NOTES OF THE WEEK.

The Allies and Turkey.

In the course of his remarks on the situation in the Near East during the debate in the House of Commons on December 22 Mr. Lloyd George was not able to add much to our knowledge of the actual position. He was more concerned to ask Parliament to support the Government in the non-committal attitude that it has taken up. With regard to Turkey he held that Great Britain could only approach Mustapha Kemal through the Constantinople Government; as the latter was now in touch with the Angora authorities, nothing could be done until the result of the negotiations was known. He pointed out that territorial modifications of the Treaty of Sévres might well be the same as the tearing up of the Treaty, and he seemed inclined to favour the policy of waiting to see what Greece under the new régime proposed to do in connection with her responsibilities in Asia Minor.

Mr. Lloyd George and Greece.

Perhaps the most notable part of the Prime Minister's speech was his admission that there might be another side to the Greek question. "We have all been filled," he said, "with a good deal of resentment and a certain measure of contempt for their (Greek) action recently, but we do not know the whole of the facts, and there may be explanations. It is very difficult for one country to judge the politics of another." He continued: "Are we upon scrappy meagre evidence to found a great policy in a part of the world which is vital to Great Britain, more vital to Britain than to any other country in the world, and vital to interests which Britain has deeply at heart?" Accordingly, Mr. Lloyd George deprecated "rushing" into any new policy in the Near East. It is to be hoped from his remarks that King Constantine and the Greek Government will now be given an opportunity of following a course conforming with the Allies' wishes, if they are so minded. The only effect of the policy advocated by the French Government would have been to antagonise the Greek people without making sure that any of the advantages anticipated from a modification of the Turkish Treaty would be secured.

M. Sterghiadis.

The announcement that M. Sterghiadis, Greek High Commissioner of Smyrna, "has rallied to King Constantine" may have an important bearing on the course of events in the Near East. In the first place M.

Sterghiadis, who has never been a party man, may, from his own point of view, have done nothing more than his obvious duty in placing his services at the disposal of his Sovereign. But his action brings to the side of the Greek Government the one man who shares with M. Venizelos the position of being head and shoulders above his contemporaries. M. Sterghiadis has earned the good will and esteem of all the Allied representatives with whom he has been brought into contact, and if he could be persuaded to take charge of the Greek Administration the last excuse that the British and French Governments have for sending Greece under King Constantine to Coventry would be removed. In view of the present attitude of the two Powers, it is difficult to see how any Greek Government can do the right thing or fail to be driven into a false position, to the prejudice alike of Greek and Allied interests. With M. Sterghiadis as Prime Minister, the folly of the policy that has found favour with Mr. Lloyd George and M. Leygues must be apparent even to its authors.

A Peasant Entente.

A report credits M. Stambolisky, the Bulgarian Prime Minister, with a desire to bring about an *entente* between the peasant organisations of the countries of Central and Eastern Europe with the object of defending the rights of small agricultural proprietors against Bolshevism on the one hand and reactionary tendencies on the other. It will be necessary to learn more about the scheme before its chances of success can be gauged. There can be no doubt that the peasant communities of the various countries are more drawn towards one another than politicians and newspapers will always allow, and any proposal of a federal nature emanating from the Balkans is to be welcomed. On the other hand, the peasant politician, where not endowed with the genius of a Stambolisky, has his limitations, and unless he listens to sound advice is apt to indulge in legislative experiments that are only a few degrees less fatal to the economic prosperity of the country than the iconoclastic doctrines of Bolshevism. But, whatever the details of the Bulgarian Prime Minister's scheme, he is on sure ground in pointing to the peasant proprietor as an infallible bulwark against the Bolshevik theories.

Bolshevist Threat to Caucasia.

"The wish is father to the thought," and the Bolsheviks are fond of reporting as having actually occurred what are, in fact, only effects that they hope to bring about by means either of their propaganda or of their armed forces. This probably accounts for disturbing

reports regarding the situation in Georgia which found their way recently to this country from Constantinople, only to be denied by the Georgian representative in London. According to the latter, the political situation in Georgia was officially reported to be "absolutely stable" on December 26, and "no crisis whatsoever or disturbances worthy of mention" have taken place there; and other messages from Georgia, reporting the arrival at Batoum on December 29 of a French cruiser, add that the situation was quite calm. Moreover, it is satisfactory to learn, the Georgian Government felt itself able quite recently to return a decidedly stiff reply to a Note addressed to it by M. Chicherin on the subject of Batoum. Steps taken for the defence of that town "without the knowledge and consent of the Georgian Government," M. Chicherin was bluntly told, would be "interpreted as acts of an imperialistic character"; and the Georgian Government intimated that it felt capable of defending its own territory and had no wish for outside help.

A Time for Action.

Although this is only what we should expect from the Georgians, it stirs our admiration none the less, and we sincerely hope that their confidence in themselves will be fully justified. But in view of recent happenings it is difficult to avoid the conclusion that the matter may very soon be put to the test by their Bolshevik neighbours; and should that prove to be the case it would be not only cowardly, but extremely unwise also, if the Allies left them to endeavour to dam back the "Red" flood unaided. Armenia affords a painful example of the results of such a policy; and unless we are willing to see the Bolsheviks, when they are ready, make a determined attempt to gain complete control of Caucasia, we must take the lesson to heart, and be prepared to help Georgia promptly and unstintedly if and when the need arises. If we are not prepared to take such action, we must not be surprised if Persia should be overrun by the Bolshevik hordes, and if Anatolia, Syria, and Mesopotamia have to stand on the defensive against them in the near future. It would be interesting to know whether the Allies have made their choice of these alternatives, or whether they are hoping against hope that some miracle may occur to save them from that painful necessity.

A Barmecide Feast.

Coming at such a time, the publication of President Wilson's award on the Turco-Armenian boundary question inevitably wears a rather ironical appearance, and will probably remind many people of a Barmecide feast. According to this award Armenia is to receive Kars, Trebizond, Tireboli (some 50 miles west of Trebizond), Erzinjan, Mush, and Bitlis, the boundary passing south of Lake Van. Comparing this with the actual area under Armenian rule to-day, and remembering the desperate straits to which the unfortunate Armenians were put to defend the territories of the Armenian Republic against the Kemalists and the Bolsheviks, we cannot avoid the feeling that the terms of the award are not likely to be enforced in the near future. They might have been enforced soon after the Armistice, but the delay has changed the situation entirely; and the disappointed Armenians must, in fairness, place the responsibility for the delay where it is chiefly due. Neither President Wilson's sincerity nor the generosity of his impulses will ever be questioned, but his failure to win over his countrymen to his views has spelled disaster for the Armenians.

Indian Politics.

For the moment the centre of interest in the field of Indian politics has shifted to Nagpur, where the National Congress, now a predominantly Extremist body, is grappling with the future of its notorious policy of non-co-operation. So far the cables have brought news only of the preliminary manoeuvres, which cannot be interpreted with safety at this distance, and we must await the reports of the final sittings to know how far the militants who control the proceedings have been influenced by the gradual development of hostility among the general public. A month ago the protagonist, Mr. Gandhi, was still serenely confident in his

monopoly of political wisdom, and even the redoubtable Colonel Wedgwood admitted in the course of an interview that his attempts at conversion had proved futile. Those who have read Sir Valentine Chirol's incisive character-sketch of the "saint and firebrand" in his recent article in *The Times* will recognise that Mr. Gandhi's mentality is definitely irrational, and the issue has now to be decided by the men who have hitherto followed him. If their enthusiasm is maintained, there is probably trouble ahead, and the best hope for India is that the pernicious doctrine of non-co-operation may gradually be submerged by the rising tide of sanity, which is the distinctive feature of the last few months.

The Indian Civil Service.

At last we have the final decision of the authorities on the methods of recruitment for the Indian Civil Service. With one important exception the scheme follows the general lines laid down by the Public Services Commission six years ago, with provision for the higher proportion of Indians proposed subsequently in the joint report of Lord Chelmsford and Mr. Montagu. The exception is that, while the Commission proposed to recruit from the schools, the Secretary of State has decided to rely on the universities, and has fixed the age limit for the competition at 21-23, the reduction of a year allowing of a corresponding increase in the period available for training on probation. We do not propose to re-argue the vexed question of universities versus schools, now decided for the time, but we must congratulate the authorities on the extension of the period of probation, the shortness of which was the great blot on the system in force before the war. The extra year will be invaluable, provided that the course of reading is properly devised and the instructors wisely chosen; and it ought to be possible to send out men thoroughly grounded not only in jurisprudence, history and economics, the subjects which have always been essential, but also in political science, a knowledge of which will be not less necessary under the new régime.

Indian Honours.

So far as India is concerned, the outstanding feature of the Honours List issued on New Year's Day is the recognition accorded to successful commercial enterprise. Sir Ernest Cable's peerage and Sir Archibald Birkmyre's baronetcy will be generally acclaimed in Calcutta, and they are supported by four new knights, Sir Thomas Bennett for Bombay, Sir Montagu Webb for Karachi, Sir Alexander Murray for Calcutta, and Sir Thomas Smith for Cawnpore, making altogether a representative and satisfactory selection. The lists of honours conferred on officials are mostly of the familiar type, but we are glad to find the name of Mr. D. T. Chadwick, the Indian Trade Commissioner in London, among the new Companions of the Indian Empire; while the conferment of the same distinction on Dr. Butler, of Pusa, and Mr. Sampson, of Madras, may be welcomed as an indication that the devoted labours of the pioneers of agricultural development are at last winning some share of the recognition they have earned so well.

THE NEAR EAST.

To be obtained at all Bookstalls.

THE WEEK AT HOME.

LONDON, Monday Evening.

Christmas and New Year.

Christmas was astonishingly like all previous Christmases. I suppose from time immemorial foolish weather prophets have predicted hard winters and an old-fashioned Christmas—a prediction which comes off about twice a century. (Personally, I should not think it worth while to be a seer on a fifty to one chance.) Yet we always pretend to believe these people, and when Christmas comes in damp and muggy, as it did this year, we express our astonishment, and protest that the English climate is changing. But it is not. It is only necessary to look through Pepys and Evelyn to see that things were the same then. A green Christmas had never happened before, but somehow it always happened that particular year.

New Year, too, was like all previous New Years. December 31 dawned with good resolutions, January 1 with a headache. On the whole, these New Year supper dances at the hotels are becoming rather a bore, especially for anybody else staying in the hotel. One is not necessarily senile or a soured puritan because one likes to get to sleep before four in the morning.

New Year's Honours.

The Honours List was very much what was expected; a large number of prominent and estimable provincial gentlemen, a few politicians, the inevitable actor—Mr. Martin Harvey—and that most modest of all God's creatures, an editor. The one surprise was to find Dr. John Clifford, the venerable Nonconformist, a Companion of Honour—a distinction which he shares with Mr. Seddon, the Labour leader, and a few others.

On the whole, it might have been worse; one remembers some Honours Lists of which it might have been said that "among that earthen lot, some could articulate, while others not"—at least, so far as aspirates were concerned. Nothing is here for tears, or even for malicious gossip.

Parliament Adjourns.

Parliament rose just before Christmas, after an all-night sitting which lasted till noon the next day. Members do not meet again before February, and next session we are promised licensing and anti-dumping, a Scylla and Charybdis on which the Independent Liberals are hoping that the Coalition will split. Their hopes are not likely to be gratified, but for all that it will be interesting to see whether or not the Coalition Liberals are able to pull their weight in the boat. Of course, it is the pose of the Wee Frees to hint that the Coalition Liberals are no longer of the true faith, but a kind of parasite on the Tory dog; they do not quite believe their own words, but they are satisfied if they have succeeded in annoying their old comrades, whom they still charge with wrecking the historic Liberal party. A cooler judgment would probably hold that the Liberal party wrecked itself—eight years of office was too much for it. But we can hardly expect the little band who are wandering in the wilderness to admit this.

Ireland.

Preparations are already being made for carrying out the provisions of the Home Rule Act. Two Parliaments are to be set up, one for Ulster, the other for the irreconcilable South; and if the ordinary rules of politics applied to Ireland, we would say that the problem was solved. So far as Ulster is concerned, there is no doubt that the provincial parliament is being taken seriously; the South has still to define its attitude. If the people want it to work, the scheme will work; if not, not. But it is difficult to see any Irish grievance left. Unfortunately, if grievances do not exist they can be manufactured.

Naval Armaments.

The discussion on naval armaments and the possible rivalry of Britain, the United States, and Japan, with the further possibility of a triangular duel—if one may use the phrase—in shipbuilding goes on. England's voice is plain and definite—the country is in favour of small armaments and peace. Rarely has there been

such unanimity; pacifist organs like the *Daily News* find themselves in agreement with the *Morning Post* and other beasts of the Tory field; economy is the watchword everywhere. It is to be hoped that some kind of agreement will be possible; people rightly feel that it would be absurd if, after disarming Europe, the rest of the world were to start the old competition afresh.

The League of Nations.

In this connection we cannot help noticing a change of tone here regarding the League of Nations. A year ago the ordinary politician found that nobody believed in it; he piped, but the audience refused to dance. Now things have changed; people are beginning to think that the League may have a future. The admission of Austria and Bulgaria has certainly made a difference; I doubt if there would be any great objection here to the admission of Germany in a few more months. The absence of America is, of course, regretted, but we have grown accustomed to that. Russia is another matter, and the controversy over Russia remains a bitter one.

On the whole, Mr. H. G. Wells has done a good deal to turn public opinion against the resumption of trade with Russia. He was obviously a friendly witness for the Bolsheviks, and he indulged in the usual ridiculous denunciations of the "blockade" and the "capitalist"; but his work did leave the impression that Russia has nothing to trade with except propaganda, a commodity with which we are already overstocked.

The revulsion against the Bolshevik theory has been marked during the last three months; outside the Clyde district it would be difficult to find anybody in the British Isles who now takes it seriously. And the advocates of trade with Russia are too vague in their details to carry much weight; the suggestion that the resumption of trade with a country in that position will be a cure for unemployment is too absurd to convince the ordinary man that it is put forward sincerely.

School Increases.

The announcement is made that the public and private schools are again compelled to put up their fees. Twenty-five per cent. has already been added in most cases; another ten per cent. is now spoken of. It now costs more to send a single boy to a public school than to feed and clothe two or three children at home, which is absurd; but the great schools are more than full. Their patrons, however, are changing; very few of the clergy, for example, can afford to send their children to a public school, and the university is quite beyond their means. One cannot think this a good thing for the future of the country.

The Small Depositor.

When Farrow's Bank failed early last month a good deal of criticism was directed against the great banks for their attitude towards the small depositor. The thrifty person who can only save a pound or so at a time never ventures to open an account at one of the Big Five's branches; there has been a general impression that they do not want him, and that they take his money with a sort of supercilious condescension, as though they were conferring a favour on him. The consequence is that, unless he goes to the Post Office Savings Bank, which is swathed with the usual official red tape, he is forced into the hands of the so-called penny banks, which generally collapse sooner or later.

Fortunately the attitude of the great banks is now said to be changing. One of these institutions, Lloyds, is advertising that it welcomes the small depositor; but, I take it, the trouble is not with the directors but with the branch staffs. The small depositor in bulk is a considerable factor, and the board of a great bank knows it; but in detail his petty transactions are rather a bother to the clerks, who do not encourage him. This attitude of mind will have to be changed if any good is to be done; for the small depositor has feelings like the rest of us, and the same objection to being politely snubbed.

The Book World.

A disappointed author once wrote a short story about a publisher who, he said, became human at Christmas and did not recognise himself. He was so shocked at

the reality that he offered to spend the rest of his life making reparation, but his punishment was even worse: he was condemned to turn into a publisher again.

Whatever the truth or the reverse of this very moral story, the publishing world ceases from issuing new masterpieces at and immediately after Christmas, and devotes itself to stocktaking. As books sell well in these days, this should be a cheering occupation; but I am informed that the real difficulty is the question of cheap reprints. Hundreds of books are out of stock and awaiting new editions, but it does not in the least follow that because a book sold well at sevenpence it will catch on again at eightpence, the current equivalent; and one that found a ready market at a shilling may be a drug in the market at half a crown.

Authors and subjects, of course, have mysterious alternations of popularity and neglect, apart from prices, and this must be an added difficulty. A year ago, for instance, England was mad on spiritualism, and some very dreadful stuff was published; no bookseller's catalogue was complete without its ghostly revelations. But this craze is now said to be on the wane. A few of the more ardent spirits have gone on to occultism, but the mass, suddenly recalled to earth, are displaying an unprecedented interest in economics. From the seventh heaven and the Mahatmas to the theory of diminishing returns and the relations of capital and labour is a biggish jump, and I understand that the seers and crystal-gazers are very indignant about it. However, such is human folly that they are never long without a clientele.

The only book that has come my way this week is "Vision and Design" (Chatto and Windus), by Roger Fry. The ordinary art critic is a bore when he is not a humbug—very often he is a combination of both—but Mr. Fry is not merely sane, but convincing; even in his analysis of taste and beauty there is little to quarrel with, and his discussion of the cause for the lack of taste in the Victorian age—which he ascribes to the decay of craftsmanship—is altogether admirable.

OCELLUS.

THE NEW YEAR HONOURS.

Among the names mentioned in the New Year Honours List, which was issued on December 31, are the following:—

BARONS.

Beardmore, Sir William, Bt.
Cable, Sir Ernest.

COMPANION OF HONOUR.

Ellerman, Sir John Reeves, Bt.

BARONETS.

Baden-Powell, Lieutenant-General.
Sir Robert Stephenson Smyth, K.C.B., K.C.V.O.
Birkmyre, Sir Archibald, C.B.E.
Cox, Reginald Henry, D.L., J.P.
Yate, Colonel Charles Edward, C.S.I., C.M.G., D.L., M.P.

KNIGHTS.

Bennett, Thomas Sewell, C.I.E., M.P.
Oldham, Ernest Fitzjohn.
Bylands, William Peter.
Collier, George Herman, C.I.E.
Arnold, Thomas Walker, C.I.E., Litt.D.
Shadi Lal, Justice Brod Bahadur.
Banerjee, Surendra Nath.
Parekh, Gokaldas Khandas.
Webb, Montagu de Pomeroy, C.I.E., C.B.E.
Murray, Alexander Robertson, C.B.E.
Abdul Husain Sahib, Khan Bahadur Mirza.
Dadabhoi, Marakjee Byramjee, C.I.E.
Smith, Thomas, V.D.
Goenka, Rai Bahadur Hari Ram, C.I.E.

G.C.M.G.

Manning, Brigadier-General Sir William Henry, K.C.M.G., K.B.E., C.B.

C.M.G.

Orr, Major Charles William James, R.A.
Dodds, Major James Hugh Hamilton.

K.C.M.G.

Berkeley, Ernest James Lennox, C.B.

G.C.B.

De Robeck, Admiral Sir John Michael, Bt., G.C.M.G., K.C.B.

C.B. (MILITARY DIVISION).

Fitzmaurice, Rear-Admiral Maurice Swynfen, C.M.G.
Owing to pressure on our space, we are compelled to hold over the Indian list until next week.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, December 6.

The Duke of Connaught.

The Duke of Connaught is expected to pass through the Canal early in Christmas week en route to India, and the High Commissioner and his staff will go to Port Said in order to greet his Royal Highness on his way through. Lord and Lady Allenby have arranged to proceed to Khartoum for a short tour at the end of the first week of January. The Sudan is, of course, within the jurisdiction of the High Commissioner of Egypt, just as was the case before the war; and Lord Allenby, in making these annual visits to the Sudan, is but following the precedent set up by the late Sir Eldon Gorst and Lord Kitchener.

The Political Situation.

There is absolutely no change in the political situation. Adly Pasha Yeghen has had an audience of the Sultan; he has attended a meeting of the Cairo Committee of the Egyptian Delegation, at which he is reported to have made a statement meeting with the approval of the members; and he has been entertained to dinner in his capacity as President of the Club by the members of the Mohamed Ali Club. Beyond that, however, he has made no public appearance or utterance, and, as was anticipated, he seems disinclined for the present to take any active part in political affairs. There is, indeed, no doubt that the proper course for all concerned is to await the statement which the Cabinet will make in the House and the proposal which the British Government will presumably make to the Sultan as head of the Egyptian State. When the nature of that statement and of that proposal is known will be the time for action, but any step before that time would be ill-advised; and it is doubtless in accordance with this view that Adly Pasha and the other prominent Egyptians are refraining from any activity.

Meanwhile, the economic situation is receiving close attention from the Government, and is absorbing the thoughts of the mass of the population. Deputations have come up from the provinces in order to lay the situation before the Government, and on Thursday last a large body of landowners had an audience with the Sultan, at which His Highness fully discussed the situation with them and promised that every effort should be made to assist them, and from which the deputation withdrew evidently delighted at their reception. There is no doubt that this interview is a step in the right direction; and this spontaneous appeal on the part of the people to their sovereign shows that, mentally, they are returning to more constitutional lines.

The Provincial Councils have been requested to give their opinion on the question of the proposed restriction of the cotton area in 1921, and it is confidently expected that legislation on these lines will at once be introduced. It is, of course, somewhat late for this measure to have any real effect on the wheat area, for winter sowings are usually over by this time. That there would in any event be a smaller cotton area next year was to be foreseen as a natural result of the decrease in cotton prices: but while it is possible that the measure proposed will not be productive of much extension of the cereal area, the Government has been well-advised to introduce it, since it is the unanimous desire of the country; and it has been even better advised to seek the advice of the Provincial Councils, since such a procedure, by associating the people in a decision on a question interesting the whole country, cannot fail to draw governors and governed closer to one another.

The Kantara Bridge.

It has been definitely decided to demolish the railway bridge across the Canal at Kantara, and after December 31 communication between Palestine and Egypt "overland" will be maintained by means of a ferry across the Canal. As I mentioned recently, the question of this bridge has been the subject of discus-

sion for several months now between the British and Egyptian Governments on the one hand and the Compagnie Universelle du Canal de Suez on the other hand. It was, I understand, discussed last November at the annual meeting of the Consultative Council of Engineers held in Paris, and it was then decided to reject any proposal for the erection of a new bridge to replace the existing one.

It is, indeed, very regrettable that it has been found impossible to agree to the erection of a bridge, which would fulfil all requirements as to non-interference with navigation in the Suez Canal; for the substitution of ferries will naturally make the cost of transport from Cairo to Jerusalem very much higher and must lead to delay in transit. It is to be feared that the effect will be seriously to interfere with and handicap the commercial relations between Egypt and Palestine, which had gradually been growing closer, and that it will to a certain extent impede the economic and commercial development of Palestine. The latter has, of course, a good deal more to lose by this decision than Egypt, and we may in the near future hear considerably more about this question of the means of communication between the Asiatic and African sides of the Canal; for the Palestine Government will certainly not accept this decision without a fight for the maintenance of the link, which is regarded by those who have studied the question as vital to that country.

Charity Bazaar.

This afternoon the annual Bazaar in aid of the Young Women's Christian Association was held at the Semiramis Hotel. The Y.W.C.A. has done, and is still doing, excellent work in Egypt, and these annual bazaars are held in order to pay off the debt on account of the new premises which had recently to be purchased in order to meet all the calls which are nowadays made on the Association. The debt at present amounts to barely £2,300, and the Association now possesses premises for which but the other day a cash offer of £21,000 was made. The hostels run by the Association all pay their way, and the proceeds of the bazaars are devoted solely to the paying off of the debt on the property and initial establishment.

Canon Horan opened the proceedings with a short prayer, and introduced Lady Allenby, who, in an admirably phrased little speech, expressed her pleasure at having been asked to perform the ceremony, and in declaring the Bazaar open wished the venture all success. Mr. Harry Farnall brought the ceremony to a conclusion with a speech of thanks to Lady Allenby. There was an excellent attendance and the stalls were very well patronised, and the Association must have benefited materially by the brisk business done by the stall-holders.

While warmly congratulating all concerned at the excellent organisation and the successful result of their labours the writer feels, however, constrained to offer one little criticism. Neither the introducer of the gracious lady who performed the opening ceremony, nor the proposer of the vote of thanks, made any reference to the absence from the Bazaar of one of the most familiar faces, viz., Sir Alexander Baird, who for years past rarely failed to attend the Bazaar and make one of his inimitable witty speeches, and who was in all probability identified for a longer period than anyone else at present in Egypt with the work of the Association. The omission of any reference to the death, since the last Bazaar, of this old and deservedly popular resident was, of course, an oversight, but an oversight all the more regrettable seeing that the late Sir Alexander Baird was such a generous supporter of, and warm sympathiser with, local charitable enterprises, amongst them the Y.W.C.A.

CAIRO, December 13.

The Sultan in the Provinces.

His Highness the Sultan paid a State visit to Mansura on Saturday last. This visit, which was made in response to an invitation extended by a deputat-

of notables who visited Alexandria in October, should have taken place three weeks ago, but it had to be postponed owing to the death of the Sultan's sister. His Highness was accorded a very fine reception, not only at Mansura, but also all the way along the route from Tantah, the decorations being especially noticeable. There is little doubt that the interview which the cultivators had with his Highness ten days ago, and the satisfaction of the popular demand with regard to the restriction of the cotton area, were greatly responsible for the warmth of this reception. Towards the end of the year the Sultan proposes to make an extensive tour in Upper Egypt by river.

The Kantara Bridge.

With reference to what I wrote last week, communications from Palestine indicate that there is considerable feeling in commercial and other circles on the question of the demolition of the bridge; but there is no indication of any Government action as yet. In the meantime, steps are being taken to dispense with the bridge after December 31, and the railway authorities at both ends are doing their best to reduce to a minimum discomfort and inconvenience. I understand that through-booking will still be possible from Egypt to Palestine and *vice-versa*.

The Political Situation.

The telegraphic agencies last week brought us a summary of Lord Milner's preface to the new edition of his book and of the recommendations which the Milner Mission have embodied in their report to the Cabinet. Both of these items of information are being discussed with great interest. Particularly so is this the case with Lord Milner's preface, to which the vernacular press has devoted considerable space. Generally speaking, it is regarded as indicating that Lord Milner intends to defend his proposals to the utmost and that, as the report itself will probably not be made public, he is desirous of putting the case clearly before the British public before the Cabinet makes its statement of policy and a discussion on that statement can take place.

Some of the Extremist organs deduce from the publication of this new edition at the present juncture that the Milner Mission have decided to agree to the reservations, while others take up a somewhat aggressive attitude and declare that nothing but the acceptance of those reservations can solve the Egyptian problem. The summary of the recommendations, which, by the way, is obviously incomplete, has, by comparison, not aroused much comment, and one can safely say that the general attitude continues to be that of waiting for the expected statement of policy from the Egyptian Government.

GREECE.

ATHENS, December 18.

The Result of the Plebiscite.

The definite results of the plebiscite which took place on November 20 (O.S.) regarding King Constantine's return are now known. The total figures for the whole of Greece, including the front, are as follows:—In Old and New Greece, out of a total of 902,101 votes, 895,561 were in favour of his return and 5,193 against. There were 1,166 blank votes, and 76 votes were cancelled for various reasons. On the Asia Minor front, out of a total of 89,633 votes, 84,735 were in favour of the King's return and 4,208 against; 627 votes were

cancelled. In the Army of Thrace 19,667 voted for the King and 982 against, 359 votes having been cancelled. The names Constantine and Venizelos were found coupled together on many votes of the civil population in Thrace.

Commenting on the results of the plebiscite on the Asia Minor front, the Liberal Press points out that it was a great blunder on the part of the Government to publish the full figures and thus acquaint Mustapha Kemal with the actual strength of the forces opposing him. In certain provinces the number of voters exceeded considerably those who participated in the elections of November 14. In Attica and Boetia, for instance, 126,003 persons voted at the plebiscite as against 82,648 at the elections. In the Salonika area the number of votes was nearly twice that registered at the elections. As the majority of the Venizelists refrained from participating in the plebiscite these results would appear to be rather strange, and the *Patris* is of the opinion that a good many people succeeded in voting more than once. One cannot, of course, say whether there is any truth in this assertion, but the indisputable fact remains that the Greeks—at least the big majority—want their King very badly; there should not be the slightest doubt about it abroad. Ever since the receipt of the wireless message from the Averoff announcing her departure from Venice with the King aboard, the Athenians have been in a fever of excitement. The word "Erhetai" (he is coming) is on everybody's lips. The Royal Family is expected in Athens to-morrow, and great preparations are in progress for its reception. Thousands of people from the provinces have invaded the capital, and every hotel, lodging-house, and many of the private houses have been full to overflowing since the beginning of the week. As the influx of visitors still continues, many are being accommodated in cafés! With very few exceptions every building and shop in Athens is gaily decorated with laurel or olive branches and the national colours. There is also a great display of the Union Jack and of tricolours. In spite of the threatening Notes presented by the Allies to the Hellenic Government and the hostile attitude adopted towards the King and the country by certain English and French newspapers, the Greek people view the future with great optimism, and are more than confident that the Great Powers will ultimately recognise King Constantine and grant the country the badly-needed financial assistance.

The Greek Army in Asia Minor.

The Commander-in-Chief of the Greek Armies in Asia Minor, General Papoulas, who arrived from Smyrna two days ago, was present at a Council of Ministers held at M. Rallis' house on Friday. The General supplied full particulars as to the actual military situation on the Asia Minor front, which he declared was extremely satisfactory. The moral of the Army, said General Papoulas, is excellent, and there is no reason whatever to fear Mustapha Kemal. The Hellenic forces are well equipped, and are ready, at any moment, to undertake an offensive against the Kemalists troops.

Miscellaneous News.

M. Sofoulis, the ex-President of the Chamber, will, in all probability, be appointed Chief of the Liberal Party. As, however, M. Sofoulis failed to gain a seat in the last elections, it is proposed that one of the Liberal Deputies—preferably a member for one of the Thracian towns—should resign in his favour. This would, of course, necessitate a by-election, but the Liberals are confident of its issue.

On Sunday last about 5,000 women demonstrated in Constitution Square in favour of King Constantine's return, and at the same time to protest against the Government's decision not to allow the women to participate in the plebiscite. Madame Yannaros, the wife of the editor of the *Esperini*, delivered a speech from a balcony, after which the demonstrators sang the "Son of the Eagle" (a tune specially composed for King Constantine) and then dispersed.

The Minister of the Interior has granted the necessary authority to open a subscription throughout Greece for the erection of a statue of M. Jean Dragoumis, who was murdered last August.

ROUMANIA.

BUCHAREST, December 12.

Outrage in the Senate.

Last Wednesday afternoon, while the Senators were entering the Senate, a fearful explosion took place, killing outright Bishop Dimitriu Radu, of Oradea Mare (Transylvania), and seriously wounding M. Grecianu, Minister of Justice, and Senator Spiru Gheorghiu, who both succumbed to their wounds a few days later, and General Coanda, the President of the Senate. Hopes are entertained that he may recover. Several Senators were slightly hurt.

According to official investigations, two shells of 76 cm. calibre, connected by clockwork, were timed to explode at the hour of assembly. This infernal contrivance was placed close to the seat of the President of the Senate. Thanks, however, to the explosion taking place when the Senators were entering, only a few happened to be in the neighbourhood at the time, otherwise the number of victims would have been greater. Despite the efforts of the authorities to trace them, the perpetrators of the crime have not yet been discovered. The Government has offered a reward of 200,000 lei for any information that will lead to their arrest.

This sinister outrage has produced a painful impression throughout the country, as this is the first time that an act of anarchy of this kind has occurred in the annals of the Roumanian Parliament. In view of their high standing, and the circumstances under which they died, the victims have been honoured with a State funeral.

Parliament.

The present session seems a slight improvement on the last. The various political parties appear to be more willing to collaborate when important questions are on the table. During the last week the work of the two Houses has been rather curtailed owing to the tragedy in the Senate, and the deaths of the three victims, as the sitting had to be suspended several days as a sign of mourning. The dastardly attempt upon the Senate was strongly condemned by the various political leaders and minorities, including the Socialists. During the week M. I. N. Anghelescu introduced the following Bills in connection with the new fiscal reforms which are so urgently needed to improve the economical and financial situation of the country:—1, *Schedular tax on special income, and progressive tax on total income*; 2, *tax on the exchange of goods, stocks and shares, services, and on the consumption of luxury goods*; 3, *excess profits tax on landed and real estates*; 4, *alcohol monopoly*; 5, *sugar monopoly*; 6, *exceptional progressive tax on capital*; 7, *Bill for payment of war indemnities, and amelioration of the rate of exchange*.

M. Anghelescu, among other remarks on the new Bills, in referring to the Budget approved in the last session, said, that according to to-day's calculations the present deficit would be more than 2 milliard lei, to which will have to be added a further half milliard lei for war credit and for payment of the postponed coupons. Besides that, there will be a separate Budget for reconstruction. He went on to explain that there are bills circulating abroad to the amount of 8½ milliard lei. Against this, the total revenue will not exceed 5 milliards. The reforms cannot be applied before 1922. M. Titulescu, the Minister of Finance, is expected to arrive from Paris in a few days, and will also propose a number of schemes in connection with fiscal reform.

A Black Sea Derelict.

The Greek boat *Quequen*, on her voyage from Constantinople to Constanza, met a vessel drifting about off the Dobruja Coast. The captain of the Greek vessel, after making the usual signals and receiving no reply, approached the boat. He, together with a few of his crew, boarded her, and found, to his surprise, that there was no living soul on her, but, instead, a quantity of rifles, machine-guns, and ammunition. There was neither food nor fuel, which proved that the abandon-

ment of the vessel was either on account of piracy or on account of the fierce gale which took place a short while ago. The crew, seeing their lives in peril, got away in a lifeboat, and probably reached the nearest coast. The derelict was flying the Russian Imperial ensign; the cabins were rather damaged, and arms were thrown about, otherwise there were no signs of any human habitation at all. The authorities have therefore come to the conclusion that during the flight of General Wrangel's army from the Crimea, this boat was probably being towed and broke loose. It was brought to Constanza, and will be dealt with according to maritime law.

BUCHAREST, December 19, 1920.

Parliament.

In the last meeting of the Chamber, one of the Opposition leaders moved that the censorship should be abolished, but the motion, when put to the vote, was rejected by a small majority.

The Under-Secretary of State for Reconstruction, in reply to various accusations in connection with the deplorable state of the railways, said that the fault lies with the preceding Governments, who have neglected this vital question. The present state of the railways is due not only to a material disorganisation, but very largely also to a moral one, and it is especially against the latter that he intends to take the most drastic measures. Naturally, the main cause is still the lack of locomotives, but in view of the projected arrangement to hand over the workshops to foreign management, he trusts that in a very short time railway traffic will become normal. Nevertheless, the situation to-day is worse than can be imagined, and one could even say it has reached a climax. He therefore appealed to everyone to abandon party squabbles, at least on this question, and to co-operate in restoring the railways to their pre-war condition.

The Minister of Labour introduced last week the following Bills:—*Trade Union Bill*; a Bill providing that the present Budget should remain in force until April 1, 1921; and another Bill to cancel the extraordinary credits.

M. Take Jonescu, on being asked when the remainder of the 40 per cent. still due on the exchange of Transylvanian crowns will be paid, said that the delay had taken place owing to a misunderstanding between the National Bank and the Government, but that it will be paid in a very short time.

During the debate on the Bill for the new regulations to be adopted in Parliament, the Opposition moved an amendment that the Parliamentary immunity should be maintained, but on being put to the vote, it was rejected.

The Senate has lost practically the whole week, owing to the fact that the house is still under repairs,

and the police still need it for their investigations of the recent outrage. It only sat on Saturday, when two new Bills were introduced, namely, the Control of Aliens Bill, and a Bill to establish a new Under-Secretaryship for the ethnical minorities.

Miscellaneous.

General Macri, Director-General of the State Railways, has resigned, and has been succeeded by Brigadier-General Mihail Jonescu, the Chief of the General Staff, who will take over his duties on December 15.

In view of the numerous losses and thefts of parcels, luggage and goods which have been so frequent in transit by rail, the directorate of the railways has decided that claims for damages arising therefrom will be charged to the officials responsible.

Mr. Lloyd George, on behalf of the British people, has conveyed, through the British Legation at Bucharest, expressions of sympathy with the Roumanian Government on account of the deaths of the eminent prelate, and of the Minister of Justice, resulting from the recent outrage in the Senate.

Lady Dering, the wife of the British Minister, arrived in Bucharest on Saturday, the 18th inst., from Nice.

Prince Carol has returned to Bucharest from Lucerne.

It is reported that the Royal weddings of Prince Carol to Princess Helena of Greece, and Princess Elisabeth to Prince George of Greece, will take place immediately after the Orthodox Christmas holidays.

In view of the false reports which have been lately spread about that the Bolshevik Army is making preparations to attack Roumania on the Dniester, the Government has decided to take severe measures against the originators of these rumours, which only alarm the people, and convey abroad a wrong impression of the state of affairs existing in the country. The Government further state that the necessary measures have been taken to safeguard the country against any such attack.

YUGOSLAVIA.

ZAGREB, December 19.

The Political Situation.

The political situation remains unchanged. Long conversations are being carried on by the different political clubs with a view to forming a strong Coalition Government that will be able to carry on the business of the country for two years without the constantly recurring crises which have done so much harm during the past two years. The leaders of the Mohammedan Party are Dr. Mehmed Spaho, a well-known Herzegovinian, and Dr. Halil Bey Hrasnitsa. The name of the latter will be remembered in connection with the rather sensational incident of last March, when M. Protitch invited the Narodny Club to join with the Radicals, and they nominated Dr. Hrasnitsa to a portfolio. But he lost the appointment within an hour, when it was announced that he was on the list of "wanted" for atrocities committed in Serbia during the Austrian occupation, when he, as an Austrian officer, held a judicial post at Kragujevats. Only in the confusion of present affairs could he come into prominence as a politician in the new kingdom. His party are prepared to join the Coalition on the following grounds:—That the agrarian question in Bosnia and Herzegovina be settled on the same lines as in the rest of the kingdom, and not in a special manner; and that the new constitution be passed by a two-thirds, and not an absolute, majority

of the Assembly. It seems that M. Pashitch has gone a long way to meet their views, but that the final decision has not yet been taken.

Conversations are still being continued between the Radicals and the Democrats, but the chances of an understanding, unfortunately, appear to be getting fainter. Among the Radicals themselves there is a difference of opinion. The milder members, or more elastic ones, who follow M. Pashitch and M. Vesnitch, are in favour of an understanding with the Democrats, while the intransigents under M. Protitch are opposed to it. Finally, M. Ljuba Yovanovitch, who was Minister of the Interior at Salonika, is endeavouring to find some middle course. It is very much to be hoped that these two dominant parties will come to a firm and definite understanding.

The parties are slowly grouping themselves, however, and now it looks as though the Extreme Right will be occupied by the Narodny Club, Mohammedans, Clericals, and Bunjevists; the Centre by the Democrats, National Socialists, Social Democrats, and Peasants; while the Communists will take the Extreme Left.

The New Assembly.

One of the most noticeable features of the new Assembly will be the absence of experienced politicians, for the mass of the members are not only new to Parliament, but new to politics. Many familiar faces will be absent, and there will be a dearth of good debaters like Yasha Prodanovitch. Ministers of Food and Reconstruction seem to have been very unpopular at the polling booths, as three of them—Stanishitch, Bukshag the Socialist, and Yoyitch the Montenegrin—have all been rejected; also other ex-Ministers, as Dr. Poljak, who migrated at the last minute from the Democrats to the Peasants, but without result, and Koratch the Socialist. The Communists are weakest of all in this respect. One of their most prominent speakers, Dr. Sima Markovitch, is said to be a *kum* of M. Pashitch himself, but got the worst of it in a passage of arms with that veteran at the first session, nor did he fare much better at the experienced hands of M. Vesnitch.

The stumbling-block in the house seems to be the rules of procedure drafted by the Vesnitch Cabinet, to which all parties seem to be hostile. It will probably be thrown overboard.

But the greatest interest is taken in the attitude of Stjepan Raditch and his fifty henchmen. A party of his delegates has arrived at Zemun, on the invitation of several parties, and had conferences with the leaders of all the chief clubs, but retain a puzzling silence. It is stated that they are prepared to come to Belgrade to participate in the sessions of the Assembly provided that the rules of procedure be amended completely, that the Assembly proclaim itself sovereign and all-puissant, that the oath be taken after the alteration of the rules, and that the constitution be passed by general agreement and not by bare majority. The opinion is gaining ground that the party will eventually join the Assembly, and, possibly, accept a portfolio.

The latest news is that a hitch has arisen owing to the unbending attitude of M. Protitch. It appears that the committee of hearing election petitions has accepted the protest of the Communists against the election of a Turk in the Bregalnitsa district (famous for the desperate fighting between Serbs and Bulgars in 1913, when the latter got severe punishment for making a surprise attack upon their allies a few hours after the Bulgar officers had left a Serbian dinner party), who joined the Radicals. M. Protitch cannot bear the thought of losing one of his members, and is said to be trying to obstruct the work of the committee by directing the Radical members to refuse to sign. This has led to another conflict between Radicals and Democrats, which is much to be regretted.

The Peasants Party.

The combined Peasants Party appear to have no desire for the glories of office. They will loyally support any Coalition or other Government which will work for unity, and, above all, for the advancement of the landworkers' interests. They propose a more thorough agrarian reform than the Radicals, or even than the

Democrats, advocate. They demand the sub-division of lands held by the church by *spahis*, *begs*, or other big holders, for the benefit of the peasant, always, however, assuring to the original owners sufficient land to enable them to support their families. Their principle is that the land should belong to the man who works it, and that no man should have more than he can work, no more than is necessary to support his family. This ideal was virtually attained in Serbia three generations ago, but the reform was easier when it was merely a question of dispossessing a defeated and expelled foreign tyrant. The party is prepared to accept Raditch and his Croats into the fold if he will accept their programme, but will not associate themselves with his demagogic methods. From this it will be judged that the Peasants Party, which really represents the vast mass of the population, although it is but in its infancy, has patriotic and sane ideas.

The Pension of ex-King Nicholas.

The Government has voted an appanage of 300,000 francs a year to ex-King Nicholas of Montenegro and Queen Milena. The most vigorous opposition was raised by M. Risto Yoyitch, Minister of Food and Reconstruction, himself a Montenegrin deputy, on the grounds that the ex-King, during his fifty years' reign, had opportunities enough to enrich himself, and that he did not fail to make use of them, and that he has all the wealth he wants for himself and family. Be it noted that the opposition did not come from a Serbianata. In fact, the whole Montenegrin colony in Belgrade is up in arms against the proposal, at least until Nicholas formally renounces all his claims for himself and his descendants.

A Waiters' Strike.

The waiters at the Café Corso in Zagreb have been striking, claiming a fixed salary instead of tips. It is now announced that they have gained their point, and the proprietor will pay them a wage of 4,000 kruna per month, and tips will be abolished. Presumably prices will be raised accordingly, but customers have so far noticed no change. But the Communists of Zagreb are up in arms to support the waiters, and have invented an original method of doing so. Large parties of them suddenly appear in the café, occupy as many seats as possible, light their own cigarettes, and drink water. They are a mixed lot, consisting mostly of boys and young men of the labouring class, among whom there is the usual blend of fairly intelligent fellows with real boors, who look half stupid, and a few weak faces, who could be easily led into rash action. But their leader seems to mean business. He maintains good discipline, and they behave perfectly well. They press the customers to buy the *Red Flag* and the *New World*, which is the organ of the Belgrade Communists, both of which are full of trash. Most of them seem to treat the thing as a huge joke, and nearly all wear a self-conscious smile, as they find themselves in unfamiliar surroundings. They fill the galleries and make speeches about the "Soviet Republic and its Significance," but the public seem more amused than alarmed, though the proprietor is naturally furious at these obstructionist tactics.

General News.

The weather for the past month has been an unspeakable mixture of snow, sleet, and fine rain, but in the higher altitudes there has been greater severity. News comes from Dolenski in Slovenia that bears and wolves have come down the mountains and are a source of danger, not only to live stock, but even to human beings. In the severe weather, wolves come quite close to Belgrade, and last year were reported from Topchider. When the wolves are hungry after a prolonged snow, it is dangerous to walk on the roads at night, for they will stalk a man, and at a favourable moment spring upon him, and the attack of a wolf is a fearful thing. A certain number of peasants, especially in the hilly countries, lose their lives in this manner every winter.

Refugees from the districts occupied by Italy have requested the Government that their representatives, Biankini, Yagitch, and Subotitch, be allowed to

represent them in the Constituent Assembly until the evacuation by the Italians. The matter has been referred to the Assembly itself for decision.

The well-known Frankist, Dr. Shustershitch, has been denying that he is in connection with the ex-Emperor Karl or intriguing for the return of the Hapsburgs. While he states categorically that he has never spoken to the ex-Emperor, the newspapers equally emphatically affirm that this is untrue, as in the old days he was often received in audience. The point of the matter is that he is alleged to be in close touch with Dr. Frank and Dr. Sachs, who are at Fiume busily intriguing for the separation of Croatia from Serbia, and there seems little doubt that they are all behind Raditch's movement, although how much influence they have with Raditch is not known. It surely depends on the amount of funds that they have available.

About ten thousand Russian refugees from the Crimea, including a number of General Wrangel's troops, are to be placed at the Bocche di Cattaro.

The racecourse at Chukaritsa, near Topchider, has been let to the Danube Racing Club rent free for 75 years. It is a pretty little course, and some quite good racing was seen there in the autumn. The Government's action will please all who are interested in racing and in horseflesh generally.

TURKEY.

CONSTANTINOPLE, December 13.

The Negotiations with Angora.

Before the official delegation left Constantinople for Angora, the Government assiduously tried to bluff the public into believing that it was receiving no communications from the Nationalists, and this policy is being maintained with regard to the official mission, from which it is pretended in official circles that no communication whatever has been received. The explanation, of course, is that the Government chooses to consider the communications that have been received as "private and unofficial." However, so far as can be ascertained, the delegation arrived safely at Angora, and was very cordially received; but naturally it is too early yet to speak about the negotiations which, if Izzet Pasha can have his own way, will commence at once. According to information from well-informed sources, the delegation was not only warmly received by the public at Angora, but also at Eski Shehir, and it is said that the population greeted the mission with cries of "Long live the Sultan!" Those who know how these things happen in Turkey will at once realise that, as with all public demonstrations, it is exceedingly probable that the reception accorded to the delegation was "to order." Hence it is fairly safe to conclude that the Nationalists are desirous, for reasons best known to themselves, of making a good impression upon the delegation in general, and upon Izzet Pasha in particular. One reason for this may be the undoubted prestige enjoyed by Izzet Pasha among all ranks of the army, and no small section of the general public. On the other hand, it is significant that on December 6, that is to say three days after the departure of the mission from Constantinople, Mustapha Kemal should have published a proclamation in which he not only denied that there was any misunderstanding between the Nationalists and the

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE
NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Bolsheviks, but also repudiated any intention of coming to a friendly settlement with the Allies. The situation is so complicated that it is difficult to decide how far this announcement should be taken seriously.

The Situation of the Government.

Except that it has accomplished something definite, although as yet nothing decisive, with regard to the Anatolian problem, the situation of the present Government is no better than that of its predecessor. The Treasury still bears a distressing resemblance to Mother Hubbard's cupboard, and the non-payment of salaries is fast bringing about a situation that may add a spice of danger to the chronic crisis. Not only are there many thousands of reserve officers, employees, and others who are on the verge of starvation, but there are also something like a hundred and twenty thousand *muhajirin*, or Moslem refugees, from Anatolia and Thrace in Constantinople. Among these are some thousands of Moslems from the Crimea. These *muhajirin* are also in great distress; for although they have been provided with shelter in the mosques and *medressés* of Stamboul, they are insufficiently fed, and lack most other necessities of life. In addition to this mass seething with discontent, there are the Russians, who are now estimated to number about one hundred and fifty thousand, of whom a not inconsiderable number are undesirables from every point of view, and who undoubtedly count among their number not a few emissaries of the Moscow Government.

The Russian Refugees.

It is an unfortunate circumstance that many thousands of the refugees from the Crimea have been allowed to land and instal themselves in the city. Most of them are without any means of subsistence, and very few possess any qualifications for earning a living at a time when even the permanent population is having a very hard time. The result has been that there has been an alarming increase of violent crimes, many of them characterised by a horrible brutality hitherto rare in the history of crime in Constantinople. On the 10th inst. an unfortunate old lady was very foully murdered and robbed in a flat in one of the principal streets of Pera, through which the trams pass, in broad daylight. Not satisfied with having strangled the poor old soul with their hands, the inhuman brutes actually mutilated their victim. Three Russians were involved, and one was caught; so there is some hope of justice being done in this case; but there have been too many cases of outrage lately in which the criminals have escaped. It is certainly time that the Allied authorities took drastic steps to rid the city of a considerable number of Russians who are obviously wandering about with nothing to do, with no money in their pockets, and either incapable or unwilling to work for an honest living. According to Press reports, a certain number of the refugees have already been sent to Dalmatia and to various other places, and there is a movement on foot to assist others to emigrate to the colonies of the Entente Powers. The only objection to this scheme is that the British Empire no longer consists of many "colonies" but of Dominions which are rather particular with regard to the quality of the would-be immigrants. Furthermore, it is not the Russian who is ready and willing to proceed to "colonies," or any other place where he will have a chance to work and live in peace that is a dangerous nuisance. It is the idle vagabond who has succeeded in dodging the camp, and has become a pest in the city itself.

Anatolia and Armenia.

Reference has already been made to Mustapha Kemal's latest proclamation, but there still remains a certain measure of doubt with regard to the true attitude of the Nationalists towards the Bolsheviks. It seems certain that the Soviet Government did really intervene in the conflict with the Armenians; for the text of a communication from Chicherin to the Angora administration on November 22 has been published. In this note the Soviet Government offered its friendly "mediation," and the Nationalist "Commissioner" for Foreign Affairs, Ahmed Mukhtar, in his reply, tried to throw all the blame for the conflict upon the Armenians, who had the "audacity" to attack the

Turkish troops for the purpose of invading and seizing the eastern provinces of Turkey. Subsequently, it would appear, while the Turks were negotiating for peace with the Armenians, a Bolshevik army entered Armenia from the east, and the latest report is to the effect that a Russian Bolshevik has been appointed to the Central Council of Commissars in Erivan. It thus seems clear that the Bolsheviks do not intend to take any risks with regard to the possibility of a Turkish army pushing forward to the Azerbaijan frontier. According to further reports, the Armenians have signed a treaty of peace with the Nationalists, and there have been great rejoicings in consequence at Angora and elsewhere in Nationalistan. On the other hand, despite Mustapha Kemal's denial, it would certainly appear to be true that there has been a slight rift in the Turko-Bolshevik lute; for it has been found necessary to send a special emissary to Moscow in the person of Ali Fuad, hitherto commander of the western front, and quite an important person in Anatolia. Ali Fuad is said to have left Angora for Moscow on December 5, and to have been appointed "Ambassador." This, however, must be a mistake, for it is known that the former deputy for Constantinople, Bekir Sami, has been in Moscow since July in the capacity of Nationalist-Turkish "Ambassador," and there has been no announcement of his having left his post. There is thus every reason to believe that Moscow must have been sending several burning messages to Angora recently, and that Mustapha Kemal apparently "got the wind up."

From these considerations it may be deduced that there is one aspect of the situation with regard to the relations between Constantinople and Angora that must be taken into serious consideration, but to which practically no importance has been attached either here or in Europe: it is quite possible that Mustapha Kemal is so deeply involved that it will be almost impossible for him to extricate himself from the toils of the Soviet Government, even should he desire it. If the Allies desire peace in Anatolia they are likely to find that Moscow will echo the almost forgotten chorus that used to greet our ears from Berlin, "There shall be no settlements or arrangements in which our voice shall not be heard and taken into consideration."

CYPRUS.

December 6.

The Greek Community.

The Greek politicians who work for "union" have been taking counsel at various meetings, and the Press discusses the outlook and the duty of the people in view of the "unexpected" and disappointing decision of the British Government. The *Aletheia* (Truth) considers that a new plan of campaign should be developed on an entirely new basis. Hitherto the movement has been directed by a deputation of members of the Legislative Council, under

the presidency of the Archbishop, and aided by a local committee at, Nicosia. A pan-Cypriot Committee should now be formed. To this end the deputation (which has failed to achieve success, but not through any fault of its own) should explain in detail its work of the last two years, and should then call upon the people, who are now quite ripe for the task, to decide what the new organisation should be, and provide the means of war, in order that this new representative body may follow the warpath which is to lead to final victory. At Limassol it has been decided that one of the members, Mr. N. Lanitis, a member of Council and of the deputation, should undertake a campaign in all the villages of the district, address the people, explain the situation, and concert measures for keeping the movement alive. He has already made a beginning at a village about three miles from Limassol, close to Polemidia Camp. He was introduced by the village schoolmaster. It is to the teacher, who moulds the mind of the youth, and sometimes also to the village priest, that the town leaders look chiefly for help in their propaganda. One of the objects of such meetings is to pave the way for another purely village gathering, at which a resolution is passed expressing the wishes of the people. This is then forwarded for transmission to the Secretary of State for the Colonies. It would, of course, be quite easy to obtain as many such resolutions as might be desired without any special campaign. But the leading spirits desire to show that they have no intention of abandoning the active prosecution of their aims.

As regards Hellenic politics, the town Greeks are divided in their opinions. Many deeply deplore the ostracism of M. Venizelos; but even in Cyprus there are anti-Venizelists, and some of these have been "demonstrating" in a manner that might lead to regrettable consequences. But the general sense is entirely in favour of peace and moderation, and a settling down to steady work for the good of the island.

A Helping Hand to Greece.

The Hellenic Government has, through the Colonial Secretary, asked the British Government to lend the services of the chief clerk of the Land Registry at Nicosia, M. Karajas, to reorganise the Land Registry offices in Thrace. This official being unable, for family and other reasons, to accept the offer, which has been made by the O.A.G., M. Tsepi, of the Department at Larnaca, has been recommended for this duty. This is not the first time that Athens has looked to Cyprus as a place where Greek-speaking officials have helped to grapple with a situation similar, no doubt, in many respects to that which confronts Greece in her newly acquired territories. The work of the Land Registry in Cyprus has been a conspicuous example of patient and methodical work, by which a somewhat slipshod system, with all its arrears and irregularities, has been brought into order. Greece realises that much might be learned in different departments of administration from this island.

Cypriots in New Greece.

Some of the many Cypriot schoolmasters who have gone to New Greece are relating their experiences for the benefit of their countrymen. One who writes to the *Phoné* says that only feelings of patriotism can attract or keep Cypriots in their new appointments. He is posted to Dumbia, in Chalcidice. His salary is 400 drachmæ a month, from which, however, 56 drachmæ are deducted on account of pension fund, income-tax, and other imposts. No doubt, he says, others who have been sent to other places in Macedonia and Thrace have similar experiences.

High Prices.

There is much grumbling over high prices of all commodities. It was hoped that they would have fallen in some cases, but they have, on the contrary, risen. White bread is sold at 1s. and 1s. 1d. the oke (2 4-5th lb.), but doubts are expressed whether analysis would show that it contains 50 per cent. of wheat flour, which an inferior kind professes to do. Profiteering continues everywhere, and only too many offenders escape the penalties of martial law.

THE LATE MR. J. D. BOURCHIER.

It is with a sense of personal loss that we have to record the death of Mr. James David Bouchier, on December 30, at Sofia. In his capacity of correspondent of *The Times* in the Balkans since 1888, some thirty of the seventy years of his life had been associated with a part of the world with which THE NEAR EAST is particularly connected, and throughout the ten years of its existence this journal has been able to count upon his good will and co-operation. If towards the end of his life, as a result of the Second Balkan War, he seemed to have abandoned some of that catholicity of sympathy which had previously made him a welcome and greatly respected figure in every country in South-Eastern Europe, he was still actuated by the same desire as ourselves to see the Balkan Peninsula, as a whole, at peace with itself. To that end he had been instrumental in bringing about the League that broke the power of Turkey, and in part his championship of Bulgaria was prompted by the conviction that the harsh terms of the Treaty of Bucharest, 1913, and still more those of the Treaty of Neuilly, were obstacles in the way of a Balkan understanding. His first love among the Near Eastern countries, however, was Greece, to which his classical knowledge and artistic tastes particularly drew him. But Mr. Bouchier's devotion to the Balkans never destroyed his faculty for constructive criticism, and it was for this reason that he always had the ear of every Balkan Sovereign and politician, for although they recognised the advantage of placing their own views before him, they knew that his advice would be at once practical and disinterested, even if they had no intention of acting upon it.

With the death of Mr. Bouchier an "institution" passes from the Balkans, where his name was a household word in social as well as in political circles. His memory will long remain green with a host of friends who recall with something akin to affection the cheery, indefatigable, unconventional Irishman, with his fund of good stories, his profound knowledge of his subject, and his devotion to open-air life. His disappointment over the mistakes of Allied diplomacy during and since the war had created in him a desire to drop out of active journalism, and a few weeks ago he left for Bulgaria, where he intended to devote himself to compiling out of his abundant experience material for a work on the Balkans. His sudden death, it is to be feared, will have robbed the world of a contribution and the understanding of contemporary history which no one else can hope to supply. It is announced in *The Times* that a State funeral will be accorded him in Bulgaria—a worthy tribute to one who worked so hard in the interests of the country.

THE Y.M.C.A. IN ROUMANIA.

For the past year the Y.M.C.A. in Roumania has been carrying on a physical training programme of organised work in the Roumanian army, and is co-operating with the Government in its efforts to improve the general system of education for the soldiers. Lieut.-Colonel Badulescu, head of the Bureau of Physical Education, with the co-operation of the Y.M.C.A. Physical Director for Roumania, has framed a Bill which will be brought before Parliament this winter. There seems every indication that the Bill will be passed. The Bill outlines a practical method for physical training in the army, in the educational institutions throughout the kingdom, and among civilian organisations.

The programme for physical education, as demonstrated by the Y.M.C.A., has already been accepted by the army. The first school for officers and under-officers was held in Bucharest and the second at the Regiment Vanatori de Monte, Brasov. Courses were given in elementary physical education, hygiene, first aid to injured, field and track athletics, calisthenics, mass games, team games, boxing, football, and other games. Upon the completion of the four weeks' intensive training course each man was given a thorough examination.

Besides the ten army huts now being operated by the Y.M.C.A. at Czernovitz, Malmaison, Silistria, Constantza, Galatz, Craiova, Jassy, Oradea Mare, Targovista, and Arad, seven military schools have been equipped with athletic material. During the winter over 2,000 officers will receive thorough instruction in physical training. From this number 400 of the best will be selected for a more advanced training course, to be given next July and August. These men will become permanent physical directors in the Roumanian army.

The Serbo-Croat-Slovene Ministry of War is issuing an Albanian commemoration medal to the memory of the retreat of the Serbian army through Albania. This medal will be conferred upon all members of foreign Missions who actually made the retreat through Albania with the Serbian army in 1915. Persons who left their Mission before the retreat will not be included, even if this Mission retreated through Albania afterwards.

The work of the Graves Registration Unit on the Gallipoli Peninsula has now been practically completed. The work of identifying the dead as far as possible, collecting those buried in isolated places, concentrating small cemeteries into spacious burial-places, and in some cases removing the site of whole cemeteries has proved a difficult task. In many places the wooden crosses have been torn up and used for firewood by the Turks. Originally there were about seventy cemeteries, but this number has been reduced to about half. The number of dead is reckoned to be from 32,000 to about 36,000. There are about 16,000 buried on the peninsula, and only about 6,000 have been identified. In addition, there are some 12,000 buried on the Aegean Islands, and some at Alexandria and Malta and elsewhere.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

GEORGIA AND ITS GOVERNMENT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of December 23 you published a correspondence from Constantinople, dated December 6, in which it is stated that a new Cabinet had come into power in Tiflis. As this information is mistaken, may I request you to spare the space for the following statement?

The rumours about the Government crisis in Georgia that have been published in the European Press have no foundation whatsoever. It is true that the Minister of Agriculture, M. Khomeriki, has resigned, but it was on personal and family grounds. He has been replaced by M. Oniashvili, a Social-Democrat and member of the Agrarian Commission of the Constituent Assembly. At the same time the post of Minister of Ways and Communications has been filled by M. Ninidze. No other changes have taken place in the Government, at the head of which remains M. N. Jordania. The new appointments have a personal character, and in no way change or affect the policy or the party composition of the Government.

According to an official telegram, dated December 26, the political situation in Georgia is absolutely stable.—I am, etc.,

A. GUGUSHVILI.

Private Secretary to the Vice-President and Minister of Foreign Affairs for Georgia.

32. Queen's Gate, S.W.7.

December 28. —

M. Gugushvili writes later that he has received from Tiflis the following telegram, dated December 28:—

Political situation in Georgia is absolutely stable. No Bolshevik attack, and no trouble whatever in Batoum or elsewhere. Only persons in Georgia who are leaving there are the profiteers, against whom the Government of Georgia has adopted very strong measures. News regarding the supposed measures taken by the Allies to help their subjects to leave Georgia is absolutely false.

THE "TIS-AS-IF-I-HAD-EATEN-IT" MOSQUE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—It is fifty years and more that I have known the story of the mosque M.A.P. designates, in your number of November 11, as "Tis-as-if-I-had-eaten-it Mosque," but I must admit that, notwithstanding my extensive knowledge of the mosques of Constantinople, I have never had the fortune to catch sight of this particular one. That it exists is certain, or the story told of it would not be so widely and persistently spread, and in so many versions.

The best and most authentic story of this mosque is the following: A wealthy Turkish gentleman, fond of company and good living, kept open house for all who desired to partake of his evening meals, richly and plentifully spread upon his *sofra* (table). The attendance was always good, his praises were in the mouths of all, and he was held in great consideration. To meet the expense, his *vekilharch* (steward) received a purse daily. Illness came upon this pleasant gentleman, and the daily feasts were interrupted. The inquiries regarding his health by those who had been in the habit of sharing his meals were, during the first days of his illness, very anxious and urgent, but as it was prolonged these inquiries became rarer, and finally ceased. Meanwhile, the daily purse had been regularly issued and the *vekilharch* had amassed a considerable number. On the recovery of the gentleman, his *vekilharch* asked him what he was to do with the purses. "The daily purse will be issued to you as heretofore," was the answer. "Keep them with the others until I decide what to do with the money." Then he reflected on the weakness of man in going after things easy to get, and on his ingratitude, and next on his own folly in ministering to his wish to excite adulation; and he determined to renounce his meals to all comers, but to keep on issuing the daily purse until there would be sufficient to build a mosque. As he daily added purse to purses, he said to himself, *San-ki edim djamissi* ("Suppose that I have eaten mosque"). This was heard of by the neighbours, and further. When the mosque was finally built the name to be given to it was already in the minds of all the public acquainted with the circumstances. The mosque bears this name, *San-ki edim djamissi* to the present day.—I am, etc.,

Sofia, November 20.

P. M. MATTHEEFF.

An Order in Council, published in the *Gazette* of last week, extends to Austria the privileges of the Copyright Union. This is in accordance with the Treaty of Peace between Austria and Britain. Another Order admits Greece to the same privileges.

THE NEW JERUSALEM.

SPEECH BY MR. RONALD STORRS.

Mr. Ronald Storrs, Governor of Jerusalem, was the guest of the Overseas Club and Patriotic League at a luncheon given in his honour at the Connaught Rooms, London, on December 21. In the absence of Lord Northcliffe, owing to indisposition, Mr. Cecil Harmsworth, M.P., Under-Secretary of State for Foreign Affairs, presided, and among those present were: The Duchess of Rutland, Lord Burnham, Lord Denman, Admiral the Hon. Sir E. R. Fremantle, Sir George Watson, Sir Charles Metcalf, Sir Owen Philipps, Sir George Perley, Sir Peter McBride, Lady Robson, the Rt. Hon. W. Ormsby-Gore, M.P., the Rt. Hon. G. N. Barnes, M.P., Sir William Goode, and Sir Godfrey Lagden.

In the course of his speech, Mr. Storrs said:—

Jerusalem is a city unparalleled in the world, with an appeal to the imagination that no Rome nor even Athens can hope to rival. Even in its appearance, from whatever side approached, there is an impression of something strange and moving. The austere grey walls and battlements, stone-built on hills of stone, command and dominate the gaunt Judean plateau. You have passed by the way of the sea through the fragrant orange groves of Jaffa to a plain of waving corn and barley until you reach what the Arabs call The Door of the Valley. Henceforth, leaving behind material prosperity, the road winds upwards amid precipitous rocks until, in the remote distance, you may descry one of the towers of Jerusalem. No better idea of the scenery can be formed than by studying the backgrounds of the great Italian painters of holy pictures, notably those of the South, such as Antonello da Messina. Olive trees and cypresses spring seemingly from the solid rock, and the heights are crowned with clustering hamlets, mountain-built with peaceful citadel.

Finally, you will pass the ancient walls, whose stones were hewn from the quarries of Solomon, and climb the Mount of Olives, from whose summit you may look over the City, of which, while it is true that its towers, pinnacles and minarets are the work of more recent ages, it is no less certain that the general appearance is, and I hope will be allowed to remain, very much what it was 2,000 years ago. For the soil imposes its own conditions, and just as in Baghdad there is not one stone, so in Jerusalem, you would search in vain for bricks; and the solid walled houses with their domed and vaulted roofs represent and perpetuate immemorial tradition. You may face West as the sun sets over the city, and the warm orange of day fades from the walls which assume a colour of cold transparent aquamarine. But its last rays still strike across to the East over that scarred and pitted desert, for all the world like a map of the moon; over the Dead Sea, lying like a mirror of matrix turquoise, apparently at your feet, but really many miles away, and linger on the remoter mountains of Moab and of Gilead, floating like a violet scarf across the horizon and shutting off the uncharted vastnesses of Arabia.

The present extent of the Jerusalem district includes Jericho, Bethlehem and Hebron, and is exactly coincident with the Roman province of Judea under any predecessor, Pontius Pilate. This is no time for a detailed description of Jerusalem, but I would like to impress upon you one memory, and that is, that what remains, what you can see and examine, is very much more real than is usually believed. Visitors may, as a rule, be divided into two categories, the ecstatic, who are prepared to accept every site as authentic, even when there are two or more places shown for the same incident; and the super-intelligent, who come prepared to find Gethsemane macadamised, and Solomon's Temple built of steel joists and corrugated iron. The truth is that in Jerusalem, as in Rome and Athens, some sites can be proved genuine, others not; but the voice of uninterrupted and undisproved tradition is strong, and it may be taken generally that the places dearest and holiest to the three great religions are, on the whole, credibly established. Over the sacred tragic city, which has been brought low by no less than 41 known sieges, there seems to brood an atmosphere of expectation heightened into poignancy. Spiritual, theological, and even ceremonial differences, elsewhere overlaid by the press of other interests, assume an importance, an actuality that increases as one remains in their midst. What happens in Jerusalem seems somehow important as well as interesting, and I venture to say that it is important; for who is there that has, though perhaps almost subconsciously, no care for Jerusalem?

The association of England with the Holy Land does not date from December 9, 1917. King Richard the Lion-Hearted; Sir Sidney Smith, who ruined Napoleon in the East, as knights in battle; Condor, Warren, Gordon and Kitchener, as explorers and verifiers of antiquity; Dean Stanley and Sir Adam Smith, as luminous and inspiring writers, had long established our claim to most-favoured-nation treatment in any settlement of the country's destiny. But no name has shed more lustre on our relations with Palestine than that of the last of the Paladins—Field-Marshal Lord Allenby; and I cannot help thinking that it was on his liberation of Jerusalem that a still small voice began to whisper to friend, to foe and to neutral, that we were going to win the war. I sometimes hear the opinion expressed that Palestine under the Turks was really not so badly off; that these well-intentioned, if not particularly bright, perfect gentlemen, if they did not themselves sow at least allowed others to reap. Not in Palestine. There the hand of the Turk upon Jew, Moslem and Christian lay—not a mailed fist, not even a hand of steel, certainly not a velvet glove, but a dead hand.

and where it stretched all hope of development, moral or material, faded and withered away.

By the time our troops occupied Jerusalem the Turks had removed everything that could be of the smallest use to us—money, records, registers, assessment lists, much furniture, and all the food. The idea that we might have freed Jerusalem only to starve it was not agreeable, but the Commander-in-Chief, once apprised, acted swiftly and surely, and very soon enough wheat came into my hands to save us from that horrible nightmare. But what came had to be used with a painful economy. A food control was established; but it was still necessary to go down with a posse of police into the city, stand by the bakers' shops and see oneself that the children were served first, then the women, and, lastly, the men.

Sanitary conditions were impossible and indescribable, but with the help of the Army, seven Sanitary Sections patrolled the streets daily, and it was made, and still is, the duty of one man to cleanse the Via Dolorosa throughout the day and keep it free from stain.

Less serious, but if possible, almost more annoying was the result of Turkish and German unscrupulous distribution of the chairs, desks and tables of the various religious institutions. They would give 50 chairs belonging to the Franciscans to a Moslem Propaganda College; the college being hard up, would have sold them, so that during our first few weeks the original owners, imagining they could have their property back at once, would break into the houses of the last possessor and remove, or attempt to remove them by force.

It must be remembered that we were not then, nor for two and a-half years afterwards, a Government with power to enact laws, lay down a policy, or borrow money. We were a temporary provisional military administration bound to administer the country strictly according to the laws as we found them. This, to a certain extent, checked our activities, but, on the other hand, there was a compensating advantage of being able, as brutal and licentious soldiery, to give orders and see they were obeyed. And I cannot think it was altogether to the disadvantage of the country that we had the power and were not afraid to use it. We may from time to time have committed illegalities, but the advantage of being able to execute obviously necessary reforms which have to be observed, at all events for a time, and can later be abolished or amended, is very great.

Among other arbitrary acts of despotism was the prohibition of drink bars. This did not imply any embargo upon the consumption of liquor, and people were free at their meals or at tables to drink what they pleased, but a bar did seem so wholly out of keeping with the surroundings that I forbade them throughout the province of Judea, and the present High Commissioner has extended this prohibition to the whole of Palestine. It was likewise possible, and I may add, pleasurable, in dealing with a request for a concession to run trams to Bethlehem and the Mount of Olives, to reply that the first rail section would be laid over the dead body of the Military Governor. The Law Courts were set going, the taxes collected with about as much facility as they are anywhere, and the general machinery of government set in motion.

Over and above these normal official activities every effort was made to get into touch with the people and to give them interests and recreation tending to bring them into contact with each other and with the governing race.

I would like to take this opportunity of acknowledging gratefully the never-failing sympathy and support, in these and all other projects, of the High Commissioner for Palestine.

I found it necessary, quite early in the day, with the object of preserving intact the traditional appearance of the city, to forbid by proclamation the use of stucco and corrugated iron within the walls, as also the destruction or erection of any building without my permission in writing. This prohibition, and other like precautions, necessitated three things. First, a Technical Adviser to instruct me, and then, so to speak, carry out my instructions; secondly, the active co-operation of the various heads of the communities; and, thirdly, money. I therefore formed a society known as the Pro-Jerusalem Society, membership of which is open to all, and on whose council sit next to one another in friendly conclave the Grand Mufti, the Orthodox and Catholic Patriarchs, the Grand Rabbi, members of the Franciscan and Dominican Orders, French and Italian architects, members of the Zionist Commission, and the Mayor of Jerusalem, by whom all projects having to do with the welfare of the City are discussed. Many of the leading merchants, realising how much of the future prosperity of Jerusalem depends upon its preservation as it now is, subscribed liberally to the undertaking, and I have found in many countries persons sufficiently interested to become members of something closely connected with Jerusalem. With the money thus collected the weaving industry has been restarted, an old caravanserai sufficiently restored to house the weavers and the looms purchased and installed. The apprentices work on the mediæval guild system, and the first task of each is to weave the material for his own dress.

The famous Mosque of Omar, known by the Arabs as the Dome of the Rock, and built over the summit of Mount Moriah, is, as is generally known, covered largely with brilliantly coloured tiles whose date extends over many centuries. Neglect by the Turks and exceptionally severe winters have damaged these tiles so badly that one of the faces of the Mosque is now almost denuded. An Armenian expert was discovered in Damascus, who, coming down to Jerusalem, found near the Mosque itself the original ovens, deserted and buried for centuries, in which many of the tiles must have been fired. With money from the Society these kilns have been restored, and tiles are now being made in the ancient manner, which, so soon as they reach a sufficiently

high standard, will be used, with the consent and approval of the Moslem authorities, to cover the bare spaces on the Mosque. The work actually carried out by Pro-Jerusalem is of importance in itself. Still more so is the innovation that, round the same table, seated in a German hospice upon chairs stamped—or branded—with the crown and monogram of Wilhelm II., can be gathered the chiefs of various and opposing sects to sink their differences and work together for the good of Jerusalem.

If I may be allowed to generalise on the experience of eighteen years in the Near East, I would say that the writing on the wall during the last two years has been more than anything else a warning against over-government and over-efficiency. It is difficult enough in all conscience to govern or attempt to guide alien races, but the difficulties are infinitely increased if the officials employed concentrate themselves upon their technical work and so get out of touch with the people. In England, so far as I can gather from a perusal of the Press, the only opinion expressed about Government officials appears to be that they should be reduced, if not altogether abolished; anyhow, not paid; and that the less seen of them the better. It is not so in the East. The East has no use for the fugitive and cloistered functionary. He must also see the people in their homes and be seen by them in his. After all, the art of politics, especially in the East, consists not in hearing those who speak, but in hearing those who are silent, and in thus finding out what they really do want. It is for this reason that clubs, unless made and kept International and open in principle to all, may tend to become a curse rather than a blessing. There is a danger that the official proceeding from his work to his lunch, from his lunch to his sporting club, from his sporting club to his bridge club, and from his bridge club to dinner at home may end by growing so remote from the people to whom he is supposed to be, and in a way, is devoting his energies that all they will ever see of him is, for a stated number of hours, six days in the week, a set face glaring over an office-table. Let his house remain, to a certain extent, his castle, but let him beware of erecting social fortresses from which the inhabitants and owners of the country are rigidly excluded.

It is not many officials that are required. They should be, like the poems of Sappho, few indeed, but those, roses; and in order to exercise and return the abundant hospitality of the East they should be adequately paid. There is a danger, whenever we begin to work upon a country of an ancient civilisation, that we tend to improve everything except the life of the people. Let us face it. We make things sure, but dull. As the prophet Isaiah says: "Thou hast multiplied the harvest but not increased the joy."

All this may appear obvious and is easy to describe, but entails certain abstinences and renunciations, especially in territory but newly occupied by those who live in exile, especially if polo, tennis and shooting, which often abound, fail to fulfil their other needs. In Palestine, for instance, if you want to hear music, you must make it yourself; if you want to see pictures, you must paint them. There are no theatres; none of those amenities of a city, which, after all, go far to mitigate the routine of our lives. It is for that reason that any encouragement or appreciation received from those in a position to understand is priceless to us, and I would like to record my gratitude and that of my colleagues for the hospitality and interest of the Overseas Club.

You are not to infer that we are not fully aware of the privilege and honour we enjoy in serving in Palestine. In Jerusalem there meet, and have met for centuries, the highest interests of the three great religions of the world. From Jerusalem has gone forth at sundry times and in divers tones a God-gifted organ-voice which has thrilled and dominated the world. I do not dare to prophesy, for the East is a university in which the scholar never takes his degree, but I do dare to believe that what has happened before may happen again, and that if we can succeed in fulfilling with justice the task that has been imposed upon us by the will of the nations, and if we can reconcile or unite at the source the chiefs and the followers of those three mighty religions, there may sound once more for the healing of the nations a voice out of Zion. If that should ever be, not the least of England's achievements will have been her part therein.

Cholera has broken out among the Russian refugees encamped at Constantinople.

M. Stergiades, the Greek Harmost of Ionia appointed by M. Venizelos, has rallied to King Constantine.

Mohammed Tewfik Nassim Pasha, the Egyptian Prime Minister, has been made an honorary G.C.M.G.

Reports from Braila state that the ice on the Danube has partly broken away above Tulcea, releasing all the blocked steamers, which have proceeded to Sulina.

A Bucharest message states that a revolutionary organisation has been discovered by the Roumanian police at Temescara, in Transylvania, directed by the Abbot Tomeo.

Owing to the fall in the cost of living the Egyptian Government is considering the withdrawal of a part of the war bonus granted to officials in the Government service.

The Yugoslav Legation in London has issued a statement that all Serb-Croat-Slovene citizens residing in Great Britain must be registered at the Legation, 195, Queen's Gate, S.W.7.

Greeks in Constantinople and other "unredeemed" areas have appealed, through the Allied Ministers in Athens, to the Entente Powers against any modification of the Treaty of Sevres.

The Ecumenical Patriarch has presented a copy of Justinian's Cross, which encloses a reliquary containing a piece of the True Cross, to M. Venizelos, in token of the approval of his work in liberating so much Greek territory.

NEAR EAST BOOKSHELF.

I.—"FOUR PILGRIMS." By William Boulting. (London: Kegan Paul, Trench, Trübner and Co., Ltd. 10s. 6d.)

II.—"FESTIVAL STORIES OF CHILD LIFE IN A JEWISH COLONY IN PALESTINE." By Hannah Trager. With a Preface by the Very Rev. Dr. Hertz, Chief Rabbi. Illustrated. (London: George Routledge and Sons, Ltd. 3s. net.)

"STORIES OF CHILD LIFE IN A JEWISH COLONY IN PALESTINE." By Hannah Trager. With a Preface by Dr. Israel Abrahams. Illustrated. (London: George Routledge and Sons, Ltd. 3s.)

"PLAYMATES IN EGYPT AND OTHER STORIES." By Elma Ehrlich Levinger. (Philadelphia: The Jewish Publication Society of America.)

III.—"POLISH FAIRY TALES." Translated from A. J. Glinaki, by Maude Ashurst Biggs. Illustrated by Cecile Walton. (London: John Lane. 16s. net.)

I.—ORIENTAL PILGRIMS.

When Trübner's Oriental Series presents the reading public with a popular rendering of the travels of Hiuen-Tsiang, Ibn Batuta, Ludovico Varthema, and our own Anglo-Saxon pilgrim, Saewulf, they may well expect a treat. The disappointment is all the greater when it is found that the work has been entrusted to unskilful and incompetent hands. The reader expects the rendering to have some real, though not too obtrusive, scholarship, and demands a style suited to the subject. Both these requirements are singularly absent from this book. The author tells us that the Sultan's secretary edited the book of Ibn Batuta's travels, "and thought to embellish a plain tale by overloading it with literary pinchbeck and dragging in irrelevant quotations from the poets." This is precisely what Mr. Boulting has done, and the reader rightly resents it. When it comes to using "veridical" for "true" and "controvertible" for "convertible" one is left aghast. Why should the author disguise the natural wish of a son to visit his father's grave by saying: "He made a filial visit to the place where earth that 'makes all sweet' had closed on his father's history"? Or why annoy us by: "His natural vigour remained such that he lived three years beyond the allotted span. The 'fitful fever' of his life ceased in the year 1377"? Again, why could our author not take the trouble to read his proofs and remove irritating typographical and other more important errors?

In spite of all these very serious defects, the matter of the book is such that it defies even Mr. Boulting's efforts to make it dull. The one exception is poor Saewulf, who is treated by his adaptor to many severe snubs for his simplicity, thus spoiling the very quality which makes his account of his pilgrimage good reading. Mr. Boulting is at his best in treating of Ludovico Varthema. Had he done as well by the others, we should have had less to say in disparagement of his work. A few maps would have been welcome.

C. S. W.

II.—CHILDREN IN PALESTINE.

Child life in Palestine, as portrayed by Mrs. Trager in these two little books, will doubtless make very interesting reading for children in English-speaking countries, as so few books of this description have been written. The stories in both volumes give us delightful pictures of the life of early settlers in the pioneer days of the Jewish colonists in Palestine. After having read the Festival stories, the children in which are so very like other children, young people in this part of the world are sure to find that the Jewish calendar has a deeper significance for them as the holidays come round, when they can picture their co-religionists in Palestine observing the same festivals. The Chief Rabbi has contributed a short preface to the Festival Stories volume.

The stories of everyday child life in Palestine in Mrs. Trager's second book will possibly prove even more welcome to young readers than those written solely round the Jewish calendar, but both books are interesting and well written. Professor Israel Abrahams has written a charming preface to this second volume, in which he states that "the Jewish child is sometimes graceless enough, but he never degenerates into a gutter snipe. The reason is to be found in the home life. Judaism is a home religion. . . . With all its severity and discipline, Judaism is a happy scheme." The children in these stories are very human; full of fun and mischief, but throughout the great influence which Judaism exerts in their lives is very apparent. The author's young readers over here will wish they could share the jolly times enjoyed by the characters in these two books on their farm colony in Palestine.

"Playmates in Egypt and Other Stories" is also written mainly for children, and, as in the first of the two books

mentioned above, the stories centre round the Jewish calendar, each chapter being devoted to one or other of the festival days. But in this volume the tales and characters, with the exception of two stories, "The Borrowed Garment" and "The Lad who brought no Offering," follow so closely the Bible narrative that the book will not find such a warm appreciation among the young children as will the colonist stories. The ten tales which make up this volume first appeared in various American publications.

III.—POLISH FAIRY TALES.

These tales, originally related to Glinski by peasants of Eastern Poland and White Russia, have been admirably rendered into English. The language of folk-lore is much the same all down the ages and the world over, so we have here seven new tales, fascinating in their subject-matter, duly conventional in their phraseology, but free from the usual defects of translation. In the illustrations, Mrs. Walton has hit upon a distinctive and happy blend of the fairy and mystical with the national type. The volume, thanks in no small measure to the publisher's art, forms a delightful gift-book. In a few pithy notes at the end of the book, the author points the moral and certainly adorns the tale.

NEAR EASTERN HANDBOOKS.

An invaluable series of Handbooks is being issued by Government Departments dealing with Near Eastern as well as Far Eastern countries. A list of the books or pamphlets that have reached us has already been given in these columns, and here there is little need to do more than to call attention to their general excellence. Prepared under the direction of the Historical Section of the Foreign Office, there are a number of smaller publications in paper covers devoted to the different provinces of the new Kingdom of the Serbs, Croats, and Slovenes, i.e., "Croatia-Slavonia and Fiume" (2s. net), "Bosnia and Herzegovina" (2s. net), "The Slovenes" (6d. net), and "The Yugoslav Movement" (1s. net); another pamphlet deals with "Slovakia" (1s. net). In one bound volume are included four similar pamphlets covering the Balkan States, entitled respectively "The Eastern Question," "Turkey in Europe," "Albania and Greece (with Cyclades and Northern Sporades)."

These publications were compiled in 1917 with a view to preparing for the work of the Peace Conference. They comprise in a convenient form a mass of information—geographical, economic, historical, social, religious and political—regarding the different countries. That they are issued under the general editorship of Sir George Prothero is a sufficient guarantee that the subjects have been accurately and dispassionately treated. Perhaps the only matter for regret in connection with them is that obviously they remained unread by those who were responsible for the terms of the Peace Treaties.

A more ambitious book is "A Handbook of Roumania" (5s. net), prepared by the Geographical Section of the Naval Intelligence Division, Naval Staff, Admiralty. This is a comprehensive record of Roumania, giving, in addition to a description of the country and a summary of its history, chapters on the people, the administration, its resources, trade and finance. Not the least valuable feature of these publications is their impartiality, an attribute not invariably shared by the works of all writers on Near Eastern affairs.

A further Handbook of "Serbia, Montenegro, Albania, and Adjacent Parts of Greece," deals with the region lying south of the Danube for the most part topographically. A large number of itineraries are described in detail, and there is a general introduction on the physical conditions and on the peoples and territories in question. The book includes also useful vocabularies and phrases in English, Italian, Ghag, Tosk, Chimariot, and Serbian. All the bound volumes are carefully indexed.

BOOKS RECEIVED.

"Macedonia: A Plea for the Primitive." By A. Goff and H. A. Fawcett. (London: The Bodley Head. £1 1s. net.)

"A Handbook of Syria (including Palestine)." Prepared by the Geographical Section of the Naval Intelligence Division, Naval Staff, Admiralty. (London: H.M. Stationery Office. 10s. net.)

"The Secret Rose Garden of Sa'd ud Din Mahmud Shabistari." Rendered from the Persian, with an introduction. By Florence Lederer. (London: John Murray. 3s. 6d. net.)

"The Present Political and Economic Conditions in Central Europe." By A. Central European. (London: The Twentieth Century Press (1912). Ltd. 6d. net.)

"In Search of a Peaceful World: The Practical Views of a Leader of Industry." By Sir Charles W. Macara, Bart. (Manchester: Sherratt and Hughes. 6s. net.)

"Austria and the Peace Treaty of St. Germain." By Dr. Franz Klein. (Vienna: Frisch and Co.)

PERSONAL AND GENERAL.

TO-DAY.

January 6, 1921 (New Style).
December 24, 1920 (Old Style).
Rabia II. 27, 1339 A.H. of the Moslem calendar.
Tibet 26, 5681, of the Jewish calendar.

Viscountess Ridley has left for India, and will be abroad for some months.

M. Frederic Nano, Secretary to the Roumanian Legation, left London for Berlin on December 23.

M. Matila Costiesco Ghyka, Secretary to the Roumanian Legation, returned to London last week from Bucharest.

The Marquess and Marchioness of Titchfield have left London for the Sudan. They will remain abroad for about three months.

Count Manconi, the new Italian Minister to Belgrade, presented his credentials to the Prince Regent of Yugoslavia last week.

Sir M. M. Bhownagree left for Paris last week, and is embarking at Marseilles in the mail steamer *Kaisar-i-Hind* for a visit to India.

M. Hotowetz, Czecho-Slovak Minister of Commerce, left Prague for London last week in connection with the projected Anglo-Czech commercial treaty.

Mr. Hamilton Fish Armstrong (formerly Military Attaché at the American Legation, Belgrade) has joined the editorial staff of the *New York Evening Post*.

M. Jan Masaryk, son of the President of Czecho-Slovakia, will arrive in London early this month to take up his appointment as Counsellor to the Czecho-Slovak Legation.

Captain Neville Hobson will give a lecture on Viscount Allenby's campaign in Palestine on January 15, at the headquarters of the 19th London Regiment, High Street, Camden Town.

Sir Percy Loraine, who has been appointed a Counsellor of Embassy, is just forty years old and has served sixteen years in the diplomatic service. He has served in Turkey, Persia, Italy, and China.

Mr. W. F. A. Rattigan, who has been appointed a Counsellor of Embassy, is an exceptional Arabic scholar. He has seen much service in Tangier and in Cairo, and was in Berlin when war broke out.

Sir Alfred Mond is about to visit Palestine, accompanied by Dr. Ch. Weizman (the Zionist leader) and Mr. Albert I. Belisha. They will confer with Sir Herbert Samuel concerning the details of the forthcoming Palestinian loan.

The marriage of Crown Prince Carol of Roumania and Princess Helen of Greece and that of Crown Prince George of Greece and Princess Elizabeth of Roumania will take place simultaneously at Bucharest shortly after the Christmas festivities (Old Style).

Field-Marshal Lord Allenby, the British High Commissioner in Egypt, proposes to start on an extensive tour of the Sudan on January 8. After visiting Kosti, his Excellency will proceed to the Nuér district, and after traversing Mongalla Province will reach the White Nile at Lado, whence he will return to Khartoum on February 13.

The marriage of Major Sophokles Venizelos (the son of the eminent Greek statesman) and Mademoiselle Catherine Zervoudachi took place on December 27 at Nice. There was a very large company present, including M. Venizelos and several ex-Greek Ministers, Sir Francis Elliot (late British Minister in Athens) and Lady Elliot, and several other British friends of M. Venizelos.

The Secretary of State for India announces that a message to the following effect has been received from H.M.S. *Malaya*: "The Duke of Connaught has been suffering from an acute attack of bronchitis since leaving Port Said, but is now convalescent. His Royal Highness, acting on medical advice, has postponed his landing at Aden until the return journey, but the Resident and Arab chiefs are to be received by the Duke on board ship at Aden on January 1."

Among the passengers on the P. and O. s.s. "*Karmala*" on Christmas Day, to India from Marseilles, was Major C. A. M. van Millingen, M.C., late of the Rifle Brigade (elder son of the late Professor Alexander van Millingen, M.A., D.D., the Byzantine archaeologist and writer), who is going to Calcutta to take up a civil appointment. Major van Millingen is a great-nephew of a distinguished Mutiny veteran, Colonel Sir Alfred R. D. Mackenzie, K.C.B., of Kenilworth, Mashobra, near Simla, late commanding 3rd Bengal Cavalry.

The lectures for the next session of the Central Asian Society are as follow:—January 20, Captain P. D. Acland, on "Communications in the East; their Expansion by Means of Aircraft"; February 17, Mr. R. Scotland Liddell, on "Transcaucasia"; March 17, Mr. M. S. Briggs, F.R.I.B.A., on "Saracenic Architecture and the Crusaders"; April 21, Mr. Robert Wilton, on "The Siberian Outlook"; and May 19, Sir Charles Greenway, Bart., on "The Oil Resources of Mesopotamia and Persia." All the meetings are held at 74, Grosvenor Square, W.1.

Referring to the retirement of Mr. J. R. Holmes, late President of the District Court of Nicosia, Cyprus, *United Empire*, says:—"Before leaving Cyprus, Mr. J. R. Holmes, who has occupied important positions as District Judge in that island for the past quarter of a century, was entertained by the members of the English Club at Nicosia, his Excellency the Officer Administering the Government and the representatives of many English and Greek families being present. This was followed by a meeting three days later at the District Court, when, on the invitation of the King's Advocate (Mr. Russell), there was a gathering of the Judges, the Bar, and many others to bid Mr. Holmes farewell. Eloquent speeches were delivered by the Crown Advocate, Mr. Paschal Constantinides (doyen of the Bar of Nicosia), Mr. Artemis and Mr. Dimitriu (one of Mr. Holmes's colleagues on the Bench), who also bore testimony to his personal kindness and zeal for work."

APPOINTMENTS, ETC.

Fathollah Khan Noury, Second Secretary to the Persian Legation, has been promoted to First Secretary.

Mr. Peter Augustus Jay, Counsellor of the United States Embassy at Rome, has been nominated United States Minister to Roumania.

Sir William Brunyate has accepted the post of Vice-Chancellor of the University of Hong Kong in succession to Sir Charles Eliot. The new Vice-Chancellor was Judicial Adviser in Egypt from 1916 to 1919, and Acting Financial Adviser from 1917 to 1919.

The King has been graciously pleased to appoint Sir Milne Cheetham, K.C.M.G., to be His Majesty's Minister Plenipotentiary in Paris. Sir Milne Cheetham has had a varied experience, having served in Madrid, Paris, Tokyo, Berlin, Rome, Rio de Janeiro, and Cairo.

Sir Henry Ledgard, of Cawnpore, has been appointed a member of the Committee of Inquiry into Indian Railways, as the representative of European commercial interest in India, instead of Mr. B. A. White, of Calcutta, who is unable to serve owing to illness.

Earl Curzon of Kedleston, Secretary of State for Foreign Affairs, has appointed Mr. Robert Gilbert Vansittart, C.M.G., M.V.O., his Principal Private Secretary. Mr. Alexander Wigram Allen Leeper, C.B.E., Assistant Private Secretary, and Mr. Adrian Wentworth Keith-Falconer his Personal Private Secretary, in succession to Mr. George Cunningham, C.B., who has resigned.

The King has been graciously pleased to appoint Mr. William Grenfell Max Muller, C.B., M.V.O., to be His Majesty's Envoy Extraordinary and Minister Plenipotentiary to the Polish Republic. Mr. Max Muller, who is the son of the late Professor Max Muller, was born in 1867. He joined the Diplomatic Service in 1892, and has served at Constantinople, The Hague, Washington, Madrid, Mexico, Christiania, and Peking.

The King has approved the reconstitution of the Executive Council of the Governor of Bombay with the following re-appointments and appointments, which took effect on January 3 on the application of the Government of India Act, 1919, to the Bombay Presidency: Governor, Sir George Lloyd, G.C.I.E., D.S.O.; Mr. G. S. Curtis, C.S.I., I.C.S. (first assumed office April, 1916); Sir Ibrahim Rahimtulla, C.I.E. (first assumed office March, 1918); Mr. M. H. W. Hayward, I.C.S.; and Sir Chimanlal Setalvad.

OBITUARY.

Lieutenant-Colonel Standish O'Grady, M.B., R.A.M.C., has died at Malta.

The death has occurred of Dr. Robert Slater Mair, who was born in Paisley in 1826. Immediately after obtaining his medical degrees in Edinburgh he went out to India, and for seventeen years practised in Madras, where he also held the post of coroner and was medical officer in the local Volunteer corps.

The death took place at Edinburgh in Christmas week of the Rev. James Robertson, Emeritus Professor of Hebrew and Oriental Languages at Glasgow University. Professor Robertson spent the first thirteen years of his ministerial career in Syria and Constantinople, where he laid the foundation of his Oriental scholarship. He was appointed to the Chair of Hebrew at Glasgow in 1877, and held it for thirty years.

Rear-Admiral Edmond St. John Garforth, C.B., died last week at his residence at St. Leonards-on-Sea in his eighty-fifth year. Admiral Garforth, who had seen a good deal of active service, was present at the siege of Sebastopol. He afterwards commanded the expedition against the Masnaah Forts in the Persian Gulf, receiving the thanks of the Indian Government for his services. He subsequently saw service in the Egyptian War.

The death took place last week of Lieutenant-Colonel Sir Adelbert Cecil Talbot, K.C.I.E., in his seventy-sixth year. He joined the Royal Artillery as a lieutenant in 1867, and two years later went to the Indian Staff Corps. He had risen to the rank of lieutenant-colonel in 1891, when he was appointed Resident in the Persian Gulf. In 1894 he became Deputy-Secretary to the Government of India in the Foreign Department for two years, during which he accompanied the Shahzadah Nasrullah Khan of Afghanistan to England as interpreter. On his return Sir Adelbert Talbot was appointed Resident in Kashmir, where he remained until he was placed on the supernumerary list in 1900. He was created a C.I.E. in 1885 and promoted to a knighthood of the Order in 1895.

NEWS IN BRIEF.

The action for criminal libel against Sir William Willcocks and Colonel Kennedy will be heard in the British Consular Court, Cairo, on January 24.

According to a Paris report, the British Chief of Police in Baghdad was assassinated in the street on Christmas night by Arabs, who escaped arrest.

Prince Habib Lotfallah died in Cairo last week after a protracted illness. He was the father of Prince Lotfallah, who was recently in London as the envoy of the King of the Hejaz.

Bulgaria declares all willingness to restore all rolling stock and other material captured from Serbia during the war, and has asked that traffic which has been suspended recently shall be resumed.

