It is as yet too early to forecast how the accounts will balance at the end of the year. The bulk of the land tax has still to come in, but, on the other hand, the cotton crisis cannot fail to affect the other sources of revenue. The utmost economy is being exercised in every department, and, although the financial authorities are having no enviable task in handling the situation and budgeting for next year, it would be wrong to adopt at this stage too pessimistic a view of the situation.

THE SUDAN.

KHARTOUM, February 6.

Light Railway to be Constructed.

It is reported that the Government have decided to build a light railway from Tokar to Trinkitat in order to move this year's cotton crop. As a temporary measure, this will no doubt be beneficial, but it is difficult to reconcile the proposition with the conditions on which the £6,000,000 loan was raised, in view of the fact that £400,000 of this sum was distinctly ear-marked for the Suakin-Tokar main line extension and the improvement of existing irrigation works. The estimated cost of the light line is some £25,000, and the transport of the cotton from Trinkitat to Suakin and Port Sudan for ginning will still be in the hands of the owners of the native sailing craft, so that the situation will not be materially improved. This appears to be a case where half measures will wreck the whole enterprise. The expenditure of a further £25,000 on the provision of self-

propelled sea-going lighters to complete the scheme would appear to the mind of the non-Government individual as the obvious course to make certain of moving the crop satisfactorily. It would be interesting to know whether the completion of the main line is again postponed indefinitely, or whether the difference in the cost of the two projects will be diverted to some other purpose, such as beautifying the embankment road in Khartoum, or the provision of an up-to-date drainage system in the capital, which is sadly lacking.

YUGOSLAVIA.

BELGRADE, February 22.

Railway Stores and Coal Required.

It is stated that the Ministry of Communications proposes to buy large quantities of general railway stores and material which are urgently required for the improvement of transport. It is also proposed to buy large stocks of coal to hold in reserve enough to maintain the entire service for three months, by which means it is hoped to be in a position to avoid the stoppage of traffic during any further strikes which may break out.

Suppression of Money Changers.

The fluctuations in exchange led to the growth of a whole crop of money-lenders in Belgrade, and shopkeepers of every kind opened money-changing departments, and battered upon the helpless public, especially in those days when the krone and the dinar were both current simultaneously with fluctuating values. This was stopped by the fixing of the ratio of kronen to dinars at one to four, but the "shroffs" still had plenty of scope in Austrian kronen, lei, levas, lire, francs, pounds, and other assorted currencies. The thing was so abused that at last the Government introduced regulations, and the authorities are seeing that these are carried out. A whole series of amateur money-changers have been suppressed. Recently several have been fined, and severely, too.

CATALOGUES FOR ZAGREB.

His Majesty's Consul at Zagreb states that he would be glad to receive any catalogues dealing with the following classes of British goods which United Kingdom firms may care to send:—Clothing of all kinds, boots and shoes; wood-working machinery and tools, especially for furniture manufacture; agricultural machinery; commercial motors; paper, stationery, and office appliances; building materials, central heating plant, geysers; prints and colours, especially distemper for internal walls; sports goods; household rubber goods; surgical and dental instruments and rubber goods; electrical appliances and fittings for house, shop, and tramway use; shop fittings; fancy leather goods; plant for coal mines; prepared foodstuffs, jams, tinned meats, cocoa, etc.; cutlery and table silver (cheap kinds). The consul also suggests that firms engaged in textile manufacture should send some species of advertisement.

This market was formerly largely supplied by Germany, and the German language is the principal business language, so that it would be preferable if these catalogues were printed in the national language, Serb-Croatian, or alternatively in German, which is the only alternative to Croatian and is largely spoken. Catalogues may be sent direct to H.M. Consul, Gjorgjiceva Ulica 7, Zagreb (Agram), by commercial papers post-marked "Printed matter." The limit in weight for this method of transmission is 4 lb. per packet.

THE BRITISH INDUSTRIES FAIR. OUTSTANDING EXHIBITS.

(FROM OUR OWN CORRESPONDENT.)

As I expected, activity at the White City section of the British Industries Fair—the other sections, as my readers are aware, are being held at Birmingham and Glasgow—became much more pronounced after the first couple of days; and while on my subsequent visits the fair was never uncomfortably packed, it needed no demonstration that there has been no lack of appreciation of the opportunity on the part of foreign buyers. It is too early to attempt to forecast the extent of the business done, but from what I have seen there is, I think, no question that if the immediate results of the fair are not all that could be hoped for, it will have a most important influence as soon as the wheels of commerce are once more running smoothly.

Further acquaintance with the White City only served to bring home the suitability of this centre for the fair. It is roomy and convenient, and there are plenty of gaps in the serried galleries of exhibits where it is possible for the buyers to rest their wearied legs. I suppose it is too much to hope that next year's fair will be held at the same centre, but if so, I would suggest that advantage should be taken of the facilities of the White City to hold all the sections of the fair in the same building. There are obvious advantages in localising the fair by concentrating machine exhibits in Birmingham, and textiles, etc., in Glasgow, but the disadvantages are even more pronounced. The purpose of the exhibition is to serve as a stimulant to the export trade, and this can best be achieved by affording every assistance to buyers from overseas for viewing the exhibits under the most favourable circumstances. At present it cannot be said that this is the case.

The most disappointing feature of the fair from my point of view has been the comparative absence of buyers from the Near and Middle East. Bulgaria is officially represented, also Roumania I believe, but the ordinary buyer from these and other countries in that region was difficult to come across. For this present conditions are entirely responsible. The exchanges prevent normal trade transactions, and as there has been delay in setting up an export credits scheme, it is not surprising that would-be buyers have come to the conclusion that a visit to the fair would not be worth while. Another year there will no doubt be a very different story to tell, for there is no question at all as to the great interest taken in the fair in the regions in question. Our Bucharest correspondent touched on this question in a message given in these columns last week, and what he said is of general application.

Toys and Games.

And now for the continuation of my review of the exhibits. Messrs. Hobbies, Ltd., had on view a large selection of their fretwork outfits and treadle saws, which ought to make a strong appeal in export markets. Another interesting stall was that of Messrs. Dean's Rag Book Co., Ltd., who showed a number of their world-famous untearable rag books, etc. Harbutt's Plasticine, Ltd., exhibited a

variety of their plasticine sets, and also showed a remarkable model in plasticine of an Arab mounted on a camel in the desert, with huge palm trees of green and brown plasticine in the background—a very artistic piece of work. Messrs. Meccano, Ltd., were showing some clock-work locomotives, together with some working models made from their constructional toys. Unfortunately, we have not sufficient space to quote all the exhibitors and the firms I have mentioned must be taken as indicating the scope of this section, which, on the whole, shows, in my opinion, that a distinct advance has been made in the quality of British toys since last year.

Among the sports goods section, Messrs. F. H. Ayres, Ltd., exhibited a wide range of tennis and badminton racquets, bowls, and cricket requisites, etc. They also had on view indoor games of every description. The Philip Mead Bat Co. were showing their well-known cricket bats, and also tennis and badminton racquets. Then Messrs. Slazengers, Ltd., whose stand was exquisitely decorated with palms of various sizes, were exhibiting their tennis racquets and balls.

Paper and Stationery.

The paper, printing, and stationery section richly repaid a visit. It has grown enormously since last year, and was housed in a large annexe. Even so, it is still far from being comprehensive of the industry, though I imagine that those who had to visit it intimately would find themselves in agreement that no further expansion was desirable. All kinds of printing were well illustrated, books, magazines, photogravures, etc., being there in abundance, to say nothing of maps and stationery. And over all was the indelible stamp of quality, and the exhibits left no doubt that in this industry Great Britain remains in the van. I was specially interested in the numerous stands of leading publishing firms. Messrs. Thomas Nelson and Son, Ltd., showed an attractive selection of general literature and toy-books; Messrs. Ward, Lock and Co., Ltd., had a tastefully arranged stall full of novels, story books, and other similar productions; Messrs. Blackie and Son, Ltd., showed examples of fine art printing, together with a variety of their general publications; while Messrs. Eyre and Spottiswoode, Ltd., had on view an admirable selection of their fine reproductions of famous pictures in colours and monochrome. Another interesting stand was that of Messrs. E. Marlborough and Co., showing stationery of all descriptions. As usual, the stand of the Cambridge University Press was of special interest, and it is clear that whatever critics may say in other directions, Cambridge continues to lead in the, shall I say, more material art of printing. Another stand that attracted attention was that of "Geographia," Ltd., wherein were displayed *inter alia* the excellent Victory series of atlases. One wondered as one looked how many of them would be rendered out of date by the decisions of the London Conference.

Messrs. Raphael Tuck and Sons, Ltd., exhibited some exquisite coloured calendars, Christmas cards, and picture postcards. They were also showing some of their admirable fine art reproductions. An interesting stand was that of the Pictograph Publishing Co., producers of original designs for advertising purposes, etc. They showed a number of striking pictures of the eternal feminine, notably a very bizarre study of a Spanish girl in purple and green, with a purple and blue background, standing on a mountain of appetising-looking oranges. Other important stands were those of Messrs. George Rowney and Co., who showed pencils, crayons, inks, and artists' colours and equipment; the Royal Sovereign Pencil Co., Ltd., whose exhibits included all kinds of pencils and crayons; and Messrs. D. Gestetner, who had

Telegrams: ATTIRE, BOWROM, LONDON.

on view several types of their Rotary Cyclostyles. Reference must also be made to the interesting stand of the Imperial Typewriter Co., Ltd., who exhibited their famous typewriter with the instantly interchangeable type-bars and keyboard. The machines are manufactured in English, French, Russian, Greek, Serbian, Polish, Swedish, Spanish, and twenty other languages. This typewriter is well known and largely used in the Near East, and only recently I understand that the Serbian War Office placed an order for three hundred of these machines.

Photographic Goods.

I was rather disappointed with the photographic section this year, though it was better than it was twelve months ago. The exhibits were few in number, and most of the well-known firms were conspicuous by their absence. Why this should be so is a mystery. The markets of the Near East offer vast scope for photographic apparatus and appliances, and a policy of enterprise would richly repay British manufacturers. The exhibitors included Messrs. W. Butcher and Sons, Ltd., who had on view a large selection of plate and film cameras, and also cinematograph cameras and projectors. They have done an extensive business in Mesopotamia and Egypt in cinematographs and projectors, etc., but not so far with the Levant, where, however, as soon as conditions are settled there ought to be a good market both for cameras and cinematographs. The Leto Photo Materials Co., Ltd., had a very interesting stand, showing a wide range of photographs printed on their famous Seltone paper, the excellence of which I can vouch for from personal experience. The stand of Messrs. Kosmos Photographics, Ltd., gave some examples of work done on Novex paper, which has the outstanding quality that it presents no difficulties regarding development, etc. They specialise in a tropical paper which is proof against all climates, which should be of great value to photographers in the Near and Middle Eastern countries. I must also mention Messrs. E. B. Fry, Ltd., makers of the "specialist" lantern slides, printing masks, and passport bindings. They had on view a very fine rainbow-opaque announcement slide, which gives a beautiful effect to any announcement or drawing. Their output of these plates amounts to over three and a half million yearly.

Pottery and Glassware.

One might justly say that, as usual, the china and earthenware exhibits were excellent, but as a matter of fact, good as they have been in previous years, this time even last year's admirable display was surpassed. Particularly noteworthy was the exhibition of art pottery, and it is evident that in this trade there has been no standing still, and that there is no danger of the skilful craftsmanship of bygone years becoming a thing of the past. The firms exhibiting in this section ought to reap a rich harvest in the Near and Middle East, given the requisite enterprise and adequate attention to local requirements. Many of them have shown themselves rather conservative in regard to markets in the past, but no doubt in this industry, as in others, this phase has gone.

To single out the best stand in this section would be an invidious task. So many exhibits presented a perfect blend of colours that it would be almost impossible to discriminate between the various grades of exquisite workmanship. A specially attractive stand was that of Messrs. Doulton and Co., Ltd., showing their art pottery in Flambé, Old Sung, Titanian, and other styles. Messrs. Josiah Wedgwood and Co., Ltd., exhibited a characteristic selection of their well-known products, and at this stand I was particularly

enamoured of some vases in light blue and white. Other attractive exhibits were those of Messrs. Sampson Bridge-wood, and Son. Messrs. Wileman and Co., Messrs. Myott Son, and Co., and Messrs. W. Moorcroft, Ltd., the last-named showing some excellent examples of their "Moorcroft" ware.

In the glassware section the exhibitors included the Berkefeld Filter Co., who exhibited different patterns of the "Berkefeld" filter for domestic, restaurant, ships, camps, laboratory, and experimental purposes; Messrs. Tate, Burtles, Ltd., had on view a large selection of wine-glasses, decanters, butter and fruit dishes, gas globes, etc.; and Messrs. Kilner Bros., Ltd., who exhibited various kinds of mineral-water bottles, wine and spirit bottles, etc., and also the "Kilner" domestic preserving jars. The Amalgamated Glass Bottle Works, Ltd., had on show a large number of hand and machine made medicine bottles, tinted in blue and brown, and other of their products. The British and Foreign Bottle Co., Ltd., were showing a selection of honey, jam, and pickle jars, confectionery jars, and their well-known brown malt extract jars. The firm of Messrs. John Walsh Walsh exhibited some table glassware, cut-glass cake dishes and an excellent set of light green wine-glasses. This stand was, in my opinion, the best arranged in the section, and the exhibits were undoubtedly of the highest quality.

Furniture.

This section, which is practically a newcomer, promises in future years to present one of the most important features of the fair. It was fairly large this year, but it could not by any stretch of imagination be described as representative. I looked for many of the famous firms, but in vain, for they were not there. Perhaps they are under the impression that the fair is not likely to prove useful to them as a trade medium. If so, the sooner they divest themselves of that idea the better. An interesting stand in this section was that of Messrs. Beresford and Hicks, who had on view an admirable selection of furniture in all varieties. Messrs. B. Cohen and Sons, Ltd., had a large exhibit, in which were displayed some admirable examples of wardrobes, sideboards, tables, chairs, and other articles. Other stands deserving notice were those of Messrs. W. and T. Lock, showing bedroom and dining-room suites, and Messrs. Herman and Phillips, Ltd. Reference must also be made to the attractive stand of Messrs. Shannon, Ltd., showing a variety of their well-known office furniture and appliances.

Finally, a word is called for in regard to the exhibits of drugs and druggists' sundries. As in other sections, the recent advance made in this industry was very apparent, and the section, it may be added, was much more complete than in previous years. Space prohibits more than the most casual mention of the stands, but among them the following are worthy of mention:—The British Glass Wool Co., Ltd., showing glass wool, free from lead, for the chemical trades, glass fibre brushes and polishers, etc.; Messrs. W. J. Bush and Co., Ltd., manufacturers of synthetic drugs, perfumes, and toilet preparations, a particularly attractive stand; and Duroglass, Ltd., makers of scientific and laboratory glassware, glass tubing, beakers, test-tubes, burettes, pipettes, etc.

The stand which, in my opinion, was the most tastefully arranged in the exhibition was that of Messrs. J. C. Eno, Ltd., who displayed their well-known fruit salts amid a miniature vineyard of black and white grapes, in the centre being a graceful little statue representing "The Symbol of Health."

ENGINEERING.

Electric Starting Sets.

Some rather interesting figures have just been sent me with regard to the economy of the C.A.V. dynamo lighting and starting set, and commenting on these it is clear that it will be no difficult task for the owner of a private or commercial vehicle to work out for himself the saving which will result from its adoption.

We may suppose that the average commercial vehicle has its engine running idle somewhere in the neighbourhood of from three to three and a-half hours per day. Even with careful running it cannot consume much less than one gallon of petrol during that time. We may assume that it is possible to save that gallon of petrol by fitting an engine-starter, and that possibility would very nearly be made a certainty by making fuel consumption, or rather fuel saving, a basis for determining the bonus paid to the driver. Calculating the cost of petrol, for the sake of argument, at being 3s. 6d. a gallon, and regarding the vehicle as being at work for five days in the week, the saving in petrol by being able to stop the engine when not wanted and to start up instantly when required by a self-starter, would be 17s. 6d. per week. There is the cost of the outfit now to be considered, and for a 4-ton lorry or a big char-a-banc this would be somewhere about £40. In looking at this, however, it must be remembered that were such a set not installed it would be necessary to provide some other means of lighting, and were that system either oil or acetylene there would be a constant consumption of material, the cost of which would also have to be taken into account. The amount saved in this way would have to be added to the 17s. 6d. already saved, and it will be seen then that the lighting and starting set would pay for itself in a very short time. Taking a set of oil lamps as costing about £10, we find that in about nine months or so we should have saved the cost of the outfit, and still be saving very nearly a pound a week in one way and another. To show the favour with which the C.A.V. sets are viewed by users, I may mention that they are used by, amongst others, the following firms, viz.:—The London General Omnibus Company, Tilling-Stevens Motors, J. I. Thornycroft and Co.; Dennis Bros.; Harrier Motors, Leyland Motors, and Halley's Industrial Motors. By the way, I hear that the C.A.V. firm have just brought

out a new type of electric horn, which, in addition to being reasonable in price, possesses certain advantages not found in other horns of a somewhat similar type.

Revival of Motor Industry.

The revival of this vast and important section of British engineering activity is not only coming, it simply cannot be stopped unless we as a nation purposely stop it. Two cardinal facts exist: one is the gigantic world-wide demand for motor vehicles in general, and the other, of greater significance from our viewpoint, is the marked preference for the British-made car throughout the home and overseas markets. The experienced and discerning motorist is open to pay £100 more for the British product.

Conservative calculation estimated the world demand for British cars at the beginning of 1920 at 50,000, two-thirds of which demand was from overseas markets. It does not take a genius at figures to appreciate that at an average of £1,000 per car this would represent a total of £50,000,000, of which £37,000,000 worth would go overseas. Can Britain afford, with its present National Debt, to turn down thirty-seven million pounds' worth of export trade? Quantity production schemes launched by several of the leading British manufacturers aimed at securing this trade for Britain. Increased production presented the only possible means which could do it. The desired output was not reached, the hampering element in the majority of instances being the fetters around capital.

Of the British manufacturers which launched out upon "the big enterprise"—that is, quantity production of a standardised model upon an economic basis—one name at least stands out prominently as having achieved a really tangible success. It is the Austin Motor Co. This firm has proved indisputably its capacity for producing a type of car which the whole world wants in considerable numbers; a car the design of which caters for the requirements of all motorists and is particularly suited to overseas conditions.

The Austin Twenty.

As to the product itself, the Austin Twenty is undoubtedly an achievement, and one of a national nature. It is the British master-stroke to the American principle of mass production, which has made a better car for the same money. Definitely, there is not another car in the world presenting its equivalent in sheer value. The Austin Twenty is not an average British car; it is above the average; and when one considers its remarkably moderate price it is not difficult to see the reason for its huge demand.

As an indication of the great confidence with which the Austin Twenty car is regarded by the home market, actual contracts have been placed totalling 5,000 cars for this country alone during the current year, and the brightest aspect of all is that the great Austin factory at Longbridge, equipped and organised as it is, is capable of an output of anything from 200 cars a week upwards. Here production costs have been reduced to a scientific minimum by the application of the most modern plant and methods, which explains why the Austin Co. can market the Austin Twenty at the astonishingly low price of £695.

Reverting to the other Austin products, and in particular the famous Austin tractor, this is another engineering achievement of supreme importance, and a further example of the Austin policy of standardising one type of machine—the design of which is the result of the most careful analysis, of experiment and tests—and once the design was defined, of setting about quantity production upon strictly economic lines, thus keeping its selling price down to a popular figure. Since its first appearance the Austin tractor has a consistent chain of successes to its credit, gaining highest awards at agricultural shows, tests, and matches. Three thousand five hundred of these machines are already contracted for during the current year, while manufacturing facilities are capable of increasing output to 200 a week. Consider for a moment the vast export trade possible in this article, bearing in mind that in India alone the major proportion of its three hundred million population live by agriculture.

Baghdad Tractor Show.

Baghdad held its first agricultural tractor competition for fifteen consecutive days during January, with Austin, Fiat, Fordson, and Saunderson machines as the principal performers. The trials were followed with great interest by the Arab farmers, who were very quickly converted to the advantages of mechanical traction, and who placed orders for these machines without waiting for the final and technical results of the competition. The sight of these modern agricultural machines being driven and cared for by the natives was picturesque in the extreme. The competition was carried through very successfully, all the machines doing good work, and the Fiat, which, as usual, used paraffin, being particularly remarked. The trials were attended by the High Commissioner, Sir Percy Cox, by various ministers, and other officials, all of whom expressed their satisfaction at the results obtained.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs, such as proprietary articles, crude drugs, heavy chemicals, fine chemical products, dressings, galenicals, etc. March 10.

Benzine.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of 1,700 tins of benzine and 3,155 tins of petroleum (1,155 naked tins and 2,000 tins in cases) for the first half-year of 1921-1922. March 16.

Paints, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of paints, oils, tar, soap, etc., required during the first six months of the financial year 1921-1922. March 17.

Roofing Tiles.—The Superintendent of Stores, Egyptian State Railways, Telegraphs, and Telephones, Bulaq, Cairo, invites tenders for the supply of 40,000 "Marseilles" roofing tiles (specification, 50 millimetres). March 17.

Linen, etc.—The Sub-Director of Stores, Ministry of Education, Sharia Insha, Cairo, invites tenders for the supply of bed linen, table linen, etc. (7,000 metres of cotton sheetings, 8,000 metres of tulle for mosquito nets, 1,200 blankets, Morocco wool, etc.), table requisites (12,500 china plates, 4,000 glass tumblers, 3,000 knives, 2,500 forks, 2,500 spoons, etc.) required for the school year 1921-22. March 19.

Envelopes.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of envelopes. April 2.

Lubricating Oils.—The general manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo station, invites tenders for the supply of 1,630 metric tons of mineral lubricating oils (specification, 200 millimetres). April 9.

Equipment, etc.—The Director of Stores, Egyptian Ministry of the Interior, Cairo, invites tenders for the supply of stores required by that Department for the year 1921. The material required includes:—Arms, ammunition, accoutrements, ordnance stores, clothing and necessities for the police and "Ghaffir" services; harness and saddlery; fire-engine equipment; barrack and other furniture; tools; general stores. Tenders, which can only be submitted by firms established in Egypt or having a representative there, must be received in Cairo by April 18. Copies of the specifications, etc., may be inspected by United Kingdom firms interested on application to the inquiry office of the Department of Overseas Trade, at 35, Old Queen Street, Westminster, S.W.1.

Roumania.

Supplies for the Roumanian Ministry of War.—The Roumanian Ministry of War desires to receive quotations from United Kingdom manufacturers and merchants for the supply of various qualities of the following articles which are required in large quantities:—Sugar, rice, coffee, olive oil, tea, soap, canned meat (1920 manufacture), khaki cloth, army boots, uniforms (tunic, trousers, and mantle). The specification of the khaki cloth is as follows:—440 grammes weight per metre, 25 kilogrammes resistance, 25-30 divisions elasticity, to be well carded, sheared, prepared and shrunk. It is proposed that payment will be made by Roumanian Government Treasury Bonds bearing 6 per cent. interest, and repayable in two years' time. All quotations, together with full particulars and samples, should be addressed to Ministère de la Guerre, 7-me Direction Intendance, Strada Jules Michlet Nr. 28, Bucharest, Roumania.

Bulgaria.

Locomotives.—The Bulgarian Legation desires to receive tenders for the supply of 25 locomotives and 270 goods wagons for the Bulgarian State Railways.

Yugoslavia.

Tenders are invited by the Yugoslav Ministry of Public Works for the erection of a power station, main conductors, and transforming stations in connection with an electrical scheme at Kostolac for the supply of current for Belgrade, Semlin, etc. Tenders, which should be addressed to the Director, Ministry of Public Works, Belgrade, are to be submitted by May 1. A translation of the specifications and conditions of tender, together with a plan showing the disposition of the various stations and lines, may be inspected by United Kingdom manufacturers and exporters interested on application to the Department of Overseas Trade, 35, Old Queen Street, S.W.1.

Morocco (Spanish Zone).

Telegraph Posts and Wire.—Tenders are invited by the Development Commission (Delegacion de Fomento) for the supply of 150 creosote posts, 7 metres in length; 2,500 kilos of galvanised iron wire, 4 millimetres in diameter. Tenders are to be delivered by March 22 at the "Negociado de Telegrafos de la Delegacion de Fomento," Tetuan, or at the Ministerio de Estado, Madrid, accompanied by a certificate to the effect that the sum of 500 pesetas has been deposited in the Banco de Espana, Madrid, or in the Moroccan State Bank, Tetuan, as a preliminary deposit. Particulars may be obtained from the Department of Overseas Trade.

REMEDIES FOR THE TRADE CRISIS.

Increased Production and Restricted Currency.

In a letter to THE NEAR EAST dealing with the trade crisis arising out of the adverse exchanges and the lack of credits abroad, Sir W. Watson Rutherford, M.P., chairman of the Roumanian Consolidated Oilfields, writes:—

I think there is no doubt that the whole industrial community who were largely mobilised for the purposes of the war, and those who were not called away were working at high pressure in munitions, etc., are naturally feeling the strain, and for some little time will certainly be indisposed to continue any exceptional exertions. This is one of the causes of the great slump in trade, arising out of short production.

Another cause undoubtedly is that the industrial unrest, partly resulting from the above, has made it almost impossible for manufacturers and employers to quote prices and accept contracts, because they naturally feel a difficulty with regard to the demands that might be made upon them for extra wages, and the uncertainty as to the cost of raw materials.

A third cause has undoubtedly been the difficult position brought about by the relative values of exchange between the different countries. This has been partly brought about by the exceptional shortage of various materials, machinery, etc., in those countries which they have been obliged to purchase from outside, and partly also by the abolition of the gold standard and the indiscriminate printing of currency to the extent of millions of money. Some countries have been flooded with a mere paper currency, and in others such currency has been considerably restricted, and obviously, to some extent, the value has been depreciated by the excessive supply.

How far these discrepancies in the currencies could be palliated or put right to any extent by countervailing duties is a matter upon which opinions are divided, but my own view is that any such attempted palliative, even if temporarily successful, would not cure the real evil which is at the root of the difficulty. In my opinion, the only real remedy is increased production and facilities for export, coupled with an immediate restriction on the output and circulation of currency, which is merely printed paper.

So long as some of the nations pay their liabilities by printing additional banknotes and putting them in circulation, so long will those countries inevitably have an exceedingly adverse exchange.

With regard to the subject of the lack of credits abroad, it is obvious that until production can be re-established and the ordinary avenues of trade once more put upon a pre-war footing, credits abroad must inevitably be restricted. Any attempt made by any Government or Governments artificially to create these credits may possibly bring about a temporary improvement, but until trade and production resume their normal proportions it will not be possible to rely upon any such remedies being permanent.

The traffic receipts of the Smyrna-Aidin Railway for the week ended February 12 amounted to £12,413.

H.M. Commercial Secretary at Bucharest reports that the importation into Roumania of gramophones is now freely permitted.

Negotiations for the acquisition by the P. and O. Banking Corporation of a controlling interest in the Allahabad Bank have now been completed.

It is reported that the local authorities at Tunis have sanctioned the exportation of 2,250 metric tons of olive oil to foreign countries, including Great Britain.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—The position as regards currants is much the same. There has been a steady demand for this commodity, and the tendency is towards higher rates. Smyrna sultanas have been in stronger request, and in general prices are on the firm side. Figs are moving off rapidly. Persian dates are still neglected, and prices have fallen to a level which one would think should bring buyers in.

Sugar.—There has been a slight depreciation in prices. West Indian crystallised has been done at 58s. 6d. to 61s. 6d., and American granulated has come to business at 37s. 6d. Home refined has been in steady request at the official rates.

Coffee.—The market has been steady. Quotations are:—March 42s., May 45s., July 46s., September 46s. 6d., and December 48s.

Oilseeds.—There has been little change in prices. Indian linseed is the same at 19s.; La Plata, however, is 2s. 3d. down at 16s. 6d. Rapeseed has been firm, with Toria 6d. up at 19s. and bold Ferozepore unchanged at 18s., while brown Cawnpore is quoted at 16s. Cottonseed has been steady, with Indian at 9s. and Egyptian black at 11s. 3d., an increase of 6d.

Seed Oils.—Oils have been variable. Linseed oil at 32s. 9d. is 1s. 3d. down. Rape oil has gained 1s. at 49s. Refined cotton oil is the same at 40s.; while the Egyptian crude variety is 1s. up at 32s. Turpentine is 3s. lower at 60s.

CURRENT PRICES.

General Produce.—Bacon, 182s. 6d. cwt.; butter, 298s. cwt.; cheese, 160s. cwt.; chilies, 125s. cwt.; eggs, 30s. 6d. per 120; cloves (Zanzibar), 10½d. lb.; cocoa (Ceylon, good to fine), 80s. cwt.; coffee (Costa Rica), 120s. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 103s. 6d. cwt.; ginger (washed Cochín), 37s. 6d. cwt.; hams, 160s. cwt.; lard, 125s. cwt.; nutmegs (110's to 80's), 10½d. lb.; pepper (Singapore black), 4d. lb.; pepper (Muntok white), 8½d. lb.; raisins Valencia, 130s. cwt.; sultanas (Smyrna), 110s. cwt.; currants (Vostizza), 89s. cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 23s. 6d. cwt.; sago flour, 16s. 3d. cwt.; rice (Rangoon No. 2), 13s. 9d. cwt.; rice (bran Rangoon), £5 12s. 6d. ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 3½d. lb.; wheat (Australian), 89s. 9d. qr.; wheat (English white), 62s. 6d. qr.; wheat (La Plata), 80s. qr.

Metals.—Aluminium, £150 ton; bismuth, 10s. lb.; antimony (English regulus), £39 12s. 6d. ton; copper (standard), £72 5s. ton; copper (electro), £78 5s. ton; gold bars 105s. 0½d. oz.; iron (No. 3 Cleveland), 195s. ton; hematite (mixed number), 220s. ton; lead (soft foreign), £20 12s. 6d. ton; manganese Poti, 2s. 2½d. unit; molybdenite, 60s. unit; nickel, £205 ton; platinum, 325s. oz.; plumbago, £35 ton; quicksilver, £12 7s. 6d. bottle; silver bars, 34½d. oz.; spelter (G.O.B.), £25 1s. 3d. ton; tinplates (20 by 14), 29s. box; tin (standard), £168 5s. ton; wolfram, 14s. 7½d. unit; zinc sheets, £38 10s. ton.

Chemicals.—Acids: boric, 75s. cwt.; oxalic, 1s. 0½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 11½d. lb.; ammonia (sulphate), £25 2s. 6d. ton; arsenic (white powdered), £51 ton; benzole (standard), 3s. 2½d. gallon; bleaching powder (35 per cent.), £20 ton; borax crystals, 38s. 6d. cwt.; cream of tartar, 160s. cwt.; potassium: bichromate, 1s. 2½d. lb.; chlorate, 6½d. lb.; caustic, £55 ton; nitrate, £57 ton; permanganate, 1s. 10½d. lb.; prussiate yellow, 1s. 3d. lb.; sulphate (90 per cent.), £34 10s. ton; sodium: crystals, 150s. ton; bicarbonate, £10 15s. ton; bichromate, 8½d. lb.; alkali (58 per cent.), £10 10s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £22 10s. ton; hyposulphite £23 10s. ton; prussiate, 8½d. lb.; nitrate, £19 15s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (industrial 125 per cent.), £155 ton; sulphate of copper, £36 10s. ton; sulphate of iron, 150s. ton; lemon oil, 3s. 10½d. lb.; quinine, 3s. 6½d. oz.; red lead, £40 10s. ton; white dry lead, £44 2s. 6d. ton; white ground lead, £54 10s. ton.

Miscellaneous.—Cotton (American), 19.14d. lb.; cotton (Egyptian, Sakellaridis), 14.50d. lb.; linseed (La Plata), £16 17s. 6d. ton; rape (Toria), £18 12s. 6d. ton; soya beans, £11 10s. ton; palm kernels, £20 ton; Oils: linseed, £32 15s. ton; soya, £29 ton; cotton (crude), £29 10s. ton; olive, 11s. 6d. gallon; ground nut, £33 10s. ton; palm, £37 12s. 6d. ton; rape (crude) £45 10s. ton; petroleum, 2s. 3½d. gallon; turpentine, 60s. cwt.; rubber: plantation No. 1 crepe, 1s. 1½d. lb.; smoked sheet, 11½d. lb.; fine hard Para, 11½d. lb.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 21:—During the week ending February 12 rainfall has benefited late spring crops in Bengal. Standing crops fair to good generally, except in the Punjab and North-West Frontier Province, where more rain badly wanted. Bombay cotton market firm. Fine M.G. Oomra, March, Rs. 254; May, Rs. 266. Piece-goods market dull. Calcutta jute and gunny markets lifeless. Talk of jute mills working four days only revived owing to coal transport difficulties. No change in bank rates.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended February 24:—

The market shows no signs at present of recovering from the sickness which has fallen upon it. Conditions ruling are practically the same as noted in our last report, and the tendency is to become worse, if anything, rather than better. The amount of business put through has lately fallen to insignificant proportions, and the small inquiry centred chiefly round Sakellaridis. A weak future market has further aggravated matters, and all prices show a substantial decline on the week, brown cotton being the worst sufferer, whilst fully good fair Sakellaridis is getting down almost to a tenderable basis. Holders of Egyptian cotton would do well to realise that there is a large quantity of staple American and "outsiders" on our market which is being offered very reasonably, and that competition must be expected from that quarter whilst present conditions are ruling. Sales 350 bales. Quotations of upper are reduced 150 to 200 points. Quotations of brown are reduced 250 to 400 points. Quotations of Sakellaridis are reduced 200 points all round. Fully good fair Sakel (official quotation) 14.50d.

CULTIVATION IN THE SUDAN.

The following particulars are given in the C.E.B. report for December:—

Bahr-el-Ghazal Province, November.—Reports from all districts are good. No grain has been harvested yet, but will be gathered during the coming month. The rainfall for the month was one inch, which is over the average for November.

Mongalla Province, November.—Very fair reports from all districts, but in the Yei River district, owing to poor rains in August and September, the simsim crop has entirely failed.

Darfur Province, November.—The Ushur assessment is expected to be completed by the middle of December. Such results as have been received up to date show substantial increases on last year's assessment.

Dongola Province.—The asal fly has appeared in the Southern district, causing a certain amount of damage to the late dura crops.

Upper Nile Province.—The Sobat is higher than last year and a strong stream is flowing down the Gila, so that river communications are likely to be favourably prolonged. The Garjak country is still cut off by water.

OIL OUTPUTS.

The Anglo Egyptian oil output is as follows:—Gemsah (week ended February 17), 1,292 tons (last week nil tons). Hurgada (week ended February 17), 3,942 tons (last week 3,949 tons).

ANNOUNCEMENTS.

NATIONAL BANK OF EGYPT.

Notice is hereby given that an ORDINARY GENERAL MEETING of the Shareholders of the National Bank of Egypt will be held on Tuesday, the 29th March, 1921, at 4 p.m., at the Head Office of the Bank in Cairo, for the purpose of—

- Receiving the Directors' Report.
- Receiving the Auditors' Report.
- Submitting the Accounts for the year ended 31st December, 1920.
- Declaring a Dividend.
- Re-electing Directors.
- Ratifying the nomination of a new Director.
- Electing Auditors for the year 1921 and fixing their remuneration.

All Shareholders holding a minimum of 20 shares have the right to take part in the General Meeting provided the shares be deposited under the following conditions at one of the following places, where cards of admission or proxy forms will be delivered:—

In EGYPT, at the latest, the 24th March, 1921.

At the Head Office, Cairo.

At the Branch at Alexandria.

At the Agencies of the Bank at Assiut, Assuan, Benha, Beni-Suef, Chebin-el-Kom, Damanhour, Fayoum, Guerga, Kench, Luxor, Mansurah, Minieh, Port Said, Rod-el-Farag (Cairo), Sohag, Tantah, Zagazig, and Musky (Cairo).

At the Office of the Anglo-Egyptian Bank, Ltd., Bank of Athens, Banque Belge pour l'Etranger, Imperial Ottoman Bank, Banque d'Orient, Banco di Roma, Cassa di Sconto e di Risparmio, Comptoir National d'Escompte de Paris, Credit Lyonnais.

In the SUDAN, at the latest, the 18th March, 1921.

At the Agencies of the National Bank of Egypt, at Khartoum, Port Sudan, and Suakin.

In EUROPE, at the latest, the 15th March, 1921.

In Paris, at the Offices of the Société Marseillaise.

In Italy, at the Offices of the Banca Commerciale Italiana.

In London, at the Agency of the National Bank of Egypt, 6 and 7, King William Street, E.C.4.

F. T. ROWLATT, Governor.

Cairo, 14th February, 1920.

OTTOMAN UNIFIED 4 PER CENT. DEBT, 1903-1906.

DEPOSIT OF COUPONS NOS. 23 TO 33, INCLUSIVE.

As the result of communications which have passed between the Council of Foreign Bond-holders and the Clearing Office, the Council give notice that:—

- (1) The receipt of coupons on deposit will remain open until a date to be announced.
- (2) Coupons may be deposited which were in the depositor's possession on or prior to the 10th of January, 1920.
- (3) Whilst deposits can only be received from British Nationals, residence within the United Kingdom is not essential, but Bondholders residing in British Colonies and Dominions must make their claims through their own Clearing Offices or Governments.

COUNCIL OF FOREIGN BONDHOLDERS.

JAMES P. COOPER, Secretary.

17, Moorgate Street, London, E.C.2,
26th February, 1921.

LANCASHIRE COTTON.**Depressing Conditions.**

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

During the past week the tone of the market has been one of extreme quietness, and business has been very dull. The most disconcerting feature has been the day-to-day fluctuations in raw cotton rates, and until that section of the market shows some signs of steadiness nobody anticipates any immediate revival of demand. As the weeks pass by more and more machinery is gradually being stopped, and at the present moment there is talk of closing down the mills altogether. Of course, we have the consoling fact that as the days pass stocks of dear goods in the outlets abroad are gradually being reduced, consequently we have conclusive proof that sooner or later buyers will have to commence operations or else the people in the East will have to dispense with Lancashire goods. With regard to the cloth section, there has been a certain amount of inquiry about, but business has been on a very restricted scale. Occasional orders have been booked for Constantinople and Egypt, but the trade outlook in the Near East generally is far from bright. Shippers to India speak rather more hopefully of the situation, especially in Calcutta, but very few definite offers are about. Dhooties have gone through in small lots for Calcutta and mulls for Karachi, but Bombay has been very quiet. Buyers for China have not shown any particular eagerness to operate, and transactions have been of a hand-to-mouth variety. There are no signs of any increased activity on behalf of South America. In home trade circles, business has been very limited. In American yarns for home use prices have been weak when tested, and only isolated sales have occurred at cut prices. Shipping bundles have not been in great request, but a few odd lots of extra hard counts are reported as having gone through for the Levant.

ELECTRIFICATION OF YUGOSLAVIA.

For some time past, says the *Agrarier Tageblatt* in a recent article, the Ministries of Communications and Public Works have been in consultation regarding the formation of a technical commission for the purpose of drawing up a plan for the electrification of Yugoslavia. This plan is now adopted, and all the general lines of the work have been laid down. Henceforth the State will have the first right to create any electrical undertaking, but private individuals may carry out electrical undertakings where the State has not constructed such; but the special permission of the Ministry of Public Works is necessary in such cases. The State is enabled, if necessary, to expropriate such individuals on condition of indemnification. The State may also nationalise existing undertakings so far as is conducive to the above end. The upkeep of the transmission and cables devolves on the electrical administration of each commune. The highest advisory body on electrical questions is the Electro-technical State Council, which is composed of 15 members and 16 deputies (substitutes). The Council will include representatives from the Ministries of Commerce and Industry, Public Works, Agriculture, Forestry and Health, the Electro-Technical Engineering Faculty, and the Law Society. As a means for controlling the revenue from electric power, an electro-technical finance committee will be set up at the Ministry of Trade. The manner in which the Ministry of Works will carry out the scheme in its final form will be promulgated in a special order.

YUGOSLAVIA'S IMPROVING POSITION.**Ready Market for British Goods.**

Notwithstanding the unsettled state of Yugoslavia, contingent upon the recent elections for the Constituent Assembly, the economic situation of the country compares favourably with that of its neighbours. As regards agricultural products there is an ascertained surplus of foodstuffs, to say nothing of the valuable forest products. Contrary to what has already been reported in certain quarters, trade by barter has not taken the place of money in the interior. The paper currency is the accepted medium of payment by the peasants, the trouble being rather that they demand too much of it. The exchange, although low, is better than that of the surrounding countries.

Representatives of several United Kingdom firms have secured fair orders, mostly in textiles. The course of sending representatives to investigate on the spot is advisable, for there will be found not only a ready market for United Kingdom manufacturers, but a considerable quantity of goods for export which are required in this country. The export of the available material would have the effect of establishing the necessary sterling credits from which payments could be made for the British manufactures required in Yugoslavia.

THE PRAGUE SAMPLES FAIR.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Will you allow me to bring to the notice of your readers a few particulars about the Prague Samples Fair and Market, which is being held between February 28 and March 8?

The fair comprises numerous exhibits in all branches of Czechoslovak industries, and provides the best opportunity for visitors to become acquainted with the economic life of Czechoslovakia, as well as for direct purchase of products, such as the well-known Bohemian glass, fancy goods (Gablons ware), toys, bentwood furniture, engineering accessories, musical instruments, gloves, etc. The fair was a great success last autumn, when it was held for the first time, and showed that Prague, situated as it is in the heart of a rich and industrial country, possesses every advantage for developing into an intermediary between the traders of Western and Eastern Europe. Exhibitors from every part of Europe are represented, and buyers from an equally wide area have announced their intention of visiting the fair.

The Czechoslovak Government granted the visitors all possible facilities as regards passports, customs, and financial transactions, and they were allowed special reduced rates on the Czechoslovak and Saxon railways. The management of the fair provided an adequate service of interpreters, and made all necessary arrangements as regards hotel accommodation, dealing with authorities, etc. Those British buyers who take this opportunity of visiting the country can fully avail themselves of the advantages derived from the rate of exchange, and resume relations with all their pre-war commercial friends, besides inaugurating new and profitable business connections.

Further particulars can be obtained from the Czechoslovak Legation, 8, Grosvenor Place, S.W.1, and from the representative of the fair, Mr. F. Sykora, 26, Gloucester Road, N.W.1.—Yours, etc.,

COMPANY MEETINGS.

BRITISH TRADE CORPORATION.

The fourth ordinary general meeting of the shareholders of the British Trade Corporation was held on February 23 at the Institute of Chartered Accountants, Moorgate Place, Moorgate Street, Lord Faringdon (the Governor) presiding.

The Secretary (Mr. G. de B. Brounlie, A.C.A.) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that on the assets side of the balance-sheet it would be seen that they had cash in hand and at bankers, £254,441, against £63,541 at the end of 1919, an increase of £190,900, which was mainly due to the figures brought in from branches, where it was necessary to maintain a very liquid cash position. Money at call and short notice was £700,000, against £510,000. British Treasury bills held amounted to £250,000, against £700,000. Their investments, which included £350,000 National War Bonds and £175,000 Exchequer Bonds, were brought into account at or under cost, and amounted to £799,264, which was approximately their market value. Bills discounted, loans, advances, etc., stood at £1,977,444, as against £1,201,057 at the corresponding period, an increase of £776,387. The next item was capital in subsidiary companies, £307,380. They would see that the auditors stated in their certificate that they were unable to form an opinion as to its value. Neither were they. The sum of £307,380 represented less than the cost price of their interests in the Anglo-Brazilian Commercial and Agency Company, the Levant Company, the Trade Indemnity Company, and the South Russia Banking Agency. These were all interests they had deliberately acquired with a view to helping British trade.

The Levant Company had spread its trading ventures over a large area, and was at the moment suffering from the heavy fall that had occurred in all commodities, but it not infrequently happened that a sharp check was the precursor of ultimate success. Several of its fields of operation, such as Greece, Serbia, and Bulgaria, were handicapped by unstable exchanges, and regions that seemed to open up unlimited opportunities for the marketing of British goods were almost closed against them at the present time. He was optimistic enough to feel convinced that these were troubles that time would heal, and, just as a year since he was able, from records that they had then in their hands, to give them a good account of the Levant Company's prospects, so he hoped that at no distant date they would be able to report a revival from the depression that was now apparent in so many directions. The Trade Indemnity Company, they were informed, showed a considerable increase on its premium income, and was doing all in its power to assist the export trade of the country. The South Russia Banking Agency was in *statu quo*, and no transactions could possibly take place until trade with Russia was placed upon some secure basis.

The progress made by the National Bank of Turkey was satisfactory, especially if they took into account the unfavourable conditions under which it had been working. Merchandise had accumulated at Constantinople, not only because of the general stagnation which had prevailed in all parts of the world, but also on account of special and local circumstances, which had practically cut off trade with a great part of Anatolia, with Southern Russia, and with Transcaucasia, thus throwing back upon Constantinople large quantities of goods intended for those regions. They had not yet received from Constantinople the accounts up to the end of 1920, and he was, therefore, unable to give them any figure of the profits of the year; but he was able to say that no serious losses had been incurred, and that the total of the deposit and current accounts had increased by about 38 per cent.

The profits for the year amounted to £119,309, and, with the balance brought forward, there was available for appropriation the sum of £141,901, subject to income and corporation profits taxes. They recommended the payment of the same dividend as last year—namely, 8s. per share, leaving a balance of £61,901 9s. to be carried forward. It was not a grand reward for much hard work, and it was not as satisfactory as they anticipated a short time since, but they felt that the proprietors would appreciate the difficulties of the present time, and wished them to proceed with caution. It was unnecessary for him to emphasise that the country was passing through troublous times, and greater caution than usual was required in dealing with finance. One of their chief functions was to be the financing of overseas trade, and with the resources at their disposal they had done their best to fulfil their mission, but they were handicapped by the difficulties their clients had in getting payment for goods. It was not only in the European countries that these difficulties were met with. The Chairman concluded by moving the adoption of the report and accounts.

Sir Henry Babington Smith, G.B.E., K.C.B., C.S.I. (deputy-governor), seconded the resolution, which was carried unanimously.

The ordinary general meeting of the Bank of Athens will be held on Thursday, March 24, at the head office in Athens.

Crédit Foncier d'Algérie et de Tunisie.—M. Philibert, President of the Commercial Tribunal of Algiers, and M. Dubourdieu, former financial director to the Tunisian Government, have joined the board of directors.

Mr. John Duncan Nimmo, senior partner of Messrs. Walter Duncan and Co., London and Glasgow, and of Messrs. Duncan Brothers and Co., Calcutta, has been appointed to a seat on the board of the National Bank of India.

STEAUA ROMANA.

Société Anonyme pour l'Industrie du Pétrole. Bucarest.

CAPITAL SOCIAL COMPLETEMENT VERSE

Lei 100,000,000.

Il est porté à la connaissance de MM. les actionnaires que l'Assemblée Générale extraordinaire des actionnaires du 16 décembre 1920 a décidé l'augmentation du capital social de la Société de Lei 100,000,000 à Lei 300,000,000 par l'émission de 400,000 actions nouvelles à Lei 500 chacune, au prix de Lei 525 —en attribuant aux anciens actionnaires deux actions nouvelles pour une action ancienne et en versant à l'occasion de l'exercement du droit d'option Lei 125 par action plus Lei 25 pour frais d'émission.

L'Assemblée Générale a autorisé le Conseil d'Administration de fixer les autres modalités et conditions de cette émission.

En cette base le Conseil d'Administration décide:

D'émettre 400,000 actions nouvelles dans les conditions fixées par l'Assemblée Générale.

Pour pouvoir exercer le droit d'option à la nouvelle émission des actions de la Société les possesseurs actuels d'actions sont obligés, tout en effectuant le premier versement, de faire leurs déclarations, qu'ils entendent exercer le droit d'option à partir du 25 janvier, 1921, jusqu'au 15 mars, 1921.

En faisant leur déclaration les possesseurs d'actions sont obligés de présenter aussi leurs actions estampillées et ceux dont les actions ont été transportées à Moscou de présenter leurs certificats prouvant la possession des actions, indiquant les quantités et les numéros des actions qu'ils possèdent.

En présentant ces actes ils effectueront aussi les versements sus-mentionnés en recevant les quittances contre lesquelles on leur délivrera plus tard les titres provisoires ou les actions de la Société.

Les actions déposées dans le délai sus-mentionné resteront au lieu de dépôt jusqu'au 31 mars, 1921; dans cet intervalle le Conseil d'Administration par son délégué procédera à la vérification des titres, et après vérification le Conseil décidera de la validité du droit d'option.

Les autres versements pour compléter le capital seront effectués conformément aux décisions ultérieures du Conseil d'Administration, mais les actionnaires auront le droit d'anticiper les versements.

Les détenteurs des actions non-estampillées sont obligés de faire leurs déclarations dans le même délai, en effectuant leurs versements toujours dans les conditions indiquées plus haut. Mais les certificats provisoires ou nouvelles actions resteront mobilisés entre les mains de la Société et ne seront délivrés aux souscripteurs de cette catégorie qu'après l'estampillage des anciennes actions, en base desquelles ils ont manifesté le droit de préférence.

Il est porté à la connaissance de tous les actionnaires de la Société que ce droit de préférence n'étant pas un droit statutaire, mais un droit accordé par l'Assemblée Générale, qui s'exerce dans les conditions et modalités établies par le Conseil d'Administration, conformément au vote de l'Assemblée Générale, ce droit devient caduc s'il n'est pas exercé dans les délais prévus plus haut et dans les conditions établies ci-dessus.

Les nouvelles actions participeront au dividende à partir du 1 janvier, 1921.

Messrs. Stern Brothers announce that shareholders desirous of depositing their shares upon the conditions stated in the above notice may deposit them at 6, Angel Court, E.C., between the hours of 11 a.m. and 3 p.m. (Saturdays excepted).

Messrs. Stern Brothers will provide facilities for making the necessary payment in Bucharest.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

STAMBOUL, February 19.

There is no change in the market position. Some sales have been made for Anatolia as well as for Roumania. Sales of manufactured goods continue on a small scale, but not in sufficient quantity to relieve the market. The sales give traders some resources which enable them to carry on from day to day.

Produce.—The fall in prices continues to be the dominant note of the market in produce. Merchants limit their operations in imports, long term transactions being excluded in view of the general state of the market.

Sugar.—The movement of last week has been followed by complete calm, despite the news of the set-back received from America, Antwerp, and Holland. The arrivals of the week amount to 100 wagons, which have been warehoused for lack of buyers. A new fall in prices is to be recorded, bringing them to an equality with prices in the countries of origin. Quotations are sugar from Antwerp, prompt shipment, £40 per ton; sugar from Holland, prompt shipment, £42 per ton; in customs £T36-37 per 100 kilos.

Coffee.—The market is weak, and transactions are insignificant. Quotations (per oke, in transit) are: Rio No. 1 Ps. 42-43, Santos Ps. 43-46, inferior qualities, Ps. 27. (For the price in customs Ps. 16.50 per oke has to be added to these totals.)

Rice.—The price continues to fall. There have been no transactions.

Oil.—The tendency is to fall, in view of the approaching imports from Roumania.

ADANA.

The report for January states: The world crisis in cotton, the chief product of this region, has brought about a serious crisis in this market, and the export trade has been brought to a standstill.

MAMOURI-UL-AZIZ.

The report for December states: The cotton crop of 1920 is estimated at about 400,000 kilos. A part is used here for the manufacture of native fabrics. Malatia, Sivas, and Cesarea purchase from us a considerable portion.

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to December 31, 1920 (new style January 14, 1920, to January 13, 1921):—

	Monopolies, tobacco, stamps, stamped paper, Naxos emery.	Piræus Customs.
Gross receipts Dec., 1920	Dr. 5,513,947.23	Dr. 5,623,732.15
Do. do. 1919	5,012,399.00	4,967,575.00
Difference between estimated & actual receipts for 12 months	1920 +36,730,414.48	+ 47,882,293.85
	1919 +21,568,063.80	+39,676,884.95

ON 'CHANGE.

Tendency Downwards: Greek Securities Strong.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday night.

The general position during the week has been unchanged. There is nothing at the present time to inspire confidence, and the wonder is that stocks remain as firm as they do in the circumstances. A new factor making for depression has now made its appearance in the shape of a pending coal crisis, but this has so far had little or no effect. Markets in these days take as their motto: "Sufficient for the day, etc." And, after all, there is always the soothing hope that labour troubles of this character may come to nothing.

Gilt-edged descriptions have been fairly well maintained during the week, and stocks generally are closing on a firm note. Foreign bonds have been noticeably weak.

As usual, the tendency in Industrials has been downwards. Business is extremely restricted, and there is literally no support for the market. In a few cases some improvement has taken place, but the majority of shares have moved to lower values. Oils have been irregular, while Rubbers are closing with renewed weakness.

Near Eastern Government securities have shown no change. Egyptian Guaranteed 3 per Cent. at 62½, Greek Guaranteed 2½ per Cent., 1898, at 58½, and Turkish Guaranteed 4 per Cent. at 67, are all unchanged.

The rise in Greek securities is still continuing. The 5 per Cent. 1881 and the 5 per Cent. 1884 Loan are both 1 up at 42, at which there were buyers. The 5 per Cent. 1890 and Fundings have both gained a point to 41, at which there were buyers. The 1910 Loan is 2 up at 32, and the 5 per Cent. 1914 Loan has increased 1 at 40. The 1902 Loan is unaltered at 35.

Banks have remained unchanged. Agricultural 3½ per Cent. Bonds are unchanged at 53, and the 3½ per Cent. Guaranteed Bonds are the same at 55. Imperial Ottoman Banks have lost ½ at 7½, as also the National Bank of Egypt at 17. Land Banks have gained ½ at 4½.

Land shares have shown a downward tendency. Beheras remain at 7½, while the preference shares are unchanged at 2½, at which there were buyers. Anglo-Egyptian Land Allotments are unchanged at 3½, and Egyptian Consolidated Lands at 1s. 1½d. are the same; but Delta Lands at 8s. 9d. have shed 3d. Gharbieh Lands are ¼ down at 1½. New Egyptians have shed 1s. 6d. at 20s. 6d., and Union Foncières have lost ½ at 2½. Sudan Plantations have gained ¼ at 3½.

Oils are lower. Anglo-Egyptians have lost ½ at 2 and Phoenix have dropped 1s. to 9s. 3d. Roumanian Consolidated, however, are 2s. 3d. up at 13s. 9d. Steaua Romana are the same at 15s.

Among Miscellaneous descriptions Abyssinian Corporations are 3s. Alexandria Waters are 7, while Morums are 9d. up at 14s. Egyptian Salt and Sodas are quoted at 27s. 6d.

BULGARIAN CONTROL OF CURRENCY.

The Bulgarian State Gazette has published the law for collecting foreign currency payable on exports. According to this law all persons exporting are obliged to cede to the National Bank one-third of the value of their exports in foreign currency at a special rate for the benefit of the State Treasury, which will not, however, be less than 20 per cent. lower than the Bourse rate. The export of Bulgarian bank notes, bonds, State and municipal coupons, etc., is forbidden, as well as those of the National and Agricultural Banks, also gold and silver coins. For needs of travelling, bank notes up to 1,000 leva may be exported.

MARKET FOR AGRICULTURAL MACHINERY IN PALESTINE.

Although little has been done as yet to improve upon the agricultural implements used heretofore in Palestine, now, with the change of Government and the increase in the value of crops, a disposition is being shown to improve agricultural methods and to introduce intensive cultivation, says an American consular report. The country is not well suited to the use of heavy implements and machinery, owing to its hilly and rocky character throughout the larger part of its area. Therefore, strong, but light and simple, ploughs to be drawn by small donkeys and cattle are best adapted to this market. The plain region, extending parallel with the coast, is about 25 miles wide and is almost flat. This, as well as the very fertile flat land south of Hebron, around Beersheba, and the country east of the Jordan River, could advantageously use the most modern type of agricultural machinery. The German and Jewish farmers who settled on the plains parallel with the coast have been using more modern ploughs, and a few harrows, reapers, and binders. Some attempts have been made with various kinds of tractors. An agricultural show is to be held about the early spring of 1921, which is expected to determine which kind and make of tractor is best suited for this district. A small tractor is needed for ploughing the orchards and almond plantations, the owners of which are now experiencing considerable difficulty in having these dug up or ploughed, owing to the scarcity and high cost of manual labour. Such a tractor should be strong and so compact as to be not more than three feet high by three feet wide. If such a motor could be constructed, it is said that at least 500 of this type could be sold in Palestine.

As the people have yet to be educated up to the use of tractors and other complicated machinery, the only possible system of promoting a sale would be the consignment to a reliable local firm, with authority to lease a tractor to a prospective buyer for a few weeks' trial, on condition that, should it prove successful, it would be purchased at a pre-arranged price. Another method would be to send out a mechanic with a machine to demonstrate its actual working to the farmers. Attractive coloured illustrated advertising would second such efforts, and in due course of time a reasonable increase in sales should be expected. It would be a loss of time to rely entirely on correspondence and literature for the sale of agricultural machinery. The lack of repair shops has stood as a serious obstacle in the way of the importation of machinery, but this condition is being gradually remedied, and before long adequate service in the way of repairs in all lines of machinery will be available.

SHIPPING INTELLIGENCE.

DREDGING THE DANUBE.

The Commercial Secretary to H.M. Legation at Bucharest reports the formation of the Société Anonyme Romano-Olandeza for the construction of dykes and for dredging the Danube. The capital of the company is given as twenty million lei, and it has been formed by shipping people and merchants of Braila, in conjunction with the firm of W. J. Kalis Wzn and Co.'s Dredger Co., 2, Scheveningsche Weg, the Hague, Holland.

The object of the company is to improve the regulation of Roumanian river courses, and they will carry out this work either for the State or for private concerns. The company takes powers to rent or acquire the ground recovered, as well as to take concessions for the construction and exploitation of tramways or railways which may be constructed on the dykes built by them. The scope of the company includes all matters tending towards these principal objects. The company has been brought into being principally through the efforts of Mr. J. R. Opreanu, the managing director of the Bank of Braila, a banking institution of the port of Braila; whilst one of the directors is Mr. C. Contzescu, the Roumanian delegate on the European Commission on the Danube.

It appears to be their intention to procure from the Roumanian Government a concession to reclaim part of the land in the Danube valley at present subject to inundation in the proximity of the port of Braila. Such land would probably prove exceedingly valuable from an agricultural point of view, whilst, in addition, there is the possibility that they may project the construction of quays and docks.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Kingsmere for Bombay (Liverpool, March 7); s.s. Elysia for Bombay (Glasgow, March 19, and Liverpool, March 24).

Anchor-Brocklebank Line.—S.s. Mahsud, for Port Said, Colombo, Madras, and Calcutta (leaves London, March 8); s.s. Manipur, for Calcutta (Birkenhead, March 16); s.s. Shadwell, for Port Said, Madras, and Calcutta (leaves London, March 21); s.s. Maidan, for Calcutta (Birkenhead, March 30); s.s. Mahronda, for Port Said, Madras, and Calcutta (London, April 5); s.s. Holywell, for Port Said, Colombo, Madras, and Calcutta (leaves London, April 16).

Bibby Line.—S.s. Oxfordshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 16); s.s. Lancashire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 30).

Byron Steamship Line.—S.s. Maid of Syra for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, March 8).

Clan Line.—S.s. Clan Sinclair, for Colombo, Madras, and Calcutta (Birkenhead, March 10).

Cunard Line.—S.s. Sea Victory, for Gibraltar, Malta, Piræus, Smyrna, Constantinople, Varna, and Galatz (London, March 15); s.s. Pavia, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, March 26).

Ellerman Line.—S.s. Assyrian, for Gibraltar, Malta, and Alexandria (Liverpool, March 5); s.s. Trentino, for Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, March 12).

Ellerman's City Line.—S.s. City of Lahore, for Calcutta (Birkenhead, March 14); s.s. City of Poona, for Bombay and Karachi (Birkenhead, March 19); s.s. City of Bombay, for Calcutta (Birkenhead, March 28).

Ellerman's Westcott and Laurance Line.—S.s. Castilian, for Gibraltar, Malta, and Alexandria (London, March 5); s.s. Gourko for Malta, Piræus, Salonika, Smyrna, and Constantinople (London, March 12).

French-Lévant Line.—S.s. Flore, for Bordeaux, Algiers, Mersina, Jaffa, Port Said, Alexandria, and Cyprus (Hull, March 8); s.s. Junon, for Algiers, Piræus, Salonika, Smyrna, Constantinople, Varna, and Constantza (Hull, March 15).

Glen Line.—S.s. Glengyle, for Port Said, Port Swettenham, Singapore, etc. (London, March 10); s.s. Glenogyle, for Port Said, Port Swettenham, Singapore, etc. (London, March 24); s.s. Glenavy, for Port Said, Port Swettenham, Singapore, etc. (London, April 7).

Harrison Line.—S.s. Defender, for Calcutta (Liverpool, March 16); a steamer will sail in May for Port Said, Port Sudan, Aden, Mombasa, Zanzibar, etc.

Henderson Line.—S.s. Amarapoor, for Port Said and Rangoon (Birkenhead, March 9); s.s. Mandalay, for Port Said and Rangoon (Birkenhead, March 23).

Holt Line.—S.s. Tantalus, for Port Said, Suez, etc. (Birkenhead, March 11); s.s. Bellerophon, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 1).

Johnston Line.—S.s. Portinglis, for Galatz and Braila (Liverpool, March 15); s.s. Dromore, for Piræus, Volo, Salonika, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 26).

Maindy Line.—S.s. Maindy Tower, for Antwerp and Moroccan ports (London, early in March); s.s. Maindy Transport, for Antwerp and Moroccan ports (London, end of March).

P. and O. Line.—S.s. Kaiser-i-Hind, for Bombay (London, March 11); s.s. Sicilia, for Bombay (London, March 24); s.s. Padua, for Bombay, Colombo, Madras, and Calcutta (London, March 24).

P. and O. British India Line.—S.s. Hatarana, for Colombo, Madras, and Calcutta (London, March 12); s.s. Mandala, for Bombay and Karachi (London, March 18); s.s. Nardana, for Colombo, Madras, and Calcutta (London, March 26); s.s. Australia, for Bombay and Karachi (London, March 26).

Power Line.—S.s. Petworth, for Gibraltar and Moroccan ports (London, end of March).

Prince Line.—S.s. Cyprian Prince, for Tunis, Malta, and Alexandria (also taking cargo for Beyrout, Jaffa, Haifa, Tripoli (Syria), Latakia, Alexandretta, Mersina, and Cyprus ports (Manchester, March 10); s.s. Black Prince, for Malta and Alexandria (London, March 15).

ENQUIRY BUREAU.

Readers abroad desirous of getting in touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, *The Near East*, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "*The Near East*" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "*The Near East*" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, *The Near East*, 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "*The Near East*" accepts no responsibility in connection with such replies.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

112. An Alexandria firm wish to enter into business relations with United Kingdom firms dealing in the following exports:—Beers and stout; salmon, sardines, tinned fruit and vegetables; coconut oil; gunny bags; pepper, rice, flour and soap.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.

NOTES OF THE WEEK.

The London Conference.

A week ago the London Conference, having listened to the request of the Greeks that there should be no interference with the Treaty of Sèvres and to the request of the Turks that the Treaty should be very largely rewritten, proposed to the two parties that the fate of the Smyrna district and of Thrace should be settled by an Inter-Allied Commission on the basis of nationality, provided that both Greeks and Turks agreed to accept the findings of the Commission as well as the remaining terms of the Treaty of Sèvres. After consultation with Athens and Angora respectively, the Delegations delivered their replies on March 4. The Greeks reported that the Hellenic Government had submitted the Allies' proposal to the vote of the National Assembly, and that the latter had unanimously pronounced against it. In these circumstances Greece was quite unable to accept the proposal; but as the Greek Government desired to contribute to the rapid consolidation of peace and order in the East, the Delegation would be particularly happy to transmit "any equitable proposals" which the Conference might formulate for the purpose of arriving at a realisation of what all desire. The Turks, on the other hand, were able to state that "the Grand National Assembly" confirmed the acceptance of the proposed inquiry, and declared itself ready to accept the other provisions of the Treaty of Sèvres, "provided that they be adapted to conditions indispensable to the existence of a free and independent Turkey."

A Fresh Improvisation.

Just as the proposal to send a Commission to investigate conditions in Thrace and Smyrna was a sudden improvisation in the absence of any agreed policy on the part of the Allies, so the Conference has again decided to temporise. The idea of sending a Commission is for the time being abandoned, and an attempt is to be made to arrive at an "equitable proposal" by an understanding between the Greeks and Turks. But inasmuch as neither Delegation considers itself authorised to go outside the letter of its original instructions, it has been decided to strengthen both, in the hope that further negotiations can be carried through more expeditiously. Accordingly Djavid Bey has been summoned from Switzerland, and M. Gounaris from Athens. With the arrival of the former the Turkish Delegation now represents the Constantinople authorities, the Angora Government, and the less extreme element in the old Committee of Union and Progress. Virtually only Talaat Pasha and Enver Pasha, who would seem to have

thrown in their lot entirely with Bolshevism, stand out of the picture, and therefore any decision agreed to by the Delegation can count upon acceptance by Turkey as a whole. The presence of M. Gounaris in London implies, we may hope, that the last has been heard of the Allies' silly policy of refusing to recognise the new order in Greece. M. Gounaris has the strongest following in the Greek Chamber of any member of the Coalition Cabinet, but the Allied Governments contrived to let it be known that they had no desire to see him taking part in the Greek Delegation. They now find it advisable to let him come, and in the interests of Greece and of the Near Eastern settlement we hope that M. Gounaris will be able to satisfy at least the British Government that, whatever views he may have held during the war, he is now actuated solely by loyalty to his sovereign and devotion to the welfare of his country.

A Question of Psychology.

We could wish that the Allied Governments, in dealing with the Near Eastern peoples, would display a little more confidence in their victory in the late war. In this connection arguments thoroughly sound in their application to Germany have no bearing on the position in Greece, Bulgaria, or Turkey, although the continued mishandling of the situation in any one of these three countries may eventually undo much, if not all, that has been achieved by the war. The fundamental difference between the three countries and Germany is that, whereas the latter trusted mainly to her own right arm, they are dependent upon outside support. In the war—in the case of Greece we may, for the sake of argument, accept the current estimate of the Constantine-Streit-Gounaris policy as the country's policy—they expected to find the support they needed in the Central Powers. Now, whatever hopes Germany may still have in herself, the Near Eastern States are under no illusion on the subject. "The staff of this bruised reed" has already gone into their hand and pierced it, and they have no intention of trusting to it again. They can only turn to the Allies, and will do so with complete conviction, if they are allowed.

A Treaty of London?

But if the Allies want to make the most of their opportunity, they must give their confidence unreservedly and offer help wholeheartedly. The Treaties of Neuilly and Sèvres represent in their territorial provisions a policy of vindictiveness, petty spite, and timorous suspicion, on all fours with the Balkan standard of 1913 as displayed in the Treaty of Bucharest. Both documents are unworthy, in regard to the terms indicated, of the

Allies. If they are revised boldly, honestly, and intelligently by the Conference, the Near East as a whole will benefit, and a lasting contribution will be made to the peace of Europe. There is every reason to take for granted to-day the loyalty to the Allies of the new régime in Greece and the desire for better things in Turkey. Before the victory of the Allies no Turkish Government felt the need for reform, as the old methods fitted in well with the general level of Europe's diplomatic morality. To-day that phase has passed, provided that France and Italy do not revive it. The Turks, in particular the Angora Government, recognise that, unless their administration reforms, they will presently cease to exist as a race, to say nothing of their status as an independent country. Let the Allies avail themselves of their opportunity. If the policy advocated proves to be mistaken, they will be in a much stronger position to deal once and for all with Turkey than they are now. There need be no qualms about setting a bad precedent by revision, for the enemies of the Entente will derive far more satisfaction from a couple of bad treaties than from one good one. A real settlement of the Near East is worthy of the best setting, and we suggest that it might be made in a Treaty of London, which for the sake of convenience can leave other provisions of the Treaties of Neuilly and Sévres standing, but will redraft on sounder national lines the territorial clauses.

King Nicholas of Montenegro.

A telegram from Antibes, received last week just after we had gone to press, announced the death there, on March 1, of King Nicholas of Montenegro. His last years had been spent in exile from the land which he undoubtedly loved well, and in the shaping of which he had played such an active part. They were unfortunately clouded in many ways, and in the eyes of the world his figure had become less heroic, less picturesque than it had been when he was only a Prince—and a poet. But, as we are reminded in the appreciation of him which appears on another page, from the pen of one who knew him well, history does not always take the same view of men, or events as the Press of the day; and history may decide that the earlier view of King Nicholas was the more correct. In the meantime we may well remember his finer qualities—his courage and downrightness, his determination to keep his country and his people free, his humour and occasional wit, and his power to stir the people of the Black Mountain with his verse. By putting an end to the prosecution of blood feuds he rendered his country an incalculable service; and his codification of its laws and his introduction—though on a small scale—of such modern improvements as roads and a railway must be set to his credit. There can be little doubt that the greatest misfortune of his life was that it should have been prolonged beyond the time when the Austrians invaded Montenegro.

The Status of Egypt.

The hope for better things in the Near East finds support in the British Government's action in regard to Egypt. Without waiting to submit the Report of the Special Mission to Egypt to a discussion in Parliament, the Government has gone one better than the Milner-Zaghoul Agreement by addressing to the Sultan of Egypt the following invitation:—

His Majesty's Government, after a study of the proposals made by Lord Milner, have arrived at the conclusion that the status of protectorate is not a satisfactory relation in which Egypt should continue to stand to Great Britain. While they have not reached final decisions with regard to Lord Milner's recommendations, they desire to confer regarding them with a delegation nominated by your Highness with a view, if possible, to substitute for the Protectorate a relationship which would, while securing the special interests of Great Britain and enabling her to offer adequate guarantees to foreign Powers, meet the legitimate aspirations of Egypt and the Egyptian people.

If the House of Commons is inclined to feel aggrieved that the invitation should have anticipated a consideration of the Report, it will doubtless reflect that the Government was placed on the horns of a dilemma. The desirability of an early statement regarding the Protectorate was obvious, but it was impossible to discuss the Report with both Lord Milner and Mr. Winston

Churchill, his successor at the Colonial Office, away. It is to be supposed that both will have returned, and possibly a debate have taken place on the question, before the Egyptian plenipotentiaries arrive in England.

Mesopotamia.

No exception will be taken to Mr. Winston Churchill's reading of the problem confronting Great Britain in Mesopotamia as he outlined it on the eve of his departure for Egypt in a letter to the president of the Dundee Liberal Association. Even with the reduction of our military strength in the country, which it was hoped to effect after this year, an expenditure of some ten or eleven millions was still indicated, and it was felt that this was more than Great Britain was justified in spending. At the same time, a policy of scuttle, Mr. Churchill pointed out, was unthinkable, and he looked to an Arab Government supported by a moderate military force as the means of enabling Great Britain to discharge her duties without imposing unjustifiable expense on the British Exchequer. There are one or two indispensable preliminaries to the carrying out of this scheme. We must be prepared to meet any "trouble in the spring"—a possible eventuality to which a correspondent called attention in our issue last week—and in this connection a wise decision in London during the session of the London Conference can save Great Britain many millions in Mesopotamia. Further, there should be no delay in the appointment, in accordance with the wishes of the Arab inhabitants, of an Arab ruler, who, if the present indications of those wishes are correctly gauged, will presumably be the Emir Faisal. Public opinion in Great Britain, there can be no doubt, would not endorse a policy of scuttle; it recognises that Mesopotamia must at first be a charge on the British Exchequer, and it would welcome any reduction on the ten millions mentioned by Mr. Churchill as an earnest of the Government's sound intentions.

The Shah's New Advisers.

So far as it is possible to judge in the light of reports that reach us from various quarters, Persia has no reason to regret the change of Cabinet which we recorded last week. Seyyid Zia ed-Din was at first credited with the intention of keeping all power in his own hands, and doubts were expressed whether he would actually make any pretence of forming a Cabinet or would, for a time at least, play the part of a dictator. Those doubts have now been set at rest by the announcement that a new Cabinet has been formed, and that its principal members have been presented to the Shah. The only survival from the former Cabinet appears to be Mirza Eissa Khan, who was Acting Minister of Finance under the Sipahdar Azam, and who now takes the portfolio as full Minister; while Masoud Khan, who took a prominent part in bringing about the *coup* of February 21-22, is now Minister for War. It is, of course, quite possible that the Cabinet will exercise very little authority, and that all the real power will lie in the hands of Seyyid Zia ed-Din; but such arrangements are not unknown outside Persia, and in any case the machinery of Government at Teheran appears to be running now with a smoothness that had not been perceptible in its operations for some time. The new Prime Minister has thought it advisable to drop the Anglo-Persian Agreement, but the fact that he is inviting British officials and advisers to return to Teheran seems to show that he wishes nevertheless to act in accordance with its provisions. Should that be so, Great Britain, whose policy towards Persia is one of perfectly sincere friendship, will certainly be pleased to afford her help.

The Danger in the North.

While it is now possible to hope that Persia is at last alive to the danger that threatens her from the North, and even that she may be able to prepare herself in time to meet it, if her luck holds good, it would be the height of folly to imagine that the danger had passed. The Bolshevik menace has been a very real one, although it is probable that the strength of the Bolshevik forces in the extreme north of Persia has been—probably intentionally—exaggerated. But a force of some sort has

certainly been waiting in readiness to take advantage of the first opportunity that offered—that is to say, of the withdrawal of the British troops and possibly the seizing of power by a Persian party not unfavourable to Bolshevism. According to a report from a well-informed source, a considerable portion of this force is still hanging about, awaiting a chance to realise its dreams of looting Teheran and the richest part of Persia. If Seyyid Zia ed-Din is wise he will take steps promptly to parry this danger. We are glad to know that he is reported to be doing so already, and we hope his countrymen and others will lend him all the help he may ask for in this direction. He and his colleagues have their hands very full indeed, but they appear to be tackling their task with courage and acumen, and the country has apparently given them its confidence.

Unfortunate Georgia.

The bad news from Georgia is confirmed, and it is no longer possible to close our eyes to the fact that not only has Tiflis fallen, but that it seems probable that Batoum will follow suit; while Bolshevik forces appear to have been overrunning the unfortunate country in all directions. The first attack, by a combined force of Russians and Armenians, broke down owing to an anti-Bolshevik *coup* at Erivan, which, it seems, demoralised the Armenian portion of the attacking force. But the main Russian attack, which followed a few days later, was made in such force, with the assistance of tanks and aeroplanes, that it proved irresistible. To a certain extent it was helped by defections among the Georgian troops; and the result was the fall of Tiflis—which, it need hardly be added was promptly and thoroughly sacked—and the temporary demoralisation of the defending forces. The situation becomes complicated by reason of a sudden move on the part of the Kemalist Nationalists, who are reported to have occupied Artvin and the province of Ardahan. They are doubtless preparing for a further advance on Batoum, which they have, of course, long coveted; and if it should become necessary to choose between them and the Bolsheviks there can be little doubt on which side British sympathies would lie. For the moment, however, all our sympathy must be reserved for the Georgians, who have been putting up a good fight against overwhelming odds, and who surely deserved assistance from the Allies in their struggle. The only help they have received seems to have been that accorded by French naval units; but they have nevertheless rallied, and are reported to have begun two offensive movements against the invaders.

THE WEEK AT HOME.

LONDON, Monday evening.

The Germans in London.

Somebody with a taste for the obvious once remarked that London was too big to be impressed by anything short of the Day of Judgment. It certainly was not impressed by the German delegates; in fact, it thought them merely foolish. A reasonable economic haggle over the indemnity it would have understood, recognising that it was hardly in human nature to accept the terms as they stood, and that a flat negative was impossible. But the German offer was simply silly. Nobody is expected to show their full hand in politics, and the Germans would not have been condemned had they tried to find a means of dividing the Allies: instead of that, they merely cemented the unity of England and France. "In politics," said Prince von Bülow, some years ago, "we Germans are asses." London, looking at the German indemnity offer last week, was inclined to accept the ex-Chancellor's verdict. Even in quarters which were prepared to let bygones be bygones, and to claim that the leopard had changed his spots, it was frankly admitted that Berlin had made a mess of things when the details of the German proposal were known.

By-Elections.

Home politics have been excessively dull during the week, in spite of the miniature general election. The House of Commons has debated such earth-shaking

topics as the increased salary of the King's Proctor. The country has been mildly amused over the by-election results, which had a quality of unexpectedness. In Kirkcaldy the Government lost what was considered a perfectly safe seat to Labour. At Dudley a Cabinet Minister, Sir A. Griffith-Boscawen, was unseated, also by Labour. Neither of these Labour gentlemen had ever been heard of outside Kirkcaldy and Dudley; at East Woolwich, however, the one Labour candidate of whom everybody has heard, Mr. Ramsay MacDonald, was defeated. The Government had thought he was so certain to win that it had refused a coupon to his opponent, who thus enters the House with all the glory of an independent member. Mr. MacDonald had cruel luck. His war record from the first went against him. But the poll was on the very day when the German reply on the indemnities was known. Mr. MacDonald had nothing to do with that, but it certainly influenced votes. I doubt if he will stand again for some time, but he is a bad loser, and he made the oddest excuse for defeat that was ever heard, claiming that he polled all the political votes. This suggests a new conundrum: When is a vote not a political vote? The answer must be: When you don't get it.

But if Labour was unlucky in East Woolwich, the Government was equally unlucky at Dudley. It is an urban constituency, and much exercised over the cost of living. Its late member, the new Minister for Agriculture, was represented as keeping up the cost of living by the home agricultural policy of the Government and the embargo on Canadian cattle. The cry of "dear meat" was raised, and Sir Arthur was really defeated because he declined to pledge himself to alter the whole policy of his department after he had only been five days in charge. It is not likely to mean any real interruption of his career, as other seats are understood to have been offered him. He is a sound administrator and a hard worker.

The election experts are drawing all kinds of morals from these results as to the movements of public opinion, but the only real lesson they convey to the ordinary intelligence is that in politics you never can tell what is going to happen. The old hands are grumbling at the women's vote, which increases the uncertainty, and party organisers are at one in denouncing the intrusion of Eve into the political Eden. But the comminations are uttered in private: in public they praise "her purifying influence," which brings something of the sanctity of the home into the grave controversies of the State." I suppose this humbug is necessary.

The Future of Flying.

Mr. Winston Churchill was not particularly happy over the Air Estimates, but he forbore from making the point that when everybody is calling for economy even the airman must suffer. The main objection of his critics is that we are spending too much on military aviation, and too little on civil flying—sound policy perhaps if another great war were imminent, but unsound in existing circumstances. The increase of civil aviation under State auspices would in a very few years render it an established industry, and provide a reserve of fully-trained men with experience of air problems in the event of war—very much as the mercantile marine feeds the Navy. As it is, our good neighbours, the French, are getting ahead of us in the air once more.

Leaders of the World's Office Equipment and Filing Systems.

Shannon LIMITED

Head Offices:—
ROPEMAKER ST., LONDON, E.C.

Succursale au Caire, EGYPT. TEL. 1956. P.O.B.

St. George's, Windsor.

It is clear that a new period of church restoration is upon us. Almost every week one hears that this or that celebrated cathedral is in a dangerous condition, and must be repaired at once. The latest announcement is that St. George's Chapel, Windsor, is in a perilous state, and the architect will not guarantee the safety of the roof for another twelvemonth. The greater part of the church is to be shut for three years while the necessary alterations are made. In this case there will be no public appeal for funds.

The Boat Race.

The Oxford and Cambridge crews have now finished their preliminary training in their home waters, and are moving to Marlow en route for Putney. Report has it that Cambridge are much the better eight, and that Oxford has been seriously perturbed over the changes that have had to be made in its personnel. They are said now to be sound, but not swift, which one takes to be a polite way of saying they are a mediocre crew. But another three weeks' training may make a difference.

The Test Matches.

There is really very little to say about the Test Matches, except that we lost every one of the five—a thing that has never happened before to an England team in Australia. The Australians beat us in bowling, batting, and fielding; and on top of that our men were unfortunate as regards accidents. We are all anxious to see our conquerors this summer in England; defeat in the Antipodes has only whetted our appetites for another tussle here.

There were two unpleasant incidents in the tour which have caused some comment. Apparently there has been a disposition to criticise the umpire's ruling in more than one case. This is a deadly heresy to the old believers in orthodox cricket; for umpires, like kings, popes, and editors, are theoretically infallible.

The other trouble has arisen through some members of the England team being retained by English newspapers to cable home an account of the day's play. Their reports, so far as I have read them, have been feeble in the extreme, but they have criticised the spectators, and this has caused wrath in Australia. It is believed that the M.C.C. will probably take action, and that in future members of an England team will have to forswear reporting.

Sermonic Duets.

A really novel idea was introduced last week at St. Paul's, Covent Garden—a sermon with interruptions from the congregation. The priest in the pulpit gave a discourse on what is known as the ministration of women, and, like most parsons, he scouted the idea of women preachers—he frankly proclaimed himself “a horrid, uncompromising bigot, one of those narrow people who believe in the narrow divine way (of St. Paul) with high hedges on each side.” He was interrupted from time to time with arguments against his view by a lady who challenged one point after another. The discussion appears to have been interesting, although, of course, neither side convinced the other. If this kind of thing were to spread, it would probably lead to better sermons and more interest in church.

Modern Manners.

One of the judges in trying a case in the Divorce Court last week, which was otherwise not worthy of any particular comment, made some remarks on the need of allowing for the looseness of modern manners that have been rather widely quoted. But these *obiter dicta* from the Divorce Court are not to be accepted too seriously. A judge who never comes into official contact with any but unfaithful husbands and fickle wives naturally tends to get his general perspective a little out of focus; just as the mental specialist who never sees any patients except lunatics comes in time to think that the whole world consists of lunatics except himself.

No doubt our morals could be improved. But was there ever a time since Eve ate the apple when that was not so? We are apt to look back to the Early Victorian period as the time when virtue reigned supreme;

but this is all imagination, and part of the universal tendency to ancestor-worship and *laus temporis acti*. In looking through the recently published “Private Letters of Sir Robert Peel,” one was struck by the fact that society was pretty much the same in those days as at present. And after all, the Restoration and the Regency did not set a very good example to the poor degenerate of the twentieth century.

A Fixed Easter.

As Easter comes early this year, another attempt is to be made to reform the calendar by fixing the same date for Easter every year. The reform, like the introduction of summer time, would be very sensible; but despite—or because of—that, it will certainly not become law. A certain amount of opposition to the change would come from the Church, but the real difficulty in the way is that the public does not mind the movable Easter very much. There is no driving-force behind these particular advocates of reform.

The Week's Books.

“The Lands of Silence” (Cambridge University Press), the posthumous work of Sir Clements R. Markham, is a magnificently conceived and executed work. It is a full and accurate history of Arctic and Antarctic exploration from the beginning of those expeditions to our own times. The author was certainly the greatest authority of his day upon the subject, and there is little to add, except in the way of detail, to the record here given.

“Russian Portraits” (Jonathan Cape), by Mrs. Clare Sheridan, is a record of her journey to Moscow to make busts of Lenin and Trotsky and other heroes of the revolutionary régime. The author being an artist, has no particular politics, and consequently her impressions may be in some ways more accurate than those of Mr. Wells, Mrs. Snowden, and others who have gone to Russia with preconceived notions. At any rate, it is an entertaining book, and although she disclaims any literary gifts, her writing is fluent and easy.

A word should be given to “Collected Essays and Reviews” (Longmans), by William James. These are selections, inclusive rather than exclusive, from his scattered periodical writings over a long series of years. In them one notices the beginnings of Pragmatism as it first began to take shape in his mind—the germ of that system, if it may be properly so called, is ascribed to the now forgotten philosopher, Mr. Charles S. Pierce—and the first rough sketch of many ideas which were subsequently given more formal shape in his longer works. But the work has more than the personal interest attaching to a collection of the half-thoughts of a distinguished writer; it throws a good deal of light, not only on his mental processes, but on his reaction to current philosophical theories of that day, and it also indicates clearly how much the world of thought would have gained had his life been prolonged another ten years.

OCELLUS.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official reports:—

MIDDLE EAST (QUESTIONS TO MINISTERS). EGYPT. PERSIA. MESOPOTAMIA. INDIA: Prerogative of Mercy.—Secretary of State (Powers). ARMENIA. (February 28.)

EGYPT: Press Censorship.—Milner Commission (Report).—Workers' Organisations. BULGARIAN PRISONERS OF WAR. KASSALA RAILWAY. ALBANIA. INDIAN ADMINISTRATION (QUESTIONS). INDIA: House Accommodation (Army Officers).—King's Cadetships. —Esher Report (Recommendations). (March 1.)

INDIA: Government Officials (Cost of Passage).—Legislative Councils (Elections).—Rupee Exchange. Government Motor Vehicles.—Punjab Disturbances.—Tea (Export Duty).—Army (Esher Report).—Burma Reform Bill.—Civil Service.—Provincial and Legislative Councils.—Dr. A. D. Denning.—Railway Officers (War Service).—Import Duties. EGYPT (MILNER REPORT). INDIA: Trade Balances.—Central and Provincial Elections. ADEN. (March 2.)

ARMENIA. ADEN. INDIA: Military Accounts Department.—Army Officers (Travelling Facilities).—Government Motor Vehicles. PALESTINE: Jews (Electoral Assembly).—Easter Riots. Jerusalem. BRITISH ARMY: Troops in Mesopotamia (Officers' Wives).—Medals (Distribution). EGYPT (STATTS). (March 3.)

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, February 21.

The Political Situation.

During the earlier part of the week no little perturbation was caused by the publication of telegraphic extracts from the speech delivered by Mr. Churchill at the farewell dinner to Lord Reading, in which he referred to Egypt. A dignified protest was telegraphed to Mr. Lloyd George by the ex-Ministers, headed by Rushdi Pasha, Adly Pasha, and Sirri Pasha, and a similar, but more strongly worded, telegram was sent by Mahmud Soliman Pasha as President of the local Committee of the Egyptian Delegation, the lawyers and other Egyptian corporations. This speech and the replies made by Mr. Lloyd George in the House of Commons have been the subject of much comment in the local Press, but the controversy aroused by them will most certainly now make way for the discussion of the Milner Report, which was released yesterday. Copies were circulated to the Ministers and Government Departments, and this morning's Press publishes the first instalment. The remaining portions of the Report will, it may be assumed, constitute the most prominent feature in the local papers for the next week or so. As the mail goes out early to-morrow morning, and the Report is somewhat extensive, there is no time to report on its reception, or to ascertain the opinions of the various communities interested in the question, and local comments must be left over until next week.

The Sultan.

The Sultan reached Helwan on Monday morning on the conclusion of his visit to Upper Egypt, which has extended over a period of five weeks. On his way down his Highness laid the foundation stone for a new ophthalmic hospital at Maghagha, and by all accounts he is exceedingly pleased with the result of his trip, which in most places was a triumphal progress.

The Judicial Reforms.

Mr. Sheldon Amos, the Judicial Adviser, and Monsieur Piola Caselli, Sultania Counsellor, were to have left this week for Rome and Paris, in order to discuss with the Italian and French Governments various points which have arisen in connection with the judicial reforms. They have, however, now cancelled their departure owing, it is understood, to the receipt of a telegram stating that their presence is no longer necessary. From this it is assumed that the negotiations are following a satisfactory course. Meanwhile, it is clear that the mandate of the Mixed Courts, which expires on April 30, will again have to be renewed; for it will certainly not be possible to introduce the judicial re-organisation on May 1. In fact, in the opinion of many qualified persons the reforms cannot come into effect for at least another year.

Warriors' Day.

The arrangements for "Warriors' Day," to which reference was made last week, are proceeding apace, and the efforts which Colonel Hussy Walsh, the local Secretary of the Egyptian branch of the Officers' Association, and his Committee are making promise to be very successful. In addition to the celebration in Egypt, arrangements have now been made to hold a series of similar entertainments on March 31 at Khartoum under the patronage of the Governor-General, Sir Lee Stack and Lady Stack, and in Jerusalem under that of Sir Herbert and Lady Samuel.

YUGOSLAVIA.

BELGRADE, February 22.

The British Colony.

The Rev. Claude Hinscliff, who is well known in Belgrade, where he served last year on the staff of the Serbian Relief Fund, is now British Chaplain in Serbia. He opened his ministry by a service in the Protestant

Church in Vuk Karadjitch St. last Sunday. The British colony mustered to support their new chaplain, and it is earnestly to be hoped that generous support will be maintained. The British colony is not yet a large one, but is a very compact and friendly body.

Another social event of considerable interest to the foreign colony and to visitors to Belgrade is the opening of the new club. Preparations have been in hand for several months, and now at last the club is an accomplished fact. It is said that an attempt was made nineteen years ago, but fell through for want of support, and that the old draft rules have been taken as a basis of the new constitution. The club is open to a fixed proportion of Serbs and of the different nationalities, and has secured excellent premises in the Knez Mihailova. There is accommodation for meals, which are both good and cheap; there are reading and writing rooms, a card room, and an American bar. Visitors to Belgrade will no longer be obliged to spend their evenings wearily sitting in the cafés, and will be grateful to those energetic and public-spirited gentlemen who have organised what is nothing but a boon to visitors and foreign residents.

"What's In a Name?"

There is a discussion going on in political circles about the official designation of the State. The Croats seem to favour the addition of "Yugoslavia" to the "Kingdom of the Serbs, Croats and Slovenes"; but there is still a "Greater Serbia" party, who would like to see the name of Serbia extended to the whole country. The Bosniaks, and especially the Bosnian Radicals, have instructed their deputies to vote for "Serbia, the Kingdom of the Serbs, Croats and Slovenes," and to accept, if compelled, the now recognised triple title with the omission of the word "Serbia," but under no circumstances to admit the word "Yugoslavia." There is certainly much to be said in favour of the name "Serbia," which is famous throughout the world; for there are still plenty of people in the west of Europe and throughout the world, who have the very vaguest ideas as to what are the Croats and the Slovenes, and there are plenty of educated people in England who hopelessly confuse the Slovenes with the Slovaks, which is perhaps not unpardonable. Besides, within the Kingdom itself, there is a district Slavonia, which is part of Croatia, and has nothing to do with Slovenia. There are others who say: "The Serbs we know, for they are our gallant Allies, but who are these Yugoslavs?"

Besides, people insist on confusing Yugoslavia with Czecho-Slovakia. It is not an uncommon thing for letters to arrive addressed "Belgrade, Czechoslovakia." One British officer arrived here last year with a passport on which the officials in London had actually secured a Czechoslovak *visé* instead of a Yugoslav one. One correspondent, on receiving from the head office of a famous Paris bank a letter addressed to "Belgrade, Czechoslovakia," wrote and pointed out the error. A very apologetic reply was soon forthcoming, but this time addressed to "Belgrade, the Republic of the Serbs, Croats, and Slovenes." Even in official documents, in English, we often read of the "State of the Serbs, Croats, and Slovenes," though the correct title is, of course, "the Kingdom." Even in the native lan-

guage there is sometimes confusion. The name on the postage stamps is "kraljevstvo," meaning kingdom, which is a good Slavonic form, but "kraljevina" is more usual Serbian. In the Radicals' instructions to their deputies, referred to above, it is the form "kraljevina" which is adopted, and not "kraljevstvo."

Vanishing Brigands.

The police authorities have been very successful in dealing with the brigandage which was so rife after the war in many parts of Serbia, especially in the south and south-east. The north and centre have long since been effectually cleared, and now the outlaws and Albanian robbers are coming in voluntarily in response to the amnesty promised to those who surrender and undertake to be good in future. The most original of these was one Deli Bekir, from Liubeshche, near Pech (Ipek), who would not condescend to hand himself over to the local authorities. One fine day last week a picturesque Albanian highlander walked into the Ministry of the Interior at Belgrade, and quietly introduced himself as the great Deli Bekir, who had managed to come all the way to Belgrade undetected, to hand himself over to the central authorities. Inspired by this example, ten more have notified their intention of coming personally to the capital to surrender.

A Census.

A census has recently been made, and the returns are rather interesting. The population of Belgrade is 110,319, of whom 60,658 are males and 49,661 females. There are 5,000 foreigners. 93,663 are Orthodox, 9,109 are Roman Catholics, 1,053 Mohammedans, 4,701 Israelites, and 50 "without religion."

The catalogue of languages spoken is rather interesting. Of the total population, 93,603 speak Serbo-Croatian as a mother-tongue, 1,230 speak Slovenish, 3,047 speak other Slavonic languages, 3,643 speak German, 1,334 Magyar, 530 Albanian, 315 Roumanian, 182 Italian, and 3,389 other languages.

A Claims List.

The Municipality has issued a return of the statement of claims for damages against the enemy during the war, which is by no means without interest. In the first class, damage to agriculture, the claims amount to 22,606,937 dinars; in the second class, damage to commercial interests and shops, the claim is 393,716,553 dinars; the third class, damage to private property, amounts to 251,908,051 dinars; claims for internment amount to 34,749,470 dinars; the fifth class, claims for shooting, killed, hanging during the Austrian occupation, cover 257 claims. Of the stock and cattle taken away, there are claims for 1,395 horses, 656 swine, 2,095 sheep, 860 oxen, 329 cows, and some smaller items. When it is remembered that these are the figures for Belgrade alone where the keeping of live stock was not encouraged, for hygienic reasons, they obviously demonstrate the capacity of the Austrians for helping themselves to other people's property. The quantity of furniture looted must have been immense, and from the Ethnographic Museum, a really large amount of very valuable carpets, rugs, old weapons, and armour and embroideries was taken. A commissioner from the Museum was succeeded in recovering a good quantity of these objects from the National Museum at Budapest, but some of the most valuable are scattered now in private houses in Hungary, and can scarcely be identified or, indeed, discovered.

GREECE.

ATHENS, February 17.

The London Conference.

The rumours I spoke of in my last letter to the effect that M. Stergiadis would probably be asked to proceed to the London Conference with M. Kalogeropoulos proved true. The High Commissioner at Smyrna came to Athens at the invitation of the Greek Government, and had many long talks with both the Premier and M.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—
THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.
AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

United Cigarette Machine Co., Inc.
80, Coleman Street,
LONDON, England.

Gounaris, who recognising how valuable his assistance would be, appeared to be very anxious that he should accompany the delegation. But the Government were doomed to disappointment, for M. Stergiadis blankly refused to go to London, for reasons that have not been disclosed. The only reason for the refusal given to the Press was that M. Stergiadis' present state of health did not permit him to undertake so long a journey at this time of the year. I am informed, however, that it is to other much stronger causes that one has to look for M. Stergiadis' refusal to help his country in this hour of need. It is more than likely that there is a certain amount of truth in the rumour that he was willing to proceed to London on condition that the Greek delegation was given *carte blanche* to get in touch with M. Venizelos there.

The Prime Minister, M. Kalogeropoulos, accompanied by numerous technical, military and financial advisers, also by M. Stergiadis' private secretary, M. P. Gournarakis, left Piræus last Thursday on board the *Narcissus*.

Results of the Census.

Some of the results of the census which was taken on January 1 are now known. The population of Athens, which in 1907 was 175,430, is to-day 300,462, and that of Piræus 130,082 to-day, as against 74,580 in 1907. The increase in the population of the capital during the last thirteen years is therefore just over 71 per cent., that of the principal port of the kingdom being 74½ per cent. The population of Salonika is given as 171,981, of Adrianople 49,170, and of Patras 45,500. The results of the census for the whole of Greece are not yet known.

A Week of Strikes.

Athens was practically without trams and gas for over a week, owing to a strike of the employees of the two companies. The main cause of the trouble was the increase of wages demanded by the strikers. For the first day or so we were entirely without tramcars; later on, however, mechanics were brought up from the Naval Arsenal, and communication on some of the principal routes was partly re-established. One or two isolated cases of sabotage were reported. On Tuesday, the employees of the Athens-Piræus Electric Railway, and those of the electricity works at New Phaleron also struck, to show solidarity with the tramwaymen. Fortunately, communication between the two towns was interrupted only for a few hours, the Government having taken drastic measures to cope with the situation. On Tuesday night, Athens was plunged in darkness for about three hours, and all shops, cafés, restaurants, and so forth, had to close down, while the main thoroughfares of the city, at the time crowded with people, rapidly became deserted, pedestrians bumping into one another as they hurried back to their homes. The electricity works were immediately put under a military guard, and bluejackets were brought up from the Naval Arsenal to take the place of the strikers. At 9.30 p.m. all was in working order again.

From the very beginning of the strike the Government made certain concessions to the men, but these were not considered satisfactory, and negotiations fell through. The authorities then threatened to proclaim martial law and send all the strikers to the front, but even then the men persisted in their demands. Matters were looking very gloomy indeed when, quite suddenly, the Government gave in, and all the employees have now returned to their work after getting practically all they had asked for. The previous day a strikers' delegation was received in audience by King Constantine.

News Items.

The students of the Public Commercial College of Athens, numbering about 600, went on strike as a sign of protest against the removal by the new Minister of Education of Professor Rigopoulos who had been the headmaster there since 1906.

The Prefect of Athens Police has given instructions to all picture house proprietors to refuse admission to the show to any boys under the age of fifteen when there is a detective film showing.

A Bill was passed last week by the National Assembly proclaiming martial law in Thrace.

TURKEY.

CONSTANTINOPLE, February 23.

Suspense.

Since the departure of the two delegations to London, there have been no local developments of any great importance, and the centre of interest is for the moment in London: Reports of an agreement, by which both the Nationalist and Government missions will attend the Conference under the presidency of Tawfik Pasha, have increased the hopes of moderate Turks that saner counsels will prevail amongst the Nationalists, and that the final result of the Conference will be favourable to Turkey. The departure of an unofficial, or perhaps semi-official, Greek delegation from Constantinople, under the acting Patriarch, H. B. Mgr. Dorotheos, and the reported activities of M. Venizelos have, however, awakened considerable apprehensions in Turkish circles, and it is realised that the Turkish representatives will have to work very hard and very wisely if they are to obtain any success.

The Caucasus.

If the local situation is uninteresting, the trend of events in the Caucasus is ample compensation, although it is exceedingly difficult to judge with certainty the precise significance of recent developments in that disturbed corner of Asia. For one thing, it is hard to understand how there could have been a successful revolution in Erivan at the present moment, unless the Bolsheviks wished for such a development, and withdrew their forces designedly. The object of such a move is not difficult to conjecture, for the existence in Erivan of an administration favourable to the Allies may be calculated to have the effect of preventing the modification of any of the clauses of the Treaty of Sèvres concerning a greater Armenia, which, if it were under Bolshevik influence, would be completely in harmony with the interests of the Moscow Government. It is by no means improbable, of course, that the anti-Communist revolution in Erivan was not in accordance with Bolshevik plans, and that the Dashnaks are returning good for evil by attempting to succour the Georgians in the latter's hour of peril. This view is supported by the news of Georgian successes and the warding off of all immediate danger to Tiflis. At the same time, it is reported that the Bolsheviks have issued an ultimatum to the Turks demanding the immediate evacuation of Alexandropol and Kars. This move on the part of the Soviet Government, coming after the despatch of a Nationalist mission to London and the utterance of anti-Bolshevik pronouncements by Mustapha Kemal, would seem to indicate that the long expected rupture between the Nationalists and their "allies" has come at last. Until the Turks and the Bolsheviks actually come to blows, however, it would be imprudent to consider these circumstances in themselves as a certain indication of a new direction in Bolshevik policy. There is, in fact good reason to believe that a deep game of bluff is being played by both Angora and Moscow, and that the Bolsheviks have by no means come to the conclusion that the Turks are of no further use to their scheme of world revolution. The decisions of the London Conference will probably clear the situation of most of its present obscurity, and there is therefore nothing to be done for the moment but to "wait and see."

It is reported from Allahabad that the threatened Indian railway strike has been postponed indefinitely in view of the Government's offer to appoint a Committee of inquiry.

Candid Opinions

concerning

CIGARETTE MACHINES

Naturally no manufacturer decries his own productions, hence you would probably be inclined to somewhat discount any eulogies, however modest, *we* might voice regarding our "STANDARD" Cigarette Machine.

It is superfluous, however, for us to ask you to accept what *we* say in the face of spontaneous expressions of opinion such as the following—one of numerous *we* are continually receiving from all parts of the world from extensive and satisfied users of our machines.

Purveyors to H. E. the High Commissioner for Egypt

The 15th January, 1921.

American Machine & Foundry Company, Limited,
59, Holborn Viaduct,
LONDON E.C.1.
(England)

Dear Sirs,

It gives us much pleasure in testifying to the perfection of your "Standard Machine" and must say that, in our opinion, your machine is the standard type of any other cigarette machine we have had in use in our factory prior to yours.

In fact, with the help of 20 Standard Machines we have now in full swing, we have succeeded to secure machine-made cigarettes equal to any hand-made ones, if not better. Besides this advantage the Standard Machine with its simplicity can be handled with an ordinary operator.

We remain, Dear Sirs,
Yours faithfully,

pr. K. & G. MELKONIAN
SUCCESSOR

Full particulars upon application to:—

NEAR EAST BOOKSHELF.

- I.—"PALESTINE RECLAIMED." By Redcliffe N. Salaman, M.D., Temp. Captain R.A.M.C. (London: Geo. Routledge and Sons, Ltd. 1920. 6s.)
- II.—"THE BACKWARD PEOPLES AND OUR RELATIONS WITH THEM." By Sir Harry Johnston. (London: Henry Milford, Oxford University Press. 2s. 6d.)

I.—ASPECTS OF ZIONISM.

"Anyone who wishes to understand the Zionist movement and the Zionist point of view cannot do better than read this book. . . . I commend this book particularly to non-Jewish readers who want to know how a Zionist looks at Palestine." These sentences, from the "Introduction," by the Hon. W. Ormsby Gore, M.P., fairly describe the chief merits of Dr. Salaman's "Palestine Reclaimed." The book is an honest, outspoken, and critical account of Palestine and the new problem of Zionism. It does not exaggerate—as some authors have done—the encouraging side, nor does it belittle the difficulties. In substance the book consists of extracts from letters written—with no intention of publication—by the author to his wife, while he was serving as a temporary Captain in the R.A.M.C., attached to the 39th (Jewish) Battalion of the Royal Fusiliers. In such circumstances, the pages necessarily contain many passing impressions, some of which are self-contradictory. On the whole, however, this well-balanced review of the situation will appeal to many who have been antagonised by some of the overglowing descriptions of other "Zionists."

For a war narrative, the letters are singularly free from battle and bloodshed. The Battalion was, with infinite difficulty, got together in Egypt from the most diverse elements—English, American, and Palestinian—and was with but little training transferred to Jericho, whence it took some part in the final advance on Es Salt. They seem to have had little or no fighting, but suffered an enormously high percentage of casualties from the malignant malaria of the Jordan Valley—a fact which reflects discredit upon the Military sanitary organisation.

More important than the military side is the writer's account of the Jewish Colonies and of the new generation which is there growing up. "They are producing splendid specimens of humanity in the colonies. The old people are more or less of the Russian type one meets at home, but the new life is reacting in the children, and in twenty years Palestine will be famous for its handsome Jews." This, however, only applies to those who go "back to the land." For the city-dwelling "Haluka" Jews, who crowd into Jerusalem and the other sacred cities, the writer has nothing good to say. Indeed, he is hardly just to them. "At present the Haluka Jew is an unmixed curse; he gives the Gentile an altogether false impression." And yet the old-world atmosphere he creates is more fascinating to the tourist than that of the entirely modern Jew, with his very fluid political, social, and religious beliefs.

Even more biased is the author when he refers to the "Arabs." (The educated native of Palestine applies the name "Arab" to the Bedouin.) In one passage the writer, however, states that the "Syrians," i.e., the race now inhabiting Palestine and Syria, are "mixed remnants of Canaanites, Amorites, Hittites, and the rest"—he might have added Hebrew, Greek, Roman, Persian, and other racial strains. The Bedouin alone have any claim to be a pure "Arab" race. At the same time, because the Syrians (townspeople and fellahin) speak Arabic, enjoy a "Semitic" Oriental civilisation and—in great predominance—are Moslems, they can naturally count upon a sympathetic attitude from the great Arab tribes of the Syrian desert and of Arabia. There is no reason why Hebrews and "Arabs" should not work together; their racial customs are largely from a common stock. But if the Jew is at a "higher cultural level," it is very indiscreet of him to say so, for Moslems and Christians in the land will not admit it. It is, indeed, untrue of the "native" Jew—the Syrian, Baghdadi, Bokharali, Persian, Yemen, and North African Jew—and these elements are sure to increase under new conditions. It is a strange, and, too, an unsound, idea that Eastern Jews are to be "made into Westerns," for it is surely part of the claim of Zionism that Jews are really Orientals who have long been compelled to leave their Eastern home, in Palestine. Zangwill's public utterances—not taken very seriously by any British Zionists, who know

his sense of humour—about clearing all the non-Jewish inhabitants out of Palestine have done much harm, because he has been supposed to speak for the true Zionist, who knows very well that such ideas are preposterous. The existing Syrian race has never had any other home. Indeed, a frank co-operation between the two Semitic people is the only hope of progress in Palestine, and with so much in common it should be possible to soon live down mutual distrust and jealousies. It cannot be supposed that Zionism is to be maintained as an alien movement for an indefinite time under the protection of British bayonets, but it will need the highest tact and diplomacy to weld into one elements so diverse as the Syrian Moslem and Christian (of many sects) and the highly diverse elements of the modern Jewish race. Although critical, our author is always hopeful. But if the interest of these questions rather overshadows the narrative, there are many picturesque incidents and descriptions, and even those already well versed in Palestinian literature will find much that is new.

E. W. G. M.

II.—THE WHITE MAN'S BURDEN.

This unpretentious little volume, one of a series on "all through current problems and events," edited by Dr. Gollancz, is a veritable mine of information. The subject which it treats of is one of enormous importance, and few are fitted to deal with it with a wider knowledge and saner judgment. Sir Harry Johnston reviews his subject under the sections: "Who are the backward peoples?" "Why are they backward?" and "Our relations with them."

"The situation of the world of 1920 is that 283,000,000 of Christian white people—British, French, Belgian, Dutch, American, Italian, Spanish, Portuguese, and Greek—are directly or indirectly interfering with or attempting to control 920,000,000 Chinese, Tibetan, Indians, Cingalese, Malays, Papuans, Negritos, Melanesians, Polynesians, Persians, Arabs, Kurds, Turks, Berbers, Hamites, Tulas, and Negroes." Can such interference and control be justified? Here is the answer, drawn from history, from ethnology and practical common sense. Interference has justified itself. But our relations are changing. For one thing, "they will no longer stand bullying, arrogance, unfairness, or deprivation of their land, and the hazard of their present and future chances of happiness and ease." . . . "They are right to insist on good manners and probity in their instructors, and on being allowed to share in the administration of their own land when they have fitted themselves for such work by their education and training. They are right in refusing to allow money raised by the taxation and treasures of their own land to be spent on countries outside." . . . "The coloured man, on the other hand, must remember that his land cannot properly be developed without railways and without the white man's capital." Sir Harry Johnston preaches a sane "Imperialism," but, from intimate knowledge, very outspokenly emphasises the mistakes of the past and the present dangers.

The book would form an excellent textbook for a teacher in geography, for use in secondary schools and colleges, the extremely condensed information being expanded by the use of the standard volumes mentioned in the bibliography at the end.

PERSONAL AND GENERAL.

TO-DAY.

March 10 (New Style).
February 25 (Old Style).
Jumada II., 30, 1339 of the Moslem calendar.
Adar 30, 5681 of the Jewish calendar.

Mr. Edwin Freshfield left London on March 6 for Smyrna.

Sir Cecil Beck, M.P., has left London for Algeria, and will not be back until after Easter.

Mrs. Alec Tweedie has returned to her flat at Whitehall Court after an absence of two years.

The Earl and Countess of Ossory will return to London about the middle of April from Egypt.

Mr. Alex Devine left for the South of France last week to attend the funeral of the late King of Montenegro.

The Raja of Pudukattai and the Aga Khan arrived at Marseilles on March 5 on board the mailboat Malwa.

On March 4 General Gouraud had the honour of being received by the King and Queen at Buckingham Palace.

Reshid Bey Adra, a Syrian notable, has arrived in London from Constantinople, and is staying at the Hyde Park Hotel.

Lady Chetwode has returned to 20, Sussex Place, Regent's Park, from visiting Sir Horace and Lady Smith-Dorrien at Gibraltar.

Mr. Winston Churchill left for Egypt on March 2. Colonel T. E. Lawrence and Air Marshal Sir Hugh Trenchard are accompanying Mr. Churchill.

M. Frederic Nano, Secretary to the Roumanian Legation, with Madame Nano, left St. Moritz last week for Berlin, where M. Nano's father is Roumanian Minister.

India will probably be represented at the coming Imperial Conference by the Maharaja Scindia of Gwalior and Mr. Srinivasa Sastri, member of the Council of State.

A daughter was born on February 15, at Nicosia, Cyprus, to Mrs. Llewelyn Jones, wife of Captain H. Llewelyn Jones, Manager a.i. of the Imperial Ottoman Bank, Nicosia.

Sir John L. Maffey, on whom the Duke of Connaught recently conferred the K.C.V.O., is proceeding, says a Delhi message, to the North-West Frontier as Chief Commissioner.

Djavid Bey, a former Turkish Minister of Finance, and a prominent member of the Committee of Union and Progress, arrived in London last week in connection with the Near East Conference.

The wedding of Mr. Humfrey Grose Hodge, of Charterhouse, Godalming, formerly of the Indian Civil Service, and Miss Pamela Moresby will take place on March 31, at St. James's Church, Sussex Gardens.

Sir Rash Behari Ghosh, who died on February 28, left 2½ lakhs of rupees to Calcutta University for travelling lectures for the purpose of advancing agriculture, and about 10 lakhs to the National Council of Education.

Mr. Chotani, President of the Khalifate Conference, accompanied by Dr. Ansari, President of the India Moslems' League, and Mr. Hasan Imam have arrived in London from India in connection with the Allied Conference.

Comte René de Chérisey, the French representative on the Inter-Allied Reparations Commission in Bulgaria, and Sir Elliot Colvin, the British representative, accompanied by their staffs, arrived at Sofia on the night of February 27. The former is Chairman of the Commission for the first year. The Italian representative is Prince Livio Borghese.

The engagement is announced of John Middleton, younger son of Mr. and Mrs. Gilbert Middleton, of Glebe House, Headingley, Leeds, and Dorothea, only daughter of the late Thomas Durant Bighton, I.C.S., Member of Bengal Legislative Council, and Mrs. Arthur Saltren-Willett, of 134, Westbourne Terrace, London, and Manor House, Padworth, Reading.

The Sultan of Egypt, who has given £E600 to the Warriors' Day Fund, and has accorded his patronage to the ball which is to be held in Cairo on March 31, in aid of it, has also subscribed £E250 to the Royal Air Force Memorial Fund.

The engagement is announced between Captain Humphry Payne, Royal Field Artillery, only son of Colonel E. H. Payne, Indian Army, and Mrs. Payne, and Anthea Penne, younger daughter of Mr. and Mrs. Bernard Firth, of Clifton Maubank, Dorset.

A marriage has been arranged between Captain the Hon. G. R. B. Bingham, Royal Welch Fusiliers, and Barbara Melvill, youngest daughter of Colonel and Mrs. Joubert de la Ferté, The Ferns, Weybridge, and will take place on April 4, at Lucknow, U.P., India.

Indian residents and visitors in London are entertaining Lord and Lady Reading at luncheon at the Savoy Hotel on Saturday, March 12, and it is expected that the Aga Khan will arrive from India in time to preside. The honorary secretary is Mr. M. H. Ispahani. The number of public entertainments that are being offered to the Viceroy-Designate bear testimony to the wide approval of the appointment.

The Ecumenical Patriarch Germanos V., who is to plead before the Allied Conference in London for the Christians of the Greek Orthodox Church, arrived in London last week. He was welcomed by representatives of his Communion in England, the chaplain to the Archbishop of Canterbury, and the Greek Minister, Dr. Gennadius. He will present the case of the Christians in Asia Minor, Roumania, and Russia, and will demand religious liberty, and request that the Church of St. Sophia be restored to the Greek Orthodox Communion.

Our Cairo Correspondent writes (February 21):—I understand that there will be this coming summer an unusually interesting show of pictures in London. This exhibition, which will take place at the Alpine Gallery, will be held by Mrs. Alec-Tweedie, who has already made her name as an authoress and traveller, and has spent the last two years travelling in Southern Europe, the Near East, and India. In addition to numerous unique sketches of the Western front she will show a large number of water-colour paintings made during her recent travels. A picture which will undoubtedly attract attention is a sketch of Gallipoli made last autumn when Mrs. Alec-Tweedie passed that historic peninsula, and added interest has undoubtedly been given to this little picture by the fact that certain important points have been marked thereon by eminent soldiers whose names are inseparably connected with the Eastern campaign, amongst them Viscount Allenby and General Sir Herbert Cox.

APPOINTMENTS, ETC.

Sir Narayen Chandavarkar, late Judge of the Bombay High Court, has been appointed President of the Bombay Legislature.

Captain W. B. Heard, who is succeeding Mr. A. B. Geary as H.B.M.'s Consul in Cairo, is expected almost immediately in Egypt to take up his duties.

Our Cyprus Correspondent writes:—Mr. Luke, Deputy Governor of Jerusalem, has been arranging for his departure from Famagusta. Sir T. Haycraft, who goes as Chief Justice to the same city from the West Indies, was for some years in Cyprus as President of the District Court at Larnaca.

OBITUARY.

A Cairo telegram received here last week announced the death of Dr. David Beddoe, a well-known British medical practitioner of that city.

COLONEL LEACHMAN'S FUNERAL.

The body of Lieutenant-Colonel Leachman, the famous Arab traveller, who was murdered last summer, was brought from Feluja, says the Baghdad correspondent of *The Times*, in an armoured car, and, after lying in state in the Garrison Church of Baghdad during the night of February 28, was buried the following day in the North Gate Cemetery with full military honours. The Acting High Commissioner, the Acting Commander-in-Chief, several members of the Provisional Government, and a vast crowd of all classes of the population attended the impressive ceremony.

NICHOLAS, KING OF MONTENEGRO.

"I have seen the day with my good biting falchion, I would have made them skip; I am old now and these same crosses spoil me."—KING LEAR, Act V., Sc. iii.

It is difficult for those of us in whose veins runs warm Celtic blood to write calmly of one whose name will ever be associated with the tragedy of sorrow, humiliation, and burning injustice.

The story of Nicholas of Montenegro will one day be revealed to the world as a page of cold, unbiassed history. His story will prove no common one, for he was the maker of Montenegro, that little mountain country immortalised by Tennyson and Gladstone, at one time sole rock defence and cherished hope of the Yugoslav peoples in their centuries of fight against the Turk. History often differs from the "current Press" report. It writes very slowly, but always truthfully; and those of us who on the death of this venerable Lion of the Balkans are full of indignation at the yelping jackals who hounded him to his grave, a broken-hearted man, must possess our souls in patience until this time arrives and history pronounces her judgment, confident that the verdict will absolutely vindicate the old man and reveal a sordid story of calumny and infamous intrigue possible only in the Balkans.

It will be a revelation difficult for the average Englishman to imagine, a revelation of events to which the Great Powers (very likely in absolute ignorance) have been passive lookers-on.

As one who has enjoyed the intimate friendship of the King for many years, both in his own country and in his exile, I have known him as a man of strong personality. For his people he had a deep and real affection that went with him to the grave. That he was a "paternal despot" to some extent was probable; but is it a certainty that among primitive people such government and direction may not have certain high values? One is so prone to judge by the standards of London, Paris, and New York.

In common with most men he had his faults. His were the faults of a warm-hearted, generous man, which exposed him to the treachery of those who, when the old lion was wounded, were glad to join the mob at his heels.

Alone of all Europe's monarchs, of whom he was the *doyen*, he bore on his body the scars of personal battle. To the twentieth century financier, to the political wire-puller of to-day, these mean nothing, but there are still some of us who admire valour and the true sporting instinct. Nicholas was a sportsman. He loved fishing. It was his great joy to wander among the hills with his gun. His soul was imbued with the romantic influence of the vast heights, the majestic solitude of the mountains. He was a poet. Little children loved him. Dogs came to him as a friend.

Nicholas was not a business man. He did not realise the significance of the economic development of his nation, and thereby lost most of the sturdy youth of Montenegro who journeyed to America to build their fortunes. If only he had been a "good business man" and less of an Early Victorian and idealist, had developed the resources of his country; introduced foreign capital; and "feathered his nest," how much more he would have been regarded by the politicals and "concessionaires." These things were beyond his ken. Disaster fell upon his country, and he stood powerless and bewildered before the scurrilous intrigues that robbed him of his throne.

I saw him last about two months ago. A broken man who spoke pathetically of his beloved "children," as he called his people. Ambition in a man of eighty years of age had long since died away, though he did long to see his country free before he died. He went to his grave convinced that his people had been the victims of an infamous intrigue; that they had been robbed of the right to determine freely their future and their wishes.

The last subject we discussed was the report circulated by the Serbian Press that he had accepted a pension from the Belgrade Government. The King considered the very offer as a deliberate insult, and maintained to the last his contention that Montenegro was an independent Sovereign State, and he the legal, lawful King of his people until such time as they had an opportunity of expressing their will freely and without Serbian domination and coercion. What the future holds in store for Montenegro depends upon the people of Montenegro themselves. There are many who look forward to his people's right of self-determination—free as they were for well-nigh 1,000 years, yet

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

forming part of a genuine federation of Yugoslav peoples. If this is not to be let us inscribe on the tomb of this gallant little nation:—"Pleurant le pays perdu." As for the King, his death may bring satisfaction to his enemies who feared his rights. Those who loved him are glad of the knowledge that the aged chieftain is to be at rest, though sad that he may not slumber amid the rugged rocks of the land he loved.

Nicholas was of the first to declare war on Germany and Austria. He was loyal to the Allies and his traducers can produce no proof to the contrary. The shameful allegations against his integrity are worthy of their origin.

Vex not his ghost! Oh let him pass! he hates him

That would upon the rack of this tough world

Stretch him out longer.

ALEX. DEVINE.

NEWS IN BRIEF.

The text of the Draft Mandates for Mesopotamia and Palestine has been issued as a White Paper (Cmd. 1176), price 2d.

A Jaffa Hebrew newspaper has been suspended for one month for making a libellous statement about the Governor of Jerusalem.

Lord Allenby has issued a proclamation at Cairo removing the restrictions placed on the sale of alcohol in public establishments.

The Mayor of Belgrade, at the head of a delegation of municipal councillors, has arrived in Paris to pay a visit to the Paris Municipal Council.

On March 3 the Italian Chamber adjourned (states the Rome correspondent of the *Morning Post*) as a sign of mourning for King Nicholas of Montenegro.

A telegram of sympathy has been sent by the British Trades Union Congress to the Georgian Socialist Party on the occasion of their country being invaded by Bolsheviks.

There was much stone-throwing and using of sticks at Bombay on March 1, when Pathans were brought in to replace the oil-workers who are on strike; 23 arrests were made by the police.

The French Senate has approved the Convention signed on September 6, 1919, fixing the frontier between Wadai (French Equatorial Africa) and the Darfur Province of the Anglo-Egyptian Sudan.

India's Legislative Assembly has voted that the members' emoluments should be the same as those of the Council of State. They also voted themselves the title of "Honourable" by fifty votes to forty-one.

An Arab editor of the Jerusalem newspaper *Al Aksa* has been sentenced to one month's imprisonment and a fine of ££50 for printing an inflammatory article about the alleged hatred of all Arabs towards the Jews.

THURSDAY, MARCH 10, 1921.

THE INDIAN BUDGET.

Even in the kaleidoscopic records of Indian finance it would be difficult to discover a more glaring contrast than is presented by Mr. Hailey's two Budgets. A year ago almost everything looked bright. The revenue sufficed to cover the necessary expenditure, capital for development was provided on an unprecedented scale without increasing the burden of debt, and, in the opinion of the responsible authorities, there was every prospect of stabilising the value of the rupee at a figure which would have rendered the future practically secure. The story unfolded this year is very different. In spite of rigorous curtailment of expenditure there is a large realised deficit, and an even larger deficit is apprehended; a heavy increase in taxation is required to balance the account, the reduced capital provision for development involves not merely a fresh loan in India, but an attempt to draw upon the London market, and the value of the rupee is so incalculable that in the official statement no attempt is made to state the figures in terms of sterling. The immediate position is indeed so depressing that at the outset it is well to insist on the temporary nature of the difficulties which confront the Indian Government. In discussing last year's Budget we wrote that the new India is heir to a great estate, and that is still the dominant factor in the situation, though for the moment the estate is embarrassed owing to a combination of unfavourable circumstances. Last year's monsoon rainfall was inadequate over a large part of the country, and in consequence India has less surplus produce to offer to the world, while, on the other hand, foreign markets are disorganised and unable to absorb the produce which is available. Meanwhile India has been importing on an unprecedented scale, partly for unproductive consumption, but very largely in order to increase her future income; the immediate effect of expenditure under these two categories is the same, for looms or engines have to be paid for as well as motor-cars or mirrors, and the result is that the balance of trade has turned against her, and her currency has suffered in the estimation of the world. Various palliatives could be suggested to ease this situation, but what is really wanted is time. Given favourable weather, the increased earning power of the country will become manifest as the months pass on, and the absorbing capacity of foreign markets may be expected to recover, though perhaps more slowly, until the position becomes stabilised, and India is again able to provide the world on profitable terms with the goods which it requires.

In these circumstances the interest of this year's Budget turns almost entirely on the expedients proposed to tide over the emergency. In explaining the nature of these, we shall follow the official statement in abandoning the attempt to write in terms of the sterling pound, and shall employ the Indian unit of a crore, which represents ten million rupees, and may mean anything from half a million sterling upwards according to the prevailing rate of exchange. The deficit for the coming year works out at 18½ crores, and the problem before the Financial Member is to raise approximately that sum. He cannot reduce the amount materially, because he has already curtailed expenditure as far as possible. The charges for the civil

administration are declared to be on the lowest possible scale, and the Legislature is more likely to press for increases than further reductions. The military budget will doubtless be attacked in the course of the debates, but we confess that, high as it is, we do not see how it can be reduced immediately without incurring serious danger, and we do not anticipate that the amount of fresh taxation will eventually fall much short of the official proposals. According to these the deficit is to be made good from four sources, the Post Office, the railways, the income-tax, and the tariff. Everyone will regret the increases in postal and railway charges, but it has to be remembered that they are the result mainly of higher wages to the employees; on the railways net revenues have fallen seriously, the postal surplus has already disappeared, and in making these adjustments India is only following the course already imposed by circumstances on nearly every country in the world. Taken together, these two sources are expected to yield 7½ crores; income-tax is to provide 3½, and the balance of about 8 crores is to come from the tariff on imported goods, leaving an estimated surplus of moderate dimensions. Some critics may be disposed to urge that a larger sum should be drawn from the income-tax, and on theoretical grounds their case is tolerably strong, but the Budget must win the support of the new Legislature, and, from the standpoint of practical politics, it is questionable whether the country is yet ready for a large and sudden increase in direct taxation.

There remains the customs tariff. The principal changes proposed in it are an increase in the general rate from 7½ to 11 per cent., together with additional duties on matches, now almost a necessary of life, and on sugar, tobacco, liquors, and a long list of other luxuries. No attempt is to be made to countervail these increases by internal duties; the promise of a Commission on Imperial preference shows that no immediate action can be expected under that head; and while we may accept the official statement that the sole object is additional revenue, and that there is no ulterior motive of any kind, we must recognise that, whatever the motive, the effect of the new duties will be definitely protective, and that their level is in some cases sufficiently high to make a practical difference to the trade of the country. The proposals are, therefore, likely to excite hostility in England, and we notice that Manchester interests are already beginning to press for an enhancement of the countervailing excise on piece-goods, so that the impending discussions may have an important bearing on the practical interpretation of the new Indian constitution. In the old régime, English interests were certainly not without influence in such matters, and were on occasion able to override the proposals of Anglo-Indian officials; the question which has still to be settled is whether similar influence can be exerted successfully against official opinion with an elected legislature at its back. On this last point, at least, there is no room for doubt. Assuming that fresh revenue must be raised, the Indian legislature will prefer the tariff to any other possible source, and the flavour of protection will serve as an attraction rather than a drawback. It is no part of our intention either to justify or to criticise the attitude of Indian legislators in this matter, but it is well that the fact should be clearly recognised. The balance of Indian opinion is definitely protectionist; given a free hand, it would probably attempt to make the tariff the dominant feature of Indian finance, and we anticipate that the chief incidents of the impending debates will consist of attempts to shift a still larger part of the burden on to foreign trade. Realisation of this fact enables us to appreciate the present budget as a whole. A large sum of money has to be found, and the problem before the authorities has been to propose such measures as may prove acceptable, or, at the least, tolerable, to the members of the newly elected legislature. It was inevitable, therefore, that the proposals should include an increase in the tariff, and, the topic once raised, the discussion is likely to result in fixing the main lines of taxation for some years to come. It will be a severe test of the capacities of an untried legislature, and we are not disposed to attempt a forecast of the outcome, but, according to the present indications, the world must reckon with the possibility of a protectionist India.

CHRISTIANITY AND ISLAM.

A paper read by the Rev. L. J. Egerton Smith, Senior Chaplain to the Forces, at a meeting of Christian workers in Constantinople, held in 1920.

Let it be stated that I approach this subject as an inquirer, disclaiming any knowledge other than that of an interested observer. Residence in this land, where the Crescent has displaced the Cross, has naturally forced home certain questions as to the relationship of the rival faiths—their interaction upon each other, and the ultimate issues that are involved. It quickly becomes evident to the most casual observer that the Near East problem is at heart a religious problem, not merely diplomatic and political. And the more closely the facts are interrogated, the more clearly does the religious element emerge. It is not without significance that the settlement with Turkey is the final and most difficult stage of the Peace negotiations. Obviously the glib suggestion that Turkey be pushed out of Europe is not the easy solution of the difficulty that its advocates would have us believe. You may delimit national barriers with a stroke of the pen; you cannot so determine the frontiers of a faith; and Turkey is more than a State—she is a Theocracy. The day may not be far distant when Islam and Christianity must squarely face each other, and upon the issues of that day the destinies of the world will depend.

Points of Contact.

I take it as a principle that it goes a long way toward the reaching of an understanding between disputants that they make an attempt to understand each other. Speaking generally, it has to be admitted that Christian and Moslem scarcely know where the other stands. The idea of the average man, for example, that Mohammedanism is a complete innovation, and that the religion and culture of the Moslem world are wholly at variance with Western thought and creed is, if not wholly false, sufficiently remote from the truth to make it a very serious misapprehension. In our zeal for the truth it is easy to exaggerate differences and to conceal approximations. There are points of contact and resemblance between Christianity and Islam, despite the fundamental divergencies upon points of dogma. This could scarcely be otherwise when it is remembered that by the very fact of its historical position, Islam is under heavy obligations to Christianity. That we may readily concede. It has not been fully recognised, however, that Islam in certain other respects, notably in the departments of philosophy and literature, has partly repaid her debt. What are these approximations? Do they afford any hope of a *rapprochement* between the rival creeds? The very suggestion sounds Utopian. But who will dare to say that the situation is devoid of hope?

Mohammed's Message.

It should be borne in mind that Islam bears no sort of relation to post-Reformation Christianity. Mohammed was a product of Mediævalism, and his theories of life and religion were cast into moulds shaped by the conditions and creeds of his own times. Let it not be inferred that the religion of Islam, as we know it to-day, is identical with the teachings of Mohammed. We see a highly complex structure, with many accretions, separated by a long process of development from its original form. Mohammed's age was a period of religious indifference. He himself was an epileptic subject, liable to morbid and fantastic hallucinations, with alternating moods of excitement and depression. The Arabs were idol-worshippers, believers in evil spirits. In addition, there were local cults of the old Semitic character. It is known that Christianity had penetrated into Arabia from Syria and Babylonia, and that certain of the tribes had accepted the Christian faith. Indeed, there was a period when it appeared likely that the whole peninsula would become Christianised. Strong colonies of Jews had settled in North and South Arabia, and they gained proselytes among the people. Inevitably the impression made upon the serious-minded Mohammed was one of diversity and inherent antagonisms: an impression which the unhappy divisions amongst the professedly Christian sections did not tend to remove. Says the Koran: "But the sects have fallen at variance among themselves about Jesus." And Mohammed conceived the idea of proclaiming a religion which should combine the best elements in these rival faiths, so far as he understood them. Moreover, Christianity and Judaism had their sacred books. Who but he should bring to the turbulent tribes of untutored Arabs the new message from God, which should guide them to the gardens of Paradise? So we find him standing forth urged by Divine impulse—who can doubt—and proclaiming his message:—

"Be ye converted, for the Day of Judgment is at hand. God has declared it unto me as he declared it unto Moses and Jesus. I am the apostle of God to you Arabs. Salvation is yours only if ye submit to the will of God preached by me."

This is Islam—submission to God. Religion, as it presented itself to the mind of Mohammed, was purely national in character. From the earliest times, under the guise of religious differences, national diversities asserted themselves; theological disputes provided the rallying ground for racial distinctions and political antagonisms. He had broken with the belief in tribal deities, and recognised the one God who revealed his purpose to chosen nations through inspired prophets. And so it naturally came about that he regarded himself as the successor of the prophets. His knowledge of the Christian Messiah and of the leaders of Israel was imperfect, largely derived from traditional and apocryphal sources; but it provided useful material for his purpose. At the outset his idea seems to have been to identify himself with these great faiths and to incorporate them into a new religious system; he himself being in the succession of Adam, Abraham, Moses, and Jesus, and far greater than them all. He made free use of the earlier revelations, adapting the messages of the prophets and of Jesus to his own ends. It is all done so clumsily that it can only deceive the very elect. For example:—

"Remember when Jesus, the son of Mary, said: 'O! Children of Israel, of a truth I am God's apostle to you, to confirm the law which was given before me, and to announce an apostle that shall come after me whose name shall be Ahmad.' But when he (Ahmad) presented himself with clear proofs of his mission they said: 'This is manifest sorcery.'"

Rodwell's translation of the Koran has the interesting note on this verse:—"Mohamet had, no doubt, heard that Jesus had promised the *Paracletos*. This title understood by him, probably from the similarity of sound, as equivalent to *Periclytos*, he applied to himself with reference to his own name Mohammad—i.e., 'praised,' 'glorified,' from the same root and of the same meaning as Ahmad, also one of the Prophet's names."

The Koran, the Final Word.

So the Koran was the final word: it came down in its entirety from God to the third Heaven, and was revealed in fragments to the Prophet. It mattered not for his purpose that in reality it was largely derived from the Old Testament and New Testament, with the addition of Arabian legends and floating Christian traditions of a local character. An integral part of the new teaching was that the chosen prophets of God were men who, by virtue of their office, attained to material success. Setbacks and refusals might be encountered, but ultimate triumph was assured. Therefore the Cross of Jesus found no place in Mohammed's system: it spelt disaster. So the explanation was made that Jesus did not die as was supposed, but was translated to Paradise, another—presumably Simon of Cyrene, who was supposed to bear resemblance to our Lord—taking his place at the Crucifixion. The Jews are condemned for saying:—

"Verily we have slain the Messiah, Jesus the son of Mary, an apostle of God.' Yet they slew him not and they crucified him not, but they had only his likeness. They did not really slay him, but God took him up to Himself."

Presumably motives of self-preservation guided Mohammed in taking this attitude, lest he himself should be subjected to like rejection on the part of unbelievers. The result was that the Cross disappeared—an irreparable loss to the Orient.

As an outstanding example of Mohammed's imperfect understanding of the Christian faith we take his rejection of the doctrine of the Trinity. Upon no dogma does the Koran more insistently pronounce than monotheism. It is fundamental to Islam. It was a protest on the one hand against the polytheism of the native tribes and against the tri-theists on the other. And as such it was perfectly sound. But it considered the Trinitarian teaching to be God the Father, Mary the Mother, and Jesus the Son, these three standing in the relationship of husband, wife, and son. God the Father is represented as saying to Jesus: "Oh, Jesus, son of Mary, hast thou said unto mankind, 'Take me and my Mother as two Gods beside God'? He shall say, 'Glory be unto thee, it is not for me to say that which I know to be not the truth. I spake not to them aught but that which thou didst bid me: Worship God, my Lord and your Lord.'"

No more tragic blunder was ever made. Where Mohammed derived this idea is not clearly known, as our knowledge of the Christian sects of the peninsula is very slight. Dr. Becker suggests that here we have a development of some gnostic conception which regarded the Holy Ghost as of female sex, instances of which may be found in the apocryphal Gospel to the Egyptians. In such circumstances we cannot look for a consistent Christology in the Koran. The divinity of our Lord is denied; yet the immaculate conception is accepted, and miraculous powers are ascribed to Jesus, including the absurd apocryphal stories of Christ's childhood. Nor is it without significance that the Moslem belief in the resurrection of believers is based upon the teaching of Jesus, and that Mohammedans generally believe that Christ will be the judge of all men at the last day. There

is high commendation of Jesus and his followers to be found in the Koran:—

"We gave Jesus the Evangel, and we put into the hearts of those who followed him kindness and compassion."

"In the footsteps of the prophets caused we Jesus the son of Mary to follow, and we gave him the Evangel with its guidance and its light confirmatory of the preceding law."

"To Jesus son of Mary gave we clear proofs of his mission and strengthened by the Holy Spirit."

In Search of a Compromise.

The truth of the matter seems to be that the early days of the Prophet were occupied with a sincere attempt to effect a compromise between his own teaching and the Jewish and Christian creeds. To his chagrin he found this only aroused the hostility of both Jew and Christian, and that his newly-proclaimed message, so far from being the solvent of religious differences, only served to accentuate them. Jew and Christian could not sit down with Mohammed in the Kingdom of God. Thus there followed the inevitable break with these faiths, and we read bitter complaints concerning the antagonism of the Jews in particular:—

"Of all men thou wilt certainly find the Jews and those who join other Gods with God to be the most intense in hatred of those who believe, and thou shalt certainly find those to be nearest in affection to them who say: 'We are Christians.'"

In the first instance, Mohammed and his followers had prayed towards Jerusalem. It was only when the breach between himself and Israel was past healing that he issued instructions that the Faithful should pray towards Mecca. On the other hand, the renunciation of idolatry was final. When it was urged upon the Prophet that the old Meccan deities should be worshipped at the same time with Allah, he replied:—

"Oh ye unbelievers,

I worship not that which ye worship.

I shall never worship that which ye worship;

To you be your religion, to me my religion."

Little by little Islam was forced back into Arabian moulds of faith and practice; Mohammed found himself compelled to accommodate his methods; so that at the best it became little more than a compromise. Striking evidence of this is seen in the influence of the ancient Kaabah worship of Mecca. The Kaabah was a sacred building, in one corner of which the Black Stone had been built, an object of great reverence to the Arabs. A fragment of the famous Kaabah stone from Mecca is to be seen set in the mihrab of the Ahmedieh mosque in Stamboul, and is greatly revered.

Much has been made of the exclusiveness of the Mohammedan creed and the fanatical hatred of the Moslems for all alien faiths. It is true that terrible excesses have been perpetrated in the name of Islam, as unhappily in the sacred name of Jesus. One of the darkest blots in the history of this fair city was the domination of the self-styled Crusaders. But it should not be overlooked that Islam makes generous concessions to adherents of other creeds. Mohammed himself was consistent in this, that in so far as he believed that the earlier religions had been founded by Divine revelations, therefore the believers of these other creeds were not wholly in error.

"Thou shalt see every nation kneeling; to its own book shall every nation be summoned."

And he laid down the principle that if on the path of conquest any people surrendered to him without resistance and paid the tribute imposed, they should be preserved, and freedom of worship guaranteed. His successors did not always act upon this principle, that must be admitted. But, as Lane remarks in his "Modern Egyptians," "The Moslems are as remarkable for their toleration as for their contempt of unbelievers."

(To be continued.)

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE SHEREEF ALI HAIDER AND MESOPOTAMIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I shall be grateful to you if you will allow me to reply to Mr. Urinowski's able criticism of my letter, which appeared in your issue of February 17.

Your correspondent is under the impression that I base Ali Haider's claims to British confidence on the Shereef's attitude during the war. On the contrary, I support my statement by his conduct before the war, at a time when he had everything to lose by being pro-British and everything to gain by being pro-Turkish. During the war, I may remark, King Hussein, in his position, had everything to gain by helping the Allied cause, and, of course, rendered valuable assistance to General Allenby. He had nothing to fear from Ali Haider, as the latter's true character and sentiments were well known to him.

I do not wish in any way to say anything that will reflect on King Hussein, but is Mr. Urinowski aware of the details connected with the deposition of Abdul-Muttalib on account of the latter's Anglophile tendency; is he aware that those connected with his deposition, some of whom are now in high positions, others under Allied supervision at Malta, continually intrigued against Ali Haider on the grounds of his being sympathetic towards Great Britain, and therefore unfitted for any high position? Can Mr. Urinowski say that Ali Haider belonged to the notorious Committee of Union and Progress, while I conclude he is aware that those he supports were ardent members of the Party? Does the thoroughly English education Ali Haider has given to his sons, as well as the whole of his political career, synchronise with an Anglophobe attitude of mind?

The reasons why Ali Haider proceeded to Medina during the war were purely pacificatory; Hussein's rebellion in the regions of the Sacred Places had appalled all devout Moslems. Had Ali Haider offered his services to King Hussein there would have been no restraint on those tribes (and they were many) which bitterly opposed the latter. Ali Haider therefore rendered the best effective help he could, in his position, to the Allied cause. If Ali Haider had "been more concerned with capturing the Emirate," he could have done so with the greatest ease, as he could have organised a formidable army of far greater strength than that of Hussein's. Even your correspondent has recognised his passivity in this respect.

With regard to the second point I raised in my previous letter—viz., Ali Haider's claims on the people of Irak—allow me to emphasise that he is not merely "a descendant of the last orthodox Khafif, Ali," but the living head representative of his house. On Hussein's own admission the House of Devi-Zeyd (Ali Haider's) is senior to that of Devi-Aoun (Hussein's). Ali Haider, therefore, should make the strongest appeal to the people of Irak-el-Arabi, whether Shiah or Sunni, in this respect.

Mr. Urinowski betrays his ignorance of Ali Haider when he says he "has secluded himself from his people by living in favour at Constantinople." Ali Haider's honest intentions and Anglophile sympathies have cost him dear. Before the declaration of the Constitution in 1908, he was not permitted to go out of the city, much less to Arabia, for fear of his conducting a propaganda in our favour. From 1908 until the declaration of war he was barred from any "favour" by the strong anti-British members of the Committee of Union and Progress.

The part Ali Haider has played in the effort to achieve an Arab nationality shows at once his patriotism, his statesmanship, and his peaceful intentions. Before the war there was no talk of Arab independence, though there was a plan to separate Syria from the Turks. When Ali Haider was approached on this subject by those who advocated violence against the Ottoman Empire he suggested that, instead of revolution, they should all work to oblige the Porte to open schools throughout Arabia, where the language taught must be Arabic, to appoint a certain number of Arabs to high

official positions, and construct roads and railways. At the same time he suggested that the Arabs on their side should obtain a true census of the Arab population, so that they might be represented in the Turkish Parliament.

At that time the Turkish population was 12,000,000, the Arab 18,000,000. The Turks would, therefore, be obliged either to grant autonomy or to succumb to the majority, and so the question would be automatically settled without any revolution. Apparently the Arab leaders who had come to Ali Haider fell in with his views, and everyone worked on these lines until the declaration of war in 1914.

Complete Arab "independence," as has been suggested in many quarters, would be fatal for a community, half of whom are only semi-civilised. Ali Haider has the wisdom and foresight to see that before the principle of self-determination can be applied to Mesopotamia it is necessary that that country should have the refining influence of a Mandatory Power for a few years. This is in accordance with the views of all sane Englishmen.

Furthermore, your correspondent states that Ali Haider's "hatred for Hussein would not conduce to a harmonious working of his followers with the supporters of Hussein were he head of affairs in Mesopotamia." Ali Haider's ambitions have always been towards the establishment of peace, and it is not likely that he will allow the personal injuries he has received to stand in the way of his ideals. In fact, Ali Haider's appointment would be to Hussein's advantage, as I shortly hope to point out.—I am, etc.,

CHAMPION.

MUSICAL NOTES.

M. Huberman.

When Mr. Ernest Newman, with the mordant accuracy that informs all his work, dubbed Tchaikovsky and Rachmaninov "the Weary Willies of Music," he was severely reprimanded by some foolish judges; but the essential verity of his delightful disrespect was illustrated at two notable recitals during the last week. Why so fine a fiddler as M. Huberman, whose recital was given at the Wigmore Hall on March 3, should have wasted his time on Tchaikovsky's effete concerto (Opus 35) is inexplicable. Of course, the public liked it, but M. Huberman is obviously an artist to whom popularity is not the first consideration. It is an arguable point whether violin concerti with pianoforte accompaniment should ever be played in public, but that the first and third movements of the Tchaikovsky might be left to grow dusty on the shelf admits of little question. This was a disappointing recital, first because the violinist was not in good form—his intonation was surprisingly erratic—and also because of his choice of pieces. A new sonata by the young Polish composer Alexander Tansman was given its first performance, but it seemed to be very carefully orthodox, and scarcely gave proof of the individuality claimed for it. Another thing which M. Huberman introduced to London was Fernand Le Borne's "Poème Légendaire," a mixed work replete with modern inarticulateness and incoherence. Indeed, the fact that M. Huberman is a fine artist was partly obscured in this recital, but it was evident in some unusually beautiful phrasing and tone in both the "Mélodie Slave," from the Tansman sonata and in the "Canzonetta" of the Tchaikovsky concerto.

M. Leff Pouishnoff.

As my readers will remember, my opinion of M. Pouishnoff, the young Persian pianist, is very high, and it was indeed nothing but his superlatively good playing that induced me to listen to the whole hour of Rachmaninov pieces of which the first half of his programme at Wigmore Hall on March 3 consisted. For there is perhaps no pianoforte composer more steeped in facile impotence than Rachmaninov; only occasionally does he depart (as, for instance, in G major prelude, Op. 32, No. 5, or in the Barcarolle Op. 10, No. 3) from the superficial and allow his undeniable genius play. What M. Pouishnoff made of the C sharp minor prelude I, having carefully missed it, do not know; but to all the rest of the Rachmaninov group he did more than justice, and must, through sheer power of unworthy persuasiveness, have converted many unbelievers. (It was, by the bye, quite refreshing to hear this extraordinarily accurate pianist humanly indulge in a few mistakes in the G minor prelude, which he played as an encore.) To Scriabin M. Pouishnoff brings very individual and deliberate methods of interpretation. Remembering the kindling warmth of his Schumann and Chopin, I little thought that he would treat Scriabin with the strict intellectuality which admittedly is one of the elements of the Slav's genius. The "Gothic" sonata (Op. 23) he played in a straight and generally perfect manner, but I do not think it was a great reading. Particularly, the first (*dramatico*) movement is more true to

itself when played ruggedly, uncouthly, if you will. In the second and third movements (*allegretto* and *andante*) the pianist did not trouble overmuch to expose the exquisite melodies from their harmonic shroud, though in the fourth (*presto con fuoco*) the riot of beauty was gloriously done. There was something more than magical, something almost mystical, in the delicate restraint which informed the readings of smaller things like "Caresse Dansé," "Enigmé," and some of the earlier studies; we have not heard these done so strictly and so surely before in London. The magnificent imperiousness which is a special virtue of this pianist was shown in a wonderful interpretation of the "Poème Satanique" (Op. 36); he rode like a conqueror above its ironic chords.

Busoni.

To say anything new about the most admirable executive artist in the world is not easy; words are, in fact, wanting to describe the last recital of Busoni at the Wigmore Hall on March 2. If there is anyone who is so complete a master of his instrument, who has so many grades of touch, who, above all, can make such magnificent use of the pedals, I have not yet heard of him. For both as artist and pianist Busoni stands alone. It was, however, chiefly as a pianist that he showed himself at his last recital, a pianist who showed us, as certainly no other living man is capable of showing, to what uses the modern grand pianoforte can be put. The architectural frescoes which Liszt has built round a theme from Bach's B minor mass became not the tawdry embellishments that most pianists make of them, but endlessly beautiful things; in his own transcription of the Andantino from Mozart's E flat concerto, Busoni displayed the restrained intensity that is one of his finest characteristics; and from some of Bach's choral preludes transcribed by himself he drew the loveliest of full organ tones. Nothing that Busoni does is forgettable; but what will probably become legendary was his playing of the last movement of Weber's first sonata, the "Moto Perpetuo"—the exhilaration arising from its almost incredible speed affected the whole audience.

ANDANTE.

PRESS ON THE NEAR EAST.

Egypt.

The *Spectator*, in its issue of February 26 does not conceal its dislike for the Milner Report. After explaining that "the whole situation in Egypt is topsy-turvy," it states that Egyptians are not doing what they are supposed to be doing at the present time, but are "looking after their own affairs, and not troubling their heads with matters of government." It proceeds to demonstrate that the difficulty of finding out what the majority of the Egyptians really want is "insuperable," and its conclusions are far from hopeful:—

If what we have said is true, and we believe it is, we are perilously near a crisis, or perhaps we should say perilously near finding that after all the hopes we have raised and all the ill-blood that has been created the only sound plan would be to carry on. But that, unfortunately, is now impossible. We are too deeply pledged to do "something pleasant," and to do it quick.

We frankly confess that we cannot suggest any plan for getting out of the *impasse* into which the Government have brought us. Things will probably have to be a great deal worse before they are better. If one tried to prophesy, one could only say that presumably the Government, after a good deal of wrangling, will give the European Nationalists nearly but not quite the whole of their demands, but will give it so ungraciously that the situation as a whole will not be improved, but aggravated. As soon as a National Government has been established, it will get rid of its limitations. That accomplished, the National Government will gradually fall into the condition of all Oriental Governments. It will be undermined with corruption, and not only with corruption among the men at the top but with corruption everywhere. Corruption, however, is a very expensive and disintegrating thing, and after, say, twenty years of it we shall expect to see Egypt financially ruined and a prey to insurrections of the kind which overthrew Ismail Pasha. When this happens we or someone else will have to come in to preserve order, and then the old round will begin all over again. A new Cromer will have to be found to rebuild the old machinery and restart it. Probably even the irrigation works

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

will not have been kept up. We can imagine one of the British engineers noting how his father's, or grandfather's work, though ruined by native folly and neglect, is still sound at its foundations!

Meantime, what of the peasant and the lower classes generally? They will be once more trodden down into the mud from which we raised them, and will be quite unable to explain how it was that when the English, whom they were told to hate and did hate, went away, things, instead of getting better, got ten times worse. And here is the real crux of the question. If the Nationalists have their way, it is not we who will suffer. On a balance of account it will be extremely good business for us to clear out of Egypt proper while guarding the Canal. We have never as a nation made anything out of Egypt, for English people held little or none of the Egyptian Debt, which we doubled in value, nor of the irrigated land, to which we gave a fourfold increment. It is not we but the Egyptian who will suffer, as he has always suffered throughout history at the hands of Pharaohs, Ptolemies, Romans, Arabs, Mamelukes, Turks, and the rest. When the poor sweated Egyptian peasant fell dead at his water wheel or while driving his primitive plough, there was always another dark-skinned worker to take his place and endure his tale of misery and oppression. His rulers took from him everything except just the amount of produce necessary for his survival. He had a value as a taxpayer, and therefore he must be allowed to live. The only time in his history when the *fella* was something more than a true proletariat was from 1890 to the present time. During that period, at any rate, he had his rights and was protected from the tax-collector and the usurer who stood behind the official plunderer. And now, poor wretch, it looks as if the wheel of fate is to turn once more, and he is to be again condemned to a type of suffering which can be compared only to that of the dumb, patient, long-eared beast which so appropriately bears the heavy burdens of the heavily burdened.

THE MILNER REPORT.

(Continued.)

A feature of the Report which cannot be ignored is the distinction it draws between the Official and the Fella. Or, rather, between the attitude of these two types towards the Mission. Thus, on the first page, we read of the strong contrast between "the caution and reserve exhibited by the native official world" and "the storm of protest and disapprobation with which the arrival of the Mission was greeted by the native public and the native Press." Again, on page 9, reference is made to "the cordial and intimate relations which many old residents in Egypt, and not a few senior officials and their wives, have established with their Egyptian neighbours"; but this goodwill was, as we know, unable to prevent the boycott of the Mission. That boycott, however, "carried out as it mainly was by students and schoolboys," was not approved "by educated Egyptians generally, or even by all those who held advanced Nationalist views. Rudeness to strangers appeared to them inconsistent with the courtesy and hospitality upon which all Egyptians pride themselves." The unfortunate thing seems to have been, as was repeatedly pointed out in THE NEAR EAST at the time, that moral courage was lacking: "there were a large number of men who were really anxious to bring their views before the Mission, but were deterred from doing so by fear of the personal annoyance to which they might in consequence be exposed." The steps taken to overcome the difficulty thus created are too well known to need recounting here.

In connection with the quotation above regarding officials, it may be noted that the Report mentions the "particular resentment . . . occasioned in Egypt at the time of the arrival of the Mission by a recent increase in the numbers of the British engaged for the public service." The number of British officials has risen from a few hundred to upwards of sixteen hundred, with scales of pay higher than those of Egyptians; and though these higher scales are doubtless justifiable, they have been readily represented as constituting a grievance. It is satisfactory to learn that the Mission does not regard as justified the oft-heard criticism that the quality of the British officials has deteriorated; but the critical sense of the Egyptians has been greatly developed.

An important contributory cause of the unrest in Egypt was "the manifest insuccess of educational policy resulting in the production of an unnecessarily large and ever-increasing number of candidates for official posts, provided with examination certificates, but destitute of any real educational culture." Almost inevitably a proportion of these failures turn to political agitation, and we do not need the Report to tell us that "Nationalist propaganda has been at work for many years in Egypt." Most people will agree that "the evolution of a sane and moderate Nationalist spirit might have been regarded with sympathy and interest"; but it is unfortunate that "political rivalries among the Western Powers led it from the first to assume an anti-British colour." Finally, among the causes of unrest, "there is the latent but ever-present

impatience of the Moslem with Christian rule. . . . There is in the East a patriotism of religion which is an even more fundamental sentiment than the patriotism of home and tradition."

Two passages bearing on the Fella and the political agitator and his methods may be given. We read on page 15:—

It has been said that "every Egyptian worth his salt is at heart a Nationalist." This is only true of the educated and semi-educated classes, who constitute less than 10 per cent. of the fourteen million inhabitants of Egypt. It would be meaningless as applied to the 92 per cent. of illiterates and especially to the fellaheen, who are two-thirds of the whole people. The turbulent crowds of the great towns may indeed be easily worked up to excitement by political catchwords, which they vociferate without understanding. But the fellaheen, as a body, are normally very indifferent to politics. They are a primitive peasantry, living on the land and by the land, to which they are passionately devoted. . . . But while their outlook remains limited, their independence has developed, and they are far more tenacious of their rights than in the old days of despotism. And from the following page comes this passage:—

It is inconceivable that the sentiment of their social superiors of every class, of all the men who make opinion, should not in the long run profoundly affect the mass of the people. No doubt Nationalism as a political creed has little attraction for these unlettered millions, though they can easily be taught to repeat its catchwords. But then it is not so much by abstract political arguments that the extremist agitator seeks to win their support, as by the constant vilification of everything British and by subtly attributing every local disaster and every personal grievance to the malignity or incompetence of British officials. This campaign of mendacious denigration is carried on by many agencies, by preachers in the mosques, by country-bred students returning for the holidays, by all but a few organs of the Arabic Press. It is true that the fella cannot, as a rule, read himself, but he can always be read to, and if everything that is spoken or written to influence him points the same way, the falsehood so sedulously instilled cannot fail ultimately to poison his mind.

The Mission, however, was satisfied, even before leaving Cairo, that it would be a profound mistake to take the view that Nationalism is synonymous with violent Anglophobia and aims at the complete subversion of the existing system of government in Egypt. How far its view will be shared by the Government and people of Great Britain it is too early yet to say. But the Report is a courageous and enlightening document, and the more it is studied the better it will be for Anglo-Egyptian relations.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Sudan Loan Result.

The result of the Sudan loan is one more proof that nothing can be accounted certain before the event. While a loan for San Paulo, the whereabouts of which would, I think, puzzle the average Englishman, was readily subscribed, over 80 per cent. of the loan for the development of what might well be described as one of the most promising regions in the Empire was left with the underwriters! To say that it is disappointing is to use a mild term. I am inclined to think that one reason for the result is to be found in the somewhat inadequate publicity given to the Sudan issue. There appeared to be a tendency to believe that, in view of the reception accorded to the first part of the loan, the appearance of the new issue would be sufficient to guarantee its success. But while that factor no doubt had an effect, it would not explain the result and the apparent preference given to a minor foreign issue over a British, the interest on which is guaranteed by the British Government.

Possible Explanations.

I have talked with various people on the subject, and have received a number of conflicting opinions. One rather interesting view is that the success of the San Paulo loan is due to the support of cosmopolitan capital which has not shown any great concern as yet in the affairs of the Sudan. That, if it be true, is gratifying; but if it was through purely British capital that the first loan was oversubscribed, how was it that its support was withheld on this occasion? Possibly the explanation for this inconsistency is to be found in the fact that this is the period of the year when the tax-collector is making the first of his terribly heavy half-yearly demands. I have also heard it suggested that the result is evidence of the growing reluctance of the British investor to support any Government security so long as there are no signs that due attention is being paid to economy by the authorities. I have very little doubt that that may have had something to do with it.

Rupee Exchange.

There are one or two points in the Indian Financial Statement which seem to invite comment, notably the reference to the rupee. The Finance Member admitted that Government expectations had not been realised in regard to the exchange rate, and also that the attempt to make them good had to some extent contributed to the excess of imports, but he urged that the new policy had had to contend against very adverse forces. That, of course, is unquestionable, but one would have thought that those capable of conceiving so bold, and as many people now think so mistaken, a policy would have been able to foresee in broad outline the general course of events, and would have planned their course accordingly. The Finance Member went on to say that, in supporting the market last year, the Government had *hoped* (the italics are mine) that abnormal conditions would improve, but that as time went on it became impossible to resist the conclusion that this anticipation was unsafe. We are told that Government efforts to maintain exchange for the time being have failed, and that for the present, in the Finance Member's opinion, there is no practical step which the Government can take to end trade depression and general uncertainty. Unfortunately, Mr. Hailey at the same time hazarded the conjecture of "a likely substantial recovery" in the second half-year, if there were a good monsoon. The immediate effect of this tentative prophecy, it is to be feared, will be to make remittances from India, which have been tight enough during the last few weeks, still tighter.

Protection Against Lancashire.

Another feature in the statement of special interest is the proposal to increase the general *ad valorem* duty of 7½ per cent. to 11 per cent., except for matches and certain luxuries, but including manufactures. As this proposal is unaccompanied by a counterbalancing increase in the cotton excise duties, it can only be interpreted as a protectional measure against Lancashire, whose trade is bound to be affected to some extent if it is passed. Naturally, the announcement has been followed by immediate protests from Lancashire. The India executive of the Manchester Chamber of Commerce has sent a telegram to the Secretary of State for India expressing its condemnation of the action of the British and India Governments, and suggesting that, as the need of further revenue is the sole object of the increased duty, the circumstances could in some measure have been met by increasing the excise duty to 7½ per cent. "The Chamber," the telegram adds, "views with alarm the total disregard shown by H.M. Government of the interests of the cotton industry in this country and of its present deplorable condition, and suggests that the Government's constant expressions of concern to increase exports from this country is inconsistent with their present action." In the past Lancashire's protests have invariably borne fruit, but the position is now materially altered, and it remains to be seen whether the India Government can be prevailed upon to abandon the proposal.

The F.B.I. and Export Credits.

An important memorandum on schemes for promoting the restoration of international trade in general and British export trade in particular was forwarded last week to the Government by the Federation of British Industries. The statement, which may be taken to represent the views of the great majority of the leaders of commerce and industry in this country, sets out in plain terms the needs of the position, and the urgent necessity for support to exports by means of a suitable export credits scheme. The Federation, however, entertains no extravagant expectations of a speedy restoration of world trade and prosperity even to this country by artificial means such as this, and it is pointed out that the best that can be hoped for is that the special financial accommodation and facilities provided may have the effect of stimulating into activity the forces of wealth and productive industry by which alone the fortunes of the impoverished countries can be repaired and the requisite means of international exchange be continuously provided.

The Ter Meulen Scheme.

The Federation approves the general principles of the Ter Meulen scheme, and urges the Government to bring strong pressure to bear with the object of expediting its introduction, with such amendments as may be desirable. As the announcement of the appointment of Sir Drummond Fraser as organiser of this scheme shows, tentative steps are being taken to bring it into being. The difficulty is

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

that many months must perforce pass before it is in working order, and it needs no emphasis that in present conditions delay such as would thus be involved must be avoided if possible. The Federation meets this point by the suggestion that a scheme to finance export credits and to insure the British exporter against eventual loss due to the failure of the importer to meet his obligations should be promptly introduced. The memorandum goes on to explain the various objections to the present export credits scheme, and says that whether that be amended or a new scheme adopted, provision should be made for insuring the exporter against loss in consideration of his paying a suitable premium.

The Cotton Position.

It hardly needs emphasising that once conditions permit of a general trade revival, there will be an enormous demand for cotton goods from all parts. Unfortunately, the adverse conditions with which cultivators of cotton have been faced this year seem likely to result in a large reduction of cotton in the United States, according to advices I have just received from a valued correspondent, and should that be the case Lancashire will find cotton very hard to obtain just at the time when there is the greatest demand for its products. Any curtailment of cultivation in the United States would be a most short-sighted policy, for there is not, and never has been, any question of over-production as regards cotton; on the contrary, its cultivation has failed to keep pace with the growth of the world's consumption, and it would not be difficult to imagine a position in which Lancashire was unable to obtain anything like adequate supplies.

Bolshevism—and after.

The news that has come to hand during the last few days suggests rather forcibly that we may be within a measurable distance of seeing the end of Bolshevism in Russia and the rise in its place of a sane administration under whose auspices Russia's readmittance to the world's commercial markets will again be possible. But if we assume that happy outcome it would be futile to anticipate any widespread influence on the general position for a very long time to come. The reconstruction of Russia is likely to be an extremely lengthy process in the best possible circumstances. Transport, for one thing, is chaotic; for another, the whole machinery for trade will have to be built up again, and until this has been accomplished Russia's participation in the world's markets must perforce be very restricted. Still, in present conditions the world will be glad of the slightest assistance, and there is little doubt that the moral effect of the downfall of the Bolsheviks on the world's economic recovery would be very pronounced.

COMMENTATOR.

SAND AND LIGNITE PROPERTIES IN YUGOSLAVIA.

The Commercial Secretary to H.M. Legation at Belgrade has been approached with regard to the disposal of a workable deposit of lignite, and another of sand, on the Danube between Belgrade and Novi Sad. The deposits are stated to lie within 50 metres of the Danube, and to require a switch of some 300-400 metres to connect up with the main railway line Budapest-Belgrade. The price is two million dinars (about £17,000), and it is said that the vendors would put up one million dinars against a further million dinars contributed by the purchasers. The proposal is to develop the lignite and the sand together in the manufacture of glass. Inquiries should be addressed to the Department of Overseas Trade, 35, Old Queen Street, S.W.1.

COMMERCE AND INDUSTRY.

GREECE.

ATHENS, February 17.

Politics and the Exchange.

The Liberal journal *Eleftheria* (Liberty), of Volo, has published a table showing the fluctuation of the exchange on London during the recent political events. The details it gives are as follows:—A fortnight prior to M. Venizelos's fall the exchange was 35.00 drs.; on the eve of the elections, 38.75; three days after M. Venizelos's departure from Greece, 40.00; at the time of the plebiscite for King Constantine, 48.00; the Allies say they will lend no more money to Greece, 51.00; the Near East Conference is decided upon, 53.00; M. Gounaris decides to represent Greece at the conference, 55.00; M. Ralli resigns, 58.00; M. Gounaris will not go to the conference, 56.50; rumours that M. Stergiadis and M. Coromilas will represent Greece at the conference, 53.50.

Unsold Tobacco.

The Greek Chamber of Commerce in Athens has received information from London to the effect that practically no Greek tobacco was sold on the English market during December. Out of a total stock of 24,318 bales only three were disposed of. In spite of the discouraging news which tobacco dealers have been receiving of late, a further 290 bales of Greek tobacco were added during December to the already overstocked market. In view of the above the Greek Chamber of Commerce is advising tobacco exporters to suspend temporarily all further shipments to England.

Miscellaneous.

Control of foodstuffs, which was reintroduced a fortnight ago, has again been abolished.

The Hellenic Government has been informed by its Consul in New York that, in order to encourage and facilitate the export of frozen meat, the United States Government has decided to inaugurate a special boat service to Piræus and Salonika exclusively for the transport of frozen meat.

CYPRUS.

NICOSIA, February 15.

Cyprus Stock Committee.

The Cyprus Stock Committee, which has done much good work for Cyprus, has been reconstituted. Mr. A. K. Bovill, O.B.E., who has just retired from the office of Principal Forest Officer, has been appointed chairman, the other members being Col. Gallagher, D.S.O., Chief Commissioner of Police; Mr. Barrett, Director of the Government Farm; and Mr. H. McLaughlan.

Timber Supplies.

No little discontent has been expressed regarding the alleged over-felling of timber during the period when fuel was exported for the needs of the campaigns in Palestine and Egypt. Many have advocated the construction of a light railway from the northern Troodos range (where trees are said to have been unduly sacrificed) to Papho (*Ktima*). During the war the timber was shipped from Famagusta.

The traffic receipts of the Egyptian Delta Light Railways for the week ended February 10 amounted to £E12,818, making the total for the year £E435,734. For the corresponding periods of last year the totals were £E13,187 and £E336,991 respectively.

EGYPT'S TRADE IN 1920.

LARGE EXCESS OF IMPORTS.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, February 18.

The December Customs returns, which have just been made available, give us the trade figures for the whole of 1920. The following table shows clearly what phenomenal strides the foreign trade of Egypt has made during the war:—

	1913.	1917.	1919.	1920.
	£E.	£E.	£E.	£E.
Imports.....	27,865,195	33,175,139	47,409,717	101,880,963
Exports.....	31,662,065	41,060,612	75,888,321	85,467,061
Re-exports ...	578,251	529,799	4,307,401	2,551,894
Transit	2,972,574	8,247,487	8,911,846	12,811,874

The figures for the past year are easily the largest hitherto known in the modern history of Egypt. As can be seen, imports have more than trebled and exports more than doubled since 1917, while since before the war re-exports have increased by 400 per cent., and the transit trade has expanded by over 500 per cent.

The most noticeable feature about the past year's statistics is the swing over of the balance of trade against the country to the extent of about fourteen millions as compared with 1919, when the credit balance in Europe was increased by £E33,000,000. From the fact that during December there was a decrease of £E12,947,892 in exports and an increase of £E1,158,502 in imports, it would appear that the adverse swing of the trade pendulum will continue for some time yet.

Under imports the principal items have been:—Preserved meat, £E631,707; preserved fish, £E585,309; cheese, £E193,475; leather, £E420,846; boots and shoes, £E721,490; wheat, £E2,414,508; maize, £E220,329; barley, £E320,536; potatoes, £E334,864; flour, £E7,029,164; fruits, £E1,457,801; sugar, £E2,787,365; tea, £E240,929; coffee, £E1,125,393; wine, £E438,287; spirits, £E662,492; vegetable oils, £E675,805; petroleum, £E1,972,098; mineral oils, £E1,674,285; printing paper, £E409,545; wrapping paper, £E307,373; cigarette paper, £E344,884; cardboard, £E325,457; wood for building, £E2,688,988; coal, £E8,315,450; cement, £E273,363; manures, £E2,901,064; household soap, £E639,812; matches, £E283,760; cotton yarn, £E1,324,177; sewing cotton, £E339,726; cotton textiles, £E18,771,487; woollen textiles, £E3,128,359; silk yarn, £E526,369; silk textiles, £1,913,181; empty sacks, £E1,258,009; manufactured iron or steel, £E4,623,552; and tobacco, £E3,184,998.

Practically all these items show substantial increases in value, which in most cases are quite out of proportion to the increases in quantity. In fact, in some instances, such as cotton piece goods by the metre and vegetable oils, the quantities have actually decreased, while the total value has increased.

Under exports the principal items have been:—Eggs, £E301,863; untanned hides and skins, £E459,912; leather, £E253,230; rice, £E173,796; cottonseed, £E3,492,239; cottonseed cake, £E594,950; onions, £E543,576; sugar, £E1,144,987; phosphates, £E416,877; raw cotton, £E75,096,026; and cigarettes, £E951,121. The same remarks regarding increase apply as to imports, and a noticeable feature is the fact that cotton exports decreased by over 40 per cent. in volume, but increased by over 15 per cent. in value.

The principal items under re-exports were:—Canned meats, £E30,535; hides and skins, £E47,418; cereals, etc., £E87,728; kerosene, £E198,206; mineral oils, £E83,527; coal, £E224,182; and cotton piece goods, £E434,544; while under transit the main articles were coal, £E7,321,437; benzine, £E3,619,671; and oil fuel, £E1,792,488.

The United Kingdom's share fell somewhat, the proportion being 37 per cent., as against just under 50 per cent., in imports, and 45 per cent., as against just over 50 per cent., in exports. India increased her share by about 50 per cent. to £E3,338,709, and Australia and New Zealand nearly trebled theirs to £E4,900,722. Of the other countries, the most important increases were in respect of the United States, whose imports were nearly quadrupled at £E10,751,055, and whose exports at £E26,469,171 showed an increase of 60 per cent.; France, whose shipments nearly trebled; Italy and Chili, whose consignments were just about doubled; and Sweden and Switzerland, each of which quadrupled their sales to Egypt. Interesting reappearances were imports from Austria, £E310,090; Belgium, £E1,927,150; and Germany, £E1,186,121. It is, perhaps, of interest to note that of the cotton exports Great Britain took 40 per cent., the United States 35 per cent., France 10 per cent., and Austria and Germany 2 per cent.

Trade between Egypt and the Sudan showed further expansion. Imports came to £E2,286,986 and exports to £E3,954,221, as compared with £E1,778,646 and £E2,847,607 respectively in 1919. The main items under imports into

Egypt were:—Bullocks, £E494,482; sheep, £E460,164; hides and skins, £E111,666; sesame, £E380,868; dates, £E146,044; groundnuts, £E115,794; charcoal, £E68,080; and gum arabic, £E34,259 (a decrease of 80 per cent.). Under exports from Egypt the chief items were:—Hides and skins, £E37,367; cereals, £E227,841; refined sugar, £E1,099,217; coffee, £E175,578; cotton textiles, £E984,385; sacks, £E160,952; and tobacco, £E234,831.

The warning recently given in the note on the State accounts for the first half of the current financial year—viz., not to adopt too pessimistic a view of the huge deficit then revealed—is being justified by the figures published for subsequent months. At the end of October the deficit stood at only £E612,286, and although at the same date the previous year there had been an excess of receipts over expenditure of £E1,898,896 the October figure certainly makes the situation much more hopeful. The pull up in the revenue during October was due to a large instalment of £E1,341,293 in the land tax and £E2,136,524 from interest on funds; while on the expenditure side railways again had a huge expenditure, this time of £E990,433, and indemnities for increased cost of living took £E933,615.

GREEK DEBT SERVICE.

Payment of Full Original Interest.

The Council of Foreign Bondholders have received information that the surplus of the revenues assigned to the service of the Greek Debt in respect of the year 1920 will permit of the payment in 1921 of the full original interest on the loans of each of the three groups. As regards sinking fund, the additions in 1921 will be 28 per cent. of the original interest in the case of Groups I. and II. and 26 per cent. in the case of Group III.

The whole of the additional interest is payable on the April coupon in the case of the Funding Loan and Rentes, on the June coupon in the case of the 5 per Cent. Loan of 1890, and on the July coupon in the case of the Monopoly Loan and the 5 per Cent. Loans of 1881 and 1884.

The following are the principal figures on which the above results are based:—

Receipts: The gross receipts in 1920 from the assigned revenues from which the plus-values are derived were 65,630,414 drachmæ, as compared with the gross receipts in 1919 of 50,468,063 drachmæ, showing an increase of 15,162,351 drachmæ.

Plus-values: The receipts from the assigned revenues, after deduction of 18 per cent. of the plus-values for expenses, were 59,018,940 drachmæ, and the amount fixed by the Law of Control being 28,900,000 drachmæ, there was a plus-value of 30,118,940 drachmæ, of which the bondholders are entitled to 60 per cent., or 18,071,364 drachmæ.

Benefit from exchange: Net profit on exchange was 6,844,680 drachmæ, of which the bondholders are entitled to 60 per cent., or 4,106,808 drachmæ, making the total plus-value applicable to the service of the debt 22,178,172 drachmæ.

Of this amount there is available for interest the sum of 10,985,086 drachmæ, which produced 15,937,593 francs (being half the above amount of 22,178,172 drachmæ, less a sum of 104,000 drachmæ, representing the deficiency, due to the fall in the rate of exchange, in the equivalent in drachmæ of the amount assigned by the Law of Control for the expenses of the Commission).

For sinking fund there is available the other half, without deduction, viz., 11,089,086 drachmæ, which produced £272,232, equal to 6,805,798 francs.

Adding to the former amount the interest saved on amortised bonds and to the latter the balance brought forward from 1919, the following result is shown for 1920:—Total amount available for increase of interest, 17,643,633 francs; total amount available for increase of sinking fund, 6,854,055 francs.

Out of these sums the additions to interest and sinking fund stated above will be made, the balance of 4,735,094 francs in the case of interest being paid into the Greek Treasury and that of 60,550 francs in the case of sinking fund being carried over to the next distribution.

COTTON GROWING WITHIN THE EMPIRE.

A HOPEFUL OUTLOOK.

At a meeting of the Royal Colonial Institute on March 8, at which Sir Henry Birchenough, Bart., K.C.M.G., presided, Mr. J. W. McConnell, chairman of the Fine Cotton Spinners and Doublers' Association, read an interesting paper on "Cotton Growing within the Empire."

Pointing out that at present, speaking in general terms, the cottons spun in Great Britain came from three sources, the British West Indies, Egypt, and the United States, Mr. McConnell said that he supposed that about three-fourths of the total quantity used came from the last-named—the United States. That had been so throughout the last 120 years, except, of course, in the time of the American Civil War. Practically, then, the question was whether the Empire could grow cotton in kind and quantity that would make them less dependent on the United States. There were good reasons why this was desirable. Her crop was probably approaching its economic limits. Her own consumption was increasing. Her climate was variable, and her crops consequently varied greatly in size.

Position in India.

Cotton growing within the Empire might be considered under two heads: Countries where cotton was already established without special stimulus from Lancashire; and countries where cotton growing was somewhat of a novelty. The first class were principally India and Egypt, if for cotton purposes the latter might be reckoned within the Empire. For the most part the present-day cottons of India were not used in Great Britain. Out of the total of, say, 4,500,000 bales, about 2,500,000 were used in India itself. Japan and China used about one million and one-eighth, and the remainder used to be sent to Germany, Austria, and other parts of Europe. For many reasons it was not thought to be possible, and for other reasons it was not considered desirable, to alter the main growths of India so as to make her cotton suitable for British use. It was also in no way desirable to grow additional cotton at the cost of growing less food. The improvements which must be aimed at principally were, first, to enlarge the yield per acre; and, second, to make the cotton grown of better quality, without altering its suitability for the mills which now used it. Such developments as those would greatly promote the prosperity of the agricultural population in India. However, apart from that, it was known that there were districts in India, notably in Sind, which might be put under irrigation and which might then produce several hundred thousand bales of cotton of a kind which would be readily marketed in Lancashire.

The special interest of cotton in Egypt lay principally in two factors. First, everything in Egypt, and cotton among the rest, was grown under irrigation. In growing cotton under irrigation, Egypt was, until a few years ago, unique. Now, cotton was being grown similarly under irrigation in California and in Arizona. The beginning had been made of growing cotton under irrigation in the Sudanese Gezira, and successful attempts at growing cotton under irrigation were being made in Northern India. It was thought probable that in parts of Nigeria and in other places in the Empire which were now sterile, irrigation might make the growing of cotton possible. It could also easily be seen how much the study of the laws of plant development was simplified, when the supply of moisture and consequently of plant food could be exactly controlled.

The other point of interest is that Egyptian cotton was of a very distinct type. Its origin was, he believed, not exactly known. It began with a special plant brought to notice by a French engineer, Jumel, growing in the garden of one Maho Bey. Then it was gradually modified by crossing with exotic plants, such as Sea Island and Brazilian. However this might be, it had now for many years been essentially of one type. There were indeed, speaking commercially, many kinds of Egyptian cotton, which differed so much that the differences were of great importance to spinners. But they were all of the Egyptian type. Just in the same way there were many differences in the main American crop, but all its varieties were so much of one type as to be readily separable from Egyptian, or from Indian, or from Brazilian or other types. The three important economic characteristics of the Egyptian type were, first, that more than any other cotton it was free from short and imperfect fibres, and therefore made a clean yarn, and was also less expensive to work; secondly, its whole range of kinds was suitable for spinning the much-needed counts of yarn which were finer and stronger than those that could be made from American Uplands; thirdly, it happened to be the cotton which gave the best results under the mercerising process, by which ladies were enabled to appear to be wearing silk garments without having dipped too deeply into their husbands' pockets. Egyptian cotton was used universally for all purposes, such as motor tyres, where strength was essential. It was also the bulk cotton used for all the finer materials called for by the dictates of fashion. It was only excelled by the Sea Island type. About two-fifths of the Egyptian cotton crop was used in Great Britain; and about one-fourth of British spinners were dependent on it.

Problems for Egypt.

The question of increasing the growth of cotton in Egypt was also one of great interest. Everything in Egypt depended on the Nile. And the profitable use of the Nile depended: firstly, on water storage; secondly, on water distribution; and thirdly, on efficient drainage. Water distribution had been most efficiently handled under the direction of British engineers. Suitable barrages had been erected at appropriate places, which had made it possible to spread the Nile water where and whenever wanted over large areas both in Upper and in Lower Egypt. Water storage had also been provided to a degree sufficient for all needs up to the present time, and plans had been made, and were now being carried out, which it was hoped would suffice for large extensions of cultivated land. In regard to drainage, the position was less satisfactory. There were two aspects of this to be considered. First, dividing the Delta into three parallels there were large areas of land in the middle tract where drainage was now imperfect, and there were further large areas in the Northern tract which were mostly salted desert, or swamp, or even under water. Great public works had been designed in Lord Kitchener's time for draining both these areas, and it was computed that when they were carried to completion in the course of fifteen or twenty years, there would be an automatic increase to the crop of cotton amounting to 750,000 bales of 500 lb., or a 50 per cent. increase over the previous maximum. These schemes were inevitably postponed during the war, and the latest news with regard to them was of rather a disappointing and uncertain nature.

The other aspect of the question was highly technical and scientific, and he could only explain its character. It was known that the cotton plant in dry ground put its roots down six or more feet below the surface. It was also, he thought, now admitted, though the theory was for some time in dispute, that if the subterranean water (which it could readily be believed was never very far below the level in the Delta of a great river) rose again after the plant had pushed down those long roots, they, which were the most active roots of the plant, would be drowned and die, so that the plant would fail of the strength necessary to continue bearing fruit. That was again a question of drainage, but that was a much more difficult matter to deal with than was the mere removal of the irrigation water after it had served its purpose. Statistics, carefully collected and fairly examined, indicated that there was some secret cause at work, which prevented the land in Egypt from producing per acre more than perhaps three-fourths of what it did before the water storage and water distribution had reached its present efficiency.

He now turned to what was being done fresh in the Empire, largely due to the enterprise and perseverance of the British Cotton Growing Association. In the British West Indies cotton was being grown when they were first discovered, but as an industry it was reintroduced about the beginning of the present century. Of the cottons grown, the greatest interest attached to those of the Sea Island variety. That variety, which took its botanical name from Barbados, was introduced into the United States from the Island of

Anguilla through the Bahamas soon after the Declaration of Independence. For one hundred years and more America enjoyed a monopoly, and at the highest point about 100,000 bales of it were grown in Florida, Georgia, and South Carolina. In the last year or two the Boll-weevil had made the growing of it commercially impossible in any of the States. It had been replaced in the mills of the world partly by improved cottons from Egypt and partly by similar cottons developed from Egyptian seed in Arizona; but for the very finest types the only present source was the West Indies, and particularly the British Windward and Leeward Islands. The quantity grown there was about 5,000 bales, infinitesimal in comparison with a world's crop of 20,000,000 or more, but a vital and necessary portion notwithstanding. Moreover, the management both by the Agricultural Departments and by the individual planters of those charming little islands was an example which, if followed in the rest of the Empire, would rapidly solve all difficulties in cotton growing. The Sea Island cottons from the West Indies were almost entirely consumed in Lancashire and in Lille, where many of the finest mills worked in close alliance with British firms.

The Sudan and Mesopotamia.

In other parts of the Empire they had so far as was known great possibilities. The Sudan grew a little, and could grow a large quantity of cotton under irrigation on the Gezira, south of Khartoum, and at Tokar and at Kassala. That of the Gezira in particular was of excellent quality, whether it was of the Egyptian or the Upland type. The Sudan was also known to be suitable for growing excellent cotton in the rain district further south, where transport on the White Nile might be possible. Uganda, as the result of comparatively few years' work, was promising 250,000 bales per annum, and might be expected before long to increase that to 1,000,000 bales. From Nigeria, that was particularly from Northern Nigeria, 100,000 bales would be expected in the early future, with practically illimitable possibilities in more distant years. In Nyassaland, Rhodesia, and in the Union of South Africa, the beginnings had been made, and if the prices obtained for cotton were reasonable in relation to the costs of living and to the prices of other products of the soil, development might be progressive and even rapid. The Union of South Africa in particular appeared to him to be taking up the matter on lines which ought to secure success.

In Mesopotamia, if it remained so far within British control that peaceful existence could be secured, the prospects were good. Experimentally, a cotton extremely suitable to Lancashire had been grown there, giving better value both to grower and to spinner than it gave either in America, where it originated, or in India, whence the planting seed actually came. In Australia, that was in Queensland, cotton was at least a possibility. Grown there entirely by white labour and at a high cost, two things were necessary. First, it must only be grown on a part of each planter's holding; secondly, it must be intrinsically cotton commanding a high price. As regards the latter condition, he had recently seen samples of extremely promising appearance, grown apparently from Sea Island seed, and in value quite among the highest classes. The cottons in all these places that he had mentioned were exactly what were wanted for their Lancashire mills, and also were suitable for Canadian use. There were many other smaller districts in the Empire where cottons might come to be grown when knowledge about it was more widely extended, but he thought he had said enough to justify, at any rate, a confident hope that the British Empire would in due course be able to grow a very large proportion of the cottons required for spinning in the mills of the Empire.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence. Calcutta, dated February 28:—During the week ended February 19, general crop prospects unchanged. Bombay cotton market easy; fine M.G. Oomra, March, Rs.238: May, Rs.252 8. 0. Piecegoods market dull. Attitude of piecegoods merchants has hardened. Majority standing fast for settlement of bills on 2s. exchange basis, only a little new business being done on cash rupee basis. Calcutta jute market dull but steady. Some business done in Hessians early last week, on revived rumour of mills working only four days from March 1, but later, buyers retired and rates reverted. No further reduction in freight rates. No change in Bank rates. At the Tea Sale, on February 22, prices were steady for well-made black Pekoe Souchongs, and the few fine liquoring teas; all other grades were lower. 585,080 packages were sold to date at an average price of 5 annas 5 pies per lb.

OIL OUTPUTS.

Algerian Oilfields.—Production from leased area:—November, 41,968 kilos; December, 39,783 kilos.

LEVANT MARKET REVIEW.

We give the following extracts from the market review of the National Bank of Turkey for January:—

Turkey entered the new year under a heavy cloud of commercial depression, which is slowly but surely growing thicker and blacker. The commercial future of the country is bound inextricably to the political future; and until the Allies have determined this, business must remain in its present state of stagnation. Great hopes have been raised among some of the local merchants by the Allied decision to hear the views of the Angora party. Others again believe that nothing can come of this new conference. Nevertheless, considerable interest was aroused by the announcement of the departure of the Turkish delegates for London, on February 12. This announcement, however, has had little or no effect on the exchange.

Much interest has been displayed locally by news of the intended payment of indemnity to Allied subjects. It is calculated that with the two million sterling paid by Turkey for the two warships in building before the war, together with the Egyptian tribute, the total sum now available in London for distribution must be about five million sterling. This sum will be handed to the financial commission at Constantinople for distribution. The state of the national finances is known generally to be very bad; indeed, until recently, Government officials at Constantinople were three months in arrears of salary; and in the more remote parts of the country the state of arrears was much greater.

Throughout the month of January exceptionally fine weather was experienced, which has alarmed the farmers to some extent. It is feared that the crops, growing too rapidly under the influence of the warm sunny weather, will be caught by the bitter cold winds that blow from the Caucasus later in the spring.

Flour and Cereals.—The flour market was more cheerful in January. About 11-12,000 tons arrived, of all qualities, chiefly from America, Australia, Bulgaria, and Roumania. Prices fell in sympathy with the American market, and 140 lb. bags realised £T13½ to £T12½ for various qualities. The stock in hand is about 11,000 tons. The flour imported into Constantinople is for local consumption only, so that the market may be considered well stocked. There were fair arrivals of barley during the month, and the market remains well stocked, although the demand continues to be good. Prices have fallen, however, to 9½-10½ piastres per oke.

Sugar.—Arrivals were greater during January than for the preceding month, chiefly Java, from New York, Marseilles, and Holland. Prices came down to some extent, and the market closed at prices from £50-56 for different qualities. The stock remains small.

Canned Goods, etc.—With the persistence of the unfavourable exchange of Turkish money, orders are still being cancelled, and goods now on the local market are those imported four or five months ago when Turkish money was worth more. Tinned goods, however, continue to come into the port, especially sardines, codfish, milk, and herrings in the barrel. Prices generally have not increased; tinned salmon, tinned fruits, and biscuits are being sold at 25 per cent. below cost.

There is the same eagerness to get rid of the present stocks, and prices are being cut as fine as possible. This eagerness obtains amongst the retail merchants especially. They seem to ignore the fact that replacement of stocks will cost them so much more, and that if through their sales they increase their capital by 20 per cent., the capital has only about 50 per cent. of buying value. Most of the wholesale grocers, however, refuse to withdraw their goods from the customs, with the result that the custom house is full of canned goods, jams, liqueurs, etc.

There is a great demand here for canned goods and spirits, and, under normal conditions, Constantinople should be a good market for these articles. Many of the grocers' co-operative associations in the city are embarrassed owing to the depreciation of Turkish currency and the resultant slump in local buying. In the past their strength lay in their rapid turnover, but through purchases effected at an unfavourable moment, they have had their capital, or a considerable part of it, tied up, and are consequently very nervous.

ALEXANDRIA WATER COMPANY, LIMITED.

EGYPT.

Notice to Shareholders.

Issue of 20,000 New Shares of £5 each.

Offered to Shareholders at par.

Applications close on 30th March, 1921.

Circular, giving full particulars and application form, obtainable:—

In London, from Barclays Bank, Limited, 1, Pall Mall East, S.W.1, or 54, Lombard Street, E.C.3.

In Alexandria, from the Anglo-Egyptian Bank, Limited.

ENGINEERING.

Wolseley Motors.

One of the most interesting visits to works I have paid was that of a few days ago to the huge establishments of the Wolseley Motors, Ltd., at Birmingham. It is remarkable to note that the Wolseley Company seems practically unaffected by the undoubted depression which exists in so many parts of the country, and I was impressed not only by the size of the staff and the number of cars in hand, but by the astonishing activity which prevailed throughout the mammoth buildings, which, by the way, cover over 30 acres of ground. A visit paid immediately afterwards to the Ward End Works of the same company, but situated in another part of the city, confirmed the view as to the remarkable activity of this branch of the industry.

The selling organisation of the company is probably one of the most perfect in the world. The vast commercial ramifications of the Vickers Co., the owners of Wolseleys, provided at the outset a world-wide organisation for selling purposes such as no modern motor concern could attempt. It was a comparatively simple matter for the Wolseley Co. to follow in the steps of the parent organisation, or rather to adopt the machinery of such organisation for the purpose of selling Wolseley cars. As a consequence Wolseley cars are being exported to-day in spite of the detriment of adverse exchanges to every country on the globe where trade is possible. Naturally the difficulty of exchange has made some inroads on the export of these cars, which probably accounts for the fact that the full quota of 200 cars a week has not been reached, not to say exceeded, as it might reasonably have been expected to do. From my own impressions regarding the plant and staff of the company, however, it will not be long before they are in that enviable position.

The Wolseley Products.

The smartest little car on the road, in the opinion of a number of capable judges, is the 10 h.p. Wolseley, which, although a vehicle of the highest class, was designed to meet the popular demand for an economical, reliable, and easily-driven runabout. Most of my readers will remember the pre-war Stellite car; it was the forerunner of this production which has incorporated in its design all the best features of that very popular production. The engine has been redesigned throughout, and possesses many unique and patented features, the outcome of four years' war experience in building aero engines. There are four cylinders, cast monobloc, with bore and stroke 65 mm. by 95 mm. respectively. While these dimensions conform to the R.A.C. rating of 10 h.p., the engine actually develops over 20 h.p. with remarkable flexibility. The overhead valves are actuated by an overhead camshaft with Wolseley patented driving gear, the cylinder head being detachable. The B.L.I.C. dynamo and electric lighting details are on the left side of the cylinder bloc, the starting motor and steering gear on the right. Petrol is gravity-fed from a tank under the scuttle dash to a patent equalising carburettor which has been specially designed to give easy starting from cold. A gear type oil pump is driven from the vertical shaft at the point where it leaves the crank case. This pump draws oil through a gauze-covered nozzle, and delivers it to a three-way pipe. One of these leads supplies oil to troughs in which the big ends dip, and also to a well feeding the rear crank-case bearing; the second leads to drilled passages in the cylinder head casting, and thence to the camshaft bearings and to the inside of the hollow rocker pivots and to the rubbing points. Cooling, as is usual with engines of this size, is by means of a thermo-syphon system. I hope to be able to deal with the Wolseley "Fifteen" and the Wolseley 20 h.p. Car de Luxe in a subsequent note, but sufficient has been said to show the sound engineering character of the light 10 h.p. car.

In a recent interview Sir Vincent Caillard, the chairman of the company, said to the writer, after dealing with the war work of the organisation and the gigantic task of changing over to peace production:—"Throughout the war the whole designing skill and manufacturing energy of the Wolseley Company were devoted to the great variety of war material. It doubtless would have been in a much better position had a section been retained for motor-car production, but with two such great upheavals—from peace work to war work, and from war work to peace work—none except those intimately connected with the company can have any conception of the work and expense entailed. Add to this the fact that not the smallest amount of energy could be

devoted to the production of post-war designs, and you will see that there must have been serious delay in getting together plant sufficient for post-war activities. This delay was, of course, greater in the case of large manufacturing companies like the Wolseley than in the case of smaller companies, because the big manufacturing concerns could not take any risk in embarking on the manufacture of motor-cars on a large scale; so appeals were made to the Ministry of Reconstruction—urgent and repeated appeals—mind I am not blaming the Ministry of Reconstruction, because we had to win the war. The result was in September, 1919, we were prepared to design and deliver three cars. I am speaking to a company of experts, and you will realise that the manufacture of a new car must occupy considerable time; and it is not unusual that a period of two years should pass from the announcement of the design to the development of quantity. It was obvious that the Wolseley Company, and indeed no progressive motor company, would embark upon a large scale manufacture of warmed-up pre-war design, and thorough overhaul was necessary, because during the time that had elapsed there had been, partly owing to the development in the aeronautical industry, a great advance in the design of internal combustion engines.

"The Wolseley Company's new model cars were based upon this advance. They did not fit the new types of engines into the old type of car, but they endeavoured to produce the individual parts correspondingly, so as to produce one perfectly combined and efficient whole; thus the new model Wolseley cars are the result of experience again right up to the moment of inception, and I am happy to say that the public as a whole have recognised that the new models were passed for production in June, 1919, and we had every hope that we should have been in full production in March, 1920; but owing to the unfortunate moulders' strike no castings were available for twenty-two weeks, and the factories could not commence producing complete cars until August, 1920. Since then output has been greatly accelerated to 150 cars per week, and the maximum of 175 cars per week."

SUGAR PRODUCTION IN YUGOSLAVIA.

The Commercial Secretary to H.M. Legation at Belgrade has forwarded some particulars of the sugar production in 1920 in Yugoslavia taken from an article which appeared in the *Agramer Tageblatt*. It appears that out of the total capacity of the eight refineries of the State of 6,200 wagons of sugar only 1,867 wagons were produced, and as the internal demand is for about twice this quantity, instead of exporting sugar, it was necessary to import about 1,800 wagons. One of the chief causes of this shortage is that the acreage under beet cultivation is small: cultivation hardly paying the peasant, who before the war received 3 kgs. of sugar for every cubic metre of beet delivered to the refinery.

In order, therefore, to put the sugar industry on its feet, so that it may at least be able to cope with the demands of the country itself, it has been suggested to the Minister of Finance that for every cubic metre of sugar beet used in the refineries 3 kgs. of sugar should be freed from the monopoly tax. These three kilos of sugar would be given to the peasants by the refineries as payment in kind. Thus the cultivation of beet could be intensified, and the productivity of the refineries brought up to their highest capacity. The State would lose about seventy-five million crowns in duties (300 millions was the total amount obtained from duty on sugar), but the sugar production would be increased and react favourably on the price of sugar. This suggestion may be taken into consideration at the Ministry of Finance.

The Commercial Secretary to H.M. Legation at Belgrade reports that it is probable a corn exchange will be established in the near future at Novi Sad. At present there is no relation between prices for corn at Novi Sad and, say, Belgrade. The need for exchanges in these two towns, which are the great centres for the corn, vegetable, and meat trade of the country, is no doubt very great, and exchanges should tend towards making the export of the agricultural produce of Yugoslavia more feasible. There has also been a movement for having a similar exchange at Subotica, but it is unlikely that this will mature at present.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—Business continues to be brisk. Currants have come to business readily, especially the lower grades. Sultanias have also been a good spot. Figs are now selling freely, while a fair demand has arisen for Persian dates.

Sugar.—There has been a slight rise in price. West Indian crystallised has been done at 59s. to 61s. 6d., while American granulated at 30s. has risen 6d. The Home refined has been in strong demand at the official rates.

Coffee.—A steady tone has characterised the market. Costa Rica, fine bold blue has come to business at 133s. 6d., and peaberry is quoted at 146s. to 161s. 6d. Nairobi ordinary bold to bold greyish has been done at 81s. to 94s. 6d. The futures market has been firm. Quotations: March, 41s. 6d.; May, 42s.; July, 43s. 6d.; September, 44s. 6d.; December, 45s. 6d.

Oilseeds.—Prices have all declined. Indian linseed is 1s. 6d. lower at 17s. 6d.; and La Plata has lost 3d. at 16s. 3d. Rapeseed is weaker, with Toria at 18s. 1s. down, and bold Ferozepore at 16s. 9d., a loss of 1s. 3d.; while brown Cawnpore has come to business at 14s. 9d., a drop of a like amount. Cottonseed has been steady, with Indian at 8s. 6d. and Egyptian black at 10s. 9d., a decline of 6d. each.

Seed Oils.—Oils have been changeable. Linseed oil, at 30s. 6d., is 2s. 3d. down. Rape oil is the same at 49s. Refined cotton oil is unchanged at 40s.; while the Egyptian crude variety is 1s. down at 31s. Turpentine is 5s. lower at 55s.

CURRENT PRICES.

General Produce.—Bacon, 172s. 6d. cwt.; butter, 298s. cwt.; cheese, 160s. cwt.; chillies, 125s. cwt.; eggs, 31s. per 120; cloves (Zanzibar), 10d. lb.; cocoa (Ceylon, good to fine), 80s. cwt.; coffee (Costa Rica), 115s. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 103s. 6d. cwt.; ginger (washed cochon), 37s. 6d. cwt.; hams, 160s. cwt.; lard, 121s. cwt.; nutmegs (110's to 80's), 1s. lb.; pepper (Singapore, black), 4d. lb.; pepper (Muntok, white), 8½d. lb.; raisins (Valencia), 120s. cwt.; sultanias (Smyrna), 110s. cwt.; currants (Vostizza), 86s. 6d. cwt.; sugar (granulated), 57s. 6d. cwt.; No. 1 cubes, 72s. cwt.; Mauritius, 66s. 3d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 23s. cwt.; sago flour, 15s. 6d. cwt.; rice (Rangoon No. 2), 13s. 9d. cwt.; rice (bran Rangoon), £5 5s. ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 3½d. lb.; wheat (Australian), 88s. 9d. qr.; wheat (English white), 75s. qr.; wheat (La Plata), 55s. 6d. qr.

Hides and Skins.—Ox and heifer: first, 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lb., 6½d. lb.; 60 to 69 lb., 6d. lb.; cows: first, 60 lbs. and up, 4½d. lb.; 59 lbs. and under, 3½d. lb.; cows: second, 60 lbs. and up, 3½d. lb.; 59 lbs. and under, 3d. lb.; bulls (first), 3½d. lb.; bulls (second), 2½d. lb.; kips (first), 5½d. lb.; kips (second), 4½d. lb.; kips (third), 3½d. lb.; horse-hides, 6s. to 9s. Calcutta Market.—Prices in rupees per 20 lbs. Arsenic hides, cows: Agras, 6 to 11; Durbhanges, 5 to 6; Patnas, 4 to 5; salted cows, 3.8 to 6.8; arsenic hides, buffalo, 2.8 to 6.8. Skins: calf, 6 to 8 per 20 lb.; goat, 12s to 150 per 100 pieces.

Rubber: plantation, No. 1 crepe, 1s. 1½d. lb.; smoked sheet, 11½d. lb.; fine hard Para, 11½d. lb.

LANCASHIRE COTTON.

Depressing Outlook.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Sellers have experienced another unsatisfactory week, for although values have continued on a low level, buyers have not been induced to operate more freely. The decision of the Indian Government to increase the import duty on cotton goods has met with distinct disappointment from Lancashire people, and though overtures are to be made in official quarters, there is little likelihood of any interference by the British Government. Spinners of yarns are in the depths of despair, and as the output is far greater than the requirements, spinners are curtailing production on a larger scale than recommended by the Masters' Federation. With regard to the cloth section, very little of a cheery nature can be said. There has been a very limited inquiry, which in most cases has been entirely unworkable. Advices from India show that clearances are being successfully carried out in the bazaars, but there has followed no general flow of orders. Only scattered sales have occurred, mainly in dhooties and jaconets for Calcutta. Buying for China has been of a hand-to-mouth variety. It is understood that merchants in Shanghai still hold large stocks of dear goods. No special feature has presented itself in inquiry for the Near Eastern outlets, and shippers have reported practically an absence of buying. Occasional sales have gone through for Egypt and the Levant, but generally only small lots at cut prices have been sold. The yarn section has remained very sluggish. American counts have weakened in price in sympathy with a poor offtake. Egyptian spinnings have had no friends whatever, and producers have lost further ground. Taking everything into consideration, the market is in a very bad state, and it looks as if it will be some time before any revival of demand will present itself.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended March 3:—Fundamentally there is no change in the situation since our previous report of the 24th ultimo. The spinning trade is still floundering in financial difficulties, and the healthy off-take of actual cotton which is so eagerly looked for still fails to make its appearance. During the last two or three days a strong feeling of optimism has arisen in Egypt, caused apparently by a rumour that Government assistance was about to be given in that country to help the trade over the present difficult period. This rumour, up to the present, lacks confirmation. The immediate effect, however, was a slight stiffening of prices here, and one or two sanguine shippers withdrew their cotton altogether from the market! The wisdom of this proceeding still remains to be seen; suffice it that, in the interim, they missed business. One important sale of white Sudan cotton took place during the week, about 310 bales being moved, and one broker was the fortunate possessor of a buying order for a quantity (rumoured at 1,000 bales) of Sakelariadis fully good fair to extra fine. Needless to say, he found no lack of sellers, and some very cheap cotton changed hands. It is presumed that this cotton is destined for the Continent. Manchester reports continue to be very depressing, and considerable stoppages of machinery are expected at Easter. C.i.f. business is officially, and very aptly, described as neglected. Total sales 1,200 bales, which includes 330 bales Sudan cotton. Quotations of Upper are reduced 100 points, those of Brown and Sakelariadis 150 points. Fully good fair Sakel 13.00d. per lb.

DRIED FRUIT.

Messrs. J. C. Houghton and Co., of Liverpool, in their monthly report, state:—

Currants.—The situation on the whole can only be summed up as disappointing, for trade has not developed appreciably. It is true that occasionally there was promise of some small renewal of activity, but the movement never gathered strength, and dwindled almost from its inception. Buyers pursue their Fabian tactics, and little has been done apart from some inquiry for old Government stocks, which at the figures of 32s. to 45s. are excellent value. Some sales also were effected of Vostizza growth, new crop, at 86s. to 95s. The fall in the Greek exchange has caused a corresponding rise in the value of stocks held in Greece, and this is, of course, a favourable factor. Quotations are:—Pyrros, 60s. to 65s.; Amalias, 65s. to 68s.; Patras, 66s. to 70s.; Gulf and Panariti, 72s. to 78s.; Zante, 70s. to 78s.; Vostizza, 82s. to 95s. Total arrivals from commencement of season to date, 18,550 tons.

Valencia Raisins.—There is practically no inquiry for the little stock remaining. Selected is quoted at 100s. to 120s., and the few parcels of seedless which were sold realised 95s.

Sultanias.—A further small arrival of Smyrna, per Bavarian, is to hand, but demand continues slow, and where sales have taken place it was at a further reduction in price, latest figures being:—Smyrna, 108s. to 125s.; Greek, 110s. to 125s.; Afghan yellow, 100s. to 110s.; red, 90s. to 95s.

BANCA NAȚIUNEI

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia, for Bombay (Glasgow, March 19, and Liverpool, March 24).

Anchor Brocklebank Line.—S.s. Manipur, for Calcutta (Birkenhead, March 19); s.s. Shadwell, for Port Said, Colombo, Madras, and Calcutta (leaves London, March 24); s.s. Maidan, for Calcutta (Birkenhead, March 30); s.s. Magdapur, for Calcutta (Birkenhead, April 11); s.s. Holywell, for Port Said, Colombo, Madras, and Calcutta (London, April 16).

Bibby Line.—S.s. Oxfordshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 16); s.s. Lancashire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 30); s.s. Yorkshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, April 13).

Clan Line.—S.s. Clan Macvicar, for Bombay and Persian Gulf (Birkenhead, March 15); s.s. Clan Kennedy, for Colombo, Madras, and Calcutta (Birkenhead, March 24).

Cunard Line.—S.s. Sea Victory, for Gibraltar, Malta, Piræus, Smyrna, Constantinople, Varna, and Galatz (London, March 15); s.s. British Coast, for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Liverpool, March 24); s.s. Pavia, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, March 26, and Liverpool, April 2).

Ellerman Line.—S.s. Trentino, for Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, March 12).

Ellerman's City Line.—S.s. City of Lahore, for Calcutta (Birkenhead, March 14); s.s. City of Poona, for Bombay and Karachi (Birkenhead, March 19); s.s. City of Bombay, for Calcutta (Birkenhead, March 29).

Ellerman's Hall Line.—S.s. City of Genoa, for Bombay, Karachi, and the Punjab (Liverpool, April 1).

Ellerman's Westcott and Laurance Line.—S.s. Gourko, for Malta, Piræus, Salonika, Smyrna, and Constantinople (London, March 12).

French-Javan Line.—S.s. Junon, for Algiers, Piræus, Salonika, Smyrna, Constantinople, Varna, and Constantza (Hull, March 15).

Glen Line.—S.s. Glenogle, for Port Said, Port Swettenham, Singapore, etc. (London, March 24); s.s. Glenavy, for Port Said, Port Swettenham, Singapore, etc. (London, April 7).

Glynn Line.—S.s. Ravenspoint, for Genoa, Leghorn, Naples, Catania, Messina, and Palermo (Liverpool, March 12).

Harrison Line.—S.s. Dramatist, for Calcutta (Liverpool, March 18). A steamer will sail in May for Port Said, Port Sudan, Aden, Mombasa, Zanzibar, etc.

Henderson Line.—S.s. Mandalay, for Port Said and Rangoon (Birkenhead, March 23).

Holt Line.—S.s. Demodocus, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 11); s.s. Agapenor, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, March 11); s.s. Euryades, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 14); s.s. Belleophon, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 1).

Johnston Line.—S.s. Portinglis, for Galatz and Braila (Liverpool, March 15); s.s. Dromore, for Piræus, Volo, Salonika, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 26).

Maindy Line.—S.s. Maindy Tower, for Antwerp and Moroccan ports (London, about March 15); s.s. Maindy Transport, for Antwerp and Moroccan ports (London, early in April).

Moss Line.—S.s. Assiout, for Gibraltar, Algiers, Malta, Piræus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 19).

Papayanni Line.—S.s. Malatian, for Malta and Alexandria (also taking cargo for Mersina, Beyrout, Alexandretta, Tripoli, Haifa, Jaffa, Port Said, Cyprus, etc.) (Liverpool, March 12); s.s. Destro, for Algiers, Malta, Syra, Smyrna, and Constantinople (Liverpool, March 26).

P. and O. Line.—S.s. Kaiser-i-Hind, for Bombay (London, March 11); s.s. Sicilia, for Bombay (London, March 24); s.s. Padua, for Bombay, Colombo, Madras, and Calcutta (London, March 24); s.s. Naldera, for Bombay (London, April 8); s.s. Sardinia, for Colombo, Madras, and Calcutta (London, April 8).

P. and O. British India Line.—S.s. Mandala, for Bombay and Karachi (London, March 18); s.s. Hatarana, for Colombo, Madras, and Calcutta (London, March 19); s.s. Nardana, for Colombo, Madras, and Calcutta (Middlesbrough, March 19); s.s. Australia, for Bombay and Karachi (London, April 2); s.s. Hatipara, for Colombo, Madras, and Calcutta (London, April 16).

Prince Line.—S.s. Black Prince, for Malta and Alexandria (London, March 15).

THE ABOUKIR COMPANY.

The report of the Aboukir Company for 1920 states that the sales during the year for cash or by instalments were:—Aboukir, 881 feddans 11 kirats for £123,646 4s. 6d.; Bourlos, 1,838 feddans 12 kirats 4 sahm for £151,897 16s. 7d.; total, 2,719 feddans 23 kirats 4 sahm for £275,544 1s. 1d. To round off the boundaries of the properties the following purchases of uncultivated land were made during the year:—Aboukir, 181 feddans 17 kirats for £950 9s. 6d.; Bourlos, 234 feddans 2 kirats for £5,780 17s.; total, 415 feddans 19 kirats for £6,731 6s. 6d. The area 234 feddans 2 kirats was included in the sale of Bourlos. The profit for the year was £69,869 2s. 9d., which, with the balance brought forward from the previous year of £7,857 3s. 2d., makes a total of £77,726 5s. 11d., from which has been deducted the interim dividend at 8 per cent. (coupon No. 18), £24,000.—£53,726 5s. 11d. It is proposed to deal with this as follows:—Proposed final dividend of 8 per cent., less tax (Coupon No. 19), £24,000.—£29,726 5s. 11d. There has been added to the reserve fund the sum of £20,000, leaving a balance to be carried forward of £9,726 5s. 11d. Meeting, March 15, 12 noon.

ENQUIRY BUREAU.

Readers abroad desirous of getting in'o touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

112. An Alexandria firm wish to enter into business relations with United Kingdom firms dealing in the following exports:—Beers and stout; salmon, sardines, tinned fruit and vegetables; coconut oil; gunny bags; pepper, rice, flour and soap.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory: Will act as agent or on commission basis.

The Bank purchases, grants advances against, or collects Bills payable in India, Burma, Ceylon, Aden, Zanzibar, British East Africa, Uganda, etc., on current terms. The Bank issues Drafts on its Branches, as well as on its Agents in the principal towns of India and Burma, Africa, and elsewhere and also sells Telegraphic Transfers on all its Branches, at the exchange of the day.

The Bank, on behalf of its Constituents, undertakes the Purchase and Sale of Government, Indian and Colonial Securities, Railway Stock, Bank and other Shares, the collection of Furlough Pay and Pensions from the India and Colonial Offices, the Custody of Government and other Securities, and the receipt of Interest and Dividends thereon.

Powers of Attorney or other forms and any information required may be had on application to the Bank of London or any of its Branches.

The Bank receives Deposits for fixed periods not exceeding one year at rates to be obtained on application.

ON 'CHANGE.

Tendency Rather Better: Greeks Decline.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

On the whole a rather better tendency has prevailed in most markets during the past week. The outcome of the London Conference came too late to have any appreciable effect; whether it will have much will depend on subsequent developments.

The gilt-edged market has been exceptionally rather weak. This is to be attributed in part to the failure of the Sudan Loan. The figures of the issue are now available, and show the result to be worse than was at first anticipated. £2,880,000 was offered, and of this the public subscribed £432,000, or only 15 per cent.

A noticeable improvement has shown itself in the Industrial group, and, while business remains very restricted, there have been a number of rises in the leading descriptions. There has been little doing in Oils, while Rubbers are again weaker, and the time is possibly within sight when there will be a return to the dismal level of values that obtained before the war.

Once again there is no change to record in Near Eastern stocks, which rank as British Government securities, Egyptian Guaranteed 3 per Cent. being 62½, Greek Guaranteed 2½ per Cent. 1898 being 58½, with buyers at that level, and Turkish Guaranteed 4 per Cent. 1855 being 68.

Greek securities have declined. The 5 per Cent. 1881 and the 5 per Cent. 1884 Loan are both 2 down at 40, at which there were buyers. The 5 per Cent. 1890 and Fundings have both shed a point at 40, which also had buyers. The 1910 Loan is 1 point down at 31, but the 5 per Cent. 1914 Loan remains unchanged at 40. The 1902 Loan has dropped ½ at 34½, at which there were buyers.

With one exception there has been no change in Bank shares. Agricultural 3½ per Cent. Bonds and the 3½ per Cent. Guaranteed Bonds are both unaltered at 53 and 55 respectively. Imperial Ottoman Banks at 7½ are unchanged, but National Bank of Egypt have gained ¼ at 17½. Land Banks are the same at 43.

Land shares have been variable. Beheras have risen ¼ to 8, while the preference shares are unchanged at 2½. Anglo-Egyptian Land Allotments are unchanged at 3½, but Egyptian Consolidated Lands are 1½d. down at 1s. Delta Lands remain at 8s. 9d., but Gharbich have been a weak spot, closing ¼ down at 1. New Egyptians have gained 1s. at 21s. 6d., while Union Foncières are ½ up at 2½. Sudan Plantations have declined 7-16 to 3 5-16.

Oils have been variable. Anglo-Egyptians have lost ¼ at 1½, while Phoenix at 9s. 3d. are unchanged. Roumanian Consolidated, however, are 9d. up at 14s. 6d. Steaua Romana are the same at 15s.

Among Miscellaneous descriptions Abyssinian Corporations are 3s. Alexandria Waters are 7, while Morums are 6d. lower at 13s. 6d. Egyptian Salt and Sodas are quoted at 27s. 6d.

A reduction in their minimum rates of discount from 7 per cent. to 6 per cent. is announced by the Bank of Bombay and the Bank of Bengal.

A contract for the repair of 570 Roumanian railway coaches and 8,000 cars at a total cost of 207,000,000 lei has been awarded to a works in Czecho-Slovakia and another at Ohlau, Silesia.

It is reported that the citrus crop of Patras and district for 1920-21 season shows an increase of 20 per cent. in quantity and 30 per cent. in value.

The Roumanian Minister of Transportation has been authorised to purchase 50 locomotives of the Prussian model at a total cost of 160,000,000 lei.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Granite Quarry.—The Director-General, Cairo Tanzim Department, P.W.M., Cairo, invites tenders for the opening and working of a granite quarry at Aswân for the output of granite paving sets for delivery to Cairo Tanzim Department and to Alexandria Municipality. Period of contract, three years.—March 15.

Benzine.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of 1,700 tins of benzine and 3,155 tins of petroleum (1,155 naked tins and 2,000 tins in cases) for the first half-year of 1921-1922. March 16.

Pumping Station Stores.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the general supply of pumping station stores for the year 1921-1922, consisting of engineering articles, oils, paints, grease, waste, wood, ropes, etc.—March 17.

Paints, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of paints, oils, tar, soap, etc., required during the first six months of the financial year 1921-1922. March 17.

Roofing Tiles.—The Superintendent of Stores, Egyptian State Railways, Telegraphs, and Telephones, Bulaq, Cairo, invites tenders for the supply of 40,000 "Marseilles" roofing tiles (specification, 50 millimetres). March 17.

Linen, etc.—The Sub-Director of Stores, Ministry of Education, Sharia Insha, Cairo, invites tenders for the supply of bed linen, table linen, etc. (7,000 metres of cotton sheetings, 8,000 metres of tulle for mosquito nets, 1,200 blankets, Morocco wool, etc.), table requisites (12,500 china plates, 4,000 glass tumblers, 3,000 knives, 2,500 forks, 2,500 spoons, etc.) required for the school year 1921-22. March 19.

Envelopes.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of envelopes. April 2.

Lubricating Oils.—The general manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo station, invites tenders for the supply of 1,630 metric tons of mineral lubricating oils (specification, 200 millimetres). April 9.

Equipment, etc.—The Director of Stores, Egyptian Ministry of the Interior, Cairo, invites tenders for the supply of stores required by that Department for the year 1921. The material required includes:—Arms, ammunition, accoutrements, ordnance stores, clothing and necessities for the police and "Ghaffir" services; harness and saddlery; fire-engine equipment; barrack and other furniture; tools; general stores. Tenders, which can only be submitted by firms established in Egypt or having a representative there, must be received in Cairo by April 18. Copies of the specifications, etc., may be inspected by United Kingdom firms interested on application to the inquiry office of the Department of Overseas Trade, at 35, Old Queen Street, Westminster, S.W.1.

Blankets.—The Egyptian War Department invites tenders for the supply and delivery of 2,500 woollen blankets, grey G.S. (L).

Yugoslavia.

Thread.—The Yugoslav Army Clothing Department, Belgrade, has invited tenders for the supply of 12,000 dozen reels (500 metre) thread, khaki colour, No. 30-40; 13,000 dozen reels (500 metre) thread, white, No. 32-40. A deposit of 20 per cent. for foreigners and 10 per cent. for Serb-Croat-Slovene subjects of the amount of the tender must be paid. Tenders should be forwarded direct to Ekonomika Odeleuje (Economic Department, Army Clothing Department), Ministère de la Guerre, Belgrade. March 14.

CONGRESS OF INDUSTRIAL ASSOCIATIONS IN ROUMANIA.

A congress of the Industrial Associations of Roumania took place last month at Bucharest. This congress was called together by the Ministry of Industry and Commerce with a view to getting some expression of opinion from those most concerned regarding new legislative measures which it might be considered desirable to introduce for the benefit of Roumanian industry. Amongst the various resolutions passed the most important would appear to be that advocating a radical modification of the customs duties, and suggesting the institution of a Commission upon which the industrialists should be represented to give effect to the proposal.

Resolution 4 is also of special interest to British firms in that it expresses the opinion of the congress that public works contracts and the supply of material for the Government should be so arranged as to give a decided preference to Roumanian firms. It was claimed that the State, with rare exceptions, should make its purchases from and award contracts to national industry. The temper of the congress appears to have been set strongly in this direction.

Resolution No. 5, recommending the principle of allowing the expropriation of land and property required for the creation and development of such commercial undertakings as are essential to the economic development of the country, has frequently been mentioned as desirable by the Director-General of Industry, M. Manolescu, and there seems every probability that some such stipulation may be passed into law.

The principle that the natural resources of the country should be exploited by companies in which the State holds a joint interest with associated firms, as postulated in the sixth resolution of the congress, is significant as pointing the way to one of the methods whereby such exploitation could be carried into effect without arousing political opposition. No mention of petroleum enterprises is made in this connection, however. The disposition of the congress, which was composed wholly of manufacturers, was strongly in favour of preventing the importation of goods which could be manufactured in the country.

It is not to be expected that these resolutions will become law in the near future, but they are worthy of notice as indicating that the manufacturers of Roumania are demanding a measure of protection for their enterprises, and that in their consideration the best method of affording such protection is through the action of the customs duties.

At the present moment Roumanian industries are given special encouragement according to the Roumanian laws for the encouragement of industry of 1899, 1907 and 1912, the application of which has recently been extended to cover the new provinces now incorporated in Greater Roumania. It might have been expected that these advantages, including as they do a substantial rebate on the rates of freight chargeable by the Railroad Administration, would have been considered reasonably sufficient for the purpose invoked, but the spirit evinced by the manufacturers concerned indicates that they are desirous of securing still further advantages from the Government.

A preliminary commercial treaty between Czecho-Slovakia and Roumania has been signed.

It is officially announced that certain provisions of the Patents and Designs Act henceforth apply to the Yugoslav State.

NOTES OF THE WEEK.

The London Conference.

There is much in the Allies' attempts to evolve a settlement of the Near Eastern question over which a cynic can make merry, but those who are more earnest in their desire to see the problem settled will welcome the steps taken by the ninth Allied Conference. In spite of all the fulminations against revision of the Treaty of Sèvres that document has now been modified in some important particulars, but less in regard to its territorial provisions than in respect of the clauses which wounded Turkish *amour propre* far more deeply. The Treaty of Sèvres placed Turkey outside the pale of civilisation and informed her that in the opinion of the Allies she would never have the least chance of coming within it. The modifications offered by the London Conference adopt the attitude that it is just possible as a result of the upheaval caused by the world-war that Turkey has learned her lesson and is resolved to turn over a new leaf. Full opportunity of doing so is to be afforded her, and all who are interested in the well-being and progress of the Near East will hope that the Turkish authorities, both in Constantinople and Angora, will accept the offer in the spirit in which it is made.

Roumania and Her Neighbours.

Roumania and Poland have signed an agreement which provides, among other things, for military co-operation in the event of an attack from the East. Being of a purely defensive character, this arrangement should be welcomed by Europe at large as well as by the two countries most closely concerned. Much less satisfactory news regarding Roumania is to the effect that the Roumanian police in Transylvania have unearthed a widespread conspiracy aiming at the organisation of the Magyars for the purpose of co-operation with regular Hungarian troops in an attempt to restore Transylvania to Hungary. The attempt was timed for the Spring, and considerable numbers of rifles and machine-guns are reported to have been smuggled into the country already. Some fifty arrests have been made, including several priests and Magyar officials, and it is expected that further ramifications of the plot will be discovered. Remembering the ill-treatment to which the Magyars in the day of their power subjected the Roumanians of Transylvania, it would hardly be surprising if the latter, now that the position is reversed, should be tempted to give them a taste of their own sauce. But as a matter of fact the conduct of the Roumanian officials would seem to have been remarkably good in the circumstances.

Collapse of Georgia.

The Georgian resistance to the Bolshevik advance collapsed with a suddenness that told its own tale of a shortage of munitions of war and—unfortunately, it must be added—of sympathy with the invaders among a section of the defending force. The Government fled to Batoum, followed at first uncomfortably closely by the Bolsheviks, and accompanied by the inevitable great crowd of refugees. In the circumstances the Government, having to make a choice of evils, with the added necessity of choosing quickly, very naturally preferred the Turks to the Bolsheviks, and invited the former to occupy the port. The invitation was accepted, and troops, apparently under the command of Kiazim Karabekir Pasha, took over the defence of Batoum on March 10. The Turks refused the Georgians' request that the civil control should remain in the latter's hands, and, proclaiming martial law, proceeded to disarm the Georgian troops and the population. In view of the methods of the Bolshevik agents, this step can cause no surprise. It is impossible to withhold our sympathy from Georgia in the great disaster that has overtaken her so soon after her recognition by the Powers, but it is impossible, also, to avoid a feeling of satisfaction that Batoum should have returned to Turkish hands rather than have fallen into those of the Bolsheviks. For the moment Moscow has accepted the situation: it remains to be seen how long her present mood will last.

The Status of Egypt.

It is expected that the Egyptian Delegation which is to negotiate with the British Government regarding the future status of Egypt will be received in May. Meanwhile, in Cairo a good deal has to be done before the Delegation actually comes into being; for, we are told, a Coalition Cabinet has to be formed, from which most of the delegates will be selected, and the composition of this Cabinet is proving a delicate and somewhat difficult matter. The position and attitude of Zaghloul Pasha are just now not quite clear; but unless his friends and admirers are doing him very poor service, he would appear to have drifted back once more into the stage of unyielding obstinacy—not to mince words—from which we had hoped he had finally emerged last year. An interview which he accorded to a correspondent of the *Herald* concluded with the statement: "The English in Egypt are hated not as English, and not even as foreigners, but simply as oppressors." Such clap-trap oratory at this stage of affairs can do nothing but harm, and indulgence in it is calculated to make even warm supporters of the Milner proposals uneasy. A reference, in the same interview, to the "harsh and iniquitous sentences"

passed on Egyptian conspirators, and their inflammatory effect on "public opinion" in Egypt will only increase the feeling of uneasiness by showing how distorted a view of justice it is possible for a certain type of mind to take. The Pasha's talk of Egypt's inability even to discuss an amicable settlement under existing conditions suggests that he has a very poor grip upon realities, and the draft Treaty which he presented to Lord Milner last July, the full text of which is given with the interview, contains internal evidence to the same effect.

An Egyptian Prince's View.

The strongest possible contrast to these utterances of Zaghoul Pasha is afforded by a lengthy and closely reasoned article on the Egyptian situation contributed to *The Times* by Prince Ibrahim Hilmy, a brother of the present Sultan of Egypt. The Prince is assuredly no less patriotic than the most prominent, or most vociferous, of the Nationalists; and he looks forward to seeing Egypt enjoying real independence when she is ripe for it; but he would like to see her walking before she tried to run; and clearly, he wishes to save her from the demagogues. He does not believe that his country "has as yet attained the point when she could stand alone by herself," and what he would ask for her now is an autonomy similar to that of the Dominions, "with certain restrictions gradually to be eliminated along with the progress of the country." The Capitulations, of course, should go, and foreign officials other than inspectors and controllers should be weeded out; the military school should be reorganised so as to allow the officers educated therein to attain all ranks in the army; and, "democracy being the order of the day, let Egypt have her Constitutional Government, but let good care be taken to constitute an Upper Chamber of men of ability and experience such as would constitute a wise counterpoise to the Lower Chamber." The Prince holds that Lord Milner's scheme, if applied in its integrity, would be disastrous to Egypt, which, left to herself, would, he fears, make no progress, but would run the risk of retrogression. He pleads for delay and caution in coming to a decision on this vital question, and concludes by expressing the hope that his Majesty's Government will steadily bear in mind the "real interests of Egypt and of the great mass of Egyptian people, not limiting itself to the conclusion of a palliative agreement destined only to satisfy a turbulent minority." We must confess that the Prince's pronouncement seems to us far more statesmanlike than that of the Pasha.

The Sudan.

Friends and well-wishers of the Sudan will have read with peculiar satisfaction that section of the Milner Commission's Report which deals with the Sudan. The Commission put on record their opinion that "no change in the political status of Egypt should be allowed to disturb the further development of the Sudan on a system which has been productive of such good results," and their view is unlikely to be challenged seriously by anyone, save, perhaps, some Egyptian extremist agitators. As our Khartoum Correspondent told us lately, it is an unfortunate fact that Egyptian "Nationalist" propaganda has been very active in the Sudan for some little time past, and owing to the feeling of uncertainty that has been allowed to grow up in the native mind it has achieved some success; though the better instructed classes have not only turned a deaf ear to the northern charmers, but have even embarked on counter propaganda. It is indeed surprising that the Egyptian agitators have been able to obtain any hearing at all, for hitherto the Egyptian has always affected to regard the Sudani as a totally inferior being, and the Sudani has retaliated with a contempt which was not slight. Moreover, as the Milner Report reminds us, the antagonism between the two countries has not been lessened by "rankling memories of Egyptian misgovernment in the past." The Sudan to-day is well off, and it knows it. Now that the Milner Mission has made it clear that Egypt will not be allowed to disturb existing conditions, it is likely to cease from coquetting with the agitating gentlemen and to settle down contentedly to its own work in its own way.

The Defence of India.

The question of India's military strength was brought into prominence last week, first by a misleading cablegram which was quickly repudiated, and then by an authentic summary of Lord Rawlinson's grave speech on the recent reductions in the army. The difficulty of the position is really due to the absence of any historical sense among the bulk of Indian public men. The menace from the north-west has persisted for a thousand years, and memories of the long roll of conquerors from Mahmud to Nadir Shah ought to ensure a steadfast national purpose, such as underlies the naval policy of this country; but no such purpose can as yet be detected in Bengal, Bombay, or Madras, the provinces from which the pressure for short-sighted economy is maintained, and, until the lessons of history have been learned, there is a real danger that the frontier may be so weakened as to tempt yet another attack. Lord Rawlinson's speech appears to have put the situation clearly before the Legislature, but no isolated effort can suffice. Under the new régime military opinion must come forward and convince the public by steady insistence on hard facts; otherwise the complacency of Councils and Assemblies may be rudely disturbed.

A Debt of Honour.

In connection with the reductions in the Indian Army, there appears to be some anxiety in this country regarding the treatment of the officers and men who are being discharged. We have failed to find any official statement showing the terms which have been granted, and we think it would be wise for the authorities to make it quite clear that, allowing for differences in the standard of living, Indian soldiers are being treated as well as those who have been discharged from the Army in this country. The matter has, of course, a political aspect, for men who should go back to their homes smarting under a feeling of injustice would be potential centres of disaffection, and excellent material for the disloyal agitators who are known to be at work; but quite apart from such considerations, justice to the men who fought is a debt of honour.

Religious Differences in India.

"Unrest" is a standing headline just now in the daily Press, and it has proved sufficiently elastic to cover the long-threatened outbreak of the deep religious quarrel among the Sikhs. That community includes two parties—the Conservative, which controls very rich endowments, and the Reform, which, among other objects, desires to handle those endowments for the general welfare. In some ways the situation presents a curious analogy to that which arose some years ago among the churches in Scotland, when the endowments were eventually allocated by a statutory commission. But Sikhs are not quite so law-abiding as Scots, and apparently they decided to fight the matter out. What actually happened is obscure, but it looks as if the authorities had been caught napping, for a death-roll of 139 is a serious thing, and the official statement admits that no Government forces were in the locality at the time. The adjustment of the dispute will afford a severe test of the efficiency of the new institutions in the Punjab.

The Burma Constitution.

The Lords' debate on the Government of Burma Bill was interesting, if not altogether satisfactory for the India Office. Lord Lytton admitted that the Government of India are still opposed to the proposal to equip Burma with the institutions considered suitable for an Indian province, and the introduction of a Bill, which is legally superfluous, is an expedient for referring the dispute to Parliament. This constitutes, if we are not mistaken, a new departure: Whitehall no longer overrules Delhi, but appeals to Westminster, and the new Standing Joint Committee on Indian affairs will serve an important function in arbitrating on such differences of opinion. Apart from this, the most noteworthy feature of the debate was Lord Selborne's declaration in favour of "cutting the painter" at once, but we do not find grounds in his speech for altering the view we have previously expressed.

THE WEEK AT HOME.

LONDON, Monday Evening.

The Germans Return Home.

The conclusion of the Allied negotiations with the Germans was inevitable. Dr. Simons can have expected nothing else. His offer was in fact a bid for the retention of Upper Silesia by Berlin, and apart from that it had no meaning. Opinion here is unanimous in approving Mr. Lloyd George's answer to this folly. The Allies' reply was debated in the House of Commons, but the discussion was perfunctory. Mr. Clynes criticised it formally, but it was easy to see that his heart was not in the job.

On the other hand, there is a great deal of doubt as to the best steps to take to secure payment of the indemnity. The Allies took the only course open, but it was a political remedy for an economic problem, and that is not always effective. Opinion here is reserved as to the results of an export tax of 50 per cent. on German goods, which is understood to have been one of Mr. Lloyd George's brilliant improvisations.

The effect of the indemnity on the course of the world's trade is very generally feared. That, however, is a matter for the future; for the present it has to be noted that the international crisis made practically no difference on the Stock Exchange last week. Business there has been so slack for some weeks past that things could hardly be worse.

The City at the moment is more interested in a possible reduction of the Bank rate than in anything else; this is now held to be the panacea for all our woes. A few weeks ago it was the abolition of the Excess Profits Duty; now that is dying or dead, one hears nothing but grumbles that the corporation tax (which a year ago was introduced almost without criticism) is as bad or worse than E.P.D.

The 1921 Budget.

The forthcoming Budget, of course, is causing a good deal of speculation in this connection. The figures of expenditure already known are the following:—

Civil Service	£460,900,585
Army	106,315,000
Air	18,411,000
National Debt Services	325,000,000
	£910,626,585

The Navy Estimates have still to be added. These are not yet published. Last year they were £84,000,000; this year they will be less by some millions. But it is clear that the total expenditure will be not much less than £1,000,000,000.

The main criticisms which Mr. Chamberlain will probably have to face will be over the very large total of the Civil Service expenditure, and the reduction of debt—this last a matter which some people think might be left to posterity to settle. But no great Chancellor of the Exchequer can take quite that easy view, and Mr. Austen Chamberlain is being increasingly recognised as a very considerable figure.

Supplementary Estimates.

A word should be added about the Supplementary Estimates, the small savouries which are produced from time to time after the *table d'hôte* of the Budget has been digested. The practice of introducing Supplementary Estimates has increased of recent years, and the House of Commons is showing itself growingly critical of this habit; it is always in a bad temper on such occasions, as last week's vote on an anti-typhus grant in Central Europe demonstrated. But this is mere conservatism. By the mercy of Providence I am not a Member of Parliament, and, therefore, have some logic left; and it is really quite easy to see that if Supplementary Estimates were abolished for sundry unexpected expenses, the heads of the spending departments would take care to include contingent expenses and a round sum for emergencies in their estimates. This would ruin the practice of close budgeting, and would lead to extravagance, since the money so voted would have to be spent.

The real trouble is that in the case of Supplementary Estimates the money is spent first and permission asked afterwards, which the House of Commons, as titular guardian of the public purse, objects to. But it cannot very well turn the Government out because some civil servant has spent a few thousand pounds without formal authority. Perhaps it would be an appropriate remedy to hang the civil servant; it would make for promotion in the service, reduce the national expenditure, and vindicate the authority of Parliament.

Brethren in Unity.

The National Liberal Club seems to be a cheery place in these days. Last week they held a meeting to denounce Mr. Lloyd George, once one of their most honoured members. (His life-size portrait in the club was then an object of reverence.) But Coalition Liberals as well as the other variety turned up, and very naturally objected to hear the Prime Minister denounced, by men who cannot get a seat in Parliament, in terms that would be considered low in the boxing ring and on the racecourse. There was an uproar, catcalls, and a good deal of confusion; the meeting finally broke up in disorder.

Mr. Pringle Passes By.

The Independent Liberals seem to be somewhat vexed by Mr. Pringle's defeat at Penistone. This young man, who did nothing in particular in the last Parliament except heckle his own leaders rather offensively, was ejected by the electors in 1918. He has since advised the party from outside, and the result of his advice seems to have been uniformly unfortunate.

However, the "Wee Frees" think a great deal of him, and made sure he would win at Penistone, which was one of the few Independent Liberal seats. He took his defeat in good part—in which he set an example to Mr. Ramsay MacDonald—but his comrades were exasperated. Liberals have not yet learned the lesson that hatred of the Prime Minister is not a sufficient policy to get them a majority in England. The Labour men look on and chuckle; they disagree with Mr. Lloyd George, but they have no personal feeling against him—indeed, they rather admire him—and the result is that they win seats, while Mr. Asquith's following will soon need a microscope before it can be seen.

Labour and Coalition.

Labour, in fact, is on the up-grade once more. It is on its best behaviour; it does not want to frighten the middle-classes again, so it repudiates "direct action," reproves revolutionary sentiments, and talks as nicely as a Sunday school teacher. Its text is unemployment, the cost of living, and the general depression; nationalisation when the audience will stand it, and the betterment of England when it won't.

REPRESENTATIVES:

CALCUTTA: 1 & 2, Old Court House Corner. H. L. Bell, Gen. Man.
CAIRO: 48, Place de l'Opera. M. G. Harris, Gen. Man.
ALEXANDRIA: Societe Generale de Pressage et de Depots.
CYPRUS: Najem Houry & Sons.
CONSTANTINOPLE: Messrs. J. W. Whittall & Co., Ltd.
SMYRNA: Messrs. C. Whittall & Co.
JERUSALEM JOPPA | Anglo-Egyptian Bank, Limited.

The public certainly prefers this to the acrid bitterness of the Independent Liberals, who remind one of a wasp in a glass bottle—they can't do any damage, but they make a terrible noise. The Labour candidates are not exciting, but, then, neither are the Coalition nominees as a rule; nor yet the Coalition policy. Mr. Bonar Law told his followers at the Constitutional Club the other day that their mission in life was to keep Labour out—not a very constructive programme, or one that will enthrall the country.

But the Coalition is not happy at the moment. In addition to disconcerting excursions and alarms without, there are strange noises and perturbations within the unwieldy monster, and dyspeptic tremblings that suggest internal growths and obstructions. Lord Derby has held a private meeting of North Country members, and is credited with more deep and dangerous designs than his bluff, open face suggests; the Unionists suspect that the Liberals within the flock are "thinking of the old 'un'" when they ought to be sound asleep and happy; and the Coalition Liberals are as querulous as an aged spinster who has married a widower with too many children—they have got a roof over their heads, but they sometimes wonder if it is improper to think about a divorce.

Mr. Smillie Resigns.

Mr. Robert Smillie, the stormy petrel of Labour, has resigned his office and retired into private life. He was always a melancholy figure—the result of a hard youth in Lanarkshire—and he is now a disappointed man. He has failed to carry out his project of Nationalisation; indeed, the tide has turned strongly against him. Nor has his policy in regard to miners' wages been successful; the coal trade is in a very bad way just now, and both owners and men are losing money.

But there was a touch of idealism and nobility in Mr. Smillie's character. He believed he was right, and he was quite ready to sacrifice himself for the cause he championed. His real interest was more in the human

than the economic side of life. Capital hated him on principle, but personally it rather liked him. Unfortunately he was a pacifist, and that has not been forgiven him.

A New Liberal Daily?

The *Saturday Review* is, I think, the first to mention in print a rumour that a new Liberal daily is to be started; the name of Mr. Runciman is connected with it, as he has had some experience of newspaper proprietorship, as owner of the *Queen* and the *Field*.

There should be room for such a venture, despite the failure of the ill-fated *Tribune*, which shut down just as it was beginning to be successful. In the last few years the number of London dailies has diminished, and a little more competition—and originality—would be a good thing in Fleet Street.

The Week's Books.

It is really not adequate to call "Wisden's Cricketer's Annual" a book of the week—it is so much more than that. The present issue, which has all the old features, contains a weighty discussion on the "leg-before" rule.

A new volume in the "Stories of the Nations" series is "Belgium" (T. Fisher Unwin), by M. Emil Cammaerts. His name alone is sufficient guarantee that the book is a good one. One had not thought of it before, but presumably the wretched publisher of this series will have to add volumes on Lithuania, Finland, and all the other new States of that part of the world.

"Instinct in Man," by Dr. James Drever (Cambridge University Press), is an extremely able discussion of some of the profoundest problems in psychology. The book, which is now issued in revised form, made its mark when the first edition was published; and its originality of thought and clarity of language—on a subject where not every distinguished professor succeeds in making himself intelligible—are likely to give it a permanent value.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, February 28.

The Milner Report.

There is little doubt that the Milner Report, which was published here last Sunday, has had an excellent reception. Indeed, it would have been surprising if such had not been the case, seeing that it is written throughout in such an impartial, sympathetic and moderate tone. The general opinion here among the British and foreign elements, and also the instructed portion of the Egyptian community, is that it is a masterpiece, unlike anything that has been written about Egypt since the late Lord Cromer penned his "Modern Egypt." Wherever I have been among Egyptian Extremists or Moderates, among foreign residents, or the British official and unofficial communities, I find exactly the same tribute paid to the faithfulness with which recent events have been recorded, to the sympathy with which the national aspirations of Egyptians have been handled, and to the patent sincerity with which the Mission has sought to make its proposals acceptable to both the British public and the Egyptians.

The Report has gone a long way to reassure the Moderates, and even to commend the recommendations, which were, of course, already known, to the less rabid of the Extremists, if one can use such an expression. The questions of the Protectorate, foreign representation, and the other reservations are still much debated, but in view of the tone of the Report the majority appear disposed to leave these points to be discussed in the course of the negotiations. The discussion in the House of Commons is anxiously awaited, and the one hope I hear expressed everywhere is that the British Government will not delay coming to a decision, so that a definite settlement may be made at the earliest opportunity, and the country may be able to settle down to the development and reorganisation work which confronts it, and which, in the circumstances, is not unnaturally being held up by the general uncertainty that reigns on every side.

An Unnecessary Storm in a Teacup.

We are wondering what Mr. Lloyd George, Lord Curzon, and Mr. Churchill thought when they received the avalanche of protests sent to them last week. These protests were based on a telegram which reported that Mr. Churchill had said at the farewell banquet to Lord Reading "that in a few years our present difficulties in Ireland and Egypt will be greatly diminished, and that the nations which are now a reproach and a stumbling-block to the supreme cause may be found to be managing their own affairs and unfolding their own destiny, peaceful and prosperous within the elastic circle of the British Empire"; and the protests were against the assertion that Egypt came within the British Empire. The London papers with the full report have now come to hand, and it appears that the new Colonial Secretary never mentioned Ireland and Egypt in this connection. The incident shows on the one hand how ill-advised it is to base action on telegraphic summaries of statements made in other places instead of waiting for the full report, and how exceedingly careful foreign correspondents and telegraphic agencies should be in their transmission of such summaries.

The Conspiracy Case.

The sentences in the "Vengeance Society" conspiracy trial, which was concluded last October, have at last been promulgated. Abdul Rahman Bey Fahmy and six others who were condemned to death have had their sentences commuted to fifteen years' penal servitude, and the remaining fifteen, who were sentenced to terms varying from twenty years' penal servitude—with lashes in some cases, and a fine—to three years hard labour, have had their sentences commuted to terms varying from twelve years' penal servitude to two years' hard labour. The relatives of the accused have peti-

tioned the authorities asking them to agree to treat the condemned men as political offenders, but as yet no official decision has been made. The sentences made somewhat of a sensation, owing probably to the fact that they had been so long delayed, and were promulgated at the present juncture.

YUGOSLAVIA.

ZAGREB, February 25 (delayed in transmission).

Political Manœuvring.

Raditch is still sulking in Zagreb, but most Serbs decline to take more than an academic interest in his proceedings. The Republican Party, however, which is neither strong nor numerous, is flirting with him. At a recent party meeting, M. Dragisha Vasitch reported on the results of a visit which he had paid to Zagreb, where he had been present at a meeting of Raditch's party, which is now referred to in the papers as the HRSS, that is to say, the *Hrvatska republikanska seljachka stranka*, or Croatian Republican Peasants' Party. M. Vasitch gave an emphatic denial to the widespread belief that Raditch and his party are opposed to the union, or hostile to the Serbs; he maintains, on the other hand, that Raditch desires most particularly to remain on brotherly terms with the Serbs, but objects in principle to the monarchical form of government. He was followed by Dr. Ikonitch, who also insisted that there was the very reverse of any feeling or tension between the Croatian Peasants and the Serbs, and that there was not the slightest reason to suppose that Raditch in any way supported the policy of the intriguers whose aim is to separate Croatia from Serbia. If that is all true, why does not Raditch make a definite declaration? His forty odd deputies would give the little Republican party a position in the Skupstina where at present they command but little influence.

M. Pashitch's conversations with the Serbian Peasants' Party are not looking very promising. The Premier, in fact, has not seen his way to fall in with the views definitely put forward by the party as the price of their support, and at the moment it does not look as though they will promise unconditional support to the Cabinet, much less accept a portfolio. Conversations are being continued with the Mohammedans, but these do not seem to be very promising either.

A Financial Trouble.

A peculiar danger is anticipated from the liberation of those parts of Dalmatia which have hitherto been occupied by the Italians, and that is the influx into Yugoslavia of unstamped *kruna* notes of the Austro-Hungarian Bank. As it is believed that about a milliard of *kruna* are held in the districts in question, the danger is obvious and considerable. To prevent the smuggling in of any such notes, however small in quantity of value, the Ministry of Finance has issued the most stringent regulations. The police will keep a very sharp look-out, and anyone caught trying to smuggle will be liable to a crushing fine, no less than 100,000 dinars, of which half will be paid to the captor of the offender or to anyone else who has contributed materially to his capture. At the same time, the Ministry appeals to all good citizens to do all in their power to prevent such smuggling.

The Narodni Club.

The banship of Croatia, vacated by the resignation of Dr. Laginja, leader of the Narodni Club, which was referred to in a previous letter, has at last been filled. Many of the Ministers were in favour of still leaving the office open, owing to the uncertain state of politics in Croatia, especially as Raditch has stated that he proposed to come to Belgrade to have a talk with the Premier, and it was felt that this would contribute greatly to clearing the air. But eventually it was decided that it was undesirable to leave this important office open any longer, and Dr. Tomislav Tomljenovitch, a prominent Democrat, has now been nominated to the post.

The Triumphant Fox-Trot.

It may be remembered that a year or more ago there was a movement of protest in Belgrade against the introduction of such "immoral" dances as the one-step and the fox-trot, that there was quite a spirited correspondence about it in the press, and that these dances were banned at the Oficirski Dom. But progress will not be stayed; for now, in the very pages of the *Politika* itself, which fulminated against the innovation last year, there is an advertisement of the "First Serbian Up-to-date Dancing Institute," where lessons are given in the "fox-trott, two-step, boston, tango, jaze, Maxixe, brésilienne and One-step."

Miscellaneous.

The Ministry of Food and Reconstruction is being liquidated. Its functions, which will gradually expire, will be carried on by departments of the Ministries of Commerce, Social Policy, Finance, and Agriculture.

Very great inconvenience is caused by the stoppage of the Vienna-Maribor express in Austria, owing to shortage of coal, which involves the cancellation of the corresponding expresses Maribor-Trieste, Maribor-Zagreb, and the fast service between Vienna and Belgrade. It is to be hoped that this very useful service will be soon restored. The express Prague-Zagreb and Belgrade is fortunately not affected.

ROUMANIA.

BUCHAREST, February 23.

Political.

Reviewing the recent by-elections, one could hardly say that any marked change in the internal political situation has taken place, although the Government obtained only two seats out of six—one in Transylvania and the other in Jassy. The other four, however, were not won by one single party. The successful candidate for Ilfov (Bucharest), M. Dobrescu, was virtually backed by the combined Opposition as well as by the Socialists, who had no candidate of their own. In Romanati, the Liberal candidate obtained the majority of votes, but as several protests were raised in Parliament against this election a Committee has been appointed to investigate the proceedings. In Bessarabia M. Stere, an independent candidate, was elected on his personal merits, as a former leader of the Roumanian element in Bessarabia during the time of the Russian rule, despite his pro-German attitude during the war. In Husi, the success of the Federalist candidate was due to the great popularity of Dr. Lupu in this particular district.

Splitting-up of the Socialist Party.

Following on the example given by other countries, and as was expected after the fiasco of the last general strike, the leaders of the Roumanian Socialist Party have split up into three different groups, owing to difference of tactics in their political programme. These groups are: the Socialist-Democrats, who will be guided by the Amsterdam International Convention; the Centralists, who wish to keep the party together as before; and the Extremists or Communists, who are inspired by the Moscow Convention.

Roumania's Foreign Policy.

M. Také Jonescu, in reply to various interpellations made in the Senate with regard to Roumania's foreign policy, said that no one at the Peace Conference could have obtained the whole of the Banat, but had the first

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted-laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE
NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

CIGARETTE WASTE-
STRIPPING MACHINE.

Roumanian Peace delegates assumed a more conciliatory attitude, Roumania might have got Weisskirch and Vershetz; besides, Roumania had to sign the Peace Treaty after an ultimatum from the Allies. Now that they had attained the present boundaries, it would be childish to keep on heckling for what they ought to have got, the more so as the general result is satisfactory.

With reference to Roumania's relations with the Russian Soviet, M. Jönescu explained that, after an exchange of several wireless messages, the Soviet Government had at last acknowledged that they are not in a state of war with Roumania. He (M. Také Jönescu) then proposed that each State should send a delegate to Riga, in order to settle various questions between them. To this the Moscow Government replied that they preferred the town of Reval as a meeting-place, and that they had appointed M. Litvinov as their delegate. This proposal the Roumanian Government accepted, and it will shortly appoint a delegate. M. Jönescu further stated that he has received a protest from the Soviets to the effect that certain Petlurist gangs are being organised in Bessarabia, and that they are crossing the Dniester to attack the Red Army. To this the Roumanian Government has replied that this was an impossibility, and that Roumania has never undertaken a single act of hostility against the Soviets. With regard to treaties and understandings with other neighbouring States, the speaker declared that certain understandings have been arrived at with the object of safeguarding the territories awarded to them by the Peace Conference. In this connection he referred to France's point of view, which favours political and military understanding between Roumania and Poland and Ozecho-Slovakia.

M. Také Jönescu also took the opportunity of reading a letter which M. Sassonoff addressed to the Roumanian Minister at Petrograd in September, 1914, in which Russia recognised Roumania's right to annex the territories of Austria-Hungary inhabited by Roumanians—that is, Transylvania and the Banat. As to Bukovina, it was to be decided on the majority principle. The letter further recognised Roumania's right to occupy these territories when the opportune moment arrived.

Explaining the Maramuresh frontier question, M. Jönescu said that in this case also the Roumanian Peace Delegates would have obtained a better boundary if, at the time, they had not insisted so much on the Alliance Treaty of 1916. Now that the frontiers have been definitely fixed, it is not possible for Roumania to change the situation. Mention was also made of the possibility that Ruthenia might be given back to Hungary; but the Roumanian Government has already pointed out to the Allies that in case this province could not be held by the country that now holds it, it will be occupied by Roumania, and on no account will it be allowed to be taken by another State.

With reference to the New Dobruja, M. Také Jönescu, in concluding his speech, said that M. Stambolisky on the occasion of his visit to Bucharest made no allusion whatever to this district, and that if he had done so he (M. Jönescu) would not have even discussed this question.

The Wedding of Princess Elizabeth.

The Court Chamberlain has at last announced the programme of festivities in connection with the wedding of Princess Elizabeth with Prince George of Greece. The civil ceremony will take place in the Library of the Royal Palace, and the religious ceremony at the Cathedral, later. A hundred guests have been honoured with invitations to lunch at the Palace, and in the evening there will be a great reception. After the wedding the newly-married couple will go first to Sinaia, where they are expected to stay until the marriage of the Crown Prince, about the middle of March.

Roumania's War Claims.

The Government sent the other day by a special courier to Paris a statement showing Roumania's war claims, with a total of 31,099,440,182 French francs in gold. This figure comprises damages to private parties, towns, and districts, indemnities for prisoners and their families. State damages, expenditure to establish the

damages, supplementary salaries paid to Roumanian officer prisoners, and allowances to the families of mobilised men. The sum further covers the damages done to the oilfields, the banknotes issued by the Banca Generala, and the National Bank's deposit at the German Imperial Bank.

Miscellaneous.

Prince Sapieha, the Polish Minister for Foreign Affairs, is expected to arrive in Bucharest shortly.

The Government is preparing a Bill to encourage motor-agriculture, by which farmers will be granted various privileges for importing into the country tractors for agricultural purposes.

Instructions have been given to the Custom Houses on the Hungarian frontier that all luggage and parcels destined for Hungary should be scrupulously examined, because it has been found that many valuable objects have been stolen from the different museums in Transylvania and smuggled over the frontier.

TURKEY.

CONSTANTINOPLE, March 1.

Is it Peace?

The details of the proceedings of the Conference of London are the sole topic both of journalistic and of conversational interest in Constantinople at present. Marvellous are the deductions which are drawn from the various accounts and comments reaching here from each of the Allied capitals; and those deductions favour either Turks or Greeks according to the individual sympathy. It was exceedingly amusing to read the leading articles of the various organs of the polyglot press of Constantinople concerning the first day's proceedings when the Greek case was stated. One paper which is devoted to Italian interests declared that the Greeks had evidently made a very bad impression, whilst an organ which has always been a heated defender of the Hellenes insisted that Monsieur Kalogeropoulos had made a very fine show. So the game goes on day by day, until the impartial observer, uninformed from other sources, must become utterly dazed. The Turkish press is decidedly pleased with the results so far, although Ali Kemal Bey, the editor of the bitterly anti-Unionist *Peyam-Sabah*, betrays considerable nervousness with regard to the final result. Even he, however, cannot compromise on the main issue, as may be seen from the following extract from one of his leading articles:—

The majority of Turks approve neither of Mustapha Kemal, nor of the Angora Assembly, nor of the Independent Tribunals, nor of the mad escapades of those people. They do not approve, for they are profoundly attached to their traditions; but when they see the Greeks prepare to advance upon Angora, then patriotism obliges them to fall into line with those who are over there (in Anatolia). Under these circumstances, as General Gouraud so clearly pointed out, even if the Hellenes advance as far as Angora, they will have gained nothing, but will simply have excited the Turks still more, and will have driven the most moderate amongst them, even those who are most strongly opposed to the Nationalists, to make common cause with the latter.

It must be remembered that Ali Kemal Bey is probably more moderate in his political opinions than any other Turk living, except with regard to the Unionists, with whom he has always classed the Nationalists. He has been condemned to death by the Nationalists,

and there is little doubt that the sentence would be carried out at once if it could be managed without undue trouble. When it is realised that the Greeks, so far from being ready to make the slightest effort to come to an agreement with the Turks, demand the integral application of the Sèvres Treaty, and refuse to consider the proposal to allow a Commission of Inquiry to settle the territorial question, it will be seen that the difficulties in the way of a peaceful settlement are enormous. The Nationalists have steadfastly clung to their determination not to consider any settlement until the Greek forces are withdrawn from Thrace and Smyrna. This the Greeks will almost certainly decline to carry out. If the Allied Prime Ministers can crack this nut, nothing else in the bag will give them much trouble. Meanwhile, everyone but the propagandists and the wire-pullers in Constantinople is asking anxiously: "Is it peace?" For the economic situation, owing to the severance of commercial relations with Anatolia and Russia, is lamentable. Bankruptcies and unemployment are the order of the day, and not only the Turk, but everyone, including the European, is affected.

The Caucasus.

The announcement of the defeat of the Bolshevik invaders of Georgia unfortunately proved to be false, and although it is said that if Georgia received immediate assistance in munitions and supplies, the final catastrophe might even now be averted, it is to be feared that such support would be no more efficacious than in the case of the various other attempts to bolster up anti-Bolshevik armies elsewhere. It should be clear to the whole world by now that the Soviet Government of Moscow is pursuing precisely the same policy as would have been pursued by any other Russian Government, and is making the re-establishment of Russia's pre-war frontiers its first consideration. Is it probable that the Russian nation as a whole would be opposed to such an object on the part of no matter what Government? The really interesting question that now arises is with regard to the manner in which the Turks will meet the Russians at Batoum. Here, again, everything depends upon Bolshevik plans for the future, and whether these plans necessitate the further utilisation of the Turks. When the Turks were permitted to stick to Kars and Alexandropol, in spite of Moscow's demands that the forces of Kiazim Karabekir should be withdrawn, it became clear that the Bolsheviks were ready to sacrifice Armenia, albeit temporarily, in the interests of a more ambitious object. Are the Turks still necessary to the success of that scheme? Or, rather, do the Bolsheviks still consider that the Turks are likely to lend themselves to the forwarding of that scheme? The manner in which the Batoum question is debated will throw considerable light upon the true state of affairs.

CYPRUS.

Nicosia, February 25.

The Enosis (Union) Movement.

At a meeting held at the residence of the Greek Archbishop on February 19 and 20 it was decided that, with a view to further organisation, a central committee of five should be established at Nicosia, to consist of the Abbot of Kykkou, Kleopas, M. Theodótou, and I Ekonomides (of Nicosia); Ph. Zannétos (Larnaca), and N. K. Laniti (Limassol). Committees are also to be formed in the six administrative districts, including the Greek Bishops of the division, the mayors, chairmen of school committees, and editors of local papers. Committees again are to be formed in the villages. Each body is to have its treasury and funds. A telegram was despatched to Mr. Lloyd George by the Archbishop and members of Council, on the occasion of the London Conference on Eastern affairs, begging that Cyprus might be included within the territorial boundaries of regenerated Hellas.

The Chief Secretary has conveyed the reply of the Secretary of State for the Colonies to the Archbishop's letter respecting the continuance of martial law, and the warning given to Mr. N. K. Laniti by the Limassol court-martial. The Minister considers that the former is necessary pending the final proclamation of peace, and that the latter was fully justified.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

March 7.—Colonel Amery informed Mr. Mosley that the present strength of the Royal Air Force in Mesopotamia is now: British officers 128, and other ranks 950.

March 8.—Mr. Harmsworth informed Mr. James Brown that no British officers had at any time been in charge of or associated with the Persia Cossack Division.

Mr. Harmsworth informed Sir John Rees that the new Persian Government had issued a proclamation in Teheran in course of which the Anglo-Persian Agreement of August, 1919, was denounced by them.

March 9.—Mr. Montagu informed Lord Henry Bentinck that at present there are now 121,800 Indian troops serving outside the Indian Empire, but that it is anticipated that this number will be reduced to less than half by the end of the present month.

March 10.—Mr. Harmsworth informed Mr. Ormsby Gore that in view of the denunciation of the Anglo-Persian Agreement of 1919, the British Government will be free to denounce the customs tariff which was based on that agreement.

HOUSE OF LORDS.

March 8.—The motion of the second reading of the Government of Burma Bill was introduced by Lord Lytton. The rejection was moved by Lord Sydenham, who subsequently withdrew his motion to make way for a motion by Lord Amphil that the debate be adjourned till further correspondence and papers had been made available. Lord Amphil's motion was carried against the wishes of the Government spokesmen by 36 votes to 31.

March 7.—Lord Crawford informed Lord Newton that it was hoped that the entry into force of the Treaty of Trianon (Hungarian Peace Treaty) would take place in a few weeks' time. The deposit in Paris of the ratifications of Great Britain, France and Italy as well as of Hungary is necessary before the Treaty can come into legal force, and as far as Great Britain is concerned, it is considered that an Act of Parliament will be required before ratification can be made complete.

("Topics in Parliament" will be found on p. 326.)

MESOPOTAMIA AT THE R.I.B.A.

At a meeting of the Royal Institute of British Architects held on March 2, Major Edward P. Warren delivered an address entitled "Mesopotamia: Architectural Impressions of a Recent Tour." It may be stated that during the war Major Warren organised and commanded the great military hospital at Corfu, which did so much to rehabilitate the Serbian army after its retreat across the Albanian mountains. For this he was made Honorary Major in the Serbian army, and received the Order of Saint Sava. Since then he has become principal architect in Mesopotamia for the Imperial War Graves Commission, and the lecture at the R.I.B.A. was the result of a recent tour in that country. It was illustrated by a large number of lantern slides, reproduced from drawings and photographs, showing places of architectural or archaeological interest. Describing these, Major Warren mentioned, among other things, that the monument set up in Baghdad by the Turks to commemorate their victory at Kut, was already in a dilapidated condition, and was now being kept up by the British. The erection of a monument, to be designed by Sir Goscombe John, in memory of Sir Stanley Maude, was projected at Baghdad.

Following Major Warren's lecture, Mr. Money showed some lantern slides, principally relating to the Hindieh dam and other irrigation works. In connection with these he related many interesting incidents. Among other things he stated that the Hindieh barrage was completed just before the Turks entered into the war. Upon this event occurring all the English engineers were arrested and marched under escort to Aleppo. It was a long march, occupying three or more weeks, and one by one the Turkish soldiers grew weary and dropped out. At length the Englishmen marched into Aleppo with no escort at all.

Later in the war, said Mr. Money, as soon as the British had occupied Baghdad, enquiries were made as to whether the Hindieh barrage was safe; it then was found that the Turks had despatched a body of troops to destroy the barrage, but the local Arabs, realising what water meant to them, rose in a body in its defence and prevented the Turks from doing any damage to it. Thus the barrage had remained and had enabled such an area of land to be put under cultivation that we were able to raise on the spot all the forage and grain required for our army in Mesopotamia, and this at a time when the German submarines were at their greatest activity.

After Mr. Money's address, Mr. Lionel Muirhead, who was for a long time resident in Mesopotamia while the country was still under Turkish rule, gave an interesting description of a large number of water-colour drawings of Mesopotamian buildings and scenery that he had on exhibition in the hall.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

EXTREMIST POISON AND ITS ANTIDOTE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I was sitting last night in the lounge of a cosmopolitan hotel at Nice, an adjoining table being occupied by several Russians and Roumanians, whose animated conversation in French was overheard by many guests, myself included. A Russian refugee discoursed at considerable length on recent happenings at Odessa. Before the Revolution he had owned some extensive flour-mills in that city, which were a model of their kind. Everything possible was done for the workers' well-being. They had schools for the children, recreation-halls, cheap and sanitary dwellings, subsidised benefit-clubs, and a pension fund. The whole concern had been appropriated by the Bolsheviks, who substituted rations for the wage-roll. They kept the employees at heel by depriving recalcitrants of food, and rewarding delation by extra allowances. Terrible were the results of this vast system of espionage. No one's life was secure, and parents were compelled by hunger to inform against their children.

A lady then remarked that things were just as bad in India; that the English were equally cruel oppressors, who drained the country of its wealth and left the unfortunate natives to starve. Having some acquaintance with her, I interposed, and asked the authority on which her diatribe was based? She replied that all she had said, and much more, was to be found in a French translation of a book by Mrs. Annie Besant. Thereon I gave the company a little biography of that versatile lady; told them that she had boxed the compass in the matter of religion and was always at the mercy of the latest influence brought to bear on her; that, after becoming the mouth-piece of an extremist clique, she had recanted all her opinions, and was now a convinced champion of the British Government. I ended with a brief sketch of Indian history since the fall of the Mughal Empire, assuring my hearers that the British had brought order out of chaos, and conferred untold benefits on our great dependency. My audience listened with attention, but some, at least, were only half-convinced. We are all aware that the propaganda organised by Lord Northcliffe played a conspicuous part in ending the Great War. Is it not high time, Sir, that the India Office should follow his lead by furnishing an antidote to the poisonous literature circulated by doctrinaires and fanatics?—I am, etc.,

F. H. S.

Nice, February 28.

THE SHEREEF ALI HAIDER AND MESOPOTAMIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your correspondent "Champion" deals with my criticism of the case for Shereef Ali Haider in your issue of the 10th inst. This calls for a further reply from me, and I should appreciate your permission to make the following observations. The criticism of "Champion" is courteous to my view-point, but it in no way qualifies the major premise of my argument, and it is not therefore necessary for me to deal at length with the new points he raises. We have merely to choose between representatives of two families both honoured among their followers. But in the consideration of the records of the two, how long need we halt between two opinions?

To all students of Arab problems it must appear amazing that Ali Haider should consider himself a candidate for the Emirate of Mesopotamia and for the honour of British confidence. At the most critical time of the war in the East, the Germans placed at Constantinople as the head of a movement against King Hussein—the only Arab leader who raised an army to fight with the British, and whose merits and conduct have been so much appreciated by our leaders—this man, the Shereef Ali Haider. We know on "Champion's" own admission that he went to Medina. The Sultan of Turkey—acting on German pressure—proclaimed Jehad, which Hussein counteracted. Further, Ali Haider would have been made Shereef of Mecca, and all the family of Hussein (whom he hated) would probably have been killed had the scheme of Ali Haider succeeded. He failed because the Arabs in Hejaz did not support him, and not because he did not wish to advance. Our ally, Hussein was the stronger, and this influenced the future movements of Ali Haider, and caused him to pause and to abandon his advance.

The Turks were pro-British during the last century, but

joined our enemies during the World War. It is hardly logical to postulate the idea now that we should help the Turks reap the benefit of our successes and deprive our Allies of such advantage merely because the Turks were our friends fifty years ago!—I am, etc.,

W. URNOWSKI.

15, Endsleigh Street, London, March 14, 1921.

Sir,—Once again I crave space in your columns to advocate the claims of Ali Haider and show how his appointment would not only be advantageous to the peace of the Empire, but also to the peace of the Hejaz.

The real question for our consideration is: Under whose leadership will there be the greatest peace in Mesopotamia, and therefore the least expense to the British taxpayer? It might very well be said that we have entered into so many engagements with different Arab leaders, most of them rivals and even potential enemies of one another, that to introduce yet one more would only add to our many difficulties. In the words of one who has known Ali Haider for many years, "the aims of the Shereef have always been for the establishment of peace," and his introduction, therefore, into the arena of Arabian politics would exercise a pacificatory influence, not only in Mesopotamia but throughout the length and breadth of Arabia as well.

To-day the Emirs Ibn-Saud, Idrisi, the Imam of Yemen, and others show bitter resentment and hostility against the present King of the Hejaz and his family. If there is one man in this world who can control these Emirs, it is Ali Haider; and if he were given a position befitting his dignity we should soon see how his influence over them would be exerted to the advantage of the British Empire, of the Hejaz, and of the whole Moslem world. King Hussein, therefore, would be immune from the aggressions of his neighbours.

If, on the other hand, a member of King Hussein's family, however worthy he may be, were given the Emirate of Mesopotamia, it would only augment the personal feuds and jealousies between the above-mentioned Emirs and the House of Devi Aoun (Hussein's), whilst the seeds of future trouble from an incarcerated candidate's (Ali Haider's) supporters would germinate in the ground of discontent so caused.

Ali Haider's introduction, therefore, would not add to our many difficulties, but rather lessen them.

It is true that Ali Haider is less known in Mesopotamia than either Faisal or Abdullah, but perhaps this is to his and our advantage. If we look up our history we shall see that those nations that have suddenly gained their independence, or even semi-independence, are more content if they have a Prince who is not only superior in social standing to any member of the community, but also is not intimately known to the majority of the population.

Having said so much in favour of Ali Haider, we must pray for wisdom, foresight, and justice to guide the final decision.—I am, etc.,

CHAMPION.

The Egyptian Government has issued a statement pointing out the necessity of the strictest economy owing to an anticipated large Budget deficit. The 60 per cent. war bonus accorded to Government employees is being reduced by one-third as from May 16.

- I.—"LUNACY IN INDIA." By A. W. Overbeck-Wright, M.D., &c., &c., Superintendent, Lunatic Asylum, Agra. (London: Baillière, Tindal and Cox. 21s. net.)
- II.—"THE STRANGER." By Arthur Bullard. (London: Macmillan & Co. 7s. 6d. net.)

I.—THE TREATMENT OF INSANITY IN INDIA.

Professor Seely remarked that the public attitude towards prisoners had passed through three phases—the first characterised by barbarous insensibility, the second by a regard for strict law and justice, the third inspired by the truism that to deprive a man of his liberty was to incur grave responsibility towards the captive. The self-same evolution is seen in the management of lunatic asylums. Within living memory their wretched inmates were kept in chains—sometimes flogged and doused with ice-cold water. Bedlam was one of the recognised sights of eighteenth century London, and passengers by coach halting at Norwich could visit the local asylum for a fee of one shilling. A revolution was slowly wrought by the efforts of the Willises, the Tukes, and their collaborators in the task of reform. Great attention is now paid to the etiology of mental aberration; every case receives sympathetic study, and all the resources of science are enlisted to effect a cure. While the British alienist has a wealth of statistics at his disposal, enabling him to compare the results of empirical treatment, his Anglo-Indian colleague possesses no such advantage. According to the census of 1911, aments and dements in British India numbered only 27 per 100,000, the corresponding figures for England and Wales being 364. Owing to unfavourable climatic conditions and over-population the struggle for life in India—which is the main cause of insanity—must be at least as severe as in higher latitudes; and we may fairly assume that the proportion of mental weaklings in our Indian Empire is no lower than at home. On this basis there are probably about 1,000,000 insanies in British Indian territory, while the census revealed only 67,836, 11 per cent. of whom can receive treatment in asylums.

Dr. A. W. Overbeck-Wright has provided abundant data for reform in a monumental work, which is the fruit of many years' experience as superintendent of the Agra Asylum. It is too technical for extended notice in a non-professional publication, but deserves the closest study by medical practitioners. His opinion regarding the causation of mental troubles will come as a surprise to most people. During the crusade against opium, that drug was alleged to be the main cause of insanity; but, as a matter of fact, it was not responsible for a single admission at Agra. Its consumption in pills is a widespread habit, and, taken in moderation, opium is a restorative and stimulant, which gives a sense of well-being to millions of sufferers from disease. In only two cases out of 280 admitted during eighteen months was lunacy due to cocaine; but Dr. Overbeck-Wright admits that this abominable drug deprives its slaves of moral sense, leading them to commit any crime in order to satisfy their craving. Indian hemp, better known as *ganja*, plays a far more important part in filling Indian asylums, and alcohol, in the adulterated form sold in bazaars, is a fertile source of insanity in the Eurasian community. But the vast majority of mental cases may be ascribed to tainted heredity, and malaria in its myriad forms weakens the capacity to resist morbid impulse. Dr. Overbeck-Wright thinks that progress in dealing with insanity is hampered by excessive centralisation, and that the fact that all Indian asylums are supported by the State renders "such institutions antiquated and out of date." He adds that—

a knowledge of the true nature of insanity and its importance as an agent in the prosperity of a nation may be among the first fruits of the progress of Indian races, and lead to local sects and bodies forming institutions of their own for the proper care and treatment of such cases, as well as combining in a prophylactic campaign against their common enemy.

F. H. S.

II.—ORIENTAL MYSTICISM VERSUS WESTERN EFFICIENCY.

Mr. Bullard introduces us, without losing any time, to a circle of enthusiastic workers in New York, all devoted either to art or to social reform, full of zeal, of high ideals, and of the driving power of efficiency. The four whom we come to know best during the course of the story are Helen Cash, who was "financial secretary—which means money-raiser—of the National Association for Labour Legislation.

She was one of the most highly-paid women in social service. She had made good." Frank Lockwood, a painter who has brought misery on himself by marrying the beautiful Lillian von Lehnburg; all his inspiration in art and joy in life are gradually being killed by her vulgar mercenary spirit and unchangeable conviction that happiness is entirely dependent on a large income. Pete McGee, who, after some years of co-operation in work and good fellowship with Helen (which he "spoilt," as she calls it, from time to time by begging her to return his love), marries a pretty little nonentity, and Win Mathews, a novelist. Living with Helen is her friend, Eunice Bender, of whom the author has made a beautiful and touching study. She is hopelessly delicate, and cannot live long, and for the short time left to her she has to nurse her strength very carefully, and is just able to make her living by fashioning delightful little rhymes and pictures for children's magazines and books. But although the fact of Eunice's illness is firmly and relentlessly insisted on, it does not have the effect of producing a morbid or unpleasant atmosphere. Her character does really rise above her physical weakness, and her lovely spirit illuminates all mention of her.

All the members of the coterie love Eunice and find her wonderfully sympathetic. She herself lives, as it were, through them, and especially through Helen. She finds her greatest sense of reality in watching their doings and experiences and admiring their tireless energy.

Into this circle comes the Stranger, Donald Lane, carelessly introduced by Mathews. Lane is the son of a medical missionary in Morocco, who had become a Mohammedan that he might better help the people, and he has been brought up as a Mohammedan. He has had strange adventures from the time when, still a child, he lost his father until after many years he returned to his house and garden in Morocco. He has come to America to help in research work connected with an obscure Oriental dialect. Lane is filled with the deep spiritual sense and mysticism of the East, and it is quite a triumph for the author that, although many chapters practically consist of Lane's views on the attitude of young America and the superiority of the Oriental point of view and his own creed, he is still a human being and endowed with more than ordinary power and dignity. He succeeds in completely shaking Helen's robust self-confidence and conviction of the importance of her own efficiency, and she finds, to her dismay, that she has fallen in love with him. All through her powerful and protecting affection for Eunice there have been a great deal of pity and a suggestion of patronage towards her work; and when she finds that Eunice and Lane love one another her horrified amazement makes her so far forget her loyalty that she tells him of the condition of Eunice's health. She finds that he already knows, but that love has for him a deeply spiritual significance and is "the very voice of God," and that he considers "health" and "efficiency" are only "abstract, empty words" before which the Western world falls down and worships. The book ends with the death of Eunice and Lane's return to his Eastern home, accompanied by Frank Lockwood. Mr. Bullard makes the world of strenuous work into which he takes us seem very real, and there is true beauty in the story of the love of the Stranger and Eunice.

JOHN LANE, The Bodley Head, Vigo Street, LONDON, W.1.

MUSICAL NOTES.

Two Reviews.

Messrs. Kegan Paul, Trench, Trubner, and Co. have recently added two volumes to their very useful "Library of Music and Musicians"—"A Handbook of Orchestration," by Florence G. Fidler, and "The Spirit of French Music," by Pierre Lasserre, translated by Denis Turner. The first book, which is designed to make of its readers intelligent listeners to music, is more a collection of notes than anything else, but is probably of more value on account of this. For this brief method enables the authoress in short space to write down all the essential preliminary points about orchestral scores and instruments. Her book is divided into two main parts—"The Score" and "The Instruments"—of which the first (and more difficult) is the better done. The compass charts illustrating her remarks are lucidity itself, and the pages on rarely-used instruments and on old and foreign scores are interesting. There is also a well-chosen bibliography. This handbook should be certain of a welcome, even more from the general lover of music than from the student.

The second book, by M. Lasserre, is one of the most interesting and stimulating series of musical essays that we have read for a long time. It is French, very French, but though this stamps the book, it certainly does not vitiate it. Even to the non-musical person it must make good reading; and its merit loses nothing, apparently, in the beautiful translation which Mr. Denis Turner has made.

There are six essays in the book—on Grétry, the king of comic opera, on Rameau, whose virtues now are almost as universally recognised as M. Lasserre could wish, on the modern Italians, on Meyerbeer, on Wagner the Poet and on Wagner the Musician. M. Lasserre's fine scholarship is evident in the remarks upon Grétry and Rameau; his acute critical sense informs a very just estimate upon the value of Meyerbeer; and his analysis of Wagner's greatness is done with deadly Latin logic. The denial of any value external to music in Wagner's culture was, perhaps, inevitable after the European War, but it is nevertheless made very convincingly by the author. However, the finest critical work in the book is undoubtedly the essay upon Meyerbeer, "a cosmopolitan manipulator." Nowhere else is M. Lasserre's exquisite sense of the fitness and pregnancy of things seen to such vivid advantage. But the whole book is very worthy, and indeed is one of the most important of the whole series.

Folk-Song.

There are few singers who could so successfully devote a whole evening to the singing of folk and traditional songs as Miss Dorothea Webb and Mr. Plunket Greene, who together gave such a recital at the Æolian Hall on March 11. Miss Webb's sincerity and general artistry are too well known to need comment here, and within a range by no means small she gave some perfect interpretations. Among these we count the fifteenth-century "Lieblich hat sich gesellet," the Neapolitan "Fenesta che lucivi," the Norman "Le Sommeil de l'enfant," the Ulster "My Lagan Love" (which she sang unaccompanied), and "The Two Sisters of Binnorie." But there were, on the other hand, a few songs either too difficult for her voice (for example, a Provençal troubadour Song, the simple magnificence of which was forced), or to which the grave beauty of her voice could not easily be adapted (a folk-song from Smyrna arranged by Bourgault Ducoudray, or "The Twelve Days of Christmas," which as a solo is almost inevitably boring). In so wide a selection of song some blemishes (chiefly arising from breathing) were apparent, of course, but Miss Webb's virtues, beautifully pointed by Miss Ella Ivimey at the pianoforte, at all times outshone her deficiencies.

Mr. Plunket Greene was heard chiefly in French and Irish song, most of which he has sung before. In these things he is our foremost authority, so that there is no more to be said than that in songs the impulse of which is uninterrupted he is still inimitable.

Mr. Sokolow, chairman of the Executive of the Zionist Organisation, has left London for Egypt and Palestine.

M. Dashkaloff, Bulgarian Minister of Commerce, concluded his mission to this country on March 11, and left for Sofia.

Mr. Claud Alexander Barron, Chief Commissioner, Delhi, has been appointed a Companion of the Order of the Star of India.

M. Frederic Nano, Secretary to the Roumanian Legation, accompanied by Mme. Nano, returned to London on March 11 from Berlin.

Sir Ian Malcolm, the British representative on the Suez Canal Commission, has returned to Paris after his official visit to the Canal.

M. A. de Lens, Secretary at the French Embassy, left London last week for Paris on his way to take up his new post at Belgrade.

Dr. Volonakis, Delegate of the Dodecanesians to the Conference, has addressed memorials to Mr. Lloyd George and to Count Sforza urging the handing over of the twelve Ægean islands to Greece.

The Indian Moslem Delegation entertained both the Ottoman Delegations at luncheon at the Savoy Hotel on March 14. Mr. Chotani presided, and among those present was the Aga Khan.

The Earl and Countess of Reading, who are due to leave for India to-day, were received by the King and Queen at Buckingham Palace on March 14, and were entertained by their Majesties at a farewell luncheon.

The Aga Khan arrived in London last week from India. He has come unofficially at great personal inconvenience, at the invitation of the British Government, in connection with the reconsideration of the Turkish Peace Treaty.

Sir Edward Boyle, together with Lady Boyle, has arrived in Belgrade in order to liquidate various institutions opened by the Serbian Relief Fund. Sir Edward and Lady Boyle were most cordially received by the Prince Regent and M. Pashitch.

The first course of English literature in Roumania was opened at the University of Bucharest by M. M. Beza, Roumanian Consul in London and lecturer at King's College, on Tuesday, February 22. The course will consist of twelve lectures.

Sir Alexander Baird, first baronet, of Urie House, near Stonehaven, Kincardine, and of Hope Street and West George Street, Glasgow, Lord Lieutenant of Kincardineshire, who died at Cairo on June 20, in his 71st year, has left personal estate of the value of £285,805, of which £58,000 is in War Loans.

"Hellenism in Egypt" is the subject of a lecture to be delivered by Mr. H. Idris Bell, M.A., in the Lecture Room of the Royal Society, Burlington House, on Thursday, March 17, at 8.30 p.m., before the members of the Egypt Exploration Society and their friends. Tickets can be obtained gratis on application to the Secretary, Egypt Exploration Society, 13, Tavistock Square, W.C.1.

Mr. Edward Fothergill, author of "Five Years in the Sudan," is now lecturing in various parts of England on "The Sudan." A correspondent who heard him recently at the Winter Gardens, Bournemouth, writes that the lecture was most interesting and instructive. When the lecturer expressed the hope that, as we had made the Sudan what it is, we should keep it, there was much applause.

A marriage has been arranged, and will take place on April 7, at Gunthorpe, between Major Frederick Marshman Bailey, C.I.E., Indian Political Department, elder son of the late Lieutenant-Colonel F. Bailey, R.E., and of Mrs. Bailey, of Edinburgh, and the Hon. Irma Cozens-Hardy, only daughter of Lord and Lady Cozens-Hardy, of Gunthorpe Hall, Melton Constable, Norfolk, and of 1, Halkin

Place, S.W.1, and granddaughter of the late Colonel Sir William Everett, K.C.M.G.

Our Cyprus Correspondent writes (February 25):—

Mr. W. A. Bowring (Receiver-General) will act till further notice as Principal Forest Officer.

Lieut.-Col. A. C. Tompkins has been appointed Commissioner of Famagusta.

Mr. M. T. Hassett has been appointed Assistant Engineer in the Public Works Department on probation.

A telegram from M. Venizelos from Monte Carlo thanks the Greeks of Cyprus for their good wishes on the occasion of the new year.

ATHENS ROYAL WEDDING.

The wedding of the Roumanian Crown Prince and Princess Helen of Greece was celebrated in Athens Cathedral on March 10 with great pomp, in the presence of all the Royal Family. Those present included the Queen of Roumania, the Roumanian Princesses, the members of the Cabinet, and the civil and military authorities.

SIR RICHARD BURTON: CENTENARY.

Saturday, March 19, will mark the centenary of the birth of Sir Richard Burton, traveller, explorer, author, and Orientalist of the first rank. He travelled extensively in many parts of the world, and some of his best work was done in Africa; but it is undoubtedly with his famous journey to Al Medina and Mecca that his name is most closely associated to-day; and his great translation of "The Thousand Nights and a Night" links his memory even more closely with the Arabs, whom he knew so well, and for whom he had such friendly regard. To travel in the character of *hajji*, or pilgrim, to the sacred cities of Islam, as he did, was an achievement to stir the imagination; and to be able to gather such detailed and valuable information as he secured, under the conditions of his journey, was an astonishing feat. Other Englishmen have since followed in his footsteps; Mecca and Medina are less mysterious now than they were in 1853-54; and the war produced several men who studied Arabian affairs in the way that Burton would have regarded as the only way—at first hand and on the spot. To them we owe much, and it is to be hoped that full weight will be given to their views in shaping our policy towards the Arabs to-day. But it is to be hoped also that the views of other men, who have studied the question from another angle and who are able perhaps to take a more impartial view of various claims advanced, will be at least as carefully considered. It is a thousand pities that Mr. Churchill cannot have the benefit of Sir Richard Burton's advice to-day, but we may hope that Sir Percy Cox and the other experts whom he has summoned to Cairo to meet him will prove worthy successors to Sir Richard.

In his biographers, as in most other things, Burton was unlucky, and we still look for an adequate and accurate picture of the man as he was. His reputation has suffered almost as much at the hands of his admirers as at those of his enemies. But nothing can conceal the fact of his greatness; his splendid fearlessness, his energy and vitality, and his great, if unostentatious, loyalty to his Queen and his country. Those Englishmen who are interested in Arabia and the Arabs revere his memory and feel towards him an affection almost personal.

APPOINTMENTS, ETC.

M. Tchenkeli has been appointed Georgian Minister to the Court of St. James.

Mr. Lewis Charles Crump has been appointed a Judge of the Bombay High Court.

Prince Anowshiravan Mirza Salon has been appointed an Honorary Attaché at the Persian Legation.

Rear-Admiral Grandclément has been appointed to the command of the French Syrian Naval Division.

OBITUARY.

A Reuter message states that M. Pyrame Naville, the Yugoslav Consul-General in Paris, died last week.

Our Cairo Correspondent writes (February 28):—

The British community has suffered a serious loss by the death of Dr. David M. Beddoe, which took place yesterday.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

day after a relatively short illness. Dr. Beddoe, who was an ear, throat, and nose specialist, came out to Egypt during the South African War, and ever since then had worked as a general practitioner in Cairo. He had a very large practice among both the British and Egyptian communities, and gained not only the respect but also the affection of all who came to him for treatment. A skilful surgeon and clever doctor, he was of an intensely sympathetic nature, and there are to-day not a few in Egypt who owe an unpayable debt to his ability, devotion, and consideration. His ready wit and fund of good stories, born of his extensive knowledge of the world, made him, moreover, an excellent companion, and his loss will be very much felt by the wide circle of friends he had formed in every class of the community. On leave in England—or more strictly speaking, perhaps, in Wales—Dr. Beddoe was an enthusiastic angler; while in the few moments of leisure which his large practice permitted him in Egypt, he gave himself up to literary pursuits. He published many short stories and several novels, in which he gave full play to his power of observation and description and his keen sense of humour. Among the latter, perhaps the best known to Anglo-Egyptians are "Henri de Valois" and "The Last of the Mamelukes," which deal with the interesting and fascinating period of Egypt under the great Mohammed Ali.

NEWS IN BRIEF.

Two Bulgarian passport offices have been opened at Varna and Rustchuk.

Cable rates from India to Europe will be increased as from April 1 from 1s. 6d. to 1s. 8d. per word.

The police have recovered Rs. 34,000 (£2,266) of the Rs. 95,000 (£6,333) in notes, which were stolen 10 days ago from an escort party that was taking the notes in a box from the Chartered Bank to the Currency Office in Calcutta.

It is announced in Rome that an aeroplane service is about to be started between Brindisi, Corfu, Crete, Derna, and Alexandria. The service will be carried on by Italian sea-planes, which will carry passengers and mails.

The island of Castellorizzo, eighty miles east of Rhodes, which was ceded to Italy under the Treaty of Sévres, was handed over to the Italian Admiral Gallieni by Admiral Mornet, commanding the French Mediterranean Squadron, on March 2.

THURSDAY, MARCH 17, 1921.

THE REVISED SETTLEMENT FOR THE NEAR EAST.

As the trouble with the Treaty of Sèvres was that it was not accepted by the great majority of the Turks and could not be imposed upon them, it follows that any arrangement which is accepted by both Turks and Greeks and which, consequently, promises to introduce peace in the Near East is to be welcomed. A revised scheme, which it is hoped, will prove acceptable to both parties, has now been evolved as a result of the conferences in London. The Turkish Delegates, unfortunately, feel obliged to consult the Angora authorities before a definite reply can be given to the Allied proposal, and it will not be safe to count upon an unequivocal acceptance until it has been accorded. The stumbling-block, in the opinion of the Nationalists, is likely to be the refusal of the Allied Powers to modify the existing arrangement in regard to Thrace. There was much to commend the proposal to restore that province to the status in which it was left by the terms of the Armistice before the Allies handed it over to Greece. Whether the term "internationalisation" be applied or not to the provision then made, the effect would be the same: to impose an administration in which the three nationalities concerned—Greeks, Bulgarians, and Turks—would acquiesce readily, and against which there would be no inducement to intrigue. As things are, it can hardly have escaped the notice of the Allied Governments that constant protests are being made, by Bulgarians and Turks against the Greeks, and by the Greeks against both. The state of affairs is inseparable from any attempt to impose the jurisdiction of one Balkan nation upon the people of another, and must continue, despite the good intentions of the Government concerned. No orders from the distant capital or from the provincial governorate will ever prevent the local official or the village policeman from applying his own interpretation of his patriotic duty towards the traditional enemy. Accordingly, while the Greeks complain of unrest among their Bulgarian subjects and incursions of Bulgarian bands, the Bulgarians, with equal conviction, declare that the protest is either the stereotyped preliminary to further violation of the rights of minorities, or that, if the movements complained of have taken place, they are the outcome of fresh oppression of Bulgarian nationals. Where these conditions exist—and so long as the present arrangements in regard to Thrace lasts they will continue to exist—it is hopeless to attempt to apportion blame; the only thing to do is to impose an impartial government until the present bitternesses have had time to abate, and it is possible to introduce a national solution which does not entail continual friction, or worse. For this reason we regret the refusal to reopen the question of Thrace, even if the Turks acquiesced. The Minorities Treaty reads well on paper, but there is no ground for supposing that, as yet, it has been applied in any one Balkan country.

The proposals now made by the Allied Powers to Turkey and Greece should go a long way towards meeting the more reasoned of the Turkish objections to the Treaty of Sèvres. In the first place, the eastern shores of the Sea of Marmora are excluded from the demilitarized zone, or territory to which neither Turks nor Greeks, but only the Allies, may send troops. Turkey is offered representation both on the Straits Commission and on the Financial Commission, with the presidency of

the former. The Allied troops in Constantinople will be withdrawn as soon as the Powers have satisfied themselves of the good faith of the Turks. The decision in regard to Smyrna follows in part the lines advocated in these pages. The vilayet will remain under the sovereignty of the Sultan, with an autonomous régime. It is proposed that a Christian Governor should be appointed by the League of Nations, but it is to be hoped for the benefit of all concerned that as a Turkish Governor is excluded Greece will also agree to a self-denying ordinance in this particular. M. Sterghiades, the present Greek High Commissioner, has reaped golden opinions on all sides, but sooner or later the post is bound to become a party matter in Greece, and there can be no guarantee that future holders would invariably maintain the high standard of efficiency which M. Sterghiades has set. It will be better to allow the inhabitants of Smyrna to indicate the nationality—neither Turk nor Greek—from which they wish their Governor to be appointed, and to leave the nomination in the hands of the League of Nations. As soon as the Turks ratify the Treaty of Peace the Greek Army is to be withdrawn from Asia Minor, but some Greek troops, it is suggested, should be left in the town of Smyrna. In the remainder of the vilayet the Gendarmerie would be under Allied officers. By a separate agreement between France and Turkey it has been arranged that Cilicia is to be evacuated by French troops, and to revert to Turkish administration, provision being made for the adequate security of persons and property, not only of Armenians, but of all the minorities in the evacuated territories.

The modified terms now offered to the Turks suggest that the Allied Powers, having been brought into personal touch with the Turkish Delegates, have decided to give some consideration to the logical results of the Allies' victory. As was explained in these pages last week, the Turks, in common with other nations, have learned much from the late war. Whether they are capable of applying their experience remains to be seen, but it is certainly in the interests of the Allies that they should be given an opportunity of doing so. Both in their dealings with Greece of the Restoration and in the Treaty of Sèvres the Allied Governments adopted a policy which might have been reasonable if the war had ended in a draw and if all the machinery of German intrigue and military aggression remained in working order. No one, we may be sure, understands the lessons of the war more thoroughly than Germany's dupes among the nations, and it would be the height of folly on the Allies' part to ignore this fact. A Turkey regenerate of her own volition would repay them for much disappointment in regard to reparations by Germany; the next best thing, although costly, would be a Turkey reformed by Allied effort. The realisation of the official Greek view of a Turkey as unregenerate as ever would mean that the war had been fought in vain, as far as the Near East is concerned. In these circumstances it must surely be worth while to give Turkey the chance she asks for, even if we keep an open mind on the subject of her capacity to reform, until she has either made good or failed completely. Certain safeguards are essential; for the war period, which may have brought the will to reform, will not have taught the Turks the whole art of efficient government, any more than it has taught it to neighbouring States. The Treaty of Sèvres was a purely Balkan product, and as such it might be regarded as both natural and defensible. Only the Allies could introduce a new atmosphere into the Balkans, and we are glad to think that Great Britain has taken the lead in this matter. The interests of the Near East as a whole and the future peace of Europe require that the attempt should be made. It might have been made more wholeheartedly than is implied in the modified terms offered to Turkey, but a big step has been taken in the right direction. If the Turks accept these terms, it will rest with the Allies to see that they are given a fair field for the experiment. In the past all efforts on the part of Turkey to reform—never very seriously undertaken, perhaps—have at once been stultified by the intrigues of one or other of the Great Powers and by the actions of the subject populations. This time the Turks must be

protected from encouragement to intrigue in Europe and from the provocative tactics of those who look upon them as their traditional enemies. The first move, it is obvious, must come from Angora. The Delegation headed by Bekir Sami Bey will, we may hope, have been brought into close enough touch with realities in London to appreciate the opportunity that is now afforded Turkey. Of the sincerity of the Allies' intentions there can be no doubt. The question that has yet to be answered is whether the Turkish authorities will respond with equal sincerity.

CHRISTIANITY AND ISLAM.

(CONCLUDED.)

A paper read by the Rev. L. J. Egerton Smith, Senior Chaplain to the Forces, at a meeting of Christian workers in Constantinople held in 1920.

The Widening Breach.

Mohammed II. proved conciliatory in his treatment of the Christians of this city in 1453. Upon the election of a new Patriarch to the Greek Orthodox Church he summoned him to his presence, and presented him with a valuable pastoral cross, saying, "Be Patriarch and be at peace. Depend upon my friendship as long as thou desirest it, and thou shalt enjoy all the privileges of thy predecessors." Christians were admitted to the highest offices of State in the Moslem world. If there were instances of intolerance on the part of the Moslem conquerors, it has to be sadly admitted there was an equal intolerance on the part of those who adopted the sign of the Cross. We can hardly disguise the fact that it was the Crusades which widened the breach between the Cross and the Crescent, and armed Islam with the sword against Christianity.

It is of importance to the understanding of the development of Islam to remember that Christians accepted the fanatically proclaimed faith in large numbers, and that these apostates brought with them an intellectual ability and culture far superior to that of the original Arabs. So we find that modifications were introduced, patently Christian in origin. Theoretically the Holy Day was accepted, though Sunday was rejected in favour of Friday; congregational worship was recognised; and eventually an order of priesthood was established, based rather upon Jewish models. The priests approximated to the character of Scribes and Pharisees, occupying the position of moral leaders and exponents, guardians of religious thought and practice. In the first days of Islam it was the custom to plant a lance in the ground, and prayer was offered behind it. With the creation of a priestly class definite forms of worship were elaborated and sacred buildings were erected.

Influence of Christianity.

The influence of mediæval Christianity is distinctly seen in the teaching of the Koran as to the pilgrimage of man upon earth. Luxurious living is condemned, though Mohammed was no ascetic. Elaborate architecture was confined to mosques:—

"The worst use a believer can make of his money is to build."

"Every building except a mosque will stand to the discredit of its architect on the Day of Resurrection."

On the other hand, the attitude of Mohammed towards woman was controlled entirely by his local environment. Mediæval Christianity condemned marriage, with certain exceptions. Islam commended matrimony:—

"Two prayers of a married man are more precious in the sight of God than seventy of a bachelor."

One naturally concludes that the petitions of Mohammed himself in his later and more indulgent days must have availed much. Yet with it all, because of it all perhaps, the menace of the sexual relationship was greatly feared:—

"But for women, men might enter Paradise."

On this account women were held in very low esteem, though the popular belief that, according to the Islamic creed, women are supposed not to possess a soul rests upon no basis of fact. To quote Professor Becker on this point: "The idea of woman as a creature of no account is cer-

tainly rooted in the ancient East, but it reached Islam in Christian dress and with the authority of Christian hostility to marriage."

In the realm of dogmatic theology it might be thought there is little convergence between Christian and Mohammedan ideas. Yet it is here that the interaction is most clearly indicated. If we call to mind the great dogmatic controversies of Mediæval Christianity, we shall find that these have left an indelible mark upon Islam. What were these historic disputes which divided Christendom but the Problem of Free Will, the Being and Attributes of God, and the Nature of God's Word? These questions precipitated themselves in the Mohammedan creed. The first produced Fatalism, the second a strict monotheism, and the third a dogma of plenary inspiration of the most absolute type. The part taken by the Christians of this city [Constantinople] in the iconoclastic controversy of the eighth and ninth centuries will be well remembered, but perhaps it is not so readily recognised that the Mohammedan prohibition of images marks the stage when Islam cut across that historic struggle.

I have not the special knowledge to show that the theories of the State, of the individual, of the economics and morality of Islam were largely, if not wholly, controlled by the form of Christianity existing in the mediæval period; but this has all been established by competent investigators. In every department we encounter that particular type of Christian practice and belief which existed in the East during the seventh and eighth centuries, with accretions from Jewish, Gnostic, and Arabian sources. In a sense Islam is a perverted form of Christianity.

Mutual Indebtedness.

We are not unmindful of the fact that the Koran inspired a new movement which lifted the whole civilised world on to a higher level of thought and achievement. Although Islam itself became retrograde, it is true that because of it Greek philosophy, mathematics, science, including medicine, architecture, and astronomy, won recognition in the West; as in a later day the capture of Constantinople scattered Greek learning among the Latin and Teutonic races, and in particular compelled the conveyance of Greek MSS. of the Bible to Western Europe, and so contributed one of the principal causes of the revival of learning. It is surely a great gain to recognise the mutual indebtedness of these rival faiths. There are vast and irreconcilable differences; centuries of bitter hatred and fierce fanaticism have created impassable barriers; yet it is clear to the historical student that Islam borrowed heavily from Christian sources. Unhappily for the race, they were to a large extent contaminated sources. And it is difficult to avoid the conclusion that had Mohammed known the pure Evangel of the Nazarene he would have flung himself with impassioned zeal into the advocacy of the Christian truth.

Going into S. Sophia one instinctively feels that the medallions of the Khalifs, the eccentric Mihrab, the Mimbar flanked by green banners of conquest, and the other accessories of Mohammedan worship have no place in that sacred edifice. In their very blatancy they declare themselves as intrusions. The eternal majesty of Justinian's creation stands unaffected by these excrescences, and through the daub and the glitter the Cross emerges as the true glory of the Eternal Wisdom. So with Islam itself: great and noble conceptions lie behind it; eternal truth is enshrined within its teaching; superstition and falsehood are there, and gross materialism; but these things are a mere daubing, an accretion of ignorance. Islam has survived because of its truth, not because of its falsehood. One thing is sure: that the Moslem world cannot live for ever within the shadowland of mediævalism. The light that Islam was indirectly the means of diffusing in the West must return to illumine the Western lands. And it will come the more surely and rapidly because the old barriers of race have been broken down. East is East, and West is West, but despite our modern prophet the twain have met, for the nations have been summoned to God's judgment seat during these past tragic years. Do we, then, speak of the possibility of a renaissance which shall liberate Islam? Are there any signs of such a new birth? Close observers who are qualified to judge speak of significant changes. "The changing East"

PURE SCOTCH

has become a mere platitude. I quote from Professor Milligan's monumental work:—

"Colonel White, writing in 1844 in his interesting book, 'Three Years in Constantinople,' said that if a certain policy were pursued fifty years cannot elapse ere travellers will flock to Constantinople in search for relics of Moslem institutions with as much eagerness as they now seek for vestiges of Christian or Pagan antiquities. It would be an exaggeration to say that this prophecy has been literally fulfilled. But events have verified its forecast to such an extent that one is tempted to assume the prophet's mantle and predict that Colonel White's words will come to pass in the next half-century."

Our authority goes on to show the enormous changes that have taken place in the political situation in matters of education, means of communication, in customs, dress, and architecture. The palaces of the Sultans vie in magnificence with the royal houses of the West, a fact which has to be considered in the light of the prohibitions of the Koran. When we remember the slow and laborious process of evolution by which the West found its way into larger freedom, we dare not say that the hope of renaissance is the mere dream of a visionary. There are three hundred million Moslems, and the British Empire is the greatest Mohammedan power. The gain to the Christian world would be immense if the devotion, loyalty, and missionary zeal of Islam could be won for Christ.

Islam and the Turk.

I have said that the religious question is at the heart of the Near East problem. Morley sums it up in a sentence:—"It is the presence of the Ottoman Turks in Europe, their possession of Constantinople, and their sovereignty as Mohammedan conquerors over Christian races."

Whether we shall see the Turkish executive power transferred from Yildiz Kiosk to Brusa does not come within the scope of our present discussion. Whether or no there is a possibility of reform within the Turkish Empire I cannot say. History does not encourage such a hope. But Islam and the Turkish Empire are not synonymous terms. Indeed, so far from being the "bulwark of Islam," Turkey has proved herself to be the vanguard of Asiatic barbarism. The claim to the Khalifate of the Sultans rests upon the argument that Selim I. purchased the title from the last of the Egyptian Fatimites in 1517. Dr. Charles Vamvacas, a member of the Turkish Parliament till 1912, says, in the *Balkan Review*:—"The Arab chiefs of Mecca, Medina, Yemen, Baghdad, Assir, and Syria never recognised the religious supremacy of the Sultan." Mr. T. P. Hughes, in his "Dictionary of Islam," writes:—"We have not seen a single work of authority nor met with a single man of learning attempting to prove that the Sultans of Turkey are the rightful Khalifahs, for the assumption of the latter by anyone who is not of the Koraish tribe is undoubtedly illegal and heretical."

The first step toward liberty would obviously be for Islam to declare herself independent of the Sublime Porte. But I may be told that this is nothing short of dismemberment of the Empire: Turkey no longer held together by theocratic ideals cannot exist. I admit the relentless logic of the situation. Not for the first time in history would it be true that the very policy by which a nation rose to power and maintained its supremacy has proved ultimately the means by which were forged the very instruments of its ruin.

As for Islam herself, is not salvation to be found in fuller contact with the light and leading of the West? And no more blessed consummation of our hopes and prayers could be desired than that one day the Cross may again rise to the ascendancy in this city of the New Rome, and that not because of a subjugated people and a recaptured shrine, but because Christian and Moslem find their common ground of worship and praise under the spacious dome of the Church of the Holy Wisdom.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:—

SERBIANS (ENGLISH EDUCATION). MESOPOTAMIA. (March 7.)
 PERSIA: British Loan.—Persian, Cossack Division. ASIA MINOR RAILWAY CONCESSIONS. MIDDLE EAST, ARAB AREAS. MESOPOTAMIA. MESOPOTAMIA (SHAHRAB ON FIGHTING). INDIA: Regimental Bands. PERSIA. CEYLON SERVICE. (SALARIES.) (March 8.)
 RUSSIA: Tiflis. ANGLO-PERSIAN OIL COMPANY. INDIA: War Expenditure.—Railway and Inland Steamer Traffic (Surcharge). MESOPOTAMIA (RAILWAY WORKERS' WAGES). PERSIA. TRADE AND COMMERCE: Exports, Turkey.—Exports, Smyrna.—Anglo-Persian Oil Company. (March 10.)

A resolution has been adopted in the Indian Council of State favouring the immediate withdrawal of control from the export of foodstuffs.

Cotton spinners from the North of France have received an order from the Roumanian Government for £800,000 worth of cotton thread.

THE SHEIKH OF KOWEIT.

A telegram received by *The Times* from Baghdad announces the death of the Sheikh of Koweit, Salim ibn Mubarak. He was the second son of the well-known Sheikh Mubarak, who had been on terms of close friendship with

THE KOWEIT FLAG.

It has a red ground, with "Koweit," in Arabic lettering upon it. (Photo by E. E. Calverley, Koweit.)

Great Britain ever since the German attempt to secure Koweit as a terminus for the "Baghdad" railway; and he succeeded his brother in 1917. The telegram referred to states that the new ruler of Koweit will probably be Ahmed ibn Jobar, nephew of Sheikh Salim.

On March 14 Earl Curzon, in the House of Lords, said Parliament would have an opportunity of expressing an opinion on the Eastern Mandates after they had been before the Council of the League of Nations.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAB (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

India and Lancashire.

A deputation from the Manchester Chamber of Commerce placed Lancashire's case—forcibly may we assume in view of the telegram from which I quoted last week?—before Mr. Montagu, and this protest has been reinforced by a strongly worded letter from the Federation of British Industries. Mr. Montagu postponed replying to the deputation until he has received the representatives of the Manchester Cotton Spinners' Association, and we shall, therefore, have to wait for a few days for an official pronouncement on the position. Mr. Montagu's position is extremely difficult, and without wishing to discourage Lancashire it is really hard to see how he can usefully intervene in present conditions. The most hopeful development during the week was the suggestion—emanating, I believe, from the Lancashire members of Parliament—that a delegation should be sent out at once to India to discuss the situation. That, at any rate, contains the germ of a compromise, and it is on that basis alone, so far as can be seen, that a settlement more or less satisfactory to both sides can be reached.

Export Credits.

At last we have the Government's new proposals for assisting the export trade. In explaining them to the House last week Sir Robert Horne first dealt at some length with the original export credits scheme, which, he stoutly maintained, had not been a failure. On that point the business world will not be able to see eye to eye with him, for there is no question that judging by results it has fallen far short of its objective. Admittedly, as he said, it was launched at a time when trade was brisk, and manufacturers and exporters were not under the necessity of having to look for markets, but when a rapid change came over the position, and an unprecedented "slump" set in, there was no tendency on the part of traders to take advantage of the scheme until an alteration in the conditions made it rather more favourable, since when there has been an improvement in the inquiries for advances, but the applications granted for an amount of £2,000,000 and the actual advances of £400,000 suggest very forcibly whether or no the scheme has really been successful.

The New Scheme.

The new proposals *prima facie* would appear to go far to meet the needs of the situation. Advances will not be made to manufacturers or exporters as before, but instead it is proposed to guarantee up to 85 per cent. of the selling or invoice price of goods. In short, exporters will be in the position of carrying their transactions through by means of the banks as in normal conditions. Further, in the case of a transaction carried out entirely through the banks the Government proposes to guarantee 70 per cent. of any loss. That sums up the position as regards exporters. Then regarding importers the Government proposes that instead of, as now, having to put up the whole cost of a transaction the importer should put up 50 per cent., and of the uncovered risk the Government would guarantee half, leaving the remainder to the exporter. The scheme, Sir Robert Horne pointed out, had been before a committee of bankers, who supported the main principles while not expressing approval of every detail.

British Fair at Bucharest?

While it is possible to overdo the fair as a medium for the promotion of trade, the outstanding success which attended the Athens Exhibition of the Federation of British Industries clearly suggested that at a suitable time another fair might with advantage be held at a suitable centre in the Near East. It now appears that the authorities here have approached the Roumanian Government with a view to holding a fair at Bucharest, at which goods from Great Britain and the Dominions would be exhibited. The idea is excellent, and has everything to commend it, and I only trust that it will be found possible to carry it out, for I can conceive nothing better calculated to further the growth of trade relations between this country and South-Eastern Europe

than a well-planned exhibition of the staple products of British industry.

The B.I.F.

I find that an impression prevails in some business circles in the City that this year's British Industries Fair has not been far removed from being a failure. It is certainly true that the remarkable results achieved in 1920 were not attained, but it is also certainly incorrect to say that the Fair has not been a success—relatively, that is, in view of the present world-wide trade depression. No one expected in the circumstances that foreign buyers would descend upon the White City and other centres in swarms, or that merchants in specially favoured lines would be placed in the embarrassing predicament of having to refuse orders. But it was expected that a fair amount of business would be done in anticipation of the early end of the "slump," and, while actual figures are not yet available, I gather that this expectation has been amply fulfilled, and that, speaking generally, exhibitors have had no reason to regret their participation in the Fair. After all, numbers talk, and the facts that some 65,000 people visited the White City and that 50 countries were represented among the buyers speak for themselves.

Smyrna-Aidin Railway Report.

A much more hopeful report is forthcoming from the Council of the Ottoman Railway from Smyrna to Aidin for the half-year ended December 31, and one which gains special interest since it has been possible, for the first time since 1914, to present the accounts in a fairly complete form. The traffic receipts for the six months amounted to £334,414, as compared with £249,940 for the previous year and the highest pre-war total of £282,140, military traffic, from which the receipts were £98,365, being mainly responsible for this result, though the receipts from passenger and goods traffic both showed increases. There was a large increase on the expenditure side, due to the higher cost of material and higher wages, the total being £205,510, as compared with £189,995 for 1919. Claims for war damages have been sent in, but it is difficult to find much grounds for optimism as to the prospect of an early settlement, in view of Turkey's financial predicament.

Egypt's Industrial Expansion.

The progress of Egypt's industrial development has been watched with the greatest sympathy by THE NEAR EAST, and it is a source of peculiar satisfaction to us that, as recorded elsewhere in this issue, our efforts to encourage it have not lacked appreciation, and that a suggestion made by our Cairo Correspondent with a view to increasing the utility of the Egyptian Industries Exhibition has been adopted by the authorities concerned.

The Anglo-Persian Issue.

With its new issue of 3,500,000 nine per cent. cumulative second preference shares of £1 each, the prospectus of which appeared in these columns last week, the Anglo-Persian Oil Company brings its issued capital up to £20,875,000, including £4,875,000 of 5 per cent. First Debenture Stock. In recent years, and especially in the last few months, the

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST.,
LONDON, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B. 
LIEUT.-COL. SIR ALBERT STERN, K.B.E., C.M.G. 

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Anglo-Persian has been greatly extending the sphere of its operations, and the oilfields which give it its name now represent only one of its many interests. This great expansion has naturally opened the way for the employment of further capital, hence the present offer. The terms of the present issue are remarkably generous, and while nothing can be accounted certain in these remarkable times I shall be greatly surprised if the public have not shown a whole-hearted readiness to take advantage of the offer, for the investor is not blind to the fact that normal conditions must ultimately develop, and that when that happens a nine per cent. preference share in a company of the standing of the Anglo-Persian will obviously go to a handsome premium.

COMMENTATOR.

TRADE DEPRESSION AT SMYRNA.

The British High Commissioner at Constantinople, in a report on the commerce of Smyrna during the last quarter of 1920, states that in that period trade in general did not come up to expectations. Owing to the political conditions caused by the Greek military occupation, the port of Smyrna was deprived of the greater portion of its hinterland, and exports and imports were consequently restricted to Smyrna town and its immediate surroundings under Greek military occupation. The situation has led to considerable depression among merchants. Goods imported could not easily be disposed of, and exports on the other hand, did not rise to their usual limit. The uneasiness prevailing on all the European markets during the latter part of the year has further increased local difficulties. Many instances have occurred of consignees in Smyrna refusing to take delivery of goods. In view of the instability of the exchange market, and the wide fluctuations of the value of the pound sterling relative to the piastre, merchants should be scrupulously exact in the execution of orders as regards quality, time of delivery, etc. So long as the pound sterling is falling, consignees will make less difficulties over accepting goods, but in a rising market the smallest pretext will be seized upon for refusing consignments. The commercial situation has not been improved by the import restrictions imposed on goods entering Smyrna from the interior.

PAPER-MAKING FROM BAMBOO.

The current number of the *Bulletin* of the Imperial Institute contains a comprehensive and valuable article on the utilisation of bamboo for paper-making. Bamboo has come much to the front in this connection during the last year or two, and it seems likely that in the near future the manufacture of paper from this material will be undertaken on a large scale in several countries. A British firm have been granted a concession for cutting bamboo in the Government forests in Trinidad and have also established a bamboo plantation there of 1,000 acres. Leases have been granted, or applied for, for working bamboo forests in Burma, Madras, and other parts of India. In Indo-China two factories, equipped on up-to-date lines, are actually manufacturing paper chiefly from bamboo. Paper made entirely from bamboo pulp is of high-class quality. On the whole it is too good for the manufacture of ordinary newspaper, and is more suitable for the better grades of printing paper.

The article gives an account of the general characters and distribution of bamboos, and a detailed statement as to their occurrence and utilisation in various countries. The technical side of the subject is fully dealt with, particulars being given of the various methods which have been employed for the conversion of bamboo into paper-pulp.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 8:—During the week ending February 26 standing crops fair to good generally, except in the Punjab and North-West Frontier Province, where rain badly wanted. Bombay cotton market easy. Fine M.G. Oomra March Rs.206, May Rs.223. Piecegoods market lifeless. Calcutta jute market quiet, with prices steady. Hessians and heavy goods very quiet, with prices weaker. Construction of three sections of Bashokharo-Ramgarh Railway (coal fields), being an extension of thirteen miles by the Bengal Nagpur Railway Co., sanctioned. Bank rate is 6 per cent.

The profits of the Bulgarian grain Consortium during 1920 are stated to amount to 140,000,000 leva, 10 per cent. of which will be given to the three State banks and 90 per cent. will be used for the construction of silos, elevators, sheds, etc., to facilitate the export of cereals in the ports of Varna and Bourgas and on the Danube.

THE INDIAN BUDGET.

PROBABLE INFLUENCE ON EXCHANGE.

By "Gold Mohur."

The Indian Budget which has just been presented possesses some features which call for more than usual criticism. Increased taxation is never popular, and it is not to be wondered at that the Manchester shippers have protested against the additional duty imposed upon their manufactured goods. This will benefit the Indian cotton mills at the expense of Lancashire. At the moment, however, it will raise the value of the heavy stocks already stored in India, and will probably help the liquidation of outstandings which are being carried in the hope that exchange would be raised.

Those who had been looking forward to an announcement that Government would propose definite measures to maintain rates have been doomed to disappointment. The slump in exchange which has followed the ineffectual efforts of Government to hold the rupee at two shillings might surely be taken as a warning that any attempt to forecast the future should be eschewed. Yet we find in the Finance Minister's speech the opinion expressed that a low exchange would prevail for the first half of the year. We are led to infer, therefore, that thereafter a recovery will take place. It is sincerely to be hoped that this desired improvement will come along, but so much depends entirely on the monsoon that it is extremely imprudent to play the part of prophet.

One result of this publication of the official view is being shown in applications from Indian importers for a further six months' delay in meeting bills, which have already been extended by many months, so that Lancashire shippers see little prospect of a return of their money for a considerable time. It is perhaps unfortunate that their hopes of a higher exchange six months ahead should receive such official confirmation, because signs were becoming apparent in India that the importers' opposition to fulfil their obligations was weakening. Since they repudiated their contracts, the attitude of many of them has undergone a change, due chiefly to the knowledge that suppliers refuse to book further orders or ship any goods unless existing stocks are cleared.

We do not seem to be any nearer a solution of the currency problem now. For the past six months and more, Indian importers have been penalised by the low exchange, and in another six months or more the exporters will have their turn. That is the only reasonable deduction to be made from the Finance Minister's remarks.

It has been given out that funds in London will probably be sufficient to meet Government disbursements for about two years, which will relieve them from the necessity of selling Council bills on India. In the present stagnation in exports from India, this announcement is of no interest, but granted a normal year with a sufficient rainfall there is every reason to expect a return of prosperity.

In an ordinary season the volume of exports can only be financed by a considerable influx of funds from other markets. We have seen ample evidence during a busy season of the great demand for money all over India, in high bank rates and the keen demand in London for remittances of Council bills. Sales by the banks of sterling transfers on London were quite inadequate to supply funds sufficient to pay for export bills, and recourse had then to be made to Council bills here. In busy times the Indian Council has met the market by increased allotments weekly up to a crore of rupees, and even higher.

If this support should not be forthcoming, the only channels by which money can be laid down in India by the banks are, therefore, sales of bank transfers on London, and imports of silver and gold. Past experience has proved that the demand for bank transfers cannot possibly meet the export requirements of India by a very large margin, and if, therefore, banks and merchants have recourse to imports of the precious metals, not only should rupee exchange re-act, but the value of silver would also appreciate.

PERFUMERY and GOOD TOILET GOODS.

Keen Prices for High Quality. Enquiries solicited.

C. A. STOKES & CO., LTD.,
No. 21, "ECLIPSOL" WORKS, BRISTOL.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

ROUMANIA.

BUCHAREST, February 23.

Commercial Relations With Germany.

The question of the resumption of commercial relations with Germany is now being studied at the Ministry of Industry and Commerce. In view of this, meetings are taking place here between the representatives of this Ministry and M. Freitag, the German envoy.

More Locomotives From Canada.

The Ministry of Communications have closed a contract with the Canadian General, Brutinel, for the supply of 300 locomotives. Sixty of these locomotives will be delivered from Europe within three months. This will save the time lost in mounting the locomotives at Constantza, as was the case with the first consignment that arrived direct from Canada. In comparison with offers from Germany, this contract is considered to be much more advantageous.

Financial Reform.

M. Titulescu, the Minister of Finance, took the opportunity the other day to explain in the Lower House the activities of his department in connection with the coming Budget. He said that the new financial reform Bill is ready, and that he is now preparing the new Budget based on the new fiscal reform. He recognised that it was the duty of the Government to increase the revenues of the State by imposing new taxes, but, above all, it had first the moral duty of proving to the taxpayers that the heavy sums they would be obliged to pay would not be squandered. He has therefore written to all his colleagues of the other departments asking them to prepare a Budget for a period of five years which should show a reduction of 20 per cent. from the last one. In his circular letter to the other Ministers M. Titulescu impressed upon them the vital question of economy to the utmost limit by abolishing useless expenditure, and especially expenditure which, in view of the high taxes he intends to levy, offends public opinion. He particularly referred to the various superfluous Missions that had been sent abroad on the slightest pretext, to the sinecures in State departments, and last, but not least, to the numerous motor-cars which were used by officials of the various departments, not to mention the general tendency to waste.

The attitude of M. Titulescu has met with great approval in Parliament, and is highly commended by the people, who see in him the first Minister of Finance after the war who has understood the situation and intends to grapple with it.

Trade Depression.

The general depression still prevails. With the exception of a small drop in prices for cloth and sugar, merchants are fighting hard to keep up the old inflated prices, and the consumers, after hearing of the great collapse of prices abroad, are rather disappointed that no marked reduction has yet taken place here. The rate of exchange is naturally still the principal cause of it.

Miscellaneous.

The long-expected payment of the quota of 40 per cent. for the exchanged Austro-Hungarian crowns has now begun throughout the country, and that for the Bessarabian roubles is to follow immediately after, and although this fact has not yet made itself felt on the market as a buying power, it is nevertheless a factor that is going to count in the near future.

The Braila grain market is undergoing a period of pronounced stagnation. Loading for export has greatly decreased, owing to there being very few transactions.

According to the report of the Ministry of Agriculture the autumn sowings are very satisfactory, and promise good prospects, thanks to the abundance of snow which has fallen lately.

YUGOSLAVIA.

ZAGREB, February 25.

The Paper Money Nuisance.

The Ministry of Finance has opened a new department which will deal exclusively with the issue and recall of

paper money, especially of low denominations. It is hoped by this means to prevent the circulation of some of the tattered and disfigured half-dinar and one-dinar notes, which are so troublesome—though, to be truthful, less so in Yugoslavia than in some other countries. Before long it is hoped that the new low-value metal currency will definitely replace the low-value krone notes, which are still a public nuisance in the released provinces.

SYRIA.

BEYROUT, February 16.

Settlement of Pre-War and War Debts.

The public mind has for some time been exercised over the question of the impending decision regarding the settlement of pre-war and war debts. This matter has been under study by the authorities for several months past, and formed the subject of an exchange of opinion between them and a mixed commission composed of merchants, bankers, and proprietors, and the decision taken in this connection, after consultation with Paris, which has just been published in the form of an *arreté*, has fallen like a thunderbolt on the creditors.

All debts contracted prior to November 26, 1918, whether the bills, drafts, etc., stipulate payment in foreign money or in Turkish money, without any distinction being made between gold and paper currency, are to be settled in Syrian currency based on the value of 1.50 dollars at the current rate of exchange ruling on the date of the *arreté*—viz., at 112 Syrian piastres to the Turkish pound.

The authorities in the preamble of the *arreté* seek to justify their decision by the fact that, in all other belligerent countries, including Turkey, where the exigencies of war and economic necessity have determined the issue of paper money as legal tender, all debts and financial obligations since the cessation of hostilities have been met in the same currency, without any account being taken of its depreciation. The determination of the value of the Turkish pound at the above-mentioned rate has been based on its average depreciation in the latter part of the war, when it reached about two-thirds of its nominal value.

Article 14 of the *arreté* has special interest in that it aims at the protection of the small landholder by withholding from the creditor the right of forced sale of such property as is necessary for the peasant's dwelling, or of such agricultural implements, cattle, seed, etc., as are indispensable for keeping under cultivation the land he owns. The courts, however, may arbitrate on that part of the annual income which might be set aside towards the amortisation of the debt, provided the balance left is sufficient to enable the peasant and his family to live.

Article 15 aims at the protection of the landowners and landlords who were the victims of usurers, and who were forced to agree to fictitious sales, known as *vente à réméré* during the period between October 23, 1914, and November 16, 1918. This clause gives the right to the sellers of such property or their heirs of regaining it by the repayment of the price received on the monetary basis fixed by the present *arreté*. A supplement to this *arreté* is said to be

on the point of being published wherein this measure is made applicable to definitive sales also. This measure will be particularly welcome to the large number of Lebanese owners of land and property who have had to part with it at any price during the war, in order to save themselves from starvation.

The *arreté* has been the subject of strong criticism, especially from the creditors. The following mode of settlement has been suggested by some as the fairest one—viz., the division of debts into two categories—(1) those contracted before the war and during the early part of the war, when the issue of Turkish paper currency had not yet been made. As all payments were then made in gold, it is contended that mere justice requires repayment to be made in gold or its equivalent in paper currency, more especially as gold is still in circulation in Syria, unlike European countries, where it is prohibited, and paper is the sole authorised currency; (2) debts contracted during that period of the war when the Turkish paper currency started at its full face value and depreciated steadily until it reached at the end less than 25 per cent. of its nominal value. The opponents of the *arreté* allege that it has not even served the end for which it was framed, because in many instances the people it affects received the value of their property in Turkish currency, when it stood at much below the rate fixed by the *arreté*.

But the question is so complicated that no one solution can be the ideal one and satisfy all parties. One thing is certain, and that is that Syria cannot well be assimilated with European countries, because its monetary basis is not fixed, and until recently—i.e., until the fiduciary issue of the *Banque de Syrie*, the Egyptian currency was the basis, and values even now continue to be established on this basis. The existence of gold in circulation further complicates matters.

The wisdom of the measure will be judged by the manner of its reception by the population in general. The present outburst of criticism from those who are perhaps not the most representative section cannot be taken as a safe criterion, and it will be some time before the real effect on the population at large is gauged.

CYPRUS.

NICOSIA, February 25.

The Budget.

The Legislative Council has been summoned to meet on March 7. The Budget estimate for the current year's service provides for an expenditure of £535,679, including the following heads:—Public Works, £101,000; Police and Prisons, £101,000; Land Registry, £45,000; Forests, £44,000; Medical, £32,000; Customs, £25,000; Treasury, £24,000; Education, £24,000; Agriculture, £17,000; and Post Office, £16,000. A Supplementary Estimate provides £55,000, with extraordinary votes, for Afforestation and Forest Roads £10,000; Building and Purchase of Government Houses, £9,000; Road for Motor Traffic, £7,000; and Repair of Roads and Bridges damaged by floods, £5,000. Allowing for the grant-in-aid of £50,000 by the Imperial Government, and the Cyprus contribution to the Ottoman debt of £92,800, the Budget contemplates a surplus of about £19,000. There is very little difference between the Estimates of the present and the last financial year.

The 1920 production of Algerian wine is placed at 186,088,239 gallons, being a decrease of 19,605,336 gallons as compared with 1919, but an increase of 18,442,240 gallons compared with 1918.

ROUMANIAN TREASURY BILLS.

The Roumanian Legation in London notifies holders of Roumanian Treasury bills payable in sterling and due in 1921 that the following instructions have been issued by the Roumanian Minister of Finance to his delegate in Paris concerning the renewal of these bonds:—Holders of Treasury bonds payable in sterling and falling due during 1921 (on or after March 20) must notify the *Bureau de la Dette Extérieure Roumaine*, *Légation de Roumanie*, 51, Rue François I^{er} Paris, as to the bonds held on or before the date the bonds are due.

The *Bureau de la Dette* will renew bonds for one year. Interest at 8½ per cent. per annum for one year will be paid in advance on the new bonds, and a cheque in sterling on London will be delivered with the new bonds. Holders are required to notify the *Bureau de la Dette* as to the serial numbers of bonds held, due date and the amount of each bond. Should holders of bonds desire it, arrangements will be made for the exchange of bonds in London (at the Bank of Roumania), but holders will have to notify the *Bureau de la Dette* as to this when furnishing serial numbers and due date. Holders will be notified by the *Bureau de la Dette* when the new bonds are ready for delivery.

A SUGGESTION ADOPTED.

Commenting on the Egyptian Industries Exhibition in THE NEAR EAST of January 27, our Cairo Correspondent advocated the opening of an office where orders for articles produced in the provinces could be taken and transmitted to the manufacturers, or through which it would be possible for the consumer to get into touch with the provincial producer. We have received a letter from the Controller of the Bureau of Commerce and Industry in Egypt, thanking us for the suggestion, and stating that it has been adopted and that goods may now be ordered at the exhibition.

REFUSAL OF ACCEPTANCES IN BULGARIA

The British Commercial Commissioner in Sofia reports that, owing to the long period of commercial stress in Bulgaria, refusal of acceptances is becoming more frequent amongst importing merchants in that country, some of whom are still loaded with stocks purchased when prices were still high. The commercial community is also suffering from the depreciated exchange. Refusals of acceptances are in the majority of cases, if not in all, due simply to the inability of the firms to withstand the long-continued strain to which they have been subjected by the abnormal conditions prevailing. British firms should therefore safeguard themselves by taking due precautions.

CATALOGUES FOR PALESTINE.

The Director of the Department of Commerce and Industry of the Government of Palestine, writing in connection with the institution of a Catalogue, Reading, and Pattern Room in Jerusalem, states that it is hoped to obtain a fully representative and up-to-date collection of catalogues and trade journals. The Director will accordingly be glad to receive any additional catalogues from United Kingdom firms or trade journals from publishers interested. Catalogues, etc., should be addressed direct to:—The Director, Department of Commerce and Industry, Government of Palestine, P.O. B.590, Jerusalem.

THE EXTENSION OF COTTON-GROWING.

MR. McCONNEL'S VIEWS.

We give below some further extracts from Mr. McConnell's lecture before the Royal Colonial Institute on "Cotton Cultivation Within the Empire," in which he discusses the best means of promoting the extension of the crop.

It was possible and, indeed, it was in some cases inevitable, said Mr. McConnell, to proceed by forming companies with ample capital and to make earning of dividends the principal objective. It was also possible, at any rate in some cases, to try to combine the development of new or improved forms of agriculture together with the benefiting and raising of the resident population. For purposes of brevity he might call the first the capitalist system, and the second the system for the benefit of the community or the community system, or sometimes it was appropriate to call it the individual system.

Now he would confess that personally he approached this matter originally as a believer in the capitalist system. He had been engaged in commerce all his life, and while, of course, self-interest had its temptations and might have its excesses, yet he honestly believed that the people who had gone about their own business primarily for the sake of profit had done more to extend the Empire and more to benefit and advance the human race than had the idealists and philanthropists. He was bound, however, to state that in this matter of Empire cotton growing he had come to be a whole-hearted believer that the immediate and pressing necessity was to concentrate their efforts on developing the growing of cotton on such lines as would benefit the residents of the cotton-growing countries. He held that belief not merely on altruistic grounds, but because he thought it was also the course that was more immediately practical.

Cotton being an annual did not require years of waiting while the plant was growing. It did not ordinarily require expensive preparation, making a large capital expenditure necessary before it was begun. On the other hand, so long as their knowledge of how to enlarge the yield of the cotton field and to improve the quality of the product was so limited as it was as yet, the margin of profit to the grower was narrow and cotton was in most cases a precarious crop for a capitalist company to handle. A capitalist company must, from the nature of the case, have an expensive staff, who must be expensively housed. The men for these staffs were not at present available. If it wanted quick results, it must by some means quickly improve the methods of agriculture. That meant buying expensive implements and working either by means of expensive animals or still more expensive motors.

Nothing could be more fatal to the prospects of ultimate success in Empire cotton growing than for British capitalists to rush blindly into the flotation of large companies for the purposes of growing cotton for profit. The time for this kind of thing might come later when there was more knowledge. It would not be eventually incompatible with the well-being of native races that their work should be made more effective by the activities of British brains and by the using of modern appliances. But neither the knowledge nor the men were yet available to make this practicable in cotton growing on a large scale. He was speaking in general terms, and he naturally had in view those parts of the Empire which the Empire Cotton Growing Committee had more particularly studied—Nigeria, Uganda, and so on. There were, however, special places where

things were different. Already in the Sudanese Gezira, development, which would otherwise have been impossible, was being carried out by a combination of Government expenditure on the storage of water and the main canals, capitalist expenditure on subsidiary works necessary for irrigation, and native labour. The proceeds of the resultant cotton and other crops were being distributed on equitable terms between these three agencies, which had thus combined to create the result. There was an immediate opportunity for doing the same kind of thing at Tokar and Kassala, both also in the Sudan. Possibilities for irrigation schemes existed also in Nigeria, some in districts near the rivers, others in the confines of Lake Chad.

Broadly speaking, opportunities for the investment of British capital by means of cotton-growing companies would most likely present themselves in places where preliminary expense of a special character was necessary. Such expense might be in irrigation as above named, or in drainage, as in the case of the Aboukir Company in Northern Egypt, in clearing, or in providing special transport facilities in places which did not commend themselves to the local Government as being suitable on general grounds for development by railways. Apart, however, from big schemes of the character just referred to, it was probable that as individual cotton growing was developed, there would be many occasions in which British capital might be welcomed for subsidiary purposes.

This whole question of capitalist growing, as distinguished from community or individual growing, was practically put on one side by the Empire Cotton Growing Committee in their principal report. Nothing that had been since said in public had caused the committee to alter their view, viz., that the immediate necessity was to concentrate on developing cotton growing by and for the benefit of the residents in the cotton-growing countries. It was true that the scheme of work which the committee recommended might have the indirect advantage of making it eventually much easier and much safer to grow cotton on the capitalist system, but the direct objective before them for the present was to assist and promote growing of cotton by individuals and communities. Starting from this point, there was one condition that was obviously essential to success. Cotton growing must be commercially profitable. Now this was a double-edged proposition. It would not suffice merely that cotton growing paid the grower at least as well as any other product to which he could devote his soil. It was also necessary that his cottons must be grown at a cost and also marketed at a cost which would make them value for value as cheap as cottons grown in other parts of the world. There were three things for the cotton-growing community to aim at—First, to increase the amount of cotton grown per unit of land or per unit of labour; that would reduce the cost of growing. Second, to improve the quality of the cotton grown; that would raise its value and its price. Third, to give all possible facilities for transport; that would reduce the cost of marketing. There were two things for the spinning community to do—First, to support even beyond the strict rules of commerce a promising infant industry; second, to make arrangements to secure that the growers of better cotton should really get a better price to reward their efforts.

During 1919, 488,900 electric bulbs were imported into Egypt, of the value of £41,680.

The traffic receipts of the Smyrna-Aidin railway for the week ended February 26 amounted to £9,547.

The Guaranty Trust Company of New York opened their new Kingsway Office, 29, Kingsway, W.C.2, on March 14.

Sir Herbert Samuel stated recently that six Chambers of Commerce and three trades associations now existed in Palestine.

Speed up your Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing :—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from 1½" diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes :—

½" to 1½" fitted with No. 2 and No. 3 Morse Taper Shank.

1½" to 3½" fitted with No. 3 and No. 4 Morse Taper Shank.

ENGINEERING.

Copper Alloys.

The subject of the copper-tin alloys has not received so much attention as has been given recently to that of aluminium-copper and aluminium-magnesium. Nevertheless, it is one on which much yet remains to be discovered, and the paper which was read recently before the Institute of Metals was not only timely but valuable. In it Mr. Haughton described the constitution of the copper tin alloys containing from 40 to 100 per cent. of tin below a temperature of 400° C. The constitution was investigated by means of thermal curves, electrical conductivity measurements, and microscopic examination of annealed and quenched specimens. It has been shown that there is a transformation in one of the constituents at a temperature of about 180° C., and in a few of the alloys a further transformation occurs at 210° C., which so far cannot be explained. The limits of solubility of tin in copper have also been investigated, and it is found that not more than 0.2 per cent. of copper dissolves in solid tin.

Searching Tests for Locomotives.

The new locomotives in operation on the Port Sudan-Atbara section of the S.G.R. are said to be proving a great success. The engines have been specially designed to meet the particular conditions encountered in that section, and they are able to haul heavy loads up steep gradients at more than average speed. Recently certain tests were carried out with a view to ascertaining their capabilities under actual working conditions, and it was found that one of these engines was able to haul a load of 600 tons up an incline of one in one hundred with the greatest ease. In fact, the time occupied in pulling this load up an incline in the Obo-Sullum section was quite fifteen minutes less than the time taken by the older types of engines, on the same section, in hauling a load of only 380 tons. Information just to hand shows that five engines of the new class are to work along the section between Atbara and Gebeit, the remaining number being employed on the Gebeit-Port Sudan section. It is stated that this latter portion of the line is one of the most difficult to negotiate of any railways in the Near, Middle, or Far East, as in a distance of only sixty miles a rise from sea level to 3,000 feet takes place. The new engines are said to effect a saving of about 50 per cent. in coal consumption, in relation to the load hauled.

Gas-filled Lamps.

The past few months have seen the introduction of a new kind of electric lamp to the British market. Known as the gas-filled type, the filament, instead of being raised to incandescence in a vacuum, as in the case of the ordinary lamps, is in an atmosphere of nitrogen or other inert gas. Certain peculiarities attending the process of manufacture and the composition and size of the filament result in a great saving of energy for a given light production, in comparison with the older forms of electric lamp, and, as a matter of fact, it may be taken that, on a useful light basis, they effect a saving of about one-half in the electricity used. As consumption of electrical energy is measured in watts and the ordinary metal lamps consume one watt per candle-power or thereabouts, the new lamps take only about one-half watt per candle-power, and in consequence are known as the "gas-filled, half-watt" lamp. All this is fairly common knowledge, and is merely mentioned as a prelude.

Now, the German lamp manufacturers do not appear to have realised fully the immense saving effected by the new type of lamp until their British and American competitors had largely overcome the difficulties of manufacture and were producing on a fairly big scale. During this time the German lamp-makers were busy making metal filament lamps of the ordinary type and—in accordance with their curious trade policy—were stocking these rather than selling them in order that they could represent to the Allies that they were in so serious a trade position that they were doing no business. The idea was that as soon as necessary they could unload vast stocks on the European, U.S., and overseas markets and by dumping and price-cutting drive British and other lamp-making firms out of the trade.

Unfortunately for themselves they neglected to take the rapidly increasing popularity of the gas-filled lamp into account. This popularity, as a matter of fact, grew at an amazing rate, and the German plan seemed in danger of being rendered useless merely because no one would want to buy ordinary lamps when Germany wished to unload.

A piece of astounding trickery was then resorted to by the German makers. They began to turn out imitation gas-filled lamps, of comparatively low efficiency, and made in a rough fashion. In appearance they were an exact facsimile of the lamp, and these were rushed into France, Italy, and Great Britain, and, in larger numbers, into the overseas markets, and sold as "gas-filled, half-watt lamps."

The ordinary individual might wonder what good purpose could be served by placing these inefficient lamps on the market. The answer is that the purpose served was two-fold. In the first place the advertised efficiency of the genuine gas-filled lamp was such that purchasers were quite ready to buy as many of the type as they could obtain. They felt that the German lamps were quite in order, and they bought them as quickly as they could be offered for sale. The first part of the purpose was thus effected: rubbishy lamps were sold in quantities at a price which carried an enormous profit. The second part of the purpose was far more wily, and was this: Users of the new lamps, of the German type, would meet with every disappointment. Not only would the light be poor and the current consumption high, but the lamps would fail, blacken prematurely or otherwise go out of commission. Now the average buyer of electric lamps is not too familiar with the ins and outs of that business; he would not differentiate between the German rubbish and the British high-grade lamps. On the contrary, he would, after a little experience with the German product, cheerfully condemn any and every gas-filled lamp on the market. In this the German thought he could see his opportunity. He argued that British capital and energy would be sunk to such an extent in the new lamps that the manufacture of the older type of metal filament lamps would be more or less neglected, so that, when the expected revulsion of public feeling from the gas-filled lamp occurred, the British maker would be quite unable to fill the demand for lamps of the ordinary kind, in which event German manufacturers would be able to unload their vast stocks on a waiting, eager market that would be ready to buy at almost any reasonable price.

Factory Lighting.

The subject of electric lamps brings up that of electric lighting generally, and it is interesting to note that the question of the scientific illumination of factories and workshops has recently been very carefully studied, in view of the diverse factors in modern production, by electrical engineers in order that the owners of such premises may be made aware as to the best and most efficient methods. Hitherto, perhaps, the chief consideration has been that of hygiene, studied in the interests of the workpeople employed. Now very little remains to be done in that direction, and the question of production, which is one of almost equal importance, may be taken in hand. To some extent these two aspects of scientific electric lighting go hand in hand; it is a well-known fact that where lighting is good production increases and the general health of the workmen is better. But scientific lighting has a direct bearing on the economy of production. The chance arrangement, possibly on ill-considered or haphazard lines, in any premises devoted to manufacturing operations, of electric lamps may lead on the one hand to a serious waste of electricity by reason of overlighting, or may, on the other hand, decrease production by giving a poor result. In either case the financial results are poor, and the inefficiency is readily translatable into terms of pounds, shillings, and pence. Some little time before the war a particularly close examination was made into the results obtained in a large textile mill, in which scientific illuminating engineers had been allowed a free hand, and it was found that the saving effected in lighting and the increased production was such as would have turned an annual loss into a substantial profit. Not only was the general output increased, but the quality of the output was improved, the proportion of "seconds" being considerably reduced. There is a further aspect, however, which has sprung up during the war, and that is the general increase in wages. It is no unusual thing now for an employee to be receiving 2s. 6d. or 3s. per hour, and in view of the comparatively low cost of electrical energy for lighting purposes when used in one of the new British-made gas-filled lamps, it will be evident that the loss of a few minutes time per hour by such a workman altogether overbalances any saving which might be effected by cutting down light and so causing him to be slower at his work. It is to-day an utterly impossible matter to arrange the lighting of factories and workshops, equipped with the most modern plant and machinery, and employing men earning high wages, except on a thoroughly well-considered and scientific basis.

ALEXANDRIA WATER COMPANY, LIMITED, EGYPT.

Notice to Shareholders.

Issue of 20,000 New Shares of £5 each.

Offered to Shareholders at par.

Applications close on 30th March, 1921.

Circular, giving full particulars and application form, obtainable:—

In London, from Barclays Bank, Limited, 1, Pall Mall East, S.W.1, or 54, Lombard Street, E.C.3.

In Alexandria, from the Anglo-Egyptian Bank, Limited.

AUSTIN

The Best Car Investment

The man who buys an Austin Twenty ensures a permanent value. Why? Because the design of the Austin is destined to be the standard for years to come. This claim is based on the opinions of well-known experts.

The Austin rate of output is increasing by leaps and bounds. The prompt man gets priority. Full particulars will be gladly supplied by your local distributors:

Messrs. Ed. Kurk & Co., London Garage 1, Rue Sultan Fouad, Alexandria. (Agency for cars and lorries in Egypt and the Soudan.)

Messrs. Strick, Scott & Co., Baghdad, Basrah, Mohammerah, Ahwar, Bushire, Hamadan. (Agency for our cars and are handling all our lines, in Mesopotamia and Persia.)

Messrs. Hassan Hoss & Co., Beyrouth. (Agency for Austin Cars and Commercial Vehicles in Syria.)

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruits.—Business has been fairly brisk. Currants have moved off freely, and as supplies of the better grades are short it is to be anticipated that prices will rise. Sultanias have continued in good demand, while figs are now in strong request.

Sugar.—There has been a rise in prices. West Indian crystallised has been done at 60s. to 62s. 6d., while American granulated has come to business at 67s. Home refined has been active and firm.

Coffee.—A weaker tone has characterised the futures market. Quotations are: March 38s., May 39s., July 40s., September 40s. 6d., December 42s. 6d.

Oilseeds.—A variable tendency has prevailed. Indian linseed has been done at 17s. 6d., while La Plata at 16s. is 3d. lower. Rapeseed has been weak, with Toria 9d. down at 17s. 3d., and bold Ferozepore a like amount down at 16s. Brown Cawnore has come to business at 14s., a decline of 9d. Cottonseed has been firm, with Egyptian black at 11s. 6d.

Seed Oils.—Linseed oil has been quiet at 29s. 6d., a decline of 1s. Rape oil at 47s. is 2s. lower. Refined cotton oil is unchanged at 40s., while the Egyptian crude variety is 1s. down at 30s. Turpentine is unchanged at 55s.

CURRENT PRICES.

General Produce.—Bacon, 170s. 6d. cwt.; butter, 298s. 8d. cwt.; cheese, 161s. cwt.; chillies, 125s. cwt.; eggs, 26s. 3d. per 120; cloves (Zanzibar), 93d. lb.; cocoa (Ceylon, good to fine), 81s. 3d. cwt.; coffee (Costa Rica), 115s. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 101s. cwt.; ginger (washed Cochín), 37s. 6d. cwt.; hams, 160s. cwt.; lard, 107s. cwt.; nutmegs (110's to 80's), 1s. lb.; pepper (Singapore black), 4d. lb.; pepper (Muntok white), 8½d. lb.; raisins (Valencia), 120s. cwt.; sultanas (Smyrna), 108s. 6d. cwt.; currants (Vostizza), 89s. cwt.; sugar (granulated), 67s. 6d. cwt.; No. 1 cubes, 72s. cwt.; Mauritius, 65s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 22s. 6d. cwt.; sago flour, 14s. cwt.; rice (Rangoon No. 2), 13s. 9d. cwt.; rice (Bran Rangoon), £5 ton; tea (Indian), 6½d. lb.; tea (Ceylon), 6½d. lb.; tea (Java), 3½d. lb.; wheat (Austrian), 86s. 3d. qr.; wheat (English white), 77s. 6d. qr.; wheat (La Plata), 79s. 6d. qr.

Hides and Skins.—Ox and heifer: first, 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 5½d. lb.; 59 lbs. and under, 4d. lb.; cows: first, 60 lbs. and up, 3d. lb.; 59 lbs. and under, 3½d. lb.; cows: second, 60 lbs. and up, 2½d. lb.; bulls (first), 2½d. lb.; bulls (second), 1½d. lb.; kips (first), 3½d. lb.; kips (second), 2½d. lb.; kips (third), 2d. lb. Calcutta Market.—Prices in rupees per 20 lb. Arsenic hides, cows: Agras, 6 to 13; Durbhangas, 5 to 6; Patnas, 4 to 5. Salted cows, 2.8 to 5.8. Arsenic hides, buffalo, 2.8 to 6.8. Skins: Calf, 6 to 8 per 20 lb.; goat, 130 to 160 per 100 pieces.

Metals.—Aluminium, £150 ton; antimony (English Regulus), £39 12s. 6d. ton; copper (standard), £67 13s. 9d. ton; copper (electro), £74 ton; bismuth, 7s. 6d. lb.; gold bars, 105s. 8d. oz.; iron (No. 3 Cleveland), 150s. ton; hematite (mixed number), 180s. ton; lead (soft foreign), £18 2s. 6d. ton; manganese Poti, 1s. 7d. unit; molybdenite, 55s. unit; nickel, £202 10s. ton; platinum, 320s. oz.; plumbago, £35 ton; quicksilver, £12 7s. 6d. bottle; silver bars, 32d. oz.; spelter (G.O.B.), £22 12s. 6d. ton; tin (standard), £156 5s. ton; wolfram, 14s. 3d. unit; zinc sheets, £37 ton; tin plates (20 by 14), 28s. 3d. box.

Chemicals.—Acids: boric, 71s. cwt.; oxalic, 10½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 9½d. lb.; ammonia sulphate, £24 6s. ton; arsenic (white powdered), £47 10s. ton; benzole (standard), 3s. 2½d. gallon; bleaching powder (35 per cent.), £20 ton; borax crystals, 34s. 6d. cwt.; cream of tartar, 145s. cwt.; Potassium: bi-chromate, 11½d. lb.; chlorate, 6½d. lb.; caustic, £52 5s. ton; nitrate, £54 ton; permanganate, 1s. 7½d. lb.; prussiate yellow, 1s. 2½d. lb.; sulphate (90 per cent.), £34 10s. ton; Sodium: crystals, 150s. ton; bi-carbonate, £10 15s. ton; bi-chromate, 8½d. lb.; alkali (58 per cent.), £9 17s. 6d. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £22 10s. ton; hyposulphite, £23 ton; prussiate, 8½d. lb.; nitrate, £20 10s. ton; glycerine (crude 80 per cent.), £106 ton; glycerine (industrial 125 per cent.), £155 ton; sulphate of copper, £35 10s. ton; sulphate of iron, 150s. ton; lemon oil, 3s. 7½d. lb.; quinine, 3s. 6½d. oz.; red lead, £38 5s. ton; white dry lead, £42 10s. ton; white ground lead, £52 12s. 6d. ton.

Miscellaneous.—Cotton (American), 7.25d.; cotton (Egyptian, Sakellaris), 15.00d. lb.; linseed (La Plata), £17 5s. ton; rape (Toria), £18 2s. 6d. ton; soya beans, £12 5s. ton; palm kernels, £19 15s. ton. Oils: Linseed, £31 10s. ton; soya, £33 ton; cotton (crude), £31 10s. ton; olive, 11s. 6d. gallon; ground nuts, £40 10s. ton; palm, £37 5s. ton; rape (crude), £49 10s. ton; petroleum, 2s. 3½d. gallon; turpentine, 57s. 6d. cwt. Rubber: Plantation No. 1 crêpe, 1s. 0½d. lb.; smoked sheet, 10½d. lb.; fine hard Para, 11½d. lb.

The Federation of British Industries have received a cable from its Athens offices stating that the moratorium existing in Greece has been extended until September 13, 1921.

The Agricultural Bank of Bulgaria has commenced to publish a kind of review entitled *Bankovi Naredbi* (Banking Regulations), which will contain various articles on bank administration.

LANCASHIRE COTTON.

Rather More Inquiry.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Sellers have experienced another unsatisfactory week, and no improvement can be registered in the tone of the market. Although there has been a fair amount of inquiry about, business has been very slow in developing. Buyers as a body have held aloof, which is only natural when there are possibilities of a reduction in values. The principal feature of interest during the week has been the firmer feeling which has prevailed in raw cotton circles, and as the value of the staple is tending to harden, though it may only be extremely slight, the probability of a general increase in trade is not altogether absent. But the market is far from healthy, and one prominent shipper has expressed the opinion that there will be no improvement until towards the autumn. With regard to cloth, inquiry for Egypt has been about, but buyers for that outlet report an abundance of Lancashire cloths. Stocks of dear goods out there are heavy, and it will be some time before they can be cleared, and, of course, in the circumstances the goods being bought are of a sorting-up variety. Buyers for the Levant and Constantinople have not been prominent, and only occasional sales have gone through. The shipments to China during the past four or five weeks have been very small, and at the moment there are no immediate prospects of a revival of demand for that outlet. The financial stringency in Shanghai is causing some anxiety in Manchester houses. With regard to India, Calcutta has been the most prominent outlet, but sales have only been of moderate dimensions and then at cut prices. Java has taken small lots of splits.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended March 10:—A rather better inquiry has been witnessed during the past week, mainly for Sakellaris and Upper, and for the first time for many months we have to report an all-round advance in quotations. Unfortunately, only a retail business has resulted, and we are inclined to think that the feeling of optimism, which seems to have percolated over here from Egypt, is not entirely justified by events. The feature of the week has been, of course, the confirmation of last week's rumours concerning the possibility of Government assistance for the Egyptian grower. It is still too early to give details, but the immediate effect has been to turn the only-too-willing Egyptian shipper into "bull" paths once more, and in many cases unreasonable limits have been received on cotton offering here. . . . Manchester reports have been rather brighter during the last two days, but the improvement so far has not been reflected in the Egyptian section. C.i.f. business remains at a very low ebb. We close with a note of caution to would-be buyers against a premature optimism not warranted by the actual situation at the moment. Sales, 2,000 bales (1,200 bales being last week's business). Quotations all round are raised 2d. per lb., the exceptions being fine and extra fine Sakellaris, which show an improvement of 1½d. per lb. Fully good fair Sakellaris 15.00d. per lb.

SUPPLIES AND PRICE

NEAR EAST.

HE

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

MAMOURET-UL-AZIZ.
The report for January states:—Imports are slow, despite the fact that the mildness of the winter favours the means of communication and transport. Sowings have been good, and the surface sown is larger than that of last year; but the little snow and rain that have fallen cause uneasiness in regard to the forthcoming crops.

ALEPPO.
The report for January states:—There have been no changes worthy of note in the commercial and financial position here since last month. Weather conditions remain unfavourable. The market in cotton is very quiet, and the demand insignificant. The quotation is Ps.19 per kilo. There are no supplies of gum.

ANGLO-PERSIAN OIL.

Voting Control.

On March 14 in the House of Commons Colonel Wedgwood asked the Prime Minister whether His Majesty's Government held voting control over the Anglo-Persian Oil Company, what proportion of the ordinary shares stood in the name of His Majesty's Government, and what proportion of the preference shares with voting power stood in their name, including the share of the present issue, and if they were at present in voting control would they see that that control was not allowed to lapse.

Mr. Chamberlain: The answer to the first and last parts of the question is in the affirmative. As regards the second part of the question, His Majesty's Government hold two-thirds of the ordinary shares and 1,000 preference shares out of a total of 8,500,000. The ordinary shares carry two votes each, the preference shares carry one vote to five shares.

All-Round Improvement.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

Considering what has happened in recent weeks the tone of the markets last week can only be regarded as remarkably good. While buoyancy would be too strong a word to use, an unmistakably cheerful atmosphere prevailed, and in a number of directions fairly substantial advances were made.

Gilt-edged securities have been very firm, notably Victory Bonds, which are closing at 77½, and War Loan, which has risen to 86 9-16. Consols have been a better feature, and are 46½. Foreign issues have not shared in the general improvement, though there are some firm spots in these descriptions. The Sudan Loan, by the way, is quoted at a discount of 2.

The Industrial group has had a good week, and prices have, generally speaking, advanced. Iron and steel shares have been specially strong, while there has been a good demand for shipping shares. Oils have been rather better, while the tone of the Rubber market has also improved.

In Near Eastern securities Egyptian Guaranteed 3 per Cent. are ¼ down at 62½. Greek Guaranteed 2½ per Cent. 1898 are 1½ up at 60, but Turkish Guaranteed 4 per Cent. 1855 are unchanged at 68.

Greeks Buoyant.

Greek securities have been strong. The 5 per Cent. 1881 and the 5 per Cent. 1884 Loans are both 2 up at 42, at which there are buyers. The 5 per Cent. 1890 and Fundings are also 2 up at 42, with unsatisfied buyers. The 1910 Loan is 1 up at 32, but the 5 per Cent. 1914 is unchanged at 40. The 1902 Loan is ½ up at 35.

Banks have been firm. Agricultural 3½ per Cent. Bonds and 3½ per Cent. Guaranteed Bonds are unaltered at 53 and 55. Imperial Ottoman Banks are ½ up at 8, and National Bank of Egypt are the same up at 17½. Land Banks are ½ up at 4½.

Land shares are stronger. Beheras are ½ up at 8½, while the preference shares have risen ½ to 3. Anglo-Egyptian Land Allotments are unchanged at 3½, but Egyptian Consolidated Lands are 1½d. up at 1s. 1½d. Delta Lands are unaltered at 8s. 9d., but Gharbich are ½ up at 1½. New Egyptians are 1½d. up at 21s. 7½d., but Union Foncières are unchanged at 2½. Sudan Plantations are ½ up at 3 7-16.

Oils have been strong. Anglo-Egyptians are 3-16 up at 2 1-16, while Phoenix have gained 3s. 9d. at 13s. Roumanian Consolidated are 3d. down at 14s. 3d., but Steaua Romana are 6d. up at 15s. 6d.

Among miscellaneous descriptions, Abyssinian Corporations are unaltered at 3s. Alexandria Waters are ¼ down at 6½, while Morums are 6d. lower at 13s. Egyptian Salt and Sodas are also 6d. down at 27s.

BULGARIAN DEBT NEGOTIATIONS.

A further conference of the holders of the Bulgarian Loans of 1892, 1902, 1907, and 1909 was held last week at the offices of the Council of Foreign Bondholders, when a statement was made by the director of the Public Debt of Bulgaria. It was decided to appoint a Committee of Bondholders to confer further with the representatives of Bulgaria.

OIL OUTPUTS.

Anglo-Egyptian (week ended March 10).—Gemsah, nil (previous week nil); Hurgada, 3,085 tons (against 3,245 tons).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Bulgaria.

Rolling Stock.—The Bulgarian State Direction Générale des Chemins de fer et des Ports invites tenders for the following rolling stock for the Bulgarian narrow gauge railways:—760 m.m. gauge.—10 locomotives, 75 goods wagons, 75 wagons for transport of oil. 600 m.m. gauge.—15 locomotives, 100 wagons for transport of oil, 20 double load trucks (40 in all) specially constructed for transport of long pieces of timber. Manufacturing and engineering firms who may desire to quote for the supply of the above-named materials are requested to submit their tenders in sealed envelopes to the Secretary of the Bulgarian Legation, 3, Queensberry Place, S.W.7 (marked on the corner:—*Bulgarian Railways Tender*), stating exactly the terms of payment under which they propose to execute the order, also the period of time within which the delivery could be made. All particulars (in French) and drawings in detail of the above-required materials may be inspected at the Secretary's Office any day between 12 and 1 p.m., on appointment.

Roumania.

Supplies for the Roumanian Ministry of War.—The Roumanian Ministry of War desires to receive quotations from United Kingdom manufacturers and merchants for the supply of various qualities of the following articles which are required in large quantities:—Sugar, rice, coffee, olive oil, tea, soap, canned meat (1920 manufacture), khaki cloth, army boots, uniforms (tunic, trousers, and mantle). The specification of the khaki cloth is as follows:—440 grammes weight per metre, 25 kilogrammes resistance, 25-30 divisions elasticity, to be well carded, sheared, prepared and shrunk. It is proposed that payment will be made by Roumanian Government Treasury Bonds bearing 6 per cent. interest, and repayable in two years' time. All quotations, together with full particulars and samples, should be addressed to Ministère de la Guerre, 7-me Direction Intendance, Strada Jules Michlet Nr. 28, Bucharest, Roumania.

Morocco (Spanish Zone).

Telegraph Posts and Wire.—Tenders are invited by the Development Commission (Delegacion de Fomento) for the supply of 150 creosote posts, 7 metres in length; 2,500 kilos of galvanised iron wire, 4 millimetres in diameter. Tenders are to be delivered by March 22 at the "Negociado de Telegrafos de la Delegacion de Fomento," Tetuan, or at the Ministerio de Estado, Madrid, accompanied by a certificate to the effect that the sum of 500 pesetas has been deposited in the Banco de Espana, Madrid, or in the Moroccan State Bank, Tetuan, as a preliminary deposit. Particulars may be obtained from the Department of Overseas Trade.

Egypt.

Blankets.—The Egyptian War Department invites tenders for the supply and delivery of 2,500 woollen blankets, grey G.S. (L).

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations
Alexandria	Piastres to £	97½	97½

SHIPPING INTELLIGENCE.

THE PORT OF KYRENIA.

(FROM OUR OWN CORRESPONDENT.)

NICOSIA, February 25.

Torrents of rain fell last week, with hail and snow in the hills. At Kyrenia a storm caused considerable damage in the port, which the Cypriots call a "parody" of a harbour, that can only be given that name by way of "Paradoxical euphemism." Kyrenia shipping was safer before its construction than since. On this occasion one sailing vessel was sunk in the "harbour" and one much damaged. The people of Kyrenia will hail the day when its reconstruction and enlargement will be taken in hand.

PORT DEVELOPMENT IN MOROCCO.

The following programme of port development for the year 1921 in the French Zone of Morocco was given in a recent issue of the *Bulletin Officiel*:—The continuation at Casablanca of works at the large mole and landing stage adjoining, and the extension of the terrepleins of the port; preliminary works of the extension of the port of Safi; the reorganisation of port works at Agadir and the adjudication for their completion; port improvements at Mazagan and Mogador from funds of the "Caisse Speciale"; continuation of works at Rabat and Kenitra by the Société des Ports.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia, for Bombay (Glasgow, March 19, and Liverpool, March 24).

Anchor Brocklebank Line.—S.s. Manipur, for Calcutta (Birkenhead, March 21); s.s. Shadwell, for Port Said, Colombo, Madras, and Calcutta (leaves London, March 24); s.s. Maidan, for Calcutta (Birkenhead, March 30); s.s. Magdapur, for Calcutta (Birkenhead, April 11); s.s. Holywell, for Port Said, Colombo, Madras, and Calcutta (London, April 16).

Bibby Line.—S.s. Oxfordshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 16); s.s. Lancashire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 30); s.s. Yorkshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, April 13).

Clan Line.—S.s. Clan Kennedy, for Colombo, Madras, and Calcutta (Birkenhead, March 24).

Cunard Line.—S.s. Sea Victory, for Gibraltar, Malta, Piræus, Smyrna, Constantinople, Varna, and Galatz (London, March 22); s.s. Antigone, for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Liverpool, March 24, and Swansea, April 1); s.s. Pavia, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, April 7).

Ellerman Line.—S.s. City of Oxford for Gibraltar, Malta, and Alexandria (Liverpool, April 1); s.s. Maronian, for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Liverpool, April 7).

Ellerman City Line.—S.s. City of Poona, for Bombay and Karachi (Birkenhead, March 19); s.s. City of Milan, for Calcutta (Birkenhead, April 1); s.s. City of Cairo, for Bombay and Karachi (Birkenhead, April 20).

Ellerman's Hall Line.—S.s. City of Genoa, for Bombay, Karachi, and the Punjab (Liverpool, April 1).

Ellerman's Westcott and Laurance Line.—S.s. Eden Hall, for Gibraltar, Malta, and Alexandria (London, March 19).

Glen Line.—S.s. Glenogle, for Port Said, Port Swettenham, Singapore, etc. (London, March 24); s.s. Glenavy, for Port Said, Port Swettenham, Singapore, etc. (London, April 7); s.s. Glenshane, for Port Said, Port Swettenham, Singapore, etc. (London, April 21); s.s. Glenade, for Port Said, Port Swettenham, Singapore, etc. (London, May 5); s.s. Glenluce, for Port Said, Port Swettenham, Singapore, etc. (London, May 19).

Harrison Line.—S.s. Dramatist, for Calcutta (Liverpool, March 18); s.s. Architect, for Calcutta (Liverpool, April 5).

Henderson Line.—S.s. Mandalay, for Port Said and Rangoon (Birkenhead, March 23).

Holt Line.—S.s. Demodocus, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, March 19); s.s. Euryades, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, March 23); s.s. Hector, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, March 23); s.s. Bellerophon, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 1); s.s. Deucalion, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 15).

Johnston Line.—S.s. Dromore, for Piræus, Volo, Salonika, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 26).

Moss Line.—S.s. Assiout, for Gibraltar, Malta, Piræus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza (Liverpool, March 19); s.s. Sitra, for Gibraltar, Algiers, Malta, and Alexandria (accepting through to Moroccan, Algerian, Cyprus, and Syrian coast ports) (Liverpool, March 19).

Papayanni Line.—S.s. Trentino, for Algiers, Malta, Syra, Smyrna, and Constantinople (Liverpool, March 26).

P. and O. Line.—S.s. Sicilia, for Bombay (London, March 24); s.s. Padua, for Colombo, Madras, and Calcutta (London, March 24); s.s. Naldera, for Bombay (London, April 8); s.s. Sardinia, for Colombo, Madras, and Calcutta (London, April 8); s.s. Plassy, for Bombay (London, April 15); s.s. Nore, for Colombo, Madras, and Calcutta (London, April 22); s.s. Dongola, for Bombay (London, May 6).

P. and O. British India Line.—S.s. Hatarang, for Colombo, Madras, and Calcutta (London, March 19); s.s. Mandala, for Bombay and Karachi (London, March 19); s.s. Nardana, for Colombo, Madras, and Calcutta (London, April 2); s.s. Warfield, for Bombay and Karachi (London, April 2); s.s. Hatipara, for Colombo, Madras, and Calcutta (London, April 16).

Prince Line.—S.s. Merchant Prince, for Malta, Alexandria, and Syrian coast ports (Middlesbrough, March 18; Antwerp, March 26; London, April 5); s.s. Black Prince, for Malta and Alexandria (London, March 20); s.s. Scottish Prince for Tunis, Malta, and Alexandria (Manchester, March 31).

OFFICIAL NOTICES.

ROUMANIAN TREASURY BILLS payable in sterling and due in the year 1921.

The Roumanian Legation in London hereby notifies Holders of the above-named Bonds that the following instructions have been issued by the Roumanian Minister of Finance to his Delegate in Paris concerning the renewal of these Bonds:—

1. Holders of Roumanian Treasury Bonds payable in sterling and falling due during the year 1921 (on or after 20th March) must notify the

Bureau de la Dette Extérieure Roumaine,
Legation de Roumaine,

51, Rue François Ier, Paris,
as to the Bonds held, on or before the date the Bonds are due for payment.

2. The Bureau de la Dette Extérieure Roumaine will renew such Bonds for one year, by issuing new Bonds of the same value due in one year from the due date of the existing Bonds.

3. Interest at 8½ per cent. per annum for one year will be paid in advance on the new Bonds and a cheque in Sterling on London for such Interest will be delivered with the new Bonds.

4. Holders are required to notify the Bureau of the Dette Extérieure Roumaine, 51, Rue François Ier, Paris, as to the serial numbers of the Bonds held, due date and the amount of each Bond.

5. Should the holders of the Bonds desire it, arrangements will be made for the exchange of Bonds in London (at the Bank of Roumania, Ltd.), but Holders will require to notify the Bureau de la Dette Extérieure Roumaine as to this when furnishing particulars as indicated in Clause No. 4, mentioned above.

Holders will be notified by the Bureau de la Dette Extérieure Roumaine when the new Bonds are ready for delivery.

NOTES OF THE WEEK.

The End of the Conference.

With the departure of the Greek and Turkish Delegations from London the Inter-Allied Conference for the revision of the Treaty of Sèvres passes into history. The next word in the settlement of the Near Eastern question rests with the Turkish authorities, of Angora rather than of Constantinople, and their answer is expected in a month's time. Although an unequivocal acceptance of the Allied proposal is hardly to be anticipated, we may still hope that the Turks will not altogether eradicate by their reply the good impression created by the reasoned arguments of their representatives. In the meantime the Greeks, who have taken the proposed modification of the Treaty of Sèvres very much to heart, will perhaps have opportunity to realise that the blow to their hopes is not as serious as it seemed at first. Even in the most favourable circumstances Smyrna would always have remained an overseas province, strongly individualistic and resolutely opposed to any kind of subordination to Athens. As things are now, it is promised autonomy, which will give full play to Hellenic influence, without the risk of the offence to Greek pride that must have followed any attempt to govern the town from Athens or for the benefit of Athenian politicians.

The Smyrna Problem.

A fresh mobilisation in Greece at this stage will not strike the world at first sight as a particularly wise measure. The Greek point of view is clear enough: no reliance can be placed on the Turks, who are capable of trying to force the Allies' hands by presenting them with a *fait accompli* in Smyrna, and for this reason Greece must be prepared to hold the ground she occupies. This argument, however, is likely to be turned against Greece, for it can be cited as conclusive proof that the decision in the Treaty of Sèvres in regard to Smyrna offered no hope of permanent peace in Asia Minor. On the other hand, any warlike action on the part of the Turks now would effectually put them out of court with the Allies, and must make the latter look to the Greeks for the military enforcement of the terms of peace. The verdict of London was in favour of a peaceful settlement of the Smyrna question, provided that the Turks accepted the other clauses of the Treaty. A settlement on the lines indicated still gave Greece her due position in Smyrna. That position is based on something stronger and more permanent than military force, and

she would do better to rely on this factor rather than to attempt to force an issue which must leave her permanently at a disadvantage against Turkey.

Southern Slav Union.

The announcement made last week that all Montenegrin Consular appointments with His Majesty's Dominions are regarded as terminated may be taken as marking the final step in the recognition by this country of the union of Montenegro with Yugoslavia. That union has been for some time past inevitable, and though it may cause heartburnings in some Montenegrin circles, it is such a perfectly natural development that there can be little doubt that it will work out to the advantage of the people of the Black Mountain, no less than to that of the Serbs, Croats, and Slovenes—the mistake made was that the union was not allowed to develop naturally, but was forced with the inevitable accompaniment of bitterness and excesses. The reports that Prince Danilo had no wish to ascend the Montenegrin Throne are shown to have been correct by his abdication of his rights, but it is unfortunate that he should have renounced them only in favour of his nephew Prince Michael, the twelve-year-old son of the late Prince Mirko.

Looking to the Future.

Queen Milena, who has been proclaimed Regent by the Montenegrins now residing in Italy, has issued a proclamation announcing that "Montenegro's rights" will be claimed, with the support of the Great Powers. As far as France and Great Britain are concerned they have already made it clear that they recognise the union, which has also been accepted by the majority of Montenegrins. It would seem, therefore, that the best service that can be rendered both to Montenegro and to the peace of Europe to-day in this matter is to accept the accomplished fact, and while keeping alive the many memories of which Montenegro may justly feel proud, to put aside others less happy, which might do harm and can do no good. On the other hand, Belgrade will probably be well advised not to forget too quickly the opposition that was offered to the forcible absorption, to deal very gently with any manifestation of local feeling that may occur in the immediate future, and to overcome lingering opposition to the new order by tact and patience rather than by the heavy hand.

A New Egyptian Cabinet.

Egypt has now its new Cabinet, Adly Yeghen Pasha having successfully undertaken the task of forming one, after Mazlum Pasha had spent a week in vain attempts

to do so. The new Cabinet is certainly a strong one, all its principal members having had considerable experience of office before; while the Prime Minister, who has played a most creditable part in bringing about the present comparatively hopeful situation, and who was already heartily respected in this country, appears now to have won the confidence of his countrymen by the declaration of policy which he made on taking office. Briefly, he declared that his Government will collaborate with the Delegation in endeavouring to reach an agreement with Great Britain that shall satisfy Egyptian aspirations; and that the National Assembly will in the last resort pronounce on the agreement, and will act as a Constituent Assembly. The Government recognises the country's need of great reforms, but will not seek to bring about any radical changes pending the establishment of the new parliamentary system; and it is of opinion that the removal of martial law and of the censorship should be possible at a very early date. These promises have given such satisfaction that Ministers no longer have to be guarded by armed police cyclists, who have actually been supplanted by Nationalist students; and crowds have paraded the Cairo streets shouting "Long Live England!"

The Delegation.

Such demonstrations of popularity, while unimportant in themselves, may be welcomed as evidencing a change of spirit that should make the task of the new Cabinet much easier than it would otherwise have been. It is to be hoped that nothing will occur to bring about any reaction in this respect; but it is to be observed that Zaghoul Pasha has announced his imminent return to Egypt, and he has in the past shown a strong dislike to others enjoying popular favour. It is possible, however, that the past may not repeat itself, and that the Delegation may succeed in presenting a united front to the world at this highly important stage of the negotiations. At the time of writing it seems that Adly Yeghen and Rushdi Pashas will come to London, but whether other members of the Cabinet will accompany them is not known. Of the late Cabinet little or nothing is heard, but it is satisfactory to note that several of the newspaper correspondents pay tribute to Tewfik Nessim Pasha and his colleagues for the way in which they "carried on" through a difficult period.