A Reuter Belgrade telegram says that a decree was signed by the Prince Regent on January 1 constituting the new Cabinet. M. Pashitch is Premier and Minister for Foreign Affairs.

Wednesday, December 29, being the Feast of St. Eleutherios in the Orthodox Kalendar, was celebrated in Smyrna as the "name-day" of M. Venizelos, and all Greek shops were closed in his honour.

Parties are divided in the new Greek Chamber as follows:—Followers of M. Rallis, 25; Gounarists, 75; Dragoumists, 30; Independents, 69; followers of M. Stratos, 62; Liberals (Venizelists), 110.

It is understood in Malta that the War Office has decided to disband the King's Own Malta Regiment, a Militia regiment which did garrison duty during the war and also furnished detachments for Cyprus.

An escape of gas in a room in the basement of Lord Lamington's house in Wilton Crescent, Belgrave Square, S.W., caused a fire on Christmas morning. The fire brigade, who were quickly on the spot, extinguished the flames before very serious damage was done.

DOMESTIC ANNOUNCEMENT.

DEATH.

DRAKEFORD.—On November 4, 1920, in Constantinople, of diphtheria, Phyllis Joan, beloved daughter of Mr. and Mrs. W. E. Drakeford, aged 8.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

THURSDAY, JANUARY 6, 1921.

BRITAIN AND FRANCE IN THE MIDDLE EAST.

By an agreement signed in Paris on December 23 the Sykes-Picot Treaty of 1916 was formally superseded, and Anglo-French relations in the Middle East henceforth rest on a less arbitrary basis. The new treaty lays down the frontier line which is to divide Syria under a French mandate from Palestine and Mesopotamia under British mandates. Starting from Ras el-Nakura, approximately half way between Haifa and El Sur (Tyre), the new boundary runs in an easterly direction for some twenty miles, then turns north for an equal distance until it reaches El Mutalla, where it bears once more to the east to Baniyas, to drop west by south to El Kuneitra. Thence following the course of the Wady Jeraba it crosses Lake Tiberias to Semakh, and keeping south of the River Yarmuk takes a course due east once more until the Damascus-Hejaz Railway is reached. The two stations, Dera'a and Nasib, are left in the French sphere, and from the latter town the boundary is traced in a north-easterly direction, crossing the Euphrates at Abu Kemal, and continuing in a more northerly direction past Rumalan-Keui, until it comes to the Tigris, which it follows up to Jeziret-ibn Omar. At this point it links up with the southern boundary of Turkey, which has been drawn with slight modifications due east and west from the Persian frontier to the Gulf of Alexandretta. Other clauses in the agreement provide for a working arrangement to be arrived at in connection with the joint use of the railway between Lake Tiberias and Nasib, and of the waters of the Yarmuk and the upper reaches of the Jordan. The undertaking entered into at San Remo between Great Britain and France in regard to Mesopotamian oil is confirmed, and Great Britain has agreed not to cede Cyprus to another Power without the previous consent of France.

To understand the new agreement it is necessary to recall the fact that the Sykes-Picot Treaty gave to France as the southern border of her sphere of influence a line that ran south-east from Acre, and, passing across the Arabian Desert, cut the Euphrates at Anah and the Tigris at a point well to the south of Mosul, before finishing at the Persian frontier. Its northern border extended as far north as Sivas, in Anatolia. At the time when this egregious arrangement was made the French also contemplated that Palestine would be placed under an international régime, which would give them a voice in the destiny of that country equal to that of any other Power. The complete separation of Palestine from Syria, and the placing of the two countries under different mandates entailed a more accurate demarcation of interests than the Sykes-Picot Treaty had attempted. It was agreed, therefore, that the historic frontiers of Palestine—from Dan to Beersheba—should be perpetuated as far as possible. Accordingly the new boundary makes a large bend to the north, so as, while skirting the Lebanon, to include in Palestine Tell-el-Kadi, the reputed site of Dan, which lies between El Mutalla and Baniyas, and at the

same time to prevent the transfer of a number of Jewish colonies to French jurisdiction. The proposal to place Mosul within the French sphere has been abandoned, but a large extent of territory has been brought within France's mandate, where her writ has little chance of running. Practical considerations prompted the Zionist organisation to urge that Palestine should be given access to the head waters of the Jordan as well as to the River Litani. To this suggestion the French Government would not consent.

As in the case of most compromises the new agreement can be attacked by both parties. Certainly, if it were supposed in France that the Sykes-Picot Treaty could ever have been carried into effect, our Allies will have reason to feel disappointed at having to surrender so much. Public opinion in Great Britain, on the other hand, regards the 1916 arrangement as an immoral document to which neither party ought to have affixed its signature, and it will not easily reconcile itself to a compromise that harks back to that agreement, rather than to the spirit of the joint British and French pledges in regard to Syria. For the moment, however, a settlement has been drafted, and, as far as Great Britain and France are concerned, provides a working agreement. It leaves unsettled the future relations between the French and the Arabs, towards whom the former are inclined to adopt an attitude wholly inconsistent with the principles underlying the League of Nations. In this matter France refuses to listen to disinterested advice, and it must be left to the future to determine how long the policy that has proved successful in France's colonial empire can continue to be enforced upon a people far more advanced in civilisation and political capacity.

THE ADRIATIC CALM.

In the interval that has elapsed since the last issue of THE NEAR EAST the curtain has been rung down on the tragi-comedy of Fiume. A few shots from the Italian Fleet sufficed to bring Signor D'Annunzio to an appreciation of the realities that he had so long ignored; he laid down his dictatorship, the Town Council assumed responsibility, and negotiations were opened with the Italian Government. The two parties are primarily concerned to effect a peaceful transition from the arbitrary rule of the Jingo poet and his legionaries to the ordered existence of a democratic community. It has been necessary to draft troops into the town for the collection of arms and to ensure order; but no one will think of doubting the intention of the Italian Government to conform with the spirit of the Treaty of Rapallo and to leave the inhabitants free to draft their own Constitution. It remains to be seen whether the elimination of d'Annunzio marks the final settlement of the Adriatic question, which does not depend upon Italy alone. The Yugoslav Government, which maintained such an exemplary attitude in the face of the provocation from Fiume and to which belongs the credit for the Treaty of Rapallo, has given place to a Cabinet under the veteran Radical, M. Pashitch. The new Prime Minister has in the past been associated with a certain aggressiveness in Serbian policy that has contrasted unfavourably with the spirit required for the successful direction of the Yugoslav State in the way of peaceful development; but with international complications removed, his appointment would seem to be more closely connected with internal politics than to be intended to have any relation to foreign affairs. The elections have left no single party in a position to form an independent Government, and the prestige and vigour of M. Pashitch promised the greater measure of stability in a manifestly unstable position. It is to be hoped that his influence will be devoted to increasing the solidarity of the new State, rather than to offering his compatriots distraction from home affairs in an attempt to revive international questions of which the Balkan world is heartily tired.

THE ADMINISTRATION OF MESOPOTAMIA.

The recently-issued "Review of the Civil Administration of Mesopotamia" is a notable production in many ways. The fact that it has been prepared by Miss Gertrude Lowthian Bell accounts for its possessing literary attractions and a human interest that are seldom found in Government publications, and the provision of a serviceable index calls for grateful recognition. But its great merit lies in the fact that it gives, for the first time, a connected authorised account of British administration in the country from the end of 1914 up to the latter part of last summer; and, hereafter, we may hope that criticism of our work in that part of the world will be better informed than much of it has been hitherto. For it must be admitted that after reading this Review we feel that what may be called the defence of those who have been responsible for law and order in the historic land since its rescue from the Turks, has never before been satisfactorily set out. Naturally, many facts were not available at the time that one crisis or another had to be dealt with, and consequently the men on the spot were blamed unfairly, because the reports that reached us were incomplete. The Review now before us sheds fresh light on many puzzling incidents, and makes us realise that on the whole our countrymen in Mesopotamia have done far better than the public had been led to believe. There were mistakes, of course, but many of them were not so bad as they were represented.

It is undoubtedly the last chapter of the Review, which deals with "The Nationalist Movement," that will be read with the greatest interest, and, we may add, with the greatest relief and satisfaction, by most Englishmen. For it shows very clearly that, whatever may have been the case elsewhere, in Mesopotamia the responsible Power has always been mindful of its expressed intention to establish a national government and to help the Arabs to recover the position they occupied before the Mongol tide flooded Irak-el-Arabi. The failure to set the Arab machine running earlier was due chiefly to that lack of cohesion which is the greatest obstacle in the way of the creation of a strong Arab kingdom. The details given in this report of the attempts to secure the views of the local population on the creation of a new State and the form of its rulership should suffice to convince anybody but the most fanatical Anglophobe that the failure was due to no fault of ours. How far it should be attributed to self-seeking on the part of members of the 'Ahd al Iraki (or Mesopotamian

League) or to the intrigues of religious fanatics, we are not yet in a position to judge; but there can be no manner of doubt that both causes contributed largely to the "unrest" of the past year. Another factor of importance was the uncertainty regarding frontiers—as at Deir; and, most important of all, perhaps, the delay in drawing up the Treaty, brought about by our long waiting on the United States.

Indeed, in view of the interest America is taking just now in Mesopotamian oil, it may not be out of place to point out that in regard to Irak, at any rate, we owe little but our misfortunes to our Allies. Apart from the delay over the Treaty, it is evident from a study of the report that the publication of President Wilson's "fourteen points" provided agitators in Mesopotamia—as elsewhere—with a most convenient tool for their own purposes. The "points," it seems, were unknown in Irak until October, 1919. Before that the people had been resigned to the prospect of our administration; and many of them were more than resigned, "looking forward with satisfaction to a future

in which they would be able to pursue commerce and agriculture in profitable security with a strong central authority preserving peace and order."

The publication of the Anglo-French declaration followed on November 8. Of this, the Review says that though "it did little but reiterate the intentions which had already been announced on the occupation of Baghdad . . . it differed from the former pronouncement in one important particular, namely, that whereas the Bag-

dad proclamation had been issued while the upshot of the war was still extremely doubtful, and for that reason had been regarded as mainly a war expedient, the Anglo-French declaration was published after the victory of the Allies had been achieved and commanded belief." The Declaration opened out fresh possibilities, "the nature of which was not clearly understood, nor indeed was it likely to be understood, by the people to whom the declaration was addressed." Some of these people even wondered whether it foreshadowed a handing back of the country to Turkish rule, and, regarding the prospect with mixed feelings, began to hedge. Others regarded it as indicating the Allies' belief that the Arabs were quite fit for self-government without help or check, and their wish to set up that government forthwith. In Baghdad, the most politically developed centre in the country, the idea of an Arab Emir was eagerly discussed; but "there was no consensus of opinion as to the person who should be selected to fill the post." The idea of a Republic was mooted, but found no favour with the Moslems. "Debate in the town," says the Review, "took almost

BY APPOINTMENT.

PURE SCOTCH

at once a sharply controversial colour." The Jews and the Christians of Baghdad took alarm at the manifestations of "political development," and the former community sent in a unanimous petition, asking to be allowed to become British subjects if Mesopotamia were placed under an Arab Government. The picture presented is exactly what would be expected by anybody acquainted with the country.

Despite the alarm of the Jews and Christians, the situation was not really serious, and probably it would never have become so but for the agitators and place-seekers. But there is bound to be some trouble when

Two Arabs of Mesopotamia.

new wine is put into old bottles; and the effort to ascertain officially what the people really wanted caused a good deal of heartburning, and gave rise to intrigues and manœuvres of a truly Oriental character. The Acting Civil Commissioner was instructed by His Majesty's Government to ascertain the views of the local population in the areas affected upon the following points:—

(1) Whether they were in favour of a single Arab State under British tutelage extending from the northern boundary of the Mosul vilayet to the Persian Gulf?

(2) If so, whether they considered that the new State should be placed under an Arab Emir?

(3) And in that case whom would they suggest?

The task was no easy one, however it might be viewed:—

The bulk of the people to whom the questions were addressed had no definite opinion and were not in a position to form one. It was clearly impracticable to pursue the inquiry among the rank and file of the tribesmen, the shepherds, marsh dwellers, rice, barley and date cultivators of the Euphrates and Tigris, whose experience of statecraft was confined to speculations as to the performances of their next-door neighbours. They would, in any case, have done no more than re-echo by command the formula prescribed by their immediate chiefs, and it was just as profitable, besides being more expeditious, to refer the questions to the chiefs only. Accordingly, in the country districts and provincial towns it was the sheikhs and men of a certain importance who were asked for their views.

The method followed may shock certain people in this country who hold that a counting of noses is a cure for every political ill, and who approve of giving young boys the power to cripple the country's industry; but it will be recognised as right by everybody who knows Mesopotamia and its people. The inquiry produced one astonishing result: "On one point there was unanimity." True, it was only that the voters all considered that the Mosul vilayet should be united to those of Baghdad and Busreh, but it was something. On the other points there were—not unnaturally, perhaps—considerable differences of opinion. Hillah and six other divisions asked for British administration without any Emir; five other divisions regarded an Emir as the ideal to aim at in the near future, but being unable to fix on one then, asked for British administration meanwhile; Nejef and the Shamiyeh Division wobbled sadly, but on the whole favoured a Moslem Emir under British protection; while in Kerbella and Kadhimain the *mujtahids'* interference rendered the inquiries valueless. In Baghdad religious pressure was brought

to bear, with the result that a packed assembly asked for "an Arab State headed by a Mohammedan king who should be one of the sons of the Shereef. Nothing was said about foreign protection, but it was known that the extremists desired to exclude it." It is necessary to emphasise the fact that not only the Jews and Christians but also the leading Moslem families and merchants had refused to take part in the assembly which expressed these views; and that they subsequently presented petitions asking for British administration. As the Review puts it:—

The extremists had, in fact, overshot the mark. Men who had at first welcomed the idea of an Arab Emir were alarmed by the wild talk and the excitement which had been aroused, and rejected an alternative the mere discussion of which had given rein to passions dangerous to the political stability of the country.

Thus, the attempt to gather public opinion was not entirely successful; but on the other hand it served to show that instructed opinion in Irak-el-Arabi could not be entirely stampeded by the political agitator even when he made an appeal to religious fanaticism; and therein it was encouraging. Moreover, taken in conjunction with attempts—not always successful—to employ natives in positions of responsibility, it served to show those Arabs who were open to conviction that Great Britain had not forgotten her pledges, and meant to honour them. The new Provisional Government—regarding which Sir Percy Cox has just sent home an encouraging report—is a further proof of her honesty of purpose, but it is too recent to be covered in the Review. With the events that followed the attempt to collect views, and which are dealt with in the report, we hope to deal in another article.

Donations promised towards the Jewish War Memorial, as a result of the tour of the Dominions by the Chief Rabbi and Mr. Albert M. Woolf, at present amount to £25,000. The secretary's address is 22, Great St. Helen's, London, E.C.3.

The first instalment of a new issue of postage stamps for the Yugoslav Government has just been received, according to a report by Consul Patton, at Belgrade. This consignment consists of 500,000 stamps designed and engraved by an American company. The postal authorities are much pleased with the stamps and with the rapid execution of the contract.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Trade and the Exchanges.

It has for some time been increasingly obvious that further steps would have to be taken by the Government to overcome the handicap of the adverse exchanges if trade is to be resumed with Europe in any considerable volume. In recent weeks we have had abundant evidence of the consequences of trade stagnation arising from the lack of purchasing power of many of the Continental countries, in particular those in South-Eastern Europe, and unless measures can be contrived to counteract the absence of credits, it is to be feared that conditions can only become worse. The exports credits scheme was a move in the right direction, but it has proved inadequate to the needs of the moment, and a much more comprehensive policy is clearly required. Two new schemes are now under consideration, the one being a proposal to grant long term credits for foreign countries which need commodities, but are unable to pay for them, while the other is a scheme for the exchange of British for foreign goods. Of the two, the latter would seem to offer the most promise, for it is impossible to regard as wholly satisfactory a measure which represents merely the postponement of liabilities. Both schemes will probably be needed, however, since some of the countries in question have few commodities available for export, and there seems to be a very general feeling in the business world that the sooner they are put into operation the better.

Roumania's Transport Problem.

The contracts arranged by the Roumanian Government with English and French groups for the repair of railway rolling stock—details of which are given by our Bucharest correspondent this week—mark a significant stage in Roumania's reconstruction. All progress since the war has been held up because of the hopeless condition of the country's transport, and it has long been obvious that without external aid there could be little prospect of any material improvement in this respect within a reasonable space of time. Recognising this fact, the Roumanian Government has very wisely enlisted the services of a number of leading English and French firms in the work of reconstruction. The terms of the contracts indicate that the work will take a considerable period to complete; but within a very few months it may be assumed that a notable improvement will have been effected, and it is to that fact that I think we may attribute the recent appreciation in the Roumanian exchange.

A Case for Action.

Every decade or thereabouts the yield of olive oil in Asia Minor is far above the average. Messrs. Giraud, in their report which we give this week, state that the prospects for the present season are excellent, and that this promises to be the year for the bumper crop. In normal times an exceptional yield means much to the region, but at the present juncture its value should be literally enormous. Unfortunately, there is a considerable obstacle in the way of the realisation of the crop. At present the export of olive oil is prohibited, and it is believed that if the prohibition is not raised perhaps half of the crop will not be gathered, thereby entailing a loss of between one and two million sterling to the country. It is not surprising to learn that the continuance of the uncertain position should have given rise to widespread dissatisfaction, and one can only hope that the High Commissioners at Constantinople, with whom the decision lies, will be able to reach an agreement with the Greek authorities at Smyrna without delay as to the only policy that can meet the situation.

The Crisis at Constantinople.

In the last few weeks the serious economic crisis from which Constantinople has been suffering since she was cut off from Anatolia has become much more acute, and our correspondent, in a message which is given in another column, declares that a state of affairs has now been reached "which could hardly be worse." The main cause of the prevailing depression is, of course, the fact that exports have been practically a negligible quantity. For the whole of the past year, indeed, the exports only amounted to about one-thirteenth of the monthly exports of 1919. In the circumstances, it is not surprising that the

piastre should have risen to over 600 to the pound sterling. Naturally there is grave financial embarrassment, and it is to be feared that serious consequences will ensue should present conditions continue. The remedy is to be found in the reopening of communications with Anatolia, and until that happens it is scarcely possible to look for any improvement in the situation.

The Kassala Railway.

Conditions being what they are at the present time, I am not surprised that the Government has not been able to see its way to guarantee a loan for the proposed railway from Kassala to Thiamiam. When the Government is faced with the imperative necessity for curtailing expenditure, it is naturally not going to look with favour on any schemes which will increase its liabilities. Unfortunately the Sudan project may be postponed indefinitely by this decision, for without a guarantee by the Government it would be practically impossible to raise the money required on anything approaching satisfactory terms.

Urgent Need for the Scheme.

While the Government's decision is to be understood, it is not so easy to appreciate the argument put forward by the Prime Minister to the deputation, that the railway was not required, because the market is unable at the moment to absorb a certain quantity of Uganda cotton. With all deference to Mr. Lloyd George, that is beside the point. It is not a question of the immediate position, but of taking timely measures to meet a situation that will arise in the course of a few years. At present there is a large surplus of cotton, and this state of things will possibly obtain for some time to come. But when the world's markets are again bare of stocks, and when the countries at present out of the market are again in a position to purchase cotton, conditions will be very different. There will then be a very real danger that Lancashire may have to go short of supplies of cotton, unless in the meantime steps have been taken to promote cotton cultivation within the Empire. And of the various schemes for doing this, the Sudan project unquestionably offers the best prospects.

Cox's Bank.

The balance-sheet just issued by Messrs. Cox and Co., the Army bankers, for the year ended September 30, is in several respects a very notable document. It was to be anticipated that following the close of the war there would be a marked diminution in the bank's business, but so far from this being the case the present balance-sheet shows a record total, the figures being £24,317,401, as compared with £24,171,164 for the previous year. The bank has a reputation for the liquid character of its resources, and this feature is fully maintained, the ratio of cash to deposits being over one-third, while the strength of its position is considerably increased by a marked reduction in its investments. It is to be noted that the heading Bills of Exchange has disappeared from the balance-sheet, and has been replaced by Bills Receivable and Documentary Bills Negotiated, a change on which the directors are to be congratulated as marking a significant step in the direction of making balance-sheets more intelligible to the general public.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, November 28.

Great Increase in Imports.

The customs statistics for the month of September reveal a swing-back in the favourable trade balance hitherto recorded. During the month imports totalled ££9,128,039 and exports ££2,513,485, as against ££3,976,349 and ££9,052,447 a year ago. Imports therefore increased by over ££5,000,000, and exports fell off by over ££6,500,000. As a result the total figures for the nine months for imports are: ££76,138,751 and for exports ££72,107,129, and during the three-quarters the former increased by ££45,319,958 and the latter by ££31,034,523, as compared with the situation at the end of September, 1919. Re-exports during the period fell off by about 50 per cent. to ££1,821,917, so that there is an adverse balance of about ££2,200,000 against the country. In view of the falling off in the demand for cotton and the drop in the price thereof it is to be anticipated that this adverse balance will go on increasing, for, although there is a local slump in Manchester goods, imports are still pouring in.

The principal imports during the nine months have been preserved meat and fish, ££767,374; wheat, ££2,321,468; wheat and maize flour, ££6,063,078; raw sugar, ££2,075,974; coffee, ££965,165; petroleum, ££1,490,622; boots and shoes, ££507,710; construction wood, ££1,640,327; oil fuel, ££939,051; coal, ££5,277,726; chemical manures, ££1,727,127; household soap, ££501,410; cotton yarn, ££1,087,809; cotton textiles, ££15,439,834; woollen textiles, ££2,318,266; silk textiles, ££1,528,236; sacks, ££1,018,961; manufactured iron and steel, ££3,417,246; tobacco, ££2,488,846. The most important increases were in wheat and wheat flour, of which 217,000 tons were imported, as against only 14,000 tons last year; raw sugar, of which 29,000 tons against 12,000; coal, of which 617,000 as against 445,000 tons; and cotton textiles, of which 7,000 more tons and 11,000 more metres were imported.

Under exports the chief items were eggs, ££285,968; hides and skins, ££369,219; cotton seed, ££2,500,390; cotton cake, ££432,731; onions, ££533,291; sugar, ££981,733; phosphates, ££382,962; raw cotton, ££63,913,013; cigarettes, ££745,112. The enormous rise in prices is apparent from the figures for cotton, which increased by nearly ££30,000,000 in value and fell off by 30 per cent. in volume, and for cotton seed, which increased by ££1,000,000 in value and of which 140,000 ardebs less were exported.

The share of the imports falling to the United Kingdom was 38 per cent., compared with 44 per cent. last year, and under exports 40 per cent. as compared with 56 per cent. The countries which increased their sales to Egypt were France, Italy, and United States, the latter of whom jumped from ££1,935,000 to ££7,388,000; while under exports the most noteworthy increase was in the case of the United States, whose share rose from ££5,658,000 to ££25,345,000, and who took a larger share of the cotton crop than the United Kingdom. An interesting reappearance in the customs statistics is Germany, her activities being directed to glass and chinaware, toys, beer, synthetic indigo, machinery, and textiles.

Trade between Egypt and the Sudan during the nine months has improved, imports into Egypt increasing from ££1,265,093 to ££1,819,952 and exports from ££2,106,216 to ££2,957,129. The chief imports from the Sudan have been cattle, ££677,218 (142,858 head); sesame, ££336,612; hides and skins, ££102,020; cereals and agricultural produce, ££344,753; and exports to the Sudan, wheat and maize flour, ££97,618; refined sugar ££874,004; coffee, ££165,760; cotton textiles, ££693,971; sacks, ££103,750; and tobacco, ££180,633.

CAIRO, December 13.

Limitation of Cotton Area.

A decree has now been issued limiting cotton cultivation in 1921. The prohibition follows exactly on the lines of that edicted for the 1918 crop—viz., the cultivation of cotton is entirely prohibited in the Upper Egypt basins, except where irrigation is carried out with Nile water, and no landowner may sow more than one-third of his holding with cotton.

The decision has been generally well received, for the Provincial Councils were unanimous in their opinion as to the desire for a restriction of the area, though they were not quite agreed as to the extent to which the restriction should be carried out. In a great many cases the opinion is held that it would have been better to have decreed the restriction for a period of three years, so as to give the land rest and be fair to everyone. It is also pointed out

that this restriction may have an adverse effect on the wheat area, in that holders of more than one plot, who had decided to devote whole areas to either wheat or cotton, are being tempted by the prohibition of putting more than one-third of any one holding under cotton to plough up part of their wheat-land in order to adjust the proportion, but, owing to the lateness, will not be able to put a corresponding portion of their cotton-land under wheat. Such cases as these are, of course, to be expected in the case of legislation which has to be introduced in a hurry, and no doubt the competent authorities will in due course take the necessary steps to remedy this.

Lancashire's Attitude.

Meanwhile Reuter informs us that the Manchester Cotton Association has intimated that the reduction in the area will inflict grievous injury on the cotton trade, and that it has decided to ask the British Government to endeavour to induce the Egyptian Government to change this policy. This piece of news has created no little amusement, for the Manchester Cotton Association can scarcely expect the fellahin to grow cotton solely for the benefit of Lancashire, when its cultivation at present prices is not remunerative. Instead of urging the British Government to take the very impolitic step of persuading the Egyptian Government to change its policy, when that policy is based on the expressed wish of the Egyptian nation, as presented by the decision of the Provincial Councils, the Manchester Cotton Association would do well to take counsel amongst its members as to the best means of raising the price, for after all the growth of cotton in Egypt is a commercial enterprise; just as the spinning of cotton is in Lancashire, and if Manchester is not prepared to pay a price which makes it worth the while of the Egyptian fellah to grow the special qualities which the Association say are of such value to Lancashire, they must expect the supply to fall off. Coming at the present juncture the attitude of Lancashire in this matter as expressed by the report published by Reuter is particularly unfortunate.

TURKEY.

CONSTANTINOPLE, December 20.

Grave Economic Crisis.

The crisis which was caused by the interruption of communications between the capital and Anatolia last spring has been steadily increasing in gravity, until a state of affairs has been reached which could hardly be worse. The rate of exchange for the pound sterling has risen to about 600 piastres, which is almost as high as the highest figure for the gold lira during the war. On the 15th inst. the directors of the principal banks in Constantinople held a meeting to consider the situation and concert measures to deal with it, but it would appear that no actual decisions were taken.

The principal reason for the crisis will readily be understood when it is realised that the value of the monthly exports during the autumn of 1919 was about four million Turkish pounds, whilst this year the exports from Constantinople have hardly reached three hundred thousand Turkish pounds. The exports from Smyrna have also been of a negligible quantity. There is no need to dwell upon the effect upon foreign exchange of an absence of exports. Constantinople is, from the point of view of production, nothing but an enormous parasite, dependent for its existence and economic prosperity upon the industry, mostly of an agricultural nature, of Anatolia. The complete cessation of all commercial relations with Anatolia through the capital has necessitated the importation of certain principal necessities from Europe, for which credits to the amount of nearly £1,000,000 sterling monthly are required, against which practically nothing is available for export.

The situation is considerably aggravated by the gambling mania which has infected the public here as elsewhere throughout the world, and there seems to be no real remedy for this evil. The banks have, indeed, decided to refuse to accept such transactions unless there is proof of sound commercial necessities on the part of the dealer in foreign values, but this measure has been tried before during the war and had practically no effect.

During the past week there have been one or two exciting days on the bourse, and there have also been quite a number of bankruptcies, involving total liabilities of very nearly a million sterling. As the director of one of the most important banks in Turkey stated, the only remedy by which general bankruptcy can be avoided is by re-establishing commercial relations with Anatolia. Constan-

tinople is suffering from a commercial blockade which is in its way as fatal as the British blockade was to Germany during the war. Until it is removed Constantinople will continue to languish, and there can be no talk of business. It would be as well to remember that British interests in this part of the world are by no means inconsiderable. Further, since British traders have been strongly encouraged by the British Government to extend their enterprise to Turkey, they have surely a right to demand that their interests should be considered.

ROUMANIA.

BUCHAREST, December 12.

Prices Increased.

Despite rumours that prices have dropped considerably abroad, here they are not only maintained but have increased, owing to the unfavourable exchange and the transport difficulty. Nevertheless, by next spring a drop is expected. Merchants are, therefore, cautious, and are generally showing themselves very reserved, but not to the extent which is reported to be taking place abroad, especially in America.

Cotton yarns are still maintaining the price of 600-620 lei per bundle. American cabot is about 17-20 lei per yard, according to quality. A local factory in Arad has begun to manufacture American cabot, width 80-90 cms., varying from 16-20 lei per metre. This factory will be able to hold its own with foreign competition to a certain extent. It has 25,000 spindles and 750 looms, worked by about 4,000 millhands, and can produce about 8,000 metres per day. It is well supplied with cotton from America. For the moment it only manufactures American cabot, and has already taken orders from Bucharest to the extent of two million lei. Next month it intends starting the manufacture of chiffon shirting, and later on of zephyrs and other textiles.

Flannelette 70 cms. wide has dropped from 26 lei to 24, and can even be found at 22.50 retail; but large quantities are not in demand. There is a scarcity of cotton thread. There is also a marked scarcity of lace, and prices have gone up 20-30 per cent. Germany is already making her appearance in textiles. She has sent a large quantity of cheap quality socks into the country at 8-10 lei per pair, competing in price with all other foreign makes. Therefore, the prices of socks are tending to fall, and Roumanian socks from the factory in Transylvania have been offered at 100 lei per dozen, and 120 lei for ladies' stockings. Suitings are still arriving from abroad: for better quality high prices are still maintained. The prohibition of luxury goods has not yet influenced the prices of such goods as there are large stocks still existing.

Business in colonial goods has been more lively during the week, but prices have not hardened under the influence of the greater demand, with the exception of olive oil and sardines. Olive oil is sold at 45 lei per kilo. Sugar is offered c.i.f. Galatz at 16 lei per kilo. In Bucharest retail prices are still very high, round about 30 lei. This difference in price is due to the transport difficulty between Galatz and Bucharest, and only small quantities can be got through. There was a shortage of rice, but large quantities have arrived, and prices are reduced. Better quality rice has dropped from 20 to 18 lei per kilo.

As mentioned in my last report, this is the dead season of the metal trade, with the exception of sheeting and copper articles. Numerous offers have come from Germany for manufactured and semi-manufactured iron goods. The loss in prices owing to the rate of exchange puts Germany in a position to compete with England and America, and it is thought here that she will soon regain her position in the metal trade. Many merchants are preparing to go to Germany next month to make their purchases.

Miscellaneous.

The Department of State Monopoly has appointed a delegation to proceed to Germany in order to negotiate the sale of Roumanian tobacco of inferior quality, of which there is a surplus stock.

In accordance with the prohibition of the importation of luxury goods, the Government have removed the prohibition of cocoa in the form of beans and powder.

In view of the connection which will be established between Roumania and Hungary, the Hungarians have decided to repair the bridge over the Tisza at Solnoc. This bridge was blown up by the Hungarians in 1919 to arrest the advance of the Roumanian troops.

The Government is negotiating for the loan of 500 million lei needed for the repair of the railways. Local banks are disposed to help in this matter, as they realise it is of paramount importance to keep the railways in working order.

The Railway Workshops.

It is reported that the Government have decided to send 1,800 locomotives to Czecho-Slovakia, Austria, and Germany

to be repaired. There are current repairs, however, which must be done on the spot in the workshops, and it is understood that in view of the unsatisfactory conditions prevailing in them at present, the Government are now negotiating with a local company, the "Vulcan," who are backed by two of the largest engineering works in France, for one portion of the workshops, whilst for the remaining portion they are negotiating with an English group. It is strongly emphasised that it is not a question of concession, but that the workshops will remain the property of the State, who will pay for the material and the labour. The private concerns merely contract to execute the repairs of a number of local locomotives and trucks, and the contract will expire on the day of completion of the repairs.

Aerial Transport.

A contract has been made between the Roumanian Government and a Franco-Roumanian Aerial Navigation Company. The Government grants to the company for a period of twenty years the concession of the international transport services of passengers and goods which will run from Paris via Strasbourg, Prague, Vienna, Budapest, Bucharest, to Constantinople. The Government further hands over the monopoly of the international services of letters, telegrams, etc., within its boundaries, and will reserve its right to the services within its boundaries from here to the aerial stations of neighbouring countries like Bulgaria, Yugoslavia, and Turkey.

Purchase of Forest Land.

The Ministry of Agriculture has prepared a Bill limiting the maximum of forest land that can be purchased by any concern to 3,000 hectares. Any purchase made above this figure will be considered void, and offenders will be fined from 1,000 to 50,000 lei for the first offence, and for every subsequent offence the penalty will be imprisonment up to three months. Land up to 5,000 hectares may be acquired in exceptional cases, and with the approval of the Minister of Agriculture.

BUCHAREST, December 19.

The Railway Contracts.

Further details are given in the official Press regarding the contracts which will be closed with the French and English groups entrusted with the repairs of the Roumanian State Railway rolling stock.

The first contract, which has been made with the French group, is divided among the following companies: The Roumanian Iron Workshops "Vulcan," the Société de Construction de Batignolles, Etablissement Schneider and Co., and the Société de Construction "Dyle et Bacalan." These companies are to repair within seven years 2,500 locomotives, 1,500 passenger coaches, and 15,000 trucks, and to place them within the shortest time in perfect working order.

For this purpose the Government has put at their disposal the railway workshops at Temesvar, Simeidia-Piski, Cluj, and Brasov, together with all the appendages and offices for their exclusive use. All the machine tools and installations will be handed over to the companies mentioned, with a detailed inventory, which, on the expiration of the contract, they will be obliged to return in good condition, as well as machine tools and buildings which may be added meanwhile. The Government, on the other hand, will pay for the repairs.

The locomotives once repaired will make a trial trip of 100 kilometres, and the "Vulcan" Group will remain responsible for six months after delivery of the locomotives, etc., for all defective repairs that may occur within the period. The group binds itself to keep the present personnel, but reserves the right to transfer them elsewhere, if necessary. The group further undertakes to have on their staff

Phone, Regent 5805 (7 lines).

Roumanian engineers and foremen in a proportion of at least 50 per cent. of every category. With regard to the workmen, they will be employed as heretofore, maintaining the positions which they have held up to now as State employees, with all rights to pensions, housing indemnities, etc. The workshops and material will be placed at the disposal of the companies at the very latest within three months from the day when the contract comes into force.

The contract grants to the group the right of priority when transporting rolling stock which is to be repaired. The State will be called upon on the 15th of every month to approve any changes they think necessary in the plan of the repair work and the price for the ensuing month. All expenses of salaries, material, etc., which will be made will be previously checked and approved by the State. For the maintenance of order in the workshops, the companies have the right to dismiss any member of the staff who might try to provoke disorder or strikes. All the machinery and material imported in 1921 will be paid for by the "Vulcan" group for the account of the Government. The group will receive in exchange Treasury Bonds payable in one year with 6 per cent. interest. The above companies will receive 15 per cent. on the cost of the repairs, which percentage will constitute their profit.

An identical contract has been closed with an English group, which will take over the workshops at Bucharest, T-Severin-Cernauti, Pascani, Jassy, Galatz, Bender, and Constanza, for the same period, and undertakes on the same terms to repair 2,500 locomotives, 1,500 passenger coaches, and 15,000 trucks.

Germany's Financial Obligations.

According to the Peace Treaty, Germany is under an obligation to Roumania to withdraw all the Banca Generala notes which she issued during the occupation. The total value of these amounts to over three milliard lei, and until they are withdrawn Germany will be obliged to pay to the Roumanian State 5 per cent. interest. Another debt which Germany has to pay to Roumania is the sum of 70 million marks in gold, which formed a security for the National Bank of Roumania, constituted at Berlin by the Germans whilst Roumania was still neutral, to guarantee the amounts paid by the National Bank to Roumanian farmers for cereals exported to Germany.

As Germany knows she will have to meet these obligations sooner or later, she has sent a delegate to commence negotiations with the Roumanian Government with a view to settling these debts, which will amount to a total of about five milliard lei. Germany proposes to settle by offering Roumania any kind of goods which she needs to the equivalent value of her debt. The Government seems well disposed towards this offer, although the National Bank would prefer the 70 million marks in gold, with the object of strengthening its paper currency.

Depreciation of the Leu.

The news of the sudden drop of the leu to 18 centimes in Paris has produced a wave of consternation throughout the country. This is the lowest rate ever recorded for Roumania. Local bankers consider this abnormal decline unjustified, and imagine that public opinion abroad has probably been misled by false alarms of Bolshevik attacks, and possibly even the Senate outrage has been greatly misinterpreted and exaggerated. Besides, what is even stranger, this depreciation has taken place at the time when M. Titulescu, the Minister of Finance, had succeeded in raising a loan of 200 million francs to pay the coupons in arrears on the Roumanian National Debt.

Cheaper Imports.

The fall in prices in foreign markets has now resulted in numerous offers of goods from foreign firms at very reduced rates, without, however, bringing about any notable transactions, as buyers, being overstocked, are holding back. Merchants, who last autumn begged foreign firms to take into consideration their orders without discussing the prices, have now received offers from English, French, and Italian firms on terms of six to twelve months' credit with 7 to 8 per cent. interest, and in some cases bank guarantees have been renounced. German and Austrian exporters, who are again taking up their old agents in Roumania, are even sending goods on consignment in order to regain the market they lost during the war.

YUGOSLAVIA.

ZAGREB, December 19.

Miscellaneous.

On the grounds that Bulgaria has failed to fulfil its obligations under the Peace Treaty, railway communication beyond Pirot is suspended both for passengers and goods traffic, with the exception of the Orient Express.

It is reported that Germany is about to deliver to Yugoslavia material for thirty-five bridges and a large quantity of plant, machinery, and constructional material.

OIL NOTES AND NEWS.

BOLSHEVIST OIL PRODUCTION.—II.

(FROM A CORRESPONDENT.)

The data supplied by Soviet papers enable us to summarise the results of the Baku oil campaign, to which the Bolsheviks attached such importance. According to the plan of the Bolsheviks, during the navigation of 1920 the transport of oil from Baku up the Volga should have amounted to 169.9 million poods, of which 22.2 millions were to be delivered at Astrakhan, and 147.7 were to be sent up the Volga. By October 1, 116.2 million poods (70 per cent.) reached Astrakhan, and the Bolsheviks reckon on transporting 40,000,000 poods more. As regards transport up the Volga, by October 1, two weeks before the navigation stopped, 84.4 million poods (57 per cent.) were delivered.

The aggregate deliveries up to September 15 (i.e., a month before navigation stopped) amounted to 38,300,000 poods—that is to say, in the four months when the Volga is navigable, about 27 per cent. of the proposed quantity of oil was delivered. The amount of oil which the Bolsheviks sent off during the last month is unknown, but the *Economicheskaya Zhizn* shows that by the end of the navigation there were about 17 or 18 million poods of petroleum and mazout at the various Volga wharves.

The oil which had already been transported up the Volga is apparently quite exhausted. The paper quoted above says:—"The six months' consumption of the railways alone is estimated at 25,000,000 poods. The stock of oil for railways amounts to 9,000,000 poods, leaving a shortage of 16,000,000 poods." Up to October 1 (i.e., the end of the navigation) water-transport had obtained only 7,300,000 poods of oil, instead of the 26,300,000 poods required. The journal adds:—"Industrial and local consumption and the first run on the opening of navigation will require approximately 14,000,000 poods of oil. Thus the Fuel Committee will need 30,000,000 poods by May 1. In connection with this, measures have been taken to revise the demand and reduce the amount to be supplied."

When there is a shortage of anything, it is a favourite trick of the Bolsheviks to cut down consumption. For instance, at first it was decided to give Petrograd 7,000,000 poods of oil, then this figure was reduced to 4,500,000 poods, but of this by September 15 (the busiest season) Petrograd had received only 1,244,000 poods by water and 600,000 poods by rail.

Even supposing that Baku supplied all the oil exported from Russia, it still used to send up to 420,000,000 poods to Russia, and at least two-thirds of this was brought up the Volga. That is to say, in normal times, no less than 280,000,000 poods of oil used to be transported up the Volga, whereas the Bolsheviks, by their confession, sent off (but did not deliver) only 84,000,000 poods, and even this figure is greatly exaggerated, judging by Bolshevik statistics of the amount of oil at the various Volga wharves.

Besides Baku petroleum the Bolsheviks get oil from Grozny. From April to October the exports amounted to about 22,200,000 poods (according to the *Economicheskaya Zhizn*), but for some reason or other the Grozny exports fell rapidly. In the same number of this paper we find the following figures of the exports of oil from Grozny:—July, 1912 tank-cars; September, 674; and October (20 days), 134, or 204 for the full thirty days. Thus the results obtained by the "Petroleum Committee" in the current year, when the Bolsheviks were full masters, are far from consoling. The Bolsheviks have not even been able to carry out their own "famine rations scheme" of supplying one-fourth of the pre-revolutionary per head ration. There is no doubt that the cause of this breakdown lies in the general methods of the Bolshevik economic system. The whole petroleum industry, like all others, has been centralised.

While notice is being sent to the Central Petroleum Board in Moscow that at Baku the workmen have dispersed owing to food restrictions, and while the necessary measures are being taken to increase the workers' bread rations, no oil is being produced, and more than half the workmen have left. It was the same on the Volga: there would be some irregularity in the navigation, due to some improper general regulations affecting some detail of shipment, and while they were being cancelled the Volga would get shallow by the end of summer, and the vessels could not be fully laden.

Moreover, in all this great undertaking, beginning with boring wells and ending with the delivery of the oil at the storage tanks in Petrograd, there was not a single man personally interested in the business. Even if there were any Communists who did their work "not for wrath but for conscience sake," it is hardly likely that such Communists were specialists in the petroleum industry.

IRRIGATION WORK IN EGYPT AND THE SUDAN.—I.

NILE PROJECTS COMMISSION REPORT.

In January last the Egyptian Government appointed the Nile Projects Commission to give its opinion on the projects prepared by the Ministry of Public Works with a view to the further regulation of the Nile supply, for the benefit of Egypt and the Sudan, and in particular to examine the report upon the physical data on which the projects are based, to report upon the propriety of the manner in which, as a result of these projects, the increased supply of available water provided by them will be allocated at each stage of development between Egypt and the Sudan, and to advise as to the apportionment of the cost of the proposed works and this inquiry as between Egypt and the Sudan.

It will be remembered that an interim report was submitted in June last, when the Commission stated that, "after careful consideration of all the evidence, we are of opinion that there has been no falsification or intentional suppression of records nor any fraudulent or intentional manipulation of data or gauges by Sir Murdoch MacDonald or by anyone else. We have studied the projects as described in 'Nile Control,' and have considered the criticisms of these which have been submitted, and we recommend that, considered from a strictly engineering point of view, the White Nile Dam, the Gezira Irrigation Scheme, and the Blue Nile (Sennar) Dam, and the Nag Hamadi Barrage should be carried out at once."

The Commission has now published its final report, which deals in detail with the terms of reference, and also with all the works included in the projects described in "Nile Control." The members of the Commission were Mr. F. St. J. Gebbie, chief engineer, Bombay (chairman), Dr. G. C. Simpson, meteorologist at Simla, and Mr. H. T. Cory (members), with Mr. J. L. Capes, of the Egyptian Ministry of Education, as secretary; and to them was added a judicial member (Judge Booth, of the Mixed Courts) for the purpose of conducting the inquiry and taking evidence on oath.

The report, which deals exhaustively with all the questions, consists of four chapters and an appendix. Chapter I., which contains the report and opinion of Judge Booth on matters dealt with at the public sittings for the hearing of evidence on oath; Chapter II., which deals with the charges brought by Sir William Willcocks and Colonel Kennedy against the reliability of data; and Chapter III., which deals with the projects from an engineering point of view, are all unanimously approved by the Commission; Chapter IV. is in two sections, dealing mainly with the future allocation of water; but as with regard to this the Commission is not unanimous, separate reports have been written, one by Mr. Cory and the other by Mr. Gebbie and Dr. Simpson. The Appendix contains the criticisms on the data, as presented in the form of charges by Sir William Willcocks and Col. Kennedy, and the technical criticisms presented by a committee of Egyptian engineers.

Judge Booth, in his report, which is endorsed by the three members of the Commission, deals with the various charges, and his finding on four of them is summarised as follows:—

"My conclusion is that the copy of page 2 of the 'Blue Nile Memorandum' itself, if it stood uncontradicted, would afford no sufficient proof of the true official Sennar gauge readings at the beginning of 1914; *a fortiori*, it must be ignored when contradicted by a body of sworn testimony."

"The mention in Col. Kennedy's note of the reading 10.10 for the Sennar gauge on January 24 must be taken to be a mistake. The reading he obtained was in reality that of January 31."—"I accept without hesitation the evidence of the witnesses called, nor have I any doubt that the books and documents proved by them contained the readings of the Sennar gauge as recorded and reported at the material time."—"In the teeth of the sworn testimony of a number of witnesses, no weight at all can be given to Sir William Willcocks' argument as to the Sennar discharge curve."—"There was never any thought of showing exaggerated discharges by means of the falsification of gauge readings. The sequence of documents I have quoted, obviously genuine, are, in my opinion, the strongest possible testimony to the good faith of the Department."—"On the documents put in there is no reason whatever for supposing that Sir Murdoch MacDonald's opinion was not honestly given."—"The good faith of the explanation of the Public Works Ministry receives strong confirmation from the explanation which Sir Murdoch MacDonald is able to give as to the non-publication of the Inspectors-General's Report for 1912, and also from the fact that it is not suggested that any particular use has even been made of the erroneous figures, nor has any motive for the non-publication of this particular error been suggested."

The findings of the Commission on the charges brought against reliability of data are that:—"In the opinion of the Commission, the 'bump' on the Sennar gauge curve and the abnormal shape of the discharge curve are both due to the same cause—namely, the alteration in the arrangement of the sandbanks and channels in the river."—"There is no other conclusion to be drawn than that Sir William Willcocks' calculated discharges were absolutely valueless."—"The Commissioners are satisfied that there has been absolutely no exaggeration of the discharges—on the contrary, they are convinced that there is no other river in the world comparable with the Nile whose discharge is so accurately determined as is that of the Nile during the low stages of 1916."—"The Commissioners strongly object to the whole method (employed by Sir William Willcocks), and they are not prepared to admit that any conclusion reached by such a method is worthy of consideration."—"The results Sir William Willcocks obtained do not prove falsification or even bad work; they simply prove that the method itself is imperfect."—"On the general question of current meters the Commission is satisfied that Egypt is now employing the method which is employed by irrigation engineers all over the world, and a return to measurements by means of floats would be a serious retrograde step."—"The Commission has decided that the Sennar gauge was not altered in 1916."—"In the absence of any amplification of Colonel Kennedy's charge which would give an idea of the grounds on which he based it, the Commission can do no more than state . . . that they can find no evidence of any falsification or desire to mislead."—"Colonel Kennedy knew that Sir Murdoch MacDonald had no original records of the Khartoum gauge, the original notebook being in Colonel Kennedy's own charge, and Colonel Kennedy had not explained to Sir Murdoch MacDonald how the gauge was in error. It is, therefore, clear that Colonel Kennedy knew quite well that Sir Murdoch MacDonald could not have deliberately published false readings."

Messrs. Fraunhofer and Kucsera, of V. Vadasz u. 37, Budapest, whose advertisement appeared in THE NEAR EAST of December 9, point out that, owing to a clerical error, the toys that they export were represented as being mechanical. The toys in question are not mechanical, but are made of artistic designs in papier-mâché, clay, wood, and lead.

ENGINEERING.

Driving Rolling Mills.

To those of us who are old enough to remember the fierce controversy which raged over the question as to whether the electric motor could ever be suitable as a means of driving iron and steel rolling mills, it will come almost as a surprise to be told on the authority of a writer who presumably has expert knowledge of the subject that "electricity can now be considered as the accepted form of motive power for rolling mills." It is one of these things of which we have become conscious almost without knowing about it, so to speak; something we have known all the time and yet which gives us something of a shock when put into words.

There is no doubt as to the truth of the statement. An analysis of the available figures shows that over half a million of electrical horse-power are used in driving rolling mills in this country. These are big figures; sixteen or eighteen years ago we should not have believed them possible. Yet even then we had the knowledge; we understood the principles. We have learned little since then, simply because we understood thoroughly the main principles governing the correct choice of a motor: since the day when the first electric motor was designed for rolling mill use no radical improvements in either design, material or construction have been made. It speaks well for the knowledge of the pioneers of the movement that no serious modifications have been made to the earliest designs.

As has been pointed out, one of the most noticeable features of the present-day drive is the size of the motor adopted, the modern demand for continually increasing the output requiring corresponding increase in the size of the driving motor. One alteration must be mentioned, as it has had a marked effect on the size of motor required. This is the adoption of what are known as "continuous" mills, where large outputs of one class of work are required. In this type of mill a series of rolls are set closely, one in front of the other, and the ingot or billet enters at one end and passes once through each of the succeeding rolls, leaving them as a semi-finished or finished product. The rolls are in very close proximity, and in consequence of this the metal is actually passing through the entire series at one time in its journey, i.e., the period when the forward end of the billet has reached the last roll, whilst the following or other end has not completely passed through the first roll. Naturally, the drive in a rolling mill of this type is much more even and steady than that in a mill of the ordinary kind, and as the motor used is of such large size it is evident that it can be operated at a higher efficiency. It is said that in the United States at the present time about 80,000 horse-power of motor drive is being used in rolling mills of the continuous type.

Factory Extension.

I hear that by reason of the rapid growth of their lighting business the British-Thomson-Houston Co., Ltd., decided some time ago to extend their Rugby factory, where the lamps and fittings, amongst other products, are made. I was in that neighbourhood recently, trying out a new motorcycle, of which more may be heard in the new year, and noticed that the new workshops are nearing completion. I hear that up-to-date machinery is being installed, and that the company hope very shortly to be able to manufacture and deliver fittings and reflectors in sufficient quantities to meet the remarkable demand which has sprung up recently. One of the principal products of the Rugby works is the Mazdalux reflectors for industrial lighting, and I am informed that the company hope to treble, or even quadruple, their output of these. They are also planning to increase considerably their production of "Eye-rest" indirect, semi-direct, and ordinary fittings and shades.

Motor Taxation.

The Automobile Association has received a number of applications from members for its booklet summarising in handy form the various points arising out of the new scheme of motor taxation, as affecting the owners of private cars and motor cycles. The booklet is being issued free to members upon application by postcard, and those who may desire additional copies of the association's "Handbook" are notified that a number are available for distribution. They will be sent upon application, post free, for 2s. 6d., together with a copy of the association's taxation booklet.

To meet the convenience of motorists desirous of becoming members of the Automobile Association whilst on the road, its road patrols have been authorised to enrol new members. The patrols are provided with a special receipt for members' subscriptions, which, upon production to other patrols, will entitle them to roadside assistance, and in the event of summonses or contraventions of the Motor Car Act, will entitle them to free legal defence. Such new members will receive their badges with the least possible delay from the head office or the nearest A.A. Area Office.

Tractor Changes.

It is gradually becoming recognised, even outside the engineering world, that the tractor—by which is meant more particularly that type which is designed chiefly with a view to carrying out agricultural and kindred work, is destined to be of considerable importance in national industry. It is really curious that agricultural machinery should have remained for so many years practically where it was until the conditions brought about by the war gave rise to the production of the tractor on a large scale. Now engineers all over the globe have turned their attention to the design and production of cultivating machinery, but amongst all the big firms concerned there is no doubt that the Austin Motor Co., Ltd., are maintaining their lead—a lead which they have established by sheer merit.

Incidentally, I note that in my recent remarks regarding the "Austin Twenty," the name given to the 20-h.p. motor-car manufactured by the same firm, I omitted to mention that some slight modifications in the position and fitting of certain items have been made in the 1921 model. For instance, the electric starter is now placed more conveniently at the side of the gear box, making the already accessible engine more accessible still. Trouble due to the fan belt stretching has been eradicated by providing a direct drive by help from the cam shaft to the fan pulley, whilst the dynamo is now also directly driven from the crankshaft by another belt. Adjustment of the tension of the fan driving belt has been made quicker and easier by a slight alteration of the locking arrangement, while the tension of the dynamo driving belt is altered by sliding the machine bodily in its mounting, a course which is the most approved engineering practice. Further, the packing of the water pump can be adjusted without any necessity for removal or dismantling.

"Smith" Service.

I am informed by my old friend, Mr. Walter Dandie, who is so well known in connection with Messrs. S. Smith and Sons (M.A.), Ltd., of 179-185, Great Portland Street, London, that his firm have inaugurated a "service" scheme which strikes me as being quite the best I have yet come across. I understand that it was thought out some months ago, but that the keen demand for the firm's products and the consequent abnormal business has prevented it being put into operation at an earlier date.

Under the scheme every Smith (M.A.) product by which the firm mean goods of their own manufacture, such as speedometers, watches, instruments, carburettors, lighting and starting sets, mechanical horns, and other goods for which they have sole selling rights, is backed by a twelve-months' guarantee, covered by the usual "wear and tear" clause. Should any article fail through defective material, whether it be a speedometer, watch, dynamo, self-starter, or any component coming under the above heading, it will be replaced by a similar article within twenty-four hours of receipt by the firm at their head office address. The only stipulation they make is that the accessory must be of post-war design, and not have been manufactured earlier than 1920.

I am informed that the firm intend to offer similar service from their Glasgow, Birmingham, Manchester and Belfast depôts in the very near future. Eventually, I believe, the idea is to extend this Smith service to the firm's overseas depôts in Australia, New Zealand, South Africa and Bangkok.

Side Lamps.

There has been an increasing tendency for some time to mount the side-lamps on the wing of the car in order to define the width as required by the Lighting Regulations. Messrs. C. A. Vandervell and Co. have for some time marketed a very neat wing-lamp of true stream-line form, fitted with a bull's-eye lens, but owing to the restricted beam this did not meet the requirements of all users, as it is desirable with a side lamp to have a wide angle beam in addition, to define the edge of the road. This difficulty has now been surmounted by substituting a hollow glass for the bull's-eye lens and fitting a small reflector which throws a beam some distance ahead. The reflector is of composite form, and in addition to the parabolic silvered back portion it has a cylindrical extension, white enamelled inside. This has the effect of giving a wide angle illumination of soft diffused light and entirely gets over all the objections which have hitherto been inseparable from the ordinary bull's-eye type of lamp. Other improvements have also been incorporated, the wiring for instance being carried, through the foot of the lamp, and therefore entirely concealed without any projections on the inside of the mud wing, all the electrical portion being inside the body of the lamp and entirely protected from wet. In view of the prevalent fashion for switching off head-lamps in town or when meeting other traffic, a side-lamp, with which it is possible to drive at quite respectable speed without any appreciable dazzling effect, is therefore a valuable acquisition in the electric lighting of motor vehicles.

STANDARD

CIGARETTE MACHINE

having an Established Reputation throughout the world, can be installed with every assurance that it will fulfil our claim, that for quality and quantity of output it is the "World's Premier."

The "STANDARD JUNIOR" Cigarette Machine is an invaluable asset to the small manufacturer for superseding old-fashioned methods of hand-production.

NEAR EAST MARKETS.

SMYRNA OLIVE OIL.

Messrs. C. J. Giraud and Co., of Smyrna, have issued the following report, dated November 30:—

Prospects for this winter's production of olive oil in Asia Minor are exceptionally satisfactory. The trees generally yield a biennial crop, and once in ten or twelve years the result is generally above the average or a bumper production, which promises to be the case this year.

The estimates at present stand as follows (the figures representing Turkish kintals):—Smyrna and environs, 50,000; Aidin, 150,000; Baidir and Odemish, 100,000; Sokia, Tchina, and Sobouje, 100,000; Kulluk, 50,000; Axar, Kirkagatch, Magnisia, Menemen, Fokia, 50,000; Aivaly district, 200,000; Adramyt, 250,000; total, 950,000 kintals, or 55,000 tons.

There is, however, a serious crisis facing farmers. Owing to short crops during the past two years, and to the impossibility consequent on the events of last year of collecting the fruit in the interior, exports of olive oil were prohibited, and the prohibition still continues.

The mills are now commencing work, and very shortly abundant supplies will begin reaching markets. The storage capacity in the country has been very much reduced, and if prohibition is not removed so as to permit the sale and export of a good portion of the production, it is absolutely certain that farmers will not be able to face the expense of collecting all their produce, and that a very heavy proportion of the olives will not be worth gathering and there will be a risk of the oil being lost. The Greek authorities are aware of the situation, the more so that deputations have been coming in from various parts of the country pointing out the extent of the crop and the absolute necessity of allowing freedom of exports, failing which, half the crop of oil will probably be sacrificed.

On the other hand, all decisions taken with regard to restrictions on exports of certain products of this province are taken by the High Commissioners in Constantinople, and apparently no consideration has as yet been given to the question of olive oil.

It is more than likely that the farmers, especially in the Adramyt and Aivaly district, will give serious trouble to the authorities. These districts are mainly dependent on the olive crop, and the population which has been returning from Greece now finds itself unable to finance the collection and milling of their produce. Steps are being taken to bring to the notice of the authorities the necessity of raising the prohibition, and there is no doubt that in due course all restrictions will be removed.

The requirements for local consumption over the next twelve months for the whole of Asia Minor, including Constantinople, can be estimated at a maximum at 20,000 tons. This is on the basis of the consumption previous to 1914. In view, however, of the fact that the interior is entirely cut off from the seaboard, and that the soap industry is hardly likely to consume anywhere near the quantity required in pre-war days, it can be safely reckoned that the consumption will certainly not reach this figure.

So far as exports go, the most optimistic estimates for the next six months hardly exceed the figure of five or six thousand tons. There is, consequently, not only sufficient oil to meet all requirements both for local consumption and for export, but also to allow of a very large stock of the liquid remaining in the country for the coming year.

Owing to the existing prohibition of exports, business is absolutely at a standstill. Foreign shippers have no inducement to risk purchases until they are absolutely assured that they will be able to ship off any oil they may secure. Meanwhile farmers have been unable to dispose of any portion of their crop for forward delivery in order to raise sufficient funds to meet the expenses of gathering and milling of their olives, and are compelled either to borrow money from native dealers at very high rates of interest or to sell a portion of their produce at ruinously low prices to speculative buyers. As a result the gathering of the fruit is being greatly handicapped.

As we have stated above, it is generally feared that as a result of this uncertain situation a good deal of fruit will be allowed to rot on the ground, thereby lessening the quantities of oil that should have been available over the next few months. If no remedy is brought about and export facilities are not granted, the prejudice caused to the country will certainly be great, and will continue to intensify the dissatisfaction generally prevailing among the population.

Meanwhile the olive oil crops in all countries give promise of excellent results. Reports from Greece, Italy, France, Spain, and Northern Africa are satisfactory, and so far as Greece goes, all export restrictions hitherto prevailing have been entirely removed. Prices on all markets for the liquid are declining, and whereas twelve months ago olive oil was

hard to obtain at under £200 to £240 per ton, prices this season are now ruling at about £130 to £150 per ton, according to quality, and are likely to drop to a still lower level.

SUDAN PRODUCE.

Gum.

The C.E.B. report for October states that the exports via Port Sudan were 57,212 kilos of bleached of the value of ££3,284, 1,242,645 kilos of hashab of the value of ££58,911, and 193,048 kilos of talh of the value of ££4,627.

Cotton.

Berber Province.—At Kitiab pumping station the earlier cotton on sakia land near the pump was good in parts, and bolls were just forming. Later cotton on Karu Land was not so advanced, but of a low habit and branching nicely. At Zeidab the native cotton was mostly fairly good. The company had picked 2,500 kantars to date, and their cotton is above the average.

Khartoum Province.—Planting of the American cotton at the Gobel Bowser Scheme commenced, but there are considerable difficulties in erecting the pump owing to the slow fall of the river. The first pickings from American cotton, issued at Geili on June 25, were brought to Geili on October 6. This cotton has done very well, and seems most suitable for sagias.

Nuba Mountains Province.—The Government experimental cotton at Talodi ripened towards the end of the month, and is being picked daily.

Red Sea Province.—Tokar.—The cotton on the eastern side is reported to be very good. Rain is required for the less heavily watered areas near the town.

Dura.

Berber Province.—Seifi dura below Garb Village was giving a second growth by percolation without further watering.

Khartoum Province.—A curious new method of growing dura, made possible by the circumstances of this year, has been observed. Some Sagias in Gereif has grown a summer crop of dura, which was out just before the rains. The rains were so good that it was possible to grow a rain "butouk," or after-growth crop, from the same roots without further watering.

Kassala Province.—The price of dura at Kassala is PT.219, and at Gedaref PT.132 the ardeb of 300 rottles (135 kilos).

Sesame.

Sennar Province.—Sesame is being steadily dealt in, but at considerably lower prices than last year. The market opened at ££2,500 and upwards per ardeb of 300 rottles (135 kilos), but soon dropped to ££2,400, about which it has since remained. This time last year the price was between ££3,500 and ££4 per ardeb.

Dates.

Halfa Province.—September.—Dates are being picked, and prospective buyers are arriving. It is anticipated that the quantity will be small, but quality good, and prices likely to be high.

Livestock, Hides and Skins.

Berber Province.—259 cattle, 7,831 sheep and goats were sold in Damer Market. Cattle averaged ££8 per head and sheep ££2.

Kassala Province.—Eighty-nine cattle and 1,194 sheep were exported from Kassala to the interior of the Sudan.

Red Sea Province.—256 sheep, 2 goats, and 83 head of cattle were exported via Port Sudan during the month.

OPIUM MARKET REPORT.

Messrs. Barker Bros., Smyrna, report as follows for the week ended December 11:—The sales this week on our market amount to forty cases of soft and druggist's manufacturing qualities at prices more or less equivalent to those of last week, viz., 19s. to 20s. per lb. for soft Yerli, and 14s. to 17s. 6d. for the manufacturing descriptions. Owing, however, to the financial crisis that we are going through and to larger arrivals of the drug on this market this week, we have strong reasons to hope that with business in hand sellers may be disposed to sell at 5d. to 6d. per lb. lower than what we quote above. The arrivals to date are 806 cases, against 1,210 at same date last year, and our stock in first and second hands is now 822 cases. The exchange is to-day 500 piastres per pound sterling for cheque and 0.69 dollar for one Turkish paper pound.

For the week ended Dec. 18, Messrs. Barker Bros., Smyrna, report as follows:—The sales this week on our market amount to 24 cases of soft and druggist's manufacturing qualities, at prices varying from 16s. to 17s. per lb. for soft and 13s. 6d. to 15s. per lb. for manufacturing descriptions. This decline is due to favourable exchange fluctuations, also to holders being more disposed to sell owing to the difficulty of raising money on their stocks. The arrivals to date are 851 cases, against 1,250 at same date last year, and our stock in first and second-hands is now 833 cases. The exchange is to-day piastres 590 per pound sterling for cheque and 0.62 dollars for one Turkish paper pound or piastres 100).

NEW ADVERTISEMENTS.

New or enlarged advertisements in this issue include those of Messrs. Edgar Allen and Co., Ltd. (p. iii.), the Bank of Athens (p. vi.), Messrs. Strick, Scott and Co., Ltd., and The Euphrates and Tigris Steam Navigation Co., Ltd.

AUSTIN

The Best Car Investment

The man who buys an Austin Twenty ensures a permanent value. Why? Because the design of the Austin is destined to be the standard for years to come. This claim is based on the opinions of well-known experts.

The Austin rate of output is increasing by leaps and bounds. The prompt man gets priority. Full particulars will be gladly supplied by your local distributors:

Messrs. Ed. Kurk & Co., London Garage 1, Rue Sultan Fouad, Alexandria. (Agency for cars and lorries in Egypt and the Soudan.)

Messrs. Strick, Scott & Co., Baghdad-Basrah, Mohammerah, Ahwaz, Bushire-Hamadan. (Agency for our cars and are handling all our lines, in Mesopotamia and Persia.)

LONDON PRODUCE REPORT.

The Decline Continues.

Dried Fruit.—Business has been unusually brisk this week. Currants have been in strong request, and it is evident that stocks in the country have been largely depleted as a result of the seasonable demand. There has been little alteration in the position as regards sultanas. Inquiry is somewhat restricted, but the demand remains steady. So far there have been no indications of the development of any extensive demand for figs.

Sugar.—Prices have declined. West Indian crystallised is again lower at 60-63s., and white Mauritius is lower at 71s. Home refined met with a good demand at the official prices.

Coffee.—There is no material change to report. Costa Rica has been done at 120s., Indian at 110s., and Mocha at 160s. The futures market has been inactive. Quotations are:—March, 46s. 6d.; July, 48s.; September, 41s. 6d.

Oilcakes.—Prices are unaltered in most cases. Linseed cake has been done at 18s., while cottonseed cake is 2s. lower at 10s. and arachis cake is unchanged at 13s.

Oilseeds.—The tone has been dull. Indian linseed is 1s. down at 22s. 6d., while La Plata is the same at 19s. 6d. Rapeseed has been inactive, with Toria at 22s. 6d. and bold Ferozepore at 21s. 6d.

Seed Oils.—Prices are still declining. Linseed oil has come to business at 36s.-38s., a decline of 4s. Turpentine has remained the same at 100s.

CURRENT PRICES.

General Produce.—Bacon, 215s. 3d. cwt.; butter, 335s. cwt.; cheese, 161s. cwt.; chillies, 130s. cwt.; cloves (Zanzibar), 1s. 3d. lb.; cocoa (Ceylon, good to fine), 112s. 6d. cwt.; coffee (Costa Rica), 106s. cwt.; East Indian bold, 115s. cwt.; Mocha long-berry, 132s. cwt.; eggs, 45s. 8d. per 120; ginger (washed Cochin), 47s. 6d. cwt.; hams, 220s. cwt.; lard, 167s. 9d. cwt.; nutmegs, 1s. 0½d. per 110's to 180's; pepper (Singapore, black), 3½d. lb.; Muntok white, 8½d. lb.; raisins (Valencia), 152s. cwt.; sultanas (Smyrna), 145s. cwt.; currants (Vostizza), 95s. 6d. cwt.; sugar (granulated), 80s. cwt.; No. 1 cubes, 84s. cwt.; Mauritius, 78s. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 24s. cwt.; rice (Rangoon No. 2), 25s. cwt.; bran, Rangoon, 27 10s. cwt.; tea (Indian), 6½d. lb.; Ceylon, 7d. lb.; Java, 4½d. lb.; wheat (Australian), 109s. 3d. qr.; English white, 82s. 6d. qr.

Hides and Skins.—Ox and heifer: First 90 lbs. and up, 7½d. lb.; 80 to 89 lbs., 7¼d. lb.; 70 to 79 lbs., 7d. lb.; 60 to 69 lbs., 6¾d. lb.; 59 lbs. and under, 6½d. lb. Cows (first): 60 lbs. and up, 6d. lb.; 59 lbs. and under, 6d. lb. Cows (second): 60 lbs. and up, 5d. lb.; 59 lbs. and under, 5d. lb. Bulls (first), 5d. lb.; bulls (second), 4d. lb. Kips (first), 6d. lb.; kips (second), 5d. lb.; kips (third), 4d. lb. Horse hides: 8s. to 29s. each.

Metals.—Aluminium, £165 ton; bismuth, 12s. 6d. lb.; copper (standard), £73 2s. 6d. ton; copper (electro-wire bars), £84 10s. ton; gold bars, 116s. 6½d. oz.; iron (No. 3 Cleveland), 225s. ton; hematite (mixed number), 260s. ton; lead (soft foreign), £22 7s. 6d. ton; manganese Poti, 2s. 6d. unit; molybdenite, 55s. unit; nickel, £215 ton; platinum, 470s. oz.; plumbago, £37 10s. ton; quicksilver, £14 bottle; silver bars, 41d. oz.; spelter (G.O.B.), £24 5s. ton; tin (standard), £202 15s. ton; wolfram, 18s. 9d. unit; tin plates (20 by 14), £33 box; zinc sheets, £47 ton.

Chemicals.—Acids: boric, 75s. cwt.; oxalic, 1s. 6½d. lb.; citric, 2s. 10½d. lb.; tartaric, 2s. 2½d. lb.; ammonia (sulphate), £24 8s. ton; benzole (standard), 3s. 6½d. gallon; arsenic (white powdered), £74 10s. ton; bleaching powder (35 per cent.), £21 ton; borax crystals, 41s. cwt.; cream of tartar, 217s. 6d. cwt. Potassium: bichromate, 1s. 3½d. lb.; chlorate, 7½d. lb.; caustic, £76 ton; nitrate, £60 ton; permanganate, 2s. 9d. lb.; sulphate (90 per cent.), £27 15s. ton; prussiate yellow, 1s. 7½d. lb. Sodium: crystals, 150s. ton; bicarbonate, £10 15s. ton; bichromate, 11½d. lb.; alkali (58 per cent.), £10 15s. ton; chlorate, 5d. lb.; caustic (70 per cent.), £27 ton; nitrate, £22 15s. ton; hyposulphate, £28 ton; prussiate, 1s. 0½d. lb.; sulphate copper, £39 10s. ton; sulphate iron, 150s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (industrial 125 per cent.), £155 ton; lead (red), £46 5s. ton; lead (white dry), £53 ton; lead (white ground), £62 17s. 6d. ton.

Miscellaneous.—Cotton (American), 11.30d. lb.; cotton (Egyptian, Sakellaris), 22.00d. lb.; linseed (La Plata), £19 ton; rape (Toria), £23 10s. ton; soya beans, £15 10s. ton; palm kernels, £26 17s. 6d. ton. Oils: linseed, £40 10s. ton; soya, £45 ton; cotton (crude), £43 10s. ton; olive, £1 gallon; ground nut, £46 ton; palm, £46 5s. ton; rape (crude), £71 10s. ton; petroleum, 2s. 3d. gallon; turpentine, 100s. cwt. Rubber: plantation (No. 1 crêpe), 10½d. lb.; smoked sheet, 9½d. lb.; fine hard Para, 1s. 1½d. lb.

British Burmah Petroleum.—Balance dividend for the year to July 31 last of 1s. per share, free of tax, payable February 28 next to holders on the books on January 17, making 20 per cent., free of tax, for the year.

Reuter's Rome correspondent. in a message dated December 23, says: A semi-official statement issued here to-day denied the report that either the Italian Government or certain Italian banks had floated a loan to Yugoslavia.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in their report for the week ended December 30, state:—Owing to the Christmas holidays there have only been three business days since our last report, and it is hardly surprising, therefore, that the turnover has been small, particularly when present conditions are considered. Spot business, in fact, has been reduced to a minimum in all departments, with a further downward tendency. The official reports from the Liverpool Cotton Association to-day intimated that "Egyptian was pressed for sale," a phrase rarely used officially, but one which aptly sums up the depressing situation here. The enquiry, such as it was, rather favoured Sakellaris, and about one hundred bales of Sudan cotton changed hands at approximately 16.00d. Cotton is freely offered at fully 2d. per lb. below official quotations. Manchester reports show no sign of improvement and c.i.f. business has been practically at a standstill. Everyone looks to the New Year to bring an improvement, but we fear there is but little cause for doing so at the moment, as the old year closes with the Big Three—i.e., Adverse Rates of Exchange, Unsettled Political Conditions, and Financial Stringency, still as formidable as ever. Quotations of Upper are reduced 100 points; those of Brown, 50 points; whilst Sakellaris has been reduced 200 points, with the exception of Fair quality, which is 100 points lower since our last. Total sales (three days), 450, which includes 100 bales Sudan. Fully good fair Sakellaris 23.00d.

DRIED FRUIT.

Messrs. J. C. Houghton and Co. Liverpool, in a report dated December 21, state:—

Currants.—Demand has continued decidedly slow, and scarcely any business is passing, so that, all things considered, prices are holding up remarkably well. Stocks remaining in Greece are estimated at 20,000 tons, against 80,000 tons at this date last year, and this healthy statistical position, combined with the strength of the Greek market, are important factors of encouragement for the future. It is reasonable, therefore, to look for an improvement on prices now ruling as soon as any buying activity is evidenced in the New Year. The Government has made further concessions in disposing of old stocks held, sales taking place at reduced figures. Quotations are:—New fruit, Pyrgos, 70s. to 72s.; Amalfas, 75s. to 76s.; Patras, 76s. to 80s.; Gulf and Panaritii, 82s. to 90s.; Zante, 80s. to 85s.; Vostizza, 90s. to 102s. Total arrivals from commencement of season to date, 15,000 tons.

Valencia Raisins.—The remaining stock of seedless is moving slowly at 118s. to 120s.

Sultanas, at their reduced level, are selling better. The Belgravian brought some parcels of choice quality, of which the market was bare, and these have realised 153s. Quotations are:—Smyrna ordinary to fair, 130s. to 134s.; good to fine, 142s. to 153s.; Greeks, 136s. to 142s.; Afghans yellow, 115s. to 127s. 6d.; red, 100s.

Figs.—The Belgravian's fresh supplies of skeleton cases sold from 120s. to 140s. Locoums neglected. Bags of Naturals, sales range from 40s. to 58s.

The traffic receipts of the Smyrna-Aidin Railway for the week ended December 18 amounted to £8,776.

The traffic receipts of the Egyptian Delta Light Railways for the week ended December 10 amounted to £E14,620, making the total for the year £E352,154. For the corresponding periods of last year the receipts amounted to £E19,545 and £E248,153 respectively.

COMPANY MEETINGS.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1920, submitted to the shareholders at the fifteenth ordinary general meeting, held at Alexandria on December 9:—

We have pleasure in placing before the shareholders for their approval our fifteenth annual report, together with the audited accounts to August 31, 1920. The quantity of cotton ginned in our factories during the year 1919-20 was cantars 789,254.12, against cantars 700,821.47 in 1918-19, and steam-pressed cantars 97,454.24, against cantars 4,781.94 in 1918-19. The following are the results to August 31, 1920:—

	£E
Factory profits	78,258
Less Sundry repairs and renewals in the factories	2,862
	75,396
Less Expenses and Management at head office,	
Alexandria	£E 6,771
Interest on Debentures	£E 3,649
Less Interest earned	3,547
	102
Sundry expenses	1,804
Insurance premiums	2,134
Commissions	101
	10,912
	64,484
Less Depreciation on buildings and machinery ...	7,065
Depreciation on Mazout and hot-air installation	10,000
Depreciation Egyptian Unified Debt. 4 per cent. à 67	2,470
Special reserve for contingencies	2,500
	22,035
	42,449
Less Statutory reserve, 10 per cent.	4,245
Dividend, as per statutes, 6 per cent., to shareholders	21,060
	25,305
	17,144
Less 10 per cent. to the board of directors	1,714
	15,430
Leaving a balance of	54,323
We have therefore to deal with the following amounts:—	
Statutory dividend of 6 per cent.	21,060
Above-mentioned balance of	15,430
Amount brought forward from last year	17,838
	54,323
of which your board propose to distribute as dividend to the shareholders two shillings per share, making...	35,100
and to carry forward	19,228

Your board, having received favourable offers, has sold the following factories:—Ex. Bacos Zagazig, ex. Russe Zagazig, ex. Chorem Zagazig, ex. Antoniadis Mit-Yazid, and the land at Abousir, sales which have enabled the company to redeem all outstanding debentures. We regret to have to inform you of the resignation of our chairman, Mr. Percy W. Carver, who for long years has devoted his energy to the benefit of the company. In accordance with Article 102 of our articles of association, Mr. Herbert Benjamin Carver succeeded as director on the board. In consequence of the death of the late Mr. Michel-Sinadino, the remaining number of directors being insufficient for all statutory purposes, your board has nominated Mr. T. S. Richmond a director, and ask for your approval. Mr. Alex. Th. Kitroeff, who has held the position since the constitution of the company first of manager and then of managing director, has resigned his post; and your board has appointed Mr. A. H. Hornbostel general manager of the company, and has asked Mr. Alex. Th. Kitroeff to remain as director. You are now asked to approve and adopt the report and balance-sheet for the year ending August 31, 1920, as presented. You have also to appoint auditors for the ensuing year and to fix their fees. Messrs. Russell, Harris, and Co. offer themselves for re-election.

IMPERIAL BANK OF PERSIA.

The thirty-first ordinary general meeting of the members of the Imperial Bank of Persia was held on December 29 at the Cannon Street Hotel, Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., the chairman, presiding.

The Manager and Secretary (Mr. Sydney Rogers) having read the notice convening the meeting and the auditors' certificate,

The Chairman, in the course of his speech, said:—Gentlemen, —The report and accounts have been in your hands for some days, and I assume it is your pleasure that we take them as read. They will not require much explanation. It is a source of satisfaction that for the first time for three years we are able to hold our annual meeting within the calendar year. We have only just succeeded in doing this, as the returns from Persia were rather delayed, and our thanks are due to the audi-

tors and to our London staff for the exertions they have made to complete the accounts in time for to-day's meeting.

I regret to say that the political situation in Persia has again been very unsettled during the past year. When I spoke to you last March at our annual meeting we were able to congratulate ourselves that at last, after the troubles of the war, Persia had for some months been enjoying a period of comparative peace and tranquillity, and I ventured to say that unless there were a renewal of the Bolshevik attacks from the north-west there was every reason to expect that the country would speedily recover from the effects of the war, especially if—as contemplated by the Anglo-Persian agreement—the work of financial reform were seriously taken in hand. Unfortunately, the hope that the Bolsheviks would abstain from further aggression has not been realised. In May last they attacked Enzeli by sea from Baku, seized the vessels which had been interned there after General Denikin's defeat, and took possession of the town. Later on they occupied Resht, from which you remember they had been ousted by General Dunsterville in the course of his brilliantly conducted expedition in the summer of 1918. The attack on Resht obliged us to close our branch there and to recall our staff. This was effected in good time without loss. The return of the Bolsheviks had the effect of encouraging Kuchik Khan and his Jangali followers in Mazandaran to renew their opposition to the Persian Government, and at one time there was some apprehension that Teheran might be attacked by these insurgents. They were, however, defeated by a force detached from the Persian Cossack Brigade, which, as you know, has for many years been maintained at Teheran under Russian officers. Later on the Cossacks, in their turn, met with a severe reverse in an attempt to capture Enzeli, and both that town and Resht are still in Bolshevik occupation. It is needless to remark that this invasion of Persian territory was entirely unjustified and unprovoked.

With regard to the balance-sheet, the totals on each side show some change from those of a year ago. Capital remains the same and needs no comment, but in view of the board's earnest desire to add year by year to the strength of the bank, we have again placed £30,000 to reserve account, bringing it up to its present amount—namely, £280,000—a record not reached before, and one your directors hope may be passed in the years to come. Notes in circulation are lower this year by £428,997—at £670,204. I do not view this fall with any dissatisfaction. In a country like Persia the fluctuations in circulation are often considerable and frequent, and this year the unsettled period through which Persia is now passing partly explains the reduction. Also, although we know that the popularity of our notes remains unimpaired, we think our chief manager is wise, at times like the present, to keep the circulation well under control, and limited to such a figure as is considered prudent. The closing of the Resht and Tabriz branches and the calling in of the issue of these two centres has also contributed to the decline now shown.

On the assets side of the account, cash stands at £3,339,574 as against the previous year's figures of £2,103,003, but if you will note that the million of Treasury Bills appearing in last year's account has been turned into cash, the total increase of some £1,236,571 is not remarkable. Investments and bills discounted, loans, and advances are both lower at £1,535,222 and £1,738,769 respectively. The decrease in the first item, investments, is brought about by the need for a liquid state of assets at the present time, when the holders of gilt-edged stocks have the rueful experience of watching their steady depreciation day by day.

With regard to the second item, bills discounted, loans, and advances, since the beginning of 1920, when it was becoming evident that the temporary boom in trade had reached its height, we endeavoured to keep abreast of the times by adopting a system of rationing our customers, both here and abroad, and we are in the happy position to-day of being able to show a very liquid balance-sheet. In addition to proportionately high cash resources we have in bills receivable at £1,591,989, as against £987,733 last year, an increase of £604,256 of easily marketable assets. As you will see from the short explanatory note printed in the balance-sheet, on the date to which our account was made up we had discounted of those bills £625,459, of which up to December 18 the contingent liability on £493,595 had run off. Bank premises, furniture, and stationery, I should like to say something more about than usual. This item, at £55,419, shows an increase of £42,360 on last year's figures. This is caused mainly by purchases of premises and other installation expenses of our newly opened agencies, all of which, you will admit, is nowadays an expensive business in comparison with a few years ago. In the future, as more settled conditions prevail in Persia, we shall have to add to this item, as many much-needed repairs and extensions of our properties have had to remain in abeyance during the past five or six years. You will, however, notice, if you refer to past balance-sheets, that during those years we have provided for this eventuality. In 1913 this item stood at £55,308, while up to September, 1919, we had steadily written this item down to £13,059.

The various items in profit and loss account speak for themselves; they show very little change from last year's figures. There is the usual payment to the Persian Government on account of royalty, the interim and final dividend, at the same rate as last year, the amounts placed to reserve and premises accounts, leaving us £29,051 to carry forward to next year's accounts, or £1,242 more than at this time last year.

The report and accounts were unanimously adopted, the retiring directors were re-elected, and the meeting terminated with a cordial vote of thanks to the chairman, directors, and the staff.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

CONSTANTINOPLE, Dec. 18.

The commercial market, the situation of which is so unsatisfactory owing to the stagnation and the fall in prices in Europe, has this week been affected by the rise in the exchange. The pound having passed above 600 piastres, and all the exchanges having risen in a more or less formidable proportion, merchants have found it impossible to take up the merchandise consigned to them. Prices of foodstuffs have risen to a certain extent as a result of the movement of the exchanges.

The market in manufactured goods continues to be adversely influenced by the lack of openings and the fall in prices in manufacturing centres.

Colonial Produce.

Sugar.—A new drop has to be recorded in American of one to two dollars. The arrivals of the week have only amounted to thirty wagons. The market is quiet, the exchange paralysing transactions. Quotations are: Java, prompt shipment from America, 13 dollars per 100 kilos; American sugar, 16 dollars. In this market the price is £60 per ton, and in Customs £T42 per 100 kilos.

Coffee.—The fall in prices continues in centres of production, especially for futures, which points very plainly to a further fall. The effect of this fall has been lessened here by the movements of the exchange. Quotations (per oke) are: Rio No. 1 Ps. 45, second qualities Ps. 41-43, in Customs Ps. 50-64, according to quality.

Rice.—The fall continues in the price of this commodity. The arrivals of the week have been 15 wagons of Saigon and 10 wagons of American (Blue Rose), most of which has been warehoused for lack of buyers. Prices are:—Saigon No. 1 (immediate shipment from Marseilles) 135-140 francs per 100 kilos, in this market Ps. 20-21 per oke in transit, American Blue Rose (prompt shipment) 14-14½ dollars per 100 kilos.

Exports

Products for export are so neglected that, despite the rise in the exchange of about 20 per cent. in the course of a few days, the demand has been insignificant and prices show no improvement.

Mohair.—Arrivals, 400 bales; sales, 80 bales at Ps. 75 per oke. Quotations are: Ps. 75 extras, Ps. 60-65 1.

Wool.—Arrivals, 140 bales. Sales, nil. Prices are very low.

ALEXANDRETTA, Nov. 15.

The routes between Alexandretta and Aleppo and between Alexandretta and Antioch are now safe, so a fairly important movement of commodities has taken place. Unfortunately this market, which is concerned principally with the transit trade, has not benefited to any great extent.

HAIFA.

The report for November states:—The economic situation of this region, far from improving, is suffering from the monetary stringency and the prohibition of the export of the principal articles of agricultural produce such as wheat, barley, and maize, of which there are considerable stocks here and no purchasers.

Prices of cereals have fallen by 10, and even 20, per cent. for some commodities. The market is very quiet.

Reuter's Paris correspondent, in a message dated January 3, states that a correspondent of *The Chicago Tribune* in Athens reports that a British company has obtained oil concessions in Thrace from the Greek Government.

(Over 80 Branches in the Near East.)

The Bank has been established for over 55 years, and has its own Branches or Agents in every important commercial town in the Near East.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Exchange and Merchandise operations effected.

ON 'CHANGE.**Tone More Cheerful.**

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday night.

A much better tone has been in evidence since I last wrote, and by the way in which markets have opened the New Year it would really appear as if the worst of the depression was over. The reasons for the changed outlook are several, the most important being the absence of adverse factors abroad coupled with a cessation of liquidation. When to that is added the development of a moderate amount of buying, it will be readily understood why prices in most markets have readily responded to the prevailing atmosphere.

Gilt-edged stocks generally have been specially good, and notable advances are to be recorded. Foreign bonds, while lacking the strength of the Home securities, have shown a fair degree of firmness, though in this direction there has been a certain amount of irregularity.

The other markets have in general shown marked improvement. Industrials, as a whole, have been more cheerful in the absence of the flood of selling that has so long been in evidence, and in a number of directions advances have taken place. There have, however, been a few weak spots. Oils have been very cheerful, the outstanding feature being Mexican Eagles, while Royal Dutch and Shells have been very strong. Rubbers, *mirabile dictu*, have made an effort to recover some of the lost ground, and there have been quite a number of small rises. The improvement in this market has been aided by a slight hardening in the raw material.

Near Eastern securities have been generally weak, with the exception of Greek issues, which have been rather firmer. In Government funds changes have, however, been insignificant. Egyptian Guaranteed 3 per cent. are unchanged at 58, while Turkish Guaranteed 4 per cent., 1855, are $\frac{1}{2}$ down at 65 $\frac{1}{2}$. Greek Guaranteed 2 $\frac{1}{2}$ per cent., 1898, are the same at 54 $\frac{1}{2}$, but Turkish 3 $\frac{1}{2}$ per cent. Egyptian Tribute Bonds are $\frac{1}{4}$ lower at 51 $\frac{1}{2}$.

Greek securities have shown improvement in a number of cases. The 5 per cent. 1881 Loan and 5 per cent. 1884 issue remain at 40. The 5 per cent. 1890 Loan has gained a point at 40, while Fundings are the same at 40. The 1910 Loan has advanced a point at 31, and the 1914 Loan has gained a like amount at 39. The 1902 Loan is 2 points down at 33.

Banks have been variable. Agricultural 3 $\frac{1}{2}$ per cent. Bonds at 55 and 3 $\frac{1}{2}$ per cent. Guaranteed Bonds at 57 are unaltered. Imperial Ottoman Banks have shed $\frac{3}{4}$ at 7, and National Bank of Egypt at 16 are down $\frac{1}{2}$. Land Banks are unchanged at 4 $\frac{3}{8}$.

There have been a number of changes in Land shares, mostly in a downward direction. Beheras have dropped $\frac{1}{2}$ points to 8 $\frac{1}{2}$, and the preference shares have declined $\frac{1}{4}$ to 2 $\frac{3}{8}$. Anglo-Egyptian Land Allotments and Egyptian Consolidated Lands are unchanged at 3 $\frac{1}{2}$ and 1s. 3d. respectively. Delta Lands at 9s. and Gharbieh Lands at 1 11-16 have fallen 1s. and 1-16 respectively. New Egyptians have been done at 21s., a decline of 3s. 6d., while Union Foncières have shed $\frac{1}{2}$ point to 2 $\frac{1}{2}$. Sudan Plantations have been weak, and have dropped 9-16 to 3 7-16.

Oils have been dull with the exception of Anglo-Egyptians, which have risen 5-16 to 2 11-16. Phoenix are $\frac{1}{2}$ down at 9s. 7 $\frac{1}{2}$ d. Roumanian Consolidated at 10s. are 2s. 6d. down, but Steaua Romana remains unchanged at 18s.

Roumanian banks have granted important credits to the Bucharest Government to enable it to increase its orders for locomotives from abroad.

LANCASHIRE COTTON.**More Hopeful Mood.**

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, January 3.

At the time of writing traders in the market have scarcely got into their stride after the holidays, and certain firms will not reopen until to-morrow. There is not much ground for belief in an early improvement in trade, but producers and merchants are in a fairly hopeful mood, as it is held that conditions cannot get worse than during the last few weeks. Lancashire users of Egyptian cotton continue to purchase sparingly. There is no change in the outlook for supplies, but it is noted that the receipts at Alexandria are decidedly below last year. In Egyptian yarns only a hand-to-mouth business is being done, and buyers can purchase at figures which show a loss to producers. In cloth for Egypt a certain amount of inquiry is about, but most of this sort of thing is for stocktaking purposes and for the valuation of stocks bought a long time ago. No activity shows itself for the outlets of the Levant. Comparatively few bids are being met with for India. Our customers in China are anxious to keep in touch with Manchester rates, but definite offers are scarce. No demand worth mentioning has come through for South America. The position of manufacturers remains wretched, and there is a tendency in some districts for still more looms to stand idle. Quotations in American yarns continue very irregular. The offtake has again been poor. Only odd lots are being sold in shipping counts, but a little more inquiry is reported for the Continent.

OIL OUTPUTS.

Anglo-Egyptian—Gemsah, week ended December 26, nil (last week nil); Hurgada, 3,295 tons (last week 3,359 tons).

The Bulgarian Government declares that it is willing to restore all rolling-stock and other material captured from Serbia during the war and hitherto retained, and has asked that traffic which has been suspended recently shall be resumed.

The Treasury have decided to exercise the option, under Clause 3 of Scheme B for the regulation of foreign exchanges, of returning Egyptian Government Three and a-Half per Cent. preference bonds on March 15, 1921, from which date the additional allowance will cease.

The India Office reports:—Treasury bills outstanding on March 31, 1920, Rs. 52,96,60,000; issued from April 1 to December 25, 1920, Rs. 97,80,20,000; total, Rs. 150,76,80,000; discharged from April 1 to December 25, 1920, Rs. 49,08,40,000; outstanding on December 25, 1920, Rs. 101,68,40,000.

Forthcoming Sailings.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, January 8).

Anchor-Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras and Calcutta (leaves London January 7); s.s. Mathura for Calcutta (Birkenhead, January 12); s.s. Mahratta for Port Said, Colombo, Madras and Calcutta (leaves London January 18); s.s. Malakand for Calcutta (Birkenhead, January 26); s.s. Maihar for Port Said, Colombo, Madras and Calcutta (leaves London February 5); s.s. Stookwell for Calcutta (Glasgow, January 29, and Birkenhead, February 9).

Bibby Line.—S.s. Warwickshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, January 12); s.s. Leicestershire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, January 26).

Byron Steamship Line.—S.s. Lord Broughton for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna and Constantza (Liverpool, January 15).

Clan Line.—S.s. Clan Lamont for Colombo, Madras and Calcutta (Birkenhead, January 13).

Cunard Line.—S.s. Sea Serpent for Gibraltar, Malta, Patras, Smyrna, Salonika, Constantinople and Constantza (London, January 12); s.s. Brescia for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza and Sulina (Glasgow, January 15, and Liverpool, January 22).

Ellerman Line.—S.s. Destro for Gibraltar, Malta and Alexandria (Liverpool, January 8).

Ellerman City Line.—S.s. City of Baroda for Calcutta (Birkenhead, January 19); s.s. City of Glasgow for Calcutta (January 31).

Ellerman Hall Line.—S.s. City of Alexandria for Karachi and the Punjab, Bombay and Malabar coast ports (Liverpool, January 12).

Glen Line.—S.s. Carnarvonshire for Port Said, etc. (London, January 20); s.s. Pembrokehire for Port Said, etc. (London, February 3); s.s. Gleniffer for Port Said, etc. (London, February 17).

Harrison Line.—S.s. Craftsman for Calcutta (Liverpool, January 18); s.s. Orator for Calcutta (Liverpool, January 31); s.s. Tactician for Calcutta (Liverpool, January 31).

Holt Line.—S.s. Atræus for Port Said, etc. (Glasgow, January 27); s.s. Hyson for Port Said, etc. (Glasgow, January 27).

Johnston Line.—S.s. Cundall for Piræus, Syra, Smyrna; Volo, Salonika, Bourgas, Varna and Constantza (Liverpool, January 22). A steamer for Piræus, Volo, Salonika, Bourgas, Varna and Constantza (Liverpool, January 22). A steamer for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila (Liverpool, January 29).

Papayanni Line.—S.s. Asturian for Algiers, Piræus, Syra, Volo, Salonika, Smyrna and Constantinople (Liverpool, January 15).

P. and O. Line.—S.s. Malwa for Bombay (London, January 14); s.s. Nyanza for Colombo, Madras, and Calcutta (London, January 21); s.s. Dongola for Bombay (London, January 28); s.s. Novara for Colombo, Madras and Calcutta (London, January 28).

P. and O. British India Line.—S.s. Nowshera for Colombo, Madras and Calcutta (London, January 15); s.s. Hatimwra for Bombay and Karachi (London, January 22); s.s. Merkara for Colombo, Madras and Calcutta (London, February 5); s.s. Tremere for Bombay and Karachi (London, February 5).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Photographic Material.—The Egyptian Ministry of the Interior invites tenders for the supply of photographic apparatus and materials (chemical, etc.) required for the year 1921-2. Tenders, which must be submitted by persons or firms residing or having a representative in Egypt, should be marked "Tender for the supply of Photographic Material," and addressed to The Director, Personnel and Equipment Department, Ministry of the Interior, Cairo, Egypt. January 31, 1921 (L.).

India.

Refuse Destructor.—The Municipality of Bombay invites tenders for the manufacture, erection, and equipment of a refuse destructor for 200 tons of refuse a day. (Spec., 5s., Sir John Wolfe Barry, Lyster, and Partners, 2, Queen Anne's Gate, S.W.1.) March 4.

Pumping Plant.—The Municipal Committee, Simla, invite tenders for supplying, erecting, and running for one month a new pumping plant, consisting of three units and steel rising mains, etc., with all fittings for the water supply. The pump lift (excluding friction) is 3,939 ft. The Municipal Committee is prepared to consider alternative tenders for other forms of plant to do the duty required by the specification. (Specification, etc., Municipal Office, Simla, Rs.10.) March 28.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated December 20:—During the week ending December 11 crop prospects generally fair, but rain urgently required in the Punjab, North-West Frontier Province, Central Provinces, Bombay, Hyderabad, and parts of Central India, and Madras. Bombay cotton market steady. Fine M.G. Oomra March, Rs. 270. Piece goods market lifeless. Calcutta jute market dull, with no overseas enquiry, but local rates steady. Hessians dull, with declining prices. Heavy goods quiet, with easier rates. No change in bank rates.

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge. Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, The Near East," 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

102. A stamp collector wishes to purchase used Austrian stamps prior to the 1882 issue. Stamp dealers in the liberated provinces of Austria are asked to send bulk packages of such stamps to the care of the Editor of THE NEAR EAST, with the price in kronen of each stamp or price per dozen, per 100, etc., of each kind. All stamps required will be paid for at the price indicated and the rest returned. Newspaper stamps are not required, but rare postmarks should be included.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

107. Old established Turkish firm handling general stores situated in Smyrna and having branches in the interior invites exporters to quote prices for groceries. The firm also acts as agents for articles of general consumption in Asia Minor.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

NOTES OF THE WEEK.