Talaat Pasha.

Talaat Pasha, a former Turkish Grand Vizier, and one of the most influential and best known leaders of the ill-omened Committee of Union and Progress, was shot in the streets of Berlin on March 15 by a young Armenian. The crime was one of revenge, the assassin having lost both his parents in one of the massacres for which Talaat was held largely responsible. The victim was a man of great force of character, and, so far from owing anything to the advantages of birth, was actually hampered by the fact that his mother was a gipsy—and therefore held in low esteem in Turkey. He rose to power by very dubious methods, and occasionally, even in his early days, he used his power very ill; but it was not until the late war that he sank to depths of infamy from which it is unlikely indeed that history will ever raise him. We refer, of course, to his treatment of the Armenians. Beside that his other offences pale into insignificance; but it is probably in connection with those terrible events that he will be best remembered outside Turkey. It must be recognised, however, that with all his faults he was a genuine patriot, and that, in a country notorious for the corruptness of its politicians, he was remarkably honest until the last few years of his life.

Lord Reading's Departure.

Lord Reading started last Thursday on his journey to India, having passed unscathed through an ordeal of entertainments for which it would be hard to find a precedent. The outstanding feature of the public, or quasi-public, functions was the suave reticence of the guest. He was dined, but not drawn, and probably not one of his hearers knows more of his intentions than when his appointment was first announced. This is, of course, entirely as it should be, but the occasion calls

for a protest against the methods adopted by some of the entertainers. The new constitution involves a gradual change in the position of Viceroys and provincial Governors, a slow transition from executive responsibility to adequate representation of the Sovereign and the Empire, and they should not be tempted to make declarations of policy such as were expected in the days of Lord Ripon or Lord Curzon. If similar attempts are continued, the only possible result is that Viceroys-designate will be compelled to decline all invitations of the kind.

The Indian Legislatures.

It is unfortunate, though perhaps inevitable, that the public in this country should have no opportunity of watching the development of the new institutions now actively at work in India. The cable may occasionally bring news of the passing of an Act or a resolution, but the point of interest just now is not what is done but how it is achieved, and in this respect the proceedings of the Central Legislature brought by recent mails are, to our mind, distinctly encouraging. Neither Chamber has had time to shake down, representatives from Madras and Assam and the Punjab have still to get to know each other, and the traditions of the old debating-society councils are not yet extinct; but, at the same time, there are signs that business is being grappled with in a workmanlike way. It is no longer considered etiquette for every member to speak at length on every motion; the frequent application of the closure is clearly telling, and even the flood of questions may eventually yield to the time-limit which has been copied from the procedure of the House of Commons. Routine business is being transacted efficiently, and if some of the resolutions proposed have been theoretical, or even fantastic, the division lists show on balance a definite preponderance of common sense.

Parties in the Provinces.

There has not yet been time for parties to crystallise out of the somewhat heterogeneous fluid of the central legislature, but in the provincial Councils lines of cleavage are beginning to appear. In Madras the elements of a party system exist in the sharp difference between Brahmins and non-Brahmins; the latter are stronger in votes, and also, perhaps, in practical common sense, but the Brahmins will form an effective opposition, and at present it looks as if this Council at least will develop on normal lines. Elsewhere the most interesting features are the signs that a country party is coming into existence. This will be slow work at first, for hitherto the towns have almost monopolised politics, but the influence of the rural electorate will be felt as time goes on, and already we notice that speakers on both sides are quick to claim that they are voicing the convictions of the peasants. They are free to do so, for naturally the first elections were fought mainly on personal questions, and the peasants have not yet spoken, but as the time for "going to the country" draws near, it is probable that issues will become more definite, and members will have to build up a "record" on which they can appeal for votes. As we have said before, the second elections are likely to be much more interesting than the first.

Extremist Poison.

The letter from "F. H. S." which we published last week raises the important question of counteracting the flood of lies regarding British work in India. There is no doubt that most of these lies are deliberate; the lie-factory near Madras has not been much in evidence of late, but the output of the Pacific Slope continues, and we have even heard it hinted that a small but active concern is at work in the S.W. postal district. Our correspondent suggests that the India Office should engage in active counter-propaganda, and the suggestion deserves careful consideration, but we hope Mr. Montagu will remember to enlist exact scholarship in the service before he faces the public. Most of the lies in circulation can be traced to an origin in British ignorance, to a hot-headed enthusiast, a tired official, a text-book compiler who has missed the important

"sources," and the like. It is important that the facts should be presented in the right way, but it is equally important that what is presented should be historically true; by all means brief persuasive advocates on the side of truth, but the brief must be prepared under the eye of the scholars—perhaps there may be a dozen all told—who really know the history of the British period.

THE WEEK AT HOME.

LONDON, Monday Evening.

Mr. Bonar Law's Breakdown.

The sudden and complete breakdown in health of Mr. Bonar Law and his enforced resignation of all political and other activity has been the one topic of the week. The announcement made by Mr. Lloyd George on Thursday afternoon was utterly unexpected, for only a week before Mr. Bonar Law had attended the Conference with the Germans, addressed a meeting of his supporters at the Constitutional Club, and gone to Glasgow to deliver his rectorial address at the University there. But a sudden chill revealed the extent of the mischief that had been going on unseen. We shall hardly see him back this year, but since Mr. Law is still a relatively young man as politicians go, it is hoped that next session he may be fully restored to his old vigour.

It is obvious that the war has told heavily on him, apart from the loss of two sons. He bore the loss with proud stoicism, and tried to forget private sorrow in public work. He has held office since May, 1916, has been a member of the War Cabinet, and, in addition, has led the House of Commons. The House has always liked him. He is a good speaker, although not a great orator; he cannot, or at least does not, appeal to passion, but to reason, and therefore he is one of those men who count for more in the House than on the platform. As a party leader he is not in the front rank, but the Unionists for some years before his headship had to take what they could get in the way of leadership and be thankful. What he would have been as Prime Minister nobody can say—the opportunity came his way in December, 1916, and he is one of the few men who have refused the post—but as a second-in-command, first under Mr. Asquith and then under Mr. Lloyd George, he was ideal. When he was first elected head of the Unionists some discontented peer is said to have referred to him as "a d—d scrap-iron merchant"—he was connected with some ironworks in Glasgow—but the party itself was little better than scrap-iron at that time, and it is now the strongest party in the Coalition and the State. That is not exactly a witness of failure.

The New Unionist Leader.

There was practically no doubt as to the succession to the leadership. Sir Edward Carson had his supporters, but he has reverted to his first love, the law, and the greatest of advocates will probably become a Lord of Appeal shortly. A few voices were raised for Lord Birkenhead, but the vacancy is in the Commons, not the Lords. Sir Robert Horne had his supporters—the prophets declare that in less than ten years he will be Prime Minister—but he is a mere babe in politics, for he only entered the House in 1918. Mr. Walter Long, who is universally popular, is *hors de combat*.

By a process of elimination, therefore, as well as by the general choice of the party, Mr. Austen Chamberlain is the new leader. His only real enemy is Lord Northcliffe, who has never loved him since he once so far forgot himself as to speak his mind about the Press, instead of letting the Press speak its mind about him. Mr. Chamberlain is really a Conservative, not a Liberal Unionist like his father; and, like Mr. Bonar Law, all his faults are on the surface. Mr. Law often made verbal mistakes, particularly in repartee on the floor of the House, but his real strength was the sterling honesty of his character. Mr. Chamberlain is rather stiff in manner—at least in public, for in private he is charming—and his speeches, one must admit, are dull; one would describe his eloquence as painstaking. Once,

to my astonishment, I heard him attempt a light bantering tone; it was like an elephant dancing.

But, like Mr. Law, he is perfectly straightforward. When he makes a statement you do not have to look out for loopholes and concealed evasions; if he says a thing it is true, and if by any chance it should turn out that he has been misinformed, he would say so at once. I should say that he is incapable of intrigue, not from dullness, but simply because he is a clean and wholesome character. These are no mean assets in politics.

As a Chancellor of the Exchequer Mr. Chamberlain has been a success. Except on one point he has been strong—he has not ventured to tackle the Civil Service; and his one mistake has been in putting the luxury taxes on wine and cigars too high. He has simply killed the trade in those two articles. For the rest, he has been cursed night and morning by the City for E.P.D., but he kept the duty going while it brought money in, and dropped it as soon as the tide turned. By this means he has made a substantial reduction in the National Debt, and kept our credit high.

His successor at the Exchequer will probably be Sir Robert Horne, but we shall not be able to test his qualities as a Chancellor this year, for whoever introduces the Budget, it will, in effect, be Mr. Chamberlain's Budget.

The Coalition and the Upheaval.

A great deal is being said as to the effect of Mr. Bonar Law's retirement on the Coalition. Those who wish it to be disastrous predict speedy disintegration; they draw a gloomy picture of Mr. Lloyd George deserted by the Conservatives, derided by the Independent Liberals, and cast into the wilderness with the Coalition Liberals. Like the futurist compositions, this may be a very pretty design, but it is not in the least like what one sees. A large party among the Conservatives would like Mr. Lloyd George to be their permanent and recognised leader; the Dukes have forgotten Limehouse, the Church has forgiven "the fat of sacrilege," the farmers have buried the memory of the land campaign; and the respectable suburbanite, who joins the Primrose League, and worships the peerage from Streatham Hill, is convinced that the Prime Minister is the only man who can save us from revolution. (Ten years ago he was said to be heading straight for revolution himself). Mr. Lloyd George does not discourage this belief. In his public speeches he now studiously ignores the Independent Liberals—who hate him the more for it—and he drops dark hints of the dangerous paths into which Labour would lead the country. Wimbledon shudders and Watford groans at the dreadful prospect, and resolves to vote Coalition again at any price.

My impression is that the Press does not reflect the real feeling of the country in this matter. The Coalition has a number of organs, but they are dull, as everything defensive must be. The anti-Coalition papers have no real policy, but their pin-pricks are amusing, and they are widely read. Their attacks, however, do not cut much ice, for the simple reason that the Opposition does not count in Parliament or the country, and a Government can survive any amount of abuse so long as there is nothing to put in its place. In fact, as with the domestic servant of our homes (now rapidly becoming an extinct species), we dare not complain lest a worse thing befall.

It is said that Labour has made up its mind there will be a General Election this year, and is preparing to contest four hundred seats. If that is true—and the report of the five hundred candidates is not very much exaggerated—it puts an end to the idea that Labour would make a concordat with the Independent Liberals.

Finance and the Commons.

The House of Commons is now in the thick of the debates on the estimates—a topic on which it usually acquits itself reasonably well. The War Office got its figures through quite easily, thanks partly to the general popularity of Sir L. Worthington Evans, the new War Minister, and partly to the fact that there was nothing to quarrel about—the real bone of contention, the War

Office expenditure in Palestine and Mesopotamia, being now shifted to the Colonial Office vote, which awaits Mr. Churchill's return. There was lamentation over the suppression of four cavalry regiments, and one or two members of the old school also regretted the continuance of the Tank. But it was certain that reductions of the establishment would have to be made, and, that being agreed, the cavalry was marked out for the economist. It is the most expensive arm per head, and it was also the arm that was least used in the last war. From those arguments there could be no real appeal.

The Next Tests.

Armstrong, the Australian cricket captain, is reported to have said that he is bringing a team to England that will defeat us on our own ground as easily as his men defeated us in the Antipodes. There is evidently no superstition in his nature; a remark like that is simply asking the English climate to do its worst. No predictions are being made on this side, but some of our men hope to make a few runs from time to time.

The Boat Race.

The Oxford and Cambridge crews have now come down to Putney for the final stages of their training. Cambridge still impress one as by far the better team—their stroke is cleaner and not so heavy, and they have far more speed.

The crowd watching the practices is as great as ever, and one cannot help noticing the number of parsons who spare an hour or so from their Lenten duties to have a look at the crews. Boating seems to have a peculiar attraction for the cloth; I hope they contrive to shut their ears to the ordinary language of the towing-path, which, as the babu said, is extremely vernacular.

Scientific Research Postponed.

Very great regret will be felt that the British Association has been compelled to abandon for the present the oceanographic expedition which was proposed last year. Estimates have now been made of the cost of the work, but it is held that "in view of the present demand for economy in all national expenditure, no further action shall be taken until circumstances seem more favourable."

Oceanography is still in its infancy as a science. But equipment and methods of investigating the depths of the ocean have enormously advanced since the voyage of the "Challenger"; and the time seems ripe for enlarging our knowledge of the abyssal regions. There can be very little doubt that the vast array of additional facts which such an expedition would bring to light would solve a number of biological problems, and no doubt bring us face to face with many more whose existence we do not at present suspect. The sheer utilitarian may laugh, and conjure up a mental picture of professors fishing with a tin can in the middle of the Pacific; but common-sense would be wrong, as usual. Practically all scientific research more than pays for itself, not merely by additions to academic knowledge but by its discovery of new products and methods that have an economic value; the careers of Pasteur, and Hooker, and many others sufficiently prove this.

It is a pity that some wealthy man—there are still a few left in England—does not see this, and come to the rescue. As a man of science put it a few days ago, "If we could find another Lord Northcliffe, who would do for the ocean depths what he has already done for the air, we could assure him of stupendous results at relatively small cost in ten years." One never knows; the man may be found yet.

Stonehenge.

A good deal of interesting work has been done recently at Stonehenge. It is suggested that the date of construction is more recent than was supposed, and an examination has proved that some of the stones could only have been lowered into position from above. It is clear, therefore, that the architects of Stonehenge were equal to the task of raising stones weighing five or six tons or more, into the air, and setting them on the uprights with perfect precision. It does not seem to have been possible to do this by means of levers, or inclined planes of earth; the monument, therefore,

argues much greater mechanical efficiency than had been hitherto supposed.

The Week's Books.

"Arthur Coleridge: Reminiscences" (Constable) contains some very pleasant recollections of Thackeray, Browning, and the great men of the last century. It is interesting to learn that Tennyson only took five minutes to compose "Crossing the Bar." That is so far as the actual composition is concerned, of course; another way of putting it would be to say that in those five minutes the whole thought of the poet's previous life was summarised.

It is hardly necessary to do more than mention the volume of plays in the complete edition of "William Ernest Henley" which Macmillan's are publishing. Henley as a playwright was not the equal of Henley the poet, but many have found his dramas—or more correctly melodramas—well worth reading.

Collectors of war books will be glad to add "In the Blue" (John Lane), by Major S. H. Long, to their list. It is a story of aircraft in the war and after—in France, Egypt, and Palestine.

It happens that I opened "Beauty and the Beast" (Cambridge University Press), by Mr. Stewart A. McDowall, without noticing the sub-title, and was therefore rather amazed to find myself in the thick of a discussion on the evolution of aesthetics. On these matters I am a child, indeed. Mr. McDowall, on the whole, follows Croce, but he derives all personality from a transcendental source. Love is relationship, and beauty its expression, but there must be reciprocity. If I understand him rightly, beauty in evolution is the continuous purification of that which traces its temporal foundations to the impulse of sex. If I had any claim to speak on this matter, or to criticise an authority on aesthetics, I should very much doubt if this was a sufficient diagnosis; but silence in these grave matters is becoming in the ignorant. Only I must confess that I have never yet read a book on aesthetics which did not leave me with a haunting sense of unreality and insufficiency.

"The Great Munition Feat, 1914-18" (Constable), by Mr. G. A. B. Dewar, tells the story of the growth in munition output during the war. It is an astonishing record of industrial adaptation, and while it is too much to expect that many will read these details of the home front, it is well to have the facts placed on record.

Lawyers' books are generally as dull as law books, but an exception must be made for the late Judge Rentoul's "Stray Thoughts and Memories" (Parsons), which is full of good stories. I quote one at random: A Catholic schoolboy in Ireland had written on a slate "To hell with King William," and was to be rebuked by his master. "Rub out that disgraceful sentence, sir." It was done. "And now, Joseph, I regret that I shall have to cane you soundly. But first I must tell you how hurt and pained I am to find you writing such a sentence on your slate. It's unmannerly, and unchristian—and unnecessary."

"Kipling's Sussex" (Simpkin, Marshall), by R. Thurston Hopkins, is a very jolly little book about a county which has produced much good literature. It is so well written, and Sussex has so many lovers, that it will certainly find many readers.

Many people will remember the pother caused by Purcell's "Life of Manning." It was a good thing to restore frankness to biography, after the excessive adulation of some of the two-volume portraits, but it was generally agreed that Purcell rather overdid it. Mr. Shane Leslie's "Henry Edward Manning" is an attempt, and on the whole a successful one, to give a truer picture of the Cardinal Archbishop. Manning had many and grave faults, and it is quite useless to pretend that his actions were always perfect. But he was a great man for all that, and a strong man. Mr. Leslie conveys the strength of his character a good deal more effectively than his predecessor did, and if he does not quite convince me that Manning was right or generous in his treatment of Newman, he does at any rate put a better interpretation on it than Purcell. His book is something much better than a piece of whitewashing, and it deserves to be widely read. OCELLUS.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, March 6.

The Protectorate.

Yesterday week the High Commissioner handed to the Sultan a letter in which he informed his Highness that the British Government had arrived at the conclusion that the status of a Protectorate was not a satisfactory relation in which Egypt should continue to stand to Great Britain and that, while they had not reached a final decision with regard to Lord Milner's recommendations, they desired to confer regarding them with a delegation nominated by the Sultan with a view, if possible, to substituting for the Protectorate a relationship which, while securing the special interests of Great Britain and enabling her to offer adequate guarantees to the foreign Powers, would meet the legitimate aspirations of Egypt and the Egyptian people.

Although it was common knowledge that his Highness was consulting with leading Egyptians with a view to nominating an official delegation to confer with the British Government, the fact that this letter had been delivered to him was kept a dead secret, and it was only late last evening that the news and the text were published. It is, therefore, too soon as yet to be able to give an opinion as to the manner in which this new concession on the part of the British Government has been received; but it seems certain, as Lord Allenby said in his letter to the Sultan conveying the decision of the British Government, that it will materially facilitate the task of forming an official delegation.

It is a matter of great satisfaction that the British Government should so speedily have announced its decision, and it should not now be long before representatives of the two Governments are able to meet and the Egyptian question enters on its penultimate stage, the last being, of course, the ratification by the British Parliament and the Egyptian Constituent Assembly of the Treaty, which it is hoped will be the result of the proposed conference between the British and Egyptian plenipotentiaries.

The Irrigation Libel Action.

The Willcocks libel action still occupies the Supreme Consular Court, and it is not likely to be brought to a conclusion for at least another ten days. Sir William Willcocks is at present in the box, and his cross-examination has just started. He is standing the ordeal well, and at the last sittings enlivened the proceedings with his humorous replies. The whole affair continues, however, to be somewhat wearying owing to the technicalities inseparable from the case. Col. Kennedy is still laid up in hospital, and all connected with the case have had to pay several visits there in order to obtain his evidence, which was required by counsel defending Sir William Willcocks.

A Charity Aerial Display.

The Royal Air Force gave a very successful aerial display at Heliopolis last Thursday and Friday, when the public were shown what can be done nowadays in the air, and were afforded some very telling illustrations of what aerial combat really means. The display attracted large crowds on both days, and a good many availed themselves of the opportunity of making their first flight. The Sultan and the High Commissioner and Lady Allenby were among the interested spectators on the first day. His Highness made a very generous donation of £E250 to the Royal Air Force Memorial Fund.

GREECE.

ATHENS, March 5.

The London Conference.

The decisions arrived at by the Allied Conference in London with regard to Smyrna and Thrace have cast a

gloom over the whole country. Although the never-failing optimism of the Greek has in no way abandoned him, one cannot help noticing that the bad turn which the national questions have quite suddenly taken has been a heavy blow to his patriotic feelings. The possibility of losing Smyrna and Thrace never seriously occurred to the Hellene, who, now noticing for the first time the sword of Damocles hanging over his head, wonders how long it has been there. Had his optimism permitted him to see things more clearly, he would have probably noticed that the unwelcome sword had appeared simultaneously with the handing to M. Ralli of the official Allied Note a few days prior to the plebiscite for King Constantine.

Immediately on receipt of the alarming news from London a Council of Ministers was hurriedly held under the presidency of the Minister of War, M. Gounaris. After a long debate on the situation, it was decided that it should be left to the National Assembly to say whether Greece would accept or reject the measures proposed by the Conference.

There were no parties in the Chamber at the sitting of Monday last. Royalists, Venizelists, and Independents had all forgotten their political enmities and dissensions, and for once remembered that they were all Greeks and that the honour of the nation was at stake. Long speeches explaining the position were delivered by M. Gounaris, M. Baltajis, M. Stratos, and the leader of the Opposition, General Danglis. Subsequently M. Constantopoulos, a member for Thrace, in a very eloquent and touching speech gave a vivid description of the hardships and sufferings of the Christian populations in Thrace at the time these were still under the Turkish yoke. He concluded his speech by saying that a plebiscite in Thrace would be nothing less than a mockery to the memory of the dead, who can no longer have a say in the matter.

The Chamber then rejected unanimously the proposal of the Conference, refusing to accept any solution which would in any way weaken the national rights of the country. The decision of the National Assembly was communicated to M. Kalogeropoulos on the same evening.

Meetings and Demonstrations.

A monster meeting to protest against the decision of the London Conference was held here on Sunday afternoon. Thousands of people, representing all classes, and among whom were many Greeks from Asia Minor, Thrace, and the Dodecanese, concentrated from the early hours of the afternoon at Omonoia Square, whence they proceeded to the British, French, and Italian Legations, where the protest was handed in. The demonstration was conducted in a very orderly manner, and the crowds were practically silent throughout the meeting. Before leaving Omonoia Square, however, and after the President of the Popular Syllogues had delivered a speech from a balcony, cries of "Long live the war" were heard.

On Monday another demonstration was held by the students of Athens University, while at the same time

meetings of protest have taken place in nearly every town, both in Old and New Greece, as well as in Smyrna.

A Bill from the L.O.N.

The League of Nations has notified the Hellenic Government that the share of Greece in the expenses of the League amounts to 309,000 golden francs.

A special department will shortly be created at the Ministry for Foreign Affairs for the purpose of dealing exclusively with matters relating to the L.O.N.

ATHENS, March 12.

The Royal Wedding.

The wedding of Princess Helena with the Crown Prince of Roumania was celebrated here last Thursday. During the whole of Wednesday night gangs of workmen were busy putting the last touches to the decorations of Hermes Street and the Cathedral Square. From early morning thousands of people took up positions along the streets by which the Royal cortège would proceed to the cathedral, and many of these were seen taking with them chairs, tables, and even ladders to enable them to get a better view of the procession. The whole distance from the Royal Palace to the cathedral was lined with Evzones, Cadets of the School of Gendarmerie, and Marines. The hour fixed for the nuptial ceremony was eleven, but the various high State officials and others commenced arriving at the Cathedral soon after 9.30. The Diplomatic Corps was represented only by the Ministers of Roumania and Spain, none of the Ambassadors of the Allied Powers being present. The British Naval Mission to Greece was represented by Vice-Admiral Kelly, and the British Police Mission by Col. Sir Frederick Halliday. The civil marriage was performed in the Royal Palace at 10 o'clock by the Roumanian Minister of Justice, M. Antonesco.

The Royal cortège left the Palace a few minutes before 11, preceded by a cavalry squadron. The first seven carriages were occupied by the "Aides-de-Camp," the Ladies-in-Waiting, and the Greek and Roumanian Princes and Princesses. King Constantine and the

Dowager Queen Olga, were in the eighth carriage, and the Queen of Roumania, with Prince Carol, in the ninth. Queen Sophie and the bride came last in a magnificent closed carriage drawn by four horses. An escort of honour formed by superior cavalry officers closed the procession. Through Kiphissia Street, Constitution Square, and Hermes Street, and amidst the deafening cheers of the enthusiastic crowds, the Royal carriages arrived at the cathedral while the military band struck up first the Greek and then the Roumanian National Anthem. The ecclesiastical ceremony was performed by the Metropolitan of Athens, Monseigneur Theoclitos, and the Greek Patriarch of Alexandria, assisted by a Roumanian Archimandrite.

Arrival of the Crown Prince and His Wife.

The Roumanian mail-boat King Charles, bringing the Duke of Sparta and his wife, Princess Elisabeth of Roumania, and Queen Marie of Roumania, was expected in Piræus on Wednesday morning, but she was delayed by the bad weather prevailing in the Ægean, and did not arrive until 1.30 in the afternoon. The newly married couple and Queen Marie, accompanied by the entire Greek Royal Family, which had boarded the "King Charles" immediately on her arrival, proceeded by special train to Athens. In spite of the bitterly cold weather, in addition to the Athenians who were up and about very early that morning, thousands of people from the neighbouring towns and villages had journeyed to the capital and for many hours waited patiently in Stadium Street and outside the Royal Palace in order to catch a glimpse of their future Queen.

The appearance of the first carriage with the Crown Prince of Greece and his young wife was hailed with loud enthusiastic cheers and cries of "Long live our bride" and "Long live Roumania." Flowers were rained upon the Royal carriage from the windows and balconies, while at the beginning of Stadium Street two white doves tied together with the Greek and Roumanian colours were thrown to the Princess. One could say with confidence that the grace of the young Princess and

The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—

THE "UNIVERSAL" CIGARETTE MACHINE.

THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.

"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.

80, Coleman Street,
LONDON, England.

her charming smile immediately won the hearts of the Athenians. A family dinner was given in the evening at the Crown Prince's Palace.

ROUMANIA.

BUCHAREST, March 3.

Political.

Now that the Government has begun to bring into Parliament the New Reform Bills it feels that it will need all the support that it can get. Collaboration with the Federalists (a *bloc* of several small parties in the Opposition), which up to now has been desired only by the Opposition, is now almost sought by the Government. Unfortunately, however, the conditions stipulated by the two sides are still so divergent—more in form than in principle—that one hardly sees how an understanding can be brought about. The Federalists demand that their programme should be adopted and, in addition, that the present Cabinet, with the exception of General Averescu, should resign—which would be equal to suicide for the newly-formed People's Party. The Government, on the other hand, would only accept certain elements of the Federalists that would agree to collaborate on the basis of its programme, which would mean the breaking-up of the Opposition *bloc*. A failure to bring about this collaboration would greatly benefit the Liberals, who despite their small number in Parliament, are still very powerful and well-organised.

M. Bratianu's Withdrawal from Parliament.

A very unusual incident occurred the other day in the Lower House. M. Bratianu, the former Prime Minister, since the election of the present Parliament has deliberately abstained from attending the sittings, despite repeated invitations from the Speaker. The Chamber, regarding M. Bratianu's demeanour as a mark of contempt, proposed and voted, almost unanimously, his exclusion from Parliament, declaring his seat vacant. M. Bratianu, previously, in response to the final invitation from the Speaker, had declared in a letter that he considered the present Parliament unworthy of him. The strange thing about his attitude is that although he, the leader of his party, ignores this Parliament, his partisans continue to attend it.

The Senate is now occupied in discussing the New Agrarian Reform Bill, which is to transfer the land from the big landowners to the peasants. Although every one is quite reconciled to the principle of this Bill, two main points now under debate are still: first, the price at which the land should be paid for by the peasants; and secondly, the maximum portion of land which the landowners should be allowed to retain.

The Royal Wedding.

During the whole of last week Bucharest has worn a festive aspect. Roumanian and Greek flags were to be seen everywhere; arches and colonnades of flowers decorated the streets from the Royal Palace to the Cathedral. The streets were crowded with visitors from the provinces, and from the varied dialects and costumes one could tell that the delegations from the different districts of the country had arrived to pay homage to the bridal pair. The wedding presents which they brought ranged from a motor-car, carriage and horses, to carpets and embroidered national costumes.

On Sunday, the wedding day, from the early hours of the day crowds of enthusiasts streamed towards the centre of the town to get a glimpse of the procession, which left the Royal Palace at 11.30, after the civil wedding had been celebrated. The bridal pair and the other members of the Royal family drove to the Cath-

edral in closed landaus, escorted by the Royal Horse Guards. Princess Elisabeth wore round her head, according to the custom of the country, threads of gold, which hung down to the train of her dress.

After the religious ceremony, conducted by the Primate of the Roumanian Orthodox Church, in the presence of a limited number of distinguished guests, consisting of the Royal family, foreign Ministers, Cabinet Ministers, and high dignitaries of State, the procession returned to the Palace. In the evening a gala reception took place at the Palace.

TURKEY.

CONSTANTINOPLE, March 8.

Fundamental Issues.

From the mass of comments and opinions expressed on all sides in Turkey with regard to the negotiations now proceeding in London, two points seem to be perfectly established. In the first place, the Turks attach as much importance to the modification of the economic and financial clauses of the Sèvres Treaty as to the territorial clauses; and in the next place, from the Turkish point of view, the complete evacuation of the contested territories by the Hellenic forces is the *sine qua non* preliminary to any agreement. So far as can be judged the Turkish delegates, whilst putting their case forward in moderate language, have nevertheless left the Allied Premiers in no doubt as regards the two points above-mentioned. As the discussions are being continued, it may be supposed that an agreement with regard to the first point is not considered impossible; but what are the prospects of an agreement in regard to the second point? If the debates in the Angora Assembly, the tone of the Nationalist Press, and the expression of private opinion are any index of Turkish policy, there can be no compromise on this point. Conversely, both Constantinists and Venizelists seem to be determined to resort to any measures rather than abandon the territories that have been wrested from the Turks. Both parties express the completest confidence in the efficiency of their military resources: the Greeks are certain that the Hellenic army could sweep away the Nationalist forces like chaff, and the Turks are equally certain that sooner or later they could force the Greeks to leave Anatolia. Without casting the least aspersion upon the proved courage of the Turks, it is permissible to doubt whether they could make much impression upon a fortified line defended by the Hellenic army. On the other hand, when the lessons of the Boer War are remembered, very considerable doubts arise as to the advisability of accepting the Greek point of view. The truth of the matter is, as has been pointed out so often in previous letters, there can never be peace between Greek and Turk, other things being equal, so long as there is no effective barrier between them. The events of the past eighteen months, and the present situation are the direct result of the removal of such a barrier. There is some talk in the Press of a direct understanding between the Greeks and the Turks, but no one who is in touch with the true temper of each nation can believe for a moment that such an agreement is possible.

The Caucasus.

At the moment of writing it would appear that final disaster is inevitable for the Georgians, and the Turks are standing at the gates of Batoum for the purpose of anticipating a Bolshevist occupation of that port, which is the key of Transcaucasia. There is very little information upon which one may base a judgment of the exact state of Turko-Bolshevist relations; but from the meagre information at our disposal it seems probable that the Bolshevists even yet do not intend to quarrel openly with the Nationalists, and will agree, for the time being at least, to an occupation of Batoum by the forces of Kiazim Karabekir. How far the Bolshevists will persist in this policy in the event of peace being definitely concluded with the Allies is a matter for speculation, but that they have any intention of allowing the Turks to remain in permanent possession of one inch of the territory belonging to the former Russian Empire is a consideration that cannot be entertained for a moment.

Speed up your Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing :—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from 1½" diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes :—

⅜" to ½" fitted with No. 2 and No. 3 Morse Taper Shank.

½" to ¾" fitted with No. 3 and No. 4 Morse Taper Shank.

Full particulars upon application to :—

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE SHEREEF ALI HAIDER AND MESOPOTAMIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I shall esteem it a great favour if, in view of Mr. Urinowski's letter in your issue of the 17th inst., you will accept a further exposition of the claims of Ali Haider.

The contention of your correspondent is that Ali Haider did his best to oppose the Allied cause during the war, and is therefore unfitted to lay any claim to British confidence. I have stated elsewhere that the influence exerted by Ali Haider in Arabia was purely pacificatory, and so of much value to the Allies. It is perhaps necessary for me to bring more evidence to bear regarding this statement. With my own eyes I have seen the deeds of loyalty to Ali Haider of fifty-four Sheikhs, who represent by far the majority of the population of the Hejaz. These Sheikhs, together with the Emirs Ibn-Saud and Ibn-Rashid, urged Ali Haider to advance against King Hussein, while the leaders of the Turko-German armies brought their influence to bear as well. In the face of all this, Ali Haider controlled the aforementioned Sheikhs, and if your correspondent can quote any occasion on which the Shereef's supporters were in active opposition against King Hussein during this period, I shall indeed be grateful. It was not Ali Haider's place to create more trouble; for had he not come to Arabia for the sole purpose of alleviating it? Even one of the Emir Faisal's most eminent Arab generals has told me that Ali Haider's supporters were of far greater magnitude than their own.

I note your correspondent passes over Ali Haider's conduct before the war, merely saying that, the Turks were pro-British during the last century. To those who have studied Turkish politics during the latter part of the last century, and the career of the notorious Committee of Union and Progress since the declaration of the Constitution, such a statement is ridiculous. I need only refer to Professor Sir W. M. Ramsay's "Impressions of Turkey":—

"The Sultan Abdul-Hamid fondly imagined that the Crescent would be renewed, and with this ideal in view he sought, helped by German intrigues, to destroy all English influence in the Ottoman Empire, for England was the arch-enemy of all that he believed in and desired. From the first day when his influence began to be felt, he worked and watched, prayed and waited, intrigued and chose his allies, with the view of destroying English influence in Turkey. . . . It is no recent theory of my own that is here stated; it is what has been said to me many a time in the years 1880-1884, when I was residing almost continually in Turkey, by men of great experience in the country, men of many nationalities. Some spoke with regret, some with indifference, some with satisfaction, but all with conviction: "Your Government seems never to recognise that the Sultan is its great and bitter enemy, and so it is always playing into his hands."

The fact that Ali Haider was kept by Abdul Hamid at Constantinople under the closest supervision, and that later on he became intensely unpopular with the Committee of Union and Progress, shows in which direction his sympathies lay. Perhaps Mr. Urinowski will endeavour to prove that the Committee of Union and Progress was prompted by Anglophile motives!

In conclusion, it might be of interest to draw your attention to the reply given by King Hussein to a mission lately sent by the Turkish Government to inquire why he did not sign the Peace Treaty. The excuse given to the Porte was the bad way in which the Turks had been treated by the Allies, whilst to the Moslem world he stated that it was in atonement for his fighting against the Turks during the Great War.—I am, etc.,

CHAMPION.

MOSLEMS AND KING HUSSEIN OF THE HEJAZ.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—If the Kaaba, the mosque around it, and the city of Mecca are still honoured by the cultured and worshipped by the uncultured Moslem of every land; if the Kaaba itself, cynosure of Islam, *kibla* of every daily prayer, has been broken by Ottoman shells, where stands any claim to Khalifship by the Aga Khan, Mohammed VI., or the Ulama?

If Hussein's custody of the Holy of Holies and his hereditary Shereefship have been undisputed for generations, what boots the challenge or defiance of authorities in Constantinople and Calcutta, or in Shiah Persia? Mecca is their spiritual home. Hussein maintained his custody and defended his trust, and, all Arabia helping him, beat back the Turkish traitor.

Let the Government of India and the Moslem Princes stimulate

the Pilgrimage to the utmost, so that the pilgrims may learn how Mecca was defended. Selections from the Allenby-Lawrence travelogue shown at Delhi and Hyderabad should do great service, and divert loyalty from Constantinople to the apex of Islam.—I am, etc.,

EDWIN RANSOM.

Bedford, March 14, 1921.

THE PRESENT SITUATION IN THE DODECANESE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Under the 122nd article of the Turkish Treaty, now under revision, the Ottoman Empire renounced all its rights over the Dodecanese in favour of Italy, who has occupied these islands since 1912, and the second article of the Tittoni-Venizelos Scialoja agreement, signed between Italy and Greece at the same time as the Treaty of Sévres, gave to Rhodes the adjoining islets and Kastellorizo a large autonomy. A proclamation issued to that effect by Governor Cavaliere Felice Maissa on October 8 last granted the promised autonomy and undertook to respect the national feelings of the islanders; also full liberty was given to the religious and educational authorities of the two islands, and a larger share of self-government was assigned to local elements. This proclamation found the Rhodians more or less apathetic. The Rhodian Greeks have been zealous Nationalists since 1912, and, in spite of a draconian martial law, they, along with the other Dodecanesians, have more than once voiced their desire to be united with Greece.

The commercial aspect in Rhodes is very gloomy. Although restrictions on export are getting tighter every day, "the import" into the island of Turks from the opposite Anatolian coast is allowed in the most scandalous manner. These Turks come and go as they please, and they alone have the privilege of trading with Anatolia. In this country we have heard much about famine in Austria and elsewhere, but we know little or nothing of what has happened during the war in these twelve small islands. The distribution of food was far from being perfect, and this state of things continued even after the Armistice and until recently, when the Greek Government took up the food supply in the Dodecanese. After the signing of the Sévres Treaty the Italians good-humouredly allowed the Greek flag to be displayed throughout the Dodecanese, with the exception of Rhodes, which remains for another fifteen years under the foreigner. The Italians allowed also patriotic meetings and doxologies to take place in view of the forthcoming Union of the Dodecanese with Greece. The joy of the Dodecanesians was so great at the approaching Nirvana that a semi-official statement made by Italy early in September last passed quite unnoticed; by which it was announced that the Dodecanese would be evacuated by Italy "only in case of the election of a Greek Government possessing the confidence of the Hellenic people" (*sic*). M. Venizelos fell, the Greek flag became immediately taboo, a popular Government is now in Greece, and the Dodecanese has not yet been evacuated, although, as you stated in your to-day's issue, Kastellorizo, a borough of the Greek prefecture of Samos, occupied by the French during the war, was evacuated by the French on the 2nd inst. and given to Italy, before the ratification or any other rectification of the Sévres Treaty takes place.

The further retention or any other bartering of the Dodecanese by Italy is not only contrary to the doctrine of nationalities, but also contrary to the interests of the Italians themselves, who derive no profit from islands where they are acting the policeman.—I am, etc.,

THEODORE D. MOSCONA.

The Palestine Mandate.

The *Morning Post* of March 18 disapproves strongly of the system of mandates, and states that the recent decision of Lord Curzon amounts to the transference by the Government of the power of Parliament to a foreign and cosmopolitan body, the League of Nations. On the Palestine mandate in particular it says:—

Now let us see to what the nation is committed by the League of Nations in respect of Palestine. It is committed, in the first place, to exercise all the rights of a sovereign Power in Palestine, upon the condition that those rights are exercised under the supervision of the League of Nations, to whom an annual report is to be submitted. What will happen when, or if, such report be meekly rendered, no one—not even Lord Curzon—can tell. But in the meantime the British Government virtually acknowledge the League of Nations as suzerain. When the people of this country thoroughly understand that humiliating position we doubt very much if they will approve of it. Great Britain is to secure the integrity of Palestine; a clause which involves the necessity of maintaining an armed force in that country, at an expense, so far, of seven millions a year, which is paid by the British taxpayer, and not a penny of which will be ever seen again. In practice, the control of finance, which is the charter and the boast of the House of Commons, is in this matter removed to the League of Nations.

Britain and the East.

In an article called "The Obsession of Strategy," *The Nation* and the *Athenæum* of February 26 explains why it does not expect any big resettlement from the latest meeting of the Supreme Council. Upon our policy in the East it says:—

We cannot discover that British policy has any constructive plans whatever for the East. Its interests are concentrated and local, partly strategic and partly economic. It perceives the importance of the two naval keys to world-power, the Suez Canal and the Straits. It has, therefore, set up a predominantly British occupation at Constantinople, and secured itself in Palestine and Cyprus, as well as in Egypt. Its relations with Greece are evidently unaffected by any sympathy or antipathy which it may feel for M. Venizelos and King Constantine. The solid fact about the Greeks is that they possess many islands and harbours useful to a sea-power. Provided their territorial ambitions are gratified, they can be employed as a serviceable auxiliary force on land, a sort of marine light infantry, attached to our Navy. In Mesopotamia and Persia the strategic and economic motives unite. Both have oil wells, and both are regarded by large strategic thinkers as stations on the road to India. Our policy is comparatively positive and luminous, wherever it touches an island, a strait, a canal, a coast-line, or an oil-field. It takes full account of the Greeks, a maritime people. The moment one quits the sea and advances inland our policy becomes hazy, negative, uncertain. It seems to ignore the Turkish interior altogether. Whether the Treaty of Sévres can be enforced, whether Anatolia remains a derelict and outlawed land, whether Mustafa Kemal rebels or submits, is from this point of view a matter of indifference. Whether any Armenians survive, and, if so, how and under what régime, is equally indifferent. As for the Bulgarians, they are not a maritime people, and consequently seem less useful than the Greeks. That is the logic of the new strategic-economic Imperialism. It believes in ships, and in oil to run the ships. Nothing else exists for it. One can in this way assure power to oneself. But to what end? As we ignore the rights, the needs, the interests of other peoples, as we forget the mission of civilisation in these dim interiors, as we close our ears to the cry of wronged and martyred peoples, the justification for the possession of power disappears. We are sapping Empire, while we fortify it.

This strategical thinking, by narrowing our concerns and excluding any constructive view of the needs of Turkey as a whole, has given us the impossible Treaty of Sévres, which we cannot impose and will not revise.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

MUSICAL NOTES.

Violinists.

It is not often that three such dull sonatas as Brahms' in E flat major (Op. 120), Vreuls' in B major, and Ireland's in D minor are found together in one programme. but this misfortune occurred at Miss Gladys Clark's recital at the Wigmore Hall on March 14. The Brahms sonata was originally written for clarinet and pianoforte, and the arrangement of it for violin is uninteresting. And why Miss Clark, who manifestly is an ambitious fiddler, chose to introduce to London the new Vreuls sonata is hard to imagine, for each of its three movements contained but about one and a-half ideas, and these commonplace ones. The writing for the pianoforte only echoed the facile impotence of the violin part.

I was disappointed not to hear a new sonata by W. Wolstenholme which Mr. Adolphe Kagan played at his recital at the Steinway Hall on March 15; but it was not all my fault that I had retreated ere it was performed. For Mr. Kagan's intonation in César Franck's sonata was a little more than I could endure, and matters were no better in Vieuxtemps's concerto in D minor. With all the goodwill in the world one could find little justification for the appearance in public of this violinist.

Pianists.

Of both Mr. Leonard Borwick and M. Léon Pouishnoff, who gave recitals on March 17 at the Æolian Hall and the Wigmore Hall respectively, I have written so much recently that I can add but little now. Evidence again was given of Mr. Borwick's remarkable power of transcription, not only in Debussy's "Fêtes," but in Bach's "Wohl mir dass ich Jesum habe," which lovely melody he weaved most gracefully. His fine intellectuality was apparent in the magnificent last sonata of Beethoven, the whole reading being informed by an intense and penetrating reserve. With some of his *tempi* and *rubato* in Chopin (particularly in the fantasia in F minor and the impromptu in A flat) one simply could not agree, but no minor differences could obscure the fact that Mr. Borwick is a very beautiful artist.

What a wonderful thing is the English public! Here was M. Pouishnoff playing a whole programme of modern Russian music, and the only thing encored for its own sake was a slight, if pleasing, "Musical Box" of his own composition, a thing which musically was (excepting that dreadful first movement of Tchaikowsky's sonata in G major) the least interesting thing of the evening. His audience passed over some most noble and notable playing of Glazounoff's "Theme and Variations"; they did not seem to realise that in Moussorgsky's "Hopak" we had unravelled for us the very genius of the wild Russian (this reading, indeed, was the most realistic I have ever heard); and why a most exquisite interpretation of Scriabin's "Poème" (Op. 52) was allowed to go unrepeatd I cannot understand. In small things M. Pouishnoff is so marvellously finished a player that I should have thought all London would have flocked to hear and to applaud him.

The Music Society.

The external changes that have been made in the composition of music since the outbreak of the European War were strikingly exemplified in the quintet for pianoforte and strings by Mistowski, which was given its first London performance on March 18 at the meeting-place of the Music Society, St. John's Institute, Westminster. This work, which was written in 1913, has many passages of banal respectability; in the first two movements there is much verbiage but little said; and out of the four movements the "finale" is the only one containing evidence of personality.

At this concert Miss Kathleen Long, a pianist of very fluent technique, played several pieces of Frank Bridge, of picturesque or descriptive nature. Bridge is a fine writer in many forms, but he is by no means at his happiest on the pianoforte; and it would be difficult to prophesy immortality for any of the things played by Miss Long.

Miss Nancy Morgan.

As I said a week or two ago, there seems to be very little of value written for the harp as a solo instrument, and it was certainly not any shortcomings in Miss Nancy Morgan, who gave a recital at the Wigmore Hall on March 16, that made her work lack interest. She herself appears to be a harpist of very considerable promise, with a vivid, even exaggerated, sense of colour. Of the pieces she played Bantock's "Sapphic Dance" was the best to hear.

Fortunately, she was assisted by Mr. John Coates, who was in his most jovial, though not his most musical, mood. His old French songs were, I think, overdone, but his singing of English songs was as admirable as ever. Of two songs by Dorothy Owen I thought little, but Ivor Gurney's "Spring," Malcolm Davidson's "At Night," and Armstrong Gibbs' "As I Lay in the Early Sun," all have considerable, if varying, degrees of merit.

I.—INDIAN TRAVEL-PICTURES.

There was a time when European exiles devoted their leisure to studying the religions, customs, and legends of India. In those remote days furlough was hard to come by, and the homeward journey occupied six months. The British capacity for making the best of things led our predecessors to consider themselves settlers rather than sojourners throughout the eighteenth century—indeed, every Presidency capital was officially styled a "settlement." The revolution in the means of transit, which brings Calcutta nearer London than was Bombay a century ago, has lessened the interest felt by Anglo-Indians in their temporary environment, and books which deal with the less obvious features of Indian life are very rare. Colonel H. A. Newell belongs to the scholarly school represented by Colonel Tod, who travelled through Rajputana, gathering materials for a work which has given him a permanent niche in the Temple of Fame. He has done well to publish several contributions to local newspapers recording his wanderings in India by house-boat and motor-car. Before setting out on these expeditions he seems to have saturated himself with the history of the country which he was about to traverse. He is a trained observer, mixed freely with the people, and lost no opportunity of mastering their folk-lore. The method adopted by our author has resulted in a series of thumbnail sketches, which give the Western reader some insight into the civilisations imposed on India, and the transformation which each has wrought in the ever-changing East.

Students of Mutiny literature will remember that the tomb of General John Nicholson, who fell gloriously at the storming of Delhi, became a place of pilgrimage, and that a sect of worshippers arose styling themselves "Nikalsani Fakirs." Colonel Newell discovered a similar shrine near the abandoned cantonment of Sirun. A gallant soldier named Colonel W. Wallace died there in 1809, after making an annual provision of Rs.9 for the upkeep of his tomb, and appointing his groom as its guardian. It came to be regarded as the burial-place of a "sat purush," or holy man; pilgrims flocked thither, marvellous cures were effected, and the ex-groom waxed fat on their offerings.

Colonel Newell's style savours of the colloquial, but now and then it attains real eloquence. He thus describes Singhad, the "Lion Fort," which commands the approaches to Poona:—

A place which once figured prominently in history can never be relegated to the scrap-heap of time. This is especially true of a famous fort. While one stone stands, it constitutes a memorial. Men have fought and died there; armies have hurled themselves against its defences. Within and without its battered walls desperate deeds have been done, attacks have been launched, long sieges endured, and forlorn hopes led. The very ground is hallowed, for mingled with it is the dust of heroes. Finally when, like a beautiful woman's, its day is done, and in old age men no longer desire it, then history makes it her own for ever, wreathing its battle-scarred stones with immortality.

During a journey by car from Ootacamund to Madras Colonel Newell halted at Seringapatam, and gives us a most graphic account of its capture on May 4 1799, when the European force had 874 casualties out of 2,434 engaged. Tipu Sultan, who then ruled Mysore with a rod of iron, was England's inveterate foe, and his lifelong dream was to oust her from Southern India. He fell on the breach, fighting furiously to the last. It is pleasant to hear that the memorials of the last struggle for empire in the East are maintained with pious care, as is "Scott's Bungalow," which many years ago was the scene of an inexplicable tragedy. Colonel Newell visited it at dusk, and writes:—

Shadows carpeted the floors. The gloom of the corners was pregnant with memories. Old pictures hung in substantial frames on the dim walls. The old furniture stood in its accustomed place. Everything breathed order, care, and refinement. Upstairs, dark though it was, carved elephants gleamed on the high four-poster beds, as though newly polished. Over all hovered "the tender grace of a day that is dead," mingled with an indefinable sense of something sinister. . . . Here had dwelt a happy family. Childish feet had pattered on the silent floors. Curly heads had lain down to rest in the great four-poster beds. Then came a fatal morning, when Colonel Scott went out as usual, leaving all well at home. On his return, he found the lifeless bodies of his wife and children! Was it poison, or cholera, or what? He did not pause to inquire. The distracted man rushed out of the house, and was never seen or heard of again! Perhaps the mystery of his disappearance is known to the sharks which infest the green waters of the Cauvery flowing past his desolate home.

Colonel Newell's illustrations—fifty-nine in number—add greatly to the charm of a delightful book. F. H. S.

II.—PERSIAN RUGS.

The collection of Oriental rugs is a fascinating hobby, and provided the collector takes good care of his specimens, a very safe one. That is to say, that a good rug, cared for as a good rug deserves to be, increases in value with the passing of time; and the "boom" of last year showed some of us how good an investment a rug may prove. But if you are to "know your way about" on ground that has not a few pitfalls for the unwary, you must either buy your knowledge by the outlay of a good deal of time and trouble in the Eastern markets and bazaars, or else study carefully at the feet of some expert, such as Mr. Delabère May shows himself in this very useful little book. He knows his subject thoroughly, and he passes on his knowledge in such a way that any careful reader should be able with the help he gives to distinguish between the varied types of rugs described. The illustrations are practical, and the details of design are distinctly helpful. The charm of the originals cannot, of course, be conveyed by any mere photographs, but the specimens selected for illustration have the merit of being really typical. The book is emphatically good, and author and publisher are to be congratulated upon it.

III.—A BALKAN NOVEL.

Some authors go far afield in search of local colour, but in the case of the writer of "From Another Angle" we infer that from the wealth of local colour which her experiences have brought her she has felt impelled to turn author. The lavishness with which she disposes of her material will, it is to be hoped, attract others to these lands of tense living, of strong love and hatred, as a suitable setting for less ambitious plots than those of the now vanished Ruritania order. After having followed the hero through the Croatian countryside, Zagreb, Belgrade, Macedonia, Rome, Genoa, Marseilles, and Paris, the English reader would certainly have laboured under a grievance if, in view of the fact that it was still the time of the Great War, the Croat and the French war-worker had not run across one another again a few yards from Big Ben. Outside her own country our author is most at home in Italy; elsewhere she has used her eye for, as she would say, *sehenswürdigkeiten*, and scenery to better effect than her ear. For, amid a plentiful sprinkling of foreign words, there is a grammatical mistake wherever German is tried, and male characters are invariably addressed by a word which our Serbo-Croatian phrase-books assure us is the vernacular for "Madame." Perhaps the phrase-books are wrong; in any case the story is there, and it is a powerful one, well told.

THE BULLETIN OF THE SCHOOL OF ORIENTAL STUDIES.

We have to acknowledge the receipt of Part IV. of the first volume of this Bulletin (London: Luzac. 6s.), which contains a series of linguistic studies ranging from the Sudan to Japan and New Guinea. The note of the contents is high scholarship, and the Bulletin has already established itself as indispensable to serious students; but even the general reader may find stray morsels to his taste, such as the Kurdish proverb: "A late guest must arrange for his own dinner," or the song of the Chinese coolie:—

"If you have sweet roast pork,
Eat it before it is stolen.
Spend your money while you're here,
After death it avails you nothing."

PERSONAL AND GENERAL.

TO-DAY.

March 24 (New Style).

March 11 (Old Style).

Ragab 14, 1339 of the Moslem Calendar.

Adar II., 14, 5681 of the Jewish Calendar.

The Earl of Cromer has arrived in London from India.

Colonel Lord Loch and Lady Loch have arrived at the Hôtel S. George, Algiers.

Lord Islington has been elected chairman of the Standing Joint Committee on Indian Affairs.

Colonel Storrs, Governor of Jerusalem, has become a vice-president of the Imperial Chess Club.

Colonel Baird, British Military Attaché for Turkey and Bulgaria, has taken up his duties at Constantinople.

Lord and Lady Reading left London on March 17 on their way to Marseilles, whence they are sailing on the *Kaisar-i-Hind* for India.

Lieutenant-Colonel E. H. Keeling has been awarded the Macgregor Memorial Medal for the best exploration or reconnaissance of the year.

The marriage arranged between Colonel A. C. B. Mackinnon and Miss D. Hammick will take place at Dehra Dun, India, at the end of April.

At the last meeting of the Council of the Royal Colonial Institute Lord Reading and Mr. Montagu, Secretary of State for India, were elected Fellows.

Mrs. Rosita Forbes is helping the Survey Department in Egypt to prepare a new map of Libya in the light of the discoveries made during her recent visit to Kufra.

Sir Syed Ali Imam, Prime Minister of Hyderabad, who came as a delegate to the Assembly of the League of Nations at Geneva, and Lady Imam left last week for India.

The King has granted authority to wear the following decoration:—Order of the Nile: Grand Officer, G. F. G. Purvis, Director-General, Coastguards and Fisheries Service, Cairo.

It is stated that General Sir Charles Monro, G.C.B., G.C.M.G., G.C.S.I., is to be created a baronet, in recognition of his services as an Army Commander during the war, and as Commander-in-Chief in India.

Yugoslavia will be represented at the Barcelona International Transit Conference by Dr. Tresitch-Pavichitch, the Yugoslav Minister in Madrid, and by Admiral Pritza and Captain Avramovitch as technical experts.

A Supplement to a recent *Gazette* announces the award of a D.S.O. to Major J. R. Hutchison, 38th Cent. India Horse, I.A.; a bar to the M.C. to Captain D. E. Whitworth, M.C., 2nd Lancers, I.A.; and the M.C. to Lieutenant W. H. Lloyd, 10th Battalion Middlesex Regiment (T.F.), attached to Royal Corps of Signals, for distinguished services rendered in Palestine.

The King of Roumania has conferred upon M. Michel B. Boeresco, Minister Plenipotentiary and Roumanian Chargé d'Affaires, the Order of Commander of the Star of Roumania.

An engagement is announced between Harold Arthur Wilkinson, of Cawnpore, North India, younger son of the late C. W. and Mrs. Wilkinson, and Ruby Georgina, youngest daughter of Lieutenant-Colonel A. and Mrs. Butterworth, of Cawnpore, North India.

The King has given the following members of the Scottish Women's Hospitals for Home and Foreign Service unrestricted permission to wear decorations of the Order of St. Sava, conferred on them by the King of the Serbs, Croats, and Slovenes in recognition of their services to the Serbian sick and wounded in the late war:—Fourth Class: Miss Beatrice Anne McGregor, M.B., C.M. Fifth Class: Miss Lillian Mary Chesney, M.B., Ch.B.; Miss Janet McVea, M.B., C.M.; Miss Elizabeth Brook, M.B., Ch.B.; Miss Catherine Louise Corbett, M.B., Ch.B.; Miss Janet Stewart Laird, M.B., Ch.B.; the Hon. Mrs. Evelina Haverfield.

March 21 was the anniversary of the Persian New Year's Day. Mirza Davood Khan, Miftah-es-Saltaneh, the Persian Minister, to celebrate the event, held a reunion at the Legation, 47, Bramham Gardens. Among those present

were the Aga Khan, Prince Anowshiravan Mirza Salom, Prince Mohamed Mirza Khosrovani, Mohamed Ajam, Mohamed Chotani, Shaikh M. H. Kidwai, M. Gavrilovitch, the Yugoslav Minister; M. Dmitri Stancioff, the Bulgarian Minister; the Right Hon. and Mrs. Ameer Ali, General Sir Percy Sykes, Sir John Rees, Sir Francis Barker, Lady Lamington, Sir Harry and Lady Foster, Mir Jagoub Mehtieff, M. Eric Raquette, Ghaffer Khan, Persian Minister for Scandinavia, and Mme. Ghaffer Khan, Fathollah Khan Noury, Mirza Issa Khan, Ebrahim Khan Gharagozlou, Mr. A. S. M. Anik, representatives from the India and Foreign Offices, General Douglas, Major Willy, Mr. M. H. Isphaham, and members of the Persian colony.

Our Athens Correspondent writes (March 12):—Mrs. E. Hooper, an English lady residing in Athens, held at the Zappeion building a very successful exhibition of upwards of seventy pictures in oil and water-colour, the subjects being mostly Greek. Amongst the oil paintings, "Daisies" and "The White Fan" are worthy of special mention. One of the best pictures exhibited is the "Yard of the Monastery of Faneromeni," with its very realistic dark-green coloured cypress trees. Mrs. Hooper is evidently very fond of monasteries. She has painted about a dozen of these, and very little fault can be found with any of them. One in particular, the "Kessariani (inner yard)" strikes me as being one of her best executions, and serves as an excellent example of the artist's skill in the delicate handling of water-colours. A small ticket marked with the word "vendu" which I noticed on practically every one of the exhibited pictures proves how much this English artist's work has been appreciated by the Athenian picture lover, usually so difficult to please.

SUDAN.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, February 27.

Recent arrivals in Khartoum included Colonel Backhouse, the Vicomte de Fontarce, Colonel Gray, of the Associated British Manufacturers, and Lieut-Colonel F. C. C. Balfour.

Sir Murdoch Macdonald, K.C.M.G., C.B., and Mr. A. Lucas, Director of the Egyptian Government Analytical Laboratories, are shortly expected in the Sudan on a tour of duty which is expected to extend to three months.

Mr. H. W. Tite, Egyptian Manager of the Compagnie Générale des Wagon-Lits, accompanied by Mrs. Tite, arrived on the 25th inst., and is reported to be proceeding south on a shooting and fishing expedition to Lake No, in company with Mr. John Wells, late Inspector-General of Mines for Egypt.

Bimbashi H. D. Wise, M.C., Cavalry and Mounted Infantry, has been appointed G.S.O. 3.

Lieut-Colonel F. C. C. Balfour, M.C., C.I.E., from 1st Inspector, Kassala Province, has been appointed Assistant Director of Intelligence.

Captain P. S. L. Beaver, M.C., Wiltshire Regiment, has been taken on the strength of the Egyptian Army with the rank of Bimbashi and posted to the 10th Sudanese.

The Order of El Nahda (3rd Class) has been conferred by H.M. the King of the Hejaz on Captain (Temp. Major) H. F. C. Hobbs, the West Yorkshire Regiment.

Mr. A. S. Reid, Auditor-General's Department, Sudan Government, died at 5 a.m. on February 18, at the Civil Hospital, from influenzal pneumonia.

APPOINTMENTS, ETC.

M. Akaki Tchenkeli, the newly-appointed Georgian Minister to the Court of St. James's, has arrived in London.

It is announced from Delhi that the Begum of Bhopal has been appointed Chancellor of the Moslem University of Aligarh.

OBITUARY.

The death is announced of His Highness Mir Sir Imam Baksh Khan Talpur, G.C.I.E., ruler of the Sind State of Khairpur. He succeeded twelve years ago, and was made a G.C.I.E. at the Coronation Durbar. He is succeeded by the eldest of his three sons, Mir Ali Nawaz Khan, who served in the princely Cadet Corps at Dehra Dun and made a tour in Europe in 1911.

The death occurred last week at Blackheath of Major-General Woodburn Hunter, Colonel Commandant, Royal Artillery. He entered the Army in March, 1865, became Colonel in June, 1889. Major-General in 1898, and was placed on the Retired List in June, 1902. General Hunter served with the Sudan Expedition in 1884-85, and was present at the second action at Abu Klea.

The death occurred suddenly last week of Archbishop Dorotheos, Locum Tenens of the Ecumenical Patriarch of

Constantinople, who arrived in this country at the beginning of this month to represent the unredeemed Greeks in the Turkish Empire. Sympathetic references to the late Archbishop were made on Sunday in St. Paul's Cathedral, Westminster Abbey, and in numerous other churches. His coffin is being conveyed to Constantinople.

The death is announced of Lieutenant-Colonel Frederick Sedley, fourth Marquis of Taffia (Malta), aged eight-three. He was son of Frederick Sedley, Superintendent of Police at Malta, who died in 1885, having married Catherine, daughter of the second Marquis of Taffia. His claim to the title of Marquis of Taffia was recognised by the Committee of Privileges of the Maltese nobility and by the British Government in January, 1905.

The death is announced of Sir Arthur Lewis Webb, K.C.M.G., M.I.C.E., who was for forty years connected with public works, chiefly in the irrigation departments, in India and Egypt. From 1881 to 1894 he worked in the irrigation branch of the Public Works Department in India. At the end of that term he was transferred to the same department in Egypt, where, in 1899, he became Inspector-General of Irrigation, and six or seven years later Under-Secretary for Irrigation. In 1908 he was appointed adviser to the Public Works Ministry of the Egyptian Government, and held that appointment till 1912. He was created a C.M.G. in 1902 and K.C.M.G. in 1912, and, in recognition of his services on the Nile reservoir, he was awarded the First Class Medjidieh (Grand Cordon) and the Second Class Osmanieh.

THE LATE TALAAT PASHA.

Talaat Pasha, a former Turkish Grand Vizier, was assassinated in Berlin on March 15 by a young Armenian, who had lost both his parents in one of the Armenian massacres. Talaat was born in 1872, his father being a Turk and his mother a gipsy. As a young man he entered the service of the Posts and Telegraphs; and early in the nineties, being then stationed at Salonika, where the Young Turks were extremely strong, he became mixed up with the movement. The events of 1908-9 brought him into prominence, and (after visiting London and Paris) he was appointed Minister of the Interior. Soon afterwards he became an ardent supporter of the policy of "Ottomanising" all the Turkish Empire, which he had previously opposed. In the first Balkan War he served as a volunteer, but with no great credit. He was always suspected of being not altogether without responsibility for the deaths of Nazim Pasha and Mahmoud Shevket Pasha, and there can be very little doubt that during the last ten or twelve years at least he was bent on keeping power in his hands and not over-scrupulous how he did it. He undoubtedly favoured Turkey entering the war on Germany's side and his responsibility for the Armenian massacres which followed is not seriously disputed. He became Grand Vizier in 1916, and held the position till September, 1918, leaving Constantinople shortly before the Allies entered it. Since then he had lived in more or less voluntary exile on the Continent.

TOPICS IN PARLIAMENT.

INDIA: Police Pay.—Army Reserve, War Medal.—Pensions. Public Works and Forest Officers.—Opium.—Dangerous Drugs.—Army Pay and Allowances.—Troops (Service Outside India).—Army Organisation.—Lord Rawlinson (Council of State Speech).—Cost of Living, Statistics.—Fiscal Commission. (March 9.)

INDIA: Officers' Medical Expenses. (March 12.)

EGYPT: MESOPOTAMIA (MANDATE). INDIA: Divorce Decrees.—Railways, Goods Rates. TRADE AND COMMERCE: Anglo-Persian Oil Company. BULGARIAN LOANS (BRITISH CLAIMS). PEACE TREATIES: Turkey and Greece.—Prisoners of War, Turkey. (March 14.)

SOUTH PERSIA RIFLES. EGYPT: MARTIAL LAW AND PRESS CENSORSHIP. CEYLON. PERSIA. INDIA: Industrial Disputes. MESOPOTAMIA (RAILWAY PERSONNEL) (March 15.)

INDIA: Trade Unions.—College Strike, Burma.—Shwe Dagon Pagoda.—Contracts (Non-Fulfilment).—Railway and Inland Steamer Traffic.—Fiscal Policy.—Cotton Duties.—Disturbances, Nankana.—Indian Affairs (Standing Joint Committee).—Government Officials (Passages).—PEACE TREATIES: Armenia and Cilicia. INDIA: Inland Water Traffic (Surcharge).—Medical Service (Travelling Facilities). MESOPOTAMIA. (March 16.)

EGYPT. GREECE (DEBT TO GREAT BRITAIN). BRITISH ARMY: Forces in Egypt and Palestine. INDIA: Europeans (Divorce Decrees).—Cotton Mills.—Financial Statement, 1921-22. (March 17.)

ROUMANIA (HUNGARIAN RESIDENTS). (March 18.)

Marshal Lyautey, says a Paris telegram, speaking before the Finance Committee of the Senate last week, declared that the army in Morocco at the present time numbered 80,000 men whom he desired to retain during the two or three years which would be necessary for carrying out the work of pacification in Morocco.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

NEWS IN BRIEF.

In the past week there was an increase of 23,000 in the numbers on relief in India.

We have received a copy of the pamphlet, published in Cairo, entitled "L'Alliance Libanaise d'Egypte et La Question du Liban."

The annual report of the Sanitary Commissioner with the Government of India has now been published in Calcutta, price Rs. 2½ (3s. 4d.).

It is announced that the greater part of the 6th Division has now left Busreh for India, three more battalions having sailed between March 8 and 11.

Mr. Israel Cohen is on his way back to Palestine from India. He has raised altogether £115,000 in Australasia and the East for the Palestine Restoration Fund.

The Bombay-Poona detective force has succeeded in arresting thirty-five persons, mostly Pathans, who are alleged to have been connected with the recent series of dacoities.

The Yugoslav Constituent Assembly which reassembled on March 14 has again adjourned. The Committee charged with the preparation of the projected Constitution has not completed its labours.

According to the *Tribuna*, the Christian Albanians of Koritsa are demanding autonomy for Southern Albania, under an elected governor-general and a local council, which is composed of two-thirds Christians and one-third Moslems.

Speaking in the Hungarian National Assembly last week, Count Teleki, the Prime Minister, said that Hungary would never give up her claims to Baranya, which were founded upon the Trianon Treaty, and would demand its evacuation by the Serbians.

At a mass meeting of over 10,000 persons held in Rangoon recently, a resolution was unanimously passed declaring that the people of Burma were quite fit to govern themselves, and demanded that full responsible self-government be granted without delay.

It was reported last week that news had been received from East Africa of the death of the "Mad" Mullah of Somaliland. Reports of the Mullah's death have been circulated from time to time during the past twenty years. The last authentic news of him, says *The Times*, dates from February, 1920, when, after the rout of his forces by the British, he left his wives behind and fled into Italian Somaliland.

Persons concerned as to their status as citizens in the ex-Austrian territory now within the confines of Yugoslavia should apply to the Legation of the Kingdom of the Serbs, Croats, and Slovenes, at 195, Queen's Gate, S.W.1, for information as to the steps to be taken.

THE EASTERN MANDATES.

When the Emir Faisal, on behalf of the King of the Hejaz, informs the Inter-Allied Conference in London that he objects to the mention of the word "Mandate" in connection with the Arabs, on the ground that it is contradictory to the pledges given by the British Government; and when there is some risk of the first election in Mesopotamia turning on the question of whether a mandate is to be tolerated or not, it is clearly time for the high Olympian attitude of the Supreme Council to give place to the spirit of fellowship and common endeavour which underlies, or ought to underlie, the conception of the League of Nations. The chief purpose of the League is to secure and maintain international peace, and its covenant is built up on the idea of mutual trust and consultation. It would be, therefore, a strange irony if the first serious breach of the peace came about through the failure to give effect to the procedure that has been so carefully elaborated. We do not, however, advocate the summoning of yet another world gathering. The history of all the Allied Conferences since the Armistice has proved the difficulties, if not the hopelessness, of unwieldy meetings and the advantages of restricting discussions to the smallest possible number of representatives. Even at the recent Conference in London far more practical headway was made at informal meetings than at the official sessions. On this question of mandates, all that is required to remove occasion for friction is a direct exchange of views before misunderstandings grow into grievances, and grievances beget unrest or open conflict. The Emir Faisal strives to make a hit by calling attention to an apparent contradiction in the Treaty of Peace with Turkey. The fourth paragraph in Article 22 of the Covenant of the League of Nations, which is incorporated with the terms imposed upon the Turks, lays down that "the wishes of these communities [formerly belonging to the Turkish Empire] must be a principal consideration in the selection of the mandatory." The third paragraph in Article 94 of the Treaty of Sèvres states that "the selection of the mandatory will be made by the principal Allied Powers." It is, however, not impossible for the latter to select the mandatory while giving full consideration to the wishes of the communities concerned. The attitude of the Emir Faisal, who admits the need of European advice and assistance in Arab administration, together with the danger of the Arabs of Mesopotamia rejecting the mandate, of which the terms are unknown to them, merely suggests a misunderstanding that would yield to closer touch between the parties concerned.

The desire of the Supreme Council to regularise the mandatory system was praiseworthy; but one effect of its action has been to invest the scheme with terrors that would not be associated with a less formal relationship. Even in Great Britain the word "mandate" has aroused certain misgivings, and attempts have been made to create prejudice against the system on the ground that it exposes the Mandatory Power to imaginary commitments. As far as the draft mandates for Mesopotamia and Palestine are concerned, it is evident that these attacks have no more foundation

than the fears of the Arabs that their interests have been sacrificed. But the objection to the formal document or phrase is wide. In Persia we have seen an Anglo-Persian agreement cancelled amid every manifestation of popular approval, but simultaneously all its salient features have been carried into effect by the Government which insisted upon its withdrawal. A similar frame of mind has prompted the Egyptians to lay stress on the specific repudiation of the word "Protectorate," over and above the proposed treaty of alliance, which, by its very nature, would supersede the previous relationship. In regard to Mesopotamia, therefore, it is most necessary that no time should be lost in making clear to the Arab inhabitants, and indeed to the British public as well, that no ulterior motives lurk behind the terms of the mandate. There can be no obligation to wait until the Council of the League of Nations has approved the draft, or the British Parliament has ratified it. Drawn up by the British authorities, it gives effect to what would be the ordinary policy of Great Britain, even if no League of Nations existed. Most of the clauses have been framed for European consumption; those which will be the more closely studied by the Arabs have clearly been prompted by consideration for native susceptibilities. The difficulty in committing intentions to paper lies in the fact that safeguards against all eventualities must be inserted. There has been little opportunity to judge how an Arab administration in Mesopotamia will shape. But both the wording of the draft mandate and the declared policy of Great Britain are expressive of the hope that the country's progressive development as an independent State will be real and rapid. This aspect of British relationship to Mesopotamia can be brought home to the native population far more clearly by other methods than by the wording of the draft mandate. The key of the position is the fact that administrative advice and assistance are essential. The more easily the native authorities facilitate their grant and help to make them effective, with a view to curtailing the period of their operation, the better pleased Great Britain will be. Under such conditions neither the wording of the mandate nor the existence of the League of Nations need weigh heavily upon the land; and if the Arab Government feels that the terms of the mandate can be modified with advantage without impairing the progressive development of the country, it will find the Mandatory Power ready to lend a sympathetic ear.

The situation in regard to Syria and Palestine is, no doubt, more complicated than that of Mesopotamia. Behind the Emir Faisal's protests lies the hostility to France, for which the French Government cannot altogether divest itself of responsibility. It would be idle to enter here into the rights and wrongs of the quarrel. For the present France considers that her interests lie in riding rough-shod over Arab susceptibilities and in maintaining by force her hold upon the territory which she has claimed in spite of the previous understanding between Great Britain and the King of the Hejaz. In the interests of the Arabs themselves we can but hope that, having made their dignified protest, they will trust to the future to vindicate their claim. The world is not in the humour at present to distinguish between the grant of administrative advice and assistance and the policy of a mandate. It will, however, be able to decide very quickly whether the spirit of the mandatory system is being applied in the everyday administration of the territory. If it is, the day of complete independence will be drawing closer of its own accord; if the spirit of the mandatory system is lacking, it will be far easier to convince the Council of the League of Nations of the fact than to obtain a hearing at the present time from the Supreme Council. A recalcitrant attitude to-day can only retard the goal that the Arabs have in view. On the other hand, if they devote all their good will and talent to making a conspicuous success of Arab administration under the British mandates in Mesopotamia and Palestine, they will not only be advancing the cause of Arab unity in these territories, but will also be providing the surest means of rounding off Arab unification with the inclusion of their Syrian nationals.

NAZARETH.

An E.E.F. Impression.

This little hill-town was fortunately spared the worst horrors of war in September, 1918, though there was fighting in its streets and round its outskirts. Some three months later the plain across which one approaches it from the railway station at El Afule was still littered with the smaller flotsam and jetsam of a hurried retreat. Except for a few skeletons of horses, the relics consisted chiefly of papers—Army returns in German and Turkish, mess bills. An Army

[Photo by Capt. M. S. Briggs.]

NAZARETH: A STREET NEAR THE SYNAGOGUE.

newspaper in Turkish' caught my eye, then a bloodstained letter beginning "Lieber Willi." For the most part the fields of tares were stripped of everything valuable, either by the zeal of our own salvage troops or by the industry of the starving natives. But as we climbed the steep ravine up the hill to Nazareth we saw gun limbers, field kitchens, and motor-lorries lying overturned, thrown down there from the curving high road far above us. We found accommodation at the Hotel Germania, where the Teuton tongue was spoken still, and whence the German staff officers had so hurriedly fled only fifteen weeks before. But the landlady was hardly prepared for the arrival of visitors, and her larder could only provide black bread, eggs, honey, and tea. The streets, when we saw them next morning, furnished further tokens of the long occupation of the town as an enemy headquarters, for every other boy seemed to be wearing the cap or tunic of

THE MOUNT OF THE TEMPTATION.

Jebel Kuruntal, the square peak on the right of the picture, is the traditional site of Our Lord's forty days' fast. A Greek monastery is situated half way up the cliff,

an Austrian or German soldier, often adorned with regimental badges or numbers. Nazareth had been in these days a hospital centre, and large red crosses were painted on the roofs of the principal buildings. The story of how the Turks had treated the home of the Scotch doctor in the town, a man who for many years had laboured for the good of the people, is typical of all the other records of foolish and vindictive brutality that will go down in history. From his garden, some 1,400 feet above sea-level, we looked over a wide panorama of magnificent mountain scenery, the higher hills of Samaria lying before us. Like many other places in Palestine, but more so than most, Nazareth recalls in its situation and appearance the stone-built towns of some parts of Central Italy. Here are the great convents with their low-pitched pantile roofs and their bare flat façades. Cypresses rise from walled gardens full of flowering fruit trees. The rocky hillsides are terraced for vines. One might be in Umbria. Moreover, there is a freshness in the air very different from the sultry heat of the desert or the flat fields of the Egyptian Delta.

The photograph shows a typical paved street, steep and narrow, at the entrance to the Synagogue, a small building now used as a church by the Greeks. This is one of the Biblical sites that seem to have a claim of authenticity, the other being "Mary's Well" (*Ein Miryam*), in the lower part of the town, where, though the modern women of Nazareth draw their water in petrol tins from brass taps, we are justified in recognising the same spring that was in use for the same purpose nineteen hundred years ago. The remaining places of pilgrimage have no such ancient tradition, and are enclosed within great monasteries.

But to most of us it is sufficient to have seen the beautiful situation of this little mountain town, and to know that here, without a shadow of doubt, was the actual scene of Our Lord's youth and early manhood.

MARTIN S. BRIGGS.

A FISHERMAN-PHILOLOGIST.

(FROM A CORRESPONDENT.)

During the dark days of the war, when the Serbs were exiled to Salonika, there was a small colony of fishermen camped on an island in the malarial delta of the river Vardar, which runs a rapid and muddy course clean through Macedonia, reaching the sea between the towering height of Mount Olympus and the picturesque, cosmopolitan city of Salonika. These men, drenched with malaria, when not busy shivering from ague, were catching fish for the Serbian military hospitals.

I often used to ride through the interminable jungles of the plain and spend a pleasant evening with the little detachment of exiles. The fish they caught are hardly known in England; the favourite was the *som*, or *silurus*, a hideous beast, with broad flat head, tiny expressionless eyes, and great wide, gaping mouth, with a moustache of tentacles on each side. He is a very unprepossessing monster, and sometimes runs into 300 lb. in weight, when he can be quite a nasty customer. But he is at his best when running about 2 or 3 lb., and then the Serbs make a wonderful soup of him, which they call *alaska chorba*, very tasty, all spiced with hot peppers. Besides the *som* there is the *mren*, but he has soft meat, and is not so good to eat as he is to look at. A more familiar fish is the *sharan* or carp, which we despise at home, but in the Balkans is esteemed. After the great fire in Salonika, when food was scarce, carp was sold in the market at about 3s. a lb. or even more. Occasionally on a lucky day they would catch a *yasetra*, or sturgeon. As with us, this is a royal fish, and was sent to the Crown Prince.

The fishermen had their camp on a tiny islet in the middle of the branches of the delta; on punting across the lagoon, guests were met with a cheery welcome from the chief of the party, an unkempt, swarthy fellow, in tattered shirt and trousers that had once been white, bare feet, and an enormous straw hat. But in spite of his uncouth appearance, his manners were irreproachable, and his voice cultivated. He received his guests with admirable courtesy and unfeigned hospitality, saying that it was nice once more to talk with an educated man.

He explained that he was a Bosnian from Brod—that is, a Serb by blood, but an Austrian subject—and he was studying at Vienna when the war broke out. He at once fled across the river and joined the Serbian army as a volunteer to fight for the liberation of his oppressed people.

I asked him what his subject was. He answered quite naturally: "I am a Comparative Philologist."

Shades of Borrow! This romantic fisherman was a specialist in dead languages. He knew Old High German well, was perfectly at home in the labyrinth of Old Slavonic and the mysteries of Sanskrit, while, of course, he knew Greek and Latin too. In modern languages he was well provided, though he refused to call himself a linguist. In addition to his own crisp Serb, he knew perfect German and Italian, and could do quite good work in French and

had some smattering of English as well. When not busy catching fish or eating *som*, he spent his time in making an English dictionary for his own use, which he did in the most original way in the world, and, one would think, the least practical, at least for life in camp, where one's goods and chattels are the sport of every breeze. He had a lidless wooden tray, divided into little squares, like those boxes in which printers keep type. In each square he had a pile of little pieces of paper, cut to fit the compartment; on each piece of paper, written in a neat and microscopic handwriting, was a word, with all its shades of meaning. He carried a special pair of forceps for picking out the little tickets, which were hardly more than an inch square.

And so this fisherman-comparative philologist, when not stewing a savoury broth over a smoky fire, which kept away the myriads of mosquitoes, was diligently studying English literature, patiently passing away the time while waiting for happier days.

Belgrade, June 2, 1920.

NEAR EAST IN PARLIAMENT

HOUSE OF LORDS.

March 14.—Lord Islington asked whether an opportunity would be afforded Parliament to approve, or otherwise, the provisions of the Mandates for Mesopotamia and Palestine prior to their submission to the Council of the League of Nations at their coming session at Geneva. Lord Lamington also asked whether in accordance with Article 22 of the Covenant any steps had been taken to ascertain the wishes of the Arabs before the Mandates were divided by the principal Allied Powers, and asked for particulars and papers regarding the American Commission which visited Palestine and Syria in the spring of 1919. An important debate arose on these questions in which Lord Bryce, the Archbishop of Canterbury and Lord Sydenham took part as well as the questioners. Lord Curzon replied in both cases. He stated that the report of the American Commission was never communicated to the British Government by the American Government, that it had never been published, and that there is no copy of it at the Foreign Office.

Dealing with the Palestine Mandate, he stated:—

I have no doubt Lord Lamington is perfectly right in saying that, if the Arabs of Palestine were consulted, they would prefer not to have the Zionists there at all. I think that very likely is the case, but as a great act of State policy it was decided, in the early stages of the War, to make a declaration which was associated with the name of Mr. Balfour. That declaration, whether it was right or wrong, has been accepted by the other Powers. It has been definitely incorporated and repeated in the terms of the Treaty of Sévres and it represents, therefore, not merely a British policy, but an Allied policy. The object of our Government, ever since that took place, has certainly been to reconcile the re-creation of what is called the national home for the Zionists in Palestine with the rights of the Arab people. That is a point to which, holding the views that I do—and my views are identical with those of the noble Lord about the Arabs—I attach supreme importance, and in so far as I have been concerned—and I have been a good deal concerned with the terms of the Mandate—my object, all the way through, has been in the direction of securing that full justice was given to the rights, and claims, and position of those who are a very large majority of the people of the country.

If the question of the Jews be left upon one side, I do not think there is any doubt at all that, given the desirability of a mandatory—and that, I think, will be universally conceded—the Arabs of Palestine would sooner have the British than they would have any other foreign State.

Dealing with Mesopotamia Lord Curzon spoke as follows:—

From the day when we went into Mesopotamia and when our victorious troops entered Baghdad, we—by “we” I mean the British Government, and I am sure I am speaking for the Coalition Government of which the noble Marquess and I were once members, as well as this one—have had no desire whatever except, in such form as might ultimately be proved to be possible, to create some form of Native Administration. We had abolished and removed the Turk. What had we to suggest in his place? Obviously, the Arab—the people of the country who had been misruled for centuries and to whom the Allies were giving a chance of independence. From the day of our first communications with King Hussein, followed by our first pro-

clamation at Baghdad, followed also by a series of Declarations to all the principal parties concerned, we have had no other solution in view but self-determination—Arab Government for what is a predominantly Arab country.

The thing has been prodigiously difficult, not only for the reason that I have named on previous occasions—namely, the almost complete absence of any trained Arabs to assume the Administration—but because, when we were three-quarters of the way through our task, there suddenly broke out a most dangerous insurrection, paralysing the efforts of the Administration, throwing everything once more into the military rut, and compelling an expenditure which, I quite agree, may have been to the last degree exorbitant, but which was forced upon a reluctant Government. That era is coming to an end. No one is more anxious than the Secretary of State for the Colonies, who has now assumed charge of those countries, to reduce military expenditure and the strength of the garrison to a minimum. It is what we all want. What we desire is to set up this Arab Administration without delay. I spent reams of paper and hours of time in the endeavour to construct, but an independent autonomous Administration cannot be set up in the East as easily as speeches can be made in this House. It is a matter that very likely takes months, and may even take years. Meanwhile, we cannot allow the whole country to fall into a raging chaos. That is simply the history of the whole thing. If any noble Lord really suspects that we have any sinister design, that we want to keep our hands on the country, or that we desire to do any of the other sinister things that appear in newspaper articles, I would ask him to believe me when I say that he is committing an error.

HOUSE OF COMMONS.

March 16.—Mr. Harmsworth informed Mr. A. Williams that it was laid down by the recent conference in London regarding the modifications of the Treaty of Sévres that Turkey should recognise the rights of Turkish Armenians to a national home on the eastern frontiers of Turkey, and that a Commission of the League of Nations should fix its boundaries; and, further, that special conditions had been arranged by the French for the protection and security of the Armenians in Cilicia.

March 17.—Mr. Harmsworth informed Mr. Ormsby Gore that no reply had yet been received from the Sultan of Egypt to the telegram addressed to him by the British Government regarding the official negotiations between the League and Egyptian representatives, but he added that the conferences would probably take place in May and that Lord Curzon will himself supervise the proceedings.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Proposed Bucharest Fair.

I understand that so far negotiations with regard to the holding of a British fair at Bucharest are in a very early stage, and that there is, in any case, no question of its being held for many months. Probably an endeavour will be made to hold it in the spring, or failing that, the autumn of next year. The earlier date would obviously be preferable, but if that be chosen there will be none too much time to spare, for the organisation will take every bit of twelve months if the fair is really to do justice to British trade. And the success of the exhibition will depend on the extent to which British firms support the efforts of the authorities to give them a really good opportunity in the markets of South-Eastern Europe.

The Indian Trade Crisis.

Merchants engaged in the Indian trade are at the present time in a most unenviable plight. They have their goods at Indian ports which are not being taken up, and while they are unable to obtain payment they are being pressed on the one hand by the banks, on the other by the manufacturers who are urging them to take delivery of further orders. The position is still more complicated by the fact that the banks have, generally speaking, curtailed further credit facilities, so that merchants are for the most part thrown on their own resources. It is all right for those firms with great reserves, but, unfortunately, all are not in that position. How those will fare who are not if some improvement does not take place quickly in the position it is difficult to see. If pressure can be brought to bear on Indian traders to meet their obligations the situation would speedily right itself. But there one comes up against what one might with justice term the white elephant of a 2s. rupee.

The Russian Agreement.

I fail to see how the trade agreement with Russia can have any practical results for a considerable time. Conditions in Russia as a result of the blessings of Soviet rule are now so chaotic that anything like ordered commerce is out of the question. Trade in these days can only be carried on by the most delicate machinery, and in Russia that machinery no longer exists, and must be recreated. Apart from that, it is open to grave question whether Russia has any large stocks for export, and if the answer is in the negative, it would be interesting to learn how it is proposed to pay for supplies from this country. The view I have given of Russian conditions is, it is true, entirely at variance with that emanating from official Soviet sources, but in the light of our experience of Bolshevik methods it is difficult to see how any great reliance can be placed on what is *prima facie* purely propaganda. Of course, if the position proves to be better than it would appear to be, the effect on world conditions will be most marked.

The Outlook.

Assuming that the new proposals for assistance to exporters prove to be thoroughly satisfactory, it must be borne in mind that the best export credits scheme that can be devised can only set the wheels of trade in motion. It cannot enable us to cope with foreign competition arising from lower costs of production. That is one of the great problems that will have to be solved before the trade position at home can possibly become satisfactory. Instance after instance has been recorded of late of contracts that have gone to other countries, simply because it was out of the question to obtain a reasonable quotation from British firms. Orders for locomotives for other parts of the Empire have been lost, while for coal, a most vital part of our export trade, countries in the Near East and other regions now look further afield. Coal is in some respects the crux of the problem. If an agreement can be arrived at with the miners on the question of wages, it would not take long to recover our lost markets for this commodity, while the reduction of the price of coal to something approaching an economic level would have an enormous effect on the whole industrial life of the country.

Critical Situation in the Sudan.

During the war a great demand arose for Sudan produce, and the trade returns expanded by leaps and bounds. Now, as will be seen from the report from our Khartoum correspondent, given on page 356, a vital change has come over the position, and instead of enjoying prosperity such as they had not known before, agriculturists there are faced with a most critical situation. Of the factors responsible for this the most important has been the rapid decline in values, the result of which is that agriculturists are faced with the prospect of heavy losses on present and future crops. Other potent causes are the shortage of labour and the high cost of fuel. Our correspondent points out that practically all available labour has been utilised in connection with Government projects, and the result is that labour is now able to make extortionate demands from the employers. The matter is obviously one which calls for action by the authorities, who cannot afford to allow the country's staple industry to suffer a set-back which would prejudice the work of development for a number of years.

Is Trade Assisted?

A letter which appeared in these columns recently criticising the assistance given by British officials to travellers in the Near East has brought down upon me various protests. The view is taken that the writer has done a great injustice to our representatives, who, speaking generally, are unsparing in their zeal for promoting British interests, and I am reproached for having allowed the letter to appear. As to that, I can only reply that the columns of this paper are open to every shade of opinion, and that criticism, even if unfounded, is apt to have a healthy influence in maintaining the standard of public services. Of course, we know that things are vastly different from conditions before the war, when anyone who wanted to complain could have found half a hundred grievances without difficulty, but even to-day it would be going too far to say that there is no room for improvement.

The A.P. Success.

As I anticipated, the Anglo-Persian issue proved an overwhelming success, the amount being largely oversubscribed. Of course the offer was a specially attractive one, for 9 per cent. preference shares so amply secured are not to be had every day for the asking, but even so, investors have of late shown themselves so shy, as in the case of the recent Sudan issue—or shall we say have had their activities so restricted by the crushing burden of taxation—that the result could not be accounted certain. As my readers are aware, the Anglo-Persian prospectus appeared in THE NEAR EAST, and it may be of interest to record the fact that every issue that has been given publicity in these columns has received the required support from the public. Company promoters are, as a rule, highly superstitious, and this record will probably appeal to them.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, March 6.

The Cotton Situation.

Responding to the popular demand, the Egyptian Government has just taken various decisions which should materially relieve the internal economic situation, and incidentally assist the smaller fellahen. At a special sitting held on Friday the Council of Ministers decided that the Government should purchase cotton in quantities not exceeding a maximum of one hundred kantars in each case, the price being fixed at 23 dollars per kantar for F.G.F. Sakellaridis and 16 dollars per kantar for Ashmuni, and being subject to alteration every week according to the fluctuations in the local market. At the same sitting the Council agreed to the National Bank advancing 15 dollars per kantar on Sakellaridis and 10 dollars per kantar on Ashmuni at an inclusive interest rate of 7½ per cent., the bank undertaking, in the event of the market price falling, not to call in the loans or ask for more cover before March 31, 1922; and it also approved of the Agricultural Bank being authorised to advance money on holdings of five feddans and under. In the latter case the Government gives its guarantee for these loans, as under the existing legislation small holdings are rendered inalienable, and the bank has hitherto been compelled to rule them out; while in the case of the National Bank it is understood that the Government is rendering itself responsible, within certain limits, for any loss which may eventually be suffered by the bank.

Although the policy of Government purchase at the present juncture has not been favoured by leading financial authorities and business men, it is possible that the Government will not run much risk in the matter, for there is reason to believe that the local price has been artificially depressed by local operators, and that the effect of the Government action in the long run will be to force the price up to a more reasonable level. Already the market has jumped 3 dollars on receipt of the news of the Government decision. Taken altogether, however, these measures cannot fail to alleviate the present state of stress which the agricultural masses, especially the smaller cultivators, are suffering, and that, after all, is the principal consideration.

SUDAN.

KHARTOUM, February 27.

Gloomy Agricultural Outlook.

The bright outlook of last spring has, unfortunately, given place to the utmost gloom and depression this year, and the hapless agriculturist is faced with a heavy loss on his present and future crops. Apart from the collapse of the various produce markets, the present situation is mainly due to the shortage of labour and the heavy cost of fuel. The vast Government projects in the Ghezireh have absorbed practically all available manual labour, and the natural consequence has been severe competition between the various Government Departments, local contractors, and cultivators, resulting in an extortionate increase of wage for both skilled and unskilled labour. The Sheikhs of villages and the various labour agents are in the happy position of demanding a premium of from PT 50 to PT 150 per head, according to the nature of the work involved and the locality, and the unfortunate would-be employer has either to submit

or see his undertakings indefinitely held up or hopelessly ruined.

In Khartoum Province the state of the crops is deplorable. Owing to lack of labour, it is practically impossible to gather all the cotton now lying on the ground, and, as the plants are in need of water, one is faced with the problem as to whether to gather the fallen cotton at the expense of the future pickings or to water the plants at the cost of losing the fallen cotton. The price of wood fuel has risen from 20 to 25 milliemmes in 1914 to 110 to 140 milliemmes per kantar of 100 rottles in 1921. This abnormal rise in price has been almost entirely due to the fact that the various Government pumping stations on the Blue Nile and in the Berber Province and also in the Khartoum Electrical Power-House have all been burning wood fuel. As a result, the Blue Nile in three years' time will be denuded of forest as far as Singa, and it is obvious that immediate steps should be taken to replace wood fuel by coal or liquid fuel in all pumping schemes north of and including Khartoum. The heavy railway freight levied on coal has made it a prohibitive type of fuel to the average cultivator, who is further handicapped by the transport charges on moving his produce by rail. As an example, freight on 315 rottles of unginned cotton from Khartoum to Port Sudan, works out at about PT 105. Assuming that the 315 rottles of raw cotton yield 100 rottles of lint after ginning, it will be seen that this charge alone works out at a trifle over 2½d. per lb.

Tractor Ploughing.

A series of very interesting demonstrations were carried out at Shambat Research Farm with a Fordson tractor and various types of Oliver ploughs. Three types of soil were experimented on with very satisfactory results. A eight-inch furrow was obtained with an Oliver disc-plough in heavy soil thickly matted with neghil roots, and a strip of land that had lain fallow for some 11 years, hitherto employed as a grazing ground and previously heavily flooded, was successfully ploughed to a depth of six inches. Amongst those present at the trials on the morning of the 25th inst., were His Excellency the Governor-General, the Assistant Director of Agriculture, the President and Vice-President of the Sudan Chamber of Commerce and a representative gathering of landowners and native cultivators, together with the representative of the Austin Tractor Company, and the demonstrators of the Fordson and Oliver Companies. The trials were an undoubted success, but certain doubts were expressed as to the probable life of the Fordson tractor, in view of the nature of the ground, climatic conditions, and the somewhat heavy hand of the native drivers. It is interesting to note that whilst a complete outfit for a 75-acre farm in the United States would cost 600 dollars, the same outfit would cost over £E650 in the Sudan, owing to the present rates of freight.

ROUMANIA.

BUCHAREST, March 3.

Russia's Debt to Roumania.

The various sums which Russia owes Roumania amount to about 18 milliard French francs in gold. This will be one of the main points which Roumania will broach when the negotiations at Reval with the Russian Soviets begin.

Electrification of Railways.

The Ministry of Communications has received from a French-Anglo-American group a proposal to utilise the hydraulic power of the river Bistritza for electrifying an important Roumanian railway line 700 kms. long, the same staff to be employed which worked on the electric railways in Southern France. This group is willing to accept as payment Roumanian Treasury Bonds payable in ten years, the annuities and interests to be paid in the shape of grain or sub-soil products transported by barges and ships provided by the group. This proposal is now being studied by a committee appointed by the Ministry.

Estimate of Autumn Sowings.

According to the Department of Statistics of the Ministry of Agriculture, the area of the autumn sowings up to January 1 in the old kingdom is as follows (in hectares):—Wheat, 1,100,000; rye, 42,000; barley, 29,000; and rape-seed, 5,000.

There is no doubt that the prospects have improved, for, taking wheat as an example, there is an increase of 300,000 hectares, or 38 per cent. as compared with the autumn sowings of 1919. It is true, however, that, compared with pre-war sowings, there is still a deficit of 800,000 hectares, or 42 per cent., but this difference will probably be lessened

by the sowings which took place in January and by the spring sowings.

The situation in the new provinces for the same period is as follows (the figures representing hectares):—Bessarabia: Wheat, 220,000; rye, 63,370. Transylvania: Wheat, 521,700; rye, 75,400. Bukovina: Wheat, 9,500; rye, 12,970.

Miscellaneous.

The Ministry of Industry and Commerce announces that the import of goods from Germany is now free, and that such goods will not be confiscated for the War Indemnities Account.

The Government is now investigating the question of reducing the excessively high export taxes on oil products.

The Ministry of Communications has closed a contract with the German firm Henschel and Son for the purchase of forty locomotives, Prussian type G.8.2, at the price of 2,450,000 marks.

The Economic Convention between Roumania and Czecho-slovakia has been concluded at Prague, having been signed by M. Hiotu, the Roumanian Minister there and M. Hottovetz, the Czecho-slovak Minister of Commerce. This convention has a temporary character, and is based on the most-favoured-nations principle; and, being "ad referendum," it has now to be approved by the Ministers' Council and ratified by Parliament.

GREECE.

ATHENS, March 8.

Export of Currants.

According to information supplied by the Greek Chamber of Commerce at Patras the quantity of currants exported from this country up to December 31 was 62,141 tons, as against 70,812 tons exported up to December 31, 1919. Of this total 46,318 tons were exported to the United Kingdom, as against 57,413 tons exported during the corresponding period in 1919; and 9,769 tons of currants were shipped to the United States, as against 5,751 tons.

ATHENS, March 12.

Indemnities for Damaged Property.

The Commission appointed by the Government in connection with indemnities claimed by the persons whose property was damaged or destroyed on the day of the announcement in Athens of the attempt on M. Venizelos's life in

Paris (August 13, 1920) has up to the present authorised the payment of the following sums:—To M. Vozikis, M.P., Governor-General of Thrace, 171,725 drachmæ; to M. Stratos, M.P., for damage done to his residence, 310,000 drachmæ; the *Nea Imera* will receive 250,000 drachmæ; the *Politia* 148,538 drachmæ; the *Astrapi* 70,000 drachmæ; and the *Rizospastis* (a Socialist journal) 102,265 drachmæ. The well-known Greek actress, Mlle. Marica Cotopouli, is to receive 350,000 drachmæ for damage done to her theatre in Omonoia Square.

There are a good many more claims which have not yet been dealt with by the Commission. The most important is that put in by Mme. Yanaro, wife of the editor of the *Esperini*, who has sent in a bill for 1,437,795 drachmæ. M. Skouloudis, the ex-Prime Minister, at whose house extensive damage was done on that eventful day, is claiming 1,183,850 drachmæ. The applications for indemnities so far received by the Commission represent a total sum of well over seven million drachmæ, and unless the Greek Government decides to present each claimant with an I.O.U., one cannot quite see where all this money will come from.

CYPRUS.

CYPRUS, March 5.

Favourable Crop Prospects.

The late rains have brought down from the hills an abundance of the fertilising *detritus* which annually enriches the great Mesaorian plain. The prospects for cereal crops are now all that could be desired in every district. The pastoral outlook for flock-owners is also excellent. The olive crop of last autumn was so abundant, especially in the Northern Kyrenia District, that a considerable surplus of olive oil is available for export. Cultivators are urging that Government should relax the rule which prohibits export of this oil. The price of this product has fallen, while the high cost of almost all other articles of consumption remains unchanged. The local production of olives and oil is generally insufficient for island needs, which are large, and Cyprus, which should export largely if the industry were what it should be, depends as a rule on a fairly large supply from outside. Carobs, of which a large quantity is being held, are fetching from £5 10s. to £7 a ton. Wines of the last vintage fetch from 30s. to 50s. the "load" of 128 oke, according to quality.

THE BONDHOLDERS' REPORT.

Greek and Turkish Finances.

Turkey's financial position is the subject of interesting comment in the report of the Corporation of Foreign Bondholders, which has just been issued. We give the following extracts:—

Greece.

The total gross receipts in 1919 applicable to the service of the old gold loans amounted to 100,844,948 drachmæ against 67,450,699 drachmæ in 1918. The receipts from the monopolies and the stamp and tobacco duties, from which the plus values are derived, were 50,468,063 drachmæ and 36,264,901 drachmæ respectively—an increase of 14,203,162 drachmæ, or 39 per cent. above the highest previous figure. Including balances from the previous year, the net amount available for increase of interest and sinking fund in 1920 was 20,792,020 francs, against 9,111,172 francs. in the previous year, and out of this sum, as stated in the Council's last report, the interest on all the loans of the three groups was raised to the full original rate and the ordinary sinking funds of the three groups were increased by 30, 30, and 32 per cent. of the original interest respectively.

In 1920 the gross receipts were 123,662,708 drachmæ, and the proportion applicable to the plus values was 65,630,414 drachmæ. The sum available for increase of interest and sinking fund will permit of the payment, for the second year in succession, of the full interest on all the old gold loans, and of additions of 28, 28, and 26 per cent. of the original interest respectively to the three groups. It is difficult to say anything at the present time as to the financial condition and outlook in Greece, the future being so largely dependent on decisions of high policy. Recent political events, coupled with the withdrawal of financial support by the Allied Powers and the issue of a large amount of paper money without Parliamentary sanction or a corresponding gold reserve, have caused a very considerable fall in the value of the drachma.

Turkey.

In 1918-19 the gross receipts from the revenues assigned to the service of the Unified Debt amounted to £T6,830,304 (paper), as against £T6,087,495 (paper) in 1917-18. For 1919-20 the provisional receipts were £T7,735,630 (paper). No complete estimate of the receipts for the current year can be made, as all communications with Anatolia have been interrupted for some time past. The agencies of the Debt Administration are allowed to continue in office, but the proceeds of the revenues have been taken by the Nationalist Government, which gives the agencies a receipt therefor. When and how these forced contributions, for which the Turkish Government will be ultimately held responsible, will be returned is, of course, most uncertain.

It may, however, be of interest to mention that up to the end of November, 1920, the gross yield from the ceded revenues (exclusive of Anatolia) was about £T2,450,000 (paper), while interest on deposits and on the reserve fund, and the Debt Council's share in the profits of the Tobacco Régie, were expected to bring the total up to about £T3,850,000 (paper). In addition to this the receipts from Adrianople, Broussa, and Smyrna were reckoned at about £T1,160,000 (paper).

The arrears of interest on the Unified Debt, reckoned up to March, 1921, amount to £6,876,234, against which the Debt Council hold resources estimated, at the current rates of exchange, to amount to £2,800,000. The coupons due September, 1920, and March, 1921, amount to £1,324,695, but no definite information can be given at present as to the funds available to meet this additional charge. During the past year the edict of the Turkish Government forbidding the payment of coupons to subjects of enemy countries has been revoked. Payment of Unified coupons can now be obtained in Turkish currency, but it is not thought likely that many holders will avail themselves of the privilege.

The Council are informed that, with the consent of the respective Governments, provisional authority has been given by the acting Allied Commissioners at Constantinople to put into force the suspended tax on spirits, and that this should add considerably to the receipts of the Debt Administration. As regards the funds deposited in German banks during the war by the German, Austrian, and Turkish

delegates on the Debt Council, it was decided, early in 1921, by the present Debt Council to call in on deposit the eleven coupons on the Unified Debt due March, 1915, to March, 1920, inclusive, with the object of establishing with the Allied clearing houses the claim of the bondholders to the repayment of the money at pre-war rates. A payment on account at the rate of 1s. 3d. per coupon of 8 shillings was offered to bondholders depositing their coupons. Receipts reserving their rights were given in place of the coupons so deposited. As the funds in question (amounting to some 160,000,000 marks) represent money collected by the Debt Council as agents for the bondholders for the service of the debt, it seems to the Council that the bondholders have the strongest possible claim that the money should be repaid at the pre-war rate and not in the present depreciated currency of Germany.

THE BULGARIAN REPARATIONS COMMISSION.

The Bulgarian Reparations Commission was received in audience by King Boris at Sofia on March 11. Count de Cherisey, president of the Commission, in the course of his speech in presenting the members of the Commission to his Majesty, said:—"In the terrible calamity which has overtaken the world Bulgaria has been seriously affected. The country which I had known a few years ago in its full vigour, advancing rapidly towards more brilliant destinies, I find to-day in a most unhappy situation. To the regrets for the past, to the cruel losses, to so many mourners both public and private we add the uncertainty of the present and the fear of to-morrow. But while the present time has its difficulties it is gratifying to us to be able to note here the more favourable prospects of the future. We recognise the solid qualities of the Bulgarian race, its patriotism, its endurance, its invincible vigour in toil. We know the wealth of the soil, the abundance of its agricultural production, which assisted and well looked after ought rapidly to provide sufficient exports to re-establish the economic balance. We know we can count on the far-sightedness and energy of the statesmen who have charge of the destinies of Bulgaria during these difficult times. Lastly, Sir, permit me to say that we place our trust in the wisdom of a king, loved and respected by all, who represents to us to-day the radiant hope of his country."

Sir Elliot Colvin, British Delegate on the Reparations Commission, has accorded an interview to a representative of the *Zora*.

"The Commission," said Sir Elliot, "is not yet fully installed. It has so far held only two sessions, at which we have had under consideration the law on the application of the economic and financial clauses of the treaty which the Bulgarian Government has to carry out.

"Naturally, the first duty of the Commission is to provide for the application of these clauses, but we do not wish you to regard us as agents of the enemy come to distract on your property. The war is over, and we do not come here with designs against the Bulgarian people.

"The Commission has come to Bulgaria not only to collect the amount of the indemnities, but also to assist in repairing the ravages of the war. We count on the support of the Government and of public opinion in the accomplishment of our difficult task, and we hope that we shall be able to assist in the economic and financial recovery of Bulgaria. I hope that our presence here will not embarrass you; that it will be actually useful to your country. Beyond question our duty is to make demands, but we hope that you will arrange the matter so that the application of the Treaty will not hamper the economic development of the country."

In conclusion, Sir Elliot expressed the hope that all possible facilities would be given to Bulgaria, adding that the Commission was in the position of a doctor whose duty it was to aid in the complete restoration and in the return of the capacity for work of his patient.

Reuter's Agency has been informed by the Greek Legation in London that the Greek Ministry of Finance states that the coupon to be paid this year to the shareholders of Greek Government gold loans has, as it did last year, attained par.

AGRICULTURAL PROSPECTS IN MESOPOTAMIA.

GREAT SCOPE FOR DEVELOPMENT.

(FROM A CORRESPONDENT.)

The land between the rivers will offer a vast field for agriculture when the irrigation works are fairly started, for the margin of cultivation will be steadily lowered over a wide area, bringing land into use that is at present lying idle. By degrees the land will be sorted out for crop-bearing, cotton giving the best results in one area, and wheat in another. And then there is the very important question of labour, of which more presently.

Mesopotamia has been described as the greatest undeveloped granary in the world; this can be easily explained with the aid of a few figures and some geography. Irak, as the Arabs call it, is larger than the Punjab. Of its 116,000 square miles about a quarter form Upper Mesopotamia, extending from Baghdad to Mosul, where the rainfall is just sufficient to keep wheat and barley under cultivation. The other three-quarters are swallowed up in the great plains of Lower Mesopotamia, with the three deltas of the Diala, the Tigris and the Euphrates. From Baghdad to the Persian Gulf it is as dry and thirsty a land as any in the Scriptures; scarcely three per cent. of the cultivable soil bears any crop up to the present, and the whole land cries out for the coming of the irrigation works that mean so much. The question of irrigation is, therefore, paramount in importance. Before the war Sir William Willcocks had outlined a scheme to irrigate seven millions of winter crops at a cost approximately of thirty millions sterling, and yield nine per cent. on the outlay, and this has still to be dealt with.

Upper Mesopotamia includes the fertile country of Arbil and the great wheat belt of Mosul, the total area under cultivation being roughly about half a million acres only. This could be pushed out very much farther on all sides by the free use of labour machinery to probably three million acres. The rainfall is normally twelve inches, just double what it is in Lower Mesopotamia, where cultivation is for the most part confined to the narrow belts and the marsh-land alongside the rivers.

Three areas are under irrigation up to the present—namely, the delta of the Diala River, a tributary of the Tigris, the Lower Euphrates, and the Shatt-el-Arab, the navigable channel of the combined waters of the Tigris and Euphrates between Kurna and Busreh. The Euphrates could be made to irrigate the whole of Southern Mesopotamia south and west of Baghdad, while the Tigris, it is contended, should be used for the country north of Busreh.

And, besides all this, there is the great province of Arabistan, with its immense possibilities for agricultural development, of which advantage has still to be taken. A million acres could be easily put under crops there by way of supplement to the output of Mesopotamia, many of the old canals being quite capable of repair. A proposal that has met with much approval favours an arrangement between the British Government and Persia to guarantee the autonomy of Arabistan, and so open the field for a big development in the future, under conditions that would attract cultivators. The opportunity is ours still, and it is to be hoped it will not be let slip or fall into other hands.

The question of labour is scarcely second in importance to irrigation, which is saying a good deal. The latest census returns show a total of 1,740,000 people in Lower Mesopotamia, dwelling outside towns and more or less directly engaged in agricultural pursuits. This allows a percentage of five per head of population to the acre. An even distribution on this scale would suffice with the aid of labour-saving machinery, which on large estates will be a necessity in the future. Landowners have been inconsistent in their demands for tractors, and trials have been lately carried out at Baghdad.

On land controlled by new irrigation projects the necessary labour will have to be obtained by attracting the nomadic and semi-nomadic tribes. This will naturally take time—possibly a considerable time—but there is no reason to doubt that this problem will be solved for the benefit of Mesopotamia. The Arab, it must not be forgotten, is a nomad mainly through force of circumstances and the long misrule of the Turks. Fortunately for us, he has on the whole a respect for British methods, and knows very well that at any rate they generally bring stable government and reasonable security of tenure; also they involve a totally different system of taxation to that which has hitherto prevailed. All these things considered, he is likely to settle down to agriculture without any trouble, and he will do it all the sooner because he knows that he will be able to reap where he has sown under the British raj.

One of the chief obstacles to progress has always been the system of taxing land on the basis of percentage of gross profits, which results in putting a premium on inferior cultivation and is fatal to any spirit of enterprise. The whole question is now being reviewed in the light of such desired improvement as a fixed assessment subject to periodical revision.

Reference is often made to the salt lands in this part of the world. This is a feature common to all arid countries where the upward action of the soil is not mitigated by rainfall. It can be effectually counteracted by drainage, and where salt has caused sterility, reclamation by washing is a simple process of cure. The salt here is common salt, and the problem of its treatment is largely a question of drainage rather than of reclamation.

Before the war there was a considerable export of barley from Busreh under the name of Persian barley, which is used mainly for brewing purposes. Having a shorter season than wheat, barley easily matures on less water, is less liable to disease, and is better able to withstand the concentration of salts in the soil. There is likely to be a large increase in this crop in the future.

Rice is extensively grown in the south, the tribes engaged in that branch of industry being reputed the richest and likewise the most stable element in the population. Sugar beet is another crop of which more will be heard, and the cultivation of ground-nuts is being taken up in some quarters with success, but, of course, on a limited scale.

Flax offers a promising field. It is cultivated near Busreh, chiefly to furnish fishing lines and nets, but the industry is capable of considerable extension. Recently a small experimental area was grown at Baghdad and was found to yield very good results. In past days silk was a valuable cottage industry, and efforts are being made to revive it. The wool of Mesopotamia has always been accounted amongst the best in the East; the export exceeds four millions of rupees.

The mainstay of Lower Mesopotamia is the date trade. This forms the principal export from Busreh, the value running into 22 million rupees, but the trade might be greatly increased by a free use of fancy packings. The date can be cultivated with success from Fao to Anah on the Euphrates and Beled on the Tigris.

The one valuable mineral the country produces is oil. The oil belt appears to extend along the foot of the Persian boundary from one end to the other. From the agricultural standpoint its great importance lies mainly in the prospect it opens up for development. A cheap supply of oil fuel is indispensable for the employment of labour-saving machinery and extending transport facilities.

ORANGE-BOX MAKING IN PALESTINE.

Orange boxes are made in Jerusalem of lumber usually imported from Roumania and Austria, but recently Norwegian and Swedish lumber has been used, says an American Consular report. Some of this material comes sawed to the sizes required, and some is sawed at Jaffa. The dimensions of the sawed boxes are as follows:—Length, 68 centimeters (26.77 inches); width, 32 centimeters (12.59 inches); height, 27 centimeters (10.62 inches). One partition is used. The thickness of the ends and partition is 16 millimeters (0.65 inch); thickness of the sides 8 millimeters (0.314 inch); thickness of tops and bottoms 7 millimeters (0.27 inch). The box itself weighs about 4½ kilos (10 pounds), and its contents about 33 kilos (72.75 pounds). Since the Armistice the price of lumber has declined, and still greater reductions are expected, which restricts purchases to immediate requirements. The orange season in Palestine lasts from November to March, and contracts for lumber are made in the summer for delivery in August and September.

With a view to encouraging the cultivation of cotton in Palestine, cotton has been exempted from payment of tithe for a period of two years, commencing April 1.

It is understood that a United States firm has contracted with the Greek Government for the supply of window frames and doors for houses to be built in Macedonia.

It is announced that an aeroplane service is to be established shortly by Italian seaplanes between Brindisi, Corfu, Crete, Derna, and Alexandria.

The shipping entering Algerian ports in 1920 show an advance of 1,197 ships of 1,068,082 gross tonnage, and 1,496,756 tons of merchandise, on that of 1919.

PERFUMERY and GOOD TOILET GOODS.

ENGINEERING.

Problem of Coal Storage.

It is not clear whether the presence of a larger percentage of dirt, slate, shale, etc., in stored coal, an increase due to the lack of care in picking at the pit-head, has anything to do with liability to heat and fire, but it is evident that it is more difficult to store coal now than formerly. The chief mechanical engineer of a large Government undertaking said recently that the whole problem of coal storage depends on this question of heating and subsequent spontaneous combustion, and any facts that can throw light on this somewhat obscure phenomenon are of more than usual interest and value. Amongst other points, it would be interesting to know whether low-grade coal is more liable to fire than coal of fine quality; whether the presence of more or less oily shale leads to increased heating; and whether the presence of damp has a similar effect. These are only three of the more important queries to which definite answers have not as yet been forthcoming, and I shall be glad to hear from readers who have definite practical information on those matters.

It appears certain, from a series of tests and investigations carried out over a period of some ten or a dozen years, that if fine coal is kept out of the pile, the heating surface is so relatively small that no cause exists for this spontaneous ignition. Put in another way, it would seem that where fine coal is absent there is a greater amount of air insulation present in the coal-stack, and that this has a deterrent effect on the heating. Mr. O. P. Hood inclines, however, to the former view, and appears to find something deleterious in connection with coal-dust itself, an opinion which does not appear to me to be exactly justified. However, the point is not of vital importance. The presence of fine coal is full of danger, whatever may be the direct cause of the heating.

These remarks about fine coal, however, must not be taken as relieving a coal-user from any and every source of anxiety, provided he orders large, lump coal from the pit. The essential factor is not how much fine coal is ordered, but how much actually gets into the coal-stack. In these days of careless and utterly irresponsible labour, it is a fact that coal bought as lump at the mine is so carelessly handled that by the time it reaches the consumer it may be in far from its original condition.

The results of the tests and investigations mentioned go to show that a unit of area of the coal surface in a pile generates a certain amount of heat, provided it can find combining materials. The amount of heat generated depends upon the temperature of the piece of coal, by which is meant that if coal is put into storage at a temperature of, say, 80 degrees, it will generate much more heat per unit of surface than if it be put into storage at a temperature of, say, 60 degrees. In general, as Mr. Hood says, the rate at which chemical reactions proceed doubles for every 10 degree rise in temperature. If this general statement applies in this case, an increase of 20 degrees in temperature means a four-fold increase in the amount of heat generated. It has already been a matter of observation that coal stored during the hot months of the summer and in heated areas is much more liable to spontaneous combustion than that stored in cooler situations and during the colder months of the year.

Another factor which is seldom given full consideration, but which is of more than usual importance, is the freshness of the surface exposed to the air. A freshly broken surface of coal has a rate of heat generation that is a function of the particular kind of coal. That rate, which is practically zero with anthracite, is most rapid with what may be termed younger coals, being particularly marked in the case of those coals found in the tertiary formations, and which are usually known as brown coals or semi-lignites. The quantity of oxygen contained in the coal seems to be the fairest measure of this rise in the rate of heat generation, although this is not to be regarded as an infallible indication. In regard to this the coal surface apparently becomes satisfied in time, and the heat produced falls to an almost inappreciable amount.

Since the rate of heating increases with the temperature, it is evident that if the heat generated is not removed the process becomes a progressive one, in which case the amount of heat generated, instead of falling or, at any rate, remaining practically constant, will tend to rise as time goes on. When the heat cannot escape, the rise in temperature more than makes up for the ageing of the coal surfaces. Thus the coal, which would be more inert with the progress of time, only becomes more disposed to catch fire.

One of the most pertinent facts that stands out in connection with this phenomenon of coal ignition is that a coal pile is cooled by radiation and by movement of air through the pile. Mr. Hood gives the following illustration: Suppose that coal were delivered in four uniform sizes and piled in a conical form by dropping it from a single point. The natural arrangement of particles would be such as to

furnish a foundation, over nearly the whole pile, of larger sized pieces, whilst the lower flanks of the pile would likewise be of the larger sizes. Nearly all the smaller pieces would be in the central core of the pile and form the top of the cone. In the region of large pieces air would move freely, and the coal surface exposed would be a minimum; hence there would be little likelihood of heating. In the centre of the pile the movement of air would be small, whilst the amount of heating surface would be great. If the fine coal should happen to be so densely packed as to prevent a movement of air, there would be no heating, because there would be no supply of oxygen to combine with the active surfaces. If there should be sufficient ventilation, such heat as might be generated would be carried away and dissipated as quickly as it was formed.

The Motor Trade.

I am informed by the Society of Motor Manufacturers and Traders that Mr. Albert Brown has been elected first chairman of the new factors' section of the society. The election of the chairmen of the various section committees takes place periodically, and I understand that the following is the complete list:—Accessories and components, Mr. W. Peto, in succession to Mr. S. D. Begbie; agricultural machinery, Mr. H. G. Burford, re-elected; body builders, Mr. G. H. Thrupp, re-elected; cars, Mr. E. M. C. Instone, re-elected; commercial vehicle (petrol), Mr. F. Churchill, re-elected; electric vehicle, Mr. W. Hixson, re-elected; factors, Mr. A. Brown; foreign car manufacturers and concessionaires, Mr. A. S. Mays-Smith, re-elected; marine, Mr. A. Perman, in succession to Mr. H. W. Hutchinson; pneumatic tyre, Mr. T. H. Woollen, re-elected; solid rubber tyre, Mr. A. Bonsor, in succession to Mr. Beckwith, deceased; steam vehicle, Mr. G. Hoare, re-elected.

'Season Cracking.'

Certainly one of the most interesting as well as most valuable papers read before the Institute of Metals was that of Messrs. Moore and Beckinsale on the "Season Cracking of Brass and Other Metals." Numerous specimens of brass have come to my notice in which season cracking has occurred, and the whole subject has a commercial importance of great magnitude. An investigation has been made into the causes of this, and also as to the mechanism of the process by which the cracks form and develop; and amongst the more important conclusions reached are certainly the following. Season cracking occurs in a great variety of industrial brasses, differing widely in composition, degree of purity, microstructure, and physical properties, but occurs only in material which is maintained in a state of stress, either by external constraint or more commonly by internal stress.

Corrosion of the surface, and sometimes of the walls of the cracks, is frequently associated with season cracking, but corrosion effects are not always visible. Season cracking may occur in brass coated with continuous protective layers such as lacquer, though nickel-plating is probably completely effective in preventing season cracking if a sufficient and continuous coat of nickel is secured. Highly-stressed articles capable of developing season cracks in certain conditions may be kept for years in reasonably pure atmospheres without showing any sign of cracking, and there appears to be no reason to anticipate the development of cracks so long as the condition of the surrounding atmosphere does not change. At the same time, some agency additional to the presence of initial stress appears to be necessary for the development of season cracks; and surface defects do not appear to contribute to the development of season cracks in brass to any important extent, and corrosion does not necessarily favour their development.

Mercury, ammonia, and ammonium salts readily produce cracks in brass which is sufficiently stressed in tension. It is probable that traces of ammonia in the atmosphere are an important agency, and possibly the main agency, inducing season cracking of stressed brass.

Season-cracks almost invariably follow an inter-crystalline path, and the cracks produced in stressed brass by mercury or by ammonia are of the same inter-crystalline type. Ammonia appears to have a specific and selective action upon the inter-crystalline material of brass, weakening it sufficiently to cause cracking if in tension. Mercury has a similar inter-crystalline weakening action. The greater the degree of hardening by cold work the less is the brass affected by the inter-crystalline weakening action of ammonia or mercury, although it is probable that weakening may occur whatever the degree of hardness of the brass.

It is probable that the behaviour of a copper alloy submitted to the combined effect of tension and of ammonia or mercury is a reliable index of its liability to fail by season-cracking. This liability appears to diminish as the zinc content of the brass is reduced. Copper and zinc-copper alloys containing less than about 10 per cent. of zinc are unlikely to fail by the development of season cracks in service.

A suitably controlled low temperature annealing which will remove stress sufficiently to ensure freedom from season-cracking with little or no effect on the hardness appears to be the most effective safeguard against failure by season-cracking, and might well be applied to all brass articles made by cold-work operations capable of inducing permanent internal stress.

This study of season-cracking and of the action of mercury and ammonia on stressed brass affords strong support to the hypothesis of an intercrystalline material differing essentially in its properties from the crystals themselves. For example, in a pure alpha brass the intercrystalline material appears to be attacked by ammonia or by mercury much more rapidly than the crystals. The presence, on spun cups and on other cold-worked articles, of a layer which retards the intercrystalline weakening action of both mercury and ammonia, is an interesting confirmation of the view that the intercrystalline material is similar in its properties to the amorphous film produced by surface flow.

The undoubtedly intercrystalline character of season-cracks in brass appears to be fully explained by the selective weakening action of a chemical substance on the intercrystalline material. The authors are unable to find in the results of their work any evidence indicating that season-cracking is the result of viscous flow of the intercrystalline cement. In this particular their view of season-cracking in brass differs from that of Rosenhain and Archbutt, although there is agreement in so far as their explanation is also based on the assumption of an intercrystalline material probably identical in its properties with Beilby's amorphous phase found in surface films.

Motorists' Night Telephones.

The Automobile Association informs me that it has installed over 50 sentry boxes along the main roads of the country, in which are fitted telephones for the use of members. During the past eighteen months members have been provided with special keys, enabling them to open the boxes and use the telephones at night time, after the A.A. road patrol in charge has gone off duty. This day and night roadside telephone service has proved of considerable convenience, particularly after dark, when roadside troubles have occurred, or when it has been necessary to call up an hotel, etc., in advance of arrival.

To enable members more easily to locate these telephones after dark, the Association has for some months past experimented with systems of illumination. The first A.A. roadside telephone box to be illuminated is that situated on the Epsom Road, near Ashted. The Association has decided similarly to illuminate the "Phone" signs attached to all A.A. roadside telephone boxes, except in cases where the boxes are well indicated by public lighting services.

LANCASHIRE COTTON.

Market More Cheerful.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Although there has been no distinct change in the situation, the tone of the market since a week ago has been rather more cheerful. In some quarters the opinion is gaining ground that the bottom in prices was touched early this month, but at the same time sellers cannot fully convince merchants that lower rates will not prevail in manufactured goods. Many manufacturers believe that no really great improvement will come about until the costs of production are substantially lowered, and it is anticipated that in about two months a drastic cut will be made in cotton operatives' wages. It is estimated that in the weaving section the output is not more than 25 per cent. of the full capacity of the looms. With regard to cloth, buyers for Egypt have not shown any particular inclination to commence operations, and recent advices from that outlet point to it being overcrowded with Lancashire goods. Still, here and there some small business has been transacted, but no big step forward can be made until the stocks of dear goods are liquidated. Buyers for Constantinople have merely looked on. In American yarns a few miscellaneous transactions have occurred in extra hard descriptions for the Levant. Undoubtedly the most promising cloth outlet is Calcutta, and fair lines of dhooties have been booked. China has been very quiet. Business with the South American outlets has been practically suspended. Operations in Egyptian spinnings remain limited. Isolated contracts have been mentioned in 60's twist at cut prices.

H.M. Minister at Belgrade reports that according to an order published in the official Gazette by the Minister of Finance the replacement of 1 and 2 kronen notes will begin as soon as possible, in order to withdraw them completely from circulation. Until this is done no Government pay-office shall receive from one person at one time more than 50 kronen in 1 and 2 kronen notes, which will only be accepted if stamped by Government authorities authorised to do so.

INTERNATIONAL COTTON STATISTICS.

HALF-YEARLY RETURNS.

Mr. A. S. Pearse, the general secretary of the International Cotton Federation, has published statistics relating to the consumption of cotton throughout the world during the half-year ending January 31, 1921, and stocks of cotton in spinners' hands on February 1, 1921. Since the armistice it is the first occasion that Austria and Russia have participated in the census. The only country of note which has not reported in time is China, otherwise the tables include the whole world. In view of the present crisis in the cotton industry throughout the world, questions were introduced in the inquiry forms asking for the number of spindles stopped, and the hours during which they were idle. These points have been answered satisfactorily by most countries, and the following reports have been received:—

England.—Out of the 56,351,570 spinning spindles existing at the present time returns from 51,382,892 spindles have been received, and of these 40,337,522 spindles have reported short time to the extent of 369.33 hours. The figures indicate that during the last half-year practically the entire industry has been suspended for a period of over six weeks of forty-eight hours.

France.—The French Federation state that a very careful calculation shows that the total number of spinning spindles in France is 9,600,000, and that in this figure are included 1,375,000 spindles completely stopped owing to the ravages of the war. According to particulars received, the mills, by running short time, suspended work during the half-year to the extent of 2.3 weeks of forty-eight hours.

Germany.—There exists in the whole country 9,400,000 spindles, and 9,150,541 spindles have made returns, of which 2,750,000 were stopped during the half year. This is equal to the suspension of the entire industry during 7.5 weeks of forty-eight hours in the half-year.

Russia.—This is now only the fourth largest cotton-spinning country of Europe, possessing altogether 7,100,000 spindles. Of these only 750,000 were working on January 31, 1921, and 6,350,000 spindles were stopped during the six months under review.

India.—Short-time figures have not been obtainable. As the six months' cotton consumption is considerably higher than half of last year's consumption, it is evident that India, with her 6,763,076 spindles, has not worked short time at all, or very little.

Japan.—There are 3,803,596 spindles in the country, and replies have been received from 3,077,279 spindles. During the half-year the average of idle spindles was 674,582; and 523,886 spindles worked short time twenty hours per week during the half-year.

United States.—The number of spinning spindles is 36,051,000, of which 31,509,021 only were active. At the end of December 1920 there were over 6,000,000 spindles idle in the United States. This figure was reduced at the end of January, 1921, to 4,541,979.

With regard to the statistics relating to the consumption of cotton, the Federation in the past has only secured these figures once a year, at the end of July. In comparing the present consumption figures with those of the previous tables, it must be borne in mind that the new figures relate to six months, whilst the previous figures cover a period of twelve months. During the six months ending January 31 Great Britain consumed 1,197,075 bales, Russia 520,750 bales, Germany 393,080 bales, Italy 393,967 bales, and France 316,231 bales, the total consumption throughout the world being 7,720,446 bales. On February 1 spinners in Great Britain held stocks of cotton of 317,571 bales, Russia 136,900 bales, Germany 131,986 bales, Italy 170,304 bales, and France 113,617 bales.

The Civil Government of Palestine has disbursed within a period of seven months a sum of £145,100 for the purposes of agricultural loans.

The traffic receipts of the Egyptian Delta Light Railways for the week ended February 28 amounted to £E8,522; total for year £E545,874. For the corresponding period of 1920 receipts amounted to £E10,605 and £E359,723 respectively.

In a message dated March 18 Reuter's Ottawa correspondent states that, questioned in the House of Commons as to the report of the possibility of Roumania repudiating her indebtedness to Canada, Sir Henry Drayton, Minister of Finance, said that all Roumania had asked for was to defer the payment of interest. It was the intention of the Government to collect the debt.

AGRICULTURAL BANK of EGYPT 3½ per CENT. BONDS.
—COUPON 33 due 1st April, 1921, will be PAID at the Offices of the National Bank of Egypt in Cairo, Alexandria, and London (6 and 7, King William Street, E.C.4).

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—Business has expanded considerably during the past week. Currants have been a good feature, and practically all varieties have advanced in price. Sultanas have been in strong demand, and rates are higher. Persian dates are going into consumption fairly well, while figs continue in good request.

Sugar.—There has been no change in prices. West Indian crystallised has been done at 60s. to 62s. 6d., while American granulated is the same at 67s. Home refined has been in good demand at the official rates.

Coffee.—The futures market has been firm. Quotations are:—March, 37s.; May, 38s.; July, 38s.; September, 40s.; December, 41s.

Oilseeds.—The market has shown an upward tendency. Indian linseed has gained 6d. at 18s. Rapeseed has been steady, with Toria at 17s. 6d., and bold Ferozepore at 16s. 6d., increases of 3d. and 6d. respectively. Brown Cawnpore is 6d. up at 14s. 6d. Cottonseed has been quiet, with Egyptian black at 12s. 6d. and Egyptian Sakellarides at 11s. 6d.

Seed Oils.—Oils have been variable. Linseed oil is unchanged at 29s. 6d. Rape oil at 46s. is 1s. down. Refined cotton oil remains the same at 40s., but the Egyptian crude variety is 1s. up at 31s. Turpentine is 5s. lower at 50s.

CURRENT PRICES.

General Produce.—Bacon, 180s. 6d. cwt.; butter, 298s. 8d. cwt.; cheese, 161s. cwt.; chillies, 115s. cwt.; eggs, 22s. per 120; cloves (Zanzibar), 9½d. lb.; cocoa (Ceylon, good to fine), 81s. 3d. cwt.; coffee (Costa Rica), 107s. 6d. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 94s. 6d. cwt.; ginger (washed Cochín), 36s. 3d. cwt.; hams, 160s. cwt.; lard, 107s. cwt.; nutmegs (110's to 80's), 1s. lb.; pepper (Singapore, black), 3½d. lb.; pepper (Muntok, white), 8½d. lb.; raisins (Valencia), 110s. cwt.; sultanas (Smyrna), 107s. 6d. cwt.; currants (Vostizza), 86s. 6d. cwt.; sugar (granulated), 67s. 10½d. cwt.; No. 1 cubes, 72s. 3d. cwt.; Mauritius, 66s. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 22s. 6d. cwt.; sago flour, 12s. 9d. cwt.; rice (Rangoon No. 2), 14s. cwt.; rice (bran Rangoon), £5 ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 3d. lb.; wheat (Austrian), 86s. 3d. qr.; wheat (English, white), 92s. 6d. qr.; wheat (La Plata), 79s. 3d. qr.

Chemicals.—Acids: Boric, 71s. cwt.; oxalic, 10½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 9½d. lb.; ammonia (sulphate), £24 11s. 3d. ton; arsenic (white-powdered), £47 10s. ton; benzole (standard), 3s. gallon; bleaching powder (35 per cent.), £20 ton; borax crystals, 34s. 6d. cwt.; cream of tartar, 132s. 6d. cwt. Potassium: Bi-chromate, 11½d. lb.; chloride, 6½d. lb.; caustic, £48 15s. ton; nitrate, £54 ton; permanganate, 1s. 7½d. lb.; prussiate yellow, 1s. 2½d. lb.; sulphate (90 per cent.), £34 10s. ton. Sodium: Crystals, 150s. ton; bi-carbonate, £10 15s. ton; bi-chromate, 7½d. lb.; alkali (58 per cent.), £9 5s. ton; chloride, 4½d. lb.; caustic (70 per cent.), £22 10s. ton; hyposulphite, £23 ton; prussiate, 8½d. lb.; nitrate, £20 12s. 6d. ton; sulphate of copper, £33 ton; sulphate of iron, 150s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; lemon oil, 3s. 5½d. lb.; quinine, 3s. 6½d. oz.; red lead, £36 10s. ton; white dry lead, £41 15s. ton; white ground lead, £52 ton.

Metals.—Aluminium, £150 ton; antimony (English Regulus), £39 12s. 6d. ton; bismuth, 7s. 6d. lb.; copper (standard), £65 15s. ton; copper (electro), £71 10s. ton; gold bars, 105s. 3½d. oz.; iron (No. 3 Cleveland), 150s. ton; hematite (mixed number), 180s. ton; lead (soft foreign), £18 10s. ton; manganese Poti, 1s. 9d. unit; molybdenite, 55s. unit; nickel, £202 10s. ton; platinum, 320s. oz.; plumbago, £35 ton; quicksilver, £12 7s. 6d. bottle; silver bars, 31d. oz.; spelter (G.O.B.), £25 10s. ton; tin (standard), £151 15s. ton; tin plates (20 by 14), 28s. 3d. box; wolfram, 14s. 3d. unit; zinc sheets, £37 ton.

Hides and Skins.—Ox and heifer: first, 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6d. lb.; 60 to 69 lbs., 5½d. lb.; 59 lbs. and under, 4½d. lb.; cows: first, 60 lbs. and up, 3d. lb.; 59 lbs. and under, 2½d. lb.; cows: second, 60 lbs. and up, 2½d. lb.; 59 lbs. and under, 2d. lb.; bulls (first), 2½d. lb.; bulls (second), 1½d. lb.; kips (first), 3½d. lb.; kips (second), 2½d. lb.; kips (third), 2d. lb. Calcutta Market.—Prices in rupees per 20 lb. Arsenic hides, cows: Agras, 8.0 to 13; Durbhargas, 5.8 to 6.8; Patnas, 4.8 to 5.8; salted cows, 2.8 to 5.8; arsenic hides (buffalo), 2.8 to 7.0; Skins: calf, 6.0 to 8.0; goat, 130.0 to 160.0 per 100 pieces.

Miscellaneous.—Cotton (American), 7.55d. lb.; cotton (Egyptian Sakellaridis), 11s. 6d. cwt.; linseed (La Plata), £16 12s. 6d. ton; rape (Toria), £17 5s. ton; soya beans, £12 5s. ton; palm kernels, £19 ton. Oils: Linseed, £30 2s. 6d. ton; soya, £33 ton; cotton (crude), £30 13s. ton; olive, 12s. gallon; ground nuts, £40 ton; palm, £36 ton; rape (crude), £47 ton; petroleum, 2s. 4d. gallon; turpentine, 57s. 6d. cwt. Rubber: Plantation No. 1 crepe, 1s. 0½d. lb.; smoked sheet, 10½d. lb.; fine hard Para, 11½d. lb.

Figures prepared by the Roumanian Bureau of Statistics show that in Bessarabia during 1920 the production (in metric quintals) of wheat was 4,848,297, of rye 959,596, of barley 5,766,079, of oats 1,012,415, and of maize 5,327,711.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended March 17:—Steadiness has again characterised our market during the past week, and although the volume of actual business remains at about the same level, the situation seems a little healthier taken all round, and the voice of the confirmed pessimist is not so frequently heard on 'change as it used to be. The measures taken recently by the Egyptian Government to assist cultivators are bearing fruit, inasmuch as confidence in the trade, which has of late been so sadly lacking, now shows distinct signs of being restored. Some "distress" cotton, which has been lying heavily on the market, is fast disappearing, and the hardening in the basis referred to last week has been well maintained and a much improved inquiry has been in evidence. The Continent and also America have each supplied their quota, but the latter, so far, has shown but little disposition to buy. Manchester continues to withhold her support, and reports from that centre are often widely divergent, so that one hardly knows what to believe. To-day's official advices, however, indicate that there is considerably more doing. A very small amount of c.i.f. business has been transacted at hardening rates. Total sales, 900 bales. Quotations of fair, good fair, and good Sakellaridis are raised 50 points.

EGYPTIAN CROPS.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in February:—

Wheat and Barley.—The weather, on the whole, was favourable and the water supply sufficient. The plants look healthy and the crop prospects are satisfactory. A considerable proportion of the early-sown crops is now in ear. Watering and manuring were the chief operations during the month under review. Slight attacks of rust and smut have been noticed nearly everywhere.

Beans.—The weather was favourable, though in a few localities winds have caused flower-shedding. There was an ample supply of water, and the fields were being watered during the month. The crop is looking well, and pod-forming is general. Green pods continued to be gathered for human consumption. Insignificant attacks of broomrape (Halook) are reported from all provinces. Blight and rust have also been noticed in some localities.

Helba.—The weather was, on the whole, favourable, and the water supply ample. Pod-formation is now general in early-sown fields, and the yield is expected to be about average.

Onions.—The crop is approaching maturity, and a good average yield is expected.

Lentils.—Pod-formation is progressing. The yield is expected to be a little above average.

Bersim.—The second and third cuttings are being taken, while drees-making started in some provinces. It seems that, owing to restriction of cotton areas, some of the catch-crop is being left as permanent bersim.

Cotton.—The preparation of the land for this crop is considerably behind-hand except in the provinces of Behera and Minufiya and in some of the larger estates elsewhere. Sowing is particularly late, as the farmers do not seem to have made up their minds definitely regarding the extent of cotton to grow in view of the present depression.

BULGARIA'S SURPLUS CEREALS.

According to information supplied by the Bulgarian Minister in London the Bulgarian State Consortium for Cereals has the following stocks available for disposal:—In the Danubian ports, all 1919 harvest—2,000 tons of millet, 2,600 tons of barley, 340 tons of oats, 730 tons of rye. At Varna and Bourgas, all 1920 harvest—5,000 tons of wheat, 1,000 tons of barley, 1,000 tons of rye, 200 tons of chick peas, 1,500 tons of haricot beans.

OPIUM MARKET REPORT.

Messrs. Barker Bros., Smyrna, report as follows for the fortnight ended February 19:—

The sales during the past two weeks amount to 21 cases of manufacturing opium at 12s. to 15s. as to quality and strength. Our exchange to-day is 585 piastres per pound sterling for cheque and 0.67 dollars for one Turkish pound of piastres 100. The arrivals are 1,210 cases against 1,490 at same date last year, and our stock to-day in first and second hands is 1,196 cases.

The use of kerosene oil stoves and heaters in Palestine has greatly developed recently, owing to the high price of coal and fuel wood.

All persons exporting goods from Bulgaria are obliged to cede to the National Bank, for the benefit of the State Treasury, one-third of the value of their exports in foreign currency at a special rate, which will not, however, be less than 20 per cent. lower than the Bourse rate. The export of Bulgarian bank notes, bonds, State and municipal coupons, etc., is forbidden, as well as those of the National and Agricultural Banks; also gold and silver coins.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

HAIFA.

The report for January states :—The prevailing crisis and the monetary stringency continue to influence unfavourably the general situation of our district, the agricultural products of which remain in part unsold.

Fearing a new fall in cereals, some merchants have deemed it to be expedient to despatch some consignments of lentils, chick peas, and sesame to the ports of Syria and the Lebanon, where prices are slightly more remunerative than elsewhere. Altogether a quantity of 450-500 tons of these goods has been exported to these places during the month for realisation at current prices. In view of the unfavourable economic situation of Palestine, the regulations of the authorities regarding the prohibition of the export of cereals only apply to wheat; other articles can be freely exported.

The abundant rains which we have had of late promise a good harvest. The area of land sown is greater than ever before, and it may be anticipated that the forthcoming crops will be abundant, enabling a large part to be set aside for export. Imports continue to be strictly limited to the needs of the district.

STAMBOUL, March 5.

The Constantinople market has presented scarcely any change during the past week. Some small sales have taken place for the towns of the Anatolian littoral as well as for Roumania. Imports have markedly decreased despite the decline of prices in Europe.

Colonial Produce.—Sugar.—Some cargoes from Holland and Antwerp have not found purchasers here, which has further depressed prices. Dutch sugar in transit is quoted at £37-38 per ton, and in Customs at £T34 per 100 kilos.

Coffee.—The market is quiet, with a tendency to fall. Quotations per oke for coffee in transit are : Rio Ps.42, Santos 45, inferior grades Ps.25.

Rice.—Prices have again fallen following large arrivals from Rangoon and Egypt. Quotations are : Saigon No. 1, for shipment at Marseilles, 90 francs per 100 kilos; inferior qualities, 75-80 francs per 100 kilos. Here Saigon rice in transit is quoted at Ps.13-14½ per oke, and in Customs Ps.15-15½ per oke.

Exports.—Complete stagnation continues to rule in the market. The sales of the week amount to about 500 bales of mohair.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Exchange and Merchandise operations effected.

ON 'CHANGE.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

It seems impossible to hope for settled conditions on the Stock Exchange, and last week we reverted from buoyancy to the uncertainty with which in recent weeks we have been so familiar.

Gilt-edged stocks have been firm, though they are closing somewhat below the best. Consols are 47½, the Five per Cent. War Loans closed at 86 9-16, while Victory Bonds stand at 77½, in all cases advances on last week's rates. Foreign bonds have been variable, Germans hardening on the result of the Upper Silesian plebiscite.

The Industrial group has been rather featureless, and changes have not been of any outstanding importance. Oils have been heavy, but Rubbers, after an indifferent opening, are responding to a slight hardening in the price of the raw commodity.

In Near Eastern securities, which rank among Government stocks, Egyptian Guaranteed 3 per Cent. are unchanged at 62½. Greek Guaranteed 2½ per Cent. 1828 are a point up at 61, while Turkish Guaranteed 4 per Cent., at 68½, are ½ up.

Greeks Strong.

Greek securities are again rising. The 5 per Cent. 1881 and the 5 per Cent. 1884 Loans are both 1 point up at 43, at which there were buyers. The 5 per Cent. 1890 is the same at 42, while Fundings have gained a point at 43, at which there were buyers. The 1910 Loan is unchanged at 42, but the 5 per Cent. 1914 has advanced 2 at 42, at which there were buyers. The 1902 Loan is 2 up at 37.

Moderate strength was displayed by Egyptian shares. Behers are unaltered at 8½, while the preference shares at 3½ have risen ½. Anglo-Egyptian Land Allotments are unchanged at 3½, but Egyptian Consolidated Lands are 2½d. up at 1s. 4d. Delta Lands are unaltered at 8s. 9d., as also Gharbieh Lands at 1½. New Egyptians at 22s. 6d. have gained 10½d., and Union Foncier at 2½ are ½ up, at which there were buyers. Sudan Plantations at 3 7-16 are the same.

Oils have been rather featureless. Anglo-Egyptians are ½ down at 1 15-16, but Phoenix have shed 1s. 3d. at 11s. 9½d. Roumanian Consolidated are 3d. up at 14s. 6d., and Steaua Romana at 16s. 3d. has gained 9d.

Among miscellaneous descriptions, Abyssinian Corporations are unaltered at 3s. Alexandria Waters are unaltered at 6½, while Mörums are 6d. lower at 12s. 6d. Egyptian Salt and Sodas have been done at 29s. 6d., a rise of 2s. 6d. Egyptian Markets have come to business at 18s. 6d.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on March 4 were as follows:—Agricultural Bank of Egypt, £4 3-32; Alexandria Water Co., Ltd., £6½; Anglo-American Nile Steam, £3; Assoc. Cotton Ginners, £25 32; Banque d'Orient, Fr. 73; Behéra Ord., £E7½; Behéra Priv., £3½; Bonded Stores, £11½; Brasseries d'Egypte Priv., Fr. 104; Building Lands of Egypt, £2; Cassa di Sconto, Fr. 107; Cassa di Sconto Priv., Fr. 108; Ciments d'Egypte Priv., Fr. 35; Ciments d'Egypte Div., Fr. 23; Comptoir Fin et Com. d'Egypte, £1; Consolidated Land, Pt. 6½; Crédit Foncier Egyptien, Fr. 572½; Crédit Foncier Fondateur, Fr. 7,200 ex.; Crédit Foncier 1886 Oblig., Fr. 342; Crédit Foncier 1903 Oblig., Fr. 234½; Crédit Foncier 1911 Oblig., Fr. 227; Crown Brewery Priv., Fr. 130; Crown Brewery Div., Fr. 130; Eaux du Caire Capital, Fr. 82; Eaux du Caire Jouissance, Fr. 104; Egypt and Levant S.S. Ord., 26s.; Egyptian Delta Light Railways, £4½; Filature Nationale d'Egypte, £10; Gabbari Lands, £E½; Immeubles d'Egypte Soc. An. des., £5½; Khedivial Mail S.S. Co. Priv., 110s.; Khedivial Mail S.S. Co. Ord., £27; Kom Ombo Ste. Ane. de Wadi, £5; Kom Ombo Ste. Ane. Fondateur, £35; Land Bank of Egypt Actions, £4½; Land Bank of Egypt Parts de Fond., £35; Lots Turcs, Fr. 45; Menzaleh Canal Navigation, P.T. 320; Nungovich Hotels, £6½; Ramleh Railway, £1½; Salt and Soda, 26s. 10½d.; Tram d'Alexandrie Priv., Fr. 39½; Tram d'Alexandrie Div., Fr. 60; Union Foncier d'Egypte, £2½; Upper Egypt Hotels, £2; Urbaines and Rurales, £3½.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 14:—During the week ending March 5 general crop prospects unchanged. Some difference has arisen between Bombay cotton brokers and cotton contracts board. At request of brokers' association the board has agreed to postpone next fortnightly settlement for one week, and market is consequently closed for one week from March 10 for hedge contracts other than liquidation of open contracts. Brokers' association have fixed minimum rates on basis of Rs. 255 for broach cotton, below which rates members are prohibited from trading. Piecegoods markets lifeless. Some inquiry for wide width mulls. Calcutta jute and gunny markets very dull. Prices of hessians declining. Owing to dissatisfaction with Dundee arbitrations and consequent invoicing back, Calcutta jute balers have resolved not to sell on Dundee contracts; balers of actuals not to bale substitutes; balers of substitutes to bale only one mark; and balers will not give guarantees on actuals; they will guarantee substitutes only for London. It was decided to recognise arbitration, but no invoicing back will be accepted. Unsold jute will not be consigned after March 31. Further reductions in freights to America. No change in bank rates. Considerable discontent reported on the part of Burma cultivators at fall in paddy prices from Rs. 180 to Rs. 148 per 100 baskets of 46 lb. each this time last year. At tea sales on March 8 selections showed slight improvement; demand was irregular and general tone of market tended downwards; medium brokers with a little tip were steady and common leafs were at previous rates. All other kinds ruled lower. 629,176 packages sold to date at an average price of five annas five pies per lb.

The traffic receipts of the Smyrna-Aidin Railway for the week ended March 12 amounted to £8,498.

Numbers are announced of Four-and-a-Half per Cent. bonds of the Piræus, Athens, and Peloponnesus Railway drawn for payment at par on April 15.

The Government of India announce that the cable rate to Europe will be increased as from April 1 from 18 to 20 annas per word.

The Bengal Doars Railway Company have declared an interim dividend of 3 per cent. on ordinary stock, payable, less tax at 4s. 8d., April 14.

SHIPPING INTELLIGENCE.

LARGE GREEK SHIP LOST.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, March 5.

The Greek mercantile fleet has lost one of its finest ships, the Admiral Coundouriotis (11,000 tons), which was burnt last week in Salonika harbour. This steamer, which was but recently constructed, had only just returned to Greece from America with a cargo of petrol and gasoline. Part of this cargo had already been discharged at the Piræus, the remainder going to Salonika, Constantinople, Jaffa, Beyrout, and Alexandria. The fire broke out early on Saturday afternoon, and, assisted by the strong wind blowing at the time, spread so rapidly that all efforts to extinguish it proved fruitless. A number of other ships lying in the vicinity of the Admiral Coundouriotis, and laden with ammunition, in the face of the danger weighed anchor and left the port in all haste. Several shots were fired on the burning ship by a small gun placed on the quay, but these failed to sink her. A larger gun was finally brought up, and this ended the short career of the unhappy ship.

WATER POWER IN GREECE.

A Swiss engineer has been employed by the Greek Government to investigate the water power in the State of Macedonia, and he has made an interesting report on the subject after a study of the falls of the rivers of Kladovo, Vodena, Niaoussa, lower Aliakmon, and high Aliakmon (says an American Consular report). Special tables have been prepared showing the estimated power of the falls of Bladovo to be 17,500 horse-power; those of Edessis, 26,000 horse-power; of Niaoussa, 22,000 horse-power; those of lower Aliakmon, 143,300 horse-power; and those of high Aliakmon as 143,000 horse-power. The total of available force of water from these falls is estimated at about 350,000 horse-power. It is estimated that the exploitation of the falls mentioned above will produce annually an electric current of about 120,000,000 kilowatts. The production of electric current from the falls of western Macedonia would be sufficient not only for the motive power and lighting of the three cities of Athens, Piræus, and Salonika, but also for the motive power of the Larissa Railway.

The consumption of electric power at Athens and Piræus is about 40,000,000 kilowatts annually and at Salonika 9,000,000 kilowatts. The plants for the development of the waterfalls would cost approximately between 160,000,000 and 180,000,000 drachmæ (30,880,000 dols. to 34,740,000 dols.). On the basis of this expenditure, a kilowatt would cost from 12 to 13 lepta (2 to 2½ cents). As Greece is dependent upon the importation of coal for a large part of its fuel supply, the employment of its water power is of vital importance in the development of the national industries.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Magdapur, for Calcutta (Birkenhead, April 11); s.s. Holywell, for Port Said, Colombo, Madras, and Calcutta (London, April 16).

Bibby Line.—S.s. Lancashire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 30); s.s. Yorkshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, April 13).

Cunard Line.—S.s. Antigone, for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Swansea, April 1); s.s. Pavia, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, April 2); Glasgow, April 7; and Swansea, April 7).

Ellerman Line.—S.s. City of Oxford for Gibraltar, Malta, and Alexandria (Liverpool, April 1); s.s. Maronian, for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Liverpool, April 7).

Ellerman City Line.—S.s. City of Milan, for Calcutta (Birkenhead, April 1); s.s. City of Cairo, for Bombay and Karachi (Birkenhead, April 20).

Ellerman's Hall Line.—S.s. City of Genoa, for Bombay, Karachi, and the Punjab (Liverpool, April 1).

French Levant Line.—S.s. Vulcain, for Bordeaux, Algiers, Messina, Alexandretta, Beyrout, Jaffa, Port Said, Alexandria, and Cyprus (Hull, March 30).

Glen Line.—S.s. Glenavy, for Port Said, Port Swettenham, Singapore, etc. (London, April 7); s.s. Glenshane, for Port Said, Port Swettenham, Singapore, etc. (London, April 21); s.s. Glenade, for Port Said, Port Swettenham, Singapore, etc. (London, May 5); s.s. Glenluce, for Port Said, Port Swettenham, Singapore, etc. (London, May 19).

Holt Line.—S.s. Machaon, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 26, and Birkenhead, March 30); s.s. Bellerophon, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 1); s.s. Anchises, for Port Said, Port Swettenham, Singapore, etc. (Glasgow,

April 8); s.s. Oanfa, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 8); s.s. Deucalion, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 15).

Johnston Line.—S.s. Drombre, for Piræus, Volo, Salonika, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 26); s.s. Incemore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 9); s.s. Venice, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 23).

P. and O. Line.—S.s. Naldera, for Bombay (London, April 8); s.s. Sardinia, for Colombo, Madras, and Calcutta (London, April 8); s.s. Plassy, for Bombay (London, April 15); s.s. Nore, for Colombo, Madras, and Calcutta (London, April 22); s.s. Dongola, for Bombay (London, May 6).

P. and O. British India Line.—S.s. Warfield, for Bombay and Karachi (London, April 2); s.s. Nardana, for Colombo, Madras, and Calcutta (London, April 9); s.s. Chanda, for Bombay and Karachi (London, April 16); s.s. Manora, for Colombo, Madras, and Calcutta (London, April 22).

Papayanni Line.—S.s. Trentino, for Algiers, Malta, Syra, Smyrna, and Constantinople (Liverpool, March 26).

Prince Line.—S.s. Merchant Prince, for Malta, Alexandria, and Syrian coast ports (Antwerp, March 26; London, April 5); s.s. Scottish Prince, for Tunis, Malta, and Alexandria (Manchester, March 31).

COMPANY NOTES AND REPORTS.

Southern Punjab Railway.

For the year to September 30 last the net earnings (at exchange of 1s. 4d.) amounted to £392,801, against £358,068 for the previous year. The net revenue was £491,466, of which £206,550 is the Government's share of surplus profits, and £10,000 is transferred to "contingencies" account. This leaves £274,916, and £125,960 was brought in, making £400,876. Further dividend on ordinary stock of 9 per cent., and a further bonus of 1 per cent., making 16 per cent. for the year; carried forward, £148,876, subject to excess profits duty and corporation profits tax if found due. The question of liability has not yet been settled.

Smyrna-Aidin Railway.

The report of the Ottoman Railway from Smyrna to Aidin states that the working of the line during the half-year to December 31 last has been continued by the company's staff, and that there are now 184 miles working, or nearly half of the whole system. The remainder of the railway is still in the possession of the Turkish Nationalists. For the first time since 1914 the Council are in a position to present accounts in a reasonably complete form. The traffic receipts for the six months are the largest on record, and amount to £334,414, the increase being largely due to military traffic. The working expenses were heavy, owing to the excessive cost of material and great increase in the price of labour and the generally abnormal conditions prevailing. During the whole of the period under review the negotiations referred to in the last report have been carried on, but, in view of the uncertainty at present ruling, especially with regard to the Treaty of Sévres, no definite conclusion has been reached. However, the company's claims for war damages have been completed, so far as this is possible, for the period from the outbreak of war until June 30, 1920, and they will be sent in this month. Further claims will have to be drawn up for the losses incurred by the company since June 30, 1920, but this cannot be done until the company regains control of the whole system.

NOTES OF THE WEEK.

The Greek Offensive.

After the fresh mobilisation to which reference was made in these columns last week the Greeks have lost no time in opening a new campaign against the Turkish Nationalists. They have gained an important success in the capture of Afion Karahissar, which places them astride the Baghdad Railway. At the same time they are across the railway to the north of Eskishehr, so that Mustapha Kemal Pasha's communications with both Constantinople and Cilicia are cut. Greek reports bear witness to the weakness of the Turkish resistance encountered so far, and it is evident that the suddenness of the Greek attack has caught the Angora authorities unprepared. The near future will decide whether the Greek or the French estimate of the Turks' fighting forces is correct. In its initial stages the Greek offensive has proceeded according to plan, the occupation of Afion Karahissar within a few days being the pivot of the Greek delegation's contention in London that the Angora army could be disposed of within three months. Towards these military operations the Allied Governments can hardly do otherwise than adopt a non-committal attitude until they are appealed to by one side or the other, although their moral obligations in view of the fact that both Greeks and Turks were invited to the London Conference raise a nice point.

The Egyptian Cabinet—

The new Cabinet in Egypt continues to enjoy public favour, and though a number of students marched from Zaghloul Pasha's house to the Palace on the Sultan's birthday, they are reported to have "created no serious disturbance." It is, in fact, difficult to see any reason why they should do so, but their demonstrations have been sometimes so irrational in the past that it is almost astonishing to find them less so now. Presumably the "march" in question was for the purpose of keeping their own enthusiasm alive against Zaghloul Pasha's return. That event is expected to take place on April 4 at Alexandria, and a great reception is being prepared for him. Whether the Cabinet shares the enthusiasm of the populace is known only to itself, or its individual members; but it looks as if it is ready to go very far towards more or less effacing itself in order to induce

Zaghloul to co-operate with it. How far this is for the good of the country remains to be seen. It is even possible to question whether it is for the good of Zaghloul Pasha himself, although his attitude suggests that he is incapable of realising the fact.

—And Zaghloul Pasha.

An illustration of the lengths to which the Egyptian Cabinet is prepared to go in this direction is afforded by its answer to a question addressed to it regarding the abolition of the Capitulations. The Cairo correspondent of the *Morning Post* reports that, Italy wishing to ascertain its views on this point, the Foreign Office sent a telegram to Cairo accordingly, adding that Italy did not wish to agree to the abolition if the Egyptians were opposed to it. The Cabinet, after a long and secret sitting, replied that it could not give an answer until negotiations regarding the abolition of the Protectorate were further advanced. The *Post's* correspondent adds, however, that the real reason for the delay was the Ministers' wish to consult Zaghloul Pasha. The latter has so far shown no enthusiasm for the removal of the Capitulations—rather the reverse—realising, of course, that they provide magnificent opportunities of playing off one Power against another. His attitude towards this subject would under other conditions and at another time probably give even the Egyptian public to think. As it is, however, Zaghloul is at the "roses, roses all the way" stage of his career, and possibly believes that it will last out his lifetime.

Conquest of a Plague.

As our readers will remember, we have from time to time referred to the efforts made of late years to find a cure for one of the greatest plagues of Modern Egypt—and, it seems, of Ancient Egypt also—bilharziosis. In the past this dreadful disease has scourged both Egypt and the Sudan, and every effort to get rid of it failed; but, comparatively lately, Dr. Christopherson experimented with antimony, applied intravenously, and it is now announced that his treatment is recognised as a specific for the disease. Dr. Christopherson has quite recently received a letter from the Department of Public Health of the Union of South Africa informing him of the successful adoption of his discovery, and, among other home authorities, the Ministry of Pensions is employing it for the healing of soldiers who contracted the disease in the late war; and it is hoped that those who contracted it in the South Africa War may also benefit by it, if funds permit. Dr. Christopherson's triumph may almost be regarded as marking a new era in the history of medical progress in the Nile Valley.

Egyptians and Sudanis of this and of future generations will certainly have reason to bless his name, and it is to be hoped that his work will be suitably recognised by the Government.

The Bolsheviks and Central Asia.

The announcement that a Bolshevik mission, seventy strong, is waiting at Askabad for authority to enter Persian territory serves as a reminder that the Moscow Government does not rely solely upon its Red armies for propaganda purposes. Agreements have now been negotiated by it with Persia, Afghanistan, Bokhara and Turkestan, as well as with Angora and the British Government. According to the treaty with Afghanistan the Soviets establish a number of Consulates in the latter country, and undertake to pay an annual subsidy to the Ameer's Government; each party binds itself not to enter with a third Power into a military or political agreement which would be detrimental to the other. Thus Russia, as was inevitable, has taken full advantage of the new freedom of action in regard to international relations allowed Afghanistan by the recent Anglo-Afghan arrangement. But for Great Britain the chief interest in the subject lies in the indication afforded of the Soviet resolve not to allow any slackening of military effort to affect the output of Bolshevik propaganda. As the trade agreement with Great Britain is said to be welcomed in Moscow mainly for the opportunity that it will provide for Soviet representatives to have free access to our industrial centres, there would seem to be a weighty drawback to be set against any trade advantages to be derived from the agreement. In regard to the Turks, it is clear that Angora and Moscow are making use of one another, each for its own ends, without any special bond of union between them. The Nationalists feel that they can only maintain touch at this time with Turanian elements in Central Asia with Soviet assistance or goodwill, and the Bolsheviks are anxious to keep their communications right up to the Indian frontier well affected. The situation for Great Britain would be less serious if there were the knowledge that the danger is fully appreciated, and is being met by a definite policy. Of the latter, however, there is no indication.

Cold and Confidence in Persia.

The withdrawal of the British forces from Northern Persia has been delayed for some weeks by extraordinarily severe weather, and the Teheran correspondent of *The Times* reports that despite all precautions the troops have suffered much from malignant frostbite. Greatly to their credit, the responsible authorities have been able to provision the force; but the roads are quite impassable for motor transport, and communications have had to be kept up entirely by pack animals. The cold has taken a heavy toll of life from man and beast, and many travellers have been snow-bound for weeks. In spite of these conditions, however, the correspondent referred to reports a new feeling of confidence in the country, inspired by the inauguration of the new régime at Teheran. The dread of Bolshevism is fading away, and Zia ed-Din appears to have been able to inspire his countrymen with fresh hope and self-respect. All this is to the good, and though we shall not pretend to believe that all is now for the best in the best possible of lands, we are glad to be able to congratulate the Persians upon the change.

Delhi and Whitehall.

An incident in the Budget debate at Delhi draws attention once again to one of the chief obstacles to more cordial relations between England and India, the inveterate suspicion and mistrust of the management of Indian finance in this country. The Government of India has been frequently pressed to say how far Whitehall was responsible for the details of its exchange policy, but the Finance Member could tell the Legislative Assembly only that "it is not within the power of Government to answer these inquiries," or, in other words, that the secrets of Whitehall cannot be disclosed. Surely it is time for Mr. Montagu to abandon this attitude. We

believe Indian suspicions to be absolutely unfounded, but their existence is a fact of the political situation, and they can be dispelled only by entire frankness. So long as the veil is there, Indians will continue to imagine a world of horrors behind it; the transfer of the control of finance from Whitehall to Delhi cannot be effected just yet, but in the meantime it should be possible to withdraw the veil once for all, and allow Indians to see that Whitehall has nothing to be ashamed of.

The Army in India.

The position in regard to the strength of the forces to be maintained in India was made clear last week by Mr. Montagu's statement in the Commons, which, however, merely repeated information already in the possession of the Indian legislature. The local aspect of the question is to be worked out by a committee of the Viceroy's Council, and the materials so provided will then be examined by a sub-committee of the Committee of Imperial Defence in the light of recent progress in such technical matters as equipment and mobility. We do not think that there are any reasonable grounds for objecting to this course of procedure, which appears well adapted to harmonise the local and professional aspects of an extremely complex question, and we shall be unfeignedly glad if the result should be to secure a substantial reduction in the heavy military charges now borne by India; but, as we have so often insisted, the security of the country is the paramount consideration, and the truest economy is to be found in an Army so efficient as to discourage attack. India was attacked two years ago because her defence was supposed to be inefficient, and the cost of the operations against Afghanistan and the Frontier tribes may well serve as a warning against allowing such misconceptions to arise in the future.

The Criterion of Military Strength.

Mr. Montagu's declaration made it clear that the criterion is "the internal and external security of India," a phrase which should go far to dispel the misconceptions aroused by the now famous pronouncement of the Esher Committee that the Army in India could be considered only as part of the total armed forces of the Empire; and we gather from his language that he will not quarrel seriously with the more detailed statement formulated by a committee of the Legislative Assembly, which, after describing the purpose of the Army as defence against external aggression and the maintenance of order, urged that in other respects its obligations should be no more onerous than those of the Dominions, and that it should not be employed outside India except for defence. As things stand at present, the Dominion status seems to us to be the only possible objective. The ideal of Imperial military organisation must not be abandoned, but the expectation that India would be willing to lead the way towards it is inconsistent with the hard facts of practical politics; we believe that the Indian legislature will be ready to move abreast of the Dominions, but the movement must be concerted, and the politicians will have to be educated up to it by slow degrees.

Divorce in India.

We do not think many lawyers will be found to quarrel with Sir Henry Duke's recent decision that the Courts in India have no authority to grant a divorce to British subjects who are resident in the country but retain their British domicile, but its effect has been to raise some very difficult and painful questions. The Courts have been granting such divorces for half a century, and on the strength of them many divorced persons have married again. These marriages must now, we suppose, be regarded as bigamous in law, and counsel for the India Office declared at the hearing of the case that some hundreds of persons would be rendered illegitimate. These questions can be disposed of only by Parliament, and we are glad that no time is to be lost in introducing a Bill to validate the judgments which have been held to be void, but the ordinary layman will probably say that half a century is rather too long for such a state of things to be allowed to continue.

THE WEEK AT HOME.

LONDON, Tuesday Morning.

The Recess.

Parliament only takes a little over a week's holiday this Easter, with a longer rest promised at Whitsun if it behaves itself. Last week was uneventful. Mr. Austen Chamberlain made his debut as leader, and received his blushing honours with his usual modesty; but the new appointments are not yet announced. Sir Robert Horne, however, is still backed for the Exchequer, but it is believed that Sir Gordon Hewart will remain on as Attorney-General, and the Lord Chief Justiceship will go to another. The Government simply cannot spare him from the House of Commons.

The Lobby last week and the country houses this week are full of discussion as to Mr. Lloyd George's own future. Will he go right or left? To judge from a speech at a luncheon just before the House rose, in which he attacked Labour as a danger to the State, the answer is likely to be to the right. But there is a good deal of Radicalism left in the little Welshman yet, and if he does lead the Conservative wing, the Conservatives will have to do a good deal more in the way of reform than the old Tories like.

Somebody has recalled the remark of the old Scotch lady in this connection, when told that her son had been taken prisoner in one of the Indian wars, and chained to another prisoner: "God help the man who's chained to our David." Some of the Tories may yet echo the remark if they chain themselves to the modern David.

The Speakership.

The Speaker has intimated his intention of retiring before Whitsun, after many years of admirable service to the Commons, whom he has ruled by wit as well as firmness. His successor is likely to be Mr. J. H. Whitley, a Yorkshire member, and Deputy-Speaker for a long period. Mr. Whitley is quiet, tactful, and impartial, and very generally liked; there is little doubt that he would fill the greater post with credit and distinction.

But it is said that he will only accept it if unanimously chosen. It is not improbable that this will be the case, but there are a few members who would like to see Sir F. Banbury, the well-known Tory member for the City, in the chair; and another section is understood to support the present Solicitor-General. The general opinion, however, is that the latter, although a charming personality, is hardly strong enough man for the post. It is true that the present House is easy to govern, but the next one, elected in three years' time, may not be so well-behaved. And a Speaker who lets the House get out of hand even once never quite recovers his authority.

The Speakership has also been offered informally to Mr. Asquith, but he refused it rather brusquely, not altogether to the delight of his diminishing band of followers. The road, therefore, seems clear for Mr. Whitley.

Easter Holidays.

Easter started with summer frocks, and ended with winter overcoats. But the trains were crowded, and, in spite of everybody's complaint of being hard up, everybody seemed to have money to spend; and even the possibility of another coal strike at the end of the week did not unduly depress the holiday crowd. The exodus was mainly to the South Coast, East Anglia being a little too bracing for the Londoner in March. Quite a number of people went to Cornwall, in spite of the heavy railway fares.

Popular Art.

Mr. Marcus Stone, who died last week at the ripe old age of eighty, was probably the most generally known artist of the late Victorian period. His career was one uninterrupted success. As a boy he attracted the attention of Dickens, who knew a good deal about book illustration, and who secured young Stone his first commission. Later on, when he started painting, he had the unique experience of never having a picture rejected by the Royal Academy, of always being hung on the line, and of having every picture sold before it was exhibited.

Needless to say, such extraordinary good fortune did

not mean the highest artistic achievement. His pictures were of the popular story-telling type, usually with a sentimental interest; "Two's Company, Three's None," the title of one of them, was typical of the rest. His women were graceful and pretty, not grand or beautiful; he reflected the conventional middle-class idea.

House of Lords Reform.

The House of Lords is not to be reformed this year after all. The Liberals profess to be very angry, but cannot protest too much; for it was Mr. Asquith who declared that the reform was "a debt of honour which brooked no delay," and then did nothing to redeem it for six years. Some of the peers are disturbed at the delay, however, because they think that the reform will probably be put off until too late, and then a Labour Government will come in and follow Hamlet's advice to "reform it altogether" by abolishing it. I doubt whether Labour would do anything quite so drastic; it probably remembers that Cromwell abolished the House of Lords, but it soon came back again.

But reform is a difficult problem. A reformed House of Lords means a stronger House of Lords, and the Commons would assuredly be jealous of any increase of power in that direction. It is admitted on all hands that the present House is too large, but who shall be excluded; and on what grounds and by whom, are very controversial questions. If the House were reduced to about two hundred picked men, as is suggested in some quarters, the problem would still not be solved, as the Government of the day could not always be sure of a majority, and this would entail the creation of fresh peers. On the other hand, there are still some who would like to see the Parliament Act abolished, and would seize the opportunity of the reform debates to raise that question. At the moment, I think, the country is not in any mood to tackle a constitutional crisis, and is well content to see the whole matter postponed.

A New Bank Building.

During the war the pessimists assured us that London would cease to be the financial centre of the world. Now that the war is over, however, the City seems to have no room for anything but finance. Every vacant site is taken by the banks, and I hear that the London County and Westminster is now to erect a palatial building of nine floors and two basements in Lothbury. It will be a magnificent edifice in the Palladian style. Another bank is enlarging its premises in Broad Street, and others may be seen opening branches here, there, and everywhere. A recent article in the *Edinburgh Review* pointed out that the war, so far from weakening the financial preponderance of London, was likely to intensify it. One read the prophecy with some doubt at the time, but the author seems to have known what he was talking about.

A New Quarterly.

Of all unlikely quarters to start a new periodical I should have thought the Bank of England the most unlikely. But that sedate institution has entered the stormy seas of journalism, and even adopted the flippant title *The Old Lady of Threadneedle Street*. Truly this is a revolutionary age. Perhaps the *London Gazette* will follow suit, and head its list of bankruptcies "Are we downhearted?" The Old Lady herself, who, like most heiresses, is loved more for her money than her looks, would be still more popular with her admirers in the City, I understand, if she gave some hint as to a reduction of the Bank Rate, but on that matter the new house-organ is discretion itself.

The Tourist Traffic.

The influx of American visitors seems to have begun remarkably early this year, and the hotel managers are rubbing their hands with delight. The London shop-keeper, who has been trying in vain to stimulate the Cockney to buy by means of repeated bargain sales, hopes the Yankees have brought their purses with them; and the picture-dealers and manufacturers of antiques are preparing for the harvest. The usual lament will soon go up that we are exporting all our artistic treasures to the United States; but in Chelsea, and other places where living artists congregate, they would not be sorry if most of the old masters crossed the Atlantic. It would give more room to the younger men to earn their living. Many of them have had an unusually hard time lately.

The Week's Book.

"Modern Democracies" (Macmillan), by Lord Bryce, is a large book, but by no means a heavy one, although it is not intended for those who read for recreation. The first part deals with the general features of democratic government. The second contains detailed studies of the working of democratic institutions in France, Switzerland, Canada, the United States, Australia, and New Zealand, with short sketches of the republics of

the ancient world and of modern Spanish America. The last section discusses general conclusions as to democratic government. Lord Bryce believes in democracy, and he points out that the new European States have adopted democratic principles. But the real danger, in his opinion, is no longer, as the classic thinkers held, that democracy leads to the rule of a tyrant, but that the people will not trouble to exercise their powers. "The extension of the functions of government and the increasing magnitude and complexity of the subjects falling within these functions have not elicited a corresponding will to serve the community on the part of those best fitted to serve it. Frenchmen, Englishmen, and Americans find it so natural a thing that men should be interested in politics that they assume men will always be so interested. But is it really true—so students of history will ask—that this interest can be counted on to last? For a thousand years, after the days of the last republicans of Rome, the most civilised people of Europe cared nothing for politics, and left government in the hands of their kings or chiefs. Greek democracy had been destroyed by force more than a century earlier, and little regret was expressed at its extinction. No one thought of trying to revive free self-government in Italy or Greece or around the coasts of the *Ægean*, where hundreds of republics had bloomed and died. The thing did happen, and whatever has happened may happen again. Peoples that had known and prized political freedom resigned it, did not much regret it, and forgot it."

But that is not quite the conclusion of the whole matter. "Hope, often disappointed but always renewed, is the anchor by which the ship that carries democracy and its fortunes will have to ride out this latest storm (the Great War) as it has ridden out many storms before. Democracy will never perish till after hope has expired." Lord Bryce, like Lord Morley, is now a very old man; it is good to see that he is more optimistic than his old colleague.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, March 13.

The Question of the Delegation.

The declaration of the British Government with regard to the Protectorate appears to have been generally very well received. Everything tends to show that the importance and liberal spirit of this declaration are recognised and appreciated by all thinking Egyptians; certainly those who are directing the political movement have frankly welcomed the declaration as facilitating their task.

There appears, however, to be some difficulty in uniting all the elements so as to form a delegation which will be wholly representative of the nation and possess the authority to negotiate and see through an agreement, and which at the same time will command the confidence of both the Egyptian nation and the British Government. The trouble seems at first to have been in regard to the question of either forming a delegation with the present Cabinet in power or reconstructing the Cabinet and choosing the members of the delegation from amongst its members. It is understood that the principle of a new Cabinet constituted by the leaders of the various parties has been accepted. It was evident that no delegation could fulfil the conditions necessary to the success of its mission unless it was assured of wholehearted support in Cairo, and unless it could keep touch with public opinion in Egypt through a Cabinet which as much as itself was interested in the success of the negotiations that it was undertaking.

That principle accepted, it would appear that a further difficulty has been encountered in the matter of the constitution of the new Cabinet and the designation of those members who are to go to London to negotiate and those who are to remain behind. It is exceedingly unfortunate that this hitch should have occurred; for there is little time to be lost if the delegation is to leave for London at the end of April, and is to be ready with its programme, etc. However, since so much progress has been made in the past, and particularly recently, thanks to the tact, broadmindedness and sincere desire to attain a speedy successful settlement shown by those who have been controlling matters, there is every reason to hope that even before this letter reaches you the difficulties which are now confronting us will have been overcome.

The Colonial Secretary in Cairo.

Mr. Winston Churchill, accompanied by Air Commdore Trenchard, Colonel Lawrence, and others, arrived this week, having spent a day in Alexandria on the way to inspect the aerodrome there. The Colonial Secretary and his party left the train one station before Cairo in order to avoid the hostile demonstration which appeared to be gathering outside Cairo station. They motored to the Semiramis Hotel, which will be the headquarters of the Middle-Eastern Conference that Mr. Churchill has summoned, and where almost simultaneously with his arrival there descended a flock of generals and other personalities arriving from Mesopotamia, Aden, and Somaliland.

The Mesopotamian Delegation includes Sir Percy Cox, General Haldane, Gaafar Pasha, Minister of Defence, Sassoon Effendi, Minister of Finance, Miss Gertrude Bell, General Ironside, from North Persia, and Colonel Trevor, from Bushire; while in addition, Sir Geoffrey Archer, Governor of British Somaliland, Colonel Cox and Major Barrett, Resident and Assistant Resident at Aden, are of the party. The first general Conference took place yesterday afternoon, and it is to be assumed that Mesopotamia, Aden, and Somaliland will be the first questions to be dealt with, since Sir Herbert Samuel and Mr. Deedes will not arrive from Jerusalem until the 16th instant.

It is not known exactly how long Mr. Churchill will

remain here—"as long as necessary" was the information given to me—but it is practically certain that he will pay a visit to Palestine before returning to London. Full information has been published in the London Press as to the object of this Conference, and I am informed that whatever decisions may be come to will not be made public until Mr. Churchill has been able to report to the Cabinet and until he makes his promised statement in the House of Commons.

End of the Irrigation Libel Action.

The Willcocks libel action came to an end on Friday afternoon. The last day of this twenty-five-days trial, which was devoted to the summing up by Judge Grain, attracted a very large attendance, and the Court was crowded out. Among distinguished visitors present was Sir Benjamin Robertson, late Chief Commissioner of the Central Provinces, India, who was given a special seat in the well of the Court. The jury, which consisted of well-known business men, took about one hour and a-half to deliberate, and their verdict of guilty on both charges, viz., criminal libel and sedition, has been very well received. After the delivery of the verdict, Mr. Preston, counsel for the Crown, stated that he did not press for exemplary punishment, as the object of the prosecution was to bring about a cessation of the attacks and libels. The judge announced that he would suspend sentence until counsel for the defence had had an opportunity of laying before him on behalf of Sir William Willcocks such proposals as he might feel called upon to make. Sir William declared, however, that he did not want mercy, only justice; he demanded that sentence should be passed on him forthwith; he considered the judge in summing up had prejudiced the jury against him, and he would take the case to a higher plane where he knew he would be proved to be right.

SUDAN.

KHARTOUM, February 27.

Khartoum Amusements.

The annual open tennis tournament proved as great a success as ever. The Broun singles championship was won once more by Mr. H. S. Job, the open doubles for men by Messrs. Field and Richardson, who become holders of the new Job Cup. The standard of tennis is better than ever, and we look to Mr. Job to uphold the laurels of the Sudan in Egypt, where he has been transferred after ten years in this arid land.

The third winter meeting of the Khartoum Racing Club was held on Saturday, February 19, and proved somewhat of a disappointment from the point of view both of racing and of attendance. The small attendance was doubtless due to the meeting being held on a Saturday instead of the customary Friday, the change of day being caused by the Church Missionary Society's sale of work having been fixed for the previous day. For the first time for some years the Governor-General was unavoidably prevented from being present.

A company of amateurs, composed of railway officials and their wives from Athara, presented a very successful pantomime, "The Babes in the Wood," which was duly appreciated.

The Sudan Club is continuing its popular fortnightly ladies' nights, and the enthusiasm for dancing has in no way abated. It is reported that some 120 sat down to dinner on the 17th inst., which must constitute a record.

ROUMANIA.

BUCHAREST, March 3.

Winding-up of a Department.

After several complaints in Parliament with regard to the Under-Secretaryship of Reconstruction, the Council of Ministers has decided to wind up this Department, dividing it into three sections. Beginning from April 1, the Section of Supplies will be handed over to the War Office, the Section of Reconstruction to the Ministry of Public Works, and the Purchasing of Goods Section to the Ministry of Industry and Commerce.

The present Parliamentary Session has been extended to March 28.

Prince Sapieha's Visit.

Prince Sapieha, the Polish Foreign Minister, accompanied by Princess Sapieha, General Razvadovski, Chief of the Polish General Staff, M. Zbyczewski, Head of the Roumanian Section of the Polish Foreign Office, and Capt. Dzieduszki arrived in Bucharest last Tuesday night (March 1) by special train from Warsaw.

Prince Sapieha first paid visits to M. Take Jonescu and Gen. Averescu, and then had an interview with the King, who retained him to a luncheon given in his honour. Amongst those present were the King, Queen, the Infante of Spain, Prince Nicholas and Princess Helen of Greece, Prince Nicolae and Princess Marie of

Roumania, Prince Sapieha, Count Skrzynski, Gen. Razvadovski, M. and Mme. Take Jonescu, Gen. Rascanu, Roumanian War Minister, and Col. Gorka, Polish Military Attaché. After luncheon the King conferred upon Prince Sapieha the Grand Cordon of the Order of the Star, and upon Gen. Razvadovski, the Grand Cordon of the Order of the Crown of Roumania.

In the evening a gala dinner was given by M. Take Jonescu at the Foreign Office in honour of the nation's guests, at which all the Ministers of the Cabinet, foreign Ministers, and other high State officials were present. Although the negotiations for the conclusion of the Polish-Roumanian Alliance will continue after Prince Sapieha's departure, in diplomatic and political circles here the alliance is already considered as a *fait accompli*.

General News.

The Government has given its sanction to institute a Saxon University at Cluj (Transylvania).

The new Greek Minister, M. Panas, and the new Yugoslav Minister, M. Tcholak, presented their credentials to King Ferdinand last week.

The authorities at Rezina (Bessarabia) report that groups of Bolshevists, devoid of arms and clothing, are attempting to take refuge in Bessarabia. These attempts are thought to be in connection with the precarious situation of the Bolshevist element in Ukrania, where the peasants are in revolt.

BUCHAREST, March 10.

Practically the whole of the past week in the Chamber has been devoted to debating the validity of the election of M. Stere, who was recently chosen as the representative of Soroca, Bessarabia. The principal charge against M. Stere was his pronounced pro-German attitude during the war, when he even published a newspaper (*Lumina*) which frequently condemned Roumania for joining the Allies against the Central Powers. In his defence M. Stere admitted that his former political attitude was mistaken, but explained that it was attribut-

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE
NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

able to his very strong anti-Russian feeling. A native of Bessarabia, he had devoted his life to the Roumanian cause there during the Russian rule, and for this he had suffered imprisonment and even exile to Siberia; and naturally he could not wish that Russia should win the war, since this would mean for Roumania the irretrievable loss of Bessarabia. The majority insisted on his invalidation, but this could not be carried out, as no irregularity had taken place at his election; and moreover the expressed wish of the 36,000 voters who had given him their suffrage could not be ignored.

The principal result of the incident was the withdrawal from the Federalist *bloc* of its leader, M. Jorga, who declared that he could not associate with a traitor to the country. At their last meeting the executive committee of the Federalist *bloc* had decided that on this question every member should be left free to vote as he chose; but the decision was not adhered to, the Bessarabian Peasants' Party and others showing strong partisanship; and M. Jorga, regarding this as a personal attack on him, in view of his antagonism to M. Stere, resigned the leadership as stated. He has been asked to reconsider his decision, but has so far refused to do so. Whatever he may eventually decide, it seems that the Government has scored by sowing discord among the Federalists.

The Magyars in Transylvania.

The Roumanian Press is full of the Magyar machinations in Transylvania. The Hungarian Government, despite assurances of friendly intentions, is favouring Irredentist propaganda in Transylvania and the Banat. Several spies were arrested lately in Transylvania, and on them were found instructions from Budapest as to the attitude Hungarians and Saxons across the border should adopt towards the Roumanians. According to these instructions, every Hungarian should hold that in Transylvania he is still on Hungarian territory, and should always be prepared to throw off the Roumanian yoke. To keep alive this spirit "literary societies" should be organised; every village should have its Irredentist library; in every house the map of pre-war Hungary should be found; badges of the Hungarian national colours should be worn at all times; the sympathies of foreigners should be enlisted whenever possible; national costume should always be worn; pro-Roumanian Hungarians should be derided and put to shame; Hungarians should avoid Socialism, but socialistic movements among Roumanians should be encouraged. As to more active measures, arms should be obtained and secreted against the day of revolt; Magyar banks and co-operative societies should be formed, with a view to gaining preponderating influence in Transylvania, and Budapest should be kept informed as to the moral of the Roumanian troops—with much more to the same effect.

The Polish-Roumanian Entente.

Before leaving Roumania Prince Sapieha was the guest of the Academy and of Parliament, where he was warmly welcomed. In a talk with Press representatives he stated that the Polish-Roumanian accord was on similar lines to the Franco-Polish compact, which aimed above all things at the maintenance of peace. He went on to explain that if either of the two countries was attacked the Entente Powers would hardly be in a position to help them in a military sense; so that the accord was very necessary. But, he added, there was no reason why a third, or even a fourth, State should not join them. He did not think that a Bolshevik attack was probable, but added that surprises are always possible.

General News.

The Government is working on a project to rearrange the districts of Greater Roumania. The whole country will be divided into nine regions and forty-eight districts instead of seventy-five as at present existing. In the course of this month the exchange of prisoners between Roumania and Hungary will start.

M. Take Jonescu, Minister for Foreign Affairs, has received a note from the London Conference inviting Roumania to send her delegates to the conference to take part at the discussion on the Dardanelles question.

TURKEY.

CONSTANTINOPLE, March 16.

The Results of the London Conference.

The final proposals made by the Allies at the London Conference were at first received with incredulity in Turkish circles in Constantinople. When later reports confirmed the earlier telegrams, considerable astonishment was expressed on all sides that the Allies, having once suggested the holding of an inquiry concerning the desires of the populations of Thrace and Smyrna, should have made proposals which take practically no account of those desires, whatever they may be. In anti-Nationalist circles the Allied decision, or, rather, proposal, is attributed to the impossibility of entertaining any confidence in the Turks so long as the country is dominated by adventurers like Mustapha Kemal. At least, that is how Ali Kemal Bey puts it in the *Sabah*. In Nationalist and neutral circles, however, the belief is expressed that the Allies have not said their last word, and that, upon further consideration, the Thracian question will be reconsidered; and the proposal to maintain a Greek garrison in Smyrna will be abandoned. It is generally agreed on all sides that the proposals as they stand are certain to be rejected by the Great National Assembly, and to a certain extent, therefore, the labours of London have not been successful. On the other hand, the French and Italians have every reason to be satisfied, for instead of the secret and underhand agreements that have subsisted hitherto, they have now concluded extensive ententes with the Nationalists with the knowledge and apparently the consent of the British Government itself. The circumstance of Anafolia being opened to French and Italian commerce whilst British commerce is still banned should be a source of considerable comfort to British firms interested in trade in the Near East!

With regard to the "conversations" between the Turkish and Greek representatives there is a widespread opinion in Turkish circles that the Allies, having regulated most of the questions of direct and vital interest to themselves, intend to leave the Turks and Greeks to settle their differences in whatever manner they choose. Such a policy might be possible for France and Italy, for neither Power is regarded as the special friend of Greece, and one of them is regarded as the open enemy of that country. The British, on the other hand, have come to be regarded as the acknowledged champions of Greece, and are credited with the intention of pursuing, in spite of the return of Constantine, the original policy accredited to them of making Greece the principal inheritor of the remains of the estate of the "Sick Man." This idea still holds good, and so long as a single Hellenic soldier is stationed in Smyrna nothing will dissipate it.

If the Turks are dissatisfied, however, it must not be supposed that the Greeks are overjoyed. The following extract from the *Proia* of March 15 is a sufficient indication of Ottoman Greek opinion:—

The "small concessions" described as by no means destroying the fundamentals of the Treaty of Sèvres completely upset the exceptional and honourable part attributed to Greece in the Orient. The Greek garrison in the city of Smyrna is nothing more than a gendarme for Europe, charged with the duty of defending the Straits against an Asiatic attack. Greece is replaced in her part, which interests the great maritime Powers more directly, by Turkey. And that is not all. The principal clause concerning the application of the Treaty, and stipulating that Constantinople, with the surrounding districts in Europe and Asia, might be taken from Turkish administration if, six months after its ratification, the Treaty had not been applied integrally, has been removed. This clause constituted the

strongest guarantee for unredeemed Hellenism, its highest hope, and the basis upon which a new Hellenism might have been raised. But this clause has also vanished. And M. Gounaris is simply occupied with the problem as to whether the officers of the local gendarmerie in Smyrna are to be Hellenes or foreigners.

The above extract is illuminating in more senses than one, and clearly exposes the full extent of the "megala idea" which is and probably will be for some time to come the principal obstacle to a lasting settlement in the Near East.

Thus, once again, half measures have had the usual result of satisfying neither of the principal antagonists. There is some satisfaction, however, in the circumstance that all is not over yet, and that further discussions are practically inevitable. There is still, therefore, some chance, however slender, of a general settlement which will permit trade to be recommenced, and incidentally save Constantinople from general bankruptcy.

ALBANIA.

DURAZZO, March 10.

Foreign Representatives.

Mr. Eyres, British Consul, has arrived in Albania and has had an interview with the Prime Minister, Ilias Bey Vrioni. His arrival has been welcomed as that of the first foreign representative here in this second period of Albanian political life. It must be understood, however, that Mr. Eyres—who is known to have very friendly feelings towards this country—is not officially appointed Consul here yet, but has been sent by the Foreign Office to make certain investigations and report thereon. It is confidently hoped, however, that the British Government will ere long appoint him Consul-General, and even that a British Minister may soon be seen in Albania.

France has just appointed M. Beguni Bilecoq as Consul at Scutari. I understand that the Albanian Government has caused representations to be made at the Quai d'Orsay regarding the uselessness of appointing a Consul at Scutari, and one who will not even be in touch with the local authorities.

The Elections.

The elections are almost over. The people have taken real interest in this manifestation of political life, but there have been certain difficulties to overcome. At Scutari, where there has never been a census, there was no certainty regarding the number of deputies to be elected, or as to the proportions of Moslems and Catholics. At Kortcha there were Greek intrigues, the most influential agent being the famous Bishop Jakovos, whom the Albanian authorities have to tolerate. In spite of these difficulties, the elections have passed off quite satisfactorily. The Nationalists have a large majority.

A False Alarm.

During the last days of February rumours were current of Greek activities on the Albanian frontier, and there were lively fears of an attack by the Greeks. These rumours greatly alarmed the Albanian Government, which made urgent representations to the Great Powers; but happily the alarm turned out a false one. In all probability the movements across the Greek frontier were in connection with the despatch of troops to Asia Minor, though it may have been intended to influence the elections in this country. At present the country is absolutely calm.

Two Albanian Memoranda.

The Albanian Government has forwarded (on March 2 and 3) two memoranda—one to the four members of the Supreme Council (Britain, France, Italy, and Japan) assembled in London, and the other to the League of Nations. In the former, the Albanian Government reminds the Great Powers that Albania, recognised as an independent and sovereign State in 1913, has just been admitted to the League of Nations, with accompanying rights and privileges, and that the Great and Lesser Powers established diplomatic relations with this country, which it is advisable now to renew in order that Albania may resume normal political life and be able to devote itself to reconstruction and progress. The second Memorandum deals with the contempt of rights of minorities shown by Serbia and Greece in regard to Albanians who were brought under their rule in 1912. The Governments of Athens and Belgrade not only ignore the civic and political rights of the Albanian minorities, but permit daily ill-treatment of them. Quite recently the destruction of seven Albanian villages in the Kossovo region has been reported, with the deaths of twelve people.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

TOWARDS A NEAR EAST SETTLEMENT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I have not received my NEAR EAST this week, but those who like myself are interested in the Turkish and Egyptian problems have been afforded much food for reflection in the various *communiqués* and articles published in *The Times* of the 14th and 16th inst. Personally speaking, holding the views that I do on the Turkish question, I can but exclaim at the complete change of front on the part of the Prime Minister; but whether our prestige in the Near East has been thereby enhanced I am more than doubtful. In fact, I fear that throughout the Moslem world it will be regarded as a complete climb-down on the part of our Government, not because we have been persuaded of the justice of the Turkish claims, but because we are afraid of the consequences which will ensue if we continue to turn a deaf ear to their demands. From first to last we have made a gigantic muddle of this Near Eastern question, as, in addition to the millions of taxpayers' money which has been wasted in Mesopotamia and the unnecessary sacrifice of lives, our statesmen have failed entirely to recognise that Pan-Islam is more than a spiritual movement, that it is a practical working proposition which has to be reckoned with when dealing with Moslems even in secular matters. The result is that not only have we failed in Asia Minor, but we have largely discounted the good results which the Indian Reform Act was expected to bring about. Indian Moslems, who have hitherto been reckoned as the most loyal of His Majesty's subjects, have joined forces with Hindoo agitators, and the non-co-operation movement has caused incalculable mischief, if not open rebellion.

Unquestionably the terms now offered to the Turkish Nationalists are a move in the right direction, and it is not surprising that Bekir Sami Bey, when interviewed by *The Times* correspondent, should have stated "that we are nearer peace now than we were hardly a week ago." It is also not to be wondered at that Bekir Sami Bey should have protested against the retention of a Greek Army of Occupation in Smyrna, a stipulation quite unnecessary, and one calculated to undo all the good which the other concessions are likely to bring about. If I had been Bekir Sami Bey, I should have also looked on the proposal of a Christian governor over the Smyrna area with grave suspicion, and should have insisted that, whoever else was appointed, M. Venizelos should be barred. M. Venizelos is too enthusiastic a supporter of the larger Greek scheme, and has been the cause of all the mischief in Asia Minor hitherto. M. Venizelos may be too big a man for such a post, but I am quite convinced that were he appointed it would very soon cease to be a governorship and become an independent kingdom of the Greeks in Asia Minor. A Smyrna municipality on the lines of the Alexandria Municipality would, with the help of the Mixed Gendarmerie, surely give the Greeks in Smyrna all the rights they are entitled to?

One word as regards Egypt and Prince Ibrahim Hilmi's article published in *The Times* of the 14th inst. He appears to be voicing the views of a Moderate Party in Egypt, if one is still in existence. The opinions expressed in the article as to the cause of all the trouble are more or less what Sir Valentine Chirol and the Milner Commission have already recorded; but the Prince's proposal for the creation of a Second Chamber to control the elected Council is, I think, thoroughly sound; and the files of THE NEAR EAST will show that it was a form of control which suggested itself to me as the best form of control for the Indian Councils, which were under consideration at the time my article was published. The idea did not find favour, even if it was ever considered, by the Indian authorities, who preferred the Diarchy system with its reserved subjects. The proposal is, I think, worth consideration in Egypt, and was (or one very similar), if I remember right, at one time recommended for India by Mr. Lionel Curtis in his "Letters to the People of India." The details of such a constitution and franchise were also set forth by me in my "Recollections and Reflections," published in 1919.—I am, etc.,

COLES PASHA.

Diarritz, March 17, 1921.

ENGLISH IN BULGARIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The English-Speaking League of Sofia was instituted in 1911. The succeeding wars, of course, suspended its work. It was restarted immediately after the Armistice, and is now in full working order. It counts to-day more than 200 members, residents of Sofia. The object of the league is to cultivate good

and social relations among the English-speaking residents in Bulgaria, to encourage the spread of the English language and literature, as also of English manners and education. For this purpose three-monthly evening courses in English are given under the direction of the league, public lectures are arranged for, to which non-members also are admitted, and social gatherings are held fortnightly in the rooms of the league. In these last the capacity of the rooms is too often quite insufficient. On special occasions special entertainments are introduced. Thus, on the eve of the English Christmas special choirs sing Christmas carols. An institution such as the league, has, I think, no need of recommendation to right-thinking Englishmen. There is not an important town in the Near East in which there are a French consul and a dozen of French-speaking persons without an "Alliance Française" encouraged and largely supported. But the British and French Governments differ vastly in their procedures in such matters. A pleasant and useful exception to the English rule has just been made by the present British Minister in Sofia, Sir Arthur Peel. His Excellency gave a tea party, with a dance, in the Legation on the 28th of last month to a part of the members of the English-Speaking League, and I understand that he proposes to repeat the experiment. The entertainment was a great success for the league, and I hope a pleasant surprise to the host.

The Bulgarians are great readers. Unfortunately there is a marked deficiency in the league's library. The books are few and too expensive to buy. A few generous Englishmen and Americans have responded to the league's appeal for books. Amongst the first I may mention the late Sir Edwin Pears, Messrs. H. M. Wallis and Kenneth Ledward, and very recently Lord Northcliffe. His lordship has sent twenty parcels of books in memory of the late J. D. Bourchier.

It requires so little to support such an institution adequately and to enable it to develop its work of social progress, culture, and enlightenment.

Bulgaria has turned out an unfortunate country, but surely her efforts for good and useful work should be generously appreciated by those who cannot deny that such efforts and work are also for the advancement of their interests. The English-Speaking League of Sofia, I do believe, claims their support.—I am, etc.,
P. M. MATTHEEFF.

Sofia, February 5, 1921.

BRITISH PRISONERS IN TURKEY.

The negotiations undertaken with the Turkish Delegation during their recent visit to London for the mutual exchange of prisoners of war, learns Reuter, are now nearing completion, and it is hoped that the repatriation will shortly take place. Under this arrangement twenty British prisoners of war who have been held captive by the Turkish Nationalists in the neighbourhood of Angora will be repatriated in exchange for certain Turkish Nationalist prisoners held by the British Government. One of the British prisoners who will be repatriated in accordance with this arrangement is Colonel Rawlinson, brother of Lord Rawlinson, who was sent on a military mission to the Caucasus about eighteen months ago.

Beersheba municipality has decided to erect a bust of Lord Allenby in Beersheba to commemorate the first victory of the Allies in Palestine. The bust will be the work of a Jerusalem sculptor, and will be in Palestinian stone.

The Queen of the Hellenes has intervened on behalf of the Greek refugees from the Caucasus now in camps at Salonika, where their condition is reported to be very insanitary and their death-rate from typhus and dysentery very high. The Government has accordingly sent £20,000 for immediate relief.

MUSICAL NOTES.

The McCullagh String Quartet.

We have heard much recently of the virtues of female musicians, and it was perhaps with ears saddened by the recollection of failures by other lady chamber players that we went to hear the concert given by the McCullagh String Quartet at the Mortimer Hall on March 21. This quartet is composed of four ladies from Liverpool, and, though this was their first appearance in London, let us say at once that here is a competent body of lady musicians, well worth hearing. It is true that they do not possess in unusual measure any of those qualities supposed to suffuse from their sex—emotional warmth, dash, fire, and the rest of it—but they do play in tune, their discipline is good, and their modesty quite charming. Novacek's quartet in E flat is not a bright work, and the acoustics of the Mortimer Hall made its inner parts sound thinner than they actually were, so that the performance was never moving; however, they certainly justified their claim to consideration. In Holbrook's Pianoforte Quintet, which they played with the composer at the pianoforte, there is too much that is commonplace, and one would willingly have heard this quartet in things of greater movement. It was unfortunate that J. R. Heath's "The Flowers of Flame," a dramatic song sequence with string quartet and pianoforte, should have been introduced at this concert, for the Mortimer Hall is the last place in the world where such a work should have been given. The singer, Mr. John Goss, had quite the worst time of it; but the audience, who could hear but few of the words, ran him a close second. As far as one could judge the work under such conditions, it was surprisingly bad. J. R. Heath is capable of much better stuff than this.

Miss Isabel Gray.

In Miss Isabel Gray's pianoforte playing there is a very certain but fixed attraction; her restraint is fine, but a lack of spiritual abandon defers one's admiration of her. There was much confidence—even audacity—in her performance of three concerti at the orchestral concert which she gave, with Sir Henry Wood and the New Queen's Hall Orchestra, at the Queen's Hall on March 22, but it was justified. Catoire's Concerto in A flat (Op. 21), Rachmaninov's in C minor (Op. 18), and Cesar Franck's "Variations Symphoniques" are about as stiff a test as you may wish, and, technically speaking, Miss Gray came through brilliantly. There are a quite delightful neatness and good finish in her playing, which save it from being superficial display. But at present her tone is a little shallow, and there is a want of intimacy that tends to make a monotonous impression. However, these things, which seem to derive from deliberate restraint rather than lack of temperament, will probably alter, for her potentialities are manifestly very great.

Sir Henry Wood's orchestra, which did not seem in very good form, made small appeal with Butterworth's "Shropshire Lad" Rhapsody, but they gave an adequate first performance (in a London concert hall) to Ravel's suite, "Le Tombeau de Couperin." This pianoforte music has been most charmingly orchestrated, in that delicate way of which Ravel is a master. Mozart's Minuet in D was a happy piece to place between Rachmaninov's sentimental concerto and the strictly governed emotion of Franck's Variations; but for Miss Gray to choose as an encore the drearily long Prelude in E minor of Rachmaninov was surely an error. This Russian is not a cheery soul at the best of times, but to let him spread his sentiment at the end of an interesting programme is to produce an anti-climax.

The London Choral Society.

It was hard luck on the London Choral Society, whose ambition is as high as that of any choral body, that its performance at the Queen's Hall on March 23 of Beethoven's "Mount of Olives" and "Solemn Mass" should be marred by the accidents that befel the soloists. Criticism is gratuitous when impromptu soloists have to be called upon; though the singing of Miss Lilian Berger, a very complete musician, who volunteered her services when Miss Astra Desmond failed to appear, was, in the circumstances, memorable. Of the rest not very much can honestly be said in praise, though the choir sang with more spirit than is their custom. No defects of time, attack, intonation, and so on could obscure the splendour of the "Credo" in the Mass; here, indeed, the sheer depth of Beethoven was sometimes reached, particularly in the orchestral passages. One felt sorry for the conductor, Mr. Arthur Fagge, who, though never imaginative at the best of times, might have done much worse in the extremely trying conditions.

ANDANTE.

An urgent appeal has been received by the Armenian Refugee Fund in London for help for the Armenians, who are now experiencing the effects of a terrible food crisis.

NEAR EAST BOOKSHELF.

- I.—"CYPRUS UNDER THE TURKS, 1571-1878." By H. C. Luke, B.Litt., M.A. (London: Oxford University Press. 8s. 6d. net.)
- II.—"A LADY DOCTOR IN BAKHTIARI LAND." By Elizabeth N. Macbean Ross, M.B. (London: Leonard Parsons. 7s. 6d. net.)
- III.—"THE PILGRIM IN JERUSALEM." By Rev. O. H. Parry, M.A. Illustrated. (London: S.P.C.K. 10s. net.)

I.—TURKISH CYPRUS.

The Turks held Cyprus for three centuries (1570-1878), wresting it from the Venetians, whose occupation lasted eighty-two years. The three preceding centuries of Lusignan rule had been a period of amazing wealth and luxury, which left architectural monuments of great beauty and interest. But the Orthodox Greek Church, to which the bulk of the people belonged, had been reduced to complete submission by the Latin Church, whose Archbishop was supreme. The Ottoman invaders were, therefore, almost welcomed by the Greek-speaking Cypriots as deliverers, and the Sultan, whose favour was thus gained, restored the Orthodox Archbishop and abolished the existing serfdom. The people, however, only passed under another form of tyranny. They had to pay to follow their religion, and to contribute heavier taxes than the Turks, who were brought into the island in large numbers to appropriate the best lands. The Porte found a taxable population of about 85,000, in a population estimated at 197,000. Then began a period of degradation and oppression in an island much afflicted by drought and locusts. Many left it for Crete, Corfu, and the Morea. Figures are unreliable, but it is unlikely that the Turkish element ever exceeded the Greek. The island became a Pashalik, under the Dardanelles vilayet; and later the estate of the Kapitan Pasha (Lord High Admiral), with a Musellim (*Mutasellim*) as resident Governor. Subsequently it became a fief of the Grand Vizier. Governors bought their posts, and recouped themselves by squeezing what they could out of the people. There was but rarely a good and well-disposed Pasha. The superior commercial activity of the Greeks enabled them to redeem their monasteries and Church properties. Meanwhile the Greek Archbishop—the Ethnarch, or political head of his community—and the Ottoman Governor found it to their mutual interest to keep on friendly terms, and under this "unholy alliance" the unfortunate Cypriots were unmercifully fleeced. Sometimes the rapacity of the Prelate led to his downfall, and sometimes, on the other hand, bishops proceeded secretly to Constantinople to protest against the unbearable oppression of the Governor. The reforms of Mahmoud II. and his successor marked a new, and in some respects better, era. But Ottoman laws, good as they are on paper, are disregarded in practice, and too often become dead letters. The Greeks now sought in ever-increasing numbers to acquire Hellenic nationality, and the Turks saw with alarm that Cyprus would soon become a Greek colony, with the Sultan's authority at an end. The Porte therefore decreed that the Sultan's permission was necessary for a change of nationality. A rising of the Turks in 1804 was a prelude to that of 1821, when the Turkish Governor found in the Greek rebellion a pretext for ruthless repression in Cyprus.

The British connection is of interest. A British Consulate is first mentioned in 1626. The archives date from the last part of the eighteenth century. Consuls were appointed, up to 1825, by the Levant Company, which traded and was well represented in Cyprus. We find British merchants lending money to Cypriots at 20, or in reality 30, per cent., since they took interest in kind (silk, cotton, wine, and cereals) at their own valuation. The British name stood higher than that of any other nation, and their relations with the Turkish authorities were apparently always friendly.

Mr. Luke has done good service towards filling the gap in Cyprus annals caused by the sterile period of Ottoman misrule. He has drawn largely from the excellent *Excerpta Cypria* of the late Mr. C. D. Cobham, and from the archives of the British Consulate in Cyprus, now first unearthed by him. Perhaps it would have been well had he relegated some of the correspondence to appendices, and given us more, in narrative form, from his own pen. Perhaps he will do so in a future and fuller edition.

II.—A LADY DOCTOR IN LURISTAN.

From time immemorial the Bakhtiaris have occupied a mountainous tract in Southern Persia known as Luristan. Their habitat lies athwart the communications between Teheran and the Indian Ocean, and commands the lower reaches of the Karun, which is Persia's only navigable river. Hence their influence on her politics is out of all proportion to their numbers. It is increased by a well-knit

feudal organisation, which—despite internecine struggles for power—has enabled them to retain virtual independence. Dr. Elizabeth N. Macbean Ross, who lived for several years in Luristan as a lady doctor, gives us much curious information regarding the powerful Bakhtiar tribes. Government is in the hands of a group of ruling families, the males being designated "Khans" and the females "Bibis." Dr. Ross won her way into the innermost circle of this aristocracy, and ranked as "Bibi" during her residence in Bakhtiar-land. She traces a striking parallel between Scotland in the sixteenth century and latter-day Persia; but acutely explains the situation there by remarking that "the principle of evolution acts just as surely in the social development of nations as it does in the realm of science" (p. 110). Deeply interesting is her account of the manners and customs of the Bakhtiar clans. They have no history, poetry, or legends. Their language—probably an offshoot of the obsolete *Farsi*—cannot be reduced to writing. In point of religious belief, they are fatalists and agnostics, resembling in this respect the tribesmen of pre-Islamic Arabia. Each of their chieftains dwells in an isolated castle, surrounded by his retainers and rules the *vayyas*, or tillers of the soil, with a rod of iron. He keeps them at heel by controlling the system of irrigation, on which their crops depend, and, like the corresponding class in pre-revolutionary France, regards his luckless vassals as *taillables et corvéables à merci*. His womenfolk enjoy an exceptional position. They are for the most part well educated, capable housewives, and able to manage the family estates during the husband's protracted absence. Polygamy is universal, and, according to Dr. Ross, it works admirably in practice. She writes (p. 64):—

The Bakhtiar women are as a rule well treated, sheltered, protected, and cared for. Their children are brought up in the rank and with the status of the father, and certainly in the tribe with which I am acquainted, much of the frightful immorality prevalent in the West is conspicuous by its absence.

The Bakhtiaris are, indeed, model parents, eager to give their children the best education within their reach. It has become the custom to send boys of the aristocratic class to Switzerland for the purpose. Dr. Ross is inclined to regret this new departure, and there is no doubt that the British public school affords a better training to scions of a ruling race than any Continental Lycée. Many leading Bakhtiaris cherish strong British proclivities, but great mischief has been wrought of late years by an Indian renegade, who poisons their minds against our countrymen. It is sad to learn from Dr. J. N. Macbean Ross's Foreword that the authoress died of typhus fever while serving as a medical officer attached to the Serbian army, leaving behind her a memory which, as a high official said, "will live for ever in the hearts of the Serbian people." F. H. S.

III.—THE PILGRIM IN JERUSALEM.

Of the making of many books about Jerusalem there is certainly no end, and surely every lover of the Holy City will be glad of them as tributes to the supreme beauty and charm of her who is to them the centre of the world. "The Pilgrim in Jerusalem," we are told, "reproduces in literary form the talks the author was wont to give to the soldiers in Jerusalem." No doubt this explains the detached arrangement of the book, each chapter being rounded off as a separate article; and also its somewhat noticeable lack of historical sequence. Because each part of Jerusalem is treated in this isolated fashion we never finish with any period, but are constantly dragged backwards on our tracks to this or that person or event, and yet, when we reach the end of the book, have gained no clear outline of the story of Jerusalem. The author evidently has not lived in Palestine, and thus has had to rely upon guide-books and works of reference rather than upon personal knowledge and experience. He gives us a good list of "important works" upon Palestine, and has evidently read up his subject well; but it is strange to find Mark Twain and Mr. Fulleylove quoted at length, and barely a word from any real authority on the Holy City.

Mr. Parry thinks that "the absence of any sanctuary or apse seems to show that the Mosque El Aksa was built for the Moslems" (p. 52). He should give his authority for such a definite statement of opinion, which is by no means generally held. We think also that he errs in stating that the four crosslets of the Jerusalem Cross represent the "four principalities of Antioch, Beyrout, Ascalon, and the Fortresses" (p. 105). Were they not the four great fiefs of Tripoli, Antioch, Edessa, and Galilee (or, as some say, Kerak)? Beyrout was only a lesser seignury in the County of Tripoli, and Ascalon in the Earldom of Jaffa (Conder, "Latin Kingdom of Jerusalem," p. 162 and maps). Of the Cross's inner and more beautiful meaning—the Five Wounds of our Lord—he says nothing. Another slip is the statement that "Godfrey entered Jerusalem on Good Friday, 1099" (p. 93). Jerusalem was taken on Friday, July 15, and one of the early Pilgrims tells us that over the great doorway of the Church of the Holy Sepulchre were carved the words—

One thousand and one hundred years save one
Since Blessed Mary bore her Glorious Son,
When rose upon July its fifteenth sun,
By Frankish might Jerusalem was won.

For the illustrations, also the work of the author, we have nothing but praise; they are charming, admirably chosen, delicate in execution, and most accurate. The headings to the chapters are also delightful, most suggestive and unusual. Certainly the writer has loved his subject, and we are sorry that he did not allow his genuine personal feeling to break through and disperse the guide-book atmosphere that pervades the book. E. M. E. B.

NEWS IN BRIEF.

The Chæphoræ of Aschylus is to be performed in the ancient Greek theatre at Smyrna on April 16, 17, 20, 24, and 28.

M. Clemenceau reached Paris on March 23 on his return from his tour in the East, and was enthusiastically welcomed.

The winter has been exceptionally severe in Northern Persia, and many muleteers are reported to have perished on the road.

The Secretary for India has appointed John Norman Garnock to superintend the transfer of lascars or other persons at North Shields.

Yugoslavia has decided to take part in the conference of the representatives of the Austrian Succession States, which is shortly to take place in Rome.

Adar II. 21, 5681, of the Jewish Calendar.

Princess Beatrice left Algiers for Paris on Tuesday.

The Aga Khan left London on March 23 for Paris for Easter.

Earl and Countess Curzon of Kedleston spent Easter at Kedleston.

Sir Henry and Lady Bax-Ironside are spending a short holiday in Paris.

The Ranee of Kalsia, with her daughter, has arrived in London from India.

Air Marshal Sir Hugh Trenchard arrived at Marseilles from Cairo on March 23.

Viscount and Viscountess Milner will return to London on April 20 from the South of France.

Mr. Alfred I. Ellis, of Birkdale, Southport, who died on December 27, left £500 to the Madras Tamil Mission and Orphanage.

A Reuter's message from Athens announces that Madame Manos, widow of the late King Alexander of Greece, has given birth to a baby girl.

M. L. Caftanzoglou, Minister Plenipotentiary and Secretary-General to the Greek Delegation, has been spending a few days in the Isle of Wight.

Sir Harry Lamb, who has been serving on the British High Commission in Constantinople, arrived at the Consulate-General at Smyrna on March 20.

Colonel Sir Malcolm Murray, who accompanied the Duke of Connaught to India, has returned to London. The Duke will probably be back towards the end of April.

Prince Danilo, eldest son of the late King Nicholas, has abdicated his claim to the Montenegrin throne in favour of his nephew Prince Michael, son of the late Prince Mirko.

Mr. Sachidananda Sinha, the Vice-President of the Indian Legislative Assembly, gave a banquet at Delhi last week in honour of Mr. A. F. Whyte, the President of the Assembly.

Lord and Lady Inchcape left London last week by the P. and O. Sicilia for Marseilles. It is their intention to make a short cruise in the Mediterranean on their yacht, the Rover.

The Kaisari-i-Hind, with Lord Reading on board, arrived at Port Said on March 23. Lord Reading landed, proceeded to Cairo by special train, and will rejoin the ship at Suez.

M. Costa Stoyanoff, Bulgarian Director of Public Debt, has arrived in Paris from Amsterdam, and together with Mr. Raiko Daskaloff, Minister for Commerce, will return shortly to Sofia.

M. Gounaris, the Greek War Minister, who was to have left London last Thursday, was confined to his room through indisposition, states Reuter, and was consequently obliged to postpone his departure for Athens until March 25.

The King has granted permission to Canon R. A. Maclean, O.B.E. (temporary C.F.), to wear the Order of St. Sava (4th class) conferred on him by the King of the Serbs, Croats, and Slovenes.

A marriage has been arranged, and will take place shortly in Rangoon, between A. V. Rooth, M.C. (late captain, 47th Sikhs), of the Bombay Burmah Trading Corporation, Ltd., youngest son of Mr. and Mrs. G. A. Rooth, Ashover, Chesterfield, and Mary Sidney Theresa, elder daughter of the late Sir John Lentaigne, F.R.C.S.I., of Tallaght, Co. Dublin, Ireland.

Sir Edward and Lady Boyle have returned to London from Belgrade, where, accompanied by the Dowager Lady Boyle, they have made arrangements for bringing the operations of the Serbian Relief Fund to a close.

Mr. Eugen and the Hon. Mrs. Millington-Drake are returning to Paris at the end of this month, and later proceed to Bucharest, where Mr. Millington-Drake has been appointed First Secretary of the British Legation.

An engagement is announced between Frederick Ewart Robertson, eldest son of the late F. E. Robertson, C.I.E., and Mrs. Robertson, and Brita Muriel, only child of H. R. Cobbold and Mrs. Cobbold, 20, Lee Road, Calcutta.

March 19 being the centenary of the birth of Sir Richard Burton, traveller, scholar, and translator of "The Thousand and One Nights," numbers of people visited St. Mary Magdalene's Cemetery, Mortlake, and laid wreaths on his tomb.

A marriage has been arranged, and will take place in April, between Major Evelyn St. Clair Gray, M.C., Poona Horse, and Evelyn, youngest daughter of the late Thomas Rome, J.P., of Charlton Kings, Gloucestershire, and of Mrs. Rome, Raymead, Goring-on-Thames.

At a meeting of the committee of the Association of Ceylon Golfers, held at the offices of the Ceylon Association in London, it was decided to hold a golf competition at Deal on June 7 and 8. Competitors should send in their names and their lowest club handicaps to the Secretary of the Association, 6, Laurence Pountney Hill, E.C.4, as soon as possible.

OBITUARY.

A Reuter's message announces that Mr. Chudleigh Garvice, a commandant of police in Egypt, has died at Alexandria, after four months' illness. He was the son of the late Mr. Charles Garvice, the novelist.

The death is announced of Mr. T. Evans Wansbrough, who during the war served voluntarily as an ambulance driver with the French Red Cross on the Salonika front. He was awarded the Croix de Guerre for his services.

The Jerusalem correspondent of *The Times* reports the death, on March 20, of His Eminence the Grand Mufti of Jerusalem, Kamil Hussein Effendi, who, he adds, was a man of fine character and much respected by all communities.

News reached London last week of the death at Calcutta of Sir Rash Behari Ghose, C.S.I., at the age of 75. He was a famous and great lawyer and a fine scholar. He was appointed to the Tagore Law Professorship in 1876, and had served on the Bengal Legislature and twice on the Supreme Legislature.

Sir Stuart Hogg died at his residence, Villa Celine, Beaulieu, on March 23. The fourth son of Sir James Weir Hogg, he entered the East India Company's service in 1853, and served as Assistant Commissioner in the Punjab, Collector of Burdwan, in Bengal, and Chief Commissioner of Police and chairman of the Municipality at Calcutta. He was knighted in 1875.

General Roger Pine Coffin has died at the Old Hall, Brackley, aged seventy-four. With the Royal Marines he saw active service with the Egyptian Expedition of 1882, taking part in the occupation of Port Said and the actions of El Magfar, Tel-el-Mahuta, Mahsameh, Kassassin, and the battle of Tel-el-Kebir. He was twice mentioned in despatches, and received the medal with clasp, the bronze star, and the brevet rank of major. In the Sudan Expedition of 1885 he was present at the actions of Hasheen and Tofrek and the operations at Tamai, and received two clasps. He was promoted to the rank of general in 1911.

General Gouraud, the French High Commissioner for Syria, has arrived in Constantinople.

The Alexandria Horticultural Society are holding shows on April 22, 23, 24, and November 5 and 6.

It is announced that the Belgrade Government have decided to take part in the conference of the representatives of the Austrian Secession States which is shortly to take place in Rome.

Professor Einstein has joined the Zionist delegation which accompanies Dr. Weizmann to the United States for the purpose of raising subscriptions for the Keren Hayesod £25,000,000 fund for Hebrew work in Palestine.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

March 22.—Colonel Amery informed Mr. Mosley that the latest figures show that the number of Indians employed by the Administration in Mesopotamia in December last were, under the Labour Directorate about 24,000, in the Inland Water Transport about 10,000, and on the railways about 19,000; and in other branches of the civil administration, the latest return for which is August, 1920, about 2,200. The last figure has since been reduced.

March 23.—Mr. Montagu informed Sir William Joynson-Hicks that the Prime Minister had decided to submit the military requirements of India to a special sub-committee of the Committee of Imperial Defence, and that the Government of India have announced that they are appointing a committee of the Viceroy's Executive Council to prepare the material to lay before the Committee of Imperial Defence. He gave an assurance that no further reductions will be made in the Indian Army pending the inquiry.

March 24.—On the motion for the adjournment of the House, a brief debate arose on the question of the British mandates for Mesopotamia, Palestine, and East Africa. The subject was introduced by Mr. Ormsby-Gore, who urged the consideration of the terms of the various mandates by both Houses of Parliament before the Government submitted their final draft to the Council of the League of Nations for their consideration and ratification. Mr. Ormsby-Gore also expressed his satisfaction at the scrapping of the Anglo-Persian agreement, and expressed the view that the interests of both Great Britain and Persia would be served by its complete abandonment. He hoped that the Foreign Office would convey to the British diplomatic representative in Teheran the thanks of all those interested in the well-being of Persia on the skilful manner in which he had safeguarded British interests during a difficult period. Colonel Archer-Shee hoped that Article 22 of the Covenant of the League might be amended so as to leave the final say regarding the terms of the mandates with Parliament rather than with the Council of the League. Lord Robert Cecil intimated that he would press for the appointment of a Select Committee of Parliament after the Easter recess to examine the draft mandates prepared by the Government in detail. He expressed doubts regarding the adequacy of the clauses of the Mesopotamia Mandate dealing with the use of military forces and concessions. Both Mr. Ormsby-Gore and Lord Robert Cecil countered the view held in certain quarters that the terms of the mandates were likely to impose increased financial burdens on Great Britain, and supported the view that had the policy of the Government during the interval that has elapsed since the Armistice been more closely on the lines of policy now embodied in the draft mandates many millions might have been saved.

Colonel Amery replied, and declined to commit the Government to the submission of the draft mandates to Parliament, and pointed out that the drafts had been the result of a series of negotiations with the principal Allied Powers to whom rights over the territories in question had been conveyed by the peace treaties. He agreed with Mr. Ormsby-Gore that the heavy expenditure in the Middle East had nothing to do with the League of Nations, and would equally have been incurred had no League existed. In regard to both Mesopotamia and Palestine, he had high hopes that the result of Mr. Churchill's conferences in Cairo and Jerusalem would enable a "drastic and sweeping reduction of expenditure" to be made. He added that "the more completely the inhabitants of Mesopotamia stand on their own feet the better we shall be pleased."

Lord Robert Cecil also asked some questions regarding the new position of the Treaty of Sévres. He hoped there would be no far-reaching changes in its provisions, especially with regard to Constantinople, which had been "the curse of Europe for centuries." Why the Turks should receive more consideration than the Germans was a mystery to him. They entered the war against England without a cause, they waged it with cruelty, and did their best to exterminate brutally a whole race. That we should turn round and show tenderness to the Turks at the very moment we were advertising our firmness towards Germany was, in his opinion, a grave defect of justice and an even graver one of policy.

Mr. Harmsworth (Under-Secretary for Foreign Affairs), in replying, was unable, in view of present events in Asia Minor, to say anything more than has already been said by the Prime Minister regarding the Treaty of Sévres.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

THURSDAY, MARCH 31, 1921.

THE TRANSCAUCASIAN CAULDRON.

Situated between Russia and Turkey, and left, so far as the Allied Powers are concerned, to its own devices, Transcaucasia could hardly expect to escape the chaotic condition into which it has fallen. Amid the welter that has followed the war which was to end war, the Transcaucasian republics do not for the moment occupy a very important position in the eyes of the world; but they have a geographical significance which has not been lost upon either of their great neighbours, and when the Allies can divert their attention from things nearer home, they, too, will find that they cannot afford to be indifferent to the future of the three States commanding both the Russian and the Turkish high road to the Middle East and India. It is well, therefore, for the British public to keep in touch as far as possible with the course of events between the Black Sea and the Caspian, even if it is difficult to understand the policies that lie behind the kaleidoscopic changes that are taking place there. The one fact which for the onlooker emerges out of the almost hopeless tangle is that both Russia and Turkey would be consulting their own interests better by allowing Georgia, Armenia, and Azerbaijan, severally or collectively, to act as a buffer between them than by seeking territorial expansion at the expense of any of the three in order to bring Russian and Turkish territory into closer proximity. In this particular, it so happens, the interests of the Allied Powers are identical with those of Russia and Turkey; and for this reason it would seem incumbent upon the Entente Governments to lend at least their influence, if they cannot give more material support, to the forces struggling to carry out a policy of such general advantage. But no attempt would seem to have been made either at the recent London Conference or in the Trade Agreement with Russia to plead the cause of peace and free development in Transcaucasia. If Allied relations with Russia and Turkey improve, one of the first steps to be taken should be to persuade both countries to adopt a self-denying policy towards the three republics.

It is easier to follow the sequence of recent events in Transcaucasia than to understand the interplay of policies which have led up to those events. As is known, the first instinct of the three States of Georgia, Armenia, and Azerbaijan on achieving independence was to form a federation. The arrangement, unhappily, lasted for a few weeks only, as the Georgians held that their interests called for a declaration of war on Turkey, and they were unable to carry Azerbaijan with them. This separatist movement proved the undoing of all the States, as it exposed them individually to Bolshevik designs. Azerbaijan was the first to succumb, a year ago; Armenia followed; and now a combined Red attack on Georgia has placed Russia once more in authority over her Caucasian provinces. It is less than a year since the Soviet Government accorded recognition to the Georgian republic, and it would have been thought that the Socialist character of the Government would satisfy Bolshevik requirements for the time being. In the opinion of the Georgians themselves, however, Moscow has been actuated more by racial considerations than by political doctrine. A particularly bitter cry has been raised from Tiflis against

the "Red Imperialists," who have "annihilated the most democratic State that ever existed." Between Russia and Turkey, Georgia has, indeed, fared badly. While her Government has been driven literally into the sea—it is reported to be located at present on a steamer lying off Batoum—the Turks have seized the districts of Artvin and Ardahan. The attempt to secure possession of Batoum as well was not successful; after a brief occupation of the town the Turks were expelled, as a result of the Georgians making common cause with the Bolsheviks, and a Russo-Turkish Treaty signed at Moscow on March 16 cedes Batoum to Georgia, while confirming the Turkish Nationalist Government in its possession of Artvin and Ardahan, together with Kars, which has been taken from the Armenian republic. The attitude of the Russian Bolsheviks would seem to be that they are prepared to recognise Georgian independence only in the event of the country adopting a Soviet régime. To judge from the terms of the Moscow agreement with the Turks, they are satisfied that the arrangements made for the Red conquest of Georgia suffice to keep it permanently Red, or they must have had other reasons for an accommodation at this time with Turkey. But events in Armenia, where the Bolshevik régime has since been overthrown, suggest that other countries as well as Russia fail to appreciate the blessings of Bolshevism and wait only for the first opportunity to rid themselves of it. The new Armenian Government is confident that it has disposed of the Soviet danger from within, but it remains to be seen whether the Moscow authorities will not order an organised campaign against Armenia on the lines that have proved effective in the case of Georgia.

In spite of the recent agreement between Moscow and Angora, the Turks can hardly retain the illusion that in making common cause with the Bolsheviks they have hit upon a settled policy for the Ottoman Empire of the future. The experience of the Caucasian republics shows that Soviet friendship is conditional upon the acceptance of Bolshevik doctrines, which are not likely to commend themselves to Turkish ruling classes. Unless, however, she does accept these doctrines, Turkey can have no permanent feeling of security against a Soviet Russia, while she has the certain knowledge that a restoration of Imperial Russia will bring with it the old designs upon Constantinople. In these circumstances there can be only one sound policy for the Turks, to create a buffer territory in Transcaucasia between themselves and the Russians, and to safeguard their retention of Constantinople by arriving at an understanding on the subject with the League of Nations. If the Angora authorities are capable of looking far enough ahead, they will seize the opportunity that now presents itself of coming to terms with the Allied Governments. A successful Greek offensive cannot fail to impair the position they have gained as a result of the London Conference; if, on the other hand, the Greeks are pressed back upon Smyrna, the Turks will have gained a relatively unimportant advantage, as they will be left with the more serious problems confronting the future of their country still unsolved. Both Turkey's choice of policy and the future of Transcaucasia call for a sympathetic attitude on the part of the Allied Governments. The withdrawal of British influence from the young Republics was a misfortune for all of them, and there is every reason to suppose that they are sufficiently aware of the fact to appreciate any help or advice that can now be given them. No costly expedition is required, and even a mission could be restricted to very small dimensions. It should be possible, at an outlay that could not be challenged by those whose concern for the national welfare is inspired mainly by the desire to embarrass the present Government, for Great Britain by friendly counsel to assist Georgia, Armenia and Azerbaijan along the path of mutual toleration, leading to political co-operation, while persuading the Turks that their own interests lie also in this direction. At least the attempt is worth making. The policy of leaving inexperienced Governments to stew in their own juice is fatal to the world's peace, and there should be other ways of helping the lame dogs among the nations over stiles than by means of formal mandates.

SOME SILHOUETTES.

By "Cactus."

I.—HACKING TO THE MEET.

At a cross-roads stands a staff officer at his pony's head, bridle over arm; pony and man in marching order.

The deep sandy roads, bounded by high cactus hedges, gleam white under a full moon. Allenby's cavalry is concentrating for the "big push," and a Division is moving under cover of darkness from its camp to the orange groves where it is to lie hidden, close behind the line, ready for zero day.

The officer looks anxiously at his watch, and glances in the direction from which he expects the brigades. As he does so he hears behind him the gurgling of a grousing column of camels approaching the line of march of the cavalry at right angles. "Blazes!" he mutters, "who the devil are these?" and mentally curses someone at G.H.Q. for having boxed the march tables. He stops the Australian officer riding at the head of the column. "Who are you?" "133rd Camel Company—water for X. Division. Must be in Wilhelme by 0600, or the 'feet' won't get their water."

"Many behind you?"

"Nope! 'Nother company perhaps."

"Right! Get a move on quick. There's a Division crossing your line in a few minutes, and there'll be hell to pay if they aren't under cover before 'Johnny Turk' gets up in the air and spots 'em."

The column winds slowly by, water gurgling in the *fantassies* as they rock to and fro on the creaking saddle packs. Led by blue-clothed, puggaried Egyptian Labour Corps, endless camels stream by. To the anxious watcher it seems as though all the camels in the world are collected in that column. "I believe the blighter has bluffed me," he thinks to himself; and pictures the wrath of the approaching brigadier if he finds his road blocked.

Just as he hears the approaching jingle of the leading brigade the last camel grunts by.

Comes a ghostly brigadier with his staff, followed by regiment after regiment, shrouded in clinging, acrid dust, through which lance tips glitter intermittently in the moonlight; follow machine-gun squadrons—guns on pack, and still more cavalry. Brigade after brigade files silently by.

As the tail passes him the staff officer turns to his pony and tightens his girths. Feeling hungry, he unstraps his near wallet and pulls out what he hopes is a tin of chocolate. An ominous rattle meets his ears, and on opening the tin the contents prove to be a collection of spare buttons and badges.

"Well, old man," he mutters to his pony, as he swings into the saddle, "some servants are the frozen limit!"

II.—THE MEET.

Again moonlight and sand. It is the following night, but the sand this time is the sand of the almost tideless Mediterranean. To the south, almost as far as the eye can see, horses are picketed close under the cliff in case of a stray shell. To the north the sky is occasionally lit up by the flash of a gun, but on the whole it is wonderfully peaceful, and the men, British and Indian, are taking a last bathe before the hunt begins.

"A bit different from France," muses our friend of last night, as he canters along the sand.

Arriving at the head of the leading brigade, he finds a lance stuck in the sand bearing a divisional pennant. He pulls up, dismounts, and hands his pony over to his orderly.

Entering a cave, he finds his brother officers seated over the remains of a late supper.

"Well, are they all up?" asks the G.S.O.1.

"Yes; the rear brigade was in its position of readiness and off-saddled when I left them. Where's the General?"

"Gone to bed"—indicating an inner cave—"and by the same token you'd better turn in, too, when you've had some food. Hounds move off at four ak emma, but I don't suppose we'll go through much before eight. Well, I'm off to bed—night!"

III.—GONE AWAY.

The dawn on September 19, 1918, was heralded by the resounding crash of our barrage as our guns opened simultaneously at Zero hour. The cavalry, early astir, have been preparing for the long hunt which every cavalryman hoped against hope lay before him. Two hours after Zero the Division whose fortunes we are following is formed up along the beach, screened from the view of the Turk by Arsuf Head. On the cliff above is the headquarters of the Infantry division which is to make for them the "G" in "Gap" they had so often waited for in France.

In a dugout cut in the side of a gully leading up from the beach is the Infantry battle headquarters. Outside a cavalry and infantry officer are chatting.

"Well," says the Infantryman, "it looks as if you are going to have a show at last. What's your objective?"

"This time to-morrow," answers the Cavalryman, quietly, "we shall be in Nazareth, and with any luck we shall have nobbled old man Liman."

"Good lord! that's a bit optimistic, isn't it?"

"Well, our General has told the Chief he will get there, and nothing will stop him once he gets going."

A head pops out of the dugout.

"Divisional Commander wanted on the 'phone, sir."

Away slips the Infantryman up the hill, and returns in a moment with his General, who enters the dugout. Moments pass, and the Infantry Commander emerges, and calls the cavalryman up to him.

"Where's your General?"

"Still up at your O.P., sir."

"Well, young man," says the Divisional Commander, "you can tell your General that the infantry have got their third objective, and that I, General X., consider that the cavalry can now go through." The cavalryman salutes, and with a broad grin of delight sprints off on his errand.

"Der Tag!"

GREEK GIFT TO BRITAIN.

The Greek White Cross Society, which was organised to provide marriage gifts to daughters and sisters of Greek soldiers who gave their lives for their country, has signalled in a notable way its appreciation of the British soldiers who died while serving with the Salonika Army during the war. Through M. Spiros Matsoukas, its founder and president, the society placed in the hands of the British Ambassador at Athens a sum representing £1,612 12s. 10d., with a request that it should be distributed in marriage gifts to the daughters of British soldiers who died on the Macedonian front. The gift has now been transferred by the Treasury to the Royal Patriotic Fund Corporation for administration, and the corporation has decided to distribute it in sums of £32 to daughters married after their father's death. Applications, giving full particulars of the date of marriage, name, number, and regiment of father, and date of his death, should be addressed to the Secretary, Royal Patriotic Fund Corporation, 17, Waterloo Place, London, S.W.1.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:—
ANGLO-PERSIAN AGREEMENT. EGYPT. ANGLO-PERSIAN OIL COMPANY. ALBANIA. (March 21.)

THE EGYPTIAN CABINET.

The new Egyptian Cabinet is composed as follows:—

Prime Minister (without portfolio).....	ADLY YEGHEN PASHA
Vice-President of the Council (without portfolio).....	HUSSEIN RUSHDI PASHA
Minister of the Interior	ABDEL KHALEK SARWAT PASHA
Minister for Public Works, War, and Marine	MOHAMMED SHAFIK PASHA
Minister of Communications	AHMED ZIWAR PASHA
Minister of Education.....	GAAFER WALY PASHA
Minister of Wakfs.....	MIDHAT YEGHEN PASHA
Minister of Justice	ABDEL FATTAH YEHIA PASHA
Minister of Agriculture	NEJIB GHALI PASHA

Mesopotamia.

Mr. Percival Landon, writing from Baghdad in the *Daily Telegraph* of March 22, states clearly the problem of defending Mesopotamia. But, as he says, little can be done until the extent of the military force with which the Cabinet intends to fulfil its obligations under the Mandate is known. However, he proceeds:—

It may be of some guidance to Downing Street to know that at least eighteen months must elapse before an Arab army can be sufficiently organised and trained to assume the duties of external defence—duties which seem unlikely to grow less during that period. Nor must it be forgotten that internal dissensions are bound to break out as soon as the final decision as to the new Empire of Irak is made public, even if—even all the more because—that decision is based upon popular election. Unless, therefore, we are willing to admit defeat in that one corner of Asia where our interests, direct and indirect, are unrivalled; to confess our inability to handle a Mandate which was peculiarly one of our own seeking; and, above all, to Americanise our conception of our duty towards our neighbour in the world—we must be ready to see this new State through its first and helpless period by maintaining "force" here. That our way is set about with difficulties is unquestionable. No easy path will bring us to our goal. But let us, at any rate, comfort some of those who believe that the money invested there is merely thrown away. The country is amply rich enough to pay for its own salvation, and the timid would do well to remember a parable. Mr. Darcy sank a quarter of a million in this part of the world before he discovered a cupful of oil. But he then discovered also the Anglo-Persian oilfields.

The matter, indeed, is one to which we are already committed. There is a consolation to be found by some in the thought that our enterprise will be justified from the financial point of view. Others will be glad that we at least have not laid our hand to the plough and looked back. But no amount of moral satisfaction will alter the plain fact that in the carrying out of this, the only Mandate of importance that the peace has called into being, we shall need all the judgment, tact, experience, and resolution that we possess.

Changes in Constantinople.

Writing in the *Fortnightly Review* for March upon "Constantinople After the War," Mr. H. Charles Woods sums up his impressions of the changes which have taken place in the Turkish capital. The Russian occupation of Pera, the exceedingly high cost of living, and the new position occupied by the Moslem woman—these are the first things upon which he comments. Turning to politics, he sketches five courses which could be pursued in an attempt to settle the Eastern Question, and concludes by suggesting the following amendments to the Treaty of Sévres:—

1. A liberal interpretation of many of the clauses dealing with the financial and other forms of control. Everybody whom I saw in Constantinople made this point, and many added that, if the "Commission of the Straits" cannot be abolished, its authority should extend only to the waters, and not to the shores, of the Dardanelles and of the Bosphorus.

2. Asia Minor to be evacuated by the Greeks, and the Armenian frontier (upon the position of which the President of the United States is to arbitrate) to be drawn in such a way as to give reasonable satisfaction to Ottoman claims. Although the first of these points is of great importance, I believe that all just Turks might agree to the adoption of one of the following alternatives. Firstly, that a plebiscite under Allied control should be held now instead of, possibly, at the end of five years, and that, whatever be the result of that plebiscite, some special régime should be established for the port of Smyrna, where the Greek element of the population undoubtedly predominates. Secondly, that the whole zone, or at any rate the greater part of it, should enjoy an autonomy under the League of Nations or one of the Great Powers—a solution much less objectionable than is the presence of the Greeks in such an area.

3. In Europe the Ottoman frontier to be the pre-war and not the Sévres boundary. People whom I met in the East seemed to think that there were two possible substitutes for such a change. Firstly, the recognition of a frontier formed by the Enos-Midia line or by the line which limits the Straits Zone. Secondly, the creation of an autonomous and internationalised State to include what was Turkish and perhaps also the pre-war Bulgarian Thrace.

To summarise and to recapitulate, it may be said that the war has resulted in far-reaching changes in Constantinople and that the situation in Turkey is now much worse than at any time since the Armistice. In the present impasse, created by the existence of a Treaty which cannot be enforced and which it is difficult to destroy, it is impossible to suggest what may be the decisions of the forthcoming Conference, or to say whether that Conference will arrive at any decisions at all. In such circumstances, all that I can add is that there are two outstanding conditions which ought to be recognised. Firstly, although in repudiating M. Venizelos, the people of Greece have forfeited one of their strongest claims to Allied support, the interests and welfare of the large number of Hellenes domiciled at Smyrna and in other areas affected by a modification in the Treaty cannot be ignored. They are as much entitled to representation at the Conference as are the Greeks of the Old Kingdom or the Turks

of Constantinople or Angora. And, secondly, provided the rights of these Christians are safeguarded, once the Treaty is to be amended (and it must be amended), I think that no stone should be left unturned to secure amendments which, if they be not actually satisfactory, should at least be acceptable to all the better and more moderate sections of the Turkish people.

THE EVEREST EXPEDITION.

At a meeting of the Royal Geographical Society last week the President, Sir Francis Younghusband, announced that the King, who is patron of the society, had sent a donation of £100 towards the funds of the Mount Everest expedition, in which both the King and Queen took the greatest interest. Colonel Howard Bury, the leader of the expedition, has been received by the Prince of Wales, and has explained to him the maps and plans. Sir Francis Younghusband added that Mr. Harold Raeburn had already left for India; and all the provisions and mountain equipment had been despatched. They had heard from Major Morshead that his survey party would assemble at Darjeeling on April 1.

ARCHÆOLOGY IN PALESTINE.

At the first meeting of the subscribers to the British School of Archæology in Jerusalem, held at King's College recently, the Chairman, Sir Frederic Kenyon, announced that the Prince of Wales had consented to be the patron of the school. The Director, Professor J. Garstang, who has recently returned from Jerusalem, described the establishment of the school in a convenient building on the Damascus road, and stated that close relations had been established with the Government, and that a basis of collaboration and co-operation had been arranged with the French and American schools of archæology. The school was co-operating with the Palestine Exploration Fund in the excavation of the site of Askalon, where very interesting discoveries had already been made, and still more important discoveries were anticipated when the excavations were resumed in April.

The Chairman pointed out that, though the school had been established with an extraordinary measure of success, it could not be maintained and developed without much greater support, and he urged the present subscribers to endeavour to interest others and to obtain further support. The officers elected were Mr. C. E. Mott to be hon. secretary, and Mr. Robert Mond hon. treasurer. Sir Frederic Kenyon was unanimously elected first President of the school. The Vice-Presidents include Lord Curzon, Lord Allenby, Sir Herbert Samuel, and the Archbishop of Canterbury.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSBEH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The Bucharest Fair Project.

It will be seen from our Bucharest Correspondent's letter this week that there is some idea of holding the proposed British Empire fair at Bucharest this year. No one can doubt that the sooner the project is undertaken the better for the future of our trade with South-Eastern Europe, but the possibility of its materialising this year may, I think, be dismissed. There is not sufficient time to make the exhibition really representative, and it must be that if it is to fulfil its object.

The Answer to Lancashire.

It was obvious that Lancashire could hope for no satisfaction in regard to the Indian cotton duties as a result of the deputations of protest to Mr. Montagu, but the cotton county needed to be convinced that an altogether new situation had arisen in India, and that henceforward it would be useless to look to Whitehall for redress whenever any question of altering the cotton duties arose, and the necessary orientation of view will doubtless follow as the result of Mr. Montagu's unambiguous reply to the deputations. He pointed out that the Government of India had been given the right to consider the interests of India first, than which I imagine Lancashire could have had no plainer reply. He further remarked that the Indian Budget makes no special distinction in regard to cotton fabrics, that the duties have been raised to meet a deficit, and that Lancashire's goods are in the same position as other British manufactures. Admittedly there is no specific discrimination against Lancashire, but as our principal exports to India are cotton goods, it cannot be said that there is much in the point raised by Mr. Montagu. For the time being, of course, Lancashire is still in a favoured position, as the cotton Excise duty is maintained, but it may be assumed that that will go in due course, and it is obvious that Lancashire must be prepared for a time when India will represent a very different market from what it has in the past.

The Outlook.

It would be futile to pretend, as a contemporary does, that Lancashire will be unaffected to any great extent by the change, for the result must obviously be immensely to increase the market in India for home-made fabrics. India is never likely to produce goods that can compete with the high count productions of Lancashire, but the extent of the Indian market of the future for Lancashire will be determined to a marked extent by the cost of production. It should be added that world trade conditions make it certain that whatever the effect on the Indian market, it will be some time before Lancashire really feels it. With the trade depression coming to an end and the prospects of the gradual restoration of trade with Russia, Lancashire is likely to find in the near future all the outlets she requires for her manufactures.

Austria and the Danube Ports.

It seems extremely probable that one of the results of the war settlement in the Near East will be the transference to a considerable extent of Austria's sea-borne trade from Trieste to the Danube ports. Apart from any question of inclination, the tendency is bound to be promoted by the fact that in the future Austria will be able to obtain her food supplies from Yugoslavia, Bulgaria, Roumania, and South Russia. The results of the change would be to enhance still further the value of the Danube as a commercial highway, and greatly to increase the importance of Galatz, Braila, and other similarly situated ports.

Egypt's Need for Tourists.

The failure of the Egyptian season is in no way a matter for surprise in view of the prevailing circumstances. Up to 1914 the Nile Valley was sure to receive throngs of tourists as each winter came round, but the war came to cut across everything, and of those of Egypt's

habitues who have survived few can now afford the increased expense entailed, and outside their ranks this generation does not know Egypt. So while the Riviera resorts have all been crowded with the fashionable world Egypt has found herself more or less neglected, and with the pleasant prospect, moreover, of being still more ignored in the future, as the result of France's efforts to popularise Morocco as a winter resort. There is only one remedy, and that is to bring the charms of Egypt to the notice of the present generation by a carefully planned advertising campaign. Whether the authorities can be prevailed upon to adopt this method or not is another matter, but it would seem certain that, if they fail to do so, Egypt must be prepared to regard her tourist season as a lost source of wealth.

American Enterprise.

Those who are familiar with the districts bordering the Red Sea will probably find some cause for amusement in the American Consular report on motoring in those regions which we give this week. Most things are possible, but it would be difficult to visualise the development of a market for motors in the Red Sea district that would really repay commercial enterprise. The writer, it must be pointed out, does not suggest anything of the kind, but he does say that there is an immediate opening for a limited number of motors, and therein lies the significance of the report from our point of view. You would not find a British representative taking the trouble to discuss at considerable length a restricted market. He would, on the contrary, confine himself to really promising openings. It is the American all over not to neglect any prospect of business, however small or unremunerative, and that is one of the secrets of success that British commerce will have to adopt if it is to keep abreast of trade enterprise in the future. In the present case, with a little care, a British firm might well find a permanent market in the Red Sea district for a few motors each year. Regarded as an isolated transaction, it would be small, it is true, but it is the little additions in this kind of way that help to swell the balance-sheet to a really respectable total at the end of the year.

Roumania's Industries.

A recently issued report on the industrial situation in Roumania at the end of last year gives anything but an encouraging view of the outlook for Roumania's industries. Great damage was done during the war to the various industrial installations, and reconstruction and development have been hampered, among other things, by the difficulty of replacing machines and accessories on account of the depreciated currency and the lack of credits; the increase in the cost of labour, the lack of fuel, transport difficulties, and the lack of capital and internal credits. A survey of the principal causes preventing progress in individual industries shows that among the chief difficulties are the lack of markets and foreign competition, and the frequent recurrence of these factors suggests very forcibly the doubtful advisability of attempting to develop industries for which, for one reason or another, the country is unsuited.

ROUMANIA.

BUCHAREST, March 10.

The Coming Budget.

At the last Minister's Council, which took place on Sunday morning, the principal discussion was the coming Budget and the new Fiscal Reform Bill. M. Titulescu, the Minister of Finance, on this occasion, made some interesting statements, saying that after the reduction of 20 per cent. was applied by every department, excepting the Ministry of Communications, the total State expenditure would amount to about 5½ milliard lei: and that by applying the existing taxes as well as the new taxes emanating from the new Fiscal Reform Bill, the revenues would exceed 8 milliard lei. In view of the enforced reduction in the expenses, a large number of Government clerks whose services can be dispensed with will be dismissed from the different departments.

M. Titulescu's efforts to reduce expenses have already begun to show results. As an example, the War Office presented on March 1 a Budget showing a reduction of 230,000 million lei, and has also cancelled the War Fund. They further recalled from abroad 49 officers on various missions, and cut down the number of motor-cars used by this department from 1,230 to 118. The expenses for the upkeep of these motor-cars have been reduced from 50,000 to 25,000 lei per car per annum. The first new tax to be put into force, and which, at the same time, is expected to bring in the largest collections, will be the proportional and progressive income-tax.

The Ministry of Finance is also now working on the unification of taxation throughout Greater Roumania, for it is interesting to note that at present four systems are in use in the country: In Transylvania, the Hungarian system; in Bukovina, the Austrian; in Bessarabia, the Russian; and in the Old Kingdom, the Roumanian system.

Foreign Currency Regulations.

The "Valuta" Committee at the Ministry of Finance has taken the following decisions concerning the export of foreign currencies. No foreign currency is allowed to be taken out of the country without the authorisation of the "Valuta" Committee. Exception is made for amounts that do not exceed 1,000 lei, 1,000 French francs, 1,000 Swiss francs, 1,000 Italian lire, 1,000 German marks, 1,000 Austrian, Czechoslovak, or Polish crowns, 100 dollars or 40 pounds sterling. Foreigners on no account are allowed to take lei out of the country. Stocks and shares may be removed by such foreigners who owned them before the war, but in no case by Roumanians.

Miscellaneous.

The Government has decided to export 40,000 tons salt from the production of the salt mines of Transylvania, at the rate of 6,000 tons per month.

The Minister of Finance, in view of the large number of Roumanian treasury bonds circulating abroad, has given orders that in future no more treasury bonds shall be issued.

The Ministry of Finance has approved the following export taxes for petroleum and its by-products: Heavy and light petrol, 11,000 lei per wagon; paraffin, 4,000 lei per

wagon; light mineral oil, 3,500 lei, and heavy mineral oil, 7,000 lei per wagon.

According to the *Monitorul Oficial* of February 20, the Cyprus Oil Trust, Limited, London, has been granted the right to establish a branch house in Bucharest.

The Roumanian Commission that was sent to visit the London Exhibition has now returned and is reported to have stated that the British Government has authorised them to inform the Roumanian Government that it intends opening in Bucharest in the course of this year, as well as in all the Balkan States, a large exhibition of British manufactured goods.

GREECE.

ATHENS, March 12.

Export of Olive Oil.

After much controversy the Government has at last authorised the export of olive oil of this year's crop, providing a special licence is previously obtained from the Ministry of Supplies. These export licences will be issued for lots of or over 500 okes, and are only granted on payment of a fee in favour of the Public Treasury, which is imposed on the highest bidder in a public auction. One-tenth of this fee is allotted to the funds for combating olive disease. Once the export licence fee is paid it cannot be refunded, and export licences issued by the Ministry of Supplies, if not used by the holders within the stipulated time, will be cancelled and put up to auction again. The quantity of olive oil which may be exported from each area will be fixed by the Minister in proportion to the production of that area.

ALBANIA.

DURAZZO, March 10.

Negotiations with Italy.

An Albanian delegation, under the presidency of M. T. Zurani, the Minister of Finance, has been at Rome for the past three months for the purpose of concluding certain conventions. The Italians have not shown any readiness to enter upon the conversations, but they have at last begun, and already an agreement has been reached regarding the posts and telegraphs. There will be other economic and financial questions to be settled, and the Albanians have firmly decided to grant no concession that would affect the interests of the country.

The Anglo-Persian.

Mr. L. W. Wallace and Mr. T. S. Barnes, representatives of the Anglo-Persian Oil Company, arrived at Durazzo from London the day before yesterday, and left immediately for Tirana. After coming to an arrangement with the Albanian Government, the company will undertake boring operations in the hope of finding important deposits of oil.

TRANSPORT ACROSS THE SUEZ CANAL.

By Victor L. Trumper, M.R.A.S.

Few who travel by the Suez Canal route ever realise that there has always been a considerable traffic across it. What is now the canal zone used to be Egypt's eastern frontier, which was contiguous with the North Sinai Desert, and Kantara, which is simply the Arabic name for the "bridge," was the main entrance on that side. This has been a highway from earliest times, but, of course, until the canal was cut, the Bedouin could enter Egypt when and where they chose, and the place they chose often did not coincide with a custom house station. However, with the making of the canal, entry into Egypt was somewhat regulated, and with the placing of ferries at different parts of the canal the customs' officials had their duties more confined to their own localities. In pre-war times the Bedouin used to bring droves of young camels to sell in Egypt, and after they had settled matters with what they professed to consider a most extortionate demand for duty, but which the custom house officer said was most reasonable, the next business was to get them across the canal. I have heard that a mule is a docile lamb compared to what a camel can be, and having witnessed the attempts of these professional camel drivers to get a mob of young camels on to the ferry I can quite believe it.

When the war with Turkey broke out and it was necessary for the military to hold the canal in force, each encampment had one or more pontoon bridges, none of which were of the orthodox military bridging material, but made up of what could be obtained on the spot. One was made of the flat-bottomed boats which were used on Lake Men-

Pipes for pipe-line being unloaded from dhows at Kantara and put on to camels.

zaleh. Another was formed of groups of nine or twelve empty barrels in a frame, with planks put across, while the flotation power of yet another was formed of the cylinders which supported the flexible pipe of one of the Canal Company's suction dredgers. It was evidently a new experience for many of the horses to cross a floating bridge, and their nervousness was great, though those who were constantly crossing soon got used to it. The north bridge at Kantara was formed of pontoon lighters which had been moored in front of Navy House, Port Said, for many years. The arrangement for this bridge was that it opened in the middle, and the two parts went parallel with the canal banks when it was opened to let a ship pass. Previous to this, however, men and material were ferried across the canal in lighters. The iron pipes for the famous pipe-line by which the water of the Nile flowed into Palestine were brought over in the same manner, and the accompanying illustration shows how they were conveyed from the canal bank to their places in the line. Two for each camel was a fairly good load.

When the Turks made their great attack on the Canal they chose an excellent spot between Lake Timsah and the Great Bitter Lake. The desert is very broken on each side of the canal by hillocks and sand dunes, which afforded excellent cover for infantry. Also if they had been able to cross in any force, if only for six hours, they could have done great damage to the railway junction west of Ismailia, and have entirely destroyed the water supply of the canal zone.

When the railway was commenced on the east side the first engines and trucks were taken across the canal slung on a floating sheer-legs, and it was rather a startling sight sometimes to see a familiar L. and S.W.R. engine suspended high in the air being slowly moved across the canal.

Later, special lighters were built which carried rails: they went into a small bay cut in the canal bank, and the engine or trucks were then run on to them; they were then hauled across to the other side, and the rolling stock run off on to corresponding rails. This was efficient as far as it went, but it was soon found to be too slow for the requirements of the campaign, and a bridge by which a train could go straight across was found necessary. It is needless here to go into all the pros and cons discussed, for the difficulties were great. In the first place no bridging material was available from home, and no one knew whether the necessary pier could be built to take the weight of the bridge. However, two or three bridges were dismantled in Upper Egypt, and the girders brought to the canal. Piles and reinforced concrete pillars were made on the edge of the deep-water channel of the canal, and the bridge was constructed. It was a very fine piece of work, especially considering the difficulties to contend with, and the material at hand. Our photo gives a good idea of its appearance. The straight girder on the left is fixed, and merely carries the line from the bank to the pier on the west side of the channel. At that point the curved span is pivoted, and on the right of the picture is the pier on the east side of the deep channel. From there to the east bank are various odd girders, etc. When the bridge is to be opened to let

Railway bridge at El Hersh, three miles north of Kantara, open to let steamers pass. View from west bank, looking north.

ships pass through the east end is raised by powerful screws on the ferro-concrete lighter underneath till the end is clear of the pier on the east side. When the lighter has got the weight it is hauled over to the west bank, either north or south, according to the current, the bridge pivoting on the pier on the west side. When it is well out of the way of traffic the floating end of the span is over some specially placed piles, the jacks are then lowered, and the span rests on the piles, the lighter floating freely underneath. When the bridge is to be prepared for train traffic the end of the span is jacked up till the lighter has the weight: it is then swung across until in position, the jacks are released, the rails connected, and the bridge is ready. It is very simple and apparently extremely efficient. The bridge can be ready for train traffic within eight minutes after a ship has passed through.

As our readers know, the Canal Company requested the authorities to remove the bridge owing to the danger to traffic, and, till a permanent bridge can be built, a kind of floating ferry will be used, similar to the one described previously. At one time it was thought that a tunnel under the canal would solve the problem of through rail-

Telegraphic Address: BRADBANK, LONDON.

way communication, but extensive borings have shown that the sub-soil or, rather, sub-sand, is so extremely unstable that a tunnel could not be made satisfactorily. A permanent fixed bridge to carry the railway above any possible masts of passing steamers would need an eight-mile ramp, which is out of the question; so probably there will have to be some sort of a swing-bridge, but to allow for probable extensions of the canal the middle will have to be at least two hundred feet wide, as larger ships are coming through than ever before.

The demolition of the present railway bridge will force passengers for Palestine to cross the canal by the pontoon bridge from Kantara West to Kantara East, but, to minimise the inconvenience as much as possible, the Palestine

Arab dhow just passed through the south bridge at Kantara, opposite the station.

railway is being extended so as to bring the departure platform quite near the present floating bridge opposite Kantara West Station of the Egyptian State Railway. An official of the E.S.R. who was sent to America to study the question of moving bridges there, has, it is said, recommended the construction of a bridge in which the two sides are raised to allow of the passage of vessels, in the same way that the Tower Bridge is worked on the Thames.

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

106. Old-established English trading company with branches in Mesopotamia and Persia, is willing to accept agencies there for manufacturers, etc.

107. Old established Turkish firm handling general stores situated in Smyrna and having branches in the interior invites exporters to quote prices for groceries. The firm also acts as agents for articles of general consumption in Asia Minor.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

112. An Alexandria firm wish to enter into business relations with United Kingdom firms dealing in the following exports:—Beers and stout; salmon, sardines, tinned fruit and vegetables; coconut oil; gunny bags; pepper, rice, flour and soap.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.

TRACTOR TRIALS IN BULGARIA.

Conditions of Entry.

H.M. Commercial Commissioner in Sofia has forwarded a copy of the conditions of entry in the competition for motor tractors to be held in May under the auspices of the Bulgarian Ministry of Transport. The object of the competition is to determine which types of motor ploughs and agricultural tractors are best suited to Bulgaria, in order that they may be recommended to agriculturists, and eventually be partially bought by the State should the Bulgarian Government so decide.

Entries must be addressed to the Ministry of Agriculture, Agricultural Section, before April 15. Applications for entry should contain:—(1) Full name and address of the applicant; (2) the name of the factory where the motor ploughs and agricultural tractors have been manufactured; (3) the mark of the company; (4) manufacturer's number; (5) particulars of representative of the company in Bulgaria; (6) information as to whether the local representative keeps a stock of spare parts; (7) information as to whether the local representative has any experienced mechanics on his staff.

When submitting the application, firms should forward to the Ministry in Bulgarian or French a detailed description of the motor ploughs and agricultural tractors, pointing out the most recent improvements in their construction. Firms or their representatives should submit to the Ministry before 6 p.m., April 30, a sealed statement in French or Bulgarian giving the price (in Bulgarian levas c.i.f. Lom, Bourgas, or Varna) of the motor ploughs and tractors taking part in the trials. The trials will begin on May 5 at a place to be announced later. Should weather conditions be unfavourable, the opening day will be postponed by decision of the jury. All entries must be assembled, ready for work, and transported to the place indicated on the appointed day. The trials will be conducted by an official specially appointed by the Ministry of Agriculture and State Lands, who will make all the necessary arrangements in accordance with the present conditions. Representatives of firms, their mechanics, and drivers must follow these conditions, and must apply to the director for all information concerning the trials.

The first days of the trials will be devoted to studying the construction of the motor ploughs and agricultural tractors. On completion of such inspection, each firm will begin to manoeuvre in accordance with a definite programme and in the particular spot allocated. Competitors will pay for their own petrol or other combustible. The trial of the motor ploughs and agricultural tractors will begin the day following the manoeuvre, in accordance with a definite programme. The trials will be carried out at a time to be fixed by the jury, under direct supervision of the Commission. All combustibles and other material required for the trials will be supplied by the Ministry of Agriculture and State Lands and debited to the competitor.

The objects of the trials are to determine:—(1) The working capacity; (2) the details and system of construction; (3) the strength and staying power; (4) the quality of the work done; (5) the quantity of the work done.

The trial will consist for each individual firm (by means of petrol or benzine as combustibles) of the following tests:—(a) Ploughing an 8 cm. furrow, (b) ploughing an 18 cm. furrow, (c) ploughing a 25 cm. furrow, (d) drawing waggons (all on level as well as undulating ground); (e) drawing harrows, (f) drawing sowing machines, (g) drawing both harrow and sowing machines simultaneously.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 22:—

During the week ended March 12 standing crops fair to good generally, except in the Punjab and North-West Frontier Province, where rain badly wanted. Bombay cotton market crisis virtually over. Contractors with Government sanction have fixed minimum rates on basis of Rs. 255 for Broach cotton. Market reopens on March 22, to which date settlement further postponed. Piecegoods market improving, demand being chiefly for staple style, particularly whites. Calcutta jute market lifeless; Hessians dull. Heavy goods show some improvement, with fair business in heavy C1 and Twills. Some mills have proposed extension of short time agreement to end of current year. No change in bank rates. At Tea sales on March 15 quality showed no improvement, offerings consisting mostly in plain-medium and common kinds. Autumnal flavoured teas were unusually scarce; general demand was better. All markets appear to be at an average price of 5 annas 4 pies per lb.

MOTORS IN THE RED SEA DISTRICT.

A LIMITED MARKET.

An interesting account of the use of motors in the Red Sea commercial district is given by the United States Consul-General at Aden, Mr. Addison E. Southard, in a recent report, from which we give the following extracts:—

In the province of Hejaz there is only one constructed highway suitable for the use of motor vehicles, and that is the 42-mile road from the port of Jeddah to Mecca. Only Mohammedans may go into the Hejaz, and consequently the European officials and business men residing in Jeddah who might be expected to introduce the use of motor vehicles have not had the opportunity to make use of the Jeddah-Mecca highway. Thousands of pilgrims go over this road each year, travelling on camels, mules, or by foot.

The use of motor vehicles would greatly improve or facilitate the travel of the many thousands who go between Jeddah and Mecca during the annual pilgrimage season, and some Mohammedan firm would doubtless find it profitable to develop the use of motor vehicles on this highway. The principal obstacles would be: first, the objections of the Bedouin camel owners, who would not willingly have their very profitable caravan trade thus interfered with; second, the possible prejudice of some of the religious fanatics who live in Jeddah and Mecca. There are no other main roads or highways suitable for wheeled vehicles in the Hejaz south of Medina, and it is improbable that there will be any developed in the immediate future. In the flat desert coastal plains light motor-cars can be used with little, if any, preparation or construction of roads.

Asir Province has no made highways, and there are no definite indications that any will be planned or attempted in the near future. Konfidah is the port for the province. The Idrissi, ruler of this province, has two or three light American cars which he uses along the hard, sandy beach between the small ports of Loheia and Chizan. This practical demonstration of the use of motor-cars may result in the construction of sand roads in the desert coastal plain of this province and in a demand for a limited number of cars.

Yemen Province has no highways suitable for wheeled vehicles, but there are incentives which may result in some highway development as soon as the political future of the province is determined by the peace treaty with Turkey. Hodeidah is a Yemen port of some importance, and is the outlet for a considerable trade from the fertile Yemen highlands. The construction of a highway fit for motor vehicles across the desert hinterland from Hodeidah to the Yemen foothills, a distance of about 50 miles, would be a great help to trade. Produce from the Yemen mountains could then come down to the edge of the desert coastal plain, and be carried into Hodeidah in but a fraction of the time and at but a fraction of the cost involved in the present tedious and unsafe method of camel caravans. And the transportation of imported goods from Hodeidah to the interior would profit likewise.

A railway over this route has long been planned, and indications are that either the railway or a highway suitable for wheeled vehicles will be constructed within the near future. The narrow streets of Hodeidah offer but little inducement for the use of motor vehicles. Motor vehicles could be used for running over the hard, sandy surface of parts of the desert coastal plain of this province without actual construction of roads, as in Asir Province.

On the opposite side of the Red Sea, in the Italian colony of Eritrea, there promises to be a market for motor vehicles. Highways are being built, or planned, which will offer a field for the sale and use of motor vehicles on the inland plateau between Asmara, Keren, Agordat, and other trade centres. There is at present a railway from Massowah, the port, to Asmara. This railway is being built on to Keren, and will probably be extended to Agordat. If railway plans are carried out, it may mean some curtailment of highway construction, but it is apparent that the Italians are going ahead with the opening up of this colony in a way which will demand the construction of both highways and railways. There are as yet very few motor vehicles in use in Eritrea. There are more than 300 miles of completed motor roads.

Jibouti, in French Somaliland, has broad streets and some roads extending a few miles outside the port which afford facilities for the use of a few motor-cars. There are at present two cars in use there. It is not probable, however, that highways will be built from Jibouti to the interior. The hinterland is desert, and is already crossed by the Franco-Ethiopian Railway, which runs 500 miles inland to Adis Abeba. The railway affords all necessary facilities for interior trade and travel in the present undeveloped state of the country. The beach and interior desert plains offer comparatively long stretches of natural motor roads.

In British Somaliland there are the ports of Zeyla, Bulhar, and Berbera, and although there is no immediate prospect of the building of highways into the interior from the two first-named ports, there are possibilities. A road suitable for wheeled traffic has been built from Berbera inland to the higher plateau at the back of the coastal desert plain; two or three small cars are in Government use over this road. The development of British Somaliland is, however, at present uncertain, and unless there is some important attempt to open up the interior it is not likely that highways will be built within a reasonable future. This country at present offers no real possibilities for the sale or use of motor vehicles. The hard, sandy beach between the ports of Berbera, Bulhar, and Zeyla affords a fair natural road for motor vehicles.

In Abyssinia there is at present no highway development. In and around the towns of Dire-Dawa and Adis Abeba streets and roads could very easily be brought to a state fit for the use of a limited number of motor vehicles for local travel, and it is not improbable that this will happen soon. The materialisation of the present prospect of an active foreign interest in the development of Abyssinian trade will undoubtedly result in the building of highways suitable for the use of motor vehicles. Some definite developments in this situation should take place in the near future.

In Aden, the commercial centre of the district, exists the greatest use of motor vehicles at present. There are now in use in Aden upward of 150 motor-cars, thirty-three motor-cycles, and seven motor-lorries. On the small Aden peninsula there are several miles of good roads or streets, but the longest straight run for a motor vehicle would be five miles from one side of the peninsula to the other. One part of Aden is on the west side and another on the east side of the peninsula. These two parts, five miles from each other, are connected by a frequent taxi service maintained with American cars. Just beyond the joining of the isthmus with mainland is the Arab village of Sheikh Othman. From the two parts of the town and port of Aden, and over the isthmus, is a good motor road to this Arab village. From East Aden, known as Steamer Point, the distance to Sheikh Othman is 10 miles; from West Aden, known as Aden Camp, the distance is 8½ miles.

Beyond Sheikh Othman the desert continues to the Yemen foothills, which are an average distance of more than 75 miles inland. Road building into the desert would not be too difficult, but there is as yet no real need for it. Considerable stretches of this desert afford a natural road for motor vehicles. A railway runs from Aden via Sheikh Othman to the town and oasis of Lahej, 30 miles inland, and many camels are available for the comparatively small amount of transport over the desert between Aden and the fertile Yemen highlands. There are at present no plans for road extension from Sheikh Othman into the desert.

The Arab Sultanate of Makalla is on the Arabian coast about 275 miles east of Aden. There is no actual highway development in this territory, but by the use of a little labour to remove obstructions and smooth over rougher places of the hard sand floor of the beach and desert coastal plains light cars can be used for transporting passengers. The ruling Sultan has recently obtained four American cars from Aden. The promising mineral prospects of this territory may result in more rapid development of motor roads, and such demand for motor vehicles as may be created could be best met by Aden dealers.

Although the development of made highways is yet in its infancy in this district, there is expected to be an increasing market for motor vehicles. Nature has provided long stretches of hard sandy beach at various places up and down both the Asiatic and African sides of the Red Sea and Gulf of Aden which, in the absence of rainfall, offer reasonably good ways over which to run motor-cars. A little labour to clear away rocks or other obstructions and to fill the occasional ravine or gully, scooped out by the wind, or made by some lost stream, is all that is necessary to supply a reasonably good road for light motor vehicles. The more intelligent and enlightened natives generally live in the little coastal towns and ports, and commerce naturally centres in these places. Under the influence of the conditions or circumstances indicated the use of motor vehicles need not await the actual building of highways or roads. There would, of course, have to be actual building to make the more fertile interior highlands accessible to and for the use of motor vehicles. The Aden-Red Sea district may be considered as having immediate possibilities as a limited market for motor vehicles.

Travellers to the Near East

Can obtain all information as to the journey from the Manager, **Continental Enquiry Office,** Victoria Station (S.E. & C.R.), S.W.1.

Speed up your Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing :—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from 1½" diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes :—

½" to 1½" fitted with No. 2 and No. 3 Morse Taper Shank.

1" to 3¼" fitted with No. 3 and No. 4 Morse Taper Shank.

Full particulars upon application to:—

ENGINEERING.

Marine Oil Engines.

In spite of the slump in shipbuilding, which has had a temporary effect on the iron and steel trades generally, great progress continues to be made in the construction of vessels fitted with internal combustion engines, and at the beginning of the year, so I am informed by an authority, there were nearly fifty vessels of that kind being built in British yards. Even so, for some reason this rate of development appears to be being exceeded in certain European countries. In Scandinavia, for example, the trade is very busy, and I hear that shipowners who had placed orders for steam vessels have in many cases given instructions for Diesel motors to be installed in place of the steam plant. By the way, I understand that the first commercial oil turbine ever constructed has now been completed and is at work, and I hope at an early date to be able to give full particulars of its design and construction. Should this turbine prove as satisfactory in operation as is anticipated, it is intended to manufacture it on a large scale for installation in ocean-going ships.

Whilst on the subject of the use of heavy oil engines of the Diesel or semi-Diesel types in marine engineering work, I note that, according to the March issue of the *Motor Ship*, there were launched or completed during the past two months 13 large ocean-going motor ships with a total cargo-carrying capacity of 140,000 tons. Particularly noteworthy is the fact that many of these vessels were of the largest and fastest class of cargo ship, two of them being 13-knot vessels carrying 14,000 tons, whilst two others were 13,500-ton craft with a speed of 12 knots. It is satisfactory to note that a large proportion of the new motor ships are of British construction, five out of the thirteen mentioned above having been built in shipyards in the United Kingdom.

Steel Barrels.

The specification for iron or steel drums or barrels of from 20 to 100 gallons capacity, as drawn up by the various railways, states that all drums or barrels must be of soft iron or mild steel of the best quality. It seems a pity that so admirable a requirement should be drawn up in so loose a manner. What precisely is "best quality" soft iron or mild steel? Every engineer knows what is meant, but with a condition of this kind who, in the case of any eventuality, is to be the judge as to whether or not it has been complied with? For example, a particular class of material could be used, and in the event of trouble ensuing a maker could say that he held the view that that material was the best quality that could be used for the purpose. His hearers might not agree with him, but under the circumstances what could they do but record their disagreement as a matter of opinion. I note that the rest of the specification is almost equally vague in parts. For instance, all joints must either be riveted and soldered or electrically or otherwise autogenously welded. Nothing is said as to how this work should be carried out nor as to the tests it should undergo. It is perfectly possible to rivet parts together in a very slipshod manner; soldering can be done in a far from efficient way, and every engineer knows what a fearful botch can be made by an inexperienced hand with any system of autogenous welding. I am moved to these reflections by a correspondent who asks for details of the railway requirements. I may confess that I had never read them through before; now that I have done so, I am quite convinced that the lay mind should not occupy itself with technical matters. But to continue and to give the details required. The drums must be strengthened and protected at each end by a strong iron or steel hoop welded, riveted, or shrunk on to the body of the drum, and must have two runners or rolling hoops welded or securely shrunk on to the body of the drum. Steel barrels of 33 ins. in length must have a bilge of not less than 2½ ins.—one wonders why 2 3-16 could not be permissible—and other sizes in proportion, and must be protected at each end by a strong iron or steel hoop welded or riveted to the body of the barrel, and such barrels need not have rolling hoops. The thicknesses of sheet metal to be used for the body and the ends of barrels of various capacities are specified, and range from 14 to 9 Birmingham wire gauge for the former to from 16 to 10 B.W.G. for the latter. This part of the specification is exact enough to satisfy the engineering mind, and is beyond criticism. Unfortunately the same cannot be said for the next clause, which specifies that each drum or barrel must be provided with a well-fitting screw bung. What is a well-fitting bung? Obviously, again, it is a matter of opinion as to whether a bung can or cannot be regarded as being well-fitting. The requirement should have been for a bung of a certain material, of not less than certain dimensions, and capable, when screwed in place, of holding for so long a period against a gas pressure of so many lbs. to the square inch. It may

be said I am too critical. In reply I simply point out that these drums are to contain toluol, xylol, benzole, benzine, ethyl alcohol, acetone, naphtha, and so on, and with substances of that kind it is impossible to be too careful. By the way, the boss of this bung must be electrically or otherwise autogenously welded or riveted, and soldered to the body or end of the drum or barrel.

A glimmering of common-sense is to be found in the next clause, which specifies that each drum or barrel must be tested by hydraulic or air pressure of 10 lb. per square inch without showing signs of leakage or injury. Also whenever it shows signs of damage or deterioration, and the test must be repeated at least once a year. The only objection to this is that the pressure is not sufficiently high to show any inherent defect, and that the words, "whenever it shows signs of damage, etc.," are too loose and give openings for certain abuse. A man may, for example, say he notices signs of damage or deterioration, and so put a user to the inconvenience of having to have a drum tested. On the other hand, he could say that he had not noticed any signs of damage or any faultiness. Such drum or barrel must be externally painted or galvanised to prevent it from rust, and must be periodically re-painted or galvanised as required. To this I would ask: "As required by whom?" This remarkable specification concludes by saying that when filling the drums or barrels an air space of at least 5 per cent. must be left, and that the screw bung of each empty drum or barrel must be securely fastened in place before the empty drum or barrel is returned. Regarding this, I would advise all readers interested to get into touch with the Steel Barrel Co., Ltd., who turn out the finest productions of this kind that I have ever seen. Provided with barrels or casks made by this firm, no one need have any fear as to their behaviour under even the most trying conditions.

Dunlop Tyre Prices Reduced.

All motorists who have been looking for cheaper tyres will welcome the announcement of a reduction of approximately 20 per cent. in the cost of Dunlop covers and of 15 per cent. on Dunlop tubes. In the case of the 815 by 105 Magnum cover, for example, the price drops from £10 4s. 3d. to £8 3s. 6d., and a tube of similar dimensions from 30s. 9d. to 26s. 3d. There is no question that now is the time to buy Dunlop manufactures, as a little calculation shows that at the moment a purchaser can secure five tyres complete for practically the price of four.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Sugar.—The home refined has been in good demand at unchanged prices. West Indian Crystallised has come to business at 60s. 6d. to 62s. 6d., while American Granulated is quoted at 40s. 6d. White Java has been done at 32s.

Coffee.—The market has been quiet but steady. Quotations are:—March, 37s.; May, 38s.; July, 38s.; September, 40s.; December, 41s.

Oilseeds.—Prices have risen all along the line with the exception of Indian linseed, which is 6d. down at 17s. 6d. Rapeseed has increased 3d. in each case, with Toria at 17s. 9d., bold Ferozepore 16s. 9d., and brown Cawnpore at 14s. 9d. Cottonseed has risen, with Egyptian black at 12s. 9d., an increase of 3d.

Seed Oils.—There has been little change in prices. Linseed oil is 1s. 6d. lower at 28s. Rape oil is unchanged at 46s. Cotton oil has been quiet. Refined at 40s. and the Egyptian crude variety at 31s. are both unaltered. Turpentine is the same at 50s.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for January:—

Gum.

Kordofan Province.—14,248 kantars were sold in El Obeid market during January, 1921, as against 11,837 kantars during the same period last year. The average price was 807 m/ms per kantar of 100 rottles (45 kilos.). Arrivals from Nahud were 6,106 kantars, as against 13,930 kantars. 1,658 kantars were sold at Um Ruaba at 80 PT. per kantar, as against 3,105 kantars last year. 4,845 kantars were sold at Rahad at 77 PT. per kantar, as against 5,602 kantars last year.

Cotton.

Red Sea Province.—A light railway between, Tokar and Trinkat, under the direction of the general manager, Sudan Government Railways, is now under construction, and it is hoped that this railway will be ready for use to transport the anticipated heavy arrivals of cotton on the Tokar market at the beginning of April. The Tokar cotton market will be opened on February 7, and the heaviest months of the season are April, May and June. The Inspector of Agriculture, Tokar, reports that the cotton generally is looking very healthy, and a record crop is expected. The probable area flooded is about 120,000 feddans. The percentage of land sown with cotton is higher than usual this year; about 90,000 feddans being under this crop. The probable yield will be at least 79,000 kantars of 315 rottles (unginned). The Sakellarides cotton brought from Kassala has done very well indeed, and is fully as promising as the Assili which has become acclimatised to Tokar conditions.

Dura.

Khartoum Province.—Rain crops in the province have now all been assessed, the total ushur amounting to 7,000 ardebs, as against 83 ardebs last year. The average yield was high. The price of dura was 123 PT. on November 1, and 80 PT. on December 31 per ardeb of 300 rottles (135 kilos.).

Upper Nile Province.—The dura crop appears to be about three-quarters that of last year; the area sown is approximately the same as last year, and the rains were good, but vast flights of dura birds have destroyed large areas, and, in Melut district, there was in addition a serious plague of field mice. The crops there are reduced 80 per cent. Kodok district is satisfactory.

White Nile Province.—An ushur of some 57,000 ardebs is now assured. The best crops were in Geteina Merkaz, where the assessment has yielded 24,052 ardebs, a result doubtless due to the fact that for several years previously the majority of the land has been lying fallow owing to lack of rain. The price of dura has risen slightly during the month and now stands at 75 PT. for the ardeb of 384 rottles, and dukhn is at 110 PT. for the same ardeb (173 kilos.).

Darfur Province.—Dura and dukhn crops are excellent in all districts. No pests are reported.

Red Sea Province.—The dura and dukhn crops are poor owing to locusts.

Sesame.

Kordofan Province.—30 ardebs of sesame were sold in El Obeid market at an average price of 125 PT. per ardeb of 330 rottles (148 kilos.).

Nuba Mountain Provinces.—Simsim has suffered in places from too much rain. Natives generally, however, have reaped an exceptionally good harvest.

The Cairo correspondent of *The Morning Post* telegraphs that a record Budget has just been issued for Egypt, receipts and expenditure being estimated at a little below £E37,000,000. The Finance Minister's statement forecasts a deficit of £E11,000,000 for the closing financial year.

Reuter's Constantinople correspondent, in a message dated March 26, states that the dispute between the Ministry of Finance and the Tobacco Monopoly regarding the accounts of the various Turkish armies during the war has been settled. The Monopoly will pay the Ottoman Government £T1,880,000, part of which will be used in paying arrears of salaries to civil and military officials.

LANCASHIRE COTTON.

Improvement Maintained.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The improved tone in the market experienced towards the end of last week has been well maintained, and business to a certain extent has developed. Although operations have been rather patchy, it is a noteworthy fact that more orders have been booked during the last few days than for some time back. The general opinion is that a turn towards better times has been made, and in support of that statement one has only to study the trend of raw cotton values during the last fortnight to see that the price of the staple has gradually hardened, until at the present time some spinners are even advancing their prices in anticipation of increased business. With regard to cloth for the Near Eastern outlets, buyers for Egypt have certainly shown more interest in prices, and here and there a certain amount of business has gone through, but the total sales have not been large. Apparently stocks of dear goods out there are by no means liquidated, and we shall have to await developments. Trade with the Levant has not been extensive. During the past few days Egyptian yarns and cotton futures have been unusually active. Quotations are considerably higher than for some time back, and spinners are not so eager to sell as was the case ten days back. With regard to cloth, Calcutta has been the most prominent outlet, and big lines of dhooties have been booked. Buyers for China are gradually awaking to the fact that a period of increased activity is about to commence. A strengthening tendency has been in evidence in American yarns, and buying has been on a freer scale.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in their report for the week ended March 24, state:—

A wave of optimism has spread over our market latterly, and we only hope that subsequent events will justify its existence. At the moment, however, it is as well to face facts. This change in tone dates definitely from the recent helpful measures introduced by the Egyptian Government. These measures have been followed by much speculative buying in Alexandria, where sentiment is notoriously "bullish," and rumour succeeds rumour with extraordinary rapidity as prices soar. So much for that side of the picture. On our market, however, in spite of a much improved inquiry, there has been no appreciable increase in the amount of actual cotton sold to spinners, and this, after all, is the true index finger pointing to the state of the trade. The immediate danger, therefore, lies in the possibility that the enthusiasm of the Egyptian operator may carry him away, and a false position may be created which can only result later in another serious decline. We do not say this will happen, we merely point out the possibility. Manchester reports have been consistently cheerful this week, and undoubtedly there has been more doing in that quarter. Some spinners have seized the opportunity to unload quantities of old high-priced stock, and although this means a serious loss if incurred now, it certainly produces a more healthy situation in the market. C.i.f. business continues to show a slight improvement, and spot prices all round show a considerable stiffening again. Sales, 700 bales for four days. Quotations of Sakellarides are raised 2d. per lb., and those of Brown and Upper 1½d. per lb.

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for fortnight ended March 12:—

The sales during the past two weeks amount to 26 cases of extra selected Carahissar, and the last prices paid are equivalent to 10s. 6d. to 11s. per lb., c.i.f. The exchange per pound sterling for cheque is now Ps. 578—and 0.67 dollars for one Turkish pound of Ps. 100. The arrivals amount to 1,275 cases, against 1,506 at same date last year, and our stock in first and second hands is now 1,235 cases.

Fares on the Paris-Strasbourg-Prague route have been reduced by one half in favour of officials and journalists on duty by the Franco-Roumanian Aeroplane Company.

PERFUMERY and GOOD TOILET GOODS.

Keen Prices for High Quality. Enquiries solicited.

No. 21, "ECLIPSOL" WORKS, BRISTOL.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

STAMBOUL, March 19.

The situation here remains the same. The fall in prices continues, and sales are insignificant. There is no demand for articles of export.

The fall in the price of cotton continues, and the general depression has brought about a new decline in the prices of manufactures, and sales are becoming more and more difficult.

Produce.—Sugar.—The position is the same as last week. The intervention of the banks who have consented to make advances has stopped a new fall in prices. The arrivals of the week, amounting to 400 wagons, have been for the most part warehoused.

Coffee.—Despite a marked improvement in countries of production, our market remains very quiet. Prices are unchanged.

MORUMS ORIENTAL STORES.

The directors of Morums Oriental Stores have issued a circular stating that, as anticipated by the chairman in his speech at the annual meeting in November last, the turnover of business for the half-year ended December last showed a satisfactory increase as compared with the corresponding period of the previous year. This is particularly gratifying having regard to the acute world depression of markets. Now, however, owing to the severe fall in the value of Egyptian cotton and the great difficulty of realising the crop, upon which the prosperity and purchasing power of the community chiefly depend, manufactured goods accumulated in the country are being thrown on the market at heavy losses, with the result that retail establishments are forced to realise their stocks at prices in many cases below cost. The returns which have been received from Egypt for the six months to December 31 last show that the profits then earned would have justified the payment of an interim dividend on the preference shares, but, in view of the circumstances mentioned above and the impossibility of foreseeing the conditions which may prevail during the next few months, the directors feel that it is advisable to defer the consideration of a dividend until they have received the accounts for the complete financial year.

ANGLO-PERSIAN ISSUE.

Allotment letters of the recent issue of the Anglo-Persian Oil Company, Ltd., have been posted. Applications from the public up to 200 shares will, it is understood, receive full allotment; but applications over 200 shares will receive allotments on a decreasing percentage, the larger applications receiving 25 per cent. to 30 per cent.; applications received from shareholders in the company and in the Burmah Oil Company, Limited, will receive somewhat larger allotments.

Tone Generally Firm.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Thursday Night.

Owing to the approaching holidays, business has been very restricted this week. On the whole a much better tone has been in evidence, which is somewhat surprising, as there have been various new unfavourable factors to take into consideration.

The gilt-edged section has been firm. War Loan Fives at 87 3-32 and Consols at 48½ both show substantial advances. The Sudan Loan is now quoted at a discount of 1½. Foreign bonds have been firmer than of late.

Industrials have been a comparatively strong feature. Oils, too, have been brighter, but Rubbers remain much the same.

Near Eastern securities have been strong. Egyptian Guaranteed 3 per cent. are 1¼ up at 63½, at which there are buyers. Greek Guaranteed 2½ per cent. 1898 are 2½ up at 63½, but Turkish Guaranteed 4 per cent. are unchanged at 68½.

Greeks are about the same. The 5 per cent. 1881 and the 5 per cent. 1884 Loans are unchanged at 43, while the 5 per cent. 1890 Loan is the same at 42. Fundings and the 1910 Loan are unaltered at 43 and 42 respectively. The 5 per cent. 1914 has lost a point at 41 and the 1902 Loan is also 1 lower at 36.

Land shares have been variable. Beheras have gained ½ at 9, while the preference shares are the same at 3½. Anglo-Egyptian Land Allotments are unaltered at 3½, but Egyptian Consolidated Lands are ½d. up at 1s. 4½d. Delta Lands are unchanged at 8s. 9d., while Gharbieh Lands have gained ½ at 1¼. New Egyptians at 23s. 6d. are 1s. up, and Union Foncierres at 221-32 have gained 5-32, at which there were buyers. Sudan Plantations are 1-32 up at 315-32.

Oils have been fairly firm. Anglo-Egyptians are 3.32 up at 21-32, and Phenix at 13s. 3d. have gone up 1s. 5½d. Roumanian at 14s. and Steaua Romana at 15s. 9d. have both lost 6d.

Among Miscellaneous descriptions Abyssinian Corporations are unaltered at 3s. Alexandria Waters have lost ½ to 6½, while Morums have come to business at 12s. 6d. Egyptian Salt and Sodas have been done at 30s., an increase of 6d., and Egyptian Markets are the same at 18s. 6d.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

Equipment, etc.—The Director of Stores, Egyptian Ministry of the Interior, Cairo, invites tenders for the supply of stores required by that Department for the year 1921. The material required includes:—Arms, ammunition, accoutrements, ordnance stores, clothing and necessaries for the police and "Ghaffir" services; harness and saddlery; fire-engine equipment; barrack and other furniture; tools; general stores. Tenders, which can only be submitted by firms established in Egypt or having a representative there, must be received in Cairo by April 18. Copies of the specifications, etc., may be inspected by United Kingdom firms interested on application to the inquiry office of the Department of Overseas Trade, at 35, Old Queen Street, Westminster, S.W.1.

Paper.—The Controller of Printing and Stationery, Old Ismailia Palace, Sharia Qasr el Aini, Cairo, invites tenders for the supply of 600 reams of paper. April 14.

Weighing Machinery.—The Physical Department, Sharia El Insha, Cairo, invites tenders for the supply of balances and weighing machinery. April 15.

Yugoslavia.

Hospital Equipment.—The General Sanitary Department of the Yugoslav Ministry of Health invites tenders for the supply of the following hospital equipment:—10,000 convalescents' dressing-gowns (cotton), 2,000 doctors' white hospital coats, 500 overalls for male attendants, 5,000 aprons for nurses, 2,000 convalescents' winter dressing-gowns (wool), 3,000 burial shirts, 3,000 burial caps of black satin, 3,000 burial socks, 6,000 metres of calico sheeting for making covers for the dead, 2,000 metres of canvas for stretchers. Prices should be quoted per piece and a deposit of 20 per cent. must accompany the tender. United Kingdom firms intending to quote are advised to arrange for the appointment of a representative in Yugoslavia to deal with the details. Tenders, which should preferably be in Serbian, or, failing that, in German or French, should be submitted to the Ministry of Health (Ministartvo Narodnog Zdravlje), Belgrade, by April 4.

Electric Lighting, etc.—The Commercial Secretary to H.M. Legation at Belgrade reports that a prominent business man and proprietor of flour mills in Serbia is contemplating the installation of a complete electrical lighting and power station, and is asking for tenders for the necessary plant, which includes one steam-engine of 150 h.p., generators, etc., for power for 4,000 to 5,000 lamps (about 90 kilowatts), and overhead cables and conductors for 60 kilometres of circuits (to provide lighting for about 1,400 houses). The name and address of the inquirer may be obtained by United Kingdom firms interested, on application to the Department of Overseas Trade.

Malta.

Coal.—Sealed tenders will be received at the Treasury, Valetta, Malta, up to 10.30 a.m., on April 14, for the supply of coal to the Government of Malta. Tenders received after the said date and hour will not be considered. Printed forms of tender, and of the conditions, may be obtained on application from the Crown Agents for the Colonies, 4, Millbank, Westminster, London, S.W.1. Each tender must contain the name of the surety whom the tenderer intends to propose for securing the performance of the contract and the payment of the penalties therein provided. The tenderer whose offer is accepted shall incur a penalty of £500 should he or his surety fail to attend to sign the contract within three days from the date of an intimation to that effect. Provided that the said tenderer and his surety shall be held to have bound themselves to an agreement, and may be compelled to carry out the obligations arising from the acceptance of the tender, although a formal contract was not executed. Tenderers shall not retract or withdraw their tenders for a period of fifteen days from the date of expiration of that period fixed for the delivery of the tenders, so that the tenders shall remain binding and may be accepted at any time during the said period of fifteen days.

SHIPPING INTELLIGENCE.

BEYROUT CUSTOMS SCANDAL.

(FROM OUR OWN CORRESPONDENT.)

BEYROUT, March 4.

A great stir has been caused, particularly among the trading community, by sensational revelations in connection with the Beyrout Customs. The anarchy that reigned in this department, as it never did before, even in Turkish times, was beginning gravely to disturb the public mind, more especially as the recent appointment of a French inspector did not seem to improve matters.

It needed an audacious robbery recently committed, when one night one of the gates of the Custom House was found open with the locks forced, to stir the higher authorities finally to vigorous action. The inquiry of the Chief of the Parquet, a Druse official delegated by the Haut Commissariat, has already resulted in the discovery of very serious abuses, and has led to the arrest of the French Inspector-General of the Syrian Customs and of several other Syrian officials of the Beyrout Custom House, who are under grave suspicion. Very wide powers have been given to the Chief of the Parquet, who has already seized the books of many leading merchants. Another French official who is taking part in the inquiry, and who has been examining the manifests of the various steamship agencies, declared that the Customs manifest copies were found by him lying on the ground in a state of indescribable disorder, as though they were so many heaps of emptied wastepaper baskets.

It is already apparent that the malpractices of the delinquent officials are not mere Customs frauds, but present the much graver aspect of what is termed in French "délit de droit commun." The Haut Commissariat deserves to be congratulated on its moral courage and impartiality in having started by the arrest of the French head inspector.

The Beyrout Custom House has a special interest not only for the population of the town itself, but also for that of the whole country, especially the territory now known as the Grand Liban, which receives its commodities through Beyrout, because the Customs receipts form one of the most important items of revenue. The local Press has lately been criticising a measure that was reported to be under consideration by the Haut Commissariat, and according to which the Customs receipts are to be distributed among the budgets of the different zones, including the Grand Liban, in proportion to the deficit to be covered by the Haut Commissariat, without account being taken of the proportional consumption by these respective zones of goods that have paid the duty. It is contended that each of these territories should receive its share of the Customs receipts in proportion to the amount of duty paid by the goods estimated to have been consumed therein.

SHIPPING SERVICES TO MOROCCO.

There is at present no direct service between Tetuan and ports in the United Kingdom, but the Maindy Steamship Company has announced its intention of making Tetuan a port of call for their steamers, and have appointed a British protected firm as their agents (says H.M. Consul-General at Tangier in a recent report). The Moss Line have also appointed the Belgian Honorary Vice-Consul as their agent in case they should send any vessel to Tetuan. The Bland Line, of Gibraltar, maintains an irregular service of small steamers with this port and Ceuta for bringing United Kingdom goods transhipped at Gibraltar. Much loss to

British trade ensues, however, from the delays and damage to goods occasioned by the process of transhipment.

There are now no regular services between Tetuan and foreign ports. Goods come to a large extent from Spain through the ports of Algeciras, Malaga, and Cadiz by small steamers and sailing boats. The Royal Netherlands Steamship Company, Amsterdam, maintains an irregular service between this port and Holland, as circumstances permit, and the line will in all probability resume its pre-war monthly sailings, goods for return being unloaded at Ceuta when the east wind makes the operation too dangerous at Tetuan. There are no fixed charges for freight as regards any of these companies. It is a matter of bargaining with the agents in each case.

The Compania Transmediterranea maintains a regular daily service between Algeciras and Ceuta, and a weekly service between Ceuta and Seville. The Royal Netherlands Steamship Company, of Amsterdam, and the Oriental Navigation Company, of New York, both run regular monthly services. Small steamers belonging to Cadiz and Seville maintain irregular services between those ports and Ceuta. As regards freight, the same remarks apply as in the case of Tetuan.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Magdapur, for Calcutta (Birkenhead, April 11); s.s. Holywell, for Port Said, Colombo, Madras, and Calcutta (London, April 16).

Cunard Line.—S.s. Antigone, for Gibraltar, Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Swansea, April 1); s.s. Phrygia, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, April 7, and Swansea, April 7).

Ellerman Line.—S.s. City of Oxford, for Gibraltar, Malta and Alexandria (Liverpool, April 1); s.s. Grodno, for Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, April 16).

Ellerman City Line.—S.s. City of Milan, for Calcutta (Birkenhead, April 4); s.s. City of Calcutta, for Calcutta (Birkenhead, April 19); s.s. City of Cairo, for Bombay and Karachi (Birkenhead, April 20).

Ellerman's Hall Line.—S.s. City of Genoa, for Bombay, Karachi, and the Punjab (Liverpool, April 1).

Glen Line.—S.s. Glenavy, for Port Said, Port Swettenham, Singapore, etc. (London, April 7); s.s. Glenshane, for Port Said, Port Swettenham, Singapore, etc. (London, April 21); s.s. Glenade, for Port Said, Port Swettenham, Singapore, etc. (London, May 5); s.s. Glenluce, for Port Said, Port Swettenham, Singapore, etc. (London, May 19); s.s. Glenogle, for Port Said, Port Swettenham, Singapore, etc. (London, May 24).

Harrison Line.—S.s. Defender, for Calcutta (Liverpool, April 5); s.s. Architect, for Calcutta (Liverpool, April 21).

Henderson Line.—S.s. Chindwin, for Port Said and Rangoon (Birkenhead, April 20); s.s. Martaban, for Port Said and Rangoon (Birkenhead, May 4).

Holt Line.—S.s. Bellerophon, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 1); s.s. Anchises, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 8); s.s. Oanfa, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 8); s.s. Deucalion, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 15).

Johnston Line.—S.s. Incemore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 9); s.s. Venice, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 23).

Maindy Line.—S.s. Maindy, transport for Antwerp and Moroccan ports (London, early in April).

Moss Line.—S.s. Karnak, for Piræus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, and Constantza (Liverpool, April 23).

P. and O. Line.—S.s. Naldera, for Bombay (London, April 8); s.s. Sardinia, for Colombo, Madras, and Calcutta (London, April 8); s.s. Plassy, for Bombay (London, April 15); s.s. Nore, for Colombo, Madras, and Calcutta (London, April 22); s.s. Dongola, for Bombay (London, May 6).

P. and O. British India Line.—S.s. Warfield, for Bombay and Karachi (London, April 2); s.s. Nardana, for Colombo, Madras, and Calcutta (London, April 9); s.s. Chanda, for Bombay and Karachi (London, April 16); s.s. Manora, for Colombo, Madras, and Calcutta (London, April 22); s.s. Neuralia, for Bombay and Karachi (London, April 29); s.s. Gambada, for Colombo, Madras, and Calcutta (London, May 7).

NOTES OF THE WEEK.

The War in Asia Minor.

At the moment of writing the Greco-Turkish War (1921) has resolved itself into a struggle for the possession of Eskishehir. Reports of the fighting are, as usual, contradictory. The Turkish statements are palpably exaggerated, but from the reserve of the Athenian *communiqués* it has to be inferred that the Greek army has encountered more determined resistance than it had been led to anticipate. Reinforcements, however, are being sent from Greece, and in view of the numerical superiority of the Greek troops it would be a matter for surprise if the Turks succeeded in arresting the invasion at this point. The aim of the Greeks is not so much to capture territory, even though it be Angora itself, as to overwhelm the Turkish army. They will, therefore, prefer to have the enemy stand up to them than withdraw into the interior. The Greek Government would seem to have staked all on this warlike venture. King Constantine is proceeding to Smyrna, and his presence at the front will hearten his troops to a great effort. M. Gounaris has become Prime Minister in place of M. Kalogeropoulos, presumably with the idea of strengthening the Government's position, as the late Prime Minister remains in the Cabinet. There would seem to be a general consensus of opinion that the struggle against the Turks has helped materially to heal the political breach that has so long kept the Hellenic people divided against itself.

The Allies and the Campaign.

One reason why the Allied effort to draw up terms of peace for the Near East proved such a complete failure is, that the attempted settlement was purely opportunist and not based on principle. It would be equally hard to discover on what principle the Allies, as the arbiters for the time being of the peace and destinies of Europe, having summoned Greeks and Turks to a Conference in London, allow them to resume fighting while the recommendations of the Conference are still under consideration. War, however, is in progress in Asia Minor, and while the Turks are being induced to believe that Great Britain is actively assisting the Greeks in the struggle, the Greeks are, no doubt, equally convinced that the French and Italians are supporting the Turks. Thus,

the day of peace and goodwill in the Near East is rendered still more remote, by the fatuity of those who ought to have taken care that, whatever else might happen in Europe, the old causes of friction and unrest which made the Balkans the storm-centre of the Continent, should be eradicated. As things are, the different peoples are being encouraged to perpetuate their bitter-nesses, and the Allies are losing the prestige that their victory in the Great War had secured them. And to what end? Given a Greek victory, is it supposed that the Turks will remain quiescent? If the Greek army is driven back, or fails to bring the Turks to book, has the settlement of the Near East been advanced in any way whatever?

The Coup That Failed.

If, as is stated, the ex-Emperor Karl was encouraged by the turn of events in Greece to make his bid for the Hungarian throne, he is not the only one who has failed to appreciate the strength of King Constantine's position. The latter returned to Greece only when recalled by a substantial majority of the Greek electorate, and probably to the secret satisfaction of most of those who had voted against his restoration. The ex-Emperor never enjoyed the measure of popularity accorded to King Constantine, and by trying to force the hands of his late Magyar subjects has possibly subjected their loyalty to a severe strain. The success of his attempted *coup* called for a popular stampede in his favour. None was forthcoming; on the contrary, he has experienced an unmistakable rebuff even in quarters theoretically monarchist. Moreover, he has called into activity a new force in European politics—joint action by Hungary's neighbour States, Italy, Yugoslavia, Czecho-Slovakia, and Roumania, who have presented the Magyar Government with an ultimatum demanding that the ex-Emperor should leave Hungary within three days. Such a message, there can be little doubt, will have for Magyar ears a harsher ring about it than any communication from the Entente Powers. Accordingly the ex-Emperor Karl, when he has recovered from his indisposition, will have to leave Steinamanger, unless his military entourage is ill-advised enough to challenge an appeal to force.

France, Britain and the Arabs.

From Palestine comes the reassuring intelligence in a message to *The Times* that there is increasing probability that the Emir Abdullah, whose visit to

Jerusalem coincided with that of Mr. Churchill, will eventually arrive at an understanding with the French "whose attitude seems decidedly more conciliatory towards the Shereefians." If this should prove to be the case, the London Conference will have borne fruit in an unexpected direction, and France is to be congratulated on abandoning a policy which must eventually have led her to disaster in the East, and, by its hostility to British interests, have endangered the permanence of the Entente. When it is believed among the Arabs that "the Crown of Mesopotamia" has been offered by the British Government to the Emir Faisal, there is evidently a misconception regarding the relationship of Great Britain to that country. It is unlikely that the British Government will impose any ruler upon the Arabs of Mesopotamia, but it will be prepared to accept as ruler the chieftain who is shown to command the larger measure of support among the Arabs. Unfortunately, anything like a unanimous choice is out of the question. The Emir Faisal, as was pointed out in these columns several weeks ago, will probably be the Arab nominee, and he has been assured that Great Britain will cordially welcome him as ruler of Mesopotamia, but the invitation must come in the first instance from the Arabs. It bordered upon the ridiculous that Great Britain should contemplate agreeing to the appointment as ruler of Mesopotamia of a man who was the object of the sustained hostility of the French. A revision of the French attitude towards the Emir is, therefore, a salutary measure.

Zaghloul Pasha in Egypt.

Zaghloul Pasha has arrived in Egypt, and has received a popular welcome of the most demonstrative kind. If he failed to be moved by such evidence of his hold upon the imagination of the Egyptians and of the position in their affections which he has acquired by his work of the past two years, he would be either more or less than human; and his worst enemies are not likely to accuse him of that. He is entitled to feel satisfaction at having won such a position for himself. But his sincerest friends and well-wishers will hope that he will, at this critical stage of Egypt's affairs, remember that a popular leader has enormous responsibilities; and that unless he is prepared to run the risk of leading wrongly he must be prepared if need be to forfeit some of—or even all—his popularity for the good of the country. Having been among the first, if not the first, to suggest that he might be given a hearing by the British Government, we hope that we may now say without offence that to us one of the greatest misfortunes that could befall the Egyptian Nationalist cause would seem to be that Zaghloul Pasha should fail to co-operate in all sincerity with Adly Yeghen Pasha and his Government. The fear that he may do so, to which we referred a fortnight ago, is so widespread, and the reasons for it are so notorious, that it would be absurd to ignore it. But we shall hope that it will prove baseless, and that Zaghloul will play a part which will win him not only the applause of the Alexandria or Cairo mob to-day, but the blessings of future generations of Egyptians.

The New Spirit in Persia.

Some very interesting details of the new state of things in Persia are given by the Teheran correspondent of *The Times*, who records it as his opinion that the coup of February 21 "was more important than any of the events of the constitutional revolution which began sixteen years ago." Early though it be to venture such an opinion, it would seem to be warranted by what has been accomplished already by Seyyid Zia ed-Din and his colleagues, and, more especially, by the new spirit of confidence which, all reports agree in saying, is abroad in the country. Everybody in Persia, except a handful of notables, appears to be pleased by the changes wrought; and it is indeed a significant fact that the arrest and imprisonment of some 200 of "the most notable figures in Persian society and politics" has aroused no protest at all—"not a single man at arms has taken the field for his overlord, nor a single tenant telegraphed to protest to Teheran." With a few, a very

few, of the prisoners some sympathy will be felt in this country; the others, it must be admitted, only too richly deserve a fate at least as bad as that which has overtaken them. Some of them, it is only fair to add, will doubtless have met that fate with a grim smile and a secret sigh that they were born a few years too late.

Sages—and Soviets.

The most satisfactory thing about this Persian revolution—for that is what it is in effect—is that it is of a purely national character, and in no way inspired by poisonous doctrines of the Moscow type. On this point all reports are agreed; and the correspondent referred to above believes that the movement holds out hope that "the East will find the antidote to Bolshevism." "Here," he writes, "is no industrial population and none to preach or conceive possible a proletarian Government, but many who cherish Plato's ideal that philosophers should be kings and kings philosophers. The East seems turning its back on parliaments and seeking sages." It remains a fact, nevertheless, that sages, like lesser men, find financial problems painful things to tackle, and it seems probable that Zia ed-Din's Cabinet will ere long find itself in trouble of much the same kind as that which confronted its predecessors. Again, the withdrawal of our troops, and the unsatisfactory state of affairs in the Resht neighbourhood, are enough to cause anxiety to any country placed as Persia now is. It is true that a Treaty has actually been entered into between Persia and the Moscow Soviet, but it remains to be seen how far this will bind the "Reds," whose record hardly inspires confidence. The Persian Government is clearly not prepared to accept all Moscow's assurances at face value, and it is to be hoped that whatever happens it will not be caught napping. Soviets have no respect at all for sages.

The Mystery of Rahmy Bey.

During the presence in London of the Turkish Nationalist Delegation negotiations were opened for the mutual exchange of prisoners of war; and a telegram from the Malta correspondent of the *Morning Post* announces that several Turkish prisoners interned on that island are expected to leave shortly for Turkey. It would be interesting to know whether Rahmy Bey, the unfortunate ex-Vali of Smyrna, is one of the number selected, and, if not, why not? The mystery surrounding his detention remains unsolved, and the authorities maintain a silence which may be dignified, or may be merely due to their inability to give any good reason for the detention of one who showed himself a chivalrous foe, and won the gratitude of numbers of British subjects, who now earnestly desire to see him released. If for any reason he cannot be released unconditionally, why cannot he be allowed to reside either in London or in Paris, on parole, as he has asked permission to do?

Indian Politics.

With the prorogation of the Indian legislature, the interest of politics shifts from the capital to the country, and Lord Chelmsford did well to remind the departing members in his closing speech that they have duties outside Delhi, and that their constituencies will want to know what they have been doing. Under the old régime constituents did not count, and we fear their requirements will be regarded as a nuisance just at first; but it is a nuisance which will have to be endured, and at the moment there are particular reasons for maintaining the closest possible touch with the country. While legislators have been debating, the enemy has been sowing tares, and there is plenty of hard spade-work—or, rather, hoe-work—to be done if the new crop is to be saved. To drop metaphors, the mischief-makers have been exceedingly busy during the last few months among the peasants and the factory hands, and if the supporters of the new constitution do not counter their activities, the position may again become thoroughly dangerous; it is hard work, but India has never been an easy country to govern, and the men who aspire to rule must learn to shoulder the burden.

THE WEEK AT HOME.

LONDON, Monday Evening.

Another Coal Strike.

The miners, or their leaders, or both, have taken the bit between their teeth, and bolted, and another coal strike is upon us. On the day that coal was decontrolled the strike began. Unfortunately it seems to have started, at least officially, in an extremely bitter spirit, for the Miners' Federation has instructed the pump men and others who have hitherto maintained the safety of the mines during a strike to come out as well as the coal-getters. This indefensible order has been condemned, as it was bound to be, on all sides, and it has not been generally obeyed. Had it been obeyed everywhere, it would have permanently ruined a large number of collieries. The fact that the order was given has encouraged the suspicion in some quarters that the Miners' Federation, finding itself in a critical position, has determined to stake everything on one throw.

The rights and wrongs of the case, so far as they have been published—and both sides have been reticent—may be briefly stated. The industry is bankrupt, because it has asked too much money for its goods; it has killed the export trade, and seriously handicapped all home industry by its greed; it has been the main factor in forcing up all industrial prices. Its critical position, brought about by its own folly—for which both masters and men must share the blame—has no public sympathy whatever. The cure is simple. The masters' profits have practically disappeared through the collapse of the export trade; the only road to economy is therefore a reduction of wages, which have been increased several times since the miners struck in 1915, at a critical moment of the war, and enforced their claim during a national emergency. With the fall of prices, such reductions of wages are being made in other industries, notably among the railwaymen, without friction; the miners would not consent.

They complain that the employers' schedule of reductions is too drastic. This is quite possible; only experts in mining conditions can decide the point. Certainly the public cannot, for all sections of the public are prejudiced against the miners, remembering that every increase in wages has been followed by a decrease in production of coal. However, it should not have been impossible to carry on the industry while the point was being discussed, as is done in other trades; the Miners' Federation preferred to call a strike, and the only remedy it has suggested was made by Mr. Frank Hodges, who proposed that the State should subsidise the industry. Seeing that coal has practically blackmailed the public for the last five years, this amounts to a proposal that the country shall no longer be blackmailed as individuals but as a nation. The proposal has everywhere been regarded as impertinent, and as a final proof of the utter selfishness of the miners' executive. Apparently they expected the Government to intervene at the last moment, but it has not done so.

What course the struggle will take cannot be foretold. I am not hopeful of a speedy settlement. Those who know tell me I am wrong. But I cannot forget that six months ago they assured the whole world that the result of the last coal strike would be permanent peace, better feeling, and mutual understanding of master and man. I could not see anything more than a truce, and a badly-drawn truce, in the terms, but I was denounced for prophesying more trouble this year as one who did not understand the position. But sometimes one's nose is a surer guide than other folk's eyes.

In the present case the trouble may last a long time; it is a matter of life and death to the Miners' Federation to hold out. If they give in they are smashed; if they hold out indefinitely they are bankrupt. For that reason they are appealing to the Triple Alliance of railwaymen and transport men to make common terms, and come out on what would in effect be a general strike. If the invitation were accepted, the Government would be faced with another attempt at "direct action" and, in effect, a revolution; but it will pro-

bably be refused. If refused, it means that the Triple Alliance, which has never proved effective yet, is a failure, and the Miners' Federation would be left to exhaust its funds and make what terms it could.

I doubt if its demise, or reduction to impotence, would be any loss to other trade unions. The solidarity of Labour is a true doctrine, but, like most doctrines, more honoured in theory than in practice, and for this reason, that the miners always appeal to it when they are in a hole, but never do anything for other workers. There are, of course, some employers who regard the present as an opportunity to smash all trade unions; these are mostly small men and bad employers of the sweating type. And there are sections in the trade unions which regard the present trouble as an opportunity to spread Bolshevism; there are an equally small minority on the other side. The decent and sensible majority in both camps sees that wages depend on cost of living, that as one rose with the other, both must fall together, and at approximately the same pace; and that in the present condition of industry, which is not flourishing, there is more to be gained by negotiation than by a fight.

The Political Consequences.

Some of the miners' leaders have complained of the apathy of the public over the coal crisis. They are apathetic in the sense that anybody who is impotent to avert a disaster is apathetic, but their real feeling is that of disgust.

The political consequence of the strike will be quite inevitably a further set-back for Labour. The public takes its revenge in votes. In the first six months of 1919 Labour won at the polls; then the railway strike gave it a period of losses. It no sooner began to recover popularity than the coal strike of last autumn and direct action appeared on the field, and again Labour lost its by-elections. After that its political leaders seemed to learn their lesson, and nobody was more carefully constitutional in its speeches than they. The party had its reward, and won several by-elections. This certainly frightened the Government, and ten days back Mr. Lloyd George, in a very expansive after-luncheon speech, denounced them as Bolsheviks in disguise, wolves in sheep's clothing, and all the rest of it.

The speech did not have much effect, because the average Labour politician in the House of Commons, so far from imitating Trotsky, is as orthodox (and as dull) as a Parish Clerk. But this sudden strike, with the suffering and loss it must cause to the community, seems to make the cap fit, and I think it will take political Labour six months to get over the prestige it will lose with the general public.

The trouble is not in the least that the Labour leader is a wolf in sheep's clothing; he is a very decent fellow, with as many ideas in his head as the average politician, and with no desire whatever to bathe in the blood of employers. He is very often a respected figure in his local chapel, or a brotherhood preacher, and akin to the sturdy Radical of the old days. He fails less in principles than in personality, and sometimes in pluck; he is too much the mere mouthpiece, and not sufficiently the leader, who will choose his own policy and methods. As his job depends on keeping in with his followers, and the extremer opinion naturally dictates the pace, he cannot be blamed too much. But it is not a particularly good thing for politics in general, or

the Labour Party in especial, that it should be in this position.

The Government Changes.

The changes in the Cabinet, which were inappropriately announced on April 1, were more numerous than had been expected, but on the whole there is little the critics can quarrel with, and it is very probable that the Government will be rather stronger than before. Sir Robert Horne has, of course, still to prove himself at the Exchequer, but to rise to what is generally considered the second position in the Cabinet after less than three years in Parliament is astonishing; in fact, it has only been done once before, in the case of the younger Pitt. Mr. Illingworth, who was not a particularly successful Postmaster-General, retires on the ground of ill-health in favour of Mr. Kellaway; Dr Addison at last disappears from the Ministry of Health, although why he should be made Minister without Portfolio passes human comprehension, and nobody knows what are the duties, if any, attaching to the post. The fact that Sir Alfred Mond goes to the Ministry of Health is generally interpreted to mean that the excessive activities and expenditure of that department are to be curbed. The public, which believes in the possibility of a Health Ministry but has resented the way in which Dr. Addison has tried to feel its pulse, will be relieved at the change.

In some ways the most important change is the retirement of Lord French as Viceroy of Ireland, and the appointment of Lord Edmund Talbot in his place. For the first time a Roman Catholic becomes Viceroy—this is the first result of the new Home Rule Act in practice. Whether that of itself will have any effect on the position in Ireland remains to be seen. A few years ago it would have had considerable weight; it will still, of course, ensure the approval of the Roman Catholic hierarchy. But Sinn Fein has shown an independence of Rome in political and other action which has caused much searching of the heart the last two or three years, and it is possible that the mere fact of the religious bond will not by itself do so much as was anticipated in the more violently republican circles.

At the same time, it is universally recognised that Lord Edmund is a man of sterling character whom everybody likes, and, what is more, respects. One of the old Catholic nobility, he has no showy parts, and he probably disdains mere brilliance. But he is absolutely straight in his dealings with friend and foe, and his appointment will restore some of the moral prestige that the Government has come increasingly to need in its Irish policy. It will be almost his first duty to superintend the convocation of the new Irish Parliaments this summer.

The Prince as Jockey.

The Prince of Wales won a very popular victory in the Guards Steeplechase at Hawthorn Hill, riding his own horse, and covering a by no means easy course without mishap. He rides gamely, and has been in the saddle very often of late; one supposes he is getting accustomed to being followed by the photographers on these and, apparently, all other possible occasions. The King and Queen were among the spectators at Hawthorn Hill; the Queen appeared to be a little anxious, but both were obviously very pleased at the Prince's success.

Falling Wages.

Prices having fallen, a good many wage agreements calculated on the cost of living are also falling. Railwaymen's wages, for instance, are down 4s. a week. It was said in some quarters that they would protest against honouring the agreement. The idea was preposterous; railwaymen are men of their word, and held to the bargain.

In the Civil Service there are also similar reductions of the war bonus on account of falling prices. These reductions will probably lead to a further fall in the cost of living; the vicious circle, of which we heard so much last year, is beginning to prey on its own vitals. Deflation is not a very enjoyable process, but it is essential to national health; it is likely to last some considerable time, and the whole of 1921 will probably be a period of stringency. I gather from a house agent that even seaside landladies are trying to curb their natural rapacity, and asking more moderate rents. But house agents are proverbially optimistic, and a statement like that takes a great deal of believing.

The Boat Race.

Cambridge won, as was expected all along. But it was by no means such an easy thing as had seemed probable at one time—a one-length win on the Putney-to-Mortlake course is not a very great margin, and the Oxford crew obviously made considerable progress in the last few days of training, while Cambridge, being already at the very top of their form, could not expect to get anything more out of themselves, and could only pray not to go stale.

All the same, I doubt if the one length which separated the boats at the end really represented the differences in the crew. Oxford made a gallant effort, but they had not another ounce left in them, and nearly collapsed afterwards: Cambridge had plenty of strength for another mile, and would have probably increased their lead considerably had the course been longer.

To make things even, Oxford beat Cambridge at golf on the same day. But University golf is a select and not a popular sport.

There has been a rather animated discussion this week over the next Test Matches. Mr. C. B. Fry has suggested that we are too haphazard over our methods; the M.C.C. appoints the captain and picks the team, but the men never play together as an eleven until they meet on the ground. The result is that the batsmen do not know each other's peculiarities, the captain is not quite sure of his bowlers or where to place his field to the best advantage. Mr. Fry thinks that the cure for this is to pick the England team early in the season, and for the eleven to play one or two trial games together, to find out each other's—and one may add, the captain's—peculiarities. Other cricketers have supported or criticised the idea; the most telling argument against it seems to be that the Douglas team in Australia was playing together all the time, and yet managed to lose every Test match.

An unspoken criticism which has been at the back of the minds of a good many is the feeling that if these men were picked and set apart and trained separately—fatted up, so to speak, for the event—it would tend to increase the professional element in the national sport, since few amateurs could afford the heavy additional tax on their time. That might help us to beat Australia, but it would not help English cricket in the long run.

The Week's Books.

A curious little book which I shall add to my war library is "Gun Running for Casement" (Collins), by Lieutenant Karl Spindler, the German officer who escaped from Donnington Hall and brought Casement over from Germany to Ireland. He has good reason to remember the British police. After his escape, he was walking about Nottingham with a comrade. "I learned that a detective had watched us for a long time without noticing our identity with the wanted men. Then he suddenly remarked that whenever we chanced to get out of step we quite mechanically regained step, and he said to himself, 'Those are certainly two German officers.'"

Serious readers will be interested in the very thoughtful essays which Miss Alice Gardner has published under the title of "The History of Sacraments in Relation to Thought and Progress" (Williams and Norgate). Her analysis of sacramental life is very suggestive; one quotation will show the trend of her thought. "Belief in sacraments and belief in direct divine communications which render sacraments superfluous are nearer to each other than either is to the crude belief in an autocratic Creator or a 'great non-natural man.'" OCELLUS.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, March 20.

The New Cabinet.

Since Thursday last Cairo has been to all intents and purposes *en fête*. The trams have been bedecked with banners and branches of trees, the public establishments have all flown their flags, and throughout the day throngs of students have passed through the streets carrying banners and shouting "Long live the Sultan," "Long live Adly," "Long live Zaghloul," etc. This is all due to the acceptance of the Presidency of the Council of Ministers by Adly Pasha Yeghen, to the constitution of a new political Cabinet to take the place of the Ministry of Affairs presided over by Mohammed Tewfik Nessim Pasha since last May, and to the publication by Adly Pasha and his colleagues of their programme.

When I penned my last letter considerable difficulties had arisen in the matter of the constitution of a new Cabinet and it looked very much as if, at this vital moment in the history of Egypt, personal considerations were going to bring everything to shipwreck. Happily, at the eleventh hour wiser counsels prevailed, and, Mazloun Pasha having found it impossible to form a Cabinet responding to the needs of the situation, the Sultan invited Adly Pasha Yeghen, the one man really indicated for the task, to assume the premiership and form the new Cabinet.

Within a very short time Adly Pasha had accomplished the task allotted to him, and on Thursday the 17th the decree was signed. The cables will have advised you of the constitution of the new Cabinet. There is, therefore, no need for me to deal with it, and all that I would say is that the choice made by Adly Pasha seems to have met with the warm approval of all sections of the community, and that he appears to have gathered round him a team which should pull together very satisfactorily. Likewise, the programme which the new Premier outlined in his letter of acceptance of office has met with general acceptance.

The Cabinet will work for a political settlement which will establish beyond doubt the independence of Egypt. In this it will seek the co-operation of Saad Pasha Zaghloul and his colleagues. It promises that the elections for the Constituent Assembly, which will be called upon to ratify the agreement, shall take place with the fullest guarantee for the expression of the country's views, and that none of the great reforms so needed by the country shall be introduced until the new Constitution, which the Cabinet will elaborate, has been put into operation, and the country has had an opportunity of expressing its opinion through its properly elected representatives. Finally, it holds out a hope that it will be possible within a very short time to return to a normal régime and do away with martial law and the censorship. This, in short, is the programme which the Cabinet has before it. It responds fully to the nation's aspirations, but the new Ministers will need the whole-hearted collaboration of the country in order to bring their very important task to a successful conclusion.

Adly Pasha's Fine Work.

Adly Pasha Yeghen fully deserves the confidence which his Sovereign, by entrusting to him the formation of the Cabinet, and his fellow-countrymen, by the manner in which they have received his nomination, repose in him. He has during the past two years worked indefatigably and at the same time unobtrusively towards a satisfactory settlement with Great Britain, meeting the Egyptian aspirations and also our own special requirements. It was thanks to him that the breach between Zaghloul Pasha and the Milner Mission was repaired; it was likewise thanks to his tact and his influence with his fellow-countrymen that agreement was come to on the lines of the draft proposals of August 18, 1920; and his influence and his personality have undoubtedly had a good deal to do

with the granting of the recent concession made by the British Government in the matter of the abolition of the Protectorate and of the promise contained in his letter of acceptance of office with regard to the removal of administrative restrictions.

It is, therefore, but fitting that he should be at the head of the Government which will have to control matters during the forthcoming negotiations, and that he should preside over the official delegation to whom will fall the task of discussing the situation with the British Government and drafting the Treaty of Alliance which will constitute the charter of liberty aspired to by the Egyptians, and, it is hoped, a bond of amity between the British and Egyptian nations.

The Outgoing Cabinet.

One final word with regard to the outgoing Cabinet, and particularly to its head, Mohammed Tewfik Nessim Pasha. The retiring Ministers took office as a Ministry of Affairs at a critical moment, and they have pluckily carried on the administration of the country under most difficult conditions. To Nessim Pasha as Prime Minister has naturally fallen the heaviest part of the burden, but he has fully lived up to the expectations created when he was appointed, and has throughout displayed remarkable patriotism, a patriotism which finds eloquent expression in his letter of resignation. When the time comes for the history of Egypt since 1918 to be written by the impartial historian we can be certain that he will single out Nessim for his able and courageous administration and his self-effacement when the time came for the adoption of a line of action dictated by, and considered more responding to, the new situation created by the British Government's declaration regarding the Protectorate.

Tomatoes, Economics and Politics.

One of my editor friends was somewhat surprised this week to receive a telegram from a village not far distant from Cairo clamouring for "Government control of tomatoes for other than economic reasons." With such far more important questions as cotton the political future of the country, cereals, etc., so prominently before the public, this seemed to him a strange demand, especially as the village itself was known to be a somewhat large producer of market garden produce; and the remark "for other than economic reasons" greatly intrigued him.

Before publishing the telegram he, therefore, made some inquiries, and eventually he was very thankful that he had taken this precaution. The explanation for this sudden concern for the control of tomatoes turns out to be that a recent delegation from the provinces which had come to congratulate the Sultan on the British Government's recent declaration, and which included members of the village in question, had on arrival in Cairo been much mishandled by a body of students who had pelted them with tomatoes. Doubtless some wag in the village had seized upon this as a good opportunity for pulling the leg of the vernacular Press, which is generally only too pleased to publish telegrams from the provinces on any subject.

ROUMANIA.

BUCHAREST, March 19.

Political.

After a week of party intrigues behind the scenes and of "rows" and scandals in Parliament, the political situation still remains practically unchanged. M. Jorga has resumed the leadership of the Federalist *bloc*, but on condition that M. Stere should not be admitted in the group.

M. Bratianu (the leader of the Liberal Party), in a speech delivered at the Liberal Club, has announced that the work of reorganisation of their party throughout the country has been completed, and that they are

now ready to take over the reins of Government when the occasion arises. M. Averescu's party, on the other hand, have just celebrated their first year's anniversary of their coming into power, which they were quite justified in doing, considering that theirs is the only party that has been able to remain in power for such a length of time since the war. They have a good chance to do so still, for though they have some weak points, there is no other party to take their place for the moment. The Liberals have still to regain among the masses their popularity; and the Federalists, although comparatively numerous, are still unable to amalgamate sufficiently to pull together.

Agrarian Reform.

In the Senate the Agrarian Reform Bill is making slow but sure progress, especially since the Opposition has abandoned its negative attitude, and has voted for the Bill in its general form, upon condition that when the different clauses are discussed their proposed amendments are taken into consideration.

At the same time the Agrarian Committee is also working very energetically in dividing up the land among the peasants, and it is reported that almost 5 per cent. of this work has already been accomplished.

Coronation Preparations.

The special committee charged with making arrangements for the coronation of King Ferdinand and Queen Marie has been hard at work, and it has now been decided that the Coronation shall take place at Alba Julia (Transylvania) on September 24. It has further been decided that a church shall be erected at Alba Julia similar to the one at Targoviste for use in the religious service in the crowning of King Ferdinand as King of All Roumanians, and in memory of the great battles which brought Greater Roumania into being. The church, it is expected, will serve for the crowning of all future kings of Roumania. On the outskirts of the town, where Michael the Brave entered Alba Julia after a victory over the Hungarians 500 years ago, a

monumental arch, with reliefs commemorating events in Roumanian history, will be erected. On the coronation day, after a service at the new church, at which all the Roumanian bishops will be present, the King and Queen, crowned, will proceed to the new triumphal arch, where the troops will parade. In the afternoon and evening there will be various entertainments, including a banquet in the hall in which the union of Transylvania with Roumania was proclaimed in December, 1918. The next day the Sovereigns will arrive in Bucharest and make a triumphal entry into the capital. Here also an arch will be erected to commemorate the day for future generations.

Tudor Vladimirescu.

This week the centenary of the death of Tudor Vladimirescu, a former Roumanian ruler, was celebrated by festivities in the capital, at which delegates in national costumes from all parts of the country assembled to express their gratitude for the good done to the Roumanian nation by this national hero.

Tudor Vladimirescu, although the son of Roumanian peasants, was able, through his intelligence, bravery and love for his fellow-peasants to rise to the rank of ruler, although for a very short time. During his time the Roumanians were oppressed by a number of Greeks, called Phanariots, sent by the Sultan of Turkey to rule over them. The oppression got so unbearable that Tudor Vladimirescu put himself at the head of a revolt to free the country of these foreign usurpers. Roumania being then under the Turks, the Sultan, thinking this revolt directed against him, sent troops to suppress this rebellion; but, on finding out the real cause of their discontent, allowed the Roumanians from that time forward to choose a ruler from their own people, thus beginning a new era for the Roumanian nation. Vladimirescu, however, was treacherously murdered by the Phanariots.

The Hungarian Plot in Transylvania.

After several isolated cases of Magyar chauvinistic manifestations, the Roumanian authorities have at last

The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—
THE "UNIVERSAL"
CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR
KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC
CIRCULAR KNIFE GRINDING
MACHINE.
AUTOMATIC CIGARETTE-
WASTE STRIPPING MACHINE.

United Cigarette
Machine Co., Inc.
80, Coleman Street,
LONDON, England.

been able to get to the bottom of a well-organised plot directed against the State, encouraged and financed by the Hungarian Government. By keeping a close watch on a certain Hungarian Society (the "Emke") the authorities were able to lay hands on the principal agents, who include a number of Magyar priests, town councillors, State officials and others; and on searching their houses letters, reports and pamphlets were found that proved indisputably that they were spying and plotting against the safety of the State.

General News.

Prince Alphonse of Bourbon, who represented the Spanish Royal Family at the wedding of Princess Elisabeth, after having visited several towns in the country, left on March 11 by the Simplon express for Paris and Madrid.

Beginning on April 1, 1921, the army will be placed on a peace footing. At the same time, martial law, censorship and military courts will be abolished.

GREECE.

ATHENS, March 20.

War Clouds.

The country is once again on the war-path. Persistent rumours of a partial mobilisation were rife throughout the week, but were repeatedly denied by those who are in the know. Last night, however, a telegram received from M. Gounaris, whose inexplicable silence during the week had caused considerable anxiety to official circles in Athens, proved how well founded these rumours had been. M. Gounaris pointed out in his telegram that in view of the recent concentration of fresh Kemalist troops in Asia Minor it would be necessary to reinforce the Hellenic front by at least three classes of reserves. The Prime Minister *ad interim*, M. Protopapadakis, immediately communicated the contents of this telegram to the King, and at eleven o'clock last night the Royal Decree calling up the 1913b, 1914, and 1915 classes was signed and published in to-day's official gazette. At the same time the King issued a proclamation to the people, stating that the calling up of the above three classes was necessary in order to protect the Christian populations in Asia Minor from Mustapha Kemal's savage hordes, also to bring about definite peace in the Near East.

The papers are full of enthusiastic articles, and assure us that Mustapha Kemal's career is at an end. To-day's *Ephimeris*, in a special one o'clock edition, states on good authority that King Constantine himself will shortly proceed to Smyrna, where he will take command of the Greek armies.

In Thrace.

The newly appointed Governor of Thrace, M. Vozikis, prior to taking up his duties, conferred with the deputies of Thrace, with whom he discussed all matters of importance connected with that region, and particularly the question of providing accommodation for the refugees. The question of adopting certain measures ensuring an adequate supply of foodstuffs for the Thracian population was also discussed. M. Vozikis left Athens for Adrianople on Thursday morning.

The Allied Commission representing the League of Nations has arrived in Gumuldjina to superintend the mutual exchange of the Greek and Bulgarian populations. The members of the Commission were received by the Prefect and the Mayor of Gumuldjina, and at their invitation paid a visit to the new orphanage of the town which serves as a home for about 200 children

whose parents were exterminated by the Bulgarians prior to the Greek occupation of Thrace.

The Moslem inhabitants of the Arcadioupolis district have despatched a telegram to the Athens Press condemning the attitude of certain Turkish deputies of Thrace who refused to sign the memorandum submitted by the National Assembly to the London Conference, declining to accept the proposal to send a commission of inquiry to Thrace and Smyrna. The telegram adds that the Moslems are very happy under Greek administration. A similar telegram was sent by three Turkish deputies from Kirkilisse, who, owing to private affairs, have been unable, so far, to attend the meetings of the Constituent Assembly.

TURKEY.

CONSTANTINOPLE, March 23.

Return of the Wanderers.

The event of the week has undoubtedly been the sudden reappearance of the much-advertised Mission under Izzet Pasha, which proceeded from Constantinople to Angora about sixteen weeks ago for the purpose of eliminating the regrettable "duality" that had arisen within the body of the Turkish state. Izzet Pasha was at once besieged by journalists and others whose hunger for news is never appeased, and it would appear that the Mission had a most difficult and uncomfortable journey back to Constantinople on account of the state of the roads being such as to make travelling irksome in every way. The journey is said to have taken fifteen days, and the question why the Mission had left Angora at such a moment was quite natural; but Izzet Pasha's reply to the effect that there was no longer any reason for him and his companions to prolong its sojourn in the capital of Nationalistan was somewhat ambiguous; and in view of the reasons which he cited to explain the lengthy stay of the Mission in Angora, his reply to the first question gives food for thought. It will be remembered that as soon as the Mission arrived in Angora

Piræus

FURNESS (Hellas) Ltd.

General Ship & Freight Brokers, Coal Importers, Stevedores & Clearing Agents.

Goods forwarded to all Greek Coast-
wise Ports, dutied and delivered to

Speed up your Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing :—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from 1½" diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes :—

½" to 1½" fitted with No. 2 and No. 3 Morse Taper Shank.

1" to 3" fitted with No. 3 and No. 4 Morse Taper Shank.

Full particulars upon application to:—

CHRISTIANIA, STOCKHOLM, TUNIS.

the Anatolian Press announced that Izzet Pasha and his companions had devised the plan of a conference in Angora as a subterfuge whereby to escape from the tyranny of the British and to join the Nationalist cause. This action on the part of the Nationalists, Izzet Pasha asserts, was necessitated by the attitude of the Bolsheviks, who regarded the advent of the Mission as a mark of hostility to themselves. How, then, it may be asked, will the return of the Mission be interpreted? And why was it considered necessary for it to brave the rigours of the Anatolian winter in order to return to Constantinople? It had been away for sixteen weeks, and its absence has made practically no difference to the administration of affairs. Another week or so would surely have made no difference.

There are, in fact, grounds for believing that there were very good reasons for the return of Izzet Pasha to Constantinople at the present moment. The Nationalists now consider that official recognition has been accorded to the Great National Assembly as the legal Government of Turkey by the very circumstance of the conclusion of agreements between its representatives in Europe and the French and Italian Governments. Further, the reception accorded to the Nationalist Delegation by the British Government is taken as a sign that Great Britain is prepared to follow the example of her Allies. Hence the Nationalist demand that the Sultan should recognise the Great National Assembly is regarded as having added force to-day. This is in all probability the key to the mystery of the Mission, and it is probable that Izzet Pasha has been charged with the task of persuading the Sultan to reconsider the matter.

Nationalist Policy.

At the same time, there is no indication whatever that the Nationalists have in any way changed the policy which has been described in previous letters. Those who hold power in Anatolia have no intention of relinquishing it; and so far as the Angora Administration is concerned, the Sublime Porte and the Imperial Cabinet do not exist. How this attitude is reconcilable with the protestations of loyalty to the Sultan it is somewhat difficult to understand, but the Nationalists are still apparently of the opinion that they are covered by asserting that the Sultan is virtually a prisoner and not a free agent. Nevertheless, if they succeed in carrying out their avowed intentions, the Sultan will be less of a free agent than ever—which will, perhaps, please the Bolsheviks, whatever the Islamic world may think.

The Results of the Conference.

So far as one can judge, the opinion of the home Press with regard to the prospects of a speedy settlement of the differences with Anatolia is generally optimistic; but there are many indications that this optimism is not altogether well founded. True, agreements have been signed with France and Italy, but these agreements are of considerable value to the Nationalists in that they permit the concentration of forces hitherto employed elsewhere upon the Ionian front. Further, there is very faint hope indeed of the Nationalists agreeing to any peace which leaves a Greek garrison in Smyrna and does not touch the status of Thrace. On the other hand, the Greeks have been preparing for the renewal of an offensive against Eskişehir for the last six weeks, and those preparations having been completed, there is good reason to believe that fresh operations are imminent. How will this assist in bringing about the settlement so ardently desired? The most optimistic estimate of possible Greek success does not extend beyond the possible capture of Angora, and there is considerable doubt whether that will achieve the end in view, apart from doubts whether the estimate itself is justified. A reverse suffered by the Greeks will only render the existing confusion worse confounded. However, *bakallem*.

The Caucasus.

It is reported here that the Turks, after having been forced by the Georgian forces which had turned Bolshevik to withdraw from Batoum, have come to an agreement with the Bolsheviks by which the all-important port remains Russian. There are no other details concerning the agreement, but it is practically certain that the Turks, preferring half a loaf to no

bread, have perforce been satisfied with promises of autonomy for the coveted province of Ajaristan. It would thus appear that the Bolsheviks and the Turks still find some use for each other, and it is therefore still more unlikely that peace is to be established in the East within the near future.

CYPRUS.

NICOSIA, March 5.

The Greek Enosis Movement.

No positive decision has been arrived at as to the next steps to be taken. The visit of Mr. Churchill to Egypt has suggested that it should not be allowed to pass without another effort being made to advance the cause. Some suggest that a deputation of all or some of the members of the Legislative Council should proceed to Cairo and seek an interview with the new Secretary of State; or that a telegram should be despatched begging that he will visit Cyprus, as he did some years ago, and see for himself how strong is the desire for union with Greece. The general feeling, however, seems to be that nothing could be gained by such a course.

The Judicial Department.

The advocates of Nicosia have presented a memorial to the Government and to the Chief Justice, Mr. Stanley Fisher, requesting that additional judges may be appointed to deal with work in the Central Courts. It is represented that the congested state of work involves constant adjournments of cases to the great detriment and loss of time of suitors. It is considered by the bar that three more judges should be appointed.

General News.

Nicosia has again been under snow, as it was once last winter, though not so thickly. Such an event is rare, and only occurs, as a rule, at long intervals.—There has been a decrease in cases of typhus and also of influenza, from which many have been suffering, especially in Limassol and the west of the island.—At Limassol football and cricket matches are being played on the afternoons of Saturday and Sunday, on the English Club grounds between English and Greek teams, Major Bolton, the Commissioner, often attending. They are very popular, and are witnessed by large numbers of residents.

NICOSIA, March 15.

The High Commissioner, Mr. Malcolm Stevenson, is proceeding by this week's mail steamer to Egypt to meet Mr. Winston Churchill.

The Legislative Council was opened on March 7 by His Excellency with the usual formalities. In the opening speech the High Commissioner was able to congratulate the Council and the island on the prosperity which marked the past year, and which is continued in the present, on the satisfactory state of the public health, and of exports and imports, in spite of various economic drawbacks. He mentioned various draft laws which would be submitted to the Council, including measures to regulate or amend laws relating to the landing and residence of foreigners, to motor traffic, and to cruelty to animals. He then left the Chamber, and the Chief Secretary having taken his place the speech was translated into Turkish, and a resolution was passed thanking His Excellency for his address. The Greek members have absented themselves from this and from all succeeding sittings.

The "Unionist" Programme.

After holding several meetings, the Greek members of Council decided to despatch a memorial, signed by the Archbishop and themselves, to Mr. Churchill, in which, after stating that they had been again elected by votes which expressed the feelings of all the Greek Cypriots, they express the hope that the British Government may reconsider its decision regarding the island. They remind the Secretary of State of his visit to Cyprus in 1907, and trust that he will be the advocate of their cause with the Imperial Government. On March 11 they requested the High Commissioner to transmit to Mr. Churchill a telegram inviting him to visit Cyprus. It was decided that, should the Secretary of State not be able to visit the island, some of the members should proceed to Egypt in the hope of obtaining an interview.

It has been decided that the Greek community in Cyprus shall be represented at Athens during the celebrations of the Tercentenary of Greek independence.

OFFICIAL NOTICE.

NOTICE.—To ROUMANIAN SUBJECTS.—The Roumanian Military Attaché in Great Britain brings to the knowledge of all Roumanian male subjects that the Class 1922, composed of:—(a) All those born in 1900 as well as those who have been previously temporarily exempted for reasons of ill-health or through having a brother serving in the Roumanian Army belonging to former classes inclusive of 1921; (b) All Roumanian male subjects of former classes that have not yet been recruited for no matter what reason, these two above categories must present themselves at the Royal Roumanian Legation, 4, Cromwell Place, S. Kensington, between the 20th and 25th of April, 1921; (c) All those temporarily exempted and rejected of former classes must be re-examined in Roumania, otherwise they will be considered as "absentees."

HELLENISM IN EGYPT.

At a meeting of the Egypt Exploration Society, held on March 17, at the Royal Society's Rooms at Burlington House, the Chairman, Colonel H. G. Lyons, F.R.S., gave a few details of the work now being carried on at Tel-el-Amarna by this Society, under the superintendence of Prof. T. Eric Peet. He pointed out that excavations at the present day are slow and elaborate owing to the necessity for publishing strictly scientific reports of all work done, and every object found. Although it is unlikely that the present season's work will yield any very important finds in the way of Museum specimens, yet everything which tends to advance our knowledge of the period of Akhnaton is of great value and interest. The Chairman went on to say that in a certain portion of the site, which was believed by the Germans who worked here before the war to be a cemetery, Professor Peet had found remains of houses where the upper portions of the structures had fallen in and were still in a good state of preservation, not having been attacked by the white ant, and there were wooden rafters, reed coverings, ropes, and implements of domestic use all *in situ*. Also many pieces of Minoan pottery, probably brought from Thebes, and one clay tablet had been recovered inscribed in Assyrian. The work now being carried out on sites in Egypt, together with such information as Professor Reisner has recently gathered from his work in the Blue Nile Province, and the Rev. John Roscoe from his travels among the present natives of Uganda and neighbouring countries, all tend to throw light on many problems of the early civilisation of Africa and the history of the early movements of man.

The Chairman then called upon Mr. H. I. Bell to deliver a lecture on "Hellenism in Egypt." Following upon a lecture delivered before the same Society last year on the Historical Importance of Greek Papyri, Mr. Bell now reviewed in fuller detail the evidence afforded by papyri of Hellenic culture, its growth, dominance, and decay. The earliest dated Greek papyri bring us into a thoroughly Greek circle, soldiers, merchants, etc., with Greek names, keeping in touch with their relatives in Greece, retaining a keen interest in poetry and literature, reading Greek authors. But the setting is Egyptian, the religion is intermixed, the political and social organisations are un-Hellenic, the peasants and artisans are semi-serfs.

A change is to be noted about the end of 3rd cent., B.C.; the settlers have acquired permanent interest in the country; there is more intermarriage, and Egyptian customs are gradually being adopted by the Greeks. Then came the Roman conquest; its first effect was the strengthening of Hellenism, an increase of civic pride, and the dominance of the gymnasia, education in them became the hall-mark of social superiority. But this increased pride of capitals led to lavish expenditure, which sealed the fate of the urban middle class, and brought about the ruin of Hellenic culture. Christianity, too, was inimical to Hellenism, asceticism, and monastic influences were opposed to the gymnasia and the cult of bodily fitness. Christianity in the East was strongly national, the Egyptian language was revived in Coptic, and Greek began to die out, being retained only as the official language. The fate of Hellenism was finally settled by the Arab Conquest. It could not live in the new atmosphere, and Egypt reverted to the Orient.

Earthquake shocks were felt at Malta on March 28 between 9.2 a.m. and 11.31 a.m. There was no damage.

Nizam Bey, son of Nizam Pasha, is now in Brussels, and has informed *The Times* correspondent that he is appealing to the Turkish Government to arrest the assassins of his father. Nizam Pasha, at the time Minister of War, was murdered on January 23, 1913, as he was leaving the Sublime Porte, by agents of the Committee of Union and Progress, instigated, as is believed, by Enver and Talaat Pashas.

MUSICAL NOTES.

THE ENGLISHMAN ABROAD.

To summarise the musical sentiments of the Englishman living abroad is not an easy matter; but, broadly speaking, it would seem that his attitude towards English music is either hostile or friendly, according to whether it be based on ignorance or on standards other than musical. There is the one who is unaware that English music exists; and there is the other whose patriotism swamps his æsthetic faculties.

I propose to take as typical of the feelings of the educated Englishman in the Near East some remarks recently made by a pianist well known in Egypt, Mr. Frederick Kitchener. The April number of *Musical Opinion* contains an article called "Some Impressions of an Anglo-Egyptian," in which the former musical critic of the *Sphinx* appears to me to illustrate well the friendly, but very vague and in part unsound, attitude to English music. Here are some of his sentences:—"The worst feature of musical life here (i.e., England) is the running about after every new foreign development, however absurd it may be, at the expense of our best composers. Why should we rave about such a man—for instance—as Stravinsky, when we have ourselves such a sane, noble and heart-feeling composer as Elgar?" Again: "Why should we always be imitating these foreigners, as though they were better than us?" "Let us stay at home. After all, there is no country like England, and no people can compare with the English." Now, this sort of thing is often written down, but one really does wonder sometimes whether the people who are content with these platitudes believe what they say. What would Mr. Kitchener have said if he had been writing, say, seventy years ago? Was not the dreadful state of music in England then due to the very fact that we did stay at home, that we were, in fact, isolated, without even being natural? And as for the increased interest in foreign developments being indulged in at the expense of our own composers, when, may we ask, was it, that our own madrigalists were discovered, that Purcell was performed, that "The Beggar's Opera" was revived, that song recitals wholly devoted to British composers were given? That time is the present. Of course, there is foolishness in all crazes, whether they be for British or for foreign music, but they at least are evidence of vitality; their subjects, moreover, are not always exclusive, and one often finds advanced people "backing" three or more composers, one of whom at least may be English. Many people despise the later works of Stravinsky as much as Mr. Kitchener appears to, but that is no reason why they should curl themselves up and say, "Out upon these freakish foreigners! Let us henceforth bask in the sun of our Elgars and Smyths."

Attention to contemporary foreign music by no means supposes a disregard of all domestic efforts; on the whole, indeed, I should say that English composers now are having a very good time. Even the three composers who, according to Mr. Kitchener, "matter"—Ethel Smyth, Elgar, Delius—even these have had some of their major works frequently performed in recent years; but why our respect for them should inhibit our taking an interest in our young composers is to me incomprehensible. One can but presume that living much abroad produces reaction; and that when the Englishman returns home he expects only the recognised to be thought worthy.

There is one last point in Mr. Kitchener's article, profoundly true, but charmingly (or, if you will, pathetically) irrelevant, on which I will close. He says: "Let us stay at home. After all, there is no country like England, and no people can compare with the English." This remark, which I fear many others would make in similar circumstances, seems to typify that vagueness which enshrouds the Englishman's æsthetic feelings. It is as if one, having inquired into the relative merits of two cricket teams, had received the answer, "Twice two are four." Of course they are; and of course no people can compare with the English. But what has all this to do with it? Quite apart from the extremely doubtful implication that a nation's virtues (and vices) are reflected in its music, this imposition upon music of a philosophic or patriotic rule would rob the judge of any æsthetic standard whatever.

"THE DAY OF THE CRESCENT: GLIMPSES OF OLD TURKEY."
G. E. Hubbard. (Cambridge University Press. 15s. net.)

THE DAYS OF THE "GRAND SINYORI."

Whatever we may think of present-day Turkey, there can be little doubt that Old Turkey, viewed from a comfortable armchair through the wizardry of Mr. Hubbard's fascinating book, was an extraordinarily interesting country. But while we are ready to admit that it would have lost none of its interest at closer quarters, so to say, we have no anxiety—having come to years of discretion, and learned to appreciate comfort and security—to find ourselves amid such adventures as many of those that befell those travellers of the sixteenth and seventeenth centuries whose journeyings are here recorded. The "Grand Sinyori" of those days was no doubt a very wonderful and awe-inspiring person, but a visit to his Court seems to have been attended by almost as many risks as, say, walking into the lair of a tiger. He held even the Ambassadors of powerful foreign States in supreme contempt, and made no bones about imprisoning them if the fancy to do so happened to take him; and the contrast between the condition of a foreigner of lesser importance in Turkey in those days and in these might almost make even a Greek or an Armenian feel some sympathy for the Turk's fall.

Mr. Hubbard takes his material from a collection of old books on Turkish travel in the 16th and 17th centuries, which he was fortunate enough—and enterprising enough—to unearth from "some of the dustiest bookshelves of the Foreign Office library." Dipping into them, he soon found himself "rapidly engrossed in a quite fascinating study"; and in this book he gives us, we may believe, the cream of the stories he read, sometimes allowing his originals to speak for themselves, at others helping us by his judicious compression of their tales. As he says: "Their stories of how they travelled, painted, plotted, or fought, according to their several capacities, are full of colour and romance and worthy products of the age of adventure in which the actors lived." Colour and romance, indeed, are here, and we are grateful to Mr. Hubbard for enabling us to enjoy them.

The first traveller whose adventures are set before us, though briefly, is Master Thomas Dallam, an organ-builder in Queen Elizabeth's reign, who was sent to Constantinople to erect an organ sent as a gift to the Sultan by the Queen—but paid for, as Mr. Hubbard remarks, in parentheses, by the Levant Company. This worthy's account of the ordeal he had to pass through when the Sultan inspected the gift very quickly gives us the true atmosphere. The great man was attended by 200 pages, 100 "Dum men who could neither heare nor speake," and 100 "dwarffes, big-bodied men, but very low of stature"; and he kept the Englishman standing "nearly $\frac{1}{4}$ of an houre" before he deigned to notice his presence. Moreover, when ordered to play the instrument, Dallam "refused because the Grand Sinyori satt so neare that I could not come at the place and must needes turne my backe towards him and touch his knee with my britchis, which no man in paine of deathe myght doo save only the Cappagan." The poor man was in such a nervous state before he got to work that it is a wonder he could play at all; but his British pluck carried him through the ordeal, and he was rewarded, in truly "Arabian Nights" style, with a handful of gold coins. Thereafter he had the good luck to watch the ladies of the Sultan's harem for some time, and later nearly lost his life for being in the way of "the Grand Sinyori and his conquibines" when they took the air. After being chased by two blackamoors, who would have hewed him "all in peecis" if they had caught him, Master Dallam was probably not sorry to bid goodbye to Turkey and return to old England.

Other travellers of whose doings we read include a Fellow of Christ's College, Cambridge, a French artist, a Flemish diplomatist, a Venetian dragoman, and a Polish soldier, and they are all good company. Lack of space forbids our even glancing at their adventures, but they will well repay reading in Mr. Hubbard's pages. We can here only refer briefly to one or two points that have particularly interested us. There is, first, the fact that these early travellers all bear testimony (when they touch the subject at all) to the efficiency of the Turkish military organisation as contrasted with the shortcomings of the non-Moslem nations. Thus, while the Turks originally borrowed artillery from their Christian enemies, they "soon outpaced the original inventors, so that by the fifteenth century they were better equipped with heavy artillery than any of their rivals" (p. 47). Again, we find Busbequius bearing testimony to "the high efficiency of the Turkish army, the abstemious-

ness and hardihood of their troops, the admirable organisation of their auxiliary services (such a striking contrast to the happy-go-lucky methods of European armies of that time), and the unwavering discipline of the men." This is contrasted with the Christian soldiers' scorn of homely fare, their readiness to mutiny if they are not pampered, and their intemperance (pp. 84, 85). Again, on page 113, we read: "Judged by the standards of the day . . . the Turkish armies were a model of organisation." Not less admirable than their military organisation was their way of accepting news of victory, as set out in Chapter XII. Indeed, it would seem that there was some warrant for the opinion of "Hy. Blunt, Gent.," which is quoted on p. 107: "I was of opinion that he who would beholde the present times in their greatest glory could not find a better scene than Turkie." Alas, poor "Turkie"!

It is interesting to find that in the fighting of the early part of the seventeenth century there were often night attacks that "bore a singular resemblance to the organised trench raids which were a marked feature of the fighting on the western front during the Great War." The Turks, however, seem as a rule to have scorned "to quarter themselves within Ditches," as one of their enemies bears witness. It is not, perhaps, surprising to find many indications that in those days Turks and Englishmen "hit it off very well together."

The details regarding the recruiting, training, duties, and privileges of the Janissaries are extremely interesting. It will surprise many readers to learn that "humility was the keynote of the system" of training them, and that they were "bred in exemplary modesty." They had their faults, of course, even in their early days, but they had their virtues, too, undoubtedly; and when we read that "side by side with the spirit of democracy there existed an iron discipline within the corps," the existence of both is explained. Nor was it the discipline that made the Janissaries an untrustworthy force at last.

Mr. Hubbard, we repeat, has given us a fascinating book, and though we think we detect one or two slight blemishes about it, it would be ungracious to call attention to them. The illustrations, which are from old works, are very well reproduced, and type and binding and paper are all that we expect from the admirable Cambridge University Press.

PERSONAL AND GENERAL.

TO-DAY.

April 7 (New Style).
March 25 (Old Style).
Ragab 28, 1339, of the Moslem Calendar.
Adar II., 5681, of the Jewish Calendar.

Admiral Sir Ernest Troubridge has left for Paris.

M. George Cretziano has arrived in London from Paris.

Colonel Lord Loch and Lady Loch will return to London in a fortnight from Algiers.

Viscount and Viscountess Ennismore are returning to London this week from India.

The Hon. Cecil and Mrs. Campbell have returned to 41, Upper Brook Street from Tunis.

Captain and Mrs. Gerard Leigh will return to London about the middle of April from the Sudan.

M. Constantin Constantinesco, Secretary to the Roumanian Legation, has returned to London from Paris.

Sir Charles and Lady Greenway and Mrs. Dalzell Hunter have left for the Continent, and will be absent for some weeks.

A Reuter telegram announces that the Maharao of Cutch is to represent India, with Mr. Sastri, at the Imperial Conference in June.

Major-General the Maharaja of Patiala, who represented the Indian Princes at the Imperial War Cabinet in 1918, arrived this week from India.

M. Geordania, Prime Minister of Georgia, who has arrived in Rome from Constantinople, will, after consultation with the Italian Government, visit Paris and London.

Commander Matila Costiesco-Ghyka, Secretary to the Roumanian Legation, and Madame Costiesco-Ghyka left town last week on a visit to the Duchess of Norfolk at Arundel Castle.

Sir Henry Dobbs, the head of the British Mission to Afghanistan, who has been on a flying visit to Delhi, has now returned to Kabul. It seems unlikely that the Mission will return to India before May.

The Archbishop of Selefke has arrived in London from Constantinople for the purpose of superintending the conveyance to Constantinople of the body of Archbishop Dorotheos, Locum Tenens of the Ecumenical Patriarchate of Constantinople, who died in London recently.

The engagement is announced between Major Heron, C.I.E., Indian Medical Service, and Nesta, daughter of the late Captain Pennell Hill, Indian Army, and Mrs. Hill, 22, Melcombe Court, Dorset Square. The marriage will take place at St. George's Church, Hanover Square, on April 26.

A marriage has been arranged, and will take place in Cairo on April 15, between H. Elliot FitzGibbon, third son of the late Henry FitzGibbon, M.D., F.R.C.S.I., and Mrs. FitzGibbon, of Dublin, and M. Kathleen Wordsworth Jameson, eldest daughter of Mr. and Mrs. Frank Wordsworth Jameson, of Hedon, East Yorkshire.

A marriage has also been arranged between Captain F. Robert W. Jameson, D.S.O., M.C., the son of the above Mr. and Mrs. Frank Wordsworth Jameson, and Violet (Wallagh) FitzGibbon, daughter of the above Dr. and Mrs. FitzGibbon. In this case the wedding will take place on April 18, in Cairo, Egypt.

Princess Xenia, the second daughter of the Grand Duchess Marie of Greece and of the late Grand Duke George Michailovitch of Russia, and a niece of King Constantine, has been betrothed to Mr. William Leeds, son of Princess Christopher of Greece. Princess Christopher was formerly the wife of Mr. Leeds, an American millionaire.

A marriage has been arranged, and will take place in June in London, between Arthur Carrington Tyndale, M.A. Oxon, Military Accounts Department, India, eldest son of Walter

Tyndale, R.I., and Mrs. Tyndale, 88, Fellows Road, Hampstead, N.W.3, and Lesley, only child of Charles Pette Triscott and Mrs. Triscott, of Chesham Bois, Bucks.

A marriage has been arranged, and will take place in April, between Major A. H. Muir, 15th Sikhs, son of the late Colonel A. M. Muir and Mrs. Muir, 11, Grimston Avenue, Folkestone, and Edith May, widow of Captain H. S. Wright, 2nd Manchesters, and daughter of the late Luke Hansard and of Mrs. Hansard, Hans Crescent Hotel.

The Emir Faisal left England on April 1 on board the P. and O. Malwa on his way to Mecca, where he will report to his father, the King of the Hejaz, concerning the negotiations with which he has been occupied during his stay in London. General Haddad Pasha will remain in this country for the present to take charge of the interests of the Hejaz Government and of the Emir Faisal.

The theme of the next discussion (April 15) by the Central Asian Society will be "Mesopotamia, 1914-21," and the principal speaker will be Lieut.-Col. Sir Arnold T. Wilson, K.C.I.E., who will deliver a lecture illustrated by lantern slides. On this occasion the Society will not meet at 74, Grosvenor Street, but in the rooms of the Royal Society, Burlington House. The time is, as usual, 4.30 p.m.

The marriage was celebrated on March 2, at St. Paul's Cathedral, Calcutta, by the Rev. Canon Cecil G. Stokoe, assisted by the Rev. D. B. Ottley, between Alexander Metaxa, younger son of F. Metaxa, Esq., and of Mrs. Metaxa, 98, Westbourne Terrace, Hyde Park, London, W., and Kathleen Mary, only child of Sir William Maxwell, K.C.I.E., M.V.O., I.C.S., retired, and of Lady Maxwell, 8, Middleton Street, Calcutta.

Mr. Tomyns Reginald Browne, M.B.E., M.I.M.E., of the Oriental Club, Hanover Square, W., late locomotive superintendent, East Indian Railway, who died on September 14, leaving £21,511, gives the residue of his estate, after payment of a number of legacies, to be divided between:—The Clergy Widows Fund, the Guild of Aid for Gentlewomen, the United Kingdom Beneficent Association, the Shipwrecked Fishermen and Mariners' Benevolent Hospital, the Dreadnought Hospital, Greenwich, and the R.N. and R.M. Orphanage, The Nore.

The King has granted permission to wear the following decorations, conferred in recognition of valuable services rendered during the war:—

GREECE.

ORDER OF THE REDEEMER

Cross of Commander.—Lieut.-Gen. Sir Edmond Roche Elles, G.C.I.E., K.C.B.

Cross of Officer.—Henry Geoffrey Elwes, M.B.E., Percy Winn Everett, Major Alexander Gawthrop Wade, M.C.

Cross of Chevalier.—William Ayling, M.B.E.

APPOINTMENTS, ETC.

M. D. Vikedas has been appointed Secretary to the Greek Legation.

Major W. H. Hodgson, Indian Army, has been appointed Commissioner of Police and Inspector-General of Prisons for Baroda State, India.

Mirza Abdol Ghaffar Khan, Minister Resident at the Persian Legation, leaves London this week to take up his appointment as Minister at Stockholm.

The King has been pleased to approve the conferment of the dignity of a Viscounty of the United Kingdom upon the Right Hon. Baron Chelmsford, G.M.S.I., G.C.M.G., G.M.I.E., G.B.E., on his relinquishing the appointment of Viceroy and Governor-General of India.

The King has been pleased to approve the appointment of the following officers of the Royal Households to the Order of the Indian Empire for services rendered in connection with the visit of H.R.H. the Duke of Connaught to India.

TO BE A KNIGHT COMMANDER.

The Right Honourable the Earl of Cromer, C.V.O.

TO BE COMPANIONS.

Lieut.-Col. Sir Malcolm Donald Murray, K.C.V.O., C.B.; Colonel Sir Edward Scott Worthington, K.C.V.O., C.B., C.M.G.

OBITUARY.

Mr. G. Vergottis, a shipowner, of Argostoli, Greece, who was on a visit to this country, died suddenly last week at Claridge's Hotel, at the age of 40. His body will be removed to Cardiff for conveyance to Greece in one of his own steamers.

A correspondent writes from Egypt:—

"The sudden death of Mrs. Ruby Josephine MacDonald, daughter of J. Boyd Love, Esq., J.P., and Mrs. Love, of Outlands, Devonport, at Bulkeley, Ramleh, Alexandria, Egypt, on January 19, at the early age of thirty-three, came as a great shock to her many friends in Egypt and the United Kingdom. About 150 persons were present at the funeral, and great sympathy is felt for her husband and family in their sad loss. She leaves a baby daughter.

"Mrs. MacDonald's bright and vivid personality, her witty talk, full of the joy of life, her kindness and abounding sympathy, her gift of comradeship, made her presence a welcome one wherever she went, though it was in her own home that her charm was especially manifest.

"During the war Mrs. MacDonald served first as a V.A.D. in Stoke Military Hospital, Devonport, and then as an officer in the W.R.N.S. when that was formed, with the rank of Assistant Principal, being employed as a coding officer on H.M.S. Apollo at Devonport. Later she was transferred to the Admiralty, and remained there until the return from abroad of her husband, Lt.-Col. L. T. A. MacDonald, O.B.E., formerly R.A.S.C. and Asst.-Director Department of Local Resources, Mesopotamian Expeditionary Force, who was recently appointed Director of the Cereals Bureau, Alexandria, under the Department of Supplies of the Egyptian Government."

NEWS IN BRIEF.

General Gouraud sailed from Constantinople last week for Beyrouth.

General Sir Percy Cox, British Commissioner in Mesopotamia, has sent from Baghdad to the Zoological Society a pair of young Persian gazelles.

It is learnt from the Hellenic Legation that the Orthodox Metropolitan of Sokia, near Aidin, has been arrested and expelled from the town.

It was announced from Rome last week that the evacuation of Dalmatian territories attributed to Yugoslavia was to take place between April 3 and April 7.

Bekir Sami Bey, Foreign Minister in the Angora Government, who represented the Turkish Nationalists at the recent Conference in London, has arrived in Rome.

Correspondence between the Secretary of State for India and the Indian Government on the Government of Burma Bill has been issued as a White Paper (Cmd. 1194).

The Roumanian Minister for Foreign Affairs has despatched a Note to Chicherin, says a Moscow wireless message, denying that any "White Guard" or other Russian political organisation exists in Roumania.

The death is reported of Mohammad Hamuda, the Algerian brigand, who carried on hostile operations against France and the Sultan of Morocco. During the Great War Hamuda succeeded in establishing relations with German agents at El Arish, in Morocco, and the Canary Islands.

The Committee of the London Moslem League has written to the Prime Minister to protest against the action of the Greeks in renewing the war in Anatolia, and expresses the opinion the Greeks will continue to keep the Near East in a ferment until they have been turned out of Thrace and Ionia.

It is stated that during a violent thunderstorm which lasted throughout Sunday the Egyptian obelisk (brought from Heliopolis by Caligula), which stands in the middle of the great square in front of St. Peter's, at Rome, was struck by lightning. Only the base of the obelisk was damaged, and that but slightly.

Twenty-eight Hungarian Bishops of Transylvania, who on the attachment of that province to Roumania had refused to take the oath of allegiance to King Ferdinand, have now given their allegiance, the ceremony taking place in the Royal Palace at Bucharest in the presence of the Sovereign and General Averescu, the Premier.

A Commission has been appointed to consider the best means of preserving the ancient buildings of Jerusalem. The restoration of the Damascus Gate has been completed, at the expense of the Pro-Jerusalem Society. The restoration of the Roman masonry in the walls of the Citadel (Tower of David) is nearing completion.

Reports received by missionary societies at home indicate exceptional aggressiveness on the part of Islam, especially in Central Africa. North of the Equator (writes a correspondent of the *Morning Post*), the majority of the African peoples have long been Mohammedans; now Islam is spreading southwards, and in West Africa is making great progress.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

DISTURBANCES AT NAGPUR.

A communiqué issued by the Indian Office on April 2 states:—The Secretary of State for India has received further news from India regarding disturbances at Nagpur, in the Central Provinces. On March 28 a mob destroyed the contents of six liquor shops, but was dispersed by the police, thirty arrests being made. Next day the police, under a European magistrate, made further arrests, but they were attacked by a mob, and the prisoners were rescued. As the attacks continued, and the police received injuries, the magistrate ordered them to fire. Reports indicate that nine deaths were caused and about thirteen persons were wounded.

On March 30 the city was still in a disturbed state, but there was no serious collision. On that and the following day the city was patrolled by strong bodies of police, and the excitement is reported now to be somewhat abating.

GALLIPOLI GRAVES.

The cemeteries on the Gallipoli Peninsula containing the graves of British soldiers are now all in good order, and the work of permanent construction will be undertaken immediately. There is no objection to relatives of the dead visiting these cemeteries. It should, however, be clearly understood that there is no accommodation for visitors on the Peninsula itself. The nearest point where such might be obtained is Chanak, on the Asiatic shore, at the Narrows. Visitors, therefore, should make their own arrangements with regard to accommodation, and also for transport across the Straits from Chanak to Kilia. Visits to most of the cemeteries entail a considerable amount of walking over hilly ground, the paths and roads, however, being good in fine weather. Motor and horse transport is practically unprocureable. As no steps had been taken with regard to the burial of the Turkish dead on the Gallipoli Peninsula, this work was undertaken some little time ago by the Imperial War Graves Commission. Its representative on the Peninsula now reports that the work will be completed by the end of this month.

On April 1, 1921, the payment of leave pay and pensions under the Civil Service Regulations, India, and of family pensions from the various Indian Civil Funds, was transferred from the Accountant-General, India Office, to the High Commissioner for India. The staff dealing with these payments remains at the India Office, and all communications on the subject should be addressed to the High Commissioner for India (Leave Pay and Pension Branch), India Office, Whitehall, London, S.W.1.

*Cairo's Hotels de Luxe.***SHEPHEARD'S HOTEL.**

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

Proprietor: AUGUSTUS VAN MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), ALEXANDRIA.

American Bar and Restaurant,
Billiards, and Lift.

THURSDAY, APRIL 7, 1921.

GREAT BRITAIN AND PALESTINE.

Mr. Winston Churchill's outspokenness during his visit to Palestine comes in welcome contrast with the manner in which most of the complicated problems of the Near East have been approached by the Allied Powers. The future of the country depends on the Jews and Arabs pulling together; but as there is little likelihood of their doing this of their own accord, it rests with the British Government in the first place to keep peace between them, and, secondly, to use all the powers of persuasion at its command to promote friendly co-operation. A proper appreciation of the shortcomings of these two important sections of the community is not incompatible with a real sympathy for both, and the task of the mandatory Power will be simplified if Jews and Arabs alike understand that in the case of Palestine at least the British authorities have full knowledge of the problem for which they have made themselves responsible. As far as can be judged from the reports of his speeches, Mr. Winston Churchill left nothing to be desired in this respect. He informed a Moslem deputation that he considered their address partly partisan and incorrect. The Balfour declaration was not going to be repudiated; the British Government thought it good for the world, good for the Jews, good for the British Empire, and also good for the Arabs dwelling in Palestine that the scattered Jews should have a national centre and a national home in Palestine, and the British Government intended it to be so. The Arabs were not to be supplanted nor to suffer, but they should share in the benefits and the progress of Zionism. The establishment of a national home for the Jews did not mean a Jewish Government to dominate the Arabs. Great Britain as the mandatory Power, Mr. Churchill implied, would keep the reins of government in her own hands. The sacredness of the civil and religious rights of the Arabs was guaranteed by the Balfour declaration, and the fact that the deputation waiting upon him chose to regard the pledge as valueless would not alter the position. Subsequently, in reply to a Jewish deputation, the Secretary of State for the Colonies and Mandate Territories reminded his audience that the establishment of a national home for the Jews was to be without prejudice or unfairness to the Arab and Christian inhabitants, who together formed an overwhelming majority. The success of Zionism would depend upon the good that it bestowed upon the whole country. He pointed out that the Arabs had expressed alarm at the Bolshevik character of some of the Jewish immigrants, and added that, whatever they might believe on this point, the duty of the Jews was to dispel such fears by a good and friendly attitude, and to propagate peace between all.