The New Viceroy of India.

The prolonged uncertainty regarding Lord Chelmsford's successor has been terminated by the announcement that Lord Reading has been selected for what is, at the moment, the most anxious office in the British Empire. Lord Reading's career, as advocate, politician, and judge, is not of the kind associated in the past with the appointment. But the successful way in which he grappled with a large variety of very difficult and important international problems (more, indeed, than the public is generally aware of) connected with the war is of good augury at the present juncture. His main duty will be to see that the new provincial governments get fair play, unhampered by the interference of superior persons in Delhi or Whitehall, and at the same time supported in their struggle against the enemy within their gates. We do not regard the occasion as one for the offer of congratulation to Lord Reading, but we may be permitted to express with confidence the hope that the Viceroy-designate will maintain the great traditions of his office, and at the same time remould them so far as may be necessary to meet the requirements of the new era.

A Middle Eastern Department.

The prospect of changes in the Cabinet has given rise to a hope in some quarters that the Prime Minister will avail himself of the opportunity to create a Middle Eastern Department. It is an unfortunate moment for increasing the number of State Departments, and behind the proposal is merely the desire to see Middle Eastern affairs handled by the British Government with fuller knowledge and greater success. A question on which the British public has no means of forming an opinion is whether, given the most profound knowledge in the Foreign Office of the Near and Middle East, it would have had the least chance of finding expression in the decisions that have determined British policy under the present régime. A new Department in such circumstances might have equally little opportunity of making itself heard, and the remedy indicated is that the authority of the Cabinet as a whole or that of an Inner Cabinet should be restored with a view to relieving the Prime Minister of work with which he cannot possibly cope. If the claims of the Dominions for special consideration be met, there is much to be said for Mr. Ormsby-Gore's suggestion that the Colonial Office should become the Office for Imperial Administration, responsible for Colonies, Protectorates, and Mandated Terri-

tories. Such an arrangement would at least prevent the divided control which has proved so prejudicial in the past to British interests in the Middle East.

Greece in Transition.

The political changes in Greece have taken place, as far as can be judged, with a welcome absence of vendetta or excesses. This state of affairs, it is to be hoped, will continue, as it would certainly bring the Government and King Constantine's régime into the worst disrepute if the events of December, 1916, were re-enacted. Constantinople, unhappily, provides a hot-bed of Greek passion. The frenzied scenes that marked the celebration of M. Venizelos's name-day have been followed by a dastardly attempt to murder a Greek officer, Major Dragoumis, who would be known as a staunch supporter of King Constantine. Major Dragoumis, fortunately, escaped, though wounded. His family, among the best-known and most respected in Greece, lost the elder son only a few months ago, murdered by a party of soldiers in Athens. It would have been a particularly tragic fate if the second son, also a young man of considerable promise, had fallen as well a victim to a loyalty that was never other than constitutional.

The Palestine Frontier.

Relations between France and Great Britain, which were supposed to be slightly lacking in cordiality a little while ago, are to-day much more cordial again. The Near East, however, still presents a good many problems—some of them important—on which we do not see eye to eye with our Allies, and though it is to be hoped that we shall both be ready at all times to consider the other's point of view, it is equally to be hoped that we shall both endeavour to avoid any appearance of bargaining—not to say haggling—together. An excellent example of what to avoid in this direction was provided last week in an article on the Palestine-Syrian frontier agreement, contributed to *Le Matin* by M. André Fribourg, a member of the Foreign Affairs Commission of the French Chamber. In effect this writer told his countrymen that they had made a fool's bargain, giving up something for nothing; and that if France's diplomatic victories continued in this fashion she would soon find that in place of the vast zone accorded to her by the agreements of 1916 she would own only enough territory to enable her to maintain sufficient troops to ensure the security of English zones further inland. This territory, he professes to think, France would be allowed to occupy until the disappearance of all danger from Mustapha Kemal's followers.

M. Fribourg appears to have a rather short memory, since he can write thus in face of the facts regarding the liberation of Syria and Palestine from the Turks and the manner in which the French and British respectively came into occupation of their "zones."

The Crown Prince of Turkey Interviewed.

The Crown Prince of Turkey has accorded two interviews to Western journalists since New Year's Day, the first to the Constantinople correspondent of the *Morning Post*, and the second to a representative of *Le Gaulois*. It has always been understood that His Royal Highness is well disposed to this country, and the first interview strengthens the impression. That was doubtless to be expected; for the Turk, whatever faults may be laid to his charge, has rarely shown ill-manners in dealing with foreigners, and has never been accused of not knowing how to use the phrase complimentary. But in this case we have more than compliments: there are practical proposals; and both interviews show that the Prince has not for one moment lost sight of the Allied point of view. The *Sèvres Treaty* he cannot regard as a masterpiece of modern diplomacy—a view which is shared by many people—and he would like it to be modified in some important respects; but others of equal importance he is ready to accept loyally, and he is confident that if his views were adopted by the Allies, he could secure their acceptance by the Nationalists, either with or without the approval of Mustapha Kemal.

His Point of View.

Smyrna is, of course, the point on which the Crown Prince expresses himself most emphatically, and, like other Turks, he shows that the real rub comes in handing it over to the Greeks. He would with a good grace see it in the occupation of the Allies for the five years stipulated for in the Treaty; and he hinted that recent events had renewed Turkish hopes in this direction. As to Thrace, he would not ask that it should be restored to Turkey "immediately," but suggests that it should be granted autonomy for twenty-five years, its administration being in Allied hands for that period; and as to the Straits and the Turkish debt, he would be ready to give any guarantees that the Allies might wish. To the *Morning Post* correspondent he expressed pleasure that Colonel Walter Guinness and General Townshend had spoken as they had in the House of Commons on Anglo-Turkish relations and the Treaty, and that Turkey still had friends in this country; and concluded by affirming his personal conviction that, whatever the state of world politics at present, a day would come when Great Britain would resume towards Turkey her friendly policy of the past. He had earlier been at pains to emphasise the services that Turkey could render to us in appeasing any disturbances that might arise in the Moslem world, and had referred to her value as a barrier against any extension of Bolshevism. It would be easier to make light of such arguments if our Moslem fellow-subjects were not at this very time showing many signs of restlessness, and if Bolshevism were as nearly dead as we were assured was the case two years ago.

News of Arabia.

It is now generally recognised that the War has given to Arabia and Arabian politics an importance which certainly did not attach to them before; and at this time developments in the Arabian Peninsula must have a peculiar interest for Great Britain. Yet in many ways the peninsula is much as it was before the war; we know practically nothing of what is going on in its interior; and even from the coastal and border regions news is meagre, and frequently contradictory. We know, for instance, very little regarding the actual state of affairs in the Yemen and Asir, and a question in Parliament on the subject put by Mr. Ormsby-Gore a few days before Christmas elicited no fresh information. Mr. Harmsworth took the opportunity to state that the Idrissi, who rules over Asir, is in cordial relationship with our Government, which is, of course, satisfactory as far as it goes; but regarding the Yemen he could, or would, say nothing new, though he would not admit that our attitude towards the Imam at Sanaa was a purely negative one. It is to be hoped that a more satisfactory state-

ment may be forthcoming shortly. At the end of last week it was announced that "local bands" had crossed into the territory of King Hussein of the Hejaz, and were moving against Tayef and threatening communications between that city and Medina. A later report, from Cairo, attributes the move to the Wahhabite followers of Ibn Saud, and states that the attack has been repulsed, with severe losses to the raiders.

The Indian Congress.

The information regarding the Indian Congress supplied to the public in this country has been far from complete owing to the habit, which seems to be growing upon the cable, of subordinating concrete facts to the impressions of unspecified and not always important individuals. So much, however, is plain that the anticipations of a "break-away" indulged in by some writers during December have not been realised: the Congress, or what was left of it after the withdrawal of the Moderate elements, adhered to its old traditions, and danced to the tune played by its self-chosen leaders, the familiar tune of jealousy and hatred. The resolutions were, as usual, characterised by careful ambiguity: the declared goal of *Swaraj*, or Home Rule, means just whatever anybody chooses; its realisation by all legitimate methods involves a determination of the criterion of legitimacy which does not appear to have been yet attempted; and the concrete decision to boycott the tax-collector at some date to be fixed later on leaves an obvious loophole for indefinite procrastination. But the plain fact remains that an important section of Indian life has reaffirmed its determination to wreck the new constitution in whatever way it can.

Extremist Reactionaries.

In the circumstances we cannot wonder that one at least of the Labour members present at the Congress should take a gloomy view of the future of Indian politics; Colonel Wedgwood had made a gallant effort to rally the apostles of non-co-operation to the constitution, and the failure of his appeal doubtless brought the facts home to him in the most effective manner possible. At any rate, he is certainly justified in describing the movement as directed against Western civilisation rather than Western rule: Mr. Gandhi and his associates stand for a return to the old India, the India of political tyranny and spiritual ascendancy; the new constitution is designed to bring about the ultimate elimination of those persistent ideals; and the issue is not one which admits of compromise. The proceedings of the Congress show that the issue is now definitely joined, and some at least of the speeches suggest that on the extremist side the campaign is to be conducted largely by appeals to the ignorant masses, who are still outside the constitution. Such appeals may well succeed, for the masses have no great cause to be content with their present position, and they have too little experience of affairs to realise that they are being called back to the darkness when they want to go forward towards the light.

The Constitution in Being.

Meanwhile, the new constitution is rapidly being brought into existence. The dyarchic executives have been appointed in the various provinces, the reconstitution of the Viceroy's Council is, we understand, practically complete, and the new legislatures have been elected, despite the opposition of the Extremist faction. Such details of the elections as have reached us are distinctly encouraging; it is true that in some urban constituencies the bulk of the voters preferred not to face the hostility which had been so carefully organised, but the country is more important than the towns, and when we read of fifty or sixty per cent. of votes recorded, and of majorities of from five to ten thousand, in some of the "backward" districts of Oudh, we realise that the country has taken its first lesson in practical democratic politics. Whether legislators who have secured so large a measure of popular support will be content to watch passively the destruction of their position by the efforts of the Extremists is a question which will probably answer itself in the course of the next few months.

THE WEEK AT HOME.

LONDON, Monday Evening.

Reconstructing the Government.

The appointment of Lord Reading to India has been received here in the same spirit of unenthusiastic surprise that would have been shown had he been made Archbishop of Canterbury. His course will be closely watched by enemies as well as friends.

His departure will make a vacancy in the office of Lord Chief Justice, and that, as well as the fact that it is assumed that Mr. Montagu will leave the India Office, necessitates some reconstruction of the Government. Sir Gordon Hewart, the Attorney-General, is generally believed to desire to be the next Chief Justice, and he would fill the post with dignity and knowledge. As Attorney-General there is a kind of unwritten law that he can claim the post if he wishes; but he is so useful to the Government in the House of Commons—where, curiously enough, it is not overstocked with able political lawyers—that efforts may be made to waive his rights. As Chief Justice he could hold the post for the rest of his life, certainly for twenty years; as Attorney-General, of course, he comes and goes with the Government.

If Sir Gordon Hewart passes himself over, Mr. Shortt may go from the Home Office to the Bench. He is a capable administrator, but he has never played a conspicuous part in politics, and is little known outside Westminster. It is said, too, that Mr. Walter Long, who has been unwell for some time, may seize the occasion of a general post to leave the Admiralty; he is getting an oldish man, although his cheeks still have the peach-blossom hue of bashful seventeen. Those who want Mr. Chamberlain to leave the Exchequer are again reviving the story that he would do well to go to the India Office.

Lord Milner and the Colonial Office.

The retirement of Lord Milner from the Colonial Office is certain; he would have resigned his office some time ago, but stayed on at the direct request of the Prime Minister. Colonel Amery is mentioned as a possible successor; he has proved an ideal Under-Secretary. Lord Milner's post will be a difficult one to fill, for the time has come to rearrange the Colonial Office. The Dominions ought to be made a separate office altogether, their status being entirely different from that of the Crown Colonies.

In any event, the British Empire is a very different thing now from what it was in 1914; the status of various oversea territories has largely changed, and the political attitude of their people has changed, as has that of folks at home. In these circumstances it is clear that the status of the Colonial Office itself will have to be changed.

Maeterlinck at the Gaiety.

I remember as a boy hearing what seemed an incredibly aged man—he was then about forty—lamenting the decadence of the times and the downfall of the Gaiety Theatre, because it had given up burlesque for musical comedy. It has now made a still more amazing change; for the home of "The Shop Girl" and "The Spring Chicken" has taken to Maeterlinck and symbolism.

The new play, "The Betrothal," is a sequel to "The Blue Bird"; the woodcutter's boy has grown up, and chooses him a wife. He is shadowed by the spirits of his ancestors—one of the critics cruelly remarks that it is illogical to make all his ancestors males—and by Destiny, who becomes smaller and smaller in size as the play proceeds. Just what symbolic meaning attaches to this every spectator must decide for himself.

The play is exquisitely mounted, and will become the rage; it seems almost certain to last out the year. The critics are divided as to its merits, but most are agreed that it is not equal to "The Blue Bird"; but then they always say this about any sequel.

The most attractive figure, and the most singular, in the whole play is Miss Gladys Cooper as Joy. For several scenes she is veiled, and does not speak; even when unveiled—more symbolism—she says only a few words. It is a difficult part for so vivacious an actress, but her wonderful beauty, which is proverbial, carries

her through triumphantly. But somehow one fails to associate her with Joy. The restless, almost discontented look which is her natural attitude makes her the Monna Lisa of our times; it is hardly what one thinks of as Joy.

The Bank Returns.

It was unfortunate that, at a time when people are rather nervous about financial stability, the failure of Farrow's Bank should be followed by the suspension of Hannevig's Bank, which had recently assumed a more pretentious title. But Hannevig's was a small affair, and the word bank was rather a misnomer.

If the timid are really beginning to think they had better put their money in a stocking for safe keeping, the reports of the great joint-stock institutions issued this week should reassure them as to the stability of legitimate banking. Investments have been written down and reserves increased; the situation is absolutely sound.

The figures of the Clearing House returns show the extraordinary volume of business done. In 1916 the total turnover was 15½ thousand millions; in 1920 it was 39 thousand millions. But there are signs when the last year's figures are examined closely of the diminished spending power of the public. The total for the first six months was £20,175,000,000; for the second, £18,844,000,000.

These enormous figures remind me of a story I was told recently of an impecunious actor who approached his local bank manager for a small overdraft. The suburban representative of the Big Five was perfectly willing to allow the modest £25 advance, but he thought it proper to read the mummer a lecture on thrift first. After two or three well-phrased sentences, the actor interrupted him with a magnificent gesture: "Dear boy, if the bank hasn't got the money I will suffer, starve, and die, rather than embarrass them; I had no idea their poverty was greater than mine." He got the overdraft and escaped the lecture.

The Income Tax.

There seems to be a sudden outburst of wrath against the Income-Tax officials. A new system of assessment was introduced last year, and is now operative; it looks complicated, but in fact it is less difficult to understand than its predecessor. I am assured that it is also more difficult to evade; but being a journalist, and therefore a devotee of the goddess of Truth, I know nothing of evasion.

However, it appears that the income-tax people themselves have failed to understand the new system, and have grossly overcharged practically everybody. The complaints are numbered by thousands that abatements and allowances which should have been made have not been made, and the wicked have suggested that the Treasury has told its myrmidons to try it on, and see what happens. But it is highly improbable that the Treasury would do anything of the kind.

The story of over-assessment comes from various parts of the country, so there must be something in it; it has been hinted in defence that the officials are overworked and harassed, but that requires a good deal of believing. I am afraid, however, that the income-tax men take a very cynical view of the honesty of the public; I remember the dictum of an acquaintance who had spent his life in that occupation: "If every overcharge and underpayment of income tax were rigorously enquired into by

Systematic Recording

As you build up your business,
so you build up your records. The success
of the one may depend upon the success of the other.

Tel. 1966. P.O.B. 849.

an auditor at the Day of Judgment," he said, "you might find a dozen or so officials condemned to the nether regions for extortion, but you would certainly find the bulk of the public condemned for evasion."

He told me a story of a man who for years had returned his income at a precise figure—£998, £1,002, £975. For a long time they suspected nothing, the amounts seemed so carefully calculated, but after a while it dawned on them that the man was living at a far higher rate. To test him, they assessed him at £5,000. He had, of course, the right of appeal, but he paid without a murmur. The next year they took him to £7,500, and he paid without protest; the third year they tried him at £10,000. This time he rebelled, and they asked him to show his books. He kept no books, or said he did not, but he gave them a solemn assurance that his income was only £9,500, and offered to give a sum to any charitable institution they might name in order to avoid proceedings "which would hurt his reputation." A few days later the Chancellor of the Exchequer acknowledged an unusually large amount of conscience money.

Municipal Reform.

A general chorus of lamentation seems to be forthcoming from the county councils and municipalities on the question of the rates. They have been extravagant in the past, but, despite the heavy burdens they have imposed on the wretched householder, they are seriously overdrawn at the banks. A good many excellent schemes will have to be abandoned or postponed, for the public has rebelled against the burdens; and one fancies that a number of officials might be retrenched. Otherwise there may be a movement to reform the whole system of local government. The Labour candidates who, like Mr. Sidney Webb, believe in high rates, suffered a serious setback last November on that account, and they are now bewailing the tide of reaction and the short-sightedness of the public, which prefers to keep its money in its pocket.

January Sales.

The shopkeepers, who discovered last autumn that women had at last learnt economy, or had had it driven into them by callous husbands, have been advertising bargains more incredible than ever. They have even taken us into their confidence, and, with an engaging candour, told us that they want money, and are, therefore, sacrificing stock bought at a higher price for a mere song; the next lot of goods in the windows, they say, will be higher priced than ever, so that if we do not buy now we have only ourselves to blame. But one or two ladies have assured me that, except in the case of furs (which nobody wants this warm, wet January), the values are not really exceptional, and the reductions are certainly no greater than usual. These things are mysteries to the human male; if the reductions are real, I cannot understand why any woman buys except in January and July, and if they are not real, why she does not buy except in January and July.

Some of the drapers, however, are trying to popularise what they call a "man's sale." I should have thought they might as well have tried to sell a matron's meerschau pipe. The imagination boggles at what one's tailor would say if one asked for a reduction in lounge suits because the ladies' tailor over the road offered unique opportunities in coats and skirts.

Clerical Poverty.

The Bishop of Durham has published an outspoken New Year's letter, in which he refers to the consequences of clerical poverty as involving an increasing inefficiency which is like a growing paralysis. "Some of the clergy," he says, "are falling into debt, and a few—happily so far only a few—are sinking into private mendicancy. Poverty holds many a clergyman to his benefice when he could and should leave it, for he dare not accept preferment which implies the cost of removal and the necessity of facing at last the long postponed obligation of dilapidations. Clerical poverty has now reached the dimensions of a public scandal." The justice of this grave verdict can hardly be disputed.

Dr. Hensley Henson points out that the position is harmful in two different ways—it encourages pluralities

and it checks the entry of men of ability into holy orders, "for what parent or guardian responsible for guiding the choice of a promising boy will lightly encourage him to look to a profession in which actual indigence is a not improbable fortune?"

There can be little doubt that the whole question of Church finance will have to be reconsidered, and an attempt made to arrive at a lasting basis. Most religious denominations are faced with the same difficulty, but on a smaller scale; the Baptists recently raised a quarter of a million in a week by a special effort for their distressed ministers. The Anglican Church has been less fortunate. It inaugurated a five-million fund during the war, but the effort was too ambitious, and probably the times were then too bad; not a tenth of the sum required has been raised. There exists, of course, a Central Board of Finance for the Church, and this will probably have to inquire into the whole problem eventually.

The Week's Books.

In "Democracy and the British Empire" (Constable) Professor F. J. C. Hearnshaw remarks that "democracy having escaped the Scylla of Prussianism, has yet to steer clear of the Charybdis of Bolshevism"; and that "the Empire, having resisted attacks from without, has yet to avoid disintegration from within."

"J. Comyns Carr: Stray Memories by his Wife" (Macmillan) recalls one of the most delightful companions and story-tellers of late Victorian days. Many will remember the book he published twelve years ago, "Some Eminent Victorians," and wish that he had left more permanent work behind. But this book helps to supply the gap.

Students of biology, and also patriotic Scotsmen, will be greatly interested in "The Influence of Man on Animal Life in Scotland" (Cambridge University Press), by Dr. James Ritchie. It goes back to the day when "neolithic man founded his most northern settlements in the British Isles 9,000 or more years ago, in a country of swamps, low forests of birch, alder, and willow, fertile meadows and snow-capped mountains." The pictures illustrating the faunal evolution are often curious and instructive. OCELLUS.

NEWS IN BRIEF.

The Alexandria Horticultural Society are holding shows on April 22, 23, 24, and November 5 and 6.

It is officially notified that the parcel post to Roumania is suspended until further notice.

From January 1 a direct radio telegraphic communication has been established between Paris and Tiflis.

According to reports from Albania, the town of Elbassan has been much damaged by an earthquake, in which fourteen persons are said to have been killed and 300 injured.

It is reported from Vienna that a through train service between Vienna and Constantinople, via Budapest, will be inaugurated in February. Trains will run twice a week.

M. Streit and Lieutenant Paparigopoulos, who were both informed they must not return to Greece with King Constantine, have now been recalled, and have left Brindisi for Athens.

According to a Rome message, the Pope has appointed Mgr. Cassulo, Bishop of Fabriano, to be apostolic delegate in Egypt. The post became vacant by the resignation to Mgr. Briante.

The British Labour Delegation, which includes Mr. Adamson and Mr. J. H. Thomas, has arrived at Prague, on the invitation of the Czecho-Slovak Government, to investigate conditions in the country.

The Government of India report that the British Mission to Afghanistan under Sir Henry Dobbs crossed the frontier on its way to Kabul on January 5. Mr. S. E. Pears has been prevented, for reasons of health, from accompanying the Mission, and his place has been taken by Mr. P. J. G. Pipon, of the Indian Political Department.

The report of the Governing Body of the School of Oriental Studies, Finsbury Circus, states that during the eleven months ended July 31 539 students attended, of whom 394 were men and 145 women, as compared with 266 men and 116 women the year before. The Treasury made the school an additional grant of £3,000 for the years 1919-20 and 1920-21, and two new University readerships in Hindustani and Hindi and in Chinese had been instituted. As a result of the success of the school, the governing body had acquired for £36,000 an adjacent site on which to build additional class-rooms. Instruction had been given in thirty-one Oriental and African languages. The largest demand had been for Arabic, but the number of students of Chinese and Hindustani showed a marked increase.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, December 20.

Industrial Troubles.

Trouble has broken out again in the Cairo tramway service. This time it is not in the nature of a general strike, but has assumed a form which is certainly more difficult to deal with, and hence more serious. The plan of campaign of the strikers has been for the drivers to fuse the cars one by one. These have, of course, to be sent to the workshops, where the mechanics, in collusion with the traffic staff, tinker at them, but so arrange that the cars never reach a stage where they can be put into commission again. As a consequence of this, no less than two hundred cars are in the workshops under repair, and thus, without coming up against the civil authorities, the employees are able to attain their end of paralysing the tramway circulation, while at the same time continuing to draw their wages.

As is always the case with passive movements, the authorities are finding it exceedingly difficult to handle the question, but there is no doubt that if they were to deal with the legal element which has been pressing on behalf of the employees for an improvement in conditions, and which, having so far been unsuccessful, is most probably responsible for this astute manœuvre, they would soon be able to settle the difficulty. It is understood that the point at issue is not so much the terms of employment, which the company has latterly improved very much, but official recognition of the syndicate, which so far has been refused; and it is highly probable that the trouble has a political rather than an economic cause.

Racing at Gezira.

Racing continues to attract enormous crowds to Heliopolis and Gezira, and last Saturday's meeting held by the Gezira Sporting Club was by far the most successful we have had this season. It was a very fashionable affair, and marked the first appearance on the racecourse this season of the Sultan. The occasion attracted an enormous crowd, and the members' enclosure, in spite of the recent extension made, was almost too small to hold all the people. His Highness was accompanied by Said Pasha Zulfikar, his Grand Chamberlain, the Ministers, and Lewa Castle-Smith Pasha, his English Aide de Camp. He was received on arrival by the High Commissioner, who was accompanied by the whole of the Residency staff, in top-hat and morning coat, and Lady Allenby, and the stewards of the club, and held an informal reception during the afternoon in the pretty kiosk which had been specially constructed for the purpose. The Sultan, who is a warm patron of the turf and has an excellent stable, has been very successful of late, notably in the Heliopolis Derby, both divisions of which saw his colours carried to victory.

The Alexandria Municipality.

The Alexandria Municipality appears to be in a bad way, to judge from the statement of accounts issued and the discussions which have taken place at its last meetings. The budget was expected to prove insufficient for the current year's expenses, but it was anticipated that the savings made by the Municipality in the past would prove more than sufficient. This has, however, not been the case, and there is a deficit of about £E143,000, which will be an annually recurring item, and which the Municipality is at a loss to know how to meet. The amount of the deficit represents by a coincidence the sum which is due to the employees for war allowances during the year on the same basis as the Government is paying to its officials, and the suggestion has been made that this payment should be cancelled. But while the Municipality should undoubtedly be run for the benefit of the inhabitants of Alexandria as a whole, and the present relatively large percentage of its revenue should not be spent on its officials, it

scarcely seems fair that the latter, if their employment is necessary, should be made to suffer. Rather would it appear to be a case for the institution of a rigorous enquiry into the administration, with a view to reducing the personnel to the minimum, to eliminating unremunerative or unnecessary expenditure, to abolishing revenue sources the collection of which costs more than the receipts, or extending them so as to assure a surplus, and to creating new and remunerative sources of income.

At the meeting held last week it was suggested that the Government should be asked to give its assistance and extend the financial powers of the Municipality. Now, the latter has been a going concern for over a quarter of a century, and ought by now to be able to stand on its own feet. Either it has in the past not been accorded sufficient scope to enable it to build up its economic organisation on a sound working basis, in which case the Government is sorely to blame, or it has been run on extravagant, impractical lines, in which case the sooner the administration is drastically reorganised the better. Whatever it be, the cause should be searchingly investigated, and a remedy be provided. At a juncture when the country is standing on the threshold of what, it is hoped, will be an important development and extension of self-governing institutions, it is, to say the least, regrettable that one of the oldest and leading municipal bodies should after twenty-seven years be compelled to appeal to the Government for assistance to carry on.

CAIRO, December 27.

The Duke of Connaught.

His Royal Highness the Duke of Connaught arrived at Port Said on the 23rd on board of s.s. Malaya. He was met on arrival by the High Commissioner and his staff, and after landing for a short time his Royal Highness gave a luncheon on board, his guests including the High Commissioner and Lady Allenby, Said Zulfikar Pasha, representing his Highness the Sultan, and Lieut.-General and Lady Congreve. The Malaya entered the Canal next morning and spent Christmas Day at Ismailia.

The Sultan.

The Sultan last Monday paid a visit to Shebin el Kom. He had a magnificent reception, and received a warm ovation whenever he appeared. His Highness has received numerous invitations to visit various towns in Upper Egypt during his forthcoming river trip, and it looks as if it will be as much as he will be able to do to fulfil all the engagements he has undertaken during the time at his disposal.

The Proposed Settlement.

The divers elements which go to make up Egypt's heterogeneous population have all been concerning themselves with the particular effect which the application of an agreement based on the proposals made by Lord Milner to Zaghloul Pasha may have on them. My letters have reported fairly fully the attitude of the purely Egyptian community, which appears to be somewhat divided on the question of the acceptability of the terms offered, though no doubt when it comes to the point the majority will be found to receive with approval the final proposals of the British Government.

The Foreign Communities.

One of the obstacles to the early conclusion of the negotiations which must precede a settlement of the Egyptian question will come, it is to be feared, from the side of the British and foreign communities. It is not that they do not sympathise with the aspirations of the Egyptians, or that they do not recognise that the time has come for the granting to the Egyptians of a much greater share in the administration of the country than has hitherto fallen to their lot. Far from that, but they one and all contemplate with no little uneasiness and anxiety the situation in which they will find

themselves if the proposals made by the Milner Mission go through in their entirety without any of the amendments which they, the British and the foreign communities, consider so essential to the general well-being of the country.

Space does not permit of my going fully into the points which are causing the British and foreign communities so much concern, but from what I have heard there seems little doubt that unless the British Government can produce some far more satisfactory guarantees as regards public security under the new regime than those offered in the Milner-Zaghloul Memorandum, it will experience considerable difficulty in getting the Powers interested to assent to the abolition of the Capitulations. Whatever the European Chancelleries may feel inclined to accept in return for favours elsewhere, they cannot afford to, and certainly will not, ignore the representations made by their subjects in Egypt, who, after all, cannot be blamed if they object to abandoning such privileges as they possess under the capitulatory regime in exchange for what they consider will place them in a far less satisfactory situation.

PORT SAID, December 21.

Heddaya Pasha's Departure.

Last month, Heddaya Pasha, late Governor of the Canal Zone, left here to take up his duties as Governor of Alexandria. His Excellency was extremely popular with all the better elements of the very mixed population here, and he carries with him the best wishes of the community. His last official act was the opening of the Cereals Bureau Depot in Port Said, where all the Government purchases of flour from abroad are stored, prior to distribution in the interior. This Government department, unlike most departments, has considerably reduced the cost of living in Egypt, especially for the poorer section of the population.

Bishop MacInnes and Bishop Gwynne have also visited Port Said, the former to say good-bye on his taking over the newly-created Bishopric of Palestine and Syria, and the latter to make officially the acquaintance of his new diocese, though Bishop Gwynne as Bishop of Khartoum was fairly well known to many in Port Said.

The Kantara Bridge.

Among those particularly concerned, the impending removal of the railway bridge across the Canal near Kantara is a subject of great interest. The Canal Company have requested the authorities to take away the present bridge, as it forms a hindrance and danger to navigation, and the paramount necessity for through railway communication during the war does not exist now. Merchants and traders are protesting, as it will considerably hamper goods traffic between Egypt and Palestine. However, this definite action of the Canal Company will probably hasten the construction of a permanent bridge, which will be able to carry all the necessary traffic, and not interfere with the transit of vessels, whatever their size.

PORT SAID, December 24.

Yesterday morning, on one of the nastiest and sandiest days that we have had this year, H.M.S. Malaya arrived with H.R.H. the Duke of Connaught on board. She was berthed in the harbour just opposite the Canal Company's offices, and shortly after Viscount Allenby went on board. The Duke then came ashore, accompanied by his staff, and several officials were presented to him, including the Governor of Port Said; El Miralai Grant Bey, Commandant of the Suez Canal Police; Mr. A. C. Were, the Acting British Consul; and Monsieur Chateauminois, the Chief of Transit of the Suez Canal Company at Port Said, in whose hands were the arrangements for the safe transit of the Malaya in the north end of the Canal.

Afterwards His Royal Highness drove to the British Hospital, where he was received by Dr. Kennard and the chairman and members of the committee. The Duke then returned on board to lunch, and among the guests invited were: Sir Said Zulfikar Pasha, Field Marshal and Viscountess Allenby, Lieutenant-General and Lady Congreve, Conte and Contess de Serionne, the Hon. C. S. Scott, Major-General Sir Foster Newland, Air-Marshal Sir G. and Lady Salmund, Ferih Shehata Pasha Kamel, Brig-General E. P. C. Kelly, Mahomed Sidky Mohamed Bey, Group Captain B. C. H. Drew, Col. H. F. Fraser, Captain W. J. C. Lake, R.N., Mr. C. A. Were (the Acting British Consul), El Miralai A. C. Grant Bey, Lieut.-Col. H. M. Rigg, and Major H. F. C. Hobbs.

Owing to a slight indisposition, His Highness did not come ashore again, and early this morning the Malaya left for Suez. She will stop the night in the Great Bitter Lake,

continuing on to Suez on Christmas morning. It was noticed that the Malaya was flying, as well as the Royal Standard, a flag which is not familiar in Port Said, namely, that which the Duke of Connaught is entitled to fly as Master of Trinity House.

The Malaya encountered very bad weather on the passage out, and lost overboard her wireless masts and aials. She has on board a most magnificent model of the ship, complete in every detail, which is being taken out for presentation to the peoples of the Malay States, as an acknowledgment of their splendid loyalty to the Empire. After the Duke of Connaught has disembarked at Madras, the Malaya will go for a cruise to the Malay States, before returning to Bombay, to convey His Royal Highness back to England. She is the largest ship in point of beam and draft that has passed through the Canal, and the Canal Company are to be congratulated on the success of the arrangements made for her transit.

YUGOSLAVIA.

ZAGREB, December 31.

Political Developments.

There has been a standstill in political matters over Christmas—the "Catholic Christmas" as it is called in Belgrade in contradistinction to the Orthodox Christmas, which comes a fortnight later. While this has the advantage of giving everybody a double holiday, it impedes both business and politics.

In connection with the formation of a Cabinet, the Regent has sent for M. Pashitch and Dr. Davidovitch, and it is believed that he has expressed the hope that the Radicals and Democrats, as the two strongest parties, will succeed in forming a coalition. M. Pashitch seems certainly anxious to do so, but M. Stoyan Protitch is intransigent. This has led to a marked division of opinion in the Radical party; but it is hardly likely to be strong enough to split the party. The Democrat Club has given its leaders a free hand to negotiate as they think fit, and it is believed that they will consent to sacrifice even the portfolio of Agrarian Reform for the sake of union and peace. At the same time there are signs of splitting within the Slovene Clericals. While it is generally recognised that Dr. Koroshets is a man of considerable ability and that the Slovenes are one of the most solid elements in the State, it must not be forgotten that his Clerical Party has no claim to be the spokesman of Slovenia, for he lost heavily in competition with Democrats and with Socialists at the elections. And now one of his own supporters, Dr. Kovachitch, has appeared with an article in a Maribor paper stating that he will not follow along a path which is dangerous to the State and to the Union. In other words, he is a good Yugoslav patriot.

The attitude of Raditch's Peasant Party is still undecided. His delegates have reported that as a result of their visit to Belgrade and conversations with the leaders of all the parties there, they have found points of contact with every one of them. It should, therefore, be not impossible to find a formula which will enable Raditch to save his face and his party to play its proper part in the Constituent Assembly. They have stated that the obstacles to their doing so are the following:—First, the draft Rules of Procedure must be amended, and to this all parties are now agreed. Secondly, they demand that no clause of the new Constitution may become law unless carried by a majority of all Serbs, all Croats, and all Slovenes, instead of by a bare majority of the House. The Radicals want a

majority of three-fifths, and the Communists, Slovene Clericals and Republicans want two-thirds. Meanwhile, Dr. Trumbitch, the only Independent in the House, is in negotiation with Raditch, and if this stalwart champion of the Union succeeds in bringing the party into the fold, he will have added one other great service to his record. The separationist Frankovist Party, who are d'Annunzio's friends, are trying to provoke Raditch into some step which will make his inclusion impossible.

The Situation at Fiume.

As can be well imagined, events in Fiume are being followed with breathless interest. All sorts of rumours are in circulation, only to be contradicted the next minute. It is said that the Yugoslav authorities at Bakar offered their services and military aid to General Caviglia, who rejected the offer on the grounds that it was a purely domestic Italian question. It is also stated that the authorities informed the Italian Government that feeling was running so high that they would not be able much longer to restrain the Yugoslav Volunteers from attacking Fiume; and that it was this news which led the Rome Government to start energetic measures forthwith.

Communist Propaganda.

Some sensation has been caused by the announcement that the Soviet delegation in Vienna has received 50 million roubles in gold, of which half is destined for propaganda in Yugoslavia, and will be distributed to Zagreb, Serajevo, and Belgrade. The Communists certainly need the money if they want to carry on their foul work; for their party has been losing ground steadily as the people are beginning to understand them. At the recent elections they lost much ground in Croatia and the Voivodina, and probably a great number of peasants in Croatia had voted for the Communists originally, but transferred their support to Raditch as they learnt more. Communism seems a very exotic growth in Montenegro and Macedonia, where it is simply used as an anti-Serbian weapon. The Socialists of Serbia have declared war upon the Communists, both against their theories and their practice. They have, however, succeeded in making some show among the miners in Bosnia and perhaps in Slovenia, by carrying on agitation on the grounds of their not unreasonable complaints against the difficulty of living. But the miners' complaints are really economical, and they are meeting with little sympathy for their Communist claims. An avowed Communist can scarcely show his face in the streets of Serajevo, so they are turning their attention to the villages, where their apostles appear to be carrying on propaganda at the point of the bayonet. In the district of Tuzla a band of them opened fire on a party of twenty gendarmes, killing one and wounding one, but a few troops made short work of them, and the workmen angrily repudiated them. At the same time, the miners' strike seems to be approaching its end, and a number of men have returned to work. There has been a two days' sympathetic general strike in Zagreb by way of protest against the intention of the Government to mobilise the miners. It is to be hoped that the disorders caused by the strikers in Bosnia are over. More than a hundred were recently arrested, carrying papers which showed an organisation for propaganda in the villages. The strike leaders have been arrested too, and all are foreigners. The Serb and Mohammedan peasants arrested have declared that they were deceived and misled by the Communist agitators, and repudiate Communism.

Education.

Great efforts are being made to advance education in Serbia (old frontier) and in Montenegro. Statistics have been published which show that in Serbia there are 2,296 schools and 4,235 teachers of both sexes, while in Montenegro there are 495. These figures are very creditable when the small area and population of the old kingdom of Serbia are remembered, and also the extent to which the population was reduced by the war. Teachers in particular suffered, for they, with the priests, have always been the bearers of the tradition of patriotism and nationality, and, therefore, aroused the special enmity of the Turks and of the Bulgars. It will be remembered that the great Voivoda Babunski

began life as a teacher in Macedonia, out of sheer patriotic motives, and not from any love of teaching; but he took to the mountains at an early age.

The Priests' Dilemma.

Something like consternation has been caused among Orthodox clerical circles by the decision of the Church Council that second marriage is forbidden, and that such priests as have married a second time must be punished and their marriages annulled. This came like a thunderbolt, for a number of priests who were war-widowers have remarried, in rather a hurry, perhaps, without waiting for the decision. Consequently, the Head Committee of the Priests' Union has called for an expression of opinion from its members, and made a statement to the Press deprecating the decision. It does not consider the decision final, and has called an extraordinary general meeting of its members for February 2 to consider the matter. Pending this meeting, they have requested the Council to suspend action.

Russian Refugees.

It is not generally recognised how splendidly the Serbs have behaved towards the Russian refugees who have crowded into the country. With great areas of her own country in difficulties, her transport disorganised, and her finances in a wretched condition, Serbia did not hesitate to offer hospitality to the refugees from Denikin's army a year ago, and many thousands found a home, many without any means of sustenance. Now Wrangel's people are arriving in their thousands. In many parts of Dalmatia the Russians already outnumber the native population. Altogether over 150,000 Russian refugees have found a warm welcome and a home in Yugoslavia—striking evidence of the loyal feelings of gratitude which the Serbs entertain for their "Russian brothers," who have done so much for them in the past.

TURKEY.

CONSTANTINOPLE, December 20.

The Negotiations with Angora.

Very little progress has been made during the past week in the negotiations which the Government Delegation was to commence with the Nationalists at Angora. It is commonly reported that Salih Pasha will be returning to Constantinople very shortly with a preliminary report, but there is no authentic information on the turn of events. There are, indeed, indirect indications that the Nationalists are allowing it to be understood that they have no intention of deserting their Bolshevik "allies," but it is more than probable that this is intended to make a certain impression and induce the Allies to give generous concessions.

Armenia.

A traveller who recently arrived from Armenia has given some interesting information upon the course of events that gave rise to the establishment of a Soviet administration in Erivan. He described in somewhat bitter terms—and quite justifiably—the withholding of adequate assistance until it was too late, and the unfortunate Republican Government's quandary when faced by internal difficulties and a sudden onslaught from without. The administration of Vratzian was no more able to deal with the situation than its predecessor, and fell an easy victim to the Armenian Bolshevik forces that entered the country from Azerbaijan. With regard to the personalities of which the Soviet is composed, one is a Russian, Sillin, one is a Dashnak, and three others are Bolsheviks. It would appear that it was Sillin who announced the incorporation of the Zangazur and Karabagh districts with the Armenian "Soviet Republic," and also summoned the Turks and Georgians to evacuate Armenian territory. It is a singular circumstance, therefore, that in spite of this summons the Turkish Commander should have sent a message of congratulations to the new administration. True, the Turks have retired from Alexandropol, and to the west of the Arpa River, but there is no information to show that the Georgians have evacuated the Borchalu district. It would hardly be right to consider these circumstances in themselves as sufficient grounds for the belief that the Russian Commissar's action was nothing more than "poudre aux yeux," but the fact remains that the policy followed by Georgia during the last two months has been worth something to the Bolsheviks, and, in spite of all the rumours, the evidence supporting the theory of a very definite understanding between the Turks and the Bolsheviks is much stronger than all

The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—

THE "UNIVERSAL" CIGARETTE MACHINE.
THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.
"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.
AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

United Cigarette Machine Co., Inc.
80, Coleman Street,
LONDON, England.

indications of the existence of a misunderstanding. As to the recognition of Armenia's claim to the Zangazur and Karabagh districts, the Bolsheviks are merely transferring something from their right hand to their left, which can hardly be considered as a favour to anyone but themselves. Finally, the abrogation of the Peace Treaty signed by M. Khadissian at Alexandropol and the opening of fresh negotiations for the fixation of the frontiers of Armenia, are circumstances in harmony with the agreement between the Turks and the Bolsheviks embodied in the correspondence between Chitcherin and Mustapha Kemal as long ago as June. There is thus every reason to regard the downfall of Armenia as the result of plans executed by the Turks and the Bolsheviks in almost complete agreement.

The Latest Exploit of the Venizelists.

The partisans of M. Venizelos in Constantinople show no signs of returning to a calmer state of mind. On the evening of the 17th inst., a large crowd attacked the offices of the *Patris* newspaper, which is believed to be a Constantinist organ. The doors and windows of the offices were smashed, and the furniture and machines completely destroyed. One can only ask what the followers of M. Venizelos would have said if Constantinists had been guilty of similar behaviour.

CONSTANTINOPLE, January 3.

The Return of the Government Mission.

In spite of the fact that the Government obstinately refuses to admit that it has received any information from Izzet Pasha with regard to the progress of the negotiations with the Nationalists, it is an open secret—that is to say, no secret at all—that the entire mission is on its way back to the capital. As to the result that has been obtained there is unfortunately very little room for optimism. Between the demands of the Nationalists and the limits of the power of the Sublime Porte there is a gulf which cannot possibly be bridged. The real issue is, of course, not so much between the Nationalists and the Sublime Porte as between the Nationalists and the Allies. So far as the Government is concerned the only issue with the Nationalists is of a purely domestic nature, and that could probably be settled in five minutes—always provided that the dynastic question is not raised. There is reason to believe that the Government has exhausted every possible means of cajoling the Nationalists to take up a more reasonable attitude, but it is certain that they have not changed their original demands to any extent. That is to say, their terms are the recognition of the complete independence of Turkey within what they consider to be the ethnographical frontiers of Turkey. "Complete independence" means freedom from such irksome curbs as financial control and military restrictions, while the ethnographical limits of Turkey are drawn by the Nationalists to include Eastern Thrace, the districts of Kars, Ardahan, and Batoum, as well as Smyrna, to say nothing of certain little bits of territory upon the borders of Syria and Mesopotamia. There can be no doubt that the turn of events in Greece has helped to make the Nationalists obstinate, but there is also very little doubt that the Bolsheviks have also helped to make them stiffen their attitude. The net result of the negotiations therefore appears to be that the mission is returning with a detailed account of the Nationalist terms, and it is for the Government to see whether the Allies are prepared to make an offer which will provide a basis for further discussion. If not, the Cabinet must either change its policy towards the Nationalists or resign. In the latter event it is difficult to foresee what Government could undertake the task of administration. The Treasury is absolutely bare, and there is a large army of officials and other functionaries to be paid. Income amounts to nil, and the most desperate efforts have failed to secure even a trifling loan. It is clear, therefore, that the final crisis which has been staved off hitherto cannot be very far off now.

Anatolia.

So far as can be judged from the Nationalist Press, the relations of the Angora Government with the Bolsheviks are of the happiest. The Angora administration is

busily introducing an improved Bolshevism of its own—in harmony with the peculiar traditions and requirements of the nation, as the official *Hakimet-i-Millî* would put it. Yonus Nadi, that quondam exponent of Pan-Turanianism who directs the *Yeni Dunya*, vigorously denies that the Nationalists are of such feeble intellect as to be obliged slavishly to imitate the Bolsheviks, much as he respects them, in running a revolution. The Nationalist revolution is to be distinguished for the quantity of oil in its composition, like the famous dish which Oriental epicures so deeply appreciate, *Imam Bayildi*. But will the Bolsheviks, whose dream it is to Bolshevise the entire world, appreciate the flavour of the Nationalist dish? First Azerbaijan, then Armenia, next Georgia, and the Caucasus will be rendered safe for the next move. Perhaps with the gambling spirit of the Committee of Union and Progress, the Nationalist Committee hopes that Bolshevism will crash before the inevitable issue is raised, but as matters are developing at present, it would seem that the time for settling accounts is nearer than is supposed at Angora. In any case, the fact remains that so convinced are the Nationalists that with Bolshevik help they will be able to attain far more than the Allies are prepared to grant, that they have thrown away a very favourable opportunity.

The departure of Ali Fuad Pasha, recently General Officer Commanding on the Western Front, for Moscow, as Nationalist Plenipotentiary to a conference of representatives of the Caucasian "Republics"—the Bolsheviks will have their little joke—is of particular significance in view of the fact that the Government Mission was in Angora at the time. "Whom the gods wish to destroy!"

A Cowardly Assault.

The dastardly attempt to murder Major Dragoumis in the Grande Rue de Péra on the evening of January 2, will certainly be deplored by M. Venizelos himself as deeply as he deplored the murder of the other son of the Greek statesman. Major Dragoumis was attacked by three men, one of whom was wearing the uniform of a Greek officer, and was shot through the upper jaw. There can be little doubt that the crime was actuated by political motives, but its sheer brutality and senselessness have disgusted many who have hitherto sympathised with the Venizelist party. Major Dragoumis, it is hoped, will recover, but the scar that he will bear throughout the rest of his life will not be a scar of shame—for him.

CYPRUS.

December 17.

Rebuilding of the Gymnasium.

The community is taking active steps towards the reconstruction of the Gymnasium at Nicosia, lately destroyed by fire. It is hoped that the work will be taken in hand very shortly, and that there will be little difficulty in raising a loan of at least £5,000 towards the sum required. In answer to the application to Government for a loan of £10,000, the Chief Secretary has replied that the Loan Commission has not that sum available, and that the application to hold a lottery will be submitted for consideration. Pulpit appeals for collections are being made in the churches, and all towns and villages are being asked to contribute, the schoolmasters being in most cases the agents.

The Hellenic Consulate.

Mr. Artemis, of Nicosia, who has continued for some time to act as Consul-General for Greece at the special request of the Hellenic Government, has asked that his resignation may be now accepted and a new Consul appointed, as his other duties do not permit him to remain in office.

Immodest Dress.

According to the *Ecclesiastical Herald* of Athens, the Orthodox Greek Church is to prohibit the entry into churches of women wearing some of the up-to-date styles of dress—bare necks and arms, and skirts all too short. It is suggested that Cyprus should follow the example, and that the Archbishop should similarly forbid unseemly dress to be worn, at any rate in places of divine worship. So rapidly has the wave of fashion spread that Cyprus shops and dressmakers are now quite ready to supply the requirements of all tastes.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

SOME INDIAN PROBLEMS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—“Politically minded Indians,” to use an ugly but serviceable phrase, are much exercised just now on a momentous question, “Separation” or “Home Rule within the Empire.” You smile. If we are wise we shall not smile, but think. If there is such a thing as responsibility, if anywhere in the world one set of people are responsible for another set of people the British nation is responsible for the peoples of India. And yet we may be asked, very soon, perhaps this year, to ignore our responsibility, to pretend that we can hand it over to someone else, to make believe that the handful of clever children who pose as the political leaders of India are the statesmen of a nation eager to be free and ready for self-government.

It will be well to think beforehand. We may find ourselves up against some awkward problems, human sacrifices, for example. There were two in India in 1919, a boy and a girl. Suppose under the slack native rule—all Oriental Governments are slack, except the Japanese—the taste for human sacrifices grows, shall we be responsible? And then those widows. You remember, don't you? They used to burn them with their dead husbands; ten thousand every year, an old missionary says. Will that custom revive? If it does, what shall we do? Is the British Empire to sanction widow burning? Is a state where this abominable crime is tolerated to rank with Canada and Australia and New Zealand as one of the Dominions of the British Empire? The contingency is possible, remember. In India the status of women is very low; girls are betrothed in childhood, and if their boy husbands die they are doomed to perpetual widowhood; not even the humane rule of the British, not even the Christian zeal of missionaries, has prevailed yet to do away with the cruel doom that blights the life of thousands of Indian girls. So widow burning might easily become a British problem, an Imperial problem.

And so may irrigation which keeps at bay the famine and communications, and defence, and a dozen other questions. Has not the British public some solid thinking before it in 1921?—I am, etc.,

C. POYNTZ SANDERSON, Hon. C.F.

3, Clarence Parade, Southsea.
January 1, 1921.

THE EGYPTIAN SITUATION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The December magazines contain three interesting articles on the Egyptian situation—one in the *Fortnightly*, by Sir Malcolm McLlwraith; another in the *Nineteenth Century*, by Mr. Ormsby Gore; and a third in the *Round Table*, anonymous. This latter contribution and the article by Mr. Ormsby Gore are, perhaps, the more interesting from an historical point of view; but the article in the *Fortnightly*, by Sir Malcolm McLlwraith, deserves special attention not only on account of Sir Malcolm's long experience as Judicial Adviser to the Egyptian Government, but also because he is clearly opposed to the conclusions arrived at by both Mr. Ormsby Gore and the writer of the article in the *Round Table*. There is no question, moreover, that Sir Malcolm voices the apprehensions of many who have served in Egypt, and not a few of the British public; consequently the views expressed will, in all probability, have considerable weight with the Cabinet and the House of Commons when the Milner proposals are under discussion.

Sir Malcolm McLlwraith does not attempt any general analysis or criticism of the Commission's findings, and confines himself to the suggested abolition of the Capitulations; which, he considers, constitute the basis of the project, because the rights of the Capitulatory Powers are to be transferred to the British Government as the privileged Power under the new régime. Sir Malcolm argues that the Powers, notably France, Italy, and Belgium, will hesitate to forego their special rights under the Capitulations, seeing that the British Army of Occupation will, under the terms of the Milner proposals, be withdrawn and the British control and responsibility for the continuous stability of the internal administration will cease. In support of this contention Sir Malcolm McLlwraith points out that the late Lord Cromer, when dealing with the Capitulations in 1908-1909, found it necessary to assure the Powers that “there was no reason for allowing the proposal of any modification in that regime to be prejudiced by the existence of any doubt as to the continuance of the British occupation.” Further, Sir Malcolm McLlwraith seems to think that if the British Army be withdrawn, not only would the Powers be

justified in opposing the scheme, but the British community could not be expected to accept a proposal which might involve “their being tried for their lives by a court composed of three judges—two foreigners and one native, neither of the foreigners being necessarily English—sitting with the six foreign assessors, only three of whom would be British, administering Egyptian codes of penal law and procedure differing widely in principle and practice from the institutions of British law.”

From this it would appear that since Sir Malcolm McLlwraith left Egypt the judicial authorities have proposed the constitution of Mixed Criminal Courts and drafted a code of procedure which does not altogether meet with his approval. Whether his fears in this connection are or are not groundless I am not prepared to argue, as I have not had an opportunity of studying the codes as drafted; but I would observe that if the necessary safeguards have not been introduced, we are alone responsible. I do not mean to say that the Egyptians have not been consulted, but the draft actually approved was not the work of the Native Egyptian Minister or Legislative Council, but of a committee composed largely of English judges. In fact, I believe that I am correct in stating that the first Nationalist explosion occurred over the question of these codes, Zaghoul Pasha making a speech in which he entirely repudiated our right to make these laws. It may be remembered also that the abolition of the Capitulations was not originally one of the planks in the Nationalist platform. Zaghoul Pasha, appreciating the opposition he was likely to meet in this matter, was quite content to leave the Capitulations in their present very unsatisfactory condition. But the way the Capitulations are abused by certain of the Powers is so notorious that it is incomprehensible how anyone having the welfare of Egypt at heart can be found to defend them; neither do I imagine that Sir Malcolm McLlwraith has any intention of doing so; but he forgets that in supporting the British community in their opposition to the scheme he is also aiding and abetting the other Powers to create difficulties. Yet if the question is thoroughly gone into, the extension of the powers of the Mixed Tribunals and the bringing of all the various nationalities under the laws of Egypt is the only satisfactory solution.

When all is said and done, the British subjects residing in foreign countries do so of their own free will, and if they commit offences against the laws of that country they must take the consequences, even to the extent of “being tried for their lives.”

Until the terms of the Treaty which is to be made with the Egyptian Government have been published, it is premature to discuss to what extent the control to be exercised by the British Resident will safeguard European interests; and the Powers will probably be anxious to see this Treaty before relinquishing their existing rights. But what about the declaration of a Protectorate, and the acceptance of the same by the Powers at Versailles? Has not this Treaty cancelled all rights under the Capitulations? Anyhow, there should be no great difficulty in safeguarding European interests without the necessity of employing an army of civilians, and the constant interference in every detail of administration which has been so developed in recent years. Whether the Army of Occupation remains at Cairo or has its headquarters on the Canal is a detail as far as the European Powers are concerned, though the transfer from Cairo is probably the removal of one source of irritation to the Egyptians.

Sir Malcolm is afraid that, owing to the opposition of the Powers, the Milner scheme may fail to materialise, and the Egyptian feeling against us become more embittered than ever. This is surely all the more reason we should all do our best to assist Lord Milner in his endeavours to fulfil the pledges of evacuation which were made in 1882, and so often repeated since, whatever meaning may be attached to the paragraph of Lord Cromer's report quoted by Sir Malcolm McLlwraith. But, differing as I do profoundly with the general spirit of Sir Malcolm's article, I must nevertheless admit that if the question is re-opened, the abolition of the Capitulations is likely to meet with considerable opposition, and if the scheme is wrecked, it will, in all probability, be owing to this opposition; and there is no saying what “political expediency and diplomatic bargaining” will produce.

Mr. Ormsby Gore, who appears to have studied the Egyptian question to some advantage, considers that the difficulties would have been less if, instead of declaring a Protectorate, we had received Egypt into the British Commonwealth of Nations—I take it that a Protectorate means a Crown Colony. I do not see how during the war Egypt, which was occupied by us and not exercising free will of her own, could have been accepted as a self-governing Dependency such as Australia. But when we proceed by treaty, as the Milner scheme proposes, we can develop the self-government as we like and the Egyptians accept. We

start, in fact, from the Crown Colony basis. If this is so, and the Allies have by the Versailles Treaty accepted our Protectorate in Egypt, why should we now reopen the question by admitting that the Powers have all sorts of rights under the Capitulations? I have no authority to speak for the Egyptians; but possibly if the Nationalists in Egypt realise that by accepting the Protectorate they free themselves from the constant interference of the Powers, it is distinctly to their advantage to do so. If for the moment it is agreed that the powers as regards legislation which exist but are never exercised by a Governor in the colonies are exercised by the Sultan of Egypt under instructions of the Resident, this is a family arrangement which does not concern the Powers, who should look only to England as the protecting authority. I, however, quite agree with Mr. Ormsby Gore that as regards the internal administration our position should be clearly defined. It is very necessary, too, that the new organic law including provisions for the protection of Europeans, such as the creation of the Mixed Courts, should be agreed on and form part of the treaty between Great Britain and Egypt. My friends in Egypt do not like the word "Protectorate," and prefer an "Alliance" rather than an "Agreement." But let them accept the former and show themselves capable of self-government and the "Alliance" will soon follow, as in the case of our Crown colonies which now form a part of the British Commonwealth. If tutelage has to be exercised, it is far better that it should be exercised by one Power than that they should be exploited by all the Powers, which the continuation of the Capitulations implies.

One more word in conclusion. Are the Egyptians going to be allowed an unrestricted choice in their constitutional ruler, Sultan or Khedive, whatever name he may go by? We do not want a repetition of the King Constantine episode in Cairo; yet it is quite on the cards that a free election might bring back the ex-Khedive, his son, or, perhaps, even another member of Mohammed Ali family. Let our Government be prepared for such a contingency; and if certain members are absolutely not acceptable, let our Government say so, and not wait till the deed is done and then refuse recognition.—I am, etc., COLES PASHA.

THE FUTURE OF WESTERN THRACE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We, the undersigned, desire to urge that, in the interests of international peace, the question of the disposal of Western Thrace should be reconsidered. The cession of Western Thrace to Greece was unjust and unwise for two reasons:—

1. Two-thirds of the population were bitterly opposed to it. During the French occupation of this province they clearly expressed their views, and since the Greek occupation a large proportion of them have taken refuge in Bulgaria.

2. It cut off Bulgaria from her only territorial outlet to the Aegean Sea, without which her economic life cannot be fully developed, and this, although Bulgaria had signed the Peace Treaty on the strength of the understanding that this territory should be placed under International control. Without such access Bulgaria will be thrown back on the Central Powers for the provision of its economic needs.

A commercial outlet through Greek territory can never be satisfactory, owing to the intense hostility which has always prevailed, and which, unfortunately, still prevails, between Bulgarians and Greeks.

The present situation in Greece, and the widespread demand among our Allies for a revision of the Treaty of Sevres, appear to us to provide a favourable opportunity for making a fresh settlement in Thrace, and we respectfully urge upon H.M. Government and the League of Nations the desirability, in the interests of future peace, of satisfying the legitimate aspirations of the large non-Greek majority, both Christian and Moslem.

THE PALESTINE MEMORIAL FUND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I recently appealed to the Press for further funds in aid of the memorial which it is proposed to erect on Mount Scopus, near Jerusalem, to the memory of those who fell in the Palestine campaign. It has been suggested that if there could be announced an address in Palestine to which donations might be sent it would be a convenience to local contributors.

I am happy to be able to announce that a local honorary treasurer has been found and an account opened with the Imperial Ottoman Bank. Subscriptions and donations in Egyptian, Turkish, or Syrian money will be gratefully received by: Miss F. E. Newton, F.R.G.S., Local Hon. Treasurer, Palestine Memorial Fund, P.O.B. 63, Haifa.—I am, etc.,

ALLENBY, F.M.

MUSICAL NOTES.

The Incorporated Society of Musicians.

The thirty-first annual conference of the Incorporated Society of Musicians was held from January 3 to January 7, and during that time indulgence was made in meetings, lectures, and concerts. It was stated (and obviously believed) by the Society that "the Musical Profession is to-day confronted with the greatest opportunity in its history," and that the complete education of the people, in which music was an essential factor, could be accomplished only in co-operation with other educationists. The music conference was, therefore, made part of a larger educational conference.

Now, I was able to go only to one lecture—that given by Sir Hugh Allen at the Mansion House on January 5—and to one concert—that provided by the English String Quartet and Miss Olga Haley at the Queen's Hall on the same day. But what I did hear made me wonder very seriously whether all this kind of thing will ever lead to any good, will make the ordinary person, that is, not only to enjoy music, but to judge of its worth. At the Mansion House, Sir Hugh Allen spoke well on the folly of giving musically educated people the opportunity of hearing "beastly tunes," but when he proceeded to claim for music the stimulating of intellect, the construction of character, one heavily sighed and feared the worst (which inevitably came in speeches made by various distinguished gentlemen after his lecture). If zealots would treat music for what it is, a purely æsthetic problem, there might be some hope of its solution; but when all sorts of moral and metaphysical virtues are claimed for it, hope may be abandoned. What, for instance, were the primary feelings of the audience at the excellent stuff which the English String Quartet and Miss Olga Haley played and sang? Did they swell with patriotic pride (they should have done had music been an integral part in the making of a nation) when Joseph Speaight's "Two Shakespearean Sketches" were done; or did they hang their heads in shame when Miss Olga Haley sang Joseph Holbrooke's "Come not when I am dead"; or were they at any time morally uplifted by the beautiful music that was performed at this concert? I doubt it.

Little good can be done by confusing the issues. It is true that more interest (by much too strong a word) appears to be taken in music now than at any time in history; but this increased indulgence is visible in many other things also, and is more probably explicable by a lack of interest in religion, the voids left by the war, and so on, than by an ebullience of a "music for music's sake" spirit.

It seems to me childish to complain, as many older musicians do, of the enormous popularity of the attractions that run counter to music—the cinema, jazz dancing, and so on; if you want to see these things stamped out you must become not a musical reformer, but a complete revolutionary. For as long as commercialism, or industrialism, or capitalism endures the success of the more vulgar things is certain; and you cannot, while the basic means of existence remain degraded, obtain an universal desire for the lovely. If you really believe that the soul of a people is mirrored in its music, then to improve that music you must first of all improve the physical or economic condition of the people; you cannot (so I think) impose upon them a spiritual reform.

But such arguments are really wide of the mark, because great music is not a product, it is an accident. This, I know, is a dogma of despair, but I believe it to be profoundly true. While the capitalist system obtains, as it does in most of Europe and America, the true appreciation of music will always lie in the hands of a minority, and I imagine that unless a man be born with a leaning to æsthetics he must, before being able to appreciate music, be physically and spiritually content. That there are exceptions to this is granted, but, speaking broadly, it is nearer the truth than a "musical educationist" generally gets.

The above criticism is negligible by the enthusiastic, because it is all negative. But that is the problem as I see it: either you must forego the prospect of a musical democracy and be content with a musical aristocracy, or you must make a change of civilisation (e.g., Russia) precede a change in culture. The musician is, at the present time indeed between the devil and the deep sea. ANDANTE.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

- III.—"MACEDONIA: A PLEA FOR THE PRIMITIVE." By A. Goff and H. A. Fawcett. (London: John Lane. 21s. net.)
- IV.—"HYMNS OF THE RUSSIAN CHURCH: Being Translations, Centos, and Suggestions from the Greek Office Books." By John Brownlie, D.D. (Glas.). (Oxford University Press. 5s. net.)
- V.—"LOCAL GOVERNMENT IN ANCIENT INDIA." By Radhakumud Mookerji. Second Edition. (Oxford: Clarendon Press. 12s. 6d. net.)

I.—THE BALKAN TANGLE.

Even the best chef does not always put sufficient salt into an otherwise perfect soup. No one could complain that Miss Durham's "Twenty Years of Balkan Tangle" failed in the savour. There is no sameness in Miss Durham's virile pen.

"Twenty Years of Balkan Tangle" is reminiscent, and is, indeed, the child of her former books, but it is written in a different vein. "High Albania" is epic and stands alone. Through the pages of that book one had the picture of a dauntless English lady fighting her way over the heights and down the mountain gorges in the torrid days of Balkan summer. In "The Struggle for Scutari" the picture is different. The traveller has become, first, correspondent, and then nurse—the war nurse with a very insufficient equipment in a war that is in itself mediæval.

In "Twenty Years of Balkan Tangle" the nurse has become an historian, who says too many good things to quote. No review can deal adequately with a book that has so many sides, and which, in truth, is the record of a prolonged jacquerie that opened the gates to the world war. It is a story of peasants fighting for fairy gold, of men that died for legends rather than for faith, and of deathless animosities and battles about names and labels.

"It was not astonishing that the Serbs hated Islam, but that they should fiercely hate every other Christian Church I did not expect.

"It is but one more instance of the fact that it was largely to the fanaticism of the Orthodox Church that the Balkan people owed their conquest by the Turks."

It is first-hand and first-rate testimony of the coming of the crisis. "The gates of time were suddenly flung open, and in the space of a few years something like five centuries poured over the land."

During these years which Miss Durham witnessed she was often horrified, but even more often amused. It was only later that she realised that the blood-stained Balkan kaleidoscope closely concerned, and sometimes ruined, the audience that laughed and applauded the principal actors.

Essentially the book is (perhaps unconsciously) an indictment of the Slav and the Slav temperament. Once Tsarism meant order in Russia. Siberia existed for malcontents. Bolshevism means Siberia for all Russia and death to malcontents. Montenegro and Serbia prided themselves on being the "mirror of Slavism." Now, Slavism under the Tsar, or King Peter of Serbia, or Lenin himself, is always "You shall be Slav or you shall die." King Peter may insist that the Mohammedan shall kiss the Cross; Lenin may force the Orthodox to spit upon it; but they both order all who are in their power to admit that they are Slavs.

Miss Durham traces Serbian history from the days of the battle of Kossovo and the great desertion that gave the

Turks the land until modern times. The charm of her pen is not diminished by the blackness of the ink. There is the poetry and romance of Serbia, and, more especially, of Montenegro; but from Kossovo onwards the Saint and the soldier combined amongst the Slavs is hard to find. Karageorge is the modern hero and villain. Of him it is reported that, flying into Austria, when his father hesitated to leave his native land he shot him dead. The picture does not change greatly in our own times—from the horrible murder of Draga and Alexander to the similar crimes by living men. One has a gloomy picture of heroism combined with madness and hereditary curse upon the rulers of a people. Her descriptions of Montenegro, and particularly of the Prince, are not so sombre. She knew him first when Cook's tourists were often his only, and sometimes his most important, visitors—a tall, old man, distinguished in appearance among the Montenegrin mountaineers, and more royal than most kings. He was a warrior, and she records one of his battles, where many kinsmen fell. He is a poet, and one song of his, "Onward to Prizren," is known and sung by all his nation. Who, in those days, would have dreamed that the Serbs would possess it and be accused of crimes in Montenegro that make the mountaineers remember with affection the days of Turkish suzerainty? She tells of him in early days, a benevolent, autocratic father of his people; and then, gradually, there comes the tale of his intrigues, and how he married one daughter to the King of Serbia, another to the heir of the rival dynasty, and yet a third to the King of Italy; of how he flirted with Russia and with Austria; of all his shrewd business bargainings that, in the end, lost him the chieftainship of his barren rock and a position in Europe. Miss Durham returned the decoration to him which he gave her, but one cannot help suspecting her of a certain sympathy for him. He had at least more excuse for all he did than some of the Prime Ministers of the Great Powers.

But it is when Miss Durham deals with Albania that she is at her best. "Albania was faced by two enemies. Not only the Turk dreaded the uprising of Albania, but Russia had already determined that the Balkan Peninsula was to be Slav and Orthodox. Greece as Orthodox might be tolerated. No one else." . . . None of these efforts on the part of Albania's enemies killed the strong race instinct which has enabled the Albanian to survive the Roman Empire and the fall of Byzantium, outlive the fleeting mediæval Empires of Bulgar and Serb, and finally emerge from the wreck of the mighty Ottoman Empire, retaining his language, his customs, and his primitive vigour—a rock over which the tides of invasion have washed in vain."

"In April, 1915, as we learnt later, the Powers who had guaranteed Albania's independence bought Italy's intervention by promising her Albania's best port, Valona, and by the same secret Treaty bound her over not to object should France, Russia, and Great Britain desire to distribute among Montenegro, Serbia, and Greece the northern and southern portions of Albania." This partition, the work of Baron Sonnino, who, unfortunately for us, was called Sidney, had a Welsh mother, and spoke perfect English, had, according to Miss Durham, contributed to widen the breach between the Serbs and the Bulgars. This, however, is at least arguable. It is doubtful whether Great Britain, situated as she was, could have acted differently, but the Treaty itself was cruel and mean, and brought its own punishment with it.

There is no "Finis" written to "Twenty Years of Balkan Tangle." M. Venizelos, much the biggest figure, is in exile; King Constantine again rules in Old Greece; but what of New Greece? King Nicholas is an exile and gagged in France; Prince Alexander's Serbs are doing in Montenegro deeds that were better left undone. Yugoslavia has yet to prove that its legs are strong enough to carry its large body. Bulgaria is cut off from the sea. Albania has been admitted to the League of Nations. Roumania—but this is too long. Let Miss Durham go on with her writing, for there are many who will read her books.

II.—ASIATIC LOVE POEMS.

There are two kinds of translators—those for whom the practice is a pleasant pastime, and those in whose hands it is one of re-creation. For the one class the pleasure is technical, for the other poetical. Now it is certainly to the second that Mr. Powys Mathers belongs. And it is not merely to his seizing of the spirit of the hundred and twenty

Specialite: INDIAN ARMY OUTFITS.

Asiatic love poems that he has translated that the success of his book is due; his excellence in the externalities of exoticism is also remarkable. "The Garden of Bright Waters" is indeed a revelation.

Some of these poems have been done from the original languages, others from the literal translations of French and Italian scholars, but all conserve the Eastern atmosphere. They include strangely beautiful verse from almost all the places of the East, including Afghanistan, Annam, Baluchistan, Burma, the Caucasus, Daghestan, Georgia, Hindustan, Kafiristan, Kurdistan, Persia, Syria, Turkestan, and Turkey, and among other things are twenty-four poems from the Arabic. Many are poignant and wistful melodies, simply crying for musical settings; we shall be surprised indeed if they escape the notice of composers. (The necessity for music is paramount in the songs from Annam, which are permeated in colour and in atmosphere.)

It is difficult in a review of a book like this to know what to quote, but perhaps nothing is more characteristic of the author's method than his poem called "Sand"; it is from the Arabic of that very remarkable figure, John Duncan:

The sand is like acres of wet milk
Poured out under the moonlight;
It crawls up about your brown feet.
Like wine trodden from white stars.

Most of the carnal poems are too long to be set down here, but the wisdom concerning the consequences of love is almost as typical of the East as the fleshly passion. Of this here are two examples, the first a song of the Tatars, called "Honey," the second a Turkish proverb:—

Young man,
If you try to eat honey
On the blade of a knife
You will cut yourself.

If you try to taste honey
On the kiss of a woman,
Taste with the lips only;
If not, young man,
You will bite your own heart.

And

Before you love,
Learn to run through snow
Leaving no footprint.

But we should be wrong if we gave the impression that these love poems deal only with the indulgence in or abstention from love, for, in fact, they deal with the matter pretty well as exhaustively as do Western writers. There is gathered in these pages the sapience of writers of all periods; there is anything from the soft sighing of a lacquered girl, to a wild ballad of the Caucasus. The book is indeed a varied and most admirable collection of unexpected beauties, of strange colours, and of sudden and subtle imageries; and it is more than distinguished verse, it is poetry.

III.—MACEDONIA DISCOVERED.

This book is exceedingly well produced, with a map and an index, which last is not as good as it might be. It also contains numerous very charming illustrations, which are successfully reproduced from beautiful drawings, in colour, pencil, and line, by Dr. Fawcett. These pictures are a welcome relief from the uninteresting photographs to which we have grown accustomed in books of this kind, and are in themselves instructive as well as delightful.

We only wish that the text of the book had been up to the standard of the pictures. The "introduction" and the sub-title led us to hope for a thorough study of Macedonia. When the authors inform us that, during a period of three years, "the most remote corners of the country have been probed," we look for a treatise going to the root of things; when we read further on that "they have been enabled to compile what is believed to be, from a non-political and non-military standpoint, the first detailed description of Macedonia" we begin to wonder. And we are not long in being disillusioned. In a quite pleasant way we are told of the various obvious matters which would thrust themselves on the attention of intelligent observers. The accuracy of it all is open to doubt, as not infrequently the information given on one page is contradicted or gravely modified on another. As indicated by the quotation from the "Introduction" given above, the authors seem to have read absolutely none of the existing literature on Macedonia, and, consequently, land themselves in a variety of very unfruitful speculations on the origin of certain customs, etc., which could have been avoided by means of a very modest course of appropriate reading. A little reading of a very general kind would also have kept them from talking of "Samos and Achaia" as "islands of the Archipelago," of "Franco-Chinese troops from the Annon Islands," or of "general *emporii* which sell anything from a Gillette razor-blade to a Turkish carpet." But we must be careful not to give a wrong impression of the book.

Most certainly it is not what it professes to be, but it does, in its queer *naïf* way give, on the whole, a clear and interesting superficial picture of life in Macedonia, specially during the war. "*Naïf*" is, indeed, the only word which expresses the child-like air of discovery which permeates the book, the solemn chapter-headings with their scrappy and inadequate contents, the constant use of expressions like "quaint," "feathered brigade," "sub-tropical," etc., the last expression being habitually used for the vegetation of Macedonia, of all places. It covers also the "fine writing" in which one of the authors indulges, as well as delicious statements like: "In attempting to describe the plants and flowers of Macedonia, one is confronted not only by countless species, but by many new and unknown varieties." Unknown to whom?

Quite a pretty house, in fact, and beautifully decorated, but it has been built without any kind of foundation and with poor materials.

C. S. W.

IV.—RUSSIAN HYMNS.

In his introduction to this book Dr. Brownlie states that the Greek Church is little known in the West, and attributes this ignorance mainly to a peculiarity of temperament in the Western peoples and to the Roman (by which he means the Catholic) Church. But there is small doubt that English interest, at any rate in the Eastern Church, is increasing, and the present work should find many eager readers in this country. The preface contains a few very useful general remarks upon the Russian, including one on the error of supposing that the Russian Church is not essentially Greek, and some technical details upon the Service books from which the hymns translated are taken.

The hymns themselves, which are both seasonal and miscellaneous, are done into smooth and flowing verse. They are careful and well appointed. But the exigencies of rhyme and of metre appear a little to have removed the very national essence of the Slavic hymns, and the imagery is of rather a universal than of a distinctively Russian type. Yet it is difficult to see how this monotony could have been avoided, for Eastern metaphors and symbols literally cannot be forced into the harness of Occidental verse.

We should have welcomed with this book some of the beautiful music to which these hymns are sung, for much of the strength and the dignity of the Russian service comes from the rhythmical freedom of its magnificent unaccompanied choral singing. This unfortunately is a side upon which Dr. Brownlie scarcely touches, but we feel that had its importance been more plainly demonstrated, the appeal of these hymns would have been more instant and certain. Perhaps for another edition the author may be persuaded to add some musical examples.

V.—EARLY INDIAN INSTITUTIONS.

We can do little more than record the appearance of a second edition of Dr. Mookerji's learned study of early Indian institutions. The work met with some criticism on its first appearance two years ago, and the author now replies to his critics in a vigorous preface. The controversy is interesting and important, but too technical for examination in these columns, and we must content ourselves with remarking that there is still much to be said by specialists in various branches of study. Meanwhile the book is indispensable to the student of ancient India, though he will be well advised to regard it as containing a large measure of hypothesis.

PERSONAL AND GENERAL.

TO-DAY.

January 13 (New Style).
December 31 (Old Style).
Jumada I., 3, 1339 A.H. of the Moslem Calendar.
Shebat 4, 5681 of the Jewish Calendar.

Colonel and Mrs. Frank McClean have left London for Egypt.

Mr. R. S. Hudson, Second Secretary to the British Legation at Athens, has arrived in London.

A memorial service for the late Mr. J. D. Bouchier was held at St. Margaret's Church, Westminster, on January 11. Among those present were the Bulgarian Minister and the staff of the Legation, Mr. G. E. Buckle, Mr. Geoffrey Dawson, and Mr. H. Wickham Steed, the three editors of *The Times*, under whom Mr. Bouchier had served, as well as a large number of personal friends.

M. Nicolas Michel Vladesco, Secretary to the Roumanian Legation, left London last week for Paris, on leave.

The Duke and Duchess of Sutherland and Lord and Lady Maidstone will shortly leave England for the Sudan.

Field-Marshal Lord Allenby's visit to the Sudan, on which he was to have started last week, has been indefinitely postponed.

The marriage arranged between Lieutenant-Colonel W. Hudson, M.C., and Joan Adèle Badcock will take place in Egypt at the end of February.

Gholam Hossein Khan Farid-es-Saltaneh, Secretary to the Persian Legation, has sufficiently recovered from his illness to be able to resume his duties.

The *Temps* states that Admiral Troubridge, in accordance with the regulations of the Danube Commission, has resigned his position as President of that body.

M. Stambolisky, the Bulgarian Prime Minister, left Prague last week for Bucharest after he had had an interview with Dr. Benes, the Czecho-Slovak Foreign Minister.

Sir Francis Lowe, M.P., left London on January 7 by the *Neuralia* for Bombay. He expects to be away for about three months. No letters will be forwarded.

Mr. Bhupendranath Basu, of the India Council, is paying a holiday visit to India on grounds of health, and left last week for Marseilles to embark on the mail steamer *Kaiser-i-Hind* for Bombay.

M. Leygues, French Prime Minister, received Major-General Sir Charles Townshend, M.P., and Ahmed Riza Pasha, former President of the Turkish Chamber of Deputies, in Paris last week.

A marriage has been arranged, and will take place early in February, between Arthur George Fritz Napier, Indian Finance Department, eldest son of the late Professor A. S. Napier, of Oxford, and Mrs. Napier, of The Whins, Alderley Edge, Cheshire, and Lucy Cecil Winter, third daughter of the late R. T. Wright, of British Guiana, and of Mrs. Wright, Heather Cot, Tilford, Surrey.

The King of Italy and the Prince Regent of Serbia exchanged telegrams of good wishes on the occasion of the New Year, and messages passed between M. Vesnitch and Signor Giolitti and Count Sforza.

Earl and Countess Buxton, Captain the Hon. F. E. Guest, M.P., and Sir Robert and Lady Baden-Powell left London last week by the P. and O. steamer *Narkunda*. Lord and Lady Buxton are going to Algiciras, and will be away for about a month.

The engagement is announced between Captain H. A. Littlejohn, M.C., Reserve of Officers, late Royal Artillery and Egyptian Army, and Jeanne, younger daughter of Mme. and M. Eugène Mannerat, directeur de la Société du Béhéra, Alexandria, Egypt.

The Reverend William Somers Sutherland, Missionary, of Kalimpong, Bengal, and Miss Annette Matilda Benson, formerly Senior Physician, Cama and Albless Hospitals, Bombay, are recent recipients of the Kaiser-i-Hind Medal for Public Services in India of the First Class.

Our Belgrade Correspondent writes (December 31): Consequent upon the recognition by Italy of the Kingdom of the Serbs, Croats, and Slovenes, the new Italian Minister to Belgrade, Count Manzoni, has arrived, and paid a visit to M. Vesnitch, accompanied by the Chargé d'Affaires, Signor Galanti.

A marriage has been arranged between W. B. B. A. Stephens, of the Bank of Madras, eldest son of the late Lieutenant W. H. Stephens, R.N., and of Mrs. Stephens, and Kathleen Wilmot, widow of Guy H. Bernays (Indian Police) and youngest daughter of the late Mr. A. T. Wilkinson.

The engagement is announced of Brevet Lieutenant-Colonel C. R. Lloyd, D.S.O., Indian Army, eldest son of the late Lieutenant-Colonel T. P. Lloyd and of Mrs. Lloyd, 11, Kensington Court Mansions, and Eve, only child of the late Donald Shaw, of Glasgow, and of Mrs. Shaw, 2, Kensington Court Mansions.

On January 20, at 8.30 p.m., Dr. H. R. Hall will deliver a lecture at the Royal Society's rooms at Burlington House on "Egypt and the Outer World in the Tell el-Amarna Period." Tickets can be obtained gratis (if stamps are enclosed for postage) on application to the Secretary, Egypt Exploration Society, 13, Tavistock Square, W.C.1.

APPOINTMENTS, ETC.

M. Ribar has been appointed Speaker of the first Constituent Assembly of Yugoslavia.

Sir Elliot Colvin has been appointed as British Representative on the Inter-Allied Commission under Part VII. (Reparation) of the Treaty with Bulgaria.

Dr. E. J. Butler, late Imperial Mycologist, Director of the Research Institute, Pusa, and Agricultural Adviser to the Government of India, has been appointed Director of the new Imperial Bureau of Mycology.

M. Michel Antinescu has been appointed Roumanian Minister of Justice in succession to M. Grecianu, who died from injuries caused by the explosion of a bomb in the Senate on December 9. M. Petrovici has become Minister of Public Works.

The Allahabad *Pioneer* announces that Mr. Clive Rattigan, editor of the *Pioneer* since 1915, tendered his resignation, as from the close of 1920, owing to reasons of health. The board of directors appointed Mr. J. E. Woolcott, the *Pioneer's* special representative at Delhi, to succeed Mr. Rattigan.

The *London Gazette* on January 7 contained an announcement by the India Office of the following appointments:—Sir Spencer Harcourt Butler, to be Governor of the United Provinces; Sir Edward Douglas Maclagan, to be Governor of the Punjab; Sir Nicholas Dodd Beatson-Bell, to be Governor of Assam, India.

M. Misu, for several years Roumanian Minister in London, has been appointed Chief of the Military and Civil Household of the King of Roumania, which it is understood gives him a position of exceptional importance as personal adviser to his Majesty. The post has been created by King Ferdinand for M. Misu, in whom his Majesty places great confidence.

OUTFITS FOR EGYPT, INDIA, AND THE FAR EAST.

Gentlemen visiting the East this Winter can be supplied with suitable clothing and the necessary equipment for travel, camp, or bungalow, at short notice.

List "H" giving full particulars and prices by return on application.

Kit renewals required by officials returning from leave, and complete outfits for those newly appointed, at moderate cost.

THRESHER & GLENNY,
INDIAN & TROPICAL OUTFITTERS,
152 & 153, STRAND, LONDON, W.C.

The Ven. John Harold Greig, M.A., B.D., rector of Hartlebury and Archdeacon of Worcester, has accepted the nomination of the Archbishop of Canterbury to the Bishopric of Gibraltar, vacant by the death of Bishop J. C. Knight. Archdeacon Greig will be consecrated in Westminster Abbey on January 25, the festival of the Conversion of St. Paul. The See of Gibraltar stretches from Portugal to Constantinople, including the north littoral of the Mediterranean and Malta, Cyprus, and the Greek Archipelago.

OBITUARY.

M. Kosta Stoyanovitch, Finance Minister in the last Serbian Cabinet, died on January 1. He entered upon office in May, 1920, and was a member of the Democratic Union Group.

Mr. Arthur Phillips, formerly Standing Counsel to the Government of India, died last week at Bath, in his eighty-third year. Called to the Bar at the Middle Temple in 1867, he went to India shortly afterwards and practised at the Calcutta Bar until 1895, subsequently practising in England before the Privy Council. While in India he held the office of Standing Counsel to the Government of India, and he was at one time Secretary to the Legislative Council of the Government.

The death has taken place at Bexhill-on-Sea, in his 71st year, of Mr. Charles Elphinstone Gouldsbury. He was the youngest son of a Bengal civilian, Mr. Francis Gouldsbury, and was educated at Clifton. After some service in the Royal Navy he joined the Indian Police, in which he served from 1869 to 1902. He was widely known as an author of amusing and interesting books of Indian official and sporting experience. The last of these was "Reminiscences of a Stowaway," recently reviewed in this journal.

Colonel Charles Wemyss Muir, C.B., C.I.E., late 17th Cavalry, Indian Army, died at Maidenhead recently, aged 70. He was the son of Sir William Muir, the well-known Indian administrator and Principal of Edinburgh University. Proceeding to India in 1872, he served as A.D.C. to his father, then Lieutenant-Governor of the United Provinces. His first experience of war was in Afghanistan, where he was with Lord Roberts in his march to Kandahar. From 1875 he was A.D.C. successively to Lord Lytton and to Lord Ripon. From 1883 he commanded for six years the Viceroy's Bodyguard. He served in the Sudan in 1885, in Burma from that year to 1887, and in the Tirah campaign of 1897-8, and was A.A.G. in Northern India from 1891 to 1893. From the latter year to 1900 he commanded the 17th Cavalry, then being appointed Colonel on the Staff. He also served in the Q.M.G.'s Department in the late war.

Turkish Nationalists have confiscated cars belonging to the American Tobacco Corporation and the Red Cross in Samsoun.

Bulgaria, having resumed the restitution of the rolling stock and other material taken from Serbia, the Serbian Government has now ordered the resumption of railway traffic with Bulgaria.

Considerable outpost activity continues in the Resht area, North-West Persia, between the Bolshevik and British forces. Two Red attacks on British posts were defeated, the British casualties being two wounded.

The Conference of Ambassadors, in consequence of the report of the Inter-Allied Naval Commission of Control that the naval clauses of the Treaty of Neuilly had been fulfilled, decided to dissolve the Commission of Control in Bulgaria.

A message from the Serbian Press Bureau, Belgrade, says that it is authorised to deny all statements which have appeared in the foreign Press relative to the occupation of Serbia by certain territories beyond the line of demarcation.

Following upon the arrest of Communists in Georgia, the Bolshevik Government has recalled its representative at Tiflis. The Georgian Government has sent a Note to Moscow protesting against the concentration of Red troops near the Georgian frontier.

It is announced that "local bands" have crossed into the territory of King Hussein, and are moving against Taif (fifty miles E.S.E. of Mecca), and against the communications from that city to Medina, in considerable strength. Reinforcements and supplies have been sent to Taif.

News has reached Rome from Cyrenaica that some State employees have discovered a remarkable head, which is thought by experts to be that of the Venus of Cyrene, where much exploration work has been done among the ruins of the Temple of Venus since the Italian occupation.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)," which would indicate that two rooms were required at Matlock on the 20th of the month.

THURSDAY, JANUARY 13, 1921.

POLITICS, BUSINESS AND PSYCHOLOGY.

A common reproach levelled against the Germans since the outbreak of the war has been that they have entirely failed to understand the psychology of other nations. Recent events in the Near East suggest that other Powers, Great Britain among them, are showing the same defect in regard to the Balkan States. Both in politics and in business disappointments have been experienced owing to the failure to acquire any real knowledge of the people with whom dealings have taken place. The most notorious instance is provided by the turn of affairs in Greece, when both Government and public in this country were taken aback by a development that had been confidently prophesied for two years by at least half of the Greek people. In the business world there has been frequent disillusionment. After protracted negotiations a loan agreement will be drawn up and everything is ready for the ratification; definite arrangements may be made for the taking over by foreign interests of all the railway workshops in a given country; a contract for the repairs of locomotives may be actually signed. Then the weeks pass, and nothing happens. Inquiries elicit no satisfactory explanation, and a comprehensive denunciation of Balkan business methods follows on the side of the British firms. It cannot be denied that from their point of view there is good cause for the exasperation felt; a great parade of the desire to do business has been made on the other side, but the tendency to hold back suddenly develops and increases as the negotiations reach the final stage. British business men are inclined to attribute the phenomenon to inherent bad faith or sharp practice, and many, as a result of their experience, make up their minds to have no further dealings with the country in question. A little previous knowledge of the people with whom they are negotiating would not only save tempers, but would also further the transactions. Too often the negotiations are in the hands of men who, however expert in their particular line of business, have no knowledge of the Near East. The discussions may even take place through an interpreter whose capabilities are not of a sufficiently high order. The subtleties of speech that often play such an important rôle in negotiations are lost, and the contracting parties are kept at arm's length. On the Balkan side the reason for the hesitation seems so obvious that no attempt is made to explain it, and umbrage is taken at the rising indignation shown by the others.

At the root of much of the misunderstanding lies the failure on the British part to appreciate how closely business and politics are associated together in the Near East, and on the Balkan part to realise that it should appear at all strange to anyone that this should be the case. In regard to Greek politics the idea of there being any other side of the question than that presented by the Venizelist Government would seem never to have occurred to the British Government; yet the anti-Venizelists had constantly protested their ability to sweep the polls as soon as free elections should be held, and

fifteen months before the event took place attention was called in these columns to the possibility, so patent was it to any close observer. In business matters a British business-man in negotiating with the representative of a Balkan firm will give as little thought to the latter's politics as he would to the politics of any fellow countryman with whom he happened to do business. But in the Balkans, unfortunately, the political aspect is all-dominating. This may be regrettable, but the fact must be reckoned with. A Government may feel compelled to resort to a foreign loan, and will open negotiations in perfect good faith; only when the final terms have been arranged will it be possible to pass in review all the bearings of these terms on the political situation, to say nothing of any international aspect, and the instinct of self-preservation may prove superior to considerations even of financial stringency. Again, the temporary surrender of the State workshops to foreign control may seem a wise as well as inevitable course to adopt to the Government in power; but if it subsequently realises that its position, none too stable at best, will be entirely undermined by such an agreement, it may feel compelled, in what it considers to be the national interests, to back out of it even at the eleventh hour.

Is, then, business on a large scale with Balkan States impossible? By no means. It is possible, it can be lucrative, and it should be regarded by the British trader, financier, and manufacturer as a duty imposed in the interest of Great Britain. But it should be embarked upon with understanding. If the difficulties with which the Near Eastern peoples have to contend are understood, they can be judiciously assisted in overcoming them, instead of having these difficulties enhanced. In the case of all large contracts of political importance the Balkan negotiators should be encouraged to have responsibility distributed, as far as is feasible, among the different political parties. Where Ministerial changes are frequent it is in the interest of the nation that a deal intended to promote the economic well-being of the country should remain unaffected by subsequent developments in home politics. To this end the advice of British official representatives should be enlisted, or the services of someone with some standing and with knowledge of the country and its people should be retained to supplement the expert knowledge of the chief negotiator. No less important is it that British firms should not sacrifice their independence of judgment as, unfortunately, the British Government has been inclined to do in regard to its Near Eastern policy for the last six years. No good has accrued to Great Britain from allowing herself to be tied to the wheels of the French diplomatic chariot in South-Eastern Europe, and British business men will find that they will fare much better in their negotiations with the Balkan peoples, if they act "on their own" and avoid international combinations. We entirely agree that the Anglo-French Entente should be strengthened in every possible way, but it will not be strengthened by any attempt at business co-operation in the Near East; for whatever may be the wishes or intentions of the French Government, that part of the French business world which is interested in the Near East has proved conclusively since the Armistice that it does not regard the promotion of its own interests as compatible with the promotion of British interests. Its method of procedure may be quite successful from its own point of view, but the fact remains that they are not popular among the Near Eastern peoples. Consequently, as British firms are not likely to adopt French methods, they will do better to seek business independently and in their own way, trusting to their country's prestige and to the desire of all the Balkan peoples to do business with Great Britain.

"THE NEAR EAST" INDEX.

The Index to Volume XVIII. of THE NEAR EAST (July 1-December 23, 1920) is now ready, and copies will be sent to subscribers on application to The Manager, 1, Devonshire Square, London, E.C.2.

TURKEY, BRITAIN, AND BOLSHEVISM.

The following article is by an Englishman who has had somewhat exceptional opportunities to study both the Turks and recent developments in Turkey and the neighbouring countries. The views to which he gives expression are, of course, his own, and THE NEAR EAST does not in all cases endorse them.

Despite the proverbial indifference of the British public to problems outside their own personal and individual concerns, it cannot fail to be of some interest even to busy merchants or politicians to know something of the present position in the Middle East, the causes that have led to it, and its future possibilities.

When the Armistice was signed Turkey was beaten down to her knees, and would have agreed to any terms that the Allies might have demanded; the Allied troops and commissions entered the country under the impression that after a short Armistice the Allies would readjust the East generally and Turkey in particular. Friends and enemies awaited the final and imminent decisions. Constantinople was at a standstill.

Time crept by without any of the expected results being brought about, and the final peace receded steadily into the unbelieved. Restlessness began to replace placid expectance; and in Turkish politics party after party arose, ineffective and unsteady, without definite aims beyond personal gain, forming a hopeless chaos. Financially the capital became a paradise for the money-changer, though there was no trade.

In considering the matter we must bear steadily in mind the fact that Turkey consists of:—(1) the Capital, and (2) Anatolia; the ruling and scandalous capital and the mis-ruled country inhabited by lusty peasants. Constantinople has for many a long day been the happy hunting-ground of the diplomatists. They continued at this time to play their old game of ensuring that no one obtained any advantages from the Sublime Porte. In Anatolia the peasants, overtired with four years of war, returned to their fields and homes as quickly as they could. No more docile enemy could have been found. Had the Allies been at all decided in their aims, it would have been simple to enforce any terms on the ineffective politicians of Constantinople and the weary population of Anatolia. The peasants wanted peace at any price; the politicians hoped for good terms from the lack of decision among the Allies, but they had no idea of effective resistance.

At this juncture there came, with the suddenness of a hurricane bursting, the occupation of Smyrna by the Greeks, on orders from the Paris Conference. The facts that led to this decision are far too complicated to be explained here; but it was foolish, unstatesmanlike and criminal. It cannot be defended on military grounds; and there is no doubt that a majority of the population of the area is Turkish. The act was fraught with terrific possibilities, which became realities as a result of the treatment of the natives by the Greek troops. The immediate result was stupefaction; then followed the realisation by the Turks that they were to be destroyed. But a far more important fact stood out: the British Empire was determined to have a Great Greece. The occupation was in contradiction to the wishes of the French, and it tended to throw our Italian Allies into the arms of our enemies; for Italy cannot afford to have as her neighbour a great Greek Empire.

In Turkey the period of stupefaction passed rapidly, to be replaced by enmity; the Smyrna area became full of Moslem refugees flying before the Greek armies; and enmity revived resistance. Had any of the principal Allies taken over the mandate the Turks would have acquiesced with a sigh, but the Greeks—! The Greco-Turkish quarrel is old, older than the British Empire; and to throw their ancient enemies into the midst of the Turkish population during an armistice was criminal folly.

How far the Turkish Government directed the organisation of resistance it is hard to say. It was clear that while the Allied troops were in Constantinople nothing effective could be done from there. It is sufficient to state that the Central Government sent out to North Anatolia a picked general, one Mustapha Kemal,

as inspector of a military area, but with large and comprehensive political powers. Within a month Mustapha Kemal had set to work to organise resistance to the Greeks, and it is clear that the Central Government viewed his action with considerable satisfaction, as a pawn to be used in the peace negotiations.

Mustapha Kemal organised secretly in the north of Anatolia with the fear of punishment in his heart. As the Armistice dragged on and the Allies took no effective action against him he came out boldly in the open. The French showed sympathy, the Italians gave active assistance to him, and the British had only the threats of using the Greeks and of taking away Constantinople with which to intimidate him. He fixed his headquarters at Angora, and under his direction a rough army, based on the remnants of the Turkish forces, deserters, brigands, and refugees, grew into being—the Turkish Nationalist Forces.

He proceeded to look for allies, and came into touch with the resentful Arabs of Arabia and Mesopotamia, the dissatisfied population of Syria, the Moslems of the Batoum province, the Opposition in Persia, the Kurds, and the Azerbaijanis.

Still the Armistice dragged on, and it became evident that beyond Constantinople the Allies could do little or nothing. Their only pawn was the Greeks, and the employment of them roused hostility and dissension among the Allies. The Turkish Government was now under the control of that fierce old Kurd, Damad Ferid Pasha, a man without any compromise about him; a tribesman of the old type that hates all outside his own clan with a blind hatred. Failing to control the Nationalists, he proclaimed them rebels, and thus the rift between Angora and Constantinople became a clear division.

Beyond Angora to the East arose another centre at Erzerum, under another Albanian, Kara Bekir. Round him, and in Angora, too, had grown up a party of extremists sworn to fight to the death as long as the Greeks remained in Anatolia.

The Greeks advanced eastwards and northwards, taking Brusa, the Allies declared a military occupation of Constantinople, the French began to clear Cilicia and to move northwards. As a result, like rats in a corner, the Nationalists were forced to look to their one hope—the Bolsheviks. The Turk and the Russian can never agree: Bolshevism and Islam can never hope to coalesce; but bound by the tie of a common enemy and, for the moment, a common aim—the destruction of the Allies—they could unite.

Gradually out of all the jumble the issue began to crystallise. The Bolsheviks were intent on destroying the British Empire by striking at her feet in the East. They seized Azerbaijan, invaded North Persia, and, by a concerted movement with the Turks from the South, forced the Armenians to their knees and opened a direct route into Anatolia through Nachivan and Zangezur. Now Nachivan is the front door of Persia, the back door of Anatolia, besides opening on the road to Mesopotamia. Herein lies the danger of letting the Bolsheviks and their creed into Asia.

Meanwhile the Allies have little to counter with. Constantinople and its Government are bankrupt. The Allies have bound the arms of the Central Government, and then threatened to kick it if it does not clear out the Nationalist rebels. Damad Ferid, though ready to sign, ratify, and carry out the Treaty, was ejected for failing, and he failed because we would not help him. His successor is far less amenable.

To kick the Central Government and the Nationalists we had the Greek Army sitting on the very Western fringe of this great mountainous country. Then came three lightning reverses; Armenia was crushed, Wrangel was chased out of the Crimea, and Venizelos was hooted out of Athens by his own countrymen. With Venizelos goes the real strength of the Greek Army. For eight years the man-power of Greece has been at war. Fired with imperialism the Greeks were prepared to do the dirty work of the Allies; with the issue clearly before them they have decided that they will do the dirty work no longer. Smyrna and Thrace will require a huge standing army; but Greece is both poor and tired, and Smyrna is valueless without the good-will of Anatolia behind it.

We stand, then, almost stripped of armour in face of an elated foe. Constantinople is held by us with a small garrison, screened by the Greek ring. The city is bankrupt and its Government is no more than a borough council with limited powers. Our weapon—the Greeks—is breaking in our hands. Before us lies an exasperated East urged on by Bolshevik propaganda and promises, in receipt of Bolshevik money and arms. We backed “a one man” policy in Venizelos and—it has failed.

There is still time to save the position, but no time to stand shivering on the brink of indecision. We must shut our ears to the fierce clamour of the fanatics—the American missionaries and the Bishops—pleading a crusade of Christianity against Islam. The Turks at this moment cannot be crushed out of existence; Anatolia is mainly, and must remain, Turkish. We cannot hope for peace in the East till Anatolia is tranquil. The key of our policy has been the creation of a great Greek Empire. The Greek nation has but one Venizelos. When we backed it we did so as much against our Allies as against our enemies. We must cease to back it. We must revise. We must call the Turks to us in common hostility to the world enemy, the Bolsheviks. The Greek must go from Anatolia. With the Turks, strange to say, will come the Armenians and the Kurds. We shall have the sympathy of Azerbaijan and Georgia. Europe must realise that she cannot partition out the East like slabs of bread for rapid consumption. We must have the East with us against the great common foe from Russia. If we call now, the East will join us; if we call to-morrow, perhaps it may; but if we neither call nor act the East will be against us, to our ruin.

NEW YEAR HONOURS.

The following is a continuation of the New Year Honours List, the first part of which we published last week:—

ORDER OF THE STAR OF INDIA.

G.C.S.I.

BENARES, LIEUTENANT-COLONEL HIS HIGHNESS MAHARAJA SIR PARBHU NARAYAN SINGH BAHADUR, G.C.I.E., MAHARAJA OF PATIALA, MAJOR-GENERAL HIS HIGHNESS FARZAND-I-KHAS-I-DAULAT-I-INGLISHIA MANSUR-I-ZAMAN AMIR-UL-UMRA MAHARAJADHIRAJA RAJESHWAR SRI MAHARAJA-I-RAJAGAN SIR BHUPINDAR SINGH MAHINDAR BAHADUR, G.C.I.E., G.B.E., MAHARAJA OF.

C.S.I.

HAMIDULLA KHAN, NAWABZADA HAJI MUHAMMAD, third son of Her Highness the Begum of Bhopal.

ORDER OF THE INDIAN EMPIRE.

G.C.I.E.

BHUTAN, HIS HIGHNESS MAHARAJA SIR UGYEN WANGCHUK, K.C.S.I., K.C.I.E., MAHARAJA OF. KAPURTHALA, LIEUTENANT-COLONEL HIS HIGHNESS FARZAND-I-DILBAND RASIKH-UL-ITIKAD DAULAT-I-INGLISHIA RAJA-I-RAJAGAN MAHARAJA SIR JAGATJIT SINGH BAHADUR, G.C.S.I., MAHARAJA OF.

K.C.I.E.

DOBBS, HENRY ROBERT CONWAY, C.S.I., C.I.E. LIMBET, THAKORE SAHEB DOLATSINHJI JESVANTSINHJI, THAKORE SAHEB OF. ARUR SINGH, SARDAR BAHADUR SARDAR, C.I.E. CRUMP, HENRY ASHBROOKE, C.S.I. SRIMUR, LIEUTENANT-COLONEL HIS HIGHNESS MAHARAJA SIR AMAR PARKASH BAHADUR, K.C.S.I., MAHARAJA OF. MALER KOTLA, LIEUTENANT-COLONEL HIS HIGHNESS NAWAB SIR AHMAD ALI KHAN BAHADUR, K.C.S.I., NAWAB OF.

C.I.E.

DUJANA, JALAL-UD-DAULA NAWAB MUHAMMAD KHURSHAD ALI KHAN BAHADUR, MUSTAKIL-JANG, C.B.E., NAWAB OF. MEHDI SHAH, KHAN BAHADUR SAYYID, O.B.E. DAULAT RAI, DIWAN BAHADUR DIWAN. KEANE, MICHAEL. SIFTON, JAMES DAVID. BURLTON, LIEUTENANT-COLONEL PHILIP SYKES MURPHY. WEBB, CHARLES MORGAN. CHADWICK, DAVID THOMAS. IVES, HARRY WILLIAM MACLEAN. BAKER, CHARLES MAURICE. MARR, WILLIAM ALEXANDER. CORBETT, GEOFFREY LATHAM. JAMES, MAJOR EDMUND HENRY SALT. GWYNN, JOHN TUDOR. DAVIDSON, LIEUTENANT-COLONEL DAVID MACDONALD. O'KINEALY, LIEUTENANT-COLONEL FREDERICK. HARVEY, LIEUTENANT-COLONEL WILLIAM FREDERICK. GRIMSTON, LIEUTENANT-COLONEL LIONEL AUGUSTUS, V.D., O.B.E. VAN GEYZEL, LIEUTENANT-COLONEL JOHN LAWRENCE.

MUSPRATT, MAJOR AND BREVET LIEUTENANT-COLONEL SYDNEY FREDERICK, D.S.O. VAUX, MAJOR HENRY GEORGE. RUMBOLL, ARTHUR CHARLES, O.B.E. SAMPSON, HUGH CHARLES. BUTLER, DR. EDWIN JOHN. DODS, ALEXANDER WADDELL. DALAL, DADIBA MERWANJI. BHANDARI, RAI BAHADUR GOPAL DAS, M.B.E. MAZUMDAR, RAI BAHADUR JADU NATH. MURZBAN, JEHLANGIR B. JOSHI, NARAYAN MALHAR. HAMID KHAN. COTTON, HARRY EVAN AUGUSTE. BROWN, FRANK HERBERT.

G.B.E. (MILITARY).

BIKANER, MAJOR-GENERAL HIS HIGHNESS MAHARAJA RAJ RAJESHWAR SIROMANI SRI SIR GANGA SINGH BAHADUR, G.C.S.I., G.C.I.E., G.C.V.O., K.C.B., A.D.C., MAHARAJA OF.

(To be concluded.)

LIEUT.-GENERAL SIR F. STANLEY MAUDE

On the application of the vicar and churchwardens of St. Paul's, Knightsbridge, the Chancellor of the diocese of London (Sir A. B. Kempe) has granted a faculty for the erection of a memorial to Lieut.-General Sir Stanley Maude in the south-east corner of the ground surrounding the church. The memorial consists of a representation of Our Saviour on the Cross with an inscription at the base as follows:—“In beloved memory of Lieut.-General Sir F. Stanley Maude, K.C.B., C.M.G., D.S.O., 23 years in the Coldstream Guards. Born June 24, 1864; died in Baghdad Nov. 18, 1917, whilst commanding the Mesopotamia Expeditionary Force. He was a Verrye Parfit Gentil Knyghte. God Reste Hys Soule.” The petition stated that the estimated cost would be about £200, which would be defrayed by members of the family.

The Calcutta correspondent of the *Morning Post* writes (January 3):—Sir Nicholas Beatson-Bell, Chief Commissioner in Assam, on his retirement, which takes effect shortly, will take Holy Orders. His services have been accepted by the Oxford Mission to Calcutta, and Sir Nicholas will serve his novitiate under Father Douglas, M.C., in the Bengali village of Behala. Father Douglas lives barefooted in a mud-floored, palm-leaf-thatched hut, and his unselfishness and devotion to the villagers are proverbial. Sir Nicholas Beatson-Bell, who as District Officer had a similar reputation in Eastern Bengal years ago, will ultimately go to Backergunje as village priest.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Business in the Balkans.

The attention paid to openings for British enterprise in the Near East has been one of the most satisfactory features of recent times, and we have been able to announce a considerable number of important undertakings. Some of these, unfortunately, have since shown a tendency to hang fire. Shipping developments on the Danube, for instance, have been checked by a disinclination of the riparian countries to allow trading facilities to steamers other than their own. The drop in exchange threatens to hamper the contract for the repair of Roumanian locomotives; and, again, the agreement which promised to do so much to advance the work of reconstruction in Roumania, by placing the workshops of the State Railways under foreign direction, is now in danger of being wrecked by a political manoeuvre. It appears that M. Bratianu, the head of the National Liberal party, has taken exception to the Government proposal on the ground that it is incompatible with Roumanian independence. I fear that this is merely a move in the party game, and I can only hope that M. Bratianu will give a thought to Roumanian interests before he persists in his threats, however great the party advantage they seem to offer.

Trade Depression.

The representative views on the trade crisis which we give this week serve to emphasise the point that its causes are not to be found in any one direction. The adverse exchanges and the lack of credits abroad have, beyond question, played the principal part in bringing about the present deplorable position; but, as Lord Sydenham forcibly points out, internal conditions have been important contributing factors. Crushing taxation has curbed enterprise and exhausted capital which should have been available for development, while labour unrest has had a serious effect on practically every industry; and manufacturers have, in many instances, found themselves unable to compete with America, Germany, and other countries, either because they could not quote a sufficiently low figure, or because they could not promise delivery in adequate time—if, indeed, they were able to name a date at all—or both. For a real revival of trade, it is obvious that, side by side with any steps that may be taken to overcome the handicap on exports, measures will have to be devised to meet the internal position.

Export Credit Schemes.

There are quite a number of export credit schemes in the field, and the business community is faced with no slight task in deciding which is likely to prove most advantageous. Notable among them is the Ter Meulen scheme, which has the sanction of the League of Nations, and the essence of which is the issuing by the importing countries of gold bonds. The latest addition to the proposals is Sir Edward Mountain's plan, which is given in another column. His scheme, which has been received with favour by the business community generally, provides for the establishment of a syndicate consisting of the leading banks and insurance companies, and the allocation by the Government of half the amount set aside for the original Exports Credits Scheme as a fund to guarantee the members of the syndicate against ultimate loss. Among the countries to which Sir Edward suggests that his scheme should be first applied are Roumania, Yugoslavia, and Georgia, and no doubt the other Near Eastern countries in need of such help would be subsequently included.

Speed Essential.

There is little to be said against the Ter Meulen scheme as a method of developing trade; but it is open, however, to the grave disadvantage that it would take time before it could be brought into operation. And the world is not in a position to brook delay. Sir Edward Mountain's plan, which would appear to overcome the defects of the present Export Credits Scheme, is not open to this objection, for it could be utilised without much delay, and in view of the favourable reception it has received it would seem exceedingly probable that it will constitute the basis of whatever expedient is adopted by the authorities to remedy the present position.

Application of Scheme.

Obviously, if the scheme adopted is to be successful not merely in initiating a revival of trade, but in its ultimate

issues, great care will have to be taken in regard to its incidence. On this subject I would draw attention to the remarks of Lord Sydenham and Sir Peter Rylands. Lord Sydenham points out that a scheme for the establishment of long-term credits can only succeed if applied to "such States as have need of our commodities, possess resources which we require, will employ their credits to trade with us, and can hold out the promise of stability, enabling them ultimately to discharge their obligations"; while Sir Peter Rylands argues that no credit should be extended to a country whose national expenditure exceeds its revenue. It is difficult, however, to see how any hard and fast division can be drawn if a scheme is to be of real use, for it is precisely those countries whose finances are for the time being in an unsatisfactory condition that are most in need of assistance.

Giving Rivals their Chance.

Our Port Said correspondent gives an illuminating instance this week of the way in which some British companies give their rivals an opening. A firm at Port Said asked an English company the freight from Suez to Port Sudan, and was informed that it was £E6. An Italian company quoted £2 10s., and this amount, be it noted, was for conveyance from Port Said, while in the other case there was rail freight to Suez to be added.

Passages from Egypt.

In view of the demand that is to be expected for passages from India this spring there has naturally been considerable apprehension in Egypt as to the prospect of obtaining passages to the United Kingdom. It is now announced that the P. and O. Company, by arrangement with the Egyptian Government, has assigned the s.s. China to the service between Alexandria and Marseilles, and that this vessel will leave Alexandria on April 12 and 26 for Marseilles, and on May 10 for Plymouth and London direct. This arrangement will ensure adequate provision for residents in Egypt desiring to visit the United Kingdom.

More Enterprise Required.

Because trade with the Near East markets is temporarily under a cloud, pending a solution of the problems of the exchanges and lack of credits, and, in the case of certain countries, of overstocked markets, many British merchants and manufacturers take the view that it is useless to do anything with regard to these markets until the situation improves. It cannot be too strongly urged that this is the worst policy that could be adopted. Throughout the Near East our competitors are combining to show extreme activity, and unless their example is followed to good purpose, when commerce does develop again to something approaching normal, British traders will find themselves at a great disadvantage. It is their business now to keep in close touch with their customers, so as to be ready for the inevitable trade revival. Exactly the same policy ought to be pursued with regard to advertising. It is not, as some business men seem to think, loss of money to continue to advertise, merely because at the moment there is no trade. On the contrary, it is an investment, and a paying one at that, for they are keeping their names before their prospective clients.

EGYPT.

CAIRO, December 20.

Cotton and Co-operation.

Cotton prices continue to be low, and the question which seriously preoccupies both the Government and landowners is how to handle the cotton crop in view of the relative small demand in the interior and the undoubted fact that present prices are unremunerative to the cultivators. Latterly there has been much talk of the formation of syndicates to take over the cotton owned by the fellahin in their respective districts, and to hold it for sale when the market is better; and this week the Government has issued a *communiqué* to the effect that it looks with favour on the creation of agricultural co-operative societies having for their object the purchase and sale of agricultural products including cotton, and that it is ready to do what it can to assist the agricultural element in forming these societies. For this purpose a special office has been created in the Ministry of the Interior, and the Government calls upon the Provincial Councils to lend their active support in this matter. It declares itself ready to help the Provincial Councils to establish these societies and to grant subsidies in all cases where the movement is seriously supported by the local inhabitants, and where there is a satisfactory financial control.

It will be very interesting to watch how this suggestion is taken up. It is obviously better that this sort of work should be done by the people themselves with the support and assistance of the Government than that the latter, as was lately suggested, should itself intervene and buy cotton. In no country in the world is the co-operative movement more necessary than in Egypt. Already before the war a start had been made in this direction, but beyond one or two instances these efforts had not met with much success. With this promise of active and material State support the movement should receive a decided fillip, only the fear is that once the immediate need—viz., the critical cotton situation—is passed, those who are at present most concerned in the success of the movement may find it not to their interest, and so may cease to support it, or may seriously oppose it.

I refer, of course, to the agricultural landlords, who in the past have always exploited the fellahin in the sense that they supplied them with seed, manures, etc., and took their crops in payment, and who at the present moment are seriously affected by the inability of the tenants to pay the high rents agreed upon six months ago. The tenants may, with the assistance of these proposed co-operative societies, be enabled in time to meet their obligations in this respect, and so it is in the interest of the landlords to foster the movement; but the latter will certainly not view with a favourable eye the permanent emancipation of the tenant classes as a result of co-operation, and once the crisis is past they will do all they can to fight the movement, which will require very active encouragement from the Government and high Egyptian circles to withstand this opposition and consolidate its position.

PORT SAID, December 21.

Demands of Strikers.

The strike among the workers of the various companies connected with shipping still drags on, but there is a more hopeful feeling among the men than there was, that it

will soon be over. The men's chief demands are believed to be an eight-hour day instead of ten hours as at present, twenty-five per cent. increase of pay, free medical attendance, full pay for the first month on sick leave, and one month's holiday a year. The companies concerned have already made certain concessions, and it is hoped that no unreasonable attitude on the part of the strike leaders will prevent a speedy settlement. The inconvenience to shipping is great, as no searchlights are being put on board the ships for night traffic through the Canal, and, consequently, the great majority of vessels are obliged to stop during the hours of darkness, which is reminiscent of the old days when ships took the best part of seventy-two hours to transit the Canal.

Freights—A Comparison!

The question of local freight is agitating the minds of traders generally, and those who have to ship by sea in particular. To give a case in point. An exporter in this town wanted to send some goods to Khartoum. He naturally wished to send them by the cheapest route, and asked for a quotation from an English shipping company for their rates to Port Sudan, the nearest port to Khartoum. They quoted him £E6 per ton from Suez to Port Sudan. He then asked for quotations from an Italian company, who offered to take the goods at fifty shillings per ton from Port Said. This is really much greater than the difference between £2 10s. and £E6, as before the goods got to Suez, from which port the English company said they would take the goods, the shipper would have had to pay railway freight from Port Said to Suez, a not inconsiderable amount, whereas the Italian company would take them practically from the door of his warehouse.

PORT SAID, December 24.

Settlement of Strike.

The strike of employees in Port Said, mentioned in my last letter, is now over, and a settlement has been reached owing to some generous concessions on the part of the firms, and it is hoped that a permanent basis of goodwill has been established in this most important centre.

GREECE.

ATHENS, December 26.

Railway Extensions.

The late Government had decided to extend the existing railway system to North-Western Greece, to effect a junction with Epirus and thence via Valona with Italian territory, and a convention to that effect had been concluded between M. Venizelos and Signor Tittoni. The prospecting of the line from Piræus to Valona was placed in the hands of an Italian company. It was soon discovered, however, that the execution of these works would necessitate an expenditure estimated at over 200 million drachmæ. This amount was considered excessive, and the whole scheme was abandoned. Subsequently the Government discussed the possibility of constructing with less expenditure a railway line between Epirus and North-Western Greece. The Italian company, which would have undertaken the construction of the first-mentioned railway line in co-operation with Greek engineers and capitalists, had also taken this matter in hand. An agreement was finally arrived at between the late Government and the Greco-Italian company, and the convention was signed between M. Repoulis on behalf of the Greek Government (M. Venizelos being absent in Europe) and the Greco-Italian company, represented in this country by the National Bank of Greece.

In accordance with this convention the railway line of Missolonghi would have been extended to Jannina, and later on to Valona. As a result of the construction of this line the products of Epirus would have been consigned to Patras via Missolonghi; furthermore, Arta, too, would have acquired railway communications, seeing that the proposed new line would have run, in accordance with the terms of the convention, via Arta. The width of the line was to have been one metre, and the expenditure was estimated at about 80 million drachmæ. This estimate was submitted to the Government and referred to the Senior Technical Council for approval. In the meantime the Venizelos Government resigned owing to its failure in the recent elections.

In addition to the construction of the above railway lines the late Government was also contemplating the construction of the Kavalla-Drama railway line, also the purchase of the Constantinople-Dedeagatch line, the Salonika-Dedeagatch line having been purchased six months ago. One cannot say whether the present Government will adopt the railway programme of its predecessor. This in any

case depends entirely upon the financial position, which is closely engaging the attention of the new Administration.

The Financial Position.

At one of the last meetings of the Greek Chamber of Commerce in Athens the President, M. Charilaos, referring to the recent sudden decline of the drachmæ, explained fully the present financial position of the country, and emphasised the fact that the depreciation of Greek currency is not justified by the actual state of affairs, but is mostly due to speculation and nervousness. M. Charilaos pointed out that the amount of paper money issued up to the present day in Greece represents 1,804,624,755 drachmæ, of which 1,282,000,000—i.e., 71 per cent.—is covered. If the 200 million drachmæ held back by the National Bank of Greece are not taken into consideration, the circulating paper money only amounts to about 1,600,000,000 drachmæ—i.e., to 80 per cent. It is well known that few countries can boast of a similar percentage of cover, and this fact is a clear indication that Greek currency is in a far better position than that of many other Western countries. The value of a country's currency largely depends upon its resources of production, and in this respect Greece's position is a very sound one. The tobacco Greece anticipates exporting this year represents at the very least 300 million drachmæ, of which Macedonia alone contributes 170 to 200 million drachmæ. Twenty-five million drachmæ have already been imported into this country from this year's tobacco sold to various foreign countries. From the export of currants it is estimated that 175 million drachmæ will be realised. Of this sum, 100 million drachmæ have already been remitted to this country. The usual quantity of olive oil exported is about 50 million kilos, which, sold at approximately 3 drachmæ per kilo, will, as soon as the Greek Government authorises its export, bring 150 million drachmæ. The approximate amount of money imported yearly into Greece by emigrants is about 700 million drachmæ.

In addition to the above, a further 250 million drachmæ at least is realised by the export of other products—viz., wines, minerals, figs, and so forth. The total yearly amount, therefore, imported into Greece is about 1,600 million drachmæ, without taking into consideration the export trade of the new territories. This 1,600 millions practically neutralises the amounts exported annually. These reached 1,608,324,000 drachmæ in 1919, and will undoubtedly be much smaller this year, in view of the existence of large stocks of last year's goods in this market.

YUGOSLAVIA.

ZAGREB, December 31.

Cattle from Germany.

A commission has been formed to transport cattle from Germany into Serbia. The transport will cost no less than 30 million dinars, and will be effected partly by land and partly by sea. Owing to the shortage of rolling-stock arrangements are being made with Germany and Austria for the loan of wagons. Quarantine stations have been prepared at Maribor and Zemun, and it is anticipated that the transfer will be completed before the end of January.

Small Wheat Exports.

The following quantities of wheat were exported from Yugoslavia during September and November by the Danube through the Baja Customs:—2,118 trucks of wheat for Austria, 236 trucks of flour for Austria, and 624 for Czechoslovakia. Very little was exported by other routes during the period in question.

ZAGREB, January 3.

Proposed Exchange of Perpers.

The Minister of Finance has submitted a proposal that the Montenegrin perpers shall be exchanged for dinars at par up to 5,000 perpers, and beyond that amount at the rate of 2 perpers to a dinar. In this way no hardship will be occasioned to the mass of the population who are poor. Up to the present 1,557 people have reported as holding perpers which they wish to exchange, and the gross value is 17,653,734 perpers. Of this sum half is held among 150 people, and the balance spread among the rest. The Zagreb papers rather ruefully note that the perper is better than the krona, with the comment, "*Bolji perper nego krona*" ("Oh yes! All right!"), a parody of the Serbian soldiers' song at Salonika, when they heard how the Austrian krona was slumping, and felt that the Empire would soon break up, and that they would return to their homes.

It will be remembered that until 1909 Austrian money was current in Montenegro. In that year perpers were first issued, with the nominal value of a franc, divided into 100 paras. The silver coins had an inelegant portrait of King Nikola. The paper money became so valueless during the war that many people simply threw it away as not worth the trouble of carrying about.

"THE TRADE CRISIS."

SOME REPRESENTATIVE VIEWS.

We give below some representative views on the present trade crisis, which arises mainly from the adverse exchanges and the lack of credits abroad. Lord Sydenham touches on the effects of labour unrest in this country and heavy taxation—both of which have, of course, played their part in bringing about industrial stagnation. As regards any scheme for the development of exports, he points out that it can only be successful provided a number of conditions are complied with as regards the countries to which it is applied. Sir Peter Rylands urges that no credit ought to be extended "to a country whose national expenditure exceeds its revenue," and remarks that, in endeavouring to restore the buying powers of Europe, we must be careful as to the effect on the recovery of rival manufacturers. Sir Edward Mountain outlines a promising exports credits scheme, reference to which is made in "Notes and News."

LORD SYDENHAM, G.C.S.I., Etc.

The first step in dealing with the grave industrial situation with which we are faced is to arrive at a clear idea of the causes of unemployment, and to distinguish between those that are purely domestic and those that arise from the lack of purchasing power of our customers abroad. In part, at least, our trouble is due to the action of Labour leaders in forcing up wages at a time when the abnormal strain due to the war was beginning to produce the inevitable effect. The 4,000 strikes and the loss of more than 61 million working days are factors which cannot be ignored. The coal, railway, and moulders' strikes in particular dealt a grievous blow to most industries, and served to increase the prices of commodities all round. At the same time, the crushing burden of taxes and rates, which might have been mitigated by drastic public economy, tends to aggravate the difficulty by weakening the purchasing power of all classes. It is quite as necessary that we should cheapen as increase our production, since we are now being undersold in neutral markets, where the Germans—our greatest trade rivals—are recovering their pre-war commercial position, assisted by the low value of the mark. Cheap coal would be infinitely helpful; but the Americans are capturing our valuable export trade, in spite of the exchange, which in their case militates against the process. We are, therefore, threatened with still higher prices of our principal natural product, and the miners, enjoying wages which are still mounting, seem to be unaware that they are depriving their fellow-workers of employment. The conditions of the different industries, and even of individual businesses in each great industry, vary so much that only free and frank conference between employer and employed can suggest means of maintaining the maximum number of the latter while securing cheapened production and the certainty of output, the want of which is losing us important foreign orders.

The proposal to establish long-term credits with foreign countries can succeed only if it is applied to such States as have need of our commodities, possess resources which we require, will employ their credits to trade with us, and can hold out the promise of stability enabling them ultimately to discharge their obligations. These conditions cannot be universally fulfilled. In the case of Russia, for example, Sir Robert Horne has rightly stated: "The real fact is that Russia has got no commodities to trade with"; and as the Soviet purchasing power is limited by the amount of gold and jewels which it has stolen, Russia can do nothing to alleviate unemployment until the murderous tyrants of Moscow have been replaced by an honest and civilised Government. All trade is, in its essence, indirect barter subject to financial adjustments; direct methods of exchange can be arranged only when each of two countries can supply commodities which the other needs in quantities that can be made to balance. Even then the calculation of equivalent values must offer great difficulties, especially at such a time as this.

I cannot here discuss the complex question of the exchanges. Speaking broadly, the rate of exchange between two countries is governed by the trade balance; but other considerations, which cannot be analysed, are present. Thus exchange is undoubtedly influenced by the view held in one country as to the credit of another, which involves an estimate—possibly incorrect—of political stability. The credit of any State which is in the grip of or believed to be approaching revolution is a vanishing quantity. Fluctuating exchanges are a serious drawback to trade; but while it might be possible to stabilise exchanges within the Empire, which would be a distinct gain, I can see no way of effecting a universal adjustment, having regard to the wide differences of internal conditions. For us, so far as

America is concerned, the only course is to export more, to import less, and to discharge or fund our debt to that country as soon as possible, while setting an example to the world of national solidarity.

I have tried to indicate the general causes of unemployment and the possible remedies; but the psychological factor must not be forgotten. If any considerable number of our working classes has been seduced into believing that this is a favourable time for abolishing "the evil thing called capitalism," then all remedies will fail. The immediate cause of unemployment here and of great suffering in some parts of Europe is the destruction of capital, which is the outstanding economic result of the war.

SIR EDWARD M. MOUNTAIN, Managing Director of the Eagle, Star and British Dominions Insurance Company, Ltd.

In order that an effective scheme for insurance can be started whereby our merchants will be enabled to dispose of their surplus stocks to those countries who at the present moment are unable to pay cash and whose credit has become weakened owing to the war, it is absolutely essential that a syndicate should be formed in this country of overwhelming financial stability. This can only be done by getting all the leading banks and insurance companies into the group.

My proposal is that the Government should allocate £13,000,000 out of the £26,000,000 that has been voted to assist the trade of these countries as a fund with which they would guarantee the members of the syndicate against ultimate loss.

I think it would be possible to form a syndicate as suggested above, and that such a syndicate could conduct the business by employing a qualified manager and having a committee to meet daily to go into all questions that may arise. Such committee would consist of the ablest brains that are available in the City, and would be absolutely unobtainable in any ordinary way.

The syndicate would take any profit that might be made out of the insurance transactions, and would pay all expenses of carrying on, officers, managers, clerks, etc., except those who would give their time and attention to conducting the business free of all cost.

If the Government accepted this proposal, the syndicate would immediately get to work, and would get into touch with such countries as Roumania, Yugoslavia, Austria, etc., etc., to get similar syndicates formed in those countries by the leading bankers, who would give their guarantee for what it is worth to the English syndicate.

In my opinion, barring the risk of financial collapse of a country or a country being seized by Bolsheviks, and the Bolsheviks repudiating their debts, under this scheme the Government would never be called upon for a penny, and even if the Bolsheviks seized any of the countries and repudiated the debts, in all probability at some date in the future the money would be recoverable. If either of such events were to occur, however, the Government would lose heavily in any case.

My scheme in no way interferes with Ter Meulen's scheme, but the Ter Meulen scheme would probably take some months to get into order, whereas my scheme could be put into operation almost immediately. A scheme of this nature would cost the Government, if it costs them anything at all, very much less than giving unemployment doles or expending the money on forced work.

The assistance in the case of the bankers and leading insurance companies would all be entirely at the Government's service, and it would be impossible for them to form any such machinery except at a gigantic cost. Such a scheme, if considered, would immediately start trade going, and would have a very beneficial effect on exchanges.

SIR W. PETER RYLANDS, President of the Federation of British Industries.

We all must sympathise with the objects of the Ter Meulen or other similar schemes for restoring the buying power of Europe.

It would, however, appear essential that no credit under any such scheme should be extended to a country whose national expenditure exceeds its revenue. At the present moment there appears to be small prospect of this. There is some danger lest the importance of securing increased

business for this country may blind us to the evil consequence which we ourselves suffer from the present lack of financial equilibrium on the Continent and the consequent interminable increase in floating debt and paper currency.

The effect of this is reflected in international exchange, but more especially in an artificial labour cost which is reflected in competitive prices in the British and foreign markets with which our manufacturers find it impossible to compete.

The recovery of Continental manufacturers who compete with the products of this country is a matter of no less importance than the question of restoring the buying powers of Europe, and we must see to it that, while seeking to achieve the latter, however desirable, we are not, in fact, aggravating our own difficulties by the consequent effect of our action upon the former.

CATALOGUES REQUIRED FOR ZAGREB.

The British Consul at Zagreb states that he would be glad to receive catalogues dealing with the following goods:—Clothing, boots and shoes; woodworking machinery and tools, especially for furniture manufacture; agricultural machinery; commercial motors; paper, stationery, and office appliances; electrical appliances and fittings for house, shop, and tramway use; shop fittings; fancy leather goods; plant for coalmines; prepared foodstuffs, jams, tinned meats, cocoa, etc. The Consul also suggests that firms engaged in textile manufacture should send some species of advertisement. This market was formerly largely supplied by Germany, and the German language is the principal business language, so that it would be preferable if these catalogues were printed in the national language, Serb-Croatian, or alternatively in German, which is the only alternative to Croatian, and is largely spoken. Catalogues should be sent direct to the British Consul, Gjorgjiceva Ulica, 7, Zagreb (Agram).

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to October 31 (new style January 14 to November 13), 1920.

	Monopolies, tobacco, stamps, stamped paper Naxos emery.	Piræus Customs.
	Drachmæ.	Drachmæ.
Gross receipts, Oct., 1920	6,083,064·79	5,000,378·00
Do. do. 1919	4,861,507·75	5,341,323·70
Estimated receipts for 10 months (Law of Control)	24,083,333·33	8,916,666·67
Actual do. do. 1920	54,822,277·06	49,156,427·05
Do. do. do. 1919	40,270,301·75	40,350,718·05
Difference between estimated and actual receipts for 10 months	1920 +30,738,913·73 1919 +16,186,968·42	+39,236,760·38 +31,434,051·38

Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1/5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

Anglo-Egyptian Oilfields.—Gemsah. Production for week to January 2, nil (last week, nil). Hurgada: 3,216 tons (last week, 3,295 tons).

The Algerian Oilfields states that advices have been received from Paris to the effect that at a meeting of the Conseil d'Etat on December 30 the request of the Société Algérienne des Petroles de Tliouanet (in which the Algerian Oilfields is largely interested) for a concession in Algiers was agreed to without opposition.

IRRIGATION WORK IN EGYPT AND THE SUDAN.—II.

NILE PROJECTS COMMISSION REPORT.

The Commission confirms in every detail the opinion given in its interim report with regard to the immediate execution of certain of the projects. It paid an extensive visit to the Sudan, and approved of the site chosen for the White Nile Dam at Gebel Awlia, which will afford Egypt a certain degree of flood protection and the necessary storage for the additional summer water immediately required, and it accepts as substantially correct the calculations of the volumes impounded in the reservoir and the flood protection levels.

As regards the Gezira Irrigation Scheme and the Blue Nile Dam, the Commission is of opinion that the dam has been designed in accordance with the usual engineering practice, and that the foundations are in sound rock. The reservoir can be filled without withdrawing from the river one drop of water to which Egypt is entitled; it does not rob Egypt of silt, and it is clear that the proposed scheme cannot adversely affect that country. The Commission considers that the project is an eminently satisfactory one, and that this scheme, as also the White Nile Dam, should be completed with the least possible delay.

The Nag Hamadi Barrage the Commission considers a necessity for the conversion of an area of about 500,000 feddans in Egypt from basin to perennial irrigation, a necessity which "alone is quite sufficient to justify the construction of this barrage."

The Upper Blue Nile Dam it likewise regards as essential for the full development of the Gezira irrigation project, and also in the interest of Egypt. In its opinion, the information available, although very meagre, indicates that such a work would be feasible from an engineering point of view, but it recommends that further investigations in the upper catchment area of the Blue Nile be undertaken immediately and prosecuted vigorously.

The Commission considers that the project for work in the Sudd region and for the Lake Albert Dam is necessary for the development of irrigation in Egypt to its fullest extent, but it says that in this case also the information at its disposal is not sufficient for it to give anything but a very general opinion on the project.

It says that: "If the proposed cut from Bor (or, possibly, from a point as far south as Rejaf) to the Sobat mouth is not impossible on financial or engineering grounds, it would prove probably the most satisfactory solution of the difficulty of getting water from Lake Albert to the White Nile without incurring the enormous losses which do now, and must always, occur in the Sudd region."

This cut with a reservoir on Lake Albert would considerably increase the supply of water for Egypt and the Sudan, but as no part of the line of the proposed cut has yet been surveyed, and part of the country through which it would pass is unexplored, it recommends that the surveys should be commenced as soon as possible, and that the possibility of obtaining an additional supply of water from the Bahr El Ghazal might be investigated after the completion of these surveys.

With regard to the proposal made by Sir William Willcocks for the construction of reservoirs in the Sudd region, the Commission does not consider it is worth while spending time or money on their investigations.

As regards the estimates of the water requirements of Egypt when irrigation has been developed to its fullest extent, it considers that they have been prepared with care and in great detail, but it is of opinion that the estimate accepted by the Ministry of Public Works is rather on the low side. It recommends that the figure submitted by Mr. Victor Mosseri, which agrees with the estimate arrived at by Messrs. Molesworth and Yennidunia, viz., 58,000,000,000 of cubic metres, should be tentatively accepted as Egypt's ultimate water requirements.

Coming now to the question of the allocation of the increased supply of available water, and the apportionment of the cost of the proposed works between Egypt and the Sudan on which there is not unanimity of opinion, two reports have, as mentioned, been written: one by Mr. Gebbie and Dr. Simpson and the other by Mr. Cory.

The latter, in a long and highly interesting note, in the course of which he answers certain of the objections raised by the Egyptian engineers, comes to the following conclusions: "Egyptian irrigation has practically reached its limit until conservation works are constructed outside its boundaries. The programme outlined in 'Nile Control' is the only practicable one. The present uses of Nile water by Egypt and the Sudan, as shown in the table, should be adopted as vested rights to the natural flow. The excess water over and above such vested rights should be divided

equally between Egypt and the Sudan. The costs of conservancy should be divided in like proportion, with the proviso that 90 per cent. of the total cost of the Makwar Dam be considered as for diversion only, and paid wholly by the Sudan, and the further proviso that failure of one party to join in conservation work when such work may be required by the other in no wise estops the first party from eventually participating in the full use of such works upon due payment of a proper share in the costs. The ex-

The Temple of Philae, now submerged by the raising of the Aswan Dam.

penses of the Commission should likewise be borne in like proportions. By complete conservancy, if that be found possible, the Nile waters will suffice for the irrigation of all irrigable areas in Egypt, and probably most of those in the Sudan."

The other two members feel that while they may be theoretically correct, it is impossible on financial and other points to apply Mr. Cory's findings in present circumstances. They regard it "as indisputable that Egypt has by right of long use established a claim to a supply of water sufficient to irrigate an area equal to the largest area which has been irrigated in any single year since the Aswan Dam in its present form was completed, and that Egypt has an established claim to receive this water at the particular seasons when it is required." (The largest area in these circumstances is 5,400,000 feddans, which was the area irrigated in 1916-17). They also consider that the Sudan has acquired a right to irrigation water for a certain area; but they have not been able to obtain sufficient data to enable them to determine what this area is. It is, however, very small in comparison with Egypt's established claim.

(To be continued).

The Guaranty Trust Company of New York announces that William Chapman Potter was elected chairman of the board of directors at a meeting held on January 5. Mr. Potter thus takes the place of the late Alexander J. Hemphill, whose death was recently announced. The new chairman is a partner of Guggenheim Brothers, who are the dominant interests in the American Smelting and Refining Company, and in other important corporations in the United States. He was a director of the Guaranty Trust Company before his election as chairman.

Standard TOBACCO MACHINERY

The utmost improvement in production methods marks the general tendency with up-to-date firms for the re-establishment of trade.

In the case of Tobacco Factories this tendency is reflected in the universal substitution of "STANDARD" Mechanical Equipment for other makes of lower efficiency.

An investigation of the capabilities of "STANDARD" Machines convinces beyond dispute that they effect real economy in manufacturing costs and as the result have been adopted in the World's Largest Cigarette and Tobacco Factories. This fact in itself speaks volumes for "STANDARD" Service.

The "STANDARD" CIGARETTE MACHINE

For quality and quantity in Cigarette production this Machine is unexcelled and is adaptable for the manufacture of cigarettes of all kinds and classes.

ENGINEERING.

The Beardmore Car.

Reference to cars brings to mind the fact that I promised to say something about the Beardmore 11-h.p. car, which is, I may say, a very fine production. The last model I saw was fitted with a two-seater coupé body, which was extremely well finished, and presented a very smart appearance. I have not yet had an opportunity of trying out this car on the road, but I am given to understand that for the past eighteen months it has been undergoing the most severe road tests imaginable in the Scottish highlands, with gratifying results as to speed, power, strength and smoothness of running. I believe, as a matter of fact, that the suspension is on what might almost be termed super-efficient lines. The arrangement is such that the point of attachment to the axle is slightly away from the centre of the spring group, and as a result all the parts which are subject to vibration tend to damp out each other and produce vibrationless running.

Welded Steel Construction.

A factory has recently been erected in North London on the "A.W.P." welded steel construction system, the skeleton being entirely of steel and the walls and partitions being of a hollow block construction. The factory is 200 ft. in length by 70 ft. in width by 27 ft. in height, and the main truss has a span of 40 ft. The wing truss on either side of the building is 15 ft. in span. It is stated that whilst the site was being cleared and the foundations put in, the stanchions, which were of ordinary H-section, were cut to length and the base plates were welded on, these and the other principal members being prepared at the works of the construction firm. The trusses were welded up in halves, conveyed to the site, placed in position, and welded where necessary. A steel jig of simple design and construction was made by which the parts could be placed in the exact position required, and by means of this it was an easy matter to secure perfect uniformity. Cleats were welded on to the principal members to which the wooden joists and purlins could be attached by coach screws, and it is noticeable that the strength of this welded construction is such that very few gusset plates, or other strengthening pieces, have had to be used. The electrical plant required consisted merely of a transformer, clicking coils, the necessary lengths of heavily insulated cables and the actual electrodes, and the whole of the work, in spite of certain delay in the delivery of the materials, occupied but little over two months.

Cotton Waste.

The increase in the price charged for cotton waste for use in engineering establishments, which is now two or three times what it was before the war, has caused many engineering firms to consider ways and means whereby economy could be effected. Some little time ago one of the largest users on the Continent laid down a plant whereby used waste was first beaten to remove loose dust and metal chippings and then slowly heated in a tank to render the oil contained in it as liquid as possible. The waste was then placed in a centrifugal machine driven at a high speed by means of an electric motor. This removed a large quantity of the free oil, and the balance was taken out by washing in boiling water, the waste being finally dried in another centrifugal, and finished off in a steam oven. It appears that a company has now been formed in the North for cleaning oily waste and wiping cloths. The waste is collected periodically from the factories and engineering works, cleaned, washed, and dried, and delivered back to the original users for a comparatively low fee. This is sufficient to cover all costs of the operation, and to leave a margin, whilst a further profit may be derived from the sale of the extracted oil, which would have a high market value. It would seem that a good prospect of financial success would be found in the establishment of similar waste recovery plants in other industrial districts.

Electricity in Docks.

From time to time a good deal has been said in these columns as to the use of electricity in loading and unloading vessels, and all that has been mentioned is supported now by Mr. L. A. P. Warner, the general manager and secretary of the Mersey Docks and Harbour Board. He has just returned from a lightning tour of American shipping ports, and mentions that he saw 5,200 tons of coal loaded and trimmed into one steamer at Baltimore in rather under five hours. Not a single human trimmer was employed in the work, the only labour being a few men in charge of the electric motors and machinery. From first to last the whole operation was mechanical. He pointed out that the cheapness of electrical energy was one reason why the Americans were so far ahead in the use of electrical appliances. In New York, he added, for general cargo, there are a number of portable electric winches in use on

some of the piers to work in conjunction with a ship's gear. In this connection, it is interesting to note that the leading electrical journal in this country considers that in course of time it is probable that the old-fashioned hand-trucks used in the Liverpool dock-sheds in connection with the loading and unloading of cargo steamers will disappear completely, and their places be taken by electrically-propelled trucks, which have enormous economic advantages. For one thing they are easily operated and controlled, and for another by their means loads of five or ten times the weight carried by hand-trucks can be moved. Several standard types of trucks are already being used in unloading vessels of the Cunard, White Star, Harrison, and other steamship lines. It mentions that one particular type of truck so employed was one built for heavy duty. This was made to the following specification: Capacity, one ton; speed, empty, 6 miles per hour; loaded, 5 miles per hour; loading space, 7 ft. by 3 ft.; overall length, 8 ft. 6 in.; height of platform, 1 ft. 11 in.; and clearance under truck, 5 in.

Benzole or Petrol?

The reduction in the price of petrol is not an unmixed benefit to all concerned. A good deal has been said and written as to the value of benzole as a motor spirit, and in view of the fact that the Government, to encourage production, exempted that spirit from the late fuel tax a large number of firms became engaged in its production. Prices naturally ran very much in line with those ruling for high-grade petrol. Now that the Government in its wisdom has taken the tax off fuel and put it on vehicles, the petrol suppliers are able to reduce their prices by about 7d. per gallon. As there was no tax on benzole there is no tax to take off, and consequently the benzole people are at a disadvantage.

I have been in correspondence with my good friends the National Benzole Co., who tell me that they have given the most earnest consideration to the subject with the result that they have been able to bring down their prices by 3d. a gallon as from January 1. This may seem a small and even an inadequate reduction, but in view of the fact that benzole has been tested by various motoring organisations and found to be about 20 per cent. better than imported spirit it is still good business to run on benzole whenever ample supplies can be obtained.

A New Rectifier

A close examination of the new Tungar rectifier, placed on the market by the British Thomson-Houston Co., Ltd., shows how well and carefully made is this interesting production. It is, as its name implies, a device for changing alternating to continuous current and transforming it down to a required voltage. It is self-contained and extremely compact, and its chief parts comprise a bulb, which does the actual work of rectification, a transformer, a reactance and an enclosing case with the necessary connecting leads.

The essential part of the apparatus is the bulb, which operates in exactly the same way as the thermionic valve used in up-to-date methods of wireless telegraphy and telephony. It operates in effect as an electric check valve, and only permits current to flow in one direction. We have, as a result, one half of the alternations of the current allowed to pass whilst the other half is checked, and this valve action has a further and most important advantage, in that it prevents the batteries from discharging back through the rectifier. Of course, the transformer and reactance are used for adjusting the current and voltage to the value required.

From personal experience I can testify to the fact that the Tungar rectifier is extremely simple in operation, and, in my opinion, it provides one of the simplest and most certain means I know of for performing the specified work. It is certainly superior in many ways to the somewhat costly and certainly bulky motor generator. It is only necessary in the case of the smaller form of the apparatus to connect the leads to the battery to be charged and insert the adaptor into any convenient wall-socket or lamp-holder. In fact, by means of one of these handy and comparatively inexpensive appliances any lampholder or wall-socket may be converted into a simple and absolutely reliable charging station.

Tungar rectifiers are suitable for charging accumulators, for motor-car starting and lighting sets, electric clocks, bells, telephones, and telegraph instruments, and also for the direct operation of various low-voltage direct-current appliances.

On account of its convenience and high efficiency, these rectifiers should prove of considerable use to the garage proprietor or private car-owner who has hitherto employed a motor generator or other form of rectifying apparatus. The appliance has no moving parts, and requires no attention, and by its use the often thankless and profitless task of battery charging becomes a matter of extreme simplicity.

Shell-Mex, Ltd.

I have just received official intimation that the existing organisations represented by Shell Marketing Co., Ltd., and the Anglo-Mexican Petroleum Co., Ltd., are to be combined under the title of Shell-Mex, Ltd. The well-known Shell Aviation, Shell, and Mex fuels will be sold as hitherto, and I should say that the new arrangement will tend towards increased economy and efficiency in distribution.

Dunlops in Czecho-Slovakia.

Mr. J. O. Jech, the principal Dunlop stockist in Prague, has forwarded to the manufacturers a copy of an official communication received from the Czecho-Slovak Automobile Club testifying to the remarkable qualities of Dunlop tyres as demonstrated by the recent reliability trial along the Czecho-Slovak frontier. The course was 2,000 kilometres in length, and was accomplished by three of the four competing cars in five days, the fourth meeting with an accident of a somewhat serious nature.

The roads are by no means up to British standards—even post-war standards—and that is expressing it mildly, judging from the reports. The fact, therefore, that the 45 h.p. Praga car—the only one to start on Dunlops—had only one experience of tyre trouble (within 300 km. from the finish) is extremely creditable. Each of the other cars was delayed considerably through the necessity for continual tyre changing, and the 70 h.p. Tatra, which attained a speed of 115 km. on the level, had eventually to fit Magnums to complete the course.

Cheaper Tyres.

Substantial reductions are being made in the prices of Dominion tyres, including both covers and tubes. The reduction is retrospective, and in these days of scarce money will be appreciated. I have never had an opportunity of testing out Dominion tyres on really bad roads, but I believe them to be of extremely good quality and likely to give full satisfaction in use.

New Automatic Oiler.

A cheap but highly efficient leaf-spring oiler of the automatic type has just been put on the market by Messrs. Dunhills, Ltd., a feature of which is the ease with which it can be attached. A good spring lubricator means a good deal, not only to the comfort of the driver, but to the life of the springs, and I am pleased to be able to recommend this simple device.

GEORGIAN NEW CUSTOMS DUTIES.

The Ministry of Finance of the Republic of Georgia has fixed a new Customs tariff, according to which all imports are divided into four groups:—(1) Provisions, agricultural implements, and machinery, which can be imported free of duty; (2) the import of articles of luxury is entirely prohibited; (3) goods for daily consumption are subject to a small duty; (4) all other goods are subject to duty which varies according to their importance as prime necessities. Goods for export are divided into three groups:—(1) Goods of prime necessity are subject to prohibitive duties; (2) monopolised goods and other raw material, such as manganese ore, tobacco, silk, wool, and timber, can be exported on payment of a corresponding export duty fixed by the Government; (3) other goods are subject to high export duties.

NEAR EAST MARKETS.**LONDON PRODUCE REPORT.****Market Unsettled.**

Dried Fruit.—Business has improved considerably during the week. Currants have been in fair demand, and the indications point to a growth in consumption. Sultanias have come to business well at steady rates. So far figs have been a dull spot, which is remarkable in view of the quality of the fruit available. There will no doubt, however, be a marked change in this respect before long. Persian dates have been in strong and increasing request.

Sugar.—Prices have remained unchanged. West Indian crystallised has come to business at 60-66s. and white Mauritius has been done at 71s. Home refined has met with a fair demand at the official rates.

Coffee.—The market has been variable. Costa Rica has been done at 110s. to 120s.; Indian is 4s. down at 106s.; while Mocha is 10s. up at 170s. The Futures market has been inactive. Quotations are:—March, 46s.; May, 47s.; July, 48s.; September, 49s.

Oilcakes.—There has been a slight rise in prices. Linseed cake and cottonseed cake are both 6d. up at 18s. 6d. and 10s. 6d., respectively. Arachis cake is unaltered at 13s.

Oilseeds.—The tone has been dull. Indian linseed at 22s. 6d. is unchanged. Rapeseed has declined, with Toria at 20s., 2s. 6d. down, and bold Ferozepore a like amount down at 19s.

Seed Oils.—Prices have remained steady. Linseed oil has come to business at 39s. Other transactions include arachis oil at 50s., coconut oil at 72s., and palmit oil meal at 10s. 3d. per cwt.

CURRENT PRICES.

General Produce.—Bacon, 214s. 9d. cwt.; butter, 336s. cwt.; cheese, 161s. cwt.; chillies, 127s. 6d. cwt.; cloves (Zanzibar), 1s. 3d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 113s. 6d. cwt.; East Indian bold, 115s. cwt.; Mocha longberry, 130s. cwt.; eggs, 45s. 8d. per 120; ginger (washed Cochin), 42s. 6d. cwt.; hams, 220s. cwt.; lard, 167s. 3d. cwt.; nutmegs, 11d. per 110's to 180's; pepper (Singapore, black), 4d. lb.; pepper (Muntok, white), 8d. lb.; raisins (Valencia), 152s. cwt.; sultanias (Smyrna), 136s. cwt.; currants (Vostizza), 91s. 6d. cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 24s. cwt. rice (Rangoon No. 2), 25s. cwt.; rice (bran, Rangoon), £7 15s. ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb. wheat (Australian), 114s. 6d. qr.; wheat (English white), 82s. 6d. qr.

Hides and Skins.—Ox and Heifer: First 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 6d. lb.; 59 lbs. and under, 6d. lb.; cows (first), 60 lbs. and up, 5d. lb. 59 lbs. and under, 5d. lb.; cows (second), 60 lbs. and up, 4d. lb.; 59 lbs. and under, 4d. lb.; bulls (first), 4½d. lb. bulls (second), 3½d. lb.; kips (first), 6d. lb.; kips (second), 5d. lb.; kips (third), 4d. lb.; horse hides, 8s. to 25s. each. **France:** Market prices in francs per kilo for goat skins:—Algiers (saline dry), 10; Constantine (salted dry), 11; Oran (salted dry), 8.50; Tunisia (salted dry), 8; Morocco (salted dry), 5 to 6; Samsoun (salted dry), 5 to 6; West Coast, 7 to 8.

Metals.—Aluminium, £165 ton; bismuth, 12s. 6d. lb.; copper (standard), £71 5s. ton; copper (electro, wire bars), £82 ton; gold bars, 116s. 10d. oz.; iron (No. 3 Cleveland), 225s. ton; hematite (mixed number), 260s. ton; lead (soft, foreign), £22 10s. ton; manganese Poti, 2s. 6d. unit; molybdenite, 55s. unit; nickel, £215 ton; platinum, 440s. oz.; plumbago, £37 10s. ton; quicksilver, £12 bottle; silver bars, 3s. 6d. oz.; spelter (G.O.B.), £25 10s. ton; tin (standard), £203 15s. ton; tin plates (20 by 14), £32 10s. box; wolfram, 18s. 3d. unit; zinc sheets, £46 10s. ton.

Chemicals.—Acids: Boric, 75s. cwt.; oxalic, 1s. 5½d. lb.; citric, 2s. 10½d. lb.; tartaric, 2s. 2½d. lb.; ammoniac (sulphate), £24 13s. ton; arsenic (white powdered), £71 ton; benzole (standard), 3s. 6½d. gallon; bleaching powder (35 per cent.), £21 ton; borax crystals, 41s. cwt.; cream of tartar, 207s. 6d. cwt. Potassium: Bichromate, 1s. 3½d. lb.; chlorate, 7½d. lb.; caustic, £75 ton; nitrate, £60 ton; permanganate, 2s. 10½d. lb.; prussiate yellow, 1s. 6½d. lb.; sulphate (90 per cent.), £27 15s. ton. Sodium: Crystals, 150s. ton; bi-carbonate, £11 15s. ton; bi-chromate, 10½d. lb.; alkali (58 per cent.), £10 15s. ton; chlorate, 5d. lb.; caustic (70 per cent.), £27 ton; hyposulphite, £27 10s. ton; prussiate, 11½d. lb.; nitrate, £22 15s. ton; glycerine (crude, 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; sulphate copper, £39 10s. ton; sulphate iron, 150s. ton; lemon oil, 4s. 10½d. lb.; quinine, 3s. 9½d. oz.; red lead, £46 5s. ton; white dry lead, £53 ton; white ground lead, £62 17s. 6d. ton.

Miscellaneous.—Cotton (American), 10.79d. lb.; cotton (Egyptian, Sakellaris), 22.00d. lb.; linseed (La Plata), £19 15s. ton; rape (Toria), £22 15s. ton; soya beans, £15 5s. ton; palm kernels, £26 17s. 6d. ton. Oils: Linseed, £40 10s. ton; soya, £40 ton; cotton (crude), £41 10s. ton; olive, 16s. 6d. gallon; ground nut, £48 ton; palm, £45 15s. ton; rape (crude), £70 ton; nreroleum, 2s. 3½d. gallon; turpentine, 100s. cwt. Rubber: Plantation, No. 1 crêpe, 10½d. lb.; smoked sheet, 9½d. lb.; fine hard Para, 1s. 1d. lb.

DRIED FRUIT.**Conditions in 1920.**

Messrs. J. C. Houghton and Co., of Liverpool, in their annual report state:—

The habit of retrospection is one in which we mostly indulge during the closing days of one year and those which herald the commencement of another, and we think it may be of interest to pass briefly in review the salient features which have characterised the past twelve months. The country has witnessed a remarkable shrinkage in the values of most commodities, largely brought about by restriction of credit and consequent financial stringency, and we think the dried fruit trade has cause for much thankfulness in being spared participation in so widespread a slump, the experience of most markets making ours a striking exception to the rule.

Currants.—The notification published on May 29 that dried fruit was to be decontrolled caused a resumption of shipments to the United Kingdom in June. These consignments, and many others which had arrived during the close period, were of excellent quality, a considerable proportion being in wooden packages, and the appreciation of their merit was rendered more keen by the fact that we had become habituated to the inferior Government importations in bags. It was promptly realised that the permission to sell without restriction, which became operative on August 4, would be taken advantage of to a very great extent, the concession having been hailed with the greatest satisfaction, and even during July a considerable trade was done in anticipation of the release. This increased in volume during August, a real season's trade being done, but a reaction from such unwonted activity was inevitable, and the fruit which arrived in September had a decidedly disappointing reception. It became evident that buyers had made provision for their Christmas requirements much earlier than usual, and were no longer disposed to purchase on a large scale, a state of affairs which continued throughout the autumn months. The long-drawn-out negotiations which proved futile to avert the coal strike, and the eventual dislocation of trade throughout the country which occurred when the strike took place, all came at a most critical period, and had a most restraining influence on buyers' operations.

Considering the small amount of business passing, prices were maintained remarkably well, for while inferior grades declined appreciably, the fall amounting to 15s. per cwt., there was no great change in the better qualities, and Vostizza continued almost at opening rates.

It is known that the wholesale houses are carrying very small stocks into the New Year, and, as consumption is believed to have been fully up to the standard of a normal season, a feeling of optimism exists among holders, for, having passed through troublesome times so satisfactorily, an active demand is looked for in 1921. The closing weeks of the old year, however, were marked by a holiday feeling, and buyers showed very little interest in business.

Cables recently received from Greece report that stocks existing there amount to only 15,000 tons, the total crop being about 74,000 tons. This is a strong factor in stabilising prices on a more permanent footing, and, coupled with the fact that the relation between supply and demand is reverting to its former state after being so long disjointed, everything tends towards healthy conditions, which are reflected in the existing firmness. Quotations are:—New fruit—Pyrgos, 70s. to 72s.; Amalias, 75s. to 76s.; Patras, 76s. to 80s.; Gulf and Panariti, 82s. to 90s.; Zante, 80s. to 85s.; Vostizza, 90s. to 102s. Total arrivals from commencement of season to date, 17,690 tons.

Valencia Raisins.—The season has been one of record prices. It was fully expected that values would run high, the crop being the smallest harvested for years, but even the most optimistic did not anticipate a maintenance of the quotations right up to Christmas. Some business was transacted in July on a c.i.f. basis at 87s. to 90s. for selected half-boxes. The first consignment arrival realised 134s. to 145s. for selected. Later prices dropped a few shillings, but subsequently recovered, finishing at the top figures of 150s. to 155s. Seedless, on the other hand, give cause for disappointment. They never appreciated, and the hope that the extreme figures asked for sultanas would induce consumers to take Valencia seedless as a substitute did not materialise. The market for this description has been a dragging one throughout, and the closing quotation of the year was 118s.

Sultanas.—Coming to a depleted market, very high prices were secured from the outset, and a considerable proportion of first arrivals having been sold in advance, there was no great quantity to be offered, and a further rise on initial values was quickly established, ranging from 147s. to 160s., and, although final figures are about 10s. below the highest reached, the season may be described on the whole as eminently satisfactory. **Afghans.**—A fair volume of business was done on c.i.f. terms at 90s. to 92s. for Red variety, and 105s. for the Yellow class. Latest spot sales were:—Red, 100s.; Yellow, 120s. to 125s.; Greeks, 135s. to 150s.; and up to 160s. for finest.

Figs.—The public, having been denied this Christmas luxury for several years, proved keen buyers, and all supplies were readily absorbed as soon as they came to hand at the record-breaking prices of—Layers, 140s. to 180s.; Locoums, 170s. to 200s. Bags of Naturals also participated in the demand, many being sold before shipment. First spot sales were at 75s. to 78s., but these rates could not be upheld owing to most buyers having c.i.f. contracts running, and values gradually declined, finishing at 40s. to 58s.

LANCASHIRE COTTON.**Position Improved.**

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

The better feeling in the market continues to be maintained, and although sellers have not been able to make rapid progress in the way of booking fresh contracts, the demand during the past week has been on broader lines than for some little time back. Users of Egyptian cotton are getting more disposed to purchase, and some merchants have done more business during the last few days. There is no particular change with regard to the outlook for supplies. In Egyptian yarns the inquiry has developed, and some spinners have booked fair orders, but at poor prices. The larger demand for Germany continues, but much difficulty is being experienced in arranging for the payment of accounts. The Board of Trade has sanctioned the scheme of the Cotton Reconstruction Board for making grants out of the surplus funds to relieve the distress in Lancashire which has arisen through unemployment. Further correspondence has taken place between the Manchester Chamber of Commerce and the India Office relating to the stabilisation of the value of the rupee, but the British Government does not seem inclined to take action at present. An improvement is now taking place in Eastern exchange rates. In cloth for Egypt rather more business has been done in stock lots at low prices. Demand has also been rather more plentiful for the outlets of the Levant. India has sent forward a larger inquiry, chiefly in light fabrics, and moderate lots have been sold for Calcutta. No particular headway has yet been made with the demand for China. Shippers to South America are still cautious. Although the prospects for manufacturers are rather brighter, curtailment of production continues on an extensive scale. In American yarns for home use the tone has been rather firmer, and slightly more business has been done. Export bundles have been in request for India and the Levant.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in their report for the week ended January 6, state:—A more optimistic feeling has been noticeable in our market during the past week, but the cause of it is rather difficult to define, unless we attribute it entirely to the steadiness displayed on the American side. The amount of spot business transacted here has been painfully small, and prices have again registered an all-round decline. Sakellaridis is gradually getting down to a more reasonable premium above contracts, but Upper is holding its own fairly well, and to-day was raised 50 points. A rumour current here, as we write, is to the effect that America during the last day or two purchased a line of 20,000 bales of Upper Egyptian in Alexandria. The grade was stated to be about good fair. No confirmation of this is yet to hand, however. The small inquiry we have had has been of a general description, with possibly a slight bias in favour of Sakellaridis. Manchester has been a little more cheerful the last two days, but "handsome is as handsome does," and it is deeds, not words, that the trade is in need of at the moment. C.i.f. business remains at a very low ebb, and spinners are finding it increasingly difficult to finance their cotton. Cotton here is freely offered, and, as compared with official quotations, there are some good bargains to be picked up. Summing up, the market seems to be finding its level, and although the general situation is still extremely adverse to trade, we are inclined to recommend caution in place of the all-out "bear" policy which we have hitherto advocated. Sales 650 (includes 70 bales Sudan). Quotations of Sakellaridis are reduced 200 points, those of brown 100 points, whilst Upper shows a decline of 50 points, except for extra fine quality, which is reduced 100 points. Fully good fair Sakel 21d.

EGYPTIAN CROP.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in November:—

Maizi (Nili).—Weather has been favourable and water supply sufficient. Harvesting is general and the early-sown crop has been cut. The crop is promising well, and the yield is average.

Millet (Nili).—The crop is healthy and promises well. Cutting will begin early this month, though harvesting has already begun in some early-sown fields. The crop is a little above the average.

Sugar Cane.—Weather has been on the whole favourable and water supply sufficient. The crop is growing satisfactorily. Harvesting sugar-cane for factories will probably begin at the end of the month. The crop is expected to be a little above average.

Wheat, Barley, and Beans.—The weather has been favourable and the water supply ample. The permission to uproot cotton sticks without cleaning before certain dates seems to have had a good effect on wheat, as sowing is generally earlier this year. Sowing of these crops is taking place actively and watering and manuring are also in progress. The crops are in a good state.

LEVANT MARKET REVIEW.

We give the following extracts from the market review of the National Bank of Turkey for November:—

Flour and Cereals.—Supplies have been arriving regularly during the month; altogether over 9,000 tons were received, of which 8,000 tons came from America—principally of the Martisco-Nelson and Gold Medal brands—and some 1,100 tons arrived from China. Very little fluctuation was recorded, prices varying from £T13½ to £T13½ per sack of 140 lbs. Exports totalled about 15,000 sacks during the month, mostly transhipped to Batoum and the Turkish littoral. The market is fairly well supplied, and with stocks on hand and cargoes afloat there is sufficient to last about eight weeks, allowing for the increased demand made on us by reason of the presence of the Russian refugees.

Barley.—In spite of the general decline in price in most of the European centres, prices here have been well maintained at figures considerably above the parities ruling in Europe, the highest and lowest for the month being respectively 11½ and 8½ piastres per oke for Russian and Roumanian qualities. Towards the close the price showed a tendency to rise, with fairly strong buyers at 9½ pts. This was mainly due to the stoppage of arrivals from Russia, and also, in part, due to the fact that we are approaching the season when the Danube will be closed to traffic. The market here is moderately supplied with stocks.

Sugar.—About 1,800 tons arrived during the month, mostly Java, and small quantities of lump from America, Marseilles, and Holland; of this some 400 tons was re-exported to Roumania. The market is fairly well stocked. During the month prices fluctuated greatly, varying from £83 to £65 per ton; still lower prices are expected by local merchants. Contrary to expectation, there has been little demand.

Nuts.—Some 5,000 bags of shelled hazel, of Kerassunde, Ordou, Trebizonde qualities, arrived from the Black Sea, and the market went a little easier on the increased imports. The price is not expected to fall much, seeing that stocks held at the places of origin are not large, and only a few hundred sacks are held here at the present moment.

Canned Goods.—Here as elsewhere the general crisis is felt, and with the exception of certain articles *de première nécessité* sales have been considerably reduced during the month. The hinterland continues closed, and as for the city itself, with its decreasing prosperity, the consumption of alimentary goods is naturally much smaller, with the result that retailers are restricting their purchases, and wholesalers are compelled to follow suit. However, apart from the present crisis, the alimentary trade is suffering from a superfluity of retailers.

Textiles, Dry Goods, etc.—There is practically no business, and prices are generally weak. During the month some consignments of cotton goods and sundry other articles arrived in port, but have not yet been withdrawn from the Customs. Dealers all round are offering stocks at dead-low prices, and in spite of this, when compared with prices, transactions are almost nil. Under existing circumstances it is quite impossible to give any current prices, for they vary with almost every merchant to such an extent that one cannot even strike a reasonable average.

Cotton Goods.—Several fairly large cotton dealers, who had their stocks lying in various warehouses, have been compelled to put them up for sale at cut prices; on the other hand, quite a number of local merchants have, notwithstanding the slump in merchandise and the rise in exchange, withdrawn their bills of lading in order to keep their credit high.

Coal.—Prices continue to fall for every description of coal. As was foreshadowed, with the settlement of the coal strike in the United Kingdom greater facilities have been granted for the export of Welsh and other qualities, so that with the lower freights at present ruling, the market here should be better supplied in the near future with the best coal at considerably reduced prices to those formerly obtaining. The situation in the United Kingdom has had marked effect on American coal, which has undergone a sharp fall in price. The local market is heavily stocked with American coal, and some dealers are finding difficulty in disposing of cargoes. Apart from cargoes actually consigned here, some large cargoes which were originally destined for the Crimea, etc., have, in view of the recent events in South Russia, been dumped on our markets.

With regard to Turkish coal, the position grows worse, for in addition to large stocks held here, large stocks continue to accumulate at the mines awaiting shipment. The situation is causing much embarrassment to the mineowners, who rely on the rapid disposal of their output to provide the funds necessary for running the mines. The trouble is further accentuated by the action of the Kemalists, who refuse to allow Greek vessels to load, and by the fact that Russian vessels are not permitted to proceed into the Black Sea, thereby increasing the difficulties of procuring tonnage.

COMPANY NOTES AND REPORTS.

British Burmah Petroleum.

The report of the British Burmah Petroleum Company for the year ended July 31 shows a credit balance of £366,419, as against £534,605 the previous year, but owing to the gain in exchange the total credit is brought up to £555,998, against £595,311. To the profit of £368,419 has been added: Difference in exchange £112,085, agency fees £5,456, dividend on shares in Rangoon Oil Company £11,719, interest £26,477, transfer fees £2,196, making a total credit of £526,353, compared with £569,676 for the previous year. Including £29,645 balance brought forward there is a disposable profit of £359,955, an additional 2½ per cent. interest on Second Mortgage Debenture stock absorbs £1,173 14s., reserve and contingent reserve account is £100,000; leaving a balance of £143,175. Out of this the directors recommend a balance dividend for the year at the rate of 1s. per share, free of tax, payable February 28 next to holders registered on January 17, making 20 per cent., free of tax, compared with 17½ per cent., free of tax, for 1919.

The dividend of £11,718 paid by the Rangoon Oil Company has been handed over to the trustees of the first mortgage debenture stock for sinking fund purposes. Subsequent to the close of the financial year a further dividend of £14,345 has been received from the Rangoon Oil Company, which has been similarly dealt with. Up to July 31 last the trustees had purchased for redemption first mortgage debenture stock of the nominal value of £211,396. They now hold £213,119. With the funds placed at their disposal by the company, the trustees of the second mortgage debenture stock have purchased £27,492 of stock, the whole of which has been cancelled, leaving £47,508 outstanding at the end of the year. The sums provided for sinking funds of the first and second mortgage debenture stocks out of profits for the year amount to £36,718 and £4,156 respectively, enabling further purchases and/or drawings to be made. The expenditure at the refinery charged to capital account is £18,395, and at the field £24,037. The £75,868 written off for depreciation has been allocated as to £16,176 to refinery accounts and £59,691 to field accounts.

Although the combined production of crude oil by the company and the Rangoon Oil Company was less than for the previous twelve months, the throughput of crude oil at the refinery was maintained by drawing upon the stocks in hand. Since the close of the financial year a further fall in the production of crude oil has taken place, due largely to the reduced yields now being obtained from the Beme field and to the longer time required for completion of wells that have to be drilled to greater depths than hitherto. The footage drilled during the year was in excess of that of the previous year, and, with the additional plant now being delivered and an augmented drilling staff, it is anticipated that this decline will be arrested.

The electrification scheme for the Yenangyaung field will probably come into partial use early in the year 1922, the proposal in the first instance being to convert the producing wells and auxiliary plant. The company has secured an important interest in oil-bearing territory on the west coast of the peninsula of Sinai. This property has been reported upon most favourably by the company's geologist. The property will be operated by the British Sinai Petroleum Company, formed in March last (in which this company retains a predominant interest) with a nominal capital of £500,000, of which 100,000 £1 shares have been subscribed for immediate working capital.

Imperial Bank of Persia.

The report of the Imperial Bank of Persia for the year ended September 20 states that the profits for the period, after making provision for expenses of management and general charges in London and at chief office and branches, income-tax, excess profits duty, corporation tax, and bad and doubtful debts, amount to £80,242 4s. 5d., to which has to be added £27,809 5s. 3d. brought forward from last account, making a total of £108,051 9s. 8d. From this sum £4,000, the amount due to the Persian Government in terms of the concession, has to be deducted, leaving £104,051 9s. 8d., which the directors have dealt with in the following manner:—First interim dividend for the year, at the rate of 3s. per share, paid June 18 (free of income-tax), £15,000; transfer to reserve account, £30,000; transfer to bank premises account, £5,000; final dividend, at the rate of 5s. per share (free of income-tax), £25,000; carry forward to new account, £29,051 9s. 8d.; total, £104,051 9s. 8d.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated January 3:—During the week ended December 25 crop prospects generally fair, but rain urgently required in the Punjab, North-West Frontier Province, Central Provinces, and Bombay, and parts of Central India and Madras. Bombay piece-goods market still lifeless. Calcutta jute market steady, with some business done. Hessians steady. Heavy goods practically neglected. Hides and skins show some signs of reviving interest. No change in bank rates.

This year's olive crop in Panderma is reported to be excellent. The Algerian fig crop is estimated at 400,000 quintals (88,900,000 lb.).

The export of dates from the French zone of Morocco has been prohibited, except under licence.

The traffic receipts of the Smyrna-Aidin Railway for the week ended December 25 amounted to £10,423.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

ALEXANDRETTA.

The report for November states :—Business between Aleppo and Alexandretta continues to develop, thanks to the security of the routes. It has not been the same as regards trade between Antioch and this place, and there have been some slight encounters between the troops of occupation and the Turkish rebels. The occupation of Aintab by the French troops will assist the development of commerce between that town and Aleppo, and consequently with Alexandretta. We await impatiently the pacification of the regions of Ourfa, Diarbekir, and Mesopotamia, in order that trade may develop as before the war.

ADANA.

The report for November states :—The railways connecting this town with Tarsus and Mersina having been repaired and communications re-established, commerce has rapidly been resumed, and, generally speaking, the prices of all articles have undergone a marked fall following the re-establishment of a connection with the sea.

Security having been re-established in the fields, the gathering and warehousing of cotton has been actively carried out. During the month under review 2,350 bales of cotton have been exported from this town to Salonika and Smyrna. The price of the batman of 4 okes, which was 200 piastres at the beginning of the month, has fluctuated considerably, and has now fallen again to 200 piastres.

The cotton crop is estimated at 25,000 bales, approximately the total of the previous crop, notwithstanding that the area sown was much greater than before. The decreased yield is due in the first place to the political events in this region between May and the end of September.

The French High Commissioner for Syria and Cilicia, with a view to encouraging and aiding the farmers and cultivators, has had 700 tons of barley unshipped at Mersina, and this amount ought to suffice for the sowing. In general the cultivators are discouraged by the yield of the cereal crop, half of which was destroyed by the excessive heat, and by the decreased value of the cotton crop.

The official winter monsoon forecast shows an unfavourable rainfall in North-west India and the neighbouring hills, justifying anxiety.

Reuter's Bombay correspondent states that the Bank of Madras have declared a dividend of 20 per cent., transferred to its contingent account for investments 8 lakhs, and carried forward 2½ lakhs.

Messrs. Coutts and Co., bankers, the London agents of the Bank of Bengal, have received the following information by cable from Calcutta :—Profit distribution—Dividend (for past half-year), 22 per cent. per annum (free of Indian income-tax), Rs.22,00,000; reserve fund, Rs.4,00,000; transferred to gratuity and pension fund, Rs.1,00,000; carried forward, Rs.3,01,868.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Exchange and Merchandise operations effected.

ON 'CHANGE.

Somewhat Irregular Tone.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

It was quite a refreshing change last week to find most of the markets showing considerable buoyancy. A factor largely responsible for the improved position was the belief that early steps would be taken to cope with the problems presented by the adverse exchanges and the lack of credits in Europe. To-day there has been a reaction, and prices have been somewhat irregular, which was inevitable in view of the rapid advances made in some lines during the week.

Government stocks have been particularly strong, and all along the line there have been considerable rises. Foreign bonds have shared to some extent in the upward movement, but are closing rather irregularly. Other markets have been generally strong, Industrials in particular showing marked firmness. Oils have been fairly buoyant, while the rise in Rubbers has been simply surprising, and, it may be added, has been apparently without adequate justification.

Near Eastern securities have shown a greatly improved tone, and advances are to be recorded in a number of directions. In Government Funds practically all the changes that have taken place have been in an upward direction. Egyptian Guaranteed 3 per Cent. are 2 up at 60, while Turkish Guaranteed 4 per Cent. 1855 are $\frac{1}{2}$ up at 67. Greek Guaranteed 2 $\frac{1}{2}$ per Cent. 1898 are a point better at 55 $\frac{1}{2}$.

Greek securities have again shown improvement in many cases. The 5 per Cent. 1881 Loan and 5 per Cent. 1884 issues have both gained $\frac{1}{2}$ at 40 $\frac{1}{2}$. The 5 per Cent. 1890 Loan and Fundings are both unchanged at 40. The 1910 Loan is the same at 40, while the 1914 Loan at 38 $\frac{1}{2}$ has dropped $\frac{1}{2}$. The 1902 Loan has gained a point at 34.

Banks have been variable. Agricultural 3 $\frac{1}{2}$ per cent. Bonds have shed 2 at 53, while the 3 $\frac{1}{2}$ per cent. Guaranteed Bonds at 55 have lost a like amount. Imperial Ottoman Banks are unchanged at 7, while National Bank of Egypt at 16 $\frac{1}{2}$, have risen $\frac{1}{4}$. Land Banks are unchanged at 4 $\frac{1}{2}$.

There have been a number of changes in Land shares, mostly in the upward direction. Beheras have risen $\frac{3}{4}$ at 9, but the Preference shares remain unchanged at 2 $\frac{1}{2}$. Anglo-Egyptian Land Allotments have remained unaltered at 3 $\frac{1}{2}$, while Egyptian Consolidated Lands have risen 3d. to 1s. 6d. Delta Lands at 9s. 9d. and Gharbieh Lands at 1 $\frac{1}{2}$ have risen 9d. and 1-16 respectively. New Egyptians have been done at 23s. 6d., a rise of 2s. 6d., and Union Foncières, at 2 $\frac{1}{2}$, have gained a $\frac{1}{4}$. Sudan Plantations have recovered 5-16 at 3 $\frac{1}{2}$.

ROUMANIAN CONSOLIDATED OIL.

Commenting on the decision of the Court of Appeal in the petition of right of the Roumanian Consolidated Oilfields against the English Government for damages caused by the destruction of its property by the Military Commission in 1916, the *Moniteur du Pétrole Roumain*, the official organ of the Roumanian Government, says:—

"The view taken by the Court of Appeal is that it is not the English Government, but the Roumanian Government, which has to make good the damage which the petroleum industry suffered by the destruction of the wells in 1916. For some time past this been merely a question of principle, seeing that a mixed Anglo-French Commission, presided over by Colonel Hearn, representing the English interests, was at work for a very long time last year with a view to ascertaining the amount of the loss inflicted on the oil industry in 1916.

"We understand the Commission has arrived at definite conclusions in this connection, and has submitted them to the Allied Governments. To the best of our knowledge, the principle of payment for the damage then caused has been definitely settled, the basis being the actual post-war expenditure incurred on the restoration of the various properties. All that remains now is to discuss the amount and the method of payment. These will be fixed as soon as the Roumanian Commission, which is examining the question of these war damages, has finished its labours."

Forthcoming Sailings.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Castalia, for Bombay (Liverpool, January 16); s.s. Assyria, for Bombay (Liverpool, February 2).

Anchor-Brocklebank Line.—S.s. Mahratta, for Port Said, Colombo, Madras, and Calcutta (leaves London January 18); s.s. Malakand, for Calcutta (Birkenhead, January 26); s.s. Maihar, for Port Said, Colombo, Madras, and Calcutta (leaves London February 5); s.s. Stockwell, for Calcutta (Glasgow, January 29, and Birkenhead, February 9); s.s. Makalla, for Port Said, Colombo, Madras, and Calcutta (leaves London, February 19); s.s. Manaar, for Calcutta (Birkenhead, February 23).

Bibby Line.—S.s. Leicestershire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, January 26).

Clan Line.—S.s. Clan Macphree, for Bombay and Persian Gulf (Birkenhead, January 17); s.s. Clan Mackenzie, for Colombo, Madras, and Calcutta (Birkenhead, January 27).

Cunard Line.—S.s. Brescia, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Glasgow, January 15, and Liverpool, January 22).

Ellerman City and Hall Line.—S.s. City of Baroda, for Calcutta (Liverpool, January 17); s.s. City of Alexandria, for Bombay and Karachi (Liverpool, January 20); s.s. City of Exeter, for Bombay and Karachi (Liverpool, January 26); s.s. City of Glasgow, for Calcutta (Liverpool, January 31); s.s. City of London, for Bombay and Karachi (Liverpool, February 12).

Ellerman's Westcott and Laurence Line.—S.s. Venetian, for Gibraltar, Malta, and Alexandria (London, January 22); s.s. Bulgarian, for Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, and Varna (London, January 26).

Golden Star Line.—S.s. Mediterranean Star, for Alexandria and Piræus (leaves Marseilles on January 18 and February 8).

Harrison Line.—S.s. Craftsman, for Calcutta (Liverpool, January 18); s.s. Orator, for Calcutta (Liverpool, January 31); s.s. Tactician, for Calcutta (Liverpool, January 31); s.s. Merchant, for Port Said, Port Sudan, Mombasa, etc. (Glasgow, February 10, and Birkenhead, February 17).

Henderson Line.—S.s. Bhamo, for Port Said and Rangoon (Birkenhead, January 19); s.s. Arracan, for Port Said and Rangoon (Birkenhead, February 9).

Holt Line.—S.s. Atreus, for Port Said, etc. (Glasgow, January 27); s.s. Hyson, for Port Said, etc. (Glasgow, January 27).

Johnston Line.—S.s. Cundall, for Piræus, Syra, Smyrna, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 22). A steamer for Piræus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, January 22). A steamer for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, January 29).

Papayanni Line.—S.s. Asturian, for Algiers, Piræus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, January 22).

P. and O. Line.—S.s. Nyanza, for Colombo, Madras, and Calcutta (London, January 21); s.s. Dongola, for Bombay (London, January 28); s.s. Novara, for Colombo, Madras, and Calcutta (London, January 28).

P. and O. British India Line.—S.s. Hatimwra, for Bombay and Karachi (London, January 22); s.s. Merkara, for Colombo, Madras, and Calcutta (London, February 5); s.s. Tremere, for Bombay and Karachi (London, Feb. 5).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Photographic Material.—The Egyptian Ministry of the Interior invites tenders for the supply of photographic apparatus and materials (chemical, etc.) required for the year 1921-2. Tenders, which must be submitted by persons or firms residing or having a representative in Egypt, should be marked "Tender for the supply of Photographic Material," and addressed to The Director, Personnel and Equipment Department, Ministry of the Interior, Cairo, Egypt. January 31, 1921 (L.).

Roadmaking.—The Director-General, Main Roads and Bridges Department, Ministry of Communications, Cairo, invites tenders for the widening of Road No. 12, from Gedaide el Hala to Telbana, consisting of earthwork and construction of culverts. January 15.

Office Construction.—The Inspector of Nag. Hamâdi Projects, 18, Rue Tewfik, Cairo, invites tenders for the construction of an office at Asyût, approximate cost to be £E16,000. Jan. 20.

India.

Refuse Destructor.—The Municipality of Bombay invites tenders for the manufacture, erection, and equipment of a refuse destructor for 200 tons of refuse a day. (Spec. 5s., Sir John Wolfe Barry, Lyster, and Partners, 2, Queen Anne's Gate, S.W.1.) March 4.

Pumping Plant.—The Municipal Committee, Simla, invite tenders for supplying, erecting, and running for one month a new pumping plant, consisting of three units and steel rising mains, etc., with all fittings for the water supply. The pump lift (excluding friction) is 3,939 ft. The Municipal Committee is prepared to consider alternative tenders for other forms of plant to do the duty required by the specification. (Specification, etc., Municipal Office, Simla, Rs.10.) March 28.

Spare Parts.—The South Indian Railway Company, Ltd., invites tenders for the supply of spare parts for carriage underframes and wagons. Specifications and forms of tender may be obtained at the company's office, 91, Petty France, Westminster, S.W.1.—January 26.

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, The Near East," 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

102. A stamp collector wishes to purchase used Austrian stamps prior to the 1882 issue. Stamp dealers in the liberated provinces of Austria are asked to send bulk packages of such stamps to the care of the Editor of THE NEAR EAST, with the price in kronen of each stamp or price per dozen, per 100, etc., of each kind. All stamps required will be paid for at the price indicated and the rest returned. Newspaper stamps are not required, but rare postmarks should be included.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

107. Old established Turkish firm handling general stores situated in Smyrna and having branches in the interior invites exporters to quote prices for groceries. The firm also acts as agents for articles of general consumption in Asia Minor.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

NOTES OF THE WEEK.

The French Ministerial Crisis.

As French policy in the Near East is such a potent factor for good or evil in the immediate future, the Ministerial changes in France are of special interest at this juncture. The events that led to the fall of the Cabinet were related to the western part of the Continent rather than to South-Eastern Europe; consequently the substitution of M. Briand for M. Leygues does not necessarily imply any change of front in France's dealings with the Near East. It is not to be supposed, for instance, that the new French Government will be less anxious to see the Sèvres Treaty modified in favour of Turkey, but any difference of opinion on this subject between France and Great Britain we hold to be of far less importance than the definitely anti-British trend that has been given to all French action in the Near East since the Armistice. We find it difficult to believe that this is the outcome of a policy officially inspired from Paris. For a local product, however, it is sufficiently widespread to call for the serious attention of the French Government, and it is hoped that M. Briand will not allow things to drift in the Near East until they are in danger of reacting on official Anglo-French relations.

Persia: Disturbing Reports.

For some little time past the Government has been discouraging women and children leaving England for Persia, and at the end of last week telegrams from Teheran announced that the immediate evacuation of British women and children was being arranged. Almost simultaneously a message issued through Reuter's Agency here explained that this step did not mean that there was "any immediate danger in their continued presence in that country," but that the conditions there were "considered most unsuitable for them, particularly in view of the impending withdrawal of British troops from North-West Persia." After this it was not surprising to learn that on Sunday telegrams had been received in Paris announcing the resignation of the Persian Cabinet, and to find the air full of rumours that the Shah had abdicated, that he had left Teheran "when the English garrison evacuated the capital," and had proceeded to Shiraz, fearing assassination "following the entry of the Persian Bolsheviks into Teheran." Failing any authoritative announcement on the subject, it was not altogether surprising that these reports should have caused some uneasiness to friends of Persia in this country. Happily, messages of a later date, and emanating from a British official source at Teheran,

dispose of most of them. The Shah—after some little hesitation, it seems—has decided on firm action; has dismissed the Sipahdar, whose Cabinet has resigned; and is confident that he can find men to carry on the work of national reconstruction.

The Shah's Resolve.

From this message it would appear that the Mejliss has not yet been summoned, but that it is to be summoned very shortly; and it is stated that the Bolshevik question is to be dealt with in resolute fashion. There is no mention of any withdrawal of British troops just yet. This is not surprising in view of our Government's implied promise that they should not be withdrawn until the spring, and of the considerable difficulty of moving bodies of troops at all in Persia at this season. Indeed, this particular rumour can never have been taken seriously by anyone acquainted with the facts of the case; for no move of the kind is likely to be taken at such very short notice, though we may ere long evacuate the northern zone. There was, however, some excuse for fearing that the other rumours might be true. The difficulties of the Shah, and of his Ministers, too, have been, and are, very real; and there can be no doubt that the Persian "Democrats" have been coquetting with the Bolsheviks. Moscow, as always, has been liberal with its promises; and it was actually suggested in some quarters that an agreement had been signed. Happily, that is not the case: Persia has, so far, avoided a fate which it would have caused her friends real sorrow to see overtaking her. She will, we hope, follow the lead given her by the Shah, turn a deaf ear to Bolshevik blandishments henceforth, and frankly grasp the helping hand that Great Britain, in all sincerity, has held out to her.

Egypt and Lord Milner.

The announcement of Lord Milner's retirement from the Colonial Office has given rise to much speculation and some uneasiness in Nationalist circles in Egypt, especially among the extremists; and it is conceivable that the uneasiness will not have been diminished by the report that his successor is to be Mr. Winston Churchill. There is a tendency to believe that Lord Milner's resignation is due to the Cabinet's refusal to accept his recommendations, and there has been of course, a renewal of violent protestations that Egypt will be satisfied with nothing but complete independence and a specific abrogation of the Protectorate. Zaghloul Pasha, however, has stated that he is willing to negotiate, if the British Government gives guarantees that the Treaty shall include a stipulation for the abolition. This is an advance, if not a very marked one, in the right

direction; and though Zaghloul may have lost ground with the extremists by making it, the step will have the approval of all moderate opinion. It is gratifying to note that all comments show that the Egyptians are now aware that in Lord Milner they have a sincere friend.

The Yemen and Asir.

News has reached this country, by way of Cairo, from Hodeida, that the Imam of Sanaa has captured Hajelah, and is threatening not only Bura and Bajil, two towns on the Sanaa-Hodeida road, but also the port itself. His forces are said to be commanded by Mahmoud Nedim Bey, who was, under the Turks, Governor of the Yemen; but against whom they are gaining their victories is not reported. In view of our cordial relations with the Idrissi, and the fact that Hodeida is garrisoned at present by Indian troops, it is natural to infer that the Imam's demonstration is directed against his old rival, and it is at least possible that it is in some way connected with the recent Wahhabite advance on Tayef. Again, the fact that Mahmoud Nedim Bey is a Syrian may not be without significance. But, so tangled is the skein of politics in the Yemen that it would be unprofitable to attempt to unravel this particular thread until further clues are vouchsafed to us. We may remark, however, that the Tehama, a low coastal region, is very different from the rocky plateau inland, and lends itself less readily to the style of warfare preferred by the men of Sanaa. Moreover, if our relations with Sheikh Idris are sufficiently cordial—we refer to Mr. Harmsworth's statement in the House of Commons the other day—the Imam's forces may, if they advance on Hodeida, learn something of the power of naval guns. It is not uninteresting to recall that it was at Bajil that Colonel Jacob's Mission was captured during the war, and that at about the same time the Arabs attacked Hodeida.

The Mystery of Rahmy Bey.

The mystery surrounding the detention of Rahmy Bey, formerly Governor-General of Smyrna, remains unsolved—as far as the public is concerned. Colonel Aubrey Herbert, M.P., who has interested himself in the matter and has asked various questions on the subject in the House of Commons, has now written a short but vigorous letter on the subject to the *Morning Post*. After recalling the unusual kindness of the Governor-General to the British who were interned in Smyrna during the war, and the unprecedented recognition of that kindness by his Majesty's Minister in Athens—actually while hostilities continued—Colonel Herbert acknowledges that he has received sympathetic answers on the subject from the Secretary for War, whose Department is not apparently guilty of this "gross act of ingratitude." That is satisfactory as far as it goes, but it does not go far enough. What a steadily increasing number of people in this country want to know is: Who is responsible? Whoever it is cannot be sheltered indefinitely. As Colonel Herbert writes in concluding his letter: "All men have their individual ideas of what is honourable, but none that I have ever heard of could be found to correspond with the Government's treatment of Rahmy Pasha." On whose advice is the Government acting in this matter? And, if it considers that it has good reasons for its action, why does it not make them known? As it is, very unpleasant rumours on the subject are steadily gaining ground.

The Duke of Connaught at Madras.

The Duke of Connaught's tour has opened auspiciously, and the people of Madras have made it clear that they at least have no sympathy with the essentially un-Indian idea of ignoring the representative of their Emperor. From the historical point of view Madras has an outstanding claim to take the lead in the new movement, for it is the cradle of British power in the East. The village of fifteen or twenty fishermen's huts, where nearly three centuries ago Francis Day laid the foundations of Fort Saint George, has grown under British inspiration into a great city with many and complex problems of its own, political, social, and economic; the Presidency of which it is the capital is about to enjoy the novel experience of a non-Brahmin Ministry in what has hitherto

been the stronghold of Brahmin ascendancy; and all the circumstances of the moment combine to emphasise the Duke's call to the people to look forward rather than backward, to lay aside bitter memories, and to establish mutual confidence and goodwill. The future of Madras now lies in the hands of her citizens, and the Duke did well to insist that none of them can afford to stand aloof: there is work for everyone, and on the quality of the work now done will depend her destiny in India and the Empire.

The Famine.

It has now become clear that the inadequacy of last year's rainfall has imposed on the central parts of India an economic strain too great to be borne by the people without organised assistance, and the information issued officially last week indicates the existence of definite distress in parts of the Central Provinces, the Bombay Deccan, and the State of Hyderabad. Judging from past experience, we must be prepared for the extension and intensification of distress for the next five or six months, but the delay in its onset is a favourable feature of the situation, and the various Administrations affected should have little difficulty in keeping abreast of developments. In order to give a just idea of the position, we may point out that while the numbers on relief are now about 50,000 in British India and 27,000 in Hyderabad, in January, 1900, when the last great famine in this part of the country occurred, the numbers exceeded 2½ millions in British India alone; it is highly improbable, therefore, that the experiences of that terrible time will be repeated.

The Agrarian Disturbances in Oudh.

The outbreak of agrarian disturbances in two districts of Oudh was sudden, but not wholly surprising to observers familiar with the local conditions. We have no doubt that it was hastened by the general spirit of unrest, and also by the particular efforts of malignant agitators, but at the same time it must be recognised that the peasants have long-standing grievances against some of the great landholders, and against many of the smaller ones. A very clear account of those grievances was given a few years ago in a paper read before the East India Association by the late Sir Duncan Baillie, who insisted that the tenancy law of Oudh was seriously defective in that it failed to provide the primary requirement of security of tenure; Oudh tenants, he declared, enjoyed no protection except from "the good feeling of their landlord, when they have the luck to be under a landlord who desires to deal justly with them;" and he urged that early action was called for because the burden of discontent was continuing to increase unchecked. So far as we know, that view has never been seriously challenged, and it explains, though it does not justify, the outbreak, which appears to have been effectively and mercifully repressed.

The Remedy.

The matter will not, however, be disposed of merely by the restoration of tranquillity; the grievance remains, and it should be one of the earliest tasks of the new Provincial Legislature to face the question, a question which successive Administrations have been content to postpone. The great landlords of Oudh have a recognised and privileged position, on which they have hitherto been disposed to insist. Legislation directed against them would be difficult to carry, and might be nearly ineffective in practice, because their social prestige dominates their estates; and the only effective remedy lies in their hands. If they continue to insist on their privileged status, things are certain to get worse; if at this juncture they play the part of statesmen and offer what the peasants must ultimately have, they can not only solve this particular question, but give a lead which would have an immense effect for good throughout the whole country. In his speech at Madras the Duke of Connaught urged the need for sane and patriotic leadership: it would be a fact of happy augury if the great landlords of Oudh should be the first to respond to that appeal.

THE WEEK AT HOME.

LONDON, Monday Evening.

Dover and Economy.

"The word politics," said Count Smorltork to Mrs. Leo Hunter, "surprises by himself." Certainly it has surprised the Government and a good many other people this last week. The Coalition only held the seat at the by-election at Hereford by a considerably reduced majority against an Independent Liberal candidate; at Dover, which used to be considered a safe seat, the Government nominee was routed. The victor had no party label, but stood on an Anti-Waste platform; it looks as though "Down with Taxes" might become as popular a cry in Imperial politics as "Down with the Rates" is in municipal affairs.

The trouble is that the bulk of taxation goes in National Debt and pension services, which cannot be reduced; but the real effect of a vote like that at Dover will be to curb the ambitions of bureaucracy. Many ambitious schemes are likely to be pruned or abandoned; Dr. Addison, who from the Ministry of Health looks on every inhabitant of these islands as a potential patient to be recorded on a card index, will pass sleepless nights because he is not allowed to spend money quite so freely.