It is to be hoped that those who affect to have misgivings in regard to the British mandates will not find in Mr. Churchill's straightforward attitude fresh confirmation of their particular bogeys. In the case of Mesopotamia, a homogeneous population should make it possible to instal immediately an Arab administration, which will fall short of self-government only in so far as it has to supplement its own inexperience by consultation with British advisers. Mr. Churchill declared in regard to Palestine that "step by step we shall develop representative institutions leading to full self-government, but our children's children will have passed away before that

is completed." Prophecy in a matter of this nature is at best superfluous; but Mr. Churchill's point is clear. The latent antagonism between Arab and Jew, not to mention the Christian section of the community, will prevent the mandatory Power for a long time to come from transferring its responsibility for good government and the maintenance of law and order in the country. There is no reason, however, why this closer hold on the administration should prove a greater burden to the British exchequer than the lighter hold that it is hoped to exercise in Mesopotamia. A number of people find it difficult to share the anxiety frequently expressed by some over the surrender of British sovereign rights to the League of Nations. Great Britain helped to create the League in the belief that it was to be an instrument for good; if by chance she is disappointed in this respect, her withdrawal would certainly not leave the League vested with the same authority. She has drawn up the terms of her own mandates, and will submit each year a report on her stewardship to the Council, of which she is also a member. Most people will see in this procedure a mere matter of form for the conscientious and honest mandatory, while it does provide a check on abuses of the mandate system. Neither in Palestine nor in Mesopotamia has Great Britain gone out of her way to obtain mandates; she could not divest herself of responsibility for the future of these countries, and in the League of Nations she has merely stereotyped what has hitherto been her custom, and has agreed to that custom being held up to the world as the standard of conduct to which the civilised States should conform in their dealings with less advanced peoples. It is not likely that—to take one illustration—a single word in any of the annual reports on British administration in Egypt would have had to be altered, even if Lord Cromer had been obliged to address the covering letter to the Council of the League instead of to his Majesty's Secretary of State for Foreign Affairs.

There is no reason to suppose that the Moslem deputation will have left Mr. Churchill altogether dissatisfied with their visit. They had pitched their fears in a high key, because between Bolshevism and Zionism on the one hand and the agitation against the mandate in Great Britain on the other they felt, no doubt, that they might at any moment be left at a disadvantage, unless they made the most of their case. They will at least have been reassured on the subject of Great Britain's attitude towards the mandate, and when once they are satisfied that the British will remain in the country to hold the balance even between the different sections, they will not be long in discovering that the mandatory system has its advantages. The Beersheba Arabs, according to report, have already made this discovery, and as a protest against the Haifa Congress, which appears to have inspired the delegation to Mr. Churchill, have placed on record that since the occupation of the country by Great Britain they have enjoyed freedom, adding that they "are thankful for its just rule, a rule which has respected Arab customs." Mr. Churchill was also right in reminding the Jews that the future of the country rests largely in their hands. They have claimed and quite justly obtained a privileged position in Palestine. The draft mandate provides that the Zionist organisation, so long as its organisation and constitution are, in the opinion of the mandatory, appropriate, "shall be recognised as a public body for the purpose of advising and co-operating with the administration of Palestine in such economic, social, and other matters as may affect the establishment of the Jewish national home and the interests of the Jewish population in Palestine." In this connection we welcome the latest movement among the leaders of British Jewry, which has for its aim definite measures for the development of the country with a view to showing that there can be a practical side to Zionism. Theoretical Zionism might be tempted to ignore the Arabs, and could hardly fail to create misgivings among them. The practical steps which are now contemplated should quickly convince all the inhabitants without distinction of creed that the recognition of Palestine as a national home for the Jews may well prove an invaluable asset to the country.

IN TRANS-CAUCASIA.

By C. E. Vulliamy, F.R.G.S.

Dr. Johnson's remark about the Giants' Causeway—that it was worth seeing, but not worth the trouble of going to see—may well have occurred to those who have visited Caucasasia within the last year or so.

At Constantinople the traveller would be ushered on board some filthy and questionable tub, in which he had to traverse the Black Sea. This horrible sea lies in a vast basin, over whose brim the winds of heaven rush together, making sport on its turbulent waters. And let it be remembered that the distance from Constantinople to Batoum is something like 600 miles. On a voyage of that length, in an ill-adapted, under-sized boat—designed, say, for short trips down the Clyde—one has time to be exceedingly uncomfortable. The present writer, who crossed the Black Sea under these conditions not very long ago, looks back on his voyage with sentiments of profound disgust.

Coming from the yellowness and aridity of the Balkans in summer, the sight of the Caucasian coast is a pleasant one. The green hills stand with mist about their heads and forest on their flanks. The air is soft and balmy. In clear weather (in the evening especially) the toothed outline of the Range can be seen to the north and east.

The writer's mission took him to Tiflis, which, at that time, contained an enthusiastic and vigorous administration of Georgians.

Tiflis is certainly an astonishing town. It is built on both banks of the Kura—a torrent of snow-thaw in summer—and straggles up the side of a steep and forbidding hill. Round it lies a country wild in every sense of the word; and yet it has an enormous Opera House, large hotels, handsome clubs, and two really fine thoroughfares. At the period of this account it was manifestly Georgian: the Georgian flag flew everywhere; Georgian staff cars rattled over the *pavé*; the troops of the Georgian Republic patrolled the streets—swarthy, sturdy men, wearing red epaulettes; and Georgian policemen, girdled with cartridges and armed with rifles, blew signals to each other on bird-like whistles, and at night made free use of their firearms. Indeed, the sound of firing was quite as inevitable as, and coincided with, the fall of darkness: sometimes only a few rounds, and sometimes a joyous outburst of rapid fire. Republics have their trials.

It was the fashion to go about fully armed—the fuller the better. At the railway station, nearly every second man had an automatic pistol and a serviceable knife stuck in his belt. Armoured trains, painted green, rumbled about on the line, with little field-guns sticking out of them here and there. And the warlike effect was intensified by the Georgian aeroplane, which, if it flew slowly, certainly flew with a great deal of noise. Racial hatreds had their play in the streets, and there were frequent reports of murder. Yet people lived in their villas on the hillside in luxury and elegance. Wealthy Armenians (whose ladies strummed their pianos with an exasperating perseverance) resigned themselves placidly to the strange conditions of life.

The climate of Mid-Caucasia is intolerably hot in summer. Towards evening, when the big hill throws its shadow across the Golovinskya Prospect, folk come out into the streets. Fierce men in black Astrakhan caps and long-skirted coats swagger on the pavement. The tall, blond Cossack makes an odd contrast with the Georgian, who is usually a middle-sized or small man, finely featured and dark-haired.

The traveller is glad enough to turn his back on the heat and hubbub of Tiflis and return to Batoum, with its misty green hills and sea breezes.

Those who remember the British occupation of Trans-Caucasia will not have forgotten the question of sea bathing at Batoum. Our administrators were shocked by the custom of the place. The absence of bathing dresses filled them with dismay. Official prudery raised the hand of protest. The result was that the portion of the beach from which the women bathed was made

to resemble a prisoners' camp, with stakes and barbed wire even to the water's edge; while military policemen (discreetly placed within the enclosure) kept guard. For this, and for other reasons, the inhabitants of Batoum regarded our period of military residence as something which, if annoying at times, had compensating gleams of humour.

On a breezy morning you occupied a deck chair on the shingle; and there, in company with bald-headed Russians and dressy Jews, you surveyed the scene. The amateur Bolshevik, with pistol in belt and gold epaulettes on the shoulders of his blouse, would loll in one of the communal chairs or stroll about the pathways. Troops of Russian girls—refugees from Odessa—were shepherded to the beach by the grim and good ladies who were caring for them. The girls wore a delicious uniform of sea-green, with little white caps and aprons.

There were two great attractions for the sport-loving and jocular—the Circus and the Palais Crystal. The former was a huge, circular building of wood; the latter, a restaurant of tawdry appearance and doubtful repute, where, however, the wines and cooking were undeniably good. But the Circus was the thing, and here might be seen some capital wrestling.

In that dusty arena the little nations of the Near East came to grips with each other. The two opponents nearly always represented two nationalities, and the spectators took up the affair as a matter of principle. As their blood warmed, the wrestlers forsook tradition. They snarled, scuffled, jested with the onlookers, hustled the "arbiter" (Mr. Kutateladze), rolled out of the ring, collided with the judge's table, spat, smacked, thumped, swore, and finally appealed to their partisans. The din became terrific. Gentlemen leaped from their seats and rushed into the arena.

There were many worse places than Batoum. It combined not a few of the advantages of civilisation with most of the advantages of barbarism.

MAZANDERAN.

At the meeting of the Royal Geographical Society (held on January 10 at the Æolian Hall, Bond Street) Captain J. B. Noel described a recent visit to a part of Persia rarely visited by Europeans—viz., Mazanderan and the other provinces lying between the Elburz Mountains and the Caspian Sea. He said that once they had crossed the mountains the land dropped very quickly down to the level of the Caspian. The rapid descent caused very narrow and deep ravines to be cut by the rivers; it also caused the rains which fell on the northern side of the mountains to come quickly down and flood the plains at the foot. From 7,000 to 10,000 ft. altitude the country was pasture. At 7,000 ft. pine forest began; below that were oak, beech, and maple, and below that a belt of tropical forest like the Terai in India. In this forest was found an extraordinarily valuable wood, the boxwood. The box trees grew to a diameter of 16 ins. or 20 ins., but in the more accessible places the larger trees had all been cut down. Along the seashore the prevailing north-west wind formed sand dunes which held back the rivers, so that the alluvial plain became a marsh. Travelling over this plain, one encountered a river at every 2½ miles on an average, and the plain itself, where cultivated, was crossed by innumerable irrigation canals. There were no roads, and the best method of getting from one part of this country to another was to cross the plain and the sand dunes to the beach and travel along that.

Captain Noel described the lower country as being well cultivated, the principal agricultural products being cotton and rice. Other products were oranges, dried fruits, hides, and skins. In a favourable season oranges sold for 4s. per 1,000; eggs were about six a penny. The people were extraordinarily well off in the matter of foodstuffs as compared with the inhabitants of the plateau on the other side of the mountains, where the climate was dry and famine frequent. The climate of Mazanderan was, however, very trying, even to natives; as to Europeans, it was said they could not live there more than two years. One of the plagues of the country was its insects, especially a poison fly; if this bit you while you slept your next-of-kin would not recognise you the next day. The marshes abounded with wild birds, and the forests with game of every sort—among other animals, tigers were plentiful. The bear and the Caspian stag were also found, and on the higher peaks the ibex. There were coal, iron ore, and other minerals in the mountains; iron was also found in pebbles in the streams; this was smelted by the natives, sometimes with coal, more often with charcoal. The principal town was Amol; older cities had existed on this site, and when people wished to build they did not make their bricks, but dug in the soil for those of the earlier towns. The industries of the country included carpet-weaving. Nearly all trade was across the Caspian to Russian ports; previously to the war the trade of this part of Persia was in effect a Russian monopoly.

PRESS ON THE NEAR EAST.

Kurdistan.

The *Daily Telegraph* of March 28 contains an interesting message on Mesopotamia from Mr. Percival Landon. He begins by showing the intractability of the Kurds, and continues:—

Compel the Kurds to come into a new constitution we cannot. If, therefore, we wish to avoid a serious aggravation of the situation, which even without this complication will tax our statesmanship to the utmost, we shall do well to administer Kurdistan through political officers directly responsible to the High Commissioner of Irak, until, of their own motion, the Kurds recognise the advantages of closer union with Mesopotamia. Indeed, it is impossible for us to settle the final administration of Southern Kurdistan—all that concerns us for the time—in view of the intentionally vague wording of the Treaty of Sèvres, which decides neither the northern nor the western frontiers, and leaves nearly the whole of what may be called Mesopotamian Kurdistan under the contingency of ultimate incorporation into the new independent State of Kurdistan therein contemplated. There is no real connection between Kurdistan and any of her neighbours, whether Persian, Turkish, Syrian, Irak, Arab, or Chaldean, and their manners, customs, and mode of life appear to be as unknown in the Near East as those of their remote ancestors, the Medes. Their existence has been aptly compared by Major Soane, the one man who knows them and their language really well, to that of Scotland in the fourteenth century. Any attempt to impose a new constitution upon them against their will would merely drive them into the arms of the Turks, whose traditional place, and even claim to respect—though the word must be used with a difference—is by no means as extinct in any part of Irak as might be believed.

The article ends with a statement of the increase in the whole province of Mosul of Turkish influence and suggestion.

The Future of Roumania.

In an article in the *New World* of March, entitled "M. Take Jonesco and the Small Entente," M. Phileas Lebesgue makes clear the cultural connection between Roumania and France. He proceeds to show that Roumania, by her geographical position, her recent formation, and her economic and political interests, "is called upon to be a link between the original circle of the Small Entente and the later group, especially between Czecho Slovakia and Poland."

Through her recent acquisitions, has she not become the chief Danubian Power, the natural link between the Balkans and central Europe? Hungary, walled round in future, can only find an outlet through Roumanian or Polish territory, and her agricultural interests are identical with those of industrial countries like Czecho Slovakia. Greater Roumania has also no advantage in keeping up an enmity with the Yugo Slavs, which never existed in their reciprocal traditions. Only the Russians and Bulgarians must be watched, as well as the Germans whom the Roumanians will not always mistrust now that their power has decreased, but who will always endeavour to benefit by all disputes. Roumania should find the guarantee for her future peace by close union with her neighbours, in the confines of the Small Entente. France would thereby also acquire that support in the East which she has always needed to counterbalance the Germanic Power, failing the help which she should obtain from England and America, as that help is always slow in arriving in cases of sudden conflict. M. Take Jonesco has a splendid mission and he is qualified to carry it through. He is clever, but that alone would not be enough: however, he is in close touch with the Roumanian conscience and that will supply him with the necessary strength and tenacity.

In our day, each nation is supposed to have a definite and clearly defined territory. Thus one's country is identical with its language and the freedom of its soil. This will not be altered. But the restrictions imposed on the sovereignty of the small States by certain clauses in the Peace Treaty, will diminish as confidence between men is restored, when moral laws will once more triumph, and besides this, a definite formula for the League of Nations will have to be found. It does not seem possible that this should depend on the goodwill of a few great Powers who are more or less rivals. A League of Nations should primarily be based on an equality of free and responsible nations. Why should not the Small Entente prove to be the centre for the amalgamation of the New Europe? Without doubt, many political and social changes will have to take place within the confines of each contracting State, but the people of each separate State will have the task of elaborating the pact which should keep them united. And this pact must be a human one. They wish to depend on themselves for their mutual defence, in close union with the West, but without any humiliating sense of subjection. This is surely right, as dignity is the sister of liberty and responsibility.

He concludes by showing how Roumania has become an eminent factor in the balance of European power, and has, in fact, become a Central Power without ceasing to be a Balkan Power.

Balkan Politics.

The *Daily Telegraph* of March 31 contains a short article upon "The State of Montenegro," in which it is pointed out that it is largely a dynastic question, and that Italy's alliance with Yugoslavia makes of the Serbian succession a question of vital interest to the peninsula.

Prague, on the other hand, is very active just now in its endeavours to reconcile Serbia with Bulgaria. In this endeavour Prague is receiving a good deal of support from the Croat element, which has not against Bulgaria the grudge borne it by the Serbians proper. Czecho-Slovakian diplomacy had always been pervaded by a keen sense of Slav solidarity, while there is naturally a good deal of sympathy between the Socialists and agrarians of Bohemia and the corresponding groups in Bulgaria and among the Croats. Italy, it is now clear, no longer views this rapprochement of all the Southern Slavs with anxiety, possibly because of the collapse of Russia, but, in accordance with the advice and prophecy of Mazzini, is asserting her common interests with the new Southern Slav communities. It remains to be seen how far this Italo-Slav policy may tend, in the long run, to the isolation of Greece, whose security in the Balkans, i.e., against Bulgarian aggression, would still seem to depend on the preservation, or rather the renovation, of the Serbo-Greek alliance.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Capitulations.

The report that negotiations are in progress with a view to the abolition of the Capitulations in Egypt has naturally been received with great satisfaction in business circles in this country. The system by which any man could take a business dispute to his own Consul has always been a great embarrassment to traders, and has nothing whatever in its favour. It brought into commercial transactions the possibility of national prejudice, to say nothing of the probability that a Consul might be wholly unqualified to decide the merits of a case. There is no question whatever that it has proved a great handicap to the development of British trade with Egypt, and that the abolition of the Capitulations would be an unmixed blessing to British commercial interests. They would have gone long ago, but for the difficulty of persuading the others concerned to agree to forgo their rights. The conditions arising out of the war have made the question a matter of practical politics, and it would seem that we are now within measurable distance of a highly desirable reform which will establish one authority.

The Coal Strike—

Coming at a time when the first faint signs were apparent of a revival of trade, the coal strike is nothing short of calamitous. Its continuance for any length of time cannot fail to have a grave effect on the position of every industry in the country and on the fortunes of every individual, for the damage done to our export trade will be disastrous in the extreme. High prices, the uncertainty of delivery, and similar factors have lost us numerous important contracts since the war, and Labour could pursue no more certain way of ensuring the success of our foreign competitors than by following its present course of constant and utterly senseless industrial strife.

—And Exports.

I would not have touched upon this question were it not for the fact that the fate of our export trade depends in a very large measure on the future of the mining industry. As things are at present, manufacturers are not able to produce cheaply enough to compete abroad, and the high price of coal has played its part in the prohibitive cost of production. In whatever direction one looks dear fuel appears as the stumbling block to industry. It is not merely at the factories themselves; dearer coal means dearer rail transport, and so it is also in the case of shipping. A reduction in the price of coal to an economic level would instantaneously react on the whole industrial life of the country. It would be followed by an all-round reduction in prices, and would enable our traders to compete confidently in overseas markets.

Our Rivals.

It is not only by its effect on the cost of production that the high price of coal has affected our overseas trade. Countries in the Near East and elsewhere who depended on us for their fuel supplies before the war have been unable to pay the present prohibitive charges for English coal if and when they could obtain it, and have had to obtain their fuel from other sources. Naturally, this has not had the effect of creating exactly a favourable impression with regard to this country; it has, as a matter of fact, had a distinctly prejudicial result, and there is no question at all that traders in many districts have looked elsewhere for their commodities simply and solely because of the ill-feeling that has arisen over the coal question. America, who is in a position to supply fuel on reasonable terms, has thus been given a great opportunity in the Near Eastern markets—an opening which she assuredly would never have had in other circumstances. If the miners adopt a reasonable attitude, and it is again possible to quote terms on which business can be done, we shall have to strain every effort to resume our place as the main supplier of fuel to these countries, but it is not going to be an easy matter, and the longer the delay the more doubtful it will be whether we shall be able to regain our old ascendancy in these markets.

The Egyptian Budget.

The economic depression prevailing in Egypt is reflected in the Budget estimates, which show a considerable reduction on the previous figures, both as regards revenue and expenditure. The revenue is estimated at ££36,701,000, a decrease of ££3,570,000, and the expenditure at ££38,682,000, a decrease of ££1,589,000, and a draft is made on the general reserve of ££1,981,000 to meet the estimated deficiency. There was a deficit on the 1920-21 Budget of over ££11,000,000, and the general reserve of ££6,000,000 is now reduced to ££2,500,000. The principal cause of the shrinkage in revenue during the past year was, of course, the fall in the price of cotton. At the moment conditions do not promise any great improvement in the near future, and the continuance of the trade "slump" would mean that at the end of the year Egypt would be faced with a very serious financial position.

The Outlook.

Egypt is unfortunately situated in being dependent for its prosperity on two sources of wealth. Of one—its tourists—it has been deprived since 1914, but until last year the presence of the troops in the country was a more than compensating factor. In the past twelve months both cotton and the tourist season failed it, the latter because, as I pointed out last week, those of the generation that knows Egypt are no longer sufficiently numerous or wealthy. With the inevitable trade revival cotton will once again play a great part in the revival of Egypt's fortunes; but whether tourists are again to bring wealth to the Nile valley will depend, I imagine, on whether the authorities prove equal to adapting themselves to the times, and, as visitors will not come spontaneously, set themselves to allure them eastwards by fascinating descriptions of the glories of the land of the Pharaohs.

Mesopotamian Oil.

Nothing is more wearisome than an unduly long wait between the acts, and the long interval that has elapsed since the despatch to America of the British Note on Mesopotamian oil has almost enabled people to forget that such a problem exists. Last week, however, presumably by way of a curtain-raiser, we were given just a suspicion of the nature of America's reply, which, it appears, will be on the lines of insistence on the rights of the United States to the Mesopotamian wells and other territories acquired by the Allies as a result of the war. "Rights," it will be noted, but in this demi-semi official pronouncement there is no mention of the simple word "duties." Perhaps to the American mind the one is synonymous for the other, but it would be well for the plain Englishman if that be stated, otherwise America may be done an injustice. Anyway, many good people would like to know the reason for America's extraordinary solicitude with regard to Mesopotamian oil, especially in view of the fact that it is by no means certain that oil exists there in workable quantities. Is it *aut Mesopotam* etc.? Or would it be possible to do a little deal in a sound mining proposition in another area?

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST.,
LONDON, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B.
LIEUT.-COL. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

ROUMANIA.

BUCHAREST, March 19.

New Schemes of Taxation.

The general interest of the country is centred round the coming Budget and the new taxes to be levied. At the last Ministers' Council, which took place on Tuesday, the Cabinet declared itself very satisfied with M. Titulescu's explanations on his programme for the 1921-22 fiscal year.

Simultaneously with the new Budget, Bills will be brought before Parliament for approval providing for: (1) Progressive income-tax, (2) Ways and means to collect the State revenues, (3) Control of the sale of alcoholic drinks, (4) A luxury tax and a tax on business turnover, (5) An exceptional and progressive tax on capital and on fortunes made during the war (with a specially high quota on fortunes made by State officials, (6) A progressive tax on inheritances.

With reference to the Budget, the Minister of Finance explained that an economy of nearly two milliard lei has resulted by doing away with the war fund of 1 milliard 200 million lei and by reducing the expenses of the different State Departments.

The Housing Crisis.

A Bill to encourage the building of houses, by which prospective builders will be granted various privileges, will soon be brought before Parliament. The housing question, especially in Bucharest, is worse than in many of the other European capitals, for while practically no houses have been built since 1914, the population has increased threefold; and the present rents have risen to such figures that only those with incomes in dollars, pound sterling, and francs can afford to pay them, excepting those tenants with old contracts which have been prolonged by law.

Miscellaneous.

In order to help the gold-mining industry in Transylvania the Government has now decided to allow the gold-miners to dispose of the ingots in the country. The price at which the State will buy the gold has been fixed at 27,500 lei per kilogram.

On Sunday the first wireless telephone trials took place in Roumania between Bucharest and Floesti organised by the Marconi Company.

The International Wagon-Lits Co. will receive for transport on the Simplon Express small parcels up to 30 kilograms each in France, Italy, Switzerland, Yugoslavia, and Roumania.

A new French shipping line has been started between Rouen and the Black Sea ports.

Roumania has issued Treasury Bonds since the war to the value of 350 million lei in the country and about 700 million lei abroad, if the lei were reckoned at par, but as they are issued in dollars, pound sterling, francs, lire, pesetas, etc., at the present rate of exchange they represent about five milliard lei.

At the Economic Convention in Vienna between the delegates of the Central Powers and the States that have inherited their former provinces, Roumania has received about fourteen million Austrian kronen in gold and the

thirteen buildings of the Austro-Hungarian banks existing in Transylvania. Roumania has further been able to come to a settlement with the German representatives with regard to the banknotes issued by the Banca Generala during the time of the occupation, and also with reference to the deposit of 1 milliard 191 million marks and 784 million kronen at the Reichsbank taken by the Germans when they issued the Banca Generala banknotes.

GREECE.

ATHENS, March 20.

Customs Receipts.

The receipts of the Piræus Customs during February last amounted to 5,152,595.80 drachmæ in paper, and to 226,931.05 drachmæ in gold. Compared with the receipts during the corresponding period last year, there is an increase this year of 463,263.05 drachmæ in paper and a decrease of 286,541.70 drachmæ in gold.

Export of Olive Oil.

The Government at first decided to allow the export of one-third of this year's crop of olive oil; subsequently, however, fearing that this quantity, being rather large, would cause an increase in the price of this product in Greece, it was decided to reduce the quantity to one-fifth of the total crop, i.e., to 15-20 million okes. It is estimated that 50 to 70 million drachmæ would thus be imported into this country, which would improve considerably the value of the drachma. The Government has also decided to export large quantities of an inferior quality oil for industrial purposes. The export of olive oil, in addition to being the means of importing foreign exchange into Greece which would relieve the Greek markets, would also assist financially the Government Treasury, which would collect large amounts from fees, duties, etc.

ATHENS, March 27.

Cereal Crop Prospects.

According to information received by the Ministry of Agriculture, the cereal crops in the majority of the provinces will, this year, fall far below those of last year. In the province of Larissa, this year's crops will be about 60 per cent. less than those of last year, while in the provinces of Trikala, Phthiotide, and Arcadia the estimated deficit will be 50 per cent. In the islands of Chio and Samos the cereal crops will be 25 per cent. less than in 1920, and 20 per cent. less in Crete and Eastern Thrace. On the contrary, in the province of Salonika an increase of about 15 per cent. is anticipated on last year's figures. Jannina and Preveza will also show an increase of about 30 per cent., whilst the production of the Drama and Verria districts will be 19 per cent. more than last year.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 14 to February 13, 1921.

	Monopolies, tobacco, stamps, stamped paper Naxos emery.	Piræus Customs.
Gross receipts, January, 1921 ...	Drachmæ. 5,440,228.50	Drachmæ. 4,516,525.65
Do. do. 1920 ...	4,771,084.90	4,938,259.85
Difference between estimated and actual receipts for one month	1921 +3,031,895.17 1920 +2,362,751.57	+3,624,858.98 +4,046,593.18

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

BANKING IN YUGOSLAVIA.

POST-WAR EXPANSION.

(FROM OUR CORRESPONDENT IN YUGOSLAVIA.)

The liberation from Austria has rather curiously had a more beneficial effect on banking in the new territories than it has on agriculture. The latter has, if anything, gone backwards for a variety of reasons, such as the difficulty and cost of obtaining new machinery, spares, and repairs, and stores, such as oil and benzine, and the great accumulation of heavily depreciated krone notes by the countryfolk, who imagine that they are war-millionaires who need not work any more. This has gone so far that in some cases it leads to deliberate waste of valuable material. One thoughtful Croat remarked that he welcomed the depreciation of the krone, since it would compel the farmers to resume hard work once they realised that they were not so rich as they thought they were. Again, agrarian reform, while in process, discourages agriculture, owing to the uncertainty of tenure pending finality, and the break-up of wealthy estates run with capital, and their distribution among small owners with little capital.

Industry, too, such as it is in this farming country, has suffered from want of raw material, plant, and capital. But banking has undoubtedly profited by the revolution. As a matter of fact, it was not difficult for banking to make progress of some sort, for before the war it was in a primitive condition. The local banks were really little more than branches of Vienna and Budapest establishments, who called the tune. Their chief function was discounting bills. But a change began in the second year of the war. Bills business grew less and less, but as the peasants and country folk began to make money by army supplies, they began to make savings and open deposits. This process went on rapidly, and actually enabled some banks to become independent. At the same time, current accounts began to swell remarkably.

Growing Interest in Industry.

In 1916 the banks began to increase their capitals, as the value of the krone began to depreciate. Some institutions which had a capital of five million krone before the war now have a hundred million, with as much in reserve. They began to wake up and look for new outlets for their energy. A great interest was taken in industries, which is daily growing, and in foreign commerce, especially imports, of which the country was in great need at the end of the war. Belgrade banks dealt direct, while the Zagreb banks formed limited liability companies on purpose. And with the disappearance of the great landowners, the assistance of the banks is more than ever necessary to the agriculturist.

Before the war all foreign trade was in foreign hands—that is to say, in the liberated provinces, for in this respect Serbia was better situated, owing to the emancipation of her trade from Austrian domination, which is associated with the name of the late M. Kosta Stojanovitch. Yugoslav corn was handled from Budapest, and known in the west as Hungarian. Vienna was the Mecca of the merchants, while colonial produce was manipulated at Trieste. The Yugoslavs had little enterprise and less capital. To-day there is a great growth of new trading firms, but all require capital, and all look to the banks to help them.

Local industries, too, are calling for immense sums. A sugar factory, for instance, requires large amounts of ready money in the autumn to buy its raw material, which is realised during the course of the next twelve months. The same thing applies to the big mills, who require hundreds of millions of krone at harvest time. Big capital, too, is required to start timber enterprises at work. The carrying on of the existing industries of the country, few as they were, was almost too much for the resources of the local banks without foreign help. Before the war, most of them were actually in foreign hands, for the Austrians and Hungarians have always been foreigners to the Yugoslavs. Then came the movement for nationalisation, either by sequestration, or by absorption by national institutions. This process has not been invariably successful, and some concerns have suffered accordingly. It is of vital importance to the country to develop those industries for which they themselves provide the raw material, such as agricultural and forest products of all kinds. It makes a difference to the country, for instance, if they grind their wheat at home and export it as flour. In the same way it is to the national interest to encourage spinning, and import the raw material instead of the finished article. It is the development of the national industries alone which can prevent the draining of the country's youth by emigration to the United States and elsewhere, which was so marked a phenomenon before the war in the liberated provinces, though scarcely known in Serbia, where the population was contented and stayed at home.

Not many statistics are available, but we can consider the comparative capitalisation of nineteen of the quoted

Zagreb financial institutions in 1912 and 1919. In the former year their total combined capital was 62 millions of krone; in 1919 it had grown to 380 millions, and to-day is 860,000, while their reserve funds have expanded for the three dates in question from 17 to 206 and 700 millions respectively. Belgrade cannot show such figures. Eliminating the National Issuing Bank, the combined banks of the capital can scarcely show 20 million dinars, equivalent to 80 million krone, or less than the capital of one big Zagreb bank.

Deposits have grown proportionately. In 1912 they amounted to 147 million krone: at the end of 1919 they reached the figure of 757 millions. This is a welcome sign, but the move in this healthy direction is much too slow, on account of the conservatism of the peasants and their shyness of financial institutions. The assets of the nineteen Zagreb banks combined have risen from 528 millions in 1912 to 3,970 millions in 1919, and are by now probably well over the 5,000 millions. Their net profits in 1912 were 5,700,000 krone, and in 1919 51,000,000. It is interesting to note that in an article by Mr. I. Belin, in *Nova Evropa*, from which these figures are taken, the author lingers with satisfaction over these figures, but makes no mention of the depreciation of the krone, which has fallen below one-twentieth of its pre-war value.

Increases of Capital.

To meet the constantly increasing demands for capital the Zagreb banks are continually making new issues, and it is interesting to note that their subscription lists are open in the United States, where they get considerable support from the extensive, and on the whole, prosperous, Yugoslav colony. Last year alone, eighteen Zagreb banks increased their capital and reserve funds from 600,000,000 to 1,500,000,000, or an increase of 900,000,000 krone. But the country is still in the very early stages of modern finance. The bourse and the market can scarcely digest all these new issues. There has been a crisis, because the banks were giving credit very freely at a time of what they call "hose," i.e., hauese, and have pulled their horns in completely on the slump. The fact is that all the banks really want more money, and have exhausted local supplies. Deposits and savings and current accounts are growing, but not rapidly enough, and it would not be possible to make a new issue now with any chance of success. Consequently, many of them are looking for support abroad. The influx of foreign capital has, as a matter of fact, already begun. The attitude of the people, as distinct from the bankers, is, however, xenophobic, more particularly in Belgrade, and the Socialists especially are alarmed and fear partly the growth of a "bankocracy" and partly the exploitation of the country by foreigners, of which they are by no means without experience. But the more sensible ones realise that local resources are totally insufficient, and that foreign influence will counteract itself if spread over several Powers, whose mutual jealousies will prevent anyone gaining too great an ascendancy over the country.

The tendency towards concentration of resources, which is the dominant feature of the West, appears in Yugoslavia in the *zadruga*, or co-operative associations, which have done very valuable work in Serbia, where the spirit of the now almost obsolete patriarchal system of living called *zadruga* has provided a tradition as well as a title to these organisations. There are innumerable *zadruga* dealing with pigs, wine, honey, produce, and all sorts of agricultural lines doing excellent work. Without such co-operation successful agriculture could scarcely exist in a land of small holders. But even these are insufficient, and must be supplemented by the help of financial institutions. In trade, the problem is easier, for limited liability companies are being formed with substantial capital on purpose, but even these require the constant assistance of the banker. These companies are tending to oust the small trader, and are a step on the long road to concentration of resources. Every day some bank buys up some small struggling concern which could no longer carry on for want of funds. The need of concentration and amalgamation is real, for there is scarcely a finance house in Yugoslavia that is capable of carrying out a big transaction unaided, but yet, instead of amalgamation, we see new foundations. A decree of the Ministry of Finance that only companies with a capital of at least four

PERFUMERY and GOOD TOILET GOODS.

Keen Prices for High Quality. Enquiries solicited.

C. A. STOKES & CO., LTD.,
No. 21, "ECLIPSOL" WORKS, BRISTOL.

million krone could deal in foreign exchange drove every little money-changer to turn himself into a company. Unfortunately, in Yugoslavia the personal element plays a bigger part than it does in the West, and personal animosities do a great deal to prevent a highly desirable fusion in finance as well as in politics. It is only a matter of time, but these antipathies greatly delay many a desirable consummation.

In the old days there were many branches of foreign banks, which have by now mostly been absorbed, which is a good step in the right direction of nationalisation, in the broad sense, and of concentration. Still, there are some entirely foreign concerns, such as the Franco-Serb Bank, the Wiener Bankverein, and now Great Britain is represented by the British Trade Corporation.

In the eyes of a Westerner, banking in Yugoslavia is elementary and scarcely out of the primitive stage. There is a shortage of experienced men, and mistakes have been made, such as too much speculation on exchange, by banks on their own account, and attempts to push up the market value of their shares, and failure in placing their issues in strong hands that will keep them off the market. The banks are heavily engaged, as most of them seem in too much of a hurry, as though to grow rich quickly were more important to them than to establish unshaken confidence. They are in a stage of transition. Many forms of activity in normal Western banking operations are scarcely known, but, still, in spite of many difficulties, very good work has been done, and it may be confidently hoped that with the growth of experience, means, and scope, the time is not far distant when the banks of Yugoslavia will be equivalent to the great resources of the country.

YUGOSLAV TENDERS.

The Commercial Secretary to H.M. Legation at Belgrade has informed the Department of Overseas Trade that it is almost impossible for British firms not having local representation in Yugoslavia to succeed in securing contracts for the supply of material for which tenders are invited by the Yugoslav Government from time to time. In view of the difficulties in tendering without local representation, the Commercial Secretary recommends that all British firms interested in the Yugoslav market should take steps towards appointing a suitable local agent to act on their behalf. He is prepared to render all possible assistance in this matter.

The Commercial Secretary also states that the date specified for the receipt of tenders is not always regarded as final in existing circumstances, but every effort should be made by United Kingdom firms to adhere to the date given. In such cases, however, where the time available does not permit of this, firms might send in their offers after the expiry of the

appointed time with reasonable hope of their quotations receiving consideration. The appointment of local agents would, however, considerably reduce the difficulties which firms at present experience in this regard.

The Army Clothing Department has informed the Commercial Secretary that tenders are frequently received from British firms who do not comply with the conditions for tendering. Tenders are frequently unaccompanied by any duty stamp and a banker's guarantee of 20 per cent. of the total amount of the contract does not always accompany the tender, which cannot be considered on that account.

MUSIC TRADE IN CONSTANTINOPLE.

In a report on the music trade in Constantinople, the Commercial Secretary to the British High Commission says:—"While at the moment music dealers are suffering in no small degree from the depression that is general throughout local business circles, there will eventually be great possibilities for British firms interested in this line. Music is surprisingly well cultivated and appreciated in this city. Concerts, etc., are numerous, good, and well patronised, and in almost all homes musical instruments of some sort, according to the circumstances of the family, are to be found. The arrival during the past year of much talent from Russia has given a further stimulus to this art.

"Unfortunately, British composers and their work are almost completely unknown even in the most cultivated circles. There is not a music dealer in the city who has an even tolerably good assortment to offer, notwithstanding that the local British colony is attaining quite an important size. Large naval and military forces have also been stationed here for two years past, and those responsible for their entertainments have invariably had to send to London for fresh numbers owing to the utter impossibility of obtaining anything of the sort here. British pianos are equally unknown.

"Efforts are being made to induce the Philharmonic Society to take up British music and to offer, presently, at least one all-British programme among their concerts of this season. This society is about the largest and best musical organisation in the city, and it is hoped by those interested in the affair that such action on their part, coming in conjunction with the distinct vogue which things British in general are enjoying, might awaken a real appreciation of modern British work in local musical circles.

"It is understood that certain American firms, both publishers and instrument makers, are actively canvassing this market at the present time, and it would undoubtedly pay an enterprising British firm to canvass this market, both as regards music, musical instruments, and their accessories, such as strings, etc.

EXECUTOR AND TRUSTEE DUTIES UNDERTAKEN

ENGINEERING.

MOTOR "SERVICE" SCHEMES.

One of the most gratifying features in connection with the motor industry of this country is the growth of the idea of "service," a feature which was practically non-existent before the war. It was the petrol companies who first gave tangible form to the necessity for "readiness to serve" in this country, and when motorists grumble, as they do periodically—the writer amongst the number—they should remember that the organisation built up at so much cost, whereby motor fuel can be obtained anywhere, just when wanted, is one of the greatest boons the motorist can have. Service is worth paying for, just as are commodities, and quite a number of firms are now organising distributing agencies throughout the country whereby their specialities can be obtained as and when desired, without trouble and without delay.

Something was said in this column some time ago as to the growing popularity of dynamo and battery ignition in the car world, and whilst it is too early as yet to speak of the magneto as being obsolete, there are signs that its day is numbered as a means of ignition, and that car builders generally are recognising that there is no need to fit two separate and distinct generating stations on a car or lorry. Where an electric lighting and starting system is fitted, there is no need for any other electrical system to be installed, and one of the first firms to recognise this was Messrs. C. A. Vandervell and Co., Ltd., of Acton Vale, who have just completed arrangements for making the famous Willard storage batteries at their Acton works. In connection with both lighting and starting, and with ignition systems, these batteries are being used in increasing quantities, and a few days ago I was privileged to spend a considerable time at the company's works, examining and testing the new productions.

C.A.V. "Service."

In connection with this the C.A.V. people are developing a very complete "service" scheme, which I am now permitted to describe. The connection which has been formed during the past few months with the Willard Storage Battery Co., and the arrangements whereby the firm mentioned act as their agents throughout the country, have enabled the Acton organisation to formulate a comprehensive working plan for rendering battery service throughout the Empire, with the exception of Canada, which covers "C.A.V.," "C.A.V.-Willard" and "Willard" batteries. Certainly the interchange of ideas which has taken place between the two companies with a view to effecting improvements in battery construction will prove of the greatest value to the motoring community, and should go a long way towards dispelling the suspicion and mistrust with which batteries have hitherto been regarded. The firm, in writing to me on the subject, outline their proposals in such complete form that I cannot do better than quote their letter *in extenso*. They say:—
"The immensely important part which the battery now plays in the electrical equipment of the modern automobile is such that the adoption of new and efficient ignition systems and the whole future of motoring are bound to be largely dependent upon the consistent efficiency of the battery equipment.

"With these conditions prevailing, it must be conceded that progress must continue, and as one of the largest manufacturers in the world, so far as electrical equipment is concerned, we have spared no pains nor efforts to increase the general efficiency and usefulness of our manufactures.

"In many aspects, however, the problem of the battery progress has presented difficulties which have appeared insurmountable. The active forces within the battery have been brought to a state bordering perfection as a result of persistent effort, yet without the corresponding efficiency in insulating these forces the attainment of battery perfection could never be realised.

"Rubber has always been considered pre-eminently the best material for battery-plate insulation. Certain characteristics of rubber, however, made its use impracticable in ordinary lighting and starting batteries beyond a limited extent. Until a few years ago the only material that partly answered this purpose was wood, chemically treated to withstand the acid solution, but owing to its rapid deterioration, its comparatively short life when in use, and the increasing difficulties in obtaining the right kind of wood, it has never been regarded as satisfactory.

"As the life of the battery depends mainly upon the quality of the insulation between its plates, it was obvious that for this purpose some more effective material must be found to withstand the deterioration both in regard to its dielectrical and mechanical properties as evidenced in wood.

"For years research has been carried on by many experts in respect to this problem of more efficient insulation, and

it was not until 1914 that Mr. T. A. Willard concluded a series of experiments by successfully producing an insulator of rubber incorporating the principle of capillary attraction.

"On completion of the necessary machinery, Mr. Willard was finally able to commercially produce insulators of thin rubber sheets pierced transversely with tens of thousands of cotton threads, each of these threads acting as a capillary channel allowing the acid solution to percolate through the insulator without in any way destroying its qualities.

"The tremendous superiority of this insulator over all other types was early foreseen, and the success of the idea has been amply proved by the fact that hundreds of motor-car manufacturers throughout the world now standardise threaded rubber insulated batteries as part of the initial electrical equipment upon their cars.

"We have obtained the exclusive rights to manufacture batteries fitted with this new Willard insulator throughout the British Empire (with the exception of Canada).

"In view of the foregoing, in which we have endeavoured to explain briefly and concisely the great difficulties which manufacturers have striven to overcome, it will be noted that we—as the largest automobile battery manufacturers in the British Empire—have not hesitated to look beyond our own organisations for improvements in batteries. We now confidently assert that the newly-designed 'C.A.V.-Willard' battery, incorporating the Willard threaded rubber insulator, is the most consistent and efficient unit of its kind in the world. Our plan is intended primarily to educate the car owner to appreciate the value and purpose the battery has to function, and by so doing create more battery satisfaction than has hitherto existed.

"The modern automobile battery does not impress the lay mind of its importance in comparison with the rest of the electrical equipment, and consequently fails to convey that it is essentially an electro-chemical apparatus dependent upon certain operating conditions and treatment for its maintenance and general efficiency. Misuse and abuse are conditions against which the best batteries in the world are unable to stand, and it would not be regarded as incorrect to assert that the vast majority of batteries which fail to function in a satisfactory manner fail owing to apparent indifference and lack of proper knowledge.

Misuse of Batteries.

"Literally speaking, the battery has a well-defined period which might be called its infancy, which finds a very interesting parallel in the babyhood of the average person. Mortality during infancy is very high on account of the ignorance of the parents, lack of proper attention and expert medical advice. Most batteries that have collapsed during the first few months of their existence have done so for the same reasons, i.e., ignorance of the car owner, want of proper attention and lack of expert advice. Generally the car owner knows little of his machine as a whole, and very much less about the battery. In consequence, his battery suffers immeasurably, and it is always regarded with doubt as to its reliability.

"In our service plan we are providing a means for the owner to place his battery in the immediate care of experts, who for a definite period of the battery's life will test it at frequent intervals—say, every two weeks—to maintain the electrolyte at proper gravity and level, and with the knowledge gleaned from his battery record chart kept at the service station, will be able to instruct the owner as to whether the conditions under which the battery is being operated are conducive to long life.

"If a battery receives this expert and regular attention during the first few months of its life, it is practically assured of a long and vigorous life. Without this service it is apt, in a very short time, to become incapacitated for further work. Our plan is to guarantee every 'C.A.V.' and 'C.A.V.-Willard' battery for a period of ninety days, provided the owner registers the battery within five days from the date of delivery at a battery service station.

"For the period of ninety days following date of registration the service station will assume complete responsibility for the battery, provided it receives fortnightly inspection by the service station, which has the authority to adjust all matters, make repairs, and, if necessary, to replace a battery by a new one when any fault exists which prevents the battery from operating in an entirely satisfactory manner.

"It is with much pleasure that we record the fact that this policy has met with the entire approval of those manufacturers who standardise 'C.A.V.' lighting and starting equipments on their cars. It is not unreasonable to assume that the policy will also receive the hearty support and co-operation of all motor-car traders, as both the car manufacturer and the trader will realise that the battery product of the 'C.A.V.' Company, backed by such comprehensive service support, will ultimately have the effect of removing difficulties which hitherto beset their path, and leave them free to extend their energies in other and more productive directions.

"Apart from the fact that 'C.A.V.-Willard' service stations will carry ample stocks of new batteries and spare parts for repair work, they will also carry a stock of rental batteries, which can be hired out to users at a standard uniform rate throughout the country, i.e., 2s. 6d. for the first day, and 1s. per day afterwards.

"These rental batteries will enable the user to use his car at any time when his regular battery is under repair or being recharged, and thus enable him to have the fullest use of his car on all occasions when otherwise, under different circumstances, delay and disappointment would be occasioned. The 'C.A.V.-Willard' scheme is planned to be everywhere operated by entirely independent traders in preference to branch premises owned and staffed by the company. Service thus designed gives greater value to the user, inasmuch as the service trader is in a position to regard all transactions from an independent and entirely different angle to that of the manufacturer, consequently in the wider application of business he possesses that freedom of action which secures the confidence of the customer in his purchases and in the realisation that quality goods alone could be supported by such a comprehensive policy."

The Austin Tractor.

In considering the report of last year's tractor trials at Lincoln, the Austin Motor Co., Ltd., request us to mention that the reference to the Austin concerns a type which has been superseded; indeed, before the judges had completed their labours, a new model lightweight had been produced. The 1921 Austin tractor has a drawbar pull 30 per cent. greater than that of last year's machine, and is built with a differential and back axle of more than double the strength, thus providing amply for the worst strains likely to arise when working under colonial conditions. At home the Austin goes from one success to another at the rate of one award a week in competitions under the observation of critical everyday farmers.

An Austin Model at Brooklands.

Although the "Austin Twenty" is not a racing model, and the firm has not laid itself out specially for competitions, it is interesting to note that when this reliable family car does take to the track it puts up an excellent record. Mr. Felix Scriven drove the first "Austin Twenty" sports model to leave the works at the Brooklands meeting on Easter Monday, and secured first place in the 75 m.p.h. Short Handicap event, winning easily at 69½ m.p.h. Mr. Scriven, who is secretary of the Bradford Automobile Club, is to be doubly congratulated—on his own skill and on the performance of his car, which did not leave the works until March 24, three days prior to the race.

The public who wish to obtain a small car which is a real car and not a makeshift, will be pleased to hear that the Austin Motor Co., Ltd., having completed its organisation for the manufacture of the 20 h.p. car, is shortly placing on the market a 10 h.p. replica of its famous "Twenty," to be sold at a popular price.

The Automobile Association has instituted arrangements whereby tourists and country members can be met in any part of London, or its outskirts, by competent pilots having an intimate knowledge of the Metropolis and London traffic conditions. The men will be available for guiding members' cars, by the best routes, through or around London. Full particulars concerning this new "A.A." service, for which a very moderate charge is made, may be obtained upon application to the Secretary, A.A. and M.U., Fanum House, Whitcomb Street, London, W.C.2, or to any of the Association's Area Offices.

So that Moroccan farmers may obtain superphosphates more readily, the Government has arranged for a manufacturer to establish works in the country, where a minimum of 20,000 tons will be produced annually.

The traffic receipts of the Egyptian Delta Light Railway for the week ended March 10 amounted to £E8,995, making the total for the year £E463,869. For the corresponding periods of last year the receipts amounted to £E12,490 and £E372,213 respectively.

The directors of the Royal Exchange Assurance have appointed Mr. Robert Connow assistant fire manager at their head office as from March 25 last. Mr. Connow has, in order to take up his new appointment, relinquished the position of general manager for South Africa of the Corporation, which he has held since 1911, prior to which he occupied a similar position for the "Alliance."

NATIONAL BANK OF EGYPT.

At the Ordinary General Meeting of the National Bank of Egypt, held in Cairo on the 29th March, 1921, a FINAL DIVIDEND of £1 2s. 6d. per share was declared, PAYABLE on the 1st APRIL, 1921, making 30s., equivalent to 15 per cent., for the year ended 31st December, 1920. Coupon No. 20 is therefore now payable.

Forms for listing coupons may be obtained at the NATIONAL BANK OF EGYPT, 6 and 7, King William Street, London, E.C.4.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—Business in currants has been brisk during the week. Sultanias are in very short supply, and values are bound to increase. The demand for figs has continued, and rates are higher.

Sugar.—The home refined has been in active demand at the official rates. West Indian crystallised has come to business at 6s. 6d. to 6s. 6d., while American granulated is quoted at 40s. 6d. Czechoslovakian has been done at 42s. 9d., and White Java at 32s.

Coffee.—The futures market has been steady but easier. Quotations are:—May, 40s.; July, 41s.; September, 42s.; December, 43s.

Oilseeds.—Prices have declined all along the line. Indian linseed March-April has lost 1s. at 16s. 6d. Rapeseed is lower with Toria at 17s. 6d., bold Ferozepore at 16s. 6d., and brown Cawnpore at 14s. 6d., being 3d. down in each case. Indian cottonseed has come to business at 9s. 9d., and Egyptian black 1s. lower at 11s. 9d.

Seed Oils.—There has been little change in prices. Linseed oil is 1s. 9d. down at 26s. 3d. Rape oil is unchanged at 46s. Cotton oil has been quiet. Refined is 2s. lower at 38s., and the Egyptian crude variety at 30s. has shed 1s. Turpentine is again lower at 48s. 6d., which has declined eighteen pence.

CURRENT PRICES.

General Produce.—Bacon, 172s. 6d. cwt.; butter, 298s. 8d. cwt.; cheese, 167s. cwt.; chillies, 105s. cwt.; eggs, 20s. 9d. per 120; cloves (Zanzibar), 9½d. lb.; cocoa (Ceylon, good to fine), 79s. cwt.; coffee (Costa Rica), 100s. cwt.; East India bold, 113s. cwt.; Mocha longberry, 95s. cwt.; ginger (washed Cochin), 37s. 6d. cwt.; hams, 160s. cwt.; lard, 105s. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore, black), 4d. lb.; pepper (Muntok white), 8½d. lb.; raisins (Valencia), 117s. 6d. cwt.; sultanias (Smyrna), 114s. 6d. cwt.; currants (Vostizza), 88s. 6d. cwt.; sugar (granulated), 68s. 9d. cwt.; sugar (No. 1 cubes), 73s. cwt.; sugar (white Mauritius), 66s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 22s. cwt.; sago flour, 13s. cwt.; rice (Rangoon No. 2), 17s. 6d. cwt.; rice (bran, Rangoon), £5 ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 2½d. lb.; wheat (Australian), 86s. qr.; wheat (English white), 92s. 6d. qr.; wheat (La Plata), 78s. 9d. qr.

Hides and Skins.—Ox and heifer (first), 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 5½d. lb.; 59 lbs. and under, 4½d. lb. Second, 90 lbs. and up, 4½d. lb.; 80 to 89 lbs., 4d. lb.; 70 to 79 lbs., 4d. lb.; 60 to 69 lbs., 3½d. lb.; 59 lbs. and under, 2½d. lb. Cows (first), 60 lbs. and up, 3½d. lb.; 59 lbs. and under 3½d. lb.; cows (second), 60 lbs. and up, 2½d. lb.; 59 lbs. and under, 2½d. lb.; bulls (first), 2½d. lb.; bulls (second), 1½d. lb. Casualty Hides: Kips (first), 3½d.; kips (second), 2½d. lb.; kips (third), 2d. lb.

Chemicals.—Acids: boric, 71s. cwt.; oxalic, 9½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 8½d. lb.; ammonia (sulphate), £24 11s. 3d. ton; arsenic (white powdered), £47 10s. ton; benzole (standard), 3s. gallon; bleaching powder (35 per cent.), £20 ton; borax crystals, 34s. 6d. cwt.; cream of tartar, 132s. 6d. cwt.; Potassium: bi-chromate, 1s. 0½d. lb.; chlorate, 6½d. lb.; caustic, £47 10s. ton; nitrate, £54 ton; permanganate, 1s. 9d. lb.; prussiate yellow, 1s. 2½d. lb.; sulphate (90 per cent.), £30 ton; Sodium: crystals, 150s. ton; bicarbonate, £10 15s. ton; bichromate, 7½d. lb.; alkali (58 per cent.), £9 5s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £22 10s. ton; hyposulphite, £23 ton; prussiate, 8½d. lb.; nitrate, £20 12s. 6d. ton; sulphate of copper, £34 ton; sulphate of iron, 150s. ton; glycerine (crude, 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; lemon oil, 3s. 5½d. lb.; quinine, 3s. 6½d. oz.; red lead, £36 10s. ton; white dry lead, £41 15s. ton; white ground lead, £52 ton.

Metals.—Aluminium, £150 ton; antimony (English Regulus), £39 2s. 6d. ton; bismuth, 7s. 6d. lb.; copper (standard), £68 15s. ton; copper (electro), £71 15s. ton; gold bars, 104s. 11d. oz.; iron (No. 3 Cleveland), 150s. ton; hematite (mixed number), 180s. ton; lead (soft foreign), £19 12s. 6d. ton; manganese Poti, 1s. 7½d. unit; molybdenite, 55s. unit; nickel, £200 ton; platinum, 325s. oz.; plumbago, £27 10s. ton; quicksilver, £12 12s. 6d. bottle; silver bars, 34d. oz.; spelter (G.O.B.), £25 5s. ton; wolfram, 13s. unit; zinc sheets, £37 ton; tin (standard), £16½ ton; tin plates (20 by 14), 26s. box.

Miscellaneous.—Cotton (American), 8.80d. lb.; linseed (La Plata), £16 10s. ton; rape (Toria), £17 10s. ton; soya beans, £11 10s. ton; palm kernels, £18 5s. ton. Oils: linseed, £28 10s. ton; soya, £32 ton; cotton (crude), £31 ton; olive, 12s. gallon; ground nuts, £36 ton; palm, £37 ton; rape (crude), £46 10s. ton; petroleum, 2s. 4d. gallon; turpentine, 50s. cwt. Rubber: Plantation No. 1 crepe, 1s. 0½d. lb.; smoked sheet, 11d. lb.; fine hard Para, 11d. lb.

The forthcoming Roumanian Budget will include taxes on doors, windows, firearms, dogs used for sport, all luxury articles and animals, furnished apartments and rents. The Customs rates on oil are to be as follows:—Benzine, 11,000 lei per wagon; paraffin, 4,000 lei per wagon; light oils, 7,000 lei per wagon.

LANCASHIRE COTTON.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

During the past week Lancashire trade has shown signs of a steady improvement, but at the moment of writing a cloud is hanging over the market. The threatened coal strike has become an actual fact. Plentiful supplies of industrial fuel are available. Just before the miners downed tools the market was full of favourable signs, raw cotton values were keeping steady, inquiry was on the increase, demand was broadening, in fact everything pointed to a revival of improved trading relations with the outlets abroad. But now it looks as if the labour troubles will thrust back the market to a state of depression. With regard to cloth, although the bulk of the demand has been for India, quite a good inquiry has been met with on behalf of the outlets of the Near East. Printing and bleaching descriptions have been in demand for Egypt, and here and there fair lots have gone through. Buyers for the Levant, Constantinople, and Persia have not been altogether idle, and some useful orders have been obtained. In the Egyptian yarn section prices have remained stiffer, and a moderate trade has been done. It cannot be said, however, that producers have been able to improve their position very much. The Masters' Federation has decided to continue short time in all the mills on the present basis. With regard to cloth for India, buyers for Calcutta have been prominent, and fair lines of dhooties and other light cloths have been booked. Business with China is slow in developing. American yarns have continued firm in price, but business has been rather patchy.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in the report for the week ended March 31, state:—The three business days which have elapsed since we last wrote have not witnessed any material change in the situation. The improved inquiry noticed last week has been fairly well maintained, and had it not been for the sudden collapse of prices in Alexandria we are inclined to think that considerably more business would have resulted. Unfortunately for all concerned the break occurred just as the trade was showing signs of a returning confidence. Nevertheless, there was certainly a little more doing on the spot, and the sales for the three days show a slight improvement on the recent average. The inquiry has been pretty general, with rather more interest being displayed in best Sakellaridis cotton, and prices keep very steady, with a tendency to harden. A new "bearish" feature has arisen, owing to the action of the American Government in imposing a seven cents duty on all staple cotton over 1½ inch imported into that country; but it is perhaps a little too early yet to judge the effects of this. C.i.f. business continues to show a slight improvement, and Manchester reports are still rather encouraging. Sales (three days) 800 bales. Quotations unchanged. Fully good fair Sakel 17.50d.

ROUMANIA'S GRAIN STOCKS.

Messrs. Watson and Youell report as follows under date March 30:—There is a diversity of opinion concerning the stocks of grain in the country at present. Some people consider that these have been over-estimated, and it is reported that a good deal is being absorbed by Transylvania, also that a considerable quantity is going into the distilleries. On the other hand, some 250,000 tons of shipping have been chartered from Roumanian ports since January, and a small inquiry for tonnage continues, and if the transport conditions could be improved, there would no doubt be a larger volume of exports. Unfortunately there appear to be occasional interruptions in the railway traffic, which made an encouraging start early in February, and the water in the Upper Danube is reported to be low, which prevents lighters from loading full cargoes or necessitates lightening over the shallows.

We are informed that the proposals of the two groups of contractors, one British and the other French, have been accepted by the Roumanian Government after certain modifications had been agreed upon, and it is now expected that good progress will be made in the repairs of rolling stock. As, however, material for these repairs will have to be ordered and shipped from this side, too much optimism must not be indulged in.

A considerable amount of improvement will undoubtedly be experienced during this year with regard to despatch of steamers arriving in the Danube with general cargo by the addition of certain new equipment at Galatz and Braila Docks in the shape of new cranes, sheds, etc., which are being ordered this year, and about which we may have more to say later on. Of course, everything will depend upon the railways doing their part in transporting the goods from the docks to interior points.

SUDAN PRODUCE.

The following are further extracts taken from the C.E.B. report for January:—

Livestock, etc.

Halfa Province.—Exports during the month of December were as follows:—3,451 catt.e. 9,877 sheep, 46 hides, and 1,470 skins.

Darfur Province.—755 head of cattle and 51 sheep were imported from Wadai during December, and the following number of animals were sold in El Fasher Market:—353 cattle, 1,273 sheep, 20 goats, 227 donkeys, 90 camels, 18 horses. The average price of bulls and sheep were respectively £E.8 and £E.1.025 per head, as compared with £E.5.400 and 600 m/ms. in December, 1919.

Sugar.

Nuba Mountains Province.—Experiments in sugar cultivation have been promising, and it is hoped a little later to encourage natives to grow same.

Tobacco.

Darfur Province.—It is reported that owing to the excellent crops which have been harvested the price of tobacco has fallen to 150 pt. the kantar. 495 kantars and 13 rottles of tobacco were sold in El Fasher market during the month, as compared with 88 kantars and 74 rottles in December, 1919.

Oranges.

Dongola Province.—The "Yusef Effendi" crop, Merowe Garden, is a record one. To date 54,000 of this fruit have been gathered and sold locally.

Nuba Mountain Province.—During the month oranges grown at Talodi have been sold in the market for the first time on record.

Cultivation.

Khartoum Province.—Riverain crops are satisfactory. The crops planted on the Gebel Bowser scheme are doing well, but labour has been difficult to obtain.

Halfa Province.—Reports confirm that the Dameira crops have been the best for many years. The area of land now being sown for the shitwi crops with wheat, barley, beans, lentils, etc., is greater than that sown for some years. In spite of warnings, seeds have not been got in as early as they should have been. The "Sirsar" has done slight damage in the lupines crops in villages in Sukkot district.

Bahr el Ghazal Province.—The rainfall for the present month is nil. Total rainfall for year was 54.24 inches, which is just 10 inches above the average of the last six years.

Dongola Province.—A January report on Gureir states that Spanish sparrows have done practically no damage this year owing to their late arrival and scarcity of numbers.

Labour.

Dongola Province.—The general exodus of labourers to Makwar continues. Consequently labour in the province is becoming scarce. Average wage is now PT.5 per diem.

White Nile Province.—There is still very little labour available, as a great many people are still engaged in threshing their crops. There is no labour available for export.

Bahr el Ghazal Province.—1,618 carriers and 207 labourers were used during the month, average rate of pay being 20 m/ms. daily.

Khartoum Province.—Labour has been extremely difficult throughout the two months owing to the enormous demands for agricultural labour. There are no signs of it easing appreciably owing to the immense demand for labour at Gebel Aulia and Makwar in addition to the local demands.

Halfa Province.—The demand for labour from Makwar is being felt. Labour which was available for here from elsewhere is not coming here now. Daily wages have gone up from 5 and 6 PT. a day to as much as 10 PT. A strong boy of 15 years or thereabouts can earn in Halfa PT.8 as a daily wage.

Miscellaneous.

Cattle Plague.—This disease has again made its appearance in Berber Province, a small outbreak having occurred in the Shendi district. Fresh outbreaks are also reported from the Blue Nile, Kassala, Khartoum, and Sennar Provinces.

CATALOGUES FOR ROUMANIA.

H.M. Consul at Czernowitz is fitting up a room in the Consulate as a waiting, reading, and information room for business men, and would be glad to receive catalogues (illustrated, if possible), directories, Chamber of Commerce and trade journals, and other literature. Wall pictures would also be welcomed. The commercial language in the province of Czernowitz being German, catalogues, etc., printed in that language would be most useful, but most business men understand English trade terms and price lists. Catalogues, etc., should be addressed to His Britannic Majesty's Consul, British Consulate, Czernowitz, Roumania.

Travellers to the Near East

Can obtain all information as to the journey from the Manager, **Continental Enquiry Office,** Victoria Station (S.E. & C.R.), S.W.1.

ALL-BRITISH FRETWORK OUTFITS . MACHINES and TOOLS.

Amateur Craftsmen know the value of British Tools, and Hobbies, Ltd., manufacture and export everything for the Fretworker, Woodworker, and Amateur Picture-frame maker. The Near East is a good market for these lines and will repay for stocking.

Write to Dept. 16
for a fully
Illustrated
Trade List

There is a constant and increasing demand for these goods and by dealing with Hobbies you have the firm with a long-established reputation to uphold and one which will treat you with British fairness and good value. You should get into touch to-day and have our lines at hand.

Business Houses trading with Turkey can insure Foreign Exchange with the Bank. Banks, Commercial Houses and others having interests in Turkey are invited to apply for terms.

Manufacturers and Merchants may address their enquiries to the Head Office for Trade Lists of Importers and Exporters.

LEVANT MARKET REVIEW.

We give the following extracts from the market review of the National Bank of Turkey for February:—

General conditions during the month were the same as those existing during the last three months. The proceedings of the London Conference are watched with great interest, and merchants are rather holding back from new business, waiting for the Allied decisions on the Near East, and the consequent effect on the Turkish exchange. Some circles are inclined to be optimistic, however, concerning the results of the Conference, and everyone is ready to make the most of the opportunities when Anatolia is again accessible. When this occurs, Anatolia will present a large market, ready to receive the large stocks of goods, especially cottons and woollens, now at Constantinople, and a certain relief should be felt at Bradford and Manchester. Reports received from the interior indicate considerable activity on the part of the Angora Government towards the establishment of good railway communications with Angora. Climatic conditions prevent the continuation of the work at present; but every preparation is being made towards the time when work is again possible. It is further stated that three battalions of 1,200 men each have been placed at the disposal of the railway company by the Kemalist government, which is also reported to have voted a sum of £T20,000 to the railway company. According to reports received, work will shortly be resumed on the Samsoun-Sivas line, which was started before the war, when the concession was in the hands of a French company, the Régie Générale des Chemins de Fer; it is stated, however, that the Angora Government is encouraging the formation of a Turkish company at Samsoun, to take over the concession. The ancient gold mines of Troy are again receiving attention from a British company, who have received a two years' option on the concession. Engineers have arrived, and it is hoped to start work very shortly. The imposition of a supplementary petrol tax at Smyrna has aroused much indignation. Strong protests are being made by a large oil company and by the American Chambers of Commerce at Smyrna and Constantinople.

Foreign Exchanges.—Throughout the month of February the course of the Turkish lira was remarkably steady owing to the absence of speculation and hopes of an early settlement of the Anatolian question. The pound sterling was quoted around 584 piastres, and the exchange required was readily obtainable. The heavy fall in value of imported foodstuffs, also a reduction in arrivals, has eased the situation somewhat. Export of merchandise is still extremely limited, but it is reported that heavy shipments of gold have been made to Syria and other destinations, and the sterling exchange has been put on this market. The Turkish gold lira has fallen in value considerably during the month, and is now quoted at about 21s. against a par value of 18s. 6d. for sterling exchange.

Compared with the New York dollar rate, gold can be purchased here at a discount of about 8 per cent., and it is considered by many that permission for the free export of gold coin would result in an improvement in the Turkish paper lira quotation, as the gold does not form any part of the security for the note issue, but is largely employed as a medium in financing trade between the interior and Constantinople.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 29:—In January, 1921, imports were 3,100 lakhs and exports 1,900 lakhs of rupees. Including bullion and rupee paper movements, total net balance of trade against India for the period from April, 1920, to February, 1921, was 45 crores (45,00,00,000) of rupees; whereas the balance of trade for the corresponding period of 1919-20 (April, 1919, to February, 1920) was in favour of India by Rs.79 crores (79,00,00,000). Indian Budget as passed after discussion with retrenchment by Legislative Assembly showed estimated surplus of Rs.44 lakhs, and it was passed on March 23 with few minor amendments by Council of State. During the week ending March 19 general crop prospects unchanged. Bombay cotton market crisis reported definitely settled; business in ready cotton satisfactory; Piecegoods market shows some relief in Bombay and especially Calcutta. Calcutta jute market very quiet. Hessians and heavy goods steady with some demands. No change in bank rates. At tea sale on March 22 Assams good; autumnals scarce, excepting good liquoring sorts. Market easier for all other kinds. 679,980 packages sold to date at an average price of five annas four pies per lb. The Government of India have decided to retain the sole powers of general regulation of air traffic and control of main air routes, leaving development of minor routes to Local Governments. Main Trunk route from Rangoon to Bombay via Calcutta and Allahabad is estimated to cost Rs.27 lakhs, Karachi to be included later, if necessary; Rangoon—Calcutta section of the route to be first taken up when funds permit.

COMPANY NOTES, AND REPORTS.

Chartered Bank of India, Australia and China.

The report of the Chartered Bank of India, Australia and China for 1920 shows a net profit, after providing for all bad and doubtful debts, of £849,601, inclusive of £172,830 brought forward. The directors propose a final dividend at rate of 14 per cent., together with bonus of 6s. 3d. per share, making 20½ per cent. for year, free of tax, adding £100,000 to reserve fund, which will then stand at £3,600,000, £35,000 to officers' superannuation fund, writing off premises account £100,000, and carrying forward £209,601. Interest on instalments of new capital (£1,000,000) and premium (£500,000) from dates of payment to December 31, 1920, at rate of 6 per cent. per annum, free of tax, has been paid. The new shares will rank equally for dividend with the old shares as from January 1, 1921. Meeting, 38, Bishopsgate, E.C., April 8, 2 p.m.

National Bank of Egypt.

The report of the National Bank of Egypt for the year ended December 3 states that the gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for bad and doubtful debts, amounts to £1,269,211 19s. 9d. After deducting from this sum: For directors' fees, £11,208 6s. 8d., for current expenses, £430,849 5s. 2d.—£442,057 11s. 10d.—there remains £827,154 7s. 11d. The directors propose to allocate: For depreciation of Government and sundry securities, £188,476 5s., for depreciation of securities in guarantee for the note issue, £58,246 8s.—£246,722 13s.—leaving a net profit of £580,431 14s. 11d. In conformity with Article 49 of the Bank's statutes a dividend of 4 per cent. is payable on the share capital, £120,000. After this statutory distribution there remains £460,431 14s. 11d. Adding to this the balance brought forward from last year, £141,932 7s. 2d., the amount available is £602,364 2s. 1d. The directors consider it prudent to allocate to special reserve for contingencies a sum of £100,000, which leaves £502,364 2s. 1d. From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital which will absorb £330,000, and leave a balance to be carried forward of £172,364 2s. 1d. Each share will thus be entitled to a dividend of 30s., equivalent to 15 per cent. on the share capital. An interim dividend of 8s. per share, equal to 4 per cent., having been paid on September 3, 1920, the balance remaining to be distributed is 22s. per share, equal to 11 per cent.

National Bank of India.

The report of the National Bank of India for the year ended December 31 last states that the net profits for the year, after providing for all bad and doubtful debts, amount to £553,398 1s. 11d., and adding £135,633 15s. 1d. brought forward, the available total is £689,031 17s. An *ad interim* dividend at the rate of 20 per cent. per annum, free of income-tax, was paid on September 23 last, amounting to £150,000. The directors now recommend a further dividend at the same rate, and an addition of £200,000 to the reserve fund, raising it to £2,500,000. They propose to write £20,000 off house property account and to add £20,000 to the officers' pension fund, leaving a balance of £149,031 17s. to be carried forward. Interest to December 31, 1920, on the new capital of £500,000 and on the premium of £300,000, at the rate of 6 per cent. per annum, free of income-tax, has been paid. The new shares will rank equally for dividend with the old shares as from January 1, 1921. Mr. Henry Chalmers and Mr. J. D. Nimmo have been appointed directors, and it will be necessary to confirm their appointment and to re-elect them. The following directors retire on this occasion, but being eligible offer themselves for re-election:—Mr. Robert Williamson, Mr. J. N. Stuart, and Mr. Robert Miller. It will be necessary to elect auditors. Messrs. Cooper Brothers and Co., and Messrs. W. A. Browne and Co., the retiring auditors, offer themselves for re-election.

The Ionian Bank declare a final dividend of 3s. per share, with a bonus of 1s. per share, both free of tax, for past half-year, making 7 per cent. for year.

The Government of India have proposed the raising of the general *ad valorem* duty of 7½ per cent. to 20 per cent. on motor-cars, motor-cycles, and tyres (excluding lorries).

THE AGRICULTURAL BANK OF EGYPT.

Notice is Hereby Given that the Eighteenth Ordinary General Meeting of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo on Friday, the 29th April, 1921, at 4 o'clock p.m., for the purpose, among other things, of:—

- Receiving the Directors' Report;
- Receiving the Auditors' Report;
- Approving the Accounts for the period ended 31st January, 1921;
- Declaration of Dividends;
- Election of Directors;
- Election of Auditors and fixing their remuneration;
- And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 13th April, 1921), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

In Egypt—At the National Bank of Egypt, Cairo.

At the National Bank of Egypt, Alexandria.

In London—At the National Bank of Egypt.

6 and 7, King William Street, E.C.4.

B. HORNSBY, President.

Cairo, 13th March, 1921.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

KAVALLA.

The report for February states:—The tobacco crisis which has developed in the European markets and in America gives cause for fearing that the merchants of our town have been too cautious in their purchases of the new crop of tobacco; one notes a marked fall in prices.

Contrary to all expectations, buying will commence towards the end of the month on a great scale; American houses will commence first, and soon other houses will be hurrying to make purchases. In some districts prices are higher than they were last year, though the tobacco is inferior in quality to that of the previous crop.

In the district of Zihna, where the tobacco has been almost entirely sold, a price of 25 drachmæ per oke has been reached. The cultivators appear satisfied with the prices obtained; it is estimated that they will obtain this year more than 100,000,000 drachmæ, the crop being more than eight million kilogrammes.

The maximum crop was reached in 1911 with 12,700,000 kilogrammes; then the Balkan Wars of 1912 and 1913 stopped the development of the cultivation of this crop; in 1914 the crop was notably greater than those of the two previous years. Unfortunately the European War broke out, and the crops of the following years were much reduced, and during the two years of Bulgarian occupation (1917, 1918) they attained their minimum.

The Department of Overseas Trade announce that creosote for the impregnation of approximately one million beech railway sleepers is required in Yugoslavia.

The production of the metallurgical industry of Roumania has been reduced to about 40 per cent. of normal, due principally to foreign competition and lack of coke. Eight hundred and fifty-nine wagons of coke monthly are required by the foundries.

The output of coal during 1920 in Czechoslovakia amounted to 111 million quintals (as compared with 104 millions in 1919), and of lignite to nearly 197 million quintals (as compared with 171 millions in 1919).

The Roumanian timber and chemical industries are working only 40 per cent. of normal owing to inability to renew plants and foreign competition.

Among the articles in demand at Ispahan are lamps, mirrors, window glass, silver-plated spoons, forks, and knives, plain and cut glass, china dishes, chairs, bedsteads, lanterns, candles, solid rubber tyres for carriages, rubber shoes, and sewing machines.

According to a report from Bulgaria, the Pernik coal mine is badly in want of new machinery, and it is said that a technical commission will go abroad shortly, probably to Germany, where machinery is cheap, to make purchases. They are especially in need of drills, and wish to develop water power for electric production. The cost of industrial coal has risen from 300 to 350 leva per ton.

General Depression.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

All other market factors have been overshadowed this week by the coal strike, which has, of course, brought renewed depression to all markets. There has been no selling, but quotations have been generally marked lower, and Home Railways in particular have been very weak.

The gilt-edged group has been dull. War Loan Fives are $\frac{1}{2}$ down at 86 $\frac{1}{2}$, while Consols are $\frac{1}{8}$ lower at 48 $\frac{1}{2}$. The Foreign market, by comparison with home securities, is closing with quite a firm appearance.

Industrials have drooped almost all along the line, while Oils have weakened in company. The price of rubber has eased again, and the shares have moved downwards.

Near Eastern securities have generally been firm. Egyptian Guaranteed 3 per Cent. are again up at 64, a rise of $\frac{1}{2}$. Turkish Guaranteed 4 per Cent. 1855 are unchanged at 68 $\frac{1}{2}$, but Greek Guaranteed 2 $\frac{1}{2}$ per Cent. 1898 are $\frac{1}{2}$ down at 63 $\frac{1}{2}$.

Greeks continue buoyant. The 5 per Cent. 1881 and the 5 per Cent. 1890 Loans are both 1 up at 44; while the 5 per Cent. 1890 Loan is 2 up at 44. Fundings at 44 are 1 up, but the 1910 Loan is unchanged at 42. The 5 per Cent. 1914 Loan is unchanged at 41, but the 1902 Loan is 2 up at 38.

Land shares have been weak. Beheras are $\frac{1}{2}$ down at 8 $\frac{1}{2}$, but the Preference shares are unchanged at 3 $\frac{1}{2}$, at which there are unsatisfied buyers. Anglo-Egyptian Land Allotments are unaltered at 3 $\frac{1}{2}$, but Egyptian Consolidated Lands are 3d. down at 1s. 1 $\frac{1}{2}$ d. Delta Lands are 8s. 9d., at which there are buyers; while Gharbieh Lands have gained $\frac{1}{2}$ at 1 $\frac{1}{2}$ s. New Egyptians are 1s. 6d. down at 22s., while Union Foncières have lost $\frac{1}{2}$ at 2 $\frac{1}{2}$ s. Sudan Plantations are $\frac{1}{2}$ lower at 3 $\frac{1}{2}$ s.

Oils are down all along the line. Anglo-Egyptians have fallen $\frac{1}{2}$ to 1 $\frac{1}{2}$ s, while Phoenix are 2s. lower down at 11s. 3d. Roumanian Consols have lost 1s. 6d. at 12s. 6d., and Steaua Romana have shed 3d. at 15s. 6d.

Among Miscellaneous descriptions Abyssinian Corporations have lost 1s. at 2s., while Alexandria Waters have shed $\frac{1}{2}$ at 6 $\frac{1}{2}$. Morums are 1s. 6d. lower at 11s. Egyptian Salt and Sodas are 2s. down at 28s., but Egyptian Markets are unchanged at 18s. 6d.

Banks have been steady. Agricultural 3 $\frac{1}{2}$ per Cent. bonds are 51 xd, while the 3 $\frac{1}{2}$ per Cent. Guaranteed bonds are 53 xd. Imperial Ottoman Banks are 7 $\frac{1}{2}$ s. National Bank of Egypt 17 $\frac{1}{2}$ s, and Land Bank of Egypt 5.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Yugoslavia.

Cigarette Papers.—Tenders are invited by the Bureau of the State Tobacco Monopoly of Yugoslavia for the supply of 13,750 reams of cigarette paper, each ream of 1,000 sheets of 430/730mm., weight per square metre 14/15 grams, percentage of ash 5 per cent., breaking point 5,000 metres, made of first-class materials. Tenders must be made before 11 a.m. on April 25. Details of the contract may be obtained from the Banque Franco-Serbe (London Agency), 30, Coleman Street, E.C.2.

Malta.

Coal.—Sealed tenders will be received at the Treasury, Valetta, Malta, up to 10.30 a.m., on April 14, for the supply of coal to the Government of Malta. Tenders received after the said date and hour will not be considered. Printed forms of tender, and of the conditions, may be obtained on application from the Crown Agents for the Colonies, 4, Millbank, Westminster, London, S.W.1. Each tender must contain the name of the surety whom the tenderer intends to propose for securing the performance of the contract and the payment of the penalties therein provided. The tenderer whose offer is accepted shall incur a penalty of £500 should he or his surety fail to attend to sign the contract within three days from the date of an intimation to that effect. Provided that the said tenderer and his surety shall be held to have bound themselves to an agreement, and may be compelled to carry out the obligations arising from the acceptance of the tender, although a formal contract was not executed. Tenderers shall not retract or withdraw their tenders for a period of fifteen days from the date of expiration of that period fixed for the delivery of the tenders, so that the tenders shall remain binding and may be accepted at any time during the said period of fifteen days.

Bulgaria.

Creosote, etc.—The Bulgarian Ministry of Railways invites tenders for 1,000 tons of creosote and 50 tons of chloride of zinc. Further details are being forwarded, and will be available for inspection on receipt at the Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1. Tenders close May 9.

CHROMIUM ORE.

A new volume dealing with chromium ore, in the series of monographs on the mineral resources of the Empire, has just been published by Mr. John Murray (price 3s. 6d.). It is written by Mr. W. G. Rumbold, of the Scientific and Technical Department of the Imperial Institute, under the direction of the Mineral Resources Committee of the Institute. The chief use of chromium is the production of ferrochrome, an alloy of iron and chromium, which is employed in the manufacture of chromium steels, used for making armour-plates, in armour-piercing projectiles, "rustless steel," high-speed steels, etc.; chromium is also used in the manufacture of chromates and bichromates, and such pigments as chrome yellow and chrome green. During the war there was a great demand for chromite, the only ore of chromium, and the production of Southern Rhodesia and New Caledonia increased considerably, while countries like India, Canada, and the United States, which produced little before the war, became large producers from 1915 or 1916 down to 1918, the price of the ore having risen in these years to abnormal heights. After the war there was a big accumulation of stocks, especially in America, and the price fell considerably, curtailing the production.

The first chapter of the monograph deals with chromite and other chromium minerals; the valuation, prices, and world's production of chromite; the concentration of the ore and its utilisation. In the second chapter the chromite deposits of the British Empire are described in detail, especially those of Selukwe in Southern Rhodesia, and of Quebec. In the third and last chapter the chromite deposits of foreign countries are described, particularly those of Greece, Asia Minor, New Caledonia, Cuba, and the United States. Statistical tables of imports and exports, production, etc., are given, whenever the necessary data were available. The work concludes with a map showing the principal chromite deposits of the world and a list of publications on the subject.

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

112. An Alexandria firm wish to enter into business relations with United Kingdom firms dealing in the following exports:—Beers and stout; salmon, sardines, tinned fruit and vegetables; coconut oil; gunny bags; pepper, rice, flour and soap.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.

NOTES OF THE WEEK.

The War in Asia Minor.

The fighting round Eskişehir, to which reference was made in these columns last week, proved to have gone harder against the Greeks than was at first realised. Part at least of their line has been forced back to the point from which the recent offensive started, and the *communiqués* issued from Athens mention four thousand casualties. From the fact that the Turks have shown no alacrity to follow up their success it has to be inferred that they also suffered heavily in the fighting. Both sides evidently welcome the breathing space, while proclaiming confidence in their ability to achieve victory when the attack is resumed. In all the circumstances it must surely be plain to the meanest, as well as to the most occupied, intelligence that further hostilities between Greeks and Turks would be senseless and an outrage on the world's conscience. The Supreme Council after the London Conference would seem to have regarded Greeks and Turks as two pugnacious terriers, for whom a little blood-letting might be salutary. That stage, however, has now passed. The campaign in Asia Minor can lead to no lasting settlement, whichever way it goes. The Greeks declared that the capture of Angora would be a walk-over for them; the Turks were equally confident that they could drive their enemy into the sea. Neither boast has been made good, and one or the other can only be made good at the cost of a prodigious amount of blood and treasure. It is time the Allied Governments stopped the campaign and imposed an equitable settlement on the Near East.

The Wider Issue.

The need for an understanding in regard to Asia Minor is the more urgent as, until it is reached, there can be no real settlement of Mesopotamia. Mr. Winston Churchill has returned to England from the Cairo Conference, and we may expect in the near future a pronouncement on the British Government's attitude towards the Mandated Territories. It is already known that this attitude is based, as far as Mesopotamia is concerned, on the free choice by the Arab population of their own ruler. The future of the country will largely turn on that ruler's personal ability on the one hand to hold his own people together, and on the other to maintain satisfactory relations with his neighbours. But if there is to be any chance of the new ruler in Mesopotamia arriving at a *modus vivendi* with the Turks of Anatolia, a previous understanding between the latter and the British Government, based on what promises

to be a lasting settlement in Asia Minor, is essential. Apart, therefore, from the principles of humanity involved in allowing Greeks and Turks to fly at one another's throats to no purpose, the peace and future development of the Middle East, as well as a reduced charge on the British Exchequer, are largely dependent on a speedy settlement of the Greco-Turkish question. This can only be enforced by Allied action.

Oil and Troubled Nerves.

If the schoolboy's expression "to wipe the floor with your adversary" has not already made its way into the American language, it will need to be adopted now for any adequate summing up of the correspondence between his Majesty's Government and the United States authorities respecting economic rights in Mandated Territories. Readers of this correspondence will be forced to the conclusion that political considerations or some compelling force which does not appear prompted the Washington Government to endeavour to make up for some of the ground lost in the world's esteem by the amazingly selfish attitude of the United States towards the League of Nations. It is difficult under any other supposition to understand how the Cabinet of a Great Power could make itself responsible for a communication so naïve and hollow as that which the American Ambassador had to pass on to the British Government last May. Fictions of the American Press were quoted as statements of fact, and preposterous demands were put forward, which, if granted, would place the United States, after having refused on the strength of a minimum contribution to the war to bear their share of the Allied peace burden, in a position overriding the League of Nations.

"The Best Interests of the World."

The oil potentialities of Mesopotamia are greatly worrying the oil interests of the United States, which already control 80 per cent. of the world's output, have effectually eliminated competition in Mexico, the Philippine Islands, Hayti, San José and Costa Rica, and, if report be true, are now gaining possession wherever they can of oil-bearing territory which they have no present intention of developing. It is on behalf of these interests that the American Secretary of State dips his pen in the unctuous ink of the most approved cant regarding "the best interests of the world," and requests the British Government to act unjustly towards its own and French nationals for the benefit of the United States. Lord Curzon has replied in a masterpiece of subtle argument and effective criticism, which, we can but hope, will be appreciated by the American

public even if it is lost upon Mr. Bainbridge Colby. "It is from no mere love of controversy," writes Lord Curzon, "that I recall this matter [a challenge which Mr. Colby ignored] to your attention, but rather from the conviction that misunderstandings between our two countries over oil questions, and indeed our present correspondence, are largely due to the spirit engendered by reports of precisely this nature, which, on dispassionate examination, can frequently be found to lack any basis of truth." On another occasion similar reports quoted by the United States Government in regard to alleged telegraphic delays and embodying the gravest charges against the British authorities were also shown "to lack any basis of truth." That better things are expected of the new Administration in Washington is shown by the British Government's suggestion that the United States should appoint a Commissioner to confer with the British Petroleum Commission with a view to reaching an adjustment of the differences between the two Governments in connection with the San Remo Oil Agreement.

Zaghloul Pasha's Opportunity.

Detailed descriptions of the reception accorded to Zaghloul Pasha on his arrival in Cairo emphasise its enthusiastic character; and it is pleasant to learn that the great crowds were markedly well-behaved, although there were comparatively few police to regulate them. The students, true to their habit of forsaking their studies on any pretext, took the opportunity of yet another holiday; but in other ways law and order appear to have been respected to an extent unusual in Egypt of late on the occasion of any great public gathering. As evidence of Zaghloul's popularity the demonstration could hardly have been more effective, and it is to be hoped that he will have the courage to turn his popularity to good use by leading the Egyptians in the way they should go, rather than seek to add to it by flattering them and egging them on to ask the impossible. It is doubtless natural that a popular idol should rate highly the judgment of those who put him on a pedestal; but it is a fatal mistake to place too high a value on the political intelligence of the masses in a country which has only lately learned that it ought to take an interest in the subject.

His Manifesto.

Zaghloul Pasha has just issued a manifesto in which he declares his readiness to co-operate with "anybody who is guided by the wishes of the nation." That is very well as far as it goes, but, frankly, we should have preferred it if he had substituted "good" for "wishes." Since the nation in its present mood seems determined to wish whatever he tells it that it ought to wish, it is for him to tell it to wish for the right thing and the thing which it is possible for Great Britain to grant. If some of the views attributed to him by members of the Delegation are really his, the chances of a settlement do not look at all bright. But until he himself proclaims them as his we shall prefer to believe that he has been misrepresented, that he now recognises that besides the people of Egypt the people of the Sudan and the people of Great Britain must be taken into consideration. Anyone who forgot or ignored those factors would surely be reckoning without his host.

Bolshevism at Belgrade.

At the end of last year, it will be recalled, the Belgrade Government announced its intention of fighting with all its forces the forces of revolution and anarchy, which, it declared, were inspired from abroad and financed chiefly by Bolshevik agents. The policy thus announced was put into practice by the Vesnich Cabinet and has been continued by the Pashitch Government. It has now, we learn from a telegram to the *Morning Post* from its Belgrade correspondent, been challenged, a Communist Deputy raising the question in Parliament, and eliciting a striking reply from M. Drashkovitch, the Minister of the Interior. The Government's spokesman had no difficulty in justifying its policy up to the hilt. Giving chapter and verse for every statement advanced, he showed that the Communists had made all arrangements for a general rising at the end of last year. Ministers

were to be assassinated, strikes to be proclaimed, and a Soviet Republic to be declared. The organisers of this plot had enlisted the help of many of their country's enemies and had their spies and agents everywhere, even in the Government offices. "In Belgrade itself," says the *Post's* summary of the Minister's speech, "they could not employ terrorism, but had promised their supporters the women of the bourgeoisie and unlimited plunder." The methods of these people seem to be the same in all countries and in all ages. The Yugoslav authorities are to be congratulated on their skill in detecting, and their courage in countering, the plot; and the people are fortunate in having had two Governments that have handled the situation firmly and fearlessly.

The Indian Legislature and the Army.

The India Office issued last week a long *communiqué* giving the text of the resolutions on military matters adopted by the Indian Legislative Assembly. The resolutions cover a wide field, but their immediate interest lies less in the actual recommendations than in the spirit which underlies them, and in this respect we think it may fairly be said that the new legislature is a great improvement on its predecessor. The constitutional ideals of the Esher Commission are repudiated, as was inevitable in the circumstances, but there is a growing recognition of the hard fact that, solely for its own defence, India needs a large, and an efficient, army. True to the new national spirit, the Assembly desires to see that army definitely Indian, and presses for progressive change in this direction, but Lord Raulson has already promised action in this sense, and, so far as we can judge, there is little risk of a fundamental divergence of policy, though, in India as elsewhere, there will probably be acute differences of opinion regarding the details of particular measures.

Problems of Indian States.

Ardent believers in the essential unity of India might derive much comfort from a perusal of the last Administration Report of Travancore, which has just reached us from the office of the Dewan. The State of Travancore occupies the extreme south of the peninsula, and as yet it is but poorly connected with the rest of the world; but the questions which it discusses are just the questions which excite most interest in Delhi, or Calcutta, or Bombay. Far-reaching schemes for material development, vague but insistent political aspirations, perplexing problems in the social and educational spheres, and, most pressing of all, the need for new and permanent sources of revenue, these are the outstanding items in the interesting address delivered by the Dewan before the Popular Assembly. At present the State has no income-tax, but the Dewan says it must be imposed at once, while unofficial opinion is to be sounded as to the possibility of other taxes; and, whatever unofficial opinion may say, it is clear that they must be found, for in Travancore, as in every other part of India, new ideas mean new needs, and each new need means a new and progressive demand upon the treasury.

The Nemesis of Literacy.

In one respect the experience of Travancore may well serve as a warning to the rest of India. No part of the country can boast of a higher percentage of literacy, as the phrase goes, and if literacy were in itself a goal the State should be a beacon shining in the darkness. But we are told that the spread of literacy has not been an unmixed blessing, that superficial extension has taken place at the expense of quality, and that the result of a "lop-sided advancement"—the phrase is the Dewan's—is seen in the large body of dissatisfied and unemployed young men, educated in a way, but not educated to the point of seeing that the State cannot provide remunerative employment for everyone. That description applies in a measure to the rest of India, and it would soon apply entirely if the enthusiasts for quantitative extension had their way. The lesson drawn by the Dewan is that at the moment quality matters most, and in this view we fancy he is supported by every educationist of repute; but the popular cry for quantity is so strong that we should like to see all the legislatures of British India induced to make a careful study of the experience of Travancore.

THE WEEK AT HOME.

LONDON, Monday Evening.

Coal.

The only topic of the week, in Parliament and out, has been the coal strike and its possible extension. The day-by-day discussions in the Commons have been extraordinarily illuminating; apart from this, it has been peculiarly difficult to ascertain the truth, both sides having resorted very largely to propaganda, which served as a smoke-screen to disguise the actual aims of the parties, and the real facts of the case as well. The public, being wise, did not believe all it heard or read; it damned the miners heartily for upsetting things, but admitted that the wage reductions were rather drastic. It gained the impression that there had been no real desire to arrive at an agreement; and, while the comings and goings of statesmen and Labour leaders during the week duly sold the evening papers, it was evident that there was a good deal of manœuvring for position in all this. The weak points of the miners' position were two: They had withdrawn the safety men in the mines—a step which had never been taken before, and which put them wrong with the public, Labour as well as middle-class. This caused physical damage to the mines: it was no doubt a good deal exaggerated for the sake of propaganda (like their inhumanity in deserting the pit ponies, of whom there were only two after all), but, still, damage was done by the withdrawal of safety men.

The other weak point of their position was that they could not deny the employer's contention that wages had to come down; it was merely a question of how much. And on this matter hopelessly irreconcilable estimates were put forward by the different sides. The public was in no position to judge, but here Mr. Hodges, the miner's leader, bungled his case badly, by saying that his scale of wages could be paid without difficulty so long as the State granted a sufficient subsidy. Of course it could, but a subsidy means more taxation for everybody. And if miners are to be subsidised, why not butchers, bakers, and candle-stick makers, and everybody who wants more money and cannot get it? On that matter the miners were out of court from the start.

The Triple Alliance.

The critical moment came when the Triple Alliance supported the miners, and the public was faced with a railway and transport strike on Tuesday night if negotiations were not reopened. The threat was impressive, but it leaked out that the railwaymen were not quite so anxious to come out, although the transport workers were seemingly in more of a fighting mood. But a partial strike is the worst of all possible strikes from the point of view of the striker, and, consequently, efforts were made to bridge the crisis; the thing was done late on Saturday, when it was arranged that the mine-owners and miners should meet this morning to try to compose their difficulties.

I am a little diffident about the prospects of a speedy settlement. Both sides have their backs up, as was shown by last week's events; both sides have very different ideas as to the conduct of the industry in future; and both sides, too, have at the back of their minds a good deal more than the mere matter in dispute.

The most telling card the miners have is that their trouble is the beginning of a concerted attack on wages; the owners reply by dark hints of revolution and Bolshevism. A few people apparently swallow this kind of thing with gusto, but I fancy this card has been played so often that it is beginning to lose its effect. It is true that there are a few revolutionaries about, but they are not particularly formidable, they have no great following, and to suggest that Labour as a whole is revolutionary is to suggest the thing that is not.

The "attack on wages" is a different story. Wages went up as the cost of living went up. Accordingly they must come down as the cost of living comes down, but not to the old level, for Labour has improved its standard of living; and although some people say this is disgraceful, public opinion does not see anything wrong in that ambition, and would not like to see the

standard reduced to its pre-war level, which was too low.

The proper way to reduce wages is gradually, and by a sliding scale. It is not a pleasant process, but it could be accomplished with a minimum of friction; that is the way the thing is being done on the railways and in some other industries. The improper way is to present an ultimatum, to make a drastic cut and to tell your men "to take it or leave it." The wise employer prefers the first way, the foolish the second way. There are a sufficient number of foolish employers about to give the cry of a conspiracy to reduce wages a colourable plausibility, but I think the bulk of employers and of employed prefer the common-sense method of friendly discussion—and the hopeless confusion in the coal trade should be an inducement to reasonableness. We are living in uncomfortable times, but that is no reason why we should go out of our way to hit each other on the head on every possible occasion.

The Reaction on Politics.

Curiously enough, the Government stand to profit by all this pothole. Labour has not presented its case very well, and it has been misrepresented by its opponents, which is the lot of all political parties. But it will feel the effect at by-elections, for the ordinary voter dislikes a party that "makes trouble," and it is said that the women's vote is particularly susceptible to these influences.

It is true that the Labour vote will probably grow, for the political organisation of the party proceeds quite apart from its economic activities. And they are also bound to secure the reversion of the bulk of the Independent Liberal vote which, although powerless to win a seat for its own side, is a factor not to be despised as an addition by any other politician on the hunt for support.

Marrying Days.

Matrimony, like other diseases, seems to be catching, and since the war, according to the Registrar-General, England has suffered from this pleasant complaint more than ever before. In the three years before the war the annual average number of marriages was 280,000. In 1915 the cry of "single men first" sent up the rate to over 300,000, many heroic bachelors deciding that they preferred matrimony to Mars, only to find in 1917 that the one complaint did not render them immune to the other. In 1919, after three slack years, the numbers again rose to 300,000; last year nearly 400,000 marriages were solemnised, and all records broken. The amiable gentlemen who complete these returns suggest that the epidemic is now slowly diminishing; I suppose the supply of bachelors is running short.

But fashions change in marriage as in other things. Before the war the marrying age was higher every

year; now, despite the lack of houses and the continuance of high prices, people marry younger—and, paradoxically, older, for the number of bridegrooms over seventy is considerable. These hot-headed youths who have passed the allotted span are not always widowers.

Marriage, as the professor of moral philosophy once remarked, is the necessary preliminary to divorce; but although the Divorce Court is busy, and cases are in arrears, the ratio of divorces to marriages is rather smaller than before. Perhaps the war has taught us patience in adversity.

The Week's Books.

Mr. Lytton Strachey shattered a good many of our idols in his "Eminent Victorians" a year ago; he has now carried his work to its logical conclusion, and given us a life of "Queen Victoria" (Chatto and Windus). It is a brilliant piece of portraiture. He reveals that after the death of the Prince Consort in 1861 "the suite of rooms which Albert had occupied in Windsor Castle was kept for ever shut away from the eyes of any but the most privileged. Within those precincts everything remained as it had been at the Prince's death; but the mysterious preoccupation of Victoria had commanded that her husband's clothing should be laid afresh each evening, upon his bed, and that each evening the water should be set ready in the basin, as if he were still alive; and this incredible rite was performed with scrupulous regularity for nearly forty years."

The Queen wrote strongly on the question of "checking this mad, wicked folly of Woman's Rights, with all its attendant horrors, forgetting every sense of womanly feeling and propriety. Lady — ought to get a good *whipping*. It is a subject that makes the Queen so furious that she cannot contain herself. . . . Woman would become the most hateful, heartless, and disgusting of human beings were she allowed to unsex herself; and where would be the protection which man was intended to give the weaker sex?"

Mr. Strachey's is a book to read. I am not quite sure about Captain Peter Wright's "At the Supreme War Council" (Nash). Captain Wright accuses most of the men in high command of intrigue and double-dealing; he quotes documents to prove it, but his documents do not always prove what he says, and some of his conclusions and statements are demonstrably wrong, as anybody with a particular knowledge of the year 1918 in Paris and London can prove for himself. To discuss his book adequately would require several columns; it will make a noise in the world, but I doubt if it will permanently hold the field. Captain Wright himself was a very minor functionary in the war—to be precise, he was Assistant Secretary to the Supreme War Council at Versailles in 1917-18. Such positions were at one time supposed to be confidential, and I think it would be a good thing to revert to that tradition.

I suppose Mr. P. F. Warner is one of the best-known men in the world, as Rugby, Oxford, Middlesex, and England cricketer, and the record of his career in "My Cricketing Life" (Hodder and Stoughton) is one of the jolliest autobiographies published for a long time. It will probably rival Ranjitsinhji's classic work in popularity, and it deserves to do so.

A very different book is "An Onlooker in France" (Williams and Norgate), by Sir William Orpen. As an artist with the British Army in France he was told: "You go anywhere you like, and do anything you like, but don't ask to get any Generals to sit to you; they're fed up with artists." But he painted most of the great leaders, including Foch, who "came in very quietly and sat like a lamb, except that his pipe upset him. It seemed that some of his English friends thought he was smoking too many cigars, and they had given him a pipe and tobacco and asked him to try and smoke it instead. He could light it all right, but after about two minutes it would begin to make strange gurgling noises, which grew louder and louder till it went out."

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, March 27.

The Cairo Conference.

The new Viceroy of India, with Lady Reading, paid a flying visit to Cairo this week, coming up from Port Said in time for Lord Reading to attend a conference with Mr. Churchill, Lord Allenby, and Sir Percy Cox. He was present at a dinner given in his honour at the Residency, and returned the same night by special train to Suez, where he picked up the Kaiser-i-Hind again. Mr. and Mrs. Churchill, who were accompanied by Sir Herbert and Lady Samuel, left Cairo by the same special train for Palestine, the two parties separating at Ismailia.

Practically nothing has transpired with regard to the discussions at the conference summoned by the Colonial Secretary, which Sir Percy Cox (Mesopotamia), General Ironside (North Persia), General Scott (Aden), Sir Herbert Samuel (Palestine), and Sir Geoffrey Archer (Somaliland) attended. Mr. Churchill has insisted on the utmost secrecy, as he wants to communicate the decisions himself to Parliament, and, marvellous to relate, there have been no leakages. In Cairo all the points at issue have been dealt with, excepting the Palestine problem, which will be discussed at Jerusalem, where Mr. Churchill will meet the representatives of the various communities to-morrow. Everyone seems to be very satisfied with the result of the conference, so it may be assumed that the decisions taken are approved of by the men most concerned in the administration of the regions affected.

Return of Zaghoul.

In the political world the event of the week is the news that Zaghoul Pasha intends to return, and will, in fact, arrive on April 4. This he announced in a cable, replying to Adly Pasha's message, in which he (Zaghoul) declared that he reserved his opinion of the new Cabinet's programme, but considered that he should be president of the official delegation, and that the majority of the members of the latter should be his nominees. We are waiting with interest to see how the situation develops after his arrival, for which the most elaborate arrangements are being made by his supporters and the Central Committee of his delegation.

The Anglican Church in Egypt.

When last autumn Bishop Gwynne was enthroned Anglican Bishop of Egypt, the Sudan, etc., he chose All Saints' Church, Cairo, as his pro-Cathedral. The effect of this action, taken with the full consent and knowledge of the Church Committee, which has existed for more than fifty years, is now evident from a memorandum which that committee has recently published. It appears that hitherto the Church Committee has appointed the chaplains and assistant chaplains, and that the site has been vested in the High Commissioner and the British Consul jointly, on behalf of the committee, which is responsible for finance and the general management. The Bishop's selection of the Church as his pro-Cathedral and his nomination of the chaplain as his sub-dean have, however, altered the legal position of the Church; for appointments of clergymen for the services of a cathedral outside England are usually made by the bishop of the diocese, while a cathedral and the land on which it stands are commonly vested in the dean and chapter, who are the governing body of the cathedral, and are responsible for the upkeep and general management. In the circumstances it would appear that the functions of the Church Committee have come to an end, and consequently a resolution was passed at a meeting held at the Residency to the effect that the committee should be dissolved; that the ownership and general management of the Church site and buildings, together with the investments and other property belonging to the Cairo Anglican funds, should be transferred to the dean and chapter; and that the appointment of the cathedral clergy should rest

with the ecclesiastical authorities. A meeting of the congregation will be held on April 2 to consider this resolution and, if it is agreed to, the transfer of property and powers will be immediately carried out.

A Sporting Family.

An event, unique in Egypt, and surely of rare occurrence in other countries, took place in Cairo recently, when a football eleven composed entirely of members of one family competed for the Sultan's Cup with teams sent up by the various units stationed here. The family in question is the Abaza family, one of the best known in Egypt and of a size which almost entitles it to be called a tribe. Its members are to be met with in almost every administration of the Government and in almost every walk of life outside; and wherever they are they will invariably be found to be rendering invaluable service to their employers and their country. The Abaza first eleven—they have also a second string—were worsted in the semi-final. That does not, however, reflect on their merits; for they met a Scottish team, which, in addition to playing the game since childhood, had the advantage of regular practice, whereas their opponents consisted of men drawn from various parts of the country, who had had little opportunity of playing together. The better team undoubtedly won, but only after a hard tussle, and we all take off our hats to the Abazas for their enterprise and spirit in entering the arena for the cup so generously offered by their Sovereign, and for competing with British teams, against whom they knew full well that in the circumstances, their chances were slender.

ROUMANIA.

BUCHAREST, March 29.

In Parliament.

During the past week the Chamber has again spent many hours discussing the advisability of accepting the election of M. Stere, the Deputy returned (by a huge majority) for Soroca, in Bessarabia. M. Iorga made a strong speech against him, and M. Take Ionescu drew loud applause from the House by a crushing indictment of M. Stere as a traitor who diligently preached sedition and disloyalty, especially among the soldiers, during the German occupation. Owing, however, to the unsettled state of public feeling in Bessarabia, it is deemed inadvisable by a large section of opinion, both in the House and out of it, to reject one of the most popular deputies from that province.

An unfortunate incident took place in the Chamber a few days ago over a question of procedure. Violent protests were made by the Federationists, and a tumult ensued with which the President was unable to deal. The outcome was the withdrawal of the whole of the Federationist group (which, it will be remembered, includes the leading politicians of Transylvania) from the Chamber, with the declaration that they would take no further part in the business of the Chamber until the President adopted more impartial methods. The situation has been aggravated by the expulsion from the Chamber for a period of ten days of four of the deputies who ignored the President's call to order.

M. Titulescu, Minister of Finance, has asked the House to accord two sittings a day to the discussion of the Budget, in order that it may be passed through before the end of this month and come into force as early as possible. The Parliamentary session has been extended till April 28. In spite of its very drastic measures, practically no adverse criticisms of it are to be seen in the Press, and it looks as though the country were beginning to realise the necessity of making further sacrifices in order to support the Government in its efforts to re-establish the financial equilibrium of the country.

Queen Marie's Return.

The arrangements for the reception of Prince Carol and his wife, Princess Helen, have unfortunately had

to be postponed owing to the illness of the Princess. Their Royal Highnesses are not expected to arrive in Bucharest for a fortnight. The Queen has returned, however, and was present on Sunday afternoon at an orchestral concert of the Philharmonic Society. The programme was composed entirely of the music of Richard Strauss, and included "Don Juan," which was brilliantly conducted by M. G. Georgescu, and the "Alpine Symphony," conducted by the composer himself. Strauss has made a visit of nearly three weeks to Bucharest, and at all the concerts he has given he has been accorded a most enthusiastic reception by crowded audiences (in spite of the enormous price of the tickets—100 lei, at normal rates L4. for the cheapest). His music is extremely popular in Bucharest, more especially "Till Eulenspiegel" and "Death and Transfiguration," both of which M. Georgescu has conducted in a masterly manner several times during the winter concert season.

Roumanian Musicians.

M. Georges Enescu, a Roumanian violinist and composer, who has gained laurels in Paris and elsewhere, is also in Bucharest at the present time, and is giving a series of interesting sonata concerts with M. Alfred Alessandrescu, a local musician of high attainments.

It is fortunate for the Bucharest public, but unfortunate for the musicians themselves, that the abnormal rate of the Roumanian exchange keeps much local talent, both in the realms of music and of painting, at home, and prevents students continuing their studies or pursuing their professions in the large centres of Western Europe.

Investiture of Prelates.

Yesterday at the Palace the investiture took place with great ceremony in the presence of the King and Queen and the Royal Family of three prelates—the Archbishop of Kishineff and Hotin (Bessarabia), the Bishop of Arad (Transylvania), and the Bishop of Karansebes (Banat), all for the new provinces. After

a short ceremony the King handed the mitre to each of the prelates in turn, and pronounced the formula of investiture. The Archbishop and the two bishops made speeches promising their loyalty to Throne and country, and to use all their energies in the interests of Greater Roumania.

Coronation Preliminaries.

General Coanda and the Committee appointed to organise the Coronation Ceremonies, to take place at Alba Julia in September, have left for Alba Julia to make the necessary arrangements.

GREECE.

ATHENS, March 27.

The War Against Kemal.

In addition to the three classes which were called up last week the Minister of War has also called up all reserve infantry officers and warrant officers belonging to the 1912, 1913a, and 1913b classes, as well as the volunteers of the 1916 class. Many of the men just called up had only been demobilised a few weeks ago; they are, nevertheless, responding to their country's fresh call with great enthusiasm. They are, of course, well trained, and they only need their kit and a boat to take them to Ionia.

The first news of the advance of the Hellenic forces was received in Athens with indescribable joy and absolute confidence as to the ultimate issue of the struggle. The Turk is not expected to offer a serious resistance, and the fall of Afion Karahissar—an extremely important junction on the Baghdad railway line—is considered a question of but a few days. The next objective will be Angora, and the Greeks are very anxious that the Allies shall not order them to stop their onward march before Mustapha Kemal's capital has fallen into their hands. The papers are publishing long articles describing the heroic deeds of the Evzones and the Greek cavalry. The Government has declared

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE
NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

that it does not intend at present to introduce press censorship; it has, however, appealed to the patriotism of the editors, requesting them to refrain from publishing any information which could in any way be of benefit to the enemy.

A few hours before the order was given to advance, the Commander-in-Chief of the Hellenic Armies in Asia Minor, General Papoulas, issued the following proclamation:—

Soldiers, we shall attack! The enemy facing us is he whom you have conquered and whom you have pursued from the first day you set foot on Greek Ionia. I know you well: it is your irresistible dash that has driven the enemy to the interior. You will now strike the last blow, and in this last effort which you will make for the sake of your country you will be accompanied by the prayers, the gratitude, and the admiration of the entire nation. Crush these remnants of barbarous violence, and be the apostles of Greek civilisation, which you will impart and inspire by your noble and proud conduct. Be magnanimous towards the vanquished, and be the defenders of liberty and justice without distinction of race or religion.

Soldiers, I am proud to be at the head of you, and I invite you, with God's help, to fresh victories.

Departure of the Roumanian Queen.

Queen Marie of Roumania, accompanied by her son Prince Nicolas and her daughter Princess Marie, left Greece on her return to Roumania last Wednesday afternoon, by the King Charles. The entire Greek Royal Family accompanied Queen Marie as far as the Roumanian steamer, which had cast anchor at Phaleron Bay. The Greek cruiser Averoff and the Roumanian destroyer Niova, lying near the King Charles, were beflagged, and fired salutes of 101 guns on arrival of the royalties.

The Crown Prince of Roumania and his wife, Princess Helen, have decided to prolong their sojourn in Tatoi by another week or so, after which they will return to Bucharest.

News Items.

The Piræus police have discovered the existence of a gang which was formed for the purpose of assisting Turkish prisoners to escape, on payment of a handsome fee. The gang, whose leader has now been arrested,

had so far succeeded in sending away from Greece eight Turkish prisoners.

Generals Nider and Manettas, who had been serving with the Greek Armies in Asia Minor from the first day of the occupation, have been recalled by the War Office. The two generals were given a hearty send-off by the Greeks of Smyrna, who are at a loss to understand why these very capable and popular officers were relieved of their duties.

The *Protevousa*, M. Gounaris' organ, states that Prince George of Greece, now in Paris, will shortly return to this country, where he will probably take command of the Hellenic Navy.

Admiral Coundouriotis, who had proceeded to France soon after the general elections, to join M. Venizelos, has returned to this country. He was welcomed at Piræus by many of the leading members of the Liberal Party.

YUGOSLAVIA.

ZAGREB, March 30.

Politics.

Considerable political progress has been effected in the last week or two. First of all, M. Pashitch has come to terms with the Mohammedans. This has not been accomplished without considerable difficulty, but the patience and political craft of this Balkan veteran have triumphed, though the Government was nearly wrecked in the attempt. The Mohammedans receive two portfolios, and the Government meet their wishes in connection with agrarian reform and indemnification of war invalids. The Radicals agreed, and the proposal was submitted to the Democrats, who, after considerable discussion, agreed in their turn. Their leader, Dr. Davidovitch, notified M. Pashitch in a letter which some official tactlessly published the next day in the *Demokratia*. As this was a private political letter, its publication brought about a storm of protest, and it looked for a time as though the Coalition would split, which would have been a disaster. The Democrats then condemned the action of the secretary of the club in publishing the letter, and the storm blew over; but it looked nasty for a time, as the Radicals were exceedingly angry, and the Mohammedans even threatened to withdraw. It was a relief to learn that the decree was signed. This involved a shuffling of the Cabinet to make room for the two Moslem members. Dr. Mehmed Spaho, a prominent Hertzgovinian, who for a short time was Minister of Woods and Forests in the first united Yugoslav Cabinet, becomes Minister of Commerce. Dr. Kukovets makes way for him by migrating to Social Policy. Dr. Karamehmedovitch takes over Public Health, Dr. Velizar Jankovitch migrating to Communications; and M. Jotsa Jovanovitch takes over Public Works. A further addition is the Slovene M. Ivan Pucelj, who becomes Minister of Agriculture in place of Dr. Jankovitch.

The Constitution.

This news, though it has caused uneasiness among the Christian peasants of Northern Bosnia, is generally welcomed, because it shows the strength of the Government and virtually guarantees the passing of the Constitution, as M. Pashitch now commands a working majority. Further, the appointment of Dr. Tomlenovitch as Ban of Croatia has improved the situation there and is counteracting the demagoguery of the irrepressible Raditch, who is still flirting with the discredited Narodny Club, and denies that he has accepted Monarchistic principles. The leader of the Serbian Agriculturists, M. Avramovitch, has called on M. Pashitch, and protested against compensation being given for the abolition of feudal rights; but his party agrees to support the Government in debate, and to vote for the Constitution, reserving a right to differ on certain minor points. M. Pashitch's position is, therefore, now extremely strong, and one can await with equanimity the passing of the Constitution. It must be remembered, however, that everybody has an eye on the next elections, which will be in less than two years' time, and most politicians are playing for position, as the present Constituent

Assembly is, after all, only a temporary body, which will then be replaced by a definite parliament.

Clause 62 is one of the most vital of the draft Constitution, since it defines the internal organisation of the State; it has been passed by the necessary majority of two-thirds on the basis of political centralisation with administrative decentralisation. The Communists wanted a federal régime on the model of Soviet Russia, while the Narodny Club asked for a mere confederation. Dr. Koroshets' Slovene Clericals proposed a form of provincial autonomy half-way between pure federation and centralisation. But the Assembly would have none of these. Then M. Stoyan Protitch drafted a scheme which even his own Radical party did not quite like. The Agriculturists, while yet in embryo, drafted a proposal opening the door to compromise, while the Mohammedan party attached importance not to any particular form of organisation, but to agrarian reform, in which they insisted on adequate indemnification for their territorial loss. Now M. Pashitch himself remarked to your Correspondent, in Paris, a little over a year ago that the Serbs had indemnified even their defeated secular enemies the Turks on dispossessing them, so they would not be likely to confiscate the property of the Bosnian begs and aghas, who are, after all, of their own flesh and blood and language. This is perfectly fair and reasonable, but has caused a shriek of protest from the Socialists, especially in the Voivodina and parts of Bosnia, that the Government will let the peasants starve, but vote three hundred million dinars for the begs and aghas of Bosnia and Hertzgovina. But all the Moslem land-owners are not rich; the vast majority are no better off than the Christian peasants. There are 15,537 families owning land on "*kmet*" tenure, of whom 11,000 pay less than 40 krana or 10 dinars annual land tax.

An English Hospital in Belgrade.

On March 22, at Vishegradska Ulica, No. 20, at four o'clock in the afternoon, a distinguished company assembled to attend the opening of Dr. MacPhail's new hospital for children. The old hospital in its temporary premises at Milosh Veliki 54, was not capacious enough, and Dr. MacPhail by her energy and organising power has raised funds and actually bought the new premises and equipped the hospital. The building is a new one and has at present sixty-five beds and accommodation for thirty more small patients. It is hoped soon to have another wing opened, and it is proposed to build on another floor for an operating theatre.

A New Post Office.

British visitors to Belgrade probably do not know the Post Office, as it is usual to send a commissionaire to do the work, which is no light matter. Those who do will not be surprised to learn that the premises have been condemned as quite unsuitable and overcrowded, and that a new and spacious building is to be erected. But they may be surprised to know that the present building, known as "Count Kevenhiller's Stables," which was in fact the stable of the Austrian Legation, was taken over in an emergency when the old post office was burnt down many years ago. The original post office had been condemned in 1871, so it is just fifty years since it was proposed to build a new one. The daily traffic in the Belgrade Post Office is 25,000 ordinary letters, 4,500 registered letters, 5,000 official letters, 8,500 postcards, 1,400 money orders, 9,500 packets of printed matter, and registered packets to the value of 300,000 dinars passing in. In the outward direction the traffic is somewhat less.

TURKEY.

CONSTANTINOPLE, March 30.

The Hellenic Offensive.

Despite the extent and importance of the preparations made by the Greeks for the purpose of settling all doubts as to their ability to take Eskishehir, and despite the fact that Eskishehir is reported to have been captured, the Hellenic Army has not been put to any test worth mentioning on the field of battle. Realising the overwhelming superiority of the Hellenic Army in every department, the Kemalist commanders wisely decided that it would be utterly hopeless to join battle until the numerical superiority of the Greeks had been reduced by a longer line of communications, and by the necessity for leaving garrisons in the newly occupied territories. The Kemalist forces have, therefore, been withdrawn without offering any resistance worth mentioning. Whether the calculations of the Nationalist commanders are justified or not, there is little doubt that this is the key of their strategy. While there can be no doubt as to the superiority of the Hellenic Army, there is still considerable room for discussion whether that Army can accomplish the task of conquering Anatolia and holding it indefinitely. If the Nationalist Army can be seized and destroyed the most difficult part of the problem will be settled; but that object will not necessarily be accomplished by the occupation of territory. That is the mistake which was made by the brother-in-law of the present occupant of the Greek throne. Mustapha Kemal himself says the Nationalists are prepared to retire to Erzeroum if necessary, and that the war will be of long duration. If that should be true, and if it should involve the prolongation of the present commercial and economic crisis in Constantinople, the outlook is indeed gloomy. If, on the other hand, the occupation of Angora by the Greeks means the resumption of trade relations between the capital and the provinces, modern Byzantium will undoubtedly regain its traditional insouciance, which, under the stress of the commercial crisis, has been less manifest during the last six months.

Propaganda.

The renewal of military operations in Anatolia provided the propagandists of both sides with an irresistible opportunity. The dissemination of false reports of battles, victories, and defeats was, of course, to be expected, and only the inexperienced would be deceived by such tales, which generally bear clearly the hall-mark of their origin. But the circulation of other stories of a rather more mischievous nature has brought forth official denials. Thus, practically every Greek in Constantinople is to-day quite convinced, in spite of denials, official and otherwise, that the Hellenic army is merely carrying out the secret orders of the British Government, and that the plan of campaign was mapped out months ago, when Admiral Mark Kerr visited Constantine in Switzerland; in other words, that the British Government and Constantine are in reality the best of friends, and the outward attitude of the former is merely "*poudre aux yeux*" for the benefit of our Allies! A telegram from Athens was actually published in the local Press this week stating that the Greek Government had succeeded in floating a loan in London. Even the circumstance of the purchase by the Hellenic military authorities of British army mules offered for sale at public auction by order of the Disposals Board of the Army of the Black Sea has been, and is still being, interpreted as a sign that the British are assisting the Greeks materially and morally. In reality, of course, no mischief whatever is intended by the disseminators of this propaganda. It is, indeed, probable that the contrary is intended. The situation is simply due to the inherent incapacity of the Levantine to realise that absolute neutrality is a reality, not a shibboleth, and can form the basis of a practical policy. This vice of dividing the world into "*pros*" and "*antis*" constantly leads the Levantine politician into completely false positions, and often into making mistakes which produce the very opposite of the results for which he strives.

The Situation in the Capital.

Since the return of Izzet Pasha the rumours of another Cabinet crisis have become more persistent, and it is not at all improbable that as soon as Tewfik Pasha returns from Europe there will, in fact, be a change of Cabinet. Exactly what any other Grand Vizier could possibly accomplish in the circumstances is not easy to guess. With one half of Anatolia in the hands of the Hellenes, and the other half in the hands of the Nationalists, the situation would defeat even a Machiavelli. So feeble is the authority of the Sublime Porte that although, to all intents and purposes, Greece and Turkey are at war, the Hellenic flag flies quite calmly in Constantinople, and every evening a Hellenic picket holds up the traffic in the Grande Rue de Pera while the flag is hauled down from the Consulate. Sweet indeed are the uses of advertisement. Thus, the situation is such that it is a matter of indifference who is Grand Vizier. The Kemalists are right—the Government of Constantinople does not exist. Meanwhile, the Greeks are convinced that a Greek army will occupy the capital on Easter Day, and Mass will be celebrated in Saint Sophia.

CYPRUS.

NICOSIA, March 26.

The Political Situation.

The High Commissioner returned from Egypt on the 24th, accompanied by Mr. Bowring, Receiver-General.

The Legislative Council, after passing a few Bills, has been adjourned *sine die*. The Greek members continued to absent themselves from all meetings.

The Greek Archbishop Kyrillos, on the occasion of the approaching centenary celebration of Greek independence (March 25 O.S.), has issued a long address to all Greek Cypriots, calling upon them to swear to "the God of their fathers," and to the heroes and martyrs of Greece and Cyprus in the past, that they will continue their struggle for freedom "from a foreign yoke" until their dreams are realised.

"Pan-Cypriot" Athletic Sports of the Greek community are to be held during three days at Nicosia, and athletic meetings are announced in several other districts. On these occasions there are great demonstrations in support of the national idea, and many political speeches are made.

A Departing Bishop.

The Greek community is losing one of its leading figures in Jacobus, Bishop of Papho, who has been acting, for considerable periods, for the Archbishop while absent on missions, and who has now submitted his resignation to the latter and to the Holy Synod. The Bishop is about to take up the highest position in the Greek Orthodox Church at Alexandria, although the appointment is not yet actually confirmed, pending the appointment of a new bishop at Tanta, in the Delta. His Eminence is greatly esteemed in Cyprus, and the whole Greek community, while warmly congratulating him, will feel his loss.

A Flood Danger.

During the last heavy rain-storms the swollen Pedias torrent, which flows past Nicosia, again caused considerable alarm, especially in the quarter likely to suffer most should a flood irruption take place. The Government is being again urged by the Press to carry out protective work by the reconstruction of stronger retaining walls, for which plans exist, but the execution of which has been postponed from year to year for various reasons. It would be well that a decision should be come to, through Government and municipal co-operation, for placing the safety of threatened properties beyond doubt during the present year, and before damage or disaster occurs.

There have been several motor mishaps. A serious accident befell a car carrying seven passengers from Kyrenia to a village, Karavas. The driver lost control, and the car collided with the parapet of a bridge and was thrown with its occupants into a strong torrent bed. All were injured, some seriously, and were taken to the Kyrenia hospital for treatment.

Fatal Fight at a Wedding.

Crime maintains a discredibly high level, and murders are far too frequent. A recent case was typical of many in the past, and was the outcome of wedding customs. A Greek bridegroom's party was escorting the bride's procession from her village to his own, and had to pass through a third village. Here another wedding was being celebrated, and—according to a prevailing custom—those who were taking part in it invited those of the passing procession to

unite in carrying out a joint dance. As it was raining those of the latter declined, whereupon an altercation developed into a free fight, during which two men of the intervening village were killed and five or six were badly wounded.

The Russian Refugees.

The unfortunate, and yet fortunate, fugitives, over 800 in number, who are now located at the Polemidia Camp, near Limassol, have not had a very happy time. While some of them are rich, or well-to-do, by far the greater number endeavour to find employment as teachers of languages, mechanics, artisans, etc.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

April 4.—Mr. Lyle asked the Under-Secretary of State for Foreign Affairs whether any concessions for development work of any sort, including mineral research, have yet been granted in Palestine; if so, will he state to whom they have been granted, and on what conditions; and what is the nature of each one? Colonel Amery replied: The answer to the first part of the question is in the negative, and the remaining parts, therefore, do not arise. I would, however, add that owing to the long delay which has occurred in the ratification of the Treaty of Sèvres and the urgent need for fostering the economic development of Palestine, the Secretary of State for the Colonies is considering, in consultation with His Majesty's High Commissioner for Palestine, the adoption of a new policy whereby applications for concessions for constructional development and schemes providing for the employment of labour might be granted by the Palestine Administration, provided that (1) the terms of the draft mandate for Palestine are strictly observed, and (2) the concessions are not in conflict with any existing concessions which it may be necessary to deal with under Article 311 of the Treaty of Sèvres. No modification of the decision not to grant concessions for working and prospecting for minerals and oils pending the entry into force of the Treaty of Sèvres is, however, at present proposed.

April 5.—Sir P. Lloyd Greame (Director of Overseas Trade Department) informed Commander Kenworthy that the official reports from Teheran revealed a more satisfactory state of affairs in the capital since the advent to power of Zia-ed-Din. His Majesty's Government were watching sympathetically the efforts of the new Cabinet, who may rest assured that any action taken for the maintenance of order and the establishment of normal conditions would be welcome to His Majesty's Government.

April 6.—Mr. Montagu informed Sir C. Yate that negotiations with Afghanistan now being carried on at Kabul, which have as their object the conclusion of a Treaty of Friendship, are still proceeding; and that, therefore, he was not in a position to make any further statement regarding the position in Afghanistan.

April 7.—Sir Charles Townshend asked whether the following Turks now interned in Malta could now be released: Rahmi Bey, Basri Bey, Mehmed Faik Bey, Ali Janani Bey, and Mehmed Sherif Bey. Sir P. Lloyd Greame replied that an agreement for the mutual release of British and Turkish prisoners was recently signed with the Turkish delegates, and it is hoped that all the persons named may shortly be set at liberty except the second, who is charged with complicity in atrocities.

SCHOOLS IN SERBIA.

Our Belgrade Correspondent writes (March 30):—All the British colony in Belgrade know Dositeeva Street, and many are familiar with the statue of an energetic-looking old gentleman, in the garb of over a century ago, facing the Srpska Krana Hotel and the Kalemegdan; but probably few connect both with Dositej Obradovitch, the grandfather of Serbian literature. This remarkable man, who visited London during his travels, founded education in Serbia. Across the Danube, at Karlovtsse in Srem, the first Serbian school was founded in 1791. A "Big School" was opened in Belgrade in 1808, where Dositej taught, also the lesser known Sima Milutinovitch, and the great Vuk Karadjitch, the founder of Serbian literature, collector of its folk songs and tales, inventor of the present simple phonetic Serbian alphabet, and lexicographer of the Serbian language. The course included the Serbian and German languages, statistics, geography, sacred history, physics, mathematics, ethics. This first light of education on Serbia was destroyed in the ill-fated year 1813, and there were no schools in the country till 1830, from which year education expanded and developed rapidly. According to the latest statistics, there are to-day in Serbia, Montenegro, and the Voivodina 79 intermediate schools with 38,548 pupils, excluding 1,500 in the commercial schools.

CONSTANTINOPLE IN THE SHADOWS.

The stout Turkish merchant shivering beside me in the stern sheets of a caique, which two native rowers struggled to drive against the strong current of the Bosphorus, wound his muffler more closely about his chin, then vigorously smote his hands together.

"In the old time," he said presently, as one imparting exclusive wisdom, "before the building of the Suez Canal brought the warm airs and currents from the South, Constantinople was very cold in winter—a hundred times colder than now, for example."

I looked at his watering eyes, and noted his chattering teeth. Ahead of us the roofs and hills of Pera and Stamboul were white with snow, the water around us was leaden grey, like the sky.

"Yes," my companion continued, with a sage air of enthusiasm for the good old days, "there was even a year when one could walk over the water—here, where this boat is now—from Stamboul to Haidar Pasha. Ice, you know. Right down into the Sea of Marmora. Those were days, Allah knows it! Not like to-day—mild, like this."

Here he shivered more violently than ever, and bade the boatmen look to their pulling, not, I was led to infer, because he was at all cold, but because our steamer had been late and he was in a hurry.

It was a long pull, too, and decidedly a cold one—an hour and a-half from our steamer, anchored and waiting for the pilot off Haidar Pasha, to the Custom House at Top Hane. Such a journey it was as should have been a dream of loveliness, but vanished was the beauty of the Bosphorus—its colour, the white magic of the buildings on its shores; for it was fell winter where one sometimes thinks that winter should not come at all. Gone, too, were the airy grace of slender minarets against blue skies, the green of Asiatic hills, and the shimmer of the Golden Horn, which was now grey, an ordinary haunt of shipping. Stamboul looked squalid; its panorama spoiled and dominated by heaps of black commercial coal at Seraglio Point. Everything, indeed, belied its name and fame; everything except the shearwaters, those restless birds, flying in long lines, which eternally skim the surface of the Bosphorus, and which the Turk so aptly calls "souls of the damned."

It was cold on the water, but in the town, where the recent fall of snow had turned to slush as it fell, and all the eaves, the very walls, dripped moisture, it was frigid. Worse still, Constantinople is dirtier than ever it was. Purest filth litters the gutters and obscure corners; refuse left lying in unfrequented ways develops into miniature mountain ranges of decomposition. The busier streets are slimy with liquid mud, which the wheels of passing carriages and motors spray in brown niagaras over helpless pedestrians huddled on the narrow pavements. Street cleaners, often decrepit native women racked by graveyard coughs, are occasionally to be seen dabbling despondent brooms in lakes of ooze; but so great are the odds against them that even the most inquiring Walrus imaginable would not be interested in the results of their labours, however many such Maids with Mops there might be in action, and it is more than likely that the local Carpenters shed all their tears long ago and have accepted the conditions—lucky believers!—as the will of Allah.

If to-day dirt may be said to be a leading "note" in the impression one receives of Constantinople, another is melancholia. There is a sadness, a cheerless pretence in the city's life that typifies what one has learned to call "the resignation of the Turk." Her highways and byways are more crowded than ever they were; the bazaars hum, the docks look crowded; yet in the very midst of movement I felt that I could hear the echo of my own footsteps; that in all the press around me there was not one light heart.

No doubt there are many causes for depression—the lost war (the Turkish flag on the tower of the Turkish War Office has remained at half-mast since the Armistice) high prices, commercial stagnation, and so

forth; but it is likely that recent events in Asia, more especially in Anatolia, have most to do with the present state of the popular mind. Smyrna may not be on every tongue, for the real Turk is not a loose talker nor a boastful one; but the shadow of its destiny lies upon every heart, and its name is at once the source of greatest fear and greatest hope. It is the common opinion that Turkey's chances for the future rest upon the ultimate disposition of Smyrna. With Smyrna, a peaceful and national development of Turkey-in-Asia by the Turks and for the Turks is possible; without it, fruitless dissension and eventual disintegration are inevitable. It is the common opinion, too, that so long as the Greeks remain in possession of the Smyrna Vilayet, so long will there be warfare and disturbances in Anatolia. No one believes that the Allies will not eventually see the error of the Greek pretensions, nor that the Greeks will be able to retain possession, even if the London Conference should confirm their mandate.

Take it all in all, there are not many signs of Allied occupation of Constantinople. A number of war vessels lie in the Bosphorus, military police keep a weather-eye on the entrances to beer halls, and passport control officers—British, French, and Italian—board all steamers upon arrival and departure. During a previous visit, a year ago, military control of the city was assumed by Allied troops in rotation; now it would appear that permanent zones have been established, Pera, for example, being under British authority, Stamboul under French.

There is no lack of food nor of the ordinary commodities of daily life, but prices are high, much too high for the poor, who are in considerable distress. Commercial activity is said to be at a standstill. Immediately after the Armistice large quantities of materials of every sort were shipped to Constantinople in the expectation of the renewal of trade with South Russia, the Caucasus, and Asiatic Turkey. These markets remained closed, however, and Constantinople has become choked with merchandise which it cannot digest and which cannot be disposed of short of ruinous loss.

I have kept until the last—not as one keeps the best thing, but as one postpones the most unpleasant—as sad a sight as anyone could see—I mean the pitiful remnants of General Wrangel's Crimean Army, now among the commonest elements in the streets of Constantinople. There are thousands of them; officers of every rank, soldiers, sailors, cossacks, peasant followers, even petty railway officials. Their uniforms are tattered and noise-some, their boots broken. Their faces are sallow, often emaciated from lack of proper nourishment, but somehow, even more distressing are their tired, hopeless-looking eyes—sad eyes that mostly look back into Yesterday, for To-day holds nothing, and there is no sign of a bright dawn To-morrow. All day long and far into the night these men without a home or country haunt the streets, walking, walking, always walking, though there is nowhere to go and nothing to do. For the most part they are silent, and I have not seen one smile. There are, too, thousands of civilian refugees, for the present Russian population of Constantinople represents two evacuations from Odessa, one from Novorossisk, and one from the Crimea, in all approximately sixty thousand persons. The French are taking care of them; yet it seems a mystery how they all exist, especially the women and old men. A British sailor

tossed away a tin of sardines partially consumed; I saw an old grey-bearded general pick it up and carefully bestow it in an inner pocket of his greatcoat—he had no tunic underneath. A Russian lady wearing a worn fur coat, but on her feet the thinnest kind of native slippers soaked in slush, entered a shop and asked for a pencil; the price was five piastres. She flushed and handed back the pencil—she could not afford tuppence! Many have become street vendors—privates, officers, and sometimes women, too. It is sad to see them, for few are self-confident enough to cry their wares, the great majority standing mutely against the houses holding a few flowers, newspapers, a small broken box of sweets, or sometimes personal possessions like cigarette cases or a single ring. In the windows of almost every shop are displayed articles of jewellery and small personal tokens which cry aloud their Russian origin, and doubtless represent the last cherished possessions of their owners. You sometimes see the wistful figures of these last hovering near by, and you can almost *feel* how much they hope that *you* may be the one—in God knows how many hundred—to go in and buy.

WILLIAM RANSTED BERRY.

Constantinople, February, 1921.

THE CARAVANSERAI.

A few days ago a friend of mine, whose acquaintance with India is a long one, and who has real knowledge of its people, was declaring that he felt that he was quite out of touch with them both; that he no longer knew India and the Indians. Asked why, he explained that it was because of an item of news he had just picked up: news that the *dhobies* (the professional gentlemen who wash—and ruin—your linen, at a price) have taken a mighty oath to drink no more spirits, in order, of course, to do the Government in the eye. In view of his experience of the class, my friend felt that this announcement did indeed mark a new epoch. As for its explanation, he observed: "I can only conclude that they were all drunk at the time they took the decision." Which, to my mind, suggests some affinity between the *dhobie* and the charlady.

A kind but anonymous correspondent sends me a clipping from a magazine which contains a real gem of Oriental enterprise. It says:—"An Oriental paper having an English section printed the following notice:—The news of English we tell the latest. Writ in perfect style and most earliest. Do a murder commit, we hear of and tell it. Do a mighty chief die, we publish it and in borders sombre. Staff has each one been colleged and write like the Kipling and the Dickens. We circle every town and extortionate not for advertisements." In a marginal note my correspondent suggests that the paper referred to may be either the "*Baghdad* or *Bush Times*!!!!" I expect either of those papers would want a few more notes of exclamation to do justice to their feelings if they thought the suggestion was meant seriously. But, of course, it is not every paper that can claim to have a staff of which each member has been colleged and writes like the Kipling and the Dickens.

The Direct Actionists in this country must surely have turned green with envy when they read the other day of the "robbery week" which had been arranged at Baku for the benefit, I gather, of the "workmen." For the account from which I get my information says that "everything possible was taken from the civil population," and that "now the *workmen* are selling back to the inhabitants their own possessions." The italics are mine. As there is no mention of any intermediate stage in the transaction, my inference is, I think, a sound one. The moral obviously is that it is—or was—a bad thing to be one of the civil population in Baku. Robbery weeks would, I imagine, leave very few of the population civil.

A friend who used to know Athens very well recently revisited the city, and was disappointed at failing to find a small English cemetery in which he used occasionally to walk. What has become of it? Whether it has been replaced by a kinema show or a department store, or whether he simply overlooked it, he could not be certain; nor does it matter. But I was interested to hear that in the cemetery there used to be a headstone of a somewhat peculiar character. It was erected to the memory of his third wife by a certain British subject, about whom Athenian society of former days was accustomed to saying, and hearing, unkind things. And the peculiarity about the stone was that on it, under cover of praising his late wife's

virtues, the widower gave the lie pretty direct to all the gossips, and, so to say, put the case for himself. Unfortunately, my friend could not recall any portion of the inscription, so that I cannot say what line learned counsel for the defence took.

I do not remember ever hearing of any other epitaph similar in character to this vanished Athenian example; but I suppose we have all come across many that are full of human interest. A quaint example, which comes from the Far East, is:—

"Here lies the body of W. W.,

Who never more will trouble you, trouble you."

Two of my favourites come from much nearer home—from South Devon, in fact. One in Portlemouth Churchyard runs:—

God takes the good, too good on earth to stay;

And leaves the bad, too bad to take away.

And another good one is to be found at Kingsbridge. It is dated 1793, and, after giving particulars of the deceased, breaks into verse thus:—

Here lie I at the chancel door;

Here lie I because I'm poor.

The farther in the more you pay;

Here lie I as warm as they.

This last inscription, with its suggestion of satisfaction at having got something in the nature of a bargain in the way of graves, reminds me that at Kerbellah there is a grave that suggests something of the kind. It covers a former Prime Minister of Persia, who, after a life which was a model of all that a life ought not to be, went to the sacred city to die, hoping that the fact that his bones were buried in sacred soil might avail him something in the hereafter. When he felt his last hour approaching he sent to inquire how much burial within the precincts of the great mosque itself would cost; and was told that for a man of his rank it would be at least a thousand *liras*. Although he was fabulously wealthy, it went against the grain to part with so much money, and he sent another messenger to ask what a grave on the outskirts of the town would cost. Not taking the inquiry quite seriously, the authorities replied that the charge would be only a few piastres. The old man closed with the bargain on the spot; and now lies in the "poor" ground, doubtless to the benefit of his heirs.

Prince Wilhelm of Wied, the ex-Mpret of Albania, must be quite an expert in the matter of flights by this time. I refer, of course, to flights of the political variety, not the aeronautical. But I see that he has not scorned to use the aeroplane for the security of his jewels; though, judging by his ignominious performance in Albania, he would be very loth to do any aerial stunts himself. It seems that during the German revolution the ex-Mpret contrived to send his collection of jewellery into Sweden by aeroplane; and though it was first confiscated by the Swedish Customs, and afterwards in constant peril of being looted by a gang of thieves—international, not of the Prussian princely variety—its former owner has at last got control of it again. He has, however, been warned by German bankers not to take his precious stones into the Fatherland. What about Albania as a place of safety for them?

"Political Zionism."

A correspondent directs our attention to an article, "Political Zionism," contributed to the *Atlantic Monthly* by Prof. A. T. Clay. The article opens with the statement:—

A traveller returning from the Near East is at once struck by the utter ignorance of Europeans and Americans concerning the true situation in Palestine—an ignorance due largely to the fact that in London there is practically only one of the important daily papers that will print anything detrimental to the schemes of the Political Zionists.

The writer differentiates between the three aspects of Zionism, namely, the religious, economic, and political. "Tolerance for the religious ideals of different faiths," he writes, "precludes any criticism or lack of respect for Religious Zionism"; and as to Economic Zionism—

A visit to some of the better-established Jewish colonies will not fail to awaken sympathy for economic Zionism. No unbiased observer of past events could think of throwing obstacles in the way of those Jews who, being persecuted in certain lands, prefer to live in a community solely Jewish; or who, through historical sentiment, long to reside in a purely Jewish cultural community in the land of their ancestors.

But of Political Zionism Prof. Clay very clearly disapproves. It is also, he tells us, "strongly opposed by many orthodox Jews in Palestine; especially because they recognise that, through the fanaticism of the Zionist leaders, it has become most difficult for them to maintain their former amicable relations with the other nations." He declares, too, that "it is opposed also by many of the leading Jews throughout the world, especially, as the Political Zionists themselves admit, by the upper circles of Jewish society." Moreover, he says bluntly:—"The Political Zionists, through their propaganda, systematically endeavour to give the world a false conception of the Palestinians." The latter are a "composite race, largely Semitic," and it is "a deliberate misrepresentation to classify them as 'Arabs' instead of Syrians." On the rival claims of the Syrians and the Jews, Prof. Clay writes:—

Much has been written upon the historic claims of the Jews to this territory, which they held for less than 500 years, prior to 2,500 years ago, but how about the claims of the Palestinian who possessed the land before the Jew, and who is still in possession, having lived there for over 5,000 years? . . . if we are to decide the question of actual ownership of the territory, the Palestinian . . . surely has a clearer title than the Jew. Moreover, this decision is based upon the records handed down by the Jew himself. Even the Hebrew language, which the Jews are attempting to revive as their spoken tongue, originally belonged to the people they are trying to oust. The language in Aram—Abraham's ancestral home—was Aramean; when the Arameans came to Palestine they adopted the Canaanite language, now called Hebrew.

Prof. Clay is indignant that the Political Zionists have been "favoured by the British authorities" to the disadvantage of the Syrians, and that in the matter of the Mandate the wishes of the latter, as expressed to the American Commission, have been ignored. The people, through the President of the Moslem and Christian League, informed the Commission that "at one time they would unanimously have asked for Great Britain, but the Balfour declaration had so shocked them that they now requested that America should have the mandate for Palestine and Syria." Whether America would have accepted it, we are not informed.

The writer gives several instances of attempts by the Political Zionists to gain control of power; and these make disturbing reading when we remember that it is Great Britain that is held responsible by the nations for anything that goes wrong. The views expressed by the late Grand Mufti (whose death was recorded in *THE NEAR EAST* quite recently) are interesting, but they would take up too much space to quote, but those of the Christians as given to the author by "a highly honoured citizen of the country" expressly for publicity may be given:—

The Moslems and Christians welcomed the British occupation because they did not know that their country had been sold to the Jews. The honour of England is in jeopardy. The Christians of the whole world do not know of this treachery, nor did the three hundred millions of Moslems know of it. But some day it will be known, because it will surely mean another war. Had the people known what was to happen, they would have worn crape when the British entered.

"The British politicians in London," Prof. Clay thinks, "seem to have little comprehension of the difficulties they are helping to create for their Empire." Again:—

It is the opinion of nearly every non-Jewish British official in Palestine, not only that Britain's reputation for justice and fair dealing is at stake, and that a great wrong is being done the inhabitants of the land, but that there are serious dangers ahead

for the Empire. . . . Moreover, these officials feel keenly the change in the attitude toward the British that has come over the inhabitants since they entered, for they know that they are now hated and despised.

This is a very serious statement to make, but, coming from a writer of Prof. Clay's standing, it cannot be set aside as worthless. It is to be hoped, however, that after Mr. Churchill's recent statement the fears of the anti-Zionists will have abated, and that "the aggressiveness of individuals" which has doubtless done much to create those fears and the hate that accompanies them will also be moderated. Although that statement puts the matter in a new light, Prof. Clay's article still remained valuable as giving a point of view that is little known in Europe.

The British and Egypt.

The March issue of the *Fortnightly Review* contains a few comments upon the Report of the Milner Commission on Egypt by Malcolm McIlwraith. Upon the provision in the Memorandum that the Egyptian Government may terminate, subject to compensation, the engagement of all existing British officials at any time within two years of the coming into force of the Treaty, he says:—

The report takes a cheerful view of the probable result of this provision. It considers, in the first place, that the wholesale retirement of the British officials—whether voluntary or compulsory—would not involve an administrative breakdown, because "there is no longer any danger that the country would relapse into the state of maladministration from which we have delivered it, and that all the old evils would return." In the second place, "no sensible Egyptian," it affirms, "seriously wishes to dispense with foreign aid in the government of his country, or believes that Egypt could, for a long time to come at any rate, afford to do without it." That, of course, depends on the view taken as to what constitutes "a sensible Egyptian," and whether, in any view, the sensible ones of this kind would be in power. And when the report goes on to declare that "the idea of any Egyptian Government, however free to do so, attempting to make a clean sweep of its foreign officials is a chimera," one cannot help wondering whether its authors have considered the possibility of a distinction between different categories of "foreign officials," and regard such a distinction as equally chimerical. In some respects French and Italian officials are considerably more congenial to Egyptians than Englishmen, and suit them better, from linguistic, juristic, and other standpoints. In pre-Occupation days, and notably in the time of Ismail Pasha, there were numbers of Frenchmen and Italians in the service of the Egyptian Government, but practically no Englishmen at all. It may be said that that was because, in those days, French and Italian influence was paramount in Egypt, and British influence practically non-existent. The circumstance is doubtless true, but it is not by any means a conclusive answer. However, assuming that, under modern conditions, and in view of the safeguards to be imposed, such discrimination against British co-operation and in favour of the Latin nations is no longer to be apprehended, it is none the less difficult to feel confident, in the light of recent events, that the view taken by prominent Egyptian statesmen and leaders of opinion as to the value and indispensability of the British officials—either individually or in the mass—is as favourable as the members of the Mission appear to think. That there is a more or less numerous section of the moderate and sober-minded classes of the community who believe in, and desire the retention of, the British officials, I have no doubt whatever. One has constant proofs of it in administration. But those classes are largely timorous and inarticulate elements of the population, and not the men who at present control affairs. Whether the latter would, in practice, find it politic to act upon what there is too much reason to believe would be their inclinations is, of course, another matter, and would no doubt largely depend on circumstances.

The danger of a "stampede" of officials, which the Report considers more probable than the one referred to above, Sir Malcolm does not think to be very grave.

Greece.

The *Morning Post* of April 7 contains an article by Mr. William Miller on the hundredth anniversary of the freeing of Greece. Pausing to comment on the fact that Greece is not celebrating her centenary as it might have been held, he proceeds to trace the various stages in the growth of Greece. His closing paragraph, on the future of Greece, is optimistic:—

We may look hopefully towards the future of Greece, even though the near prospect seems dark. Southern countries never lack clever men, but in this world cleverness is always beaten by character. Where, as in M. Venizelos, and as in Charilaos Trikoupis (who died in exile at Cannes) the two qualities are united, triumph is assured. And the history of the Near East teaches not only in Greece, but in Serbia and Bulgaria, not only in modern but in mediæval times, that in that part of the world more than elsewhere national successes depend upon the individual. Only, small States are far more jealous of individual greatness than are large Empires. Modern England worships heroes, ancient Athens ostracised them.

Articles to Note.

"The New Persian Woman," by Clara E. Rice; "Moslem Retrogression," by Canon W. Hooper, D.D.; and "The Influence of Islam on African Native Law," by Major C. Braithwaite Wallis, in the *Moslem World* (April).

MUSICAL NOTES.

The London Chamber Concert Society.

This society began its spring season at the Wigmore Hall on April 5 with a programme which included Josef Holbrooke's quartet for strings, "The Pickwick Club," and two songs by Ethel Smyth with accompaniment for strings, flute, harp, and percussion. Holbrooke is a composer whose merits and demerits are loudly advertised in this country, but this quartet of his, marvellously well played though it was by the Philharmonic String Quartet, is not exhilarating. True, it was possible with an explanatory programme to follow his earnest and quite clever pleasantries, but without such assistance I do not think much resemblance to, or interpretation of, Dickens could be found. There was more to satisfy in the two songs of Ethel Smyth, sung by Miss Olga Haley and conducted by the composer, even though scarcely a word was audible. (This fault, by the way, was not Miss Haley's.) In "La Danse," as in the second song, the writing had considerable beauty, although the percussion, which was chiefly and unnecessarily used to mark the accent, was a nuisance; the composer obviously had quite definite and poetical ideas in her interpretation of de Regnier. Later in the evening we heard Beethoven's "Serenade" Trio, for Flute, Violin and Viola (Op. 25), a work of small interest, one which under any other name would stand no chance of performance.

Miss Elizabeth Nichol.

It was disappointing to find that Miss Nichol, a singer of pleasing if limited abilities, had not chosen a more interesting programme for her recital at the Æolian Hall on April 6. To have to wait through Mendelssohn's "Infelice," three very poor songs of Tchaikovsky, four dull though sincere efforts of Nicholas Gatty, until she came to what she excelled in—Bantock's "The Red Lotus"—made one impatient, and perhaps unduly observant of such defects as her over-emphasised consonantal attack, her impure pronouncing of the short "a," and so on; and the two Bantock songs were only a brief respite, for her judgment again went wrong in having a violin obligato to Rachmaninov's "Lilacs," which is far better with pianoforte accompaniment alone. However, there is nothing vulgar in her singing; her enunciation is excellent, and her musical sense generally good; if, indeed, she were intellectually more enterprising the chastity of her methods would give her distinction.

British Song.

In eloquent and determined constation of her creed, Miss Ursula Greville devoted her recital at the Wigmore Hall on April 7 wholly to British song. She was assisted in this by Mr. Eric Godley, a rare because a genuine baritone, and Mr. Owen Mase, a very rare accompanist. That alert intelligence which informs all her interpretations was again her most notable distinction; and it was remarkable that the development of her penetrative sense has brought to her strictness and a finer general restraint. It is true that there were songs in which I liked better her older habit of poetic realism—Bainton's "Nightingale Near the House" and Gerrard Williams' "Dilemma," for example—and there were songs not worthy of her—Foulds' "The Reed Player" and Felix White's "The Western Window"; but on the whole this recital showed well her keen discrimination and the musical cleverness which distinguishes her from the rest of our younger singers. For sheer intensity and colour I do not think that such renderings as she gave of Holst's "Faith" or Bantock's "Feast of Lanterns," for instance, could be surpassed. In Mr. Godley's singing there are many possibilities. For not only has he naturally a fine voice, but he knows what he is doing and what to do with it. The vigour and certainty of his interpretations compensated for inequalities in some of the songs he sang. To hear him in Martin Shaw's "Love Pagan" or in Howell's "Old Skinfint" was a joy infrequent in these days, when good popular songs are either despised or mauled. Incidentally, I cannot believe that so fine a singer could believe warrantable the repetition of Eric Fogg's "Full Fathom Five," for the assumption with which this young composer has shown Shakespeare what he really meant is simply monstrous.

At this concert there was more than one unusual feature, the most startling of which, perhaps, was Mr. Godley's exhortation to us to remark the virtues of Mr. Mase. It really needed none of his words for this justice to be done, for the exquisite colours which Mr. Mase drew from a boudoir grand were unforgettable. He has the finest insight into and the most delicate perception of utterly different songs, and I was disappointed that he should so inexplicably have mist the essence of "Immanence." I do not often

acknowledge the worth of accompanists—certainly not often enough—but Mr. Mase's artistry is so refreshingly beautiful that it cannot pass unrecorded.

The Small Orchestra.

Among the few good things that have resulted from the war is the smaller orchestra. One can now see more clearly that it is only a few types of music that are fit to be performed by the large orchestra for which everyone in the years preceding the war wrote; but not only is this return to the past size of orchestra aesthetically desirable, it has become almost an economic necessity. And what excellent results can be obtained from it were obvious in the first of a series of four orchestral concerts which Mr. Edward Clark gave at the Queen's Hall on April 8. His programme included Haydn's "Military Symphony" and Stravinsky's "Fire-Bird Suite" (re-orchestrated in 1919), works utterly different in character but similar in their possession of genius. Mr. Clark is not an attractive conductor to watch, but the results he obtains are excellently certain; he is, in fact, the most promising, as he is the most enterprising, of our younger conductors. I liked particularly the smooth poetry and the fire of his interpretation of the second and third pieces of the Stravinsky suite, "Horovod" and "The Dance of the Subjects of Koshchei the Immortal." The new works which he proposes to introduce to this country in his next three concerts make these undertakings of exceptional interest.

Roumanian Audiences.

The facts concerning music which the Bucharest Correspondent of this journal sets forth in his letter in this week's issue are extremely interesting, and illustrate well the differences that must exist between the inhabitants of the Roumanian capital and those, say, of London. For though Strauss is at the moment very popular in this country, neither he nor any one else would be sufficient to induce an audience here to pay 100 lei, or about 7s., to hear him; and it is comparatively seldom that any hall in London is crowded. How happy would English concert managers be if they could charge such amounts for tickets; all the dreadful talk that we hear about the inevitable disappearance of orchestral combinations would disappear at once.

AND ANTE.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:—

EGYPT. INDIA: H.R.H. the Duke of Connaught. MESOPOTAMIA. EGYPT (ZAGHLOUL PASHA). (March 22.)

INDIA: Sedition (Prosecutions).—Bolshevik Agents.—Indian Emergency Committee, London.—Opium Cultivation.—Police Grant, Bnbal.—Disturbances, Nagpur.—Germans, Admission.—Army Organisation.—Conspiracy Convictions (Pardons).—Government Newspaper.—Sandhurst Cadets.—Public Works Department.—Railway and Inland Water Traffic (Surcharge).—Railway Station, Gufranwalla.—Dr. Kitchlew and Mr. Rambhaji Datt.—Trans-border Raids and Dacoities.—Prison System, Andamans.—Mounted Officers (Changers). MIDDLE EAST (SOVIET AGENTS). (March 23.)

GREECE (LOAN). EGYPT (ZAGHLOUL PASHA). OTTOMAN REGIE TOBACCO COMPANY. INDIA: Sutlej River Hydro-Electric Scheme.—Civil Service.—Army Officers (Exchange Compensation Allowance).—Import Duties.—Oudh and Rohilkund Railway (Upper Subordinates). (March 24.)

PEACE TREATIES: Turkey. PALESTINE (April 4).

PERSIA. PEACE TREATIES: Russia, Poland, and Angora.—Turkey.—Cilicia. INDIA: Army (Constitution and Strength).—International Labour Conference. EGYPT. PALESTINE. INDIA: Government Service (Contracts).—Public Works Department (Technical Allowance). (April 5.)

SERBIA AND FRANCE.

(From Our Belgrade Correspondent.)

The present Yugoslav Minister of Finance, Dr. Kosta Kumanudi, gave a course of lectures in 1918 in the Faculty of Law at the Sorbonne in Paris. On the proposition of the Dean, M. Larnaud, the Faculty has sent Dr. Kumanudi a telegram of hearty congratulations on his elevation to his present high post, for which he is fully qualified by his learning and erudition. Another sign of the relations between Serbia and France was the sending of a wreath, by the blinded veterans of Serbia, placed upon the grave of France's Unknown Warrior.

NEAR EAST BOOKSHELF.

- I.—"THE LEBANON IN TURMOIL. SYRIA AND THE POWERS IN 1860." By J. F. Scheltema, M.A., Ph.D. Yale Oriental Series. Researches. Vol. VII. Eng. Agents, Oxford University Press. 27s. 6d. net.
- II.—"EARLY TRAVELS IN INDIA, 1583-1619." Edited by W. Foster, C.I.E. (Oxford University Press. 12s. 6d. net.)

I.—CHRISTIANS AND DRUZES IN THE LEBANON.

Owing to her central position, wealth, and proximity to trade routes, Syria has ever been mixed up in the great movements which arose or came to a head in that fascinating area where three continents meet. Beautiful and gracious, she offers an easy living to her remarkably prolific sons, who, if classical writers are to be trusted, succumbed to her charms and were notoriously effeminate and sensuous. The Syrian of old, clever to a degree, and with an easy acuteness, possessed a temperament which seemed fated to hinder any progressive advance. Moreover, the land was so exposed to diverse external influences that one might almost assert that there was an "Eastern Question" from the first. At all events, the political instability of Syria is familiar to the historian, and this sect-ridden land had a reputation for religious intolerance even in Roman times; although, if it has been able to enjoy some peace under a strong ruling external hand, the internal factions have also been utilised for their own end by rival external influences.

Of modern disturbances that of 1860 is not only the best known, it was also one of a long chain of episodes, new links in which are even now being forged. The European Powers had tried to settle the quarrels of the Maronite Christians and the Druzes, but with no success; a series of massacres led to armed intervention, and a miserable story of murder and atrocity came to a lame end. Honest attempts to form a lasting conciliation were hampered by international rivalry, and the melancholy chapter has frequently been described and discussed from varying points of view. We now owe to Dr. J. F. Scheltema a translation of an interesting Arabic account of the events by a native Syrian. It does not add much to our knowledge of the broad outlines, but it is of value as an independent version which fills in the inner history and records a number of new details. The writer, a Christian of Armenian descent, served as U.S.A. Consul in Beyrout and later in the Egyptian Government. His work is entitled, "The Book of the Marvels of the Time Concerning the Massacres in the Arab Country by Iskander Ibn Yagub Abkarius." Dr. Scheltema supplements his translation with full running notes, foreword, introduction, and conclusion; and the volume is an instructive contribution to the political history of that unhappy period. As the Editor states, it is an attempt to "put in the proper light a special phase of the everlasting Eastern question," and upon this question he has very definite views.

The native writer is naive and simple, he has aimed at truthfulness and impartiality, and rarely has he relieved the gloom of the narrative (e.g., p. 81 seq.). He rather significantly omits the latter part of the Emperor Napoleon's address to the French troops ("vous allez aider le Sultan à faire rentrer dans l'obéissance des sujets aveuglés par un fanatisme d'un autre siècle," p. 151). He does his best to distribute blame fairly, and if he has a certain pro-Christian bias, the Editor takes very good care throughout to restore the balance, and indeed manifests another bias. The writer clearly shows that there was much wrong-doing on both sides, and when he emphasises the admirable behaviour of some Moslems and their repudiation of the excesses by their co-religionists (pp. 126, 143) we are far more inclined than the Editor to sympathise with his statements which favour the Maronite Christians. The fact was that the terrible massacres were the sequel to years of feud; thus the writer innocently remarks that "in the year 1844 the Christians and Druzes began to fight each other, according to their custom" (p. 62). The massacre at Der-el-Kamar was the sequel to the infamous declaration of a holy war (p. 115 seq.); and it is noteworthy that the carnage at Damascus, on the other hand, "was not sanctioned by the Islamic religious law as some people think" (p. 126), but was due to the rabble, although "persons of rank and dignity" were subsequently inculpated" (p. 158). The writer attributes the Damascus outrage to the laws stipulating the equality of subjects irrespective of religion; the Christians shocked the Moslems by wearing the sacred green and opening wine shops, and the Moslems retaliated and insulted the Cross (p. 127 seq.).

Dr. Scheltema takes the view that the Maronites, urged by the Powers, forced war, and that the Druzes turned the tables upon them. They brought their troubles upon themselves, and Lord Dufferin himself said: "It is idle to speak of the Christians as if they were saintly martyrs" (p. 41). Dr. Scheltema considers plain speaking is now necessary: the Powers must drop "morality-mongering" (p. 173), and cease that "air of superiority which, with a meddling

temper, has so far hindered more than assisted progress" (p. 192). Syria "waits only for the cessation of internal strife, long fostered by European interference" (p. 192), and we do not misunderstand Dr. Scheltema if we infer that, so far from Christians helping the East, we may yet see—what has happened "from times immemorial"—a communion that will redound to "the ultimate spiritual, and therefore most essential, profit of the *soi-disant* civiliser in contact with real civilisation" (p. 193).

Whether a little more detachment would have made this volume less a piece of propaganda we need not discuss; and if we do not share the Editor's view of European responsibility for the bloodshed, it is because he has not taken into consideration the political and religious vicissitudes outside or before European intervention. He forgets that turmoil and fanaticism were recurrent in the ancient East before Christianity. We may dismiss his fatalistic tentative guess that perhaps the bloodshed was one of Nature's contrivances to provide against over-population (p. 9); and if we are unable to apportion the blame fairly may we not agree with the simple native writer: "God, whose decree lies between the Kaf and the Nun, will repay everyone according to his deeds" (p. 143)? One may regret that Dr. Scheltema has not distinguished between the Holy War (p. 115 seq.), with its deliberate incentive to murder or rapine, and all inexcusable, cruel, and foul deeds done contrary to or in spite of religion. The difference between calculated and methodical outrage and "seeing red" is an important one. In general, we may agree with Dr. Scheltema that in the East the religious question is fundamental; this is obvious to everyone acquainted with its psychology, religion, and history; but what is more disquieting is the failure of broad-minded people of all creeds and colours to look for the common basis which assuredly exists. Untold good could be done by a frank and honest discussion of the fundamental questions, but it must be done in a spirit other than that manifested in the present volume.

S. A. C.

II.—THE FIRST ENGLISHMEN IN INDIA.

Mr. Foster has brought together the narratives of seven Englishmen who visited India in the early days, and the result is a book which can be described as thoroughly satisfactory. The narratives are printed precisely as they have come down, the short introductions are models of what such things should be, the footnotes explain such difficulties as the text presents, two maps and some illustrations give further help, and the student of history is thus provided with all the materials needed to enable him to make the best use of the documents; but, if we are not mistaken, the book makes a much wider appeal, and it can be read with enjoyment as well as profit by anyone interested in India or in the work of the English nation. It so happens that these seven writers form almost a microcosm of the time. First comes Ralph Fitch, a merchant on a commercial mission, hard-headed, terse, and matter-of-fact, who spent eight years in the performance of his duties. Next we have John Mildenhall, a private concession-hunter, and an unsuccessful one; his tombstone can still be seen in Agra. Then we have William Hawkins, teaching manners to the Portuguese at Surat, drinking hard with the Emperor Jahangir, and starting homeward with an Armenian wife, to die just at the end of the voyage. William Finch follows, an able merchant, whose commercial report on Surat is a model of such documents, and who was blessed with a genuine gift of style; then Nicholas Withington, also a merchant, but far inferior to Finch; then Tom Coryat (of the "Crudities"), pedestrian and butt, who walked from Aleppo to Ajmere, and is depicted in a contemporary illustration, well reproduced in the book, as riding an elephant with spurs; and lastly the Reverend Edward Terry, a delightful specimen of the cultured parson, whom Mr. Foster serves up, as Purchas did before him, as "a good farewell draught of English-Indian liquor." We like the chaplain best, but the whole company are well worth meeting, and we are grateful to Mr. Foster for bringing them together in so handy a form.

BOOK RECEIVED.

"The Man Who Did the Right Thing: A Romance of East Africa." By Sir Harry Johnston. (London: Chatto and Windus. 8s. 6d. net.)

A Reuter message from Constantinople, dated April 7, states that the Ankara papers give the text of an agreement signed in Moscow on March 1 by Turkish and Afghan delegates, assuring a complete mutual understanding on all foreign questions. Turkey agrees to reorganise the Afghan army and supply officers and arms.

PERSONAL AND GENERAL.

TO-DAY.

April 14 (New Style).

April 1 (Old Style).

Shaaban 6, 1339 of the Moslem Calendar.

Nisan 6, 5681 of the Jewish Calendar.

Mr. and Mrs. Rudyard Kipling have arrived at Cannes.

M. Jordania, President of the Georgian Republic, has arrived in Paris.

Viscount and Viscountess Ennismore have returned to London from India.

The Earl and Countess of Carnarvon have returned to 1, Seamore Place, from Egypt.

The Bulgarian Minister visited Sir Eyre Crowe on April 6 at the Foreign Office.

M. Venizelos went to Paris from Nice last week, but has since returned to the South.

Marshal Lyautey left France on April 10 to resume his duties as Resident-General in Morocco.

The Gaekwar Bahadur of Baroda arrived at Marseilles on April 9 from Bombay on his way to London.

The Marquess and Marchioness of Titchfield will return to London from the Sudan in about a week's time.

Princess Bibesco has left Paris for the Hotel du Palais. Biarritz, where she will remain till the end of April.

Lord and Lady Inchcape, who are cruising in the Mediterranean, will return to London about the end of the month.

Captain and Mrs. Rexford Parsons, on leave from India, are in Scotland, and will be with Mrs. Charles Parsons, 110, Park Street, W., for May.

The marriage arranged between Mr. Thomas Archibald Leach, Sudan Political Service, and Miss Jessie Laing will take place on April 28 at the Old Parish Church, Croydon.

Lieutenant-General Sir Francis Lloyd, who has been confined to bed suffering from an attack of influenza, has sufficiently recovered to be able to leave England for Algiers.

M. Antonesco, formerly Roumanian Minister in Paris, has arrived in London, and was on April 8 the guest at luncheon of M. Boeresco, the Roumanian Chargé d'Affaires.

The annual memorial service in connection with the 29th Division (Gallipoli, 1915-16) will be held at Holy Trinity Church, Eltham, on Monday, the 25th inst., at eleven o'clock.

The King of the Hellenes has appointed M. A. Rizo Rangabé, Greek Minister and Chargé d'Affaires of the Legation in London, a Commander of the Order of the Redeemer.

General Sir Robert Baden-Powell on April 9 reviewed a body of Egyptian Boy Scouts and Girl Guides in Cairo, and in the afternoon inspected the European Boy Scouts and Girl Guides.

The marriage of Miss Rita Rattray, only child of Brigadier-General C. Rattray C.B., C.S.I., to Mr. Alfred Claude Burlingham takes place to-day at All Souls Church, Langham Place, London. General Rattray served in Mesopotamia, 1915-1917.

The engagement is announced between Dimitri Papaléxopoulos, C.M.G., captain of the Royal Hellenic Navy, and Miss Dorothy Elliadi, daughter of Mr. and Mrs. Elia Elliadi, 2, Rue de Saigon, Paris.

Under the auspices of the Central Asian Society a lecture on "Mesopotamia, 1914-1921," will be given by Lieut.-Colonel Sir Arnold T. Wilson, K.C.I.E., at the Royal Society's Lecture Room, Burlington House, Piccadilly, W., to-morrow, April 15, at 4.30 p.m.

General Lord Rawlinson has arrived at Karachi on a tour of inspection of the Western Command. The Commander-in-Chief will visit important stations in Baluchistan, and will afterwards proceed to the scene of the operations in the Mahsud and Waziri country.

A marriage has been arranged, and will shortly take place, between Arthur C. De Morgan, of Rangoon, Burma, second son of the late Mr. and Mrs. S. A. De Morgan, and May Fendall, of 41, Belsize Avenue, N.W.3, only child of Mrs. and the late Mr. R. H. Fendall.

Ghaffar Khan Emadol Molk, who was Persian Chargé d'Affaires in London from December, 1919, to November last, is this week leaving London with Mme. Emadol Molk to take up his new appointment as Envoy Extraordinary and Minister Plenipotentiary at Stockholm.

A marriage has been arranged, and will shortly take place, between Captain Yovan U. Yovanovitch, Consul-General for the Kingdom of Serbs, Croats, and Slovenes, and Florence Elliot, only daughter of the late James Arnott and Mrs. Arnott, 37, Gloucester Place, Portman Square, W.1.

The engagement is announced, and the marriage will take place in August, between Angus H. Gurney, Indian Civil Service, youngest son of Mr. and Mrs. H. W. Gurney, of Thames Ditton, Surrey, and Nancy Mabel, only daughter of Dr. and Mrs. H. Ward Evans, The Old Hall, Newport, Salop.

A marriage has been arranged, and will take place early in June, between Charles F. Fosdick, only son of Mr. William Fosdick, of Auckland, N.Z., and Enid Mary Kathleen, eldest daughter of Mr. and Mrs. Maurice B. O'Connor, of Ballygunge, St. George's Hill, Weybridge, and Ballygunge, Calcutta.

A marriage has been arranged between Major Douglas Giffard Oliver, Indian Army Political Department, son of the late Edmund Ward Oliver, of Orlestone, Kent, and Lorimer, third daughter of the late William Cattanaich Donaldson, Bourtreehill, Ayrshire, and Mrs. Donaldson, Ballindalloch, Balfour, Stirlingshire.

On Tuesday, April 19, a dinner and dance will be held to celebrate the Serbian Workers' Reunion, at the Wharncliffe Rooms, Great Central Hotel. Col. Sir Courtauld Thomson, K.B.E., C.B., will take the chair. Tickets, which are 21s. each, may be obtained from the hon. secretary, Miss Marx, 24, Melcombe Court, Dorset Square, N.W.1.

A marriage has been arranged, and will take place this month, between Brevet-Lieutenant-Colonel J. H. M. Cornwall, C.B.E., D.S.O., M.C., Royal Field Artillery, son of Mr. James Cornwall, late Postmaster-General, India, 24, Drumsheugh Gardens, Edinburgh, and Marjorie Coralie Scott Owen, daughter of the late Mr. W. Scott Owen, O.B.E., J.P., and Mrs. Scott Owen, of Cefngwifed, Newtown, Montgomeryshire.

Dr. M. A. Ansari, accompanied by Mr. Ghaffar (Secretary), members of the Indian Muslim Delegation, on April 9 concluded their official visit to this country, and left Victoria by the Continental boat train express on their return to India. Among those present to see them off were Mr. M. M. Chotani, the head of the Indian Muslim Delegation, Shaikh M. H. Kidwai of Gadia (who are remaining in Europe pending new developments in the Eastern question), and a large gathering of Hindoos, Mussulmans, Sikhs, and Parsees, undergraduates studying at the Oxford, Cambridge, and London Universities.

The King, in recognition of services during the operations against Afghanistan, has made the following appointments to the Order of the British Empire:—

To be a Knight Commander of the Civil Division—Baba Sir Gurbakesh Singh Bedi, Kt., C.I.E.

To be Commanders of the Civil Division—Mr. Douglas Donald, C.S.I., C.I.E., Political Officer and Assistant Commissioner, Hangu and Samana; Mr. John Moncrieff Wright, Indian Civil Service Superintendent, Chin Hills; Mr. George Arthur Cocks, Deputy Inspector-General, Criminal Investigation Department, Punjab; Temporary Lieut.-Colonel Frederick Charles Isemonger, Senior Superintendent of Police, Punjab; and Lieut. Edward Ernest Long.

The King has given permission for the wearing of the following decorations:—

ORDER OF THE NILE (EGYPT).

Second Class.—P. R. Boxwell, Inspr.-Gen. of Irrigation, Upper Egypt.

Third Class.—P. Swan, Director-Gen., Mech. Dept., Egyptian Ministry of Public Works; L. C. Enness; W. D. L. Roberts, Inspr. of Irrigation, 1st Circle; L. F. P. de Smidt, Inspr. of Irrigation, Zifta Circle.

Fourth Class.—A. D. D. Butcher, Director, Delta Barrage; H. V. C. Johnstone, Director of Works, 1st Circle; G. R. Kinder, Director of Works, 3rd Circle; A. O. W. D.

Pinson, Insp., Main Drainage Dept.; T. H. Smith, Chief Mech. Eng., Main Drainage Dept.
Fifth Class.—E. B. Hewgill, J. M. Edwards.

Our Cairo Correspondent writes (March 27):—"The Semiramis Hotel has been the venue during the past three weeks of a most interesting exhibition of pictures. Miss Bridget Keir has been showing there the products of her talented brush—numerous scenes of Italian landscape, a number of excellent impressionist pictures of London landmarks, and many reproductions of well-known Egyptian scenes and sights. It is an admirable collection, and—speaking only of her Egyptian pictures, since one is naturally a greater critic of them—I must say that Miss Keir has caught the Egyptian atmosphere in a wonderful manner. She is remaining on in Egypt for another month, in order to complete certain commissions, and will work her way back to London so as to be there in June, 1922, when she has arranged to hold an exhibition at the Whistler Gallery.

APPOINTMENTS, ETC.

M. Tchenkeli, the newly-appointed Georgian Minister, has arrived in London.

Dr. Vesnitch, ex-Prime Minister of Serbia, has been appointed Yugoslav Minister in Paris.

Mgr. Nicolaos, Archbishop of Cesarea, has been appointed the *locum tenens* of the Œcumenical Patriarchate of Constantinople.

Commander Matila Costiesco-Ghika, Secretary to the Roumanian Legation, has been appointed First Secretary to the Legation in Madrid.

Athens telegrams announce the appointment of M. Theotokis to be Minister of War in place of M. Gounaris, who has succeeded to the Premiership.

The King has appointed Sir William Sinclair Marris, K.C.S.I., K.C.I.E., to be Governor of Assam, India, vice Sir Nicholas Dodd Beatson-Bell, K.C.S.I., K.C.I.E.

The *Egyptian Gazette* states that Lt.-Col. J. S. Liddell, C.M.G., D.S.O., Under-Secretary of State for Communications, will be appointed as Egyptian and Sudan Government Agent in London, in succession to the late Sir Arthur Webb. Colonel Liddell will be succeeded as Under-Secretary of State by M. T. Borton Pasha, the Postmaster-General, who in turn will be succeeded by Sahib Bey Claudios, the Assistant Postmaster-General.

OBITUARY.

The death has occurred of Vice-Admiral Frederick Owen Pike, C.M.G., D.S.O. His career included service on the *Beacon*, gun-vessel, at the bombardment of Alexandria.

In a much-delayed letter, our Belgrade Correspondent writes:—"The death is announced of a great Yugoslav patriot, Dr. Ivan Orazhen, in his fifty-second year. Dr. Orazhen was a Slovene, but an enthusiastic philo-Serb in the days when that was an unusual and dangerous line to take, and an unrelenting antagonist to the anti-Serb chauvinistic party among the Croats. In spite of powerful opposition, he organised a club of young Slovenes with the title 'Slovenia,' and led a policy of union of Serbs, Croats and Slovenes. He was an enthusiastic leader of the Sokols. When Vienna tried to crush the movement on account of its political activities, his skilful handling saved the situation. During the Balkan War of 1912 he went to help his beloved Serbs, and served as surgeon and chief of the military hospital at Belgrade, and afterwards at Kragujevats. He gave an account of his experiences in a book called 'Among Our Wounded Brothers,' which was full of admiration for the peasant-warriors and their patience in suffering. Naturally, he welcomed the union with joy, and his work was crowned by his election as president of the United Yugoslav Sokol Alliance."

EX-EMPEROR KARL.

A correspondent writes:—"The dramatic appearance of the ex-Emperor Karl at Budapest has naturally aroused a considerable amount of attention in the Yugoslav Press; the tone, however, is not of alarm, but rather of contemptuous amusement, shared by other Slav States. A distinguished Polish official, who had met him in audience while he was still on the throne, described his impression in these words: "I knew him to be thirty years old in appearance, he looked twenty, but when he opened his mouth he seemed to be ten." The Serbian papers refer to him disrespectfully as *Karik bez marjasha*, that is, "Charlie Lack Ha'-pence." Yugoslavia, like Roumania and Czecho Slovakia, are satisfied with Admiral Horthy's declaration, and the consternation is greater in Vienna, where double guards were placed on the Hofburg, while the German Party, the Christian Alliance, and the Social Democrats have issued a declaration against the Hapsburgs, and the latter have called upon the workers to be prepared, if necessary, for a decisive conflict.

NEWS IN BRIEF.

In a recent speech outlining Persia's foreign policy, Zia-ed-Din said that relations with Great Britain were now completely cordial.

The delegation of the Nationalist Turks which came to London for the Near East Conference left Rome for Brindisi, on its way to Angora, on April 9.

It is stated that rapid progress is being made with the evacuation of the troops in Northern Peraia, and by the middle of May all are expected to have left there.

The Prime Minister has informed Sir J. D. Rees, in a written reply to a question, that the Mesopotamian mandate will be considered by the Council of the League of Nations at its next meeting in June.

It is semi-officially announced that a special Afghan Mission, under Mohammed Vali Khan, which is visiting the European capitals, arrived in Berlin on April 8 in order to notify the Government of the accession of the Ameer, Aman Ullah Khan.

The *Morning Post* Malta Correspondent states that notwithstanding the decision of the National Assembly to reject Proportional Representation, the Colonial Office has decided to adopt the system in the Letters Patent granting self-government to Malta.

At the prorogation of the Bengal Legislative Council on April 7 the Governor, Lord Ronaldshay, announced that he intended to provide a further opportunity for discussing the police grant which, from the debate on April 1, he understood the Council desired.

LORD CHELMSFORD.

Lord Chelmsford has laid down his high office, and a successor is now charged with the duty of carrying out the policy in the initiation of which he played so large a part. On such occasions it is usual to attempt an estimate of the outgoing Viceroy's achievement, and to-day we shall follow precedent, but we shall follow it with caution. There have been Viceroy's whose work was done mainly in the daylight, but this cannot be said of Lord Chelmsford, for more than half his term of office was passed in the obscurity of war, and in conditions which rendered reticence an imperative necessity, while the methods adopted in framing the new constitution were such as to conceal more or less effectively the shares of the individuals concerned in the undertaking. The whole truth of these years will probably not be known until the diaries and memoirs of the protagonists are published for the benefit of some future generation, and while the quidnuncs may experience no difficulty in fixing responsibility or distributing praise and blame, it is both wiser and truer to admit that our knowledge is inadequate for a final judgment. These considerations apply directly to the administrative record of the last five years. Viewed from the outside, it cannot be denied that the administration, while remarkably efficient in comparison with that of most countries, has fallen below the high standard recognised in India. There have been too many regrettable incidents, too many instances of lack of foresight, too little stability, at times too great a tendency to drift. It is easy to recognise such defects, but the apportionment of blame is a different matter. Some observers maintain that Lord Chelmsford has been badly served by colleagues and subordinates not of his selection, others that his best efforts have been nullified by the activities of Whitehall; and while he has never, so far as we know, attempted to urge such considerations, they justify suspension of judgment until the facts are fully known.

It is not, however, as a routine administrator that the retiring Viceroy will be judged. The verdict will be based on two outstanding events, the revival of India's military power, and the introduction of new political institutions. Memories are so short that it may be well to recall the part played by India in the war. At the outset her resources were heroically—we had almost said recklessly—employed in Europe, Africa and Asia, and the effort resulted, as bitter experience was to show, in the destruction of the military machine. A period of inactivity followed, and the Empire began to ask whether India could do nothing. But under Lord Chelmsford the country was speedily reorganised for war; men, munitions, and money were provided on a scale which astonished even the most enthusiastic believers in India's unexplored capacities, and the result was seen first in a steady increase of pressure on the enemy, and then in the spectacular victories in Palestine and Mesopotamia which marked the decisive year. In the course of this reorganisation mistakes were doubtless made in matters of detail, but regarded as a whole the great effort was crowned with success, and while the Viceroy was quick to award the praise to the men who did the work, they on their side recognised that their achievement was due primarily to the vision and the driving force at the centre of affairs. The Services, military and civil, responded to the call, and without their aid Lord Chelmsford could have done little; his merit lay in the facts that he realised the possibilities as well as the

needs of the situation, and that his inspiration transformed those possibilities into accomplished facts.

Military reorganisation did not, however, claim all Lord Chelmsford's energies. Already familiar with Indian political conditions, he had formed the conclusion that the time for a new departure had come, and within a few weeks of his arrival in Simla he took up the question of constitutional reform. The first step was to secure an authoritative declaration of policy from the Government in this country; the pronouncement made in August, 1917, showed what had to be done, and the task was nothing less than the framing of a new constitution, to be moulded to circumstances for which there were no precedents in East or West. The methods adopted were also without precedent. Lord Chelmsford invited the Secretary of State to visit India, and the result of their deliberations was seen in the publication of their joint report within less than a year of the first official recognition of the need for action. The pace so set was maintained to the end. In the winter of 1918-19 the Southborough Committees worked out a large mass of necessary details, in 1919 the constitution became law after a prolonged inquiry by a committee of Parliament, in 1920 the subsidiary rules were completed and electoral machinery was brought into existence; and now the new institutions, both political and administrative, are in being, and the future of India has been decided, so far as the decision lies with human agents. Regarded merely as an example of determined and sustained effort, the achievement is remarkable: Indian methods of procedure are sure but slow, and we have no doubt that Lord Chelmsford was justified in the claim he recently made that, but for Mr. Montagu's visit, elaborate despatches would still be passing between Delhi and Whitehall, unless indeed the internal situation should have developed in a way to render despatches for a time irrelevant. It is, however, by results rather than methods that posterity will judge the work of these five strenuous years. The new institutions have been explained, and on occasion criticised, in these columns, and we do not propose to go over the ground again to-day. Nor do we propose to attempt the task of apportioning responsibility between the authors of the Joint Report. Some critics, indeed, profess to be equipped for this undertaking, and are ready to attribute each separate feature of the constitution to Lord Chelmsford or to Mr. Montagu as the case may be, but for ourselves we prefer to accept it as the joint product of two statesmen who, in the words of the former, worked together with the utmost harmony and goodwill, and who were assisted by some of the ablest men now employed in the service of India. The share of Lord Chelmsford is in any case large; he has himself claimed that the practical initiative was his, and it can be claimed on his behalf that from the time when his view of the position was formed, he has never wavered in the determination to carry his policy to a successful issue, that he has allowed nothing to turn him from his course, that he has discarded time-honoured doctrines and practices when they stood in his way, and that he has been discouraged neither by the hesitation of colleagues, nor by the blows of fortune. The great question remains: Has he judged rightly? and we can answer only that time will show. As yet there is no unanimity among competent critics; it may be that he has misread essential facts, or that the structure reared by him may prove to be too heavy for the foundation on which he had to build; the stresses to which it is exposed will not produce their full effect at once; and while we regard the immediate prospect as hopeful, certainly much less gloomy than it appeared in the autumn of last year, we are not yet prepared to anticipate the final verdict. If Lord Chelmsford's great work stands the test of time, posterity will award him a high place among the statesmen of the Empire, and among the protagonists in the struggle against the secular traditions of Asia; should it fail, the judgment on his achievement must be unfavourable; but, whatever the event may be, we are justified in saying that he will be remembered as a Viceroy who, in a time of the utmost stress, devoted to the service of India the abilities and the qualities of a great English gentleman.

IN THE SECESSION STATES.

ROVING NOTES.

(BY OUR BELGRADE CORRESPONDENT.)

BUCHAREST, March 11.

Your Belgrade Correspondent, being on tour, feels justified in writing from Bucharest, *de passage*, without any idea of trespassing on the domain of his colleague in Roumania; for he knows nothing of the politics or the language of the country, but finds much of interest on his brief visit. In the first place, after a rather long visit to Europe it was

"THE MAID OF THE INN."

An example of picturesque Roumanian costume.

quite nice to find oneself in the dear old East again; though on leaving the Simplon and going out into the frozen streets and arctic temperature, the scene recalled Russia rather than the Balkans, especially the heavy wadded coats of the cabbies, of the genuine Roumanians, as well as of the Russians of that strange sect the *Skoptsi*, who submit themselves to the strangest self-denying ordinance, and show their devotion to the doctrines of Malthus in their beardless and wrinkled faces.