Unluckily, there are signs, also, that the economists, emboldened by the rejection of the Health Bill a month ago, are now concentrating against the improvements in education which Mr. Fisher, the Education Minister, has in view. A subtle propaganda to that end is being worked in many popular papers, the main line of argument being that "what was good enough for father is good enough for anybody." In view of Dr. Shadwell's recent description in *The Times* of the progress of Labour colleges in South Wales, and Labour's insistence on educating itself, this anti-educational zeal in other quarters is likely to lead to a great deal of class-feeling.

Telephones.

Another source of discontent with the Government has been the projected increase in telephone rates. These seem as if they had been devised to irritate the public. The increases are enormous, and the old flat rate is now abandoned in favour of a yearly payment for the telephone installation—like a gas-meter—and a charge for each call. Obviously this will involve disputes between the Exchange and the user, and it will cost a great deal of clerical labour to register each call and to make out an account for every user. The protests have been loud and strong, but the Post Office has adopted a *non possumus* attitude. The whole matter will have to be discussed when Parliament meets.

Government Changes.

These troubles do not furnish a very favourable atmosphere for the reconstruction of the Government, which is likely to be confined within as narrow limits as possible. Sir Gordon Hewart is still thinking over the Lord Chief Justiceship; he would still like the post, but he cannot be spared from the Commons. Rumour declares that Lord Lee may leave the Board of Agriculture for the Admiralty, in the place of Mr. Long, who will retire to his beloved Wiltshire, where they discuss pigs instead of battleships; and Mr. Winston Churchill, tired of running the War Office in peace time, will cross the road to the Colonial Office. (He has been there before, as Under-Secretary to a colourless Secretary of State, in 1906.)

There is a disposition in some quarters to suggest that the Colonial Office will be of less importance than before; obviously Mr. Churchill does not think so, for he would be hardly likely to promote himself backwards.

Chequers.

Mr. Lloyd George has no doubt been turning these matters over in his mind in the quiet week he has been spending at Chequers. That beautiful country house, which dates from the Tudors, has now been made over to the Government by Lord Lee as a residence for the Prime Minister, and Mr. Lloyd George has taken the opportunity of the recess to snatch a rest in his quiet quarters. Chequers would be delightful anywhere, but, compared with the insufferable dinginess of Downing Street, it must seem like paradise.

Unluckily there is no dower-house attached to the mansion for fallen Prime Ministers; perhaps Lord Lee will consider the idea. An adjacent small holding for a retired Coriolanus might be a useful scheme; and it would be a kind of *memento mori* for the actual occupant of Chequers.

The City and Unemployment.

The City appears to be more cheerful than it was a month ago. Probably the fact that the Cunard Company's new issue, of four millions, was largely over-subscribed has a good deal to do with the optimistic feeling; at least, it shows that the investor is not an extinct species, but a rather cautious bird at the moment. The gilt-edged stocks, too, are on the upgrade. Of industrials the less said the better; the cold fit is likely to last some months in that direction until trade revives.

At present there is no sign of any improvement, nor is there likely to be for some little time. Unemployment is increasing rather than diminishing, and the adoption of short time, although probably better as a palliative than wholesale dismissals, is no real remedy.

In this connection it is not the City only, but the whole country, which condemns the folly of the official Labour Party in refusing to co-operate with the Government in dealing with the general question of unemployment. The negotiations have been going on for weeks. The Government have put forward many projects; the Labour Party has not accepted one. It has confined itself to destructive criticism, and seems to have sought every opportunity for delay; even now it has put off the problem to another Conference at the end of the month. Since it can hardly be so childlike as to believe that Committees and Conferences can ever come to a speedy or a real decision, it would appear that the Labour Party is either not impressed by the unemployment figures, or that it hopes to make political capital out of the difficulty. If the latter is the case, one would say that it has made a disastrous miscalculation. The Government has done its best to co-operate with Labour in finding a way out of the present difficulty; the discredit for refusing to co-operate cannot therefore fall on them, but on the Labour politicians.

In that event, they will lose still further the public support. A year ago their star was definitely in the ascendant. Last summer the Council of Action, the coal strike, and other causes, lost them many votes; their present action, or inaction, will lose many more.

Moreover, although the Labour Party is not as a rule responsible for strikes, the continuance of strikes must damage them politically. All the municipal employees of Ilford went on strike last week, and that borough was without light in its houses and trams in its streets. I know nothing of the rights or wrongs of the dispute—each side, as usual, blames the other—but it is certain

that these things do not encourage the ordinary voter to support Labour or a policy of nationalisation or municipalisation. Personally, I do not care a jot whether my electric light is made by an "enlightened municipality" or "a callous capitalist company," but I must admit that I like it to function. And a private motor-bus that moves seems to my simple intelligence to be worth many municipal trams that do not run.

The Prime Minister's Salary.

The question of the Prime Minister's salary and the suggestion that a pension should be conferred on the holder of the office have again been discussed—this time before a committee. Mr. Lloyd George has made it quite clear that at a time when the State is not overburdened with wealth, he would refuse a higher salary even if it were voted. His scruples are to be respected, for he is probably the poorest man in the Cabinet; but there is no doubt that the office is scandalously badly paid. It should certainly not be less than £8,000, and £10,000 would not be too generous, with a pension of £5,000 a year. Mr. Asquith, who gave evidence, admitted that he left office a poorer man than when he entered Downing Street, but for some reason he was against a pension for ex-Premiers. Probably the motive of personal delicacy decided his standpoint, for he is not a rich man. Mr. Balfour, the only other living ex-Premier, is wealthy.

Mount Everest.

The announcement of the Mount Everest expedition has aroused enormous interest. Every small boy at school has traced a grubby finger along the map of the Himalayas, and Fleet Street has hastily brushed up its local colour with the aid of the Encyclopædia Britannica. I am told that it was even used to point a moral lesson in a sermon, and that the snow-clad purity of the summit made a peroration that duly impressed a congregation until they reflected that nobody could stay on those noble heights of virtue very long.

Scientific interest is equally great, although it takes a less boisterous form. The expedition, even if only partially successful, will add considerably to geographical knowledge, and it should make a permanent contribution to our rather scanty information of the upper atmosphere, and the conditions which it imposes on life. But the oceanographers, who want the depths of the ocean dredged to add to our knowledge of life five miles down as well as up, are rather envious that Mount Everest should have stolen a march on them.

Reprints.

A difficult position has arisen in that part of the publishing trade which engages in the business of cheap reprints of standard works. The cheapness of the reprints that were so popular before the war was based on the fact that the publisher did not expect to make any money on the first ten thousand copies, which he could easily reckon to sell at a shilling; after that he made a profit, infinitesimal when each copy was considered, but fairly remunerative when another ten thousand had been sold of each of several volumes in a series.

The stocks being exhausted by this time, it is commercially impossible to reproduce these reprints at less than half-a-crown, and it is very doubtful whether twenty thousand purchasers can be found at half-a-crown even for standard works. Many of them are therefore likely to remain out of print unless print and paper come down—a circumstance that is peculiarly unfortunate at the moment when the reading public is larger than ever.

OCELLUS.

We have received the current number of the *Review of Reviews*, the first issue under the editorship of Sir Philip Gibbs. It preserves its usual interesting features, but worth special note are the contributions written by several eminent publicists, who deal largely with the world of the future. As an organ of general appeal, its popularity will certainly be increased by the vigour and honesty of its new editor.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

YUGOSLAVIA.

ZAGREB, January 2.

Disruptive Forces.

The enemies of the Union have been busy over the close of the old year, for they realise that if ever they are to succeed in their intrigues to separate Croatia from Serbia it must be before the Constituent Assembly has done its work. Their headquarters are most probably in Budapest, and they are using the Communism bogey as an instrument in their game. In Belgrade they have made a determined and partly successful attempt to capture the Labour Party, and they have been behind every strike, and lost no opportunity to interfere in the machinery of Government and the working of the State.

A sensational case occurred in Zagreb in the middle of last month, when Dr. Accurti (formerly Public Prosecutor) and his wife were arrested on the charge of plotting with the Hungarians against the interests of S.H.S. One of the doctor's messengers was arrested when trying to cross the frontier, and on him was found a letter written in invisible ink to a Hungarian captain, by the hand of Madame Accurti. The messenger was induced to confess, and the whole pretty plot revealed; which was to enlist Magyar military aid at the psychological moment to break up the Union and to separate Croatia from Serbia. Accurti sprang into unenviable fame as the Public Prosecutor in the notorious treason trial at Zagreb in 1908 and 1909. The plot was discovered by the police, who are extremely competent, and was allowed to mature up to a certain point, when the authorities struck.

The purely economic strike of the colliers in Slovenia and Bosnia was eagerly seized by the Communists to prosecute their ends, and when the authorities announced that they would militarise the Bosnian miners a general strike was proclaimed in Zagreb and disturbances threatened in Belgrade. But the authorities were equal to the occasion. Wholesale arrests of agitators took place in Bosnia, and it was found that they were almost without exception foreigners, apparently chiefly Hungarians. In Zagreb the strike fell flat. There was a scuffle when the police, with rifle butts, scattered a Communist meeting, and a few shots were fired into the air, but no greater damage seems to have been done than the loss of a number of hats.

To ensure order in the town the sale of alcoholic drinks was forbidden for several days; so New Year festivities were quiet; and, besides, all cafés and restaurants were closed at nine. No newspapers appeared over the week-end. The most obvious result of the so-called strike was the cessation of the constant rumble of the trams and the closing of the shops for a day. It is rumoured that all prominent Communists and leaders have spent their New Year's Day under preventive arrest. A similar state of affairs seems to have obtained in Belgrade, where the police had no difficulty in scattering one meeting which threatened to be obstreperous.

Strong Action by the Government.

The swan-song of the Vesnitch Cabinet was a proclamation declaring the firm intention of the Government to fight with all its resources the hostile and revolutionary movement inspired from abroad by enemies of the country, consisting chiefly of pro-Hapsburg Magyars, international Jews, and Russian Bolshevik agents, who mostly supplied the funds. It was announced that a comprehensive Bolshevik plot had been discovered to bring about a revolution, murder several Ministers and other prominent persons, and proclaim soviet republics all over the place.

The Communists were well organised and supplied with funds. They had a wireless telegraphic service, and had prepared a simultaneous attack upon banks and State treasuries. They had secret agents all over the country, even in many Government departments,

including the telegraph office; they were in touch with Moscow, through Roumania, Hungary, and Bulgaria; and their numbers were swelled by large numbers of women and children whom they had succeeded in misleading. It is believed that their plan was to murder M. Vesnitch, M. Drashkovitch (Minister of the Interior), Dr. Yankovitch (Minister of Agriculture), General Yovanovitch (Minister of War) and the Crown Prince himself. The assassins were to be chosen by lot. The colliers' strike was to be the first step towards disorganising the country.

The Government promptly arrested about two hundred people in Belgrade, seized all meeting places of the Labour Party, confiscated their papers and their funds, forbade strikes and meetings. All foreigners in any way connected with Bolshevik or revolutionary propaganda will be expelled from the country, any attempt at propaganda will be severely dealt with, and all State aid will be stopped from the families of any person in any way connected therewith. The Labour Party suffers from its association with the Communists, and its newspapers are suppressed. There has been a wholesale arresting of people all over the country who have been in any way connected with the propaganda.

The New Cabinet.

After taking these energetic steps the Vesnitch Cabinet resigned; and the new Cabinet, under M. Pashitch, consisting of an equal number of Democrats and Radicals, took the oath. They take up the reins of Government at a critical moment; but it seems that they are as determined as their predecessors to see that the Constituent Assembly carries out its great duties in freedom and peace. The new Cabinet is interesting as being the first step in the inevitable fusion of the two great parties, Democrats and Radicals. Of the former, M. Drashkovitch, Kosta Stoyanovitch, and Svetozar Pribitchevitch retain their portfolios of the Interior, Finance, and Education respectively. Dr. Henrik Krizman (Democrat) migrates to Mines and Forests, leaving Social Policy to the Radical Dr. Milivoje Yovanovitch. The representatives of the Narodny Club, of course, leave the Cabinet. The Radicals have Dr. Slavko Miletitch as Minister of Posts and Telegraphs, M. Nikola Uzunovitch as Minister of Agrarian Reform, and M. Mark Trifkovitch as Minister of Justice and of the Constituent Assembly and Unification of the Laws. General Branko Yovanovitch remains Minister of War. Dr. Vyekoslav Kukovec (Democrat) is Minister of Commerce. M. Pashitch carries the portfolio of Foreign Affairs, together with the Presidency of the Council. Unfortunately, scarcely was the decree signed when M. Kosta Stoyanovitch (Minister of Finance) was taken suddenly ill and died. His successor, who must be a Democrat, has not yet been named.

A Powerful Coalition.

Thus, the Democrats and Radicals have buried the hatchet, and it is to be hoped that henceforth they will work in harmony for the good of the State. It will be noticed that M. Stoyan Protitch is not included in the Ministry. In view of his rigidity of character and implacable hostility to M. Pribitchevitch, this is entirely in the interests of peace. It is the Radicals who are inevitably identified, in spite of all their faults, with the tremendous events of the later part of the war, and it is the Democrats who have fought for the complete unification of the country, and include in their number the survivors of the Independents, Progressives, and other now obsolete anti-Radical parties. The new coalition of the two strongest parties in the State bids well for a settled and considered programme, and no better combination could have been found to steer the ship through the fateful days of the Constituent Assembly. They will surely be supported by the Socialists and the Peasants of Serbia, the Voivodina and Bosnia, while the Radicals will be supported

by the Bosnian Moslems. This fusion is one more instance of the essential patriotism and solidarity of the Serbs, who fight like Kilkenny cats among themselves, but on the first appearance of an outside danger close up their ranks and present a common front to the enemy. Austria never could understand this, and always made the mistake of counting too much upon apparent internal quarrels in Serbia. And now again to-day, pro-Hapsburgites and reactionaries, Hungarians, Bulgar Chauvinists, Bolsheviks, and d'Annunzio have been making the same mistake. They have joined forces in their common blind hatred of the Union, but are coming to grief on the rock of the South Slav sturdy character.

ROUMANIA.

BUCHAREST, January 2.

Parliament and the Cabinet.

Parliament rose on December 31 for the Orthodox holidays, and will not reassemble until January 25. The week was an uneventful one in the Chamber, being devoted chiefly to discussing the King's Message, though considerable sums were voted for railway reconstruction.

The death of M. D. Grecianu and the resignation of M. O. Taslauanu having created vacancies in the Cabinet, M. Mihail Antonescu is to take over the Ministry of Justice, and M. J. Popovici has been appointed Minister of Public Works.

Visit of M. Stambolisky.

M. Stambolisky, the Bulgarian Prime Minister, is expected to arrive in Bucharest from Prague on January 4. It is understood that the object of his visit is to exchange views with the Roumanian Government on the resumption of economic and political relations between the two countries. M. Stambolisky will be accompanied by MM. Kissinoff, Bulgarian Minister at Athens; Karakasoff, the Director-General of Bulgarian Railways; Miloseff, general manager of the Sofia Bank; and Mlle. Stancioff, the Prime Minister's secretary.

The Bulgarian Minister in Bucharest, M. Nedkoff, has presented his credentials to the King.

The Krefeld Camp Trial.

The special military court which has been for over three months trying the Roumanian ex-prisoners from the officers' camp at Krefeld has at last passed sentence on the accused. The principal charges against them was that they returned to the occupied territory of Roumania with the consent of the enemy, and that they gave a written undertaking that they would not take up arms again against the Central Powers. A number of these officers were also charged with surrendering to the enemy, and with assisting Colonel Sturdza in the propaganda by which he sought to spread the idea of forming an army to fight against the Russians, and consequently against the Roumanian Army. Others were accused of having accepted missions to go to the prisoners' camps behind the German lines in order to collect information concerning the Roumanian Army, and to distribute literature with a view to bringing about desertions. Yet another charge was that of having held posts under the Germans.

The sentences passed were as follows:—The chief culprits, Colonel A. Sturdza and Second-Lieutenants Wachmann and Negresen, who are still absent from the country, have been sentenced to penal servitude for

life. Colonel Stavroche, charged with surrendering with the brigade that he commanded and with aiding Colonel Sturdza, was sentenced to five years' penal servitude. Sentences of imprisonment ranging from one to four years were passed on eight other officers, and forty-six of the accused were acquitted.

GREECE.

ATHENS, January 3.

The History of a Decoration.

Shortly after King Constantine's return to Athens His Majesty awarded to the Chief of the British Naval Mission to Greece, Vice-Admiral Kelly, the Grand Cross of the Order of the Saviour. Two days later, however, the British Minister in Athens, Earl Granville, called on the Greek Prime Minister, M. Ralli, returning the decoration to him and informing him at the same time that the British Government would not authorise Admiral Kelly to accept it. Soon after the departure from the Ministry of Earl Granville an extraordinary Council of Ministers was held to discuss the question of the decoration. On the following day a statement was published in the papers to the effect that the Grand Cross of the Order of the Saviour was conferred upon Admiral Kelly in his capacity of an officer of the Hellenic Navy, but as the British Government did not authorise its acceptance the Greek Government would not insist on this point any further.

Practically every paper in Athens has commented in leading articles upon the incident. The *Patris*, a Venizelist organ, says:—"M. Ralli ought to have foreseen that the decoration conferred upon Admiral Kelly by the King would not be accepted. The result is that Greece has received an affront which she did not deserve. This would not have happened if those governing had any conception of national dignity." The *Ethnos* (Venizelist) says that the incident is without precedent in history, and any other Government responsible for such an affront would have resigned." The *Politia* (Royalist) writes:—"The return of the decoration awarded to Admiral Kelly is a continuation of the Allies' policy towards the new régime in Greece. Its acceptance would have meant a change in this policy, but in any case the Government ought not to have challenged the Allies to display their defiance and reserve."

The Hellenic Government had also decided to award a decoration to the Chief of the French Military Mission to Greece, General Gramat. In order, however, to avoid a repetition of Admiral Kelly's incident the Government took steps to ascertain whether the French Government would authorise General Gramat to wear the decoration. The French Government replied through its Minister in Athens, M. de Billy, that it could not, in the present circumstances, grant the necessary authority.

The British Colony.

The British Club in Athens gave a very successful dance on New Year's night. Amongst those present were the British Minister, Earl Granville, and Countess Granville, Vice-Admiral Kelly, R.N., and Mrs. Kelly, Colonel Sir Frederick Halliday, Chief of the British Police Mission to Greece; Colonel Hoare-Nairne, Military Attaché; Mr. Bentinck, Counsellor of the Legation; Mr. Dodd, Secretary of the Legation; Mr. Atchley, Secretary of the Legation, and Mrs. and Miss Atchley; Mr. Donaldson Rawlins, Commercial Attaché, and Mrs. Donaldson Rawlins; Captain Hays, R.H.N., and Mrs. Hays; Captain Cope, R.H.N., and Mrs. Cope; Commander Wethey, R.H.N., Chairman of the Club Committee, and Mrs. Wethey; Major R. Murray Meikle, managing director of the Levant Co. (Greece), and Mrs. R. Murray Meikle; Mr. Luard, President of the British Chamber of Commerce in Athens; Colonel Schellenberger, American Military Attaché; Miss Capps, daughter of the American Minister in Athens; and many others, the total attendance numbering a hundred and fifty. Colonel Sir Frederick Halliday, in command of his well-known jazz band, the members of

The Greeks in Bulgaria.

The Greek Chargé d'Affaires in Sofia has notified the Hellenic Government that the Bulgarian Government has issued orders for the release of all Greeks accused of having damaged property belonging to Bulgarians. The Bulgarian Government has likewise released all Greeks residing in Bulgaria who, in accordance with the law, had been sent to prison on a charge of becoming rich during the war.

A Torchlight Procession.

A torchlight procession in honour of the correspondents of foreign newspapers at present in Athens took place last Sunday evening. The torch-bearers, singing the "Son of the Eagle," passed up Stadium Street, Constitution Square, Kifissia Boulevard, and thence past the Royal Palace in Herode of Attica Road. The King and the Royal Family watched the procession from one of the balconies of the Palace.

The "Salamis."

A few months before the outbreak of the war the Greek Government had placed an order in Germany for a large cruiser, which was to have been given the name of Salamis. The Minister of Marine has now decided to send a commission to Berlin for the purpose of cancelling the contract and recovering the deposit of twenty-five million drachmæ which was at the time paid by Greece.

TURKEY.

CONSTANTINOPLE, January 10.

Mr. Lloyd George Contradicted.

A considerable flutter has been caused in Turkish political circles by the emphatic contradictions on the part of Turkish statesmen of Mr. Lloyd George's statement in the House of Commons on December 22 to the effect that, while the Treaty of Sèvres was being drawn up, the Allies were informed that Turkey would be willing to sacrifice Thrace and Smyrna in return for being allowed to remain in possession of Constantinople. It will be remembered that when Ali Riza Pasha's Cabinet first came into power, Tewfik Pasha collaborated with Mustapha Reshid Pasha at the Ministry of Foreign Affairs until Sefa Bey became Foreign Minister in the same Cabinet. Ali Riza Pasha, Tewfik Pasha, and Sefa Bey were the first to deny that any such overture had been made by the Turkish Government at any time during their tenure of office. The inference was that Damad Ferid Pasha was the guilty individual, but that veteran statesman also denied that the overtures made by his administration concerned anything more than the affirmation of Turkish rights according to the principles enunciated by President Wilson. "What is truth?" said jesting Pilate, and stayed not for an answer. Bacon was right—it is rather a waste of time upon certain occasions.

The Government Mission.

Rumour has been very busy with regard to the mission that is negotiating with the Nationalists at Angora for the purpose of effecting a reconciliation between the Nationalists and the Central Government. It was authoritatively reported that the mission left Angora for Ineboli and Constantinople on December 29, but so far it seems to be true that no news whatever has been received officially or otherwise concerning the alleged departure. On the other hand, it would seem to be true that the Government actually sent a communication to Izzet Pasha instructing him to return with all his colleagues as soon as possible. Exactly what is happening at Angora is therefore a matter for conjecture. In some quarters it is confidently asserted that neither Izzet Pasha nor any other member of the mission intends to return, but that they all have definitely thrown in their lot with the Nationalists. These affirmations are probably based upon announcements in the Anatolian Press, to which reference has been made in previous letters, but which really amounted to nothing more than a statement that Izzet Pasha and his colleagues had accepted the Nationalist point of view; although another

construction was justifiable in view of the ambiguous nature of the announcement. In other circles, it is believed that the Nationalists are preventing the mission from leaving and from communicating with the Central Government, because an offensive is about to be commenced against the Greeks, and the measure is a precaution against the leakage of information. There is something to be said for this point of view, because it is a fact that the fighting which has been in progress recently in the neighbourhood of Oushak has suddenly become more violent and has spread to the Broussa area. It is also an open secret that the Nationalists have been planning an offensive on the western front for some time. In the meanwhile, however, the position of the Government is becoming critical on account of the complete lack of funds. Schools are being closed down, officials are absenting themselves from their work, orphanages and refugee institutions are unable to feed their charges, and the widespread distress is daily becoming more acute. In such circumstances, unless the mission returns very shortly, a Cabinet crisis is almost inevitable.

The Caucasus.

In the Middle Eastern theatre a complicated situation, in appearance, at all events, has arisen. There seem to be clear indications that the Bolsheviks and the Turks are profoundly distrustful of each other, and the Turks particularly are taking no risks, if they can be avoided. Circumstances, at the present moment, are rather in favour of the Turks, because wintry conditions are preventing the Bolsheviks from maintaining any considerable forces in territory adjacent to Turkey. Thus the Bolsheviks are compelled to rely almost entirely upon diplomatic methods. In this connection the arrival in Angora of the notorious Bolshevik Bodu Mdivani is of considerable interest at the present juncture, and it may be safely surmised that his object is to assure the Nationalists that "Codlin's the friend."

The activity of the Georgian Foreign Office is also of considerable interest at the present moment. The precise situation is not altogether clear, but it is certain that Georgia's position is such that the Bolsheviks have only to move for a Soviet Government to be established in Tiflis as in Erivan. A Georgian delegation under Simon Gurkevitch, vice-president of the Georgian Assembly, has reached Angora, and it is said that the Turks have concluded an entente with the Georgian Government whereby the latter is assured of Turkish neutrality in the event of a conflict with Russia, and of immunity against a Turkish attack upon Batoum. The Georgian Government will probably discover that the Turks have never made a promise yet through which a camel could not pass.

CYPRUS.

December 17.

Greek Opinion on the Outlook.

There is little new to say regarding the "Union" agitation. The situation resembles that which followed similar replies of the British Government to previous deputations. The Greek leaders, after another check, continued the chase. They have declared for continued efforts, but are in favour of the incorporation of fresh elements, so as to form a larger representative body. The agitation has hitherto been mainly directed by but few actual workers, the most active and demonstrative being of the Limassol group, with a strong collaboration, as time went on, from Nicosia, and latterly from other towns, with

their clubs, committees, and newspapers. The average town Cypriot goes somewhat passively with the stream, with little real enthusiasm; but is ready to take part in demonstrations and to avoid any outward appearance of lukewarmness that would prevent social harmony or amicable meetings at club or coffee-house. When you come to the rural districts, there is really merely a parrot-cry, which becomes more shrill in the *komopolis*, or large village, or in some particular localities. But if the truth were known, it is doubtless a fact that many of the more thoughtful would candidly confess that they cannot see where any advantage to the island could come in by a change of administration; and that the cry for union is in reality purely sentimental. Moreover, the present outlook in Greece may well strengthen misgivings. It may be shrewdly suspected that Greece might gain something at the expense of Cyprus, but hardly *vice versa*.

December 23.

Attitude of the Greeks.

The Greek papers publish a number of addresses, letters, and telegrams that have emanated from the promoters of *enosis*. There is a long address to the people, signed by the nine elected non-Mohammedan members of the Legislative Council, explaining the reasons for their resignation, and stating that the people now have an opportunity of forcibly expressing their views and wishes. Then there is a communication to the officer administering the government stating that the members would be inconsistent, and fail in their duty and sacred trust, if they did not declare how much the *amour-propre* of the Greek community had been wounded, protest emphatically against the decision of the British Government, and affirm their unalterable desire for freedom from a "foreign yoke." Circumstances, they allege, compel them to resign in a body; and they request that their communication may be forwarded to the Secretary of State for the Colonies. The Greek Archbishop, on his part, takes separate action. He has written to the O.A.G. complaining that martial law is still in force, and that a late member of the Legislative Council, Mr. N. Laniti, has been summoned before a court martial on account of a recent political speech criticising the decision of the British Government. Mr. Laniti, whose language is certainly calculated to incite people to disaffection, has been warned that he renders himself liable to expulsion from the island. His Eminence has also telegraphed to the English Press and to various politicians and friends of Greece in England, that certain statements of the Under-Secretary of State have "raised a storm of indignation." To the Greek Press he has telegraphed stating that co-operation (with the Government) is now impossible, and that the struggle must be maintained. "We call," says the telegram, "upon the Hellenic nation, and the friends of liberty and justice everywhere, to aid in the sacred struggle for our country." He has also telegraphed to French and American papers.

Mr. Theodótou, late M.L.C., who is also a member of the Executive Council, has resigned his seat on that body. The leaders have thus definitely proclaimed that collaboration with the Government is out of the question, and that a campaign will henceforth be maintained by a full Committee of Bishops, former and late Members of Council, and mayors of towns. Prayers are to be offered in all churches, and collections to be made on Sundays and official festivals, in aid of the cause.

The local papers, which are largely occupied with Hellenic affairs, support all the proposals; but apparently not one of them takes any wider view of the situation, or makes the slightest attempt to explain the obvious reasons—very well known to themselves—for the decision of the British Government. They run in blinkers and can only look along one road. Articles and speeches constantly end with the everlasting "Union, only union, and nothing but union."

ASIA MINOR.

SMYRNA, December 28.

Venizelist Demonstration.

The Smyrna Greeks have kept to-day, the birthday of Venizelos, as a general holiday. All the shops in the principal streets have closed. The few shopkeepers who refused at first to close their premises were compelled to do so by the various Venizelos committees. In one or two instances where shopkeepers refused to close their premises, and invoked the aid of the Greek soldiers, the Venizelists stood up to the bayonets of the soldiers, and defied them to strike. The soldiers, however, gave way and the premises were closed.

India, the weekly organ in this country of the Indian National Congress, has ceased publication, its last number being dated January 14. It was founded thirty years ago.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE EGYPTIAN SITUATION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In his important and extremely interesting letter, which you published in your issue of January 13, on the Egyptian situation, Coles Pasha makes several references to my summary of, and comments on, the Milner proposals in the December number of the *Nineteenth Century*.

In dealing with the question of the "Protectorate," he writes: "I take it that a Protectorate means a Crown Colony." In this I think he is wrong. If a Protectorate was the same thing as a Crown Colony, then the Egyptians would have become British subjects, as the inhabitants of a Crown Colony are the subjects of the British Crown, and bear allegiance to King George V. The Egyptians are not British subjects, and never have been, and the only allegiance they bear at present is to the Sultan.

In my opinion, therefore, he is wrong in stating that "we start in fact from the Crown Colony basis." The problem would be much simpler if we did, and the essential difficulty of the present situation lies in the fact that we start from the basis of a Protectorate, the precise implication and meaning of which was not defined when it was proclaimed, and has not since been defined. The only thing that was defined when the "Protectorate" was proclaimed was the right of the British Crown to select the Sultan of Egypt, and I agree with the last paragraph of Coles Pasha's letter, in which he lays emphasis on the possible results of any surrender of this right. If we do surrender it, I think it should be part of the Treaty of Alliance contemplated by the Milner proposals, that the ex-Khedive, Abbas II., should be debarred under any circumstances from restoration to the Egyptian throne. The new organic law will have to contain the law governing the appointment and succession to the Sultanate, and this is why I suggest that the organic law should be made an integral part of the Treaty of Alliance which the Egyptians could not violate without at the same time violating the Treaty of Alliance.

I had not seen the article of Sir Malcolm McIlwraith when I wrote my article in the *Nineteenth Century*, but I am inclined to agree with him that the chief difficulty presented by the Milner proposals lies not in any difficulty in effecting the Treaty between Egypt and the British Crown, but in the far greater difficulty of effecting the necessary collateral Treaties with foreign Powers who have hitherto enjoyed rights under the Capitulations, especially in connection with the proposed mixed criminal courts. In fact, I maintain, the main problem before the Egyptian leaders lies, not so much in the consideration of the future relations between Egypt and the British Empire, but in securing the assent of twelve other foreign states to the "bringing of all the various nationalities under the laws of Egypt," which I agree with Coles Pasha is the only solution which will be ultimately satisfactory from both the British and the Egyptian point of view.

May I once again repeat the appeal with which I concluded my article in the *Nineteenth Century*, that the whole matter may be settled one way or the other without further delay? The continued procrastination in the announcement of the final intentions of the British Government is as exasperating to every Englishman who is working in Egypt as it is to the Egyptians, and to the foreign communities resident in that country.—I am, etc.,

W. ORMSBY GORE.

5, Mansfield Street, W.1.

January 13, 1921.

THE LATE J. D. BOURCHIER.

A Bulgarian Tribute.

Mr. P. M. Mattheoff sends us from Sofia the following appreciation of the late Mr. J. D. Bouchier, dated January 6:—

J. D. Bouchier, Balkan correspondent of *The Times* for the past thirty-three years, died suddenly on December 30. About eleven o'clock in the evening he complained to the waiter of the hotel in which he resided of internal pains, and asked for a doctor. The doctor came, attended to him, and left him asleep. At 8.30 in the morning of the 30th he was found dead in bed.

Bouchier came to Bulgaria in 1888 as *The Times* correspondent. He has since acted for his paper in Greece, Roumania, Serbia, and Bulgaria, his preferred residence being in Sofia. During his long residence in these countries he acquired a unique and complete knowledge of the Balkan lands and the nations inhabiting them, and of the statesmen and leading men who guided their destinies. He came to possess a thorough understanding of the aspirations, pretensions, and ambitions which divided these nations; knew where these clashed and where

a little goodwill and common sense on both sides might have conciliated them; where chauvinism was rampant and impossible to reason with. The knowledge he possessed and his honesty of purpose gave him great opportunities to accomplish good work in bringing these nations to a better understanding among themselves. He more than once initiated and conducted with zeal important negotiations to that effect. Events, however, in the Balkans moved too fast, rivalry was too acute, chauvinism rendered conditions inextricable because of the ever-present jealousy and even bad faith.

Bourchier lived to see Bulgaria, whose rights he most disinterestedly championed, fall into the hands of thieves, to see her in the extremest distress, undergo catastrophe after catastrophe. He had borne testimony to Bulgaria's brilliant progress and development; he rejoiced greatly and with pride when she was on the point of attaining her national ideal, the reunion of the Bulgarian race: he grieved to see Bulgaria side with the Central Powers in the last war, disastrous for all; but he did not blame her. He died with Bulgaria before his eyes humiliated and cruelly rent asunder.

Bourchier worked honestly, ideally, and equally for all the Balkan countries, but he certainly gave more of his mind and time to the country which most needed his help, unhappy, unfortunate—blundering, if you please—Bulgaria. Few are the Bulgarians who have not met him; there is not one who has not heard his name. There is not a corner of the Bulgarian lands that he has not visited, and his death has been a shock for all Bulgarians. The whole country is in mourning.

A State funeral was accorded to him, conducted as for an Orthodox. He lay in state in the Cathedral for three days. The funeral service was most imposing. It was performed by the Archbishop, with the assistance of all the clergy present in Sofia, and representatives of the King, the Staff of the British Legation, the Ministers, the military and civil functionaries, and delegates from the country were present. The square outside the church and the streets through which the procession passed were black with dense crowds; shops and business places were closed. The first wreath placed on the catafalque was that of the King; there was one from the British Legation and another "from *The Times*, London."

Sir Arthur Peel, British Minister, paid tribute in well-chosen words to the sterling qualities of the departed (his former master at Eton), and to the services he had rendered to this country, which held him in such high esteem and love. Sir Arthur was followed by a journalist and by the President of the Macedonian Brotherhoods. The coffin was carried into and out of the church by members of the Press. The weather was magnificent and the procession a wonderful sight. The coffin was finally closed and placed in a specially prepared lorry, which at once started for the Rilo Monastery.

The Rilo Monastery is an ancient national sanctuary situated in a valley in the midst of the highest summits of the Rhodopes. The burial-place is a beautiful spot just outside the monastery, in accordance with the deceased's expressed wish.

The constancy, the intrepidity, and daring with which Bourchier laboured in defence of right and justice have endeared him to Bulgarians, wherever they live, and his name in itself will be a national monument. Generations upon generations will wend their way to the beautiful spot, where lie his remains, to utter a blessing and offer a prayer for the great-hearted, noble Briton.

PRESS ON THE NEAR EAST.

Hellenism.

The *Morning Post* of January 7 contained an interesting article written by its Rome correspondent on "The Phanariotes: Byzantium versus Athens." "Owing to our regrettable habit," he says, "of not treating Greek history as a whole—

we are apt to ignore the fact that modern Greece is the grand-child of classical Hellas, but the child of mediæval Byzantium. From 1453, when Constantinople fell, down to the War of Independence, of which 1921 will be the centenary, the traditions of the Byzantine Empire—a great and often unjustly calumniated name—were worthily continued by the (Ecumenical Patriarchate. That institution, more national than the Papacy (for the (Ecumenical Patriarch was always a Greek, while the Pope, before 1523, was frequently not an Italian, and during the Avignon captivity always a Frenchman), was thus for three and a half centuries the outward and visible head of Hellenism, at a time when Athens was still a small provincial town and the now busy Piræus a single warehouse. Not only so; but down to the erection of the Bulgarian Exarchate in 1870 the (Ecumenical Patriarch was the ecclesiastical head of the so-called "Greek" Christians of the Balkans, not only Greeks, but Bulgars, Serbs, and Roumanians also, and the division between them and the Turks was by religion and not by race.

Even now, although the creation of an independent Greek Kingdom in 1832 involved the erection of an autonomous Church in Greece proper (finally recognised in 1850 and 1852), still in matters of dogma "the Great Church" of Constantinople retained its pre-eminence. Thus, the markedly pro-Venizelist and anti-Constantinian policy of the (Ecumenical Patriarchate—there is at present no (Ecumenical Patriarch, for the last was deposed during the war, and the (Ecumenical Patriarchate, pending a new election, is in commission—must needs exercise considerable influence upon the Hellenic world. This means that, if Athens be Royalist, Byzantium is Venizelist. If Athens has rejected the modern Perikles, Byzantium has repudiated the new Constantine and the new Sophia. And it was Byzantium, not Athens, which saved Hellenism from the Bulgarians, retook Crete from the Saracens, and, in fact, anticipated the deeds of M. Venizelos a thousand years ago. But it was not only the ecclesiastical circles of Constantinople that exercised a great influence upon the fortunes of Hellenism. From the "Lighthouse," or "Phanar," quarter of Byzantium sprang those Phanariotes, who were for long the intellectual leaders of the Greek race. The Phanariotes had their faults of character, but they, as their name implied, were a "lighthouse" of culture in the dark days of Turkish Greece. From them, between 1716 and 1822, came the Princes, or *Hospodars*, of the two Danubian Principalities, Wallachia and Moldavia, the nucleus of the present Kingdom of Roumania. From them still earlier came the chief interpreters of the Porte and the Dragomans of the Fleet—the brains, in fact, of the Turkish service. They never forgot their own people, and more than once were the means of saving them from annihilation.

He proceeds to give examples of Phanariotes who have conspicuously served their country, and continues:—

In the early years of Athens as the capital of the new-born Kingdom, the Phanariote Society represented the most cultured element there, as was natural from its long traditions, by the side of such ancient indigenous Athenian "anchoritic" families as the Benizeloi, from whom M. Gennadius, the learned ex-Minister of Greece in London, is on his mother's side descended.

The "unredeemed" Greeks, as one of them recently said to me, are against Constantine—and the "unredeemed" Greeks are a powerful factor. What Byzantium thinks to-day Athens may think to-morrow, especially if the Allies give Constantine plenty of rope and plenty of time to make mistakes. The Royalist leaders are only united by their antagonism to M. Venizelos; otherwise there are as many schisms among them as there were in St. Paul's day in the Church of Corinth. Constantine, if left to his own devices, is much more likely to become unpopular than if he be converted into a martyr. Our true policy is to watch events carefully, not to allow ourselves to be fooled by him twice, and to place no confidence whatsoever in the promises and explanations of new-born "friends of the Allies" with or without aggressively German names, or even with aggressively British ones.

Articles to Note.

"The Revulsion in Greece," by Professor A. J. Toynbee, in the *Contemporary Review* (January).

"The New Era in India," by Stanley Rice, in the *Fortnightly Review* (January).

It is stated that at a recent meeting of members of Cambridge University interested in Oriental archaeology it was agreed to offer the University twenty pounds annually to enable it to become a subscriber to the British School of Archaeology in Jerusalem. This subscription will entitle the University to nominate one student at the school. There would seem to be little doubt that in the future all systematic exploration and excavation will be conducted through this school and the associated French and American schools.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

I.—THE DESPATCHES OF SIR ARCHIBALD MURRAY.

On January 9, 1916, General Murray took over the command of the Mediterranean Expeditionary Force from General Sir C. C. Munro. The Dardanelles adventure was just over, and troops were pouring into Egypt both from there and through the Suez Canal from India and Australia. The Commander-in-Chief's most urgent problem was the defence of this Canal—and all Egypt—from an attack from the East. To the West of Egypt the Senussi, with many restless tribes, threatened disturbance, and all the larger oases had to be occupied. Along the coast towards Tripoli active raids and reconnaissances were in progress. Even the forces collected in Salonika, under the command of Lieut.-General Sir B. T. Mahon, were under General Murray's control "for administrative purposes," and Cyprus for a time called for some attention. Amid all this remained the constant pressing calls from France for more men, and tens of thousands of soldiers had to be passed on from Egypt, on several occasions at the expense of the disorganisation of plans of offence already arranged for against the Turk. These four despatches, now first printed uncensored, give an account of all these operations.

The first despatch contains an account of the organisation of the Canal defence and of numerous minor operations, both on the Eastern and Western frontiers. Though mostly successful, there was a serious setback at Oghratina and at Katia, where the greater part of three squadrons of Worcestershire Yeomanry were overwhelmed. The advance eastwards, however, was soon resumed. The second despatch centres round the very important victory of Roumani. Originally a carefully organised attack on us, the repulse of the Turkish forces was followed by our rapid advance, whereby thousands of prisoners and great quantities of munitions and stores were captured. Lieut.-General the Hon. H. A. Lawrence was in command, and is here deservedly given the "warmest praise."

The third despatch, dated March 18, 1917, carries the account of a continued successful advance right up to the frontier of Palestine, in which the battles of Magdhaba and Rafa were notable achievements. For these successes special credit is paid to Lieut.-General Sir Charles Dobell and Lieut.-General Sir Philip Chetwode.

On the Western frontier of Egypt the dramatic capture of the Siwa oasis in February by a fighting force of "three light-armed batteries and three light car patrols of six cars each," was an event as momentous as it was unique. When one recalls how much had been written of the danger of the Senussi, the destruction of the forces and the headlong flight—unfortunately not the capture—of the famous Sayad Ahmad and Mahommed Salih were great events.

The fourth despatch, dated June 28, 1917, contains an account of the two much-discussed battles of Gaza. Here especially censorship was exercised during the war, and it is only just that the constantly changing attitude of the War Office, which must necessarily have greatly embarrassed General Murray's plans, should now be revealed. A letter from the War Office is published as a "Foreword," as a condition of the publication of the full text of General Murray's original despatches. In this it is pointed out that "the various changes of policy on which stress is laid in the first part of the (fourth) despatch were based not merely on local considerations connected with the campaign east of the Suez Canal and adjacent theatres of war, but on a general review of the course of the war as a whole, including such considerations as the development of the German submarine campaign, the failure of General Nivelle's offensive and the extension of the British line on the Western Front, Allied policy in the Balkans, and the course of events in Russia." A want of recognition of this is apt to create a misleading impression, but it is only fair to add that the suppression of the "various changes of policy" has been unfair to General Murray, as it was very largely responsible for the setback at Gaza and the popular verdict upon it. The first battle of Gaza was an attempt to take the town by a bold and sudden stroke; apparently it very nearly succeeded. "Though the *coup de main* just failed, the military results, in my opinion, justified my anticipations." Indeed the General calls it "a most successful operation," a view taken by the Press at home on the publication of the first news. Probably it was this too roseate Press view which caused the

public to go to the other extreme when the failure to take Gaza became known a few days later.

Of the second battle of Gaza in April it cannot be said that the account here given does much that is new in its defence, even though the results were not without importance. Politically it did no good. It was a frontal attack upon a position which since our first attempt had become a veritable fortress, protected by earthworks, wire, and cactus hedges, and held, according to this despatch, by some five divisions of Turks—a force much larger than our own. General Murray had been starved of reinforcements, and obviously, it is now clear, had insufficient men for such an attack. All hope of a surprise was gone, and that alone could have given success. Tanks, of a primitive make, proved a failure. Our casualties were 7,000, and though General Murray estimates the Turkish loss as greater, it is difficult to see how he supports his figures. Obviously General Dobell and his divisional commanders were right in advising General Murray to break off the engagement. The brighter side is that the ground gained was consolidated on April 20. "No ground, in fact, gained on that day has since been lost, and the position to which we then advanced has facilitated and will facilitate further operations."

Were these despatches the end we might view them differently, but the crown is laid upon General Murray's work by Field-Marshal Viscount Allenby, who says:—

"I reaped the fruits of his foresight and strategical imagination, which brought the waters of the Nile to the borders of Palestine, planned the skilful military operations by which the Turks were driven from strong positions in the desert over the frontier of Egypt, and carried a standard gauge railway to the gates of Gaza. The organisation he created, both in Sinai and in Egypt, stood all tests, and formed the corner-stone of my successes."

This volume, beautifully printed and bound, is a commentary on the above words, and, we venture to say, forms a far better and more dignified answer to public criticism than some books which have been published, manifestly of a controversial nature, by other military leaders. These documents are submitted to the verdict of history alongside Allenby's own despatches, and there is little fear what the verdict will be. The second battle of Gaza was an incident in a brilliant campaign, and in the long run it became a link in the chain of our final success.

It should be added that, besides some fine portraits and some sketch maps, there is a portfolio—in book form, containing four splendid maps—the Turkish Empire, Egypt, Sinai, and South Palestine, which illustrate every point in the military operations described. The whole publication is most handsomely got up, and should be widely circulated.

E. W. G. M.

II.—ADVENTURES IN ANCIENT EGYPT AND ELSEWHERE.

What strikes us most about this collection of six short stories by Sir Rider Haggard is the variety of his choice of subjects and the way in which he can command a definitely separate style of writing to fit each. The first story, which gives its title to the book, is a perfect blend of humour and romance, and is absolutely successful as a whole. It is charming from the moment when Ebenezer Smith, in the British Museum, first catches sight of a cast of the head of an unknown Egyptian queen, and loses his heart to that sweet face with its strange, inscrutable smile. We follow with delight his subsequent adventures, and learn how he discovers the tomb of his beloved—Ma-mee; how he is accidentally locked into the Museum at Cairo on the night when all the rulers of ancient Egypt are allowed to assemble and talk, how he both sees his beautiful queen, and has speech with her, and is left to the end of his days wondering whether this marvellous experience was all a dream or not.

The longest of the stories, "Barbara Who Came Back," is a pretty, old-fashioned love story, until Barbara dies, and then makes her great sacrifice by choosing to return to earth in a fresh incarnation in order to save another's soul.

Descriptions of "the other side" which—in spite of the best intentions to describe a state of spiritual and perfect happiness—must be translated into the terms of material comfort, or rather luxury, are always difficult to bear with patience.

In "The Little Flower" the author does succeed in making us picture very clearly that ardent, though not very wise, missionary, Thomas Bull, his wife and little daughter, and the tribe whom he struggles to win for Christianity from the influence of the powerful witch-doctor, Menzi. The story is, however, rather spoilt by the clumsiness of the machinery that is used to bring about Menzi's dramatic death.

Of the three remaining tales, two do not reach a very high level. The one which is presumably intended to make the reader's flesh creep quite fails to attain its object. But, in the third, Allan Quatermain's many friends will be glad to hear his deep voice telling the story of the heroism of "Magepa the Buck."

III.—"A HOLE CALLED BOMBAYEE."

It is not yet three centuries since Captain Weddell described how the Portuguese war-vessels, after a naval action, had retired to "a hole called Bombayee," and a hole, or, in other words, an anchorage, Bombay remained throughout the Portuguese period. Then came the East India Company, and laid the foundations of the city, which, under the leadership first of Scots and then of Parsees, has grown into the gigantic mushroom of to-day, presenting to its citizens all the complex problems of town life in their most aggravated forms. One of the most prominent of these citizens has now given us a description of Bombay as it appeared to his boyish eyes, and we think the predominant feeling of every reader will be gratitude to the veteran who has undertaken such a labour, even though it be a labour of love. And with gratitude will go admiration, for while there is no obvious art and a captious critic might point to various defects, Sir Dinshaw has given us a real book, one which serves its declared purpose, and at the same time can be read with interest and enjoyment. The writer takes us over the ground step by step, pausing on occasion to glance backward or forward, and never forgetting to pay a tribute to each hero of the old times. There are no men like them nowadays, says Sir Dinshaw, and we can only answer that there never were.

What, then, was Bombay like to live in sixty years ago? The man of to-day will probably reply that it must have been intolerable. Slums perhaps fewer, but as bad as now; open drains, or no drains at all; a water-famine every summer; no organised recreations; bitter sectarian controversies; and a dozen other objectionable features. Water-famines, of course, meant cholera, and also disastrous fires. Sir Dinshaw's grandmother instructed him at an early age in the truth of the aphorism that, come what may, a burglary is to be preferred to a fire, and there is no doubt that that is the Indian point of view. You are not ruined while the roof is on the walls. But against all these drawbacks must be set the blessing of space, plenty of room inside the houses, and plenty of room for small children to play outside. Space meant liberty, the unchartered freedom of Indian boys to play what and where they liked, which is nowadays so sadly curtailed in Bombay as well as Calcutta; and Sir Dinshaw looks back on the town hall not only as the scene of dignified ceremonials, but as a splendid place to play in, running up the steps and sliding down the banisters. So, altogether, Bombay was habitable in the 'fifties, though the life was not the life of to-day. Sir Dinshaw traces the beginning of the change which set in just then. There was a quickening of civic and commercial life; the railways were climbing the *ghats*; water was being brought to the city; gas-lamps were coming; banks were developing; and a start had just been made in what, looking backward, we may call the cause of all the woe—the erection of the cotton mills. Bombay attempted to pack not only Liverpool but most of Lancashire into one small and inconvenient island, with the waste spaces of all India lying just behind. There was room for a great seaport, but not for much more, and no one need be surprised at the congestion which has resulted. However, the mischief is done, and now the island has to be enlarged. When that is accomplished there will be yet another Bombay, and we hope that someone will leave as good a record of the city which is now to pass away as Sir Dinshaw has given us of the older city which he knew.

The Council of the Royal Institute of British Architects invite competition for the proposed Council Chamber to be built in Calcutta for the Legislative Council of Bombay. Premiums of £500, £250, and £100 will be awarded to the authors of the designs, and the winner of the first premium will be appointed to carry out the work in accordance with the Royal Institute of British Architects' scale of professional charges.

MUSICAL NOTES.

A Joint Recital.

On the whole there was much more to bless than to curse at the joint recital which Miss Mildred Allingham and M. Michael Doré gave at the Wigmore Hall on January 7. Despite the fact that Miss Allingham sang poorly poor songs by Havergal Brian, Goossens, and Cyril Scott, and despite the choice by M. Doré of such juvenile pieces as Paganini's "La Clachette" and Kreisler's "Schön Rosmarin," there was a good deal for which one was really grateful. First was a very charming sonata of Cervetto (exquisitely arranged by G. Salmon), played by M. Doré with a cleanness and straightforwardness that made the music a sheer delight. There is no need to go deep into such music as this—fortunately for M. Doré and ourselves—for technical efficiency and a modest temperament are all that is required to bring through its charm. Then there were the quite amazingly beautiful "Four Songs for Voice and Violin" of Gustav Holst, sung most reverently and feelingly by Miss Allingham. The words, which are taken from Miss Mary Segar's "Mediæval Anthology," are steeped in the Catholic spirit, and it is proof of Mr. Holst's deep and flexible sympathy that he has so purely conveyed that spirit. In the rhythm of these songs he has broken, not new ground certainly, but the links that bind composers to the old ground; he has returned to the freedom of the past. Very economically, most simply, and without any ostentation, he has put back the hands of the clock; it was possible during the singing of these songs to realise a little of the mediæval devotional spirit, a realisation hitherto made possible only in painting and in literature. The rich reticence with which Miss Allingham treated them deserves much praise, the beauty of her low notes being notable. She continued excellently in a group of foreign songs, singing Max Reger's "Maria Wiegenlied" and Joseph Marx' "Lob des Frühlings" in particular just as they are meant to be sung.

The Royal Philharmonic Society.

The connection between Beethoven and this Society is too well known to be told of here, and it was interesting to notice how the 150th anniversary of the composer would be observed. It seems pretty certain that, in spite of the older critics and the older public, Beethoven's reputation is declining—one cannot stop these things—and though in various recitals and other concerts the occasion was duly honoured by having the programme composed wholly of Beethoven, at the Royal Philharmonic Society's concert at the Queen's Hall on December 16 it was more fittingly honoured by having only one Beethoven composition—the "Coriolan" overture—in the programme. The main interest of the evening, however, lay in the first London performance of Arnold Bax's tone-poem, called "November Woods." Bax is one of the most often played of the younger school of British composers, and deservedly so, for he has a fine richness of imagination, and is developing a subtle and sure technique. But it was possible to admire "November Woods" only in details, for it was as a purely individual expression of mood before Nature that one heard. On this one hearing, I, at any rate, could get no impression of the cosmic spirit which most great works of like intent have; the attitude taken up was, where the painting was not merely realistic, wholly subjective, and to be subjective one must first be important. But rather than say anything about this work now, I would like to hear it again. It was vividly conducted by Mr. Hamilton Harty, whose imagination is in some ways akin to that of the composer.

In a different mood, and with less pleasure because of the sudden and total change, one listened to some extraordinarily good singing by the Philharmonic Choir under Mr. Kennedy Scott of some unaccompanied choral works of the sixteenth century. Both the technique and the tone of this choir are excellent, and their renderings of a motet of Sweelinck ("Hodie Christus Natus Est") and of a cradle song by Calvisius ("Joseph, lieber Joseph mein") were extremely beautiful. It is not often that one hears this old polyphonic stuff done nowadays; but its vitality and freshness are really astonishing.

PERSONAL AND GENERAL.

TO-DAY.

January 20 (New Style).
January 7 (Old Style).
Jumada I., 10, 1339 A.H. of the Moslem Calendar.
Shebat 11, 5681 of the Jewish Calendar.

Sir Milne Cheetham left London last week for Paris.

Lord and Lady Eustace Percy will shortly leave London for Egypt.

Viscount and Viscountess Astor have arrived at the Hotel St. George, Algiers.

M. Canellopoulos, Hellenic High Commissioner in Constantinople, has resigned.

The Hon. Mrs. Ronald Greville has left London for the South of France *en route* for the Sudan.

M. Constantin Constantinesco, Secretary to the Roumanian Legation, left London on January 16 for Nice.

The Earl and Countess of Carnarvon, accompanied by Lady Evelyn Herbert, left London last week for Egypt.

M. Radu Th. Djuvara, the newly appointed First Secretary to the Roumanian Legation, arrived in London last week from Bucharest.

The Bulgarian Minister entertained the personnel of the Legation on January 13 in celebration of New Year's Eve according to the Greek Orthodox calendar.

The King has been pleased, by Warrant under His Majesty's Royal Sign Manual, to authorise the Viceroy of India to confer the honour of Knight Bachelor upon Mr. William Mitchell Acworth.

In celebration of the knighthood conferred on Sir Mirza Abdul Hossain, Sheriff of Madras, Mr. M. H. Ispahani, his nephew, and Mrs. Ispahani gave a dinner party at the Savoy Hotel on January 15 to a large company.

The lecture on Viscount Allenby's campaign in Palestine, which was to have been given by Captain Neville Hobson last week at the 19th London Regiment Headquarters, High Street, Camden Town, has been postponed until Saturday, February 12.

A marriage has been arranged between Captain Walter Raleigh Fetherstonhaugh Trevelyan, 93rd Burma Infantry, only son of the late Captain Walter Raleigh Trevelyan, 64, Onslow Gardens, S.W., and Olive, youngest daughter of T. Gibbons Frost, of Mollington Hall, Chester.

Friday, the 14th, being New Year's Day according to the Greek Orthodox calendar, a special service was held at the Russian Church in Welbeck Street, Marylebone, during the morning. The Very Rev. Eugene Smirnoff officiated. Amongst the congregation were the Bulgarian Minister and the personnel of the Legation.

Mr. Dhunjibhoy Bomanji, of The Willows, Windsor, who is at present on a visit to Bombay, where he has extensive business associations, has made a gift of £5,000 to the King Edward VII. Hospital, Windsor, free of any conditions, his object being to "help the splendid work the hospital is doing for the benefit of the sick and suffering."

Lady Chalmers, Baroness de Balabre, Major R. and Mrs. Lloyd George, Sir Robert McAlpine, Sir Edward Every, Mrs. Porteous Scott, and the Hon. Mrs. Malcolm Stevenson were among the passengers by the P. and O. Company's steamship Malwa, which left London on January 14 for Bombay. Sir T. O. Callender, the Maharaja and Maharani of Cooch Behar, Viscount and Viscountess Ennismore, Major-General Sir H. C. Holman, Brigadier-General Storrs, and Major-General L. R. Vaughan will join the Malwa at Marseilles next Saturday.

Mrs. Fanny Mavrogordato, of Westbourne Terrace, W., who died on November 18, wife of Michel George Mavrogordato, has left estate of the value of £50,071. The will of July 30, 1906, is proved by her sons George Michel Mavrogordato and Theodore Michel Mavrogordato, and her son-in-law Constantine Manoli Vassiliadi, all of Great Winchester Street, E.C. She gives her leasehold house to her son-in-law Constantine M. Vassiliadi, and the residue of the property between her two sons and her daughter Fanny Vassiliadi.

APPOINTMENTS, ETC.

The following appointments are announced of Presidents of legislative bodies provided for in the Government of India Act (1919):—

The Indian Legislature: The Council of State.—Mr. A. P. Muddiman, I.C.S., late Secretary to the Government of India in the Legislative Department. The Legislative Assembly.—Mr. A. F. Whyte.

Provincial Legislatures.—Bengal: Nawab Syed Sir Sham-sul Huda, member of the Bengal Executive Council, 1912-17. Madras: Sir Raja-gopala Achariyar, a member of the Madras Executive Council since 1917. United Provinces: Mr. Michael Keane, I.C.S., late Judicial Secretary to the Local Government. The Punjab: Mr. M. S. D. Butler, I.C.S., formerly Secretary of the Indian Public Services Commission. The Central Provinces: Rao Bahadur R. N. Mudholkar, formerly a member of the Viceregal Legislative Council. Bihar and Orissa: Sir Walter Maude, I.C.S., member of the Executive Council of the Province. Assam (temporarily): Mr. J. C. Arbuthnot, late Commissioner of the Surma Valley and Hill Districts.

M. de Fontenay, Minister at Belgrade, is to go as French Ambassador to Copenhagen. M. Clement Simon, French Minister at Prague, has been transferred to Belgrade.

Major Milau Yovitchitch, Assistant Military Attaché at the Yugoslav Legation in London, has received an appointment in the War Office at Belgrade.

OBITUARY.

The death occurred last week of Mr. George Francis Adams, who had been Chief Inspector of Mines in India since 1910.

The death is announced of the Rev. Arthur G. Luckman, rector of St. Cuthbert's, Colinton, Mid Lothian. Ordained in 1881 he worked for many years in India. He was master of the Boys' High School, Allahabad, 1882-86; canon of Calcutta, 1900-7; and Archdeacon of Calcutta, 1907-11.

NEWS IN BRIEF.

According to a Constantinople report, £1 sterling is now worth 14,000 roubles in Georgia.

Recent police raids in Cairo have resulted in seizures of bombs and revolvers, and the Public Prosecutor is personally investigating the matter.

Further raiding by the adherents of the Emir Abd el Aziz es Saud of Riyadh against the Hejaz is reported from Taif, where they have been repulsed by troops sent from Mecca.

It is announced in Paris that General Franchet d'Esperey will go to Belgrade to bestow, in the name of the French Government, the Croix de Guerre conferred upon the Serbian capital.

The examination for the Indian Civil Service in 1921 will be held under the old regulations. No date has yet been fixed for the introduction of the new regulation reducing the age limit by one year.

Reshid Pasha, accompanied by Raghib Raif, Turkish Minister-Plenipotentiary, arrived in London last week on an unofficial mission from Constantinople. Reshid Pasha visited this country during the Balkan Conference in 1912.

From Bolshevik sources it is reported that a Tartar insurrection has broken out in the Crimea, and that the Tartars have established relations with the peasant leader Makhnov, who is operating in the Government of Ekaterinoslav.

Among the cases which will come before the Seine Assizes on January 25 and 26 is that of the two Greek officers, Tserapis and Kyrikis, who in August last made an attempt on the life of M. Venizelos at the Gare de Lyon, in Paris.

M. Ralli, the Greek Prime Minister, has been informed by the British and French Ministers that their Governments regard as insufficient the explanations given by the Greek Government for appropriating the balance of the loan granted by Britain, France, and the United States.

The Viceroy of India reports that Sir H. Dobbs' Mission to Afghanistan arrived at Kabul in safety on January 7. The Mission was received with full military honours on the frontier and at Jellalabad. Suitable arrangements have been made for its reception and accommodation at Kabul.

The Macedonian societies in Bulgaria have appealed to the League of Nations against the action of the Hellenic and Yugoslav Governments in suppressing the activities and confiscating the buildings of 1,373 Bulgarian schools and dismissing 2,226 teachers in Macedonia, in addition to closing 1,331 Exarchist churches and 73 monasteries in that area.

The following information has been received by the Minister of War regarding the losses sustained by the French Army of the Levant in the period between November 1, 1919, and December 15, 1920:—2,700 killed, died as a result of disease, or missing; 700 prisoners. These figures include 1,800 natives. Four thousand seven hundred troops have been withdrawn.

The illustration, "On the Tigris, near Baghdad," which appeared in our issue of January 6, was from a photograph by Mr. Ernest Betts, author of "The Bagging of Baghdad."

The Polish General Haller arrived in Bucharest on January 11, and has been received by the King.

Snow has fallen at Kandahar for the first time since 1905, and it is stated to be the heaviest fall on record.

According to the *Temps*, the Œcumenical Patriarchate in Constantinople has reversed its policy of hostility to King Constantine.

A telegram from Budenib, on the Moroccan-Algerian frontier, reports that local levies, assisted by French aeroplanes, attacked and routed, with considerable loss, a large gathering of rebellious tribesmen south-east of Itzer.

The Central Committee of the Party of Syrian Union in Cairo has protested against the Franco-British Agreement defining the frontiers of Palestine as a dismemberment of Syria, for which the Committee claims independence under the guarantee of the League of Nations.

A Colonial report on Malta states that the question of the increased cost of living in that group of islands was the main difficulty with which the Government had to contend during the past year. Unemployment, aggravated by the discharging of 15,000 men from the naval and military establishments and the mercantile marine, had also to be dealt with.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

DEMOBILISED OFFICER, 33, long experience Turkey and Greece shipping, coaling, chartering, insurance, banking; also expert knowledge tobacco; perfect French, fluent Greek and Turkish; notions Bulgarian; excellent connections; capable introduce business, desires responsible post with reliable firm U.K., or abroad. Highest references.—Write Box 176, NEAR EAST, 1, Devonshire Square, London, E.C.2.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

LORD READING'S TASK IN INDIA.

In recording the appointment of Lord Reading as Viceroy and Governor-General of India we wrote briefly of the difficulty of the task which lies before him. The accomplishment of that task may depend not only on his gifts as leader and administrator, but also on the support accorded to him by this country and by the rest of the British Empire; for there are anxious times ahead, and it may well be that the outcome may be determined in great measure by the attitude of a wider public towards questions which at first sight appear to be of merely local import. Sympathy, to be of real value, must be based on knowledge and on understanding, and it may serve some useful purpose at this juncture if we set out in the fewest possible words the basic factors of the problems to be solved. We have invited India to discard the old ideals of privilege and ascendancy; let us endeavour to realise the strength of the fortress, which, after a somewhat desultory siege, has now been summoned formally to surrender. Patriotic scholars claim to have discovered elements of popular government in the India of the distant past, but if those elements ever existed, they had been submerged before the opening of the historical period, which stretches over nearly a thousand years, and is dominated from first to last by the ideas of spiritual ascendancy, political tyranny, and economic exploitation. The individual had no chance, and Indians in the mass had no rights, but only duties, in particular the duty of slaving for a starvation wage, and handing over the surplus produce of their labour to support in luxury the adventurers and parasites of half Asia, who swarmed into India in search of prey. With the establishment of English rule came western education and western ideas, which proved attractive from the outset to a small but energetic class of students; they assimilated the liberalism of the last century in its crudest form, and they originated a demand for political institutions with a very imperfect appreciation of what was actually implied. Meanwhile the new ideas were spreading more widely, and their true implication was becoming understood by other classes, less conspicuous on the surface, but of greater importance in the stream of national life. Five years ago it was already possible to distinguish two tendencies in Indian thought: desire to restore the old régime and aspiration for a fusion of East and West which should be better than the old; but these ideas were still, so to speak, in solution, and it required the impact of some external force to render them visible to ordinary observers. The declaration of policy made by the British Government in August, 1917, sufficed to start the process of crystallisation, and while officials have been engaged in devising the political machinery of the new constitution, Indian thought has responded by bringing the opposing tendencies clearly into view and thus providing the foundations of a party system, a thing which is frequently abused, but with which no progressive nation has yet been able to dispense.

So far the development will be intelligible to everyone. The distinctive feature in the situation is that one of the two nascent parties which desires to restore the old régime of privilege and ascendancy has decided to stand outside the constitution and to attempt its destruction by any means which seem to offer a prospect of success. The initial inspiration of this party is, we believe, intellectual, but its strength lies in the fact that circumstances have enabled it to secure the support of a large volume of sentiment, impractical indeed and often ill-informed, but genuine and at the same time important. Three strains of this

sentiment may be distinguished. First, there is the pathetic nationalist dream, inspired so largely by false history, of a once fruitful and smiling land ruined by English commerce and English rule. Bad teaching has created this sentiment, and its present strength is great; it can be cured only by time and by the spread of knowledge, and, while it is already weakening, it must be reckoned with as a factor of importance during the years ahead. Next, there is the sentiment clinging to the idea of the Khalifate. As so many of our readers know, that is not a Moslem idea, but a product of the impact on Islam of the definitely Indian idea of spiritual ascendancy. Competent observers assure us that it is already on the wane, a fact due mainly to the ineptitude of those who propagated it; but at the moment it remains a force which must be taken into account. Lastly, there is the widespread bitterness which resulted from the events of 1919 in the Punjab, and here there is unfortunately little sign of appeasement. In this matter we can only repeat the opinion we have previously expressed that time, and nothing but time, can cure the wounds of both sides; further discussion would be useless, but the existence of the sentiment has to be borne in mind. The net result is that the convinced advocates of the régime of privilege and ascendancy can count for the time being on the support of a large number of persons who are guided mainly by their feelings, and disposed to set their own undisciplined emotions before the good of their country or the crying needs of the masses of the people. And it is in connection with the masses that their support counts for most, because sentiment is always a powerful basis of appeal, and it is particularly powerful in India at the present day. No careful observer can doubt that English rule has opened the eyes of the masses to the fundamental fact that life may possibly be worth living, a fact denied by their faith and contradicted by the stern experience of at least a thousand years. Vague discontent already exists, as is apparent from the recurring strikes in the industrial world, and from disturbances like those which are reported as we write from rural districts in Oudh; this new spirit may be turned to the salvation of the country, but it may also be directed to its ruin, and the latter course has been chosen by the party of which we speak.

The position then is that a new and highly experimental constitution has to be worked, largely by new and inexperienced men, in the teeth of an unscrupulous opposition, working outside the constitution, directed by able leaders, supported by enthusiasts, and having ready to its hand all the materials for a conflagration which it may not hesitate to provoke. What is the duty of the Government in these conditions? It is easy to say that the peace must be kept, that the new constitution must be given a fair chance, and that the men who have welcomed its introduction must be assured of sympathy and support. The realisation of these objects would in any case be a task of much difficulty, but the conditions require even more: the necessary operations of the administration must be carried out in such a way as to rally to the constitution the sentiment which now opposes it, and the masses who are just beginning to be conscious of its existence. We believe that the new institutions, both legislative and executive, will, when once in working order, exercise a powerful attraction on many of the best spirits, who, owing to temporary causes, have decided to hold aloof. For them the way must be made easy, and nothing must be done or said to harden them in opposition or tempt them to seek a martyr's crown. It is possible to conceive the gradual dwindling of the unconstitutional party to a point where its elimination should present no practical difficulties. We do not venture to prophesy that this object will be attained, but we would urge that the attempt must be made, and that its realisation would be a triumph of true statesmanship. And at the same time the peasants and the workmen must be rallied to the new order. We suggest no facile policy of doles, but the infinitely more arduous undertaking of constructive leadership. The masses can be swayed by sentiment, but the sentiment is not all on one side, nor are they deaf to reason when urged by the men they

trust. Convince them that the way to realise their new and still vague aspirations is to support the institutions which have now been established, and the central danger of the position would at once disappear. It is a difficult task, impossible of accomplishment by stereotyped official propaganda, but not beyond the reach of organised effort by the great mass of Indian opinion which has determined to accept the ideals underlying the new constitution. What is wanted here is the inspiration and the driving force which only the highest statesmanship can supply, and for this, we are confident, India will not turn to Lord Reading in vain. The masses do not yet vote, but already they begin to dominate the field of politics; we may be sure that they will not stand still; and their course will be determined by the leadership of the next few years.

A GREAT ALBANIAN.

In recent years Ismail Kemal Bey was so closely associated with Albania in the public mind that, had he not left them his memoirs* to remind them of the fact, even some of his best friends might easily have forgotten that, before he became known to this generation as an Albanian patriot, he had devoted the best part of a lifetime to the cause of Turkish reform. His memoirs tell the story of his life in the Turkish service, and practically all we can learn in them of his labours on behalf of Albanian independence is confined within the compass of a single chapter of the book, to which it constitutes in reality an appendix reproducing an article he contributed to the *Quarterly Review* in June, 1917. It is explained by the editor that Ismail Kemal Bey had intended to use this article as the framework of an Albanian section of his memoirs running to several chapters; but he was not spared to carry out the project, and after his death the material he left behind him was found to be too scanty to admit of the section being written by another hand. This *Quarterly Review* article, which the editor has happily been permitted to reproduce, enables us, however, to appreciate how thoroughly the realities of the Albanian question were grasped by the author; and the Albanians may esteem themselves fortunate in having available for the support of their claims this admirable presentation of their case bequeathed to them by one whose services to his native land will ever bear comparison with those he so faithfully rendered to the Ottoman Empire during the long years he owned the Sultan as his master. Still, one cannot help regretting that this gifted statesman, who never allowed his enthusiasm for the cause of his native land to obscure his mature political judgment, was not spared to write the projected Albanian chapters of his memoirs; for one feels instinctively they would have presented the Albanian case so cogently and so powerfully that even the amateur exponents of the new diplomacy, struggling to make good the defects of their education in geography and modern history, might perhaps have been able to grasp earlier the necessity for taking a firm stand on behalf of the rights of one of the most ill-used of the nations of the Near East. It would really seem as if the Albanians were free at last from the menace of having meted out to them the fate reserved for "backward races" in the new world—the shadow of the mandatory power no longer hangs over them—but one fears they are more likely to ascribe this happy release to the circumstance that they live in a difficult country and know how to fight in defence of it, than to the sense of justice of the makers of the new Europe.

The memoirs of Ismail Kemal Bey, covering the fifty years between 1860 and 1910, tell us practically all that is to be known of the political history of the Ottoman Empire during the period. Written by one who was privileged to be in the centre of Turkish politics during the most critical years of the life of the Ottoman Empire, enjoying the confidence of two Sultans and the friendship of some of the most capable Ministers who served them, these memoirs

possess a unique value at the present time, when to acquire a right understanding of the Eastern Question seems to be beyond the capacity of the mediocrities whose experiments in foreign policy threaten to deprive the world of all the good we fondly hoped a just and lasting peace would confer upon it.

For fifty years Ismail Kemal Bey was one of a band of brave, enthusiastic men who worked untiringly for the reform of the Ottoman Empire. Steeped in the Liberal materialism of the time, they honestly believed that universal suffrage, public works, education, and the efficient administration of justice were all-powerful instruments for the uplifting of the human race. For them, prosperity was synonymous with progress and a budget surplus the hall-mark of success in the competition of nations; they thought imperially, and (if Ismail Kemal Bey's friends will forgive us for saying so) nationalism made no appeal to them whatever. Some of them were attracted by the federal system of government, believing it capable of adaptation to the peculiar needs of the Ottoman Empire; but the majority, convinced that administration is necessarily simplified by centralisation, looked to the building up of a new Turkey on French lines. Of these latter the Young Turks may be regarded as the modern successors, for while one inevitably associates their movement with Germany, it may be questioned whether, apart from their belief in the excellence of German military and commercial organisation, they ever swerved from their faith in the ordered logical French system of centralised administration, convinced as they were that it offered the best means for the attainment of the object they had ever in view—the consolidation of the Ottoman Empire.

The Sultan Abdul Hamid is always regarded in this country as a bloodthirsty tyrant, whose reign brought untold evil on Turkey, and to whose malign influence may be traced not a little of the trouble in the Near East which culminated in the outbreak of the great war. There is little in this book calculated to modify this view of "Abdul the damned," but still one feels after reading the memorial submitted to him by Ismail Kemal in 1897, that he was broad-minded to the extent of allowing his servants to state their views on the policy of the Empire with a freedom which in Germany would have been regarded as *lese majesté* in those days. Regarding the Turkish Liberals as dangerous enemies, he took the greatest possible care to keep himself fully informed as to their political aspirations, and by encouraging them to put their ideas into concrete form for his enlightenment, invariably succeeded in paralysing their reforming zeal whenever their efforts seemed likely to lead to tangible results. His industry, his thorough grasp of European politics, and his keen judgment of men and things made him the most formidable antagonist against whom the unlucky reformers could possibly have been pitted, and his contempt for them naturally increased with every victory he scored against them. The mere fact that he never took the trouble to have any of them executed, and rarely thought it worth while even to banish them, points to his having always felt confident that his intellectual superiority over them was bound in the long run to bring their schemes to naught. Abdul Hamid did not believe in constitutional monarchy, and, convinced that its introduction into the Ottoman Empire would be disastrous to the Khalifate, devoted most of his life to wrecking the projects of the Turkish Liberals. For many years he could claim to be not only the most successful despot in the whole world, but also the ablest, for during the greater part of his reign his Ministers were little more than his secretaries. They had nothing to do with policy—with that he alone was concerned—and even the minor details of administration were subject to his supervision. In the end the Young Turks proved too much for him, but it is at their door that posterity will lay the responsibility for the downfall of the Ottoman Empire; while Abdul Hamid will ever be remembered as the last of the Sultans who was able to hold it together by sheer force of intellect at a time when, rotten within and ringed around by enemies, its continued survival impressed the world as a chronic miracle.

Ismail Kemal Bey's life for fifty years was devoted to a hopeless cause; everything he laboured to build up was thrown down as soon as it began to take shape; he was always on the losing side, yet never in his memoirs can one

detect the note of disillusionment, and his faith in his political ideals remained unshaken to the end. It was only when he turned his back on Turkey and devoted his remaining years to the Albanian cause that he was allowed to get a glimpse of the promised land.

Ismail Kemal Bey suffered in the latter part of his career in the Turkish service from his long association with Midhat Pasha, with whose policy he was entirely in sympathy and for whom he entertained a great personal regard. During Midhat's governorship of Bulgaria Ismail Kemal Bey was his right-hand man, and, sharing his chief's belief that good administration would alone suffice to remove the discontent of the Christian population in the European provinces of the empire, he laboured unceasingly to raise the standard of government in the districts bordering on the Danube. If we are to believe Ismail Kemal Bey, Midhat Pasha effected a marvellous improvement in the administration of the province in a very short time, and it was only when his policy was reversed after his downfall that the movement for Bulgarian independence began to acquire force. He insists that the downfall of the military power of France in 1870 was largely responsible for the collapse of the Turkish reform movement and the disastrous reaction which followed during the seven years which ended with the outbreak of the Russo-Turkish War. After the Crimean War the influence of the Western Powers was paramount in Turkey. Prussia was fully occupied with her schemes for uniting the northern States of Germany into a great empire, Austria with her chronic Italian embarrassments, Russia exhausted by a disastrous war was content to bide her time for making her next great bid for Constantinople. The only Powers in a position to make things uncomfortable for Turkey were Great Britain and France, no longer allies, but still substantially in agreement in their Near Eastern policy. They desired to see Turkey strong enough to hold Russia in check, and realising that strength could only come to her when the unrest of her Christian population was allayed by good administration, they never ceased to urge on the Sultan the necessity for adopting a sound policy of reform. The Sultan, fearing that his Western supporters might be moved to take strong action if he did not hasten to carry out their wishes, for a time gave the statesmen of the Liberal Party in Turkey practically a free hand; and had they been allowed to complete the work set going by Midhat Pasha it is possible that the liberation of the Balkan States might have been delayed half a century. With the eclipse of the military power of France, and the virtual withdrawal of Britain from European politics under the first Gladstone Government, the Turkish reactionaries were able to convince the Sultan that the reform policy forced upon him by the Western Powers might safely be dropped. Germany and Austria affected to sympathise with the desire of the reactionaries to restore the good old days of Oriental despotism, while secretly encouraging Russia to fill the rôle of liberator of the Balkan States prepared for her by the atrocious misgovernment of the Sultan's servants.

With the return of the British Conservative Party to power the hopes of the reformers revived, but the mischief had gone too far, and with the crowning folly of the Bulgarian atrocities Turkey's last chance of active support from any of the Great Powers disappeared. The good fight she put up against Russia in 1877, however, restored to her many of the friends she had alienated by the orgy of misgovernment she had indulged in in the period immediately preceding the outbreak of the war, and she may thank them for having at the Berlin Congress secured her Empire a reprieve of forty years. When, however, one reflects that during the years between the Berlin Congress and the outbreak of the Great War no European Power ever made a serious attempt to encourage Turkey to reform, and that the chief concern of all of them was the disposal of the provinces periodically plucked away from her—Eastern Rumelia, Egypt, Crete, and Tripoli in turn—it is not very surprising that the patriotic Turk's belief in the benevolent intentions of the Western Powers steadily declined. The Balkan war was the last straw, and when Turkey at the end of it found herself sliding rapidly into the abyss, we can hardly blame her for grasping the hand held out to her from Berlin. In 1914 the best that the Grand Alliance could offer her was the preservation of her remaining territories as the price of her neutrality; Germany, on the other hand, could hold out the bait of a restored and enlarged Ottoman Empire embracing Egypt and all the Russian territories south of the Caucasus if she would consent to throw in her lot with the Central Powers. She succumbed to the tempter, and, joining the wrong side, became involved in the disaster which overtook our enemies in 1918. To-day, bankrupt, impotent, and spiritless, she is free to reflect on her former greatness and the criminal imbecility of the Sultans who, after allowing it to be frittered away, crushed every effort made by the best men in the Empire to restore it. Ismail Kemal Bey was only one of the many capable men the Sultans have always had at their service to administer the Ottoman Empire pro-

perly. In the brief periods of spasmodic activity in the direction of reform they were always able to demonstrate their capacity, and one feels, after reading these memoirs of Ismail Kemal Bey, that had Turkey been fated in recent years to be governed by men of his type, by her best instead of by her worst, not only could the downfall of the Ottoman Empire have been averted, but the intervention of foreign Powers in its internal administration would have been rendered to a great extent unnecessary. The editor and the translator of this most interesting and informing book are to be congratulated on achieving what must have been to them—the friends and admirers of Ismail Kemal Bey—a veritable labour of love.

BETA.

PALESTINE EXPLORATION.

The current *Quarterly Statement* of the Palestine Exploration Fund contains an illustrated article on "The Fund's Excavation of Askalon," which gives an encouraging report of the first stage of the work. Two interesting statues were secured in the earliest days of the excavations; specimens of local pottery of every period, from post-Neolithic to Roman times, and traces of Byzantine and Crusaders' Churches have been found; and a general preliminary idea of the potentialities of the site has been secured. It is to be hoped that the appeal for special subscriptions to meet the expenses of the work will have a most generous response. The *Statement* also contains a note on the subject of crocodiles in Palestine, by Dr. E. W. G. Masterman, who puts forward much evidence in favour of the case "for," and expresses the hope that if crocodiles are found actually to have survived, some degree of protection may be afforded to them. Other articles are: "Neo-Babylonian Signet with Phœnician Inscription," by E. J. Pilcher; "The Synagogue of Theodotos at Jerusalem"; "The Inscription of Theodotos," by Rabbi A. Marmorstein; and "A New Interpretation of the Phaistos Disk: The Oldest Music in the World?" by F. W. Read.

According to the *Ecclesiastical Herald* of Athens, the Orthodox Greek Church intends to prohibit the entry into churches of women wearing some of the up-to-date styles of dress. It is suggested that Cyprus should follow suit, so rapidly has the wave of fashion spread there.

In a public speech recently delivered on the occasion of the third anniversary of the existence of the People's Guard, the President of the Georgian Government, Monsieur M. N. Jordania, referred to the success attained by Georgia, in the organisation of her forces, and expressed full conviction that the Georgian people would be able to bring to a desired and successful conclusion the strengthening of their country's freedom and independence, and to overcome all the obstacles it may encounter.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Sir Adam Block's Report.

The report of Sir Adam Block on the Ottoman Public Debt, which is given elsewhere in these columns, will provide but cold comfort for bondholders, for Sir Adam takes anything but a rosy view of the present conditions in Turkey. The period covered is the year ended February 28, 1919, and the report has been delayed owing to the impossibility of obtaining definite figures from the provinces. For that period the position was not unsatisfactory—on paper. There was a substantial increase in the gross receipts, while the net receipts also expanded, but the depreciation of the Turkish pound renders comparisons of this nature most misleading. As regards the following year, it is stated that receipts were coming in fairly well up to the Greek occupation of Smyrna on May 15, 1919. "Since that time, owing to the Nationalist movement," adds Sir Adam, "the whole situation has changed, and, Anatolia being now cut off from the Central Administration, there has been a very serious fall in receipts." Sir Adam remarks that there can be no improvement until order is restored in Anatolia.

Wanted a Policy.

As Sir Adam justly points out, the state of Turkey has gone from bad to worse since the Armistice, and it is his opinion that if the existing state of things is allowed to continue, the situation, already critical, will be compromised beyond repair. It is incumbent, he says, on the Allied Powers to decide on their policy, and to put it into execution without further delay. What will happen if matters are allowed to drift as they have been up to the present I leave my readers to determine for themselves in the light of the message of our Constantinople Correspondent, given in these columns a couple of weeks ago, dealing with the grave economic crisis at the capital arising from the severance of communications with Anatolia.

Payment of Coupons.

Naturally the question of immediate interest to bondholders is how and when the coupons in arrears are to be paid, and what funds are available for the process. The payments cannot be resumed until the ratification of the treaty with Turkey. £6,906,032 is required to cover the eleven coupons in arrears. This amount would be more than covered if the sums deposited in German and Austrian banks could be realised at pre-war rates of exchange. A claim has been lodged with the Clearing House established under the Treaty of Versailles for the repayment on this basis, and the matter is now under consideration. The sums actually in the Council's hands at present would only be sufficient to pay about three-eighths of the arrears of interest, and it is stated that if this were done it would probably be necessary to issue funding certificates for the balance. In view of the length of time that bondholders have had to wait without any return, it would seem desirable as soon as the ratification of the peace makes the resumption of payments possible that this method should be resorted to rather than that there should be any further delay.

A Lost Contract.

An account was given recently in a contemporary of a lost deal in grain with Roumania. What actually happened may be briefly described. The Roumanian Government proposed to dispose of its surplus grain to an English group on favourable terms, which included the placing of substantial orders in England. There was everything to be said in favour of the proposal, which would have done much to cement British interests in Roumania, and at the same time would have provided much-needed employment here. A doubt existed in certain quarters here, however, whether Roumania's harvest would yield an adequate surplus to enable sufficient exports to be made, and on this ground it was not found possible to proceed with the scheme. As it happens, England's lost chance would appear to have presented France with her opportunity, for I learn that negotiations with our Ally seem likely to have a better fate, and that it is probable that France will agree to take grain for something like 100,000,000 francs, the stipulation being that the payment is to be utilised to meet the outstanding Roumanian coupons, and those that will fall due in the immediate future. As my readers know, France holds most

of the bonds, and it will be realised how once again she stands to profit by what may prove to have been an excess of caution on the part of this country.

A Kantara Tunnel?

Writing of the decision to replace the Kantara railway bridge by a ferry service, I said that at best it could only be regarded as a temporary expedient, and according to the information now before me, that is all it will be. The ferry project naturally received considerable opposition as it entailed the end of direct communication between Egypt and Palestine with all that that implied, and presumably as a result of the outcry that was raised on both sides of the "Black Water"—I trust I am not out of order in using this phrase in a non-Indian connection—the project has been reconsidered, and the Egyptian State Railways have sent an expert to examine the possibility of a tunnel under the Canal. Obviously a tunnel was the only satisfactory solution if the Canal Company maintained an adamant front on the question of a bridge, and it would appear probable that resort will now be made to this expedient. It may be hoped that there will be no delay in arriving at a decision, because tunnels are not constructed in a day, and the interests of Palestine and Egypt will suffer in the absence of adequate communications between the two countries.

India and British Coal Exports.

Elsewhere we reproduce an official communication of the Government of India dealing with restrictions on the export of coal. It has been found necessary to introduce stringent regulations regarding the export of this commodity, because of labour complications and the deficiency in railway rolling stock. Exports to Sabang and Singapore have been stopped, no bunker coal will be allowed to go to Aden after the end of this month, while up to March restrictions are placed on the amount of bunker coal that may be exported to Colombo, after which month Ceylon will no longer be able to depend on India for bunker coal, though Ceylon's railways will continue to be supplied. The effect of these restrictions is to make the ports in question mainly dependent on the United Kingdom for coal. A few months back it would have been difficult to meet their requirements, but at the present time, owing to a combination of circumstances, such as high prices, the resultant competition, and increased production, there is no shortage of coal for export, and India's decision, therefore, will bring a measure of relief to the home market.

The G.I.P. Report.

The report of the Great Indian Peninsula Railway for the half-year ended September 30 shows a satisfactory increase in the gross receipts, which are Rs.14,09,007 up at Rs.6,64,58,930, but this is far more than counterbalanced by the rise in expenditure, which has increased by Rs.74,76,633 to Rs.5,04,17,244, and the net revenue at Rs.1,00,41,686 shows a decline of Rs.60,67,626. Excluding the State lines, there is a decrease of Rs.54,97,102. The increased expenditure is due mainly to the increase in salaries and wages. The prospects with regard to the current half-year would appear to be rather unfavourable, as while the expenditure remains high receipts have decreased as a result of the present trade depression.

COMMENTATOR.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

GREECE.

ATHENS, January 3.

The Governorship of the National Bank.

The intervention of the Government in the question of the Governorship of the National Bank of Greece has caused much commotion amongst the political and financial circles of this city. Last week the Premier, M. Ralli, visited the co-Governor of the National Bank, M. Drosopoulos, and requested him to inform the Governor, M. Zaimis, that it was the Government's wish that he should tender his resignation. M. Ralli added that in case M. Zaimis refused to comply with this request a statement would be issued, prior to the shareholders' meeting, to the effect that M. Zaimis' re-election would not be recognised by the Council of Ministers. M. Zaimis' reply was a blank refusal to comply with this demand. He declared that he saw no reason whatsoever why he should resign, seeing that during the last six years he has been the Governor of the National Bank this establishment greatly prospered. Moreover, the intervention of the Government in the matter was an arbitrary action, and aimed at influencing the shareholders prior to the general meeting. He pointed out that since he had been entrusted with the administration of the National Bank this establishment's reserve capital had increased from 13,300,000 drachmæ to 40,000,000 drachmæ, while the dividend distributed to the shareholders increased from 240 to 360 drachmæ. As M. Ralli, however, strongly insisted upon M. Zaimis' resignation, the latter issued a statement to the Press to the effect that in view of the arbitrary attitude adopted by the Government in the matter he had decided not to seek re-election. The *Anatoli*, an independent paper, commenting on this regrettable incident, says that the action of the Government will shake the confidence of the people in the premier banking establishment in Greece to an extent which will undoubtedly do much harm to the economic situation of the country.

Prices of Foodstuffs.

Since the abolition of Government control, prices of foodstuffs have gone up considerably. The following are the latest prices at which foodstuffs are sold in the capital:—Lamb, 19 drachmæ per oke, instead of 12; cheese, 14 drachmæ, instead of 8.50; onions, 1 drachma, instead of 40 lepta; potatoes, 1.40 to 1.60 drachmæ, instead of 85 lepta; pork, 11.40 drachmæ, instead of 7; beef, 12 drachmæ, instead of 8; and fish, 14 drachmæ, instead of 10. In order to prevent further increases, which are quite likely now, owing to the approaching holidays the Government has decided to reintroduce the control of prices.

ROUMANIA.

BUCHAREST, January 2.

Danube Navigation Resumed.

In my last report I mentioned that the river traffic was interrupted owing to the freezing of the Danube. After ice-breakers had been used, and milder weather having set in, navigation was resumed on December 28.

Opposition to Workshops Concession.

As was expected, the concession of the railway workshops to foreign concerns is meeting with a certain amount of opposition, chiefly from the Liberal Party, the local iron and steel manufacturers, and a large number of engineers. In the first place, they are against any concession to foreigners on principle, and, in addition, they consider the conditions of the contract disastrous to the country from a financial as well as an industrial point of view.

Curb on Speculation.

With a view to avoiding speculation in the lei abroad, the Ministry of Finance has sent a circular letter to all banks, instructing them to make no payments of lei abroad for account of any foreign banks or persons without being fully covered in cash previously.

YUGOSLAVIA.

ZAGREB, January 15.

New Companies.

The manufacturing chemical company "Isis" has founded a new company at Karlovatz (Croatia) with the title *Kastel* Factory of Chemical and Pharmaceutical Products, which is the first of its kind in the country, and, indeed, in the Balkans. Its objects are the manufacture of various medicinal articles, tabloids, serums, and medicinal vegetable products. The company has purchased an extensive property on the line between Karlovatz and Liubliana with a large number of spacious buildings which can easily be adopted to the needs of the new works. The spare ground, of which there is plenty, will be employed in the cultivation of medicinal plants.

A railway-truck and bridge company has been founded at Brod on the Save with a capital of 20 million kronen, which is to be increased to 200 million within three years.

More Austrian Kronen.

The Italian evacuation of territories hitherto occupied has released an immense number of old Austrian kronen that have not been stamped by the Yugoslav Ministry of Finance. This is a very serious problem for the Ministry as well as for the unfortunate holders of the notes.

Sugar Factories' Amalgamation.

The sugar factories of Yugoslavia have made a combine for mutual protection. The president is M. F. Zajet, general director of the Tiuprija Factory, while the vice-presidents are M. V. Brachfeld, director of the Osijek factory, and M. Oskar Tiller, director of the Belgrade factory.

CYPRUS.

CYPRUS, December 17.

Agricultural Outlook.

Weather conditions continue to be very unfavourable, and cause much anxiety. There has been no rain to speak of for many weeks, and early cereal sowings are already seriously affected, but much sowing has still to be done. The Government is issuing seed corn on the usual terms to all needy applicants, but complaints, backed by some of the members of Council, are made that the quantity offered is insufficient, owing to the partial failure of last year's crops. The Government is also asked to lower the prices of grain issued from the tithe stores.

The Vine Industry.

At last there seems to be some prospect of more care being taken in the preparation of raisins, which should be a far more lucrative branch of the vine industry than it has ever been in the past. There is no reason why in many excellent vine lands raisins should not be handled according to methods that would insure acceptance in the London market, which has hitherto looked with disfavour on the Cyprus product. It is a case of apathy and neglect. There is at present some awakening to the need of new methods, and correspondence with London which is now proceeding may have good results. There have been some good shipments to New York.

The traffic receipts of the Smyrna-Aidin Railway for the week ended January 8 amounted to £9,146.

The half-yearly general meeting of the East Indian Railway Company will be held at the Cannon Street Hotel on January 25.

IRRIGATION WORK IN EGYPT AND THE SUDAN.—III.

NILE PROJECTS COMMISSION REPORT.

It has been impossible to obtain sufficient data on which to base any reliable forecast of the probable rate of increase of irrigation in the Sudan, and Mr. Gebbie and Dr. Simpson find themselves, therefore, unable to decide precisely what proportion of the increased supply of available water should be allocated to Egypt and the Sudan. They have, however, after consultation with Sir Murdoch Macdonald and the officials of the Sudan, made the following suggestions as a workable solution of the problem which they believe will be acceptable both to Egypt and the Sudan: "The Sudan Government to pay for the Sennar Dam and the water derived from it to be used by the Sudan only. If, however, the stored water unused on April 15 in each year is given to Egypt, then the cost of providing by pumping or other agreed method drinking water for the cultivators on the Gezira and their livestock will be borne by Egypt.

"The White Nile Dam (Gebel Aulia) to be paid for by the Egyptian Government, and the water derived from it to be used for Egypt. As the reservoir will cause material damage south of Gebel Aulia, the Egyptian Government will pay or provide full compensation, in cash or kind, for such damage. As the effect of the dam will be to injure to some extent the basin and other systems of flood irrigation north of Khartoum in the provinces of Khartoum, Berber, Dongola, and Halfa, so much water as shall permit 80,000 feddans of summer crops in these provinces to be irrigated by pumps shall, as compensation, be appropriated every year from the Nile after the Gebel Aulia Dam is built.

"The Sudan Government already has the right to pump water without restriction between July 15 and March 1, and the right to irrigate 20,000 feddans of summer crops, and is availing itself of the latter right, partly on the Blue Nile and partly on the Main Nile. After the construction of the Sennar Dam the latter pumping right will no longer be exercised on the Blue Nile for the land now irrigated within the area of the Gezira scheme. The Sudan Government may, therefore, use her right to withdraw water from the Nile for the irrigation of 20,000 feddans of summer crops in such other areas dependent on the Nile as she may find suitable. Thus, after the construction of the Sennar and Gebel Aulia Dams the Sudan will have the right to irrigate by pumps from the Nile 80,000 feddans of summer crops north of Khartoum, in the provinces of Khartoum, Berber, Dongola, and Halfa, and 20,000 feddans anywhere else in the Nile basin, as well as the free-flow system in the Gezira as described below.

"The Gezira scheme is so designed that 300,000 feddans can be developed without using any water naturally flowing in the Blue Nile after January 18 in any year. In most years Egypt can spare water from the Nile after this date, and the Gezira scheme need not draw on the storage in the Sennar reservoir till later than January 18. The area under cultivation may, therefore, be increased beyond 300,000 feddans, provided the cultivators are prepared to suffer an occasional shortage in the event of the occurrence of a very low year. The Sudan may, therefore, be permitted to withdraw water from the Blue Nile after January 18 to such a date as corresponds to the first use of storage water at Aswan to supplement a shortage in the natural river supply for Egypt.

"The eventual development of the Gezira to a cultivated area of 1,000,000 feddans is contingent on the construction of the Upper Blue Nile Dam. This dam will be built by Egypt and paid for by her in the first place. Egypt will use all the water, so provided at the beginning, but the waters from the Upper Blue Nile Dam will, as and when required for the development of the Gezira, be allocated in increasing quantity to the Sudan, who shall then pay a share of the cost of the dam in proportion to the water she receives from it. The Sudan may, instead of using such water from the Blue Nile, use the same quantity of a less amount by pumping from the White Nile for such period as she may wish.

"At present it is difficult to form any reliable estimate of the relative proportions required by Egypt and the Sudan

of the water to be furnished by the construction of the other works contemplated in 'Nile Control,' but it is recognised that when the time arrives the Sudan shall share in the water derived from these new sources. The Sudan Government will then be called upon to pay an equitable share of the cost of the new works proportionate to the volume of water used.

"As differences of opinion may arise in regard to the interpretation or application in practice of the above suggestions, the Commission recommends that a Board, consisting of two members, representing Egypt and the Sudan respectively, with an independent chairman, should be appointed, and all differences of opinion referred to it."

It is sincerely to be hoped that the publication of this report will set a term for all time to the unfortunate controversy which has for so long been waged around the Irrigation projects drawn up by Sir Murdoch MacDonald and the Ministry of Public Works, and that the public feeling which was aroused in Egypt to the point that it became an acute political question will now be definitely allayed.

The impartiality of the London Committee, which sat on the question in the summer of 1918, was attacked in an inexcusable manner, considering the eminent position in the engineering world held by every one of its members, and we now have a Commission of absolutely independent men, nominated by such independent bodies as the Governments of India and the United States and Cambridge University, confirming in every detail the findings of the London Commission, and asserting that the grave charges levelled at Sir Murdoch MacDonald are without foundation, and that the projects set forth in that much-disputed document "Nile Control" can safely be put into operation in their original form.

No greater vindication of the ability and integrity of Sir Murdoch MacDonald and his very able staff of the Ministry of Public Works could be wished for, and the memory of the anxious and trying ordeal through which they have had to pass during the past couple of years will undoubtedly be tempered by the knowledge, and the personal satisfaction attaching thereto, that their gigantic schemes for the development of Egypt and the Sudan have been passed as sound by the greatest irrigation authorities in the world.

INDIA'S COAL SHORTAGE.

Stricter Export Policy.

The serious shortage of coal in India, due to labour difficulties, and the deficiency of railway rolling stock, is being met by the Government of India by the stringent restriction of exports. The following official statement sets forth the position:—

The Government of India regret to announce that the shortage of coal in India has compelled them to enforce a stricter export policy. The stock of railway coal is dangerously low, and industries in many parts of the country are experiencing difficulties in obtaining coal. Six large jute mills at Calcutta, employing 30,000 men, have had to close down owing to lack of coal. The shortage is due partly to inadequate labour supplies and other local labour troubles, and partly to a deficiency in railway rolling stock—3,025 wagons are required daily. Only 2,500 are now available, and there is no early prospect of increasing the number beyond 2,700. The Government of India have consequently found it necessary to stop exports to Sabang and Singapore immediately, and to allow no bunker coal to go to Aden after the end of January. Fifty thousand tons of bunker coal will be exported to Colombo this month, 42,000 in February and 25,000 in March. After the end of March Colombo can no longer rely upon India for bunker coal, but the Ceylon railways will still be supplied from India. Exports to all other ports were stopped some months ago.

Steamers leaving Indian ports for the West will in future be allowed bunkers only sufficient to take them three days' journey beyond Port Said, and similar restrictions will be enforced in the case of ships proceeding eastwards. By this means it is hoped by the end of March to reduce demands on the Bengal coalfields by 200 wagons per day, but even so the available wagons will not be sufficient to meet the internal requirements of India. The Government of India greatly regret the inconvenience to which the above-mentioned ports will be put, but trust that they will be able to secure coal either from the United Kingdom or from Japan.

TURKEY'S FINANCES.

CRITICAL POSITION.

A special report on the Ottoman Public Debt for the thirty-seventh financial period (March 1, 1918, to February 28, 1919), by Sir Adam Block, representative of the British and Dutch bondholders, has just been issued. The delay in its publication has been due to the impossibility of obtaining definite figures from the provinces. Many districts were in the military occupation of foreign armies, and in others local disturbances and conflicts have caused a partial, if not complete rupture of all communications with the Central Administration. Sir Adam Block returned to Constantinople early in November, 1918, and his French and Italian colleagues arrived shortly afterwards. The German and Austrian delegates left forthwith, and the Council now consists of the British, French and Turkish delegates, and the delegates of the Imperial Ottoman Bank.

Bad as the state of Turkey was at the end of the war, and continued to be in the first months of the Armistice, the gross receipts were superior to those of the preceding year. All the revenues, except the silk revenues, showed an increase. The increase in receipts is due almost entirely to the rise in values of the articles taxed. It must be remembered that the £T paper and its exchange value is so depreciated that there can be no real comparison with former years, and the receipts are insufficient to cover the payment of the coupons in London or Paris.

The complete accounts for the year 1919-20, are not yet to hand, but it is nevertheless possible to state that the receipts, in spite of difficulties of every kind, have been coming in fairly well right up to the Greek occupation of Smyrna, on May 15, 1919. Since that time, owing to the Nationalist movement, the whole situation has changed, and, Anatolia being now cut off from the Central Administration, there has been a very serious fall in receipts. Sir Adam Block states that there can be no improvement in the fiscal situation until order is restored in Anatolia, and the bondholders, with their important stake in the country, are naturally impatient at the delay in finding any remedy for the political and economic confusion existing in Turkey. Although two years have passed since the Armistice was concluded, the Peace Treaty was not signed until August 10, 1920, and still awaits ratification.

Meanwhile, the state of Turkey has gone from bad to worse. If the existing state of things is allowed to continue the situation, already critical, will be compromised beyond repair, to the detriment not only of the bondholders, but of the Great Powers interested in the trade and financial stability of the country, and who look to the amelioration of the finances in order to obtain payment for the cost of their Armies of Occupation, and for reparation to their subjects for losses suffered during the war. It is incumbent on the Allied Powers to decide on their policy, and to put it into execution without further delay.

The question of greatest interest to the bondholders is when and how the coupons in arrear are to be paid, and what funds are available for the payment of the coupons, suspended, as far as the subjects of the Allied Powers are concerned, since September, 1914.

The payment of the coupons cannot be resumed till the Peace Treaty is put into execution and peace is restored between the Allied Powers and the Turkish Government.

Taking the unpaid coupons to be those of 1915, 1916, 1917, 1918, 1919, and March, 1920 (11 coupons), the sum required for the Unified Debt, £stg6,906,032. To meet this liability the Debt Council has the following resources: (1) The amounts deposited in German and Austrian banks equivalent at pre-war rates of exchange to £stg7,904,935, and at present rate to £stg811,677. (2) The amounts in the hands of the Debt Council in Constantinople, London and Paris equivalent at pre-war rates to £stg7,377,858, and at present rate (420 piastres to the £stg.) to £stg2,613,189.

As regards the former, a claim has been lodged with the Clearing House established under the Treaty of Versailles for the repayment at the pre-war rate of exchange of the amount deposited in German banks, and if this is received it would be sufficient to discharge all the arrears on the Unified bonds. The matter is at present under consideration, and it is hoped that the funds collected on behalf of the bondholders by their own representatives for the purpose of paying them their coupons, and which were deposited in Germany in gold, should be repaid in that medium, and not in depreciated marks. Until this important question is decided it is impossible to make any definite arrangement. If the sums actually in the Council's hands at present, as above mentioned, were realised at the present rate of exchange, they would only be sufficient to pay about three-eighths of the arrears of interest on the Unified bonds, and if this were done it would probably be necessary to issue Funding Certificates for the balance.

TRADE AND RUPEE EXCHANGE.

AN UNCERTAIN OUTLOOK.

By "Gold Mohur."

The recently published trade returns indicate a severe shrinkage in exports, and Lancashire manufacturers have been chiefly affected. The stagnation is due to several causes, but the principal factor is the slump in exchange, although there can be no doubt that the overloaded condition of the principal markets has also contributed to the depression.

Within the past year wide fluctuations have been recorded in rupee exchange, and high-water mark was reached when the rate was rushed up to 2s. 11d. When Government announced their adoption of the Currency Commission Report it was assumed that steps would be taken to maintain the rupee round about the level of 2s. recommended by the committee.

Unfortunately, owing to a poor monsoon, the volume of exports from India this season has been quite inadequate to redress the balance of trade, and when Government, owing to depleted balances, were forced to abandon their sales of Reverse Councils, exchange fell away to under 1s. 5d. Since then its movements have been comparatively unimportant. On any signs of weakness exporters from India have shown considerable anxiety to sell their bills, and in the absence of cover on the other side of the book, banks raised their rates. This had the effect of penalising exporters, so that they ceased to operate, and during the ensuing lull rates fell away again. Thus we notice during the past ten days the same conditions repeated—a lower exchange enabled exports to be profitably made to this country, and of cotton to Japan, which caused rates to stiffen to 1s. 6½d., and again the downward tendency asserted itself.

It is worth while drawing attention to these fluctuations in order to show that provided there was a large exportable surplus from India to markets prepared to pay for it, a reasonable rise in exchange would naturally be established, but whether any upward movement would gather sufficient force to bring it within sight of the 2s. level is extremely doubtful. On the other hand, the Indian importers have a grievance which they have lost no opportunity of proclaiming. Relying upon the pledge implied by the Government acceptance of the Currency Commission Report, they maintain that they were justified in expecting a 2s. rupee, and they have flatly refused to honour their obligations unless this rate be conceded. They have cancelled, or sought to cancel, orders wholesale which were placed in Manchester many months ago. They decline to accept their bills, and warehouses and godowns at all the principal centres are full of rejected goods. Hence the depression in Lancashire and Yorkshire, where many firms have been badly hit.

The serious drop in cotton values coupled with the fall in exchange will entail losses of 40 or 50 per cent., probably more on some consignments, and a deadlock has now ensued which many firms on this side are positively afraid to face. Some are, perhaps prudently, shouldering a part of the burden by granting liberal allowances in order to recover payment for their goods; others are hesitating, but may have to follow their neighbours and cut the loss. Meanwhile, a time is approaching when cheaper cotton is bound to attract fresh orders, but as long as warehouses in India are congested with high-priced goods, it will be almost impossible to arrange further shipments until the present stocks are paid for and cleared off. A few Indian firms are in the fortunate position of holding small stocks, thanks to their shrewdness in settling exchange well over 2s. Some of those lucky dealers have been buying special lines in Manchester during the past six weeks at prices 60 per cent. under those ruling six months ago.

The future is most uncertain; if the volume of exports is unable to give sufficient impetus to exchange to raise it above present levels during these months when the shipping season from India should be at its height, what may be expected when the export trade slackens in April and May? Is the Currency Report to be thrown overboard, and are we to go back to the old parity of sixteen pence? This may prove to be the solution of the present difficulty.

Greece expects a deficit of 986,000,000 drachmae (£19,720,000) for 1920-21, as compared with one for 399,000,000 drachmae for 1919-20.

The Bank of Bombay has declared a dividend of 15 per cent., a bonus of 7 per cent., transferred to reserve fund 5 lakhs, and carried forward 4½ lakhs of rupees.

The statistics issued by the Ministry of Finance of Georgia show that the State revenue is increasing monthly. For October the revenue amounted to 305,000,000 roubles, or twice the amount estimated in the Budget.

The numbers are announced of the bonds of the Kingdom of Greece Five per Cent. National Loan of 1907 drawn for repayment at par on December 18, and payable January 15 at Hambro's Bank of Northern Commerce or the Ionian Bank.

ENGINEERING.

Scientific Welding.

If attention has not already been called in these notes to the great importance from an engineering point of view of scientific welding it has not been by reason of any scepticism regarding its value. There has been far too much talk, especially during the latter stages of the war, regarding "defective castings filled up with metal" and of "damaged parts patched up and painted over," the impression given being that metal so healed was weak and unreliable, and that the whole thing was a device on the part of unscrupulous engineers to gain money at the expense, may be, of soldiers' or sailors' lives.

Nothing could be further from the truth than to associate scientific welding with "faking." A defective casting, a damaged part, a cracked piece of machinery may now be repaired with one or the other of the autogenous welding systems so as to be even stronger than a perfect part of the same kind just issued from stores. Of course, there is welding and welding, just as there are welders and welders. I am speaking of scientific systems, and of work carried out by trained and skilled men; I am not referring to the work of unskilled operatives handling possibly incorrectly adjusted welding plant in an ignorant manner. I have seen broken parts built up and repaired with infinite patience and consummate skill so as to give a result closely approximating to the perfect. I have seen, on the other hand, straightforward jobs muddled through and finished in a style that would disgrace a first year's apprentice in a good works. Everything depends on skill and knowledge, and for that reason welding work should be sent to a really high-class firm to be done, and not given to anybody who possesses and claims to be able to handle a blowpipe.

It is in regard to broken parts of machinery generally, and scored motor-car cylinders in particular, that scientific welding plays so useful a part. One of the most highly developed systems is that known as the Barimar metallurgical process, by the aid of which an almost unbelievable number of castings, that would otherwise have had to be scrapped, have been repaired. My friend Mr. C. W. Brett, who is one of our leading experts, tells me that in pre-war days the only reliable method of rendering scored cylinders thoroughly efficient was to weld up the scored places, regrind the bores, and fit entirely new pistons complete. As may be expected, such a process was costly in the extreme, and the work usually occupied a month or six weeks. To-day large quantities of cylinders scored in this way are being successfully treated by Messrs. Barimar, Ltd., at a price which is only about 10 or 20 per cent. of the cost of the old method, and the work can generally be completed in about a couple of days. A further point, and one which is of paramount importance, is that when cylinders are dealt with according to the new method they do not have to be welded or reground, and the filling of new pistons is consequently entirely unnecessary.

Good Progress.

In spite of the serious setbacks caused during the past year by trade disputes and the resultant high price of all kinds of raw materials, the year was really one of the most prosperous known in the British motor industry. It is true that it started with a boom and finished with what was suspiciously like a slump, but a good deal of solid work was done which will make its effect felt in future years. Production was at a remarkably high rate, and a considerable percentage of the total car output is to be credited to the remarkable but apparently greatly underestimated work of the Austin Motor Co., Ltd., whose sales turnover for the year, I happen to know, was just about £5,000,000.

This is by far the biggest output attained by any automobile firm in the British Isles for this or any preceding year in the annals of the trade. Prospects for 1921 are also most encouraging, contracts with distributors having been made for Austin cars and tractors to the amount of £8,000,000 for delivery within the year.

Motor Touring in Italy.

The Automobile Association states that the importation of motor-cars into Italy is now forbidden. An exception is made in favour of motor-cars covered by Triptyques. This exception, however, is made only on the express condition that cars temporarily imported by means of Triptyques, which are issued by the A.A. to members, shall not be sold or kept in Italy. Any person contravening this prohibition will render himself liable to prosecution for the importation of forbidden merchandise. At the expiration of three months the tax must be paid and the Triptyque is then available for a further term of three months. Before the end of the six months it is absolutely necessary that the car be re-exported.

Whilst on this subject, I may point out that the considerable increase of late in the activities of the Engineering Department of the Automobile Association, in connection with

the inspection, the purchase, repair work, or extensive reconditioning of cars and lorries, suggests that members only require to be made conversant with the fact that this assistance is available—especially where the disbursement of considerable sums of money is involved—in order to make more use of this benefit of A.A. membership. Technical advice and help is given free in consultation or in correspondence, while nominal fees only are charged for inspections. A staff of expert engineers is exclusively engaged on this work, and although the examination of vehicles is confined to members, in certain cases this is extended to non-members.

LANCASHIRE AND EGYPTIAN COTTON.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of the 6th inst. you* remark with regard to Egyptian cotton that Lancashire can scarcely expect the fellahin to grow cotton solely for the benefit of Lancashire spinners at unremunerative prices, and that the best way is to find some means of raising the buying prices. Now, what is the position? Prior to the war Upper Egyptian was about 8d. per lb., and Sakellaridis about 11d., and average American cotton 7d. The bulk of the business done last season was on the basis of about 35d. for Sakel, 30d. for Upper, and 20d. for American, and later in the season these prices were put up to 112d., 96d., and 42d. respectively.

I think the position of the cotton trade to-day, not only in Lancashire, but also in all other cotton spinning countries, shows that the world cannot and will not pay anything like these high prices, which were caused largely by pyramidal speculations, that brought about the inevitable reaction, with the present deplorable losses to all concerned. To-day's prices are Upper 17d., Sakel 24d., American 15d., which are considered high enough, but as the rent of cotton-growing land in Egypt averages to-day something like £50 per feddan, against about £6 per feddan in 1914, and as it requires two feddans to grow a bale of 720 lb., you will see the difficulty of growing cotton on an economic basis.

Lancashire has not, as you appear to suggest, a monopoly of the Egyptian cotton trade, but has to compete with other countries, and other similar growths of cotton; for instance, the State of Arizona, U.S.A., has this season produced 100,000 bales of long stapled Egyptian style against only 50,000 bales last season.

Had a Rent Restriction Act similar to that in this country been passed in Egypt it would have gone a long way to ameliorate the condition now so unhappily existing. —Yours faithfully,

FRED A. TOMLINSON,

President, Manchester Cotton Association, Ltd.

Dugdale Chambers, 22, St. Mary's Gate, Manchester.

January 11.

"STANDARD" TOBACCO MACHINERY

Every Description of
Automatic Mechanical
Equipment for the
**TOBACCO
INDUSTRY.**

*THE "STANDARD-JUNIOR"
CIGARETTE MACHINE*

THE "STANDARD-JUNIOR" CIGARETTE MACHINE

Is the ideal model for small manufacturers. Although low in price, it is a highly developed apparatus capable of the utmost perfection of output up to 7,500 Cigarettes per hour and requires only two attendants of ordinary intelligence to operate.

Compare this with the cost of producing Cigarettes by hand or with obsolete inefficient machines.

THE "STANDARD" CIGARETTE MACHINE

THE "STANDARD" CIGARETTE MACHINE

embodies every conceivable practical refinement for the production of Cigarettes upon a commercial basis, i.e., on a large scale with manufacturing costs brought to the irreducible minimum. It is capable of a higher consistent output of faultlessly made Cigarettes than any other machine existing, and is exclusively adopted in the largest factories throughout the World.

*"STANDARD" CIGARETTE
PACKING MACHINE*

"STANDARD" CIGARETTE PACKING MACHINES.

No Cigarette Factory is up-to-date without the most modern and efficient Packing Machinery, viz., the "STANDARD." These machines can be adapted for packing Cigarettes of any pre-determined size and quantity in either paper "cups" or cardboard "shell and slide" packets, after wrapping them automatically in paper or tin foil or both.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Business Restricted.

Dried Fruit.—The improvement in business recorded last week has not been maintained. The demand for currants has slackened off, and it would appear that buyers have now satisfied the greater part of their immediate requirements. In most cases prices show a considerable decline. There has not been much doing in sultanias, and the same remark applies to figs and dates. As we have pointed out previously, the quality of the two last-named commodities leaves little to be desired, and it is astonishing that buyers should so far have shown so little interest in them.

Sugar.—Prices have remained unchanged. West Indian crystallised has come to business at 62s. to 66s., and white Mauritius has been done at 71s. Home refined has met with a good demand at the official prices.

Coffee.—The market has remained steady. Costa Rica has been done at 120s.; Indian is unchanged at 106s. and Mocha at 170s. is also unaltered. The futures market has been quiet. Quotations are:—March, 49s.; May, 48s. 6d.; July, 50s.; September, 50s.; December, 51s.

Oilcakes.—There has been a slight rise in prices. Linseed cake is 6d. up, and cottonseed cake is 1s. up at 19s. and 11s. 6d. respectively. At the same period last year linseed cake was done at 25s. and cottonseed cake at 18s. Groundnut cake has come to business at from 14s. to 14s. 6d., and palm kernel has been done at 8s. to 9s.

Oilseeds.—The position is unchanged. Indian linseed is the same at 22s. 6d. Rapeseed is also unaltered with Toria at 20s. and bold Ferozepore at 19s.

Seed Oils.—Prices have declined a little. Linseed oil at 36s. has lost 3s. Other transactions include crude rape oil at 59s.; refined cotton oil at 45s.; and the Egyptian variety at 34s. Turpentine is unchanged at 100s.

CURRENT PRICES.

General Produce.—Bacon, 215s. 3d. cwt.; butter, 336s. cwt.; cheese, 161s. cwt.; eggs, 44s. per 120.; chillies, 127s. 6d. cwt.; cloves (Zanzibar), 1s. 2d. lb.; cocoa (Ceylon, good to fine), 100s. cwt.; coffee (Costa Rica), 111s. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 116s. cwt.; ginger (washed Cochinchina), 42s. 6d. cwt.; hams, 220s. cwt.; lard, 167s. 9d. cwt.; nutmegs, 11d. per 110's to 180's; pepper (Singapore, black), 4½d. lb.; pepper (Muntok, white), 8½d. lb.; raisins (Valencia), 152s. cwt.; sultanias (Smyrna), 136s. cwt.; currants (Vostizza), 91s. 6d. cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 24s. 3d. cwt.; rice (Rangoon No. 2), 22s. 6d. cwt.; rice (bran, Rangoon), £7 5s. ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 3½d. lb.; wheat (Australian), 114s. 9d. qr.; wheat (English white), 80s. qr.

Hides and Skins.—Ox and Heifer: First 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 6½d. lb.; 59 lbs. and under, 6d. lb.; cows (first), 60 lbs. and up, 4½d. lb.; 59 lbs. and under, 4½d. lb.; cows (second), 60 lbs. and up, 4d. lb.; 59 lbs. and under, 4d. lb.; bulls (first), 4½d. lb.; bulls (second), 3½d. lb.; kips (first), 6½d. lb.; kips (second), 5½d. lb.; kips (third), 4½d. lb.; horse-hides, 7s. 6d. to 22s.

Metals.—Aluminium, £165 ton; bismuth, 12s. 6d. lb.; copper (standard), £72 10s. ton; copper (electro, wire bars), £83 ton; gold bars, 114s. 0½d. oz.; iron (No. 3 Cleveland), 220s. ton; hematite (mixed number), 260s. ton; lead (soft foreign), £23 2s. 6d. ton; manganese Poti, 2s. 6d. unit; molybdenite, 60s. unit; nickel, £215 ton; platinum, 440s. oz.; quicksilver, £12 15s. bottle; silver bars, 42d. oz.; spelter (G.O.B.), £25 18s. 9d. ton; plumbago, £37 10s. ton; tin (standard), £208 ton; tin plates (20 by 14), 33s. box; wolfram, 17s. 6d. unit; zinc sheets, £45 ton.

Chemicals.—Acids: Boric, 75s. cwt.; oxalic, 1s. 4½d. lb.; citric, 2s. 10½d. lb.; tartaric, 2s. 1½d. lb.; ammonia (sulphate), £25 8s. ton; arsenic (white powdered), £65 ton; benzole (standard), 3s. 2½d. gallon; bleaching powder (35 per cent.), £21 ton; borax crystals, 38s. 6d. cwt.; cream of tartar, 195s. cwt.; potassium: bichromate, 1s. 3½d. lb.; chlorate, 7½d. lb.; caustic, £75 ton; nitrate, £60 ton; permanganate, 2s. 10½d. lb.; prussiate yellow, 1s. 6½d. lb.; sulphate (90 per cent.), £27 15s. ton; Sodium: crystals, 150s. ton; bi-carbonate, £11 ton; bichromate, 9½d. lb.; alkali (58 per cent.), £10 15s. ton; chlorate, 5d. lb.; caustic (70 per cent.), £27 ton; hyposulphite, £27 10s. ton; prussiate, 11½d. lb.; nitrate, £21 15s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; sulphate of copper, £39 ton; sulphate of iron, 150s. ton; lemon oil, 4s. 7½d. lb.; quinine, 3s. 9½d. oz.; red lead, £46 15s. ton; white dry lead, £52 10s. ton; white ground lead, £62 2s. 6d. ton.

Miscellaneous.—Cotton (American), 10.79d. lb.; cotton (Egyptian, Sakellaridis), 23.00d. lb.; linseed (La Plata), £22 10s. ton; rape (Toria), £20 10s. ton; soya beans, £15 5s. ton; palm kernels, £24 12s. 6d. ton; Oils: linseed, £40 ton; soya, £40 ton; cotton (crude), £37 10s. ton; olive, 16s. 6d. gallon; ground nut, £47 ton; palm, £45 10s. ton; rape (crude), £70 ton; petroleum, 2s. 3d. gallon; turpentine, 100s. cwt.; Rubber: plantation No. 1 crepe, 1s. 1½d. lb.; smoked sheet, 11½d. lb.; fine hard Para, 1s. 0½d. lb.

IVORY IN 1920.

Messrs. Hale and Son, in their annual report, state:—

The year under review has been remarkable for greater fluctuations in prices than at any other time of which there is any record. This was owing to the small quantities catalogued at the commencement of the year, and the strong demand at the January auction through American competition and the fashion for ivory then prevailing, when prices were forced up £50 to £100 per cwt. This advance was lost at the subsequent auctions. Larger imports came forward from all quarters, and prices at the close of the year are lower than this time last year, being about the same as those ruling in July, 1919. The imports from Zanzibar and Egypt have been larger of all descriptions, and principally soft ivory, and a fair amount of West Coast and Central African of the hard description.

At the January sales Zanzibar, Bombay, Mozambique, and East African soft were in small supply, and all kinds including scrivellos advanced £50 to £100 per cwt. Hard grain, none offered, but this description from other parts advanced £50 to £90 per cwt. Billiard ball pieces and ball scrivellos were £20 to £50 per cwt. higher. Cut hollows also advanced £40 to £50 per cwt. In April, when larger supplies were brought forward, soft, large, and medium tusks declined £40 to £60 per cwt., and hard were £30 to £50 per cwt. lower. Cut ball pieces and ball scrivellos, £15 to £20 per cwt. lower. Scrivellos declined £30 to £40 per cwt., and cut hollows £15 to £20 per cwt. In July prices further receded, soft large and medium tusks were £30 to £50 per cwt. lower, and hard £20 to £40 per cwt. down. Cut ball pieces, ball scrivellos, cut points for balls and cut hollows were £10 to £20 per cwt. lower. Scrivellos were £10 to £20 per cwt. lower. In October soft large and medium tusks declined on the average £8 to £10 per cwt. Hard was steady to a little easier. Cut ball pieces, ball scrivellos, and cut points for balls were firm to rather higher, ordinary scrivellos £5 to £8 per cwt. lower.

Egyptian ivory has been in fair supply throughout the year. Prices for both the soft and hard description advanced in January £50 to £100 per cwt., and ball scrivellos £30 to £50 per cwt. In April the decline averaged £40 to £60 per cwt. Ball scrivellos £20, and ordinary scrivellos £20 to £30 per cwt. lower. In July soft grain declined £30 to £50, and hard £20 to £40 per cwt. In October soft declined £3 to £10 per cwt., whilst hard was steady to a little easier.

REVIEW OF WOOL SITUATION

Messrs. G. and W. Townend, in their annual wool report, state that the past year has witnessed the climax of the long and almost continuous advance in wool prices which has marked the past six years. The growing stringency of the money markets, the largely increased capital required to finance the enhanced prices, and, above all, the long-drawn-out delay in the political and economic re-settlement of Europe, have combined to call an abrupt halt to advancing prices and to initiate a decline which, commencing in April, has proceeded with increasing rapidity during the later months. This drastic reduction in prices will, however, hasten the recovery of confidence and the resumption of normal trading, and there are already welcome signs that the problem of the European exchanges is being at last grappled with in ways that promise some early practical results.

The total offerings have been:—Government-owned wools, about 1,600,000 bales; privately-owned wools, about 147,000 bales. Clearances during the earlier months were exceedingly satisfactory, but during the latter half of the year withdrawals have been increasingly heavy, amounting at the November and December sales to about 60 per cent. The market, as the result of world upheaval, finds itself confronted by conditions and problems altogether abnormal, in which favourable and unfavourable factors are out of all ordinary proportion. The Home and American markets are at the moment overstocked with manufactured goods; but, on the other hand, still larger wool-using populations are almost devoid of woollen material of any description. The normal supply of wool is barely sufficient for the world's requirements, but the present supply is almost a full year in excess. Inflated prices, which had become so serious a handicap on business and finance, have, by the drastic reductions of the past few months, already been so far adjusted to existing conditions as to be no longer a necessary bar to confidence and enterprise, and have been brought back to what may be considered, in view of the depreciation of currency and the permanently increased costs of production, an approximately normal level. The depression of the past few months has been of unexampled severity, but at the close of the year there are not wanting some definite grounds for the belief that the worst of the depression is already past.

AUSTIN

The Best Car Investment

The man who buys an Austin Twenty ensures a permanent value. Why? Because the design of the Austin is destined to be the standard for years to come. This claim is based on the opinions of well-known experts.

The Austin rate of output is increasing by leaps and bounds. The prompt man gets priority. Full particulars will be gladly supplied by your local distributors:

Messrs. Ed. Kirk & Co., London Garage, 1, Rue Sultan Fouad, Alexandria. (Agency for cars and lorries in Egypt and the Soudan.)

Messrs. Strick, Scott & Co., Baghdad, Basrah, Mohammerah, Ahwas, Bushire, Hamadan. (Agency for our cars and are handling all our lines, in Mesopotamia and Persia.)

Messrs. Hassan Hoss & Co., Beyrouth. (Agency for Austin Cars and Commercial Vehicles in Syria.)

Every description of Banking business, in all its Financial and Commercial branches, undertaken.

Business Houses trading with Turkey can insure Foreign Exchange with the Bank. Banks, Commercial Houses and others having interests in Turkey are invited to apply for terms.

Manufacturers and Merchants may address their enquiries to the Head Office for Trade Lists of Importers and Exporters.

FOREIGN PRODUCE PROSPECTS IN 1921.

In their annual report for 1920, Messrs. Bigland, Sons and Jeffreys state:—

The year 1919 will long be remembered by merchants, manufacturers, and producers of raw materials as the year of the greatest advance in prices of commodities ever recorded. The phenomenal rise of prices continued into the spring of 1920; the average of the maximum figures reached its height in February-March. A decline then commenced which has reached what we may now call a *débâcle* in the closing months of 1920. No such record decline in prices has ever previously occurred in the statistical history of the staples of commerce, for the simple reason that never before have figures soared to the tremendous height which made possible such a decline as we have had to face during the past few months. The fall has been greater than the total average pre-war price of most of the articles in question. Our readers and clients will, therefore, readily agree that it is exceptionally difficult to make a reasoned statement covering the outlook and to make any forecast for 1921.

Our forecast for 1921 is that business will be difficult to negotiate—that we shall all have to work hard to pay our taxes—that profits will be very meagre, and that great timidity on the part of merchants will restrict oversea trade; therefore it will be a year lacking in enterprise, with few new developments. During this waiting period all traders should conserve their energies for the activities which are sure to develop when the present financial stringency is past.

CULTIVATION IN THE SUDAN.

The following are further extracts from the C.E.B. report for October:

Berber Province.—The Nile has continued to fall more gradually than last year, thus giving the people time to get back from the rain crops for Saluka cultivation. Reports from the Atmur continue to be good. There seems to be a certain amount of stem-borer in the dura, but locusts have been few and far between. Apart from the few locusts and some boll-worm, the principal trouble has been the green Andat beetle. An attempt is being made, on the recommendation of the Government Entomologist, to combat this by turning out the village children with bowls of water and a paraffin film on it.

Blue Nile Province.—Considerable damage was done to the crops in parts of the province, more especially the southern part, by very late showers. Reports show that the crops in some parts are not quite so good as was anticipated, especially in the Medani and Managil districts, but there is very little doubt that the crop, taken as a whole, will be a very large one. It is the extent of the cultivation more than the average quality of the crop that is the feature of this year's harvest.

Kassala Province.—The cultivation reports are all satisfactory, though some damage has been caused to sesame in Gedaref and Mefaza by Andat fly. The Gash ceased to flow on October 1; but two further flushes came down during the first week of the month. The crops on the irrigated areas and also the Gash Delta are doing well.

Red Sea Province.—There has been more rain in the hills, and the prospects of a good dura crop are promising. Grazing should also be above the average.

Khartoum Province.—The rain crops throughout the province are excellent, particularly those at the tail end of the Gezireh alongside the Blue Nile boundary; also the crops between Kadaru and Gubba stations.

Upper Nile Province.—Crops are promising. Some damage is reported from various places, attributable possibly to excess of rains or possibly to some flies, of which endeavours are being made to obtain specimens.

White Nile Province.—Detailed reports from inspectors show that the weeding of crops at the weeding season was greatly interfered with by the prevalence of malaria, and consequently the yields have not been as good as the heaviness of the rains would otherwise have justified.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated January 10:—During the week ended January 1 crop prospects generally fair, but rain urgently required in the Punjab, North-West Frontier Province, Central Provinces, Bombay, in the unirrigated area of the United Provinces of Agra and Oudh, and in parts of Central India and Madras.

Bombay cotton market irregular. Fine M.G. Oomra, March, Rs. 266. Piece-goods market lifeless, as before, with prices nominally steady. Calcutta jute and gunny markets steady, but little business passing. Freight rates on jute and gunnies have been reduced. No change in bank rates.

Coal exports to Sabang and Singapore stopped immediately and to Aden by end of January. Colombo will receive 50,000 tons in January, 40,000 in February, and 25,000 in March, after which supplies will cease, but reduced supplies will continue for Ceylon Government railways. Steamers proceeding westwards will be bunkered only as far as Port Said and three days further, while restrictions to similar effect will be placed on steamers proceeding eastwards.

DRIED FRUIT.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated January 11, state:—

Currants.—It is not possible to record any real increase of activity, although the tone of the market has been slightly better. Some interest has been taken in speciality parcels. Bags of the dry character Zante, landed per Brescia, have received some attention, and sales at 80s. to 82s. have taken place; also in good quality shade dried Vostizza it has been possible to make some progress at 95s. to 98s., and up to 102s. has been paid for the finest quality. Other growths are neglected with the exception of a little business reported in bags cleaned Amalias at 65s. Government holdings of old fruit at the reduction are selling fairly at 32s. to 45s. Quotations are:—Pyrgos, 68s. to 70s.; Amalias, 70s. to 74s.; Patras, 73s. to 78s.; Gulf and Panariti, 80s. to 90s.; Zante, 75s. to 82s.; Vostizza, 90s. to 102s. Total arrivals from commencement of season to date 17,690 tons.

Valencia Raisins.—A small consignment of selected, per Valkyrian, has been marketed, but no sales are reported.

Sultanas.—No revival is in evidence, and the little trade pressing is at late rates. Quotations are:—Smyrna, 135s. to 145s.; Greeks, 135s. to 140s.; Afghans, red, 95s. to 100s.; Afghans, yellow, 110s. to 120s.

Figs.—Layers about cleared, Naturals dragging sale at 40s. to 50s.

Now that the most active period of the season is over we shall for the present issue our report on the first Tuesday in the month.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in their report for the week ended January 13, state:—The past week has been decidedly interesting, the early part bringing a marked improvement in the demand for Egyptian cotton. It is well, however, to guard against a feeling of undue optimism, although after such a prolonged period of stagnation such a feeling is easily acquired. One swallow does not make a summer, and two days of good business need not necessarily indicate a trade boom; nevertheless, the week under review leaves us with the impression that there is "more doing," and this in spite of the dicta of several usually well-informed authorities who persist in the "flash in the pan" theory. The line of argument pursued by the latter is that spinners are being forced into the market in order to keep their machinery moving at the mills, and that there is really nothing behind it. This may be so, but it does not seem quite to explain the broader inquiry experienced here. A feature of the week was the number of bids made which did not lead to business. It gave one the impression that spinners had at last decided on a line of resistance and meant to hold to it. Another feature was the appearance in our market of several "outsiders," that is to say, spinners who normally do not buy Egyptian, excepting for an occasional mixing, and none of whom have been seen in our market for some considerable time. Sakellaridis and Uppers here have about shared the honours of the inquiry; of the former 1. 35—42 were chiefly in request, and of the latter T. 1—4 were generally asked for. Low cotton, both Sakellaridis and Upper, received a little more attention, and on one day 250 bales of Sudan cotton changed hands. Prices, in spite of the conservative views of spinners, have shown an all-round stiffening. A certain "bullish" sentiment has, no doubt, percolated into the Egyptian market, from the fact that the American markets have been showing a steady improvement of late, and this, of course, must be given its full value. For example, to-day's total sales were given as 10,000 bales, which includes everything. This figure has not been seen here for months past, and caused quite a sensation, although for this season of the year it should cause no comment in normal times. Manchester reports this week have been much more cheerful, but—and here we wish to strike a note of warning—their bearing was principally on the American market, and not on ours, except for one day, when Egyptian spinnings attracted more attention. We again advise caution, but, be the cause what it may, there is certainly more doing in the spot department. Total sales 1,750 (including 250 bales Sudan). Quotations are raised 2d. per lb. Fully good fair Sakellaridis 23.00d.

SMYRNA OPIUM REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended December 31:—The sales this week on our market amount to six cases at from 14s. 6d. to 15s. per lb. for manufacturing qualities. The exchange is 560 piastres per pound sterling for cheque, and 0.62 dollars for one Turkish pound of 100 piastres. The arrivals are 896 cases, against 1,325 at same date last year, and our stock is now 840 cases.

OIL OUTPUTS.

Anglo-Egyptian.—Week ended January 9: Gensah, nil; Hurgada, 3,592 tons (previous week, 3,216 tons).

British Burmah Petroleum.—A cablegram has been received reporting that the total production of crude oil by this company and the Rangoon Oil Company amounted to 60,234 barrels for December.

COMPANY MEETINGS.**STEUA ROMANA (BRITISH).****Important Holding in the Roumanian Company.**

The statutory meeting of the Steaua Romana (British), Ltd., was held on January 13 at Winchester House, Old Broad Street, E.C., Sir Albert Gerald Stern, K.B.E., C.M.G., presiding in the unavoidable absence abroad of Sir Charles Greenway, Bart., the chairman of the company.

The Secretary (Mr. John A. Roney) having read the notice calling the meeting and the auditors' certificate,

The Chairman said: This notice is given for the purpose of complying with the provisions of the Companies Acts, and may therefore be regarded as merely formal. You have all received a copy of the report containing the particulars which the directors are required to lay before shareholders at the first and, as it is called, statutory meeting, and I assume that with your permission we may take the report as read. You will see that under the heading of receipts the company has received £1,410,511 in respect of subscriptions to its shares, all of which, I may remind you, have been taken up. Bank interest amounts to £5,153 8s. 7d. On the payments side we have £1,027,724 13s. 9d., representing amounts paid to the original vendors of the shares in the Roumanian company (called the Steaua Roumana Societe Anonyme pour l'Industrie du Petrole), the acquisition of which represents the first and most important object of our existence.

I may, perhaps, explain for the benefit of those who are unacquainted with the circumstances, that the payments we have to make under this heading—and which we are gradually clearing off—represent not only the purchase price of the shares which are being purchased for our own account, but also a proportion of an advance which we and the French banking group associated with us in the main transaction agreed to make to the five large Roumanian banks who participated in the purchase.

Position of Groups.

Roughly speaking, the three groups own just over half the shares in the Steaua Roumana, of which our company takes one-quarter (making one-eighth of the whole), the French group one-quarter and the Roumanian banks one-half. The French and ourselves are completing the payment of the Roumanian proportion of the purchase price by way of advance to them, and these advances are secured by the deposit of their shares, half with us and half with the French group. Preliminary expenses stand at present at £34,254 2s., and it is not expected that this figure will materially increase. This is well within our original estimate of £45,000. I may perhaps remind you that this is an item which in ours, as in all other cases of companies registered since last summer, is necessarily larger than in the case of earlier registrations owing to the heavy increase in capital duty, which, as you know, was quadrupled by the last Finance Act. Interest on calls paid in advance, £12,909 19s. 9d., calls for no comment, and the remaining items speak for themselves. Under

the circumstances there are no resolutions to put before the meeting, but if there are any questions that shareholders would like to ask I shall be pleased to answer them to the best of my ability. As the main object is that of a holding company, and we only came into existence three months ago, there is nothing of special interest to report at this stage.

Management of Property.

Our efforts at the present time, in conjunction with our French associates, are directed to the examination of the technical conditions under which the Roumanian Company's undertaking is being worked, and, through the representatives whom we have respectively appointed, assisting those who are responsible for its conduct in Roumania. In addition, our company and the French group are represented on the board by 10 out of 21 members, and on the managing committee by four out of eight members. Our own representative is Mr. G. S. de M. Rogers, who was selected for us by the Anglo-Persian Oil Company, and I am sure that our interests could not be in better hands. It is satisfactory to note from the particulars furnished in the Roumanian papers that the production from the company's wells has lately shown an increase, and we hope that with the more extensive drilling programme which is being prepared this increase will grow rapidly in the near future.

Position of Roumanian Company.

The ordinary general meeting of the Steaua Roumana Societe Anonyme pour l'Industrie du Petrole was held in Bucharest on December 15, 1920, at which the annual report of the directors and of the auditors for the year 1919 were submitted. It is interesting to the shareholders of the Steaua Romana (British), Ltd., to note that the net profit of the Roumanian Company for the year 1919 was 26,782,623 lei, and that a dividend of 20 per cent., or 100 lei per share, has been declared for the year 1919. At the same meeting it was decided to increase the capital of the Roumanian Company to 300,000,000 lei by the issue of 200,000,000 in new shares of 500 lei each, to be issued at a premium of 25 lei at the rate of two new shares for every existing one held. The holding of the British Company in the Roumanian Company will thus be trebled by the exercise of its right to subscribe to the new shares, for which purpose we have ample funds.

The Chairman having replied to some questions the proceedings terminated.

COMPANY NOTES AND REPORTS.**Steaua Romana (British).**

The statutory report states that the company was registered on October 12, 1920, with a nominal capital of £2,025,000, divided into 2,000,000 ordinary shares of £1 each and 500,000 deferred shares of 1s. each. The total number of shares allotted to December 31, 1920, is 2,000,000 ordinary shares and 500,000 deferred shares, all of which have been allotted subject to the payment of the whole amount thereof in cash. The total amount of cash received in respect of the said 2,000,000 ordinary shares is £1,385,511, and in respect of the 500,000 deferred shares is £25,000. The preliminary expenses are estimated at £45,000.

SUDAN RESEARCH FARM.

In the report of the Gordon Memorial College, Khartoum, for the year ended December 31, 1919, Mr. J. W. Crowfoot, C.B.E., the principal, reports as follows on the work of the Central Research Farm:—

Mr. Sawyer was detached from the Farm to make an agricultural survey of the Southern Provinces, and has since been appointed Assistant Administrator in charge of Agriculture in Palestine. The original pioneer work which he has carried out both at Shambat and in the south will, I believe, prove of permanent value to this country.

Major Nathan, O.B.E., who returned from Palestine last May, has been in charge of the Farm and the pumping schemes since that date. The greater part of the Farm has been left fallow during the last season, but an excellent cotton crop has been grown on the Shambat pumping scheme, which was disposed of locally at £E22 the kantar (about 315 lb.) unginned; at Tuti the cotton crop of 1918-19 proved a comparative failure, and no cotton was planted in the 1919-20 season, but other crops, in particular dura and ground nuts, yielded a very good return. Major Nathan has done some very good work on the Farm.

The results of the work of the year 1919 are summarised as follows:—

"(a) Cotton.—The numerous types bred in the past at Khartoum North have been reduced to seven, of which a large number of strains are undergoing purification. Hopes are entertained that cottons rivaling Sakel in length and fineness, but constitutionally stronger, may be on the market in the near future.

"(b) Wheat.—No new hybrids have been made this season, but a large assortment of foreign types have been introduced, and are at the moment under observation. As a result of the previous year's work, six Australian varieties were introduced by the Agriculture Department for trial on a commercial scale. Early maturing wheats bred by Mr. Massey are also being grown on sufficiently large scale to enable a test of their rust resistant properties, and also to ensure fair comparison with local varieties.

"(c) Introductions. — A considerable number of economic plants have been introduced, and in some cases distributed to likely quarters. Maize, beans, peas, lucerne, melons, tobacco, oats, barley, capsicums, groundnuts, sesame and sorghums are all under cultivation in experimental plots."

Markets Generally Inactive.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday night.

During the past week business has been of disappointing dimensions, and in most markets a sagging tendency has been in evidence. Conditions at the moment are too adverse for any pronounced improvement to be possible. There is, for one thing, the industrial position at home, while abroad the week has seen the development of several unfavourable factors. In the circumstances, it is rather surprising that prices should have been maintained as well as they have been.

On the whole, the gilt-edged section has been fairly strong, and the various Government stocks have closed to-day on a firm note. Foreign bonds have been featureless, with some few exceptions, in which changes have been to the advantage of holders. Argentines have been a rather strong spot.

There has been little doing in Industrials, and there have been few notable changes. Shipping shares have been very quiet, but Oils, on the other hand, have been the medium of a certain amount of activity. Rubbers, after their recent spurt, have again lapsed into dullness. In Mines an interesting feature has been the rise in Chartered on the prospects of a favourable award.

Near Eastern securities have been inactive and weak. Government Funds have been variable. Egyptian Guaranteed 3 per Cent. are unchanged at 60, but Turkish Guaranteed 4 per Cent. 1855 are $\frac{1}{2}$ down at 67. On the other hand, Greek Guaranteed 2 $\frac{1}{2}$ per Cent. 1898 are $\frac{1}{2}$ up at 57.

Greek securities have, in most cases, shown improvement. The 5 per cent. 1881 Loan and 5 per cent. 1884 issues have both risen one point to 41 $\frac{1}{2}$. The 5 per cent. 1890 Loan and Fundings both remain unchanged at 40. The 1910 Loan has lost 9 points at 31, at which there were sellers, while the 1914 Loan at 39 has gained $\frac{1}{2}$. The 1902 Loan is a point up at 35.

Banks have displayed little activity. Agricultural 3 $\frac{1}{2}$ per cent. Bonds are the same at 53, and the 3 $\frac{1}{2}$ per cent. Guaranteed Bonds at 55 are unchanged. Imperial Ottoman Banks are half a point up at 7 $\frac{1}{2}$, and National Bank of Egypt at 16 $\frac{1}{4}$ have risen $\frac{1}{4}$. Land Banks are unchanged at 4 $\frac{1}{2}$.

There have been a number of changes in Land Shares. Beheras have shed $\frac{1}{4}$ at 8 $\frac{1}{2}$, but the Preference shares remain unchanged at 2 $\frac{1}{2}$. Anglo-Egyptian Land Allotments have remained unaltered at 3 $\frac{1}{4}$, while Egyptian Consolidated Lands have gained 3d. to 1s. 9d. Delta Lands at 9s. 9d. and Gharbieh Lands at 1 $\frac{3}{4}$ have remained unchanged. New Egyptians are the same at 23s. 6d., while Union Foncières are 1-16 up at 2 13-16. Sudan Plantations have lost $\frac{1}{8}$ at 2 $\frac{1}{2}$.

TRACTOR TRIALS IN BULGARIA.

H.M. Commercial Commissioner in Sofia reports that a competition for motor tractors is to be held in April next, under the auspices of the Bulgarian Ministry of Agriculture. A small strong tractor, capable of dealing with rough ground, and able to operate within confined spaces, is the type likely to meet with success. It is suggested that firms desirous of competing should communicate with the Banque Agricole de Bulgarie, Sofia, Bulgaria, the correspondence being in either the French, German, or Russian language.

There is reported to be a surplus of cattle in Croatia, and prices have fallen considerably.

LANCASHIRE COTTON.

Business Increasing.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Without there being any general increase of business in the market, demand tends to broaden, and many producers during the past week have sold more freely than for several months back. The feeling is growing that more favourable opportunities of purchasing will not be met with in the near future. Enterprise, however, is somewhat checked by the financial stringency, whilst some merchants are handicapped by not having yet distributed dear goods bought a long time ago. Lancashire spinners are now purchasing Egyptian cotton on a freer scale. Prices are better held. Increased activity is also showing itself in Egyptian yarns, but orders are placed very irregularly. At the time of writing it is not sure whether organised short time in this section will be continued, but some firms want to be allowed to run machinery as they wish. In piece goods for Egypt inquiry has been rather better, and some fair lines have been booked in grey shirtings. Printing and finishing cloths are now attracting rather more attention for the outlets of the Levant. Most exporters, however, are not in a position to purchase speculatively. There is a little anxiety with regard to financial affairs in Egypt. In cloth for India the larger inquiry has been well maintained. So far most of the buying has been in light fabrics such as dhooties, but offers in grey shirtings are improving. Of the several outlets Calcutta is the best. For China there have been a few more attempts at trade, especially in bleaching descriptions. Only occasional lines have been mentioned for South America. The outlook for manufacturers as a body is brighter, and some firms are arranging to restart looms that have been stopped for many months. In American yarns for home use an increased turnover has taken place, especially in ring beams, and prices are firmer. Rather more trade has been about in bundles for India, and in extra hard descriptions for the Near East.

A large quantity of flour-milling machinery and equipment is required in Transylvania and the Roumanian district of Banat.

During November 3,000 tons of wax were exported to England from Panderma.

The traffic receipts of the Egyptian Delta Light Railways for the week ended December 20 amounted to £E14,472, making the total for the year £E365,626.

SHIPPING INTELLIGENCE.

PORT CONSTRUCTION IN MOROCCO.

In a recent report H.M. Consul-General at Tangier gives some interesting particulars of the progress of port development in Morocco.

A new section of quay at Kenitra, 224 metres long, with open storage ground at the rear, has been authorised for contract. Two cranes to carry three tons each have been installed and are ready for service.

At Rabat-Salee a warehouse, 54 metres by 16 metres on the open ground adjacent to the Custom House, has been completed and opened. The erection of a third warehouse, to be constructed on the same enclosure, has been put up for contract. Work is continued on the metalled roadway which will connect the quarries of Sidi Bou Knadel and Oued Akrech with the jetties south of Mehedia and Kenitra.

The large jetty at Casablanca has an extreme length of three-quarters of the P.M.1180 to the P.M.1234, and its guarding wall from P.M.1074 to P.M.1152. The work on the foundation of the wall of the quay approaching the large jetty continues; 208 metres have been actually finished. The building and filling up of the open-storage grounds of the Boulevards Font de Mer and Sidi Kairouani continues. The laying of the carriage way of Sidi Abderhamen has also been continued, and a commencement has been made with the installation of the building equipment necessary for the construction of this road.

Construction of two temporary bridges (or platforms) at Fedhala is in progress, and on completion should facilitate the embarking and landing of merchandise. The purchase of the naval material necessary is being carried out by the company in operation. The completion of existing work at Safi continues; also the preliminary work on the construction of the port for small barques. The port for small barques at Mogador is nearly completed with the exception of the clearing of the sandbanks, etc., for which purpose a dredger has been put into operation.

THE PORT OF CONSTANTZA.

The Chamber of Commerce of Constantza has reported to the Roumanian Ministry of Industry and Commerce as follows on the situation of the Black Sea port of Constantza: (1) All the quays have been entirely cleared of wrecks. (2) No. 2 grain warehouse, with 30,000 tons capacity, is in full working order, but No 1 warehouse, of the same capacity, is working only partially. (3) The equipment for oil export is in working order with the exception that instead of 40 tanks of 5,000 cubic metres capacity (as before the war), there are at present only 27 tanks. (4) The lighting plants, power, water drains, etc. have been repaired and are in the same working order as before the war. (5) Storehouses of 10,691 square metres accommodation are ready to receive any kind of goods from arriving steamers or trains. (6) A 40-ton crane has been set up on the quay. There are no smaller cranes, but those on the steamers can easily be used. (7) All railways serving the port have been repaired.

TURKISH FREIGHT RATES.

By a recent decision of the Allied High Commissioners the Inter-Allied Railway Commission is to be notified that rates may be increased by 25 per cent. above tariff charges, and that similarly, the Chirket-i-Harié Steamship Company has been notified that its rates are to be increased by 60 per cent.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria, for Bombay (Liverpool, February 2).

Bibby Line.—S.s. Leicestershire, for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, January 29); s.s. Gloucestershire, for Rangoon (London, February 2); s.s. Herefordshire, for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 16).

Byron Steamship Line.—S.s. Lord Broughton, for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila (Liverpool, January 22).

Clan Line.—S.s. Clan Mackenzie, for Colombo, Madras and Calcutta (Birkenhead, January 27); s.s. Banffshire, for Colombo, Madras and Calcutta (Birkenhead, January 27).

Cunard Line.—S.s. Brescia, for Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika and Constantinople (Liverpool, January 22); s.s. Antinoe, for Gibraltar, Messina, etc. (Liverpool, January 27, and Swansea, February 1).

Ellerman Line.—S.s. Maronian, for Gibraltar, Malta and Alexandria (Liverpool, January 22); s.s. Polo, for Patras, Piræus, Syra, Volo, Salonika, Smyrna and Constantinople (Liverpool, February 5).

Ellerman City Line.—S.s. City of Exeter, for Bombay and Karachi (Birkenhead, January 20); s.s. City of Glasgow, for Calcutta (Birkenhead, January 31); s.s. City of York, for Calcutta (Birkenhead, February 14).

Ellerman's Hall Line.—S.s. City of Birmingham, for Bombay, Karachi and the Punjab (Liverpool, January 29); s.s. City of London, for Bombay, Karachi and the Punjab (Liverpool, February 10).

Ellerman's Westcott and Laurance Line.—S.s. Venetian, for Gibraltar, Malta and Alexandria (London, January 22); s.s. Bulgarian, for Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas and Varna (London, January 26).

Glen Line.—S.s. Pembrokeshire, for Port Said, Singapore, etc. (London, February 3); s.s. Gleniffer, for Port Said, Singapore, etc. (London, February 17); s.s. Glenegyle, for Port Said, Singapore, etc. (London, March 3).

Golden Star Line.—S.s. Mediterranean Star, for Genoa, Naples, Alexandria, and Piræus (leaves Marseilles February 8).

Harrison Line.—S.s. Musician, for Calcutta (Liverpool, February 3); s.s. Defender, for Calcutta (Liverpool, February 17); s.s. Merchant, for Port Said, Port Sudan, Aden, Mombasa, Zanzibar, etc. (Glasgow, February 10, and Birkenhead, February 17).

Henderson Line.—S.s. Arracan (freight only), for Port Said and Rangoon (Birkenhead, February 9).

Holt Line.—S.s. Atreus, for Port Said, Singapore, etc. (Glasgow, January 27); s.s. Hyson, for Port Said, Singapore, etc. (Glasgow, January 27); s.s. Jason, for Port Said, Singapore, etc. (Glasgow, January 27); s.s. Idomeneus, for Port Said, Singapore, etc. (Birkenhead, January 27); s.s. Elsinor, for Port Said, Singapore, etc. (Swansea, February 3).

Johnston Line.—S.s. Cundall, for Piræus, Volo, Salonika, Bourgas, Varna, Constantza (Liverpool, January 22); s.s. Aviemore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, January 29).

Moss Line.—S.s. Limoges, for Gibraltar, Malta, Piræus, Syra, Smyrna, Salonika and Constantinople (Liverpool, February 12).

Papayanni Line.—S.s. Assyrian, for Malta and Alexandria (also taking cargo for Beyrout, Alexandretta, Jaffa, Haifa, Messina, Port Said, and Cyprus, etc. (Liverpool, January 29).

P. and O. Line.—S.s. Dongola, for Bombay (London, January 28); s.s. Novara, for Colombo, Madras, and Calcutta (London, February 5); s.s. China, for Bombay (London, February 11); s.s. Nellore, for Colombo, Madras and Calcutta (London, February 11); s.s. Kalyan, for Bombay (London, February 18); s.s. Soudan, for Bombay (London, February 18); s.s. Somali, for Colombo, Madras and Calcutta (London, February 25).

P. and O. British India Line.—S.s. Hatimura, for Bombay and Karachi (London, January 22); s.s. Tremere, for Bombay and Karachi (London, February 5); s.s. Lena, for Bombay and Karachi (London, February 19); s.s. Morvada, for Colombo, Madras and Calcutta (London, February 25).

Prince Line.—S.s. Glendhu, for Tunis, Malta and Alexandria, also taking cargo for Syrian coast and Cyprus ports (Manchester, January 25); s.s. Glenshiel, for Malta and Alexandria, also taking cargo for Syrian coast and Cyprus ports (London, January 30).

NOTES OF THE WEEK.

The Decoration of M. Gounaris.

In conferring a high decoration upon M. Gounaris "for valuable services to the country and the Throne" King Constantine has taken a step calculated to make the well-wishers of Greece despair of any early improvement in the Greek situation. No one disputes the right of the King to reward those who have served him well, and no one would wish to interfere in a purely domestic concern of this nature; but the fact that the reward has been conferred publicly at this time will confirm in their estimate of King Constantine all those who hold that what they regard as his stupidity and obstinacy constitute a danger to the future peace of the Near East. M. Gounaris is not *persona grata* with the Entente Governments, and there is no reason why he should be. By conferring upon him the highest honour at his disposal King Constantine has shown either that he is determined to do all that he can to flout the Powers or that he is entirely lacking in ordinary intelligence. If the King is so beholden to M. Gounaris, it would have been quite simple to have informed him of the fact and to have deferred the public acknowledgment until a more convenient season. Those who are striving for a satisfactory adjustment of the present strained relations between the Entente Governments and Greece will be tempted to feel that they are not likely to receive any help from King Constantine, and that, if they succeed, it will be in spite of him. The fact that M. Gounaris allowed the King to make the award is a measure of his statesmanship and of the value of the "services" that he has rendered or is likely to render to his country.

Party Politics in Bulgaria.

M. Stambolisky has returned to Bulgaria after his long tour abroad, and there is every indication that his presence is urgently needed in the country. It is a severe tax, both on the people and on the other members of the Ministry, to have the Prime Minister absent for any considerable length of time, for the most perfect system of communication with the travelling head of the Government is no adequate substitute for daily personal touch. There is inevitably a tendency to mark time until he returns, with the result that a number of matters of varying degrees of urgency are postponed. M. Stambolisky, it is to be feared, will find this to be the case in Bulgaria. He will pick up the reins of government again, however, with the knowledge that the whole nation recognises that the object of his tour has been brilliantly gained. Apart from this admission

it is doubtful whether party politics will be prepared to make much allowance. The Agrarian Party in power has had to feel its way, and with all the administrative experience on the side of the Opposition it is bound to have to face severe criticism. Nothing would be worse for Bulgaria at this stage than a long spell of political instability, and it is to be hoped that M. Stambolisky will have profited by his tour to realise that Party considerations are as nothing compared with good government, and that some expedients which offer a quick way of raising money are not necessarily sound statecraft, and may not provide the largest revenue in the long run.

The Mail Service to the Near East.

Any improvement in the mail service to South-Eastern Europe would seem to be entirely fortuitous, as it is liable to be interrupted by a fresh spell of delays, during which correspondence may take twenty days to reach Sofia or Constantinople. The journey from London to these capitals, it may be pointed out, can be completed well within the week, but letters posted in England on and before December 18 were not delivered in Constantinople before January 8. As a rule the newspaper post fares still worse: sometimes it will reach its destination several days before letters posted on the same date. The British Post Office disowns all responsibility. Mailbags are dispatched to Paris to be conveyed by the Simplon-Orient Express, but it would seem to be nobody's business to see whether they are placed on that train. Consequently, little, if any, of the daily mail matter from England appears to travel eastward by the express service, with the result that when, as recently, all other trains between Serbia and Bulgaria cease running the bulk of the English mail fails to reach the latter country. In view of the fact that this state of affairs has now lasted over two years, it might be thought that the British Post Office would have felt constrained from a sense of self-respect, if not from consideration for British interests, to have devised a more satisfactory arrangement with the French postal authorities.

The Egyptian Nationalists.

It has been evident for some little time past that the Egyptian Nationalists are less united now than they were a little while ago. There is no open breach, but opinion is divided regarding the absolute necessity of inserting in the Treaty a specific statement that the British Protectorate is abolished. Zaghloul Pasha appears to have caused some uneasiness among his followers by giving too many interviews to foreign news-

paper representatives, to whom he has made somewhat conflicting statements as to his views. On the other hand, Adly Yeghen Pasha, who does not appear to have made any public pronouncement on the subject, appears nevertheless to be regarded by a steadily increasing number of Egyptians as a possible leader of the Moderates, if Zaghloul and the Extremists should follow a course which might threaten to undo all the good that has been accomplished by the Milner negotiations. He would be a bold man who would venture to prophesy whether the rift will become wider or the differences be overcome; but it would undoubtedly be a good thing for Egypt if some of those who claim that they have been entrusted with the mission of negotiating on her behalf were to think less of their personal importance and to show less anxiety to take the centre of the stage on every possible occasion.

A Mare's Nest in Egypt.

Our Cairo Correspondent reports, in a letter published on another page, certain arrests which, it was thought at the time he wrote, might lead to the discovery of another widespread conspiracy or a second Society of Vengeance. Fortunately the suspicion has not been justified, and telegrams despatched last week make it clear that the informer in the case was himself the maker of bombs discovered; while according to some reports the said bombs are actually mere "dummies." The student responsible for this false alarm appears to have acted with the intention of getting his personal enemies into trouble and in the hope of obtaining rewards for his information. Such conduct, with its blend of low cunning and short-sightedness, is typical of the student who provides the bulk of the "strikers" when his class marks its disapproval of anything or anybody by taking a holiday, and who "demonstrates" on the slightest provocation or no provocation at all. It is a pity that in Egypt, as in India, he has generally been taken too seriously. But, of course, when he takes to attempting to assassinate Ministers, or even to planting dummy bombs on the premises of anybody against whom he happens to have a grudge, he becomes a serious pest, and should be treated as such.

Armenia's New Friends.

A statement issued recently by the Armenian Bureau in London pointed out that Armenia, in yielding to Soviet Russia, did so "solely for the sake of preserving the physical existence of the Armenian people." It would be impossible to question the truth of that statement, and it would be not only ungenerous, but unfair, to blame the Armenians for acting as they did. They had most certainly had their fair share of fighting, and were at the point of exhaustion; and their appeals for help, military or diplomatic, met with no response from Europe or America; surrender to the Bolsheviks, or, rather, to Bolshevism, was the only course open to them—and they took it. But it has not saved them. The Bolsheviks, it is true, afforded them some little protection against the Kemalists, but it was only in order to secure more loot for themselves, and upon the whole it is probable that the Armenians now regret more than ever that they were unable to come to some arrangement with Angora rather than with Moscow. For we learn now that Bolshevik requisitioning in Armenia was conducted on such a scale that at last the peasants rose in revolt in an endeavour to save the remnants of their stores. The natural result followed: the rising was suppressed with the aid of troops from Baku; and, their tragic fortune clinging to them still, the Armenian peasants were so brutally handled that the Commissar responsible, one Orjanikidze, was actually censured by Moscow.

The Yemen Fighting.

The latest news of the fighting between the forces of the Imam of Sanaa, under Mahmoud Nedim Bey, and those of the Idrissi, the ruler of Asir, is that the former have been defeated and driven out of the Idrissi's country. The threat to Hodeidah is thus removed, and it is possible that we shall hear nothing more of the old-standing rivalry for some time. But it is equally possible that we may hear a great deal more of it, and in the near future. For we have to recognise that the

Arab world is in a state of considerable excitement still; and, as we remarked last week, the presence of the ex-Governor of the Yemen with the Imam's troops is significant. It is true that Mahmoud Nedim Bey, though he was formerly in Turkish Government service, is a Syrian, not a Turk; but even so, it is very doubtful whether he would have made an acceptable leader to any Arab force two years, or even one year, ago. To-day, it seems, his former service is forgotten; only his nationality remembered. The really interesting thing for us to know would be whether his sympathies are actually with the Arabs or with the Turks, and whether he is bent on keeping southern Arabia in a state of unrest simply in order to embarrass the Allies. There remains, of course, the chance that he has been playing his hand entirely for his own benefit.

Confusing Reports from Persia.

A telegram sent to *The Times* by its Teheran correspondent on January 18 announced that the Sipahdar's Cabinet had "again resigned," and that its resignation "has this time been accepted." The Sipahdar, it seems, had withdrawn his resignation, owing to representations made by Teheran merchants, with whom he is described as being "extremely popular owing to his negotiations with the Moscow Soviet." But the telegrams announcing his resignation continue to be followed, at very brief intervals, by others announcing that he has again accepted office; and at the moment of writing it seems that he is engaged in forming a fresh Cabinet. It is also reported that the Bolsheviks have left Resht, and are making preparations to quit Enzeli on the signature of an agreement with Persia. This may be connected in some way with the awakening of the Shiah world to the dangers of Bolshevism, which is reported from Nejed and Kerbella; but it is more probably a subtle move in the Bolshevik game. For the moment it is possible to congratulate the Shah and his subjects, but we cannot persuade ourselves that that Bolshevik greed will leave Persia to itself for very long, or that Persia unaided will be able to keep off the inevitable advance; and in view of the failure to ratify the Anglo-Persian Agreement, and of the certainty that our troops will, therefore, be withdrawn at least from Northern Persia as soon as it is practicable to move them, the prospect is, upon the whole, not a pleasing one. A withdrawal southwards of the Shah, his Court, and his Government, as suggested in our columns last November, would still seem to us to be a sound and practical move.

Indian Ministers.

Now that the full list of the new Indian Ministers has at last been published in this country it is possible to form some idea of the immediate prospects of the dyarchic system of administration, and on this point our first impressions are definitely favourable. It is, of course, true that the Ministers are inexperienced in conducting public business, though most of them are practised critics of its conduct by others; but a beginning has to be made, and the list shows in every province men who are likely to learn their work quickly, as well as to hold their own in debate against any possible opposition. The outstanding names are Sir Surendranath Bannerji, in Bengal; Mr. Paranjpye, the well-known educationist, in Bombay; and Mr. Chintamani, in the United Provinces, the last-named a practical journalist, who has "come on" in recent years more rapidly than almost any statesman in the country. As yet there are no Prime Ministers, and we suppose the leadership of each team is left to settle itself, as it is likely to do, but their absence may be a source of temporary weakness, and there may be a few resignations by-and-by owing to inadequate appreciation of the need for team-work. That lesson, however, will be learned in time, and meanwhile we see no reason to doubt that the "transferred subjects" of the King-Emperor's business will be administered reasonably well.

The Situation in Madras.

From some points of view the most striking feature of the list is the selection in Madras of three "non-brahmin" Ministers, supported by a large majority of

the provincial legislature. As our readers will remember, the "non-brahmins," representing the great bulk of the population, feared that brahmin influence would suffice to carry the elections; they refused even to state their case before the Southborough Committee, and they protested bitterly against Lord Meston's award, but eventually they made the best of it, and now they find themselves in power, possibly to their own surprise. Some of the brahmin leaders have urged that one at least of the three Ministers should have been chosen from the minority, but Madras is scarcely yet ripe for such a coalition, and we think that a definitely party government at this stage will make for the political progress of the Presidency. The brahmins will learn that their hitherto unquestioned ascendancy is shattered; the victorious party will soon find out that they cannot do without their opponents' great abilities; and we anticipate that, after a certain amount of bickering, the course of politics in this region will be as equable as in any other part of India.

Calcutta Students' Strike.

The most unpleasant feature of last week's news from India was the intimation that a large number of students in Calcutta had "come out," and discontinued their studies pending the grant of what they have been taught to call Home Rule. One had hoped that the recent failure of the attempts to bring out the Hindu and Moslem Universities would have given a setback to this form of agitation, but young Bengal, with all its admirable qualities, is a little weak in the sense of discipline, and so the new Ministers have an early chance of showing their capacities in a region where the old bureaucratic administration has won few laurels. We have watched these students' strikes for about twenty years, and we are convinced that they have been handled far too tenderly: the telegraph has been kept busy, high officials have rushed to the spot, anxious only to see that the students had no shadow of a grievance, and the inducements offered to them to return to work have bred a general idea that such a strike does harm to people other than the lads and their families. The eradication of that mistaken idea will not be an easy task, but it is a task essential to the progress of real education, and we hope that Ministers in Bengal will take up a strong position from the outset.

THE WEEK AT HOME.

LONDON, Monday Evening.

Home and Foreign Politics.

The Prime Minister is in Paris, discussing the German reparations with M. Briand, the new French Prime Minister. The Germans, as usual, appear to be putting up a wall of indignation and terror at the prospect of the indemnity; it finds a few echoes in the Press here, but, outside the *Westminster Gazette* and the *Daily News*, it has no real defenders, and the public at large do not in the least believe in these pictures of an impoverished and bankrupt Germany being driven into the arms of Bolshevism by the Allies. It is the opinion of practically every Englishman who has been in Germany since the Armistice, and of Germans themselves in their candid moments, that the whole German character and tradition is fundamentally opposed to Bolshevism.

At home, as we get nearer the opening of Parliament, the rumours of splits, secessions, and troubles within the Coalition increase. But clubmen and political journalists are credulous souls. Somebody once remarked many years ago that the third session of a Parliament was the critical one for a Government, for the obvious reason that it has by that time offended some of its friends, satisfied others, exhausted its early enthusiasm and excited opponents, and generally begun to feel the swing of the pendulum. But that generalisation, which fitted the sixties, seventies, and eighties of last century, and may, for all I know, have fitted the House of Commons under Simon de Montfort, is still trotted out regularly as an eternal truth, and facts are busily sought for to suit the theory.

But in the present day the facts are rather stubborn. It is perfectly true that Coalition Unionists and Liberals have not entirely coalesced; but they are still a happier family than Independent Liberals and Labour, who detest each other more than they do the Government. There is also some little division between the ordinary Conservative, who hates the idea of any reform, and thinks things are very well as they are, and the young Tory school—they will not call themselves Conservatives—who believe in "sane reform," sanity being, of course, the measures of which they approve. These are really the salt of the Tory party; before the war they had a union which called itself the Unionist Social Reform Committee, which certainly influenced opinion and legislation. That organisation seems to have disappeared, and most of those who composed it now hold high office in the State; but other thinking young Tories have come forward, and are beginning to carry weight. Naturally they have to overcome the inertia of the ordinary Conservative; he would fight them to the death if they were Liberals, but as they are usually Tories of good family whose natural doom is the House of Lords the middle-class Conservative merely mutters that boys will be boys, and admits that perhaps it is as well to have some brains in the party after all.

The idea that these young Tories will secede and enter Mr. Asquith's wigwam is ludicrous; and even the political gossips have never ventured to suggest that they will worship in the Labour tabernacle. The Coalition, then, is not likely to fall to pieces from within. It will encounter a good deal of stormy weather this year, but the craft on the whole is more seaworthy than it was a twelvemonth ago.

The Cost of Living—

The cost of living is now quite definitely falling, and it has declined in two successive months. But every month last year it went up until December, and it is now just about what it was in October, 1920, and very far above the figure of last January. The exact figures, as published by the Board of Trade, are of interest; they represent the increase per cent. over the cost of living in July, 1914. Since the end of 1919 they run: January, 1920, 125 per cent.; February and March, 130; April, 132; May, 141; June, 150; July, 152; August, 155; September, 161; October, 154; November, 176; December, 169; January, 1921, 165. It is anticipated that there will be another drop in February. But it will take a considerable time to get back to the figures of a year ago, for forthcoming threatened increases of rates are likely to nullify a good many points in the reduced cost of food. But still, as Galileo remarked about something else, it moves.

—And Wages.

The fall in the cost of food, if it should prove permanent and continuous, as we all hope, is bound to affect wages. Already some employers are talking of reductions. That, I think, is a little premature, seeing that the fall in the cost of living is small, recent, and not yet certainly stabilised. But there are not likely to be any demands, at least successful demands, for increases of wages when prices are falling; and in the long run a fall in one must be reflected by a fall in the other, as was the case with the rise.

Leaders of the World's Office Equipment and Filing Systems.

Shannon LIMITED

Head Offices:—
ROPEMAKER ST., LONDON, E.C.

Succursale au Caire, EGYPT. TEL. 1966. P.O.B

Unluckily, the usual acrimonious controversy on the subject shows signs of breaking out again. The employer says that wages should be reduced, the workman retorts that profits should be reduced; the employer retaliates that by the time the workman has had his wages and the Treasury its excess profits there are no profits left to reduce, and so on. I should have thought it would have been easy for a joint committee of master and man to have settled the question by a round-table inquiry, and I believe it is being done in some cases. But, of course, goodwill is necessary, and extremists on either side do not deal in goodwill.

I imagine the extremists in either camp are rather glad of the steady increase in unemployment—in the one case because it offers opportunities of lowering wages to the sweating point; in the other because, when men have empty stomachs, and still more when the children at home are hungry, they are likely to see red. There are not a great number of extremists of either sort, but in an economic crisis like the present they might become a source of danger.

Nationalising the Railways.

Mr. J. H. Thomas is becoming a prolific author. Only a few weeks ago his book, "When Labour Rules," was noticed in this column, and here he is again, with "The Red Light in the Railways" (Cassell). He believes in nationalisation, but not bureaucracy or confiscation; and he thinks nationalisation would be both efficient and economical. (It is rather unlucky that his book comes out just when the agitation against the increased charges for the nationalised telephones is at its height.) Even on the nationalised railways, however, he holds that the right to strike would still exist. One wonders if he would hold that view if he, as head of a Labour Government which had nationalised the railways, were faced with a railway strike. His book is worth reading, but it seems to me to be too hastily written, and to try too much to make the best of every conceivable world.

The Third Test Match.

We may have won the war, but we have certainly lost the ashes. Most English cricketers agree that it is not merely a matter of luck in winning the toss or getting the worst of the wicket; the Australian team has shown itself definitely our superior in three matches running. It is true that in the last one at Adelaide we did better than in the previous two, but there is very little doubt that the better team won, and sporting circles in London make no attempt to disguise the fact. The Australian superiority, too, seems to be all round, in batting, bowling, and fielding.

"The downfall of England," as the evening newspapers lugubriously call it on their placards, will add zest to the cricket season of the coming summer, when the Australians pay us a return visit. If they beat us at Lord's and the Oval as well as at Sydney, Melbourne, and Adelaide, it will be time for us to take up croquet.

Mr. P. F. Warner has suggested in *The Times* that our cricket grounds are no longer large enough, and that the crowds in 1922 will be bigger than ever. Certainly I found the Oval uncomfortably crowded once or twice last year, and the trams and tubes which take one there were hopelessly congested on the big days. It should not be difficult to add to the accommodation in the three months before the season starts.

A Mild Winter.

The extraordinarily mild weather which we have had since Christmas has produced some curious contrasts. Because it is warm, the doctors hold that it is healthy, for a really cold snap at this time of year keeps them busy with old people, to whom a bad January is easily the most fatal month; but because it is wet the chemists hold that it is unhealthy, the demand for anti-rheumatic remedies having considerably increased. However that may be, I saw a party of children going primrosing in the woods on the East Coast on Sunday morning—a sight I do not recollect having seen before in January.

The Week's Books.

"The Letters of William James" (Longmans) are likely to have a far wider circulation than the recently published correspondence of his brother Henry; indeed,

in some ways I find them better than the philosophy which impresses one at first reading, but which later on often strikes one as rather thin. Pragmatism will hardly last, but the "Varieties of Religious Experience" will, and some of these letters deserve to live. His description of England is good: "I find the strongest impression I received was that of the singularly artificial, yet deeply vital and soundly healthy, character of the English social and political system as it now exists. It is one of the most bizarre outbursts of time, one of the most abnormal, in certain ways, and yet one of the most successful—this accumulation of individual initiatives all preserved."

Elsewhere he is less friendly: "The density of British unintellectuality is a spectacle for gods. One can't imagine it or describe it. One can only see it." Of Kipling he says: "It's strange that with so much sympathy with the insides of every living thing, brute or human, drunk or sober, he should have so little sympathy with those of a Yankee—who also is, in the last resort, one of God's creatures."

In the last years of his life, however, he was more appreciative. "And, on the whole, what a magnificent land and race is this Britain! Everything about them is of better quality than the corresponding thing in the U.S.—with but few exceptions, I imagine. The equilibrium is so well achieved, the human tone so cheery, blithe, and manly, and the manners so delightfully good. Not one unwholesome-looking man or woman does one meet here for 250 that one meets in America! Yet I believe (or suspect) that ours is eventually the bigger destiny, if we can only succeed in living up to it. Meanwhile, as my brother Henry once wrote, thank God for a world that holds so rich an England, so rare an Italy." A handsome compliment.

"The New State" (Longmans, Green), by Miss M. P. Follett, is a political study of group organisation which has achieved fame in the United States. It is introduced here with a long preface by Lord Haldane, and it appears, so far as I have examined it, fully to merit the very high praise he bestows upon it as a piece of political thought. It is not a work which one could venture to criticise without very careful study.

"Freedom and Liberty," by Mr. W. Benett (Oxford University Press) is an attempt to show that "the universal final end of ethics must be found in religion, and there only," and it contains, as a penultimate chapter, a statement of what in the author's opinion the final ends, religious and philosophic, consist. The book is the fruit of much hard thinking, but the author, unlike many ethical philosophers, has taken pains with his writing, and it is therefore not difficult to read.

"Studies in Islamic Poetry," by Mr. R. A. Nicholson (Cambridge University Press), contains a great deal of the verse of Ma'arri, both in the original and translation. As a complete stranger to Persian poetry, I was reminded curiously of both Lucretius and Omar Khayyam. The panegyrics and love-poems which are also discussed here, and of which specimens are given, are not much to my taste. Nor do they seem to appeal to Mr. Nicholson himself very greatly.

"Early Italian Literature" (Blackie) contains a reprint of much pre-Dante writing, with critical introductions by Dr. Ernesto Grillo. It will interest the specialist, but only the specialist, in that subject.

Mr. Arnold Bennett's new work, "Things that Have Interested Me" (Chatto and Windus), is hardly likely to satisfy his most ardent admirers. It is a collection of short papers, and it strikes me as rather raw material to throw at the head of the public.

There is a good deal of entertainment in Mr. Henry S. Salt's "Seventy Years Among Savages" (George Allen). Mr. Salt is a vegetarian, and the savages are we ordinary meat-eating Britons. But a diet of nuts and may, or whatever vegetarians eat, has by no means dulled the author's sense of humour.

OCCELLUS

Under the presidency of Es Seyd Ahmed, the former Sheikh of the Senussi, a Pan-Islamic Conference was held at Sivas early this month. It is reported that others present included the Emir Abdullah, Faisal's brother, an Emir of Kerbella, and also a representative of the Imam Yehia, the Zaidi Emir of Sanaa in the Yemen.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, January 3.

The Sultan.

The Sultan has received a mark of appreciation from the French Government, in the form of the Grand Cordon of the Legion d'Honneur, which M. Gaillard presented to him yesterday morning at Abdin Palace. His Highness leaves on the 11th for his Upper Egypt trip, in connection with which invitations continue to arrive from the various Provinces through which he will pass.

The Political Situation.

The political situation remains unchanged. The various factions continue to squabble in the vernacular Press over the relative merits of Zaghloul Pasha and Adly Pasha, and the proper attitude which should be adopted by true patriots in the event of the British Government adopting certain hypothetical lines of action. Beyond these polemics, which, though at first entertaining, are becoming somewhat boring to the average reader, there is nothing new in the situation, and everyone is waiting to see what the British Government will say in the House of Commons when Parliament reassembles.

Yuletide Festivities.

Yuletide has passed off happily and uneventfully. There were great festivities in the hotels, where the fun and frolic were kept up till a very early hour. Dinner parties were given at the Residency, followed by dancing, and the French Minister held his customary reception on New Year's Day, which was very well attended. An unusual feature of the holiday week was the very heavy downpour of rain, which somewhat interfered with social engagements.

The Tram Strike.

The tram strike continues, and, although a satisfactory solution was in sight at Christmas, the settlement has not been reached yet. The Government is concerting measures with the tramway company and other transport agencies to maintain communications with the suburbs, which are much inconvenienced by the present great reduction in the tram service.

A British Officials' Association.

In my letter of December 27 I gave briefly the views of the Egyptian and foreign communities upon the proposed Anglo-Egyptian Treaty. There is, however, a third element which will be very seriously affected by the Treaty. I refer to the foreign civil servants, whose engagements, according to Clause VII. of the Milner-Zaghloul Memorandum, may be terminated at the instance of either the officials themselves or the Egyptian Government at any time within two years after the coming into force of the Treaty, and the pension or compensation to be accorded to whom, in addition to that provided by the existing law, is to be laid down by the Treaty.

These officials have accepted without clamour the inevitable situation which the Treaty will bring into being for them. In view, however, of the vagueness of the reference in the Memorandum itself, and of the difficulties which will inevitably arise when it comes to the elaboration of the details, the British civil servants have formed themselves into an association under the designation "Association of British Officials in the Service of the Egyptian Government," the objects of which are:—To consider the possible effect of Clause VII. of the Anglo-Egyptian Draft Agreement upon the position of British officials in the service of the Egyptian Government; to present the views and interests of British officials in regard to the question of compensation; to institute, in particular, by means of technical sub-committees appointed therefor, the immediate study of the complicated issues involved in the drawing up of fair and reasonable measures of compensation which shall be just and equitable as between the very varied categories of officials concerned, and, as a result of such study, to be in a position when, in accordance with the assurance given, the opportunity is afforded to put forward a con-

sidered and authoritative presentation of the case of all British officials.

The document setting forth the objects of the association goes on to say that it has no political or semi-political object of any kind whatsoever, and that it is actuated solely by a desire to see that the treatment accorded to British officials may be based upon a detailed knowledge of the existing varied conditions of service, and that the data to this end shall be co-ordinated and made available in good time. In view of the misleading statements on this subject which have appeared in the local Press, it is only fair and right that the attitude of the British officials should be made clear, and in this connection it is interesting to note that both the French and the Italian officials in the service of the Egyptian Government have formed separate committees having the same object, and working in close touch with their British colleagues.

The Willcocks-Kenedy Action.

This week the criminal libel action against Sir William Willcocks and Colonel Ralston Kenedy was mentioned in the British Consular Court, when various applications were made to Judge Grain by both parties. It was agreed that, in order to meet its demand for permission to strike out certain clauses in the plea of justification, the defence should put in a fresh statement, and the application to take on commission the evidence of Mr. G. B. Ireland, formerly General Inspector of Irrigation, was granted. The date for the trial was provisionally fixed for January 24, but the point raised by the prosecution that the two cases should be consolidated and heard together was not decided. The defence protested at the publication of the Nile Projects Commission's Report at this particular juncture, on the score that this was deliberately done in order to influence the result of the trial; but Mr. Preston, the Prosecutor, was able to explain that the report was issued by authority, that Sir Murdoch MacDonald had had nothing to do with its publication, and that it would have appeared much earlier if there had not been such great delays in connection with the printing. It might be added that the local Press daily publishes copious extracts from the report, but that so far there has been little or no comment of any importance.

CAIRO, January 10.

The Sultan's Tour.

The Sultan left this morning for his Upper Egypt trip, motoring to Helouan, where, accompanied by the Prime Minister and his household, he went on board his steamer, the Arabia. Owing to the low state of the river it has been necessary to release a certain amount of water at the dam to enable the Sultania fleet to get up, but this will not, it is expected, affect the summer supply. As previously mentioned, his Highness will make a very extended tour of Upper Egypt; and, in addition to stopping at the principal towns, he will visit the antiquities at Luxor and the dam at Aswan. He is expected to be back in Cairo by February 18.

Lord Milner's Resignation.

Lord Allenby was due to leave on Saturday last for a visit to the Sudan, but at the last moment his departure was cancelled; the next day came the news of the resignation of Lord Milner; and out here these two events were at once connected. I understand that there is no direct connection between the two. Lord Allenby has put off his visit because certain questions are under consideration which render it desirable that he should be in closer touch with London than would have been the case had he gone to the Sudan. As soon as these questions are settled, however, he will proceed to the Sudan.

Lord Milner's resignation has not surprised many of us, who knew that he had intended retiring as soon as he had issued his report; but local Egyptian opinion, in spite of the Reuter telegram that the resignation has nothing to do with the Egyptian question, has made up its mind that one of the reasons the Secretary for the Colonies has resigned is that the Cabinet is opposed to the proposals he has made for the settlement of the

Egyptian question. All said and done, the resignation has not created much excitement, the minds of the majority of the people being too much occupied with the cotton market and the economic situation. There is, however, no doubt that it has come as an unpleasant surprise to the Complete Independence party, and that they are feeling exceedingly depressed and anxious as to the future. This is very evident from the attitude of the Zaghoulouist organs, which are once again beginning to talk a lot about maintaining a united front and not giving in until the last point has been won from the British Government.

Serious Government Defalcations.

A serious embezzlement has been discovered in the Ministry of the Interior. The sum involved is stated to be about £E3,000, mainly in connection with travelling allowances and Secret Service funds. The signatures of various officials have been forged, amongst them those of previous Prime Ministers. The official accused has been arrested, and Ahmed Zeki Pasha, the Secretary of the Council of Ministers, who passed these requisitions, has to-day been suspended. The defalcations have taken place over a period of years, and the Parquet is now engaged in investigating the extent to which they have been carried on and exactly how far the officials suspected of complicity are involved.

Another Conspiracy Case?

As yet there is no further news as to the sentences passed on the twenty-four men convicted in the Abdel Rahman Fahmy case. Meanwhile the authorities have in hand what may possibly prove to be another conspiracy case. Quite naturally, considerable secrecy is maintained, but it is known that the authorities recently made an important seizure of bombs, acids, and circulars, and that the Procureur-General is himself conducting the inquiry. Two men are at present under arrest. What leads one to attach importance to this case and to expect that it may throw a good deal of further light on the criminal organisations that have existed in this country during the past two years is the fact that one of the men arrested is Doctor Khaffaga, the husband of the American, Lucy Bromley, who, during the more active period of the political agitation in 1919-1920, made a practice of delivering inflammatory speeches at Al Azhar.

The Racing Season.

Racing continues to be one of the main attractions of the season, and so successful have the meetings been that the Heliopolis Racing Club have decided to hold an extra Sunday meeting every fortnight. Thus we shall from now onward until the end of March have a meeting every Sunday at Heliopolis and one every Saturday, alternately at Gezira and Heliopolis. A remarkable feature of the racing this year has been the success of the English jockeys; and it is interesting to note that Egyptian horse owners, including the Sultan, seem to prefer the latter to their own countrymen. Several of the latter are excellent jockeys, but have little chance, as they rarely get a first-class mount.

YUGOSLAVIA.

ZAGREB, January 5.

The Late Minister of Finance.

The late Minister of Finance, Kosta Stoyanovitch, was given a public funeral on the 4th. Although his financial measures provoked plenty of opposition and a great deal of criticism, both at home and abroad, it must be remembered that he was a democrat who succeeded a Radical minister, who doubtless followed the pleasing custom of embarrassing his successor. On taking

over his duties, he found empty coffers and urgent and imperious demands, and was obliged to undertake emergency measures against his own better judgment. It is generally agreed that he came out pretty well from a difficult and disagreeable task. Born at Bitolj (Monastir) in 1867, after a brilliant scholastic career, he finished his studies at Paris and Leipzig. He passed from an academic to a political career, and several times held the portfolios of Agriculture and of Finance. He was well reputed as a writer on economic subjects. At Corfu in 1915 he headed the opposition to his old party the Radicals, and afterwards was Economic Delegate for Serbia at the Paris Conference, where he did good work for his country. His greatest claim to recognition is that he carried through the customs war with Austria between 1906 and 1908, and by finding new markets, broke once and for all that subservience to Austria that had marked the Obrenovitch régime. This was really the first blow in the struggle for complete independence, which he lived to see crowned with success. Even his enemies respected his capacity and integrity, and his loss is a severe one for Yugoslavia.

Opposition to Communism.

The new Government has declared its intention of carrying out the firm policy of the Vesnitch Cabinet against the Communist plot. The mass of the workmen are satisfied, and it is generally held that they were not identified with the Bolshevik movement, which, in fact, can never take a real root in this land of peasant proprietors. At a meeting at Vukovar of the Communist party, 74 votes were given against a motion that the party continue to exist, and representative members from Slovenia, Croatia, Slavonia, Bosnia, and Serbia all protested. A number transferred their allegiance to the Socialist and others to the Agricultural Parties. Three Communist municipalities have abjured the party, and on all sides news comes in of other dissidents, who are well-intentioned men, inclined towards extreme Socialism, but disgusted with the anti-patriotic plot, and the proved inspiration from Moscow.

The authorities have discovered a despatch from Zinovief, President of the Executive Committee of the Third International, pointing out to the Communists of Yugoslavia that they should have an easy task before them to overthrow the State and bring about a revolution, as the State is yet hardly consolidated and in the throes of completing its union, and lacking in funds, and calling upon them to do all in their power to increase every small difference between Serbs, Croats, Slovenes, and Montenegrins. Such advice, coming from such a source, only irritates Yugoslavs, even if they are of Communist tendencies, and so defeats its own ends. It falls on fruitful soil only on the subsidised foreign agents who are now being mercilessly rounded up and expelled.

From Skoplje and from Uzhitsa we hear that the Communist municipalities, whose recent election was hailed with a flourish of trumpets by the Bolsheviks, have resigned and repudiated the party. At Vukar, a leader of the local Communists came into collision with the peasants, and was shot. In Bosnia there is a proposal to form a civil guard in the towns and villages, to protect the country against the Communists. In Belgrade, all officials and employees of the municipality have passed a resolution calling upon the Mayor to dismiss at once all officials and employees who are connected with the Communist party.

Probably in connection with the Communist plot is the latest Albanian attack upon the town of Prishtina, where they killed three gendarmes, some officials and citizens, looted and robbed and carried off some prominent townsmen as hostages into the mountains.

As the Communists are working in harmony with the so-called "black and yellows"—i.e., pro-Hapsburgites, and the Magyars, who have in common a hatred and fear of Yugoslavia, and all have been in touch with d'Annunzio, the end of the tragi-comedy at Fiume is another blow to their hopes, but has attracted less attention in Yugoslavia than would have been expected, partly because of the general excitement in the internal situation, and partly because the inevitable end was discounted. But it is pointed out in the Croat papers that neither Gigante nor the Croat renegade Host-Venturi

can claim to represent the town. And at the same time it is interesting to note that the senator who is raising a lament in the Italian press on the "dolorous episode" of Zara is named Ghiglianovitch. The whole thing is undoubtedly connected with the general increase of Bolshevik activity, marked by the concentration of troops on the Roumanian frontier, and bound up with Anti-Entente movement, inspired from Berlin-Budapest.

ZAGREB, January 8.

Serbia and the Russian Refugees.

The Serbs have been criticised for their rather quixotic reception of so many Russian refugees, especially at a time when the country's finances are in by no means an ideal condition. It is also suggested that this *beau geste* may cost the country dear, for among so many there are sure to be Bolshevik agents; and, in fact, this appears to be the case. The authorities have had their eyes open, and now they have found some of them taking part in intrigue and propaganda, a nice reward for the hospitality which they have received. Consequently, a new section has been constituted at the Ministry of the Interior, which will deal entirely with the question of the Russian refugees. Many of them are valuable additions to the strength of the country, for during her eight years' fighting, Serbia lost an immense number of trained and professional men in all branches, which she could ill afford at any time, and consequently, Russian doctors, engineers, and business men are filling up many gaps in the social polity of the country to-day.

Vacant Posts.

The vacant portfolio of Finance has not been filled yet. The former Minister, M. Velkovitch, who fixed the ratio of krone to dinars permanently at four to one, declines, on the grounds that it is not an entirely Democratic Government. It has been offered to Dr. Vojce Marinkovitch, brother of the former Minister of Religion, who is known in London and is a trained financier. If he does not accept, it is thought that there will be a shuffling of the Democratic portfolios, that M. Drashkovitch will accept Finance, which would be well received in the country, and M. Pribitchevitch would return to his old post at the Interior. The Mohammedans have not yet decided to join the Cabinet, and three portfolios are held vacant for them. It is thought that they would prefer to see the rather democratic coalition break down and a more conservative one formed under M. Stoyan Protitch, as the Mussulmen of Bosnia, who are chiefly landowning begs, are essentially a conservative element.

Zagreb and England.

The Zagreb newspapers are paying a great deal of attention to affairs in England. The Irish question is followed with a good deal of detail, and plenty of references to "British tyranny," to "fire and sword" of the British Government, and an obvious sympathy for the "sinnfeinovtsi," as a small people struggling heroically for liberty. This smells of propaganda, as England and things British are very popular in Zagreb. A small evening paper, the other day, had nearly a column of caustic review of Mrs. Asquith's book, an account of plays now appearing in London, especially "O'Flaherty, V.C." and "G.H.Q. Love." Besides this, there was a long article on the question of unemployment in Britain, while another day there were two columns on the state of affairs in India.

Miscellaneous.

Dr. Momchilo Ninchitch, former Minister of Finance and later of Commerce, has been decorated with the Order of St. Sava, 1st Class.

M. Ilija Shumenkovitch, Councillor of the S.H.S. Legation in London, has resigned in order to stand for the Skupshtina in the Democratic interest.

The Ministry of Public Works has accepted a tender for twenty-five motor-cars from an unnamed foreign firm, subject to prompt delivery.

The Bosnian Mussulmen have resolved to support that Government which represents all three branches of the people. If they join the Cabinet, Dr. Mehmed Spaho and M. Korkut and Dr. Karamehmedovitch will

be candidates for portfolios. If the Slovene Clericals join, they will receive one portfolio, and the Mohammedans only two.

One effect of the revelations of the Communist plot has been that one deputy of that party has joined the Socialists and two have joined the Democrats.

CYPRUS.

NICOSIA, December 29.

The Situation.

The election of members to the Legislative Council has been fixed to take place on January 21, and lists of polling stations in the three electoral divisions of Cyprus, in case of a poll being required, have been published. Under normal conditions, which might have been hoped for, Cyprus should now be settling down to a period of really hopeful development. Her needs are manifest, and her grievances might now at last be dealt with by means of encouragement from the Colonial Office and co-operation from the representatives of the Cypriot people. Unfortunately, however, the outlook is far from promising. It might well be expected that, a definite reply having been given by the British Government to the party of "Union," the leaders might now at least rest on their oars, and await the outcome of Near East and connected tangles, and—what is of real importance to the island—devote themselves, after their long holiday, to the development of neglected local interests, especially that of agriculture and kindred industries.

The leaders of the agitation have done all that could be done in presenting their case. At a cost of many thousands of pounds—from Church and other funds—they have been absent from their duties in the Council on deputations to London, the last of which it was hoped and believed by their supporters would meet with success. It is high time that they should now realise the actual situation and prospect, and explain it truthfully to their constituents, instead of inciting them to take up political aims which lie quite outside their ken and concerns. Instead of this, the late members of Council (several of whom have plenty of leisure for their self-constituted task) have decided that they will seek re-election, and, if elected, as probably most of them will be, again resign in a body. If they should adhere to this very unwise resolution, a serious case for consideration would be presented to the Home Government.

As regards their immediate programme, the leaders now dwell on that part of Colonel Amery's statement which hints that the cry for union came from a section of the people only, and did not express the feelings of the Cypriot Greeks as a whole. They now say that, in order to dispose finally of the question, it is advisable to undertake a village to village campaign which will place the matter beyond the possibility of doubt. It is hardly necessary to repeat that, under present conditions, the result of any plebiscite would only be "made to order," and according to plan; and for those who know these conditions the matter would therefore still remain where it is.