Bucharest is certainly ahead of Belgrade in many respects, and, in spite of the constant grows against the cost of living, seems cheaper in many ways. Cabs are a great deal cheaper, and driving in them is less of a weariness of the flesh, owing to the flatter roads; and one misses those terrible pavings which some Serbs love so much that they wish to keep them in perpetuity. There is no accounting for taste, for they are, if possible, worse than the famous "pavé pointu" of Petrograd.

The Roumanian peasant does not seem to be so genial a soul as the Serb. He is said to be lazy, and it appears that he is now making such fabulous sums by hiring out his oxen

and carts for transport that he refuses to work in his fields, at least for more than the bare necessities of his family. His independence and indifference to other people's wants were well illustrated when a motor was snowed up in a drift about fifteen kilos outside the town. Ten peasants with oxen and empty carts came by, and were implored by the desperate chauffeur and passengers to lend their beasts to pull the car out of the drift, and were offered untold sums for their trouble. But not they! They had their day's work, and went stolidly by, untempted by the hundreds of lei for a few minutes' work, and indifferent to the troubles of the travellers. Presently there came by a broken-down car, towed by two pair of oxen. A Hungarian chauffeur sat

IN TRANSYLVANIA. "THE BLACK TOWER."

An old Saxon church, built for refuge against the Turks. Modern church in background.

at the wheel. As a brother of the road he was asked to lend at least a pair of the animals, just to get the car out of its trouble. But the selfish Magyar simply swore beautifully, and ordered his peasants to drive on. But they had some more human elements in them, and were persuaded to harness up the leaders, and left the protesting Magyar with a single pair, which was quite capable of pulling him. With the other pair the peasants extricated the chilled and miserable travellers; for a blizzard was blowing. For a quarter of an hour's work these boys earned 300 lei, for they would not look at less, and as they were presumably earning vast sums for towing the Magyar some twenty or thirty kilometres, and picked up an extra 300 lei *en passant*, it is hardly to be wondered at that they find it better to earn in a week with their oxen more than they would probably make in a year by agriculture. It is, however, a serious thing for the country.

One does not notice many traces of the war, beyond an inscription on some of the bank notes to the effect that they

GUARANTEED

WHITE HORSE

PURE SCOTCH

are issued on the basis of a special privilege, and covered by a deposit in the Imperial German Bank in Berlin. Another inscription, not reminiscent of the war, was too good to pass by, as a specimen of English as she is wrote. It was in the *wagon-lit* office, to the effect that each ticket issued has to be signed by the owner, otherwise the traveller *riks the run* to find no place at his disposal at the station.

LWOW (LEMBERG), March 20.

The Belgrade-Zagreb Correspondent is outside his beat when travelling in these northern regions; but still there is a certain similarity with the more genial climates of the Danube. Two Slavonic languages are spoken here—Polish and Ruthenian—and here, too, we find a young Slavonic State struggling with the same problems. Here we find also plenty of traces of the ravages of the war, and here are racial hatred and plots and intrigues.

Czernowitz is in Roumania, but so far from the province of your Bucharest Correspondent that a mention may be permitted. It is a fine town of big stucco houses, in the usual Austrian style, and one or two quite fine buildings, especially the Residenz. But one has to look quite closely

IN TRANSYLVANIA, A FOREST ROAD.

to find anything in it Roumanian, except the uniforms and some new official inscriptions, or anything Slav, beyond the name, except a few unobtrusive newspapers in Polish and Ruthenian. For the town is essentially German. Almost all the names over the shops are German, and Slavonic names are no rarer than in Berlin. German is the commonest language, and many of the inhabitants know no other. In some form or other, too, it is the language of the Jews who form so large a portion of the population, all stamped with that unmistakable Yiddish look, with unkempt whiskers and beards, shabby black hats, and long, greasy gabardines. The place swarms with men that could have stood as models for Fagin.

The market place is far less interesting than one would expect in the Bukovina, and one notices but few pretty peasant costumes, though the Slavonic type is seen in the country folk who bring in their wares to sell. They are mostly of that strong, coarse type that one associates with the Russian mujik, and their Ruthenian tongue is comprehensible to anyone who knows Russian. The town shows but few traces of the war, although it changed hands so often. There are a few battered houses near the station, and a kilometre or two outside, beyond the Pruth, there is a large military cemetery in an orchard.

The journey from Czernowitz to Lwow, better known under the German name of Lemberg, is to be avoided. There

is no first class, nor are the trains lit. Customs, passports, and other delays are interminable. There is a wait of over three hours at the last Roumanian station, and nearly as much at the first Polish one. To make matters worse, we were told that the thawing ice on the Dniester had broken the bridge, and that passengers would be obliged to walk across and man-haul their baggage at five o'clock in the morning. Fortunately, we were spared this experience, as the Poles had succeeded in patching up the bridge.

On approaching Lwow, one is surprised to see barbed wire entanglements still standing. This, it appears, is not a relic of 1914-15, but of 1919, when the Poles and the Ukrainians were having a private war on their own account for the possession of the much-prized trophy of Lwow; and it is left as a matter of precaution in view of further troubles with the Ukrainians or the Bolsheviks.

Lwow is a fine city, European in type, with good buildings, but dirty. It has some hotels which are superior to the average accommodation offered by Austro-Hungarian provincial towns, but the difficulty is to get a room in one, here as elsewhere in Europe. For the place is full of refugees from across the Bolshevik frontier, and a good sound tip to the hall porter is the only remedy. After all, if the tip is big enough, he can always turn somebody out and swear that the room is requisitioned for a Minister. This method is not without its advantages, but it leaves a certain feeling of insecurity of title.

GREEK INDEPENDENCE.

At the Greek Church of St. Sophia, Moscow Road, Bayswater, on April 10, a *Te Deum* was sung in celebration of the centenary of the Greek War of Independence. The Great Archimandrite officiated, and was assisted by the Archimandrite. There was a large congregation. Among those present were M. Alexandre Rizo-Rangabé, the Greek Minister, with Mme. Rizo-Rangabé, M. Gennadius, Hon. Greek Minister, M. and Mme. Mango, M. and Mme. Primenos, M. and Mme. Ambatielos, M. Yanopoulos, M. Inglessis, M. Vikelas, Captain Kriezis, Colonel Vlassis, Major and Mme. Coliopoulos, Major Rogoti, Captain and Mme. Kypriote, Admiral Mark Kerr, M. Loutsis, M. Kyriakides, Captain Sakellaris, M. G. Marchetti, Mme. Phranzis, and M. Vasiliadi. Subsequently a reception was held by M. and Mme. Rangabé at the Legation.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Mesopotamia Oilfields.

The question of concessions for oil in Mesopotamia is the principal subject dealt with in correspondence between the British Government and the United States Ambassador regarding economic rights in mandated territories, which was issued last week as a White Paper. The most important part of the correspondence is a long despatch from Lord Curzon in reply to a Note from the American Secretary of State, in which he states in detail the British case with regard to the Mesopotamian oilfields. He points out that the whole of the oilfields to which the provisions in the San Remo agreement relating to Mesopotamia refer are the subject of a concession granted before the war by the Turkish Government to the Turkish Petroleum Company as the result of British and German negotiations, and in which the German share was 25 per cent. But for the war the exploitation of the oilfields would long ago have been begun, and he remarks that "it can hardly be contended that his Majesty's Government should now question the validity of an undertaking granted by the Turkish Government in return for consideration received." This part of the argument is closed with the very neat rejoinder that, "and I may add, since the United States Government will presumably expect his Majesty's Government to recognise the rights acquired by the Standard Oil Company in Palestine from the Turkish Government, that these rights . . . are no stronger than those of the Turkish Petroleum Company."

French and Arab Interests.

France's position in regard to the oilfields, it is pointed out, is simply that the German interests have been allocated to our Ally in return for facilities by which it will be possible for the oil to reach the Mediterranean. It is, in short, as Lord Curzon aptly remarks, "the adaptation of pre-war arrangements to existing conditions," and he maintains that the arrangement effected is in the best interests of the Arab State. "Neither the rights of the Turkish Petroleum Company," he continues, "nor the provisions of the San Remo Agreement, will preclude the Arab State from enjoying the full benefit of ownership or from prescribing the conditions on which the oilfields shall be developed." In view of the facts so ably set forth—the whole document is a model of its kind for careful and precise marshalling of the facts—it is difficult to see how America can any longer maintain her case. There is no question of discrimination against the United States, but merely of the maintenance of rights acquired before the war. Apart from the concession in question, it is open to America or to any other country to assist in the development of Mesopotamia's resources, and there is no reason in the world why American and British oil interests should not work amicably together there.

Causes of the Trade Decline.

In his speech at the general meeting of the Chartered Bank Sir Montagu Turner touched on the great trade decline, and pointed out that it is not reasonable to attribute it to any one particular cause, such as the Excess Profits Tax, the labour situation, or the exchanges. Several causes, he added, had come into play—the unsettled world conditions, financial disorder in Central Europe reacting on the exchange, lavish expenditure in unproductive avenues, and especially in this country restriction of output "to a point which rendered it impossible to compete with other nations where each individual was allowed to work to the utmost limit of his capacity without let or hindrance." Sir Montagu further emphasised the point that there was an insufficient appreciation of the fact of the temporary disappearance of Russia from the world of civilisation, "that France, Germany, and Italy could no longer participate as formerly in the trade of the world; in other words that the purchasing power of civilised nations in Europe had dwindled to comparative insignificance."

The Indian Trade Outlook.

Dealing with the effect of the serious decline in the Eastern exchanges on the disposal of manufactured goods in the various markets, Sir Montagu pointed out that the

position had been aggravated in India by the failure of the south-west monsoon and the winter rains in the north of India, by political troubles, and by the refusal of Indian importers to recognise the validity of contracts with European shippers. As regards the rupee exchange, he held forth no hopes of any but a slow appreciation. "On this side," he said, "there are more stocks than we can at present dispose of in the case of tea, jute, cotton, hides, rubber, and hemp, and until these surplus stocks are worked off and prices in India are adjusted to prices on this side we can look for no great improvement in the export trade from India, nor in the appreciation of the rupee. This process of appreciation is likely to be slow unless some unexpected factor is introduced." Sir Montagu ended with a word of encouragement regarding the future course of Eastern trade generally, stating that "indications from the several spheres point to a distinctly better undertone, which we hope will in course of time develop."

Bulgaria's Ports.

I find that the statement of the Bulgarian Minister of Commerce during his recent visit to this country that British shipping lines have no direct communication with Bulgarian ports has given rise to misapprehension in certain quarters, where it has been interpreted as implying that there are no regular sailings from this country. Of course, that was not the meaning the speaker intended to convey. There are, I believe, five lines serving the ports of Varna and Bourgas, and two of them maintain regular and frequent services between Great Britain and Bulgaria, notably the Cunard and Johnston Lines. This is so well known that I would not refer to it but for the misconception that has arisen. What the sentence in question was intended to imply was that there is no sea connection with Bulgaria, other than the roundabout way through the Dardanelles. That is, of course, perfectly intelligible, because while the freedom of the Dardanelles passage would seem now to be settled, he would be a venturesome individual who would assert in these uncertain times that later developments may not once again place Bulgaria in the position of being dependent on the will of a third party for her sea communications with Western Europe.

Export Credits.

One of the leading provincial Chambers of Commerce is responsible for an interesting addition to the long list of export credit schemes. Under this scheme the risk would be equally shared by the Government and the exporter, and the *modus operandi* would be for the exporter to obtain the permission of the Board of Trade to do business, and having undertaken half the risk he would be free to carry out the transaction in his own way. Unquestionably the scheme has its attractions, but it has seen light too late in the day to have any chance of being adopted, unless it should be necessary to supplement the present Government scheme, when it would, no doubt, come in for consideration.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

YUGOSLAVIA.

ZAGREB, March 30.

Montenegrin Perper Currency.

The question of the exchange of the Montenegrin perper currency, which, as recorded in *THE NEAR EAST*, was dealt with on generous terms by the late M. Kosta Stoyanovich when Minister of Finance, has been reopened by his successor, Dr. Kumanudi, who has postponed the settlement pending reference to the Consulting Committee of Finance and then to the Ministerial Council.

New Shipping Line.

It is announced that a London shipowner has formed a new steamship service in which financial houses in Belgrade and Zagreb are taking part. The new company already owns three 9,000-ton vessels, and will open its Trans-atlantic service in three months' time between New York and Gruz (Gravosa) and other Adriatic ports.

Development of Fishing Industry.

The fishing industry is to be an important source of revenue. Hitherto it has brought in only from two to three hundred thousand dinars a year. Under the new scheme it is estimated that it will bring in ten millions in the first year, and that this will gradually increase. All feudal fishing rights are abolished, and the rights over all lakes and rivers throughout the country pass to the State. Small lakes and ponds will be granted to the local authorities, and private landowners will retain the rights in streams passing entirely through their property. In sea-fishing the littoral parishes have the right of free fishing for a distance of one English mile from the coast, beyond which, in territorial waters, the rights belong to the State.

New Postal Tariff.

A new postal tariff for international service is announced to come into force from April 1. On an ordinary letter up to 20 grammes the charge will be one dinar, and half-a-dinar for each additional 20 grammes. Postcards will be charged half-a-dinar, and reply-postcards a dinar. Printed matter is rated at 20 para for every 50 grammes, and sample post at the same rate. Registration fee is one dinar.

Railway Services and Coal Supplies.

By the decision of the International Conference in Bern, a series of new train services will come into operation on June 1. This means that for the services in Yugoslavia the daily consumption of fuel will be raised from 4,150 tons of coal to 5,400 tons. The railway directorates are supplied as follows:—Belgrade, by the State colliery at Senj; Zagreb and Liubliana, by local pits; Subotitsa, from Pechuy; Sarajevo, by Mostar; and the Steamship Syndicate, partly from Bosnia and partly from Pechuy. Unfortunately, the output from the native collieries can hardly meet the present requirements, and the output from Pechuy available for Yugoslavia depends upon the Reparations Commission. Therefore, in order to be in a position to maintain regularity of service, the Ministry of Communications has resolved always to carry a three months' reserve in stock, and this must be obtained from abroad, either from Czechoslovakia or from England, or from both. The total reserve required is 150,000 tons, of

which two-thirds are to be in the form of coal and one-third as briquettes.

"Politika's" New Home.

Building is going on actively in Belgrade in spite of the high cost of materials and labour. A new five-floor house has been begun in Poenkareva Street, to be the new premises of the newspaper *Politika*. It is hoped to transfer the press to its new quarters in July, and to have the building finished by November 1. The site was formerly occupied by what was fifty years ago the finest building in the town, a two-storey house occupied by the Sardinian Consul. Here Prince Michael was a constant visitor, as he was very friendly with the Consul, and with him followed with intense interest the emancipation and unification of Italy. To the Prince this was an occasion for rejoicing, for it was his ambition to effect a similar liberation and unification of all the South Slavs and Christians of the Turkish dominions in the Balkans, and he would probably have succeeded but for the intrigues of Russia and Austria. Britain, too, with her pro-Turk-anti-Russian policy, threw obstacles in the way. The *Politika* is an interesting paper, and its director, Dr. Ribnikar, is to be congratulated upon his enterprise. The founder of the paper, Captain Vladislav Ribnikar, was killed in the early days of the war (on September 1, 1914), and his brother, the editor, Captain Darko Ribnikar, fell the previous day.

A Deal that Failed.

During the bad days before the Treaty of Rapallo, when d'Annunzio was still holding court at Fiume, reproaches were frequently laid against unpatriotic merchants and tradesmen in the neighbouring districts of dealing with the poet and with the Italians, who were then regarded as little short of enemies. A story now comes through that these same tradesmen had prepared many truckloads of meat, bacon, and stock for sending into Italy for sale before Easter, as a consequence of which the price of such commodities in Liubliana went up considerably. Suddenly there burst upon them the news that the Italian Government has forbidden the importation of meat and cattle from Yugoslavia, and so these big stocks are thrown on the market and down came the prices, to the consternation of the tradesmen and the delight of the population.

Miscellaneous.

Traffic with Bulgaria, which was hitherto confined to the Tzaribrod route, is now open the entire length of the frontier.

Twenty-five para notes will shortly be issued.

Some one-dinar notes have appeared in circulation with an error in the overprint in the crown values in the Cyrillic text, where the U and the R have been transposed in the word "krone," so that the word appears as "kyrhe" instead of "kryhe." But as the Croatian and Slovene text in the overprint is in order, and the notes themselves are good, the Ministry has decided to issue them for circulation, and they are to be accepted as legal tender.

In the forthcoming negotiations for a commercial treaty between Italy and Yugoslavia the latter kingdom will be represented by Dr. Michael Popovich, a former Minister of Finance; by Dr. Ante Trumbich, former Minister of Foreign Affairs; and Dr. Milan Todorovich, from the Ministry of Commerce.

A project has been completed by the Ministry of Public Works for the erection of a main electrical power station at Kostolatz to supply Belgrade and the whole of the area with light and power. The estimates for the central station and eight sub-stations provide for six million dinars, which was estimated for in last year's Budget. Work upon the station will commence in June, and the plant is to be completed by September, 1922.

The Government has decided to found an agrarian bank with a capital of 10,000,000 dinars to afford financial help to the agricultural associations. It has also been resolved to increase the pensions to war invalids, and to pay them in dinars throughout the country.

ROUMANIA.

BUCHAREST, March 29.

Fire at Flour Mill.

A very destructive fire broke out last night in a large flour mill which had just been sold by the bank Mar-moroch Blank for the sum of twelve million lei. The building was completely destroyed, with all its machinery and some twenty waggons of flour and an equal quantity of bran. The damage is estimated at ten million lei. The Fire Brigade, being very imperfectly equipped, were quite unable to quench the flames, though they succeeded in preventing their taking a hold on the neighbouring buildings. Great praise has been given to the Boy Scouts, who saved the archives and other valuables.

Export of Railway Sleepers.

A special commission charged with the control of the export of railway sleepers has come to the following decisions, published in the *Moniteur Official*:—1. Owners of beech sleepers wishing to obtain an export permit in the proportion of 60 per cent. must give proof that they have delivered 40 per cent. of the exportable quantity to the head office of the State Railways at a price of 20 lei each, departure station. 2. Owners of oak sleepers wishing to obtain an export permit in a proportion of 50 per cent. must give proof that they have delivered to the head office of the State Railways sleepers equal to 50 per cent. of the quantity exported and at the following prices:—(a) Sleepers of 1st class (7 to the cubic metre) at 29 lei each, departure station; (b) sleepers of 2nd class (9 to the cubic metre) at 25 lei each, departure station; (c) sleepers of 3rd class (14 to the cubic metre), at 18 lei each, departure station.

An Economic Congress.

A congress of traders from the new provinces is at present holding meetings in Bucharest, and is engaged in drawing up a scheme of proposals to be submitted to the Government for the improvement of trade conditions. Their desiderata include an import tax on articles manufactured in the country, the reduction or complete abolition of export taxes, and the abandonment of import taxes on machines which cannot be manufactured in Roumania.

Visit of Mayor of Lyons.

During the past week Bucharest has been entertaining the Mayor of Lyons, M. Herriot, who, before his departure, gave a donation of 500 francs for the war orphans. The Lyons Fair, which is still proceeding, has awakened a good deal of interest in commercial circles here, and delegates from the Ministry of Industry and Commerce have visited it. M. Herriot gave two public lectures on "The Spirit of France," which were attended by many notabilities of the city. It is rumoured in the Press that he had several interviews with Government officials with a view to raising a loan in France.

Miscellaneous.

M. Trancu-Jassy, Minister of Labour, will bring in a Bill this week for the suppression of vagabondage and begging, and the founding of homes for boys with criminal propensities, and labour colonies. This is a much-needed measure, and will doubtless receive support from most quarters.

CYPRUS.

NICOSIA (undated).

Unfavourable Harvest Outlook.

The harvest prospects are not so good as they were. Rain is badly required, and if it does not fall shortly the barley harvest will be considerably less than was expected.

Live Stock Show.

The Agricultural Department held a ram show at Exomitochi village on the 22nd, which created considerable interest amongst the shepherds in the Messoria; also a sale of pure bred middle white pigs and white Leghorn cockerels from the Government stud farm at Athalassa.

ANGLO-PERSIAN OIL DIVIDENDS.

In the House of Commons on April 6 Mr. Wise asked the Chancellor of the Exchequer if he would state the amount the British Government has invested in the Anglo-Persian Oil Company and the percentage of the Ordinary dividends since 1913.

Commander Hilton-Young (Secretary to the Treasury): The amount of cash invested is £4,250,000. The dividends on Ordinary shares have been as follows:—For the year to March 31, 1917 (the first dividend paid), 6 per cent., less tax; year to March 31, 1918, 8 per cent., tax free; 1919, 10 per cent., tax free; 1920, 20 per cent., less tax.

The Banca Commerciale Italiana and Romana, of Bucharest, has opened a branch at Galatz.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Bulgaria.

Creosote, etc.—The Bulgarian Ministry of Railways invites tenders for 1,000 tons of creosote and 50 tons of chloride of zinc. May 9.

Egypt.

School Supplies.—The Department of Overseas Trade has received from H.M. Commercial Agent for Egypt particulars of the requirements of the Egyptian Ministry of Education for the year 1921-1922. These requirements comprise various descriptions of school furniture, carpets, oilcloth, safes, flags, iron pegs, rubber hose, ropes, wire, brass nozzles, etc. Specifications, quantities, and conditions of tender may be inspected in the Enquiry Room, Department of Overseas Trade, 35, Old Queen Street, S.W.1. Tenders have to be submitted to the Stores Department, Ministry of Education, Sharia el Insha, Cairo, not later than April 23.

Canvas, Hides, Nainsook, Cloth.—The Egyptian War Department invite tenders for the supply of canvas, W.P., chocolate colour; hides (collar and bridle), and basils. Tenders due on April 22. 37,500 yards of cotton nainsook; 400 yards of dark blue artillery cloth. Tenders due April 23. Samples may be seen at the Office of the Inspecting Engineer to the Egyptian Government, Queen Anne's Chambers, Broadway, Westminster, S.W.1.

Globes, Etc.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of glass globes, candles, and mats required for the Hejaz. April 25.

Millboard.—The Controller of Printing and Stationery, Old Ismailia Palace, Sharia Qasr el Aini, Cairo, invites tenders for the supply of 11,000 kilos of millboard. May 19.

Roumania.

Tinned Meat.—The Roumanian Ministry of War is inviting quotations for the supply of four million rations of tinned meat in tins of 400 grammes each. The meat should be of 1921 production if possible. Quotations should be addressed to "Ministère de la Guerre, 7^{ème} Direction Intendance, Rue Jules Michelet Nr. 28, Bucharest." Full particulars regarding conditions of manufacture, year of preparation, price, and proposed method of payment should be given, and it should also be stated whether credit facilities will be given. Particulars may be obtained on application to the Department of Overseas Trade, 35, Old Queen Street, S.W.1.

Yugoslavia.

Cigarette Paper.—Tenders are invited by the Bureau of the State Tobacco Monopoly of Yugoslavia for the supply of 13,750 reams of cigarette paper, each ream of 1,000 sheets of 430/730mm., weight per square metre 14.15 grams, percentage of ash 5 per cent., breaking point 5,000 metres, made of first-class materials. Tenders must be made before 11 a.m. on April 25. Details of the contract may be obtained from the Banque Franco-Serbe (London Agency), 30, Coleman Street, E.C.2.

Cotton Cloth.—The Army Clothing Department (Ekonomsko Odeljenje), Donji Grad, Belgrade, invites tenders for the supply of:—1,000,000 metres of cotton cloth ("American") (unbleached) for shirts, etc.; 1,000,000 metres of cotton cloth ("American") (unbleached) for sheets; 7,000,000 metres of cotton cloth for straw mattress covers. A deposit of 10 per cent. for Yugoslav subjects and 20 per cent. for foreigners must be made before the tenders are opened. Each offer must bear a 10 dinar duty stamp. All particulars may be obtained upon application to the Department of Overseas Trade (Textile Section), 35, Old Queen Street, Westminster, S.W.1. April 25.

TENDERS FOR GREEK ARMY REQUIREMENTS.

A decree concerning the presentation of tenders for the requirements of the Greek Army was published in a recent issue of the Greek Government *Gazette*. It states that military tenders are divided into three categories: (1) General tenders concerning the annual supplies for the army, (2) particular tenders for the maintenance of the army, and (3) extraordinary tenders for unforeseen requirements. All tenders will be published in the Government *Gazette* and in daily newspapers for three consecutive days, at least 30-40 days before the adjudication for general tenders, and 14-25 days for particular tenders. In the case of extraordinary tenders the question of adjudication is left to the discretion of the Ministry of War. Where samples have to be produced by tenderers they must be delivered to the Military Department at least two days before the adjudication. A tender made after the end of the adjudication, and prior to the approval of the Minister, is only acceptable if the tenderer declares in writing that his offer is a firm one.

The traffic receipts of the Suez Canal from March 25 to 31 amounted to 3,130,000 francs, against 3,120,000 francs for the corresponding period last year.

The Yugoslav Government has prohibited all exportation to all countries.

An extraordinary general meeting of the Steaua Romana Company is to be held at Bucharest on April 25, when proposals will be put forward for the increase of the capital from 300 to 310 million lei.

Speed up your -Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing:—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from 1½" diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes:—

½" to 1½" fitted with No. 2 and No. 3 Morse Taper Shank.

1½" to 3½" fitted with No. 3 and No. 4 Morse Taper Shank.

Full particulars upon application to:—

THE EGYPTIAN BUDGET. UNCERTAIN ECONOMIC OUTLOOK.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, March 27.

The financial authorities have had considerable difficulty in framing the estimates for the new financial year, owing to the depressed nature of the local economic situation and the uncertainty of the outlook. The budget for 1921-1922, which the Council of Ministers approved at its sitting to-day, indicates clearly how the State finances are being affected.

Revenue is fixed at ££36,701,000 and expenditure at ££38,682,000, the estimated deficit of ££1,981,000 being provided for by a draft on the general reserve. Compared with 1920-1921, these figures show a falling off of ££3,570,000 in revenue, and ££1,589,000 in expenditure, while in the previous budget the two sides of the account balanced.

The diminution in revenue is in reality greater than appears by comparison with the 1920-1921 totals, since on the receipt side is included an amount of ££4,123,000 from the sales of wheat, flour, meat, etc., which the Government has been purchasing for the local population. Also, owing to the increase in the tobacco tariff, an extra ££800,000 is expected under this head, so that the falling off in revenue is in reality in the neighbourhood of ££8,500,000.

As regards the expenditure, an amount of ££4,709,000 is provided for the cost of the flour and other articles of first necessity, the proceeds of which are credited under receipts, as mentioned above. This represents an increase of ££2,709,000 compared with the credit provided in the preceding year. In addition, a sum of ££650,000 is included for the settlement of claims arising out of the 1919 events. This item is really the carry-forward of the balance left unexpended out of the ££954,000 provided under this head in the preceding year, and in consequence it will be more correct to say that expenditure has been reduced by ££3,993,000. (Incidentally, it transpires from these figures that the loss on the Government purchase and sale of flour, etc., will be in the neighbourhood of ££3,000,000.)

The Finance Committee, in its note on the budget, points out that the decrease in expenditure is due in a certain measure to the fall in the cost of materials, etc., but that the main cause is the drastic cutting down of the departmental budgets. If it had been possible, further reductions would have been made in consequence of the considerable diminution in receipts which may be expected as a result of the fall in the price of cotton; but, as the committee points out, the transition from a year of plenty to a year of want is not easy, especially as the important new works started in 1920-1921 must be carried out, and no reduction in that respect would have been justifiable.

No provision has been made in the new budget for the adoption of the recommendations of the Commission which is studying the re-classification of the Government cadre, as that Commission has not yet reported and the extra cost of its recommendations have not yet been calculated. It is therefore probable that the draft on the general reserve will have to be increased in order to meet this extra charge.

Coming now to details, the main items worthy of note on the revenue side are:—Customs: The total diminution is ££2,421,000. Import dues are expected to fall off by ££2,057,000, owing to the decrease in the purchasing power of the country; export dues are estimated at ££693,000 less, for although the holding up of cotton during the past year cannot fail to increase arrivals in Alexandria and compensate for the smaller area cultivated in 1921, the very much lower price will considerably affect the total collected in dues. If, as mentioned above, the tobacco tariff and certain quay dues had not been raised the reduction in Customs receipts would have been over ££3,000,000.

Railway receipts are expected to be ££280,000 less, owing to the decrease in passenger and goods traffic. On the other hand, Post Office receipts are estimated at ££105,000 more, due to the recent raising of the foreign postage and development of the service. State domains are expected to produce ££536,000 less, owing to the fall in the price of cotton and other agricultural commodities, while interest on funds is fixed at ££1,003,000 less, due to the contraction in the note issue and the decrease in interest on investments owing to the sale of a portion of the stocks in which the reserve is invested. Extraordinary receipts, which include sale of land, are fixed at ££526,000, as against ££4,596,000 in the preceding year. The decrease is due to the fact that it is not anticipated that there will be much demand for land during the coming year.

On the expenditure side, in addition to the two items mentioned above, the most noteworthy differences are:—Under Ministry of Finance there is an increase of ££262,365 under Central Administration due to the purchase of the Koubbeh Palace from the ex-Khedive's estate at a price of ££135,000, and to the provision of a credit of ££99,000 for

the completion of the oil refinery at Suez and the continuation of the geological survey. Under the Mines Department a sum of ££90,500 is also provided for oil-boring experiments. The Civil List of the Sultan shows a net increase of ££157,979, a sum of ££230,000 is provided for the settlement of the repairs to the Sultania yacht "Mahrousa," and one of ££55,500 for further repairs in the various palaces. Under Ghaffirs an increase of ££255,598 is provided. This may be considered to be set off by an increase of ££214,000 in the receipts estimated for the current year, and under War Office there is an increase of ££207,018, due mainly to the recent improvement in the rates of pay.

The main decreases in expenditure are under irrigation, Cairo Tanzim, railways, ports and lights, and indemnities for increased cost of living. Under irrigation there is an increase of ££100,269 under ordinary expenditure, but a decrease of ££550,705 under new works. The latter include ££400,000 for the White Nile reservoir and ££146,000 for work at Abukir. Under railways the decrease amounts to ££2,955,680. This is due to the fact that there is a large stock of coal and material which has been paid for in previous years. The credit for the railways includes an amount of ££1,099,500 for the purchase and repair of rolling stock, etc., but this credit will only just be sufficient for carrying on, and will only permit in a very small degree the undertaking of the arrears of work which had accumulated during the war. The reduction in the indemnities for increased cost of living is due to the recent cutting off of one-third of the war gratuity granted to officials.

With regard to the draft on the general reserve, this is not after all surprising. In a certain measure it is caused by extraordinary expenditure due to the political and the world economic situation. In addition, in the ordinary expenditure are included such items as ££1,099,500 for purchase and repair of rolling stock on the railways, work which should have been done in the war years when ample credits for such expenditure were provided. The credits were not used owing to the difficulty in obtaining the necessary material, and the non-spending of these amounts on repair and upkeep, which has been estimated to amount to approximately ££7,000,000, has meant that surpluses resulted in the war years, and went to inflate the reserve, which is now being called upon to meet extra expenditure in this respect, and drafts on which are, in the circumstances, fully justified, and in fact are what one would have expected. The outlook at the present moment, it is true, is not in regard to the future promising, but there is really no just cause for pessimism, and if only the local political situation can be satisfactorily settled so that all energies can be concentrated on constructive and remunerative work we shall soon find that the country has righted itself, for at bottom it is sound, and its rich natural resources are undamaged.

BANK OF ROUMANIA.

On and after April 18 the address of the Bank of Roumania, Ltd., will be 17, Tokenhouse Yard, Lothbury, E.C.2. The telephone numbers and telegraphic address of the bank will not be changed.

The Egyptian Government has issued a decree fixing the Customs duties on coal and frozen meat at 8 per cent. *ad valorem*, on timber at 10 per cent. *ad valorem*, and on benzine and mineral oil for lubrication at 15 per cent. *ad valorem*.

The directors of the Peninsular and Oriental Steam Navigation Co. announce a dividend at the rate of 5 per cent. per annum on the preferred stock, less income tax, and an interim dividend at the rate of 12 per cent. per annum on the deferred stock of the company, free of income-tax, for the half-year ended March 31 last. Warrants will be posted on May 18.

ENGINEERING.

Motor Road Races.

It is now practically certain that the Tourist Trophy races for all classes of motor-cars will be held in the Isle of Man next year, in addition to a number of other representative and valuable trials. It appears that a certain amount of misapprehension exists with regard to the attitude of the Society of Motor Manufacturers and Traders on the subject of motor-car road races and trials, and having been in correspondence with the society on the subject I am able to say that early last year the society considered the question of road events for 1921. A large number of British car manufacturers expressed the view that any such events would be undesirable in the then state of the industry, and a special meeting of manufacturers and importers was afterwards convened, when a large majority were of opinion that no such event was desirable for this year. More recently the question again arose, and a further meeting, which I believe was thoroughly representative, came to a similar decision. This second meeting further expressed the opinion that the society should take early steps with regard to road events for 1922. Consequently the society immediately got into touch with the Royal Automobile and the Royal Scottish Automobile Clubs with a view to arranging a comprehensive programme of road events next year which should cater for all classes of motor-cars. Considerable progress has already been made in this direction, and further developments will be watched with interest both by the trade and the motoring public.

A New Power Saw.

A new pattern of power-driven hack saw has recently been introduced by Messrs. Alfred Herbert, Ltd., of Coventry, which presents a number of novel and interesting features. It is claimed to be the first machine of its kind to be fitted with an all-gear drive and a single pulley drive, the nearest approach to this having been that of certain American designers, who have supplied a separate gear-box as an extra attachment when specially desired. In the new British production, which is known as the "Novel," the three-speed gear is an integral part of the body of the machine.

From a description supplied, it appears that steel gears, running in an oil bath, are filled and are immediately accessible by merely lifting the cover of the gear-box. The pulley speed is 180 revolutions per minute, and the gears are so proportioned that speeds of 125, 90, and 60 strokes per minute are available at will. This range is ample to enable the machine to deal with every kind of metal from cast-iron and tool or mild steel to bronze, copper, or ordinary yellow brass. A machine of this kind would be found invaluable in a stores or a general engineer's workshop where a variety of materials have to be dealt with in the day's work. It would also be a valuable adjunct to, a repair shop wherein all classes of work are carried out.

Cutting is effected, as usual, on the "draw" stroke and by means of a simple clutch arrangement, which grips a square bar attached to the saw frame; the blade is lifted clear of the work on the return stroke, thus preventing rubbing, loss of power by friction, and undue wear of the teeth. The clutch is of the simplest possible design, and has no teeth to wear, and so cannot easily get out of adjustment or fail to carry out its work. As is usual in this class of tool, the feed is by gravity, and a means is provided whereby additional weight can be brought to bear on the blade when necessary.

As regards the general design, the base of the machine forms a tank, in which the used lubricating suds collect and from which they are driven back by means of a pump to the point of contact between the saw and the work. The pump is of the well-known plunger type, which has been proved to be thoroughly reliable and satisfactory in action. In fact, exhaustive tests of the most practical character have proved its superiority to most forms of geared or shutter pumps, one of the reasons for this being that it is able to deal with a lubricant which contains a good deal of dirt and metal cuttings held in suspension. The drive of the pump is so arranged that it stops and starts by the mere action of turning on and turning off the tap regulating the supply of lubricant to the work, and the pressure cannot by any means be increased in the pipes beyond that required to give an ample and sufficient supply of suds.

The work is held in a vice of special design, which has a loose jaw swivelling through an angle of 45 degrees. This permits of tapering or irregular work being held firmly without risk of slipping, and as the fast jaw can be set to any required angle with the saw blade between 90 and 45 degrees, it is possible for work to be cut at practically any angle.

The machine is started by means of a friction clutch, and as soon as the cut has reached the required depth it is thrown out of action and stopped automatically. Only half

horse-power is required to drive the machine, and it may be of interest to mention that it can be adjusted to take blades of 10, 12, or 14 inches in length.

Slag for Concrete.

The increased use of concrete in construction work has caused a good deal of attention to be paid to the question of suitable material, or "aggregate," for mixing with the cement. Good sharp, coarse gravel is not always obtainable, and whilst the use of ground blast furnace slag has been suggested, it has not as yet come into considerable favour by reason of the suspicion with which any new and apparently untested material is regarded. A number of tests, however, have recently been carried out on the value of slags for both fine and coarse aggregates, and these go to show that concrete so made is about equal in strength to that made with ordinary coarse river sand and gravel. The conclusions arrived at are that crushed slag as a coarse aggregate produces concrete of as high a quality as that made with gravel. The tests were not sufficiently extensive to determine the durability of the slag concrete, but to the extent of the tests there were no signs of disintegration due to the residue of sulphur in the slag. It is interesting to note that slag sand, by reason of its lack of fine material, does not produce an easily workable concrete when used as a fine aggregate. If it is necessary to use it, through the absence of a better material, it may be improved by mixing it with a certain proportion of fine sea sand or slaked lime; but, speaking generally, it would seem better to avoid the use of finely crushed slag when any other suitable material is available.

The British Engineering Standards Association has published a revised edition of its specification for Portland cement which contains one or two marked additions to, or alterations from, previous editions. The association informs me that the following are the principal modifications:—

(1) A paragraph has been inserted making it clear that no cement to which slag has been added, or which is a mixture of Portland cement and slag, will comply with the specification.

(2) Provision has been made for sampling cement when stored in deep silos.

(3) The specific gravity test has been eliminated.

(4) The aeration of cement before testing for setting time has been dispensed with.

(5) A provision has been inserted permitting the deduction from the total lime content of the proportion of lime necessary to combine with the sulphuric anhydride present when calculating the lime ratio.

(6) The medium and slow-setting cements have been replaced by a grade having a minimum initial setting time of 20 minutes, and a maximum final setting time of 10 hours. The quick-setting cement which formed one of the three standard grades is retained in the specification, but is only to be supplied if specially required. A minimum final setting time is not now specified.

(7) The clause relating to the supply by the vendor, free of cost, of a certificate that the cement has been tested and analysed and complies in all respects with the specification, has been modified to provide that if such a certificate is required it must be so specified at the time of purchase.

Jig and Tool Making.

It is not generally known in engineering circles that Messrs. C. A. Vandervell and Co., Ltd., the well-known electrical engineers of Acton, are in a position to supply jigs, tools and special fixtures of the highest accuracy and quality for all branches of engineering, their factory at Brighton being one of the best equipped in the country for this class of work. Inquiries should be addressed to the company at Acton.

Miscellaneous.

During the four days of the Easter holidays—Good Friday to Easter Monday—the Automobile Association's road patrols and mechanical "first-aid" machines assisted motorists in connection with fifty-three accidents (one of which was fatal). Over twelve hundred motorists were assisted in cases of mechanical breakdown and minor roadside troubles.

Under the new Roads Act endorsements which were compulsory under the Motor Car Act are now made discretionary on the part of magistrates, and motorists who have not had any endorsements on their licences for three years are entitled to have the old endorsements cancelled, and have clean licences. Motorists who are in this latter position are invited to communicate with the Automobile Association for advice in obtaining cancellation of old endorsements.

The Dunlop Rubber Company have been advised that Dunlop tyres exclusively were fitted to the vehicles which were used by H.R.H. the Duke of Connaught during his recent tour in India. In consequence of the industrial situation the annual dinner of the London Chamber of Commerce arranged for April 12 was postponed. Places allotted will be reserved on behalf of the holders

LANCASHIRE COTTON.

The Labour Situation.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

All other matters in the market during the past week have been overclouded by the industrial crisis, and any untoward developments that have occurred have been due purely to the coal strike. It is no use bemoaning the fact that had the labour situation not grown so critical a substantial business would have been done, and although at the moment of writing the position is extremely serious, the tone of the market is fairly healthy, and inquiry shows no signs of diminishing. It is only natural that progress between buyers and sellers has been checked by the uncertainty as to future production. Cloth manufacturers are very much disturbed at the industrial deadlock, and many have had to lose orders through insisting on the insertion of a strike clause, but some firms have taken the risk and extended the delivery time an extra month. With regard to cloth, only a miscellaneous business has been done for the outlets of the Near East, but it is reported that the position in Egypt and Persia is gradually improving. Isolated sales have taken place for the Levant and Turkey. The Egyptian yarn section has experienced a slight falling off in demand, but prices, taking into consideration the events of the past week, have ruled fairly steady. Cloth demand for India has tended to increase, and fair lines of dhooties and other light cloths have been booked for Calcutta. Shippers to China are slow in raising rates, and business has been patchy. In American yarns for home use the turnover has been smaller than last week. Taking the situation all round, the position of the cotton trade can be termed as improving, but if the Triple Alliance decides to strike, trade will be forced to a standstill.

LIVERPOOL COTTON REPORT.

Messrs. Reynold and Gibson, in their report for the week ended April 7, state:—Considering the gravity of the industrial situation in this country at the moment the week closes on a very steady market. There is quite a good undertone, and it is becoming increasingly evident that spinners are beginning seriously to consider the replenishment of stocks, which for some time now they have allowed to run down to a bare working minimum. The present coal crisis has come at a most unfortunate time, and if it proves of long duration, will undoubtedly have the effect of once again deterring the ultra cautious spinner from entering the market. It is extremely difficult to forecast the immediate turn of events, as the reports of the negotiations vary so much from hour to hour, but as we write the outlook is a gloomy one. If, however, some unexpected and favourable development should transpire, we consider it more than likely that a brisk turn for the better in our market would take place almost at once. Sentiment here is more than ever leaning to the "bull" side, in spite of the difficult times through which we are passing. The inquiry, which has been of a general character, has been fairly well maintained, one rather noticeable feature being the renewed interest shown in Tokar cotton, although no actual sales have been reported. Prices still show an advancing tendency. C.i.f. business continues to show a slight improvement, but Manchester reports, after making a gallant effort to maintain their recent encouraging tone, have been forced to give way before the weight of outside circumstances, and to-day's advices are to the effect that business in that quarter is practically at a standstill. The steadiness of the Alexandria market is accounted for by a cable we received stating that the Egyptian Government was recently buying considerable quantities of spot cotton in the open market. Sales for the week, 1,000 bales. Fine Sakel-larides is raised 50 points; other quotations are unchanged. F.G.F. Sakel 17.00d.

An exhibition of Greek products was organised recently at Danzig by the Greek Consul there. The exhibits included the various kinds of tobacco grown in the country, figs, wines, and a number of manufactures.

LONDON PRODUCE REPORT.

Dried Fruit.—Currants have been in fair request during the week, and rates are generally higher. There has been a strong demand for Greek sultanias. Figs are in very short supply, and prices are high.

Sugar.—The home refined has been in large request at the official prices. West Indian crystallised has come to business at 60s. to 66s., while American granulated is quoted at 68s. to 68s. 3d.

Coffee.—The futures market has been steady. Quotations are:—May, 38s. 6d.; July, 39s. 6d.; September, 40s. 6d.; December, 41s. 6d.

Oilseeds.—Prices have declined all along the line, with the exception of Indian linseed, which is unchanged at 16s. 6d. Rapeseed is lower with Toria at 17s. 6d., bold Ferozepore at 16s. 6d., and brown Cawnpore at 14s., which is a decline of 6d. in each case. Indian cottonseed is 9d. lower at 9s., and Egyptian black at 11s. 3d. has shed 6d.

Seed Oils.—Prices have in most cases shown a downward tendency. Linseed oil has lost 1s. 9d. at 24s. 6d. Rape oil is unchanged at 46s. Cotton oil has been quiet. The refined variety is unaltered at 38s., but Egyptian crude is 2s. down at 28s. Turpentine has lost 4s. at 44s. 6d.

CURRENT PRICES.

Hides and Skins.—Ox and Heifer (first), 90 lb. and up, 6½d. lb.; 80 to 89 lb., 6¼d. lb.; 70 to 79 lb., 6¼d. lb.; 60 to 69 lb., 5½d. lb.; 59 lb. and under, 3½d. lb.; (second), 90 lb. and up, 4½d. lb.; 80 to 89 lb., 4¼d. lb.; 70 to 79 lb., 4¼d. lb.; 60 to 69 lb., 3½d. lb.; 59 lb. and under, 2½d. lb. Cows (first), 60 lb. and up, 3½d. lb.; 59 lb. and under, 3½d. lb.; (second), 60 lb. and up, 2½d. lb.; 59 lb. and under, 2½d. lb. Bulls (first), 2½d. lb.; (second), 1½d. lb. Casualty Hides.—Kips, first, 3½d. lb.; second, 2½d. lb.; third, 2d. lb. Calcutta Market prices in rupees per 20 lb.:—Arsenic hides (cows):—Agras, 9 to 12; Durbhargas, 5 to 6; Patnas, 4 to 5; salted cows, 2.8 to 5; arsenic hides (buffalo), 2.8 to 6.8. Skins:—Calf, 6 to 8 per 20 lb.; goat, 130 to 160 per 100 pieces.

General Produce.—Bacon, 172s. 6d. cwt.; butter, 241s. cwt.; cheese, 167s. cwt.; chillies, 107s. 6d. cwt.; eggs, 19s. 6d. per 120; cloves (Zanzibar), 9½d. lb.; cocoa (Ceylon, good to fine), 79s. cwt.; coffee (Costa Rica), 99s. cwt.; coffee (East India, bold), 113s. cwt.; coffee (Mocha longberry), 93s. 6d. cwt.; coffee (Santos superior), 49s. 9d. cwt.; ginger (washed Cochian), 37s. 6d. cwt.; namis, 165s. cwt.; lard, 88s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore, black), 3½d. lb.; pepper (Muntok, white), 8d. lb.; raisins (Valencia), 117s. 6d. cwt.; currants (Vostizza), 90s. 6d. cwt.; sultanias (Smyrna), 126s. 6d. cwt.; sugar (granulated), 68s. 7½d. cwt.; sugar (No. 1 cubes), 73s. cwt.; sugar (white Java), 67s. 6d. cwt.; sugar (white Mauritius), 66s. 6d. cwt.; sugar (West India crystallised), 63s. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 22s. cwt.; sago flour, 12s. 9d. cwt.; rice (Rangoon, No. 2), 17s. 6d. cwt.; rice (bran Rangoon), 25 5s. ton; tea (Indian), 6½d. lb.; tea (Ceylon), 6½d. lb.; tea (Java), 2½d. lb.; wheat (Australian), 85s. 6d. qr.; wheat (English white), 93s. qr.; wheat (La Plata), 77s. 9d. qr.

Chemicals.—Acids: Boric, 71s. cwt.; oxalic, 9½d. lb.; citric 2s. 2½d. lb.; tartaric, 1s. 3½d. lb.; ammonia sulphate, £24 11s. 3d. ton; arsenic (white powdered), £47 10s. ton; benzole (standard), 2s. 11½d. lb.; bleaching powder (35 per cent.), £20 10s. ton; borax crystals, 34s. 6d. cwt.; cream of tartar, 132s. 6d. cwt. Potassium: Bichromate, 1s. 0½d. lb.; chlorate, 6½d. lb.; caustic, £47 10s. ton; nitrate, £54 ton; permanganate, 1s. 10½d. lb.; prussiate yellow, 1s. 2½d. lb.; sulphate (90 per cent.), £27 10s. ton. Sodium: Crystals, 150s. ton; bi-carbonate, £10 15s. ton; bi-chromate, 7½d. lb.; alkali (58 per cent.), £9 5s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £22 5s. ton; hyposulphate, £25 ton; prussiate, 8½d. lb.; nitrate, £20 12s. 6d. ton; sulphate of copper, £34 10s. ton; sulphate of iron, 150s. ton; glycerine (crude, 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; lemon oil, 3s. 4½d. lb.; quinine, 3s. 5½d. oz.; red lead, £38 10s. ton; white dry lead, £41 15s. ton; white ground lead, £52 ton.

Metals.—Aluminium, £150 ton; antimony (English Regulus), £39 12s. 6d. ton; bismuth, 7s. 6d. lb.; copper (standard), £69 17s. 6d. ton; copper (electro), £73 10s. per ton; gold bars 104s. 8½d. oz.; iron (No. 3 Cleveland), 150s. ton; hematite (mixed number), 180s. ton; lead (soft foreign), £19 18s. 9d. ton; manganese Poti, 1s. 7½d. unit; molybdenite, 55s. unit; nickel, £200 ton; platinum, 340s. oz.; plumbago, £50 ton; quicksilver, £12 12s. 6d. bottle; silver bars, 32½d. oz.; spelter (G.O.B.), £24 15s. ton; tin (standard), £159 10s. ton; tin plates (20 by 14), 27s. box; wolfram, 12s. 9d. unit; zinc sheets, £37 ton.

Miscellaneous.—Cotton (American), 8.14d. lb.; linseed (La Plata), £15 2s. 6d. ton; rape (Toria), £17 10s. ton; soya beans, £11 13s. 9d. ton; palm kernels, £17 18s. 9d. ton. Oils: Linseed, £26 12s. 6d. ton; soya, £32 10s. ton; cotton (crude), £30 10s. ton; olive, £97 10s. ton; ground nut, £36 ton; palm, £36 5s. ton; rape (crude), £46 ton; petroleum, 2s. 3½d. gallon; turpentine, 49s. cwt. Rubber: Plantation (No. 1 Crepe), 1s. 0d. lb.; smoked sheet, 10½d. lb.; fine hard Para, 11d. per lb.

The traffic receipts of the Smyrna-Aidin Railway for the week ended March 26 amounted to £7,910.

DRIED FRUIT.

Messrs. J. C. Houghton and Co. report as follows for the week ending April 5:—

Currents.—The uncertainty as to what action the Government intended to take as to the disposal of the remainder of their stock has for some time had a most restraining influence on buyers. It had been realised for some time that the available supplies in the United Kingdom were considerably below the average, and as the stock remaining in Greece was of the smallest dimensions for many years, it was felt that, once the decision of the Government was known, a healthier state of affairs would result, as buyers had continued the policy they have been pursuing for the past few months—that of purchasing only for absolute requirements. As soon as it was known that the whole of their stock had been disposed of, the market took a change for the better, and the last ten days have witnessed an active demand showing an appreciable rise in values; more especially has it been noticeable in quarter-cases, bags so far not having benefited to the same extent. The Bosnian arrived with about 350 tons, which was quickly disposed of at full prices. The closing quotations are:—Pyrgos and Amalias, 62s. to 70s.; Patras, 66s. to 74s.; Zante, 72s. to 76s.; Gulf and Panarit, 72s. to 78s.; Vostizza, 84s. to 95s. Total arrivals from commencement of season to date, 18,900 tons. We understand, according to the statistics of the Greek Chamber of Commerce, that the exports to the United Kingdom totalled 46,318 tons, against 57,413 last year. This accounts, to a certain extent, for the small supplies now remaining in this country. Whereas, we understand, almost double the quantity they had last year was shipped to the United States this season.

Valencia Raisins.—Very little available. A few selected have been sold at 120s. and seedless at 85s. to 90s.

Sultanas.—As the depleted state of the stock of Smyrna fruit gradually dawned on the trade, it became evident that, with anything like a normal consumption, supplies would soon be exhausted, and with a better inquiry from the country the market took a different tone and prices steadily improved, and we closed the month with an advance of 10s. to 15s. over those prices ruling in February.

Afghans.—These have been in more request, and prices also show an advance. Reds have advanced from 85s. to 90s., and the yellow variety, some very sticky parcels, have been on offer and have sold from 95s. to 100s., and good dried quality 110s. to 114s. Greeks have also been in some request at 125s. to 130s. Quotations for Smyrnas are:—Ordinary quality, 115s.; fair quality, 120s.; good to fine, 125s. to 150s.

Figs.—Bags have been in active demand, and a good big business has been done round about 40s., and the small stock remaining is being held for 45s. A small consignment of skeleton cases ex Trentino were disposed of, 70s. layers, 60s. Protoben.

OPIUM MARKET REPORT.

Messrs. Barker Bros., Smyrna, report as follows for fortnight ended March 26:—Since our last report of March 12 the sales of opium on our market amount to twenty-three cases at 9s. 9d. to 11s. per lb. c.i.f., as to quality and strength. The exchange per pound sterling to-day for cheque on London stands at Ps.580, and 0.67 dollars for one Turkish pound of Ps.100. The arrivals are 1,285 cases, against 1,520 at same date last year, and our stock in first and second hands is now 1,222 cases.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on April 1 were as follows:—Agricultural Bank of Egypt, £4 17-32; Alexandria Water Co., Ltd., £6 11-16; Anglo-American Nile Steam, £3; Associated Cotton Ginners, £ 13-16; Banque d'Orient, Fr. 71½; Behera Ord., £E8 17-32; Behera Priv., £3 3-16; Bonded Stores, £10 9-32 ex; Brasseries d'Egypte, Priv., Fr. 120; Building Lands of Egypt, £ 21-32; Cassi di Sconto, Priv., Fr. 106; Ciments d'Egypte, Priv., Fr. 35; Ciments d'Egypte, Div., Fr. 23; Comptoir Fin et Com. d'Egypte, £1 1-32; Consolidated Land, £T6½; Credit Foncier Egyptien, Fr. 596; Credit Foncier Fondateur, Fr. 7,300 ex.; Credit Foncier 1886 Oblig., Fr. 338; Credit Foncier 1903 Oblig., Fr. 237; Credit Foncier 1911 Oblig., Fr. 228½; Crown Brewery Priv., Fr. 162; Crown Brewery Div., Fr. 130; Eaux du Caire Capital, Fr. 77; Eaux du Caire Jouissance, Fr. 107; Egypt and Levant S.S. Ord., 26s. 7½d.; Egyptian Delta Light Railways, £4½; Filature Nationale d'Egypte, £10 15-16; Gabbari Lands, £ 13-32; Immeubles d'Egypte Soc. An. des., £5½; Khedivial Mail S.S. Co., Pref., £2½; Khedivial Mail S.S. Co., Ord., 110s.; Kom. Ombo Ste. Ane. de Wadi, £5 7-16; Kom. Ombo Ste. Ane. Fondateur, £35; Land Bank of Egypt, Parts de Fond, £35; Lots Turcs, Fr. 46½; Menzaleh Canal Navigation, £T315; Nungovich Hotels, £7½; Rameh Railway, £1½; Salt and Soda, 28s.; Tram d'Alexandrie Priv., Fr. 43½; Tram d'Alexandrie Div., Fr. 60; Union Foncier d'Egypte, £2 9-16; Egypt Hotels, £2; Urbaines and Rurales Ste d'Entr., £3.

LEVANT MARKET REVIEW.

The following are further extracts taken from the market review of the National Bank of Turkey for February, the first portion of which appeared in our last week's issue:—

Flour and Cereals.—Flour imports during the month fell to the comparatively low figure of 3,750 tons, which arrived from America, Australia, and Egypt. Early in the month there was a distinct tendency towards a hardening in prices. In the third week, however, the Egyptian Government offered on the Alexandria market large surplus stocks of flour and wheat for immediate sale at prices 25/30 per cent. below the price of similar quality American flour. Prices immediately dropped here, and the market remains in a very disturbed state. Stocks in hand have fallen to about 5,500 tons, or sufficient to feed the population of Constantinople, estimated at 1,400,000, for twelve days.

Barley.—During the month only small quantities of Roumanian barley were imported, and these for local consumption and for Smyrna, at prices varying from Ps. 10½ to 8½ per oke. Re exports from Constantinople were small, as prices here and in Roumania were higher than those obtaining on the Continent and in the United Kingdom, where only 35s. per 400 lbs. was paid for March shipments. The market received a shock from Egypt when the Egyptian Government offered their surplus stocks of Roumanian barley c.i.f. Constantinople at a lower price than the cost in Roumania. The month closed with barley at Ps. 9-9½ per oke.

Sugar.—Arrivals during February amounted to about 2,500 tons, from America, Belgium, and Holland; of this, about 250 tons were re-exported to Batoum, and about 150 tons to Mersina. Prices declined during the month from £46 per ton c.i.f. to £41 per ton. The present stocks are small, but heavy arrivals of about 4,000 tons are expected during the next fortnight or so, and a consequent further decline in prices may be expected. Closing price: £41 per ton, c.i.f. Constantinople.

Canned Goods, etc.—With the continued financial stringency, the public continues to be unable to purchase largely, and the alimentary business suffers to a great extent. At the same time, inasmuch as food is a necessity, this branch of business has suffered perhaps less than any other by the world slump in prices. For the replenishment of stocks, new orders are placed at very low prices, which has caused a certain amount of anxiety to those who held large stocks before the slump commenced, and who have not yet liquidated their old stocks. Nevertheless, the market is so overstocked with some lines that no fresh orders are given abroad, despite the sharp cut in prices.

In the soap market it is estimated that there are sufficient stocks of "Sunlight" to last the population of Constantinople nearly two years. For new business large reductions have been made by certain manufacturers in their quotations for c.i.f. Constantinople; one well-known British firm is now offering at 40 per cent. below their price of about a month ago.

The demand for sardines, tinned milk, and fish in barrels is maintained. The shortage of hams is still noticeable, and there has been no reduction in the price, which is still about £T8 per oke.

Some difficulty is being experienced in replenishing stocks of whisky. There are many cheap and inferior brands on the market, most of them unsaleable; but the best known Scotch whiskies are practically impossible to obtain now.

Textiles, Dry Goods, etc.—The general tone of the market continues to be dull, February having brought no relief to the depression. There have been inquiries for spring and summer woollens, and also for cotton goods, but prospective buyers will buy only at greatly reduced prices, and very little business has resulted. Italian flannelettes are still being imported into Constantinople in place of British goods, due to the more favourable exchange of the Italian lira.

Coal.—There are still large stocks of coal here, although imports have been cut down to a minimum. Prices have fallen slightly with the reduction in the export price of Welsh coal to 57s. per ton f.o.b. Cardiff. American coal has followed suit. The export tax imposed by the Kemalist Government on all coal exported from the Heraclea coalfield has been reduced to £T1 per ton. Still a radical cut in prices is necessary before any business can be done in Turkish coal, which has earned a bad reputation for quality. For domestic requirements, Cardiff coal is now supplied at £T35 per ton at coal merchants' depots, or £T38 delivered.

Tobacco.—The tobacco trade suffers from the world-wide depression. Occasional inquiries are received, but merchants here refuse to sell at the low prices offered. The total exports during February were only 54,000 kilos, which compares very unfavourably with 1,100,000 kilos for February of last year. Parcels are still being exported from Kavalla, for which brand 40 drachmae per oke, or about 5s. 8d. per lb., is paid.

The traffic receipts of the Smyrna-Aidin Railway for the week ended April 2 amounted to £9,919.

The traffic receipts of the Egyptian Delta Light Railways for the week ended March 20 amounted to £E8,725, making the total for year £E472,594. For the corresponding periods of last year the receipts amounted to £E11,278 and £E383,491 respectively.

The phosphate exports of Algeria and Tunis last year amounted to 1,870,500 tons, 953,000 tons of which went to France, 400,000 to Italy, and 242,000 to Britain.

DIRECTORS' REPORT.

Presented at the Sixty-seventh Ordinary General Meeting, 8th April, 1921.

The Directors have now to submit to the Shareholders the Balance-Sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £849,601 9s. 11d., inclusive of £172,830 6s. 10d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £140,000. The amount now available is therefore £709,601 9s. 11d., and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum, together with a Bonus of Six shillings and three pence per share, making Twenty and a-quarter per cent. per annum for the whole year, free of Income-tax; to add £100,000 to the Reserve Fund, which will then stand at £3,600,000, to add £35,000 to the Officers' Superannuation Fund; to write off Premises Account £100,000, and to carry forward the balance of £209,601 9s. 11d. Interest on Instalments of New Capital (£1,000,000) and Premium (£500,000) from dates of payment to 31st December, 1920, at the rate of 6 per cent. per annum free of Income-tax has been paid. The New Shares will rank equally for dividend with the Old Shares as from the 1st January, 1921.

It is proposed that the Rt. Hon. Sir John Newell Jordan, G.C.I.E., K.C.B., K.C.M.G., already a provisional Member of the Board, be formally elected a Director.

Sir Duncan Carmichael, Sir Harry Goschen, K.B.E., and the Rt. Hon. Lord George Hamilton, G.O.S.I., the Directors who now retire by rotation, present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A., and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Friday, the 15th April.

By Order of the Court, A. S. HEWETT, Secretary.

COMPANY MEETINGS.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

Future Course of Eastern Trade.

Better Undertone.

The sixty-seventh ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held on April 8 at the bank's premises, 38, Bishopsgate, E.C., Sir Montagu Cornish Turner (the chairman) presiding.

The Chief Manager (Mr. W. E. Preston) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—Before moving the adoption of the report I should like to make a few remarks with regard to the business of the past year. When we met in this room at our last annual meeting, just twelve months ago, we were in the enjoyment of a period of great commercial activity. In many cases the demand for goods exceeded the supply, with the result that prices soared to record heights, wages rose by leaps and bounds and exceptional profits were made, only to be swallowed up by the insatiable demands of the tax-gatherer and the omnipresent rate collector. It was very evident that, with an unsettled world and a half-developed peace, this condition of feverish activity in trade and delusive prosperity could not last. We all felt that a decline in trade was inevitable, but few of us realised that the collapse would come with such lightning rapidity, or that the effect would be so deep and so widespread. Some people are inclined to attribute the great collapse to a particular cause, such, for instance, as the imposition of the 60 per cent excess profits tax. Others attribute it to the vagaries of exchange, or the attitude of labour in bringing about constant strikes. It is not quite fair or reasonable to attribute the disaster to any one particular cause. Several causes have come into play. The unsettled state of the world, financial disorder in Central Europe resulting in the absolute upset of foreign exchanges, lavish expenditure in arms and munitions and various other avenues of unproductive expenditure, and in this country especially the ill-advised action of labour in limiting the output to a point which rendered it impossible to compete with other nations where each individual was allowed to work to the utmost limit of his capacity without let or hindrance. Nor did we sufficiently appreciate the fact that the vast Russian Empire had temporarily disappeared from the world of civilisation; that France, Germany, and Italy could no longer participate as formerly in the trade of the world; in other words, that the purchasing power of civilised nations in Europe had dwindled to comparative insignificance. So it is that traders in this country and in America are overloaded with raw material or manufactured goods to dispose of, which will take some time, and must, I fear, entail serious losses.

Decline in Values.

As instances of depreciation in values I would quote the following:—

Cotton has declined from 29.90d. per pound on March 1, 1920, to 6.38d. per pound in March, 1921, a fall of 23.52d., showing a drop of 78 per cent.; jute from £70 per ton to £32 per ton, a fall of £38 per ton, equal to a drop of 54 per cent.; hemp from £76 per ton to £40 per ton, a fall of £36, equal to 47 per cent.; copra from £72 per ton to £32 per ton, a fall of £40, equal to 55 per cent.; wool shows a fall of 75 per cent.; linseed from £66 10s. to £18 per ton, a fall of £48 10s., equal to 68 per cent.; rapeseed from £51 to £15 5s. per ton, a fall of £35 15s., equal to 71 per cent.; rubber from 2s. 7d. per pound to 1s. 1d. for crepe, a fall of 1s. 6d., and from 2s. 7d. per pound to 11d. for Para, a fall of 1s. 7d., equal to a drop of from 50 per cent. to 62 per cent.; tin from £409 10s. to £159 10s. per ton, a fall of £250, equal to 61 per cent.; silk from 64s. to 20s. 3d. per pound, a fall of 43s. 9d.; shellac from 825s. to 300s. per cwt., a fall of 525s., equal to 63 per cent.; and hides and skins show a fall of from 60 per cent. to 75 per cent. Silver has fallen from 84d. per ounce in March, 1920, to 32d. per ounce in March, 1921, a fall of 61 per cent.

Eastern exchanges have dropped, as the following list will show:

T.T. SELLING RATE ON LONDON.

	March 1, 1920.		March 1, 1921.		Diff.		
Place.	s.	d.	s.	d.	s.	d.	p.c.
Calcutta	2	7½	1	3½	1	3½	50
Hongkong	5	7	2	4½	3	2½	57
Shanghai	8	7	3	2	5	5	63
Saigon	6	4	2	3½	4	0½	63
Manila	2	10	2	2½	0	7½	22

The serious decline in Indian and Chinese exchanges has in a measure accounted for the difficulty of the disposal of manufactured goods in the different markets, but in India the position has been aggravated by the failure of the south-west monsoon and the winter rains in the North of India, by political

troubles, and the very regrettable refusal of Indian importers to recognise the validity of contracts with European shippers. At many points stocks of goods in the East are not greatly excessive, and I shall be disappointed if the surplus stocks are not worked off within a measurable distance of time, but until this is effected shipments to the East should be discouraged and limited to bare necessities of trade.

The present low level of the rupee is the inevitable result of the temporary collapse of the Indian export market. On this side there are more stocks than we can at present dispose of in the case of tea, jute, cotton, hides, rubber, and hemp, and until these surplus stocks are worked off and prices in India are adjusted to prices on this side we can look for no great improvement in the export trade from India, nor in the appreciation of the rupee. This process of appreciation is likely to be slow unless some unexpected factor is introduced.

I am glad to see that the tea market has improved of late, but I can see no chance of a real and substantial improvement in this or other of our Eastern markets until the world has really settled down to a true and genuine peace basis and free and unrestricted trade prevails in and with all nations of the world.

Capital and Reserves.

As regards the report and balance-sheet which we ask you to accept to-day, you will notice that with the increased capital sanctioned at the special meeting held on October 9 last, and confirmed at a subsequent meeting, the capital of the bank now stands at £3,000,000, made up of 600,000 shares of £5 each, as against the old capital of £1,200,000, increased last year to £2,000,000, and the shares of a par value of £20. The increase of capital from £1,200,000 has been of invaluable assistance, enabling us to meet the requirements of trade generally, and especially of late, when the demands of our customers, many old and valued friends, have been somewhat larger than usual. In all cases we have endeavoured to meet legitimate trade demands as far as the resources of the bank have permitted.

The reserve fund now stands at £3,500,000, and it should be our object gradually to increase this figure as opportunity occurs. We have also thought it necessary to set aside £100,000 on premises account, in view of our building engagements where it has been found necessary either to rebuild or to purchase new sites and build to meet the requirements of the business and the staff. You will notice that interest has been paid on instalments of new capital up to December 31 last, and the new shares ranked for dividend as from January 1 last.

Turning to the figures of our balance-sheet, it is exceedingly satisfactory to note that, in spite of the severe drop in prices to which I have referred, and also to the equally severe fall in the Eastern exchanges, our total figures on either side of our account should amount to the satisfactory item of £70,932,744 15s. 10d., against £68,741,695 14s. 8d. at December 31, 1919. While our current accounts show a small shortage of £366,723 11s. 6d., our fixed deposits show a very pleasing increase of £1,136,886 15s. 9d., which would point to current account money being transferred from a call to a fixed basis, which is very gratifying indeed at a period such as the present. Our liability on loans payable, it will be noticed, has been reduced from £2,429,028 0s. 4d. to £1,020,000. The reduction under bills payable to £4,367,612 3s. 3d. from £6,681,709 17s. 3d. is, of course, entirely due to the lower rates of exchanges now ruling.

Criticism has in certain quarters been made that banks generally have not played their part in financing this country's trade to the full extent of their resources. I think that in our case a comparison of our figures under the headings of "Acceptances on account of customers" and "Bills discounted and loans"—namely, £3,720,598 0s. 1d. and £28,585,930 18s. 10d. respectively, against our 1919 figures of £1,679,929 0s. 9d. and

Insurances effected through the Bank's Brokers.

Applications for Terms invited.

£17,561,394 2s. 8d., will convince most that we at least have done all that could reasonably have been expected of us in this particular respect. And, while rendering this great assistance to the trade of our country, we have been careful to see to it that the percentage of our cash resources to current account liabilities—over 30 per cent.—has not been allowed to be unduly entrenched upon, in addition to which our other liquid resources, in the shape of Government securities and bills of exchange, including Treasury bills, aggregated £24,212,563 18s.

Better Outlook.

As regards the future course of Eastern trade, it is dangerous even in normal times to attempt to forecast the course of events, and to essay to do so now, under present abnormal world conditions, would be more dangerous still; but it may not be imprudent to state that, judged from cables reaching us this week from our respective agencies and branches, the outlook in the East is much happier, and that indications from the several spheres point to a distinctly better undertone, which we hope will in course of time develop.

The satisfactory results shown in the report are indeed gratifying, and we must congratulate Mr. Preston and his colleagues on the very successful result of his and their indefatigable labours. Nor do we forget to appreciate the efforts of the managers and the staff both at home and abroad. Mr. T. H. Whitehead, who for many years filled the important position of chief manager in this bank, has retired after forty-six years' arduous and successful service. He left with the good wishes of a very large circle of friends, of his late colleagues, and of the board. We hope he may enjoy many happy and restful years in the retirement he has so well earned. In Mr. W. E. Preston, who has succeeded Mr. Whitehead, we are fortunate in having a very able and competent chief, in whom the board and all who know him have the fullest confidence. Under his management and that of his colleagues, Mr. Bruce and Mr. Miller, we have no fear as to the future prosperity of the bank.

You will be asked to-day to confirm the election of Sir John Jordan, G.C.I.E., to a seat on the Board. Sir John has had an extraordinary period of service in China from 1876 to 1920, and for the past fourteen years filled the position of British Envoy Extraordinary and Minister Plenipotentiary with great honour to himself and with great advantage to the British Empire. By his tact, his diplomacy and his genial nature Sir John Jordan has won a name for himself among official and non-official Chinese which will never be forgotten. With these remarks I beg to move the following resolution, namely:—“That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted.” I will ask Sir Alfred Dent to second that resolution.

Sir Alfred Dent, K.C.M.G., seconded the motion, which was carried unanimously.

Dividend and Bonus.

A final dividend at the rate of 14 per cent. per annum, together with a bonus of 6s. 3d. per share, making 20½ per cent. for the whole year, free of income tax, was declared, payable on and after April 15.

The election of Sir John Jordan as a director was confirmed, and the retiring directors and auditors were reappointed.

Mr. Frederick Tomkinson said he had to propose a resolution which he was sure all the shareholders present would cordially adopt. The resolution was that the best thanks of the shareholders be given to the directors and the staff for their successful management of the bank. After listening to the very clear and excellent address of the chairman it seemed, in view of the circumstances he had described, very remarkable that such a satisfactory report should have been submitted to that meeting. The figures quoted by the chairman indicated the great depression in trade, especially in the East, and he thought it was really almost miraculous that the board had been able to present such a satisfactory report and pay such a handsome dividend, in addition to placing a considerable sum to reserve. He considered that the board and the staff both at home and abroad deserved very great credit for that achievement and the very sincere thanks of the shareholders. He would like, however, to emphasise that the dividend had been earned not only by the capital of £3,000,000, but by the money which the shareholders had provided for the creation of the reserve fund, which was £500,000 more than the capital. He would like particularly to emphasise that point, because in these socialistic days it was not desirable that it should go forth that they were earning 20 per cent. on their capital alone.

Mr. W. C. Green seconded the motion, which was unanimously approved.

The Chairman, in returning thanks, said that the last twelve months had been a period of very great anxiety, and therefore it was all the more to the credit of their managers and staff that the company had been able to show such excellent results. He would point out, also, that the results shown were after

making provision in every possible way for what might be called bad or doubtful debts, or any possible loss that they could see in the present or the near future. He was very happy, therefore, in being chairman of that institution, and in being supported by such a very able, efficient, and zealous staff, who so ably looked after the interests of the shareholders.

The proceedings then terminated.

NATIONAL BANK OF EGYPT.

Egypt's Economic Position.

The twenty-first annual general meeting of the National Bank of Egypt was held on March 29 at the head office of the bank in Cairo, Mr. B. Hornsby, C.B.E. (the Governor), presiding.

The Governor said:—Gentlemen, I have the honour to-day to preside for the first time at the general meeting of the bank's shareholders, my predecessor, Sir Frederick Rowlatt, having retired from active service on February 28, at the end of his third quinquennial period as governor. Some little time ago Sir Frederick intimated to the board that after thirty-three years of strenuous work in this country he did not desire to take office for a further period. The directors received this decision with great regret, but I am happy to state that we shall not lose his services entirely, as, subject to your ratification to-day, he will remain as a member of the board, and we hope to have for many years to come the benefit of his profound knowledge of this country and of his wise counsels. We have also to report to you that H.E. Boghos Pacha Nubar, who has been a director of the bank since its formation, has resigned from the board, being detained in Europe on private affairs. We desire to put on record the valuable services he has rendered to the bank, and to say how sorry we are to be deprived of his presence and advice.

We have pleasure in submitting to you the balance-sheet and the profit and loss account for the year 1920. Our gross profits, after making the usual provisions, have reached the large sum of £1,269,211, from which we have to deduct our expenses and the amount necessary to provide for the depreciation on our securities. The net profit is £580,431, of which we propose to place £100,000 to special reserve, to distribute £450,000 as dividend at the rate of 15 per cent. (including the interim dividend of 4 per cent. paid last September), and to increase the carry forward by about £30,000, making the latter £172,364.

Year by year, for several years past, we have hoped that the depreciation of our securities would have been arrested, but each year our hopes have been falsified and we have had again to devote £246,000 to this purpose. Our holdings now very largely consist of short-term securities, and as they fall due for payment we shall reap the benefit of our present prudence. Our expenses have again increased, largely owing to increased remuneration to our staff, and also to the normal development of our business. We are glad to see that at last there are signs of a fall in the cost of living, which will make the situation easier all round. Despite these two factors, our profits are higher than they have ever been before, and reflect the exceptional prosperity which Egypt enjoyed through the greater part of the year 1920. The picture is somewhat changed to-day, but I will refer to that presently.

Balance Sheet.

Turning to our balance-sheet, you will find that our total figures have shrunk from about 43 millions to 28½ millions. This shrinkage is almost entirely accounted for by the fact that at the end of 1919 we were holding a large sum for the Egyptian Government, which was paid out in the ordinary course of business during the year 1920. The deposits of the general public were reduced by about 1½ million, which was only natural, as our customers were able to get goods from abroad which had not been obtainable during the war. The deposits still include some fairly large sums of a non-permanent nature which are destined shortly to disappear. Our advances on merchandise fell from 7½ millions to under 2 millions, and our foreign bills discounted from 7½ millions to 1½ million. Both these reductions are due to the same causes; first, the fall in the price of cotton has caused our customers to require less money to carry on their business, and, secondly, the stagnation in the export trade is such that our largest customers, instead of owing us money, as they usually do during the winter months, have money to their credit and have few export bills to sell us. In so far as it shows the strength of their positions this is very satisfactory, but it will have its effect on the profits for the year in course.

On December 11, 1919, the note issue reached the figure of £68,200,000, since when it has steadily declined, till at the end of 1920 it was only £40,400,000—a drop of nearly 28 millions in that interval. The fall began in the natural course of events in the early part of the year, and continued until the end of September. The commencement of the cotton season arrested

the fall for a few weeks, but by the middle of October, owing to the state of the cotton market, a further decline set in, which has continued up to the present without interruption, the figure at the end of February this year being £36,000,000.

It is sometimes thought in this country that it is in our power to increase or contract the note issue at will, whereas, of course, the changes are automatic and depend on the state of the country's trade. So long as the value of exports largely exceeded that of imports, and high prices demanded a larger volume of currency for carrying on trade, the amount of the issue constantly increased, in response to a legitimate trade demand, each increase being guaranteed by the deposit in our Issue Department of British Treasury bills for an equivalent amount. But as soon as the balance of trade turns against Egypt, as it now has, notes have to be surrendered in payment of the excess value of imports over exports, and consequently the Issue contracts. The Treasury bills previously deposited are released, and their proceeds are utilised to pay the foreign exporter.

The figures for the year in course will probably show a large balance against the country, and we are now, in common with the rest of the world, passing through a period of acute depression. Our principal product, cotton, which at one moment, in February last year, attained the price of £39 per cantar (100 lb.), is now down to about £6, and the eager demand which was such a characteristic of last season is replaced by a feeble stream of orders; in particular, during the six months ended February, 1920, we had exported to Great Britain 2,207,201 cantars and to America 1,593,832 cantars, as against 936,211 cantars and 175,093 cantars during the six months ended February last.

Restriction of Cotton Area.

It is needless to say that this heavy fall in price has caused keen disappointment to the growers, most of whom, misled by the high prices of a year ago, looked forward to still higher prices this season. The Government has again issued a decree restricting somewhat the area which may be planted in cotton, and doubtless many cultivators will still further reduce their area and turn their attention to other crops. But the prices of these latter have also dropped considerably, whilst on the other hand costs of production have not yet done so to the same extent; fortunately they continue to show a downward tendency, and it is obvious that prices and cost of production must fall into such relation as will enable the grower to realise a profit. The adjustment process may be long or short, but in any case it is bound to be unpleasant. Fortunately, the years of exceptional prosperity which we have just passed through have endowed all classes with increased powers of resistance; debts of all kinds have been paid off, bank deposits have largely increased, a large quantity of Government stock and other Egyptian securities have been purchased from abroad, and the people of the country still hold some £30,000,000 of bank notes, to say nothing of over £6,000,000 of silver currency, both issued since the commencement of the war.

That there has been a serious set-back cannot be denied, but the general financial situation of the country is fundamentally sound, as that of a fertile country with an industrious population should naturally be.

We must hope that the revival of trade and commerce throughout the world will not be long delayed, and in particular that spinners of Egyptian cotton will begin to buy more freely than they now seem able to do.

The economic and financial conditions of the Sudan continue to be very satisfactory. The increase in the value of imports in 1920 over 1919 is chiefly due to the growth of the purchasing power of the population, the enhanced prices which ruled during the year, and also to the considerable capital expended in the country by the Government, principally on irrigation works at Makwar, on the Blue Nile, where a dam is being constructed. The growth of the export trade is chiefly due to enhanced prices, the good cotton crop of 1920, and the demand for Sudan cattle in Egypt; 88,000 cantars of ginned cotton, valued at £1,605,742, were exported during the year, as against 49,742 cantars, valued at £360,295, during 1919, and the value of live-stock exported was £963,749, as compared with £710,639 in 1919.

The Government finances, consequent upon the development of trade, have greatly benefited, and the revenue is anticipated to attain the figure of £4,390,000, against an estimate of £3,500,000.

Reference was made by us last year to the Sudan Government Loan of £6,000,000 for the purpose of irrigation works, including the construction of a dam at Makwar, on the Blue Nile, and also for the extension of the railway system in the Sudan. The first instalment of £3,500,000 was raised in 1919, and the balance has recently been issued. The irrigation works are being pushed forward with great activity, and it is anticipated that on the completion of the scheme both the Government resources and the external trade of the country will considerably develop.

Our own business in the Sudan continues to progress satisfactorily. We now have, in addition to offices at Khartoum, Suakim, and Port Sudan, sub-agencies at Omdurman, Wad Medani, El Obeid, and Tokar. The establishment of these offices enables us to play our proper part in the development of the trade of the country.

The directors who retire this year by rotation are Mr. E. W. P. Foster, H. E. V. Harari Pasha, and Colonel the Hon. Sidney Peel, and we submit their names to you for the honour of re-election. We also ask you to confirm the nomination of Sir Frederick Rowlatt as a director.

In conclusion, we desire to render our thanks to our staff for their services; we have endeavoured, by liberal increases of salary and by temporary allowances, not only to put them in a position to meet the increased cost of living but also to improve their general position. Our efforts have been appreciated, and your affairs are cared for by a loyal body of servants.

NEW COMPANIES.

Marmara.

The Marmara Co., Ltd., was registered as a private company on March 11 with a capital of £60,000 in £1 shares. Objects:—To take over the marble quarries and freehold and leasehold properties, machinery and chattels in Island of Marmara, Turkey, to adopt an agreement with Walton, Gooddy and Cripps, Ltd., F. C. Stoop, G. Bernieri, R. N. Cripps, and A. D. Stoop, and to carry on the business of quarry owners or masters, quarrymen, masons, importers, exporters, ship and barge owners, etc. First directors: F. C. Stoop (chairman), West Hall, Byfleet; A. D. Stoop, West Hall, Byfleet; H. K. Cripps, Redcliffe, Clifton Down Road, Bristol; H. Gooddy, 84, Talbot Road, Highgate, N.; R. N. Cripps, Redcliffe, Clifton Down Road, Bristol.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated April 4:—During the week ending March 26 general crop prospects unchanged. Bombay cotton market quiet, but steady; fine M.G. Oomra, May Rs.228, July Rs.241. Piece-goods market optimistic, with fair demand and improved tone. Bleached cloths in good demand. Calcutta jute market quiet, but steady; crops reports to date favourable, though smaller acreage expected; Hessians rather firmer; heavy goods distinctly firmer, with improved demand, and prices advanced. Improvements, however, possibly only temporary, due to accumulation of orders during holidays. Further reductions in freights on jute and gunnies to America, they being now 40s. New York, 45s. Philadelphia, 7 dollars Pacific ports. Freights for Australia will be reduced after June. No change in bank rates. Central Cotton Committee, with headquarters at Bombay, constituted, as recommended by Indian Cotton Committee.

A cable dated April 6 states:—All Indian wheat crop supplementary forecast, 1920-21. 24,502,000 acres as compared with 28,921,000 acres for the period ending March 31, 1920. Bombay cotton arrivals from September 1, 1920, to March 25, 1921, amounted to 1,633,000 bales as compared with 2,017,000 bales during the corresponding period of the previous year. Trading in forward contracts recommenced, but minimum rates for May and July-August Broach still in force. There were 80,700 packages of imported piece-goods in Bombay Port Trust warehouses at end of February, 1921—that is 1,060 packages more than the January figures—nevertheless, up-country bazaars known to be short of stocks.

Purchase of Allahabad Bank Shares.

An option was offered to the shareholders of the Allahabad Bank to exchange their shares for those of the P. and O. Banking Corporation at the issue price of the latter, and just over 94 per cent. of the ordinary shares in the Allahabad Bank has now been acquired, and 9,417 of these will be paid for by the issue of new shares in the P. and O. Bank, the balance being paid for in cash. A dividend of 18 per cent. has been paid in each of the past thirteen years on the ordinary shares of the Allahabad Bank, and for the present it is the intention to continue it as a separate institution, with its headquarters at Allahabad.

At a recent meeting of the directors of the Manchester Cotton Association it was reported, says *Cotton*, that a further letter had now been received from the Board of Trade of March 15, 1921, in reply to the association's letter regarding the cultivation of Pelion cotton in Egypt, which was to the effect that the inquiry conducted by the Egyptian Ministry of Agriculture proved that there was no longer any ground for the fear which was at one time entertained that Pelion cotton cultivation would be undertaken on a large scale, also a law had been passed with a view to preventing the mixing of varieties of cotton, and also that the technical question of maintaining the purity of the Sakellaridis variety is receiving the attention of the Egyptian Ministry of Agriculture.

Exchange and Merchandise operations effected.

ON 'CHANGE.

More Cheerful Tendency.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

Despite the critical labour situation the markets generally have been holding up well, and the more favourable developments at the week-end have resulted in almost a buoyant tone prevailing to-night, showing plainly that the Exchange is very confident that a settlement will be reached.

The gilt-edged market has been fairly firm. War Loan Fives are 1 up at 87 3-16. Consols, however, are $\frac{1}{4}$ lower at 48 $\frac{1}{4}$. Foreign bonds have, on the whole, been strong.

Industrials generally, after drooping considerably, have shown a harder tendency on the latest news. Various Shipping shares have been in demand, notably P. and O. Deferred. Oils have been in fair request, and some of the leading lines have been noticeably strong. Rubbers remain depressed.

Near Eastern securities have remained about the same. Egyptian Guaranteed 3 per Cent. are unchanged at 64, as are Turkish Guaranteed 4 per Cent. 1855 at 68 $\frac{1}{2}$. Greek Guaranteed 2 $\frac{1}{2}$ per Cent. 1898 are 2 up at 65 $\frac{1}{2}$.

There are no special movements to record in Greek shares. The 5 per Cent. 1881 and the 5 per Cent. 1884 Loans are both unchanged at 44, while the 5 per Cent. 1890 also remains at 44. Fundings are 3 down at 41, but the 1910 Loan is unchanged at 42. The 5 per Cent. 1914 Loan is unchanged at 41, as is the 1902 Loan at 38.

Banks have been firm. Agricultural 3 $\frac{1}{2}$ per Cent. Bonds are the same at 51 xd, while the 3 $\frac{1}{2}$ per Cent. Guaranteed Bonds are unchanged at 53 xd. Imperial Ottoman Banks remain at 7 $\frac{1}{2}$; National Bank of Egypt are 17 $\frac{1}{2}$ xd; while Land Bank of Egypt are unchanged at 5.

There have been few changes in Land shares. Beheras are unchanged at 8 $\frac{1}{2}$, while the preference shares remain at 3 $\frac{1}{2}$. Anglo-Egyptian Land Allotments are 3 $\frac{1}{2}$, while Egyptian Consolidated Lands are the same at 1s. 1 $\frac{1}{2}$ d. Delta Lands at 8s. 9d. and Gharbieh Lands at 1 3-16 are unchanged. New Egyptians are 6d. up at 22s. 6d., while Union Foncières have improved $\frac{1}{8}$ to 2 $\frac{1}{2}$. Sudan Plantations are 1-16 lower at 3 $\frac{1}{4}$.

In Oils Anglo-Egyptians are unchanged at 1 $\frac{1}{2}$, Phoenix are 1s. 3d. up at 12s. 6d., while Roumanian Consols are 3d. better at 12s. 9d. Steaua Romana are 1s. 3d. down at 14s. 3d.

Among Miscellaneous descriptions, Abyssinian Corporations are 2s., while Alexandria Waters remain at 6 $\frac{1}{2}$. Morums are 9-16, while Salt and Sodas are 6d. down at 27s. 6d. Egyptian Markets are unchanged at 18s. 6d.

FUEL ECONOMISING DEVICES.

Sweeping Claims for an Invention.

(FROM OUR CORRESPONDENT IN YUGOSLAVIA.)

A Russian engineer, M. Feodor Feodorovich Bogatyroff, now a refugee in Belgrade, has been causing a sensation by his announcement of an invention which will revolutionise life and be an immense boon for the people. The authorities, willing to grasp at anything which may conceivably reduce the terrible cost of living in Belgrade, have appointed a technical commission which will examine his plant.

He has prepared for this investigation the following plant with the following claims:—(1) A kitchen stove which will in one hour cook a two-course dinner for twenty-five people with the expenditure of only one kilogram of wood. (2) A heating stove which with 12-15 kilograms of wood, in mid-winter, will warm a room of 500 cubic metres space to a temperature of 16-20 degs. C., and maintain the warmth for twenty-four hours. (3) An oven which with 7-8 kilograms of wood will bake 150 kilograms of bread in 30-40 minutes.

Further, he has patented a new kind of material useful for constructional purposes, with the following remarkable properties:—It can be made of any conceivable kind of rubbish, sweepings, dead leaves, and so is extremely cheap. It is so light that it will float on water; it is so tough that a board of it 3 cm. thick will stop a bullet from a 12 cm. gun; yet it can be easily sawn; it is unflammable and a non-conductor of heat, impervious to damp, and, finally, an ideal building material.

The inventor worked for eight years with Edison, and then as an engineer for seventeen years in Moscow. He offers his invention to the State on the condition that it be not exploited by capitalists, but developed for the good of the people, for the solution of both the fuel and housing problems, two of the most pressing questions to-day in Yugoslavia, as indeed elsewhere. The claims are so extravagant as to excite a smile, but the Government are making a serious investigation.

Our Correspondent adds in a later message:—

The invention has been tested officially in Belgrade. A technical committee has issued a detailed report, which is summarised as follows:—(1) The ovens are good in principle and economical in practice, and (2) with regard to economy of fuel, time, and labour, they show a marked saving, and are to be recommended. The inventor recently gave a demonstration which has aroused a great deal of interest in Belgrade.

FRANCE-MOROCCO AIR MAIL SERVICE

The Postmaster-General announces that the Air Mail for Morocco now leaves Toulouse four times, instead of three times a week, viz., on Mondays, Wednesdays, Thursdays, and Saturdays, at 10.30 a.m. The latest time of posting at the General Post Office, London, is 6.30 a.m. (for printed papers, 6.0 a.m.) on the preceding day, except in the case of the Monday air service, for which the latest time of posting at the General Post Office is 11.0 p.m. on Saturday (or 6.0 a.m. on Sunday with an extra fee of 1d.). Packets for Morocco posted on any day of the week, in London or the provinces, should normally be accelerated in transmission by the use of the air service.

The Roumanian Chamber has passed a Bill establishing a monopoly of the internal distribution of oil products.

At the court of directors of the Royal Exchange Assurance Corporation held on April 6 it was decided to recommend the general court, to be held on April 27 next, to declare a further dividend of 9 per cent., less income-tax, making 16 per cent., less income-tax, for the year 1920.

INSURANCE OF GREEK SHIPS.

Lloyd's Decision.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, March 20.

The decision arrived at by Lloyd's to discontinue insuring Greek ships, also to cancel within a month's time all insurances effected on ships flying the Greek flag, has been a fresh blow to Greek shipping. During the last six months forty-five wrecks of Greek ships occurred from sea risk, whereas during the whole period of the war the number of wrecks was considerably smaller. The writer is informed that two representatives of Lloyd's have arrived in Athens to inquire into the matter and submit a report to London. The Greek shipowners, realising the gravity of the situation, have appointed a deputation which interviewed the Minister of National Economy and discussed with him the steps to be taken in order to convince Lloyd's of the shipowners' *bona-fides*, and request the former to cancel the over-drastring measures decided upon. It is to be hoped that the Greek Government will take the matter in hand without delay, and will do all that is possible to persuade Lloyd's to reconsider their decision, which, if carried out, would certainly have disastrous effects on the Hellenic mercantile marine.

YUGOSLAV SHIPPING COMPANY.

The Minister of Trade and Industries of Yugoslavia announces the formation of a new shipping company, which is to be called the Yugoslav Lloyd Co. The capital amounts to 3,000,000 dinars, and the headquarters of the company is Belgrade.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. *Circassia*, for Bombay (Liverpool, April 25).

Anchor Brocklebank Line.—S.s. *Macharda*, for Calcutta (Birkenhead, April 27); s.s. *Mangalore*, for Calcutta (Birkenhead, May 11); s.s. *Matra*, for Port Said, Colombo, Madras, and Calcutta (London, May 21); s.s. *Matheran*, for Port Said, Colombo, Madras, and Calcutta (London, June 9).

Bibby Line.—S.s. *Warwickshire*, for Marseilles, Port Said, Colombo, and Rangoon (London, April 19; and Birkenhead, May 11).

Byron Steamship Line.—S.s. *Lord Byron*, for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, April 23).

Olan Line.—S.s. *Millewa*, for Bombay and Persian Gulf (Birkenhead, April 14); s.s. *Clan Ogilvy*, for Colombo, Madras, and Calcutta (Birkenhead, April 28).

Cunard Line.—S.s. *Antinea*, for Gibraltar, Malta, Piræus, Smyrna, Constantinople, Varna, and Galatz (London, April 16); s.s. *Tyria*, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, May 7).

Ellerman Line.—S.s. *Grodno*, for Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, April 16); s.s. *Asturian*, for Gibraltar, Malta, and Alexandria (Liverpool, April 30).

Ellerman "City" Line.—S.s. *Branksome Hall*, for Calcutta (Birkenhead, April 18); s.s. *City of Cairo*, for Bombay and Karachi (Birkenhead, April 20); s.s. *City of Calcutta*, for Calcutta (Birkenhead, May 2).

Glen Line.—S.s. *Glenluce*, for Port Said, Port Swettenham, Singapore, etc. (London, April 28); s.s. *Glenishane*, for Port Said, Port Swettenham, Singapore, etc. (London, May 19).

Harrison Line.—S.s. *Architect*, for Calcutta (Liverpool, April 21); s.s. *Orator*, for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, in May).

Holt Line.—S.s. *Deucalion*, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 15); s.s. *Anchises*, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, April 15); s.s. *Oanfa*, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, April 15); s.s. *Yantsze*, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 22); s.s. *Pak Ling*, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, April 22); s.s. *Mentor*, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 29).

Johnston Line.—S.s. *Cundall*, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 23); s.s. *Aviemore*, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 14).

Maindy Line.—S.s. *Maindy Tower*, for Antwerp and Moroccan ports (London, middle of May).

Moss Line.—S.s. *Karnak*, for Gibraltar, Algiers, Malta, and Alexandria (Liverpool, April 22); s.s. *Limoges*, for Syra, Smyrna, and Constantinople (Liverpool, April 23).

Papayanni Line.—S.s. *Maronian*, for Algiers, Malta, Piræus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, April 30).

P. and O. Line.—S.s. *Plassy*, for Bombay (London, April 15); s.s. *Nore*, for Colombo, Madras, and Calcutta (London, April 22); s.s. *Dongola*, for Bombay (London, May 6); s.s. *Syria*, for Bombay (London, May 13); s.s. *Nyanza*, for Colombo, Madras, and Calcutta (London, April 20).

P. and O. British India Line.—S.s. *Chanda*, for Bombay and Karachi (London, April 16); s.s. *Manora*, for Colombo, Madras, and Calcutta (London, April 22); s.s. *Neuralia*, for Bombay and Karachi (London, April 29); s.s. *Margha*, for Colombo, Madras, and Calcutta (London, May 7).

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

107. Old established Turkish firm handling general stores situated in Smyrna and having branches in the interior invites exporters to quote prices for groceries. The firm also acts as agents for articles of general consumption in Asia Minor.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get into touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

112. An Alexandria firm wish to enter into business relations with United Kingdom firms dealing in the following exports:—Beers and stout; salmon, sardines, tinned fruit and vegetables; coconut oil; gunny bags; pepper, rice, flour and soap.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.

NOTES OF THE WEEK.

The Greco Turkish Campaign.

The lull in the fighting in Asia Minor has been broken by isolated attacks by the Turks on the Greek positions. Both sides claim to have had the better of each encounter, and there the rest of the world will be content to leave the matter. In the meantime, the respite afforded the British Government by the collapse of the menace of a general strike in sympathy with the coal-miners has apparently served to remind the Allied Powers that the recent London Conference stands adjourned for a month, and that it ought, therefore, to be meeting again, as the specified period has already passed. If an early date should be fixed for the gathering, the incongruity of allowing the fighting in Asia Minor to continue must become still more apparent. It must in any case stultify the Conference in large measure, as in the absence of a reply from the Turkish Nationalists the position in regard to the Treaty of Sévres remains where it was before the ninth Conference assembled.

Reconstruction in Bulgaria.

After his successful tour abroad M. Stamboulisky has now had time to pick up the threads of internal administration once more, and the hardest part of his work has begun. He will have learned from his observations in the various countries that the art of government entails a delicate balancing of forces, and that it is not good for a country when one party rides roughshod over the interests of other sections of the community which are not under its own political banner. The advent to power of the peasants in Bulgaria constitutes a valuable object-lesson for a large part of Europe where peasants form the bulk of the population, and M. Stamboulisky's administration is being carefully watched. He is fortunate in having at his side the Inter-Allied Commission, to whose eagerness to give him any assistance or advice in its power all the Commissioners have testified. In these circumstances it is unfortunate that a Budget should have passed the Sobranje before the Commission could get to work; for it would have been invaluable to have a first Budget compiled at this juncture with the knowledge and approval of the Commission, so that its relation to the actual expenditure and receipts of the current year could have been followed more closely by the Commissioners. Disappointment has been expressed that the exchange rate has not responded more noticeably to the Commission's presence in Sofia; but in this connection it must be borne in mind that exchange rarely adjusts

itself to sentimental considerations. It is determined by the hard facts of production and of revenue and expenditure. In common with most countries, Bulgaria has allowed expenditure to soar. It must be curtailed and revenue increased before any great improvement in the exchange can be expected. Above all, drastic restrictions must be placed on currency note issues, a subject which might well engage the Commission's attention, if it has not done so already.

Compulsory Labour in Bulgaria.

If the report that the Allied Governments had protested against the scheme of compulsory labour introduced by the Bulgarian Government on the ground that it tended to perpetuate under a different guise the military organisation of conscription was true, it would seem that Allied misgivings on the subject have been removed, as the system, according to the latest news from Bulgaria, is now in general operation. It has been applied primarily in the schools throughout the country, and pupils of both sexes have recently been engaged in various forms of open-air work, planting trees, improving parks and public gardens, and building roads. In Sofia itself provision is being made for some fifteen thousand workers under the scheme, and the programme includes the construction of a water channel, the laying out of a public park, and the cutting of a main avenue through Boris Park. At the same time a fresh effort is being made to popularise service in the volunteer army imposed upon Bulgaria under the terms of the Treaty of Neuilly. The first attempt to secure recruits proved a fiasco. The pay now offered is 2,280 leva a year (£90 at the old rate of exchange, about £7 at the present rate) for privates who have already served in the army, and 1,800 leva (£72: £6) for those who have not served previously, subject to increases every three years during the twelve years with the colours, as well as to certain supplementary payments enjoyed by State employees. The terms include a month's holiday every year, the right to marry, freedom from compulsory labour, and opportunities for learning a trade: At the end of the period of service each soldier will receive a gratuity of 5,000 leva or Government employment.

Sir William Willcocks and—

Another stage in the long-drawn-out Nile Irrigation Case was reached last Saturday when Judge Grain, who has been hearing the action, passed sentence on Sir William Willcocks, the principal defendant. In doing so, the learned judge explained that he could no longer wait for the conclusion of the case against Colonel

Kennedy, as he would have to leave Egypt shortly to take up another post, which, a Reuter's message states, is in the Supreme Court at Shanghai. Holding that Sir William had become obsessed by the belief that his statements with regard to the Nile projects were correct, the judge merely bound him over for one year on the charge of libel; but warned him that should he again publish seditious matter he would be deported immediately. The great services which Sir William Willcocks has rendered to Egypt, to Mesopotamia, and to other countries, his extraordinary energy and enthusiasm, and his courage and originality have won him friends all over the world, and the regret caused by his appearance in this case has been sincere and widespread. But it has been recognised that the charges he advanced could not be left unanswered, and that in view of his methods of advancing them they could only be met as they have been; and in all probability the general feeling to-day is that he has been dealt with very leniently.

—Sir Murdoch Macdonald.

At the same time there will be very lively satisfaction that Sir Murdoch Macdonald is at last free from the cruel strain that has been put upon him, and which he has had to bear so long. For it would have been on his shoulders that the whole of the responsibility would ultimately have fallen had the various charges made by Sir William Willcocks been proved. They have been disproved, and Sir Murdoch Macdonald and the others against whom they were launched are to be congratulated on the result of the trial. It has been an unpleasant, and for Egypt a very costly, business, and everybody will hope that the last of it has now been heard.

The Egyptian Negotiations.

Latest reports available indicate that a more or less silent trial of strength between Adly Yeghen Pasha and Zaghloul Pasha is still in progress. The former, it seems, has the support of the more intellectual Egyptians, while Zaghloul still remains the idol of the students and the more demonstrative elements of the population. The former has not varied in his policy of moderation, but Zaghloul Pasha appears to be still not quite decided what course to follow. A significant incident occurred at a banquet last Friday, when during a speech he was making Zaghloul Pasha was interrupted by a member of the Legislative Assembly, with a request for information regarding the policy he actually intended to follow. The mere request gave rise to an uproar, and the seeker after information had a somewhat narrow escape from violence at the hands of the students. If the latter regard such a natural request with disfavour, it hardly argues their fitness to take any part at all—let alone such a prominent part as they arrogate to themselves—in the important negotiations now proceeding.

The Situation at Teheran.

The new Cabinet at Teheran is following faithfully the course mapped out for it by its leaders at the time of their *coup*. By its determined suppression of lawlessness at various points it has made itself respected as few, if any, of its predecessors have been, and its steady pursuit of the policy of making—or endeavouring to make—former high officials disgorge some of the wealth they accumulated by means that were not at all doubtful evidently has the full approval of most Persians. A few days ago the Prime Minister, Seyyid Zia ed-Din, outlined the Government's foreign policy—proving himself, by the way, quite up-to-date in choosing to do so in the form of an after-dinner speech. Relations with this country he declared to be completely cordial now that the Anglo-Persian Agreement has disappeared, that Agreement having served only (according to him) to create misunderstandings. Persia was bent on sincerely friendly relations with Great Britain and Russia, and she would look to other countries also to help her with advice: to France for legal advisers, to America for agricultural advisers, and so forth. If he gave any indication of where Persia is to raise the money of which she stands in such need, the reports of his speech telegraphed home have curiously omitted to inform us on

the point. Perhaps, however, he is still awaiting the return of his Financial Adviser, in which case his reticence is merely the latest example of his wisdom.

The Indian Legislatures: Their Strength

Evidence continues to accumulate that the new legislative bodies in India have made a really satisfactory start. One may perhaps charge a little discount on the eulogy delivered by Mr. Whyte, the President of the Assembly, in an after-dinner speech, the text of which has now reached this country, but the verdict of less friendly critics, and, most of all, the detailed reports of the proceedings, show that his favourable opinion is substantially correct. Lack of experience has naturally been manifested from time to time, but nobody can complain of that feature when opportunities for gaining experience have been so rare, and the outstanding fact is the rapid growth of a sense of responsibility such as the old Councils ordinarily failed to display. A few unwise decisions may have been taken, but they are not irremediable, and the number of fantastic or dangerous proposals which have been quietly set aside is really surprising. As yet there has been little time for constructive legislation, but the voting of the Estimates, an entire novelty for India, has given ample opportunity for the display of parliamentary capacity, and we are inclined to think that even the framers of the constitution must be a little startled at the aptitude shown by their progeny.

—and Weakness.

Many critics feared that the Legislatures would at first be inclined to spend money too lavishly, but in fact they have begun by making a vigorous stand for economy, and in doing so have given evidence of what may prove to be a serious weakness, a tendency to take short views, which is seen in the opposition to unpopular but necessary expenditure. The forests, for instance, need a large and immediate capital outlay if they are to produce their full revenue, but forest regulation is unpopular, and in one or two provinces the forest grants have been selected for attack by town-dwellers, who have not yet learned to realise their urgency. The most discouraging incident, however, of the debates of last month was a large reduction of the provincial police budget in the Bengal Council. The police are half-starved in every province, but they are three-quarter-starved in Bengal. It is hopeless to expect an improvement in *moral* without providing reasonable conditions of service, but the force has to bear the burden of the unpopularity which it undoubtedly earned in the centuries of Moslem rule, and so the Council would deprive it of the opportunity of rising above its past. The inhabitants of Bengal have of late shown so much genuine capacity for progress that we hope by next budget time they will have realised the necessity for giving their police a chance.

The Civil Servant as Politician.

Of matters outside the Councils, the most striking item of recent news from India is the cautious invitation to civil servants to mount the platform and instruct the people on current political questions. This change of policy was foreshadowed in a famous passage of the Joint Report, which declared that in the new India the civilian "must explain and persuade, and argue and refute": but its immediate occasion is the obvious need for countering the propaganda of non-co-operation by all the means at the disposal of the Executive. In this matter the lead has already been taken by Lord Sinha in Bihar and Sir Harcourt Butler in the United Provinces, and the orders which they have issued should help to bring home to the people the essential fact that the doctrine of non-co-operation is a threat to the future of India as a whole, and consequently a movement to be opposed by all men of goodwill. There are still large parts of the country where the masses instinctively look for guidance to officials rather than politicians. It is to the masses that the non-co-operators are now devoting their attention, and district officers will be quick to realise that this new and arduous task calls for their most strenuous efforts.

THE WEEK AT HOME.

LONDON, Monday Evening.

A Week of Crisis.

Last week was easily the most exciting time since the Armistice. The coal strike bade fair to extend into a general strike, there was talk of revolution and civil war, and then suddenly the bubble burst. The reason was simple—the majority of people kept their heads; England looked over the edge of the precipice, decided it would be a very uncomfortable long jump, and drew back again. Hotheads on both sides exhorted us to "have a shot at it," and "get it over this time." But it was not a simple matter of swimming across a stream; what we were asked to do was to put out on an ocean of which nobody could see the other side.

In the earlier discussions on the coal strike the miners steadily improved their position in public opinion. Mr. Hodges, their spokesman, argued coolly and well for the national pool. His arguments did not convince, but the coal-owners did not argue at all, but put up a blank negative. On that matter therefore the public began to turn towards the side that seemed most reasonable. On the matter of the actual wages offered, however—which was not discussed at all—it became evident that the cuts suggested were altogether too drastic. The rule as to falling wages is simple. They rise as prices rise, and always as a consequence of increased prices; therefore they should fall as prices fall, and the fall in prices should precede the fall in wages. The mine-owners made a heavy cut far in excess of the fall in prices. That was their first mistake; their second was that they presented it as an ultimatum, with a "take it or leave it" air. The day for that kind of thing has gone in any case, and it is inconceivable that a round-table conference would not have suggested adjustments. After all, it was common ground that wages should fall; the question was as to the amount and the method.

The owners therefore put up a *non possumus*: Labour retaliated by the threat of a Triple Alliance strike, which would have included railways, trams, all forms of transport, and possibly electricians. This was interpreted (quite naturally) as a threat against the community; it was, in fact, really a strategic move, intended to make the owners give way. A few people believed the cry of civil war; most of us kept cool, doubted the reality of the general strike, and assumed that the mine-owners would compromise at the last moment.

It was perfectly obvious on Thursday that the Triple Alliance wanted to build a golden bridge. Its leaders had a long talk with Mr. Lloyd George in the morning. In the evening the mine-owners put their case to private members of the House of Commons; the miners followed them. The judgment of the private members was on the whole in favour of the miners; like the rest of the non-mining world, they knew little of the merits of the dispute, but it was evident that the wage-cuts were too heavy, and perhaps more important still, the miners had again offered to negotiate the whole question.

At that moment the miners had the game in their hands. The next morning they lost it. The Miners' Federation went back on its representative, Mr. Hodges, and refused to negotiate; this unreason transferred itself from Capital to Labour. Thereupon the railway and transport men declared the general strike off; they had been against a strike all along, but had come into line, with some misgivings as to the consequences for themselves and the nation, in order to strengthen the hands of the miners. When the latter committed their blunder in tactics, their allies were only too glad to withdraw.

In any event, it appears that the strike would only have been a partial one. It was said—I do not know on what authority—that about half the railwaymen would have remained at work, and disregarded the strike order. In that case it is perfectly clear that the strike would have failed had it been persisted in.

Its Consequences.

But with all this we are not precisely where we were. It is said that a thunderstorm clears the air, and that is true. But it also makes an untidy mess of the trim

flower-beds. The events of this week will have certain reactions.

In the first place, the Government is not quite where it was. It will get some votes out of the turmoil, for John Citizen hates being disturbed in his avocations, and although he admits that the mine-owners were wrong, he will take it out of the Labour Party at by-elections—that is, until the Coalition candidates make themselves ridiculous by calling every Labour man a Bolshevik, which will infallibly cause a reaction.

But the real shock to the Government is not in the constituencies but in the House of Commons. The despised back-benchers intervened when the Government failed, and their intervention made all the difference. For years past the Government has increasingly dominated the House; the House has shown in a crisis that it can act independently of the Government—and with greater effect. That is an extremely important point.

In the second place, Capital is not quite where it was. Its tactics were wrong, and its methods were wrong. In any big industrial dispute that involves the nation in future, Capital will have to argue its case as well as Labour. The public is the silent umpire, and, on the whole, it is reasonably fair; it discounts all the talk of Communism on the one side, and all the talk of Bolshevism on the other, and gets down to the real matter in dispute—the wages—on which its judgment is of value. It is not enough for Capital in these great industrial troubles to consider itself sacrosanct, and to believe that it will get public support unconditionally. It has got to prove itself just in its actions.

In the third place, Labour is not quite where it was. The Triple Alliance has not functioned. We shall probably hear a good many explanations during the next few days, and even recriminations—for the trouble is not yet over—but the probable truth of the matter is that the ordinary union member did not think there was sufficient ground for a strike. He will follow his leader up to a point, but beyond that point he will think for himself. In the present case, Mr. Thomas of the railwaymen was clearly aware that the point was passed at which the normal discipline could be imposed. It must be remembered that a trade union, like any body of professional men, is in effect a State within a State, and that the only persuasion or coercion it can ultimately rely on is the general opinion of the majority of its members. In the present case counsels were divided, and the projected move collapsed.

The Labour Party is likely to have a good many arguments over the events of the week, and the atmosphere at some of their private meetings in the immediate future may be heated. The miners will certainly accuse the railwaymen of betraying them, which is not a pleasant accusation. But the real truth of the matter seems to be that the miners made a false move at the critical moment and precipitated the collapse of their policy themselves.

New Lord Chief Justice.

This is the day of the sturdy veteran. The Government being unable to spare the services of Sir Gordon Hewart, the Lord Chief Justiceship has been offered to and accepted by Mr. Justice A. T. Lawrence, who is seventy-eight. And in order to relieve the congestion in the Divorce Court a retired judge of that division, who is now turned eighty, has consented to sit again. We no longer say: "Too old at forty" in these strenuous days; at threescore years and ten a man is just getting into his stride.

The Winter Returns.

It is a curious fact, of which the superstitious can make what they will, that the coal strike began in summery weather—some good folks called it providential—and that since then we have returned to winter, with snow, wind, hurricanes, and hail. It was not likely that the British climate should let itself be ignored during these disturbances; but it has had to share the honours with the interest excited by a famous trial now proceeding, in which an Archdeacon is appealing to the Judicial Committee of the Privy Council against a judgment of the Consistory Court for immorality.

The case is fully reported day by day, and discussed in every tram and omnibus, as the Archdeacon is one of the most celebrated preachers of the time; but as it is still *sub judice*, printed comment must be deferred.

Improving Education.

There has been some outcry against education by the reactionaries in the Press of late and something like an organised opposition to Mr. Fisher, the Education Minister, because he was spending too much money—even Dean Inge, who ought to know better, having joined in the denunciation. Fortunately, there was no echo of this clamour in the House of Commons, and the estimates went through without a murmur.

Popular Divorce.

The statistics of divorce are higher than ever before, and the lawyers, who thrive on the catastrophes of love, are beginning to reap their harvest from the epidemic of matrimony in the past few years. The actual number of suits entered for hearing year by year are:—1912, 448; 1913, 431; 1914, 389; 1915, 378; 1916, 351; 1917, 306; 1918, 639; 1919, 855; 1920, 1,451; 1921, 2,384. A superficial glance at the figures seems to indicate that while we were fighting the Germans we were too busy to fight our wives; but that is not the full truth of the matter. The increase is mainly due to the facilities now given for "poor person's divorce"; in other words, the apparent demand for divorce, like everything else in this world, depends to some extent on the facilities offered. No fewer than 1,945 out of the 2,300 cases are undefended, and the bulk of them are to be tried without a jury. In view of the increase of population and the notorious fact that many people married during the war who hardly knew each other by sight, it would be premature to found any conclusions as to the decay of morality on these figures.

But I am assured by lawyers who specialise in this branch of the profession that if a new divorce law were passed there would be a great rush of petitions for some years of people who want a divorce but cannot get it under existing conditions, and that then things would

probably quieten down. But there is not the least prospect of any such Bill being passed this Session. Last year the House of Lords showed itself far more open to consider the reform of the divorce laws than the Commons.

The Week's Books.

"Man's Descent from the Gods" (Heinemann), by Anthony M. Ludovici, is a most extraordinary work, as a quotation from its first pages will show: "Prometheus, far from being a great benefactor of mankind, as modern thought, owing to a deliberate misunderstanding, supposes him to have been, was therefore, as the myth reveals him, a creature who outraged both gods and men. Not until Dionysus appeared with his medicines, and particularly his dispensary of fermented liquors, were the appalling evils resulting from Prometheus's theft of fire-production mitigated and neutralised. The chemical changes that take place in the cooking of food, as also the physiological effects of these changes, are adduced to show how deleterious are the results of the application of fire to natural products used as human food; and in the chapters dealing with Dionysus I show how these deleterious results have been checked, and may still continue to be checked, by the use of fermented liquors. Prometheus versus Dionysus is thus the theme of the book—Prometheus, with his unhealthy civilisation, being the evil genius; and Dionysus, with his healthy dietaries, his mead, his wines, and his ales, being the saviour of mankind." A very novel thunderbolt against "Pussyfoot."

A word should be given to "Oxford Poetry: 1920" (Blackwell). This is now a well-known annual, and it contains some good, although not great, verse.

OCELLUS.

Our Belgrade Correspondent writes:—A congress of Yugoslav Socialists has been held in Belgrade, under the presidency of Dr. Nedelko Koshanin, in which all the districts were represented. The chief business was the unanimous condemnation of the Communists and of their methods, which would have only brought disaster and chaos upon the country.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, April 3.

The Political Situation.

The political situation continues satisfactory. Messages and visits of congratulation continue to pour in upon the new Cabinet, which at the present moment, at any rate, appears to have the whole country at its back. The Sultan on Thursday last paid a State visit to Zagazig, where he had an excellent reception, and Adly Pasha came in for quite an ovation. The most active preparations are being made to receive Zaghloul Pasha, but opinion is very much divided as to what his attitude will be.

Investiture at the Residency.

A picturesque ceremony took place at the Residency on Monday afternoon, when the High Commissioner held an investiture in the garden. There were over one hundred and seventy recipients, among them quite a number of Egyptians, to whom Viscount Allenby made a short address before beginning the distribution of decorations. At the close of the ceremony the recipients and their friends were entertained at tea.

Warriors' Day.

Warriors' Day was celebrated by a most successful ball under the patronage of Lady Allenby. For the occasion Ghezira Casino, which has in the past been associated with so many similar brilliant functions, was reopened, thanks to the generosity of Emir Lutfalla Bey, who recently acquired the Palace and the Casino. The High Commissioner and Lady Allenby were among the earliest arrivals, and stayed until very late, watching with interest the gay scene, which was rendered more than ordinarily attractive by the fact that it had been agreed that in honour of the occasion decorations should be worn. Exactly how many were present it would be difficult to say, but it could not have been far short of eight hundred. A certain number who purchased tickets were prevented from going, but the organisers expect to obtain at least £E1,200 from the venture, and I should say that their estimate errs on the conservative side.

A ball was given on the same day at Alexandria, another will be held to-morrow at Port Said, and other entertainments have been organised. It will not be at all surprising if, together with the subscription list, which, at the eleventh hour, has received substantial additions from some of the more important industrial houses, the efforts in Egypt, Palestine, and the Sudan of the organising committee, of which Col. Hussy Walsh is the able honorary secretary, result in a total of well over five figures.

Considering the present commercial depression, the care which has been taken not to make collections through administrative channels, for fear of the same political mistake as occurred in connection with the Red Cross collections, and the fact that most of the British community are people with fixed incomes, and so have been affected by the high cost of living, this result is in the highest degree satisfactory.

A British Union in Egypt.

The formation is mooted of a body to be known as the "British Union in Egypt," to watch over and protect the interests and promote the welfare of British subjects in Egypt. Its objects, which are political, civic, economic, patriotic, and benevolent are: to secure a closer union between Egypt and the various parts of the British Empire; to promote and maintain British prestige in Egypt; to bring forward the opinions of its members on all matters affecting their welfare; generally to promote the interests and safeguard the rights of the British community in Egypt; to watch legislation as far as it affects British interests in Egypt, with a view to detecting and rectifying any defects and modifying such legislation as circumstances may require; to aid in the

development of patriotic movements and of charitable and educational institutions; and to assist in the defence of any member accused of an offence against criminal law or in defending any civil proceedings in circumstances which appear to the Union to bear a political or racial significance, or otherwise to undertake or contribute to the costs and expenses of any member in instituting or conducting any criminal or civil proceedings, and in making representations to Government or any other public or private body in like circumstances.

All members of the British community, male and female, resident in Egypt will be eligible as ordinary members of the Union, which it is proposed shall be affiliated to the British Empire Union in England, and have a central organisation in Cairo under the direction of an executive council, with local councils and branches in Alexandria and other towns in Egypt. The idea of this Union has grown out of the council of the British non-official community of Cairo, which was formed in April, 1919, to consider certain political and other developments that were looming in Egypt. In view of the change in régime which is now contemplated, the constitution of some body has become necessary for the protection and safeguarding of British interests. Such a function cannot possibly be carried out by a chamber of commerce, and it has been decided to call a meeting of the British community on April 20 and submit to it the scheme for the formation of the British Union, which will represent all interests and all sections of the British community in Egypt and take on occasion such action as circumstances may require.

YUGOSLAVIA.

ZAGREB, April 19.

Politics.

The Constituent Assembly has met again, after the labours of the Committee, and listened with great interest to the speech of M. Drashkovitch on the Communist plot of four months ago. The Government had been challenged to produce proofs of its allegations that the Yugoslav Communists were in direct touch with foreign intriguers, and that there was a definite plot to overthrow the State and the union. The Minister of the Interior pointed out that the Communists held a congress in Belgrade in 1919 which was innocuous, as they rejected the Bolshevik programme; but in 1920 a second congress, which was held at Vukovar, was much more serious, accepting the Third International and the full Communist programme, for Lenin's agents had been busy in the meantime, disappointed at the patriotic and national result of the Belgrade congress. The Communists here had, in fact, admittedly ceased to be a Yugoslav Communist party, and declared themselves a sector of the vast, international, communist war against the bourgeoisie. M. Drashkovitch then proceeded to describe the measures taken by the Communists. First, they captured the simple Labourers party with their fair words and promises of a millennium, and exploited their strikes. The Government was in possession of proofs that they received money from abroad, from Russia, from Hungary, and from America. One communist had admitted that he had received twenty million kruna from Hungary. Moreover, jewellery had been found in the country which had been

identified as part of the Imperial Russian collection of gems, and loot from Russian churches and museums. They had succeeded in getting their own men into Government posts as spies, and actually had their own agents in the postal and telegraph service. They had received uncensored telegrams from abroad at a time when the censorship still existed. In the *Radnicki Dom*, headquarters of the Labourers' party, they had found a whole mass of stolen archives and Government documents from various offices. By their specious promises they had actually succeeded in winning over some gendarmes and officers. In 1919 they persuaded many soldiers to desert. They were in direct touch with organised gangs of international thieves; and in this connection the Minister quoted a number of crimes that had been carried out in the direct interest of Communism. They had been intriguing constantly with the avowed enemies of the State: documents had been found proving intrigues between the Communists and the Bulgarians. During the Austrian Occupation, the Communists had openly performed services to the enemy, both Austrian and Bulgarian; and the Government had absolute proof that by this means they had done many good Serbs to death. In 1917 a prominent Communist, a "second Lenin," wrote to the Bulgarian supply department promising to use all their power to arrange supplies for the Bulgarian army. They had a whole series of documents containing threats to prominent people in Southern Serbia and Montenegro at the time of the elections. The ringleaders were mostly men who had been in Russia and Hungary and learnt their Bolshevism there. There are some genuine Communists in Croatia who had been identified with the looting of the Serbian Ministry in Petrograd and Moscow. But most of the Communists were foreigners, and many of them had come into the country in the Austrian service during the war. In Dalmatia there were many foreign Communists, who had remained all the time in direct touch with Italy. They had a central committee of three or five, who organised the business.

and drew lots to choose the perpetrator for various assassinations and other criminal attempts. On the eve of the general strike there had been a meeting of them in Belgrade which 1,500 attended, when the word was given to be ready for action at any moment. A deputy, Ljubomir Radovitch, had stumped Croatia with the catchword, "Long live Austria," and they were busy spreading pro-Italian ideas in Dalmatia. Finally, the Minister wound up by saying that the Government would not have taken the vigorous action that it did were they not satisfied of the existence of a carefully planned and organised plot against the State and the union, in direct touch with all the enemies of Yugoslavia.

As may be expected, this sensational declaration had a profound effect upon the House, which proceeded to a vote of confidence in the Government which was carried by a large majority; and so M. Pashitch's position is stronger than ever. But it is interesting to observe that there was much cross-voting. An outstanding feature was the voting of a Radical, Dr. Momchilo Ivanitch, against the Government. Dr. Ivanitch is an enthusiastic supporter of M. Stoyan Protitch, who is not in the House. This unbending politician took advantage of this occasion to attack his former chief, M. Pashitch, and the Radical Party that he led so long, in an article in the *Tribuna*, in which he declared his secession from the Radical party.

The country is naturally greatly excited by the adventures of the ex-Emperor Karl and the consequent events in Hungary. It is rumoured that troops were massed on the northern frontier ready for any eventuality, and that a reactionary plot has been discovered, by which, as soon as Karl was restored, Prince Rupprecht should be proclaimed King of Bavaria. In connection with this, the northern provinces of Yugoslavia were to be restored to Hungary, in which the Royalists were, of course, supported by the Frankovist Croats, who were financed by the "Bauernbund" of Steiermark under clerical influence. Raditch's politics were connected with the

The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—

THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.
AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

United Cigarette Machine Co., Inc.
80, Coleman Street,
LONDON, England.

move, and the Communist activities were made use of by the royalists. In fact, the extreme Right and extreme Left met with the common object of overthrowing the existing regime, which neither can tolerate. The Press states that Raditch was a well-known Hapsburg agent, during the war: that he is, in fact, a republican vis-à-vis the Serbian dynasty, but a monarchist in other respects. Probably he is first and foremost a Raditchist.

ROUMANIA.

BUCHAREST, April 5.

Political.

During the last few days the chief pre-occupation of political and other circles has been the *coup d'état* of the late King Charles in Hungary. The fullest reports of the event published in the newspapers come from Berlin. It has evidently come as a surprise to the neighbouring countries, not excepting Austria, though it was known, of course, that affairs in Hungary were not going very smoothly, and that there was a large party in favour of the return of the King. The event is naturally causing a good deal of anxiety in Roumania on account of its possible effect upon Transylvania, where the Hungarian population is unfortunately still very unfriendly towards the new administration. For once the Press of all shades of opinion is at one in urging that Roumania must take a very strong stand against such a violation of the Treaty of Versailles as the restoration of the Hapsburgs would constitute. The Minister of Foreign Affairs, M. Také Jonescu, lost no time in instructing the Roumanian Minister in Budapest to make strong representations in the same sense to the administration there, and in getting into communication with the other Allied countries of the Balkans in order to arrange for united action in the event of King Charles persisting in his attempt to seize the Throne. In view of the determined attitude adopted by Britain, France, and Italy, the anxiety is becoming gradually less acute, and it is felt that the ex-King's adventure is not likely to succeed.

The police are still busy investigating the anti-Roumanian plot recently discovered in Transylvania, and a number of arrests have been made.

General News.

The King has left Bucharest and gone to his shooting lodge at Pelesh.

The racing season has begun, and the first meeting took place at Baneasa on Sunday, April 3.

The drought still continues. For almost six weeks there has scarcely been a drop of rain and the outlook for the harvest is growing serious. For several days lately dark clouds gathered, and people in the streets might be seen casting hopeful glances at them, but the wind cleared them all away. Only yesterday morning there was a very slight fall of snow (there is said to have been a considerable fall at Sinaia) and these last two days have been distinctly colder, but no frost.

The Socialists in the Ardeal have finally excluded the Communists from their organisation. At Cluj and Oradea Mare the latter are in a very small minority.

It is reported from Berlin that forty-one railway companies which formerly had their head offices at Budapest have decided to remove them to the Ardeal. If this be true it will add several millions a year to the Roumanian State resources.

GREECE.

ATHENS, April 3.

The Premier's Return.

The President of the Council of Ministers, M. Kalođeropoulos, returned to Athens last Monday morning, accompanied by the majority of the technical advisers of the Greek delegation, as well as M. Stergiadis, Secretary.

The Premier was received at Piræus by the Minister for Foreign Affairs, M. Baltadji, who welcomed him by saying that "never before had a Greek Prime Minister returned to his country from a diplomatic mission broad bringing with him so many victories and laurels

as he in whose hands is to-day the destiny of Greece." The Greek Minister for Foreign Affairs is evidently not aware of M. Kalođeropoulos's huge blunders at the Conference, which necessitated the hurried departure to London of M. Gounaris.

Replying to the representatives of the Athens Press, who had asked him what his impressions were, M. Kalođeropoulos stated that in spite of a very strong opposition the Greek delegation succeeded in averting a revision of the Treaty of Sèvres. The Hellenic Army is now having the last say in the matter, and its bayonets will definitely solve all the national questions now in suspense. Speaking of Mr. Lloyd George, the Premier said he was a great statesman, and he felt an immense admiration for him.

On Tuesday M. Kalođeropoulos was received in audience by the King, to whom he communicated the details of the London Conference and put him *au courant* with the actual position of Greek affairs.

At a Council of Ministers held under M. Kalođeropoulos's presidency it was decided to convoke the Constituent Assembly on the 8th inst. M. Gounaris, who is expected back during the middle of the week, will be present at the re-opening of the Chamber, and will make important declarations.

More Men Called Up.

The following classes have been called up during the last few days: The reserve officers belonging to the 1910 and 1911 classes: all regular officers who had resigned their commissions and belonging to the 1910, 1911, 1912, 1913a, and 1913b classes; the refugees of the 1913b, 1914, and 1915 classes who have acquired Greek nationality; all reserve cavalry officers and warrant officers belonging to the 1913b, 1914, 1915, and 1916 classes; the sanitary officers of the 1907 and 1908 classes, and the pharmacists of the 1910 class. There are many rumours to the effect that at least three more classes of N.C.O.s and men will be called up during this week. Nothing will, however, be decided upon until M. Gounaris returns.

By order of the Minister of War all members of the

Speed up your Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing :—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from 1½" diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes :—

½" to 1½" fitted with No. 2 and No. 3 Morse Taper Shank.

1½" to 3" fitted with No. 3 and No. 4 Morse Taper Shank.

Full particulars upon application to:—

AMERICAN MACHINE & FOUNDRY CO., LTD.,

Cables: "AMMAFOCO, LONDON."

Codes: All usual.

NEW YORK, PARIS, BRUSSELS, CAIRO, GENEVA, SOFIA, ATHENS,
CHRISTIANIA, STOCKHOLM, TUNIS.

National Assembly who belong to the classes called up, also a limited number of civil servants whose services are considered absolutely indispensable at the various Ministries, are exempted from military service.

Miscellaneous News.

The *Progrès d'Athènes* says that the Serbian authorities at Monastir have forbidden the sale of Greek newspapers in that town.

During the last four months 12,573 decorations were awarded by the Government to various people.

Mr. William Leeds, son of Princess Anastasia of Greece, formerly Mrs. Leeds, has become engaged to Princess Xenia, daughter of the Grand Duchess Maria, King Constantine's sister. The marriage will probably take place in Athens next July. Mr. Leeds is only eighteen years old and his future wife seventeen.

In reply to the allegations which have of late frequently appeared in the Greek Press to the effect that the Italians are supplying the Kemalists troops in Asia Minor with war material and foodstuffs, the Italian Minister in Athens has caused a statement to be published in the papers denying these charges most categorically.

The first batch of 563 wounded, 40 of whom are officers, arrived here to-day from the Asia Minor front.

The *Kathimerini* says that during one of the Greek attacks at Afion Karahissar, the Greek officer commanding the 6th Company of the 4th Archipelago Regiment, was killed. A major of the British Army who had been following the operations immediately took command of the company, which renewed the attack with increased energy. Before long, however, the British officer was mortally wounded by shell fire and it is reported that he died in hospital a few days later. The major's name is not given. [This report has been officially denied.—Ed.]

TURKEY.

CONSTANTINOPLE, April 6.

The Failure of the Offensive.

It is too early yet to attempt to define the exact positions of the opposing armies in Anatolia, but there can no longer be any doubt as to the Hellenes having suffered a reverse of no little importance. It is possible, and quite probable, that the offensive will be renewed with still stronger forces as soon as the Greek Army has had a rest, but the result of the attempt to take Eskishehir has shown clearly that those who doubted the ability of the Greeks to settle the Turkish question by force of arms had good grounds for their opinion. Even though the Greeks may be more successful in a second attempt, it is now more than ever doubtful whether any kind of peace worth having can result from the policy of making Greece the "mandataire of Europe," as the propagandists are accustomed to call her. Despite outward and official appearances, Italy has never regarded the Greek invasion of Anatolia with a favourable eye, and whatever may have been the policy of the Clemenceau Administration, France, it seems, would rather have peace with Turkey than a "mandataire" in Anatolia. In present circumstances it must be admitted that the French point of view is eminently practical, and in harmony with the economic interests of Europe as well as of Turkey—not to mention Greece herself.

The story of the offensive is simple enough, although only the barest details of the fighting are available. The reports published in the Press by either side in this respect must be taken with the greatest caution: for both are alike subject to the usual Oriental failing of exaggeration. All seems to have gone well for the Greeks until they reached Soyud, north of Eskishehir and to the east of the railway line, where the Turks had organised very strong defensive positions and wired entanglements supported by heavy artillery. The artillery seems to have been abundant and remarkably well handled, with the result that for the first time the Greek advance was definitely checked. Progress still continued on the right flank, however, and owing,

it is said, to a mutiny on the part of the Turkish garrison, Afion Karahissar was captured. The Greek commander then tried to break the Turkish defences to the west of Eskishehir, and at the same time to work round the south of the city and take the Soyud positions in the rear and flank. After nine successive days' heavy fighting, however, the Greek army seems to have become exhausted, and as a result of the commencement of a counter-offensive on the part of the Turks, it became necessary to retreat to the original defensive line to the east of Brusa. According to a conservative estimate, the Greek losses in killed and wounded were only about five or six thousand—by no means a heavy total in view of the number of troops engaged; but it is not clear whether this figure applied to the entire line or only to the centre. The Nationalists, of course, state that the Greeks lost about five times the number mentioned, and talk about entire divisions being annihilated, but that is merely a manner of speaking in this part of the world.

Naturally, feeling is running very high between Greeks and Turks, and the former have certainly made matters worse by their incurable loquacity.

The Aftermath.

What is the situation now, and what are the prospects of peace? So far as we ourselves are concerned, the outlook is by no means promising, for, despite official disclaimers, both Greeks and Turks are convinced that the British Government was behind the Greeks in their decision to renew hostilities. Unfortunately our Allies seem to be doing all they can to strengthen this belief. On March 28, the *Temps*, in the course of an astonishing leading article, openly accused the British Government of double-dealing in the following words: "Clearly General Papoulas would never have taken the offensive, if the Greek Government had not found the necessary support in London. Although the contrary is averred, no one will hesitate between evidence and a denial." If another conference is held, what will be the attitude of the Nationalist delegates this time? Success is a very heady wine, and in southern Europe and Turkey there are no heads steady enough to quaff it without suffering the after-effects of a distorted vision. The tone of the Nationalist Press does not augur well for the prospect of a speedy and satisfactory peace.

SMYRNA.

SMYRNA, April 7.

The Turco-Greek Fighting.

Though the Treaty of Sévres expressly forbids the Greeks to enrol Ottoman subjects in their army, they are nevertheless doing this, and angry protests to the Allied High Commissioners are being made by European firms who are, in consequence, losing their employees. Many of these Greek-Ottoman subjects were compelled to serve in the Turkish army during the great war, and naturally fear that, should they be taken prisoners, they will be summarily shot as traitors.

Many batches of wounded men are reaching Smyrna from the Eskishehir front, where the Greek losses appear to have been very heavy. The Turks claim that the Greek army on that front has been annihilated, but this is considered in Smyrna to be a foolish exaggeration. One thing is clear: the Greek offensive has been a ghastly failure so far, and few Smyrna Greeks have any wish to fight for Constantine's cause.

MUSICAL NOTES.

The Sevcik Quartet.

Czecho-Slovakia seems above all other countries to abound in performers of chamber music, and it is no bad choice of the London Chamber Concert Society to engage for three of its concerts the Sevcik Quartet, a body of musicians that has not been in England since 1913. This quartet, which, incidentally, has just come from Egypt, has distinctively a freedom and certainty of rhythm that few string quartets possess, and also a lightness of touch and sureness of intonation that are a delight. But none of these qualities could make Novak's quartet in G major, with which they began the concert at the Wigmore Hall on April 12, hold our interest, for it is a work the ideas of which are neither genuine nor sufficiently discreetly stated. Grieg's quartet in F major was certainly better, but here again no great gifts of interpretation were necessary. On the whole, the Sevcik Quartet was a slight disappointment to me; I had looked for things as big as we have received from the Flonzaleys, the Bohemians, or our own London String Quartet, but they had in no comparable measure the glorious fulness of tone, the full-blooded fire, or the exquisite finish that are the characteristics of these others. However, they are playing at the next two concerts of the London C.C. Society (Wigmore Hall, April 19 and 26), so that there will be further opportunities of judging them. At this concert Miss Harriet Cohen played Bar's sonata, which is still in manuscript, very finely indeed. The stark imagination of the work was magnificently portrayed, and the pianist heightened immensely the impression a previous hearing of the sonata had made. But that Miss Cohen's virtues are those of a pianist was shown in an Elizabethan composition that she played as an encore (it was Byrde's "Pavane, the Earl of Salisbury"); her keyboard knowledge and technique were obviously developed on the modern instrument.

M. Leff Pouishnoff.

By unassuming ways and sheer merit M. Pouishnoff, on whose unusual possessions I have frequently spoken in these notes, has become a favourite with the discerning public, and it was pleasant to listen to a recital by him which was given by request. At the Wigmore Hall on April 13 he once more proved how wide is his command over the pianoforte. He has played better than he did at this concert—there were too many notes missed or mis-hit—but even in the big works where his youth plays impetuous tricks, in Liszt's Sonata in B minor, or in Schumann's "Carnaval," for example, his quite remarkable powers, both of expression and of endurance, were again manifest. He gave to Beethoven's 32 variations in C minor a vitality that only great pianists are able to infuse into them; and his rendering of slight but genuine Scriabin pieces was wonderful in its individualism. It is in the smaller works, where his impetuosity is not so easily able to run riot, that M. Pouishnoff excels; but there is no doubt that in a few years' time, when his intellectual control has equalled the facility of his technique, he will take his place among the world's pianists.

A Chamber Concert.

Mr. Josef Holbrooke, a British composer of copious achievement, must have had some fun from the three chamber concerts that he has organised at the Mortimer Hall. He has been playing at each concert three pianoforte pieces by unknown composers, and has offered prizes of money to anyone who could get the names right. He has, he said, a sympathy with the underdogs among the composers, a sympathy which has prompted him to dig up among the fossils of the recent past stray things that have taken his fancy. Now to him, as I say, this must have been fun. But for the public, the only people who can do this sort of thing with impunity are the Busonis and Lamonds of to-day, and one's complete ignorance of what Mr. Holbrooke was playing with such studious nonchalance was no matter for shame; rather was it swamped by amazement that a man in a public hall could be so selfish as to crack a joke and keep it all to himself. However, there was one fine thing done at the last concert on April 11, and that was the Pizetti Sonata for violin and pianoforte, played by Miss Evelyn Hunter and Mr. Holbrooke; it is a work the beautiful strength of which becomes more apparent with every hearing. There is little superficial attractiveness in it, but study of it shows how unusually fine its contents are. Mr. John Goss, a singer whom I much admire, introduced some "Sporting Songs" composed by Mr. Holbrooke, the words of which (excluding "Caswallawn" by T. E. Ellis), are taken from G. K. Chesterton's "Flying Inn." Unhappily, the composer has forgotten that Mr. Chesterton's famed lines sing of themselves, and that all they require is a good tune. It is the absence of this that robs Mr. Holbrooke's clever efforts of significance.

ANDANTE.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

April 12.—Sir Philip Lloyd Greame informed Mr. Wise that there are at present 2,589 Russian refugees in Egypt, and that the total cost per annum falling upon the British Government for their maintenance is £162,224. Every effort was being made to liquidate the obligations of the British Government towards these refugees, but it was impossible to give any definite date upon which they would cease to be a charge on public funds.

Sir Philip Lloyd Greame informed Commander Kenworthy that the Greek Government is not receiving any financial or other assistance, either direct or indirect, from the British Government in their operations against the Turkish forces in Anatolia, and, further, that no ammunition or other stores are being supplied to the Greeks from either British or Egyptian sources. In connection with the same subject Mr. Chamberlain informed Colonel Wedgwood that the British Government have not sent, nor have they assisted in sending from Egypt any volunteers, reservists, or munitions to Greece.

Sir Philip Lloyd Greame informed Mr. Hayward that General Wrangel's Russian troops are still at Chatalja, Gallipoli, and Lemnos, and that, so far as the British Government are aware, France is the only country now contributing towards their maintenance.

April 13.—In reply to General Townshend, Mr. Harmsworth stated that until a Treaty of Peace has been ratified a technical state of war still exists between Great Britain and Turkey, and that with regard to the present Græco-Turkish hostilities the attitude of the British Government is one of neutrality.

Mr. Harmsworth informed Major Glyn that all questions concerning the administration of the Sudan should be addressed by members to the Foreign Office, and those of a purely commercial nature should be addressed to the Department of Overseas Trade.

April 14.—In reply to a question by Lord Curzon regarding the situation in Asia Minor, the Prime Minister stated that on the northern sector the Greeks had fallen back to their original position east of Broussa. On the southern sector the Greeks have evacuated Afion-Karahissar, to which they advanced early in the operations. As to the losses on either side, there was no definite information, and the rival claims were most conflicting.

Mr. Hilton Young informed Mr. Lambert that the approximate estimated cost during the current financial year in connection with the occupation of Constantinople and Egypt is as follows:—Constantinople Army Services, £3,000,000; Air Services, £40,000; Foreign Office Services, £10,000; Egypt Army Services, £5,000,000; Air Services, £1,576,000.

Bolsheviks near Enzeli have shelled a Persian Cossack force at Naglobar.

The High Commissioner for Palestine, attended by Colonel T. E. Lawrence, is to visit the Emir Abdullah at Amman, in the Oultre-Jourdain.

Jewish settlers in Bessarabia have pledged themselves to give, for the next five years, a tenth of their possessions and earnings to the Palestine Foundation Fund, and, in addition, the proceeds of a self-imposed tax on wheat and flour.

- I.—"AN AID TO PRACTICAL WRITTEN ARABIC." By J. Van Ess. M.A. (Oxford University Press. 21s. net.)
 II.—"THE EARLY HOURS." By Marmaduke Pickthall. (London: Collins and Co. 7s. 6d. net.)

I.—WRITTEN ARABIC.

This volume was prepared at the request of the Administration of the Territories of Irak in British occupation. The book was printed in 1920 at the Oxford University Press under the guidance of Rev. D. S. Margoliouth, D.Litt., Laudian Professor of Arabic in the University of Oxford. It does not claim to be a standard authority, its aim being to help in acquiring a sufficient knowledge of Arabic to enable the student to use the everyday language of newspapers, petitions, letters, etc.

The first section of the book deals with the explanation of simple grammatical rules, a knowledge of which is essential for a beginner. In this section an attempt is made to expound such rules as are really necessary for an ordinary knowledge of the language. It is to be noticed, however, that the author has at the same time endeavoured to raise very minute grammatical questions which are really beyond the scope of the book, and which are not of great practical value. Errors are occasionally met with, and the examples quoted to illustrate the rules under treatment are not always of a practical or generally accepted type.

The second section contains reading selections, which on the whole seem to be of a suitable kind. They represent considerable variety, including Koranic and Biblical texts as well as quotations from magazines and newspapers of different Arabic-speaking countries. Some of the quotations, however, such as those taken from the Koran, are by no means easy enough for students who are only beginning the study of the language, and who are consequently not too ambitious. The section ends with a set of Arabic proverbs, which are very useful and which are of current use.

The third section gives specimens of manuscripts. It begins by illustrating the formation of letters in various combinations, as taken from standard copy-books of a famous Arabic expert in caligraphy.

It then proceeds to give a wide variety of scripts, including petitions, letters, invitation cards, documents dealing with commercial and civil transactions, etc. These are given as they are ordinarily written by hand, together with the corresponding copies in print and their translations in English. The idea is an excellent one, and should remove many of the difficulties that the ordinary English student has to overcome in his attempt to obtain an adequate knowledge of the language as used in ordinary life.

The next part of the book consists of a vocabulary which takes up the greater part of the book. It is arranged in alphabetical order, and not according to roots as nearly all Arabic dictionaries are arranged. It is by no means an easy task for people who happen to be in the unfortunate position of not being profound Arabic scholars to look up a word in an Arabic ordinary dictionary. One has to know the root form of the word before he can find it in a dictionary, and if he happens to be unacquainted with the root, he is practically unable to find the word. The attempt to do away with the root system in the arrangement of the vocabulary should be a great help to students. One of the features of the vocabulary is that it is practical in so far as it even introduces Turkish words that have become of general use in Irak.

The last chapter is perhaps the best and most useful section of the book. It attempts to give the derived measures which are more or less difficult to discover under their respective roots.

The book, on the whole, represents an adequate effort on the part of the author who must have acquired a thorough grip of the colloquial Arabic as used by the people of Irak. It is to be hoped, however, that before a second edition is contemplated, a thorough revision of it will be made with a view to eliminating such parts as may seem to be unnecessary and rectifying such mistakes as may be found in the first section of the present edition. It would be highly desirable that a more careful selection of examples to illustrate the grammatical rules should be made.

II.—THROUGH TURKISH SPECTACLES.

Anyone who has ever heard the East a-callin' will certainly enjoy this book. Enjoyment may be checked now and then by the intrusion of politics into the story, but the story itself is truly Turkish. Camruddin and many of his fellow-countrymen are as likable as they are admirably drawn; and

Mr. Pickthall has lost none of his talent for setting before us, in a few words, pictures of the East in its most fascinating aspect—pictures which set us longing to be off to the shores of the Bosphorus and the bazaars of Stamboul again, as soon as they are freed from their present visitors! Briefly, the story is that of an ex-soldier of the Hamidian Army, who, after serving with credit in the Yemen, and winning the favour of his General by his gallantry, returns to his home only to become involved very quickly in the events that led up to the revolution of 1908. In a very short time he is in the thick of it, and—after a narrow escape from being put away by Abdul Hamid's spies—takes part as a *fedai* in the first rising, under Niazi Bey. For a while Fortune smiles upon him as she can smile, surely, only in Oriental lands, and he has a period of happiness to which his simple goodness and his sturdy championship of what he conceives to be the right fully entitle him. The counter-revolution casts its shadow over him; the Italo-Turkish war, very naturally, shakes his faith in the justice of Europe when the Turk is concerned; and the attack by the Balkan League brings disaster upon him and his. One other piece of great good fortune comes to console him for his losses and his sufferings, but the fate of his beloved country saddens him utterly, though it cannot embitter so good a Moslem as he; and the book closes on a sad note.

Interwoven with the simple story of Camruddin, Gulraane, his first wife, and the lady Reshidah, his second, there is a great deal about the doings of the C.U.P. and the Young Turks; and to tell truth, towards the end of the book we find the predominance of this element rather irritating. We can understand, and sympathise, with the author's indignation at the way Turkey was treated by Europe—and especially by her secular foe Russia—and the story of her attempt to secure British advisers, and even administrators, and of its failure owing to our pusillanimity is truly deplorable. But we cannot follow Mr. Pickthall all the way. Turkey had enemies enough, and to spare; but even of those outside her own borders very few could have been found in this country. Nor were all the "Old" Turks so incompetent as they are represented in "The Early Hours"; while to ask us to believe that all the C.U.P. leaders were inspired only by worthy motives is, frankly, to ask the impossible. Occasionally, the author's hero-worship carries him to strange lengths, as for example, when he tells us (p. 255) that Mahmud Shevket Pasha—for whom we have a very real admiration—had to be threatened with violence before he would consent to become Grand Vizier. To yield to threats what he would not yield to argument would surely be unworthy of such a brave man.

But, after all, this laudation of the Committee of Union and Progress, although it occupies much space in the last third of the book, is not the story. The effect produced by the upheaval upon Camruddin and the others is what interests us, and we enjoy being with them in their picturesque surroundings, and seeing life for a while through their eyes. In that way the book has afforded us very real pleasure, and we are grateful accordingly to Mr. Pickthall.

We regret that in our acknowledgment of the receipt of "When Turkey was Turkey," by Mary A. Poynter, the name of the publishers was wrongly given. Messrs. George Routledge and Sons are actually the publishers. The price of the book is 12s. 6d. net.

A Reuter message from Athens states:—After a somewhat stormy debate the proclamation of martial law was voted by the Constituent Assembly on April 12. Before the division the Prime Minister, M. Gounaris, declared that martial law was required in order to permit of the establishment of a censorship on military subjects only.

MESOPOTAMIA—1914-1921.

Speaking before a meeting of the Central Asian Society held at Burlington House on April 13, Sir Arnold T. Wilson said that neither the Treaty of Versailles nor that of Sévres said in so many words that we undertook to guard and maintain an independent Arab Government in Mesopotamia; but such a pledge was implied in both treaties, and the British Government had repeatedly affirmed this as its policy. Of the elements composing the population of the country the Shias numbered half as many again as the Sunnis. Between these two sects the division was profound, almost like that between different nations, extending to every activity of their lives and contributing to a difference of outlook which it would be impossible to ignore. It was from the Sunnis that Government officials of every kind were drawn, while the Shias had always held aloof, and none of them were included in the present Arab Government. They chiefly inhabited the country from Felujah inclusive below Baghdad; north of that the bulk of the population was Sunni as far as Mosul, beyond which again it consisted chiefly of Kurds. The social organisation of Kurdistan was little able to resist a powerful and unscrupulous individual with armed men in his pay, and sometimes the prestige of a saintly name to support him; so that there, even more than with the Arabs, a foreign Government was required. Previously to the war the various discordant and irreconcilable elements that made up the population of Mesopotamia had been loosely governed by the Turks. That government was an Oriental bureaucracy, bad from many points of view; but were a plebiscite to be taken to-day in Irak on the subject of Turkish versus Arab government, there would be a large majority in favour of Turkey. Bad as the record of the Turks was, it was already forgotten, and the national feeling of the Arabs was not a unifying factor. We must, however, support the Arab Government.

Dealing with the economic aspect, the lecturer said that the total area of Mesopotamia was about half as great again as that of the Punjab, but its population was only a quarter as many; its exports were entirely agricultural and pastoral. Dates amounted to about £2,000,000 a year, of which a half came to this country, a quarter went to India, and a quarter to the United States. The £2,000,000 could be doubled in ten years; the water was there for this. But we must first find fresh markets for the dates, teach the Arab to grow them better, and ourselves learn to pack them better. The average quantity of cereals raised was about 100,000 tons—a quantity no greater than the port of Karachi could handle in four days. The first consignment of cotton had arrived in London; it amounted to only ninety-two bales, but was of first-rate quality. The silkworm had formerly flourished in the country, and we had begun to encourage its rearing again. There were possibilities with sugar beet. Wool to the value of £250,000 annually was exported, also hides and leather. This trade might be expanded, but it would be better to encourage a local leather and woollen industry. There was oil in Mesopotamia, but the difficulty was to get it out. At present it was almost inaccessible, and needed a pipe line 500 miles long to get it to Busreh. Mesopotamia was no El Dorado, and the Mesopotamian would have to be furnished with a fresh set of ideals and imbued with an idea of progress before he could be made to work harder. Immigration offered no solution, only fresh problems. The peoples of Central Asia would not forsake their present life to labour in Mesopotamia, and as to India, that country itself offered greater attractions to the stalwart Mohammedan cultivator, who alone would make a good settler.

Turning to the probable effect of our abandoning our mandate, the lecturer said that such a course would be followed by anarchy in Mesopotamia, Palestine, and Syria, such as those countries had not witnessed for centuries; and this would spread to Egypt and India. No government could be firm in the Middle East without our support and assistance. The case was analogous to that of the Soudan. That country we had abandoned, and had gone back to it after ten years, to find the population reduced nearly two-thirds by famine and the sword. He assumed that Parliament would ratify the mandate. To make the mandate a success, we needed first and foremost commercial enterprise. Another necessity was a measure of restraint on the part of public speakers and the Press. Our task in Mesopotamia last year had been made much more difficult than it need have been by an orgy of ill-informed opinion from the United Kingdom; much of this had been reproduced in the native Press. He believed that from the time of the Armistice until now not a single newspaper in Great Britain had thought it worth while to send a special correspondent to Mesopotamia; a *Times* representative had once spent a week in the country, but he was on his way to Teheran.

The lecturer concluded with a personal reference. He said he had applied for permission to retire from Government service with a view to taking up other, he hoped, not less useful employment in Mesopotamia. This was not because of the prospect of earning higher pay, but he held it to be the duty of us all to serve civilisation in the best way we could. He hoped to play a humble part in the creation of wealth, which he believed could best be done on commercial lines. Governments had endeavoured to do this but had failed.

A short discussion followed.

It is stated from Malta that the Government has arranged for a regular steamship service to Sicily. A British vessel will ply four times a week, and will thus remedy a grievance long felt by British officers and residents homeward bound.

PERSONAL AND GENERAL.

TO-DAY.

April 21 (New Style).

April 8 (Old Style).

Shaaban 13, 1339, of the Moslem Calendar

Nisan 13, 5681, of the Jewish Calendar.

Lady Islington has arrived in Paris from Biarritz.

Lady Crosfield is making satisfactory progress towards recovery.

The Earl and Countess of Ossory have arrived in London from Egypt.

Lord and Lady Inchcape have arrived at Cannes in their yacht *Rever*.

Viscount and Viscountess Milner have returned from the South of France.

Sir Rennell and Lady Rodd will return to London early next month from Rome.

The Emir Faisal arrived in Cairo on April 14 on his way back from London to the Hejaz.

Prince Nicolas of Roumania is expected to arrive in London shortly from Bucharest.

Lord and Lady Chelmsford and the Hon. Anne Thesiger arrived in London this week, where their address will be 18, Queen's Gate, S.W.7.

M. Costiesco-Ghika, Secretary to the Roumanian Legation, left London on April 17 for Madrid, where he has been appointed First Secretary.

Mohamed-Ali Khan, who has been appointed Counsellor to the Persian Legation, has arrived in London from Teheran and entered upon his duties.

Mrs. Rosita Forbes will arrive in England on April 26, and will be at 56, Eaton Square until May 11, when she will return to her flat at 69, Curzon Street.

Flying Officer Cox, Adjutant of the 14th Squadron, whilst taking part in air manoeuvres on Friday, says a Jerusalem telegram, had his machine crash, and was killed.

The Sultan has given £10,000 (£2,000) to the Red Crescent Fund which has been started at Constantinople, but only about £130,000 (£6,000) has as yet been subscribed.

Mr. Neville George De Brecton Priestley, of West Hill, East Putney, managing director of the South Indian Railway Company, who died on December 13, left estate of the value of £28,861 gross and £24,821 net.

The marriage arranged between Captain Leonard Newton, of The Laurels, Mold, North Wales, and Margaret Wolseley, elder daughter of Lieutenant-Colonel T. W. Haig, C.S.I., C.M.G., C.B.E., will take place on the 27th inst. at Lahore, India.

The engagement is announced, and the marriage will take place shortly, between Percy Hamilton Maffin, M.C., Executive Engineer, Indian State Railways, and Eleanor, elder daughter of Mr. and Mrs. Stanley Bartrum, Coniston, Bromley, Kent.

Our Zagreb Correspondent writes:—Count Michael Karoly, whom nobody seems to want, has obtained permission from the Yugoslav Government to live at Dubrovnik (Ragusa), and has arrived with his family at Zagreb on his way to Dalmatia.

In aid of the Rheims Cathedral Restoration Fund (30, Regent Street), a lecture on "The Miracle of Modern

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

Morocco," illustrated with lantern slides, will be given by Mrs. Aubrey Le Blond at the Æolian Hall at three o'clock to-morrow afternoon.

Major-General C. P. Grant, C.B., has arrived in Palestine, from England, says the *Zionist Review*, to take up his post as Director of Public Works. Lieut.-Colonel C. W. Gray Donald, O.B.E., will act as Deputy to the Director of Public Works.

Sir Alfred Macdonald Bulteel Irwin, C.S.I., of Ailesbury Road, Dublin, formerly a puisne Judge of the Chief Court of Lower Burma, who died on February 1, son of the Ven. Henry Irwin, Archdeacon of Elphin, has left personal estate of the value of £7,581.

The Egyptian Government invite competitive designs for the new buildings of Qasr el Aini Hospital and School at Cairo, with accommodation for 1,225 beds. Particulars may be obtained from the Secretary, Royal Institute of British Architects, 9, Conduit Street, W.1.

M. Yankovitch, Yugoslav Minister for Agriculture, has warmly thanked the Duke of Portland, President of the Agricultural Relief of Allies Committee of the Royal Agricultural Society, for the gift of seeds and implements to the value of £15,000 contributed by British farmers for the benefit of the peasants of Serbia.

The marriage was celebrated on April 14 at St. Andrew's Church, Roker, by the Rev. A. du T. Pownall, assisted by Rev. E. W. Bolland, Vicar of Southwick Parish Church, between T. V. Holmes, M.A., LL.B., son of Mrs. and the late Mr. Stephen Holmes, Jesmond, Newcastle, and Miss Molly Bird, daughter of Mrs. and the late Mr. R. R. Bird, of Cairo, Egypt.

Under the auspices of the Royal Society of Arts, Lieut.-Colonel Sir Edward W. M. Grigg, K.C.V.O., C.M.G., D.S.O., will deliver the Sir George Birdwood Memorial Lecture to-morrow, April 22, at 4.30 p.m., at John Street, Adelphi. His subject is "The Common Service of the British and Indian Peoples to the World." The Earl of Lytton, Under Secretary of State for India, will preside. On the same occasion the medal awarded for the Birdwood Lecture given last year will be presented by Mr. A. A. Campbell, F.R.S., Chairman of the Council, to Sir Valentine Chirol.

APPOINTMENTS, ETC.

General Dousmanis has been appointed Chief of the Greek General Staff.

Mr. Peter A. Jay, Counsellor of Embassy at Rome, has been appointed American Minister to Roumania.

The King has been pleased to approve the appointment of Mr. Hugh McPherson, C.S.I., I.C.S., to be a member of the Executive Council of the Governor of Bihar and Orissa, in succession to Sir Walter Maude, K.C.I.E., C.S.I., I.C.S., who is retiring this month.

The King has been pleased to approve of the promotion to the rank of Field-Marshal of General Sir Arthur Arnold Barrett, G.C.B., G.C.S.I., K.C.V.O., retired pay, late Indian Army, in succession to the late Field-Marshal Sir Charles Comyn Egerton, G.C.B., D.S.O.

The King has been pleased to approve the appointment of Mr. Henry Staveley Lawrence, C.S.I., I.C.S., to be a Member of the Executive Council of the Governor of Bombay in succession to Sir George Seymour Curtis, K.C.S.I., I.C.S., whose tenure of office expires this month.

Mr. N. G. Davidson, Advocate-General of the Sudan Government, has accepted, says the *Sudan Times*, the post of Legal Adviser to the Mesopotamian Government, in succession to Sir E. Bonham Carter (formerly Legal Secretary, S.G.), who has resigned his post in Mesopotamia.

NEWS IN BRIEF.

A further declaration of British neutrality has been sent to the Greek and Turkish Governments.

A Port Said telegram announces the arrival of the Japanese Crown Prince at the port on April 17.

Greece has reimposed a Press censorship in order to prevent the publication of misleading news about the military situation.

A Cairo message reports a collision between two aeroplanes at Billbeis on April 14. The four occupants of the machines were killed.

The proceeds of the Egyptian Warriors' Day entertainments, which are not yet concluded, are expected to exceed £10,000.

April 13 was kept as the anniversary of the Amritsar tragedy. A *hartal* was declared, and public meetings were held in Bombay and elsewhere.

An Athens *communiqué*, dated April 14, states that there were slight attacks against the Greek lines at Tulu Bunar, which were easily repulsed.

The Anglo-Hellenic Agreement of September 4, 1920, relating to the suppression of the Capitulations in Egypt, has been published [Cmd. 1237, 1d.]

Bekir Sami Bey and other members of the delegation of the Turkish Nationalist Government travelled from Brindisi to Constantinople in an Italian destroyer.

A message from the Viceroy to the India Office announces that 181,329 persons are now being relieved in certain parts of India, and that the famine is spreading.

M. Gounaris, the Greek Prime Minister, speaking in the Chamber last week, stated that there had never been any question of the King's going to the front.

Marshal Lyautey, the Resident-General in Morocco, landed at Casablanca last week on his return from France. He was presented with a Marshal's baton of honour by the oldest French resident.

The members of the Georgian Government have issued from Constantinople an appeal to all Socialist parties and workmen's organisations for support against the invasion of their country by the Russian Bolsheviks, who "hide their Imperialistic characteristics under the flag of Communism."

Writing on April 11, Reuter's Smyrna correspondent reports:—As the result of the indiscriminate fire of Greek troops passing through the town on their way to the front four people are reported to have been killed. Great uneasiness is being experienced by the Turkish population, and the Greek military authorities appear to be unable to put a stop to such undisciplined action.

THE MESOPOTAMIAN MANDATE.

It is to be hoped that the domestic crisis will have lost some of its acuteness to enable both members of Parliament and the public as a whole to give their full attention when Mr. Winston Churchill announces the policy of the British Government in regard to the mandated territories. In spite of the efforts that have been made in a section of the Press to discredit Great Britain's acceptance of the mandates for Palestine and Mesopotamia, we believe that the bulk of the British people is prepared to accept the responsibilities entailed as an inevitable post-war extension of the nation's burden, while naturally anxious to see the financial commitments connected with these fresh responsibilities reduced to a minimum. Most of the criticism levelled against the mandates has centred in the alleged abrogation of national rights in favour of the League of Nations and in the charges to be imposed upon the British Exchequer. With regard to the former, it may be pointed out that if the principle of the League of Nations is good—it has been accepted for better or for worse by Parliament and the country—any deference paid by Great Britain to the League in connection with the mandated territories can only serve to enhance its prestige and usefulness. In the case of the cost likely to be incurred through the mandates, an entirely unjustifiable attempt has been made to argue, first, that the expenditure in Mesopotamia during the last two years is due to the acceptance of the mandate, and, secondly, that the current Budget may be taken as a fair indication of expenditure in the future. Neither argument will hold good. The course of events in Mesopotamia after the Armistice was not influenced in any way by the decision to bring into existence the League of Nations or by the prospect of a mandate being offered to Great Britain. The chief item in our Mesopotamian expenditure has been the military establishment; and it is obvious that this will not be maintained at the strength which has been necessary during the last two years. Indeed, the terms of the mandate are the best guarantee that military expenditure will be restricted within the narrowest possible limits, while the aim of the mandatory Government will be to make the country as quickly as possible self-supporting.

As far as Mesopotamia is concerned, the chief interest in Mr. Churchill's speech will lie in the measures that it is proposed to adopt with a view to keeping expenditure on the country within reasonable limits from next year onwards. It has been made abundantly clear that the policy of scuttle finds no favour with the Government. If any doubt on this point had still lingered in the public mind, it will have been dissipated by the very able lecture delivered before the Central Asian Society by Sir Arnold Wilson, formerly Civil Commissioner in Mesopotamia. Sir Arnold Wilson accompanied Mr. Churchill to Egypt in an advisory capacity, and, although he no longer has official authority, we shall

not be wrong in supposing that on main lines his views in regard to the future of Mesopotamia are shared by the Government. Now, from the fact that nothing has been allowed to leak out regarding the Cairo conferences it is safe to infer that there was general agreement among those who met in consultation. Consequently when Sir Arnold Wilson in a public lecture condemns the suggested policy of allowing the Arabs to fend for themselves while the British retire within the perimeter of Busreh, we may be sure that Mr. Churchill will have equally potent arguments against such a policy. No Arab Government, in the opinion of the late Civil Commissioner, could be formed without British support and assistance. Were we to abandon the mandate, he added, Islam, already suspicious, would finally, perhaps for a century, turn definitely against us. With anarchy would come loss of trade, and in a short time civilisation in these regions would be submerged, as it was in the Sudan when the British Government abandoned that country in deference to much the same complaints as were now being made. The analogy is an apt one, and should be taken to heart. But we may hope that, after Mr. Churchill's *exposé* of the situation and of the Government's intentions, the last will have been heard of a complete withdrawal to Busreh. There need be no delay in creating a national Arab force, but it is evident that some time must elapse before such an organisation can be efficient enough to stand alone and to meet all the requirements of the extended territory that it will have to serve.

British policy in Mesopotamia has been simplified by the terms of the mandate. We are pledged to the establishment of a national Government, and to this end we must count upon the support of the so-called Nationalists. It is true that they were mainly responsible for the spread of the recent rebellion, if not for the original outbreak; but that movement was effectively quelled, and most of the participants have learnt their lesson, even though they may not have admitted the fact. The proclamation of a general amnesty, if it did not convince the extremists that they had misjudged the British character, would at least strengthen the hands of the more moderate element. It so happens that the Nationalists as a body are more or less united on the question of the future ruler of Mesopotamia. An inquiry on this subject, it will be remembered, was set on foot before the 1920 rebellion, and while opinion up and down the country showed marked differences more support was given to an Emir of the Shereefian family than to any other. In those days, as Emir Faisal seemed destined to rule over Syria the choice inclined towards his brother, Emir Abdullah. Whether on the strength of his war exploits popular favour would now incline to Emir Faisal remains to be seen, but on this point the Arabs of Mesopotamia must decide for themselves. As far as Emir Abdullah is concerned, a post will in all probability be found for him nearer home. A few days ago in Cairo Emir Faisal admitted that he had received unofficial proposals to accept the throne of Mesopotamia, and he knows that he can count upon a welcome from the British Government. The latter, however, can take no steps in the matter until the choice of the people has been clearly indicated. Of Emir Faisal it can certainly be said that his personal qualities offer the best possible augury for a successful reign in Mesopotamia. He has shown himself patient, conciliatory, and steadfast; left to himself, he could probably be relied upon to evolve a successful *modus vivendi* with his Turkish and Kurdish neighbours to the north and with the powerful Arab chieftains of the region west and south-west of Mesopotamia. Whatever the result of the Cairo Conference it is to be hoped that no time will be lost in giving effect to its decisions in so far as they are calculated to stabilise conditions in Mesopotamia and enable the country to settle down to the new era.

ST. GEORGE OF ENGLAND.

By Estelle Blyth.

St. George is a very real and living personality to the people of Palestine, whether Christian or Moslem, and after living in the warmth of their belief it is strange to find at home a widespread ignorance and indifference about him. He is the Patron Saint of England, and, therefore, in a sense, of the whole Empire, a splendid figure, bold, chivalrous, and ready—surely the very type of English manhood; and yet there are still many who know so little about him as to think that George the Tribune and George of Cappadocia are one and the same. Let us contest the heresy at once. George of Cappadocia (or, more correctly, of Laodicea), who is canonised only by the ignorant, championed the Arian heresy against Athanasius; later, though still an Arian, he became Archbishop of Alexandria (A.D. 356-61), and was torn to pieces by his infuriated flock on Christmas Eve, 361. This was in the reign of Julian, who annexed the heretic's fine library and removed it to Rome. George the Tribune was martyred A.D. 303 (some even give the date as 292); Arius propounded his heresy about 318, and was condemned by the Council of Nicea in 325. Making full allowance for the inaccuracy of oral tradition, we must still confess it is most unlikely that in the short space of fifty-seven years men could lose all remembrance of the soldier's steadfastness unto death, or of the archbishop's far from blameless career. It is worth mentioning also that there was (and still may be) a very ancient church in Syria in whose ruins was found a Greek inscription, dated 346, which referred to the holy martyr, George. The error crept in about the end of the fifth century; English readers, no doubt, take it on trust from Gibbon. It would not be worth referring to but for the fact that people are so slipshod and slovenly in their history as to think that such a man as George of Cappadocia could be England's Patron Saint.

Who, then, was St. George?

This is his story, as I have been able to piece it together from many sources, old and new. He was not an Englishman, but a Roman, born in the Province of Cappadocia, the son of a Christian nobleman who suffered for his faith. After his father's death, St. George, while still a boy, took his mother to Lydda in Palestine, where she had property, and would be safer from heathen vengeance. The early Christians were as strictly forbidden to provoke martyrdom, as they were to deny their faith if directly questioned. His mother died a few years later, when St. George, a generous, fearless boy of seventeen, had already won distinction as a soldier. The beauty of his person and his character attracted the notice of that wayward tyrant, Diocletian, who made him a tribune and showed him great favour and affection, once even sending him on an Imperial Mission into Britain. It is strange that the Emperor never suspected the young Tribune of being a Christian; for it is on record that St. George sent much help, both in money and in kind, to the persecuted Christians of Armenia. St. George, for his part, served the heathen Emperor faithfully, until the latter's fearful persecution of the Christians swept the young Tribune, in a blaze of righteous anger, to the tyrant's presence, to protest against the inhuman savagery that spared neither age nor sex. He proclaimed himself a Christian, to the utter fury of Diocletian, and was straightway by him given over to prison and to torture. The guards placed his feet in stocks, and laid a heavy stone upon his breast; he spoke no word, but silently endured their cruelty. The following day they bound him to a wheel set with spikes of steel, which tore his body fearfully as the wheel was forced round. As the guards laboured at their horrid task, a voice cried out of heaven: "George, fear thou nothing, for I am with thee!" and the soldier, looking upwards, beheld One clad in robes of brightest glory, from Whom a wonderful, unearthly light shone out. Two of the guards, also saw the vision, became Christians, and instantly were put to death. The broken body of the Saint, who yet lived and was fully conscious, was unbound from the wheel, and he was carried back to prison. Here he was allowed to see an old servant, whom he charged to carry his body to Lydda for burial. Diocletian again and again offered him full pardon if he would but scatter a few grains of incense on the altar of some Roman god. In fact, the savage Emperor laboured to save his favourite's life, but as St. George still held firm he was beheaded (April 23, 303). One is thankful for the clean sword sweep that ended those days of brutal torture.

Naturally "a death so noble" was seed from which would spring a ready crop of legends. The episode of the dragon (which need not necessarily be a legend *only*), took place at Berytus (Beyrout), where the monster had made its lair by

the watersprings outside the city, and thus caught its prey without much trouble. St. George killed his dragon in fair fight, and it is not surprising that the people of Berytus at once embraced their champion's faith; after which St. George further "glorified the land with many miracles." The early pilgrims invariably visited the place where the dragon was slain; the modern traveller may have it pointed out to him as the scene of Andromeda's rescue by Perseus.

The story soon found its way into Britain; it was one to touch the heart and fire the generous imagination of English youth. From England the cult spread through Europe, and very soon Aragon, Valencia, Portugal, Malta, and Genoa (all seafaring countries) adopted him as their Patron Saint. England early on displaced the weak-kneed Confessor from being her Patron Saint in favour of St. George the Soldier. There are two versions of how this came to pass, the latter being probably the true one. The earlier version says that Robert of Normandy was hard pressed to hold his own at the Siege of Antioch (July 3, 1098), but at the crucial moment, when the Christians had almost failed under the overwhelming numbers of the infidel, St. George, that valiant knight, was seen "with an innumerable army coming down from the hills, all in white, with a red cross on his banner." The Saracens fled, feeling, no doubt, unequal to fighting a heavenly, as well as an earthly, host, and so Antioch was won by the First Crusade. "This story made St. George extraordinarily famous . . . and to be esteemed a patron, not only of England, but of Christianity itself. Not but that St. George was a considerable saint before this." The other story tells us that, at the Siege of Calais (1349), Edward III. led a spirited attack with the cry, "Ha, St. Edward! Ha, St. George!" utterly routing the French, who lost two hundred good men slain. That year saw also the foundation of the Order of St. George (now the Order of the Garter), which "exceeds in majesty, honour, and fame all chivalrous Orders in the world," according to Selden. A hundred years earlier (1222) the Council of Oxford enjoined that St. George's Day should be kept as a national feast. In the ancient Use of Sarum we find a special Collect, Epistle (St. James i. 2-12), and Gospel (St. John xv. 1-7); and though in Prayer Books of subsequent date April 23 is only a black-letter day, there are still special observances for it—three Collects, with an Introit and the Gloria. It was Edward VI., the *enfant terrible* of English History, who changed the name of the Order of St. George to the Order of the Garter, and also cut out of the Prayer Book the Collect, Epistle, and Gospel for the day. One wonders by what happy chance he was withheld from snuffing out the day entirely.

To go back a little way, we find Edward I. flying the Ensign of St. George on the four battleships which bore his wooden bridges north in his first Scottish War (1303). In an "Old Art of War" (found in a library abroad, but without date), I discovered an "Item" to the effect that "all Souldiers entering into bataille, assault, skirmish, or other faction of armes, shall have for their common cry and word, 'St. George, forward,' and 'Upon them, St. George,' whereby the souldier is much comforted and the enemy dismayed, by calling to mind the ancient valour of England, who with that name has so oft been victorious." Henry VII., surely the harshest of our kings, forbade the Irish to use their national battle-cry, commanding them to call instead upon St. George, or "on the name of their sovereign lord, the King of England for the time being" (1495). In the twelfth century English soldiers began to wear the red cross of St. George upon their surcoats. It came easily enough to English soldiers to call upon their Saint as they went into action; and not once or twice only did he appear to succour Christian arms in Palestine. It is not strange that the Crusaders' ardent faith in him spread to the Saracens, and has remained in Palestine until this day.

In the pages of the early Pilgrims to Palestine there are many references to St. George and to the Georgians, who were both a people and a sect. Sir John Maundeville writes of them thus: "There are others who are called Georgians, which were converted by St. George, and they worship him more than any other saint, and to him they cry for help, and they came out of the realm of Georgia. These people have their crowns shaven, the Clerks have round crowns and the laity have their crowns all square; and they hold the same Christian doctrines as the Greeks" (Chap. x., A.D. 1322). Later on he describes the kingdom of Georgia, which "commences at the east (of the kingdom of Media), at the great mountain called Abzor, and contains many people of different nations. . . . Their kingdom extends towards Turkey and towards the Great Sea, and towards the south it borders on the Greater Armenia. . . . The King of Georgia is in subjection to the Great Cham. . . . And know well that in the kingdom of Georgia, Abchaz, and the Little Armenia are good and devout Christians; for they shrive and house themselves always once or twice in the

week, and many house themselves every day" (Chap. xiv.). The Georgians held various churches and chapels in Jerusalem, and in the Church of the Holy Sepulchre. When they came into Jerusalem the Saracens dared exact no tribute from them, as they did from all other Christians, for they were a fighting people (even "their noblewomen were trained in the use of arms"), and they welcomed any excuse for joining battle with the infidel. They were stout, if not always dependable, allies of the Christian Kingdom during its brief existence.

St. George of England is buried at Lydda (Ludd), on the Plain of Sharon, a little town as old and venerable as any in the land. It was a city in the portion of Benjamin, and was then called Lod. Later, the Romans called it Diospolis, City of Jupiter, and that name is found on coins of Septimius Severus (A.D. 211), and Caracalla (217). St. George lies in the crypt of the ancient church (now restored to the Greek Church), exactly under the high altar; over the grave there is a fine recumbent figure of the saint, which is said to be the one effigy allowed in the Greek Church. A narrow road now runs through the midst of the old church, one half of which is a mosque; only part of the nave and the north aisle have survived to our day. The ancient church was a very splendid building; it was oblong in shape, and of very early construction, though it is doubtful whether William of Tyre is correct in ascribing it to Justinian. Richard I. in 1192 encamped for twenty-two days between St. George (Lydda), and Ramula (Ramleh), suffering almost equally from the heavy rains and the enemy's lightning attacks. In 1483, Felix Fabry found the church in very ruinous condition, though the Greeks still held services in one part, and lamps burned continuously before the altar. A constant stream of pilgrims and others came to worship at St. George's tomb, and many wonders were performed there. On their authority we have the terrible story of one who, scoffing, laid his hand upon a marble column whereat the saint had been scourged, and then was unable to withdraw his hand until the saint had been appeased by the sinner's prayers and penitence. They, too, relate with horror how an "intruded Bishop of the Latin rite" in 1185 tried to move the marble slab that marked the grave, when fire rushed out upon him, burning one man to death and injuring another.

The peasants of Palestine, both Christian and Moslem, deny that St. George is dead, while at the same time they regard his tomb with the utmost reverence. They call him "Khuddr-el-Hai"—literally, the Always-Green, which we may render as "the one who never dies." A Moslem once told me that the natives believe that St. George will answer their cry to him for help, and I have often heard a woman call out his name if a little child tumbles down. The Moslems point out a large stone in the courtyard of the Mosque of Omar where St. George comes every night to pray. The Mohammedans, who usually identify St. George with the prophet Elijah—El Khudr, the forerunner of Messiah—at Lydda, confound his legend with another about Christ Himself. Their name for Antichrist is Dajjal, and they have a tradition that Jesus will slay Antichrist by the gate of Lydda. This notion sprang from an ancient bas-relief of St. George and the Dragon on the Lydda church. But Dajjal may be derived, by a very common confusion between *n* and *l*, from Dagon, whose name two neighbouring villages—Dajûn and Beit Dajûn—bear to this day, while one of the gates of Lydda used to be called the Gate of Dagon. If the derivation be correct, then it is indeed a curious process by which the monster, symbolic of heathenism conquered by Christianity, has been evolved out of the first great rival of the God of Israel. And could there be a fitter scene for such a legend than the town where Hebrew touched Philistine, Jew struggled with Greek, and Christendom contested with Islam? ("Historical Geography," G. A. Smith. Chap. VIII.) The Jews of Jobar, near Damascus, worship at the shrine of Elijah, whom they call El Khuddr, men with men, and women with women, dancing a sort of Nature dance. ("Religions of Palestine," Bliss.) In every Greek church there are found pictures of "St. George, with a long spear upon a jolly hackney that gave the dragon his death-wound, as the painters say, in the throat"; and every autumn the Greek Church keeps the Feast of Lydda as a general holiday, the Patriarch himself going down to celebrate mass, while people crowd in from all parts of the country. This feast is mentioned by an Arab writer, Mukaddasi, as long ago as 985, but it was then held on St. George's Day.

The fact that the Patron Saint of England is buried in Palestine is one of the many links that bind the people of the Holy Land to the England who freed them; they will not grudge England the charge of his sacred dust. Let us no longer be indifferent to the honour of our Patron Saint, whose cross is the first and oldest on our Flag. St. George, as Patron Saint of England, is also the Patron Saint of the Empire that has grown from our little, ever-living England. No member of that Empire, be he great or small, can wish to forget that it is England who has

drawn around her the other countries far and near; that it is to England these countries look; England, at whose need they spring to arms, whose tongue they speak, whose literature is their heritage, whose laws are their standard, whose fall would break the Empire into a hundred incoherent pieces.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:—

INDIA: Political Department (Pay). Royal Indian Marine (April 11).

EGYPT (PRESS CENSORSHIP). GREECE (ANATOLIAN OPERATIONS.) ROYAL MALTA ARTILLERY. RUSSIA: Afghanistan.—General Wrangel's Troops. INDIA: Dr. Denning's Claim. (April 12.)

INDIA: European Goods (Boycott).—Officers' Pay and Pensions.—Army Reductions.—Reserved Departments, Bengal. HAJI MOHAMMED ABDULLAH. INDIA: Colonel Frank Johnson.—Burmese Associations (Protest).—Bolshevist Gold.—Census.—Amir of Afghanistan.—Native Regiments.—Government of Madras (Public Park). TURKEY. SUDAN (April 13).

PEACE TREATIES: Turkish Prisoners (Rahmy Bey). GREECE: British Debt.—Asia Minor Operations. NEAR AND MIDDLE EAST (BRITISH OCCUPATIONS). INDIA: Royal Army Medical Corps Officers (Pay). (April 14.)

THE ARAB HORSE SOCIETY.

The Council Meeting of the above Society was held on April 5 at the Grosvenor Hotel, London, Mr. S. G. Hough being in the chair. The following new members were elected:—Capt. Gilbert Blaine, A5, The Albany, Piccadilly, W.; G. F. Covey, Hazardside, Poundhill, Sussex; Major T. B. Goodchild, Ministry of Agriculture, Cairo; Lt.-Col. Fredk. F. Lance, Wexford, Wrotham, Kent; Major Sydney A. Metcalf, Aylands, Waltham Cross, Herts; Brian E. S. Mountain, West Hill House, Epsom; Miss J. L. Cave Penney, Rogues' Roost, Ashburton, Devon; S. W. Steane, Scrinagar, Kashmir; Major E. Claude Thomas, Ray Lodge, Lingfield.

The settlement of an action brought by Messrs. J. W. Benson, Limited, jewellers, against the Dowager Maharanee of Cooh Behar was announced in the King's Bench Division on April 14. The claim was in respect of jewellery sold. Mr. Barrington Ward, K.C., for the plaintiffs, said it had been agreed that the defendant should submit to judgment upon terms which had been endorsed on counsel's briefs.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAB (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

For Freight and particulars, apply to

LYNCH BROS., LTD.,

MANAGING AGENTS,

**3, SALTERS HALL COURT,
LONDON, E.C.4,**

OR TO

**THE MESOPOTAMIA PERSIA
CORPORATION, LTD.,**

At chief towns in Mesopotamia and Persia.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

British Interests in Egypt.

Particulars are given by our Cairo Correspondent in his letter this week of a movement to establish a British Union in Egypt for the protection of British interests there. The proposal is the logical development of the step taken in 1919, when in view of the change in the outlook a council was formed for that purpose as the outcome of meetings of the British community at the British Chamber of Commerce, which had, up to that time, looked after British interests, but which had, of course, been primarily concerned with commercial matters. Future needs clearly made some more permanent organisation desirable, hence the present proposal for the formation of a body which will be representative of the whole British community in Egypt, and as such will consequently possess an influence which no body, however powerful, representing sectional interests, could ever hope to possess.

The Rupee Problem.

The Indian exchange position was dealt with in detail by Mr. Robert Williamson at the general meeting of the National Bank of India. He pointed out that the conditions of trade with India had all been adverse to the success of the scheme for the establishment of the rupee exchange at 2s., and declared that having regard to the adverse trade figures "a long time must elapse before the 2s. rate is made effective, if it is ever reached at all, and one may well have doubts on that point." He suggests the possibility that the Indian Currency Committee may again be called together to review the situation, and evidently is of the opinion that the difference between the statutory rate of exchange and the current market price necessitates further consideration being given to the problem. It is interesting to note in this connection that the committee in its report contemplates conditions which would render it "necessary to consider the problem afresh, and take the measures which might be required by the altered circumstances." Whether it will come to that must remain to be seen. It may be noted, however, that there is a growing body of opinion which strongly holds the view that it was a mistaken policy ever to attempt to alter the value of the rupee.

The Eastern Markets.

Mr. Williamson was far from optimistic in dealing with the trade position. He commented on the overstocking of the Eastern markets with goods of all kinds, and pointed out that there are stocks of produce in this country, in America, and even in Germany, "waiting to be moved into consumption, and the off-take is very slack." The liquidation of these operations would require much time and patience, he remarked, before it was brought to a close. "There is now," he added, "a marked falling off in shipments to the East, and also from that quarter to this side, which ought to improve the position there and here, and if this should lead to a speedier realisation of supplies, even although accompanied by curtailment in our current business, we shall rejoice and certainly need not grumble."

Romanian Consolidated.