The agitators can always rely on a sympathetic and collaborating Press. The last issue of the *Phonētēs Kypros* (December 25) devotes two long columns to a parable which likens British policy, in theory and practice, to a distinguished preacher who discoursed on the text "he that hath two coats let him give to him that hath none." When a poor man begged for an old coat, he was repelled by the priest, who averred that the scripture applied to others, not to the preacher. In like manner England rejects the petition of poor Cyprus, while advocating "self-determination." Some papers just touch the suggestion that the return of King Constantine and the present attitude of the Greek people render the offer of Cyprus to Greece more than ever out of the question. If, it is argued, in 1915, when there were suspicions of pro-Germanism on the part of the King, the island was (conditionally) offered to Greece, how can there be an obstacle "now that all doubts as to the sincerity of his Anglophil sentiments have been dispelled," and seeing that Greek policy must always henceforth depend on close friendship with Great Britain!

General News.

An interesting football match between Greek and Turkish boys was played last week at Nicosia in a field near the Pedia river, behind the Agricultural School, before thousands of spectators. It was well contested, and ended in a draw. The meeting was quite typical of the friendly relations that should, and in almost all respects do exist, between the two communities. The only antagonism existing relates to the political agitation of the Greek union faction.

The Greek Archbishop has issued an encyclical regarding the mention of King Constantine's name in the churches. Some 800 Russian refugees have arrived at Polemidia Camp, Limassol. The total number may, it is said, be 2,000.

“THE ALLEN” Heavy-Fuel OIL ENGINE.

THE “Allen” Heavy-Fuel Oil Engine is principally remarkable for its reliability and simplicity, while it will drive either by means of a belt or direct coupled to electric generators, pumps, agricultural or other machinery.

The “Allen” Heavy-Fuel Oil Engine is easily and quickly started, and will run for long periods with a minimum of attention.

We are building for stock requirements, against which early delivery can be given.

The “U.K.” CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—

THE “UNIVERSAL”
CIGARETTE MACHINE.

THE “S.A.” DOUBLE CIRCULAR
KNIFE AND TOOL GRINDER.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

FRANCE AND THE ARABS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The second column of your leading article in your number of January 6 contains a phrase (*in fine*), which runs thus: "It (the Franco-British Settlement of December 23, 1920) leaves unsettled the future relations between the French and the Arabs, towards whom the former are inclined to adopt an attitude wholly inconsistent with the principles underlying the League of Nations."

Allow me to point out: Firstly, that it does not seem that the general question of the relations between France and the Arabs was relevant in a settlement the main object of which was the fixing of the frontier between Syria and Palestine, unless Great Britain was prepared to admit that we should ask her to embody in the same document the definition of the policy she intended to follow towards the Arabs in Mesopotamia—a demand she would probably have waved aside as indiscreet. This does not mean that an exchange of views between the French and British Governments on questions relating to the Arabs may not be useful and even of the utmost importance. There are Frenchmen who, in their small sphere, have worked to that end, even during the war, when more immediate preoccupations were pressing on us. Secondly, that Frenchmen will be—to employ the most reticent form—utterly astounded to read, in the most important British weekly, having a large distribution in the Near East, that we are inclined to adopt towards the Arabs an attitude "wholly inconsistent with the principles underlying the League of Nations." Where is the foundation of this accusation? You often complain—and with reason—of the tone of a part of the French Press. Surely you ought not to fall into the same *travers*.

Though we are faced in Syria with a particularly difficult problem, among a bewildering complex of creeds, rites and races—though we are struggling with a situation which we inherited, and have to fight in Cilicia—we have managed to start a general plan of administration which takes into account, as far as possible, the rights of every important group, whether religious or ethnographic, proportionately to their importance. The Moslems of Damascus, and the Moslems of Aleppo (you had yourselves forseen *two Emirates*), the Christian of the Lebanon, the hill-tribes of the Nosairiyeh, and the Druse of the Hauran, each has had his right recognised, as far as strict justice is reconcilable with a working administration and with common-sense. We have nowhere, that I know, conceived, or applied, a system implicating that a local majority should be submitted to the will, or governed in the interest of, or gradually superseded by the encouraged immigration from the outside of a local minority, however respectable may be its claims.

Justice is an old—and, I think, on the whole, justified—boast of our nation. As was recalled at the Congrès Française de la Syrie, held in January, 1919, in Marseilles (whose connection with Syria dates back to the twelfth century), an old Arab author of the thirteenth or fourteenth century, wrote that the Moslems often left the lands under the yoke of the Emirs to come and live under "the Franks, in whose justice one could have confidence." And it was another Arab, Abd-el-Kader, who though beaten and exiled by us from Algeria, at Damascus, helped us to save the Christians at the time of the massacres of 1860. It is principally to his honour, of course; but perhaps it does not speak badly either for his former victors and their treatment of Arabs.

We have some knowledge of the Arabs; and, with due regard to the differences between Algiers and Damascus, we think we have not handled them so badly; and we have the proof of it during the war. That part played by the Arabs in the municipalities and in the Algerian Delegations; our recent extension of their political rights, can compare, we think, not unfavourably with the political rights accorded up to now, say, to the *fellah* in Egypt. The Arabic studies of our University at Algiers; the achievements of General Lyautey and the officers and civilians under his guidance in Morocco; and even of Frenchmen working privately in Algeria, Tunisia and Morocco, can be put forward without fear as an example of intelligent effort towards the comprehension of creeds, racial characteristics, and social organisations differing from our own. No other nation that I know of can boast of a *Père de Foucault*, a voluntary exile among the Touaregs, whose sole method of religious propaganda was the example of his life, without any *Preaching*

at all, and who was mourned by the tribesmen as a saint, though a Roumi.

It is strange that—on the ground of political liberty (and the question stands largely on a political ground)—it should be so often lost sight of that we have Negro deputies in the French Parliament. It is not a glaring fact that (if I may so express myself), but it ought to make people from the outside, especially friends, turn their pen at least seven times in their inkstand before they launch out such unwarrantable attacks as the one I am replying to.

To accuse us of being inclined to adopt, against any one, and especially towards politically weak races, an "attitude wholly inconsistent with the principles underlying the League of Nations" is (I am sorry to be constrained to use the term) a calumny; but it can leave perfectly calm the Nation of the Rights of Man. As I had the opportunity to point out in a recent lecture (December 1) in the University of Manchester, France is a very old protagonist indeed of the idea of the Society of Nations and of International peace in the foundation of justice. We had our working plan of the League ready by the end of 1917—more than a year before you—and, as I also made bold to prophesy on the same occasion: "I should not be astonished if the final wording of the pact, when the United States come in, as they must and certainly mean to, closely resembled the French scheme of 1917—which, for a country who is sometimes accused of not wishing the success of this great design, would not be a bad achievement."

As to the spirit in which we view the principles of the League of Nations, the way they were expounded by our delegates in Geneva, as clear as it was eloquent, and the part played by MM. Léon Bourgeois, Viviani and Hanotaux on the occasion was, I think I may say without undue pride and in perfect truth, second to none, as was the part our representative played in the great Peace Conferences of 1899 and 1907. M. Léon Bourgeois' book: "La Société des Nations," now dates more than ten years back.

For an honest application to non-Europeans of the principles of gradual self-government, for the foundation of schools, and the diffusion of modern learning among alien races for the levelling up, as you say, you can count on the French. We are even perhaps apt to overdo things a little. The phrase I have protested against is the more objectionable.—I am, etc.,

HENRI BRENIER.

THE EGYPTIAN SITUATION.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In your issue of the 20th inst., Mr. Ormsby-Gore questions my description of Egypt as a Crown Colony, and, strictly speaking, he is, of course, right, as, while Cyprus was annexed, Egypt was only declared a Protectorate. But the Powers having accepted our Protectorate at Versailles, I thought that I was justified in stating that we started "from a Crown Colony basis." I meant, of course, as regards the Capitulations. At least, Sir Valentine Chirol told us, in the articles he contributed to *The Times*, that in declaring Egypt a Protectorate "the British Government were anxious to prove their desire, whilst bringing Egypt within the fold of the British Empire, to leave room for her future development on lines congenial to her people in the large commonwealth of nations that formed the British Empire." If at the time of the armistice this "desire" on the part of the Government had been further demonstrated by the reception of an Egyptian Delegation in London, or the despatch of a Milner to Egypt, what a lot of bloodshed and loss would have been saved! But to return to our declaration of a Protectorate: if it does not mean that we are free from the Capitulations, what does it mean? All the years I was in Egypt I understood that the declaration of a Protectorate would have freed us from the many troubles we were subject to owing to the Capitulations. But, judging from Sir Malcolm McIlwraith's articles in the *Fortnightly*, we must still go hat in hand to all the Powers for the approval of any legislation which affects Europeans. If this is so, all I can say is that we had much better have annexed Egypt when we annexed Cyprus; we could then have started out to grant self-government "on lines congenial to her people." But if a Protectorate means nothing, why is it that Tunisians and Algerians in Egypt are recognised as French subjects?—I am, etc.,

Biarritz, January 23.

COLES PASTA.

It is officially announced from Rangoon that all the villages in the Chin hills which took part in the rising in the Haka subdivision of Burma in 1917-18 have now come in, thus completing the submission of this area.

It has been decided to introduce as soon as possible the Gurkha felt hat for wear in peace by Gurkhas, Gharwalis, Kumaonis, men of the 2-73rd Malabar Infantry and units recruited in Burma with the exception of Kachins. The pagrees or pith hats in possession of these men will then be withdrawn.

PRESS ON THE NEAR EAST.

Greece.

In the *Contemporary Review* for January, Professor Arnold J. Toynbee has an interesting article on "The Revulsion in Greece." He writes as one who was surprised by the result of the recent elections, and in asking the question, "What is going to happen now?" suggests that "the policy of the Allies will not determine, but, on the contrary, will be determined by, the local course of events in the region concerned." He proceeds:—

The Allied Governments' power of action in the Near East is at present feeble, for two reasons. In the first place, they have left the physical enforcement of the Treaty with Turkey to be determined by a trial of strength between the Greek forces in Anatolia and the Turkish Nationalist forces of Mustapha Kemal. Except for the garrison at Constantinople and the naval patrols, there are no Allied forces on the spot. The Allied Governments could persuade their citizen-soldiers to keep watch on the Rhine; they could not, and cannot, persuade them in any considerable numbers to volunteer for campaigns in the Near East after the termination of the Great War in Western Europe. Besides, every particle of military force which the Allied Governments have been able to muster in the Near East since the armistice with Turkey has been devoted, as far as possible, to war with the Bolsheviks, and the ill-success and unpopularity of these adventures in Russia have made it virtually impossible for them now to demand efforts from their people for dealing with Turkey, no matter how legitimate or how necessary in our own self-interest such efforts might be demonstrated to be. A few months ago, when the Turkish Nationalists were on the point of gaining military command over the Straits and Constantinople, the Allied Governments could only avert the blow by sanctioning a Greek offensive. And now they are no more able than they were then to impose their will in the Near East by military action of their own. If they had vetoed Constantine's return to the throne (they have wisely refrained from doing so), they could not have driven him out of Athens, once he had arrived there by aeroplane, by military force. If they had decided to revise the Treaty of Sèvres by decree from London or Paris, they could not have compelled the Greeks to evacuate Thrace or Western Anatolia. And having left the Treaty alone, at any rate for the moment, they will equally be unable to maintain it by force of arms, supposing it is violated in Western Anatolia (as it has been already in Armenia) by a successful military offensive on the part of the Turkish Nationalists. True, the Allied Governments possess, and are already exercising, the power of the purse, and hold in reserve the powers of blockade and of widespread diplomatic influence. These are tremendous weapons, but their effectiveness depends on time and on unanimity among the parties that wield them. And here we come to the second, and more serious, weakness in the counsels of the Allied Governments. Their joint diplomatic publications cover profound differences of aim and view. To put these differences very crudely, the French Government are pro-Turk, the Italian Government anti-Greek, the British Government pro-Venizelos, with a suspension of judgment about a Greece with other leaders. The French Government are pro-Turk for the same reason as their own French predecessors, as well as other Governments, before them. They are speculating on economic advantages, and they have discovered that if you elect to have Russia's enmity you are bound to seek Turkey's friendship. The Italian Government are anti-Greek, not from any irremediable race-hatred, but because they regard the rise of a new Mediterranean Power to the East of them with the same jealousy with which the recent rise of Italy herself has at times been regarded by France. The British Government are pro-Venizelos because British statesmen and high officials have admired his qualities

and succumbed to his charm—so unaffectedly that they have failed to reckon with the possibility of his disappearance from the scene. The *communiqués* regarding the inter-Allied Conferences that have already taken place enable us to prophesy with some assurance what line the resolution of these divergent forces will follow. The British Government will prevent the French and Italian Governments from formally revising the Treaty of Sèvres, coming to terms with the Turkish Nationalists, and giving them open countenance and support. The French and Italian Governments will prevent the British Government (supposing the British Government itself were inclined to such a course) from lending Mr. Rhalli the same financial and diplomatic support for the military enforcement of the Treaty as has been lent to Mr. Venizelos. The result will be that all three Allied Powers will incur the resentment of both the Greek and the Turkish peoples, and that the issue will be decided between the Greeks and Turks themselves, with no—or no avowed—help or hindrance from outside. Hence, what is happening in the Near East is of much greater political importance than what is happening in the Foreign Offices over here. If the Greek front in Anatolia breaks, the Treaty of Sèvres will revise itself in proportion to the change in the military situation. If the Greek front holds, the Treaty, in substance, will stand.

He then analyses the causes of the defeat of M. Venizelos, classifying them under three heads: the personal factor, the national factor, and the long mobilisation. And, in conclusion, he suggests a *via media* between Greece and Turkey.

It is, undoubtedly, unjust and impolitic for the Allied Governments to revise the Treaty over the Greek Government's head, whether they do it avowedly or by the indirect and more disingenuous method which they have chosen. But there is much to be said for a direct arrangement between the principal parties concerned, and there is a good precedent for this in the recent Adriatic settlement. The impracticable Treaty of London between Italy and the "Principal Allied Powers," to which the Yugoslavs were not a party, was in many ways parallel to the Treaty of Sèvres, which the Turkish Nationalists refuse to recognise. Is there not a case for a Greco-Turkish Treaty of Rapallo? Freedom of economic access to the port of Smyrna is as vital to Turkish Anatolia as access to Fiume is to Yugoslavia and Hungary. In both cases all the railways from the interior converge upon this one outlet on the coast. On the other hand, the large Greek population intermingled with the Turkish population along the Anatolian coastline has at least as strong a claim to national recognition as the much smaller Italian element on the eastern shores of the Adriatic. So long as the Greek front in Anatolia is intact, Greece is in a strong position for making a fair bargain, while her own decision in the elections and the subsequent withdrawal of Allied support are a warning to her that the situation cannot long continue in her favour. In abandoning a Treaty which her electors have pronounced to be a military burden beyond her strength, Greece might secure invaluable compensations: the security of her national minorities scattered through Anatolia, whom she can never hope to include in her own frontiers, however ambitiously drawn; and the trade of the Anatolian hinterland, which is the natural appanage of the maritime Power in the Aegean, and not of those Powers which have assigned themselves "spheres of economic interest" in Anatolia by the Tripartite Treaty which supplements the Treaty of Sèvres. The advantages to be expected by the Turks from a direct discussion with the Greeks are too obvious to need mention; but, apart from the immediate advantages to both parties in such an arrangement, there are wider and more permanent common interests which it would serve.

The underlying cause of the misfortunes of the Near Eastern peoples has been the intrigue and intervention of Great Powers from outside, and though since the Armistice these Powers have changed most of the lines and colours on the Near Eastern map, their own disturbing influence has been maintained. In fact, the settlement of 1918-20 has left the Near East in the condition in which Germany and Italy were left by the settlement of 1914-15, as a mosaic of independent States with impossible frontiers, mutually hostile, and lending themselves, as satellites, to the more dangerous mutual hostilities of the Great Powers around. This evil was removed in Germany and Italy during the nineteenth century by successful movements towards economic and political unification, which not only benefited those countries themselves, but eliminated a great danger to the peace of the world. In the twentieth century a similar movement towards unity in the Near East is surely inevitable. The "Little Entente" is a good beginning. Cannot Greece and Turkey fall into line?

The Greeks in Asia.

The *Glasgow Herald* of January 18 has an article on the obscure news that is filtering through concerning the doings of the Greeks against the Turks in Asia Minor. Upon the reported retreat of the Greeks it says:—

If the news of the Greek collapse is true it means that there is no fighting force on the spot to oppose the Kemalists, and that the attempt to counteract the Nationalist rebellion by Greek offensives has failed. In other words, there is nothing to prevent a real attempt to realise the Pan-Turkish dream. This is a serious situation not merely for our outposts in Middle Asia, but for the whole influence of Europe in the Islamic world, and may well portend an aggressive Islamic campaign that will convulse all Asia to the Chinese frontiers. And yet the sole contribution to the formation of an Allied policy is the declaration of the Rome Cabinet that no offensive action shall be undertaken to enforce the Sèvres Treaty!

MUSICAL NOTES.

A New English Violinist.

It was under the above title that Mr. Alfred Barker gave (with Miss Minnie Hamblett as pianist) a recital at the Wigmore Hall on January 19. But of all creatures in the world the musical critic is probably the last to be caught by novelties; certainly his pleasures come as much from memories as from anticipations. Yet it was obvious at once that Mr. Barker is an experienced fiddler, with a technique which, though not impeccable, is fluent, a tone which is sometimes rich and always good, and a musical sense which generally informed sound interpretations. But his temperamental control is curiously uncertain; there were times in Elgar's sonata, especially in the middle movement, when a hurried scampering over the *accelerando* passages quite wrecked the dignity of his playing; and some wantonly careless work in a Bach concerto obscured the exquisite joinery of the whole thing. It is true that neither in the sonata nor in the concerto was he helped by his pianists, but for their deficiencies he was at least partly responsible. Mr. Barker is much above the ordinary run of recitalists, but at present his temperament appears to allow him only inconsistently to realise his potentialities.

From Miss Hamblett's poor work in the Elgar sonata, poor in accuracy, sympathy, and above all in rhythm, I should never have guessed that she could have showed such verve as a soloist. But there was any amount of spirit in her playing of pieces by Max Reger, Paul Juon, and E. D. Bancroft; except for the fact that she demonstrated where she should have suggested, these trifles were as well done as you might have wished.

An Ambitious Pianist.

There is much more virtue than is sometimes supposed in the choice of a good programme, and the selection by Mr. Lloyd Powell at his recital at the Wigmore Hall on January 20 of Bach, Couperin, Dandrien, Ireland, Chopin, Schubert-Liszt, Debussy, Howells, and Brahms-Paganini, showed that his ambitions, at any rate, were out of the common. The big works were John Ireland's fine Sonata in E minor, and the colossal variations of Brahms in a theme by Paganini (2nd set)—works which alone are almost sufficient to tire the ordinary pianist. Mr. Powell played these composers in the order given, and after the Ireland his playing suffered. Already, however, he had proved his worth: I liked well, for instance, his interpretation of Bach's "Wachet Auf" prelude (Busoni's transcription), except that he brought out the air, as do most young pianists, too prominently; and Dandrien's "Les Tourbillons" was brilliant in its delicacy. His reading, too, of Ireland's Sonata was both honest and heroic; there was a little narrowness in the slow movement, but on the whole its grand spaciousness was well represented. In a group of Chopin studies he caught the fancy of his audience, but there was certainly nothing remarkable about his playing here; rather the reverse, for wrong notes in Chopin are of much more grievous consequence than, say, in Ireland, and his indulgence in these could not be called conservative. Nearly all Schubert-Liszt things are rather boring; certainly in "The Erlking" and in "Hark, Hark, the Lark!" it is Liszt the pianist, not Liszt the musician, who is uppermost. Mr. Powell again played very well in Debussy's "Reflets sur l'eau" and in Herbert Howells' "Procession," but in the Brahms-Paganini, his bad pedalling, which was earlier shown in the Ireland, was the least of his sins. None but the greatest should in public attempt these variations; they are a test in which all but the Busonis and Lamonds are beaten before they start to play.

ANDANTE.

At a recent billiards match, played at Bombay between Mr. Clark McConachy, the New Zealand champion, and Inspector Baker, of the Bombay Police, Mr. McConachy made a break of 870.

The Governor of Malta has received a despatch from the Colonial Secretary expressing the desirability of the estimates for the ensuing financial year being framed, if possible, by the new Government. As the estimates must be passed before the end of March, it is thought that the establishment of responsible government in the island is imminent.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

THE LATIN PATRIARCH OF JERUSALEM

Cardinal Camassei, formerly Patriarch of Jerusalem, has died in Rome of angina pectoris shortly after celebrating Mass.

Monsignor Felipe Cumassei, Latin Patriarch of Jerusalem, was born at Rome, September 14, 1848. His early life was uneventful, and there is nothing of importance to chronicle in it until his election to the Archbishopric of Naksos in March, 1904. Here he worked for two years, until in 1906, to the undisguised surprise of himself and everybody else, he was appointed to the Patriarchate of Jerusalem. The aged Patriarch, Mons. Ludovico Piavi, had been for years in very feeble health, hardly ever able to go out even in a closed carriage. With his growing weakness the Franciscans, already the most powerful of the Latin monastic bodies in Jerusalem, had become practically supreme in everything, and it was no secret that they desired the appointment of one of their own order as Patriarch. Directly Mons. Piavi was dead, the seething discontent of the other orders flared up, all uniting to oppose the election of any nominee of the Franciscans. The Patriarchate remained vacant, and eventually the Pope intervened, and himself nominated a man who had no connection with any religious party at Jerusalem, and of whom all that was known was good. Mons. Cumassei was elected to this unenviable dignity on December 6, 1906. He had not schemed for it, nor wished for it; he was not willing to go.

He was plunged straightway into the stormy sea of Latin religious life in the Holy City. There was a good deal of jealousy, open and hidden, amongst the different orders; some were actually older foundations than others, some were older in the Holy Land; there were many nationalities represented in each House, and the whole situation was extremely difficult for a new-comer to grasp. The Patriarch was full of kindness; he honestly tried to deal fairly and impartially with all, but he was in no sense a strong man, and he was too sincere by nature to try to play off one order against another. In his anxious study of the many problems he was confronted with, it seemed to him that the native members of his Church were not always fairly dealt with by the monks. This is unfortunately only too true. The Latin Syrians have become terribly inert and dependent under the monkish system of doles of bread and free rooms; to struggle means to lose these advantages, and the few who have made any real stand against the oppressive rule of the monks have suffered severely for it. There was a good deal of discontent amongst the Latin Syrians, and Mons. Cumassei, by trying to better their lot, fell under their sway in a curious manner, but did not succeed in achieving any real reform. This brought him into disfavour with the monks generally, and he had not sufficient personality to impress himself upon either party.

He was a man of simple tastes and habits, and very kind-hearted. He was always accessible to his people, and was genuinely anxious to serve them. Probably he would have made a better parish priest than Patriarch of such a vexed place as Jerusalem. He saw the need for reform, but he was not strong enough to bring about any changes. To the end he kept up the curious custom of celebrating Mass in the Church of the Holy Sepulchre for the Franciscans three times each Lent, for which he received the sum of £50 after each service. But his natural goodness of heart won him a certain respect, and the Syrians as a whole liked him very much, though they were disappointed that he had not succeeded in doing more for them. It was one of his Syrian people who described him as "a very kind man, but a cipher." Probably no one was better aware of his failure, nor felt it more, than the forlorn Patriarch himself.

PALESTINE HONOURS SIR A. MOND.

A Jerusalem wire received by the Jewish Correspondence Bureau states:—

"The Council of Jerusalem Jews gave a reception to Dr. Chaim Weizman and Sir Alfred Mond on January 18. All the most representative Jews of Jerusalem were present, including Rabbi Myer, Rabbi Kuk, Mr. David Yellin, President of the Town Council, and Mr. M. Ussichkin, all of whom addressed the meeting. Sir Alfred Mond replied in a glowing speech, in which he said that Palestine was a land of great possibilities, and that no power on earth could hinder the Jews from building up their national home. In Palestine there was room to spare for a national home, and also for a flourishing Arab Commonwealth.

"Dr. Weizman and Sir Alfred Mond have now left Jerusalem for a tour of the Jewish colonies."

OLD BAGHDAD: SOME PRE-WAR MEMORIES.

(FROM A CORRESPONDENT.)

It may be asserted without fear of contradiction that before the war Baghdad and Mesopotamia were unknown to the Man-in-the-Street, or were at best associated in his mind only with dim memories of the "Arabian Nights" or—strange contrast!—the Bible. The war has done much to change all this, and to-day thousands of men who served in "Mesopotamia" know the land and its people far better than they know other lands and other peoples nearer home, and like or—more commonly—dislike them, according to their personal experience. Necessarily, they saw the country and the Arabs under abnormal conditions; Baghdad of the war period must have been, and Baghdad of to-day must be, a very different city from the Baghdad of Turkish rule. But the pre-war Baghdad had attractions of its own for some of us, and perhaps the following reminiscences of the old city may be of interest to some of those citizens of the Empire who made its acquaintance only yesterday, so to speak. Perhaps, too, they may recall some not unpleasant memories to others who, like myself, knew the place more than a quarter of a century ago.

With the aid of one of those Jann who in former days were so active in Baghdad, and, indeed, all over Irak-el-Arabi, let us, then, put back the hands of the clock some twenty or twenty-five years, and picture ourselves, having passed up the Persian Gulf, at Busreh, en route for Baghdad. We are inevitably impressed by the palm-lined Shatt-el-Arab, the great river formed by the junction at Gurnah (or Kurna) of the Tigris and the Euphrates; but we soon learn that the palms do not extend beyond the junction in this fashion, and that most of our river journey is to be through a barren enough land. We learn also that if we are wise we shall choose to travel by one of the English steamers plying on the river; and we act accordingly, ignoring the Turkish-owned boats and embarking on one that flies the Red Ensign.

Passengers, the mails, and cargo all being aboard, we start, steaming up the magnificent broad stretch of the united rivers until we arrive at Gurnah, where we enter the Tigris. The first stopping-place of importance is the "Tomb of the Prophet Ezra," which is built of blue and white tiles, and is thickly surrounded by date palms. It looks highly picturesque from the river as you are approaching it, but, like many places in the East, on close inspection it turns out to be tawdry and disappointing. The tomb itself is an oblong structure about 10 ft. high, 12 to 14 ft. long, and 6 ft. wide, and is covered in cedar wood. The panels of this great box were split and broken when I visited it, and the broken places had been used by pilgrims to the shrine as a sort of post-box, and were simply crammed with letters, petitions, and manuscripts addressed to the Prophet.

After leaving Ezra's Tomb we continue our voyage to Amarah. This we find to be a town of some importance, indeed, the most important on the Tigris until we reach Baghdad. It does an important grain trade, and exports large quantities of wool annually. There is a sect settled here known as "Subbies"—I forget of whom they claim to be the followers—who are most excellent silversmiths, able to copy any pattern you give them. They have a method of oxidising silver which they claim is known only

to themselves, and by them it is treasured as a secret, very jealously guarded and handed down from father to son.

The voyage after leaving Amarah lacks in interest slightly. On either side there appears arid desert, stretching as far as the eye can reach, and broken only by some straggling Arab encampments. But, should the atmospheric conditions prove favourable, you may see, away in the East, a sight that is worth going far to see. There, lying far away in the distance, stretched like the back of a gigantic whale, you see the mighty range of the Bakhtiari Mountains running across Persia, their tops clad in snow, which assumes the most tender shades of delicate colouring under the rays of the setting sun, and offers a picture equal to any that the most ardent or imaginative painter or poet could conceive.

The next place we come to is Kut, rendered famous by Townshend's memorable defence of it during the war. Here wool, gall, and gum are the staple sources of trade with the natives, and very important quantities are handled and shipped annually to India and England. Bales of Manchester goods are sent here direct, or re-shipped from Baghdad. These are sold readily to the Arab tribes whose encampments lie away back in the desert.

After Kut another thirty hours' steaming up river brings us to Baghdad. Approaching the city soon after sunrise, you can almost imagine you are coming to some fairyland. The sun shines on picturesque domed mosques and daintily pointed minarets, with airy galleries for the Muezzin, picked out in dark blue, white, and gold. It all appears too delicate, too fragile to be real. Alas! the illusion is cruelly dissipated when you arrive at your destination, and the steamer is anchored safely alongside the Baghdad Custom House.

Now your troubles commence. Customs officials, *hamals* (porters), *gouphagis*, boatmen and idlers come swarming on board, and unless you have someone to look after you you are pestered by the importunate on all sides. Your sense of smell, too, is assailed by odours with which one only meets in the East, most of which are far from fragrant.

At last you reach the bazaars. What a motley crowd! Arabs, Persians, Turks, Kurds, Chaldeans, Hindoos, Parsees—in fact, you may see representatives of every Eastern nationality under the sun. What a din! Shouts of "Barek!" ("Make way—Look out!") mingle with the noise of the water-carriers, clinking their metal cups against the earthen water jar and shouting "Moy! Moy!" ("Water! Water!") and a host of other cries. The big white donkeys for which Baghdad is noted come ambling by with heavy loads poised carelessly on their backs, held in position only by their equally careless drivers. It is a case of keeping a sharp look-out in order to avoid an unpleasant bump or more serious accident. And then the flies! One wonders whether the "grievous swarms of flies" mentioned in the eighth chapter of Exodus found a resting-place in Baghdad when they were "removed from Pharaoh."

There is one fairly good road in Baghdad which, starting at the North Gate, runs through the city to the South Gate. It is broad, and is kept cleaner than any of the others. But in the residential quarters the streets are very narrow. The closely-latticed windows of the houses, which jut out from the main walls about 8 or 10 ft. above the street level, very often nearly meet similar windows in the house opposite. Indeed, if the inhabitants be on friendly terms they sit in these windows, which have deep recesses covered with cushions, and talk to each other across the street as freely as if they were sitting in the same room together.

The hot weather usually sets in about the middle of May and lasts until the end of October. During those months

you live in the underground rooms of your house, called "serdarbs," and derive some comfort from a punkah. Soon after sunset you go on the housetop, and there you dine. If the "shemal" be blowing, it is cool and pleasant; but should the wind be southerly you suffer much discomfort. At such times all sorts of uninvited guests swarm to your table—mosquitoes, sandflies, beetles, locusts, and a large green fly known as the "praying mantis," from the devotional attitude it assumes when feeding. These make you extinguish your lamp and beat a retreat. The best thing to do is to light your pipe, if you indulge in tobacco, crawl under your mosquito net, and go to bed. You can smoke and look up at the stars. They appear to be suspended on threads, hanging from a deep rich indigo-coloured curtain, and you can see distances between them: the flat appearance of a star-lit sky we see here in England is entirely absent in the East.

College. The death of Sir William Mather last September meant the removal of an invaluable member of the committee; and the death of Dr. Chalmers, though he had actually ceased to be a member of the staff some months before, was a great blow to his old friends in Khartoum. Dr. Beam, another valued member of the staff, died in Khartoum in 1919, and the college also lost its senior Egyptian official, Abdul Magid Bey Ibrahim, who had been Headmaster of the Kadis Section for many years.

An innovation which is likely to have excellent results is recorded by Sir Reginald Wingate. As the President and the Principal of the College are usually in England for a short time in the summer, it has been arranged to hold an extra meeting of the Governing Body, at which these officials can be present. As a result of the first of these meetings, steps have been taken to solve the problem of providing accommodation for the staff, the Sudan Government, as usual, doing everything possible to assist the authorities, with the result that a very satisfactory solution of the difficulty has been found.

THE MINARET OF THE MOSQUE JAMA AL-GHAZL, BUILT BY THE KHALIF AL MUSTANSIR A.H. 633 (A.D. 1235). IT IS THE OLDEST AND HIGHEST MINARET IN BAGHDAD.

Reproduced by kind permission of Mr. John Murray, C.F.O., from Sir E. Wallis Budge's book, "By Nile and Tigris," which was reviewed in "The Near East," October 21, 1920.

But, alas! it is not all calm and peace. Silence is broken by cries and noises from the city. The howling and barking of the pariah dogs; people quarrelling in the streets; women mourning and wailing their dead or shrieking as they sit around the bed of someone in *extremis* under the impression that by so doing they may be able to scare away "the dreaded one with the scythe."

Notwithstanding all these inimical influences, tired nature asserts herself in the end, and you fall into a troubled sleep, to be awakened just before dawn by the loud cry of the Muezzin, standing high up in the minaret of the mosque just near, calling the Faithful to prayers. You again fall asleep, but a little later are awakened by an imperious master—whom you dare not disregard—the sun. His majesty turns you out of your bed, whether you will or no. You go down to the coolest room in the house and have your morning tea, which you appreciate greatly after a long hot night on the housetop that has been far from restful.

GORDON COLLEGE, KHARTOUM.

The eighteenth annual report of the Gordon Memorial College, Khartoum, carries on the tale of good work unostentatiously done that has been told by previous reports. As the Chairman, Sir Reginald Wingate, remarks in his covering note: "As regards primary education, the standard, in spite of war difficulties, has been more than maintained, whilst real progress is reported in the sphere of elementary vernacular education . . ."; and again, in touching on the research work: "In spite of many setbacks consequent on the war much valuable work has been accomplished." Gordon College, in fact, since its foundation has done wonders and difficulties and setbacks seem to exercise on it a positively stimulating effect.

The report has to record some heavy losses sustained by the

Mr. Crowfoot, the Principal, is able to report that the vacancies in the staff, caused by the transfers of three officials, have all been filled by the promotion of "men born and bred in the Sudan." He adds: "As an illustration of the greater part which the latter are now playing in the country, and the resultant widening of the influence of the college, it may be mentioned that whereas the inspectorate of this department consisted in 1914 of one British official and three Egyptians, it now consists of two British inspectors, one Egyptian, and two from the Sudan. In the provinces the change is proceeding even more rapidly." Again we read: "The influence of the college is not confined to the Sudan. As an upshot of a visit paid us by the Commissioner for British Somaliland, the Colonial Office decided to send six boys, the sons of prominent Somali Sheikhs, to be trained in the Gordon College for future service in their own country. The boys arrived with two of the parents towards the end of December, and although their knowledge of Arabic is weak, they are already well reported on. The Resident of Bornu also visited the college last year with the object of selecting teachers to start a school for the Arab tribes of North-Eastern Nigeria, but, although several volunteered at first for the work, it was found impossible ultimately to induce them to leave their families, and the project has been for the time regretfully abandoned."

The prefectorial system has been further extended in the college, with results that seem to justify the experiment. The Boy Scouts are living up to their high reputation; and the College Dramatic Society "continues to give performances in Arabic once a month, and the plays, which are very cleverly written and acted, are attended by large audiences, and are very much appreciated. The authors are three boys of 16 and 17 years of age." The industrial workshops have overcome the difficulties caused by the war, and "with new developments taking place in many parts of the country we are temporarily faced with more requests for skilled labour than we can meet. Mr. Rhodes reports that over 300 boys trained in his workshops are now working for Government, and another 100 are known to be satisfactorily employed elsewhere."

In a word, the College and the Sudan are both making progress, and the report is one of the most satisfactory we have read.

PERSONAL AND GENERAL.

TO-DAY.

January 27 (New Style).
January 14 (Old Style).
Jumada 1, 17, 1339 A.H. of the Moslem Calendar.
Shebat 18, 5681 of the Jewish Calendar.

Lady Dawson of Penn is leaving London to-day for Algiers.

M. Stambolisky, the Bulgarian Prime Minister, has returned to Sofia from his European tour.

Dr. Masaryk, President of Czecho-Slovakia, has been promoted M.A. in the University of Zagreb.

Colonel Leslie Wilson, M.P., and Mrs. Leslie Wilson left London last week for Paris en route for Algiers.

At the last meeting of the Society of Antiquaries of London, Miss Gertrude L. Bell was elected Fellow.

Dr. Frederick Lasbrey, of Old Cairo, has been awarded the French Medal of the Reconnaissance Francaise.

M. Niclas Michel Vladesco, Secretary to the Roumanian Legation, returned to London last week from Paris.

The Emperor of Japan has conferred upon Field-Marshal Lord Allenby the Order of the Rising Sun (First-class).

Prince Nicolas of Roumania has returned to England from the Continent, and has resumed his studies at Eton.

Prince Paul of Serbia took the degrees of Bachelor of Arts and Master of Arts at Oxford University on January 20.

Mr. James Dixon, late Inspector-General of the Burmese Police, of 7, St. Albans Road, Kensington, W., left property valued at £37,174.

Lord Reading, the new Viceroy, and Lady Reading will sail for India from Marseilles on March 19. They will leave London on March 17.

Sir Donald Campbell Johnstone, of The Nook, Holford Road, Hampstead, N.W., formerly Chief Judge of the Punjab, afterwards of Cairo, left £10,033.

M. W. M. Petrovitch, Secretary to the Yugoslav Ministry of Education, and formerly Secretary at the Legation here, has arrived in London from Belgrade.

Lieutenant-General Sir Philip Chetwode and Lady Chetwode have left 7, Sussex Place, and moved to 20, Sussex Place, Regent's Park, which is now their permanent address.

Colonel Frederick de Bude Young, 22nd Lancers, Indian Army, of the Devonshire Club, S.W., founder of the Comrades of the Great War, who died in King's College Hospital, left £5,820.

At a recent meeting of the Senate of London University thanks were accorded to the Serbian Government for a grant of £250 a year towards the maintenance of a Serbian lecturer at King's College.

Major-General J. R. Vaughan, Commandant, Staff College, Quetta, sailed from Marseilles last week by the P. and O. steamer "Malwa" for India. Mrs. Vaughan and her daughter will not leave for India until the spring.

Mrs. Hugh Poynter's "Around the Shores of Asia" is on the point of publication, and may, indeed, have made its appearance by the time these lines are in print. Her second book, "When Turkey was Turkey," will probably be published in March.

The marriage of Eliezer Yellin, eldest son of Mr. David Yellin, O.B.E., Vice-President of the Municipality of Jerusalem, with Thelma, daughter of Mr. Herbert Bentwich, of 21, Cavendish Road West, N.W.8, will take place at Jerusalem on March 15.

It has been decided to raise funds for a memorial in the Kohat Church to Colonel T. H. Foulkes, of the Indian Medical Service, and Mrs. Foulkes, who were shot by tribesmen last November. Subscriptions may be sent to the agent, Alliance Bank of Simla, Lahore.

Mr. Frank Watson Shaw, of Russley, Wokingham, Berks, and Bombay, India, who died at Minehead on August 22, has left estate of the value of £96,456. Probate is granted to his brother Alexander Moore Shaw, of West George Street, Glasgow. The testator leaves the whole of the property to his wife absolutely.

The Cunard liner Aquitania left Liverpool on January 22 for New York with nearly 3,000 passengers. Among the passengers were Prince Bibesco, lately appointed Roumanian Minister at Washington, and Princess Bibesco, daughter and son-in-law of Mr. and Mrs. Asquith, the latter of whom journeyed to Liverpool to bid them good-bye.

In memory of Lieutenant-Colonel F. W. L. Edwards, King's Royal Rifles, late Military Secretary to the Sirdar, a service was held in Khartoum Cathedral on December 31 last. The service was conducted by the Bishop of Khartoum and Cairo, the Right Rev. Llewellyn Gwynne. Among those at the service were the Sirdar and Lady Stack, the brother officers of Colonel Edwards, and a number of Moslem officers, who attended to pay respect "to the memory of one whom they loved."

APPOINTMENTS, ETC.

Mirza Abdul-Ghaffar Khan, Counsellor of the Persian Legation in London, has been appointed Persian Minister in Stockholm.

Mohammed Ali Khan has been appointed Counsellor to the Persian Legation in London. He was formerly First Secretary to the Legation in Petrograd.

Our Bucharest Correspondent writes (January 9):—M. Naum, the Greek Minister at Bucharest, has been called to Athens to give certain information. It is rumoured that he will not return to Bucharest, being suspected by the new Greek Government of having pro-Venizelist views. For the time being, the Greek Government will send M. Theotokis, son of the former Prime Minister and former Minister at Berlin (one of those who followed King Constantine into exile). This gentleman is coming on an extraordinary mission to attend the Royal Weddings, after which he will probably be appointed Minister at Bucharest.

OBITUARY.

A telegram from Bombay announces the death of the Hon. Rao Bahadur Mudholkar, C.I.E., member of the Central Provinces Legislative Council.

The death has occurred at Felpham, near Bognor, of Lady Birdwood, widow of Sir George Birdwood, the eminent Anglo-Indian. She was eighty-nine years of age.

Our Cairo Correspondent writes (January 3):—Social circles received a great shock last week in the news of the death of Mme. R. Rolo, which occurred while she was dancing at her house on Boxing Night. Mme. Rolo was a well-known figure in Cairo society, and was Mistress of the Robes to her Highness the Sultana. Her funeral was

OUTFITS FOR EGYPT, INDIA, AND THE FAR EAST.

Gentlemen visiting the East this Winter can be supplied with suitable clothing and the necessary equipment for travel, camp, or bungalow, at short notice.

List "H" giving full particulars and prices by return on application.

Kit renewals required by officials returning from leave, and complete outfits for those newly appointed, at moderate cost.

THRESHER & GLENNY,
INDIAN & TROPICAL OUTFITTERS,
152 & 153, STRAND, LONDON, W.C.

attended by representatives of the Sultan and the High Commissioner, and by a very large number of European and Egyptian notables.

Sir Arthur George Macpherson, K.C.I.E., formerly a Judge of the High Court of Calcutta, has died at Exmouth at the age of 92. In 1859 he was made first Judge of the Calcutta Small Cause Court. Three years later, after the passing of the Indian Councils Act, 1861, he was elected as the first Legislative Secretary to the Government of Bengal and on occasion acted as Under-Secretary in the Legislative Department of the Government of India. He was appointed to the Calcutta High Court Bench in 1865, and held the position with general acceptance for a dozen years, also at one period as Acting Chief Justice. He was made Legal Adviser to the Secretary of State for India in 1869, and three years later Secretary of the Judicial and Public Department of the India Office.

NEW STAMPS FOR 1921.

The following are extracts from an article in *The Times* of January 13 under the above heading:—

Several long-delayed issues are due to make their appearance early in 1921, notably the first unified stamps for Yugoslavia, a permanent issue for Palestine, and a picturesque issue for Italian Tyrol. A centenary issue will be that which marks the 100 years' freedom of Greece from the Turkish yoke. New stamps for Syria under the French mandate, for the Spanish air-post service, and for Bessarabia are also announced for early issue.

The first and probably the last definite postage stamps of the Armenian Republic reached London this week, comprising the values 3 roubles green, 5 roubles red, and 10 roubles blue, handsomely engraved and recess-printed in Paris with the device of an eagle carrying a short sword and trampling upon a viper. The same design is common to all values, and those originally prepared, with views of Mount Ararat, etc., have not, so far as is known, proceeded beyond the proof stage. The inscriptions are in both English and Arabic.

D'Annunzio's brief tenure of the Croatian islands of Arbe and Veglia will be perpetuated in the stamp album by stamps of the so-called "Legionnaire" series overprinted with the names of the islands for local use, in addition to the superscription "Reggenza Italiana del Carnaro."

NEWS IN BRIEF.

Yalta, in the Crimea, has been renamed "Krasnoarmeisk" (Red Army).

According to reports received at Delhi, a satisfactory settlement has been effected with the Afridis.

French Senegalese troops are reported to have been employed to suppress a mutiny among some of General Wrangel's Cossacks at Chatalja.

Over 30,000 deaths were caused by the recent earthquakes in Albania, and there are thousands of refugees in need of shelter, food, and clothing.

According to news from Aden, the dethroned Emperor of Ethiopia, Lij Yasu, has been elected King of Tigre, one of the regions of Abyssinia.

General Gouraud, Commander-in-Chief of the French Army of the Levant, has inaugurated an air mail service between Aleppo and Alexandretta.

Thirty-three village sheikhs have submitted to the French column operating in the recently disturbed area in Syria, and French prisoners have been released.

Mr. Israel Cohen, who has been touring China and Japan on behalf of the Palestine Restoration Fund, has raised £21,000 in those countries, and is now on his way to Java and India.

An appeal is again made for light reading matter for British soldiers in camp and hospital in Mesopotamia and Persia. Newspapers and magazines will be circulated if posted to the Y.M.C.A., Baghdad.

The Armenian Refugees Fund, of 96, Victoria Street, London, S.W.1, appeals for funds to relieve the distress of 200,000 Armenians who have fled before the Turkish occupation of the Kars and Alexandropol districts.

The newly-formed Armenian Soviet Government is reported to have sent an ultimatum to the Nationalist Turks demanding their withdrawal to the 1914 frontier, and asking for reparation for damage done and goods pillaged during the recent invasion.

Edhem Bey, operating on his own account against Mustapha Kemal Pasha, is reported to have captured Kutahia on January 11, with two Nationalist division commanders, 600 prisoners, and much material. He is supposed to be contemplating an attack on Eskishehr from the south.

Calcutta taxicab drivers, who are out on strike, refused to resume work, although the Government appointed a special committee to advise upon future regulations. The Government therefore decided to suspend the licences of all drivers who did not return to work by last Saturday.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX. LONDON. TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

FRANCE AND THE ARABS.

In a letter published on another page M. Henri Brenier, who writes with authority on Franco-Syrian affairs, takes exception to the view very widely held in Great Britain that the French attitude towards the Arabs is wholly inconsistent with the principles underlying the League of Nations. He points out that France is an old protagonist of the idea of the League of Nations and of international peace on the foundation of justice, and he cites the successful handling of an Arab population in Algeria. It was very far from our intention in advocating an equitable settlement in the Middle East to suggest that France had not been eminently successful in building up her colonial empire, and, unfortunately M. Brenier entirely ignores the immediate occasion of the remarks to which he takes exception. His silence on the point will confirm many in their belief that the French people as a whole are ignorant of much that has been done in their name in Syria. If we find it necessary to criticise French policy in this particular, it is because it stands out in such sharp contrast with French traditions, because Great Britain is also involved, and because we are convinced that the world will not be able to settle down to a lasting peace if glaring injustices are permitted in Europe or just beyond its borders. In dealing with Syria it would seem as if France were unable to consider the question from any other point of view than that of her pre-war interests. Reference is constantly being made to the amount of French capital invested in the Ottoman Empire; France, it is pointed out, headed the list of countries that received Syrian exports, although no mention is made of the fact that she did not retain this pre-eminence when the whole trade of the country was taken into consideration; France's educational efforts and her religious status are also insisted upon. Before the war the French case would have been above challenge; to-day, in the light of the Allies' declarations and what we have called the spirit of the League of Nations, all these arguments are beside the point if they override the principle of self-determination. That principle, we admit, is capable of being strained *ad absurdum*; but the question that the Allies, and especially the French people, ought to consider is whether the principle does not hold good in the case of the Arab kingdom of Syria.

Syria and Mesopotamia, as M. Brenier recognises, have much in common. To-day, Great Britain as Mandatory Power in the latter is concerned to set up an Arab administration under an Arab ruler. The first step that France took in regard to the exercise of her mandate in Syria was to suppress by force of arms an elected Arab ruler. Officially she is pleased with herself for having done so, and imagines that she has established a hold on Syria after her own liking—mandate, or no mandate—that offers a prospect of making good her pre-war commitments. But it is difficult to believe that this action will conduce to peace in the Middle East, or is in the real interests of France. By the terms of the Anglo-French Declaration of November 11, 1918, the two Powers announced in regard to their

policies in Syria and Mesopotamia that their aim was "the establishment of Governments and national administrations deriving their authority from the initiative and free choice of the indigenous populations," adding that "far from wishing to impose on the populations of these regions any particular institution, they are only concerned to ensure by their support and by adequate assistance the regular working of Governments and administrations freely chosen by themselves." As a result of negotiations extending over 1915 and into 1916, an undertaking was entered into between Great Britain and King Hussein on behalf of the Arabs that Arab jurisdiction should be recognised over an area extending from the Persian Gulf to Cilicia. Lebanon and Beyrout, with its coast, were left to France, but there can be no doubt that both the contracting parties understood that the Eastern portion of Syria, including the towns of Damascus, Homs, Hama and Aleppo, would fall within Arab territory. This point was confirmed after the Armistice by the arrangement which placed these four towns under the administration of the Emir Faisal, while General Allenby remained responsible for the administration of Syria as a whole. Immediately the British troops were withdrawn, however, the French Army, under General Gouraud, would seem to have concentrated its attention on the Eastern zone, with the inevitable result. The position was certainly difficult. The Arabs made no secret of their dislike of the French, and desired that the mandate over them should be in British hands. This was impossible, in view of the agreement between Great Britain and France, entered into after the understanding with King Hussein, but there was good reason to believe that under the conciliatory rule of the Emir Faisal the French mandate would work smoothly. General Gouraud had other aims in view. A military expedition effected the conquest of the eastern zone and the Emir was deposed.

Now, no one will claim that the Arabs were altogether blameless; but it is impossible to read the ultimatum presented to the Damascus Government and to recall that General Gouraud excused his final step on the ground that the Arab acceptance of his terms had not reached him before the expiration of the time-limit (midnight), although it had been handed to the French officer concerned more than six hours previously, without feeling that, whatever may be the policy of the Paris Government or the traditions of France, French action in Syria has been wholly at variance with the spirit and aims which the Allies declared to be theirs in compassing the defeat of Germany and Austria. No amount of successful administration is likely to wipe out the resentment caused by the forceful seizure of Arab territory which French troops previously had neither conquered nor occupied. Unfortunately, the responsibility is not solely France's, nor will be the penalty for the wrong-doing. Great Britain has connived at France's action, with the result that it will go forth throughout the East that the word of the British Government is no longer to be trusted. It is impossible to expect the Arab mind to appreciate the dilemma into which the mis-handling of the whole Near and Middle Eastern problem has brought Great Britain; but we ought at least to have been able to count upon our French Allies not to aggravate an already complicated situation. As things are, it can only be hoped that the necessity of maintaining a large army in Syria will ultimately compel the French people to review the actions of their representatives in that country and to take steps to prevent their mandate becoming the storm-centre of the Middle East.

NEAR EAST BOOKSHELF.

I.—"THE NEW JERUSALEM." By G. K. Chesterton. (London: Hodder and Stoughton. 12s. 6d. net.)

II.—"THE EYE OF ZEITOUN." By Talbot Mundy. (London: Hutchinson and Co. 8s. 6d. net.)

I.—G.K.C. AND JERUSALEM.

There was a time when we hoped that Mr. G. K. Chesterton would write his best book, that the high romance of "Napoleon of Notting Hill," or of "The Man Who Was Thursday," would be fused with the rich imagination of his "Crimes of England," or of his "Short History," that all his brilliance that has blazed on so many things would be concentrated on one subject. And now we know that he will never write a best book. For his style has become too intimately slipshod; his flippancies are too often inevitable; his digressions too often assume gigantic and even important dimensions; and his absolute, though jocular incapacity to keep to the rails, while adding to his charm, detracts, sometimes seriously, from the greatness of his work. In other words, the bubbling flow of his gallant hilarities sometimes muddies the clearer stream of his serious thought.

We accept Mr. Chesterton then for what he is, a real poet, who is sometimes the versifier, a fine writer, whose bad outmeasures, but does not overbalance, his good, and a great journalist who even now has not forgotten the art of "turning out" paragraphs. This said, we may preface this review by remarking, for those who wish it, that there is a surprising amount of information concerning Jerusalem in this book: the author does not, of course, talk on the Holy City, but he does talk about it, and sometimes it is the very centre of his thoughts. This, as we say, is unexpected; but unfortunately, there are also in it the usual and illegitimate things—Guild-Socialism, St. George and the Dragon, Mr. H. G. Wells, Mr. Ezra Pound, Capitalism, The Albert Memorial, Psycho-Analysis—and the other stock topics which, when treated by Mr. Chesterton in a newspaper, are most intriguing, but which are scarcely so breathlessly exciting when found (or rather encountered) in a book on the Holy Land. So that this work, though in many places beautiful, rich, and grand, really is a disappointment. It is true that just criticism is disarmed by the amusing (because obvious) prefatory note that "this book is only an uncomfortably large notebook"; it is true that the conditions under which it was written and produced made proportion and unity almost impossible; but all the same we are, because Mr. Chesterton is so fine a man, and had so fine a subject, disgruntled.

However, having marked down the manifest deficiencies, we have nothing but praise for and agreement with the rest of the book. Illumination of obscure things is here plentiful; explanation of inexcusable matters is generously offered; and the justification of his own elusive position is done perfectly. Some pages are simply profound (G. K. C. would say profoundly simple); and in passing fits of earnest solemnity depths are reached that are movingly mystical. In this mad medley there comes after pages of perhaps cheap reasoning a paragraph of gorgeous sense; after reams of superb philosophical irrelevancies a block of sound psychology. It is one of the delights of "The New Jerusalem" that though one can expect the bad patches, the good ones crop up unexpectedly all over the place. For instance, in a strangely tolerant and rambling chapter on "The Way of the Desert," we find these words on Islam which surely discover the truth, the very core of the matter:—

The philosophy of the desert can only begin over again. It cannot grow; it cannot have what Protestants call progress and Catholics call development. There is death and hell in the desert when it does begin over again. There is always the possibility that a new prophet will rediscover the old truth, will find again written on the red sands the secret of the obvious. But it will always be the same secret, for which thousands of these simple and serious and splendidly valiant men will die. The highest message of Mahomet is a piece of divine tautology. The very cry that God is God is a repetition of words, like the repetitions of wide sands and rolling skies.

On his travels to and from Jerusalem Mr. Chesterton found what he set out to discover; the truth as he conceived it was in him before he started, but the meaning of the truth his fancies while pondering on Jerusalem alone enabled him to disentangle from the maze of facts and lies which enshrouded it. Suddenly and naturally the impulse of the Crusades was made plain to him, the existence of the curious Christians at Jerusalem made intelligible, the reasons of the failure of the Middle Ages given to him. He knew beforehand the phrases which contain the truth, but not until he had actually seen the facts from which the phrases derive did he really understand them. In some

very brilliant writing upon the Church of the Nativity at Bethlehem, for instance, there occurs this very poetic intuition; he is speaking of the red columns of Constantine in that Church from which goes "the dark stairway" that descends under canopies of rock to the stable where Christ was born:—

Never have I felt so vividly the great fact of our history; that the Christian religion is like a huge bridge across a boundless sea, which alone connects us with the men who made the world, and yet have utterly vanished from the world. To put it curtly and very crudely, on this point alone it was possible to sympathise with a Roman and not merely to admire him. . . . I can never recapture in words the waves of sympathy with strange things that went through me in that twilight of the tall pillars, like giants robed in purple, standing still and looking down into that dark hole in the ground. Here halted that imperial civilisation, when it had marched in triumph through the whole world; here, in the evening of its days, it came trailing in all its panoply in the pathway of the three kings. For it came following not only a falling, but a fallen, star, and one that dived before them into a birthplace darker than a grave. And the lord of the laurels, clad in his sombre crimson, looked down into that darkness, and then looked up, and saw that all the stars in his own sky were dead. They were deities no longer, but only a brilliant dust, scattered down the vain void of Lucretius.

It is in the magnificently rhetorical statement of such verities as these that Mr. Chesterton is without a peer in modern English literature.

To end a review of this book without discussing the author's attitude towards the Jewish problem is impossible. He has for long been reviled and lauded as an anti-Semite—a not very intelligent or intelligible phrase. An anti-Semite properly speaking is one who is hostile to the Jews in any place or form, and Mr. Chesterton's position has, of course, never been within a thousand miles of this. His attitude on this question has been indeed, and is, perfectly consistent and comprehensible, and it is one of the few problems that he has faced fairly and squarely. In Palestine, he points out, there is no "problem" of the Jew; for there he is recognised as a foreigner, as something distinct, for instance, from an Englishman, or a Frenchman, or a Turk. It is in Western Europe that the distinction has been slurred; it is there consequently that the fact that the Jew is a problem has, until recently, been difficult to understand. But events have certainly proved the soundness of Chesterton's position, and the possibility of the realisation of his constant desire "to give Jews the dignity and status of a separate nation," his desire that "so far as possible Jews should be represented by Jews, should live in a society of Jews, should be judged by Jews and ruled by Jews." His plan is to establish groups or cantons of Jews both within and without Palestine. We call this a feasible, a tolerant, and an enlightened plan; but we do not think it will be followed.

This is not the place to speak of the main things in the book; the vivid historical and passionate Christian spirit, the sense of the permanence of the Roman Empire, the confidence in the superiority of Western civilisation, and so on; for all these are the very stuff of Mr. Chesterton's thought, and may be found in almost all his works. But we may say that because rather than in spite of these concepts we meet, not impartiality certainly, for that is a vice which the author never indulged in and which the war has happily helped to kill, but that rare and admirable justice and a sense of the fitness of things which inform all that will survive of this splendid writer.

II.—ROMANCE IN ARMENIA.

Mr. Talbot Mundy has devised a good plot, in which he arranges that three Englishmen, an American, an American girl, and a Sikh who has turned Mohammedan shall all help Kagig, the chief and "Eye of Zeitoun," and his people in the defence of that mountain stronghold in Armenia

FRENCH SELF-TAUGHT, GRAMMAR with KEY

By J. LAFITTE, B. Sc. L., Principal French Master, City of London School.

For learning the Language by the Natural Method. It contains Classified Vocabulary, Travelling by Rail, Road and Sea, Cycling, Motoring, Post, Telegraph, &c. Commercial, NAVAL AND MILITARY Terms, Health, Human Body, Food, Fruits and Drink, &c., Conversation, so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION Tables of Money with illustration of Coinage, Weights and Measures. A course of simple and practical lessons in the Grammar and construction of the French language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

Crown 8vo., 316 pp. Green Cloth, 6/- net. Postage, 4d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & CO., 51, Old Bailey, E.C.4

against the cruel onslaught of the Turks. And the people whom he has chosen to carry out his plot also seem just right.

But, except for some of the descriptions of scenery, we feel that he might really have done better if he had outlined the situation and given us a brief summary of the characters of the four friends (the three Englishmen and the American), of whom Lord Montdidier, known as Monty, is the leader, and of those whom they meet in their adventure, and left us to imagine the rest. This is because, in spite of his exciting plot and his evident affection for the people he has created, he does not at all succeed in making those people live, and the more he tells us about them the less real they become. He has indicated fairly plainly the kind of personality which he means each of them to possess, but he has not so contrived that each does actually possess it.

This fact produced in us an irritating sense that there was some way in which better use could be made of good material, and out of this arose the thought that here, at any rate, is a novel which could with real advantage be adapted to the use of the cinema, and which would not lose in the process, but would gain something. We should still have the plot and the inspiring mountain scenery, and the actors and actresses might be able to give to the characters the definite personalities which they now lack. Then perhaps the scene where Monty, chivalrous and brave to the last, falls on the ramparts of what had been the castle of his Crusader ancestors would really touch us, which in the novel it so curiously just fails to do.

Mr. Mundy's prose and also his verse, of which there are examples between each chapter, seemed to us to owe a great deal to an evident admiration for the work of Mr. Rudyard Kipling.

The author's attempt to introduce a farcical element in the person of Mr. Peter Measel is quite distressingly unsuccessful.

THE CARAVANSERAI.

*Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultan after Sultan with his Pomp
Abode his Hour or two, and went his way.*

—OMAR KHAYYAM.

My reference to that succulent Turkish dish, *Imâm Bâ-yildi*, gave rise to a correspondence which I for one found very interesting. It has also produced from one correspondent a practical recipe for preparing the dish; and though I do not think it would be an easy matter to obtain egg-plants in this country at the present season, I dare say some of my readers may be glad to have the instructions. Here they are:—

Imâm-Bâ-yildi.—Cut 6 ripe egg-plants into 4 slices length-ways (without separating the stalks). Sprinkle them with salt, and let them remain 5 or 10 minutes. Peel and cut 5 or 6 onions into rather thick slices, and fry them partly brown in butter or olive oil. Lay half of them in a stew-pan, over which place the egg-plants, and place the other half of the onions over them. Add 6 peeled cloves of garlic, and a pint of water, or more. Place the pan on the fire and let it simmer till the egg-plants are soft. Dish up carefully and serve hot.

The same kind correspondent sends another recipe for a dish of egg-plants, which is also very savoury. It is called *Bédinjân Pâshashi*, and is prepared thus:—Cut egg-plants, as required, into slices about $\frac{1}{4}$ -inch thick, place them in salt water for about 10 minutes. Then dip them in flour, fry them in butter a nice brown, and arrange them in a baking dish. Pound 3 or 4 cloves of garlic in a mortar, add a little salt and a small cup of wine vinegar. Stir this well with a wooden spoon and pour it over the egg-plants. Place the dish on a moderate charcoal fire until the liquor is absorbed. Take off and serve.

My attention is called by a reader to an advertisement that appeared in the London papers a few days ago. It begins: "Sanitary Inspector required for the Persian Gulf." My correspondent thinks that the gentleman who secures the post is likely to have his hands full, the Persian Gulf being a largish place; and suggests that in matters of sanitation it has much to learn. I suspect that the duties of the post will not be quite so wide as my correspondent affects to believe, and that the successful applicant is likely to be required to tackle only one of the ports—probably *Busreh*! But in other respects I find myself in most cordial agreement with my correspondent. The Persian Gulf is an interesting sea, and many of its ports are extremely picturesque—though my opinion will probably not be endorsed by all readers; but, writing from memory, I am inclined to say that they could all do with some sanitation—in fact, with quite a lot of it. Anybody who has landed at, say, *Bunder Abbas* or *Muskat*, and picked his way about, will, I am sure, agree with me.

Whether sanitation is an unmixed blessing—in the East, at any rate—I am not quite sure. I have heard men who ought to know something about the subject declare that the introduction of drains into an Oriental city is usually followed by an outbreak of all sorts of diseases; and, on the other hand, the extraordinary immunity from disease of some of the least "sanitary" cities I have visited would take a lot of explaining by sanitary experts. Quite recently a friend was arguing that in killing off a hundred thousand harmful microbes we probably killed off a hundred and twenty thousand beneficial ones, and I don't see any good reason for contradicting him. So, after all, I hardly know whether to congratulate the P.G. on being about to have a sanitary inspector, or to commiserate with it. Of course, it might be well to keep my pity for the inspector; for the Gulf, with its choice assortment of "indescribables," might quite well kill him off before he got started on the bacilli and things.

"Oriental ineligible," are, I see, to be "rounded up" in the United States, and, apparently, deported. Orientals of the "Far" variety never have been particularly welcome in the States, I suppose, but those from the Nearer East are not regarded with so much disfavour; and I suspect that the latter will be less closely overhauled by the Deport Agents. But ineligible *are* ineligible, whether they hail from Japan or China, or from Syria or Egypt, and, as I noted lately, the Nearer East has been in bad odour in France lately, so why not in America now? One has to be very guarded in one's comments these days, but I must admit that I should like to see Great Britain taking a leaf out of America's book, and getting rid of *her* ineligible foreign extraction. As it is, she seems bent on exporting her decent labouring men and replacing them by the scum of Eastern Europe, and of a good many other parts of the world, too!

CORSAIR.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

France and Roumania.

Our Bucharest Correspondent gives this week full details of the French deal with Roumania from which it will be seen that our Allies have made ample capital out of the indecision on this side which gave them their chance. France has agreed to give Roumania a loan of 200 million francs, and Roumania in return is to export an equivalent amount of her staple products. Half the loan is to be advanced immediately, and the balance will be advanced as soon as the delivery of the goods begins. For both countries the advantage of the arrangement is obvious, especially so in the case of France. Roumania is able to realise in advance a portion of her potential exports to meet her financial engagements, while France, in addition to carrying through a deal which promises to be extremely profitable, has the added satisfaction of knowing that the loan is to be utilised to meet the coupons in arrears on the Roumanian National Debt and those that will shortly fall due—the bulk of which, as I pointed out last week, are held in France. And yet our French friends have not infrequently called us a *business nation*!

Egypt's Economic Crisis.

For some weeks the economic position of Egypt has been growing steadily worse, but serious as conditions are there now, it is to be feared that the country has still to undergo the worst of the crisis. Previous experience has shown that depression in other centres has its repercussion in Egypt long afterwards, and it is to be expected, therefore, that the effects of the present stagnation in the United Kingdom and other countries will only be felt by Egypt in a few months. Then, if conditions do not improve in the meantime, the country may be faced with a really grave position. Of course, if cotton rose and if neighbouring markets were in a position to absorb Egypt's surplus stocks, the position would be immediately relieved, but neither event is likely in the immediate future, and the former contingency is especially improbable.

Need for Confidence.

A factor which does not inspire confidence in the outlook is the character of the Egyptian business community. The average trader is too easily moved to depression. It is, indeed, really a kind of second nature with him to take the gloomiest view of the outlook. In present circumstances when grounds for optimism are so very hard to find, the risk of a flood of depression affecting the market may well be imagined. Those who know the extraordinary recuperative powers of the country—evidenced time and again when the position appeared on the surface to be most unfavourable—can have no doubt that Egypt will eventually emerge successfully from the present crisis; but obviously the rapidity of the recuperative process will depend very largely on the present attitude of the business community.

The Egyptian Season.

Despite the dismal commercial outlook, the season in Egypt seems likely to regain something of its former brilliance this year. I imagine that the Sultan's decision to charter a tourist steamer for a voyage on the Nile, recorded by our Cairo Correspondent in another column, was due as much as anything to a desire to further the return to the normal. If so, it was an excellent conception, and is bound to give a decided fillip to the tourist season. Our correspondent omitted to mention the owners of the steamer, but I think that most people could have guessed the name if it had not been revealed in a telegram this week that the vessel which His Highness has engaged is Messrs. Thomas Cook and Son's Arabia. Of course, it was bound to be Cook's in the Nile Valley, for while the famous firm has rivals of the extremely forceful type, now as before the war it is the "man from Cook's" who leads the way.

Co-operation or Corner?

The latest development in the Egyptian cotton position is recorded by Reuter's Cairo correspondent, who states that a co-operative syndicate has been formed to hold 2,000,000 kantars of cotton in the hope that it may be possible by such a measure to raise the price of the commodity. The phrase "co-operative syndicate" sounds very well, but when similar transactions have been attempted by our cousins over the water that has not been the term that has

been applied to them. In plain English, the Egyptian project would appear to represent an attempt to bring about a "corner." Such a scheme could not be carried through without very substantial financial support, as the amount of cotton in question represents about half of the crop in some years. According to the correspondent, the syndicate is apparently acting on the assumption that the banks will advance the necessary funds; but experts doubt whether its members have sufficient knowledge of the world's markets to carry out such an operation.

An Ill-Advised Policy.

The unfortunate position in which Egypt has been placed by the "slump" in cotton is clearly recognised in this country, and there is the fullest sympathy for the unfortunate cultivators. But the way to remedy the position is not by a scheme such as that proposed. It might afford temporary relief, though even that is far from certain, and it is much more likely that immediate disaster would overtake the enterprise, and it is the likelihood of that eventuality which makes it all but certain that the banks will have nothing to do with any such proposition. But even if it were temporarily successful, the only substantial result would be to strengthen the movement to render the United Kingdom less dependent on this source of supply. But as I have suggested, I do not imagine that the project will come to anything.

Germany Again.

One would imagine that the numerous orders that have fallen to foreign firms recently which in pre-war conditions would have been obtained by British firms, must be giving Labour in this country "furiously to think." This is likely to be particularly the case with regard to the latest instances that have come to light. This time it is Germany that is the successful rival, large orders having been placed with that country from Egypt for railway carriage and wagon tyres and for wagon wheels and axles. Of course, apart from labour conditions, the exchange makes it an impossibility for us to compete with Germany at the present time, but there are other considerations besides obtaining goods at the lowest price, and one would have thought that every effort would have been made to give British firms the preference, even if it meant paying considerably more, rather than place orders with Germany.

British Coal Exports.

As I expected, the decision of the Indian Government to restrict coal exports has quickly made its influence felt in this country. Inquiries have been received during the past few days for large quantities of Welsh coal, and for the time being there looks like being a revival of the export trade. It cannot be too strongly emphasised, however, that there can be no prospect of any permanent expansion of the British coal trade so long as the present high prices are maintained. They must come down if the United Kingdom is to regain its position as the supplier of this commodity to the world's markets, and the sooner this happens the better for the commercial interests of the country in general, for there is no getting away from the fact that the impossibility of obtaining British coal at anything approaching reasonable rates has been extremely detrimental to us abroad.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, January 3.

Interesting Tractor Trials.

An interesting series of tractor trials took place this week near Benha. These are the first to be arranged in this country on any scale lending itself to the comparison of results, and the trials attracted quite a large number of the more important members of the agricultural community. Rain interfered with the last day's work, but sufficient data was forthcoming from the first three days to enable the judges to give their verdict, which will be made public shortly. In view of the serious labour problem in this country, any process which will result in economies in labour and expense will be very welcome even to those who are most conservative in their methods, and these trials, while they will show which designs are best fitted for the peculiar local conditions, and what improvements are required to meet the latter, will, at the same time, have had the excellent effect of demonstrating to the larger landed elements the efficiency of mechanical contrivances and the advantage which the latter offer in the case of larger estates over the methods hitherto employed.

CAIRO, January 10.

Egyptian Industries.

The Egyptian Industries Exhibition since its opening on the 30th ultimo has attracted a very large number of visitors, Egyptians as well as Europeans, all of whom have expressed their appreciation of the object and their pleasure at the comprehensiveness of the exhibition and the excellence of the articles shown. An important question which might well receive the attention of the Bureau of Commerce and Industry is the channel through which the public can get into touch with those whose handiwork is exposed at this exhibition. As regards exhibitors whose establishments are in Cairo there is no difficulty, for intending purchasers can make a note of the address affixed to the exhibit and can go straight to the workshops. It is, however, an entirely different matter in regard to articles produced in the provinces, which are quite as numerous as those produced in Cairo or Alexandria, and the Bureau of Commerce and Industry would undoubtedly be conferring a benefit on all concerned—in fact, such a departure would seem quite naturally to fall within the scope of its mandate—if it were to open an office where orders for articles produced in the provinces could be taken and transmitted to the manufacturers, or through which it would be possible for the consumer to get into touch with the provincial producer.

[The exhibition is described in an article from our Cairo Correspondent, which is given on page 121.]

ROUMANIA.

BUCHAREST, January 9.

Locomotives for Private Concerns.

The Ministers' Council, together with the Administration of the railways, have decided to solve the question of the transport of fuel and victuals for the various towns, villages, factories, etc., by granting them the right to buy locomotives on their own account, while the State will place at their

disposal the number of trucks required. The State has pledged itself not to requisition them or to cause any restrictions.

Credit Balances of Former Enemy Subjects.

The Minister of Finance has sent a circular order to all the banks of the Old Kingdom and the new provinces instructing them to hand over all credit balances belonging to former enemy subjects, in compliance with the terms of the Treaty of Versailles.

France's Loan to Roumania.

Details are now available regarding the loan of 200 million francs which the Roumanian Minister of Finance has contracted in Paris with several banks, under the auspices of the French Government. The French banks will advance immediately to Roumania the sum of 100 million francs, and the balance will be paid as soon as the Roumanian Government begins to deliver the goods to be sold to the French Ministry of Supplies. Roumania undertakes to export to France maize, rye, barley, petroleum and timber, and is under an obligation to commence exporting in August, 1921. It has the option of exporting before that time should there be anything available, such as maize.

Of the net proceeds of exported goods, one-third will be retained on account of advances made, and the remaining two-thirds will be paid, so that in payment of the loan Roumania will export to France goods to the value of 600 million lei. The price which the French Government will have to pay will be the current price quoted at Antwerp when the goods are loaded at the Roumanian ports. No date has been fixed for the repayment of the loan, but 6 per cent. interest will be reckoned until the final payment. This loan will be used to pay the coupons in arrears of the National Debt and the Treasury Bonds which have fallen due.

Purchase of Army Equipment.

The Roumanian Government has purchased from France a large consignment of army clothing and boots to the value of 98 million francs, payable in Treasury bonds in five years. This consignment was originally destined for the Crimea, but, as General Wrangel's army evacuated after the goods had been shipped, they were then offered to the Roumanian Government, who were in need of such articles to complete their own stocks, and, in view of the advantageous conditions of the offer, it was readily accepted. The goods will be landed at one of the Roumanian ports within a few days.

Fulfilment of Government Pledge.

It seems that the Government has at last fixed the date when the remainder of the 40 per cent. due to the people of Transylvania, Bukovina, and Bessarabia, who have exchanged their crowns and roubles respectively into lei, should be paid. According to the original arrangement, the State should have begun to pay the amount on December 1, but for certain reasons it has been delayed, and the date has now been fixed for February 1. This delay has caused considerable harm to the people of the above-mentioned provinces as well as to the whole country, as it is one of the main reasons for the shortage of ready cash. In view of the approaching settlement everyone is expecting that shortly the financial stringency will be eased to a certain extent.

The Exchange Problem.

At the meeting of the "Valuta" Commission, which took place at the Ministry of Finance, several important measures were decided upon to improve the present rate of exchange:

1. Imports to be restricted to the possible minimum, and only machinery and industrial articles necessary for reconstruction work to be allowed to enter the country.
2. Exports to be permitted to the utmost extent possible.
3. The banks to be prevented from speculating with the rate of exchange.

New Postal Rates.

As the Roumanian Post Office has to pay to other countries for the transport of foreign correspondence in the respective foreign currencies, the Government has decided, in order to compensate for the depreciated rate of exchange, to increase the postal rates for foreign correspondence as from January 1 as follows:—Letters, for the first 20 grammes, 2 lei, and for every extra 20 grammes or fractions thereof, 1.20 lei; postcards, 1 lei; printed matter, for every 50 grammes, 40 bani (maximum weight 2 kilos); business documents, up to 20 grammes, 2 lei; for every extra 50 grammes or fractions thereof, 40 bani; samples, up to 100 grammes, 80 bani; for every extra 50 grammes or fraction, 40 bani (maximum weight 350 grammes); newspapers and magazines, etc., for every number or for every 50 grammes, 10 bani; for all registered matter, an extra 2 lei.

EXHIBITION OF EGYPTIAN INDUSTRIES.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, January 4.

The Sultan this week officially opened the first exhibition of Egyptian industries, which has been organised by the recently created Bureau of Commerce and Industry. We have in the past had many shows of Egypt's arts and crafts, but this is the first occasion where Egyptian industrial products have been grouped together in such a comprehensive manner, and certainly it is the first time that most people have realised how diverse are the industrial activities of the country.

At the same time one is struck by the impetus which the war and the consequent shutting down of external markets have given to local enterprise. Who would ever have thought a few years ago that, for instance, motor-car tyres, rubber-tubing, surgical apparatus, ink, gramophone discs, kitchen utensils, cups and saucers, European clothing, to name only a few articles at random, could be obtained from local manufacturers; and yet not only can they be so obtained, but they are to be bought at what are relatively moderate prices.

The "Société des Industries Egyptiennes" show some excellently made motor-tyres, rubber-tubing, and rubber goods of every description. Ibrahim Eff. Lamy's exhibit of ink and sealing wax is of high quality. Mr. Costis has a very varied supply of pottery, household and fancy, of excellent glaze. The leather exhibit of Mr. Deary includes portmanteaux, kit-bags, gun and cartridge cases, etc., all made by Egyptian workmen and equal to the best European workmanship. Messrs. Hassan Aly, of Cairo, show some very well-turned-out surgical apparatus, geysers, and radiators.

The centre of attraction was the silk room, where there were a series of show-cases of most beautiful silks of both ancient and modern designs, all manufactured on hand-looms by Mohamed Abdel Fattah El Hommosany of Mehalla El Kebir, a collection of the most exquisite Kashmir shawls, and silk lengths of every description, all of equally good texture and finish. The specimens of the trappings of the Holy Carpet and its accessories, which fill part of the wall in this room, are an illustration of the lengths to which the fine art of gold and silver embroidery has been brought in Egypt.

The exhibit of cotton and woollen fabrics was very interesting, and demonstrated that the Egyptian weaver has by no means lost his cunning, but that, on the contrary, he is making rapid progress. There were some very well-made bed-spreads from Mehalla El Kebir and Qualiub, some wonderful native head-dresses of glorious colouring, which might easily be used for draperies, and numerous show-cases containing cotton dress fabrics, towelling, and flannels, which were every bit as good as what Manchester supplies to this country, while the specimens of tweed suitings indicated that local enterprise, if it continues as it is doing, will soon be able to cater for the variegated taste of the "Young Egypt" in the matter of clothes.

The rope and twine exhibit showed a vast improvement on what one had seen in the past. Some were made from flax, but most of the specimens shown were made out of "sisal" which promises in the future to be one of Egypt's most useful and valuable products. The wicker chairs, tables, and general furniture shown were of very good

finish, while the matting made out of "samar" was excellent, some of the specimens comparing most favourably, both as regards prices and workmanship, with the best Japanese designs. A revelation in diversity of design, in workmanship, and in price was certainly the basket work, most of it being made out of palm leaves.

The various Government Departments interested in industrial work are well represented. The Coastguard and Fisheries Service show an excellent selection of sponges found in Egyptian waters. The Egyptian Prisons have a general exhibit made by its inmates ranging from saddlery and harness work to brushes and agricultural tools. The Egyptian State Railways have a most attractive exhibit in the shape of a model tank engine propelled by electricity, and made entirely by Egyptian workmen, in the railway workshops. The Mines Department shows the different minerals, ores, and oils obtainable in Egypt, and in the latter connection perhaps one of the most interesting exhibits was that of two brothers, Messrs. Nessim, who claim to have found in Upper Egypt the source of the colours used in the temples of Ancient Egypt and supposed to have been lost, and who show some of the results of their research work.

Messrs. Compton and Co., who, during the war, set up a factory at Shubra where only Egyptian workmen are employed, show what the latter are able to do in the matter of ready-made clothing and uniforms; while in practically every room and down the passages are excellent rugs of every description made by the Amria Bedouin, who, thanks to the interest taken in them by the late Miss Baird, have been enabled to turn into a profitable trade what at the beginning of the war was merely a home industry.

The Sudan has a room to itself in which are exhibited native basket work, ostrich feathers, ivory work, leather bags and saddle bags of curious design, as well as the various grains which that wonderful country produces; there is a fine collection of the best of the Muski brass-workers' and copper-smiths' art, while the enterprising Elhamia Trade School has a wonderful exhibit of inlaid furniture.

The above is of necessity but a cursory review of the articles seen at this exhibition, but it is sufficient to indicate the industrial activities of the country and the future possibilities of their development. Most of the articles shown bore ridiculously cheap prices, and they should command a ready sale once their existence is known.

While, owing to the lack of fuel and raw material, especially minerals, Egypt cannot engage in the bigger industries which exist in other countries, there is no reason why she should not produce all her requirements in the everyday articles, for which there is a big demand throughout the country, and the impression gained from this first exhibition is that she is on the high road to doing so.

What Egyptian industry has suffered from in the past has been lack of publicity, lack of support and encouragement, and lack of guidance. The necessary publicity will henceforward be afforded by this exhibition, which is to become a permanent feature, and will, at the suggestion of the Sultan, be removed to more spacious premises as soon as they can be found, and by the connection which the Bureau of Commerce and Industry will be able to establish between the local producer and consumers in and outside Egypt. The Bureau will also be in a position to indicate the directions in which Government can give the support and encouragement, financial as well as moral, which it has promised, while, in conjunction with the Department of Technical Industries, the Bureau should be able to afford the necessary guidance to enable the workers to improve in finish and

design so as to cater for the markets, which are, so to speak, at their door.

The writer cannot close this review without offering his hearty congratulations to the Bureau of Commerce and Industry and its able Controller, Mr. J. F. G. Hopkins, on the success of the exhibition. The latter clearly indicates that the Bureau, in spite of the short time that has elapsed since its creation, is already in close touch with local industries even in the remotest parts of the country, and that it thoroughly understands, and is competent to carry out, the very responsible task laid upon its shoulders. We shall expect to find Egyptian industries making giant strides in the near future under its direction.

ZAGREB TIMBER MARKET.

We have received from the London office of the Banque Franco-Serb the following particulars regarding the Zagreb timber market forwarded to the bank from its Zagreb branch:—

Considerable quantities of wood are available here, especially beech, oak, and fir (pine is not grown), but merchants engaged in the production and export of fir do not usually deal in oak. No stock actually exists in English dimensions, but the mills would be very pleased to take orders at reasonable prices. The Fiume question still appears complicated, and we cannot count on using this port for some time, so that shipments must still be made via Trieste. Considerable quantities of our wood have been shipped to Egypt, and that country is actually one of the largest buyers from us. As far as we can hear, no market has been opened directly with England.

The Banque Franco-Serb has the names of several firms which are prepared to export oak, beech, and timber, and will be glad to communicate them to any readers of THE NEAR EAST who may be interested.

ROUMANIAN 4% LOAN OF 1908.

The Roumanian Government is prepared to pay the outstanding interest of its Four per Cent. Loan of 1908 in respect of bonds held by British subjects prior to August 1, 1914. Holders of such bonds are therefore requested to lodge the necessary particulars of their holdings with Messrs. J. Henry Schröder and Co., 145, Leadenhall Street, E.C.3, on or before February 5, and to produce at the same time documentary evidence to prove that the bonds have been in their continuous possession since August 1, 1914. The Roumanian Government undertakes to pay the overdue coupons in French francs, and to remit to Messrs. Schröder and Co. the funds necessary for this purpose as soon as the approximate amount required has been ascertained.

THE PRICE OF SILVER.

RELATION OF SUPPLY AND DEMAND.

A hundred years ago, when Great Britain adopted the gold standard, the value of silver was five shillings an ounce. With the discovery of fresh mines and the production of silver as a by-product its value gradually depreciated, until in 1914 it stood at two shillings the ounce. During the war the price rapidly increased until the British and American Governments intervened and fixed the value once more at five shillings. As soon as this control was removed silver again began to soar, and actually touched seven shillings the ounce. Reaction set in, and to-day it is back to 3s. 3d. or 3s. 4d. What then is the real position in regard to silver? How does supply compare with demand? The subject is one of the widest possible interest to the whole business world.

In 1918 the United States Congress passed the Pittman Act which fixed at one dollar per ounce the price at which the United States Treasury was to make purchases of silver to replace the Sherman dollars sold to the India Government, and in July, 1919, Senator Pittman, who is supposed to have a profound knowledge of the American silver position, is reported to have declared that the world's demand for silver was double the production, and to have expressed the opinion that for the next twenty years prices would range between 1 dollar and 1.29 dollars per ounce, the established parity of the American silver dollar. At the same time there appeared in the *American Mining Journal* an article according to which the world's consumption of silver (in millions of ounces) was as follows: Subsidiary coinage 60, Arts 75, India 150, China 40, Africa 25, total 350 million ounces. Against this figure the world's production was set at 180 million ounces, showing an annual shortage of 170 million ounces.

Now according to a report of the United States Bureau of Mines the world's production of silver for the six years 1913-18 was in thousands of ounces, as follows: 225,380, 168,430, 184,170, 168,810, 174,160, 197,380. The last total was made up from six sources: America, 151,610; Central and South America, 1,846; Australasia, 1,000; Asia, 936; Europe, 687; and Africa, 108 ounces. To the total from America the United States contributed 67,810,100 ounces, Mexico 62,517,000 ounces, and Canada 21,284,600 ounces. In view of the fact that Mexico is now producing some 20 per cent. more than the amount with which it was credited in 1918, and that other countries are likely to show also considerable increases, it is reasonable to believe that the actual world production is already and will remain at a much higher figure than the 197 million ounces of 1918.

Now if we turn to the American estimate of the world's consumption we shall be following expert British opinion if we state that the American figures are absurdly exaggerated. As Great Britain's subsidiary coinage has been reduced from 925 fine to 500 fine, and has already been issued, the metal required being obtained as a by-product from British ore-smelters, the only subsidiary coinage to provide for is that of the United States, and the requirement for this are reported to be 12 million ounces. America, again, is the only country using silver to-day to any extent for Arts purposes, and according to report the amount entailed had dropped to less than 25 million ounces. It is difficult to know on what basis an estimate of 150 million ounces is allocated as India's annual consumption, and if current imports are any criterion we shall be nearer the mark in placing the amount at 30 million ounces.

Thus, if the American estimates for China and Africa are left unchallenged as far as the aggregate is concerned, it will probably be more accurate to assess the world's consumption, after making all allowances, at well below 150 million ounces, while the production, taking into account the sales of silver from the Continent representing melted coinage, will be in the neighbourhood of 230 million ounces or more. It does not follow, however, from this that the position of silver is hopeless. There are too many cross currents at work to warrant dogmatism on this point. The speculative element in regard to silver transactions has to be reckoned with, and there are considerable interests involved which will work hard to prevent silver falling to the lowest depths. Finally, China has it in her power to steady her own exchange when the world produce market begins to awaken from its present lethargy.

The Manchester Chamber of Commerce has received the following cablegram from the Delhi Piece-goods Association:—"Seriousness of the situation here not realised in Manchester. Importers urge you to take steps to suspend further new business for six months."

The French Air Mail for Morocco leaves Toulouse on Mondays, Wednesdays, and Saturdays, and in order to be included in it, packets should be posted in this country in time for despatch from London in the mail for Paris closed at the G.P.O., London, at 3 p.m. (printed papers, etc., 2.30 p.m.) on Saturdays, Mondays, and Thursdays.

CONDITIONS IN BULGARIA.

OUTLOOK FOR BRITISH ENTERPRISE.

(FROM A CORRESPONDENT.)

Little seems to be known in commercial circles in England, except perhaps in Manchester, of the trade conditions in Bulgaria. This letter will consequently throw some light where light is needed, as the details given are from first-hand knowledge.

M. Stambolisky's visit to England was well advertised, and immediately set some firms thinking about this country's possibilities. Several representatives of English houses put in an appearance in Bulgaria very soon after his visit, obviously inspired by his favourable speeches; but I think without much result. Bulgaria, like all other countries, is passing through troublous times, and the same tendencies towards inflated credits, a superfluity of Government control, and a general decline of purchasing power of the paper currency is as evident here as elsewhere. Added to these difficulties, the Government began a period of prosecution against the more wealthy members of the community, and spread the net wide enough to include anybody who had made any considerable sum during the war period. It was considered a crime to have made money out of the national necessity—an idea with which many Englishmen will agree. But many merchants have been, and are still, kept in durance for long periods, without any charges being brought against them. This has had a very unsettling effect on trade conditions, and large sums of money have apparently left the country for other and safer lodgment. It is noteworthy that the Jewish merchant, who occupies a leading place in the trade of the country, is hardly represented, if at all, in the long list of those incarcerated.

For the first four months of the year a complete paralysis prevailed owing to a serious railway strike. The handling of this strike by M. Stambolisky's Government was a lesson to Westerners, and might conceivably be taken as a model by them. The country rallied to the support of the Government, and many of the strikers are now sadder and wiser men. Transport conditions are now more or less normal. Trains do not run as quickly as before the war, owing to the permanent way being in need of new rails and the rolling-stock of repair, but every effort is being made to keep things moving, and with success. The difference between the railway efficiency of this country and that of Yugoslavia and Roumania is very noticeable to travellers who have recently passed through the different countries, the conditions of transport in the two latter States being deplorable.

The rate of exchange has fluctuated very violently during the year, beginning at 200, rising to 350, falling again to 170, and, after further violent fluctuation, rising to the present price of 320. The increase in the value during July and August was due to the inauguration of a considerable grain export up the Danube to the riparian countries on its northern banks; but the good effect caused was destroyed by the repressive measures of the Government and by considerable imports during September and October. The Government Department in control of grain export has been very unsuccessful in its handling, owing to inefficiency and other causes. Many shippers who tried to secure cargoes were sent away by the absurdly high prices asked, and as a result of various other difficulties. Many well-informed people have again and again made representations to members of the Agricultural party in power that they want to concentrate on their export more than anything else, in order to get their exchange to a more normal level; but the advice has not met with much success. The prices of all cereals have now been reduced, however, and the situation seems to be improving. Large tobacco exports took place during December, and there are large quantities still left to come. The year's crops were very heavy, especially maize; and when exports of this begin in the spring the exchange may be expected to stiffen.

The market position generally is not like that of Constantinople, where there is a glut of most commodities. Great quantities of goods have certainly come in, but not more than the country can absorb. The absence of buyers in all sections, owing to the heavy fall in producing countries, is causing the merchant to hold his hand until the situation becomes clearer, as he is afraid of being undercut; also the fact that goods have been offered from Constantinople in some instances far below their cost. The clearing up of the situation is awaited, and when it comes a better demand is sure to show itself. A certain number of institutions which have come into existence during the last few years are now feeling the pinch.

The co-operative societies are not at the moment too prosperous, but they are mostly sound concerns, and they

have proved their place as a factor for good in the national economic life. Great inconvenience is caused by the lack of currency, especially notes of large denomination, owing to hoarding by peasants. Large quantities are held by dealers also in neighbouring countries as security against purchases made there.

The prospects of English trade are good in certain directions if manufacturers will only realise that in a country like Bulgaria credit is necessary, and that their competitors in other countries are prepared to, and do, extend this privilege. An effort should be made by firms to try to get the shipping companies trading with the Black Sea to reduce their freight charges. The writer has seen recently quotations of 50s. per ton Hamburg to Varna, while for the same goods £7 10s. is charged from Liverpool to Varna. This anomaly ought to be removed.

The National Stores, started under Government auspices, have proved a distinct failure, owing to inefficient handling, and are an object-lesson to advocates of Government trading. A committee is sitting upon their affairs.

A British Chamber of Commerce has lately been inaugurated in Sofia with Englishmen in control, which will endeavour to prove itself a live concern. It is hoped that English firms interested in this country will become members. The Chamber will be in the position to give reliable local information and to push British interests in a country which has been in the past overlooked.

A final note to those who interest themselves in Bulgaria, and who wish to establish permanent connections is: do not quote without engagement and with uncertain dates of delivery. The competition in all branches of trade is already keen, and will become more so. Other nationalities are ready and anxious to trade, and most of them, owing to the weakness of their different exchanges, can offer goods at more advantageous prices in local currency than Englishmen can. Consequently to handicap offers with restrictions can only have one termination, and that is that no business will result. It is true that British goods are more appreciated than any other, and Bulgarians know that quite well, but they will not pay the big difference which in many instances exists if the cheaper article from Germany or Belgium will fulfil the purpose for which it is required.

A DUNLOP CALENDAR.

We have received from the Dunlop Company a calendar for the current year which is unique in advertising. Produced by Raphael Tuck and Sons, Ltd., in conjunction with the Dunlop Company's advertising department, it is indeed in every way a credit to British advertising. It depicts a typical London night scene in the vicinity of Piccadilly Circus, and is done in oil facsimile of such excellence that it will undoubtedly be mistaken by many for an original. We understand that the accompanying date pad has been produced in practically every language, not excepting Chinese, for world-wide distribution to all the customers upon the Company's register.

ENGINEERING.

ENGINEERING SAFETY.

On several occasions the subject of safety appliances for use in connection with engineering and other plant has been dealt with in the columns of THE NEAR EAST. In view of a recent statement made, which was to the effect that it was not sufficient to protect a workman from machinery, but that he must also be protected from himself, it is of interest to note that the returns of the British "Safety First" Association show that about 75 per cent. of the accidents occurring in industrial establishments are due to carelessness, thoughtlessness and ignorance. Of the balance a proportion appears due to that peculiar sense of humour possessed by many workmen, a humour which consists in hooking a fellow employee by the collar to a travelling crane, or forcing the nozzle of an air blast into his mouth, or setting fire to his coat-tails just at the moment he is doing some intricate or dangerous job.

It would seem as though engineering science had practically gone to the limit in devising guards, safety devices, and other precautions to prevent the possibility of accident in workshops. Milling machines, automatics, and cutting and pressing tools are provided with guards at considerable cost, and at some sacrifice of efficiency, yet every factory foreman knows of cases where these guards have been deliberately removed and accident invited simply because some semi-intelligent workman felt they interfered with his freedom of action. Everything possible has been done by the engineer to make every class of appliance foolproof; it is difficult to say what further course can be taken except that of eliminating the fool. The cynic may say that he is doing his utmost to eliminate himself, but though result may, in the latter case, be certain, it may be long in action, and the course which should be adopted is for employers generally to refuse to employ workmen who are hopelessly unintelligent. It may be argued that such a course would perhaps deplete our works, but a transition period could be arranged, of some few months, during which the employing firms should do their utmost to bring home to the workman the fact that he is merely suffering from a somewhat atrophied and certainly dormant brain, and that his mental condition can be improved sufficiently, if he understands and takes notice of what he is told, to enable him to continue his work with reasonable safety. During this transition period every effort should be made to teach him, by cinematograph and other illustrations, by object lessons, by lectures, notes, verbal and other warnings, that the desire of the management is that he shall live the rest of his life with as many limbs as he had when he entered it.

It may be argued that no amount of tuition, no matter of what kind, could improve matters, and, although one is loath to admit it, there may be a modicum of truth in the assertion. As the Chief Inspector of Factories and Workshops said recently, there seems no limit to the incredible folly of the ignorant workman, no possibility of guarding against his unexpected actions.

A Remarkable Example.

I can give a recent instance of this which provides a vivid illustration:

Everyone knows that electrical energy, generated at extra high tension, is one of the most potent forces we have. By carefully designed and constructed apparatus the voltage of the supply can be transformed down to harmless limits, and in every power station the most elaborate precautions are taken to prevent any unauthorised person from touching any part of the current-carrying metal work which might be an element of danger.

In the engine-room of such a station a fitter, with an assistant, was doing some trifling task, in the course of which he asked his assistant to connect up an electric drill. Such a drill has the current carried to it by a length of flexible conductor, similar to, but generally rather stouter than the flexible cord carrying the ordinary electric lamp. At the end of this flexible cable is a porcelain plug, and all that has to be done to connect up the drill is to place this plug in a socket fixed in some convenient position—in this instance, on the wall of the room in which the men were working.

It will hardly be credited, but the assistant, instead of doing this simple thing, proceeded as follows: He sought for, and at length obtained, a long ladder, and climbed

up to the switchboard gallery. To gain access to this he climbed, at some risk of losing his footing, over a guard railing, and then went along the gallery until he reached a passage way marked "danger." He went along this and found on either side of him huge insulating and protective screens, each 8 ft. in height, placed there to prevent any possibility of anyone touching the high-tension conductors. The assistant, seeing these, seems to have thought them merely difficulties to be overcome, so he climbed them, descended on the other side and walked about until he found a stout copper rod to which he attempted to tie his flexible cord. He found 10,000 volts at home, and in a manner that seems to show a certain truth in an old proverb, escaped with a severe burn instead of being volatilised, or at least wiped out of existence. Now, how is it possible to deal with, or to guard against such extraordinary stupidity? Here it was not a case of ignorance; ignorance would have led the man to tie the flexible to the nearest gas-pipe or to the outside of the socket. Ignorance would never have led him to take such ordered steps to attain an end. The whole thing was an instance of that crassly stupid, cocksure, "I-know" attitude, which is so characteristic of the post-war workman. Truly my sympathies go out to everyone connected with the Safety First movement, as I know from lengthy practical experience the difficulties against which they are contending.