A circular has been issued by the directors of the Roumanian Consolidated Oilfields, Ltd., describing the progress made with the work of reconstruction, and outlining the plans of the board. A very satisfactory review is given of the general position and outlook. Since the Armistice good progress has been made, and the company has now seventeen producing wells and twelve wells in course of being drilled, three of which are close to oil. The actual output since the company recovered possession of its property is over 40,000 tons, and the possible production has already recovered to 150 tons per day. The general manager estimates that with the supplies of casing and other material

now forthcoming and adequate power the company will by December 31 regain its pre-war production, "and so rich and extensive are the company's lands that it is only a matter of systematic drilling to double that production in the near future."

The Company's Claim.

The position with regard to the company's claim for compensation is dealt with at length in the circular. The decision of the Court of Appeal, it will be recalled, was that Roumania was primarily liable for the destruction, and this liability has been admitted, and steps have been taken to ascertain the amount of the damage, which has been fixed at 296,591,675 lei, equal at an exchange of 285 lei to the £ to £1,040,672. The British and French Governments maintained that they were only responsible as guarantors for part of the loss sustained, and the directors state that they have received information which justifies them in stating that the amount for which the two Governments will admit liability will not be less than £300,000. No date for payment has yet been fixed, but the British Government have authorised the statement that they will urge the committee that will be appointed to settle the matter to deal with this company's claim first.

Proposed Increase of Capital.

Pending the settlement of the company's claim, additional working capital is required, and this need the directors propose to meet by offering new convertible debentures to shareholders in proportion to their holdings. For the purpose of giving conversion rights it is proposed to increase the company's capital from £1,750,000 to £2,500,000 by the creation of 750,000 shares of £1 each. The debenture issue is to be offered at 95 per cent., and will bear interest at 10 per cent. per annum, and be redeemable at par in five years. In view of the strength of the company's position it is clear that the debenture issue would be fully secured, and shareholders may be expected to avail themselves of the opportunity, more especially as the conversion rights will in all probability prove a most valuable consideration.

Apathy of British Film Producers.

My recent criticisms of the apathy of British film manufacturers as regards Near Eastern markets are fully borne out in a letter in the current issue of the *Times Trade Supplement*. "Here in Egypt," says the writer, "I have never seen a single British film at any cinema. French, Italian, American, Spanish, and, since the Armistice, German films are imported on a large scale." The result is, of course, that the trade of all these countries benefit, for the cinema, whatever its merits or demerits, is of undoubted value as an instrument of commercial propaganda. What the reason is for this lack of enterprise on the part of British film producers it is difficult to say. Possibly now that this industry is also participating in the trade "slump" they will be able to "discover" the great markets for films in the Near East.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 17, TOKENHOUSE YARD,
LOTHBURY, E.C.2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
GENERAL THE HON. SIR H. A. LAWRENCE, K.C.B.
LIEUT.-COL. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

ROUMANIA.

BUCHAREST, April 5.

Crop Prospects in Bessarabia.

Information collected by the Secretary for Agriculture in Bessarabia goes to show that the autumn sowings of wheat in that province amounted to 20,000 hectares, and of rye to 6,370 hectares. According to the local official statistics, 3,542 hectares have been sown with beetroot this year.

As is well known, Bessarabia is an exceedingly fruitful province, and produces magnificent harvests both of cereals and fruit. It used to contain many large estates, but these have all been reduced by the new agrarian law to a maximum of 300 hectares each.

The prospects for this year's fruit crops are summarised as follows:—Cherries look well and promise a good crop. There will be an excellent crop of plums unless they are damaged by a late frost or destroyed by insects. Pears and apples promise a medium crop. Vines promise well if they are not attacked by the mildew. Nuts also look promising.

Petroleum Distribution.

The Bill for granting to a private company the monopoly of the distribution of petroleum within the boundaries of Roumania is now before the House, and is giving rise to a great deal of discussion. The Decree Law authorising the formation of such a company was published in the *Moniteur Officiel* some months ago, and now awaits confirmation. An interesting speech on the subject was made on March 28 by M. Stere, the member for Soroca in Bessarabia. He condemned the present project as lacking in clearness and advocated the nationalisation of the whole petroleum industry. The Liberals showed signs of approval at this, but the speech was listened to in a more or less hostile silence. The Committee in charge of the Bill has eliminated the clauses restricting imports and also the clause authorising the State to purchase a minimum of 20 per cent. from the exporter.

Exploitation of Natural Gas.

The fuel department of the Ministry of Industry and Commerce has sent a circular to all the petroleum societies requesting them to take measures for the collection and use of the natural gas which emanates from the wells. It is intended that these gases should be employed in future for heating the boilers and running the engines used in the petroleum industry. It is hoped in this way to economise about 10,000 waggons of "mazout" per annum, which would be a very useful amount to divert to the railways and other industries. A careful study of the petroleum fields of the Prahova is being made at the present time with a view to the use of these gases. It is proposed to build a conduit to carry them from the Prahova region to the town of Ploesch, where they can be used for lighting purposes.

Miscellaneous.

It is reported that a new discovery has been made of a gold deposit at Mihadia, for the exploitation of which a company has been formed with a capital of five million lei.

The Bank Marmorosch Blank made a net profit for 1920 of 5½ million lei. A dividend of 20 per cent. is to be paid.

In view of the re-organisation of the luggage transport the Roumanian State Railways now assume full respon-

sibility for all luggage transported, and the systematic thieving which has been going on for so long will be put a stop to.

With a view to improving the value of the lei, especially on the French market, the Government is doing all it can to increase exports from Roumania. It will be remembered that a loan was recently raised in France, against which the Government undertook to export 15,000 waggons of wheat at 40,000 lei per waggon. Of the total value of this 600,000,000 lei, 25 per cent. is to be credited to the Roumanian National Debt, and the rest will be used to improve the rate of the lei in France, though it is not quite clear how it is proposed to do this.

GREECE.

ATHENS, April 3.

The Question of a Loan.

The Government is still searching hard for money. Great hopes were entertained that the visit to London of the Governor of the National Bank of Greece, M. Maximos, would bear fruit, but, as far as can be seen, that gentleman's efforts to conclude a private loan have come to nothing. Moreover, there is not the slightest indication of the raising by the Allies of the financial blockade, and Greece, now plunged into a fresh war, wonders where the necessary funds to "carry on" will come from. True, the National Bank has placed 70,000,000 drachmæ at the disposal of the Government, but the expenses entailed by the new campaign are so heavy that this amount is nothing more than a drop in the ocean. The Government Press assures us with its customary optimism that there is no cause for anxiety, as very important loans are about to be concluded. On the other hand the Opposition papers say that the financial negotiations which were in progress with private banking groups in London have definitely fallen through owing to the extremely high interest and unreasonable guarantees demanded, and that the Government is now seriously thinking of floating another internal loan. In the meantime a further depreciation of the drachma is anticipated.

Customs Receipts.

The receipts of the Piræus Customs during the second ten days of March (O.S.) amounted to 2,347,309.10 drachmæ in paper and 118,390.65 drachmæ in gold. Compared with the receipts during the corresponding period last year, there is a decrease this year of 1,613.55 drachmæ in paper and of 62,379.80 drachmæ in gold.

Export of Wine from Patras.

According to information supplied by the Greek Chamber of Commerce at Patras, the quantity of wine exported from that port during the whole of 1920 amounted to 3,183,614 okas, and was distributed as follows (the figures representing okas):—France 2,939,611, Great Britain 168,885, Austria 26,685, Denmark 10,714, America 8,840, Holland 8,054, Egypt 7,714, Smyrna 6,176, Germany 5,869, Italy 575, Constantinople 430, and various other centres 61.

ASIA MINOR.

SMYRNA, April 5.

British Interests in Smyrna.

The board of the Smyrna British Chamber of Commerce waited upon Sir Harry H. Lamb, K.C.M.G., to welcome him to Smyrna as representative of the British High Commissioner for Turkey, when the chairman, Mr. Sidney La Fontaine, in expressing the board's welcome, added that in pre-war days the Smyrna export trade was principally in the hands of British merchants, whose ancestors established themselves in Smyrna about the end of the eighteenth century. Many were connected with the "Honourable Levant Company," which flourished in the eighteenth century. To-day, unfortunately, owing to the chaotic and critical conditions obtaining in the Smyrna Province, said Mr. La Fontaine, the British merchant had been ousted out of the trade by those more favoured by the present administration. The chairman felt sure that British interests in Smyrna were quite safe in the hands of Sir Harry H. Lamb, whose reputation was well known to the Smyrna British Chamber of Commerce, and in their strenuous efforts to recover the lost trade they felt sure they could count on his effective co-operation. Sir Harry thanked the board for their welcome, and assured them that at all times he would be most happy to do his utmost, to the extent of his ability and opportunity, to help British merchants in their struggle to recover the lost commerce.

THE BUILDING EXHIBITION.

EFFICIENCY THE KEY-NOTE.

(FROM OUR OWN CORRESPONDENT.)

Opened in the middle of a world trade "slump," and with the gravest industrial crisis with which this country has yet been faced nearing its climax—anti-climax if you like, but on Thursday and Friday it did not feel like that—the Building Exhibition at Olympia presented last week a remarkable contrast to the prevailing circumstances. One entered the hall and it was like passing into another world; outside all was depression; inside the atmosphere was suffused with cheery optimism. There was a suggestion on all sides of brisk business, and it needed a serious effort of the imagination to conjure up the words "trade depression."

The Building Exhibition is normally a biennial event, but the present show, which remains open until April 26, is the first of a short annual series, the change being effected on account of the housing shortage. This temporary alteration will, it may be hoped, prove permanent; for there is no doubt that when present difficulties are solved in this country the exhibition should be a most valuable medium for the promotion of our overseas trade. Not in some lines, of course; there are many classes of goods which come within the scope of this exhibition which one would not expect to export, at any rate, to any great extent. But for the various types of machinery—for wood working, road construction, and the mixing of concrete, etc.—there is unquestionably a vast market, especially in regions like the Near and Middle East.

I suppose there are few countries which have not found themselves with a housing shortage as a legacy of the war. Certainly, in most parts of the Near East it is the case, and in centres like Bucharest special measures have had to be devised to meet the situation. A visit to the exhibition by representatives of Near Eastern countries could, in the circumstances, scarcely have failed to have been of mutual value, and it is to be regretted that some arrangement of this kind was not made. The authorities would do well to bear this in mind for a subsequent occasion, because if British contractors are to play any considerable part in the extensive town planning schemes that will be undertaken there in due course, it is clearly most desirable that it should be brought home to the countries in question that in all that concerns building, whether it be the planning of sites, the erection of houses, or vast schemes of road construction, this country is easily first in the field.

That is emphatically the lesson the exhibition has to teach. At almost every stand throughout the vast building there is evidence of the great strides that have been made in the industry during the last few years. Improvements of every description are on view, particularly in regard to labour-saving machinery, both in connection with the various processes of house building and for the housewife in the shape of elaborate cooking appliances and hot-water apparatus—though these latter, if I may say so, form only a minor part of the exhibition. They are much in evidence. It is true, but rather as the dessert than as one of the staple items of the menu. There are so many other important things that attract the attention—the innumerable aids to industry, for instance, that are to be seen on stand after stand, pointing very forcibly to the fact that as far as materials and machinery are concerned, nothing hinders an intensive house-building scheme. The whole exhibition is an object-lesson of its kind, and over it all is the unmistakable stamp of efficiency. If that word had not already been adopted it would have been in accordance with the fitness of things for it to have been called that. Everything seems to fit in. There is none of the haphazard arrangement of stands, or, be it added, of the catalogue, that I have noticed at some recent exhibitions which I need not specify. Everything is arranged to facilitate business, and the stands are obviously ordered not for show, but for work, and they are none the less effective on that account.

Turning to the exhibits, one of the most interesting features of the show is presented by the stands dealing with various aspects of road construction. Specially notable are the exhibits of Agricultural and General Engineers, Limited, notably the "Aveling and Porter" piston valve steam-roller, and the same firm's compound steam-tractor. The Ransome Machinery Company, Limited, have two interesting stands, showing among other things the Ransome combined drying and mixing plant for making tar macadam.

The total capacity of this machine is 6 cubic feet, and its approximate output per hour is four tons. A word must be given also to the exhibits of Millars' Timber and Trading Company, Limited, including wagon loaders, concrete mixers, petrol engines, and hoists.

Messrs. Stavers and Partners have on view an autotelfer and a working model of a cable crane. The Fawcett Construction Co., Ltd., show "Mon'lith-crete" steel joists, while Medway's Safety Lift Co., Ltd., and Waygood-Otis, Ltd., exhibit lifts of various descriptions. I was particularly interested in the stand of H. J. and C. Major, Ltd., showing their well-known patent interlocking tiles, for which there should be a splendid market in the Near East, a remark which also applies to the exhibits of plaited cords of James Austin and Sons, Ltd. Other notable stands are those of Torrance and Sons, Ltd., manufacturers of machinery for the paint and colour and printing ink trades; Venesta, Ltd., who are showing their plywood for panelling and partition work; and Vickers, Ltd., who have now on view a portable concrete brick machine, a portable concrete roofing tile machine, and a portable concrete partition slab machine.

Of special interest also are the stands of Hill and Co. (Engineers), Ltd., showing various labour-saving appliances, among them the Sauerman Dragline Excavator; Sutcliffe, Speakman and Co., Ltd., showing their pottery moulding machine, etc.; and the Laffly (England) Company, exhibiting a combination water and hydraulic dust tipping wagon, etc. These exhibits I have mentioned are representative of the contents of one of the best exhibitions it has been my fortune to see, and I only regret that lack of space precludes my dealing with the stands at greater length, for there are many other exhibitors I should like to mention.

THE MODERNISATION OF BELGRADE.

Projected Railway Lines.

(FROM OUR CORRESPONDENT IN YUGOSLAVIA.)

For a long time the Municipality of Belgrade has been considering a scheme for the modernisation and beautification of Belgrade, to make it a city worthy of the capital of the united kingdom, and of its commanding natural position, and one day the whole matter will be offered for international competition for the submission of plans.

The first step is the planning of the railway lines, and the scheme for this has been completed by the Ministry of Public Works. The main lines are as follows: A great central station on modern lines will be erected near the junction of King Alexander St. and the Takovska, near the cattle-market on the Trkalishte, that is on the high ground beyond the top of the Resavska. From here three lines will radiate. The first, a double line, will pass by a semi-circular tunnel a kilometre long to the Chuburski Brook by Shumatovska Ulica, Topovske Shupe to Vshetechki Mill, where there will be a Southern Station. Here the line divides, one branch forking by Weifort's Brewery to Topchider, another to the Save Bridge, and the third by a viaduct to the first floor level of the old station, which will be used only for goods in transit, the new high level serving for passengers; this branch will pass under Lomina St., by a tunnel 1,100 metres long below the Terazije, where there will be an underground station accessible by lifts. The line will leave the tunnel near Bailoni's brewery, and go straight to Dortiolska Station, between Vidin St. and the Danube. Hence a bridge will cross the Danube, available for vehicular, tram, and foot traffic as well, and effect a connection with Panchévo and the Banat. From Dortiolska Station a line will run to a new station at the Klanitza (slaughter house) thence past Ilich's mill into a semi-circular tunnel 1,100 metres long, coming out near Bulbuldere Brook (the Vale of Nightingales, a Turkish name), then to Voivoda Brana St., by another tunnel to the central station.

By this scheme Belgrade will be surrounded by a ring of railways. Yet another line from the central station will pass Mokri Lug, Mala Krsna, to Pozharevatz on the Danube, and form a section of an eventual international main line Odessa-Belgrade-Paris. Another ring, from the Dortiolska Station, will pass the town to the old station, then cross the Save by a new bridge where the Austrian pontoon bridge was, which will be available also for tram, vehicular, and foot traffic, and connect up with Zemun. The Save bank will be devoted to wharfage and warehouses. From a new station by the Save bridge a line will branch across part of Srem to Shavnik, and thence to Kotor (Cattaro), and thus connect up with the Adriatic. The underlying theory of the scheme is to separate through traffic from local, and to keep passenger and goods traffic separate. For the execution of the scheme, the estimate is a milliard. This sounds a lot, but if it means a thousand million dinars, the authors are decidedly optimists.

BALANCE SHEET, 31st January, 1921.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—Business during the past week has been affected by the industrial trouble, and trade has generally been restricted. Currants have been in fair request, while there has also been some demand for figs and Persian dates.

Sugar.—Home refined has been in good demand at the official prices. West Indian crystallised has come to business at 60s. to 66s., and American granulated has been done at 68s. 3d.

Coffee.—The futures market has been steady. Quotations are:—May 40s., July 40s., September 40s. 6d., December 42s.

Oilseeds.—The market has generally been weak. Indian linseed has lost 6d. at 16s., while La Plata is quoted at 14s. Rapeseed is lower, with Toria at 17s. and bold Ferozepore at 16s., a loss of 6d. in both cases, while brown Cawnpore at 14s. is unaltered. Egyptian cottonseed (black) has gained 3d. at 11s. 6d.

Seed Oils.—Prices have been unsettled. Linseed oil has advanced 1s. at 25s. 6d. Rape Oil at 44s. has dropped 2s. Cotton oil has remained quiet and steady. The refined variety is unchanged at 38s., but the Egyptian crude at 29s. has gained 1s. Turpentine is 11s. higher at 55s. 6d.

CURRENT PRICES.

General Produce.—Bacon, 172s. 6d. cwt.; butter, 241s. cwt.; cheese, 154s. cwt.; chillies, 107s. 6d. cwt.; eggs, 20s. 6d. per 120; cloves (Zanzibar), 94d. lb.; cocoa (Ceylon, good to fine), 79s. cwt.; coffee (Costa Rica), 109s. cwt.; coffee (East India, bold), 113s. cwt.; coffee (Mocha, longberry), 92s. 6d. cwt.; coffee (Santos superior), 51s. 3d. cwt.; ginger (washed, Cochin), 37s. 6d. cwt.; hams, 165s. cwt.; lard, 88s. 6d. cwt.; nutmegs (110's to 80's), 114d. lb.; pepper (Singapore, black), 34d. lb.; pepper (Muntok, white), 8d. lb.; raisins (Valencia), 122s. 6d. cwt.; currants (Vostizza), 72s. 6d. cwt.; sultanas (Smyrna), 126s. 6d. cwt.; sugar (granulated), 68s. 74d. cwt.; sugar (No. 1 cubes), 73s. cwt.; sugar (white Java), 66s. 6d. cwt.; sugar (white Mauritius), 66s. 6d. cwt.; sugar (West India crystallised), 62s. cwt.; tapioca (fair Singapore), 14d. lb.; sago (small pearl), 24s. 3d. cwt.; sago flour, 12s. 9d. cwt.; rice (Rangoon No. 2), 17s. 9d. cwt.; rice (bran, Rangoon), 25 8s. 9d. ton; tea (Indian), 64d. lb.; tea (Ceylon), 64d. lb.; tea (Java), 24d. lb.; wheat (Australian), 85s. 3d. qr.; wheat (English white), 81s. 6d. qr.; wheat (La Plata), 79s. 9d. qr.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 64d. lb.; 80 to 89 lbs., 64d. lb.; 70 to 79 lbs., 64d. lb.; 60 to 69 lbs., 54d. lb.; 59 lbs. and under, 44d. lb.; (second), 90 lbs. and up, 44d. lb.; 80 to 89 lbs., 44d. lb.; 70 to 79 lbs., 44d. lb.; 60 to 69 lbs., 34d. lb.; 59 lbs. and under, 3d. lb.; Cows (first), 60 lbs. and up, 34d. lb.; 59 lbs. and under, 34d. lb.; (second), 60 lbs. and up, 24d. lb.; 59 lbs. and under, 24d. lb.; bulls (first), 24d. lb.; bulls (second), 14d. lb.; kips (first), 34d. lb.; (second), 24d. lb.; (third), 2d. lb. Calcutta Market:—Prices in rupees per 20 lb. Arsenic hides (cows): Agras, 5 to 11; Durbhargao, 3.8 to 5; Patnas, 3.8 to 5. Salted cows, 2.8 to 5. Skins: Calf, 6 to 8 rupees per 20 lb.; goat, 130 to 160 per 100 pieces.

Chemicals.—Acids: Boric, 79s. cwt.; oxalic, 94d. lb.; citric, 2s. 54d. lb.; tartaric, 1s. 84d. lb.; ammonia (sulphate), £24 11s. 3d. ton; arsenic (white powdered), £47 10s. ton; benzole (standard), 3s. gallon; bleaching powder (35 per cent.), £20 10s. ton; borax crystals, 34s. 6d. cwt.; cream of tartar, 133s. 6d. cwt.; Potassium: Bi-chromate, 1s. 04d. lb.; chlorate, 64d. lb.; caustic, £48 10s. ton; nitrate, £54 ton; permanganate, 1s. 104d. lb.; prussiate yellow, 1s. 24d. lb.; sulphate (90 per cent.), £27 10s. ton; Sodium: Crystals, 150s. ton; bi-carbonate, £10 10s. ton; bi-chromate, 74d. lb.; alkali (58 per cent.), £8 15s. ton; chlorate, 44d. lb.; caustic (70 per cent.), £22 5s. ton; hyposulphite, £23 ton; prussiate, 84d. lb.; nitrate, £20 12s. 6d. ton; glycerine (crude, 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; sulphate of copper, £34 10s. ton; sulphate of iron, 150s. ton; lemon oil, 3s. 3d. lb.; quinine, 3s. 54d. oz.; red lead, £38 10s. ton; white dry lead, £41 15s. ton; white ground lead, £52 ton.

Metals.—Aluminium, £150 ton; antimony (English regulus), £39 7s. 6d. ton; bismuth, 7s. 6d. lb.; copper (standard), £68 11s. 3d. ton; copper (electro), £73 10s. ton; gold bars, 106s. oz.; iron (No 3 Cleveland), 120s. ton; hematite (mixed number), 180s. ton; lead (soft foreign), £19 18s. 9d. ton; manganese Poti, 1s. 44d. unit; molybdenite, 55s. unit; nickel, £200 ton; platinum, 340s. oz.; plumbago, £30 ton; quicksilver, £12 12s. 6d. bottle; silver bars, 33d. oz.; spelter (G.O.B.), £24 15s. ton; tin (standard), £156 ton; wolfram, 12s. 9d. unit; zinc sheets, £36 10s. ton; tin plates (20 by 14), 26s. 6d. box.

Miscellaneous.—Cotton (American), 7.93d. lb.; linseed (La Plata), £14 7s. 6d. ton; rape (Toria), £17 ton; soya beans, £11 15s. ton; palm kernels, £16 12s. 6d. ton. Oils: Linseed, £23 15s. ton; soya, £32 ton; cotton (crude), £30 ton; olive, £87 10s. ton; ground nut, £36 ton; palm, £30 10s. ton; rape (crude), £45 10s. ton; petroleum, 2s. 34d. gallon; turpentine, 45s. 3d. cwt. Rubber: Plantation (No. 1 crepe), 104d. lb.; smoked sheet, 94d. lb.; fine hard Para, 11d. lb.

EMPIRE COTTON GROWING.

Formation of a Register of Experts,

During the interval that has elapsed since the publication of the report of the Empire Cotton Growing Committee, considerable progress has been made towards the establishment of a permanent organisation competent to carry into effect the recommendations contained in the report. The permanent body will be known as the Empire Cotton Growing Corporation, and will be incorporated under Royal Charter.

Meanwhile, the present committee has been making careful inquiry from the Governments of the Dominions, Colonies, and Protectorates as to the means by which the development of cotton growing within the Empire may best be promoted. From more than one of the Governments approached the suggestion has been made that specially qualified men should be appointed to advise the local Agricultural Departments on matters connected with cotton growing within their respective areas. It appears probable, therefore, that the selection and appointment of such experts of various kinds will be one of the first tasks that will confront the new Corporation, which it is hoped may be established shortly.

To assist the proposed Corporation the Empire Cotton Growing Committee are, therefore, prepared to receive now from suitably qualified persons statements of their scientific attainments and/or experience of tropical agriculture, with a view to compiling a register of men whose services overseas may be useful in the development of cotton growing, either in consultation or by appointment as cotton experts.

The register is intended to be available for reference by the Corporation now in course of formation, but it is unlikely that appointments can be made for the next few months. The entry of a name on the register will not necessarily be taken to imply willingness to accept service under the Corporation subsequently. If such service is likely to be desired, the fact should be specially stated. All communications, which will be regarded as confidential to the members of the Council of the Corporation, should be addressed to: The Secretary, Empire Cotton Growing Committee, Board of Trade, Great George Street, London, S.W.1.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows, for the week ended April 14:—Considering the unsettled conditions which have prevailed during the past week, our market has shown a very steady front. Business on the "spot" has been slightly curtailed, as was only to be expected under the circumstances, and spinners show an increased disposition to keep their needs supplied on the hand to mouth principle. Nevertheless, they continue to keep in close touch with the market, as is witnessed by the healthy inquiry which continued day by day. Reports are almost unanimous that business in Manchester is maintaining, and it would seem as if the present industrial crisis had occurred at a particularly unfortunate time for the trade. Now, of course, a material check has been administered to would-be buyers who naturally are loath to enter into fresh contracts until the outlook becomes more settled. The improved inquiry for Tokar, to which we drew attention last week, was most disappointing in its result, only forty bales being put down. Manchester reports have continued very steady in face of adverse conditions, and c.i.f. business has, if anything, shown a slight improvement. Total sales, 1,200 bales. Quotations of Sakellaridis are advanced 50 points, with the exception of extra fine, which is reduced 50 points. Other quotations are unchanged on balance, but with the tendency easier. Fully good fair Sakel 17.50d.

COTTON MACHINERY REDUCED.

Messrs. John Worrall, Limited, of Oldham, have published their Cotton Spinners' and Manufacturers' Directory for Lancashire for 1921. The figures given show that since a year ago fifteen firms have gone out of existence. In 1920, there were in Lancashire 60,079,394 spinning and doubling spindles, and 798,083 looms, whereas now there are 60,053,246 spinning and doubling spindles, and 790,399 looms. The largest cloth manufacturing district in Lancashire is Burnley with 109,940 looms, then comes Blackburn with 994,880 looms. In the spinning section Oldham is the chief centre with 17,586,076 spinning and doubling spindles followed by Bolton with 7,638,155 spinning and doubling spindles.

We are informed that the contract for the supply of filing cabinets to the Egyptian Government, for which tenders were invited recently, has been allotted to The Shannon, Ltd.

Registered in London under the Companies Act of 1862 on the 23rd March, 1866.

COMPANY MEETINGS.

NATIONAL BANK OF INDIA.

The Indian Exchange Position.

The ordinary general meeting of the shareholders of the National Bank of India, Ltd., was held on April 13 at the Wesleyan Hall, Bishopsgate, E.C., Mr. Robert Williamson (the deputy-chairman) presiding.

The General Manager (Mr. H. Chalmers) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—I presume that, as usual, the report may be taken as read. I am sure the absence owing to ill-health of our chairman from our meeting to-day will be as deeply and sincerely regretted, particularly by his old friends and acquaintances whom I see in the room, as it is by us. This is the second occasion on which he has been absent from our annual meetings since the year 1877, when he became associated with the management of this bank. It strikes me that this may be unique in the history of attendances at such gatherings, but even if it is not, to have been absent only twice in the long period of forty-four years is a wonderful record. Those of you who know Mr. Campbell need not be told by me that he himself much regrets his absence from our midst to-day. Most gladly indeed would I, in particular, have welcomed him to preside over this meeting. I ask you to join with me in an expression of our hope that he will soon be restored to a greater measure of health and strength.

Before dealing with the business which has brought us together here I must first express our great regret at the loss we have sustained since our last meeting by the death of our esteemed colleague, Mr. Alfred Simson, who had been a director since January, 1901. Throughout the period of his directorate Mr. Simson had given keen attention to the affairs of the bank, and had always been active in furthering and promoting its interests. Prior to Mr. Simson's death, on September 6, 1920, the directors had appointed Mr. Chalmers, the general manager, to a seat on the board, to mark their appreciation of his valuable and unremitting services to the institution in times of much difficulty in the conduct of our business, and later on in our proceedings I shall bring his name before you for reappointment as a director. We have felt, however, for some time past that our best interests would be served by the appointment of a new director to fill the vacancy caused by the death of Mr. Simson, and quite recently Mr. Campbell urged us to take this step. After consultation with him, and with his approval, we decided to invite Mr. John Duncan Nimmo, the senior partner of Messrs. Walter Duncan and Co., London and Glasgow, and of their corresponding firm, Messrs. Duncan Bros. and Co., Calcutta, to join the board, and I am glad to tell you he accepted our invitation. He is here with us to-day, and I will ask you by and by to confirm his appointment.

Increase of Capital.

Towards the end of last year we found it would be advantageous to increase the capital of the bank by making an issue of 40,000 shares on terms and conditions in all respects the same as when, with your sanction and approval, we made a like addition in January, 1919. The reasons for this step were very much the same as those set before you by the Chairman in his address to you on the 21st of that month.

Business generally in all parts of the world is now, and for some months past indeed has been, exceedingly depressed. Within our own British Isles something in the nature of an industrial *débâcle* is in full force, with unemployment very prevalent, which, I fear, can alone be met by a readjustment of industry to meet the economic changes that have taken place. Eastern markets are overlaid with supplies of goods of all kinds; there are also stocks of produce in this country, in America, and even in Germany, from that quarter, waiting to be moved into consumption, and the offtake is very slack. Consequently it is likely that the liquidation of these operations will require much time and patience before it is brought to a close. This bank naturally is interested, and we do not expect to escape losses from this part of our business. In that connection we have given heed to the difficulties attending trade conditions, and before closing the accounts which are now in your hands we made adequate provision for anything of this kind that might fall to our lot.

I am glad, therefore, that we are able to place before you a statement of the bank's affairs which I hope you will regard as quite satisfactory. The first points to which I should draw your attention are the increase in our paid-up capital and our reserve fund. By reason of the issue of new shares the former now stands at £2,000,000, and the latter, increased to the extent of £300,000 by the premium thereon and by a further sum of £200,000 from the profits of last year, if agreed to by you to-day, will be raised to £2,500,000. Owing to our accounts for 1919 having been made up on the old parity of 1s. 4d. per rupee, and those now in your hands on the new statutory basis of 2s., which was also the basis of our last half-yearly statement, it is not possible easily to compare the figures in the balance-sheet under each heading in the two years. The most important change, and really the only one worth mentioning, is on the debit side of the account, where we have acceptances for customers, £3,795,673, compared with £880,052 in 1919, an increase which gives you evidence of the activity in exports to the East on which I have already commented.

Generally speaking, from the other figures in the balance-sheet it will be seen that the bank's business has been well maintained. Our house property is an increasing element. The Chairman told you last year of our purchase of the Colombo

office, which we shall have to rebuild by-and-by, as it is not possible suitably to reconstruct the present building, which occupies a fine position. We have also been obliged to purchase our Karachi premises. The net profits for the year amount to £553,398, compared with £452,169 in 1919, and we propose to pay a dividend of 20 per cent. per annum, free of income-tax, to place £20,000 to premises account, £20,000 to officers' pension fund, to add £200,000 to reserve fund, thereby increasing it to the handsome sum of £2,500,000, carrying forward a balance of £149,031, against £135,633 brought in. These results will, I trust, give you satisfaction. You will be pleased to hear that the bank has been enabled to continue paying to the pensioners, also to the whole staff, who have continued to give us most admirable service in a very strenuous year's working, suitable bonuses, having regard to the continued dearness in cost of living.

Rupee Exchange.

Since the Chairman spoke to you a year ago of the recommendations made by the Commission on Currency to fix the price of the rupee at 2s. or 10 rupees to the sovereign, great changes, with violent fluctuations, have taken place in every quarter, and as regards India in particular we have witnessed a very heavy fall in the value of the rupee. The endeavours of the Committee to solve the Indian problem have been quite the reverse of the success that many people anticipated, while the efforts of the Government to support and make effective the new scheme by selling on the 2s. gold basis—and from June, 1920, when the basis of the rupee was changed to 2s. sterling—"Reverse Councils" to the extent of over £50,000,000 of their sterling resources have been a conspicuous failure, and were some months ago abandoned.

Perhaps a mistake was made at the outset in fixing the price in gold, which nowadays is subject to the fluctuations in value common to commodities, where exchange comes into play, but, even so, the important modification made in June last year has not brought us up till now nearer to the attainment of the object in view. The conditions of trade with India have all been adverse to the success of the scheme, and the great outflow of capital from India to this side, due to the high rate at which remittances could be made, likewise added to those adverse conditions. Since February, 1920, the exchange price of the rupee has dropped from 2s. 10½d. to as low as 1s. 3d.—to-day it is 1s. 3½d.—while silver, from the highest point touched, 89½d. in February, 1920, was quoted yesterday at 36½d. When the 16d. rupee scheme came into operation in 1893 the rate fell back gradually to 1s. 0½d. for T.T., and it took about five years to reach 1s. 4d. Having regard to the adverse trade figures which I have just mentioned, a long time must elapse before the 2s. rate is made effective, if it is ever reached at all, and one may well have doubts on that point. The Government of India are now out of the business. The gold standard reserves accumulated out of profits made on the coinage of silver during a period of about fifteen years, from the published figures, seem to remain unchanged, but the sterling resources otherwise must have been largely depleted at a heavy loss, having regard to the free use of them in the effort to support exchange, and the value of the rupee is now left to find its own level. That level, necessarily a fluctuating one, being more or less based on the price of silver bullion, could more readily be determined if the mints in India were reopened to the coinage of silver to the public, but I sometimes wonder whether we may again return to that position.

Current Year's Prospects.

With regard to our prospects for the current year, it is not possible for me to paint them as brilliant. The volume of our business for the time being is small. The slump that has taken place in prices, the greatly diminished export trade of the country in bulk, as well as in value, and the still unsettled position in nearly all the Continental markets which in pre-war years were good customers for Indian produce, have combined to bring about the prevailing slackness. With the exercise of some little patience these troubles will be solved. But in respect to finding employment for our funds we are experiencing no difficulty, and our hope is that a year hence you will have no cause to complain of the results of our work. In any case I would like to assure you that we shall spare no effort to attain success.

There is one other matter which it is necessary for me to mention to you to-day. As you are aware, it has been our custom, probably running back to the day when this bank was first established in London, to issue to the shareholders a half-yearly report. Our bank, indeed, may be the only one in London that does this. All the big joint stock institutions here, and, I think, also the overseas banks, confine themselves to the issue of a yearly report only, and we have decided to come into line with them in this matter. Accordingly, for the current year our next report and accounts will be placed in your hands in March.

1922, but we shall continue to pay the half-yearly dividend at about the same time as heretofore. Our Chairman has expressed his entire approval of this departure from our past custom, which in many ways will be a convenience to the management and our staff generally.

The resolution which I move is: "That the report of the directors and statement of accounts for the year ended December 31, 1920, be received and adopted, and that a dividend for the six months to December 31, 1920, at the rate of 20 per cent. per annum, be paid on the shares of the company registered at this date, the same to be payable free of income-tax on and after April 14, 1921."

Mr. Robert Miller seconded the motion, which was carried unanimously.

The appointment of Mr. Henry Chalmers and Mr. J. D. Nimmo to the board was confirmed, and the retiring directors, Messrs. Robert Williamson, J. N. Stuart, and Robert Miller were re-elected.

Messrs. Cooper Brothers and Co. and Messrs. W. A. Browne and Co., the retiring auditors, were reappointed.

Mr. J. Irwin-Davis proposed a vote of thanks to the Chairman and directors for the care and prudence they had exercised in conducting the affairs of the bank during the past year.

The resolution was seconded by Mr. J. G. P. Jepps, and carried unanimously.

Vote of Thanks to General Manager and Staff.

Mr. H. H. Nelson, in moving a vote of thanks to the general manager and staff, said he wished first to make a few remarks with regard to the statement so ably put before the meeting by the chairman, and which he was sure would repay a close study at some other time. Apparently it was the history of what had been brought about since they last met by what a good many of them regarded as considerable muddling both by the Government in this country and by the Government in India. He was not going into any political question or any matters on which they might have divergent views, but he wished to call the attention of the meeting to the fact that a year ago they were all filled with high hopes as to what might happen in the immediate future. Business then was brisk and excellent, manufacturers were being sought right and left, but unhappily they found that, instead of this state of things being encouraged and supported, as it should have been, it was damped down by over-taxation in this country, as a result of which an immense amount of capital was taken away from trade where it could have been much better employed, not only for the benefit of individuals, but for the benefit of taxation in this country.

Unfortunately it was one of the conditions of Coalition Government that no one took any trouble in Parliament in these days to oppose measures which they knew were intrinsically wrong. The chief object of Parliamentary people at the present time seemed to be to placate the voters, especially the proletarian voters, in order that they might remain in a position which at one time was a very dignified one, but which he ventured to say had lost a great deal of its dignity in the past few years. The result was, as the Chairman had pointed out, that the commercial position of the country was now a parlous one. Not only was that the case in this country, but in India they knew of the parlous experiments which had been tried in connection with the exchange by people who really should have mastered the subject to a certain extent before they took such steps as led to a condition of things which had been reflected all over the world to the disadvantage of this country. He pointed this out because he thought it a pity that in a meeting like this some few words should not be said to enable people who read the report of the proceedings to know that these disadvantages had not been recognised. Considering the condition of things which had prevailed, the report now presented reflected the greatest credit upon the staff. They had never had a report which was more satisfactory or a year in which the profits had been earned under more disadvantageous circumstances.

Mr. J. D. Longmire seconded the resolution, which was carried unanimously.

The General Manager, in expressing thanks for the vote, said that the staff had had a strenuous year, and conditions were still strenuous, but they hoped to continue to merit the approval of the shareholders.

The proceedings then terminated.

STANDARD SIZES FOR FILMS.

"Standard Measurements," which has recently been published by the Incorporated Association of Kinematograph Manufacturers, Ltd., of 167-169, Wardour Street, W.1, has for its object the fixing of a standard width of films and also of the distance between the perforations. The book also deals with the size of spool centres; masks of camera, printer and projector; the diameter and pitch of thread of focussing jacket, etc. It is certainly desirable that something should be done to standardise the films, etc., and this book, which should prove invaluable to all who are interested in this industry, is a step in the direction of reform. The film industry has been seriously handicapped by the varied sizes of films, causing not only innumerable breaks during an exhibition of a film, but involving risks of fire when the film slips off the sprockets, or damage in other ways.

A Palestine Government report states that much satisfaction is shown at the abolition of the tobacco monopoly, and many orders have been received by tobacco firms for seeds. It is proposed to establish tobacco growing on an extensive scale.

COMPANY NOTES AND REPORTS.

Bank of Athens.

The net profit of the Bank of Athens for 1920, after deducting all taxes, amortisations, and general expenses, was Drs.18,144,451. Final dividend of Drs.10 on ordinary shares proposed, placing to statutory reserve Drs.1,800,000, to directors Drs.1,051,440, donations and subscriptions Drs.131,430, super-annuation fund Drs.131,430, bonus to staff Drs.657,150, to income-tax Drs.1,115,418, to special reserve Drs.2,600,000, balance forward Drs.2,257,583. An interim dividend of 5 per cent. on ordinary shares has been paid.

Ionian Bank.

The report of the Ionian Bank for the year 1920 states that the profits, after providing for management expenses, losses, bad and doubtful debts, depreciation of securities, bonus to staff, rates, taxes, income-tax, and excess profit duty, both in Greece and England, amount to £39,433, and £11,307 was brought in, making £50,740. An interim dividend at 3s. per share, tax free, was paid in September, and the directors propose a further dividend at 3s. per share and a bonus at 1s. per share, both tax free, payable April 27; to reserve (making it £130,000), £5,000; forward, £11,750. The business of the bank shows satisfactory improvement, but, owing to the policy of the directors in writing down the investments to market value or under, the amount brought into profit shows only a slight increase over last year. A large portion of this depreciation has arisen on British Government war securities, and will be brought back into profit within the next few years. The usefulness of the branch at Syra, which was opened during the European War on account of strong representations from the British authorities in Athens, having now ceased, the branch has been closed. Meeting, Basildon House, Moorgate Street, E.C., April 26, at 11.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

Millboard.—The Controller of Printing and Stationery, Old Ismailia Palace, Sharia Qasr el Aini, Cairo, invites tenders for the supply of 11,000 kilos of millboard, May 19.

Tarlatan, Oils.—The Egyptian War Department invites tenders for the supply of tarlatan, white, Scotch finish. Tenders due April 23. Tenders are also invited for oil, colza, and oil rape. Tenders due April 27. A sample of the first item mentioned can be seen and particulars of the second obtained at the office of the Inspecting Engineer to the Egyptian and Sudanese Governments, Queen Anne's Chambers, Broadway, Westminster, S.W.1.

Bicycles.—The Director-General Postal Administration, Alexandria, invites tenders for the supply of a bicycle and 20 to 30 tricycles. Specification can be obtained from the Egyptian Government Agent, Queen Anne's Chambers, Westminster, S.W.1. June 1.

India.

Steelwork.—The Great Indian Peninsula Railway Company invites tenders for the supply of steelwork for bridges (Reay Road bridge). Particulars and specification (£1) can be obtained from the Secretary, 48, Cophall Avenue, E.C. April 26.

Yugoslavia.

Cotton Cloth.—The Army Clothing Department (Ekonomsko Odelenje), Donji Grad, Belgrade, invites tenders for the supply of:—1,000,000 metres of cotton cloth ("American") (unbleached) for shirts, etc.; 1,000,000 metres of cotton cloth ("American") (unbleached) for sheets; 7,000,000 metres of cotton cloth for straw mattress covers. A deposit of 10 per cent. for Yugoslav subjects and 20 per cent. for foreigners must be made before the tenders are opened. Each offer must bear a 10 dinar duty stamp. All particulars may be obtained upon application to the Department of Overseas Trade (Textile Section), 35, Old Queen Street, Westminster, S.W.1. April 25.

Dynamos, etc.—The Commercial Secretary to H.M. Legation at Belgrade reports that he has received an inquiry from a local contractor in regard to plant, etc., required for the electrical lighting of a town in Yugoslavia. The inquirer states that he is desirous of obtaining offers from United Kingdom firms for two dynamos of 40 kilowatts each and 50 kilometres of overhead cable, etc., for the supply of current to about 1,200 houses. The name and address of the inquiring firm may be obtained on application to the Department of Overseas Trade, 35, Old Queen Street, S.W.1.

Morocco.

Bridge.—The Tangier-Fez Railway invite tenders for the construction of a bridge 410 feet in length over the Sedu River at Mechra Belksiri, the cost of construction being estimated at 2,000,000 francs. Tenders must reach the Department of Public Works at Tangier by May 1.

Travellers to the Near East

Can obtain all information as to the journey from the Manager, **Continental Enquiry Office,** Victoria Station (S.E. & C.R.), S.W.1.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

MAMOURET-UL-AZIZ.

The report for February states:— Imports have been very quiet, as much because of the news that arrives regarding the fall in prices as because of political conditions. Some small transactions are to be recorded in ironmongery. As regards exports, skins are a little higher. Marten fur, which was sold at 500 piastres the piece, is looked for at 1,000. But the quality is inferior to that of the previous year.

Weather conditions during the month having been good, the anxiety of the previous month has disappeared, and we hope to have a good crop.

ALEPPO.

There has been no change worthy of note in the commercial and financial position here. Weather conditions remain unfavourable to agriculture.

ADRIANOPLE.

The following extracts are taken from the report for January and February:— Although the business of our town has suffered from the crises which prevail to some extent in all parts, the imports of our market are nevertheless of some importance. During the two months the imports have included 10 wagons of sugar from Salonika, 80 wagons of flour and cereals from Bulgaria, 10 wagons of dried fruit, and 15 wagons of various products from Salonika and the Pireus.

The drought which has prevailed here during January and February has stopped the growth of the crops throughout Thrace, and rains are indispensable for the development of the cereals. Although the villagers, are still optimistic, the winter crops must be regarded as seriously affected if there is no rain during March.

STAMBOUL, April 2.

Because of the persistent offerings and the lack of buyers, prices of manufactures here are quoted lower than in the countries of origin.

Colonial Produce.—Sugar: Prices have firmed up more and more in America, but in Holland as well as in Belgium offerings are made at reduced rates. Our market is specially quiet owing to the lack of buyers.

Coffee.—Despite the marked rise in countries of production, the market remains quiet owing to the lack of demand and the large stocks.

ON 'CHANGE.

Buoyant Markets.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

The favourable developments of the labour situation on Friday came too late to affect the Stock Markets before the week-end, and so we had the full influence of them to-day, when, generally speaking, a most buoyant tone has prevailed, and in most markets shares are closing well above their previous level. Of course, we are not out of the wood yet with the coal strike still unsettled; but once that is settled it seems reasonable to anticipate better conditions on the Stock Exchange.

The gilt-edged market has been noticeably cheerful. On the week War Loan Fives are a point up at 88 3-16, while Consols have gained $\frac{1}{2}$ at 48 $\frac{3}{4}$. Foreign bonds have also been fairly firm.

Industrials generally are closing to-day on a very cheerful note. Shipping shares have been well supported, notably P. and O. Deferred, which are 332. Oils have been strong, while a slight improvement in the price of the raw commodity has had an effect on some of the leading Rubber descriptions.

Near Eastern securities have made a good showing during the week. Egyptian Guaranteed 3 per Cent. are $\frac{1}{2}$ up at 65 $\frac{1}{2}$, Greek Guaranteed 2 $\frac{1}{2}$ per Cent. 1898 are $\frac{1}{2}$ up at 66, while Turkish Guaranteed 4 per Cent. 1855 have gained a point at 69 $\frac{1}{2}$.

Greek shares remain the same. The 5 per Cent. 1881 and the 5 per Cent. 1884 Loans are unchanged at 44, while the 5 per cent. 1890 also remains at 44. Fundings are the same at 41, and the 1910 Loan is unchanged at 42. The 5 per Cent. 1914 Loan and the 1902 Loan are unchanged at 41 and 38 respectively.

Banks have been firm. Agricultural 3 $\frac{1}{2}$ per cent. Bonds, and the 3 $\frac{1}{2}$ per cent. Guaranteed Bonds are the same at 51 and 53 respectively, the quotations in both cases being xl. Imperial Ottoman Banks remain at 7 $\frac{1}{2}$, but National Bank of Egypt at 17 9-16xd. are 1-16 up. Land Bank of Egypt are unchanged at 5, at which there are buyers.

Land shares have on the whole been strong. Beheras are $\frac{1}{4}$ up at 9, while the preference shares are unchanged at 3 $\frac{1}{2}$. Anglo-Egyptian Land Allotments are 3 $\frac{1}{2}$, while Egyptian Consolidated Lands are the same at 1s. 1 $\frac{1}{2}$ d. Delta Lands at 8s. 9d., and Gharbieh Lands at 1 3-16 are unchanged. New Egyptians are 1s. up at 23s. 6d., while Union Foncières are the same at 2 $\frac{1}{2}$. Sudan Plantations remain at 3 $\frac{1}{2}$.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations
Alexandria	Piastres to £	97 $\frac{1}{2}$	97 $\frac{1}{2}$
Athens	Drachmæ to £	25-22 $\frac{1}{2}$	56-50-57

LANCASHIRE COTTON.

Better Tone Prevails.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

The tone of the market during the past week has been more satisfactory, and if it had not been for the grave industrial crisis business would have developed on broader lines than has been the actual case. There has been more inquiry about than for some time back, but transactions have been very difficult to arrange, chiefly on account of the question of inserting strike clauses. A fair amount of cloth buying has taken place for Egypt, and it is reported that the position out there is gradually improving. In any case, it is mentioned that stocks of goods in the up-country districts will soon need replenishing. Only fragmentary business has taken place for the Levant and Constantinople. Quotations in Egyptian spinnings have continued stiffer, and in some cases prices have appeared to be quite prohibitive. Buying on the whole has been patchy. For India a fair number of cloth sales have taken place, and the tendency appears to be for inquiry to broaden. Calcutta, Karachi, and Madras have provided some useful lines. Shippers to China are still slow in raising rates. In American yarns for home use the tone has been firm and rather more business has been done. Prices have been steady. In export yarns there has been an increased inquiry for India, and moderate lots have changed hands for Bombay and Madras. We are still in the throes of the coal strike, and until some definite settlement can be arranged between the miners and the owners, it will be practically impossible to report a period of increased activity.

THE AGRICULTURAL BANK OF EGYPT.

The gross profit of the Agricultural Bank of Egypt for year to January 31, 1921, including interest on loans, investments and on bank account, was £703,057. General expenses and amount written off depreciation absorb £125,939, debenture interest, etc., £242,064, interest on preferred shares £50,000, directors' fees £2,600, National Bank of Egypt £8,360, loans and instalments in arrear current year £79,912, interest on amounts carried forward on account of ordinary and deferred shares £35,737, reserve fund £13,783, special reserve £18,619, leaving available £126,040.

TRADE OUTLOOK IN TURKEY.

The London office of the Guaranty Trust Company of New York has received from its office at Constantinople a cable which points out that the imports for March exceed £T3,916,000, and the exports for the same period are over £T735,000. This represents a decrease of £T4,600,000 in the imports and an increase of about £T74,000 in the exports, as compared with the month of February.

Some commercial activity is noticeable as the result of a more optimistic outlook, though transactions are naturally limited to essentials. There is a strong demand for cabot from Roumania. Bulgarian millers are making strenuous efforts to regain their position in the flour market at Constantinople.

Sterling fluctuated between 580 and 585, and is now 581. The tendency is steady, although there is some selling short as covering operations resulting from the improvement of lei and lire. Lei have improved from 40 to 48 piastres per 20 lei, and lire from 16 $\frac{1}{2}$ to 14 $\frac{1}{2}$ lire per Turkish pound. The Stock Market is generally dull, and notwithstanding the Nationalist successes Turkish securities remain weak. Lottery bonds, which at the beginning of April were quoted 11 to 12, are now 9.90, sales being difficult.

BRITISH TRADE CORPORATION

Established for the Assistance of British Trade by the Insurance of Accounts.

SHIPPING INTELLIGENCE.

FRENCH MAIL SERVICES TO THE EAST.

Reuter's Paris correspondent in a message dated April 16 states: The report on the Bill concerning the running of maritime, postal and general services to the Far East, Australia, New Caledonia, the Eastern Coast of Africa and the Eastern Mediterranean, which has just been tabled in the Chamber, specifies that the Messageries Maritimes Company shall cease to be a State-subsidised company. A new organisation, based on the régime system, will carry on the necessary services. The Messageries Maritimes Company undertakes to form a special company, with a capital of 60,000,000f., in the six months following the ratification of the contract. A number of alterations will be made in the mail steamer routes.

ROUMANIAN RIVER TONNAGE ON THE DANUBE.

The Commercial Secretary to H.M. Legation at Bucharest, Mr. A. A. Adams, deals in a recent report with the need for increased tonnage in Roumania. The figures given by Mr. Adams relate to river tonnage in Roumania only and not to the navigation of the tonnage as a whole.

The total number of lighters on the Danube at the present time, exclusive of tanks, is 469 as compared with a pre-war total of 668. Many of these lighters are probably in serious want of repair or renewal. The number of tugs on the river is given as 58 in place of a pre-war total of 80. The number of floating elevators, used to load steamers with grain direct from lighters, is 34, which is a decrease of four on the pre-war total.

With regard to barges as a whole, not distinguishing lighters, information in the possession of the Board of Trade is that in 1914 there were 2,376 privately owned, 64 owned by the Austrian State and 102 owned by the Hungarian State, making a grand total of 2,542. This, of course, relates to the whole of the Danube and not merely the Roumanian portion. It is not known how many of these are in present service. The above figures appear to show that there is a good opening for the supply of British-built vessels of the above kind to the river and transport companies in Roumania.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news, received from the Director-General of Commercial Intelligence, Calcutta, dated April 11:—Bombay cotton market easy; fine M.C. Oomra, May, Rs. 218.8.0. July, Rs. 231. Cotton Contract Board's prohibition against trading below minimum of Rs. 255 for good Broach expired on April 7, and heavy fall ensued. Bombay piecegoods market shows good demands from consuming centres, with prices tending upwards. Bleached goods continue in great request. Latest meeting of Bombay Native Piecegoods Merchants' Association confirmed the two shilling exchange resolution and increased penalty on members who paid for and took delivery of their goods at any other rate of exchange. Calcutta and Karachi piecegoods markets improving; Karachi Association's resolution forbidding new trade has been withdrawn. Calcutta jute and gunny markets quiet. Prices of Hessians declining. No change in bank rates. At tea sales on April 5 offerings consisted mostly in common and low medium grades. Quantity of dust unusually large. 705,368 packages sold to date at an average price of five annas four pies per lb.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. *Circassia*, for Bombay (Liverpool, April 25).

Anchor Brocklebank Line.—S.s. *Macharda*, for Calcutta (Birkenhead, April 27); s.s. *Mangalore*, for Calcutta (Birkenhead, May 11); s.s. *Matra*, for Port Said, Colombo, Madras, and Calcutta (London, May 21); s.s. *Matheran*, for Port Said, Colombo, Madras, and Calcutta (London, June 9).

Bibby Line.—S.s. *Warwickshire*, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, May 11); s.s. *Leicestershire* for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, May 25).

Byron Steamship Line.—S.s. *Lord Byron*, for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, April 25); s.s. *Maid of Delos* for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, April 23).

Clan Line.—S.s. *Clan Ogilvy*, for Colombo, Madras, and Calcutta (Birkenhead, April 28).

Cunard Line.—S.s. *Antinoë*, for Gibraltar, Malta, Piræus, Smyrna, Constantinople, Varna, and Galatz (London, end of April); s.s. *Tyria*, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, May 21).

Ellerman Line.—S.s. *Trentino* for Gibraltar, Malta, and Alexandria (Liverpool, May 3); s.s. *Gerano* for Genoa, Leghorn, Naples, Bari, Venice, and Trieste (Liverpool, May 5).

Ellerman "City" Line.—S.s. *City of Calcutta*, for Calcutta (Birkenhead, May 2).

Ellerman Hall Line.—A steamer will sail for Bombay, Karachi, and the Punjab, on April 29.

Glen Line.—S.s. *Glenluce*, for Port Said, Port Swettenham, Singapore, etc. (London, April 28); s.s. *Glenishane*, for Port Said, Port Swettenham, Singapore, etc. (London, May 19).

Glynn Line.—S.s. *Riposto*, for Genoa, Leghorn, Naples, Catania, Messina, and Palermo (Liverpool, April 30).

Harrison Line.—S.s. *Architect*, for Calcutta (Liverpool, April 23); s.s. *Orator*, for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, in May); s.s. *Astronomer*, for Calcutta (Liverpool, May 7).

Henderson Line.—S.s. *Burma*, for Port Said and Rangoon (Birkenhead, May 4).

Holt Line.—S.s. *Yantsze*, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 22); s.s. *Pak Ling*, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, April 22); s.s. *Deucalion*, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, April 22); s.s. *Mentor*, for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 29); s.s. *Ixion*, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, May 6); s.s. *Lycaon* for Port Said, Port Swettenham, Singapore, etc. (Glasgow, May 6).

Johnston Line.—S.s. *Cundall*, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 23); s.s. *Aviemore*, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 14).

Maindy Line.—S.s. *Maindy Tower*, for Antwerp and Moroccan ports (London, middle of May).

Moss Line.—S.s. *Karnak*, for Gibraltar, Algiers, Malta, and Alexandria (Liverpool, April 22); s.s. *Limoges*, for Syra, Smyrna, and Constantinople (Liverpool, April 27).

Papayanni Line.—S.s. *Maronian*, for Algiers, Malta, Piræus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, May 7); s.s. *Asturian*, for Malta and Alexandria (also taking cargo for Beyrout, Alexandretta, Haifa, Messina, Jaffa, Port Said, Cyprus, etc.) (Liverpool, May 13).

P. and O. Line.—S.s. *Nore*, for Colombo, Madras, and Calcutta (London, April 22); s.s. *Dongola*, for Bombay (London, May 6); s.s. *Nyanza*, for Colombo, Madras, and Calcutta (London, April 20); s.s. *Kashgar* for Bombay (London, May 20).

P. and O. British India Line.—S.s. *Manora*, for Colombo, Madras, and Calcutta (London, April 22); s.s. *Neuralia*, for Bombay and Karachi (London, April 29); s.s. *Margha*, for Colombo, Madras, and Calcutta (London, May 7).

The traffic receipts of the Smyrna-Aidin Railway for the week ended April 9 amounted to £8,431.

Burma Railways Company.—The transfer books of the Three per Cent. Debenture stock will be closed from May 2 to 14 inclusive.

The Chartered Bank of India, Australia and China announces that on and after May 1 the address of its New York agency will be 44, Beaver Street, New York City.

NOTES OF THE WEEK.

Off the Map.

For the past week the Greco-Turkish conflict has been, in common parlance, "off the map," as far as the Allied Powers are concerned, owing to the incidence of matters of more pressing importance. It is a matter for regret that this should be the case, as each week's delay tends to render a final settlement of the Turkish question more difficult. The attitude of the British and French Governments would seem to be that they are prevented from offering mediation in view of the insistence of the Greek delegation to the London Conference that Greece could not brook interference in a matter of this nature, and must be allowed to deal with the Turks entirely by herself. It was hoped at one time that Italy would be able to save the situation; but M. Gounaris has now given an official denial to the report that there had been any question of mediation by the Italian Government. Greece has claimed "splendid isolation," and, in the opinion of those who were at one time ready to save her from herself, must now abide by the results. It must be admitted, however, that, apart from the inevitable outcry about enemy atrocities, without which no Balkan campaign would be complete, the Greek Government admits no doubt as to the future. Reinforcements are reaching the Greek army in Asia Minor, and it is reported that a fresh offensive has been launched.

The Real Issue.

It is difficult to withhold sympathy from the Greeks, who are now being made to suffer for the Allies' mis-handling of the Near Eastern question. The terms of the Treaty of Sévres were the outcome of an exceedingly clever piece of special pleading on the part of Greece, and having gained her point, she naturally holds that she is entitled to keep what has been given her. M. Venizelos's one mistake was the premature occupation of Smyrna. It was a departure from the realm of argument, in which he had carried all before him, to the unknown and problematical sphere of force, and it brought the whole question, and the Allies as well, up against hard and definite facts. These facts the present Greek Government is unwilling to face. It will, however, have to face them sooner or later, and, as the Allied Powers hold back, it is the duty of Greece's friends in Great Britain, where she has very many, to urge her to face them before it is too late. The Greek settlement embodied in the Treaty of Sévres would never have brought peace to the Near East. It underestimated the vitality of Turkey, and made no attempt to

look beyond Asia Minor. In regard to both points the Allies were equally at fault; but now they, in particular Great Britain, have had to realise that the Turkish problem is linked up with the future of the Middle East and of Central Asia, and with the whole world of Islam. The real issue, therefore, to-day is that, whatever victories she may gain in the field over the Turks, Greece cannot be allowed by the Allies to keep practically the whole of Asia in a ferment of unrest. If without further delay she can appreciate this point, she must realise that by placing her cause unreservedly in the Allies' hands she stands to obtain better terms than if she antagonises them by adding to their already serious embarrassments.

The Danube Conference.

Under the terms of the Treaties with the late enemy States the European Commission of the Danube reassumed the powers it possessed before the war, but with representatives of Great Britain, France, Italy, and Roumania only constituting the Commission. This body undertook provisionally the administration of the river, and by common consent has been carrying out its task successfully. Meanwhile attention has had to be given to the constitution of a permanent International Commission of Control over the Danube, and the Conference for this purpose is now sitting in Paris. One clause common to the several treaties provided that this Commission should consist of two representatives of German riparian States, one representative of each other riparian State, and one representative of each non-riparian State represented in the future on the European Commission of the Danube. Dissension appears to have arisen in the Conference, because the three Great Powers are inclined in regard to Danube navigation to let bygones be bygones, and to give Hungary the full benefit of its geographical position by making it the centre of gravity of the river system. The same Powers are not averse from a Magyar chairman of the Commission, and have proposed the addition of a Magyar, and possibly a German as well, to the sub-Commission entrusted with administrative and fiscal duties in connection with the Iron Gates, which lie in the waterway between Roumania and Yugoslavia.

Forcing the Pace of Peace.

To these proposals of the Great Powers the Roumanian representative on the Danube Conference offers an emphatic objection, and something in the nature of a strongly worded protest from the Roumanian Government is understood to have been addressed to the three Great Powers. It is to be hoped that a speedy attempt

will be made to compose the difference of opinion. While we look forward confidently to the day when friction and "nerves" will have been eliminated from the Balkans, we realise that little good can be done by trying to force the pace in this respect. The Allied Powers rightly adopt the attitude that among the former enemy States Germany alone retains her power for serious mischief, the others having been rendered to all intents and purposes innocuous. It is, however, useless to deny that our Balkan Allies have not yet adopted this view. In regard to Hungary the recent escapade of the ex-Emperor Karl has served to confirm their worst fears. In these circumstances it is better for all concerned, Great Powers, Allied States and ex-enemy States, to progress slowly towards a better condition of things. The Balkan Peninsula will benefit. It is not altogether a question of unreasonableness. Domestic politics play their part. The Allied Governments do wrong to ignore these and other considerations which loom large in the countries concerned. That the affairs of countries cannot be peaceably settled without reference to the peoples inhabiting them is an axiom that has yet to be learned by Allied politicians.

Egyptian Delegation Rivalries.

There are signs that the struggle between Adly Yeghen Pasha and the Moderates on the one hand and Zaghloul Pasha and the Extremists on the other hand is approaching a crisis. It looks as if the Prime Minister and his supporters now feel fairly confident of their ability to bring the country safely through the difficulties which admittedly beset the path they wish it to follow; and it is to be hoped that their confidence will prove to be well founded. Zaghloul Pasha, however, appears to be equally confident that his views must prevail. He has declared that he will co-operate with the Cabinet only on his own terms, which, it is understood, are that he shall be head of the delegation to negotiate with the British Government, and that he shall nominate the majority of its members. In such circumstances it would seem to be a work of supererogation to appoint any delegation at all, or to go through the form of any negotiations; and if Adly Pasha and his colleagues stand firm against such pretentiousness they will have the approval of moderate opinion everywhere.

Seyyid Talib Expelled.

Early last month the Minister of the Interior in the Provisional Government of Mesopotamia, Seyyid Talib Pasha, made a tour of the principal cities and towns in the south of the province. In the course of that tour he very naturally visited Busreh, for which place he used to be Deputy in the Turkish Parliament; and there he took occasion to emphasise his good will towards the Government, and to deplore the recent disturbances, which had, he very truly observed, been baneful in their results. "As a father is to his son, so am I," he declared, "to the people of Irak. I entertain great hopes for the future of our country, but we cannot get along ourselves without outside help; and for this outside help we must look to Great Britain, who has shown great sincerity and a real desire to help us." And he added wise words about the people co-operating and learning how to serve their country. In view of these expressions of sentiments which we must all admire, it may have come rather as a shock to some people to learn at the end of last week that the British High Commissioner had found it necessary, in the interests of law and order, to arrange for the deportation of Seyyid Talib, who left Baghdad on April 16.

Profession and Practice.

With every wish to believe that at the time of his Busreh speech the ex-Minister of the Interior really meant what he said, we still are not inclined to question the wisdom of Sir Percy Cox's decision. The High Commissioner is not the man to take such action hastily, or without good reason; and we cannot forget that in the past—notably in the days preceding the war—Seyyid Talib had the reputation of being a born intriguer. It has been known for some time that he considered that he himself would make a very good Emir of Mesopotamia, and that he was, to put it very mildly,

unfavourably disposed towards the idea of a member of King Hussein's family being chosen for that position. His views of his own fitness were shared by few, and he had no following worth consideration; but his ambition may have pushed him into some indiscretion; and though Great Britain will certainly not put any pressure on the people of Irak in making their choice, neither could she permit any attempts on the part of ambitious politicians to forward their own interests in any underhand fashion. The ostensible reason for Seyyid Talib's removal was that he expressed publicly disapproval of the attitude of certain British officials, and talked rather wildly of using armed force if the Government failed to carry out its promises. Such un-Ministerial conduct could not, of course, be overlooked. If any Minister has good cause of complaint against any British official, he can be sure of a fair hearing, if he puts it forward properly. It looks as if Seyyid Talib had failed woefully to live up to his professions.

Lord Chelmsford in England.

If ever a man has earned a good holiday, it is Lord Chelmsford, but apparently he does not intend to take one just yet; for within three days of his arrival in England he made a striking speech on the situation in India. The occasion was the Birdwood Memorial Lecture at the Society of Arts, and the substance of the speech was in the main a confirmation of the views we have recently expressed regarding the initial success of the new legislative institutions. Lord Chelmsford insisted on the sense of balance and responsibility displayed by the provincial legislatures, and on the constructive spirit in which the central body had dealt with the difficult financial situation; but even more important was his testimony, based on personal experience, to the educative effect which has been produced on all concerned. Many of the Indian legislators have found that their pre-conceived ideas of British officials require to be entirely reconstructed, while the officials on their side have been quick to readjust their attitude to the new conditions, and the widening of outlook has necessarily resulted in a marked advance towards harmonious co-operation, which must gratify all men of goodwill, and would assuredly have rejoiced the heart of Sir George Birdwood, the great old man in whose memory the lecture was delivered.

Politics and Social Relations.

It is already apparent that this political advance is destined to produce a marked effect on the social relations between Englishmen and Indians. From various sources we hear that the session and the season at Delhi have tended to coalesce, and that many political difficulties have been eased by talk across the dinner-table, or at those out-door entertainments where even the most conservative Indians can mix freely with men of other communities. The establishment of the Chelmsford Club at the capital is an important step in this direction. English clubs are by their nature as exclusive in India as in other countries, and there is room for a parallel set of social institutions, open from the outset to all races. Delhi has now set the example, and the new club seems to be reasonably assured of success. It is not a political club like those in this country, where parties are segregated in different buildings, sometimes to the exacerbation of sectional differences, but it is political in the sense that its membership consists mainly of people actively concerned in politics, and its root idea is social intercourse between men of different views. We hope to hear of similar clubs being established at the various provincial centres of political activity, in some at least of which the opportunities for such intercourse are still far too few.

The Future of Burma.

Lord Lytton made a further statement last week regarding the new constitution for Burma, which strikes us as holding out a somewhat dubious prospect. The question is, as we knew before, to go before the Standing Joint Committee of Parliament in order that the necessary legislation may be passed this session, but the Under-Secretary of State also expressed the hope that the Committee would at the same time consider the idea

of separating Burma from India. That is a much more intricate matter, and if stress is to be laid on the words "at the same time" we should say that the prospect of early legislation is remote, and that Mr. Montagu will find himself free to act on the alternative course already announced and introduced Diarchy by executive action. We trust, however, that the Committee will realise the advantages of keeping the two subjects distinct: the provision of a new internal constitution is an urgent matter, and should be made by Parliament forthwith; the question of separation is not urgent, and in our opinion is not yet ripe for decision; all that is needed at the present juncture is that that question should not be prejudged, and the new constitution should be so framed as to leave it entirely open.

THE WEEK AT HOME.

The Coal Crisis.

LONDON, Monday Evening.

After the excitement of the week before, last week was relatively flat. There was some little recrimination between miners and railwaymen over the breakdown of the Triple Alliance, and the *Daily Herald*, which believes in direct action, has been in doleful mood. But the actual dispute has not been settled yet. For several days there was apparently nothing doing at all; on Friday the parties met, conferred for over two hours, and agreed to confer again. To-day (Monday) they are meeting again; it is hoped in many quarters that a temporary arrangement may be arrived at which will enable the miners to get back to work, when the difficult questions of reorganisation can then be threshed out more at leisure and, let us hope, in a conciliatory spirit.

But last week's apparent quiet was not altogether profitless. The protagonists, instead of meeting face to face, carried on their controversy in the columns of the newspapers, with considerable effect as regards throwing light on dark places. There has been a good deal of unreason on both sides, and this informal discussion has helped to indicate where the trouble lay.

One difficulty, as far as the public is concerned as judge, is that both sides seem united in one thing—making their proposals as difficult of comprehension as they can. The owners, for instance, issued an eight-point programme last Wednesday. The lay public read it carefully, and understood every individual word in each of the eight points; but the effect of every point, and of the eight together, was hopelessly obscure. Moreover, neither side has produced those full and final figures as to wages which are above all things necessary to clarity of discussion. Both talk of averages, but everybody with the slightest knowledge of arithmetic knows that the average wage of many different men may be hopelessly misleading. I do not quite understand this apparent reluctance to give the actual facts; I cannot think it a wise policy.

One thing, however, has emerged. From the mass of verbiage in which the proposals and counter-proposals are concealed, the owners are prepared to amend their offers—in other words, they, as well as the public, now recognise that the proposed cuts in wages were too drastic. Public opinion has almost from the first recognised this as an essential, and has blamed the owners for their ultimatum. On the other hand, the miners still cling to their policy of a national pool as essential, and on this the public is both less informed and less convinced.

The increasing shortage of coal is steadily reducing the train services, and industrial output in other trades. Business men are hopeful that once the dispute is settled trade will revive quickly, and they even suggest that in some respects the crisis may have done good. I confess that I do not see any reason to share that optimism: the effects of the coal trouble will be felt for months in all the great industries, and 1921 is not likely to leave happy memories either for master or man.

On the other hand, good has come out of evil in one respect. There is no longer any talk of an imminent General Election; it never seemed particularly likely, but it is now definitely recognised as out of the question

for some time ahead. The Government has not shone in its handling of the coal trouble, but neither Liberal nor Labour can oust it, and both parties in the Opposition recognise the fact.

The Cup Final.

The shortage of coal prevented any special trains being run for the football Cup Final, but a good many people turned up for the event notwithstanding—over 70,000, to be precise. A London team, the Tottenham Hotspurs, won the Cup—it is only the second time in twenty years it has come South. The King watched the game, and presented the trophy to the victors.

Cricket.

The Australian cricketers have arrived, and the unfortunate English team has also returned, to renew the fight over here. But the English captain has yet to be chosen by the M.C.C., and the Australians, arriving at a time when the railway service is rather worse than it was towards the end of the war, owing to the coal strike, are faced with unexpected difficulties—unless they hire a motor-pantechicon to convey them from match to match. This miserably wet and cold April is also likely to fill our visitors with forebodings; the combination of snow and a thunderstorm, which has been fairly usual during the past few days, is surprising and perplexing to the uninitiated. It reminds one of the story of the German philosopher who had demonstrated the rationality of the cosmos in a series of brilliant metaphysical lectures; he took a summer holiday in England and recanted, on the ground that a natural phenomenon so irrational as British meteorology made a fatal flaw in his hypothesis.

More Houses.

The wretched Dr. Addison was denounced steadily by his opponents for failing to build houses, but a recent tour round London and a trek through some of the suburban home counties like Surrey, Kent, and Middlesex has convinced me that he did not altogether waste his time. Near Beckenham and Acton, and in many other places entire new towns seem to be springing up and finding a new population at once. The last slate is hardly on the roof when the perambulator is in the doorway; it is the same in every village, where the half-dozen or so additional cottages under the scheme are quickly furnished.

One of the conditions made by the Ministry of Health was that the new houses should have a longer frontage than typical cottage property in the past—it is one way of avoiding slums. The idea has given great offence in some quarters—a local builder recently denounced it to me as "idiotic idealism." But the doctors approve of the increased air and sunlight which the new houses obtain, and point out that the additional cost in housing will probably be more than repaid by the diminished expenditure on sanatoria for tuberculosis.

The Occult World.

I understand that there is rather a slump just now in spiritualism, and that the mediums and other exponents of the art are faced with very material anxieties as to rents, rates, and taxes. I suppose it is not much use to gaze into a crystal when the landlord calls for his cheque. The astrologists, I am told, are in rather better trim—possibly because there are fewer of them—as a good many people still believe, or pretend to believe, in the stars. It is extraordinary how these superstitions persist.

But the fashionable craze of the moment is psycho-analysis, and I believe some of the spiritualist professors are changing their names and professions on this account. You pay your guinea and tell your dreams, and the quack then reveals your innermost soul, or your "unconscious" or "subliminal self." The "wise women" of the countryside did very much the same, without the quasi-scientific jargon, in the old days; even now dream-books are sold in country towns to the servant girl who wants to know if the butcher's boy truly loves her. Apparently Bond Street is very much the same, and many an idle woman spends an hour or so in having her soul explored by a "professor of psychometrics." It is almost exclusively a feminine craze, probably for the simple reason that "women dream of broken hearts, and men of Broken Hills," and psycho-analysis is not much use as an investor's guide.

Divorce Reform.

There are signs that the divorce problem is not to be allowed to rest where it was left last session, when the two Houses of Parliament failed to agree as to the proposed reforms. Lord Buckmaster and other peers are again propounding the changes they advocate in the shape of a Bill, and the usual sporadic discussion is being carried on in the Press. The Church is still immovable, more particularly the High Church party, which is the strongest part of the Church; it has been rallied for its lack of logic, but it seems immune to that kind of argument.

Legal opinion is as strongly in favour of divorce law reform as clerical opinion is against it, and on a matter of that kind one would think that the Bar had more practical knowledge than the clergy, who hold their position with more stubbornness than real argument. The lawyers hold that the present position of the marriage laws really tends to degrade the institution, and they accuse the clergy of exalting the ceremony above the general interests of society.

But nothing will be done in the present Parliament. Members of the Commons with shaky seats do not want to antagonise the clergy unnecessarily, and their passion for reform is very easily sated when there is no great driving force of public opinion behind the change. As the number of people who want a divorce is still considerably less than those who do not, it is easy to find arguments against a change.

The Cane at School.

A congress of doctors and schoolmasters has been discussing the effects of caning, and schoolboys and the fathers of schoolboys have followed the subject with interest. I am rather surprised to see how many of the speakers objected to caning on the hands as dangerous; my own recollection was that it was not much of a punishment. It is true that my hands were hard from wicket-keeping. What I really disliked was caning on the back, which is so brutal and dangerous that it should be forbidden; besides, after the second time it was utterly ineffectual, for a thick wad of blotting-paper worn under the waistcoat renders it painless, as any boy soon discovers. Most of the masters agreed that the cane was sometimes necessary, and the doctors held that one portion of the body, and one only, should be regarded as the mandatory territory for that particular experiment.

Window Slashers.

An extraordinary series of outrages have been perpetrated during the last few days. Hundreds of plate-glass windows in London and the suburbs have been cut or slashed by a diamond or nail—in some cases so deeply that the windows have collapsed or become unsafe; in others, merely disfigured. The police have been on the

alert, but so far no arrests have been made. The original theory, which ascribed the misdeeds to a madman, has been discredited, for no one man could have been in so many places at once. It is now said to be the work of an organised gang, and the voice of rumour naturally credits either Sinn Féin or Bolshevism, according to individual taste. The whole proceeding is so senseless that it is difficult to believe that any political organisation could resort to it. The trouble has now spread to provincial towns.

The Decadent Theatre.

There seems to be something radically wrong with the English stage to-day. While the fantastic "Chu Chin Chow" is now in its sixth year, Maeterlinck's beautiful play, "The Betrothal," has been withdrawn after a relatively short run; and Miss Gladys Cooper, who had a noble part in that drama, is now appearing in a farce called "Up in Mabel's Room." Of this latter it is sufficient to say that most of the action takes place in a lady's bedroom, the leading actor spends most of his time under the bed, and the subject of the plot is mainly concerned with soiled female underwear. The stage seems to want a new Jeremy Collier when disgusting rubbish of this kind can be put on. This, like a very similar but slightly less dirty play, "Nightie Night," which is now running, comes from America. I suppose the United States exports what it has no use for.

The Week's Books.

"Social Decay and Regeneration" (Constable), by R. Austen Freeman—with an introduction by Mr. Havelock Ellis—is an important contribution to sociology. Mr. Freeman has in effect written a thesis to show that Man having invented the Machine, has now become dominated by the Machine. His argument is sustained, grave, and occasionally brilliant. But he goes a little too far when he suggests that the low intelligence of Labour is due to its domination by the Machine. In fact, his argument here destroys itself in the making, for on another page he condemns the unrestricted immigration of low-type Russians and Poles into England, and points out that they reduce the standard of intelligence and morality in this country, by sweating and other anti-social practices. But it is precisely these people who have never come under the dominance of the Machine, whereas our ordinary urban population is more or less directly connected with mechanical pursuits all its life. But I do not think this argument can be maintained at all without very considerable limitations. At various times of my life, for instance, I have had a good deal to do with two classes of workers—printers and agricultural labourers. The latter hates machinery, despises it, and generally puts a lump of clay in its more delicate parts to prove it is useless; the former is a skilled craft, which historical evidence shows has made most of the great improvements in one of the most complicated and difficult (and therefore, according to Mr. Freeman's argument, one of the most dominating) of all machines. Now, if anybody tells me that an agricultural labourer is more intelligent on the average than a printer because he is less mechanical, I am not going to argue with him.

But the real value of this book is that it compels thought. Nobody will agree with it entirely, but it is provocative and honest in its purpose. The author ends by a plea for reducing the population—but there is no room here to discuss eugenics.

Mr. Graham Wallas is always interesting, if only because he does not belong to any particular school of political thought. In "Our Social Heritage" (Allen and Unwin) he collects a number of essays on such subjects as Guild Socialism, the Church and Social Change, and other problems of the day.

"The Backbone of Africa" (Witherby), by Sir Alfred Sharpe, discusses the administrative and economic problems of East Africa, and also touches on sport. Sir Alfred, once Governor of Nyasa, is an authority on his subject; but it is rather devastating to discover his opinion that "one generally finds that the more civilised the natives become the more lax are their morals."

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, April 10.

The Return of Saad Pasha Zaghloul.

The return of Saad Pasha Zaghloul on Tuesday last to his home in Cairo after an absence of two years has been the event of the week. Indeed, it is probably no exaggeration to say that the reception accorded to him is unprecedented in the annals of Egypt. For days previous the most active preparations had been made in Cairo, Alexandria, and also in the provinces, and the day before his arrival students and others paraded the streets, demonstrating in his honour and generally creating an atmosphere of excitement. He had a tremendous reception in Alexandria, where, it may be noted, he was met by, amongst others, the ex-Premier, Mohammed Pasha Said, and Prince Omar Toussoun, and where he attended a monster banquet in the evening. His journey to Cairo the next day was a veritable triumphal progress. At every station along the route the greatest enthusiasm prevailed. The scene all the way was most remarkable. It was with difficulty that the train was restarted at every station owing to the crowd on the line and on the roof, and it is not surprising that Cairo was reached an hour and three-quarters late.

In the capital the excitement was meanwhile fast reaching its climax. For days people had been pouring in from the districts for the event, and on the morning of the 5th, the day of Zaghloul Pasha's arrival in Cairo, there was already at an early hour a goodly crowd in the streets, many of whom had taken up their position overnight. As the morning advanced the crowd grew, and the delegations from the various schools, syndicates, etc., banners at their head, and in cases accompanied by boy scouts with bugle and drum, made their appearance and marched to their appointed position amid the frantic applause of the onlookers. By special arrangement with the police, and at their own request, the students and Azharites carried out the policing of the route, and, to their credit, be it said, right well did they accomplish their self-appointed task. Under the direction of energetic supervisors, and with the very rare assistance of a mounted policeman, they kept the line of route with marked success until "El Raiss el Mahbuhb" passed.

The scene in the city at that moment was indeed a wonderful one. Every element of the Egyptian population was represented in full force either in the streets or on the balconies. Wherever one looked was a moving picture of absorbing interest; and the most extraordinary part about the whole spectacle was the complete docility, good nature and orderliness of the many thousands standing in the streets, who, in spite of exacting climatic conditions, maintained their enthusiasm till the bitter end.

"El Raiss el Mahbuhb" was preceded by his wife, to whom an exceedingly warm welcome was extended, possibly due to a certain extent to the first impression that the occupant was Zaghloul Pasha himself. When, however, he actually appeared, standing in an open car, the pent-up excitement found its full outlet; the crowd frantically waved its flags and its arms, and the air was rent by an outburst which was simply deafening, but must have been none the less gratifying to the Pasha, who was standing with his back to the driver returning the salutations of the people, who broke the ranks and, as the car passed, surged after him in a manner which added the finishing touch to what was an amazing popular demonstration.

Since his arrival there has been a constant procession of deputations to his house, and, even to-day, five days after his arrival, these are continuing to traverse the streets. To most of these visitors Zaghloul Pasha has addressed a few words, most times merely his warm thanks. He has driven nightly through the native quarters, and has paid a visit to the graves of the Egyptians who lost their lives in the disturbances of the spring of 1919, and whom he acclaimed as the

"martyrs of liberty"; and he has issued a manifesto to the people thanking them for their warm reception, enjoining everyone to return to his or her work, and stating that he has returned to consult the nation and co-operate with the Cabinet, if its intentions conform to the will of the nation. But up to now he has not committed himself to an interpretation of the "will of the nation," and as far as can be gathered no definite discussions have taken place between him and the Cabinet, though he has had informal conversations with Adly Pasha. The situation is, therefore, still obscure, and every one is anxiously awaiting its development.

The Anglican Community.

The general meeting of the Anglican community took place as arranged, and considered the question of the status, etc., of the Church Committee and the ownership of the Church property as reported in my letter of March 27. It was unanimously decided to transfer the ownership and general management of the Church site and buildings, investments, etc., to the Dean and Chapter, and to leave the appointment of the Cathedral clergy to the ecclesiastic authorities. Sir F. T. Rowlatt and Mr. A. P. Bolland were appointed sub-deans and people's wardens, and it was decided to form a Church Council, corresponding to the parish councils provided for in England by the Enabling Act, to consist of the High Commissioner as Chairman, the two churchwardens ex-officio, and twelve elected members. The election of the latter is to be by ballot, and nominations are to be received up to the 13th instant.

PORT SAID, April 9.

Nationalist Demonstrations.

The past few days in Port Said have been marked by several Nationalist demonstrations. Last Sunday morning the steamer Mykali left the port, carrying Nationalists of the town who had chartered her to take them out to sea to meet the steamer which was bringing Zaghloul Pasha to Alexandria. It is estimated that at least three hundred people were on board, swarming everywhere, and shouting Nationalist sentiments. She was preceded out of the port by tugs, on which bands discoursed patriotic sounds, and the sides of the vessel were painted with "Independence" mottoes. The following afternoon there was a large native procession in the town, composed of a nucleus of Egyptian Boy Scouts, but principally a great crowd of the lower orders, carrying flags and portraits and shouting for "Independence."

Port Said Girl Guides.

With all this going on, it was a relief to think of the quiet little display which had been given in the lighthouse garden that morning, when Lady Baden Powell, who is on her way back from India and the East, inspected the 1st Port Said Girl Guides, heard them give a rendering of the Girl Guide song, and witnessed a display of first-aid and stretcher drill. Afterwards Lady Baden Powell distributed various badges that had been earned by the Guides, and gave the girls a most interesting talk on her unique experiences of the Guide movement in the East. Miss Nonie Broatch, the Captain, has since received a most appreciative letter from the Chief Guide congratulating her on the efficiency of her company. In the afternoon the Guides gave another display in the same place, and in the absence of Lady Baden Powell were inspected by Captain Seymour, of H.M.S. Calypso. The public were admitted on payment of PT10, and a most excellent tea was provided. The funds obtained amounted to over £E10, and are to be devoted to the furtherance of the Girl Guide movement in Port Said.

General News.

The most important personal news in the place is the departure of Grant Bey, Commandant of the Suez Canal police, to Alexandria. He has been most popular with all classes, and not least so with the Egyptians, both official and unofficial. As far as has been officially announced, his transfer is only temporary; but it is believed that His Excellency Heddaya Pasha, our late Governor, who is now Governor of Alexandria, wishes to retain his services there if possible.

Two days ago there was trouble amongst the strikers at the Suez Oil refinery. Some men wished to work, but the majority did not, and assaulted the manager and others. The police and Egyptian military were called in, and after first firing over their heads as a warning, were obliged to fire at them, wounding several.

YUGOSLAVIA.

ZAGREB, April 17.

Yugoslavia and her Neighbours.

The adventure of the ex-Emperor Karl at Budapest has produced interesting results in Yugoslavia. It is believed that the Government presented an ultimatum to the Magyar Government, in which it declared that Yugoslavia would not permit a restoration of the Habsburgs; that the present form of government, which it regards as a republic, although it is called a monarchy, must not be changed; that the Magyar Government must fulfil all the conditions of the Peace Treaty with the least possible delay, and, above all, reduce its army, which at present numbers 100,000, to 35,000 men; that the calling of new recruits to the colours must cease at once; and, finally, that Yugoslavia, with the Little Entente, demands that Hungary cede to Austria the territory in the west of the country according to the terms of the treaties. This report is not officially confirmed, but it seems clear that Budapest was startled and frightened by this new element in European politics, and that the alliance between Czecho Slovakia and Yugoslavia is a very real thing. It is interesting to note that Karl has brought Yugoslavia and Italy nearer

together, and so done great good, for the two States have much in common.

It is probably true that Italy is negotiating with the Little Entente with a view to concerted action to prevent for ever the restoration of the Habsburgs, and very cordial telegrams of congratulation have been exchanged between M. Pashitch and Count Sforza. In this connection it is interesting to note that an Italian delegation has arrived in Belgrade to negotiate a commercial treaty with Yugoslavia, as foreseen in the Treaty of Rapallo. The president of the Yugoslav committee is Dr. Momchilo Ninchitch, former Minister of Finance in the Serbian Radical Government, and Minister of Commerce in a recent Cabinet and acting Minister of Foreign Affairs. Other member of the committee are Dr. Trumbitch, Dr. Zherjav, and MM. Kukitch and Kostrenchitch, all sound men. The inclusion of Dr. Trumbitch is most interesting, and there can be no doubt that a good deal more than mere commercial matters will be discussed. It will be recollected that it was Dr. Trumbitch, then Minister of Foreign Affairs, who negotiated the Treaty of Rapallo.

Relations with Italy.

The Yugoslav Party in Fiume, the Fiume Autonomy Democratic Party, and the Fiume International Socialist Party have sent a telegram to M. Pashitch, on the grounds that the forthcoming elections in Fiume will be under interallied supervision, and that presumably Yugoslavia will have a voice in the matter, urging him not to recognise the "illegal, usurping government of Groshitch." The telegram adds that the Italian parties have falsified the registers, and so forth. The chief interest in the telegram is the fact that there are so many parties already in Fiume, and that at least three of them turn to Belgrade for protection.

The recent disturbances and bloodshed in Istria have caused a painful impression, and have been attributed in the Italian Press to Yugoslav intrigues. The *Slovenski Narod* now offers the explanation that all is due to the machinations of an individual named Chiloga, who posed as a Nationalist, but is in reality a Com-

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE
NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

munist. Chilega is well known in Mostar as an avowed Frankovist, that is, a Habsburgophil and open enemy of Yugoslavia, from which country he has been expelled. It suited his game to pose as a Yugoslav agitator in Istria, and to make difficulties between the Slavs and Italy, as the Italians will certainly attribute his action to the machinations of Belgrade.

It is generally known that there are about 400,000 or more Yugoslavs, chiefly Slovenes, who are to-day Italian subjects, and that as a result of the Klagenfurt plebiscite a substantial number have been handed over to Austria. But besides these there is a colony of Croats in former Magyar territory which now belongs to Austria. These, it is reported, have recently waited in a deputation on the Austrian Chancellor, Dr. Mayer, who promised to do all he could to respect the wishes of the Croatian people.

The Politicians.

In the political world there is not much to relate. The withdrawal of M. Stoyan Protitch from the Radical Party, of which he has been the leader since the liberation, is still the talk of the town. It has been thought that he would retire from the political arena, where his unbending character and arrogant manner have been stumbling blocks to many coalitions, and one of the chief causes of the perpetual crises of the last two years. Many think that his object is to split the Radical Party, and so break the Coalition, destroy the present Constituent Assembly, and form a new Government out of the Opposition, of which he will be the head. To the onlooker his forte certainly seems to be destruction rather than construction; but the Radicals are probably too devoted to M. Pashitch to be very seriously affected.

The Narodni Club is sulking about the Constitution, and the Slovene Clericals appear to be going to do the same thing. There are signs of splitting in the Agriculturalists, the Socialists are angry at the agreement with the Mohammedans of Bosnia, and the Communists have grown tired of their parliamentary leader, Dr. Sima Markovitch, and elected a new chief, M. Trisha Kaclevitch.

GREECE.

ATHENS, April 10.

Imprisonment of an Editor.

As a result of the publication in the Venizelist paper *Patris* of an article dealing with the military situation in Asia Minor, this journal's editor, M. D. Lambrakis, was arrested yesterday by order of the Government and imprisoned, after having been charged with "shaking the confidence of the people in the Government's war policy, and in the Army."

An extract from M. Lambrakis's article runs as follows:—

We have before us either enemies or mistrustful friends; we are diplomatically isolated and financially blockaded. We trumpeted forth that Asia Minor was mistress of the situation and would bring about a change in the opinion of the Allies. Our army which had hitherto known nothing but victories, has now, after the most striking proofs of heroism, been obliged by Kemal, to retire 120 kilometres without succeeding in attaining the main object of its offensive. . . . When, for political reasons, those in command of the units on the Asia Minor front were replaced, we warned the Government of the dangers and the responsibility that such an action would involve. Will the Government hesitate now to replace those responsible for this military check? General Papoulas is not a friend of ours; we must, nevertheless, admit that he enjoys unlimited confidence among military circles, and that, despite the check at Eski-Shehir, his authority still remains intact. Let the Government therefore afford this honest and sincere soldier the collaboration he is in need of.

The *Politeia*, a Royalist paper, whilst admitting the seriousness of M. Lambrakis's offence, expresses the hope that the Government will treat the matter leniently and will order his release. The *Politeia* points out that M. Lambrakis is a white journalist and a straightforward rival, who very strongly condemned the barbaric scenes of Athens in August last year, and through whose influence many anti-Venizelist journalists imprisoned at the time of the "tyranny" were set free.

M. Gounaris Returns.

M. Gounaris, accompanied by the Governor of the National Bank, M. Maximos, returned to Athens on

Tuesday. At a Council of Ministers held the same evening the Minister of War declared that the realisation of the national aspirations depended entirely upon the work of the troops in Asia Minor. If these were victorious, Greece need not have any fear of losing what she had acquired. M. Gounaris added that there could not be the slightest doubt as to the successful issue of the new campaign.

The New Cabinet.

Four different Prime Ministers, and therefore four different Cabinets, in less than five months is something of a record, and not easily to be beaten. On November 10 last M. Venizelos was the President of the Council; he was replaced by M. Ralli on November 15. On February 7 M. Kalogeropoulos was entrusted with the Premiership, and finally on April 8 M. Gounaris's turn arrived. That it had been M. Kalogeropoulos' intention to resign was no secret, but it was generally thought that he would not take such a step until he had given a full and detailed account to the National Assembly of his doings in London. No little surprise was therefore felt on Friday when the early edition afternoon papers informed us that M. Kalogeropoulos had tendered his resignation to the King, and that it had been promptly accepted. In less than half an hour after M. Kalogeropoulos' departure from the Palace, M. Gounaris was received by the King, who entrusted him with the formation of the new Cabinet, which is composed as follows:—

Prime Minister and Minister of Justice	M. DEMETRIUS GOUNARIS
Minister for Foreign Affairs	M. GEORGE BALTADJIS
Minister for Home Affairs	M. SPYRO STAIS
Minister of War	M. NIKOLAS THEOTOKIS
Minister of Marine	M. PETROS MAVROMIHALIS
Minister of Communications	M. P. TSALDARIS
Minister of National Economy ..	M. JOHN D. RALLI
Minister of Finance and Food Supplies	M. P. PROTOPAPADAKIS
Minister of Public Assistance ..	M. ANTONIOS KARTALIS
Minister of Education	M. THEODORE ZAIMIS
Minister of Agriculture	M. CONSTANTINE TERTIPIIS

M. Gounaris is evidently no longer in the bad books of the Allies. Only two months ago the new Premier was clearly given to understand that his presence at the London Conference as Greece's delegate could not be tolerated. Since then M. Gounaris has visited London, Paris, and Rome, and has come into close contact with Mr. Lloyd George and M. Briand. What has happened? It does not require much guessing. The formation of a purely Gounarist Cabinet, from which M. Kalogeropoulos is left out, answers the question.

Greek Independence Day.

On March 25, the hundredth anniversary of the commencement of the Greek revolution against the Turks was celebrated throughout the country. In Athens the main streets were decorated and all Government offices and banks were closed for three days. In the morning a thanksgiving service was held at the Cathedral, which was attended by all the members of the Royal Family. After the service a reception took place at the University, where M. Carolidis, Professor of History, delivered a speech explaining the importance of the day. The King, followed by the Crown Prince and the other Princes, then proceeded to the small park outside the University, and placed laurel wreaths on the statues of Patriarch Gregory V., of Rigas Ferraios, and of Corais. In the afternoon of the same day wreaths were also placed on statues of many other heroes of the Revolution, and in the evening the public buildings, the Acropolis, and the Lycabettus were brilliantly illuminated. On the occasion of these national celebrations enthusiastic articles accompanied by symbolic illustrations and patriotic verses appeared in almost every newspaper here.

ROUMANIA.

BUCHAREST, April 12.

The Agrarian Reforms

The excitement caused by ex-King Charles's attempt to recover the throne of Hungary having died away, home affairs have once more claimed public attention. During the past week Parliament has been discussing the Budget*, the Agrarian Reform Bill, proposed new regulations regarding imports and exports, and the proposed concession of the railway workshops to British and French groups.*

The Agrarian Reform Law has now acquired a very different aspect from that which it bore when first brought before Parliament by the Liberal Party on December 16, 1918. The idea then was to transfer the expropriated areas of land to co-operative societies of peasants, who should work it in common and share the profits. This plan, however, found no favour in the eyes of the peasant, who does not take kindly to co-operation; and so loud and insistent were his complaints and his demands for individual ownership that the present Government was finally obliged to give way to them. The work of distribution of the expropriated land by committees of experts appointed for this purpose has now been going on for some months; but it is proving an extremely slow and complicated task, owing to the great variety of considerations involved, not the least of which are the varying quality of the land and the natural desire of each man to have his share of the best. There are still over four hundred thousand hectares to be expropriated before the total figure provided by the law is reached. The amount of land received by each peasant depends partly upon the density of the population in his district, and in some cases the land available has not been sufficient to provide for all, and peasants have removed to more thinly populated districts in order to receive their allotments. It is to be hoped that the last state of these will not be worse than the first. Rather a pathetic instance was witnessed by the writer last summer of strong healthy mountaineers recently settled in the low flat district

towards the Delta of the Danube, where they were easily distinguishable not only by their picturesque embroidered costumes, but by their fresh colour and splendid physique from the thin and sallow-faced inhabitants of that malaria-stricken country.

During the discussions of the past week it has been claimed that in certain provinces the land available under the law is still not sufficient for the requirements of the population, and that more drastic expropriation measures must be taken. This question, however, is still under discussion. As the law now stands, the largest estate allowed to any landowner in Bessarabia is 100 hectares, in Transylvania 500 hectares, and in the old Kingdom 300 hectares.

Shortage of Quinine.

Reverting to the question of the malaria prevalent in the low lying districts towards the mouths of the Danube it may be remarked that there is a great shortage of quinine in Roumania at the present time owing, no doubt, to transport and financial difficulties. The only quinine available comes from Germany, where stocks are probably depleted, and is of very poor quality, having little virtue in it, and owing to the low rate of the leu it has not been found possible to import from England or America. Until recently the American Red Cross distributed large quantities of quinine, but now they have closed down, and there is no other source of supply.

CYPRUS.

NICOSIA, March 29.

Rejoicings arranged to celebrate the centenary of Hellenic independence are numerous and varied, although it has not yet been decided at Athens whether the national fêtes are to be held during this, the hundredth anniversary of the Greek rising of 1821, or seven years later, when the liberation of Greece was actually won and proclaimed.

A draft law is in the hands of members of the Legislative Council relating to the timely suppression of publications containing seditious matter.

The Holy Synod of Cyprus began its session on March 23, under the presidency of the Archbishop, and has a long list of agenda. Its first care appears to be the preparation of yet another memorial regarding the "Cypriot question," which is to be despatched to the Archbishop of Canterbury and the higher clergy of the Anglican Church, and to certain politicians. It will also discuss the Pan-Christian Conference at Geneva, at which the Cyprus Greek Church is represented by the Archimandrite Chrysostom Papadopoulos; and the forthcoming Pan-Christian Congress, at which the Bishop of Kition will represent the autonomous Orthodox Church of Cyprus.

NICOSIA, April 4.

During the short session of the Legislative Council the Moslem, in co-operation with the official members, carried the few measures that were deemed of importance, and presumably the Council will not be convened again unless circumstances occur to render a meeting necessary, as sometimes happens in the summer months. There is no disposition on the part of the Greek members to change their attitude or tactics, which have already caused much unnecessary trouble and expense.

The memorial of the Greek Archbishop (which was drawn up after the first meeting of the Holy Synod held since his return) to the Archbishop of Canterbury is now published in the papers. His Beatitude expresses the Synod's feeling of gratitude for the sympathetic reception accorded to the Greek prelate while in England; he deplores what is still called the "unjust decision" of the British Government regarding Cyprus, and expresses the hope that the Archbishop of Canterbury and the clergy of England will raise their voice in support of the petition for union.

A newly-elected Abbot of Trooditissa Monastery, Jacobus, has been installed by the Bishop of Papho. This old retreat is a favourite place of resort in the summer season, and is picturesquely situated in the pine-clad heights of Troodos, a few miles from the camp.

A reply has been received from the Chief Secretary to the Greek application respecting Cypriot volunteers for the Hellenic army. It is naturally to the effect that none can be enlisted except those who can prove that they are of Hellenic nationality. This would, of course, exclude any but a very few individuals in the island.

* These subjects are dealt with on another page.

BULGARIA & HER NEIGHBOURS

We have received the following communication from the Bulgarian Legation:—

Recently fresh problems have been added to the intricate question of the Near East by persistent Press campaigns conducted at Belgrade, Athens, and Bucharest against the policy of the Bulgarian Government. The principal papers of the three Balkan States have given publicity to allegations concerning the appearance of Bulgarian bands in the Dobruja, Thrace, and Macedonia, which, it is said, have been formed on Bulgarian territory and sent across the frontiers in order to raise insurrections. These unfounded reports are obviously intended to create an unfavourable political atmosphere in public opinion abroad in regard to Bulgaria, and are apparently in connection with certain drastic measures which our neighbours seem to intend to take against Bulgaria.

As a matter of fact the Bulgarian Government are in possession of information according to which considerable Serbian military forces are being concentrated close to our frontier. Some Serbian frontier officials even announced that the Serbian Government intended to occupy a certain new extent of Bulgarian territory, including the State coal-mines of Pernik, under the pretext that Bulgaria has failed to fulfil her obligations in regard to the Peace Treaty. On the other hand, the Bulgarian Government are aware of the fact that the Bulgarian population of the recently annexed Tsaribrod district are forced to sign petitions claiming that, as they are deprived of any hinterland, their existence is impossible, and suggesting that they should be granted a territory of greater extent eastwards, as far as Trioushi (Dragoman). This news has made the worst impression at Sofia.

The Bulgarian Government are convinced that if there are any symptoms of unrest in the neighbouring States the causes must be sought outside Bulgaria. In regard to this, their opinion is supported by the statements made by the Yugoslav Minister of the Interior to the Belgrade Parliament. M. Drashkovitch, indeed, stated that the epidemic of brigandage and murder from which Macedonia has recently been suffering has been traced largely to Communist influence, supported financially by Hungarian and Russian Bolsheviks. According to M. Drashkovitch's declarations, certain notorious murderers had received supplies and weapons from persons now sitting in Parliament at Belgrade as Communist deputies, and documents found on certain rebels proved that they were members of the Serbian Communist party. It seems, therefore, that the appearance of bands in Macedonia is due to the same wave of discontent which caused the great majority of the Macedonian electors to give their voices to the Communist party, and not to any contrivance on the part of the Bulgarian Government.

On April 11 the representatives of the Serb-Croat-Slovene State, of Greece, and of Roumania called collectively upon the Bulgarian Prime Minister to draw his attention to the fact "that certain Bulgarian committees have been actively at work lately sending bands into the neighbouring States with the intention of causing unrest, and that this had been tolerated by the Bulgarian Government." M. Stambolisky made a formal statement before the three representatives, of which the following is a summary:—

The Bulgarian Government regrets that anyone should have doubted its loyal attitude. The Bulgarian Government has done and is doing its utmost to establish friendly relations with all its neighbours. Therefore, we have never tolerated and shall never allow any action to take place which would compromise that policy and bring new troubles upon us. Moreover, it would be entirely against the very principles of the peaceful policy we are following. It is possible that a few separate individuals have crossed the frontier, but they are ordinary brigands and contrabandists. We have taken and are taking the strongest possible measures against these men. No bands have been organised on Bulgarian territory with the knowledge and the consent of the Government. We deny that statement, and declare that we are ready to accept any international inquiry which may be esteemed necessary in order to prove the real attitude of the Bulgarian Government. The Bulgarian Government are giving irrefutable proof of their good faith and entire readiness to make every possible effort in order to fulfil their obligations to the extreme limit of Bulgaria's capacity.

At the end of his interview with the representatives of the neighbouring Balkan States, the Bulgarian Prime Minister expressed the hope that his statement would convince their Governments that the policy of Bulgaria is to establish friendly relations with all her neighbours, and that, therefore, the Bulgarian Government deserved their support.

It may be added that, though Bulgaria has been left by the Treaty of Neuilly with military and police forces quite inadequate for preserving order in the country and controlling the frontiers, the Bulgarian Government are doing their

utmost to maintain internal peace. The Bulgarian Government are loyally striving to fulfil the obligations assumed by the Treaty of Neuilly. Therefore the announced intention of certain neighbouring States to apply Sanctions to Bulgaria in the form of occupation of other Bulgarian territories would constitute an act of flagrant injustice, which could not in any way be accounted for in regard to a State which is doing its best, and is, moreover, already disarmed.

Should these drastic intentions be carried out, the faith of the Bulgarian people would be shattered, and the position of the Bulgarian Government, which since the Armistice has been successfully dealing with a very heavy task, would be most seriously compromised.

THE CONSTANTINOPLE "COMEDY."

The following extracts from a letter recently received from Constantinople show what a curious position has arisen in that city owing to the Allied occupation and the fighting in Asia Minor.

"The comedy of the Near East problem hardly merits discussion. An account appeared in our local press two days ago of a football match in Pera between Greeks and Turks. There was a big attendance, and the game was played most amicably. The Turks won. Prayers for the success of the Turkish armies are being said in our local mosques at which the Sultan attends. Greek sailors and soldiers patrol and police Constantinople daily, assisting the Allies in regulating traffic and keeping the peace; the Greek Consul and High Commissioner reside in Constantinople; while the Sultan and the whole Turkish nation and all the Turkish papers are openly at one with the Nationalists.

"The staging and setting of the farce comprises much inflammable material, and apart from the ultimate risk if the play is continued indefinitely, the performance is showing unmistakable signs of palling on the audience here. It is regarded as one of the poorest productions that London has ever been responsible for."

Paris and Rome, we suggest, must take their share of credit—or the reverse—for the piece.

THE BRITISH ARMENIA COMMITTEE.

The British Armenia Committee has issued a memorandum in which it urges that the new Armenian State must be created under conditions which will enable it ultimately to maintain itself. For this purpose guarantees for the evacuation by the Turks of the Armenian territory must be obtained by withholding concessions offered to Turkey in other quarters. In addition, the new Armenia "must cover an area which—potentially at least—forms a geographical and economic unit capable of military defence." This condition implies territorial access to the sea and possession of Kars and the Erzeroum plateau. The frontiers laid down by ex-President Wilson should be the basis for the proposed League Commission. The memorandum criticises Allied policy in Cilicia, asserts that the terms of the agreement between France and Kema "amount to a cynical flouting of British and Allied pledges to the Cilician Christians," and presses for the establishment of an autonomous Government or of an administration under a Christian Governor such as formerly existed in the Lebanon.

INDIAN STUDENTS IN ENGLAND.

The High Commissioner for India has appointed Mr. Thomas Quayle, D.Litt. (Lond.), Joint Secretary for Indian Students. While Mr. N. C. Sen, for some years past Adviser to Indian Students in London, brings to bear upon the work in the interests of these students the requisite Indian experience, his colleague will provide the necessary corollary of knowledge of higher educational and university life in this country. Dr. Quayle was special William Noble Fellow of the Liverpool University, Eyton Davies Research Student in the University of Wales, and an advanced student for research work at Balliol College, Oxford. He is at present Director of Education to the borough of Sutton Coldfield. It is understood that, in consultation with the Government of India, the Secretary of State is taking the opportunity of the transfer of the work from the India Office to appoint a committee of inquiry into the arrangements for Indian students, and that Lord Lytton will be the chairman.

Our Zagreb Correspondent writes (April 17): A Slovene aviator (Vognar), on a Phoenix machine has established the local record for altitude, reaching a height of 6,500 metres in forty minutes.

In connection with the refusal of Germany to comply with the Allied claims with regard to reparations, the Government of Serbs, Croats, and Slovenes decided on April 9 to introduce a tax of 50 per cent. to be paid on the value of goods imported from Germany, the tax to be brought into force from April 16.

PRESS ON THE NEAR EAST.

Palestine.

Writing from Jerusalem, in the *Pall Mall and Globe* of April 12, on "Palestine To-day," Mrs. Henry Fawcett indicates some of the difficulties to be grappled with by the High Commissioner and his advisers:—

British rule is bitterly unpopular with considerable sections of the population, with the poorer and more numerous, because bread and other necessities were never so dear. They do not stop to ask the reason why; indeed, they attack the Government, not only for bread being dear, but because the export of corn (to prevent it becoming dearer) has been stopped. They only know that the rise in food prices synchronised with British rule, and on our shoulders falls the blame. Among the more educated classes the cause of the discontent is different, but not less real.

She then states that the disaffection is due to a complete misinterpretation of the Balfour Declaration of November 2, 1917, which was taken to mean in Great Britain that Jews should be enabled to take their place in Palestine on a footing of equality with other people:—

It was in this sense that the Balfour Declaration met with general acceptance in Great Britain; but here all kinds of interpretations have been put upon it, and it has become a source of most violent contention. There are those who contend that the first and second parts of the Declaration are mutually incompatible—that Palestine cannot become a national home for the Jews without cruel injustice to the native Syrians who have lived and died in the country for a thousand years or more, and form by far the largest section of the native population. There are men who say and believe, "We are to be enslaved in order that our enemies may have a national home," and they say that what is actually taking place day by day and month by month is the gradual subjection of the non-Jewish population to the ever-growing dominance of the Jewish.

One grievance constantly referred to is the continued suspension of all the machinery of representative government, whether local or central. His Excellency the High Commissioner has, it is true, an Advisory Council, but this is not an elected but a nominated body, and now, nearly three years after the end of the war, the general inhabitants of Palestine have far less electoral power than they had under Turkish rule. Between 1908 and the outbreak of the war a system of representation did exist whereby, for example, four members from Jerusalem, two from Nablus, two from Haifa, one from Acre, and so forth, sat in the Parliament set up by the Young Turks in Constantinople. All this is now stopped, and nothing satisfactory is put in its place. A nominated Advisory Council can never give the people the confidence they would repose in elected representatives. It is true this argument is met by those who affirm that the Turkish representative system might have looked well on paper, but was, practically worthless; it certainly did not make Turkish government popular. Nevertheless, the present Administration has to face a formidable body of opposition, and it is probable that a safety valve might be found for its free and open expression if some sound form of rudimentary representative government could be brought into existence. Much of the unpopularity of the Government probably arises from pure ignorance and the timidity born of ignorance.

Greeks and Turks.

The Special Correspondent of the *Manchester Guardian* in Smyrna, writing in the issue of April 12, sums up his impressions thus:—

The Turks of X. (a district the correspondent had just visited) are in a panicky state of mind, and not only they but the Turkish intellectuals in Smyrna are genuinely convinced that it is the policy of the Greek Administration to get rid of the Turkish element in the Sèvres zone. This, I am quite sure, is a delusion, and the cases of violence or injustice which they have cited to me do not alter my opinion. I suppose every Greek has at least a slight prejudice against every Turk, and the lower down you go in the ranks of the Administration the more prejudice and the more influence of prejudice on action you will discover. The Turkish population is most intimately affected by the behaviour of the lowest members of the official hierarchy—the minor officials and the gendarmes—and I have no doubt that the incidents related to me are not only true but are only a percentage of the total that have occurred.

Yet my impression on the whole is that the political grievance outweighs the personal grievances of the Turkish population. They are very proud, and, like most Moslems (and some other human beings), they consider it unjust that they should suffer the same misfortunes as the rest of mankind. They particularly resent that the "rayah" whom they ruled so long with scorpions should now rule them with whips. In truth, I do not think that either people can lead a satisfactory life under the rule of the other, even if only the lighter instrument of castigation is employed; and that is why I have put forward in so many telegrams and despatches the thesis that this vilayet ought to have a mixed Administration, recruited proportionately from the two elements and placed under foreign control.

Smyrna and the East.

In an article called "Great Britain and Smyrna" the *Morning Post* of April 9 advocates the withdrawal of Smyrna from Greek possession. It does not conceal its jubilation over the defeat of King Constantine's troops in Asia Minor, and, though it approves of M. Venizelos, it says that Mr. Lloyd George, in being won over so whole-

heartedly to the policy of the Greek ex-Premier, was not sufficiently solicitous of the interests of his own country. In fact:—

The result of Mr. Lloyd George's unthinking adoption of the cause of M. Venizelos is that Greece and Turkey are again at war and that the renewal of strife in Anatolia is bound to have, and, indeed, is already having, serious consequences in the Caucasus, in Persia, in Afghanistan, and throughout British dominion in the East. Both Greeks and Turks have flouted the wishes of the London Conference. What is worse, the Turks are convinced that Great Britain is espousing the cause of King Constantine, just as it committed itself to the programme of M. Venizelos. Every day we are receiving communications from members of the Turkish delegations to the recent London Conference to the effect that this country is sending munitions and other support to the Greeks. These suspicions are ill-founded, but they reveal a state of mind which does not augur well for the maintenance of cordial relations between this country and Islam, already severely tried by our surrender to the Zionists in Palestine. We have already driven the Kemalists into the arms of the Bolsheviks, and Constantinople and the Government of the Sultan into the arms of the Kemalists. It is accordingly imperative that we change our unfortunate policy in the Near and Middle East and begin to consider the fundamental interests of the British Empire. Our main interest in that part of the world is peace and the stopping of a war which can only benefit in the long run the conspirators of Moscow. Now, as long as Smyrna belongs to Greece there can be no peace in the middle East. The blessed principle of self-determination has got nothing to do with the case. The plain outstanding fact is that Smyrna is the natural outlet for the trade of Anatolia, and that if it be taken away from its rightful owners then Turkish trade is stifled and Turkish financial recuperation becomes an impossibility. To take Smyrna away from Turkey is an injustice; to hand it over to Greece is, from a Turkish point of view, an outrage. Alike from an economic and a psychological point of view Smyrna in the hands of Greece is a nest of eternal war. The Allies, therefore, ought to hand it back to Turkey or submit it to a control which would satisfy legitimate Turkish susceptibilities. In such a case we may be sure that Turkey would give to Greek interests in Smyrna the same consideration as Greece is prepared to give to Bulgarian interests in the Aegean. In doing so they would be doing a real service to Greece. In developing Thrace and the Islands the Greeks have a sufficient outlet for their energies for many years to come. Perhaps the bitter but wholesome lesson conveyed by recent events in Anatolia may convince Athens, as well as London, of the necessity for a less ambitious and more practical policy.

Armenia.

An article in the *Manchester Guardian* of April 11 says that the present condition of Armenia is a disgrace.

It is clear that the fair and well-articulated plan for settling Near Eastern questions on a racial basis which the Allies embodied in the Sèvres Treaty is lapsing into complete confusion, in which the old miseries and the old dangers will again prevail. Armenia is now, as for centuries, a test case. Her future seemed assured. At last the Christian peoples the world over, to whom her sufferings were a traditional cause for searching consciences and for devising remedies, would be spared the distraction of this recurrent sore. The cure depended on making Turkey powerless when the chance offered, and on a temporary tutelage by the victors in the war of the Armenian people. The first was not done; Turkey was vanquished, but, with amazing folly, she was left her arms. The second has been abandoned, and the tragedy of Armenia, to our disgrace, remains. . . . Kemal, in his present mood, will understand and yield to nothing but superior power. To display it means men and money, and this all the Allies except Greece have so far refused. Greece has fought a long, and for a time successful, campaign, and is now losing it. Her ambitions, after Constantine's return, were such as perhaps deserved defeat. But to a Greece that limits her objectives to a fair racial treatment of the Near Eastern question, such as was aimed at at Sèvres, need the Allies refuse help, moral and even material? The best and most characteristic of American public thought has always championed Armenia. The other Allies, whatever their present apathy, are deeply pledged to save Armenia, and in their own interest they must restrain Kemal. If they gave their help, even thus tardily, justice might still be done, and a wrong that has far too long troubled good men in all civilised countries be finally redressed.

MUSICAL NOTES.

Miss Judith Litante.

It was in the main an artist's programme that Miss Judith Litante, a soprano, had drawn up for her recital at the Æolian Hall on April 14, but it was rather unequally performed. Her old Italian songs were well done, particularly Caldara's "Alma del Core," but her English group, containing things by Purcell and Arne, was not intense enough. In a group of *lieder* by Wolf, Schubert, and Brahms her rhythm was a little shaky and her choice of *tempi* rather haphazard. But in her final group, which was chiefly Russian, though she missed the bursting joy of Ravel's Greek folk-song "Tout Gai," she made amends by a very beautiful interpretation of Arensky's "Cradle Song." Miss Litante has much to learn, both technically and musically, but certainly she has the makings of a fine singer.

Two Pianists.

I do not know that there is generally any essential connection between an artist and the race to which he belongs, and it seems to me that the insistence which some critics give to the reflection of nationality in the composition or the interpretation of music is overdone. However that may be, the chief quality in the playing of M. Reimar de Radium, the Danish pianist who gave a recital at the Wigmore Hall on April 20, was restraint, a restraint partly deliberate and partly due to a lack of poetical sense. His technique in scale work is fluent, delicate, and finished, and in *piano* passages he has a charming grace. But there is no great depth in his readings; Beethoven's "Appassionata," for instance, was driiig rigid; the caprice made by Saint-Saëns on an air of Glück is a work the dullness of which no facile prettiness can disturb; and in Chopin the gradations of tone were unskillfully managed. The main defect of this pianist lies in his rhythm, which is inelastic; his emphasis on the bar rather than on the line makes his playing more monotonous than the clean, unaffected display of his other abilities warrants.

In the playing of Mr. Leonard Rayner, whose recital was at the Wigmore Hall on April 21, there is much to please, but little that is moving. He has a neat, accurate technique that of itself could cope with the demands which such things as Cesar Franck's "Prelude, Chorale, and Fugue," and the "Escenas Romanticas" of Granados made upon it; but he had not the majestic and passionate conception of these works that is necessary to the demonstration of their greatness. A little diffident of his climaxes, a little hard in his rhythm, this pianist is more of an academician than a poet. He introduced to London a suite of four bird songs by F. Herbert Bond; they were the harmless kind of imitative lyricism that one thought had died with Grieg.

Mr. Francis Buckley.

It is not often that ambition is so far removed from ability as it was in the vocal recital by Mr. Francis Buckley at the Wigmore Hall on April 18. And it was not his deficiencies alone that made the evening lack interest: his collaborators in Handel's "St. Cecilia" cantata—Miss Gladys Van der Beeck, a string quartet composed of ladies, and Miss Hilda le Gros—were all perseveringly inefficient.

Mr. Buckley himself has a pleasant, small voice, the fragility of which can scarcely stand the buffetings of public performance. He has, however, excellent intentions, for his choice of song was admirable. Yet to sing a bird song by Armstrong Gibbs with the same unconvinced sincerity as that with which an Arensky love song is declaimed is making unnecessary demands upon the patience of an audience. But Mr. Buckley achieved something in finishing his songs at all, for the inert vagaries of his accompanist must have been almost insupportable.

Negro Spirituals.

The discovery of the folk-songs of negroes is a recent one, and no one in this country is doing so much to explain them as Mr. Roland Hayes, a negro tenor whose last recital was at the Wigmore Hall on April 21. I was disappointed not to be able to hear more than two of his spirituals, for without any doubt at all he is a most admirable exponent of them. Their tense and sustained pathos he most beautifully and without any exaggeration displays—a feat of artistry by no means easy. To hear his singing of "Go down, Moses," for example, is to hear the very fundamentals of song; and I shall certainly go to hear him again.

The Spencer Dyke String Quartet.

It was fortunate that the Spencer Dyke String Quartet were assisting Miss Annabel Macdonald in her recital at the Wigmore Hall on April 22, for without them there would not have been much cause for enjoyment. But they are a very capable quartet, in tone, in rhythm, and in finish. The two sketches of Goossens, indeed, "By the Tarn" and "Jack o' Lantern," which they have made their own, they play better than anyone else; and it was pleasing to see even the rather indiscriminating audience that applauded the recitalist's efforts recognise the merits of these fine instrumentalists. Of Miss Macdonald's voice not much can honestly be said in praise, and to expatiate on her impure diction, her false sentiment, and her uncertain quality would be a thankless task.

ANDANTE.

EARLY HINDU POLITY IN KASHMIR.

A lecture on the early history of Kashmir was given on April 25 before the East India Association by Mr. E. A. Molony, I.C.S., C.B.E., Sir Francis Younghusband being in the chair. The lecturer began by a brief historical survey from the reign of the famous Asoka, who founded the capital, Srinagar, up to the eleventh century, when the victorious advance of Mahmud of Ghazni was repulsed by the Kashmirians. In religion the country was Buddhist under Asoka; religious toleration was, however, fully recognised, for Hinduism existed side by side with the established creed. With the subsequent revival of Hinduism the worship of Siva arose, and later the cult of Vishnu grew up and flourished for centuries together with Buddhism and Saivism. As time went on the characteristic institution of caste emerged, but the references to it are nebulous before the eleventh century, and it connoted occupation rather than social rank; from the eleventh century onwards we come across the familiar names of Vaisya and Kshatriya. The Brahman was recognised from a very early date; the scavengers and others whose work was of a defiling nature became "untouchable," but the mass of the people were not divided by any rigid line. Asoka established a regular system of Government on ancient Oriental lines, but the chief posts gradually became modified either by expansion or by atrophy as the needs of the State demanded. There were regular trials, and it is interesting to learn that the dissatisfied used to go on hunger strike, with the curious result that the sin of causing death was imputed to the judge. On the other hand, the regular administration of justice was greatly hampered by constant insurrection, by treachery, and by assassination. Forced labour of the kind known to readers of Egyptian history as the *corvée* seems to have been common and to have been severely felt. The land tax was both unstable and excessive, though at times benevolent rulers made provision for famine and distress. The whole system of the country was based on terrorism and the strong hand. It was held that to allow villagers to amass wealth or to relax the control of the hill tribes was to court disaster for the King. The information regarding customs is meagre. Women were not secluded, and suttee was common, especially in the reigning family. Drinking, too, was well known, but was considered disreputable. The amusements of the people, then as now, were chiefly singing, dancing, and religious festivals.

It is clear from this picture that the golden age conjured up by the Extremists of to-day exists only in their imagination. The Royal Court may have been splendid, but the people were purposely kept in a state of extreme poverty, and in the hill country lawlessness was only kept in check with great difficulty. The British are charged with oppressive taxation and a demoralising educational system, but the taxation was evidently far more oppressive, and of education, except in Sanskrit, there was none. The single redeeming feature was that the Government was native, and the Extremist of to-day, for the sake of that single fact, is apt to forget and condone much that was unlovely in the past. If it is unfair to point to that past as a picture of what would be, in the absence of the British, it is equally unfair to represent as golden an age which was in fact frankly brazen.

I.—THE TURKISH PROBLEM.

The outstanding feature in the Near Eastern situation to-day is that the Allies' attempt to settle the Turkish problem by the Treaty of Sèvres has broken down completely, hopelessly. An effort was made to effect a compromise at the recent London Conference; but the only result so far has been in the nature of a deadlock. It is, perhaps, the hope of the Allied Governments that when a condition of stalemate as between Turks and Greeks has been definitely established they will find the opportunity to impose terms that both peoples will have to accept. Such a solution, it is to be feared, will be at best but a temporary compromise. The terms of the Treaty of Sèvres are in themselves the clearest evidence of the failure of the responsible heads of the Governments concerned to understand the problem with which they had to deal. Subsequent action confirmed the fact of their ignorance, and there is no indication that any genuine effort has since been made to study the problem afresh. As far as Great Britain was concerned, there was ample knowledge, both inside and outside Government Departments, to obviate the cruder mistakes of the Paris Conference; but it may be doubted whether the real significance of the Near Eastern question in all its ramifications had been even dimly understood, let alone mastered. It was still regarded as being in the nature of a gamble—a question of "spotting the winner." When a "tip" was given it was followed avidly, and an explanation was elaborated to justify the proceeding. It would not be fair to the British Prime Minister to say that he was following no definite policy in his Near Eastern settlement. But he looked no farther than the Mediterranean. There he found a pro-British seafaring nation, and it seemed the obvious thing to do to bind it as closely as possible to Great Britain with a view to combating anti-British tendencies in the Near East. Mr. Lloyd George's outlook was too restricted. The Near Eastern problem stretches from the Adriatic, if not from the Atlantic, to the Indian Ocean, perhaps to the Pacific, and the British public has been somewhat forcibly reminded of the fact.

If past mistakes are to be avoided, our conception of the problem has to be revised. In this small pamphlet, "Europe in Asia Minor," the anonymous author, "A Good European," presents an interpretation which it would be difficult to challenge on grounds of scholarship, history, or statesmanship. He declares in his Preface that he addresses himself exclusively to honest and sincere folk, and "cares nothing for the opinion of those who, for one reason or another, whether deliberately or from weakness of heart or mind, have prostrated themselves before the three mighty powers that govern modern humanity: Money, Prejudice, and Impassioned Stupidity." In regard to the Turkish question, however, there is a well-meaning section of the community, so constitutionally pessimistic that they are incapable of hoping for better things, who are unable to get away from the Turks' atrocity record, and are satisfied that nothing good can ever come out of Turkey. It is to be hoped that they will at least read "Europe in Asia Minor" with an open mind, to see whether Angora appears to hold out possibilities denied to Constantinople.

The two outstanding names among those in Great Britain who have brought any degree of vision to bear upon the Turkish problem are David Urquhart and Beaconsfield. Of the latter our author writes:—

He dreamed of the moral protectorate of Great Britain over Islam, and on his journeys in the Near East he studied the spirit of the Moslem people, which he thought worthy of participating in the work of modern civilisation as it had participated in the civilisations that have preceded our own. He wished his country to preside, in brotherly collaboration, over the political education of the Moslem peoples, and over the vast reform movements which have been agitating the minds of Mussulmans for the last hundred years.

Beaconsfield's ideas were upset by Gladstone. "Instead of becoming the impartial though benevolent mediator between Christianity and Islam—a task clearly indicated by the Asiatic interests of the British Empire—the latter turned

ever more and more to the Tsarist standpoint, whose one object was to blot out from the political system of the world the very real though stationary forces which Islam still holds at her disposal."

At the time of the Turkish revolution of 1908 there was for a moment a tendency to revise our opinion of the Turks, but the help from Great Britain for which they looked was not forthcoming. "In these circumstances the Turkish revolution was bound to fail in its attempt to reconcile so many different and frequently conflicting interests. European diplomacy took advantage of the grave errors which inevitably occur in any work of reform and revolution in the Near East, in order to resume its policy of destruction with an alacrity which contrasted all too conspicuously with the long and magnanimous patience it had exercised towards the autocratic system." The Turks threw themselves blindfold into the arms of Germany, after having made fruitless attempts in London, both in 1913 and 1914, to secure British collaboration in the work of reform in Asia Minor. After the signing of the Armistice Great Britain had once more to make up her mind about a Turkish policy. "Scorning the guidance of her past diplomacy with regard to the question of Islam, [she] endeavoured to apply a policy of which the mildest indictment is that it has nothing British about it, and betrays throughout its Levantine origin."

From this point we may allow "A Good European" to speak for himself, while we would strongly urge everyone who wishes to arrive at an intelligent appreciation of the Near Eastern question to study the pamphlet. Some will possibly decide that the goal which he has in view can be reached with less insistence on expediency at the expense, if necessary, of morality. A revision of Great Britain's Turkish policy must go hand in hand with the resolve that the Turks shall be given a fair and full opportunity, which they have never had before, of making good.

"In the realm of world politics—and let all incurable moralists remember this once and for all—it is not a question of knowing who is right or wrong, it is not a question of urging the merits of Venizelos on the one hand and the iniquities of the Turk on the other or *vice versa*; but simply of valuing the forces involved, and of adapting them to the policy or interests at stake, which, in this instance, are the primary interests of the British Empire. This elementary principle of political science has been forgotten in many countries. It is not a matter of deciding whether the Koran is a pleasant book for Gladstonian readers, or whether the Turks are barbarians or not. The question is whether these so-called barbarians still stand for a political power with which the world must reckon, and whether they are capable of disgorging their venom against Europe and of poisoning the relations between England and Asia. Now this they have proved themselves to be."

"Surely it is not the duty of a world power such as victorious Britain, destined to be the arbiter, not only of one religious community, or of one race or nationality, but of the whole of thinking humanity, to be moved by passion and adopt a partial and one-sided attitude towards a question of such vast importance?"

"The power of Turkey is no longer such as to enable her to resume her old historic part, now for ever lost; but it is abundantly adequate for the purpose of poisoning the relations between Moslem Asia and Europe, and of playing the part of advance guard in the world revolution in Asia, already so much exasperated with the white race, and of making all attempts at pacification and placation quite impossible in the Near East. . . . The Turks, having beaten the Armenians, now have a *back door* opening into Central Asia and the Caucasus, whither they can withdraw their forces, intact, into a country peopled by men of the Turkish race and of Moslem faith, where they would be at home, and where, driven to desperation, they would be forced to continue an endless struggle most dangerous to the peace and welfare of the world."

"All reasonable Turks . . . who only want to live and develop in their own country and their own home, are far from being intractable. They demand but one condition, that their right to live and remain a nation among the nations should not be subject to the consent of swollen-headed Pan-Hellenism."

"The power of Turkey is one of the most active and restless forces in Asiatic politics. She will act in accordance with her own interests, and not at the dictates of Moscow; and she will react against any attempt upon her existence from whatever quarter it may hail; but if she is admitted into the family of nations, she will also 'react' in favour of those who helped her thus to obtain the object dearest to her heart."

"The practical value of the friendship of Turkey would consist in providing for the organisation of the Moslem forces of the Caucasus and Central Asia for the purposes of reconstruction—the reconstruction of the Near East based upon three distinct entities: a Caucasian Confederation, a Confederation of Central Asia, and a regenerated Turkey. This consummation would prove for the British Empire, once more the friend of Islam, something more than a flimsy theory. It might mean permanent alliances, based at first on purely economic considerations, but when mutual confidence, so shaken on either side, had been re-established by time, maturing into political unions. But in order

to reach it the Turks must be treated as a free people and not as slaves."

"By allowing the moderate party in Turkey to play the part of commissioners of Western Europe in the Moslem world, the fact would be recognised that the Turks are from the ethnical point of view members of the white race, whilst by religion they belong to Islam. This two-fold aspect is of fundamental importance for the future relations of Europe and Asia; for it is a question of determining whether the Turkish nation is to be made the advance guard of Islamic Revolution against Europe or whether she is to be allotted the rôle she aspired to play in the happiest moments of her dramatic historical career—that of rear-guard to the West on the confines of the two continents of Europe and Asia. Are the Turks to be for or against Europe?"

II.—ARTHUR RIMBAUD.

We have placed Rimbaud's name at the head of this review, partly because of the immense influence he had on Verlaine's career, but chiefly because his name and fame are intimately connected with the Near East. The subject of Verlaine has little connection with readers of this journal, but the record which this book contains of Rimbaud's travels in that region alone makes it of sufficient interest to be recommended.

Of Verlaine himself, a poet whose position is certain but unfixed, this is not the place to write; nor can we fitly appreciate Mr. Nicholson's curiously impartial estimate of his worth. It is enough to state that the author of this book is one of the younger school of critics, a school which prefers cold detachment to warm attachment, and which in its judicious cleverness puts sagacity above truth, and admiration above enthusiasm. How much this critic actually thinks of Verlaine it is not easy to say; but one gathers in a negative way (from the chill but ultimately unjustified scorn with which he looks on Verlaine's predecessors), and by the persistent care with which he has pointed out Verlaine's defects, that his opinion is higher than he here discovers it.

Arthur Rimbaud, who was born in 1854 and died in 1891, was probably the most amazing genius the world has known. It was, as Mr. Nicholson very discreetly but very clearly shows, his diabolical inspiration and self that were the determining, and perhaps the most constant, factors in Verlaine's life. Renouncing literature for ever at the age of nineteen, he thereafter lived true to his words:—

Je ne parlerai pas, je ne penserai rien :
Mais l'amour infini me montera dans l'âme,
Et j'irai loin, bien loin comme un bohémien,
Par la Nature . . .

After seeing Verlaine for the last time in 1874, Rimbaud set out on his travels, and was until the end of his life to indulge this lone wandering. During the next few years he was in many places, including Egypt, Cyprus, and the East Indies. The details of his journeyings, as set out by Mr. Nicholson, are intensely interesting to Near Eastern readers. In 1880 he was again in Cyprus, overseeing "the construction of the summer villa then being built for the British High Commissioner on the summit of Mount Troodos." Thence he went to Jeddah, Suakim, Massowah, Hodeidah, Aden, and the interior of Abyssinia. In this last place, with his headquarters at Harrar, and studying the native languages—Amharic, Galla, Somali, and Arabic—he made money, but he was still unhappy. He was in Cairo in 1887, down with dysentery, but dreaming yet of wider adventures and more distant lands. Four years later he was a dying man. Ordered by an English doctor at Aden immediately to return to Europe, he came back, but at Marseilles the final gloom came on him. Yet even a night before his death he wanted to leave for Egypt.

Such in brief is the tale of a marvellous, monstrous being whose dramatic abnormalities are well insisted upon by Mr. Nicholson. There can scarcely ever be again a man like Rimbaud.

We would willingly expatiate upon the discrimination, the fascination, and the intellectuality of this book, were it apt; particularly should we like to praise the author's style of writing (except that we do very strongly but resignedly object to have post-war Englishmen referred to as "We Anglo-Saxons"), and to comment upon his habit of reticent but unpuzzled wondering. And his technical capabilities to set out to do what he intended in this monograph are undeniable, only we are not quite sure what that was.

BOOKS RECEIVED.

"Sun, Sand, and Somals: Leaves from the Note-Book of a District Commissioner in British Somaliland." By Major H. Rayne, M.B.E., M.C. Illustrated. (London: H. F. and G. Witherby. 12s. 6d. net.)

"The Backbone of Africa: A Record of Travel During the Great War, with Some Suggestions for Administrative Reform." By Sir Alfred Sharpe, K.C.M.G., C.B. Illustrated. (London: H. F. and G. Witherby. 16s. net.)

"The Wreck." By Rabindranath Tagore. (London: Macmillan and Co., Ltd., 8s. 6d. net.)

PERSONAL AND GENERAL.

TO-DAY.

April 28 (New Style).

April 15 (Old Style).

Shaaban 20, 1339 of the Moslem Calendar.

Nisan 20, 5681 of the Jewish Calendar.

The Maharaja of Patiala has left the Ritz Hotel for Paris.

The Aga Khan will shortly return to London from his tour in Italy.

Viscount and Viscountess Maidstone have returned home from the Sudan.

Prince Amarjit Singh of Kapurthala has left the Savoy Hotel for Paris.

M. Jordania, President of the Republic of Georgia, has arrived in Paris.

M. Vesnitch, who has been reappointed Yugoslav Minister in Paris, has taken up his duties.

Hossein Khan Alai, Persian Minister in Madrid, has arrived in London.

Sir Valentine Chirol, who has been in India for the last five months, has returned to England.

Captain and Mrs. Gerard Leigh have returned to Lees Court, Faversham, from Egypt and the Sudan.

Lord and Lady Inchcape, who have been yachting in the Mediterranean, returned to Seamore Place this week.

Captain J. W. Collins, the new correspondent of *The Times* in the Balkans, has arrived, says *L'Echo de Bulgarie*, in Sofia.

M. Vladimir Milanovitch, Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes, has left London for Paris.

Colonel Kenneth Wigram, C.B., till recently Director of Staff Duties in India, will represent the Indian Army at the forthcoming meeting of the Imperial Cabinet.

Earl Curzon of Kedleston is a little better. Countess Curzon of Kedleston, who is in Paris with Lady Irene Curzon, will return to London early next week.

News has reached England that the Oriental Lodge, No. 687, Constantinople, which works under charter from the Grand Lodge of England, has resumed its meetings.

Our Zagreb Correspondent writes (April 17): Professor Jovan Cvijiv (Tsviyitch), the eminent geographer, has been elected President of the Academy of Sciences in Belgrade.

A marriage has been arranged, and will shortly take place in India, between Captain W. T. Bird, 30th Lancers, I.A., and Mary, only daughter of the late Surgeon-Major W. Parsons, Feltham.

Mr. A. G. M. Dickson, chairman of the London Committee of the National Bank of Turkey and manager of the British Trade Corporation, has returned to London from a prolonged tour in the Near East.

The Earl of Cromer had the honour of being received by His Majesty on April 22, when the King conferred upon him the honour of knighthood and invested him with the insignia of a Knight Commander of the Most Eminent Order of the Indian Empire.

Under the auspices of the Czech Society of Great Britain, a short conference on Czecho-Slovak music will be given at the Czecho-Slovak Legation, 9, Grosvenor Place, S.W.1, on May 5 at 4 p.m. Mrs. Newmarch will deliver the lecture, and musical illustrations will be provided by Miss Fanny Davies and Mlle. Cécile Brenner.

Our Cyprus Correspondent writes (April 4):—Dr. Thompson, Chief Medical Officer, is going to England on leave. Mr. Alex. Mavrogordato, who retired on pension, has returned to Cyprus to take up work which has been offered by the Government. Mr. G. Jeffery, who had also left the island, has returned, and resumes the office of Curator of Antiquities.

The King has granted the following Egyptian Government officials permission to wear decorations of the Order of the

Nile conferred on them by the Sultan of Egypt in recognition of valuable services: Second Class—E. M. Dowson. Third Class: A. Lucas, R. H. Greaves, G. F. Schreiber.

At King's College, London, Dr. A. S. Yahuda, Professor of Semitic Languages and Hebrew Literature at the University of Madrid, is to give a course of three public lectures on "New Light on Pentateuchal Problems and the Earliest Development of the Hebrew Language." The lectures, to which admission is free without ticket, are to take place in the Great Hall, on May 2, 4, and 9, at 5.30 p.m.

Our Zagreb Correspondent writes (April 17): There will soon be celebrated the 250th anniversary of the death of the Croat patriot and poet, Zrinsky, and the Croats hope on this occasion to recover the historical library of the patriot. This consists of 523 books and 30 very valuable manuscripts. The Croat local government bought it in 1890 from an antiquarian in Vienna, but it is at present in Budapest. In 1917 the Hungarian Academy borrowed it from the Zagreb University for an exhibition, and it still lies in Budapest, in spite of repeated applications for its return. It is probable that in view of the coming anniversary, diplomatic pressure will be brought to bear to effect the restoration of this valuable historical antiquity to its proper home.

OBITUARY.

As we go to Press we much regret to learn of the death of Lieutenant-Colonel Sir James Robert Dunlop Smith, K.C.S.I., K.C.V.O., C.I.E., Political A.D.C. to the Secretary of State for India. We hope next week to give a notice of his career.

His Highness Maharana Shri Mohanddevji Narandevji, Raja of Dharampur, Gujerit, has died at the age of 59. He succeeded his father in 1891, and his 30 years of rule were marked by a progressive policy. Among other changes, he started travelling dispensaries in his State, and prohibited the slaughter of animals on religious festivals. He is succeeded by his eldest son, Shri Vijaydevji.

NEWS IN BRIEF.

Female suffrage has been adopted by the Grand Commission for revision of the Greek Constitution.

While in Cairo last week the Crown Prince of Japan exchanged visits with the Sultan of Egypt.

It is reported that trade in Smyrna is now completely at a standstill owing to the political uncertainty in Ionia.

The "Recognition by H.M. Government of the Treaty of Rapallo" has been published as a White Paper (Cmd. 1238).

Lord Allenby has dedicated a monument at Alexandria to the French citizens connected with the district who fell in the war.

Mgr. Cassulo, Apostolic Delegate to Egypt and Arabia, received special instructions in a private audience with the Pope last week.

Gregory V., the Greek Patriarch, who was murdered by Turks in 1821, has been solemnly beatified in the Cathedral of Athens.

A loan of £83,000 is to be floated by the Greek Government to further Greek interests in Asia Minor, where several orphanages are to be founded.

It is reported that M. Stambolisky, the Bulgarian Prime Minister, is seriously ill with influenza. M. Torlakoff, the Finance Minister, is acting for him.

The Roumanian Chamber has voted a tax not exceeding 50 per cent. on goods imported from Germany and on goods imported from other countries but of German origin.

Mr. Chotani, the head of the Indian Moslem delegation, and his colleague, Sheikh Kidwai, discussed the Near East question with Mr. Philip Kerr at 10, Downing Street, last week.

An Athens telegram reports that Greece celebrated on April 24 the anniversary of the sortie from Missolonghi. Prince Nicolas took a prominent part in the anniversary celebrations.

Plague has broken out in Egypt, a daily average of 35 cases being reported, says Reuter's Alexandria correspondent on April 21. Vessels are being detained in quarantine at Alexandria.

Dr. Alexander Goldstein, Chief Rabbi in Bulgaria, announces that every Jew in Bulgaria will give a tenth of his capital and income towards the fund for rebuilding the National Home in Palestine.

An election to fill the vacancy caused by the abdication and subsequent death of the Œcumenical Patriarch Germanos V. will be held in Constantinople after the Orthodox Easter (May 1, N.S.).

Mr. Hughes, the United States Secretary of State, has recommended the enforcement of rigid restrictions on immigration, particularly of Armenians, Russians, Georgians, and emigrants from the Balkan States.

At a large meeting of the unofficial British community in Cairo a resolution was passed confirming the decision to form a British Union to watch British interests in Egypt. Mr. Kingsford was elected chairman.

The death is announced from Paris of M. Albert Adès, part author of "Goha le Simple," a novel of Egyptian life which attracted wide attention a year or two ago, and which has been translated into many languages.

On April 2 the Bishop in Jerusalem celebrated at a Corporate Communion in St. George's Cathedral, at which representatives of 20 Anglican and Protestant missionary bodies attended at the conclusion of the Missionary Conference.

Shah Ismail, a Circassian follower of the lately-murdered Ahmed Anzavur Pasha, on April 21 shot Yusuf Bey, a notable of Panderma, in a café next door to the Sirkeji police station. The Circassian appears to have believed that Yusuf had been concerned in the murder of his master.

Although the population of Bucharest has increased threefold, practically no new houses have been built since 1914. Present rents have risen to such high figures that only those with incomes in dollars, pounds sterling, and francs can afford to pay them, excepting tenants with old contracts prolonged by law.

A list showing the order in which orders, decorations and medals should be worn was gazetted last week. It does not alter the existing order except that the Indian Distinguished Service medal is now placed immediately after the Edward medal, instead of immediately after the Air Force medal.

The Postmaster-General announces that a portion of the mail from Egypt, India, and the Far East which arrived in London on April 20 was seriously damaged by sea water during a heavy gale in the Mediterranean. The damaged portion of the mail will be delivered as soon as possible; but it is feared that in some cases addresses will be indecipherable.

A lecture on "Paper Pulp Supplies from India," by Mr. W. Raitt, F.C.S., Cellulose Expert to the Government of India, will be given before the Royal Society of Arts on Tuesday, May 3. Mr. R. W. Sindall, F.C.S., who at the instance of the Indian authorities carried out in Burma an extensive investigation of bamboo for paper-making, will take part in the proceedings. The chair will be taken at 4.30 p.m. by Sir Robert W. Carlyle, late Member of Council for Revenue and Agriculture in India.

SIR GEORGE BIRDWOOD MEMORIAL LECTURE.

On April 22, under the auspices of the Royal Society of Arts, Lieut. Col. Sir Edward W. M. Grigg delivered the Sir George Birdwood Memorial Lecture. The lecture, entitled "The Common Services of the British and Indian Peoples to the World," was presided over by the Earl of Lytton, Under-Secretary of State for India. Sir Edward Grigg began by paying a tribute to the life and work of Sir George Birdwood, whose greatest quality was the gift of imaginative insight into the Indian point of view, and his understanding sympathy with Indian life and ideals. Proceeding, he said that upon the vexed question of whether or not the British tendency to force Western methods upon an Eastern social organisation to which they were utterly strange was justifiable he took a middle view. Certainly it was for Englishmen to admit that in India, as elsewhere, they had sometimes let their passion for order and efficiency outrun the need for studying the standpoint and character of those on whom those Western benefits were applied. On the other hand, the philosophic historian would not accept Mr. Ghandi's account of British influence on India without many reserves. Common sense led one to suspect that, whatever the results of the close association of Englishmen and Indians during three centuries, the result could not be attributed wholly to either one people or the other, but jointly to both.

The lecturer went on to state that European methods and ideals could not have been averted, whether they were desirable or not. But the Indian nationalism of our time was not only the product but the justification of British rule.

THE CALL OF BABYLONIA.

It is now generally agreed that civilisation had its beginning in the Near East, and certainly the three religions which have most deeply affected the Western world come to us from the same region. Whether the culture of Egypt or of Chaldea was the earlier or the superior are points that may be left for argument to the Egyptologist and the Assyriologist, whose energies it seems probable they will employ for many years to come; but the early history of those "Bible lands," as they are often called, makes a strong appeal to a wide public; any discovery that sheds new light on the subject is eagerly canvassed; and the Babylonian, Egyptian, and Palestinian galleries of any museum attract a perennial stream of students and sightseers. Thanks to the enterprise and patience of numerous explorers, travellers, and excavators, many relics of those past civilisations have been secured, and European and American scholars have had much material to work upon, recovered from the *tels* and tumuli, the cemeteries, the rubbish mounds, and the ruined cities of the old Egyptians, Assyrians, Babylonians, and Palestinians. The climate of the Nile valley, the natural dryness of its soil, and the extraordinary care which its early inhabitants bestowed upon the burial of their dead have made Egypt the happy hunting ground of the excavator, and have provided the archaeologist and the palæographer with a mass of material of the utmost value, much of which was in a wonderful state of preservation when recovered. We may instance the great "finds" of papyri made by Doctors Grenfell and Hunt at Oxyrhynchus, where, at a depth of only a few inches below the surface, in the rubbish mounds of the old city, the fortunate diggers discovered some thousands of fragments of this delicate substance, among them many items of extreme importance. As a depository for evidence of early culture, the Nile valley is probably unrivalled. Moreover, the travellers and tourists who flock to the country each winter often prove generous supporters of excavating work undertaken by this society or by that, and the result is that we know to-day more of the history of Ancient Egypt than of many countries nearer in point of time to our own civilisation.

Palestine, like Egypt, has exercised a strong fascination over travellers and tourists, and though excavations were not regarded with favour by the Turks, much has been accomplished in the way of examining its ruins. But of Assyria and Babylonia there is a different tale to tell. They have yielded up treasures certainly not less valuable artistically or historically than those of their old rival; but conditions of climate, soil, and weather are less favourable than those of the Nile valley to the preservation of antiquities; and in the days of Turkish rule travel by the Tigris or Euphrates, while it appealed to a few, lovers of the unhackneyed, had no attractions for the tourist or the dilettante with a liking for comfort. Thus, while several British excavators cast longing eyes at the Mesopotamian mounds, public support for archaeological work in that region was not forthcoming as it was in the case of Egypt. The early pages of the history of Babylonian and Assyrian exploration and excavation are almost entirely occupied by records of British achievements, but latterly we had left the work to others—French, Germans, and Americans. The Turk had actually shaken off his apathy sufficiently

to excavate one site at which we had done some preliminary work; but even that fact had failed to spur us into taking up pick and shovel once more and clearing one of the many sites that cry aloud for investigation ere their precious contents perish beneath the alternate soakings and scorplings of the Mesopotamian winter and summer. The region which had exercised so powerful a spell over Englishmen for some half a century after Rich's investigations in 1821, in which Rawlinson, Layard, Loftus, Taylor, and others had accomplished so much; which had been first surveyed by Lieutenants Collingwood and Bewsher, Felix Jones and Selby, seemed to have lost all attraction for us. The British Museum, it is true, did work from time to time, and secured some valuable antiquities, thanks to Sir Wallis Budge and others, but the public enthusiasm of the earlier days was lacking, and in Babylonia no excavations had been undertaken for many years before the war. Even the Germans' great discoveries at Babylon, Assur and elsewhere failed to stir in us the spirit of emulation. And the Germans, who had discovered that excavation and exploitation could be made to go well in double harness, were naturally well pleased.

Our neglect of the Mesopotamian mounds was to be regretted for many reasons, and we are glad to believe that the new conditions brought about by the war will lead to a radical change. The mandate for Mesopotamia—like that for Palestine, where, however, the need for action is less urgent—provides for the enactment of a Law of Antiquities, to replace the former Ottoman law on the subject. We hope that the new Law will be so drafted as to encourage the excavation of as many sites as possible with the greatest speed compatible with scientific procedure. For, it cannot be said too often or too emphatically, every salty flood, every wet season, works untold mischief among the clay tablets and other perishable relics that lie jumbled together in the ruins. Egyptian sites can wait for further exploration; those of Babylonia cannot; and every excavator who knows his craft and places his duty to science above his own predilections, or personal interests, must recognise the fact. Digging by untrained men, irresponsible amateurs and mere *antika*-hunters must, of course, be vigorously repressed. The excavator whose sole aim is to secure objects for exhibition should be sternly kept in check; and wherever there is any chance of architectural remains being uncovered there should be trained observers to survey and record them before they are removed, if it is essential that they should be removed at all. These things, and many others to which we are unable here to refer, mean control and organisation; and we would suggest to Mr. Winston Churchill that he has now an absolutely unique opportunity to create a Department of Near Eastern Antiquities, which should take the necessary steps in this direction. It might be very advisable that it should not actually undertake excavations itself; but it would encourage such work by any responsible societies and institutions, and would co-ordinate all efforts aimed at the increase of our knowledge of the past by such means. For the present, it is certain, no purely Arab Government could undertake the scientific direction of such a work; though it might very well do good service among the remains of former Arabian culture. Obviously, therefore, the direction must be undertaken by Great Britain, who, by the mandate, stands pledged to "ensure equality of treatment in the matter of archaeological research to the nationals of all States, members of the League of Nations." The scientific world looks to her to do all that is possible at this eleventh hour for the recovery and preservation of such clues to the past as may still survive. The task is too large for private endeavour to tackle: our Government must lend its active support. The best course to follow perhaps would be to establish a British School of Archaeology in Baghdad, on similar lines to that in Jerusalem, but more directly helped in the first place by Government. A Babylonian Exploration Fund might also be created at home, to enlist public interest and support for the work. Once launched under favourable auspices, that work would, we believe, go forward successfully, to the increase of our prestige and the great gain of our knowledge of the ancient Near East.

A MACEDONIAN SUMMER.

By C. E. Vulliamy, F.R.G.S.

I remember telling the General that I meant to write an account of our life in the summer line, and asking him to suggest a title. "War Made Easy," said he; or, "A Picnic in the Hills." That was before the Doiran offensive of 1918. And it must be admitted that the campaign in Macedonia, until its final phase, could not be compared for glory and danger with that in any

A STURDY MACEDONIAN.

other theatre of war. There was the heat of summer, it is true; and the bitter winds and hard frosts of winter. There was the boredom that comes of unvaried routine. There was a sad bungling of the leave-system, and a sad indifference, in too many cases, to the tedium and weariness of men's lives. But with all this, there were not a few who were ready to agree with the General's description.

Our summer line lay along the Krusha Hills. Battalion headquarters would be placed in some ruined and deserted village: the companies were stationed on the wooded spurs that sloped down to the broad valley of the Butkova. In front of us rose the great blue wall of the Belashitza Range; and on the rocky face of that range the Bulgar had taken up his summer quarters, looking towards us over something like six miles of no-man's land.

There was little incident to disturb us. Sometimes a gentle photographer would fly across from the other side, followed over our lines by the little white blobs of bursting shrapnel. Or the observation balloon that kept watch in the Doiran sector might be attacked by a droning swarm of aircraft, and the sky would be speckled and mottled as the barrage drove them off.

When the staff came to visit us there would be a lavish expenditure of ammunition. The howitzers would send their shells whooping down to the valley; rifles and Lewis guns filled the ravines with a sound like that of waves on an iron beach.

The only other diversions, apart from nocturnal walks which were known as patrols, were caused by imaginative sentries who saw lights moving towards them, or by some stray fox crossing a trip-wire, and thereby loosing off a Véry light, or a bomb, or some other pretty arrangement.

The officers lived in charming little wooden huts, placed in shade and security. The Italians, who had held that part of the line before we took it over, had known how to make the best of things. During the heat of the day we lay in cool comfort on our beds, sleeping, reading, or smoking; and however much the adventurous might long for warlike episodes, it is certain that those hours of blessed calm and that nobly serene environment were appreciated at their true worth by the majority.

One could hardly imagine a more beautiful landscape than that in which we found ourselves. There were men who said that the silence and immobility of the mountains got on their nerves. Perhaps that great barrier, from which no attack could be made, and against which no attack could be launched, suggested the idea that the war had become a thing of infinite duration, and that the obstacles against which we had set our faces would prove as hard and as lasting as the rocky sides of the Belashitza. But there came a night when the sky over the Vardar, away on our left, glowed and rippled with the flashes of big guns, and we remembered that the barrier came to an end somewhere.

On our immediate front, the enemy seldom gave an indication of his presence. Occasionally, on a fine night, he would fulminate from his mountains, or would send up an attractive display of coloured lights. Sometimes, as I have recorded, he would fly across. His patrols, when he sent them out took special care to avoid contact with our own—a piece of good sense that met with our unqualified approval. The Bulgar had no personal quarrel with us. He made that clear in the most engaging manner and in a number of amusing and instructive devices.

Those were great days for the studious. People who took delight in collecting plants and insects found vast scope for their activities. The insects of Macedonia

MACEDONIAN PEASANTS WITH BULLOCK CART.

present an exasperating and terrifying variety. They have overtaxed the knowledge of compendious writers, and have puzzled the learned and the unlearned alike. It was strange to notice how men who had paid little

BY APPOINTMENT,

PURE SCOTCH

Speed up your -Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing :—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from 1½" diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes :—

⅝" to 1½" fitted with No. 2 and No. 3 Morse Taper Shank.

1" to 3" fitted with No. 3 and No. 4 Morse Taper Shank.

Full particulars upon application to:—

AMERICAN MACHINE & FOUNDRY CO., LTD.,
CANBURY PARK ROAD, KINGSTON-ON-THAMES, ENGLAND.

heed to shells and bullets in France grew pale at the approach of a single mosquito. To the newcomer in particular, the twanging note of the *anopheles* was a signal for panic. Indeed, these fears began as near home as Italy, when the first little buzzers flew into the troop-train.

Men with a fondness for reading found full content. They set up shelves, on which they placed the favourite authors who had accompanied them from England. I knew a man who had read the whole of Gibbon's "Decline and Fall," as well as the greater part of Macaulay's "History," during the campaign; and, not satisfied with that, he had got half-way through Motley's "Dutch Republic," when, to his extreme annoyance, the offensive of 1918 interrupted these ponderous studies.

There were others who took up popular systems of mental training—a harmless, if fruitless, method of passing the time.

Officers would occasionally take short leave in Salonika, where, on the road to Kalamaria, they had an excellent hostel. Here they could amuse themselves in various ways, joyfully if not wisely; yet there were many who returned to the austerity and calm of the great hills with a sense of relief. Salonika is not a place that commends itself to the Western European.

The summer line in Macedonia is a happy memory for many of us; a period of rest and good-fellowship that is surely one of the brighter chapters in the history of the war.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

April 20.—In the House of Lords, Lord Lamington again raised the question of the mandate for Palestine, and asked for the Report of the American Commission of Inquiry.

Lord Londonderry replied on behalf of the Government that it was not for His Majesty's Government to publish or to draw the attention of the Council of the League of Nations to a document which was the property of a foreign Government, and which that Government has not thought fit to publish or communicate to any other Government. Lord Lamington accordingly withdrew his motion.

The House debated the Treaty of Peace, Hungary, Bill, and after considerable debate the Bill was read a second time without a division.

The second meeting of the Joint Select Committee of both Houses on Indian affairs was held, and on the same afternoon Lord Lytton informed the House of Lords that the Government had decided to refer the question of the future constitution of Burma to the Joint Select Committee forthwith, and that the debate on the second reading on the Government of Burma Bill would be adjourned until such time as the reports of the Joint Select Committee on the whole question of Burma had been published. The Government felt, however, that the constitution of Burma must be dealt with in the course of the present session, and if, therefore, the Government were unable to obtain a report from the Joint Select Committee in time, they might think it necessary to proceed with the present Bill without such a Report. They did not anticipate, however, that the Committee would have any difficulty in reporting in the course of the session. The course now proposed would enable the Joint Select Committee to consider the question of detaching Burma from India, as well as the problem of the reform of the Burmese constitution.

HOUSE OF COMMONS.

April 18.—In reply to Col. Aubrey Herbert the Prime Minister stated that the British Government had agreed with their Allies to maintain the attitude of strict neutrality during the present hostilities in Asia Minor; the neutrality will cover Constantinople, which is in Allied occupation. As regards the use of the Dardanelles by the Greeks, the Prime Minister stated that the international arrangements concerning all straits had been in abeyance since the Turkish Government violated them by admitting the Goeben in 1914, and that the fresh arrangements contemplated by the Treaty of Peace with Turkey do not become binding until the entry into force of the new treaty.

April 19.—Sir L. Worthington Evans informed Mr. Wise that the cost to the British taxpayer provided for in the Estimates of 1921-2 for the maintenance of the Egyptian Military Police and Egyptian Labour Corps is £95,000 and £325,000 respectively.

In reply to Mr. Hills, who asked if the House would have an opportunity of discussing the Egyptian question, Mr.

Chamberlain replied that he did not think it would be desirable to have a debate in Parliament in advance of the discussion that it is hoped will take place between the British Government and the Egyptian delegation which the Sultan has been invited to send to this country.

Mr. Ormsby Gore asked whether any members of the Persian Government who originally entered into the Anglo-Persian agreement had been arrested and are to be tried for peculation; whether the British Government undertook to protect the persons and property of such individuals, and if so whether any representations had been made to the new Persian Government. Mr. Harmsworth replied that two members of the Cabinet of Vossukh-ed-Dowleh had been arrested on the charge mentioned, as well as a number of other persons. These two ex-Ministers had in the past received assurances of the good offices and support in case of need of His Majesty's Government, whose duty it, therefore, was to see that their trial was conducted impartially; and representations to this effect had been made through the British Legation. He added that there was no desire on our part to interfere with any just claims which may be established by the new Persian Government.

April 20.—In reply to a question by Mr. Kenyon as to whether he was in possession of the terms of the treaties between the Turkish Nationalist Government and France and Italy respectively, and as to whether these treaties would be published, Mr. Harmsworth stated that the British Government were aware of the terms of these treaties, and were in communication with the French and Italian Governments on the subject, but that the question of their publication was one for the French and Italian Governments to decide. In response to supplementaries he added that he would prefer not to make any further statement on the subject at this stage.

April 21.—The Prime Minister informed Mr. Lunn that there are at present 2,300 British troops in Persia and one Air Force flight, detached from Baghdad, and that they are being withdrawn to Mesopotamia.

In reply to Major Glyn, the Prime Minister stated that there is no present intention of reducing the number of officials concerned in the administration or command of the gendarmerie at Constantinople, and that there is no present intention of reducing the British forces in Constantinople.

Mr. Montagu informed Mr. Kenyon that the Government of India had reported that the protective pickets near Ladha, on the North-West Frontier, were heavily attacked by tribesmen on March 24. Our casualties amounted to sixteen killed and twenty-four wounded. In retaliation, the village of Makin was subjected to heavy air-bombing. Since then organised attacks had been made on our protective troops and convoys, involving hand-to-hand fighting. Our casualties from April 5 to 10 inclusive amounted to thirty-four killed and seventy-six wounded.

Major Glyn asked whether at the present time there exists through railway communication between Egypt and Palestine, and whether it is intended to make arrangements, either by tunnel or train ferry across the Suez Canal, to replace the Kantara Bridge. Mr. Edward Wood replied that Egypt and Palestine are connected by the railway known as the Sinai Military Railway, which runs across Egyptian territory from Kantara, on the Suez Canal, to Rafa, on the Palestine frontier. The future arrangements for linking up this line on the east of the canal with the Egyptian State railway system on the west of the canal are still under consideration.

In introducing the Air Estimates in Committee of Supply Captain Guest (Secretary of State for Air) stated that there was a considerable sum of money in the Estimates to be spent in Egypt, and that this was a subject which must be approached with caution because of the political situation there, and the attendant policy of the Government is as yet undecided. It was, however, possible to say that Egypt, geographically and automatically, will find itself the central flying depot of our Eastern activities.

THE CARAVANSERAI.

*Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultan after Sultan with his Pomp
Abode his Hour or two, and went his way.*

—OMAR KHAYYAM.

"A traveller from Macedonia, reports an interesting souvenir of the Salonika campaign," writes a correspondent. "The Germans had made a military road which passes through the gorge at Demirkapija by a tunnel. Over the entrance is written in large letters: 'Mackensen Tunnel,' and above this the following inscription:—

WILHELM II.

Deutscher Kaiser, König von Preussen
befahl seinen Soldaten
diese Strasse zu bauen,
1916.

"But French wit beat German pride, for beneath the above there is now the following addendum:—

Le Général Franchet d'Espérey
Commandant en Chef
des Armées alliées en Orient
ordonna à ses troupes
de chasser les Boches,
1918."

A circular issued in Teheran last autumn by the General Telephone Company of Persia has lately come into my hands. I have read it with unfeigned interest, and can only say that I wish company prospectuses and reports issued at home were half as interesting as this truly sporting effort in English, which is headed: "The General Telephone Association of Persia: A Just Opportunity for Money-Savers Everywhere." After this commendable call to the thrifty, I was not surprised to find the text permeated by a spirit of altruism which moved me very strongly. It opens with a statement of the advantages of the telephone as a means of gathering "news and information from all places," and points out that: "in no other way it is possible for two friends or commercial correspondents, who are separated, whether near or far, to inform each other of their family matters or trade secrets." Then, with a fine prophetic vision of our own P.O.'s late scoop (!) it points out that "countries which have realised the all-beneficial uses of telephone service have made every effort to take advantage of this unsurpassable source of fortune."

Skipping (alas!) over some paragraphs, I come to the announcement that: "Now that the heralds of a prosperous future for Persia are daily appearing in this country, the owners of the Persian Telephone Concession have consented to a great personal sacrifice and have decided to allow others an opportunity to participate in this immeasurable fortune." Then come particulars of the number of shares to be issued—only four hundred—of the period of the concession still to run, and of the address at which "the fundamental shares or bonds can be bought;" with a warning that "as the number of these shares is limited and it will not take long to dispose of them, the would-be purchasers are advised to make haste." And finally there is the exhortation: "Do not miss this chance to benefit yourself and the public. Take part in this great fortune, which is indeed the key to the prosperity of the individual as well as of the public, and the country." If only I had a thousand toman for a share! But even if I had, I suppose I should be too late now; for the circular was issued in Mizan 1299 (October last). I note that the company has issued a booklet giving further particulars of itself and its activities; and I hope to secure a copy, for even my un-financial brain can find food for thought in this kind of "company announcement." As it is, being in a land where "telephonical communication" is now a costly affair, I am not even able to gather information or news, or to impart my trade secrets to my friends on the instrument that is here so often cursed. Ring off!

It is reported that "10,000 Russian refugees repatriated to Odessa from Constantinople by the French were greeted with brass bands, banners, and speeches by the local Soviet." I wonder how this news will strike the Turks who are left in Constantinople. They are likely, I fancy, to conclude that at last they know what European, or Western, music means: that it is an expression of sorrow too deep for words. For, according to reports from many sources, the Turks in Constantinople are just about as tired of the poor Russian refugees (and the rich ones, too) as they can be. And when you come to think of it the situation is peculiar. We may, and do, admire Wrangel and his brave men; but to the Turks Russians are just Russians, and therefore their secular enemies.

CORSAIR.

JERUSALEM UNIVERSITY LIBRARY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—At the Third Annual Conference of the Inter-University Jewish Federation, held at Oriel College, Oxford, on August 3, 1920, it was unanimously resolved, in response to a request of the Zionist organisation, to render every possible assistance to all efforts on behalf of the Hebrew University at Jerusalem. The most urgent need at the present juncture is an immediate and abundant supply of books for the Jerusalem University Library. We can conceive no cause more precious and commendable than the full development and firm consolidation of the intellectual and spiritual resources of the Jewish National Home. To this end books are the first requisite. In a scarcity of books the mind of a people is denied free expansion and healthy growth. To Jews with their love of learning, the want of books is most distressing. In Palestine, unfortunately, there is a real book famine, and even with help from all over the world, it will need a great effort to build up the present University Library of about 40,000 volumes into an up-to-date library worthy of the Jewish University.

Serious works dealing with all branches of knowledge, standard works of fiction in any language, and more especially books which will be of use to university students are needed. Books on Hebraica, Judaica and Semitica, mathematics, physics, chemistry, microbiology, and medical research are, however, the most urgently called for, as the first departments of the University that are to be opened will deal in research in these subjects. Books on law, economics, history, and philosophy will also be much appreciated. Sets of scientific journals, transactions of learned societies, official reports and other publications, and works and pamphlets of permanent value are especially required; good text-books of established repute will also be useful.

Considering that this is an important step towards a spiritual revival of Palestine, and that our credit as an enlightened people is at stake, we appeal to your readers to send all the books they can spare as a freewill offering to those who will treasure them in Palestine. A single book will be welcome; but it is hoped that donors will send as many as they can. Gifts of books may be sent either direct to "The University Library, Jerusalem," or to the Hon. Secretary, Mr. D. B. Stanhill, B.Sc., F.I.C., 75, Gt. Russell Street, London, W.C.1, who will, if necessary, arrange for the collection of the books. An artistically designed book-plate, the generous work of Mrs. L. Pilichowski (Lena Pillico), will permanently record the names of the donors.—Yours, etc.,

S. ALEXANDER, Chairman.

ISRAEL M. SIEFF, Treasurer.

D. B. STANHILL, Hon. Secretary.

HARRY DAGUL, Chairman, I.U.J.F.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Mr. Chamberlain's Last Budget.

It was generally anticipated that Mr. Chamberlain's last Budget would be a very humdrum affair, and for once expectations were not disappointed. Hopes had been entertained that it would be found possible to afford some relief to the income-tax payer, but those who were so optimistic as to cherish such ideas put them aside as a result of the coal strike. As for the rest, everything had been discounted in advance. On the whole Mr. Chamberlain's review of the position was not unsatisfactory, but it remains to be seen whether it will be borne out. As things are at present, it seems very open to question whether there will be a surplus at all at the end of the year, even if no supplementary estimates are forthcoming. The effects of the coal strike unhappily are not limited to the period of its operation; for many months it cannot fail to affect the trade of the country, and I am afraid that when the receipts come to be reckoned up it may be found that the estimates have been framed on rather too hopeful lines. Of course, once trade is resumed there may be an extraordinarily rapid recovery, in which case all will be well. But on the face of it that is not very likely.

Soundness of his Policy.

In these days it is no enviable thing to be Chancellor of the Exchequer, and I do not suppose that Mr. Chamberlain's justifiable pleasure at his appointment as Leader of the House of Commons will be in any way tinged with regret at his last association with the Treasury. He has had a peculiarly thankless task in endeavouring to make ends meet, and his efforts have not been exactly aided by the unthinking criticism with which he has been deluged by a section of the Press. Of the soundness of the policy he has pursued there can be, I think, little question. The times demand the avoidance of hazardous financial expedients, and Mr. Chamberlain has emphatically played for safety, and the steps he has taken with a view to the reorganisation of the country's finances have earned for him no inconsiderable reputation in business circles. In less arduous days he would, I think, have been regarded as a great Chancellor, but to merit that term now one would have to be a superman.

Indian Loan Success.

The event of last week in finance was the issue of a large Indian loan. The last Indian loan raised in London was in 1912, and the terms of issue on that occasion read very strangely in comparison with those of the new loan. But then we have lived centuries since 1912. The amount of the present issue is £7,500,000, bearing interest at what can only be described as the remarkable rate of 7 per cent. It is a short-term loan, redeemable in 1931 at the latest, and subscribers to it have the benefit of an easy instalment system, while the most interesting and, it may be added, not the least attractive feature of the loan is the conversion right attached to it. A holder of a £100 bond has the right to convert it into £202 of India Three per Cent. stock up to October 5, 1922, into £200 of that stock on the same date in the following year, and into £198 of the stock on October 5, 1924. Could any better terms be desired by would-be holders of gilt-edged securities?

Remarkable Interest.

I cannot pretend to know why it was considered necessary to offer 7 per cent. interest, unless it is the failure of the recent Sudan Loan or the fear that Government issues in general are at present under somewhat of a cloud as the result of a growing belief that only lack of support on the part of investors will bring home to the authorities the urgent need for economy. Any way, be the reason what it may, the rate offered made the loan a success the moment it appeared, and no one in the City was in the least surprised to learn that it had been found necessary to close the lists at 3 p.m. on the day of issue. The result affords clear proof that there is plenty of money in the country for sound issues, and in addition is a plain indication that the investor has full confidence in the future of India. Now that it is over there will, I expect, be much speculation as to

what would have been the lowest rate of interest at which the loan would have been a success, and I think we may take it for granted that the consequence of the rapid subscription of the loan will be that the next issue of a similar nature will be offered at anything up to a point under the present rate.

Handicap to British Trade.

There is no getting away from the fact that with conditions as they are at present, British traders are faced with a most serious proposition in attempting to develop trade with the Near East, or with any other region. The difficulties of the position are clearly brought out in a letter from a Serbian official, quoted by a correspondent of a contemporary. The needs of Yugoslavia are very considerable in every direction, he points out, "but the prices quoted by Czecho-Slovakia, Austria, and Germany are always less than the London market, in some cases as much as ten times less." Buyers there are not governed in their dealings by sentiment, and the lower priced goods, therefore, receive the preference; but, apart from the question of price there is, according to the official, a feeling that it is useless to attempt to establish trade with Great Britain as long as the industrial position here is unsettled.

The Outlook.

It is scarcely necessary to comment on this statement, which simply bears out what I have said in these columns time and again regarding the damage Labour is inflicting on the country's interests abroad by maintaining a false level of values here and by creating general uncertainty regarding the time at which goods can be delivered. Labour must realise the facts of the case, and provide clear evidence of a determination to act on them if there is to be any real hope for British trade enterprise in foreign markets. If one industrial struggle is to succeed another in a vain attempt to defeat the economic laws; if, after the coal strike is settled, there is to be a railway strike, and after a railway strike a strike of labourers, or cotton operatives, or what you will, and so on, then, indeed, the outlook will be hopeless. The truth is that Labour here, as the results of developments during the war, is living in a kind of dreamland. That is the penalty we pay for a system of education that is no education at all.

Misplaced Enterprise.

That it would be incorrect to label all British firms as lacking in enterprise is evident from a little episode related in the current issue of the *Journal of the British Chamber of Commerce of Turkey and the Balkan States*. It appears that a British firm north of the Tweed were desirous of doing business with Turkey, so they addressed a typewritten letter to a British firm at Constantinople bearing a good old English name, but the letter was not in English, but in German. "Is this a joke, a brain wave, or a language competition?" says our contemporary, which goes on to mention that it has suggested to the head of the firm addressed that he should reply to the firm in Greek.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

ROUMANIA.

BUCHAREST, April 12.

The Budget.

The Budget was the most important item discussed in Parliament during the past week. M. Titulescu has had an uphill fight against the enormous increases in expenditure shown in the budgets of the different Ministries. They have been reduced to some extent for inclusion in the general Budget, which shows a marked improvement on that of last year, in which the expenditure was estimated at over 6 milliards and the revenue at under 4½ milliards. This year expenditure is reduced to 4,866,000,000 lei, while revenue is increased to 5,009,237,000 lei, giving a surplus of revenue of 143,237,000 lei.

The Floating Debt.

The floating debt of Roumania in Treasury bonds amounts to 15,025,284,981 lei, of which, however, only about 2,875,285,000 represent foreign debt, the rest being held within the country and bearing scarcely any interest.

The financial position at the moment does not admit of the payment of any of this debt, and it has been necessary to raise fresh loans to cover the interest due on the Treasury Bonds. In view of her natural resources, however, there is every reason to hope that after a few good harvests Roumania will quickly re-establish herself.

In considering the financial situation and the means of improving it, one is constantly led back to the questions of transport and of exports. Transport conditions have improved slightly during the last few months, though the congestion at the ports still continues, and it is only with the greatest difficulty that cargoes can be unloaded at Galatz, Braila, or Constantza, owing to the lack of warehouse space. The proposed concession of the railway workshops to British and French groups for a period of seven years is still meeting with opposition from some quarters, but apparently no serious alternative proposals have been made.

A committee of the Ministry of Industry and Commerce is now considering the readjustment of import and export regulations with a view to doing away with the necessity for permits. It is proposed to divide all imports and exports under two headings respectively, i.e., those which may, and those which may not, be imported or exported. The prohibition is to be unconditional, and no special permits are to be granted. Nothing has yet been published as to what articles are likely to be prohibited, and the export prohibition will doubtless depend to some extent on the harvest prospects. A revision of the Customs duties is also under consideration in view of various representations made by bodies of business men showing that some reductions are necessary in order to enable Roumanian produce to compete with that of other countries on European markets.

Petroleum Production.

The production of crude petroleum in Roumania during the months of January and February this year amounted to 82,343 metric tons made up as follows: Prahovo—62,502 tons; Dambovitza, 11,971 tons; Buzau, 5,752 tons; Bacau, 2,752 tons. On the whole the production is falling off owing largely to the continued shortage of electric current. All the companies are making efforts to supply this want by the use of some other motor power, and some have suc-

ceeded in turning to account the natural gas escaping from the well mouths, but it will be a long time before this substitute can be generally and profitably used. The export of petroleum products has been paralysed by the heavy taxes imposed which make it impossible for the Roumanian exporter to compete with the products of other markets. The low rate of the Polish mark gives the Poles the advantage in Central Europe, and in the West he has to contend with the low prices of the American products.

YUGOSLAVIA.

ZAGREB, April 17.

End of the Drought.

After a prolonged and distressing drought, welcome rain has come. The position had been getting serious, and fears were entertained for the harvest; the export of cattle had been forbidden, and that of corn restricted; while an order had been issued permitting cattle and sheep to graze in forests regardless of ownership.

Miscellaneous.

The export of lignite is now permitted subject to an export duty of five dinars per 1,000 kilos.

The importation of mineral oil is now permitted without special license, subject only to the ordinary duty.

The Ministry of Agrarian Reform has resolved to allow some large estates in the Voivodina to remain in order to encourage the cultivation of sugar beet.

It is stated that summer time will not be adopted in Yugoslavia in future.

ZAGREB, April 18.

Heavy Rains.

Heavy rains have been falling for three days, to the intense relief of the community. The weather has turned much colder, and snow is reported from the mountainous districts of Slovenia.

Gold Reserves of Austro-Hungarian Bank.

It is reported that it has been decided at Paris to divide the gold reserves of the Austro-Hungarian Bank among the Succession States. The amount available is said to be 65 million krone in gold, of which Yugoslavia's proportion would be about ten millions.

German Tenders Preferred.

For some time a project has been mooted for building large modern railway works for the construction of locomotives and trucks. The Ministry of Communications is said to have received tenders from England, France, and Germany, of which those from the last named are preferred on the grounds of price and conditions of delivery. It is stated, however, that pressure has been brought to bear on the Government to prevent the order being placed in Germany. As Yugoslavia possesses, in varying degrees of development, the main raw materials, such as coal, iron, and timber, it is thought probable that the Government will expand its chief railway workshops into factories.

CYPRUS.

NICOSIA, March 29.

The Economic Crisis.

The Press is wisely pointing out that the island, if it does not revert to more frugal and thrifty habits, will be carried along the road that leads to ruin and bankruptcy. During the last Calendar year imports (valued at £2,073,584) exceeded exports (£1,200,659) by £872,925. This is no doubt largely attributable to the increased prosperity and consequent luxury that has resulted from the war. Cypriot townfolk are no longer satisfied with pre-war conditions. The present generation looks for electric lighting, must travel in up-to-date motors, and live up to the new standard in dress, and in all other respects. Strong protests are being made by the more prudent, and it is urged that energetic steps should be taken by the Government and local authorities to stimulate backward industries in an island, which can not only be self-supporting, but can by judicious employment of capital recover its lost prosperity, if helped along the right path. Meantime the fall in the price of carobs, and the low prices now obtained for wines has been a severe blow to the island. In the wine-producing areas the villagers are much depressed over the outlook, and are talking of various co-operative movements to alleviate the trouble. Agricultural co-operation has not yet made any appreciable progress in the island, and no great success can yet be anticipated in this direction. Again the

check to emigration is disappointing to many. Pitiful accounts continue to be received from Cypriot emigrants to the United States, who describe the acute distress prevailing due to unemployment, and the difficulty in finding work. America is still the dream of many townfolk and villagers.

Embargo on Exports.

A new proclamation of the High Commissioner gives a list of goods, the exportation of which is absolutely prohibited. These include cattle, horses, mules, asses, camels, sheep, firearms, ammunition, gold and silver (in coin or bullion), oil, poultry, and various provisions; also a list of a few articles, including coal (not yet discovered in Cyprus), which may be exported, but only to the United Kingdom or British possessions. There are other island products, the export of which is prohibited by the Statute laws of Cyprus, which include all forest produce, game, antiquities, and manure.

NICOSIA, April 4.

Rain Greatly Needed.

The drought which has prevailed throughout March—a very critical month for island cereals—has completely altered the prospect, which had been very favourable during the preceding months. Unless rain comes very speedily the effect on the crops will be most disastrous. Already barley has suffered seriously, and the state of wheat crops is not much better. The greatest anxiety prevails. There is no improvement in the price of carobs, of which considerable stocks are held in hope of a rise. Some merchants have sold, at a loss, at 20s. the kantar (about £4 9s. the ton) out of store; and the prospect is discouraging. In Nicosia the prices for cereals are: Wheat, 12s. to 13s. the bushel; barley, 4s. 6d. to 4s. 10d.; vetches, 5s. 6d. The Agricultural Department does not lose hope, and is clearly prepared to foster agricultural industry all round. There are undoubted possibilities in various branches still undeveloped if only native enterprise can be stimulated. There has been a small fall in the price of a few articles. There is no information so far regarding locusts.

PALESTINE CHAMBERS OF COMMERCE.

It may be of interest to our readers to know that there are quite a number of Chambers of Commerce and Traders' Associations in Palestine. The following is believed to be the complete list, the secretaries' names being given in parentheses:—Chambers of Commerce: Jerusalem (Mr. E. Shelly), Jaffa (Mr. L. Shipp), Haifa (Mr. T. Zeibak), Nablous (Haj Shafie Abdel Hadi), Gaza (Mr. Gellat), and Ramallah (Mr. F. Shatara). Traders' Associations: Nazareth (Mr. N. Audah), Acre (Mr. S. Kattan), and Hebron (Mr. Ahmed Abdel Hafiz el Havlawi).

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated April 18:—Cotton.—1,681,000 bales arrived in Bombay from September 1, 1920, to April 8, 1921, as compared with 2,117,000 bales in the corresponding period of the previous year. Bombay cotton market firm; fine M.G. Oomra, May, Rs.227; July, Rs.244. Piecegoods market shows fair demands from consuming centres, with improvements in ruling rates for bleached staples, and slight improvements in light fancies. Calcutta jute and gunny markets quiet but steady. Heavy goods very firm with good inquiry for Liverpool and Number 2 Twills. Rangoon Paddy arrivals continue on fair scale at prices Rs.175 to Rs.178 per 100 baskets of 46 lbs. each. 5,000 tons of white rice—special, put on market daily during past week. Prices steady; last price at which business was done was Rs.415 per 100 baskets of 75 lbs. each. No change in Bank rates. At Tea sale on April 12 prices were weaker for commonest grades and dusts, all other grades being firm. 730,928 packages sold to date at an average price of 5 annas 3 pies per lb.

A later cable states:—Cotton. 1,754,000 bales arrived in Bombay from September 1, 1920, to April 14, 1921, as compared with 2,227,000 bales in the corresponding period of the preceding year. Bombay imported piecegoods market shows a fair demand, with prices in some styles slightly advanced; fair clearances also in Calcutta, Karachi, and Delhi, and altogether a healthier tone now prevails. Valuations for export duties on hides reduced all round from April 16.

The importation into Greece of extra fine ("luxury") flour is prohibited.

The river and transport companies in Roumania require lighters, tugs, and floating elevators.

The value of Yugoslavia's exports in 1920 was 1,320.5 million dinars.

The traffic receipts of the Egyptian Delta Light Railways for the week ended March 31 amounted to £111,082; total for year, £483,676. For the corresponding periods of last year receipts amounted to £12,883 and £396,374 respectively.

TENDERS INVITED.

[Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.]

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

Khaki Puggaree; Soap.—The Egyptian War Department invites tenders for (1) Khaki Puggaree (48,000 yards); (2) Palm oil soap and soft soap. Particulars can be obtained from the Inspecting Engineer, Egyptian Government, Queen Anne's Chambers, Westminster, S.W.1, May 2.

Drugs, etc.—Tenders are invited for the supply of drugs, etc., required for the period July 1, 1921, to March 31, 1922, by the Department of Public Health, Cairo. The articles required include various drugs and chemicals, surgical dressings, and various sundries, such as bottles, ointment pots, filter paper, etc., etc. Tenders will be received by the Director of Stores, Department of Public Health, Cairo, up till noon on May 10. (D.O.T.)

Coal Tar.—Tenders are invited for the supply of a thousand tons of coal tar to the Roads Office Tanzim Department, Cairo, to be delivered between July 1 and October 15. Alternative prices can be quoted for British Standard Specification No. 2, of any coal gas tar suitable for road spraying. May 15. (D.O.T.)

Millboard.—The Controller of Printing and Stationery, Old Ismailia Palace, Sharia Qasr el Aini, Cairo, invites tenders for the supply of 11,000 kilos of millboard. May 19.

Bicycles.—The Director-General Postal Administration, Alexandria, invites tenders for the supply of a bicycle and 20 to 30 tricycles. Specification can be obtained from the Egyptian Government Agent, Queen Anne's Chambers, Westminster, S.W.1. June 1.

Yugoslavia.

Benzine, etc.—Tenders are invited by the Director of State Monopolies of Yugoslavia in Belgrade for (1) 300,000 kilos benzine of 725-730/15 deg. cent.; (2) 4,000 kilos stiff grease, 20,000 kilos lubricating oil for automobiles, of which 10,000 kilos is for summer use (thick oil) and 10,000 kilos is for winter use (thin oil). Particulars can be obtained from the Banque Franco-Serbe, 30, Coleman Street, E.C. Tenders close May 4.

Oils, Greases, etc.—Tenders are invited by the Technical Section of the Yugoslav Ministry of War and Marine for the supply of the following oils, greases, etc.:—250,000 litres benzine, spec. grav. 720/735; 80,000 litres "light benzine," spec. grav. 650/700; 120,000 kilos naphtha, 30,000 kilos machine oil, 20,000 litres petroleum (paraffin), 10,000 kilos "Olax" auto oil, 10,000 kilos mineral oil, 6,000 kilos oil for aeroplane motors, 5,000 kilos oil for cylinders, 3,500 kilos oil for dynamos, 5,000 kilos castor oil, 600 kilos Vulcan oil, 150 kilos "Compressor" oil, 100 kilos pure light oil, 20 kilos bone oil, 2,000 litres ordinary "Spiritus" (alcohol), 500 kilos varnish, 600 kilos sulphuric acid, 100 litres alcohol (97 per cent.), 2,000 kilos consistent grease, 2,000 kilos grease for greasing tools, 3,000 kilos ordinary grease, 300 kilos machine grease, 500 kilos "Stanfer" grease, 150 kilos vaseline, 50 kilos "Torot" grease, 20 kilos grease for cleaning metal (metal polish), 4,500 kilos soda, 4,500 kilos soap powder, 100 kilos glue, 100 kilos potash, 50 kilos dryers for paint, 50 kilos yellow, blue, and red paint, 10 kilos whitening for putty, 10 kilos plaster of Paris, 500,000 kilos coal. Tenders, which should be addressed to "Ministru Vojnom i Mornarice Ponuda za nabavku benzina i maziwa," should be submitted by May 5. The usual conditions as to the deposit of 10 per cent. for Yugoslav nationals and 20 per cent. for foreigners apply, as also the registration of letters of guarantee with the Ministry of Finance; and tenders must bear a 10 dinar duty stamp. (D.O.T.)

Morocco.

Bridge.—The Tangier-Fez Railway invite tenders for the construction of a bridge 410 feet in length over the Sedu River at Mechra Belksiri, the cost of construction being estimated at 2,000,000 francs. Tenders must reach the Department of Public Works at Tangier by May 1.

Construction of Buildings in Morocco.—Tenders are invited by the Secretariat of the Delegacion de Fomento in Tetuan for the building of a church, episcopal palace, mission and schools. May 25. (D.O.T.)

THE UNITED CIGARETTE MACHINE COMPANY (Inc.) announce that they have secured larger and more serviceable offices, where they will have show rooms for demonstrating their machines, and on and after Friday, April 29, the London office address of the firm will be 59, Holborn Viaduct, London, E.C.1, to which address all communications should be sent.

The Canada Overseas Trading Company, Ltd., of 23-24, Eldon Street, E.C., and of Vancouver, has obtained an important contract for the supply of sleepers to the Egyptian State Railways.

Travellers to the Near East

Can obtain all information as to the journey from the Manager, **Continental Enquiry Office,** Victoria Station (S.E. & C.R.), S.W.1.

**For Fretwork Material,
Woodworkers' Tools,
Picture Framing Tools,
Fretwork Machines,
Benches, Lathes, etc.**

you should get in touch with the firm of Hobbies, Ltd. They can supply British-made goods at competitive prices, and you will obtain a constant customer by introducing their various excellent lines.

Write to Dept. 16 for our
Illustrated Trade List.

If it is anything the amateur craftsman is likely to need, Hobbies can supply it on good terms. Their customers now are world-wide, and the increasing popularity should not be overlooked by anyone in the Near East. It is a paying proposition.

HOBBIES, LTD., DEREHAM, ENGLAND.

EDWARDS & SONS

(NEAR EAST), LTD.,

Importers & Exporters,
GULBENKIAN HAN, SIRKEDJI,
STAMBOUL, CONSTANTINOPLE.

Special Departments for:—

Cotton and Woollen Goods, Yarns,
Hosiery and Silkware; Hardware and
Tools; Drugs, Chemicals, and Jute
Products; Leather, Boots, etc.; Auto-
mobiles and Tractors; Agricultural
and other Machinery; Near East
Products, etc., etc., etc.

Large Stocks Available. Enquiries Invited.
WORLD-WIDE CONNECTIONS.

Insurance Department.

Agents for: The Guardian Assurance
Co., Ltd., The Patriotic Assurance Co.

HERBERT SYMONDSON & BROWN } Brokers at Lloyds.
ALFRED BLACKMORE & CO.

Marine and Fire Insurances Effected.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of
Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

NATIONAL BANK OF TURKEY

(Affiliated to the British Trade Corporation).

The Bank has Agents in all the principal Cities of Europe, America, and the Far East, and has Correspondents throughout the World.

Every description of Banking business, in all its Financial and Commercial branches, undertaken.

Business Houses trading with Turkey can insure Foreign Exchange with the Bank. Banks, Commercial Houses and others having interests in Turkey are invited to apply for terms.

Manufacturers and Merchants may address their enquiries to the Head Office for Trade Lists of Importers and Exporters.

OIL-SHALE IN BULGARIA.

By Dr. V. Kantcheff.

Under the name of naphtha-schists (bituminous schists) are understood such clay schists as contain more or less organic substances. Their colour ranges from coffee to black; they burn with a yellow smoky flame, giving out a peculiar recognisable smell.

Subjected to a dry distillation, bituminous shale yields an oil which resembles crude petroleum. The nature and the quantity of crude oil varies according to the manner in which the distillation is performed.

Besides crude oil the distillation also yields:—(1) Ammonia, which is converted into sulphate of ammonia (artificial manure); (2) lighting or illuminating gas, which serves on the spot for heating the retorts, or is used for gas engines; and (3) mineral waste from the shale schists which may in some cases be used for the production of alum or the manufacture of bricks or the making of roads, etc.

Before the great war bituminous shale was worked principally in Great Britain (Scotland), Australia, and France. During the war, however, Germany also tried to work her shale deposits although they were greatly inferior. Saxon shale yields from 4 per cent. to 12 per cent. of crude oil, and those of Messel, near Darmstadt, from 6 per cent. to 10 per cent. The Scotch shale industry is the oldest and the most perfected. It was started towards the second half of the last century, and in 1871 it had already worked 81,300 tons of shale. In 1913 the quantity of shale worked amounted to a total of 3,280,143 tons. In France, in Buxière and Autun, shale is worked, and for the working of this shale pits of from 60 to 200 metres deep have been sunk.

Bulgaria is, beyond any doubt, rich in this bituminous shale. According to experts, the shale in Bulgaria is the greatest in area so far discovered. The most important deposits at present known in Bulgaria are the following:—

1. Near the town of Breznik. Shale deposits exist within 10 kilometres of the town. The shale is found in ground which contains jurassic deposits (sandstone, clay schists, and limestone). Concordantly between the sandstone is found a complex of some 50 metres thickness of bituminous shale.

As regards the percentage yields of shale oil, the complex may be divided into three qualities of shale, one of the beds of which may have very important practical value, as it yields from 12 per cent. to 13 per cent. of crude oil. The thickness of this bed of shale is up to 6 or 7 metres. The estimated tonnage of this shale is enormous. The surface shale alone is calculated at 30,000,000 tons, and on taking into account also the shale beneath the surface, the total quantity is incalculably great and may serve as an object of exploitation for a very long period of years. The deposits are situated 25 kilometres distant from the Government railway line.

2. Near the towns of Radomir and Kustendil. The soil here consists of chalk deposits and is known as "productive" to the extent of some tens of kilometres. The thickness of the shale deposit is not yet determined, but it is apparently greater than that of Breznik.

3. Near the station of Popovtzi. The outcrop is on the railway line running from Stara-Zagora to Tirnovo, two kilometres south of the station Popovtzi. The strata consists of tertiary deposits (conglomerate, sandstone, clay, schists, etc.) in which is included a complex of bituminous shale. The out-croppings of the schists show a thickness of from 3 to 30 metres. The outcrop has been traced for 8 kilometres.

4. Near the town of Kazanlik. The outcrop lies near the village of Saltikovo, to the west of the town of Kazanlik. Geologically they are the same as those near to the station of Popovtzi. The thickness of the complex so far proved is up to 10 metres. Shale has also been found lately in the district of Haskovo near the village Mandra.

5. At Serbinovo (Gorna Djoumaya). The actual outcrop is near the village of Serbinovo, about 15 kilometres to the south of the town of Gorna-Djoumaya. The ground consists of tertiary deposits, in which are included a complex of bituminous schists, together with beds of lignite coal. Preliminary inspection of the outcroppings has proved bituminous beds of 25 metres thickness. The shale is from 4 to 5 kilometres distant from the narrow gauge railway line Radomir-Doubniza-Roupel.

All these claims belong to private persons. The Government owns only an unimportant part of them, near the town of Kazanlik. Together with the mine-geological inspection of the above-mentioned bituminous shale in Bulgaria, technical-industrial studies have been made, and these also have given very favourable results. The most serious studies made so far have been those with samples of the Breznik shale. The analyses made in England showed about 13 per cent. of crude oil, and the analyses

made in Germany showed that there was about 10 per cent. to 12 per cent. crude oil obtainable. On comparing the Breznik shale with that of Scotland, it has been observed that Scotch shale contains more illuminating oil, gas-oil, and sulphate of ammonia, while the shale from Breznik contains more lubricating oil and paraffin wax.

The shale near Radomir has been analysed in the Berlin Geological Institute. Notwithstanding that the samples were taken from the surface, the percentage of crude oil yielded by them was over 8 per cent. The percentage obtained from the various samples procured from the shale from Popovtzi was 10 per cent. and above, while that from the second quality was from 7 per cent. to 10 per cent. It is apparent from these analyses that these places of origin deserve serious attention and treatment. From the experiments made twenty years ago in London with the distillation of bituminous shale from Kazanlik, it has been demonstrated that all the beds are not equally impregnated with bitumens, therefore the product obtained from these first distillations was not equal in quality, and varied from 6 per cent. to 10 per cent. Shale near the village Serbinovo was very light, and its colour is dark coffee to black; it burns very well, with a strong smoky flame. The analyses made in Sofia have shown a percentage of from 22 per cent. to 23 per cent. crude oil, and this shale may be regarded as the richest in bituminous substances.

It may be judged from the analyses given above that the bituminous shale found in Bulgaria does not rank below that found in Scotland, the best samples of which on being distilled yield 12 per cent. of crude oil. During the war it was found possible in Germany to work shale profitably which only yielded 5 per cent. of crude oil. Up to date three industrial concessions have been granted in Bulgaria for the production and refinement of mineral oil from naphtha-schists. The first to British subjects with reserved regions—namely, Sofia, Kustendil, and Vratza districts. The second and third are granted to Bulgarian subjects with reserved regions—namely, Stara Zagora for the second and for the third Philippopolis and Gorna-Djoumaya.

The prices of oil and other products obtained from the distillation of shale during recent years, before the war, during the war, and to-day, are considerably higher than formerly. In competent circles it is held that for many years to come the world's demand for oil will exceed the supply and production. From the facts and information at hand it may be positively asserted that the working of bituminous shale, an entirely new industry for Bulgaria, has great promise for the future, and deserves the greatest consideration on the part of our own and foreign capitalists, who can find both profit and productive activity in this industry.

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

112. An Alexandria firm wish to enter into business relations with United Kingdom firms dealing in the following exports:—Beers and stout; salmon, sardines, tinned fruit and vegetables; coconut oil; gunny bags; pepper, rice, flour and soap.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.

114.—Importer in Karachi (India), travelling throughout India, wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

ENGINEERING.

(BY OUR ENGINEERING REPRESENTATIVE.)

Power Gas from Wood.

Considerable developments have taken place of late in connection with the obtaining of power from low-grade fuels and industrial waste, by the medium of first converting the fuel into gas, which is made use of in internal combustion engines. In most, if not all, of the processes in operation, a proportion of valuable by-products, as sulphate of ammonia, can be recovered, and in some instances the yield of these substances has been sufficient to show a profit on the distillation work and so render the power available at no cost. My attention has been re-directed to the subject by an interesting letter from a correspondent in Yugoslavia, who asks for particulars as to methods of obtaining power gas from wood waste. He asks if equally good results can be obtained from soft as from hard woods, and as a large amount of sawdust and other wood waste exists in his vicinity he is naturally anxious to turn it to advantage.

There is not the slightest doubt but that power gas can be obtained from wood waste, seaweed, straw and dried grasses, peat refuse, or any other carbon-containing substance of a like nature. The only point is as to whether it can be obtained at a reasonable price and whether it will show an adequate return on the capital expenditure. Where the prospective fuel exists in vast quantities in close proximity to the factory or mill it is proposed to drive with the power gas, there is, or should be, every prospect of successful working; in the case of my correspondent, for example, there are exceptionally large quantities of iron ore in the vicinity, and it would seem that his proposal to generate power gas from the wood waste and to use it for producing electric power for smelting the ore is likely on the face of it to prove successful. It is, of course, difficult to express a definite opinion before seeing the situation, or, at all events, having clear and detailed information as to the labour costs involved in getting the wood waste to the retorts, the iron ore to the smelting plant, the power to the furnaces, and the machinery to the situation. There are a host of factors to be considered, but, as I said, at first glance there appears no reason why such an undertaking should not be quite successful.

He asks further whether the iron ore he obtains in that part of Yugoslavia is likely to yield good results. As he adds that hitherto it has been chiefly imported it is hardly likely that anyone would go to the trouble of buying and exporting it were it not of fair quality, and I think my correspondent may take it that if it is good enough for someone else it would be good enough for him. The readiest method to adopt in order to decide the question would be to send a sample of the ore to be analysed by some well-known analyst. For this purpose a considerable quantity of the ore, consisting of specimens picked from all parts of the deposit, should be sent, and the analyst will then be able to select representative pieces and crush, powder and mix the particles so as to arrive at a reliable result. The ore should not contain a great deal of moisture, and although silica, alumina, manganese, magnesia, and one or other of oxides of arsenic, copper, nickel, vanadium, sodium, or other metals are almost certain to be present, the less sulphur the ore contains the better. However, there is no need here to go into the question of the iron ore;

the subject of producing gas from wood waste is of the greater interest.

In dealing with the distillation of organic substances considerations of bulk enter appreciably into the question. For instance, to obtain a given quantity of power gas, a plant for dealing with high-grade coal will be small in comparison with one designed for dealing with the waste from, for example, a cork-cutting factory. In Sweden a large amount of power gas is obtained by the distillation of seaweed, and here the chief difficulty is in getting sufficient quantities of the weed into the retorts. In parts of Australia portable retorts are being used for dealing with the waste wood from timber clearings, and here again the size of the retorts and the consequent difficulty in moving them from place to place militates against their use. In Germany immense quantities of peat dust are subjected to distillation in retorts, but here the difficulty in the way chiefly arises from the fact that the peat dust contains large quantities of moisture which it is almost impossible to remove. In the wood waste and sawdust mentioned by my correspondent there would also be a large proportion of moisture, a factor which would have to be taken into consideration in calculating the size of the plant. Another important factor would be the cost of carrying the sawdust and other fuel to the producer plant; it is all very well to say that it is on the spot, but in practice it would practically be found that the waste fuel, etc., in the immediate vicinity of the plant would be used up comparatively quickly, and that it would not be long before quantities were having to be brought to the retort from much further afield.

As regards the character of the plant to be employed, it is obvious that the selection of this would have to be made after a careful and expert examination of the situation and all the conditions pertaining to it. Possibly a surface-heated retort, either vertical or horizontal and of ample size would be used, and in connection with this the Prioleau process in peat distillation would offer some sort of parallel. The low temperature distillation process would if carefully studied give some indication as to the adoption of a successful system, and the Zechmeister, the Larsen, and the Turner processes of distilling low-grade fuels of the kind, and obtaining gas for power and other purposes have many points of interest. My correspondent may take it that it is possible to obtain power gas from wood waste; to use that power gas in producing electrical energy and to use that electrical energy in smelting iron ore; but there are a number of points to be considered, and it is impossible for anyone to give expert advice on the subject before seeing the situation and being in possession of the fullest details.

A New Light Car.

The British concessionaires for D.F.P. cars, which, it may be mentioned, are of French manufacture, inform me that they have received so many inquiries for the 10-12 h.p. model—which, I believe, was last made in 1916 or thereabouts—that they have decided to reintroduce this popular little car. I remember trying one of these in 1914, just before the war, and I can testify as to reserve of power, the comfortable springing, and the easy control and steering which were prominent features of the production. If the new model comes up to the same degree of excellence which the 1914 car had reached I can confidently prophesy that it will prove an immediate success. The concessionaires say that the 10-12 h.p. chassis fills a gap which exists between the cycle-car and the chassis of medium power, such as the D.F.P. 12-40 h.p. model, and so enables motorists who feel that the larger car is beyond their means to purchase a really sound, well-designed chassis at a strictly moderate price.

With this end in view, the makers have kept the equipment as simple as possible, providing detachable wheels and electric lighting, but dispensing with the self-starting device.

The chassis, I understand, will be of the most sturdy construction, so that it can be driven over even the worst of roads with perfect confidence. The engine, which is of the four-cylinder type, with a bore and stroke of 65 by 120 millimetres, has a Treasury rating of 10.4 h.p., and consequently will be subject to an annual tax of £11. The over-all length of the chassis will be 11 ft. 10 in., with a wheel-base of 9 ft. and a wheel track of 4 ft. Detachable wheels are fitted, and the tyres, which will be 750 by 85 millimetres, are evidently to be of ample size in regard to the power of the car. I may be able to say something further about this interesting proposition, which, by the way, will be offered in both the two and the four-seater models.

Stand-by Plant.

A good deal of interest has been taken recently in the subject of installing stand-by or auxiliary plants in factories or public service undertakings. Some few years ago the chief argument against their use was that the need for their employment seldom arose, and that consequently they

would only be likely to be in use for a brief period each year. In such event they would be unable to earn anything like a fair return on the capital expenditure. It might have been argued even then that the annual cost of upkeep might have been regarded as an insurance, but even so it might have been cheaper to insure against breakdowns or stoppages of plant in other ways.

But now the provision of a stand-by plant which will run on crude oil is merely an act of sound precaution, as in the event of a coal shortage it would be possible to keep the works running or to continue to render the service, as the case may be. I am prompted to these remarks by the receipt of a catalogue from Messrs. Vickers-Petters, Ltd., of Ipswich, who are makers of stationary and marine types of oil-engines for working on crude and residual oils or refined petroleum. The firm inform me that they are now manufacturing semi-Diesel oil-engines, for running on crude oil, in sizes up to 450 brake-horse-power, and that they are in a position to give immediate delivery of practically all sizes subject to prior sale.

In case any of my readers are unaware of the fact, I may say that the firm is a combination of Vickers, Ltd., the well-known shipbuilding and armament firm, with Petters, Ltd., the pioneers of the semi-Diesel engine in England. It was Vickers who designed the "solid injection" Diesel engine which was so largely used in British submarine service, and the connection of Petters, Ltd., with oil-engines of all types and kinds goes back, to my knowledge, to upwards of twenty-five years.

Although I have not yet had the pleasure of going over the works of the company at Ipswich—a pleasure which I hope is in store—I am informed that they are the largest in this country exclusively devoted to the manufacture of heavy oil-engines. I understand that they are the works which were built in 1913 and equipped for the production of engines of this type by the Consolidated Diesel Engine Manufacturers, Ltd.

Of course, the Vickers-Petter semi-Diesel engine is not a new and untried production, as I had an opportunity of inspecting one exhibited at the Turin International Exposition. Since that date it has earned golden opinions from all users, and engines of this type and make are working in every part of the world, under varying conditions of climate and altitude, and upon almost every known kind of crude, refined, and residual oil.

Some technical points which may be mentioned are that the Vickers-Petter engine can be started from cold in one minute by means of a rapid starting lamp, or instantaneously by means of the electric starter. The engine can be run, once it has been started, at any load from dead light to full for any length of time without lamp or electric ignition, and the combustion is so perfect that even after prolonged running at full load there is practically no deposit in either the cylinder or the vaporiser. The running costs are extremely low, taking the present cost of oil as a basis, and the engine is substantially designed and capable of dealing with heavy overloads for a long and continuous period.

PROPOSED POWER STATION ON THE DANUBE.

According to the *Yugoslavenski Lloyd*, the Yugoslav Government is preparing a scheme for the erection of a central power-station at Kostolast, on the Danube, to supply Belgrade, Smederevo, Pogorévat, Gotzka, Kovine, Panuchovo, and Zenun with motor power and lighting.

Anglo-Egyptian.—Week ended April 15: Gensah, nil (previous week, nil tons); Hurgada, 3,490 tons (against 2,792 tons).

THE PHOTOGRAPHIC FAIR.

SOME NOTABLE EXHIBITS.

(FROM OUR OWN CORRESPONDENT.)

Like a sound vintage the annual Photographic Fair improves with age, and it is only rendering bare justice to say that good as last year's exhibition was it was far surpassed by the show at the Horticultural Hall which came to an end on Saturday.

The Fair has now come to be a thoroughly representative event, and it is perfectly obvious that its continued growth will render larger premises eminently desirable on the next occasion. As a spectacle, it has a peculiar attraction for the public. There are, I suppose, few people who have not dabbled in their youth at making pictures, and the desire to see results that the vast majority have never been able to approach even remotely is clearly irresistible. At any rate, almost from the opening day the Fair was literally crowded with enthusiasts, and when I paid a visit in the second week the difficulty was to see the exhibits for the spectators, a thing that does not often happen at these exhibitions.

It would be impossible to mention anything in connection with photography that was not on view. There were, of course, cameras in hundreds, ranging from the tiny pocket affair to the latest production for Press work; papers suitable for every class of work and all climates; and the most recent developments in connection with the dark room. In this connection a feature of special interest was the number of novelties that confronted one on every hand.

And now for the exhibits. Messrs. Kodak, Ltd., who had a large stand by the entrance, were showing an extensive display of work in the various grades of paper they manufacture, also examples of work done on the Eastman portrait film. Large and small windows to the left of their stand were changed each day to show the art of window decoration in the most effective way. Adjoining this stand was the Wratten division of Messrs. Kodak, where many views were shown taken on the Wratten Panchromatic plates. A large number of dark-room "safety lamps" were also on view.

Another stand of special interest was that of Messrs. Marion and Co., Ltd., who were exhibiting among other things results of photos taken on their "Iso-record" plate. This plate is exceedingly sensitive and can be used for taking photos indoors by gas or electric light with an exposure of two seconds. Great care has to be taken in the dark-room when developing the plate, because it is very sensitive to yellow and green lights, and it should be developed under a deep red light. Excellent results of outdoor scenes can be obtained on this plate, which is also suitable for Press work. A very interesting exhibit was an electric print drier, which is a time-saving instrument for those who require dry prints in the space of a few minutes. At the excellently-arranged stand of the Leto Plate Materials Co., Ltd., a large number of photographs printed on the famous "Seltona" paper were on view, and also some examples of the boardoid variety.

Messrs. Kosmos Photographics, Ltd., who are running a £1,000 competition for amateur photographers, exhibited a series of enlargements on "Vitegas" paper, many of which were from the prints which won prizes in their last competition. They also showed many prints on "Novex" paper, a gaslight paper which has the advantage of presenting no difficulties to the manipulator. The stand of Messrs. Houghton's, Ltd., was so full of cameras and accessories that it would be impossible to mention all here. The Klito and Ensign cameras appealed to me most; they are wonderfully compact, and give excellent results. The firm also showed many enlargements of photos taken on the "Ensign" film, and also a large selection of Futurist albums and See-thru masks. In their Professional section, portraiture, mounts of various descriptions, studio furniture and apparatus, etc., were shown.

PERFUMERY and GOOD TOILET GOODS.

Keen Prices for High Quality. Enquiries solicited.

C. A. STOKES & CO., LTD.,

No. 21, "ECLIPSOL" WORKS, BRISTOL.

London Showroom: CITY PRESS CHAMBERS, 149, ALDERSGATE STREET, E.C.1.

The Thornton-Pickard Manufacturing Co., Ltd., were showing a large assortment of their roller-blind shutters, and numerous all-weather Press cameras, field cameras, and Imperial pocket cameras. The stand of Messrs. W. Butcher and Sons, Ltd., was one of great interest. Their cameras included the Cameo, Maxim, Carbine, Klimax, and the Pressman Reflex, all of which are well known, and which are extensively used in Turkey and Egypt. They were also showing their Carbine daylight developing tank, made of nickel and very simple to operate, by means of which films of any size may be developed with perfect safety in broad daylight, which has filled a long-felt want. Another interesting stand was that of Messrs. John J. Griffin and Sons, Ltd., who exhibited some exquisite examples of work on their famous Noctona, Goldona, and bromide p.o.p. They also showed some of their "Gramme" dry plates and "Gaslyt" lantern plates, and a large selection of plate, film and reflex cameras.

Messrs. Elliott and Sons, Ltd., manufacturers of the well-known Barnet plates and papers, were exhibiting some beautiful photographs on their Barton, bromide, gaslight, and Verona paper, the last-named being, by the way, a new developing paper. Messrs. Johnson and Sons exhibited photographic chemicals, including toners, intensifiers, reducers, photographic varnishes, hypo, flash powders, etc. One has only to mention the word Ross for it to be known that the reference is to the famous Clapham lens makers. The exhibits of this firm included a complete range of lenses and cameras, notably their "Xpres" lens, which is invaluable for portraiture, press and reflex work, reducing exposures to a minimum, and enabling a perfect photo to be obtained. This firm has introduced to the photographic world a new cinematograph projector incorporating the latest developments. Finally, a word must be said regarding the exhibits of Messrs. Gevaert, Ltd., whose photographs in black and white were particularly good. Their "Normal" gaslight paper is noteworthy for giving strong prints from weak negatives, and is very suitable for Press work. Messrs. Gevaert, who do an extensive business in Eastern countries and on the Continent, were also showing examples of work done on their "Special" gaslight paper, which has special claims on the attention of photographers in the Near and Middle East, where photographs are more or less of a vigorous kind.

NEAR EAST MARKETS:

LONDON PRODUCE REPORT.

Dried Fruit.—Business has been rather restricted during the week, but rates have remained firm. Currants have been in short supply, but a further consignment has arrived, and stocks are now sufficient for immediate needs. The demand for this commodity has been fair. There are very small stocks of sultanas, and prices are rather higher. Persian dates have been in good request.

Sugar.—Home refined has been in active request at the official rates. West Indian crystallised has been done at 62s. to 62s. 6d., while American granulated has come to business at 67s., a decline of 1s. 3d.

Coffee.—A firm tone has prevailed in futures. Quotations are:—May, 38s. 6d.; July, 40s.; September, 40s. 6d.; December, 42s.; March, 43s. 6d.

Oilseeds.—The market has been strong, and rates are generally firmer. Indian linseed at 18s. is 2s. up; while 1a Plata is 3d. harder at 14s. 3d. Rapeseed is firm, with Toria at 17s. 6d., bold Ferozepore at 16s. 6d., and brown Cawnpore at 14s. 6d., a gain of 6d. in each case. Egyptian cottonseed (black) is 9d. up at 12s. 3d.

CURRENT PRICES.

General Produce.—Bacon, 172s. 6d. cwt.; butter, 251s. cwt.; cheese, 154s. cwt.; chillies, 107s. 6d. cwt.; eggs, 20s. 6d. per 120; cloves (Zanzibar), 9½d. lb.; cocoa (Ceylon, good to fine), 79s. cwt.; coffee (Costa Rica), 104s. 6d. cwt.; coffee (East India bold), 113s. cwt.; coffee (Mocha, longberry), 92s. 6d. cwt.; coffee (Santos superior), 52s. 6d. cwt.; ginger (washed Cochin), 37s. 6d. cwt.; hams, 165s. cwt.; lard, 88s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 3½d. lb.; pepper (Muntok white), 8½d. lb.; raisins (Valencia), 115s. cwt.; currants (Vostizza), 77s. cwt.; sultanas (Smyrna), 126s. 6d. cwt.; sugar (granulated), 68s. 7½d. cwt.; sugar (No. 1 cubes), 73s. cwt.; sugar (white Java), 66s. 6d. cwt.; sugar (white Mauritius), 65s. 6d. cwt.; sugar (West Indian crystallised), 62s. 6d. cwt.; tapioca (fair Singapore), 1¼d. lb.; sago (small pearl), 24s. 9d. cwt.; sago flour, 13s. cwt.; rice (Rangoon No. 2), 17s. 9d. cwt.; rice (bran, Rangoon), £5 8s. 9d. ton; tea (Indian), 7d. lb.; tea (Ceylon), 7d. lb.; tea (Java), 3½d. lb.; wheat (Australian), 85s. 3d. qr.; wheat (English white), 81s. 6d. qr.; wheat (La Plata), 79s. 9d. qr.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 7d. lb.; 80 to 89 lbs., 7d. lb.; 70 to 79 lbs., 7d. lb.; 60 to 69 lbs., 6½d. lb.; 59 lbs. and under, 5d. lb.; (second), 90 lbs. and up, 4½d. lb.; 80 to 89 lbs., 4½d. lb.; 70 to 79 lbs., 4½d. lb.; 60 to 69 lbs., 3½d. lb.; 59 lbs. and under, 3d. lb. Cows (first), 60 lbs. and up, 4½d. lb.; 59 lbs. and under, 4½d. lb.; Cows (second), 60 lbs. and up, 3d. lb.; 59 lbs. and under, 3d. lb. Bulls (first), 2½d. lb.; bulls (second), 1½d. lb. Casualty hides, 2½d. lb. Kips (first), 3½d. lb.; kips (second), 2½d. lb.; kips (third), 2d. lb. Calcutta market prices in rupees per 20 lb. Arsenic cows: Agrad, 6 to 11; Durbhanga, 4 to 5; Patnas, 3 to 4; salted cows, 2.8 to 5.8; arsenic hides (buffalo), 2.8 to 7. Skins: Calf, 6 to 8; goat, 130 to 160 per 100 pieces.

Chemicals.—Acids. Boric, 71s. cwt.; oxalic, 9½d. lb.; citric, 2s. 4½d. lb.; tartaric, 1s. 8½d. lb.; ammonia (sulphate), £20 5s. 7½d. ton; arsenic (white powdered), £47 10s. ton; benzole (standard), 2s. 11½d. gallon; bleaching powder (35 per cent.), £20 10s. ton; borax crystals, 34s. 6d. cwt.; cream of tartar, 133s. 6d. cwt.; Potassium: Bichromate, 9½d. lb.; chlorate, 6½d. lb.; caustic, £47 10s. ton; nitrate, £54 ton; permanganate, 1s. 10½d. lb.; prussiate yellow, 1s. 2½d. lb.; sulphate (90 per cent.), £27 10s. ton; Sodium Crystals, 150s. ton; bicarbonate, £11 ton; bichromate, 7½d. lb.; alkali (58 per cent.) chlorate, 4½d. lb.; caustic (70 per cent.), £22 5s. ton; hyposulphite, £23 ton; prussiate, 8½d. lb.; nitrate, £20 12s. 6d. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (industrial 125 per cent.), £155 ton; sulphate of copper, £34 ton; sulphate of iron, 150s. ton; lemon oil, 3s. 2d. lb.; quinine, 3s. 5½d. oz.; red lead, £38 10s. ton; white dry lead, £41 15s. ton; white ground lead, £52 ton.

Metals.—Aluminium, £150 ton; antimony (English regulus), £39 12s. 6d. ton; bismuth, 7s. 6d. lb.; copper (standard), £69 ton; copper (electro), £72 10s. ton; gold bars, 105s. 1d. oz.; iron (No. 3 Cleveland), 120s. ton; hematite (mixed number), 180s. ton; lead (soft foreign), £20 12s. 6d. ton; manganese Poti, 1s. 4½d. unit; molybdenite, 55s. unit; nickel, £200 ton; platinum, 340s. oz.; plumbago, £30 ton; quicksilver, £12 12s. 6d. bottle; silver bars, 35d. oz.; spelter (G.O.B.), £25 10s. ton; tin (standard), £168 1s. 6d. ton; tin plates (20 by 14), 27s. box; wolfram, 12s. unit; zinc sheets, £36 10s. ton.

Miscellaneous.—Cotton (American), 8.24d. lb.; linseed (La Plata), £14 2s. 6d. ton; rape (Toria), £17 2s. 6d. ton; soya beans, £11 12s. 6d. ton; palm kernels, £17 12s. 6d. ton; Oils: Linseed, £24 15s. ton; soya, £30 ton; cotton (crude), £29 ton; olive, £87 10s. ton; ground nut, £35 ton; palm, £30 10s. ton; rape (crude), £45 10s. ton; petroleum, 2s. 3½d. gallon; turpentine, 45s. 3d. cwt.; Rubber: Plantation (No. 1. crepe), 11½d. lb.; smoked sheet, 10d. lb.; fine hard Para, 11d. lb.

There were 370 exhibitors at the agricultural exhibition and fair at Algiers, which was opened by the French Minister of Marine on April 20.

Capt. P. F. Knightley, D.S.O., Associate of the Chartered Institute of Secretaries, has been appointed registrar of the Anglo-Persian Oil Company.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for February:—

Gum.

The exports of gum during February were 908,688 kilos of hashab, of the value of £E31,280, and 36,470 kilos of talh, of the value of £E664, via Port Sudan; and 9,800 kilos of hashab, of the value of £E318, via Halfa.

Kordofan Province.—12,883 kantars were sold in El Obeid market during February, as against 17,560 kantars during the same month last year, at an average price of 675 m/ms. per kantar of 100 rottles (45 kilos). Arrivals from Nahud were 2,836 kantars, as against 5,754 during February, 1920. The amount sold at Um Ruaba was 1,935 kantars, as against 2,540 last year, the average price being 650 m/ms. per kantar. At Rahad 3,693 kantars were sold at prices ranging from PT.70 to PT.45 the kantar, as against 3,895 kantars last year.

Wheat.

Darfur Province.—The average price in El Fasher market during January was £E2 per ardeb.

Berber Province.—The price of wheat fell from PT.600 in January to PT.475 in February per ardeb of 400 rottles.

Dura.

Blue Nile Province.—The highest price is 589 m/ms. per ardeb, and the lowest price 535 m/ms. per ardeb. The highest price dropped as compared with December, which was 750 m/ms., but the lowest price remained practically the same. Some of the dura is still uncut, but in parts a great deal has been harvested since the last report.

Darfur Province.—The average price of dura in El Fasher market during January was PT.90 per ardeb of 300 rottles (45 kilos). Ushur lists have not yet been received from all districts, but the amount is everywhere considerably in excess of last year's, although the latter was above the normal. In Eastern Darfur the ushur exceeds last year's by 50 per cent., and the price of the 300 rottle ardeb in Um Shanga and Zernakh has fallen to PT.43.

White Nile Province.—The price of dura declined steadily during the month, and finally stood at PT.40 per ardeb of 348 rottles, a price which is very disappointing to the cultivators, as in view of the high wages paid by them for "hishing," every ardeb they have produced must have cost them at least PT.50.

Berber Province.—The price of sakia and red dura from the atmurs fell from PT.188 in January to PT.180 in February per ardeb of 380 rottles. Feterita remained at PT.150.

Miscellaneous.

Berber Province.—The price of maize fell from PT.138 in January to PT.120 in February per ardeb of 380 rottles.

Kordofan Province.—During February 47 ardebs of sesame were sold in El Obeid market at an average price of PT.135 per ardeb of 330 rottles. 239 ardebs of 210 rottles of ful sudani (ground nuts) were sold in El Obeid market at an average price of £E1.225 m/ms. per ardeb.

Dongola Province.—The price of Barakawi dates has risen from PT.16 to PT.22 the keila in Kareima market.

Livestock, Hides and Skins.

Halfa Province.—The following reports have been received:—The exports during the month have been:—Cattle, 1,979; goats, 5; sheep, 11,418; hides, 366; skins, 3,567. Exports in January, 1920, were:—Camels, 404; cattle, 4,153; goats, 13; sheep, 20,199; hides, 851; skins, 6,974.

Darfur Province.—333 head of cattle passed through El Fasher quarantine stations during the month.

White Nile Province.—The cattle trade is still very dull, and prices have declined.

Berber Province.—The market at Damer has been comparatively poor, only 214 cattle and 3,126 sheep and goats being sold in January, and 283 cattle with 2,587 sheep and goats in February, a great falling off from previous years. This is due to the slackening in demand from Egypt, and also the fall in price, which does not tempt the nomad to bring his animals in. Cattle average, PT.676 in January and PT.687 in February, while sheep were PT.165 and PT.180.

The Duke of Portland, as president of the Agricultural Relief of Allies Committee, has received a letter from the Serbian Minister of Agriculture at Belgrade expressing to all English farmers in the name of all Serbian farmers the deepest gratitude for the "splendid gift" sent for distribution among the peasants of Serbia. The gift consisted of large quantities of seeds and implements up to a total value of £15,000, which was subscribed for by farmers at the suggestion of the Royal Agricultural Society of England. It formed part of a total gift to Serbia of relief of the value of £50,000, the remainder having been distributed in the form of English breeding cattle.

EGYPTIAN CROPS.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in March:—

Wheat.—The weather was unfavourable, having been unusually cold for this time of the year, with high winds and occasional showers. Its effect, however, has not been marked and has been felt more in Lower Egypt. The water supply was ample. Slight attacks of smut and rust have been noticed in most provinces, but have not caused much damage. They are seen more in Baladi than in Hindi wheat. The bulk of the crop is in ear. Its prospects in Lower Egypt are not as good as last month; elsewhere they have slightly advanced.

Barley.—The weather has generally been unfavourable and the water supply ample. The crop is, however, promising well and is approaching maturity. In Garga and Qena Provinces some early-sown fields were being harvested. This operation will be general during April. The crop is expected to be slightly above average.

Beans.—The crop has somewhat suffered from rust and broomrape, as well as from unfavourable weather, which caused a certain amount of flower shedding. Slight attacks of aphid and blight have also been noticed in some localities. Harvesting has begun in Upper Egypt, and will be general in the course of April. The condition of the crop is below average.

Helba.—The condition of the crop is satisfactory. Harvesting of early-sown fields has begun in Minya and Upper Egypt. The late-sown crop is approaching maturity.

Lentils.—The crop is in a good condition. Harvesting of early-sown fields has begun.

Onions.—Unfavourable weather in some localities has slightly affected the crop. The crop is healthy, but is expected to be a little below the average. Harvesting has begun in Upper Egypt.

Bersim.—The cold weather has slightly affected the growth of the crop. Areas under temporary bersim were being ploughed up for sefi crops. The third cutting is now general, and dreemaking is progressing. The crop is practically free from pests and in a satisfactory state of growth. Areas under this crop seem to be larger than last year owing to the restriction of the area under cotton.

Cotton.—The weather has been unfavourable nearly all over the country, but the water supply was ample. Sowing has been considerably retarded by the cold weather, as well as by the conditions arising out of the cotton crisis referred to last month. There was a large amount of re-sowing in early-sown fields which were affected by the changeable weather.

Sugar Cane.—Cutting the old crop for sugar factories is practically finished. This crop has been seriously affected by the sugar cane mealy bug, which has prevented a considerable portion of the sugar from crystallising in the course of manufacture. The new crop is progressing normally but for the attack of the mealy bug. The area under this crop seems to be larger than last year.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on April 8 were as follows:—Agricultural Bank of Egypt, £4 17-32; Alexandria Water Co., Ltd., £6 11-16; Anglo-America Nile Steam, £3; Associated Cotton Ginners, £13-16; Banque d'Orient, Fr. 63 ex; Behera Ord., £E8 9-16; Behera Priv., £E3 3-16; Bonded Stores, £10 9-32 ex; Brasseries d'Egypte Priv., Fr. 115; Building Lands of Egypt, £21-32; Cassi di Sconto, Priv., Fr. 102 ex; Ciments d'Egypte Priv., Fr. 35; Ciments d'Egypte Div., Fr. 23; Comptoir Fin et Com d'Egypte, £1 V.; Consolidated Land, P.T. 5; Credit Foncier Egyptien, Fr. 591; Credit Foncier Fondateur, Fr. 7,700 ex; Credit Foncier 1886 Oblig., Fr. 335; Credit Foncier 1903 Oblig., Fr. 239; Credit Foncier 1911 Oblig., Fr. 229; Crown Brewery Priv., Fr. 162; Crown Brewery Div., Fr. 130 V.; Eaux du Caire Capital, Fr. 73 ex; Eaux du Caire Jouissance, Fr. 100 ex; Egypt and Levant s.s. Ord., 26s. 3d.; Egyptian Delta Light Railways, £4; Filature Nationale d'Egypte, £10; Gabbari Lands, £13-32; Immeubles d'Egypte Soc. An. des., £5 3-32 ex; Khedivial Mail s.s. Co., Pref., £2; Khedivial Mail S.S. Co., Ord., 110s.; Kom. Ombo Ste. Ane. de Wadi, £4; Kom. Ombo Ste. Fondateur, £35; Land Bank of Egypt, Parts de Fond., £35; Lots Turc, Fr. 45; Menzaleh Canal Navigation, Pt. 280 ex; Nungovich Hotels, £7; Ramleh Railway, £1; Salt and Soda, 27s. 6d.; Tram d'Alexandrie Priv., Fr. 40; Tram d'Alexandrie Div., Fr. 60 V.; Union Fonciere d'Egypte, £2; Egypt Hotels, £2 1-16; Urbaines and Rurales, £3.

The traffic receipts of the Smyrna-Aidin Railway for the week ended April 16 amounted to £9,405.

Oriental Gas.—Interim dividend at usual rate of 3½ per cent., less tax, on account of year ending June 30.

Polish, Plate Powder.

POLISH.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

STAMBOUL, April 16.

There is no improvement in the position in the Constantinople market. The fall in prices of manufactures continues. The consignments of merchandise made to Roumania have given excellent results owing to the improvement in the rate of the lei. Orders for flour, sugar, and rice continue. In view of the low prices at which transactions have been carried out the risk of loss would appear to be small.

As regards manufactures, there have been a few arrivals of seasonable articles. Stocks are very considerable. Despite the precarious position of the market there is no failure to be recorded.

Produce.—A marked improvement is to be noted as regards produce.

Sugar.—Following the lower prices announced from Java, the other producing centres are disposed to make concessions in price, especially as regards futures. The latest quotation from Java is £32-£33 per ton. This market shows a firm tone, principally because of the demand for Roumania. Quotations are:—Sugar from Java and from Holland, £44-£45 per ton; in Customs £T35-35½ per 100 kilos.

Coffee.—As a result of the fluctuations in the price merchants are showing a reluctance to do business.

Rice.—The rise continues in Saigon rice, which is now quoted at 105 francs per 100 kilos. The market for American is weak. American Blue Rose is quoted at 9 dollars per 100 kilos. Prices have risen here to Ps.18 for Saigon, and Ps.28-29 for Blue Rose. Stocks are reduced.

Oil.—Arrivals continue regularly, and prices show a falling tendency. The bidon is quoted at Ps.370. Roumanian oil sells at Ps.26 per oke.

PANDERMA.

The report for March states:—Conditions continue to favour cultivation in this region. The only commercial movement to be noted is the importation from Roumania of 200-250,000 kilos of barley and 400,000 kilos of maize, which will meet the needs of local consumption, and that of Balikesser and the neighbourhood.

EXPORT CREDITS.

The Board of Trade publish the following return showing the advances made, applications sanctioned, and advances repaid under the Overseas Trade (Credits and Insurance) Act, 1920:—

Advances Actually Made.—January 1 to March 31, 1921, for Finland, Baltic Provinces, Poland, Czecho-Slovakia, Yugoslavia, Roumania, Bulgaria, and Austria, £321,058 5s. 8d. Total from September, 1919, to March 31, 1921, for Finland, Baltic Provinces, Poland, Czecho-Slovakia, Yugoslavia, Roumania, Bulgaria, and Austria, £458,843 1s. 8d.

Applications Sanctioned.—January 1 to March 31, 1921, £686,711 12s. 10d. Total from September, 1919, to March 31, 1921, £2,086,745 17s. 10d.

Advances Repaid.—September, 1919, to March 31, 1921, £16,173 2s. 10d.

(FROM OUR OWN CORRESPONDENT.)

THROMORTON STREET, Monday Night.

A firm tone has prevailed during the week. To-day markets have been scarcely affected by the Budget, which followed the expected lines. There were those among the members who some weeks ago had hoped that the Chancellor would soften his heart on the income-tax question, but the onset of another spell of industrial unrest discounted any such optimistic ideas.

Gilt-edged securities continue in particular favour, and investors for the time being are evidently content to play for safety. We can anticipate activity in the other group when the strike ends. War Loan Fives have had a good week, and closed $\frac{1}{2}$ up at 88 13-16. Consols, on the other hand, have eased $\frac{1}{4}$ to 48 $\frac{1}{2}$. The 4 $\frac{1}{2}$ per Cent. War Loan is 93 $\frac{3}{4}$. A variable tendency has been in evidence in the Foreign Bonds section.

Industrials have generally been firm, the Iron and Steel section showing special strength. Vickers have been a strong spot, closing at 13s. 9d. In Shipping, P. and O. Deferred have again advanced, and are now 350, a gain on the week of 18. There has not been much doing in Oils, while Rubbers have been more or less featureless.

Near Eastern securities are again very firm. Egyptian Guaranteed 3 per Cent. are 1 up at 66 $\frac{1}{2}$. Greek Guaranteed 2 $\frac{1}{2}$ per Cent. 1898 are unchanged at 66, while Turkish Guaranteed 4 per Cent. 1855 are $\frac{1}{2}$ up at 70.

Greek shares have been weak. The 5 per cent. 1881 is unchanged at 44, but the 5 per cent. 1884 is 1 down at 43. The 5 per cent. 1890 at 43 has lost a point, while Fundings have lost 2 at 39. The 1910 Loan is 4 lower at 38, but the 5 per cent. 1914 Loan and the 1902 Loan are unchanged at 41 and 38 respectively.

Banks have been steady. Agricultural 3 $\frac{1}{2}$ per cent. Bonds and the 3 $\frac{1}{2}$ per cent. Guaranteed Bonds remain at 51 and 53 respectively. Imperial Ottoman Banks are $\frac{3}{4}$ up at 8 $\frac{1}{2}$, but National Bank of Egypt at 17 $\frac{1}{4}$ are 7-16 down. Land Bank of Egypt remain at 5.

Land shares have been variable. Beheras are $\frac{1}{2}$ down at 8 $\frac{1}{2}$, but the preference shares are unchanged at 3 $\frac{1}{2}$. Anglo-Egyptian Land Allotments are unchanged at 3 $\frac{1}{2}$, but Delta Lands are 1s. 3d. down at 8s. 9d., while Egyptian Consolidated Lands have shed 1 $\frac{1}{2}$ at 1s. Gharbieh Lands are 3-16 up at 1 $\frac{1}{2}$, but New Egyptians are 9d. down at 22s. 9d. Union Foncières have shed $\frac{1}{2}$ at 2 $\frac{1}{2}$, while Sudan Plantations have lost a similar amount at 3 $\frac{1}{2}$.

In Oils Anglo-Egyptians are 2 1-16, Phoenix are 13s., Roumanian Consols 15s., and Steaua Romana 14s.

Among Miscellaneous descriptions Abyssinian Corporations are 2s., Alexandria Waters 6 $\frac{1}{2}$, Morums 11s., Salt and Sodas 27s. 6d. and Egyptian Markets 18s. 6d.

OPIUM MARKET REPORT.

Messrs. Barker Bros., Smyrna, report as follows for the fortnight ended April 19:—Since our last report of the 28th ult. the sales on our market amount to 45 cases at 8s. 10d., 9s. 6d., and 10s. per lb. c.i.f., as to quality and morphia strength. The exchange has been oscillating by $\frac{1}{2}$ to 1 $\frac{1}{2}$ per cent., and to-day it is 578 piastres per pound sterling, for cheque, and 0.66 dollars for one Turkish pound or piastres 100. In Constantinople the price is about 1s. per lb. higher than what is paid at the present moment on this market, and the reason is the monetary crisis, which is more acute here than in the capital. The arrivals are 1,301 cases against 1,520 at same date last year, and our stock in first and second hands is now 1,219 cases. The average net weight of each case is calculated at 160 lb.

LANCASHIRE COTTON.

Brighter Market Outlook.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

During the past week the tone of the market has been healthier than for some time back, and with the present industrial difficulties out of the way it is generally anticipated that the market will make a jump forward to a period of increased activity. There is no probability of lower values in manufactured articles, and if the coal strike can be settled during the next few days there is no doubt that increased buying will take place. There has been evidence of a larger demand for the raw material, and spot sales in Liverpool tend to increase. The general inquiry in cloth for abroad continues healthier, but compared with last week rather more difficulties have been experienced in arranging fresh business, chiefly on account of producers insisting on the insertion of a strike clause in contracts. A feature of the market has been the increased interest shown by buyers for Egypt, and fairly large sales of a miscellaneous variety have taken place for that outlet. Isolated transactions have taken place for the Levant and Constantinople, but reports from the other side are distinctly better. With regard to Egyptian yarns, prices have ruled steady, and although sales have not been important the general inquiry continues rather more encouraging. India has been asking for cloth prices and making offers, and although the bulk of the demand has come from Calcutta, some dealers in Karachi, Madras, and Bombay are showing more interest in Lancashire goods. Dhooties and jaconets have been sold in fair quantities at hardening rates. Comparatively little has been done for China, but buying in bleaching descriptions has not been quite at a standstill. The South American market appears to be quiet.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows under date April 21:—

Egyptian Spot.—An improved business has been done during the past week, a good line of Sakel cotton put through for a large concern forming the chief contribution to total sales. The inquiry continues to promise a permanent improvement in the off-take when outside conditions permit. Generally, the demand has centred on the medium to better grades of Sakel, whilst uppers have received rather more attention than hitherto. A moderate business has been done on Tokar and Sudan cotton, but prices realised have been on the easy side. Quotations for Sakellaridis are advanced 25 points; upper and brown being unchanged. Sales 1,900, including 60 bales of Sudan.

BARSİ LIGHT RAILWAY.

An interim report of the Barsi Light Railway Company for the year to March 31 states that gross earnings were Rs.14,27,000, and working expenses Rs.6,65,000, compared with Rs.15,95,000 and Rs.6,07,000 respectively in the previous year. Owing to the favourable rates of exchange at which it has been possible to get remittances home during the past year, it is estimated that the net revenue for the year (after providing for probable taxation thereon in India) will amount to some £58,000, as against £88,300 last year and £37,700 in 1918-19. An interim dividend is proposed of 3 per cent., together with bonus of 2 per cent., or 10s. per share in all.

Czechoslovakia exported in 1920 1,134,124 tons of coal, 273,649 tons of coke, 3,430,169 tons of lignite, and 55,158 tons of lignite briquettes.

COMPANY MEETINGS.

ROUMANIAN CONSOLIDATED OILFIELDS.

Issue of Debentures.

Property Reinstated and Pre-War Output in Sight.

An extraordinary general meeting of the shareholders of Roumanian Consolidated Oilfields, Ltd., was held on Monday, the 25th inst., at the company's offices, 48, Cannon Street, E.C., to authorise an increase of the nominal share capital necessitated by the issue of 10 per cent. convertible debentures now on offer to the shareholders at the price of £95 per £100 debenture. Sir W. Watson Rutherford, M.P., chairman of the company, presided.

The Secretary (Mr. J. W. Creasser) having read the notice convening the meeting,

The Chairman, in moving the resolution, explained that as each of these debentures was exchangeable at any time during its currency for 100 shares, it was necessary that the company should be in a position to issue such shares if and when the exchange was called for. There was, however, at present no intention to issue them; they were simply being authorised to provide for conversion rights. With regard to the debenture issue itself no money was being thrown away in underwriting, and the net proceeds would be applied primarily in meeting the current liabilities, while the residue would be represented by cash and by valuable additional assets.

Rapid Development.

As the issue was being made by way of rights to all shareholders in proportion to their holdings, no shareholder could reasonably object to generous terms in which all had *pro rata* rights to participate. Every shareholder, however small, was entitled to his proportion on paying the small amount of £15 per debenture, the further instalments being only due in six and twelve months. Those who paid the £95 in full would receive forthwith interest at the rate of 10 per cent. on the whole amount of the debenture, namely £100. These, however, were small advantages compared with the conversion rights. The company's extensive territories in the richest oil country in Europe and the experience gained prior to the destruction, coupled with the successful and rapid development now taking place, justified the directors in agreeing with their manager in Roumania in his optimistic forecast as regards future production, and that the pre-war record output of 100,000 tons in one year would be again attained, and in all probability exceeded.

Remarkable Production of Oil.

Notwithstanding the destruction at the instance of the Allies in 1916, and in spite of all the adverse conditions, no less than 40,000 tons had already been produced since the Armistice down to the end of February this year.

Other good work that had been accomplished was that the leases of the more valuable lands had been renewed and important territories added. The company had already 17 producing wells and 12 drilling wells, of which three were close to oil—the destroyed buildings were almost all rebuilt—20,000 tons of tankage had been newly constructed, 130 kilometres (80 miles) of pipelines relaid and joined up, machine shop rebuilt, refitted, and in full working order, new refinery in course of erection with double the former refining capacity, and, in short, a valuation recently completed of the assets in Roumania (taking the lands only at the figures in the books) came out at over £2,000,000 sterling, even calculated at the excessively low rate of exchange of 285 lei to the £1 sterling (against 25½ normal).

After the destruction to which the company had so patriotically submitted in November, 1916, these results constituted a record of which he, as Chairman, was justly proud, and he was entitled to congratulate the shareholders, and also the board of directors, the management, and the engineering staff in Roumania. An item not taken into account in estimating the value of the assets at two million pounds sterling was the "claim." If and when the company received the anticipated compensation of £300,000 or upwards in respect of the 1916 destruction, as explained in the company's circular of the 14th inst., the value of the undertaking, and therefore the intrinsic value of the shares and the security for the debentures now offered, would be enhanced in proportion. The right of converting the debentures into shares would enable the holders at any time during the currency of the debentures to participate in these enhanced values and in the realisable profits. Pending conversion, the debentures were an excellent investment, yielding £10 10s. 6d. per cent. (less income tax) on the amount the holders had actually paid.

Reparations.

Further, the shareholders would not forget that, apart from the 1916 destruction, there were other items under the head of "reparations" which went to make up the £1,040,000 recently fixed by the Roumanian Judicial Tribunal as the amount for complete reinstatement. Roumania was occupied by the enemy for over two years, and for the purpose of reparations should be treated on the same footing as Belgium and the occupied parts of France, Italy, and Serbia. Opinions might differ as to whether the Allies would ever recover from the enemy any part of the cost of the war, but it was understood reparations would

come before the cost of the war, and the directors had every reason to expect that sooner or later the company would receive something substantial under this heading.

Given the success of the present issue, of which he felt assured, the future of the company in no way depended upon anything whatever being recovered under the claim for destruction, and still less upon receiving any contribution in respect of reparations. The receipts from these sources when they materialised might almost be regarded as windfalls simply adding to the resources of the company and correspondingly increasing the value of its undertaking. Their company was purely British, and its industry was petroleum, which was the principal valuable alternative to coal. Fuel was the first essential for manufacture, and thousands of inhabitants of these islands would starve if our manufactures ceased to provide the means to enable the necessary food to be purchased abroad.

Value of Oil as Fuel.

The importance, therefore, of a successful petroleum undertaking owned by a purely British company could scarcely be exaggerated. He desired to make no reference to the present calamitous coal strike, except to say that it could not fail to call the earnest attention of the public to the paramount urgency of supporting and developing all possible sources of fuel supply.

The Chairman concluded by moving "That the authorised capital of the company be increased from £1,750,000 to £2,500,000 by the creation of 750,000 additional shares of £1 each."

Major R. W. Barnett, M.P., seconded the motion, which was carried unanimously, and the proceedings then terminated.

SHIPPING INTELLIGENCE.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Brocklebank Line.—S.s. Mangalore, for Calcutta (Birkenhead, May 11); s.s. Masirah, for Calcutta (Birkenhead, May 28); s.s. Matheran, for Port Said, Colombo, Madras, and Calcutta (London, May 31).

Cunard Line.—S.s. Antinoe, for Gibraltar, Malta, Piræus, Smyrna, Constantinople, Varna, and Galatz (London, end of April); s.s. Tyria, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, June 1).

Ellerman Line.—S.s. Trentino, for Gibraltar, Malta, and Alexandria (Liverpool, May 3). A steamer will sail for Gibraltar, Malta, Syra, Smyrna, and Constantinople on June 11.

Holt Line.—S.s. Ixion, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, May 6); s.s. Lycaon, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, May 6); s.s. Mentor, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, May 6); s.s. Polyphemus, for Port Said, Suez, etc. (Birkenhead, May 6).

Johnston Line.—S.s. Aviemore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, May 14).

P. and O. Line.—S.s. Dongola, for Bombay (London, May 6); s.s. Nyanza, for Colombo, Madras, and Calcutta (London, May 20); s.s. Kashgar, for Bombay (London, May 20).

P. and O. British India Line.—S.s. Margha, for Colombo, Madras, and Calcutta (London, May 13); s.s. Gambada, for Bombay and Karachi (London, May 14); s.s. Hatimura, for Colombo, Madras, and Calcutta (London, June 4).

[We regret that owing to pressure of space the remainder of the Shipping Intelligence is unavoidably held over this week.]

NOTES OF THE WEEK.

The Turkish Deadlock.

According to an apocryphal story of respectable antiquity, a Turkish boatman, ferrying across the Bosphorus a Greek and a Jew, glared at the former and said: "If I had my wish, we Turks would cut as many Greek throats as we cut throats of sheep and lambs at Bairam." The Greek retorted that if he had his wish, his countrymen would break as many Turkish heads as they broke eggs at Easter. Then, remembering the third party in the boat, they both turned to him and asked his view of the matter. Holding up his hands in pious supplication, the Jew replied: "My friends, may God grant both your wishes." The Allied Governments, it would seem, are minded to take a leaf out of the Jew's book. Having failed to bring the Greeks and Turks into line at the London Conference, they are waiting to see whether they will prove more amenable when both have exhausted themselves in the Anatolian campaign. The process, however, is likely to be a lengthy one, and in the meantime there is a strong probability that economic and financial disaster will not only overtake Turkey and Greece, but will also involve many other countries as well, and British interests in particular. It is time, therefore, that the Allied Powers should again take stock of the Near Eastern situation in the light of the developments that have taken place since the London Conference.

A New Factor.

Allied policy since the Armistice has completed the work begun by the Balkan Wars. Before 1912 a national spirit in Turkey was a thing unknown. A Turk would describe himself as a Mussulman, or of this or that town or vilayet, never *tout court* as a Turk. The sense of nationality in Turkey, quickened by the disastrous results of the Balkan Wars, has become a force to be reckoned with as a result of the Kemalist movement. Unconscious of its existence a few months ago, the Greeks have now been compelled to recognise that it introduces an unexpected factor into the Asia Minor question. In the first place it reduces to an absurdity the proposed occupation of Angora and the subjection of ten million Turks to eight million Greeks, which were trump cards at the London Conference. Peace has its disillusionings no less than war, and Greece will not be the first of the Allied countries that has had to revise since the defeat of the Central Powers its estimate of its own capacity in one direction or another. Great Britain has learnt much in Egypt, Mesopotamia, and India, and compared with her experience the Smyrna lesson is a

very small one for Greece. Certain it is that the longer it is drawn out the worse it will become. For any possible disappointment on the Asia Minor coast the Greeks would secure ample compensation in a reformed Turkey, which, no longer a prey to international intrigue, held out the prospect of trade commensurate with the resources and potentialities of Anatolia.

Room for Compromise.

Discreet inquiries, we believe, would reveal that both Greeks and Turks are more capable to-day of being brought into line than they were a few months ago. But if the necessity for revision of the Treaty of Sèvres is admitted, it must be carried through completely, and in no makeshift manner. Losses in the territorial sphere can be made good in another. There can be no question of a Turkey *in statu quo ante bellum*. Both the Angora authorities and the Constantinople Government know themselves to be capable of better things, and the Allies must insist upon practical assurances on this point. They owe it to themselves as well as to the Greeks. In spite of all the moral doctrines mouthed during the war, the Allied Powers have not taken a single step towards making the Near East better than they found it at the beginning of the war. They have introduced no improvements, they have laid down no new principles; they have perpetuated bitternesses and widened the opportunities for strife. If for once they could hold out higher aims before people who would gladly leave the old ruts, they would at least strengthen the hands of the better elements in each country. But the new settlement must be impartial, thorough, and final.

Italy and Yugoslavia.

The conditions of the Treaty of Rapallo are in course of execution. The island of Veglia has been evacuated by Italy and occupied by Yugoslav troops, and by the time these lines are in print the Yugoslav and Italian delegates, who have met at Abbassia, will probably have begun the settlement of the frontier line in accordance with the Treaty. Some small hitch seems to have occurred in regard to the evacuation of part of the Dalmatian coast, owing to the Dalmatians showing an unwillingness to provide food for the citizens of Zara; but in all probability the little difficulty has already been adjusted. And it is very pleasing to note in Italy a disposition to take a friendly view of Yugoslavia's attitude, in place of the former readiness to see cause of offence in everything she did. Thus, the correct attitude of Belgrade in regard to the Fiuman situation is handsomely acknowledged by the *Tribuna*, which describes it as level-headed and even cordial, and

as going farther than the Treaty of Rapallo stipulated in the way of neutrality. Such praise from the ministerial organ should go far towards obliterating memories of past bitterness over this vexed question.

Bulgaria and her Neighbours.

A reference was made in an official communication from the Bulgarian Legation published in last week's issue to "the announced intention of certain neighbouring States to apply sanctions to Bulgaria in the form of occupation of other Bulgarian territories." The possibility of such a course being adopted seemed so remote that it was difficult to imagine that the statement could have any other ground than a certain nervousness which has always characterised international relations in the Balkans in the past. But there can be no doubt that the reported concentration of Serbian forces near the frontier is causing the liveliest apprehension in Bulgaria. In view of the recrudescence of brigandage in Serbia to which our correspondent in Yugoslavia calls attention this week there might well be a more satisfactory explanation of the military concentration. In any case it is to be hoped that the Allied Powers will firmly forbid any attempt at provocation in the Balkans, from whatever quarter it may come. The Treaty of Neuilly was imposed by the Allies as a whole, and there can be no question of responsibility for the enforcement of its terms being taken out of the hands of the Supreme Council by isolated action on the part of one or other of the Allies. There are two Allied Missions in Bulgaria charged with the duty of seeing that the terms of the Treaty are carried out.

Agitators in Cyprus.

Greek Cypriotes have been celebrating the centenary of the Greek rising against Turkish domination, and the celebration has been marked by more enthusiasm than wisdom. The facts of the case as set out by our Cyprus Correspondent, whose account will be found on another page, show that the High Commissioner and the officials under his orders acted with foresight and discretion; and some of the leading members of the Greek community set a good example in the way of obeying and supporting authority. But, unfortunately, the occasion did not pass without serious trouble; and the demonstrators saw fit to pass, not only resolutions of the stereotyped variety in favour of union, but also another condemning the Government for taking precautions—which were proved to be so necessary. This kind of thing may give some pleasure to a few Cypriotes, but it can do no good to them, or to anybody else save a few interested agitators, and it would be an unmitigated blessing to the islanders as a whole if it were suppressed. The agitators and mischief-makers have been given far too much rope, and allowed to assume far too much importance in their own opinion and in that of the islanders. There is no reason to believe that Great Britain has any intention of handing over the Cypriote Turks to the tender mercies of the Cypriote "Greeks"—quite the contrary; and Mr. Churchill will be doing a real service to the island if he makes that quite clear. The deportation of a few more agitators—one, it is reported, has gone already—would also serve a useful purpose.

The Intransigence of Zaghloul.

The situation brought about in Egypt by the difference of opinion between Adly Yeghen Pasha, the Government, and the Egyptian Moderates, on the one hand, and Zaghloul Pasha on the other hand, is discussed in our leading article. What the final outcome of the split will be is not yet certain, but at the time of writing it is clear that intelligent Egyptian opinion is with Adly Pasha and his colleagues. It is reported, in fact, that Zaghloul has lost the support of all the other original members of the Delegation, who decline to allow the future of Egypt to be imperilled by his megalomania; and the Cabinet's position has been strengthened by support from many quarters where the facts of the case are viewed in truer perspective than they appear to be by "El Raiss el Mahboub." It is to be hoped that the students and others who compose the noisy element will not be able this time to stir up the country to mischief as they did two years ago; but there are indications

that they have been and are preparing to follow the same tactics again. Already a fracas has taken place at Tanta, where, in the Ahmadiyah Mosque, speeches made by students, who took different views of Zaghloul's conduct, led to fighting which eventually necessitated calling upon the military for aid. The casualty list was made up of three killed and some seventy wounded. The fact that the Moderates felt strong enough to put up a fight at all is a notable feature of the incident.

The Persian Government.

Sirdar Riza Khan, who commands the Persian Cossacks and who was their leader in the coup of February 21, has now joined the Cabinet of Seyyid Zia ed-Din as Minister for War, in place of Mahsud Khan. It is probable that the change will mean a considerable strengthening of the Cabinet. In any case Riza Khan's experience in the matter of *coups*—before that which placed the present Government in power, he with his Hamadan regiment had effected one which established Starroselsky as chief of the Cossack Brigade—should fit him to guard against such perils; and his energy and military knowledge appear to be valuable assets to his party. Those qualities are bound to be tested by present conditions in Persia. The Cossacks have lately taken over the front north of Kasvin, from which our troops have been entirely withdrawn; and hardly had they done so when trouble arose between the Cossacks and the Bolsheviks, and the latter bombarded the former. The newly arrived Bolshevik Minister promptly apologised for the incident, and the Persian Government, while accepting the apology, intimated that should any further incidents of the kind occur it would decline to have any relations with him. Seyyid Zia ed-Din has congratulated his countryman on having now stirred in their own defence, and has thanked our troops not only "for going," but also "for having come"—thus indicating that he at least recognises the service that they have undoubtedly rendered to Persia. All friends of Persia will hope that the Cossacks, if put to the test, will give as good an account of themselves as they did at first last year, and that there will be no repetition of the collapse that was brought about either by incompetent leading or by treachery on the part of the Russian officers.

The Plight of Georgia.

A pathetic memorandum sent by the Georgian Government to the Allied Powers tells the story of the overrunning of the country by Bolshevik forces. After vain efforts to upset the Socialist régime by ordinary methods of intrigue and insurrection, the Soviets of Moscow, we are told, decided upon more forcible measures. An understanding was reached with Angora, and the Georgians found themselves attacked on all sides. The Government with the Army was forced back on Batoum, and on March 18 was compelled to leave the country and take refuge in ships. The Bolsheviks entered Batoum the same day, and Georgia is now duly sovietised, while the properly constituted Georgian Government has removed itself to Constantinople. Georgia, it would seem, will have to wait for the general liquidation of Bolshevism unless she is fortunate enough to be able to turn out the intruders. Peace between the Allied Powers and Turkey would be a first step towards clearing Transcaucasia of Bolshevik activities. Any working agreement that exists between Angora and Moscow was taken up as a make-weight against the Allies. Reassured on the subject of their foreign relations, especially in regard to Greece, the Turks will have no further need to coquet with Bolshevism, and will probably be pleased to see the doctrine recede as far as possible from their frontiers.

Lord Reading's Debut.

The full reports of Lord Reading's first speeches at Bombay bear out the impression given by the cables that he refused to commit himself to any declaration of policy; but they also indicate a tendency, which the cables did not mention, to lay stress on the Governor-General and ignore the Governor-General's Council, which, according to the constitution, is entitled to at least a voice in the measures to be adopted. As a competent critic has remarked, Lord Reading's reply to the municipal address of welcome is the reply of a despot.

and could have been appropriately made by Asoka or Aurangzeb, neither of whom was afflicted with an Executive Council or anything of the kind. We are entitled to look for precision in the language used by one who has been Attorney-General, but all the same we trust that Lord Reading does not really mean to ignore his Council, a practice which has not yielded satisfactory results in the past, and which is bound to be disastrous now that the Council is composed so largely of Indian members; probably by this time he is actively engaged in performing the constitutional duties of a Governor-General in Council.

Women's Suffrage in India.

Madras is the first province to exercise the privilege accorded under the new constitution of deciding whether the franchise shall be given to women, and an overwhelming majority of the Council has answered in the affirmative. The outstanding feature of what was a really instructive debate was the solid opposition of the Moslem members, who took the ground that no respectable woman of their community would vote, and therefore they should not be insulted by being asked to do so; while we notice that Mr. Naidu, one of the Ministers, suggested that in deference to their hostile attitude Moslems should be excluded from the operation of the resolution. The question is of comparatively small importance in Madras, where the Moslem population is not numerous, but it is likely to excite much interest in provinces like Bengal and the Punjab, where it has not yet come before the Councils; and quite possibly its discussion may result in emphasising the social cleavage based on religious differences, which progressive Indians prefer to ignore, but which is still unfortunately one of the hard facts of the political situation.

THE WEEK AT HOME.

LONDON, Monday evening.

Stagnation.

The coal stoppage continues and seems likely to continue. Negotiations were resumed last week, and each party in the triangular discussion gave way, or seemed to give way, a little—the miners agreed to discuss wages, the owners made an amended offer of wages, and the Government hinted at a larger subsidy. It all came to nothing; the conference broke up, and at the moment no negotiations are going on or seem in sight.

Speaking as one of the public, I should have said that the miners made a mistake in refusing to discuss wages for so long, and another mistake last week in their summary rejection of the owners' new terms. It may have been good tactics not to have accepted these, on the assumption that still better terms would eventually be proposed. But if the miners had replied with a counter-proposal, the negotiations would not have broken down, and we should have been nearer to bridging the gulf. As it is, we seem back again where we started a month ago; and it is clear that both owners and miners are once more looking to the Government to help them out of their difficulties by offering an increased subsidy.

This idea of looking to the taxpayer to make up the deficiencies of the industry seems thoroughly to have debauched the coal trade; but it is quite hopeless as a permanent solution. It is neither private enterprise nor nationalisation, but mere parasitism.

The consequences of the strike are becoming serious. After a month's stoppage, unemployment in other trades is steadily increasing, and train services are cut down to a minimum. (The railway losses, by the way, will fall on the taxpayer, the railways still being under Government control; and now that travelling, except for urgency, is almost impossible, this will make a pretty bill to pay on next year's Budget.) The railwaymen in many cases are using their enforced idleness in cultivating allotments, and at country stations, where there are only two trains a day, these are golden hours for porters who are amateur gardeners; but otherwise the only people who are profiting are the wood and peat merchants.

With a railway service more restricted than at the worst period of the war, England is reverting to a collec-

tion of isolated towns and villages. So far the theatres have not closed down, but touring provincial companies are in a bad way, and it is likely to be a gloomy Whitsun. Even if the miners are back at work by Whitsun, it will be impossible to restore the train services this month, and holidays will be out of the question for those without motors. In these circumstances those seaside places which have been trying to get the public to take their holidays earlier, to spread the season out over a longer period, are very pessimistic; a feeling which is shared by the London shops, who usually expect a golden harvest during the "season." But with dances, balls, and dinners postponed on all hands, trade is at a standstill. At the big shops they say frankly that things are not likely to recover this summer, and staffs are being reduced. With the curtailment of trams and local trains, even the suburban shopper is now beginning to get cut off from Oxford Street.

Politics.

Politics for the time being are as dead as business. The House of Lords again discussed divorce last week, but the session is likely to be a lean one in the Commons, and nobody will be surprised if the Government drops both Protection and Licensing Reform for the sake of peace. The Anti-Dumping Bill, which has not yet seen the light, is anathema to the Coalition Liberals; the Licensing Bill is hated by the Tories. The Cabinet, with industrial troubles on its hands and national finance, to say the least, not assisted by the current controversies, may choose to take the path of least resistance and postpone both its chief legislative dishes to next session. Whether the appetite will be whetted by the absence of fare remains to be seen. The Government is in the happy position of knowing that, even if it does nothing, nobody can turn it out; the coal dispute may be costing millions, but the demand for a subsidy is not helping the Labour Party in the constituencies, and privately many of the Labour leaders are cursing the miners with vigour. Nothing is being said publicly at the moment, but when the coal question is out of the way a good deal of the dirty linen of the Triple Alliance may be washed in the open, to the information if not the edification of the community.

The Budget.

This year's Budget, which was introduced last week, was more of a lecture on high finance than a speech to interest the general taxpayer. Indeed, taxation remains as it was, except that the increased duty on cigars and champagne is off—and one can again get a Havana at a reasonable price. That particular tax defeated its own end, as it reduced the consumption of imported cigars to almost nothing, and by so doing not only diminished the revenue but killed our export trade to Cuba. Even now it will take the trade some time to revive, as men have got out of the habit of smoking cigars. The income-tax remains as before.

On the other side of the shield we have paid off a good deal of our foreign debt—mainly by sales of surplus war goods, and this has certainly raised our credit and helped towards restoring the exchanges. We shall continue to reduce the external debt at a less rapid rate in the current year. Another satisfactory feature is that the subsidies on home industries, which became necessary in war time, are being gradually abolished.

But there is a general feeling that expenditure is still far too high, particularly in the Civil Service. It is hoped that Sir Robert Horne, the new Chancellor of the Exchequer, will be more successful in reducing this than Mr. Chamberlain. The Ministry of Health, in

SCHOOLS & TUTORS.

Messrs. TRUMAN & KNIGHTLEY, Ltd., are in close touch with all the leading educational establishments in England for boys and girls, and are able to advise parents where to find early vacancies. Their knowledge of these establishments, for the majority of which they supply the teaching staffs, extends over 20 years and they are thus in a position to give information and advice difficult to obtain elsewhere.

An explanatory booklet "On the choice of a School" will be sent post free on application.

TRUMAN & KNIGHTLEY, LTD.,
61-62, CONDUIT STREET, LONDON, ENGLAND.
Phone: Mayfair 1063-1064.

particular, is getting its wings clipped; if the useless Labour Exchanges were abolished as well a good many millions would be saved.

The financial position of the State is still serious. But at least it is better than it was a year ago, and with stern economy it will be better still in another twelve-month. It is natural that the ordinary voter and taxpayer should make agonised appeals for a reduction of taxation, which is extremely heavy, but the way towards restoration of economic health does not lie along that primrose path, but in the reduction of war debt. If we stick steadily to that for another ten years the national finances will again be in a sound position.

The New Speaker.

Somebody has pointed out that Mr. Whitley, the new Speaker, who was elected last week, is the first Nonconformist and the first "tradesman" to hold that great office. His predecessors in the Chair have all been either country squires, like Mr. Lowther, or lawyers, like Mr. Gully; but Mr. Whitley is a cotton-spinner from Halifax. He is a pleasant, unassuming man, but quite capable of putting his foot down on an over-rhetorical or presumptuous member. He is a Liberal (of the Independent variety), by conviction.

The Wakeford Case.

Few trials have evoked more general interest than the appeal of Archdeacon Wakeford, which was concluded last week. A Consistory Court at Lincoln, the Archdeacon's diocese, convicted him of immorality committed in 1920; and the Archdeacon appealed to the Privy Council. A fund was raised to defend him by his many friends, who held it incredible that a man of 60, and in a high position in the Church, could have acted in the manner alleged. After hearing all the evidence exhaustively, the Privy Council held that the charges had been proved; that the Archdeacon (who suggested that he was the victim of a conspiracy by certain clerical and other enemies) was guilty, and that the hypothesis of a conspiracy was unfounded.

The trial will do the Church some harm. For a great preacher and official dignitary to be unable to rebut a charge of immorality is not satisfactory; hardly less unpleasant an impression was made by the sidelights which the hearing cast upon the jealousy and bickering and gossip within the Church itself. These features of the case, as well as a pretty general feeling that, even if guilty, the Archdeacon would have to pay a very heavy price, assured him of much public sympathy. A fund of £3,000 was raised for his defence. But the costs of the trial amount altogether to £8,000—a long bill for a man who is deprived of his preferment to face.

The Week's Books.

Mr. Neville Lytton, the author of "The Press and the General Staff" (Collins) was Press Censor on the Western Front, but he is now unmuzzled, and he has written a very lively book, full of epigrams. "For a soldier," he says, "it is not a bad thing to look cleverer than you are, like Kitchener, or to be cleverer than you look, like Plumer." But I like best his discussion with Mr. Churchill. "As we were motoring towards the front he asked me if I did not think it was very courageous of Lloyd George to bring him back to power after the Gallipoli affair. I answered that I thought he was the courageous one in daring to show his face in public after all the mistakes he had made." Mr. Churchill's retort is not recorded.

It is hardly necessary to do more than mention "A Few Short Runs" (John Murray), by Lord Harris. It will become one of the classics of cricket. I like the saying of that great bat, Arthur Shrewsbury, as to umpires' decisions: "I don't worry. I am given out when I am in: I am given in when I am out. I don't grumble. I take the fat and the lean as they come." Surely an admirable philosophy?

A word should be given to "The Economic Development of France and Germany, 1815-1914" (Cambridge University Press), by Dr. J. H. Clapham. It is a good deal more than a mere bald recital of facts; it gives a real insight into the history of a century's development.

OCELLUS.

The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—
THE "UNIVERSAL"
CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR
KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC
CIRCULAR KNIFE GRINDING
MACHINE.
AUTOMATIC CIGARETTE-
WASTE STRIPPING MACHINE.

LONDON, England.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, April 18.

Notable Arrivals.

The Crown Prince of Japan arrived in Egypt to-day on his way to Europe. His Imperial Highness is staying as the guest of the High Commissioner and Lady Allenby at the Residency, where two large dinner parties are being given in his honour.

The Emir Faisal arrived in Cairo on Thursday last, and is at present staying at Sheppard's Hotel, where he has been joined by his brother Zeid. The Emir is on his way back to the Hejaz to report to his father, who will meet him at Jeddah, the results of his mission to London. His Highness appears very satisfied with what he has been able to obtain so far from the British Government, who, he admits, have agreed to the maximum which present circumstances render possible. In several interviews he has freely testified to his feelings of friendship towards Great Britain, and the gratitude of his nation for what England has done for them, even so far.

Zaghloul Pasha and the Cabinet.

There is no definite change to report in connection with the political situation. Zaghloul Pasha, who has been the guest of the Native and Mixed Bars, the Ulema and the representative bodies, and who continues to receive deputations almost daily, has made numerous speeches, but none of them has thrown any more light on the progress of the conversations and the attitude he is taking up. As a matter of fact, conversations between him and Adly Pasha have, I understand, made considerable progress, and at the time of writing the prospect of an agreement is far more promising than has been the case hitherto. The only point which seems likely to give rise to difficulty is the question of the presidency of the official Delegation. Zaghloul Pasha claims that position and the right to nominate the majority of the Delegation. On the other hand, the Cabinet claims, and very rightly too, that this is a political question, and as the Cabinet is responsible, the negotiations must be carried out under the direction of its head. If a hitch takes place in this connection it will be solely due to Zaghloul Pasha's having once again allowed personal considerations to influence him.

Admirable Police Display.

One of the most interesting spectacles of its kind given of recent years was held on Thursday last on the Manshia Parade Ground at the Citadel. It was the occasion of the display of the Cairo City Police and Fire Brigade, an annual feature of the pre-war winter season which had been suspended since 1914. The City Police were represented by the Mounted Troop, whose musical ride was excellently carried out and who gave a most wonderful exhibition of tent-pegging and skill at arms. The Fire Brigade gave a very graphic demonstration of the work they are called upon to do and the manner in which it is done, and all that one can say is that, having seen this display, it is now easy to understand why fires in Cairo are so quickly got in hand, and how the Cairo Fire Brigade has obtained an almost world-wide reputation for efficiency. The display was attended by the High Commissioner and Lady Allenby, the Ministers, and many European residents and Egyptians. Russell Bey, the Commandant of the City Police, and Bimbashi Blake, the head of the Cairo Fire Brigade, are certainly to be congratulated on the excellent manner in which everything was carried out.

The Willcocks Libel Case.

What one hopes will prove to be the last stage in the irrigation controversy took place on Saturday at the British Consular Court, when Sir William Willcocks's case came up for sentence. Judge Grain, who had originally postponed judgment in the hope that the case against Col. Kennedy might be dealt with in the meantime, and in order to have time to consider his decision, announced that although Col. Kennedy's case could not

yet be taken, he must deal with the present one, as he was himself shortly leaving the country. In delivering sentence he emphasised the seriousness of the charges on which Sir William Willcocks had been found guilty, the very serious trouble he had caused the officials of the Ministry of Public Works and the fact that his criticisms and activities had cost Egypt the very substantial sum of £E400,000. In the circumstances he felt he would have been fully justified in passing a very severe sentence on Sir William Willcocks, but, taking into consideration the fact that he is no longer a young man, and that he is obviously obsessed with the correctness of his statements, which nothing will convince him are wrong, Judge Grain said he had to come to the conclusion that the proper course for him to take would be for him to bind over Sir William Willcocks to be of good behaviour for one year. He explained to Sir William that if he in any way repeated the libellous statements during this period he would forthwith be called up for sentence, which would be passed upon him according to the note that Judge Grain would leave for his successor before he left Egypt to take up his new appointment; moreover, if Sir William, even after the expiration of that year, was guilty of behaviour which the authorities regarded as unsatisfactory, he could be at once deported. By arrangement with the Crown, the judge made no order for costs.

CAIRO, April 24.

The Crown Prince of Japan only remained in Egypt three days, but during that time he put in a tremendous lot of sight-seeing. During his stay in Cairo he was the guest of the High Commissioner and Lady Allenby at the Residency, where on Tuesday afternoon there was a garden party, to which the Diplomatic Corps and the Ministers were invited, and in the evening a banquet in his honour. His Imperial Highness also called on the Sultan, who shortly afterwards returned the compliment at the Residency. He visited the Pyramids and the Sporting Club in the company of the High Commissioner and Lady Allenby, and was shown over the Museum and the Sultania Library by the Ministers of Public Works and Education.

The Political Situation.

It is exceedingly difficult at the present juncture to express any opinion on the political situation; for we appear once again to have come to a critical point. After publicly stating his conditions in the course of a series of banquets at the beginning of the week—conditions in regard to which, since to a great extent they constituted part of the Cabinet's own programme, there was no difficulty in coming to an agreement—Zaghloul Pasha yesterday made the definite announcement that the presidency of the official delegation and the nomination of the majority of its members must be in the hands of his delegation, and that unless this were accepted he would not co-operate with the Cabinet. The Cabinet's point of view is that it is responsible for the direction of the political affairs of the country, and that as the negotiations come under this heading the presidency of the official delegation cannot be in any other hands than those of the head of the Government. Constitutionally the Cabinet is quite right. It would, however, be a thousand pities if on what is a personal question disagreement should take place when agreement has been come to on relatively far more important questions, and thus the much-desired union of the people be threatened.

It is in the interest of the country that some compromise should be made, so that the Egyptian Delegation and the Cabinet can co-operate. The unfortunate thing is that Zaghloul Pasha has once again forced the issue, and that he has made it exceedingly difficult to make a compromise on this point without loss of dignity to the Cabinet. How the country will go if the Cabinet declares that in the circumstances it will carry out the negotiations alone it is impossible to say, but one thing can be clearly foreseen, and that is that if it is forced

into the position where it has to carry on these negotiations alone we must in the very nature of things expect difficulties to arise when the time comes to obtain a ratification of the treaty negotiated in London without the co-operation of the Egyptian Delegation.

The British Union in Egypt.

The proposal for the formation of a British Union in Egypt, the objects of which were explained about a fortnight ago, was brought before the British community on Wednesday last at a meeting held at the Continental Hotel. There was a very large and representative gathering of members of the community, to whom the idea appeared to have appealed very strongly. The meeting unanimously approved of the objects of the Union, of its affiliation to the British Empire Union, and of the subscription being fixed at £1. Subsequently by a ballot twelve members were elected to the Executive Committee, with Mr. W. E. Kingsford as Chairman and Mr. A. H. Hooker as Vice-Chairman. It transpired during the meeting that Government officials, although British subjects, cannot join the Union, which, however, would be prepared, according to the Chairman, to take up their cases if it was considered to be in the public interest.

The British Union, which is a most praiseworthy departure deserving of the fullest support from the British community, has, therefore, now been launched on its career, which every Briton hopes will be a successful one. Unfortunately, one or two criticisms have already been voiced, criticisms which are all the more regrettable since a little more forethought and certainly a little more explanation in the Chairman's speech could have prevented them. The first criticism relates to the ineligibility of British subjects who are in the service of the Egyptian Government. There may be special reasons why, under the present régime, they cannot be allowed to join the Union. The latter has, however, been formed primarily to deal with the situation which may arise under the new régime, to be introduced when the Anglo-Egyptian agreement has been ratified. Under that new régime the status of British officials will surely have changed in that they will no longer be servants of a Government controlled by the British Government, and, therefore, bound by disciplinary rules applying to servants of the Crown, but will be servants of an independent foreign State. It is, therefore, difficult to see how there could be any objection to their being members of the Union when the new régime comes into operation. It is, moreover, somewhat regrettable that this point should not have been made clear at the very outset; for quite an appreciable portion of those present were Government officials and members of the Army. Most of these voted on resolutions put to the meeting, and, in view of the statement that they cannot be members, the question which naturally presents itself to one's mind is whether in those circumstances they were entitled to a vote and whether the resolutions passed are legally binding.

One other point which has given rise to criticism is the question of subscription. This has been fixed at £1. Now, the Chairman, in his speech, very rightly said that it was desired that the Union should be as representative as possible. It is, however, to be feared that the fixing of the subscription at this relatively high figure will restrict the membership, for there are many members of the British community who, with small fixed incomes, could not afford this addition to the calls already made on them, but who could certainly afford a nominal subscription fee. Since there is a donation fund there is no reason why a nominal subscription of, say, 5s. should not be fixed, and why it should not be left to those members of the British community who are more fortunately situated to make an annual donation in addition; alternatively, it might be possible, as in the case of similar unions and institutes in England, to establish various grades of membership, such as associates at, say, 5s., full members at, say, £1, etc. Unless something on some such lines as these is adopted it is to be feared that the Union will not be of the required representative character; nor will it have the funds, without which it cannot work satisfactorily.

In recording these criticisms, I should like it clearly to be understood that I write in no spirit of antagonism either to the Union itself or to those gentlemen to whose public spirit its inception is entirely due. It is the duty of a correspondent to give publicity to the views of the public, and I do this all the more readily in this instance because I feel that the criticisms are for the good of the cause.

YUGOSLAVIA.

ZAGREB, April 18.

M. Drashkovitch Resigns.

To the regret of nearly everybody, M. Milorad Drashkovitch, Minister of the Interior, after making his sensational disclosures on the Communist plot, resigned his portfolio on the grounds of ill-health. He has made himself widely respected since he first accepted the portfolio of Communications in Dr. Davidovitch's Democrat Government in 1919, and his loss is a severe one for the party and for the Government.

The vacancy in the Cabinet caused by the resignation of M. Milorad Drashkovitch from the Ministry of the Interior has been filled up. M. Svetozar Pribitchevitch takes over his portfolio, which, it will be remembered, this strong politician held in the Democrat Government of eighteen months ago. This left the portfolio of Education empty, to be taken by Dr. Davidovitch, the former Democrat Premier, who returns to an old duty.

There is a noticeable tendency on the part of the Government's supporters to press on with the work of the constitution without waste of time. There are but few speakers, and they are commendably brief; only the Opposition tries to drag out time. Dr. Koroshets, Slovene Clericals are as angry as the Narodni Club, but neither is a strong party. Dr. Koroshets maintains that the draft constitution is in opposition to the Declaration of Corfu, the address of the National Council which led to the union, and the reply of the Regent to the address; and he threatens to withdraw. Raditch is still expected to come to Belgrade, and there are suggestions of a union of Raditch with Dr. Koroshets and the Narodni Club to form an Opposition *bloc*, which perhaps M. Protitch will lead.

An Interesting Ceremony.

It is announced that in May the Crown Prince Regent will be present at the ceremony of returning the remains of Vladika Petar II. of Montenegro to the Lovchen. Petar II., who was uncle of Danilo I., the first lay prince of Montenegro, and, in his turn, uncle of the late ex-King, was not only perhaps the greatest of the long dynasty of capable rulers which the House of Petrovitch-Niegush produced, but admittedly one of the finest of Serbian poets. His "Gorski Vijenats" (the "Mountain Garland") is a classic. Unfortunately, it hardly lends itself to translation, and is so full of local and peculiar expressions and colour that modern Serbs themselves almost require a commentary to read it with. There is a famous quotation in the preface where, speaking half-apologetically for the diminutive size of his realm, which in those days was the only free Serbian unit, he pleads that out of a small copse you can hardly expect a lion to emerge, but if one comes out of a large forest there is no marvel in the matter. On his death he was buried, at his own desire, in a tiny chapel built for his tomb on the very summit of the Lovchen, so that even in his grave he might watch over the destinies of his beloved people. The little chapel is so tiny that it is not visible from any distance, although the actual tip of the Lovchen is only a few metres in extent; but from here the traveller commands a tremendous and inspiring panorama over the Adriatic to Italy on one side, while the imposing fords of the Bocche of Cattaro are at his feet. When the Austrians, by stealth or by treachery, took the Lovchen, they removed the remains of the Vladika; but now he will be restored to his resting-place, and once more the Montenegrins will feel that their beloved "Vladika Rade" is watching over them.

War Echoes.

It takes a long time to restore to their homes the hundreds of thousands of wanderers scattered by the war. A credit has just been granted for the return of

the last remaining Yugoslavs who still linger in Siberia, and who, it is hoped, will soon be returned to their homes. This is not all, for only now has the Ministry of Foreign Affairs succeeded in completing the necessary arrangements for the return to Serbia from Bulgaria, Austria, Hungary, and Germany of children who were taken away during the enemy occupation. Up to the present 125 such children have been found, but it is known that there are many more. It is such action as this that makes racial hatred so bitter in the south-east of Europe.

General News.

It is reported from Rome that the Pope has consented to allow the Epistles and Evangelists to be sung in Croatian, and that a Slavonic ritual be introduced in all Roman Catholic churches in Yugoslavia.

Zagreb always prides itself on being a more European city than Belgrade. To-day it looks more European than ever, or more London-like. The visitor wonders at first what strikes him as so familiar, till he recognises a typical London "bobby" at a street corner. For during the last few weeks a consignment of English policemen's helmets has arrived, and the police of Zagreb are to-day equipped with them. If one took away the red piping from their overcoats and gave them a truncheon instead of a bayonet, one could imagine oneself in London. But at night they carry rifles and their bayonets are not in the scabbard.

GREECE.

ATHENS, April 23.

The Military Situation in Asia Minor.

The Sub-Chief of Staff, Brigadier-General Stratigos, who has just returned from a visit to the Asia Minor front, has submitted a long report to the Minister of War with regard to the actual military situation. The general says that in view of the many changes which have recently taken place in the military condition of the enemy immediate action is necessary. The conventions concluded with the Bolsheviks and the French have enabled the Turks to bring up considerable reinforcements from the Caucasus and Cilicia, while the assistance afforded to Kemal at the London Conference by certain of Greece's Allies has greatly increased the *moral* of his troops. The plan of the Greek High Command was both laid out and executed well. There has been no defeat at Eskishehir, but merely a check. The information in the hands of the Greek staff was correct in every respect, with the exception of that concerning the *moral* of the Turk, which was raised by the Allies in London. The attack, the occupation, and, finally, the evacuation of Afion Karahissar were justified. Smyrna ought to be protected, the enemy forces in that sector dispersed, and the communications with Konia destroyed. To retain Afion Karahissar would have been an unpardonable mistake, seeing that the Greeks did not aim at territorial conquests. The operations at Eskishehir were likewise justified, in spite of the fact that the Greek forces were numerically insufficient to bring this enterprise to a successful issue. The enemy suffered serious losses and the Hellenic forces retired, realising that these operations would require enormous sacrifices. The actual military situation is good, the *moral* of the troops is excellent, and Smyrna is well guarded.

Referring to eventual future operations, General Stratigos says: "We are facing a serious war, which will undoubtedly be victorious. But in order to secure ultimate success it is necessary that we should intensify our actions and act without delay."

Admiral Kerr's Visit.

The ex-chief of the British Naval Mission to Greece, Vice-Admiral Kerr, arrived in Athens last Wednesday. He was received at Piræus by a Greek naval officer representing the Minister of Marine. Certain Government papers attach great political importance to Admiral Kerr's visit, and are trying to convince us that he is entrusted with a special mission in connection with the war in Asia Minor and the recognition of King Constantine by the Allies. To the journalists, however, who visited him at the Hotel Grande Bretagne, where he is

staying, the Admiral declared that he had long since been on the retired list of the British Navy, and that as he was now travelling as a representative of big British firms, his presence in Athens was devoid of any political significance.

Admiral Kerr was received in audience by King Constantine on Thursday.

The Canonization of Gregory V.

A ceremony by which the Greek Patriarch of Constantinople, Gregory V., was proclaimed a saint of the Orthodox Greek Church was held at the Cathedral here on Thursday morning. The ceremony was performed by the Patriarch of Alexandria and the Metropolitan of Athens, assisted by fourteen Archbishops. The King, the Duke of Sparta, Princes Andrew and Christopher, and many State officials were present at the ceremony, which was of an exceptionally solemn character. Patriarch Gregory V. was hanged in Constantinople by the Turks in 1821 when the Greek revolution for independence broke out; and his body was then thrown into the Bosphorus, whence it was recovered by a Greek fishing boat and conveyed first to Odessa and thence to Athens in 1854.

The Greek Officers in Constantinople.

The Venizelist officers, who, fearing reprisals on the part of the Royalists, sought refuge in Constantinople after M. Venizelos' departure from Greece, have placed themselves at the disposal of the Greek Government, and declared that they were desirous of proceeding to the Asia Minor front. The services of these officers would undoubtedly be of great value to the Army in view of their wide experience acquired both on the Salonika front, where they had served with the National Defence forces, and in Asia Minor and Thrace last year. Despite this fact the Greek Government has not so far stated whether it accepts or not the patriotic offer.

Speed up your Tapping & Drilling Operations.

Every time a machine is stopped for changing a tool, so much time is taken up which can be utilised in uninterrupted production by employing:—

WAHLSTROM AUTOMATIC DRILL CHUCKS.

Tools can be instantaneously changed without stopping the spindles, and are centred automatically.

The tool cannot slip, consequently the shanks are never damaged, the design of the chuck being such that the greater the resistance the greater the grip.

No collets, sockets, keys or wrenches are needed.

Various sizes standardised to take tools from $1\frac{1}{2}$ " diameter down to 0" and suitable for either straight or taper shanks.

THE WAHLSTROM AUTOMATIC TAPPER.

Automatically introduces the oscillating movement of Hand Tapping so necessary with hard materials to avoid numerous tap breakages, *but at ten times the speed.*

There are no springs to get out of order, the movement being absolutely mechanical.

← A turn of this knob immediately produces continuous rotation for tapping soft materials.

Reverse motion for withdrawing the tap is automatically and instantaneously secured at increased speed on raising the spindle.

Made in two sizes:—

$\frac{1}{8}$ " to $\frac{1}{2}$ " fitted with No. 2 and No. 3 Morse Taper Shank.

$\frac{1}{4}$ " to $\frac{3}{4}$ " fitted with No. 3 and No. 4 Morse Taper Shank.

Full particulars upon application to:—

AMERICAN MACHINE & FOUNDRY CO., LTD.,
CANBURY PARK ROAD, KINGSTON-ON-THAMES, ENGLAND.

Cables: "AMMAFOCO, LONDON."

Codes: All usual.

police at Smyrna by eleven officers and 350 policemen.

A Royal Decree has been published by which the import from abroad of part worn blankets is prohibited.

ROUMANIA.

BUCHAREST, April 20.

Parliament.

The Agrarian Committee of the Chamber is still considering the Agrarian Reform Law, and several modifications have been agreed upon, notably one which provides that in densely populated districts the maximum estate to be left to any landowner will be of 100 hectares, irrespective of the number of his direct heirs—a consideration which in other cases is allowed. It may be remembered that at the present stage 450,000 hectares have still to be found to make up the total area designated by the Expropriation Law for distribution to the peasants. Though this law is undoubtedly destined to have excellent results in the future—and its far-seeing democratic tendency reflects great credit upon a governing class which voluntarily deprived itself of a large part of its landed property in order to provide for the needs of the peasantry—it will probably take some years for its beneficial effects to develop, owing partly to the abnormal economic conditions resulting from the world-war. On the one hand the financial difficulties of the Government have prevented its paying the landowners for the land expropriated; on the other the peasant who has received his parcel of land neglects to cultivate it because he finds that he can earn money more easily by carting timber or other produce into the towns, railway transport of goods having almost completely broken down and prices having risen up to a thousand per cent. In his present state the requirements of the peasant are few, and he is not naturally either very ambitious or very energetic; but as his education improves his ambition will no doubt increase; and it would, therefore, seem that one of the first objectives of the administration should now be the establishment of sufficient good schools in the villages, in order to provide a firm foundation for the re-establishment of the country on a progressively productive basis.

Suppression of Mendicancy.

An interesting measure came before the Senate this week for the suppression of vagabondage and begging, and the protection of children. It provides that all beggars capable of working shall be considered as delinquents and liable to sentences varying from five days' to one month's hard labour, either in special labour colonies to be founded for the purpose, or in the execution of works for the municipalities, such as road-making or the care of public gardens. It further provides that a relief bureau be established in every commune to procure work for the unemployed. Vagabonds and mendicants not able to work, including the aged and children under eighteen years of age, are to be placed under the charge of existing charitable institutions. Severe penalties are imposed for such contraventions of the law as the carrying of arms and the use of false identification papers, etc. This is a much-needed measure, and is sure to be warmly welcomed by the public; for at present the streets of Bucharest are infested with beggars of all descriptions, from strong men to miserable creatures whimperingly exposing their deformities or infirmities.

BULGARIA.

SOFIA, April 20.

Political.

There have been no events of outstanding importance in the political world during the past few weeks, but on the 11th inst. the diplomatic representatives of Yugoslavia, Roumania, and Greece addressed a joint Note to the Bulgarian Government demanding that steps should be taken against the bands of *Komitajis*, which for some time, it was alleged, have been crossing the frontiers in different directions and causing disorders. The Note stated that the existence of these bands was known to

the Bulgarian Government, and was not being checked. The reply, delivered on the 13th, emphatically denied that these bands were tolerated by the Bulgarian Government, and asked for specific details as to the times and places of the occurrence of the alleged incidents. It also said that Bulgaria would welcome an international inquiry, to be conducted on the spot, and ended by reiterating previous expressions of the good faith of Bulgaria.

The Reparations Commission.

The Inter-Allied Commission of Reparations, on which Great Britain is represented by Sir Elliott Colvin, is now installed, and preliminary negotiations are on foot with regard to the fulfilment by Bulgaria of the financial clauses of the Treaty of Neuilly. A full council of Ministers was held on Monday, the 18th, and it is expected that the actual work of the Commission will begin early next month.

Whilst the Reparations Commission, of which I shall have more to say next week, is beginning its labours, the Inter-Allied Military Commission of Control has fixed on May 31 as the probable date of its departure. This will affect General de Fourton, the chief of the Commission, and about thirty French, British, Italian, and Japanese officers.

Refugees from Macedonia.

On Sunday, the 17th, together with the correspondents of a French and an Italian journal, I went to Kustendil to see some Macedonian refugees. During the last few months several thousand Macedonians have fled from Serbia into Bulgaria, and at Kustendil we saw upwards of thirty families who had just come from Serbia. They all told the same tale—that at the elections a few months ago they were advised by local orators and politicians to vote for the Communist candidate on the ground that if he were elected they would gain all manner of benefits thereby. They, therefore, voted Communist, and as a result the Serbians burnt their houses and seized their goods. Thus bereft of all their worldly possessions, they fled to Bulgaria, and are now gradually spreading throughout the country. One could not help sympathising with their unhappy lot, but it is only fair to add that there were amongst them some men who had come to Bulgaria a few months back, presumably to evade service in the Serbian Army, and who are now protesting bitterly against their wives and families being left in Serbia. For these one could feel no pity.

All these refugees were dressed in their picturesque national costume, and one was struck by the magnificent physique of both sexes. It was interesting to note that all the refugees still pin their faith to an autonomous Macedonia, and, although they have fled to Bulgaria, do not wish to be incorporated in this country, in which

there are to-day about a quarter of a million of them. Their ability to govern may be doubted, but one feels that such a people will in the long run come into its own. At present the Great Powers have their own houses to set in order, but the Macedonian Society in Bulgaria, which is still presided over by M. Karanjouloff, is very active in its endeavours to call the attention of the civilised world to the unhappy plight of its people.

The Prime Minister.

M. Stambolisky, the Prime Minister, has been in bad health lately, and after having so far recovered as to be able to attend the Council of Ministers on the 18th, has been again confined to his room owing to a severe attack of influenza. M. Turlakoff, Minister of Finance, is acting for him during his enforced absence.

TURKEY.

CONSTANTINOPLE, April 20.

The Return of Tewfik Pasha.

Although there is no doubt that now Tewfik Pasha has returned there must at least be a reshuffle of the Cabinet, nothing has yet been done in this direction. The resignations of Izzet and Salih Pashas immediately upon their return to Constantinople from Angora created a Cabinet crisis, which has only been postponed by their consenting to remain nominally in possession of their portfolios until the Grand Vizier's return. Izzet Pasha is credited in many quarters with the desire of becoming Grand Vizier himself, and it is probable that there is something in the rumour. In reality, however, the present crisis is interesting, not so much from the point of view of the possible composition of a new administration, but on account of the peculiar state of affairs in the interior. It must be remembered that the Nationalists have never given the slightest indication of having changed their views with regard to the Central Government's having no right to existence. The Angora Administration does not recognise the Sublime Porte as a Government, and studiously avoided addressing Tewfik Pasha as the Grand Vizier in the course of the correspondence exchanged prior to the departure of the two delegations for Europe. Nothing indicates that the situation has been changed in any way. Indeed, so far as can be gathered here the conduct of Bekir Sami Bey and the Anatolian delegates in London afforded ample corroboration of the Nationalist point of view towards Stamboul. Whether, as is reported in certain circles in Constantinople, Izzet Pasha was secretly nominated Governor of the "Province" of Constantinople before he left Angora or not, the fact remains that the Nationalists regard Constantinople and its neighbourhood merely as a province of Turkey temporarily under enemy occupation, but so far as possible under the jurisdiction of the Great National Assembly, like the rest of the country hitherto unoccupied. In these circumstances, the Constantinople Government must be either frankly hostile to the Nationalists or else of little more importance than a *liaison* between the capital and the Great National Assembly. By the exercise of the utmost tact and patience Tewfik Pasha has hitherto succeeded in steering a middle path, but how much longer will that be possible?

The War in Anatolia.

Turkish papers during the past week have been full of accounts of heavy fighting on the southern front during the retreat of the Greeks from Afion Karahissar. It would appear, however, that except at Turlu Punar and Banaz there was no fighting worth mentioning. According to the latest Turkish reports, the Greeks have been driven back from the two places mentioned to Ushak; and if this report be true, it would indicate that the Greeks have not yet sufficiently recovered to be able to make a stand except in those positions which they held before the commencement of the offensive, and which must be very strongly fortified. The Turlu Punar—Banaz positions are of considerable natural strength and afford a powerful preliminary line of defence for Ushak itself. It is inconceivable that these positions would have been voluntarily abandoned.

There is no doubt that a sharp fight occurred for the possession of the positions in question, and there is reason to believe that the Turkish report is true. For the rest, reinforcements are being rushed to the front by both sides, and another offensive by the Hellenes seems inevitable. Whatever the result, it is abundantly clear that the Anatolian question can never be definitely settled by the force of Hellenic arms. Would it not be wiser for the Greeks to recognise the fact without shedding any more blood and spending any more money? As the *Orient News* remarked yesterday anent the abandonment of the scheme for the reconstruction of Salonika, if the Greeks invested their millions in Salonika instead of throwing them away in Anatolia they would get a quicker and much better return for their money.

Requiem.

The overwhelming sympathy of the great majority of the Turkish nation with the Nationalists has been amply demonstrated during the last ten days, during which several requiem services have been held in one or other of the great Mosques in Stamboul. One of the most important of these ceremonies was held on the 15th inst., in the Mosque of Aya Sofia, by command of the Sultan. The proceedings were of a very impressive nature, and it is estimated that no fewer than twenty-five thousand people actually obtained access to the building, while many thousands were unable to find accommodation. On Monday a similar ceremony was held at the Fatih Mosque, when similar scenes were witnessed. There can be no doubt that a kind of revival is developing in the Islamic world; and it may be fraught with far-reaching results, the nature of which will depend to a great extent upon how European statesmen handle the situation. The lamentably weak and vacillating policy that has characterised the proceedings of the councils of Europe during the last two or three years, at all events, will inevitably bring about a very dangerous state of affairs.

The Russians.

Some ten thousand Russians have been repatriated to Russia so far, but there remain at least another fifty thousand. The French Government is anxious to be rid of them, but it is difficult to see how it is to be done in a short period. It is all very well to say, "No more relief after such and such a date!" But who prevented Mr. Lloyd George from carrying out his plan for obtaining an amnesty last year in order that the Crimean adventure might be wound up? Who is responsible for the presence of the Russians in Constantinople at all? Those responsibilities cannot be lightly ignored just because there is a different Administration in France to-day. Every Administration inherits the responsibilities of its predecessor, and must either maintain them or wind them up satisfactorily. When the British refused to have anything further to do with the South Russian venture, French papers wrote of us with the traditional "nation of shopkeepers" taunt, but events have proved that Mr. Lloyd George was absolutely correct in his forecast. The sudden recognition of the South Russian Government by the French without so much as informing the British Government even twelve hours beforehand was a profound error, which has cost the French Treasury very dear; and the full consequences of that ill-advised action cannot be so easily avoided.

CYPRUS.

NICOSIA, April 18.

The Centenary Celebrations.

The preliminary celebrations have passed, but not without untoward incidents at Nicosia. The Greek community, wishing to conform as far as possible to the programme adopted at Athens, decided to confine the public functions to a Doxology in the church and the crowning of the statue of the martyred Archbishop Kyprianos, and to postpone to April 25 (O.S.) the further festivities. The arrangements, however, included processions with flags through the streets, to which the Government very

wisely objected, as likely to provoke ill-feeling, especially in Turkish quarters, and possible breaches of the peace. The High Commissioner therefore intimated to the Archbishop that it was undesirable that any such processions should take place, and that Greek airs were not to be played in the streets. The Commissioner (Provost-Martial) and the Chief Commandant of Police also called to the office of the former the Mayor, the Greek Members of Council, and a leading citizen, and conveyed to them the Government orders on the subject. A new programme was thereupon made out.

On Wednesday morning (April 6) at a gathering in the Pan-Cypriot Gymnasium the director explained the orders, and told the students to go quietly to their homes. In spite of this a number of youths and boys organised a procession and marched out with small flags, in contravention of the orders. The Commissioner and Police Commandant, being informed of this, at once proceeded to the spot and ordered the boys to disperse. The order was disobeyed, and it was not until police arrived and a Greek member of Council, M. Theodótou, had spoken seriously to them that they took back their flags and broke up. In the afternoon the Commissioner and C.C. Police summoned the Director of the Gymnasium and the Greek members of Council, and recommended that the ringleaders should be severely punished, the punishment to include confinement in the school for an hour after close of studies for some time to come. Later, the Archbishop was called to the Commissioner's office and was directed that in the proceedings of the following day (March 25), April 7, mortar salutes were forbidden, that the band was not to play in the streets, and that the people could not be allowed to assemble in the open space near the Archbishop's Palace, but must collect inside its enclosure. Other precautions included the closing of all places licensed for the sale of intoxicating liquors from Wednesday evening to noon Thursday.

Next day, Thursday (April 7), resolutions were passed in favour of "union," to be forwarded, as usual, to the High Commissioner for transmission to the Secretary of State. At 10 a.m., at a Doxology at the Church of Phaneroméne, the Archbishop officiated, and the Hellenic Consul, the Mayor, Members of Council, and other leading Greeks were present. After a speech by M. Theodótou, a resolution was passed protesting against the Government orders, as being uncalled for and "unworthy of a civilised Government." This also was sent to the High Commissioner with the same object. The crowd then proceeded to the Archbishopric, and, according to directions, passed into the enclosure and garden of the palace. But proceedings had scarcely commenced there when processions with flags began to arrive from various directions. These had to be dispersed or shepherded into the enclosure. The proceedings included a long address by the Archbishop, a speech by an Australian now visiting Cyprus, and a recitation by the poet, M. Perdios. The people then dispersed; but meantime a large procession with flags was encountered marching in defiance of police orders, and scenes of disorder ensued. This would probably have had serious consequences had not the Abbot of Kykkou, the Greek judge, M. Demetrios, and others arrived on the scene, and persuaded the demonstrators to hand in the flags at a Greek club close by and break up. Several persons were arrested and will be dealt with by court martial.

Congratulatory telegrams were despatched to King Constantine, expressing the hope that all Hellenic communities would attain to freedom under his rule. The Archbishop has written to the High Commissioner, protesting against his having been summoned to the Commissioner's office, as a violation of customary etiquette in conveying communications.

With regard to the draft law in respect of the Press and the publication of seditious matter, the "Central Committee" of union met, and, after discussion with journalists, decided to submit a memorial on the subject to the British Government and British Press.

Some of those summoned before the court martial have been sentenced to terms of imprisonment from six to nine months.

ALBANIA.

DURAZZO, April 17.

Parliament.

Scutari (Shkodra) has not yet elected its deputies, owing to the uncertainty regarding the exact numbers of the Catholics and the Mohammedans, and consequently as to the number of deputies to which each community is entitled. This uncertainty is due to the lack of a census, the Turks having never taken one, and Albania having had no time to do so since she has been independent.

As a result of this delay it is expected that the opening of Parliament will not take place on April 21, as was anticipated, but will have to be postponed. It must be made clear that this difficulty at Scutari is not due to any struggle of a religious character. Moreover, it is worth adding, here in Albania great astonishment has been caused by the announcement made in some European papers—including some in England—that the elections had resulted favourably to the Essadist Party—that is to say, to the reactionaries. The contrary is the truth. Among the sixty deputies thus far elected there is not a single adherent of the late Essad Pasha, and more than two-thirds of these deputies belong to the Nationalist Party, so that the Parliament will represent the progressive and patriotic elements of the country.

Oil.

Colonel C. L. W. Wallace and Major J. S. Barnes have spent some two weeks in Albania. It is understood that they came from London in order to enter into negotiations with the Albanian Government regarding prospecting for oil and undertaking trial borings on behalf of the Anglo-Persian Oil Company. There is talk of the possibility of rich supplies of petroleum in the country; but, of course, such talk is not necessarily well informed. Messrs. Wallace and Barnes are reported to have come to some kind of arrangement with the Tirana Government; but there are rumours of other concerns, which had got wind of the negotiations, having recently made certain proposals. In this connection two companies are mentioned, of which one is American.

Foreign Representatives.

M. Béguin Bilcoq, French Consul, is already in Albania, but at Scutari, not Tirana. He was Consul at Scutari in 1915, and has just resumed his duties. The Albanian authorities are surprised by the appointment of a Consul who does not present his credentials and keeps away from the centre of Government. It may be added that at the present time there are two agents of Serbia (one at Kortcha, the other at Scutari) who reside in Albania without any official recognition on the part of the Government of the country. There are also three Italian Consuls—at Valona, Durazzo, and Scutari—besides M. Castoldi, who bears the title of Minister, and has resided at the Italian Legation, Durazzo. In August, 1920, he was notified that the Albanian Government would no longer recognise the title of High Commissioner, which he had borne up till then.

Albanians and Serbians.

The Yugoslav authorities are reported to be taking more and more drastic measures against the Albanians of Kossovo, and it is even said that within the last few months more than 2,000 Albanians have met with violent deaths, and more than thirty villages have been plundered or destroyed. Many Albanians have abandoned their homes and fled into Albanian territory. The Yugoslav Government has announced that the families of Albanians who have thus fled will be interned and their property confiscated. The refugees have telegraphed protests to the League of Nations.

Negotiations with Italy.

The Albanian Commission, headed by Tef Zurani, Minister of Finances, continues the negotiations with the Consulta in Rome. It wishes to bring about certain commercial and financial agreements between Italy and Albania, but the negotiations drag somewhat badly by reason of the Italian demands being excessive and the Albanians being, perhaps, rather intransigent.

MUSICAL NOTES.

The London String Quartet.

The London String Quartet has succeeded too well. From Scandinavia to the South Sea Islands it has been hailed for what it might well have been, the finest quartet in the world. But this foreign success has not meant improvement. One of their greatest virtues used to lie in their tone, but this has now become coarsened and uncertain—the result of added vigour in the first and second violins. During the past week at the Æolian Hall they played in chronological order Beethoven's seventeen quartets, and, while there were often a beautiful finish to their playing and always a strict regard for the composer's directions, their interpretations were less moving than one had hoped and, in fact, expected they would be. They are still in some ways unique, but it will be a thousand pities if they allow popular success or routine permanently to impair their inherent excellence.

The Sevcik Quartet.

This Bohemian Quartet has now appeared three times at the concerts of the London Chamber Concert Society, and the judgment of the discerning has gone against them. For it is only in their own native music—Dvorak, Novak, and so on—that they excel; in stuff which is more refined or different spiritually, their rough, brusque rhythm avails them nothing, and only does violence to the text. Thinness and imperfect finish marred Cesar Franch's quartet in D major; heavy clumsiness in Arnold Bax's quartet in G major almost hid this composer's extreme sensitiveness; and the Sevcik's playing of the accompaniment which Goossens has given to the songs "Melancholy" and "Philomel" made one very seriously doubt their musicianship, so painfully erratic was their intonation, and so little sensible of the singer's existence did they seem. We have in England quartets better than this, and I do not think the Sevcik Quartet will leave this country with greatly enhanced reputation.

A Fine Violinist.

Although I was able to hear Mr. Laurance Turner only in Arnold Bax's Sonata in E major, with which he began his recital at the Wigmore Hall on April 27, I do not doubt that he will make a big reputation. He had in this sonata the very great advantage of Miss Harriet Cohen's piano-forte playing, and the joint performance was a fine one. His tone is rich and full, his technique considerable, and his insight remarkably vivid. A certain emotional ebullience he will probably in the course of time subdue, but already his sincerity and perceptiveness mark out a future for him. Of this sonata the first movement is too long, it meanders overmuch into by-paths; but the second and third are full of beauty. The main theme, which appears in both the first and last movements (and which, incidentally, is very similar to the beginning of Bax's song, "Far in a Western Brookland"), is very appealing.

Some Singers.

Recently at the Queen's Hall, M. Dimitri Smirnoff, a famous Russian tenor, has given two recitals; but, although I unfortunately was able to listen only to part of his second on April 28, I should imagine that he is living rather on his reputation than up to it. Probably he is far better in opera than on the concert platform, for his mannerisms seem rather the result of habit than the inevitable evidence of personality. He pulled the house down with his final "jamais" in Raoul Gunsbourg's "Le Moment qui passe," but any of our ballad singers on any Saturday afternoon can do that. His voice is a powerful one, fairly well under control, but his musical sense did not seem to me particularly refined—in Tchaikovsky's "At the Ball," for instance, he held up the impulse and dallied with the rhythm in order to make temporary side effects—and it appeared that he thought in notes rather than in phrases. But, as I say, I heard him only in half a dozen songs; and his audience certainly liked him very much.

In Miss Grace Tootell's programme at the Æolian Hall on April 25, there was a pretty choice of song, for it contained some old English songs, scrupulously arranged by Dolmetsch, some Purcell, Schubert, and Brahms (including "Mädchenfluch," which is from an old Serbian folk-song), some old and modern French, and, finally, an English group. Her voice is not strong, and, indeed, loses

in quality where vigour is needed, but she has a certain reticent charm that unfortunately was not supported by the memorised efforts of her accompanist, Miss Nem Cooper. Her French accent, as shown in Fauré's "Aurore" and in Duparc's "Chanson Triste," was a good deal better than her Irish brogue, as attempted in Stanford's "Cutting Rushes."

It is not fair to judge a singer from her singing of a few songs, especially when those songs are probably the weakest in the programme. Yet I could not honestly say that when Miss Ilma Marx, at the Æolian Hall on April 27, sang two songs of J. D. Davis, "Good-Night" and "Autumn," she gave much evidence either of vocal ability or of a knowledge of the worth of music. There was more value in the violin playing of Miss Dorothy Brook, whose playing of slight things of Glazounov, Gossec, and Dvorak-Kreisler was rhythmically good, if uncertain in intonation. But for some inexplicable reason her *rubato* was not understood by Mr. O'Connor Morris, usually a very reliable accompanist, so that many of his efforts came well after the fair.

ANDANTE.

EARLY CHRONOLOGY OF SUMER AND EGYPT.

On April 27 Professor S. Langdon delivered a lecture on behalf of the Egypt Exploration Society at the Royal Society's rooms at Burlington House on "The Early Chronology of Sumer and Egypt, and the Similarities of their Culture." The chair was taken by Lord Carnarvon, who has just returned from Egypt, and gave a few interesting details of recent excavation work carried out there.

Professor Langdon said that the ancient people commonly known as the Egyptians were not the first civilised people on the banks of the Nile, but they were preceded by an Asiatic people who were probably Sumerians or Elamites. These two Asiatic peoples are now known to have belonged to the same race, and they founded the first organised societies known to history, on the shores of the Persian Gulf and in Elam, in the Stone Age. The Sumerians, the most talented branch of a widely-spread race, spoke a highly organised agglutinative speech. They are found in prehistoric levels from the head of the Persian Gulf northwards along the banks of the Euphrates and the Tigris as far as Assur, north of the Lower Zab, and in Russian Turkestan. Recently discovered dynastic tablets established the date of the earliest kingdoms of Mesopotamia as early as 5,000 B.C. At that time the Semites had already invaded the Mesopotamian valley and established themselves in the region of Baghdad. The history of ancient Babylonia consists of two rival kingdoms, Sumer in the south, whose principal capital was Erech, and Kish in the north, whose principal capital from 5000-2900 was at Kish.

The earliest Sumerian culture is strikingly similar to that of prehistoric Egypt; it must be assumed that a branch of this people occupied Upper Egypt in the region of Abydos and Hierakonpolis as early as 5000 B.C. The Sumerian linear pictographic writing is clearly revealed in the Egyptian pottery markings which preceded the Egyptian hieroglyphs. This writing is known to have been well developed in Sumer, or ancient Chaldea, before 3800, and the prehistoric Egyptian linear style cannot be much later. The Sumerians and Elamites appear to have reached Egypt by sea routes, trading and adventuring along the coasts of Southern Arabia until they reached Punt, Ethiopia, and finally the Nile valley in the region of Koptos. All of their prehistoric remains have been found in Upper Egypt, principally at Abydos and Naghada.

They brought with them into Egypt the cylinder seal, the mace head, and a style of decoration in stone which is characteristic of Sumerian art. The characteristic features of this remarkable people were: a long head, of large brain capacity; a thin high nose, which joined the cranium without depression; a slightly receding forehead, and eyes whose axes are not horizontal but slant slightly outward. The position of the axis of the eye is precisely the reverse of the Mongolian type. It is possible to discern in their prehistoric tomb paintings in Egypt the same physical characteristics. They disappeared in Egypt some time before the first Egyptian Dynasty founded by Menes, and were superseded by an African people who amalgamated with Semitic races from Asia. This new race invented their own system of writing, which developed into the classical hieroglyph. The older Sumerian linear style appears to have been used in Egypt without intelligence even by the Sumerian-Egyptians themselves. It was probably never understood in Egypt, and the signs survived only as occult marks on pottery after the older Asiatic peoples had disappeared.

The religion of the Egyptians is obviously related to the Sumerian, and there is no Semitic influence in the fundamental religious concepts of the ancient religions of Babylonia and Egypt. The names of the gods in both pantheons do not reveal a single Semitic name. It is probable that the great cults of Tammuz and Osiris are the creations of two branches of the same people, that of Osiris being inherited by the Egyptians from the older Asiatic people.

Mr. Langdon attempted to fix the beginning of the First Egyptian Dynasty by comparing the methods of year dating of the famous Semitic Emperor Naram-sin (2795-2739 B.C.) with those of Egypt. He argued that Naram-sin borrowed his system of year-dating from Egypt, and showed that this could have taken place only after Den, fifth king of the First Dynasty. He also argued from archaeology to make Naram-sin a contemporary of the last two kings of the Second Egyptian Dynasty. He arrived by these two methods at a date circa 3200 for Menes.

NEAR EAST BOOKSHELF.

- I.—"GLIMPSES OF BENGAL, SELECTED FROM LETTERS OF SIR RABINDRANATH TAGORE." (London: Macmillan and Co. 7s. 6d. net.)
- II.—"A MOSLEM SEEKER AFTER GOD." By Samuel M. Zwemer. (New York and London: Fleming H. Revel Company. 12s. 6d. net.)

I.—THE CHARM OF RURAL BENGAL.

Sir Rabindranath Tagore has done well to publish a series of letters addressed to intimate friends during his prolonged tours in Lower Bengal. They date back to the concluding decades of last century, when the distinguished poet had not achieved the glory and penalties of fame; and reproduce the atmosphere of rural Bengal with marvellous fidelity. Most poets find inspiration in mountain scenery; Sir Rabindranath's plastic mind responded to the call of the vast Gangetic Delta, which occupies 390,000 square miles of the globe's surface. "Goethe," he wrote, "wanted more light on his death-bed."

If I have any desire left at all at such a time it will be for "more space" as well; for I dearly love both light and space. Many despise Bengal as being only a flat country; but that is just what makes me revel in its scenery. Its unobstructed sky is filled to the brim, like an amethyst cup, with the descending twilight and peace of the evening; and the golden skirt of the still, silent noonday spreads over all without let or hindrance. Where is there another such country for the eye to look on, the mind to take in?

A poet would find small difficulty in turning many of Sir Rabindra's word-pictures into flowing verse. Witness the following description of a tropical storm:—

Heavy clouds rose in the west. They came up black, tumbled, and tattered, with streaks of lurid light showing through, here and there. Then came an angry roar. Torn-off scraps of cloud hurried up, like panting messengers of evil tidings. Finally, lightning and thunder, rain and storm, came on together, and executed a mad Dervish dance. The bamboo clumps seemed to howl as the raging wind lashed the ground with them, now to the east, now to the west. Over all the storm droned like a giant snake-charmer's pipe, and to its rhythm swayed hundreds of thousands of crested waves, like so many hooded snakes.

But etymology teaches us that the true poet is essentially a creator. In July, 1893, someone who lacked the divine fire opined otherwise in an Indian newspaper, moving our author to define the basis of the craft of which he is a past-master:—

All I have to say about the discussion which is going on over "silent poets" is that, although the strength of feeling may be the same in those who are silent and in those who are vocal, that has nothing to do with poetry. Poetry is not a matter of feeling, it is the creation of form. Ideas take shape by some hidden, subtle skill at work within the poet. This creative power is the origin of poetry. Perceptions, feelings, language—these are only raw material. One man may be gifted with feeling, a second with language, a third with both; but he alone is a poet who has creative genius as well.

In his golden prime Sir Rabindra was keenly appreciative of feminine beauty, and put forth a novel theory accounting for it, reminding one of Burns's distich:—"His 'prentice hand He tried on man, And then He made the lasses, O!"

For some time it has struck me that man is a rough-hewn and woman a finished product. There is an unbroken consistency in her manners, customs, speech, and adornment. The reason is that for ages Nature has assigned to her the same definite rôle, and has been adapting her to fulfil it. No cataclysm, no political revolution, no alteration of social ideal has yet diverted woman from her peculiar functions or destroyed their inter-relation. She has loved, tended, caressed, and done nothing else; and the exquisite skill which she has acquired in these permeates all her being and doing. Her disposition and action have become inseparably one, like the flower and its scent. . . . Woman was cast in the mould of Mother. Man has no such primal design to go by, and that is why he has been unable to rise to an equal perfection of beauty.

If woman's new-born political status should lessen her claim to be the fairer sex it will have been dearly bought.

A word of praise, in conclusion, for Sir Rabindra Tagore's translator, whose version of our poet's vernacular effusions adds greatly to the charm of a remarkable book.

F. H. S.

II.—A PERSIAN MYSTIC.

Our knowledge of other civilisations is derived from the great men who adorned them, and who soared high above their contemporaries as mountains dominate the surrounding plain. Islam has produced but four of such giants during the fourteen centuries of its troubled existence, and chief among them was Al Ghazali—scholar, philosopher, and saint. The eleventh century of our era, which witnessed his birth, was a period of decadence for the followers of the Prophet. The Abbaside Caliphate at Baghdad was

little more than a name; the militant fervour generated in Arabia had spent its force; Eastern Asia was a congeries of petty principalities, which collapsed on the impact of the Seljuk Turks. These nomads trampled civilisation under foot and added nothing to human culture; but they breathed new life into the dry bones of Islam. Fired by the Koran's militant precepts, they enforced its dogma with the convert's fiery zeal. Hitherto Christians from all parts of Europe had been allowed free access to the holy places of Palestine. Its conquest in 1176 by the Seljuk Turks gave the signal for wholesale massacres of these pilgrims. A cry of indignation rose from Christendom: its princes, soldiers, artificers and peasants set out to rescue the Holy Land from desecration. Thus originated the Crusades: their object was defeated by the Turkish hordes whose conquest of the Near East gave a new and disastrous trend to the world's history. In that era of stress and storm Al Ghazali's youth was spent. Born at Tus, the capital of Khorassan, in 1158, he received the best education available at the time. Before reaching the age of twenty he had mastered the principles of every known science and learnt the Koran by heart. Migrating to Nishapur, he studied the traditions under Imam Ma'Ali, on whose death in 1085 he sought advancement from Nizam-ul-Mulk, the all-powerful Vizier of Sultan Alp Arslan, who ruled Eastern Islam from Baghdad. Receiving the appointment of lecturer at the Nizamiyeh College, he soon attracted crowds of students. The ten years he spent at Baghdad were a period of intense literary activity. Treatises dealing with the entire range of learning flowed from his erudite pen, and everything seemed to promise a brilliant and lucrative career. It was shattered by a mysterious ailment which prostrated him for several months. Doubts began to assail him; he found no solace from theologians and philosophers: for a brief spell Al Ghazali was a thorough-going sceptic. At length, however, he found a haven of refuge in mysticism. He absorbed the Sufi doctrine which denies self and seeks union with God through eight stages of spiritual growth—generally stated as Service, Love, Abstraction, Knowledge, Ecstasy, Union and Extinction. But his vigorous intellect saved him from the pantheism and antinomianism to which so many Sufis succumb; he remained to the end a faithful follower of the Prophet. After conversion he found Baghdad too narrow a sphere for his new-born energies. In 1095 he abandoned home, fortune and friends, and set out on a journey which lasted nearly ten years, embracing Syria, Arabia and Egypt. In 1104 he returned to active life, and settled down at Tus, to spend the rest of his days in study. They were cut short by the austerities and hardships which he had endured. In 1111 A.D. he passed peacefully away at 53. Al Ghazali was a true Aryan in genius and creative power: extensive travel made him a cosmopolitan: and his learning was on a par with his capacity for imparting it to others.

It is a hopeful sign of the times that Asia should have cast its spell over many students in the United States, who regard the champions of an alien creed with sympathy and discernment. Of such is Professor Samuel Zwemer, lecturer in the Theological Seminary of New Brunswick, and the College of Missions at Indianapolis. He has given the world an illuminating biography of Al Ghazali, followed by an account of his teaching which enables Westerners to grasp the secret of his hero's immense influence. A bibliography and list of Al Ghazali's works are given in the appendix; only an index is lacking to render Professor Zwemer's book an exhaustive study of a truly great career.

F. H. S.

BOOKS RECEIVED.

"The Diary of a Yeomanry M.O. (Egypt, Gallipoli, Palestine, and Italy)." By Captain O. Teichman, D.S.O., M.C. (London: T. Fisher Unwin. 12s. 6d. net.)

PERSONAL AND GENERAL.

TO-DAY.

May 5 (New Style).
 April 22 (Old Style).
 Shaaban 27, 1339 of the Moslem Calendar.
 Nisan 27, 5681 of the Jewish Calendar.

Sir Albert Stern has arrived in Paris from the Hôtel du Palais, Biarritz.

Sir Rennell and Lady Rodd are returning to London this week from Rome.

The Rev. S. M. Zwemer has left Egypt and will spend a short furlough in New York.

Monsieur Eustrate Gueshoff, son of the ex-Prime Minister of Bulgaria, has arrived in London from Sofia.

Lord and Lady Dawson of Penn and the Hon. Sybil Dawson arrived in London this week from Algiers.

Dr. Greig, the new Bishop of Gibraltar, is the guest of Lord Plumer at the Palace of San Antonio, Malta.

Earl Curzon of Kedleston has returned to town from Kedleston Hall, and is now much improved in health.

The Maharaja of Patiala has left London for Aix-les-Bains, and will return to London the beginning of June.

Lieut.-Colonel and Mrs. Ralph Verney have returned from India, and their present address is Botolph House, Winslow, Bucks.

The Hon. W. Ormsby-Gore, M.P., and Lady Beatrice Ormsby-Gore spent the week-end with Lord and Lady Harlech.

M. Frederic Nano, Secretary to the Roumanian Legation, and Madamo Nano have taken up their residence at 12, Hill Street, Rutland Gate.

The marriage of Richard Roy Maconachie, Indian Civil Service, and Miss Joan Lethbridge will take place at St. Martin-in-the-Fields on June 2.

Lord Reading is making a personal scrutiny of the proceedings in Punjab Courts-martial, with a view to exercising his prerogative of clemency where it is justified.

Prince Nicolas of Roumania, who has now returned to Eton, was entertained to luncheon on April 28 by M. Boeresco, Minister Plenipotentiary and Roumanian Chargé d'Affaires.

A marriage has been arranged, and will shortly take place in India, between Captain W. T. Bird, 30th Lancers, I.A., and Mary, only daughter of the late Surgeon-Major W. Parsons Feltham.

Major W. C. F. A. Wilson arrived in Busreh on March 20 from Baghdad, says the *Busrah Times*, to relieve Major G. V. B. Gillan, the Divisional Adviser, who was to proceed to England on leave.

Mr. T. A. Leach, Senior Inspector, Kordofan Province, has been transferred to the Red Sea Province, and Mr. R. K. Winter, Senior Inspector, of the latter province, goes to the Bahr-el-Ghazal Province.

Lieut.-Colonel Edgar Geer Russell, late I.M.S., of the East India United Service Club, St. James's Square, S.W., and Rattray House, Crimond, Aberdeen, who died on November 8 last, left £20,487.

Among wills recently proved was that of Mr. Thomas Watt Smith, of Victoria Road, Kensington, W., late Judge of the Punjab Chief Court, and author of a handbook of "Acts and Regulations for the Punjab," who left £32,616.

Major W. E. Marshall, M.C., M.B., R.A.M.C., Government Bacteriologist, left Khartoum, says the *Sudan Times*, on April 17 for Jeddah, to take up the appointment of Agent and Consul under the British Government.

Major-General Sir Charles Townshend has been appointed a member of the Committee of Honour charged with the arrangements for the Napoleonic Centenary. Mr. Winston Churchill is the other British member of the Committee.

Sir Ralph Percy Ashton, J.P., of Beechwood, Reigate, Surrey, and Orient House, New Broad Street, a partner in Kilburn and Co., Calcutta, and director of other companies, who was found dead on January 28, aged 61, has left £26,239.

Among wills recently proved was that of Mr. Arthur Phillips, of Ormonde House, Weston Road, Bath, formerly standing counsel to the Government of India and Secretary to the Legislative Council of the Government of India, who left £36,404.

The Rev. H. C. W. Allinson, formerly engaged in missionary work in Persia, and who for the past four years has held the curacy of Christ Church, Cockfosters, New Barnet, has been presented to the living of Holy Trinity, Sheerness, in succession to the Rev. H. B. Cartwright.

The following contributions have recently been made to the Pro-Jerusalem Society:—The Princess Edmond de Polignac, £E30; Sir Hugh Bell, 10 guineas; Mrs. Clowes, 10 guineas; Banco di Roma, £E25; Anonymous Donor from Japan, £E50; Mr. James de Rothschild, £50.

The Hon. A. D. Pickford, Acting Chief Commissioner for India, and Mr. J. S. Wilson, District Commissioner for Calcutta, who will arrive in England shortly, are to take a course of training at the Scoutmasters' training school at Gillwell Park, Chingford, Essex, with a view to recommending it in India.

The Duke of Connaught, who has been staying in the South of France since the conclusion of his mission to India, which he undertook in place of the Prince of Wales, arrived in London on April 30. He was accompanied by his daughter, Lady Patricia Ramsay, who had travelled with him from Paris.

The Emir Faisal, who was joined by his eldest brother, the Emir Ali, at Yambo, arrived at Jeddah on April 25, where his father, King Hussein, had come from Mecca to welcome him. The King and his sons were expected to proceed to the capital on April 27.

On Sunday, May 1, in honour of the Bulgarian Easter, the Bulgarian Minister and Madame Staneioff gave a reception at the Legation, entertaining all the members of the Bulgarian Colony and many English friends, among whom were:—Sir Edward and Lady Boyle, Mr. and Mrs. Noel Buxton, and the relatives of the late Mr. Bouchier.

A marriage has been arranged, and will take place in Madrid on June 30, between Mr. Arthur F. H. Wiggin, Second Secretary, Diplomatic Service, attached to the Residency, Cairo, son of the late Mr. F. H. Wiggin, nephew of the fifth Lord Dynevor, and Señorita Maria del Carmen Vallin y Parrella; only child of Señor Cristobal Vallin, Spanish Minister at Belgrade.

The King has given permission to wear the following decorations conferred by the Sultan of Egypt in recognition of valuable services rendered:—

ORDER OF THE NILE.

Second Class.—Bt. Lieut.-Colonel M. H. Logan and R. H. Dun.

Third Class.—Bt. Lieut.-Colonel J. J. B. Tapley, D.S.O., Bt. Lieut.-Colonel T. B. Vandeleur, D.S.O., Major (T./Lieut.-Colonel) C. A. Barker, O.B.E., Major C. S. Northcote, Major H. F. O. Thwaites, M.C., N. G. Davidson, and S. A. Tippetts.

Mrs. Sarsfield-Hall, O.B.E., has recently returned to El-Obeid, Kordofan Province, Sudan, from Darfur. She was the first white woman to visit Darfur, which was only brought under administrative control a little over four years ago, and accompanied her husband as far as Kuttum, the headquarters of the northern district of the province, seventy miles north-west of Fasher. Kuttum is over 500 miles by horse or camel from railroad at El-Obeid, and lies within a few days' march of the spot where Lieut. Boyd Alexander was killed some years ago in attempting to reach the Nile from West Africa. Mrs. Sarsfield-Hall has returned to El-Obeid, as her husband has been transferred there from Darfur on appointment as Senior Inspector, Kordofan Province.

May 1 was Greek Easter Sunday, and at the Greek Church, Moscow Road, Bayswater, a special service in celebration was held. The interior of the church was decorated with flowers and the floor strewn with olive leaves. The Great Archimandrite, Dr. Pagonis, officiated, being assisted by the Archimandrite Agathangolas Moscovakis. There was a large congregation. Among those present were M. Rangabé, the Greek Chargé d'Affaires, Madame Rangabé, the

personnel, and M. Boeresco, Minister Plenipotentiary and Roumanian Chargé d'Affaires of the Legation. At the conclusion of the service the Archimandrites distributed Easter eggs to the congregation, and a collection was made on behalf of the Greek Benevolent Fund.

OBITUARY.

SIR JAMES DUNLOP SMITH.

Sir James Dunlop Smith, whose death we recorded briefly last week, was one of those servants whom India cannot easily spare. He had a distinguished career as an officer of the Punjab Commission, and we can recall the time when he was looked on as a future Lieutenant-Governor, but he was brought home to undertake the important and delicate duties of Political Aide-de-Camp to the Secretary of State for India, and he filled that post with remarkable ability for the remainder of his life. The Political A.D.C. may fairly be described as the liaison-officer between the India Office and the outside world, the Press and the public in this country, and a host of more or less distinguished visitors from India; the post is one in which mistakes are conspicuous and widely resented, while success does not come prominently before the public, and the best tribute that can be paid to Sir James Dunlop Smith is to say that, while the public at large knew but little of his activities, his official duties brought him hosts of friends. It would be ungenerous not to add some acknowledgment of his attitude to the Press throughout the war; the India Office, like other Departments, had often to be reticent in those days, but there are different types of reticence, and the type affected by Sir James was that which the public desired—a frank statement of what could be published, and an equally frank refusal of information which had to be withheld.

The death of General Branko Yovanovitch, the Serbian Minister for War and Marine, occurred suddenly last week in Belgrade, states Reuter. General Yovanovitch was an officer of great ability, who commanded the Serbian cavalry with notable success during the Great War. He was appointed Minister for War in February last year.

ENGLISH BOOKS FOR BELGRADE.

During last year the South Slav Entente Committee of the Royal Society of Literature sent to Belgrade University over 18,000 English standard books presented to the committee for the purpose. The cost of carriage to Belgrade was £150, of which £96 has been subscribed, and the committee is now asking for contributions towards the balance. They may be sent to the hon. secretary, Mrs. J. D. Ellis, at the Royal Society of Literature, 2, Bloomsbury Square, W.C.1.

ECONOMY IN BELGRADE.

Our Belgrade Correspondent writes:—With a view to economising stationery, an order has gone forth to all public departments which will produce consternation among the crusted members of the staff, and recalls our own Army Orders during the war, when envelopes were used over and over again, and other petty devices succeeded in bulk in effecting very great economies. It has hitherto been customary in public documents in Serbia for the paper to be folded down the middle and only the right-hand half used for the text. Now the whole of the sheet will be used, with only a narrow margin, and so at one stroke a very large economy will be brought about.

PUBLIC ART GALLERY IN INDIA.

The opening to the public of the picture gallery in Baroda, India, on March 23, was, says the *Morning Post*, an event of much interest, for it is the first public picture gallery in India. The collection of 188 paintings formed for it by Mr. Marion H. Spielmann is designed to give a general idea of the whole course and scope of European art since the Renaissance, and examples of different Schools include a number of admirable works. The Maharaja Gaekwar presided at the opening, and at his request the ceremony of unlocking the silver padlock was performed by Mrs. Blakeway, wife of Colonel Blakeway, the British Resident, after Mr. E. Rimbault Dibdin, who has organised and arranged the gallery, had given an account of the inception and progress of the enterprise. Significant evidence of the nature of the climate which the pictures have now to endure is supplied by the fact that, in order to have a comfortable temperature during the ceremony, the hour fixed was 8.30 a.m., and the rooms were cooled by means of blocks of ice in metal trays. All possible precautions have been taken to protect from climatic dangers this collection, which introduces to Indian artists the valuable lessons to be learned from the great European painters of the past and present.

In fulfilment of certain reparation clauses of the Neuilly Treaty, the Bulgarian Government has issued an urgent order to the District Requisitioning Commission in Bulgaria for the delivery of 33,000 sheep to Yugoslavia. The delivery has already begun.

NEWS IN BRIEF.

Djevad Bey, the new Turkish Minister to Switzerland, arrived at Berne last week.

Blackleg tramwaymen were attacked and seventeen injured by Cairo strikers on April 27 and 28.

An Athens telegram reports the Greek military classes 1913a, 1912, 1904, and 1903 have been mobilised.

A military and political agreement between Czecho-Slovakia and Roumania has been signed at Prague.

Yugoslav troops have occupied the island of Veglia, evacuated by Italy in accordance with the Treaty of Rapallo.

The Commissar Rothstein, diplomatic representative of the Soviet of Moscow, arrived in Teheran on April 25.

General Gouraud, the French High Commissioner in Syria, opened the Commercial Fair at Beyrouth on April 30.

Bekir Sami Bey, who represented the Angora Government at the recent Conference in London, has arrived at Angora.

The Greek railhead on the Southern (Ushak) front in Asia Minor has been advanced about twelve miles east of Banaz.

An Athens message states that Admiral Dopsmanis, the Commander of the Fleet in Turkish waters, has been removed from his post.

Strikers on the Oudh-Rohilkund Railway returned to work last week, but the strike in the P. and O. dry docks at Bombay still continues.

Statistics of plague in Alexandria published on April 22 were inaccurate. Not more than five cases have occurred, and the outbreak is now under control.

Two thousand five hundred men employed at twenty-seven oil mills in the Calcutta district have struck work for higher wages and have formed a trade union.

A decree has been issued in Cairo extending the mixed tribunal till November 1 next. The adhesion of the United States to this measure has not yet been received.

It is reported that a fire has occurred at the Ionian Bank cotton store in Alexandria. About 12,000 bales were destroyed, and the insurance runs into over £500,000.

H.R.H. the Prince of Udine, nephew of the Queen Mother, on April 30 formally opened the new Parliament of Cyrenaica, in Libya, in the name of the King of Italy.

In the Hall of St. Michael and St. George, on April 30 (writes the Malta correspondent of *The Times*), the Governor read the Letters Patent granting self-government to Malta.

M. Gounaris, the Greek Prime Minister; M. Theotokis, Minister for War; and General Dousmanis, Chief of the General Staff, reports Reuter, have left Smyrna on their way to visit the front.

According to the *Svenska Dagbladet* (says Reuter's Stockholm correspondent), the Crown Prince has taken the initiative in arranging that Swedish archaeologists should undertake excavations at Korone, in the Peloponnese.

A Constantinople message reports that at a reception given by the French Admiral de Bon, at which the Diplomatic Corps were present, there was an outbreak of fire. All the guests left safely, but the house was burnt down.

The Belgrade correspondent of the *Morning Post* states that the famous Russian daily paper *Novoye Vremya*, which ceased publication in Petrograd in 1918, has reappeared in Belgrade with practically the whole of the old staff, including Souvorine, Stolpina, Renikopp, Ksurine, and Yogerof. Menchikof and Rosanov were both killed by the Bolsheviks.

Our Belgrade Correspondent writes:—A series of lectures is ordered to be given in all schools in Yugoslavia of the career of the late Voivoda Mishitch and the significance of his life's work, crowned with the victories of Rudnik and the Salonika front. In the gymnasiums for boys the lectures will be given for senior officers.

ZAGHLOUL OR EGYPT?

Those who are inclined to regard with grave misgiving the proposed grant of self-government to Egypt will find confirmation of their fears in the crisis which has now arisen in that country. Some, indeed, are anxious over the menace to the British Empire that a studiedly hostile Egypt might introduce; but a larger number are really concerned for Egypt herself, in view of the setback to her social and economic development which, they hold, must inevitably follow in a land of peasants the placing of unrestricted power in the hands of urban politicians. While Egypt will have it in her power to be a thorn in the side of the Empire, there can be little doubt that the latter will be able to look after itself. It may well, however, be powerless to save Egypt from going down the hill of retrogression. So much will depend on the attitude of her public men, in particular of those entrusted with the reins of government. When once the right of the Egyptians to a freer hand in their own administration is conceded, opportunities for British advice and guidance will depend entirely on the readiness of the Egyptian authorities to invite one or the other. For this reason the struggle between Adly Pasha, the Prime Minister, and Saad Zaghloul Pasha has a special interest, as it represents the conflict between the two schools of thought—the one standing for self-government for Egypt, but in close reliance upon Great Britain, the other actuated by the sole idea of cutting the painter, in order that the fruits of power and the emoluments of office may be shared between the smallest possible number, whatever may be the fate of the country at large. Again, in Zaghloul Pasha's action we notice the first beginnings of that system of personal politics which has been the curse of so many countries on the morrow of independence. Adly Pasha suggests that the affairs of Egypt should be conducted decently and in order. The agreement with Great Britain provides for negotiations by the Egyptian Government, and Adly Pasha was nominated as Prime Minister to this end. Zaghloul Pasha, who has himself admitted that the new Cabinet represents the nation's will, is offered full co-operation with it in the negotiations with Great Britain, but claims that his own "Egyptian Delegation" is the only proper body to settle the terms of the treaty determining the status of the new Egypt. The essence of the Milner-Zaghloul agreement was that both parties were preliminary investigators, exploring the ground of possible understanding, which could be finally staked out only by the Governments of the two countries. Zaghloul Pasha is reckoning entirely without his host if he imagines that a formal treaty will be negotiated by Great Britain with a body of men having no Government responsibility.

It will be a matter for regret if Zaghloul Pasha belies the hopes that have been formed in regard to him both in Egypt and in Great Britain. Even if the British Government and public had to be somewhat forcibly reminded of his merits, they have since accorded him

appreciation without stint, as, in their desire for Egypt's well-being, they wanted her to be served by all who had qualifications for the task. But to-day Zaghloul Pasha is no longer challenging British obtuseness or indifference; he is in conflict with his own fellow-countrymen, because he would arrogate to himself the privileges of a dictatorship without its responsibilities. He is entitled to credit for the early success of his destructive tactics. Whether Great Britain allowed herself to be too easily persuaded or impressed need not be discussed now; we are prepared to believe that whatever arrangement is reached will work for the best in the long run. But as far as Zaghloul Pasha is concerned now, the time has come for a constructive policy, and if he has none to offer his country, his day is over. He must be conscious himself that, in spite of the splendid welcome accorded to him in Egypt, he has passed the zenith of his popularity. The practical statesmanship and sound common sense of Adly Pasha are having their effect. A noisy rout of students may acclaim Zaghloul Pasha, but the racial incentive that gave him his following in the first instance is lacking, and the nation is tiring of the pace that he has set and of the demands that he has made upon them. If he were to try to repeat the demonstrations and riots of two years ago the Egyptians themselves might conceivably suppress them without calling upon the British Army; and if it became necessary in the last resort to deport him again, popular excitement, we should imagine, would be of a mild character compared with what it was in 1919. In a public tribute paid last week by a former leader of the Zaghloul party to the Prime Minister and Rushdi Pasha there was a significant remark to the effect that these two statesmen, to whom, it was stated, the national movement owed everything, had undertaken their labours in London and Paris at their own expense. It is probably not forgotten by either the townsfolk or the fellahen that a substantial levy was required in the first instance to finance the agitation associated with Zaghloul Pasha. For a long period the latter found that the cause necessitated his sojourn in Paris in particularly comfortable circumstances, it has always been understood; and if it is now necessary to emphasise the fact that Adly Pasha and Rushdi Pasha paid their own way in Paris and London, the inference is that all the members of the Zaghloul Delegation did not.

At present no one in Great Britain bears Zaghloul Pasha any ill-will. His action in abandoning at the eleventh hour his wholly intransigent attitude and agreeing to negotiate with Lord Milner's Mission was appreciated, and was held to imply a return to common sense. He seemed to be marked out as the future leader of Egypt, and it was felt that his influence would be thrown into the scale of political moderation and economic progress. The first misgivings were aroused after the return of the Egyptian Delegates from Egypt, when Zaghloul Pasha attempted to reopen the negotiations *de novo*, and it required the good sense of Adly Pasha to keep the Delegation as a whole on the only sound line of policy open to it. Since that time Zaghloul Pasha would seem to have been at pains to stultify all the good opinions formed of him and to have steadily lost ground in Egypt as well as in Great Britain. Preferring the flesh-pots of Paris, he postponed his return to his own country until the time had come to appoint the official mission for the negotiations with Great Britain, and then imagined that the spirit of the London Agreement could be set aside to gratify his own personal vanity. It will say much for Egypt's soundness if public opinion, undeterred by the shouts of the students, rallies to the side of Adly Pasha in support of the contention that the treaty negotiations must be carried through by the accredited Government and not by Zaghloul Pasha's unofficial Delegation. Members of that body, indeed, are at issue with him on the point, and any further insistence on his part can only confirm the view that he is now playing solely for his own hand. If the Cabinet should be defeated on the question, it will be a bad thing for Egypt, even though the treaty with Great Britain go through without any modifications; for Zaghloul Pasha's success will set a low political standard from which the country is not likely to recover for a long period.

BRIGANDAGE IN YUGOSLAVIA.

(FROM OUR OWN CORRESPONDENT.)

ZAGREB, April 1.

"An Honourable Occupation."

One almost hesitates to refer to the subject of brigandage for fear of giving an exaggerated impression and opening the way to mischievous tongues to hold forth upon the dangerous and unsettled state of affairs in the country. But it is useless shutting one's eyes to facts. It must be borne in mind, too, that in many parts of Macedonia brigandage has been an honourable occupation from time immemorial, that Serbia had hardly liberated a great part of the country, and had had no time to introduce order and organisation, before the great war broke out. Consequently, the wilder Albanian tribes carry on their old borderland tradition of harrying the villages, and they are encouraged by enemy and Communist intrigues. In addition to these, there are a certain number of men who have lost everything in the war, having everything to lose and nothing to gain by demobilisation, and have become thoroughly accustomed to carrying and making free use of their weapons. With these two distinct sorts of ruffians the authorities have had their hands full. Their energetic steps have reduced the trouble very largely, but it is not entirely stifled.

Desperate and homeless Montenegrins seem to be the chief offenders. On March 22, as a party of peasants were on the road from Gacko to Nevesinje, they were attacked by half-a-dozen Montenegrins, who stripped them to the skin. One peasant was killed and fifteen more, including an old man of eighty, were taken away as hostages.

Recently a gang of five desperadoes were condemned to death at Nish. Just before they were shot they confessed to two other crimes of which they had not been accused, both heartless murders for robbery. As they were being bound to the stake they recognised among the onlookers some of their former confederates, who had doubtless come to look on at the execution. This annoyed the condemned men, who promptly denounced them, so the guilty onlookers were in their turn at once marched off to gaol.

The End of a Honeymoon.

A very serious and peculiarly ruthless case occurred a few days ago. On the well-known road from Kotor (Cattaro) to Cettigne, near the hamlet of Torijan, not far from Niegush, a party of ruffians attacked a lorry in the Sinn Fein style. They shot the chauffeur, a Russian captain, and his assistant, and the gendarme who was escorting them. M. Radul Radovitch, a finance official, was severely wounded and robbed of two million dinars that he was taking to Cettigne, and a lady, who was returning from her honeymoon, was wounded. The bandits looted the killed and wounded, and left them lying by the road. This happened in the evening, and it was not till the next morning that help was brought to the wounded. The Government has proclaimed a reward of a hundred thousand dinars for the men, and the gendarmerie and military are ordered out in pursuit. The Cettigne Press blames the authorities for their mildness in treating prisoners, and their easy granting of amnesties to savage and incorrigible brigands.

A battle with bandits is reported from near Podgoritsa, where they left ten killed and wounded on the field. Military, as well as gendarmerie, are hunting them down on all sides, and the families, where available, are being interned and held as hostages, and their property sold; in Montenegro, if the criminals are not caught, the village, parish, or district will be held responsible, and fined accordingly. In fact, the authorities are quite determined finally to stamp out the nuisance.

A Gallant Boy.

An exciting affair recently occurred near Mladenovats. The district had been infested by an armed ruffian named Nikodej Antonizevitch, who was badly wanted by the police. One evening he came into an inn bent on robbery, thinking that there was only a helpless woman there. Unfortunately for him, her brother was present, and he, recognising the ruffian, attacked him instantly. There was a fearful wrestling match, in which the brigand was getting the better of it, as he was the stronger man, when the brother, by a final effort, threw him, and succeeded in holding him down and preventing him from firing, while he called for help. His sister had fled in terror, but his thirteen-year-old son, Milutin, seeing his father's distress, ran and fetched an axe, with which he vigorously hammered the robber's legs. The boy soon saw that this was not enough, and that his father would soon be beaten, so he calmly walked round to the other side and staved the thief's head in with a vigorous blow of his axe. No wonder, then, that little Milutin is the hero of the village which he has delivered from the monster.

THEATRE-GOING IN TEHERAN.

TEHERAN, December 31, 1920.

One night last week I went to the Armenian theatre to see an opera called "Anoosh." It is an opera, with lots of music and dancing—Oriental music and dancing of the kind that suits our taste, and there were many Persians present, drawn from the ranks of the Persian aristocracy. Some of the gentlemen had seen the opera before, and they had liked it so well that they had decided to take their ladies to see it at the first opportunity; and now they were carrying out their promises. The ladies were in the gallery, far back, without any lamp or light, and well screened behind a huge curtain, through openings in which they watched the play with keen relish. In accordance with a previous arrangement, nobody else was in the gallery except one or two Armenian young ladies who acted as ushers and companions.

Now, among the Persians of the male sex who were present was a certain Seyyid, who is well known, if not widely esteemed. Although he has had the misfortune to lose one of his eyes, he yet contrived to observe that the gallery above was in darkness and the front of it screened. As Armenian ladies do not hide themselves behind veils or screens, the wise man very soon concluded that Persian ladies must be present, and became agitated. Once or twice he muttered that it was "khlaif shar" (against Holy law), but he was quickly silenced by the ushers, who threatened to remove him if he persisted in interrupting. This induced him to keep quiet, but he could not forget the "outrage." The next morning he went off to the Chief Mujtahid, and, without revealing his real object, asked: "Sir, what is your opinion, and what is the punishment according to our Holy law, if a Moslem woman permits herself to go to a Christian theatre to see an immoral performance?"

The Mujtahid at once replied: "At the time of our Prophet of the most blessed memory, and at the time of writing of our most holy book, Al Koran, there were no theatres, and there is nothing definite against them; but, according to the venerated custom of centuries, she has no right to attend a theatrical performance, and if she does so, death is her portion."

On second thoughts, however, the Mujtahid, recognising that aristocratic ladies could not very well be hanged for such an offence, yet anxious to please the Seyyid, promised to write to the Governor, to get him to have the ladies' husbands punished. After the necessary inquiries, the gentlemen were invited to the Governor's palace, and there rebuked for their "khlaif shar" conduct; and after a moral lecture and some advice regarding their future behaviour, took their departure, none too well pleased. It may be stated in passing that the son of the Governor had been present at the performance, but had seen no "khlaif shar" in the ladies' presence.

The perturbed husbands, joined by the Governor's son, next went off to the Mujtahid with a query of their own. "Agha," said they, "what is your opinion of, and according to our Holy law what should be the punishment meted out to, a seyid, a descendant of the Blessed Prophet (on whom have peace), if he drinks arak all day, and is intoxicated every night?"

The Mujtahid understood, of course, "where the head of the animal was hid," as the saying goes; but he was caught in a trap, and was bound to give his opinion. And his opinion could only be in accordance with the law, which, in plain words forbids drunkenness. "Such a man," said he, "is no true Moslem, but a kafir (unbeliever)."

At once came the second query: "And what is the punishment for a Moslem who conducts himself like a kafir?"

"The bastinado," replied the Mujtahid, substituting that penalty for "death."

"Then," said the gentlemen, "this Seyyid X— must certainly be bastinadoed for being drunk every night, and must be beaten anew every time he breaks the law."

The Mujtahid promised to punish the Seyyid. But in truly conciliatory spirit proper to one of his position, he added: "He is guilty, and so are you gentlemen; but this time we will let his sins obliterate your guilt, and your offences shall be set against his wrong-doing. Thus the account is even. Take care that you offend no more."

By MIRZA FIROOZ KHAN.

PRESS ON THE NEAR EAST.

A Balkan Pot-Pourri.

In an article entitled "The Truth About the Balkans," in the current issue of the *Quarterly Review*, Mr. H. Charles Woods summarises conditions in South-Eastern Europe as he was able to diagnose them during a recent tour in that part of the world. It is not possible within the space available here to deal fully with the comments on the situation in the several countries. Mr. Woods has himself experienced difficulty in compressing his survey into the limits imposed, and it is probable that some of his analyses have suffered from over-condensation. In Yugoslavia he recognises the difficulties of reconciling tendencies towards autonomous privileges in the component States with the requirements of union. But there are two facts "which speak well for the future." The Prince Regent is "a material asset and a binding force in the country," and "I found nobody in Croatia or Slovenia (where I saw representative men of the various political parties) who was opposed to some form of union with Serbia."

"The future," Mr. Woods adds, "almost entirely depends upon whether M. Pashitch, who is the most experienced statesman in the country, is capable of adapting and broadening his ideas to suit the new circumstances by which he is surrounded, and upon whether the present or another Government is able to arrive at a compromise upon the constitutional question—a compromise which must be acceptable not only to the Cabinet assembled at Belgrade, but also to the peoples of the component parts of the present State."

On the subject of Roumania, Mr. Woods is more critical, and it is hardly likely that his potted strictures will pass unchallenged in Roumanian quarters. Probably in no country in the Balkans—Greece not excepted—is the game of politics fought out with greater intensity of feeling, or do politicians "let themselves go" with such complete abandon. It is only necessary to read a party paper to feel convinced that every prominent adherent of an opposition party ought at once in the interests of the country to be hanged from the nearest lamp-post, until, of course, you pick up an opposition paper and realise that such an end would be far too mild and flattering for that organ's political opponents. The result is that the foreigner from a land where politics are run under different rules is apt to imagine that Roumania, like Sodom of old, is likely to perish for want of five righteous men. It remains to be seen whether the inferences which the writer has drawn obviously from the speeches of ardent politicians will be borne out by the actual course of events. Mr. Woods writes:—

"... the people (Roumanes and others) of all the new areas, and especially those of the former Austro-Hungarian empire, who are far better educated than those of old Roumania, are becoming more and more dissatisfied. Indeed, as things stand, I believe that discontent is rife and widespread in the new territories (particularly in those which used to form part of the Dual Monarchy), and that, unless their peoples, who at one time favoured union, are given the very considerable voice which they deserve in the government of the whole country, there may be a most serious movement either for independence or for union with Hungary, the government of which, though severe, was always correct."

Again, Mr. Woods indulges in a very sweeping denunciation of the Roumanian administration:—

"This is the only country in the Balkans where little attempt has been made to set up a policy of reconstruction and where chaos and corruption exist on all sides. . . . In spite of the absolute necessity for Roumania to introduce reforms, one finds that from the time of her entry into the war up till last December there had been no proper budget, and the current expenses of the State, so far as paid, were met largely by internal loans and issues of paper money. . . . Again, the corruption, for which Roumania has always been notorious, has increased to a degree which makes the present state of things more dreadful than that which existed in Turkey during the worst days of Abdul Hamid, when bribery there was at its height."

Clearly the picture is over-painted here, and one is forced to wonder how many personal experiences have gone to make up the winter of the artist's discontent. The corruption legend can be overdone, and the surest way to bring that about is to allow every visitor to Roumania to arrive convinced that nothing but open-handed bribery will enable him to set one foot in front of the other. In regard to hotels, it is probably true that the shortage of accommodation has encouraged every staff to make the foreigner pay for the privilege of admission, but higher up in the social scale it is not infrequently the case that readiness to accept a commission is surpassed by the eagerness to offer one, and the transaction is simply regarded as further evidence of the spendthrift folly of the average foreigner. Generalisations are invariably misleading, and it would be unfair to Roumania to allow the impression to get abroad that conditions there are as hopeless as, let us say, the Irish-American represents them with sublime conviction to be at the present moment in the United Kingdom.

The Progress of Iraq.

The *Basrah Times* of March 15 contains an article with the above heading, in which it states that the tour from

Baghdad down the Tigris of Seyyid Talib Pasha, whose recent deportation makes the article of immediate interest, "has certainly done a great deal of good." It should, it says, serve to show critics of the new Administration that the people of Iraq are not so lacking the spirit of cohesive nationalism as, for instance, H.H. the Aga Khan suggested when he wrote that "the people are split up into tribes and sects, mostly jealous of one another, and the atmosphere is that of perpetual strife."

It would be idle to contend that the history of the Arab peoples of Iraq does not afford substantial ground for his Highness's belief. The tribal system in Mesopotamia, whatever advantages it may or may not confer on those who live under its aegis, is not conducive to the longevity or peace of mind of a central administration, unless the latter deliberately trades on the tribal proclivity for internecine warfare, and foment trouble in order modestly to divert the attention of the country as a whole from the effects of its edicts. Such a policy would not appeal to the British advisers in Mesopotamia, and, if one may judge by the speeches of the recently appointed Ministers and Mutasarrifs, neither does it hold out any attractions to the Arab Council of State.

Continuing, the article says that when the future of the regenerated Iraq comes to be written, this tour of Seyyid Talib Pasha, who took as his slogan "Partnership is a necessary service for all," must rank as a milestone in the path of progress.

The writer proceeds to examine the causes of the alarm with which some members of the House of Commons were struck when they considered the annual cost to Britain of the mandates for Mesopotamia and Palestine, and concludes:

As we understand the situation, there is to be no pretension on the part of the British advisers in Mesopotamia that their mission is to "reform" the Arabs. The object is rather to afford the people of Iraq an opportunity to reform themselves—an opportunity which they have never had before. Not long ago Lord Sydenham protested against an assertion that Britain had "one story for India, one for Egypt, and a different story for Mesopotamia," and he went on to say: "This I regard as unjust and misleading. We have only one policy in these countries and others which fate has left upon our hands. We desire to give the fullest measure of self-government compatible with the discharge of our responsibilities to the peoples as a whole and to foreign Powers." This statement is the true interpretation of our policy and presence in Mesopotamia. We have heard Arabs object that such disinterestedness is no more probable in the policy of a nation than it would be in the private transactions of the average individual. "The British," said a Basrawi merchant the other day, "are not here for the sake of our bright black eyes!" He forgot that not only is there a moral obligation on the part of Britain to do her best to set up an administration in Iraq to replace the corrupt government which, in pursuit of her military policy, she was compelled to destroy: there is another incentive, and possibly a stronger, in the fact that a peaceful, prosperous Mesopotamia would be a valuable guarantee for the future welfare of Britain's important interests in the Near and Middle East. Our Arab friends should consider this in conjunction with British assurances that there is no intention to exploit the commercial resources of Iraq in the interests of outsiders. There is an even more pregnant factor to be kept in mind; it is that at the Near East Conference in London the official delegates of the Ottoman Government and those representing the Angora Government were agreed on certain principles, one of which laid down that Turkish rule should not be extended to countries inhabited by Arab majorities. Mesopotamia, it seems, has to choose between British help or none at all.

Articles to Note.

"The Sacrifice of Greece; or, The Story of a Scrap of Paper," by R. B. C. Sheridan, in the *Nineteenth Century* (May).

"The Revision of the Turkish Treaty: (1) Armenia, (2) Smyrna, and (3) Thrace," by Viscount Bryce, O.M., Sir J. J. Stavridi, and Noel Buxton respectively; and "India and the League of Nations," by A. Yusuf Ali, C.B.E., in the *Contemporary Review* (May).

"Reconciliation in India," by Holford Knight; "The Situation in the Middle East," by Robert Machray; "Trieste, Salenica, and Smyrna," by H. Charles Woods; and "Persia at the Crisis of Her Fate," by Brigadier-General Sir Percy Sykes, K.C.I.E., C.B., in the *Fortnightly Review* (May).

A special census, with the help of the police, is to be taken of the beggars of Bombay. This census is expected to throw light on the part the beggars play in disseminating disease.

A new hospital building containing four wards, fully equipped with every modern convenience, has been given recently by the Bora caste of Mohammedan merchants of the city of Madiad, India, to the Thoburn Memorial Hospital, maintained there by the Board of Foreign Missions of the Methodist Episcopal Church (United States).

A White Paper (Cmd. 1239) has been published at 6d., containing the text of the Anglo-French Convention of September 8, 1918, which supplements the Boundary Convention of June 14, 1898, and the Declaration of March 21, 1899, about the boundary between the Anglo-Egyptian Sudan and French territory. This is shown on a scale of 1:3,000,000 from 9° to 22° north latitude.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

April 25.—Mr. Harmsworth informed Col. Wedgwood that the Allied Governments had decided that the sub-Commission of the International Allied Military Mission at Budapest would remain at Pecs, in the Baranga district of Hungary, to supervise the transfer of that area from the Yugoslav to the Hungarian authorities on the ratification of the Hungarian Peace Treaty; and the Allied Governments were considering the question of the desirability of ensuring the presence of some civilian representatives as well.

Commander Bellairs asked the Secretary of State for India the relative cost of a British and native Indian soldier per annum in India. Mr. Montagu replied that a recent estimate by the Government of India gives 1,971 rupees and 411 rupees as the annual cost respectively.

April 26.—Mr. Aubrey Herbert asked whether Greek military forces have landed in the Gulf of Ismid, and whether this is compatible with the neutrality that the Allies have declared. Mr. Harmsworth replied that Greek forces were landed in the Gulf of Ismid last year, and were placed under the command of Sir T. Harrington. He relinquished his command over them, however, before the outbreak of the recent Greco-Turkish hostilities. These troops are doubtless receiving reinforcements by sea; but the neutrality of the principal Allied Powers in the present hostilities precludes them from interfering with the passage of such reinforcements except to the extent of preventing any territory or port in Allied occupation being used as a base for their despatch.

April 28.—Mr. Amery informed Sir W. Davis that all the vessels of the Bulgarian Navy have, with two exceptions, been left in Bulgarian hands, the majority being damaged or worthless. The latter consist of four torpedo-boats and six armed motor-boats. The exceptions are one gun-boat, which is being sold for the joint benefit of the Allies, and one submarine, which has been allocated to, and will be sold for the benefit of, Great Britain.

Mr. Montagu informed Sir Thomas Bennett that, according to a newspaper report from India, the new census reveals the population of Bombay City as 1,172,953, while that of Calcutta is 884,705.

Mr. Wood informed Mr. Ormsby-Gore that the territory east of Palestine is now known officially as Transjordan, and will retain that name.

Several questions appeared on the paper during the course of the week, in the name of Lieut.-Col. James and others, dealing with the situation in Egypt occasioned by the changed attitude of Zaghloul Pasha. All these questions were postponed at the request of the Foreign Office for a week.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:

PEACE TREATIES: Italy and Turkey. GREECE (OPERATIONS AGAINST TURKS). ARMENIA. DEMOBILISED OFFICERS' PASSAGES (INDIA). INDIA: Sikh Regiment, Amritsar (Unfounded Report). (April 18.)

INDIA: Colonisation (British Subjects).—Army Reductions.—Established Church. EGYPT, PERSIA. (April 19.)

TURKISH NATIONALIST GOVERNMENT (AGREEMENTS). ALBANIA. MIDDLE EAST (MR. CHURCHILL'S VISIT). CONSTANTINOPLE. (BILLETING). INDIA: Provincial Legislatures (Standing Committees).—Egret Feathers (Export). (April 20.)

GREECE AND TURKEY. PEACE TREATIES: Turkey. PERSIA. CONSTANTINOPLE (GENDARMERIE). INDIA (FRONTIER OPERATIONS). EGYPT AND PALESTINE (RAILWAY COMMUNICATION). (April 21.)

SOVIET PROPAGANDA, INDIA. INDIA: Provincial Council Elections.—Allahabad University. INDIA: British and Indian Soldiers (Cost). NATIONAL WAR MEMORIAL. (April 25.)

INDIA: Seditious Speeches.—Elections, Madras.—High Court Judges.—Trade Unions.—Dr. Kichlew and Rambahuj Dutt.—Cavalry Regiments (Reduction).—Disturbances (North-West Frontier).—European and Native Troops.—Madras Military Fund. GREECE AND TURKEY. PUBLIC SERVANTS, INDIA. MESOPOTAMIA. (April 26.)

GREECE AND TURKEY. PEACE TREATIES: Bulgarian Naval and Merchant Ships. ROYAL AIR FORCE: Collision of Aeroplanes, Cairo. INDIA: Bombay and Calcutta (Population).—Feathers (Export).—Silver Dollars (Purchase).—Army Officers (Repatriation). TRANS-JORDANIA. (April 28.)

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE CASE OF RAHMY BEY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Readers of THE NEAR EAST are familiar with the question of Rahmy Bey's imprisonment at Malta. During the war, Rahmy Bey, Governor of Smyrna, showed very unusual kindness to British residents and British prisoners at Smyrna. The British Government took the unprecedented step of thanking him, during the war, through Sir F. Elliot, our representative at Athens. When the Greeks landed on April 21, 1919, and the massacres occurred, Rahmy Bey, after being treated with considerable indignity by the Greeks, was taken on a British cruiser and sent to Malta. Since then he has been imprisoned in Malta, separated from his wife and children, without any charge being preferred against him. I have several times pointed out in the House of Commons that his treatment was against all our traditions, and, in fact, against the traditions of honour and gratitude. The other day, I received a letter from Rahmy Bey, thanking me, in formal terms. I enclose my answer. I shall be grateful to you if you will publish.—I am, etc.,

AUBREY HERBERT.

House of Commons, April 27, 1921.

[COPY.]

April 27, 1921.

Dear Rahmy Bey,—I am much obliged for your letter of thanks to me, which was, however, quite unnecessary, as all the thanks should come from men like myself. I am very sorry that my efforts to achieve your liberation have been unavailing. There are a number of people in this country who know of the great kindness with which your Excellency consistently treated Englishmen and British prisoners during the war.

All who know the facts are sorry and ashamed that you should have been treated with such gross ingratitude.

I am, yours sincerely,

(Signed) AUBREY HERBERT.

We have received the sixth annual report of the Armenian Red Cross and Refugee Fund. It is stated therein that during the year 1920 the amount of £6,503 was received, bringing the total of the Fund to the end of the year to £26,104.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Greeks and British Trade.

Our Smyrna Correspondent reports that the Greek military authorities there have placed an embargo on the export of "cloth and such other articles that may be used for military purposes" from Smyrna to Adana, Adalia, and Sokia areas. This restriction, he points out, falls heavily on British firms, who have imported large stocks of cloth to distribute in these districts. It is not difficult to understand the motive underlying Greek policy at Smyrna, but there can be little doubt as to the effect of measures such as that in question. If traders are to be harassed at every turn by regulations and restrictions, of which that on the export of wheat provides the outstanding example, there is a great danger that they will turn their attention to some centre where they are free to pursue their business. Under the Turks Smyrna was a flourishing commercial centre, and one of constantly growing importance. It will be a poor bargain for Greece to gain territory in Asia Minor at the expense of ruining Smyrna.

Pumps for Mesopotamia.

Makers of pumping machinery will be interested in the reference in the article on cotton cultivation in Mesopotamia which appears in another column to the increasing use of centrifugal pumps in that region. The Arabs discovered the utility of these pumps some years before the war, and, as I have pointed out in these columns, were beginning to utilise them then on a moderate scale. But, of course, the obstacle then to their adoption on a great scale was the lack of security under the Turkish administration. That they have been coming rapidly into use since 1918 affords the best possible testimony that the Arab could give to British rule. As the writer of the article aptly puts it, the fact "is a positive indication that the Arab in general is satisfied that his property will, under British administration, be reasonably secure."

The Export Credits Scheme.

There is no little impatience in commercial circles because the authorities have not yet brought their new export credits scheme into operation. Business men anxious to develop trade with countries whose exchanges render ordinary transactions out of the question are hindered from doing so because the original export credits scheme, which still holds the field, falls far short of their requirements. The delay in introducing the revised scheme is, I believe, due to the numerous criticisms that were made when its provisions were outlined last March. It was felt necessary to make certain alterations in order to meet the critics as far as possible, and the revision has taken time, while the coal strike has naturally occasioned further delay. I gather that the scheme is now ready and that the requisite steps will be taken to make it operative at the earliest possible moment.

Related Tenders.

I have had occasion to refer several times in these notes to the serious handicap with which British traders are too often confronted in regard to tenders for Near Eastern countries. Unfortunately, it is impossible to say that there has so far been any great improvement in this state of things. Only last week a correspondent received notice of a tender, the closing date of which absolutely prevented him from taking any action in the matter. It is well known, of course, that some of the Balkan countries are not too exigent in the matter of dates, but British firms, as a rule, do not care to interest themselves in tenders unless they are certain they can comply with the stated requirements. In the majority of cases Balkan tenders give ample time for British firms, provided they receive notice at once. In the circumstances, it would seem eminently desirable that British Consular officials should cable home particulars of all important tenders.

Great Britain and Bulgaria.

A very encouraging note is struck by our Sofia Correspondent in his letter this week, in which he compares the commercial aspect of Sofia as it is now and as it was four

months ago. He comments on the much greater variety and the larger stocks of goods on view in the shops and warehouses. "Goods have been coming in in large quantities," he adds, "and one is glad to be able to state that, as regards actual merchandise, England is fully holding her own." In view of the hampering effect on trade of the adverse exchanges, this is more than gratifying, and it carries a plain moral for the British business man as to the prospects in the Bulgarian market, once conditions permit normal trade.

The British India Corporation.

At the general meeting of the British India Corporation held recently at Cawnpore, Sir Alexander McRobert, the chairman, was able to give a most satisfactory review of the position of the company, which, it will be remembered, was formed a little over a year ago to incorporate a number of the leading industrial establishments of India, notably the Cawnpore Woollen Mills and Messrs. Cooper Allen and Co. The results of the year have enabled the directors to write off the whole of the preliminary expenses and to reduce goodwill by 35 lakhs, leaving only 20 lakhs to be dealt with under this heading, so that we may assume that in a year or so this item will entirely disappear. The actual profit amounted to Rs. 75,60,000, a considerable advance on the forecast in the prospectus, which was Rs. 66,00,000, and the dividend on the ordinary shares is 10 per cent. free of income-tax, regarding which Sir Alexander said that the directors believed it wise to play for safety and to recommend a distribution which there was reasonable hope of maintaining, if not bettering, in future years. Sir Alexander concluded with a reference to the unsettled labour position in the country, and pointed out that a reasonable dividend in future depended very much on the attitude and behaviour of the workers.

French Enterprise in Syria.

While French policy may seem not infrequently to be open to question, it is impossible not to admire the energy and thoroughness with which our Allies have set themselves to the task of administering and developing a region like Syria. Our Beyrout Correspondent gives this week a few details which throw a very interesting light on French enterprise there. Special attention is naturally being paid to railway communications, and the Tripoli-Homs line is being rapidly reconstructed, while plans are ready for lines between Beyrout and Tripoli and between Alexandretta and Aleppo. Then, in addition, the French have granted a concession for the construction of a central wireless station near Beyrout and smaller stations throughout the country to a French company. I mention the nationality of the company because it is symptomatic of the policy of every country but our own to safeguard the interests of their nationals where business of this kind is going. It would be a very excellent thing if we could bring ourselves to take a leaf out of their book in this respect. As it is, we read without surprise of orders being even placed in Germany by British Possessions. Imagine such an occurrence under French régime!

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 17, TOKENHOUSE YARD,
LOTHBURY, E.C.2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

GREECE.

ATHENS, April 19.

The National Bank Meeting.

At a general meeting of the shareholders of the National Bank of Greece, under the chairmanship of M. G. Streit, the Governor, M. Maximos, who recently returned from his unsuccessful journey to London, made an important statement regarding the general financial position. He said that in order to ensure the application of the Treaty of Sèvres, the Greeks were obliged to make great sacrifices both in life and in money. Only a few days ago the Government had found it necessary to reinforce the army by calling up three more classes of reserves. The balance-sheets of the National Bank gave an idea as to what the economic consequences of these measures would be. On December 31, 1920 (o.s.), the debt of the State to the bank amounted to 1,369,299,743.00 drachmæ, as against 653,036,179.00 drachmæ on December 31, 1919. It would be seen by these figures that during the former year the bank had advanced 716,263,564 drachmæ to the State, which money was chiefly used in connection with the campaign in Asia Minor. As soon as the economic crisis had ceased to make itself felt on the foreign markets, the National Bank would direct all its attention to obtaining assistance in order to relieve the situation. He then pointed out that on December 31, 1920, the Greek national debt amounted to 4,200 million drachmæ, which was considerably less per head than that of any of the Allied nations. Finally, he said that he was very optimistic in regard to the pourparlers with financial circles in London.

Price of Bread Increased.

The Government has increased the price of bread by 40 lepta per oka for first quality flour, and by 30 lepta for the second quality. As soon as this increase was announced a bakers' deputation presented itself before the Minister of Supplies, and demanded an increase in wages. M. Protapadakis consented to this, and the bakers will now receive an additional four lepta for every oka of bread. The price of wheat has been fixed at 1.25 drachmæ c.i.f. Greek port, and that of white flour sold in the Government stores at 2.57 drachmæ per oka.

Customs Receipts.

The receipts of the Piræus Customs during March amounted to 6,810,024.05 drachmæ in paper and 268,105.25 drachmæ in gold. Compared with the receipts during the corresponding period last year there is an increase this year of 755,512.35 drachmæ in paper and a decrease of 202,209.65 drachmæ in gold.

ATHENS, April 23.

The New Loan.

The news published by two morning papers last Tuesday to the effect that the Government contemplated putting into circulation a considerable amount of paper money caused something like a panic amongst financial circles. The pound sterling from 57 drachmæ jumped up to 62, and the French franc was quoted at 1.20 drachmæ. Early in the afternoon the Government officially denied the rumour, but at the sitting of the National Assembly on the same evening the Minister of Finance introduced a Bill proposing the ratification of the following convention concluded between the Government and the National Bank of Greece on March 31

last (O.S.):—The privilege of the National Bank to issue banknotes is extended up to 1950, and will include the territories ceded to Greece by the Treaty of Sèvres. The National Bank undertakes to grant a loan to the State of 550 million drachmæ, and has the right to increase by 500 million drachmæ the circulation of its paper money. The new issue of notes will be guaranteed by short-term commercial concessions and National Loan Bonds. The State's share of the bank's profits accruing from the issue of these banknotes is regulated by the convention of 1914. The National Bank undertakes to increase its capital to 100,000,000 drachmæ within two years, and to establish five new branches within the same period. The loan of 550 million drachmæ will be made against bonds of an equal value. The interest is fixed at 5 per cent. for the first 50 millions, plus one per cent. per annum for amortisation. For the balance of the loan a yearly interest of 4½ per cent. will be paid. The interest and the amortisation are guaranteed by the State's share of the National Bank's profits, by the surplus public revenue at the disposal of the International Control, and, if necessary, by the regular revenues from the State's Budget.

YUGOSLAVIA.

ZAGREB, April 25.

Rumour of Forged Notes.

It has been rumoured that there are large quantities of forged 10 dinar notes in circulation. The rumours have been widely believed, especially as the 20 dinar notes were so largely forged that they had to be recalled. The Ministry of Finance has issued a statement that there are no forged notes of this denomination known to be in circulation, and that action will be taken against any persons spreading the story.

Machinery from Germany.

It is stated that the Government has accepted an offer made by Germany to deliver machinery instead of the ten thousand horses due under the treaty. There is no lack of horses, and good ones, too, in Yugoslavia, and even a certain amount of export has been permitted. But there is a decided shortage of cattle, and it is hoped that Germany will not be long in fulfilling her obligations in this respect.