Some "Safety" Data.

According to the returns of the British Safety-First Association, and to a paper read before that institution, a summary of accidents in one of the largest steel works in existence shows a monthly average of accidents which is astonishingly high. Of these, not one has been due to the absence of a safety device, and individual care would have avoided most of them. At the works in question a great deal of interest is taken in the Safety-First movement, and neither expense nor pains are spared to drive home to the men the need for care in their work. Yet, in spite of all effort, 482 accidents took place in one month, none of which was attributable to lack of instructions or absence of precaution on the part of the employing firm.

The suggestion has been made that money or other prizes should be offered to those departments which showed, during the month or the year, the lowest percentage of accidents. In regard to this, however, it is practically certain that the unscrupulous character of the average workman, where personal gain is concerned, would lead him to conceal accidents which happened to others, as far as possible in order that his department would take a high place in the competition.

The whole root of the trouble appears to lie in a workman's distaste for knowledge and dislike for using such intelligence as he possesses, and little result will be forthcoming until employees generally have been taught to think for themselves.

A Safety Switch.

A description has reached me of an interesting and, in some respects novel, switch for dealing in perfect safety with fairly heavy currents at comparatively high voltages. As I have pointed out above, the average labour employed in factories, etc., to-day is not nearly as intelligent or even careful as that of pre-war days, and every precaution has now to be taken to protect the workman from himself. For that reason every form of safety device as to be welcomed, and the switch in question, which is the product of one of the largest electrical engineering firms in the world, should come into fairly general use in the near future.

The switch has been specially designed for use on main circuits or in situations where ordinary knife switches have been used hitherto. The switch itself consists of a bow-shaped copper laminated contact bridge, which makes connection between two blocks, one of which carries the fuse clip and the other the sweating thimble to which the main cable is brought. The operating mechanism is of galvanised steel, working by means of a substantial insulated handle, on the well-known toggle principle. The outer laminations of the brush are of thin bronze strip, so that the action is entirely self-cleaning, owing to their scraping effect, and auxiliary contacts are provided for the purpose of carrying and eventually breaking the arc formed during switching-off. The switch, it may be said, is of the quick-make-and-break type.

So far there is no novelty in the construction. A number of more or less similar types could be selected to-day, or,

for that matter, could have been selected years ago from the lists of any representative manufacturing or factoring firm. The novelty and safety of the switch lie in other directions, and it is in these that the chief interest is to be found, from an engineering point of view.

The switch, with the fuse clips and terminals, is enclosed in a steel box, into and out of which the main cables pass through ebonite collars, or steel tubes, as the case may be. This steel box is provided with a lid which is hinged in the centre, the bottom portion carrying the handle of the switch, which projects outwards in the usual way. This portion of the lid is firmly screwed to the box by means of a number of stout screws, and a seal can be attached, or even a padlock, to prevent any risk of the screws being removed, and the lid opened by any unauthorised person. The other portion of the lid can be swung back out of place in order to give free access to the fuse clips for replacement purposes.

The first and most striking novelty is that this hinged portion of the lid is connected to an ingenious latch arrangement, which is so coupled to the switch that the lid cannot be opened under any circumstances unless the switch is first thrown over to the "off" position. Farther, until the lid is again closed and fastened in place the switch cannot be released so as to enable it to be moved, and the current switched on. In this way defective fuses can be replaced at any time with immunity by even the least-skilled workman. As long as the door of the fuse portion is open no part of the switch-gear can carry electrical energy. It is pointed out that by using a padlock the switch handle can be locked back in the "off" position, and held there after the fuses have been fixed, until some responsible person has viewed the work and passed it as correctly done.

Further provision is made for a second padlock which will fasten the fuse-box cover in place, so that a duly authorised person must be fetched to unlock the lid before the defective fuses can be touched. Either of these padlocks could be used independently of the other, and if a responsible person—who need not, however, be a skilled electrician—is given charge of the key, it should be impossible for any accident to occur.

Artistic Lighting.

In connection with electric lighting work there are certain essential conditions with which well-planned lighting—whether it be in the workshop, the office or the home—must comply. The light must be adequate, glare from exposed filaments must be absent, and the fixtures must be located in such positions that the light comes from the correct quarter.

Artistic considerations demand that the fittings should conform to the style of decoration in the rooms they are intended to illuminate, and that the light should be of a pleasing nature. Here it may be mentioned that it is as well to provide in the main reception rooms for alternative lighting so that the illumination scheme may be varied to suit the whim of the moment or the exigencies of the occasion.

For instance, the main lighting of a drawing-room could be derived from one or more semi-indirect pendants, but although these may be used to flood the room with light when a merry entertainment is in progress, well-shaded candle lamps on the piano, with, perhaps, a floor standard in a corner, would be more suited to a quiet domestic evening.

In the study an indirect fitting would produce an almost shadowless light, most pleasant to work under, but on occasion this could be switched off and light for reading obtained from a table standard.

For a small family party an adjustable pendant over the table might suffice in the dining-room, but the appearance of the table can be greatly enhanced on "state occasions" by table candle-sticks or the like.

Oil Burning.

Some little time ago I was present at a demonstration of an ordinary Foden steam-wagon which had been converted from coal-firing to liquid fuel burning by the Scarab Oil Burning Co., Limited, and which, at that time, had been working under those conditions for about six weeks.

The consumption of liquid fuel, it is claimed, works out at about half a gallon per mile on town service, with a fuel load of five tons on the body of the wagon and three tons on a trailer. Lighting up in the morning is accomplished by a hand-starting arrangement whereby, after five or ten minutes, the burners operate by themselves until steam is raised. The engine can be moved under its own steam within thirty minutes of the burners being lighted.

It was the Scarab Oil Burning Company's system that was fitted to the oil-fired train from Euston to Birmingham some weeks back. They are also fitting the system to locomotives on the North-Eastern Railway, the Great Northern Railway, the Highland Railway, and some foreign lines.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Sugar.—There has been no change in prices. West Indian crystallised has come to business at 62s. to 66s., and white Mauritius has been done at 71s. Home refined has been in active demand at the official rates.

Coffee.—The market has shown a slight improvement in most cases. Costa Rica has been done at 130s., an increase of 1s., and Indian at 110s. has gone up 4s. Mocha at 170s. is unchanged. The futures market is firmer but inactive. Quotations are:—March, 48s.; May, 47s.; July, 47s.; September, 48s.; December, 49s.

Oilcakes.—There has been a decline in prices. Linseed cake is 1s. down, and cottonseed cake is 6d. down at 18s. and 11s. respectively. Ground nut cake at 15s. 6d. has risen 1s. Coconut cake has come to business at 12s. 6d.

Oilseeds.—The market has shown an upward tendency. Indian linseed is the same at 22s. 6d. Rapeseed has risen with Toria at 20s. 6d. and bold Ferozepore at 20s., increases of 6d. and 1s. respectively.

Seed Oils.—Prices are still on the decline. Linseed oil at 33s. has lost 3s. Other transactions include rape oil at 53s., a drop of 6s. Refined cotton oil at 43s. has shed 2s.; and the Egyptian variety has also declined 4s. at 30s. Turpentine is unchanged at 100s.

CURRENT PRICES.

General Produce.—Bacon, 180s. cwt.; butter, 280s. cwt.; cheese, 170s. cwt.; eggs, 36s. per 120; chillies, 125s. cwt.; cloves (Zanzibar), 1s. 2d. lb.; cocoa (Ceylon, good to fine), 90s. cwt.; coffee (Costa Rica), 116s. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 116s. cwt.; ginger (washed Cochim), 42s. 6d. cwt.; hams, 160s. cwt.; lard, 141s. 6d. cwt.; nutmegs, 11d. lb. per 110's to 80's; pepper (Singapore, black), 4½d. lb.; pepper (Muntok white), 8½d. lb.; raisins (Valencia), 152s. cwt.; sultanas (Smyrna), 130s. cwt.; currants (Vostizza), 91s. 6d.; cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 2d. lb.; sago (small pearly), 25s. cwt.; rice (Rangoon No. 2), 18s. cwt.; rice (bran Rangoon), £7 5s. ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 3½d. lb.; wheat (Australian), 114s. 9d. qr.; wheat (English white), 82s. 6d. qr.

Hides and Skins.—Ox and Heifer: First 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 6½d. lb.; 59 lbs. and under, 6½d. lb.; cows (first), 60 lbs. and up, 4½d. lb.; 59 lbs. and under, 4½d. lb.; cows (second), 60 lbs. and up, 4d. lb.; 59 lbs. and under, 4d. lb.; bulls (first), 4½d. lb.; bulls (second), 3½d. lb.; kips (first), 6½d. lb.; kips (second), 5½d. lb.; kips (third), 4½d. lb.; horse hides, 7s. to 20s. each. Calcutta Market:—Prices in rupees per 20 lb.: Arsenic hides, cows—Agris, 9.0 to 15.0; Durbhargas, 6.0 to 7.8; Patnas, 4.0 to 6.8; salted cows, 4.0 to 9.0. Arsenic hides, buffalo, 2.8 to 7.0. Skins: Calf, 8.0 to 10.0; goat, 120.0 to 130.0 per 100 pieces.

Metals.—Aluminium, £165 ton; bismuth, 12s. 6d. lb.; copper (standard), £73 15s. ton; copper (electro, wire bars), £83 5s. ton; gold bars, 110s. 8d. oz.; iron (No. 3 Cleveland), 220s. ton; hematite (mixed number), 240s. ton; lead (soft foreign), £23 12s. 6d. ton; manganese Poti, 2s. 6d. unit; Molybdenite, 65s. unit; nickel, £215 ton; platinum, 410s. oz.; plumbago, £37 10s. ton; quicksilver, £12 12s. 6d. bottle; silver bars, 39½d. lb.; spelter (G.O.B.), £27 8s. 6d. ton; tin (standard), £205 ton; tin sheets (20 by 14), 33s. box; wolfram, 16s. 6d. unit; zinc sheets, £44 10s.

Chemicals.—Acids: Boric, 75s. cwt.; oxalic, 1s. 3½d. lb.; citric, 2s. 4½d. lb.; tartaric, 2s. 0½d. lb.; ammonia (sulphate), £25 8s. ton; arsenic (white powdered), £60 ton; benzole (standard), 3s. 2½d. gallon; bleaching powder (35 per cent.), £21 ton; borax crystals, 38s. 6d. cwt.; cream of tartar, 170s. cwt. Potassium: Bichromate, 1s. 2½d. lb.; chlorate, 7½d. lb.; caustic, £73 10s. ton; nitrate, £60 ton; permanganate, 2s. 10½d. lb.; prussiate yellow, 1s. 6½d. lb.; sulphate (90 per cent.), £27 15s. tons. Sodium: Crystals, 150s. ton; bi-carbonate, £11 ton; bi-chromate, 9½d. lb.; alkali (58 per cent.), £10 15s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £26 10s. ton; hyposulphate, £26 10s. ton; prussiate, 11½d. lb.; nitrate, £21 15s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; sulphate of copper, £39 ton; sulphate of iron, 150s. ton; lemon oil, 4s. 6d. lb.; quinine, 3s. 8d. oz.; red lead, £44 12s. 6d. ton; white dry lead, £50 12s. 6d. ton; white ground lead, £60 10s. ton.

Miscellaneous.—Cotton (American), 11.17d. lb.; cotton (Egyptian, Sakellaridis), 22.00d. lb.; linseed (La Plata), £18 15s. ton; rape (Toria), £20 5s. ton; soya beans, £14 10s. ton; palm kernels, £24 10s. ton; oils, linseed, £38 ton; soya, £38 10s. ton; cotton (crude), £34 10s. ton; olive, 16s. gallon; ground nut, £45 10s. ton; palm, £45 10s. ton; rape (crude), £62 10s. ton; petroleum, 2s. 3d. gallon; turpentine, 100s. cwt. Rubber: Plantation (No. 1 crepe), 1s. 1½d. lb.; smoked sheet, 1s. 1d. lb.; fine hard Para, 1s. 0½d. lb.

LANCASHIRE COTTON.**Market Again Depressed.**

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Since a week ago the market has met with a decided set-back. The improved inquiry has passed away, and spinners and manufacturers are now reporting again a general absence of demand. The change in the situation is very largely due to the reaction in raw cotton rates, and as is usual in a falling market buyers are holding aloof. The turnover in Egyptian cotton has been much smaller than last week. Users anticipated plentiful supplies for some time to come, and a revival of business in yarns is very uncertain. Egyptian spinners continue to meet with an irregular inquiry. Isolated sales have occurred at cut prices, but there has not been any general flow of orders, and it has been decided to continue organised short time. Letters and telegrams from Egypt with regard to piece goods have not been very favourable, and although clearances are of fair extent merchants on the other side are not yet ready to commit themselves to contracts of weight with Lancashire manufacturers. Very little has been heard of demand for the outlets of the Levant. Inquiry for India shows a distinct falling off. Native merchants are adopting a very awkward attitude with regard to remittances, and the exchange problem cannot be solved. Prices have been asked for for China, but business has not matured. The South American outlets have been quiet. Manufacturers take a gloomy view of the prospects. American yarns have been purchased sparingly, and prices have favoured buyers. Only odd lots have changed hands in shipping counts.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in their report for the week ended January 20, state:—We have experienced a most disappointing week. The improvement which took place last week has not been maintained, and the future, apparently, is as uncertain as ever. A considerable quantity of cheap cotton was on offer, but the tendency of the whole cotton market here was distinctly downwards, and the Lancashire spinner, according to his invariable custom, stood aloof. The American markets which started the recent short-lived advance were also responsible for the set-back. Manchester, which for about ten days had been sending through most encouraging reports, at once got scared, and for the last day or two advices from that centre have been anything but cheerful. Most experts agree that had the markets here displayed anything like a reasonable show of strength, a considerable volume of business would have taken place. The week's enquiry may be described as fair, Sakellaridis being mostly in request. The best quality is getting scarce now, owing to the low stocks on hand, and a slight advance in price for the top grade has been registered. Other growths were comparatively neglected. Taken all round, quotations for Egyptian cotton would still appear to be too high, particularly for Sakellaridis and brown cottons. A fair amount of desultory bidding took place, but spinners, on the whole, were apathetic, and in the majority of cases their ideas were too low altogether, and business failed to result. C.I.F. business has been done on a small scale only. The visible supply in Great Britain is lower to-day than it has been since November last, and we can only wait—and hope. Quotations show an all-round decrease of 50 points, with the exception of extra fine Sakellaridis, which is advanced 50 points. Total sales, 1,200 bales. Fully good fair Sakellaridis 22.50d.

H.M. Legation at Belgrade reports to the Department of Overseas Trade that the Administrative Council of the Serb, Croat, Slovene National Bank has decided to call in all notes of 20 dinar value. This will take place during the course of the next three months. The 20 dinar notes have lately been counterfeited in very large quantities, and this fact may have influenced the National Bank in coming to their decision.

EGYPTIAN CROPS.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in December:—

Maize (Nili).—Harvesting was completed towards the middle of the month. The crop is a little below the average.

Wheat and Barley.—The weather has been favourable and the water supply ample. Late crops in Qalyūbiya and Beheira Provinces have not received quantities sufficient owing to winter closure. The area under wheat and barley has now increased and appears to be larger than last year. The bulk of the crop has been sown early and the germination is satisfactory; watering and manuring are in progress. Cut-worm has been noticed in Minūfiya and Asyūt Provinces, but the damage done is negligible.

Beans.—The weather has, on the whole, been favourable, and the water supply ample. Flowering in early sown fields is general. In the basin areas in Giza Province, sowing was a week later than last year. Slight attacks of broomrape (*Halook*) are reported from Daqahliya, Minūfiya, and Qena. The area under beans, too, seems to be larger this year. The crop is in good condition.

Lentils.—The crop is in good condition, and flowering has begun in early sown fields. In the basins sowing has now been completed.

Bersim.—The crop is in a satisfactory state of growth. The first cut has been taken, as well as the second one in early sown fields. Grazing is now general.

THE RUBBER MARKET IN 1920.

In their annual review of the rubber market in 1920, Messrs. S Figgis and Co. state:—The total new supply of all rubber we estimate was about 305,000 tons for 1920, and stocks of plantation rubber in the world to-day are large. We estimate in the East, America, and England, a total increase in the stocks of about 80,000 tons, but there is much less afloat than at this time last year. The rubber trade has gone through a worse crisis this year than ever before. The large amount of rubber which American manufacturers bought at the end of 1919 and the beginning of 1920 was made into manufactured goods in anticipation of a big European demand, which opinion was no doubt generally held; the result was that manufacturers were left with large quantities of manufactured goods, and had still to take in considerable quantities of raw rubber at high prices. It is evident that, but for this, prices would not have reached the high level of last winter, and that they were not justified; we recommended caution in our last annual review. The supply of rubber during the past two years has now shown itself greater than the demand. The sales made by estates over 1921 are much less than usual, and there is no doubt that after the high-priced contracts have been liquidated the position as regards new buying powers will have improved. We understand that on the Continent, though the use of motors is small, there is a considerable increase in bicycles, and Germany has bought a little. The agreement made in October by the Growers' Association to curtail output by 25 per cent. did not affect the market, and it was not until this year, when it was reported that the Malay Government would probably bring forward legislation restricting output and export by 50 per cent. reduction, that the market improved, and we close about 4½d. above the worst.

The tobacco monopoly has been abolished throughout Palestine. Mr. A. K. Wright, general manager of the Royal Bank of Scotland, has been elected a director of the P. and O. Banking Corporation, Ltd.

The traffic receipts of the Smyrna-Aidin Railway for the week ended January 15 amounted to £9,949.

The Bank has Agents in all the principal Cities of Europe, America, and the Far East, and has Correspondents throughout the World.

Every description of Banking business, in all its Financial and Commercial branches, undertaken.

Business Houses trading with Turkey can insure Foreign Exchange with the Bank. Banks, Commercial Houses and others having interests in Turkey are invited to apply for terms.

Manufacturers and Merchants may address their enquiries to the Head Office for Trade Lists of Importers and Exporters.

COMPANY MEETINGS.

GREAT INDIAN PENINSULA RAILWAY COMPANY.

Heavy Increase in Working Expenses.

The one hundred and forty-second half-yearly meeting of stockholders of the Great Indian Peninsula Railway Company was held on January 21 at the offices, 48, Copthall Avenue, E.C.

The Secretary (Mr. R. H. Walpole) read the notice convening the meeting and the auditors' report.

Sir Charles H. Armstrong (the chairman of the company) presided, and, in moving the adoption of the report for the six months ended September 30 last, said that an arrangement was made a few months ago with the Secretary of State that detailed reports on the working of the various departments of the railway should in future be made once only in the twelve months, and these fuller particulars for the whole financial year would be submitted at the half-yearly meeting at the end of June. With regard to the period under review, he said that gross receipts showed an increase of over 14 lacs of rupees compared with the corresponding period of 1919, but as expenditure was 75 lacs in excess of the corresponding six months, the result was a falling-off in net revenue of 60½ lacs, or 27.44 per cent. After deduction of interest charges there was a deficit on the half-year's working of Rs.2,77,000, against a surplus in the corresponding period of 1919 of Rs.52,20,000, a total decrease of nearly 55 lacs. The first six months of their financial year were not, as a rule, the best, but as working expenses had greatly increased, and had been added to since the current half-year commenced, the year's results must be affected thereby, although in all probability the gross receipts would show an advance on the previous twelve months. To date they were 21 lacs to the good, but as last year's monsoon was not favourable, crops in Western India were below the average, and as, owing to trade depression in this country and unfavourable exchanges on the Continent, the demand for Indian produce was not what it used to be, the receipts into Bombay of many important articles would decline, and the company's tonnage would be affected thereby. The percentage of working expenses for the half-year was 75.86, as against 66.01 in the corresponding period of 1919. This was a heavy percentage, and unless rates and fares were raised to meet the increased cost of working, there was little chance, he feared, of any decline, and the figure might even go higher.

Question of Finance.

They had now before them a large capital programme for coaching vehicles and goods wagons which, if carried through, would enable them to give a really efficient service, but they were short of funds, and until this was remedied they would continue to work under disadvantages, and the public in India would be the sufferers. The time had undoubtedly come, at any rate on the G.I.P., when rates and fares must be raised, for money could not now be borrowed on the old basis of 3½ per cent., and to cover a present rate of 6 or 6½ per cent. and greatly increased working expenses, a much larger revenue was necessary, even after taking into account the small increase they hoped to get year by year from a steadily expanding traffic. This urgent need for higher rates they had strongly represented to the Government of India, by whom such matters were controlled. The question of adequate funds was a most important one for the working and development of Indian railways, and as the success of Indian trade depended very largely on the successful working of the trunk lines, the question of finance was one that should be carefully studied, not only in this country, but in India. He was hoping that some new method of finance would be recommended by the Railway Committee now sitting in India, and he was also hoping that in some way it might be possible to attract rupee money into the railways of India, although in all probability it would cost more to do this than to raise money in England.

Mr. J. F. Finlay, C.S.I., seconded the motion, which was unanimously carried.

COMPANY NOTES AND REPORTS.

East Indian Railway.

The gross receipts of the East Indian Railway Company for the half-year ended September 30, 1920, were Rs. 7,28,90,587, increase Rs. 53,03,927; working expenses were Rs. 3,82,34,235, increase Rs. 92,94,680; and net earnings Rs. 3,46,56,352, decrease Rs. 39,90,753. The net earnings, including South Behar Railway, together with sum received for working the Delhi-Umballa-Kalka Railway, amount to Rs. 3,31,79,481. From this has to be deducted Rs. 1,75,47,090 in respect of charges, leaving divisible surplus of Rs. 1,56,32,391, the company's share of which, after deducting Rs. 80,132 for Indian income and super-taxes, is Rs. 3,51,692. This has produced £29,308, which, added to balance in surplus profits account (after paying and providing for excess profits duty to March 31, 1920), enables the Board to recommend a dividend, subject to English income-tax at 4s. 9d., of 15s. 3d. per cent. on deferred annuity capital and deferred annuity, class "D," in addition to guaranteed interest of £2 per cent., for the half-year, and 4s. 9d. per cent. in respect of the amount received from Secretary of State.

Bengal-Nagpur Railway.

Holders of debenture bonds to bearer of the Bengal-Nagpur Railway Company, Limited, amounting to £500,000, and falling due on February 2, are advised that the directors, with the sanction of the Secretary of State for India in Council, are prepared to renew such debentures at £98 10s. per £100 (30s. per cent. discount) for a further period of two years, with interest at the rate of 6½ per cent. per annum, provided the holders of the said debentures intimate their acceptance of this offer and send their bonds to the office of the company, 132, Gresham House, Old Broad Street, E.C., for endorsement before noon on February 1. A commission of 5s. per £100 will be allowed to brokers and other recognised agents.

Rohilkund and Kumaon Railway.

The net earnings of the Rohilkund and Kumaon Railway for the year ended September 30 last amount to Rs.25,89,722, against Rs.23,44,352. The actual rate of exchange during the period was much higher than 1s. 4d., the book rate, and adding the actual gain in remittance, £47,853, the net earnings are £125,973, against £84,966. After bringing forward £39,413, providing for income-taxes, etc., appropriating £9,500 to the investment depreciation fund, transferring £10,000 to reserve, and adjusting £8,758 on account of Secretary of State's share of surplus profits, the amount to be dealt with is £62,497. The directors propose a final dividend of £4 per cent., together with a bonus of 1 per cent. on the ordinary stock, subject to tax, and that the balance of £46,414 be carried forward. The dividend with bonus is at the rate of 10 per cent. for the year, the same as in the preceding year.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated January 17:—Famine has been declared in the Ahmednagar district of the Bombay Presidency, and scarcity in parts of the Central Provinces and the Nasik district of the Bombay Presidency. In the whole of the Central Provinces crops are considerably damaged owing to prolonged drought, where rain is urgently required. Rain also required in the Punjab, North-West Frontier Provinces, Bombay, and the unirrigated area of the United Provinces of Agra and Oudh and in parts of Central India and Madras. Otherwise crop prospects generally fair during week ending January 8.

Bombay cotton market steady. Fine M.G. Oomra March Rs.275. Piece-goods market absolutely stagnant. Calcutta jute market steady, with fair business early in the week. Hessians steady, with some demand. Freights on jute and gunnies still falling.

The following railways have been sanctioned: (1) Construction of metre gauge railway of 38 miles, from Dholka to Dhandhuka by the Bombay, Baroda, and Central India Railway Company. (2) Construction of a railway of 30 miles from Dhandhuka to Botad by Bhavnagar Darbar. (3) Reconnaissance Survey for connection of Munnar (tea district) with Cochin State Railway.

The Government of India are pushing on with preparations for air mail service, firstly, between Rangoon and Calcutta; secondly, between Calcutta and Bombay. Evidence given before the Indian Railway Committee shows that the Indian steel output was restricted during 1920 owing to the shortage of railway facilities. No change in bank rates—i.e., the rate is 7 per cent. in Bombay, Calcutta, and Madras.

Sir Frederick Rowlatt is relinquishing the Governorship of the National Bank of Egypt. His successor is Mr. B. Hornsby, sub-governor of the Bank of Alexandria.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

STAMBOUL, January 15.

The fall in prices and the general stagnation continue to exercise an unfavourable influence on the market. All the same, granted that imports, especially manufactures, have almost completely ceased owing to the absence of orders, some sales transacted for Roumania, as well as for some Anatolian towns of the Black Sea littoral, appear to have relieved somewhat the difficult position of merchants.

Manufactures.—The fall in prices and the lack of business are the dominant features of the market. The news received recently from manufacturing centres points to a cessation of the decline. Our market is holding its own while awaiting the end of the dead season and the resumption of communications with the interior.

Colonial Produce.—**Sugar.**—A certain improvement in prices has taken place on the Java, American, and Marseilles markets, while the Amsterdam and Antwerp markets are lower. The arrivals of the week amount to about thirty cases, which have been disposed of as soon as they were unshipped. Quotations are:—Java sugar, shipment from America, 14-14½ dollars; in this market, £58-£59 per ton; in cartons, £T45-£T46 per 100 kilos.

Coffee.—The market is featureless. There is no demand in Europe, as in this market. The 8,000 sacks which arrived recently remain unsold pending buying orders from Roumania, which is actually our principal outlet. Prices (per oke in transit), Rio No. 1, Ps. 43-44; Rio No. 2, Ps. 41-42; ordinary quality, Ps. 30. Coffee in cartons is quoted at about Ps. 50 per oke, according to quality.

MERSINA, January 4.

The opening of railway communications between Mersina and Adana has not given to commerce here the activity that was anticipated. As a matter of fact, the town of Adana—the principal market for all merchandise imported into Cilicia—in view of the fear that railway communications with Europe via Adana would be lacking throughout the winter, had her supplies completely replenished by Karatach, so that when the line was opened it was found that Adana had adequate supplies of everything. This position has somewhat seriously affected our market because of the impossibility of disposing of stocks without causing a marked fall in prices, and consequently a considerable loss.

A certain number of bales of cotton have arrived here by railway from Adana for export abroad, but, owing to the fall in the price of cotton in Europe and developments in Greece, shipments have been completely suspended. Cotton is now Ps. 140 per 100 kilos, and sesame Ps. 25 per oke.

ON 'CHANGE.

Tendency Irregular; Renewed Liquidation.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday night.

The recent recovery in markets has been shortlived. In view of the prevailing circumstances, it was really too much to expect a continuance of the upward movement. For firm markets we must wait until vastly different conditions obtain both at home and abroad. The past week has seen in most markets the development of an irregular tendency—Near Eastern descriptions providing one of the few exceptions.

The firmness which has characterised the gilt edged market for some time has given place during the past few days to considerable irregularity, and in a number of cases quotations have moved downward. Foreign Funds have been exceptionally rather firmer, but here, too, the position will be rather uncertain until the decisions of the Inter-Allied Conference in Paris are known.

Industrials have been markedly weak. There has been a further development of liquidation, and prices in general are considerably lower on balance. The chief depressing factor has been the general trade outlook, which rather tends to become worse at the moment.

In the Shipping section, an inactive tone has ruled, and there is nothing of any particular interest to report. The oil market has been dull, and marked declines are to be noted in the leading descriptions. Rubbers have resumed their downward march, and in a number of cases prices have reached a very low level.

Few changes are to be recorded in Near Eastern Government securities. Egyptian Guaranteed 3 per cent. are unchanged at 60, while Turkish Guaranteed 4 per cent. 1855 are the same at 67. Exceptionally Greek Guaranteed 2½ per cent. 1898 are ½ up at 57½.

Greek securities have, with one exception, shown no change. The 5 per cent. 1881 Loan and 5 per cent. 1884 issues remain the same at 41½. The 5 per cent. 1890 Loan has gained 1½ points at 41½, but Funding at 40 is unchanged. The 1910 Loan at 31 and the 1914 Loan at 39 are both unaltered. The 1902 Loan is the same at 35.

Banks have remained steady. Agricultural 3½ per cent. Bonds are the same at 53, and the 3½ per cent. Guaranteed Bonds at 55 are unchanged. Imperial Ottoman Banks at 7½ and National Bank of Egypt at 16½ are both unaltered. Land Banks at 4 13-16 have gained 3-16.

There have been very few changes in Land Shares. Beheras at 8½, and the Preference shares at 2½ are the same. Anglo-Egyptian Land Allotments remain unaltered at 3½, as also the Egyptian Consolidated Lands at 1s. 9d. Delta Lands at 9s. 6d. have shed 3d., while Gharbieh Lands at 1½ are unchanged. New Egyptians are the same at 23s. 6d., while Union Foncières are 1-32 up at 2 27-32, at which there were buyers. Sudan Plantations have increased 1 1-16 at 3 11-16.

Oils have been changeable. Anglo-Egyptians have risen 3-16 to 2½. Phoenix are 1s. 10½d. up at 11s. 6d. Roumanian Consolidated at 13s. 6d. have gained 3s. 6d., but Steaua Romana has lost 6d. at 17s. 6d.

Among Miscellaneous descriptions, Abyssinian Corporations are 3s. Alexandria Waters close at 7½d., at which there are buyers. Morums are quoted at 13s. 6d. and Egyptian Salt and Sodas at 30s. 6d.

TENDERS INVITED.

Tenders are invited for the following contracts. and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.O.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Photographic Material.—The Egyptian Ministry of the Interior invites tenders for the supply of photographic apparatus and materials (chemical, etc.) required for the year 1921-2. Tenders, which must be submitted by persons or firms residing or having a representative in Egypt, should be marked "Tender for the supply of Photographic Material," and addressed to The Director, Personnel and Equipment Department, Ministry of the Interior, Cairo, Egypt. January 31, 1921 (L.).

Metals.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of metals required for the first six months of the financial year 1921-1922. February 7.

Ropes, Canvas, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of ropes, canvas, bunting, etc., required for the first six months of the financial year 1921-1922. February 10.

Uniforms and Boots.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of uniforms and boots for the coming summer. February 17.

Paper.—The Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and stationery. February 24.

Wood.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of wood required during six months from April 1, 1921. March 15.

Paints, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of paints, oils, tar, soap, etc., required during the first six months of the financial year 1921-1922. March 17.

India.

Refuse Destructor.—The Municipality of Bombay invites tenders for the manufacture, erection, and equipment of a refuse destructor for 200 tons of refuse a day. (Spec. 5s. Sir John Wolfe Barry, Lyster, and Partners, 2, Queen Anne's Gate, S.W.1.) March 4.

Pumping Plant.—The Municipal Committee, Simla, invite tenders for supplying, erecting, and running for one month a new pumping plant, consisting of three units and steel rising mains, etc., with all fittings for the water supply. The pump lift (excluding friction) is 3,939 ft. The Municipal Committee is prepared to consider alternative tenders for other forms of plant to do the duty required by the specification. (Specification, etc., Municipal Office, Simla, Rs.10.) March 28.

SHIPPING INTELLIGENCE.

REMARKABLE BRITISH SHIPPING EXPANSION.

It appears that a considerable reduction in shipbuilding has taken place in the United States, whilst the rate of building in the United Kingdom has appreciably increased. For the quarter ending September last year, the figures for which are now available, British shipbuilding showed an increase of over 150,000 tons as compared with the returns for June, and an increase of nearly one million tons on the figures for the same period in 1919. The United States figures, on the other hand, show a decrease of no less than 58 per cent. between March, 1919, and September, 1920, the British figures for the same period showing an increase of no less than 66.5 per cent.

MARINE DIESELS.

The "Grand Prix," at the L'Orient (France) Marine Exhibition was gained by the Ansaldo San Giorgio Marine semi-Diesel engine, which is said to be a most suitable prime mover for small craft, especially the larger type of fishing boats. A number of types and designs of Diesels and semi-Diesels were shown at the exhibition, which was largely attended.

FORTHCOMING SAILINGS.

Anchor Line.—S.s. Scindia, for Bombay (also taking cargo for Karachi and coast ports) (Liverpool, February 7).

Anchor-Brocklebank Line.—S.s. Maihar, for Port Said, Colombo, Madras and Calcutta (leaves London, February 8); s.s. Malakand, for Calcutta (Birkenhead, February 9); s.s. Makalla, for Port Said, Colombo, Madras and Calcutta (leaves London, February 19); s.s. Manaar, for Calcutta (Liverpool, February 23).

Bibby Line.—S.s. Gloucestershire, for Rangoon (London, February 2); s.s. Herefordshire, for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 16).

Clan Line.—S.s. Clan Kenneth, for Bombay and Persian Gulf (Manchester, February 1); s.s. Clan Urquhart for Colombo, Madras and Calcutta (Birkenhead, February 10).

Cunard Line.—S.s. Antiope, for Gibraltar, Messina, etc. (Swansea, February 1).

Ellerman Line.—S.s. Polo, for Patras, Piræus, Syra, Volo, Salonika, Smyrna and Constantinople (Liverpool, February 5); s.s. City of Palermo for Gibraltar, Malta and Alexandria (Liverpool, February 12).

Ellerman City Line.—S.s. City of Glasgow, for Calcutta (Birkenhead, January 31); s.s. City of York, for Calcutta (Birkenhead, February 14).

Ellerman's Hall Line.—S.s. City of Birmingham, for Bombay, Karachi and the Punjab (Liverpool, January 29); s.s. City of London, for Bombay, Karachi and the Punjab (Liverpool, February 10).

Ellerman's Westcott and Laurance Line.—S.s. Mardinian, for Gibraltar, Malta and Alexandria (London, January 29).

Glen Line.—S.s. Pembrokehire, for Port Said, Singapore, etc. (London, February 3); s.s. Gleniffer, for Port Said, Singapore, etc. (London, February 17); s.s. Glengyle, for Port Said, Singapore, etc. (London, March 3).

Golden Star Line.—S.s. Mediterranean Star, for Genoa, Naples, Alexandria and Piræus (leaves Marseilles, February 8).

Harrison Line.—S.s. Musician, for Calcutta (Liverpool, February 3); s.s. Patrician, for Calcutta (Liverpool, Feb-

ruary 5); s.s. Defender, for Calcutta (Liverpool, February 19); s.s. Merchant, for Port Said, Port Sudan, Aden, Mombasa, Zanzibar, etc. (Glasgow, February 10; Birkenhead, February 17).

Henderson Line.—S.s. Arracan (freight only), for Port Said and Rangoon (Birkenhead, February 9).

Holt Line.—S.s. Atreus, for Port Said, Singapore, etc. (Birkenhead, February 3); s.s. Jason, for Port Said, Singapore, etc. (Birkenhead, February 3); s.s. Elsinor, for Port Said, Singapore, etc. (Swansea, February 3, and Birkenhead, February 10).

Johnston Line.—S.s. Aviemore, for Galatz and Braila (Liverpool, February 2); s.s. Venice, for Galatz and Braila (Liverpool, February 12); s.s. Pomaron, for Galatz and Braila (Liverpool, February 23); s.s. Incemore, for Piræus, Syra, Smyrna, Vola, Salonika, Constantinople, Bourgas, Varna, Sulina, Galatz and Braila (Liverpool, March 5).

Moss Line.—S.s. Amarna, for Gibraltar, Algiers, Malta and Alexandria (accepting cargo for Moroccan, Algerian, Cyprus and Syrian coast ports) (Liverpool, February 5); s.s. Limoges, for Gibraltar, Malta, Piræus, Syra, Smyrna, Salonika, Constantinople (Liverpool, February 19).

Papayanni Line.—S.s. Assyrian for Malta and Alexandria (also taking cargo for Beyrout, Alexandretta, Jaffa, Haifa, Mersina, Port Said and Cyprus, etc. (Liverpool, January 29).

P. and O. Line.—S.s. Dongola, for Bombay (Liverpool, January 28); s.s. Novara, for Colombo, Madras and Calcutta (London, February 5); s.s. China, for Bombay (London, February 11); s.s. Nellore, for Colombo, Madras and Calcutta (London, February 11); s.s. Kalvan, for Bombay (London, February 18); s.s. Soudan, for Bombay (London, February 18); s.s. Somali, for Colombo, Madras and Calcutta (London, February 25).

P. and O. British India Line.—S.s. Merkara, for Colombo, Madras and Calcutta (London, February 4); s.s. Tremere, for Bombay and Karachi (London, February 5); s.s. Lena, for Bombay and Karachi (London, February 19); s.s. Morvada, for Colombo, Madras and Calcutta (London, February 25).

Prince Line.—S.s. Glenshiel, for Malta and Alexandria, also taking cargo for Syrian coast and Cyprus ports (London, January 30); s.s. Syrian Prince, for Malta and Alexandria, also taking cargo for Syrian coast and Cyprus ports (Leith, February 10, and Liverpool, February 20); s.s. Soldier Prince, for Tunis, Malta and Alexandria, also taking cargo for Syrian coast and Cyprus ports (Manchester, February 15).

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, 'The Near East,' 1, Devonshire Square, London, E.C.2," when they will be redirected to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

103. An Athens firm invites publishers of periodicals dealing with yarns (reports on local markets and world output) and cottons to send specimen copies with a view to its becoming a permanent subscriber.

104. A Greek firm is establishing an electric light station in Macedonia, and wishes to get into touch with firms dealing in the necessary machinery.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

107. Old established Turkish firm handling general stores situated in Smyrna and having branches in the interior invites exporters to quote prices for groceries. The firm also acts as agents for articles of general consumption in Asia Minor.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get in touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

NOTES OF THE WEEK.

The Conference on Near Eastern Affairs.

The Allied Conference on Near Eastern affairs, which is to be attended by representatives of Greece and Turkey, will be opened in London on February 21. Greece is to be represented by M. Rallis, Prime Minister, and M. Kalogeropoulos, and in spite of the fulminations now emanating from Angora it is to be hoped that Mustapha Kemal Pasha will see in time the wisdom of having a Nationalist delegate present. Whatever may be the official outcome of the Conference, it will have brought the new Greek Government into touch with the British and French Governments, and must inevitably be a prelude to the formal recognition by the Powers of King Constantine. There is good reason for supposing that M. Venizeios is ready to urge this course on the Allied Governments.

Yugoslavia and Bulgaria.

A message from Belgrade reports that uneasiness prevails in Yugoslavia at the reported evasions of the military provisions of the Treaty of Neuilly by the Bulgarians. It is stated that, according to figures in the possession of the "Serbian" Government, Bulgaria has at the moment 46,000 men under arms, whereas the Treaty limits the army to 20,000. The Allied Military Missions in Sofia are being "hoodwinked," in the opinion of Belgrade. If any evasions of the Treaty of Neuilly can be established, it is the duty of the Yugoslav authorities to call attention to them; but we have too high an opinion of Serbian valour and *sang froid* to credit the statement that anything happening in a relatively diminutive Bulgaria causes alarm to the Serbian authorities or people. At the same time it is to be hoped that the Yugoslav Government will be careful to avoid any action that suggests the perpetuation of the old policy of suspicion and pinpricks in Serbo-Bulgarian relations. The recent stoppage of traffic between the two countries affected foreign interests no less than Bulgarian, and it has not yet been shown that a less high-handed method of procedure would have failed to secure the end in view.

Compulsory Labour in Bulgaria.

The Allied Governments have responded to Yugoslav misgivings in another direction by vetoing the law introduced by the present Bulgarian Government compelling practically all able-bodied citizens, male and

female, between certain years of age to give a certain number of days each year to manual labour of public utility. It was considered in Yugoslavia that the introduction of this scheme tended to keep in being the Bulgarian military system, inasmuch as Army officers would naturally be chosen to superintend the labour bands in the different districts. The Allied Governments called for reports from their military missions, and have taken the action indicated. As the law was necessarily unpopular in Bulgaria, its abrogation is not likely to cause much regret in the country. Whatever its relation to the military system might have proved in practice, it is difficult to believe that M. Stamboliisky's Government deliberately adopted compulsory labour with the object of going behind the Treaty of Neuilly. In the light of other legislation it is more likely that it is entitled to be regarded as a well-meant but unfortunate method of illustrating Bulgaria's resolve to concentrate all her attention on economic reconstruction.

A Russo-Persian Agreement.

Reports, which appear to be trustworthy, inform us that, through the Persian Ambassador in Constantinople, a Russo-Persian agreement has actually been signed. Unless we are misinformed, His Excellency the Minister referred to has never been friendly disposed towards this country; and we can, therefore, probably place our finger on the centre of one of those Persian circles which, according to a Paris message, express satisfaction at the step taken. For, according to this message, the new agreement "provides for the abandonment of the former Russian policy in Persia," and therefore the Anglo-Persian Agreement, "the pretext for which was Soviet Russia's designs against Persia," may be straightway abolished. In fact, Soviet Russia, having already renounced many items on the other side of her accounts with the world, now renounces "all privileges, concessions, guarantees on debts, and limitations on the sovereign rights of Persia obtained by Tsarist Russia." Of course, if the Persian Government chooses to accept all these assurances at their face value that is entirely its own concern. But it is unfortunate that it should have had to inaugurate the new era of brotherly love by a protest to the Soviet Government in connection with a little affair in the province of Ghilan, where "a band of rebels," under the protection of fire from Bolshevik armed ships, made a raid, and carried off a number of notables and quantities of other loot. February 2 was fixed as the date for the meeting of the Mejliss: it will be interesting to see what view that body takes of these latest developments. If it wishes to see all British troops withdrawn from

Persia it has only to refuse to ratify the Anglo-Persian Agreement.

The Egyptian Nationalists.

Nearly all the members of the Egyptian Nationalist Delegation are now back in their own country, only Zaghloul Pasha himself and two other members remaining in Paris. The *Morning Post's* Cairo correspondent reports that the leader telegraphed from Paris to the Cairo committee of the Delegation instructing it to boycott the returning members, and that on their arrival in Cairo they met with a mixed reception from the crowd, who wished to know whether they were still loyal to Zaghloul. From this it would appear that the noisy element, at least, still remains loyal to him; but that is not to say that in case the breach should widen it would be wise to pay very great deference to the popular Pasha. Moderate views are gaining ground, and have been doing so for some time; and when those who hold them can feel safe in giving expression to them and acting upon them, the shouters will recede into their proper position in regard to the negotiations. At present, members of the Delegation talk of their intention to bow to the nation's will; but other people find considerable difficulty in making out, amidst the clamour, what is the nation's will.

The Independence of Georgia.

It will be remembered that Georgia secured a recognition of *de facto* independence rather more than a year ago; and the Supreme Council has now accorded its recognition of her independence as a *de jure* State. We regard this as good news, and hope that it indicates that the Allies recognise the importance of Georgia as a possible bar to the spread of Bolshevism, and that they will act accordingly. For the moment her own bold actions and the failures of Lenin and Trotsky's agents in their propaganda work have saved her from the danger that threatened, but that danger was for the time a very real one. The Bolsheviks had prepared forces for the invasion of Georgia, and—it almost goes without saying—were working hard through their agents to stir up disaffection in the country itself. But the Georgian Government discovered what was going on, and took vigorous action against the plotters within their borders, and the Georgian working classes supported this course so heartily that the Bolsheviks had to abandon hope of help from the inside. At the same time their troops on the border became impatient, and finding that the promise of a great peasant rising was not likely to be fulfilled lost heart and went off to Baku to do some looting on their own account.

A Plea for Federation.

The Georgians are to be congratulated on the success that has attended their bold handling of a dangerous situation, and it is to be wished that certain other countries would deal in the same efficient way with traitors and agitators within their borders. But it would be foolish indeed to believe that the threat had been removed permanently, and when we compare the man-power of Georgia and her military resources with those of Soviet Russia it is impossible, despite the superiority in quality of her fighting men, to feel at all satisfied about the future. We publish to-day the first of two articles upon the situation in Transcaucasia from a correspondent in Tiflis. The writer holds that if the republics of Georgia, Armenia, and Azerbaijan are to find political salvation, to maintain (or to regain) their independence, they must unite for that purpose: that the Transcaucasian Federation must be revived in one form or another. His view is based upon experience acquired on the spot, and in the light of recent events; and it will probably be shared by the majority of our readers. Indeed, the advantages of such a federation are obvious, and though the difficulties in the way of bringing it about again are considerable they should not, and we believe would not, prove insuperable. If an understanding with Turkey could be reached at the same time, a great step towards giving peace to the Near and Middle East would have been taken. Under present conditions it would be unreasonable to expect the three

republics to achieve any result of the kind unaided; but perhaps Paris and London, with or without other assistance, could accomplish it, and thereby prove themselves still capable of constructive statesmanship.

The British Mission in Kabul.

The formal reception of the British Mission by the Ameer marks one more step forward in the lengthy process of readjusting our relations with Afghanistan, and the hope of a firm and lasting treaty expressed by Sir Henry Dobbs will assuredly be shared by public opinion in this country, which desires to see a strong and friendly Power established on India's vulnerable frontier. It would be a mistake, however, to look confidently for an immediate result. Afghans act promptly in the field, but their diplomacy proceeds more sedately, and we must expect prolonged discussions, and possibly delays, before a final settlement is achieved. Further, there is the menace to Afghanistan from the north, of which we have written so frequently. The details of the position in that quarter remain obscure, but there is no doubt of the intensity of Bolshevik aspirations, and we may be sure that their agents are busy in Kabul just now. Sir Henry Dobbs's task is, therefore, not an easy one, but he has a well-earned reputation for overcoming difficulties, and, while the outcome is still doubtful, we are confident that British interests are in good hands.

Indian Liberals.

Looking through the last Indian mail, one is struck by the onesidedness of the political news brought by the cables. We heard much of the deliberations, if they may be so called, of the extremists, who have captured the machinery of the National Congress, but we were told scarcely anything of the proceedings of the Liberal Federation, which claims to be the custodian of Congress traditions, and, judging by the record of its members, has a far better title to be heard. The difference between the two organisations is simply that the Congress aims at wrecking the new constitution, which the Federation intends to work, while pressing for its further liberalisation. The newer body is apparently still backward in the matter of organisation, and perhaps this is the reason why we heard so little of it, but it is gaining ground, and we notice among its supporters the names of some prominent politicians who not long ago were identified with the other side; it forms, further, a rallying-point for a very large volume of opinion which has hitherto been silent, but is beginning to find a voice, and we think it is destined to play a prominent part in the great drama which is now being staged in India.

The Past and the Future.

The most striking feature of the Federation's proceedings was undoubtedly the evidence afforded by the speeches of the continued soreness of moderate Indian opinion over the unfortunate events in the Punjab. We have no intention of reopening a discussion of those events, but the soreness of which we speak is a fact which must be taken into account in any just appreciation of the position in India, and we invite our readers to recognise it, and allow for its existence. There is undoubtedly truth in the resolution which records that the line taken by the Government "has largely prevented the people from realising the value of the constitutional reforms." To recognise that truth is not to condemn the Government for its action, and for ourselves we regard it as a call to look forward rather than backward. The realisation of the value of the reforms has in fact been impeded, but it is already proceeding, and the pace is bound to quicken when the new institutions are definitely in being; there is no better cure for wounded feelings than immersion in hard constructive work, and the fact that Indian Liberals are taking their share of the burden is in our judgment of good augury for the future.

The Call to Slavery.

Meanwhile the campaign of the Extremist-Reactionaries appears to be developing on the lines of an attempt to destroy that western civilisation which, with all its faults, has done so much to rescue the Indian

masses from slavery. The supply of coal is threatened; and without coal the free and decidedly independent factory hands would be driven back to practical serfdom in the overcrowded villages from which they have escaped. Bengal peasants are being urged not to grow jute; it is the extra profit of this crop which has rescued so many of them from economic servitude, and given them the hope of social emancipation, and if they abandon the crop the old fetters will speedily be reimposed. The reactionary ideal is thus coming more clearly into view—the old Indian ideal of a population too poor to give trouble, and easily driven by whoever holds the whip. It is not likely to be realised permanently, because during the last half-century the masses have, for the first time in history, been given a distant view of another and more hopeful future; but it may make headway for a time under the guidance of able and unscrupulous leaders, and the result depends mainly on the activities of those Indians who have rejected the old ideal for the new.

THE WEEK AT HOME.

LONDON, Monday evening.

Politics and Places.

It has been an amusing week for the industrious student of the daily papers. The political gossips and note-writers had already reconstructed the Government to their satisfaction, but the Cabinet, with unpardonable lack of proper feeling, delayed the fulfilment of the predictions. Thereupon the newspaper commentators, driven to make bricks without straw, discovered their ingenuity. They announced a serious unrest in the Coalition, with all the prospect of an early secession. The ship of State was to be shipwrecked by a mutinous crew. Rebel Unionists were to make Mr. Lloyd George walk the plank; sullen Liberals were to cheer his extinction. The end was already in sight; the match laid to the mine, which was to be sprung in the shape of a General Election—even the date was given us. The first week in May was to see the writs out.

Unfortunately the English people are constituted very much like the late Professor Huxley, who once remarked that he was ready to believe anything, only he liked to have the evidence first. And when one came to look for the evidence on which these predictions were based, one found that it consisted in the following facts: Mr. Bonar Law had been staying with Mr. Balfour in Scotland, and that curiously assorted pair were supposed to be plotting the construction of a secret gallows for their Liberal colleagues; Sir George Younger had made a speech at Cambridge, expressing the hope that the Budget this year would be smaller; Lord Hugh and Lord Robert Cecil announced that they might cross the House and sit on the Front Opposition Bench; and finally, Lord Derby had refused to take office, although it had been offered him.

From this miserable assortment of political eggs was the omelette made. It looked substantial enough until one cut it open, and then it incontinently vanished. The idea that the Unionist party is a "belle dame sans merci" who has Mr. Lloyd George in thrall is a little wide of the mark. The brothers Cecil are highly respected as men of principle, but their political course has been too erratic, and perhaps too fanatical, to give them much following. They will add to the intellect of the Front Opposition Bench, but also to its variety; their views are those of neither Mr. Asquith nor Mr. Thomas, nor have they, in fact, lent any real support to the Government for some time. If there is a Unionist "cave," as is suggested, it is a cave without a leader, for Mr. Bonar Law is notoriously not among the recalcitrants. Indeed, he is more like Mrs. Micawber than ever, for while Mr. Lloyd George is always waiting for something to turn up—as it generally does—Mr. Bonar Law swears that he will never, never desert his partner or their interesting twins, Coalition Unionist and Coalition Liberal.

A good deal, of course, depends on the Cardigan by-election, where the Independent Liberals, after a series of intrigues and denunciations in which the whole of Wales seems to have joined from the pulpit to the post-

man, are running their own candidate against Mr. Lloyd George's private secretary. But I doubt if the "Wee Frees" will make much headway in the country at large until they give over their insensate personal hatred of the Prime Minister. People at large certainly do not share it, but the Independents seem to have no other idea in their head.

As for Labour, it is a hopeless case. Its body looks healthy enough, but Mr. Sidney Webb has the permanent copyhold of its brain, and it seems to have sold its soul to Lord Haldane. If I were a Labour man, I think I should prefer to paddle my own canoe—not from any rooted objection to carrying distinguished passengers, but merely on the calculation that the united weight of Mr. Webb and Lord Haldane was enough to swamp any boat, and leave the other occupants dripping in mid-stream. Political Labour is evidently not too happy in its own mind just now, and the wicked Tories and cynical Liberals are chuckling over its bewilderment.

Railway Finance.

Our railways are unlucky. When Sir Eric Geddes raised passenger fares and freight rates last August we were told that we had only to pay just this little extra—about twopence on the shilling—to put their finances right. We paid, we grumbled, and we doubted. Several weeks later we were assured that the increase had been fully justified, that the public was willingly paying, and columns of statistics were published to show us how right Sir Eric and his railways were, and how utterly he had confounded his critics. Still we grumbled and doubted, and now, six months afterwards, it is admitted that there is a heavy deficit after all, which appears to be getting worse.

It appears that Sir Eric Geddes added up his figures correctly, but he forgot that railway traffic is not provided, like the air we breathe, by a bountiful Providence; it comes from the public and the trader. He could not foresee the coal strike (although many other people foresaw it), or the slump in business (although everybody else knew it was coming); nor did he realise that the public would travel less, as it notoriously has done since the increase, or that the higher freight rates would hamper trade. That is the worst of being a superman—one sees with the eye of faith many things that are invisible to the ordinary person, such as profits; but one misses the facts that lie immediately in front of one's nose, which quite commonplace and even stupid people are aware of.

Fortunately for Sir Eric Geddes, the telephones are now being treated in the same way as the railways, and we are told that if we only pay double for getting the right number—I forget if the charge is to be more or less than double for the usual wrong number—the telephones will really pay their way at last; and Mr. Illingworth, the Postmaster-General, is repeating the "patter" as though it were a novelty we had never heard before.

Women Jurors.

The path of the woman juror in the Civil Courts is not proving quite so easy as in the criminal courts. There were women on the jury in a murder case recently, and they had no difficulty in bringing in a verdict of guilty. It was a clear case, but apparently the objection once advanced—that women, being the producers of life, could take no part in its destruction—did not apply. But in the Divorce Court, where some of the evidence is often sordid and disgusting, counsel have been in a difficulty this last week. When revolting letters or indecent pictures are put in evidence for the jury to examine, and there are women on the jury, one does not wonder at counsel showing some reluctance to go into the full details of the case.

Mr. Bernard Shaw has ridiculed Sir E. Marshall Hall's "prudery" in this matter. It is safe to say that nobody who knows Sir Edward has ever suspected him of prudery; his objection was simply that of a decent-minded man to discuss nauseating matters before women, and I think he will be generally respected for it. The evidence in the Divorce Court is sometimes enough to make even a robust-minded man feel physically sick.

Things will shake down in time, and probably an unwritten understanding will be arrived at that in a certain class of cases only men should be on the jury. On the other hand, some lawyers say that there is one type of action in which a jury of none but women should be sworn—breach of promise cases. For some inexplicable reason, a male jury always believes the lady's story of the broken heart. It is suggested that a female jury would be more precise in its desire for evidence of the brokenness.

The Bankers on Business.

Mr. McKenna's annual review of the year at the meeting of his bank, and Mr. Goodenough's similar address to the shareholders of Barclays Bank, seem to have been a tonic medicine to the City, where attention appears to have been focussed so exclusively on liquida-

tions and prospective liquidations recently that men have almost forgotten that a good deal of business still goes on in spite of the atmosphere of gloom. Stock-brokers say they are not doing enough business to pay for a sixpenny lunch in a tea-shop, and the produce market laments the wild fluctuations of prices and the sudden parsimony of the public; and everybody in turn denounces the Chancellor of the Exchequer as the true source of all our woes. But the City comforts itself with the assurance that the Excess Profits Duty must really go this spring—and I understand that the lawyers smile expectantly at the same reflection, for they hope and believe that the abolition of the duty will involve a number of cases of disputed liability which will lead to litigation.

The Week's Books.

A new war book, "The Fifth Army in March, 1918" (John Lane), by Mr. W. Shaw Sparrow, is chiefly notable for an introduction by General Gough. He makes the sound point that he was not given enough men for the work he had to do. But Mr. Sparrow's tone is altogether too bitter and controversial, and I think he spoils his own case by the odium he introduces. The book would have been stronger had it made at least an attempt to be impartial.

A collected edition of the Poems and Miscellanies of the late F. W. H. Myers is a book I have long been looking for; it is now published in convenient form by Macmillans. In the same series, apparently, are issued simultaneously the Collected Poems of W. E. Henley. Following so close upon the Collected Poems of Hardy and Kipling, from the same house; reference to the best modern English verse is now easy.

It is not often that one finds a novel worth mentioning in this column, but Mr. Michael Sadleir's "Privilege" (Constable) is emphatically a book to read. He is a newcomer to me, but if this is his first novel I hope it will not be his last, for there are both life and style in his work. The subject of the book is a study of an aristocratic family in decay.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

GREECE.

ATHENS, January 15.

Opening of Parliament.

The opening of the Third National Assembly took place on January 5. The Chamber was full long before the commencement of the sitting, a large number of ladies being present. The only occupants of the box allotted to the Diplomatic Corps were the representatives of Holland and Spain, and some of the officers serving with the Foreign Missions to Greece. The deputies, including a number of Venizelists, began to arrive at the Chamber shortly after 9.30; many of the newly elected Turkish deputies of Macedonia and Thrace were present. At 10.15 the oldest member present, M. Vryonis, deputy for Cephalonia, announced the commencement of the sitting, whereupon the Metropolitan of Athens, assisted by the Holy Synod, held the usual service. The King and Queen arrived a few minutes later, and were very warmly cheered by the crowds waiting outside the House of Parliament. A similar reception awaited their Majesties inside the Chamber.

King Constantine's Speech.

King Constantine read his speech, in which he expressed his joy at being among the representatives of the people, and particularly those of the territories which, thanks to the heroism of the Hellenic army and navy and the support of the Allied Great Powers, had recently regained their liberty. "The mandate with which you have been entrusted by the people," added his Majesty, "makes easy the amendment of the Constitution on an absolutely popular basis and in conformity with the present ideas and requirements." Speaking of the military operations, the King said he was convinced that the representatives of the nation would afford all their support to the struggle in which the army is now engaged in Asia Minor. Hellenism, he added, is following this struggle with great enthusiasm, and this alone is a guarantee for its successful issue. With regard to the relations with the Great Powers, he said that the firm resolution of the entire nation to collaborate loyally with the Allies will surely gain for Greece the confidence of the latter, and lead to the re-establishment of good relations.

Referring to the alliance with Serbia, the King emphasised the fact that this is a solid guarantee for the preservation of peace in the Balkan Peninsula. He then announced the coming marriages of his son the Crown Prince George to Princess Elizabeth of Roumania, and of his daughter Princess Helena to Prince Carol of Roumania. These marriages will establish cordial relations between Greece and the glorious and powerful Kingdom of Roumania.

The King finally referred to the death of his son, Alexander, and at the end of his speech proclaimed the opening of the Third National Assembly of Athens.

The Political Situation.

The next session of the National Assembly will be held on, or soon after, January 11-24, when the election of the President of the Chamber will take place. This election will be of exceptional importance; and political circles are looking forward to it with interest, as it will be the means of ascertaining the exact strength of the various political parties. These exceed half a dozen, and their strength is approximately as follows:—M. Gounaris has about 72 followers; M. Rallis can count upon 10 deputies, all of whom are his personal friends; while M. Stratos, who is not on very friendly terms with the Government just now, owing to his not having been included in M. Rallis' Cabinet, estimates the number of his adherents at 62. The Minister of Finance, M. Kalogeropoulos, can boast of 12 faithful partisans; M. Dimitracopoulos is at the head of about 8 deputies; and another group, under M. Dragoumis and M. Bousios, comprises 15 deputies.

A very important group is that of the 40 Turkish

deputies. These, it is rumoured, will form an independent body, regulating its attitude in the Chamber in accordance with the various points and questions raised. The Venizelists, however, maintain that out of the 22 Turkish deputies elected in Thrace under the Liberal flag, 16 will remain faithful to that party. If that be true, the Venizelist party will comprise at least 110 adherents, and would thus be the strongest group in the Chamber. There is also some talk of the formation of still another group under the leadership of the ex-Governor of the National Bank, M. Zaimis, consisting of 10 deputies who were elected under the Opposition flag. M. Zaimis is not likely to forget M. Rallis' attitude on the question of the Governorship of the National Bank; and this group, if formed, will certainly not contribute towards increasing the Government's majority in the Chamber.

As stated above, M. Stratos' relations with the Government are rather strained at present, and it would surprise nobody if at the election for the President this party, instead of standing by M. Rallis and M. Gounaris, supported its own candidate for this post. As the Venizelists would, naturally, support their own man, it looks as if the Government candidate is not going to have it all his own way.

The Crown Prince of Roumania.

Prince Carol of Roumania arrived in Athens last week. He was received at the station by the King, the Queen, Princess Helena, the Council of Ministers, and numerous high State officials. The young Prince received a hearty ovation from the crowd which was waiting outside the station to see him. The Ministers called on Prince Carol in the afternoon, and the latter returned M. Rallis' visit shortly afterwards. The Government has conferred upon the Crown Prince of Roumania the Grand Cross of the Order of the Saviour.

Miscellaneous News.

The Government has cancelled the results of the polling on November 14 on the Asia Minor and Thracian fronts.

The Minister of War has ordered all officers, N.C.O.s and men now on special duty in Europe to return to Greece and rejoin their units.

The Minister of Public Instruction has decided to reinstate all the professors of Athens University who had been dismissed by the previous Government, and has, at the same time, relieved of their functions the majority of those appointed by the Venizelists.

YUGOSLAVIA.

ZAGREB (undated).

The Republicans.

A split appears to be imminent in the Republican Party, which was never strong, and if its splits, will become insignificant. There is discontent with the tactics of the leaders. The rank and file are particularly angry with their leader, Jasha Prodanovitch for his flirting with the Communists and with Raditch; for the party is patriotic; they also resent the presence in the party of Dragisha Vasitch, brother-in-law of Ribarats, the veteran and sole survivor of the once all-powerful Liberal party. Ribarats enjoyed notoriety

many years ago for his savage repression of disturbances in Serbia, when he was a pillar of the Obrenovitch dynasty and of autocratic rights. As his party is now extinct, he recently joined M. Protitch's Coalition, as Minister of Commerce but they soon tired of him, and he held the portfolio only a few weeks. His day is done, and nowadays nobody wants him. He is not a member of the Republican Club; but he attends their meetings, and they do not seem to like him. As a protest, it is stated that the party will lose its really sound men, such as Dr. Jovan Zhuyevitch, the geologist, who is President of the Academy of Sciences; Dr. Branislav Petronyevitch, a member of the Academy, and other prominent politicians.

Anti-British Propaganda.

The Zagreb papers continue to devote a large amount of space to British affairs, which they follow with interest and with sympathy in Croatia. But news from Ireland is always distorted and expressed in a most hostile manner, with frequent references to English barbarity, blood and iron, executions and reprisals. This is not the mere sympathy of an habitually crushed people for a small nationality apparently struggling for freedom against the repression and tyranny of an invader. It is certainly the fruit of deliberate propaganda. Most probably it is inspired from Berlin, whence, it appears, most of the news originates. It is highly desirable that some counter-measures were taken, and the Zagreb, and also the Belgrade, Press supplied with authentic information and articles illustrating the English point of view.

Priests and Marriage.

It may be remembered that in an earlier letter, from Belgrade, an account was given of two Orthodox priests who were widowers anxious to remarry, and, as they could not obtain the consent of the Church Council, acted on their own responsibility and married each other. Very numerous cases like this have occurred in Serbia, so there is now general consternation at the decision of the Church Council that all these marriages are invalid, that the wives must be put away, and the offending priests punished. Consequently, the priests have organised themselves, and petitioned that this decision be not put into execution until after a general meeting of priests. If their wishes are not granted, it seems probable that they will defy the authorities, and, in spite of excommunication, or the Orthodox equivalent of suspension, "strike," that is, continue to carry on their duties regardless of the thunders of the heads of the Church. As the Church in Serbia has always been essentially national and of the people, it is believed that the priests will have their own way in the long run.

Miscellaneous News.

The Voluntary Aid Society of Zagreb has issued its report for the year 1920. During this period, its members attended to 377 cases of sudden illness, 163 accidents, 41 suicides, and effected the transport to proper quarters of 26 maniacs and 1,407 invalids.

Statistics have been issued showing the number of visitors to Zagreb, which, in connection with the dearth of accommodation, are interesting. From May 1 to the end of the past year, there came to Zagreb 177,972 strangers, all of whom obtained lodgings through the Lodgings Committee. About 200 come every day, without seeking accommodation for the night, so altogether for the period in question about 300,000 strangers visited the town. As each means a net profit of 10 krana to the town, this is a revenue of about 3,000,000 krana. For the nine months in question, the committee took 647,299 krana in fees.

TURKEY.

CONSTANTINOPLE, January 22.

The Government Mission.

At last, to a certain extent, matters have become clearer with regard to the famous mission headed by Izzet Pasha that was to have put an end to the unfortunate "duality" that had arisen within the Turkish body politic. The courier who was so successful in establishing a *liaison* between the Sublime Porte of Constantinople and the no less Sublime Porte of Angora

returned on January 16 from Ineboli, whither he had been sent to inquire into the strange silence on the part of the mission—or so the world was told—and now the world knows that the mission will remain in Angora until—Allah knows when! Meanwhile, has there not been a glorious victory against the "desecrators of the sacred soil of the country," and have not the wicked "capitalist and Imperialist Powers of Europe" been put to confusion? Let us see what those Powers will now decide!

To read the Nationalist newspapers, one would think that the Hellenic army had been annihilated, and that the road to Smyrna was as clear as Watling Street. The old adage concerning the blindness of those whom the gods wish to destroy seems never to have reached Angora; for surely never was a vanquished nation given such an opportunity as has been vouchsafed to Turkey during the last two months. Yet on the strength of having put up a more or less lively resistance against a reconnaissance in force on the part of the Greek army, the Government Mission which had been allowed to proceed to Angora by the goodwill of the Allies is held practically prisoner, and its leaders are placed in such a position that they appear to be making common cause with the short-sighted adventurers who, with overweening egotism, defy Europe on the one hand and play with Red Russia on the other.

Izzet Pasha is authoritatively stated to have been present at Eski Shehir during the fighting at In Eunu, when the Hellenic army, for the first time during the Anatolian campaign, met with any real organised resistance worthy of the name; and, unless that veteran soldier has been false to his reputation, he can only have yielded to severe pressure, for he has staked his honour upon bringing about a reconciliation between Angora and Stamboul. There is good reason to believe that had it not been for the Greek advance against Eski Shehir he and the other members of the Government Mission would have been back in Constantinople ere now with a report more or less satisfactory; but the result of the recent military operations has had the effect of strengthening the hands of the extremists in Angora, and Izzet Pasha's efforts have been brought practically to naught. The Nationalist Press is claiming a glorious victory against the Greeks, and the Greeks are maintaining that everything was carried out according to plan. The truth of the matter is that the operations were a great error at this juncture, for a reconnaissance in force is always a mistake when prestige is an important consideration. However successfully the objects of the operations may have been fulfilled, it is practically impossible to prevent the enemy from claiming a victory, from the very circumstance that a reconnaissance involves a withdrawal from territory occupied. Thus the harm that has been done is incalculable, whether Constantine's manoeuvre makes any impression in Europe or not. The effect of the Greek operations may be judged from the fact that the Constantinople newspaper *Sabah*, which has been hitherto bitterly opposed to the Nationalists, eulogised the Nationalist forces as "heroes," whereas previously it was stigmatising the very same "heroes" as bandits and outlaws. What, therefore, can have been the effect in the perfervid atmosphere of Angora?

The negotiations between the Nationalists and the Government Mission are said to be proceeding, and the Mission promises to return as soon as a definite result shall have been obtained. In plain language this means that if the forthcoming conference of Allied Premiers decide to tear up the Treaty of Sèvres and agree to

concede the majority of the concessions demanded by the Nationalists, the latter will graciously consent to the formation of a Cabinet in Constantinople which will be empowered to dictate terms to the Allies.

The Caucasus.

One of the most interesting items of news that have recently come to hand concerns the recall of Schiemann, or Scheinmann, the Bolshevik representative in Tiflis, and the nomination of Stark to that position. It would appear that Comrade Schiemann or Scheinmann has not exactly been a shining success, and that the Bolshevik plans for painting Georgia red have consequently gone a-gley. The reports concerning the fall of the Jordania Ministry, which reached here last month, and which were unfortunately repeated in a previous letter, have happily been proved to be without foundation; but there is not the slightest doubt as to the direction in which the wind is blowing. It is credibly reported that the Bolshevik commander of the Red forces that were waiting the signal to march on the Georgian frontier was so incensed at the failure of his comrade in Tiflis to work up the according-to-plan revolt of the oppressed proletariat of Georgia for which the Red army was waiting that he sent the aforesaid comrade an official rebuke couched in most unofficial language. Moreover, the Communist organisation in Georgia itself appears to have been equally annoyed with dull Comrade Schiemann, and begged Trotzky by telegraph to take him away. Those who are in the know insist that Trotzky upon receipt of this message was so irritated at the failure of his schemes that he immediately decreed fourteen days' Terror against the *bourgeois* of the whole world, with the exception of H. G. Wells, Sylvia Pankhurst, and Winston Churchill! In any case, Schiemann was forthwith informed that the light of his countenance was required upon the Supreme Economic Council at Moscow, where the shadow of his nose would cast less gloom than in Tiflis. Georgia is to be congratulated heartily upon the energetic measures which were taken to smash the preparations that were being made within the frontiers to facilitate the task of the ravaging hordes that had gathered on her borders.

ALBANIA.

January 18.

Admission to the L.O.N.

The admission of Albania to the League of Nations (December 17) was celebrated throughout the country with the greatest enthusiasm: houses and streets were decked with flags, official congratulations were exchanged, and many telegrams were sent off to members of the League who had supported the Albanian cause. Tirana begins to breathe more freely, for it is recognised that this admission of Albania to the League will simplify matters greatly, and will considerably strengthen the country's international position.

Diplomatic Relations.

The arrival of Mr. Eyres, the Consul-General for Albania appointed by Great Britain, is impatiently awaited at Tirana, and it is earnestly hoped that diplomatic and commercial representatives of other Powers will soon be seen. The Albanian delegations in Paris, in Geneva, and in London are doing their best to bring about the realisation of these desires, as is the Albanian representative at Washington.

The Earthquake.

The country finds itself confronted by two fresh troubles: the influx of 40,000 refugees who have fled from the regions devastated by the Serbians—the east and north-east portions of Albania—and earthquake shocks. The latter disaster has brought about terrible suffering owing to the shortage of medical supplies for the sufferers; though the Government and the people alike have made, and are making, enormous sacrifices on behalf of the victims. Help is expected from various Red Cross societies and philanthropic bodies.

The Elections.

The electoral campaign is now in progress for the new Chamber which is to be convened next month. The new

law provides for one deputy for every 12,000 inhabitants (men and women), which means eighty deputies for the whole of Albania. All Albanians twenty years old or over and in the enjoyment of civic rights are entitled to the vote; that is to say that the suffrage is universal. These electors vote for delegates, one delegate being elected by every 500 electors, and delegates must be at least twenty-five years old. In their turn the delegates vote for the deputies, who must be at least thirty years old. Thus the elections are on the lines of universal suffrage and two classes. Soldiers, gendarmes, and officers are not allowed to vote or to stand for election so long as they follow their profession.

It is believed and generally hoped that the Parliament to be elected will fulfil the functions of a constituent assembly and will elaborate a constitution for the country. It is also highly probable that in any case the powers of the Supreme Council will be reduced, and that this kind of Directory will become equivalent to the president of a republic.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

GREAT BRITAIN AND AFGHANISTAN.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—As soon as I arrived in the region from which I write this, I perceived that the Bolshevik propaganda is waging an anti-British campaign in Afghanistan. They have gained a footing by Consular agents and by political missions at Kabul, also a prestige by actual occupation of certain parts, as, for instance, the Kushki, near Herat. This re-occupation of the former Tsarist outpost is bewildering to me for the reason that some Afghan detachments are to this day in Merv. That the Bolsheviks are permitted to hold a point in rear of the Afghan gives rise to grave political doubts. I, for one, do not believe that the Bolsheviks are playing fair to the Afghans; and what is more, it is to the interests of my countrymen to discern quickly their friends and foes. Matters of high policy are moving very rapidly here.

The British political mission to Kabul left Peshawar this afternoon, and every patriotic Afghan expects that peace and goodwill will be the result of the Kabul Conference. The presence of this Mission in Kabul will add to the many nationalities and groups already there, namely, Bolsheviks, Kemalists, Uzbeks, Turkomans and Persians. If the Sirdar-i-ally, Mohammed Beg Tarzai, handles the situation in the same admirable way as he did during the Mussoorie Conference, there is every reason to believe that a lasting friendship may be brought about between Great Britain and Afghanistan. I may just hint here that at one time or another, whilst in Great Britain, I spoke and wrote about the Afghan aspirations and claims. In this connection, I may draw your attention to my articles in the *Edinburgh Review*, also those printed in your columns, and to the lectures which I delivered before the Central Asian Society. A student of Mid-Eastern politics will find therein an answer to his question as to the expectations of the Afghans. I have knowledge of the fact that those claims have been urged at Mussoorie, and will be dealt with again at Kabul. They are just claims, and as I said before, I will say now, that they should be granted. Nor would the British Government lose anything by granting them. Indeed, it is most essential that the Afghans should be the friends of the British, and that may be taken to be a correct impression which I have formed on the spot.—I am, etc.,

MUSICAL NOTES.

Two Singers.

I have before referred to the halo of musical glory with which Manchester surrounds itself—a halo of which artists from that city are, when they come to the more critical atmosphere of London, frequently relieved. And last week once more we suffered disillusionment. At her recital at the Wigmore Hall on January 24 Miss Helen Anderton showed certain emotional gifts, but little else. One does not know how far she was disturbed by the impetuous accompaniment of Miss Dorothy Crewe (who, I should imagine, is a skilful soloist), but she had faults that were peculiar to herself. What, for instance, can *lieder* by Brahms and Schubert be without smooth enunciation; and of what use is it to choose such excellent poets as Housman, de la Mare, and Shanks if their verse be equally treated with muffled reserve? Frankly, Miss Anderton was a disappointment. With so excellent a choice of programme (we were particularly grateful to hear "I tempi assai lontano," by Respighi, and "San Basilio," by Pizzetti) much might have been done.

The programme of Miss Gladys Moger at her recital at the Æolian Hall on January 26 was of rare interest. On the beauty of Gustav Holst's new "Four Songs for Voice and Violin" I commented a week or so ago, but she sang also important new songs by Herbert Howells, Arthur Bliss, Lord Berners, and E. J. Dent, and most of her other songs were quite recent. Miss Moger is diversely gifted, albeit with a developed sense of interpretation that far exceeds in beauty the natural quality of her voice. She failed, for instance, in such "vocal" songs as Malcolm Davidson's "Christmas Carol" (which none who heard it sung by Gervase Elwes, who is now dead, will ever forget), or Denis Browne's "To Gratiana Dancing and Singing," or Gerrard Williams' "Inconsequent Ballad"; but, on the other hand, her exquisite *piano* tone and cleverness were adequate recompense in Howells' "Gavotte," a lovely song in the firm fragility of which the accompanist fully shares; in Berners' "Theodore or the Pirate King," and in Longo's "Febbraio." Miss Moger's quite unusual intelligence and general perspicacity always make her worth hearing.

Pianists.

Assisting at Miss Anderton's recital at the Wigmore Hall we found Mr. Edward Isaacs, a pianist whose fame in his own town of Manchester is considerable. His technique is neat and occasionally brilliant, and his tone never offends. Where the rhythm is clear-cut and there is a sense of exhilaration in the music he is quite enjoyable; of a trivial "Toccata" of Sgambati, for example, he made as much as possible; in the "Seguidillas" of Albeniz there was real glow; and though technically he was not equal to Liszt's "Tarantelle" (Napoli), he made a brave show of it. But in more serious stuff the count was against him: Bach's "Chromatic Fantasia and Fugue" was informed, and consequently spoiled by the inevitable romanticism of his race; and Chopin's "Barcarolle" was thinly done.

Of Miss Kathleen Cooper, whose recital was at the Wigmore Hall on January 26, I do not care to say much, as I heard her only in Bach-D'Albert's Prelude and Fugue in D major and Schumann's "Etudes Symphoniques." There were intelligence and sincerity in her Bach, and it was a pity that a waste of physical effort decreased the effect of some of the climaxes: certainly there was promise in her playing. This was partly dispelled in her Schumann, which often lacked warmth, and in which the phrasing was far from spontaneous. Probably so large a work was beyond her present powers: at any rate, her indulgence in wrong notes exceeded the number usually granted to young artists.

A Fine Fiddler.

Mme. Adila Fachiri (Mlle. Adila d'Aranyi) has definite genius. It did not matter to which period the music belonged which she played at her recital at the Wigmore Hall on January 25: for in it all there was the evidence of sincere, highly individual, and yet disciplined thought. There are few lady violinists who can satisfy equally (or adequately) in such composers as Bach, Veracini, and Brahms. Adila Fachiri reached her highest point in two (Nos. 3 and 10) of the Brahms-Joachim Hungarian Dances, her wild and speaking fervour here being irresistible. Already she had done notable work in an Aria and Capriccio (in the latter especially) from a recently published sonata of Veracini, and she made two Romances of Beethoven much more interesting than is usual. It is not often that a new work is the most popular in a programme, but it was so with the "Capitan Fracasse" of Castelnuovo-Tedesco, the young Italian composer, whose work is deservedly becoming well-known in this country.

ANDANTE.

THE LATE VOIVODE MISHITCH.

Voivode Mishitch, Serbia's greatest General, died at the age of sixty-five on January 20, in Belgrade, after a long illness.

He was the son of humble parents, of Strouganik, in the Valjevo district. He was only eighteen when he served in his first war—the Serbo-Turkish—in 1877, and he served again in 1885 in the Serbo-Bulgarian War. In the Balkan War of 1913 he took a leading part in the operations on the Bregalnitz. Thereafter he devoted himself to military studies, and in 1914, on the outbreak of the Austro-Serbian War, he was Assistant Chief of Staff to General Putnik, the Serbian Commander-in-Chief. At the end of that year he was given command of the First Army, which had suffered severely at the hands of the Austrian invaders. He reorganised his command, and inspired it with fresh spirit, and then led it against the invaders, and his counter-attack was crowned by success. The Austrians were driven from Serbia with heavy losses, leaving some 40,000 prisoners behind them, and General Mishitch was promoted Marshal.

In the disastrous Serbian retreat of 1915, when our Allies had to give way before the joint German, Austrian, and Bulgarian advance, Marshal Mishitch distinguished himself by the skill with which he extracted his force from a difficult position, and when the Serbians took the offensive again he resumed command of his old army on the Salonika front. In 1918 he was made Chief of Staff, and he is usually credited with having been largely responsible for the plan which led to the victory over the Bulgarians and to the Allies' success on that front.

Marshal Mishitch was intensely popular with his men by reason of his courage and simple tastes, and though he was a man of great will power and one to be obeyed, his manner was kind, and he was always ready to help his men in any possible way.

Amongst the many decorations he received from foreign Governments were the G.C.M.G. and the K.C.B., the Order of St. Michael and St. George being conferred upon him by General Milne at Salonika. A final mark of respect to his memory was paid when the Prince Regent Alexander walked in the Marshal's funeral procession on January 22.

DR. DENNING'S ACTION.

We commented recently on a judgment delivered by Mr. Justice Bailhache in an action against the Secretary of State for India, in which the terms of a contract for service were described as "most unfortunate and misleading." We are now informed by the India Office that the form of contract in question was altered some years ago, so that similar questions are not likely to recur, and it is pleasant to be able to add that a payment has been made to the plaintiff on account of the costs incurred by him in his unsuccessful action.

All deserters and those who did not join the Greek Army during the Venizelist régime, and to whom an amnesty was granted by the present Government, have been called to the Colours. They are presenting themselves *en masse* to the estimated number of 30,000.

The Rome correspondent of the *Morning Post* states that King Nicholas of Montenegro has arrived in that city incognito from Antibes, doubtless with the object of conferring upon the present position of the Montenegrin question which was lately discussed between him and his Ministers there.

NEAR EAST BOOKSHELF.

I.—"A DWELLER IN MESOPOTAMIA." By Donald Maxwell. (London: The Bodley Head. 25s. net.)

II.—"THE BLACK BLANKET." By Maxwell Laurie. (London: Werner Laurie. 8s. 6d. net.)

I.—PICTURES OF MESOPOTAMIA.

Mr. Donald Maxwell is one of those gifted, and, may we add, comparatively rare, mortals who can express themselves equally well in two mediums. Whether he is engaged with colour or with words, the effect is equally happy, and the combination as it appears in the book before us is warranted to make the mere artist or the mere author feel—well, in the words of "The Young Visitors," very mere.

Mr. Maxwell, as official artist to the Mesopotamian Expeditionary Force during the latter period of the campaign, had excellent opportunities of visiting and sketching every scene of interest from Fao to Baghdad. The oil refineries at Abadan, Old Busreh, the Marshes, Kut, Baghdad, and much else by the way, all are described in these pleasantly-written chapters, and illustrated by many charming sketches.

It is a book which will appeal to many. To those who have had some personal experience of Mesopotamia during the war such descriptions as the one (on page 26) of Ashar Creek at sunset; or of that dear old friend the "Sushan," with her persevering stern-wheel, "the whole effect being faintly reminiscent of a haymaking machine," will strike home and bring back memories of old days not altogether unhappy. Those who have not visited the Land of the Two Rivers, but in their arm-chairs at home have allowed their imaginations the full rope of mystery and romance will find the author determined to woo them from such idle dreams. Gently but quite firmly he bids them return to earth, or rather, as he frequently insists, to mud. He is anxious to prove to us that the glory is departed and that as a matter of hard fact there is a good deal of nonsense about this romance business! But I doubt whether he will succeed in this. Turn to the monochrome facing page 64, "Babylon the Great is fallen, is fallen," and resist, if you can, the extraordinarily dramatic force and the romance of both picture and title. Or, again, look at the line-drawing of "Baghdad" on page 93. Can Mr. Maxwell, with his hand on his heart, declare that he has resisted the mystery of this country? Though he writes that he has "always said that the hanging gardens of Borsal knocked spots off the hanging gardens of Babylon," we find it hard to believe that one who thinks so could yet quote those verses with which his fifth chapter closes.

Although the reader is conducted on a tour of Mesopotamia from the sea to Baghdad, the pages are singularly free from the guide-book flavour; nor is this in any sense a war book. It is as though we wandered at will with a particularly light-hearted companion, not too bent on our instruction, but fully qualified to show us all that is beautiful. It is difficult, indeed, to choose any one of these pictures as being the best or the most typical of the country; nearly all are wonderfully successful in their particular way, and all, without exception, have the great merit of restraint. "The House of Sinbad," "Ezra's Tomb"—a particularly graceful water-colour—and "The Narrows" are excellent; while in "Babylon: the excavations of El Kasr" (page 56) we have an example of that mysterious influence from which the artist, when he turns writer, would have us believe him immune.

It is almost ungracious to find fault with a book we have enjoyed so much, but may we hint that the author's excursions into history are not always successful from the point of view of accuracy; and that of the two different versions of Haroun er Rashid's name neither is correct?

Finally, Mr. Maxwell is at his best when he feels serious; it is, we think, rather a mistake to be quite so funny all the time.

II.—AMERICA'S PROBLEM.

Mr. Laurie writes to show how the cloud of coloured descent hovered over the life of David Sheldon. At first it looms very dark indeed—threatens, in fact, to shroud that life in impenetrable fog—then for a time it is kept far off by the determined faith of those who love him; then it again comes up, gloomy and threatening, to be, in the end, dispersed for ever. David's father is a Southern Planter in the days before the abolition of slavery, and when he inherits his estate he leaves his wife and baby in exile in the West Indian port of Regina, because he dares not take them back to the State of Maine, where his beautiful Helen will be well known as the daughter of a black slave woman and his marriage will not be recognised. He means to send them to England, so that later David may come to

America as his heir, his coloured blood unsuspected. But Sheldon is extravagant and careless, and it is not until his death that the money is found to rescue Helen and her boy from Regina. It is to this sea-port, while David is still a little boy, that Mr. Laurie takes us first, and at once we recognise with pleasure the power of creating an atmosphere, of suggesting circumstances, and building up a situation with subtle but sure touches. The street, which has gone down and become more and more entirely "coloured," in which David's mother continues to live because her placid nature has gradually developed into a passive laziness which she cannot shake off, is made very real to us. So are the plucky, fair little boy, Honorius, his mulatto friend, and Major Langton, the strong man, with the one fault which has made him an outcast, but who saves Dave just in time from the evil influences of the Dock gangs.

But when Dave, from the homeward-bound steamer, waves good-bye to Regina and Honorius, Mr. Laurie seems also to abandon the leisurely method by which he has been unfolding, and so clearly revealing, his hero's personality. When David appears again as the young owner of the Plantation of Hirondelles and as the friend of the Versanges family, who own the neighbouring estate, the author seems to have lost the knack of weaving a strong fabric out of delicate threads of feeling and circumstance, and the story becomes distinctly downright—even a little bald. To be sure, there are several chapters, before the plot gets into full swing, in which Mr. Laurie discourses on the problem of the negro by showing us how Monsieur Versanges manages his slaves, and this is quite interesting, but we never get inside the heart and mind of grown-up David, nor of any of the freshly-introduced characters. The style of writing even changes a little, and the quickly illuminating similes, at once direct and fanciful, which had delighted us earlier in the book, are rarer, although there are still some very clear pictures, as that of the moonlight when David and Madeline Versanges walk together in a wood. "The whole world was shut out by walls of black-green foliage. The moonlight struck downwards in bright, piercing shafts; to look up between the tree-tops was to gaze from the bottom of a deep well upwards into a swimming radiance of glory."

When the terrible moment of trial, to which the whole story has been leading up, comes to David, we do not realise his anguish as vividly as we realise the feelings of the little boy in Regina, and the last few pages, which put everything right, give rather the impression of a hurried winding-up of the whole affair. As it is the first part of the story with the people concerned in it—Honorius, the friend, and Langton, the rescuer—that has caught our imagination, it is difficult not to resent the circumstances in which they are both re-introduced into the book, and which seems to be quite unnecessarily tragic. We feel that Mr. Laurie begins by making a study of the hardships and disadvantages which attend coloured descent, as seen through the personality of David, and ends by seeing David only as one amongst a collection of figures who are arranged to illustrate the difficulty of the problem. But for all this, the book is very well worth reading, both for the thought which Mr. Laurie has given to the question of the negro in America and for the charm and interest of the story he has to tell.

EGYPT EXPLORATION SOCIETY.

On Thursday evening, January 20, Mr. H. R. Hall, Hon. Secretary of the Egypt Exploration Society, delivered a lecture before the members of the Society and their friends on "Egypt and the External World in the time of Akhenaten," the heretical and pacifist Pharaoh who reigned about 1380-1360 B.C., and who built the city of Akhenaten, the modern Tell el-Amarna, now being excavated by the Society under the direction of Professor T. E. Peet. The chair was taken by Colonel H. G. Lyons.

Dr. Hall showed slides illustrating the civilisations of Palestine, Syria, Anatolia, Cilicia, Cyprus, and Greece in the time of Akhenaten, and described the relations of Egypt with these countries in his reign. The lecturer expressed the great interest of the detailed history of the time which we know from the contemporary tablets discovered at Amarna, and also at Boghaz Keui, in Anatolia. He considered that though the mutual influence of Mycenaean Greece and Egypt on each other in artistic matters in the fourteenth century B.C. was undoubtedly great, it was possible to over-estimate the effect of the free and untrammelled Mycenaean art on that of Egypt, and that the artistic movement in Egypt under Akhenaten's influence did not, perhaps, owe so much to Greece as had been thought, the fantastic side of Mycenaean art, its most remarkable characteristic, having no counterpart in contemporary Egypt. Dr. Hall noted that the possible effect of Akhenaten's monotheism in religious matters, at the very time when apparently the Hebrews were entering Palestine, on the reception of Hebrew monotheism, has yet to be worked out.

PERSONAL AND GENERAL.

TO-DAY.

February 3 (New Style).
January 21 (Old Style).
Jumada 1, 24,1339 A.H. of the Moslem Calendar.
Shebat 25, 5681 of the Jewish Calendar.

M. Venizelos arrived in Paris last week.

Earl and Countess Curzon of Kedleston left Paris last week for the South of France.

Sir Henry and Lady Bax-Ironside have left Alice Holt, Farnham, for the Continent.

M. Juvara, the Roumanian Minister in Athens, has presented his credentials to King Constantine.

His Highness Nasser-ul-Mulk, ex-Regent of Persia, has arrived in London from Paris on a short visit.

His Excellency Hovannes Khan, ex-Persian Minister in Berlin, arrived in London last week from Paris.

Mr. William Max Müller, the newly appointed British Minister to Poland, arrived in Warsaw last week.

M. Clemenceau, the former French Prime Minister, who is making a tour in the East, has arrived at Bombay.

Sir Basil Zaharoff has completely recovered from the effects of his recent motoring accident on the Riviera.

Lady Macready left for Egypt last week, and will be absent from the Royal Hospital, Dublin, until the end of April.

Sir Arthur Yapp, National Secretary of the English Y.M.C.A., is expected in London from India about the end of this week.

The Mercantile Bank of India has sent to Canon Alexander a donation of 250 guineas towards the St. Paul's Cathedral Preservation Fund.

Lord Reading has asked Mr. S. R. Hignell, C.I.E., who has been acting as Private Secretary to the Viceroy, to continue to hold that appointment.

M. Beza, Secretary to the Roumanian Legation, left London on January 30 for Bucharest, where he will give a course of lectures on English literature.

The Bulgarian Minister has taken up his residence at 51, Queen's Gate, where he has recently been joined by Mme. Stancioff and the members of his family.

At the invitation of the Lord Mayor (President) and the Earl of Derby (Chairman), Lord Inchcape has consented to join the London Executive of the League of Help.

Colonel J. W. Boyle, head of the Canadian Mission in Roumania, who was with General Wrangel when the latter evacuated Russia, is making a short stay in London.

President Wilson, through the American Minister in Athens, and M. Rallis, the Greek Prime Minister, has acknowledged King Constantine's message of greeting sent at the New Year.

Among the passengers by the Peninsular and Oriental Company's s.s. Caledonia for Bombay are Sir Wallis Budge, Lady Cameron, Lord and Lady Forteviot, Lady Macdonald, and the Earl of Wilton.

Prince and Princess Nicholas of Greece are leaving Athens for Bucharest, in order to attend the wedding of the Diadoch (Duke of Sparta) and Princess Elizabeth of Roumania, which is fixed for the second week of this month.

Field-Marshal Lord Allenby left last week, stated a Cairo message, for a short tour of the Sudan. He will call at Khartoum and Sennar, and will probably inspect the site of the dam at Gebel Aulia, returning to Cairo about February 8.

At a meeting of the Royal Asiatic Society to be held on February 8, at 4.30 p.m., Miss R. Houston will read a paper, entitled "Turkestan under Bolshevik Rule." Lord Roay will preside, and the paper will be illustrated by lantern slides.

General Sir Robert Baden-Powell and Lady Baden-Powell have arrived at Bombay on the steamship Narkunda on their visit to India. On landing the Chief Scout was received by Government officials. He then inspected a parade of Boy Scouts and Girl Guides. The General and Lady Baden-Powell afterwards proceeded to Government House, where they will be the guests of Sir George and Lady Lloyd.

At a meeting of the Central Committee of the United Conservative Association, held last week at Hastings, Lord Eustace Percy was adopted as prospective Coalition Unionist candidate for the borough at the bye-election which is expected to take place in July.

Mr. Churchill will preside at the English-speaking Union's farewell dinner to the Earl of Reading, Viceroy-designate of India, which will be held on Lincoln's birthday, February 12, at the Hyde Park Hotel.

Lord Reading proposes to embark at Marseilles in the P. and O. liner Kaiser-i-Hind on March 19. He will land in Bombay on the morning of April 2, and will there take over the office of Viceroy and Governor-General of India from Lord Chelmsford, who will leave Bombay by the P. and O. liner Kalyan on the same evening.

The King has given to Major Pearce Blair leave to wear the Cross of Officer of the Royal Order of George I., conferred by the late King of the Hellenes, and to Squadron-Leader F. W. Stent, M.C., Captain F. H. Furness-Williams, and Lieutenant K. J. Oldfield, D.F.C., permission to wear the decoration of the Order of the Nahda, Fourth Class, bestowed by the King of the Hejaz.

The marriage arranged between Frederic C. Nano, Secretary to the Roumanian Legation in London, and Miss Rose de Covarrubias, youngest daughter of Don Miguel de Covarrubias, formerly Mexican Minister in London, and now residing at 22, Down Street, took place at the Church of Our Lady of the Assumption, Warwick Street, yesterday morning.

Colonel Ioan Paum, of the Roumanian Army, arrived in London last week on a Mission from the Roumanian Government in order to present to the British Army the Regimental Colours of one of the Roumanian infantry regiments which distinguished itself at the battle of Marasesti. The War Office, with the concurrence of the Roumanian authorities in London, has decided that the most fitting resting-place for these colours would be the Royal Hospital, Chelsea.

The battleship Iron Duke, Lord Jellicoe's flagship in the Grand Fleet in 1914-16, including the battle of Jutland, and since April, 1919, the flagship of the Commander-in-Chief in the Mediterranean, is ordered to return to Portsmouth to pay off and recommission for further service. She will leave Malta on February 21. After recommissioning she will leave Portsmouth on or about March 21 to She will leave Malta on February 21. After recommissioning by Captain R. A. S. Hill, who was appointed in July, 1919, the same month as Admiral Sir John M. de Robeck became Commander-in-Chief, and who is expected to remain in command when the ship recommissions. Her present crew joined her at Portsmouth on March 21, 1919, but the majority of the officers have been changed since that date. The midshipmen of the Iron Duke, when she arrives at Portsmouth, will include Prince George.

APPOINTMENTS, ETC.

M. Clement-Siniout has been appointed French Minister at Belgrade.

Vice-Admiral Salaün has been appointed Commander-in-Chief of the French Mediterranean Squadron.

The India Office announces the appointment of Sir George Seymour Curtis, Sir Ibrahim Rahimtulla, Mr. Maurice Henry Weston Hayward, barrister-at-law, and Sir Chimantal Harilal Setalvad, as members of the Bombay Executive Council.

The King has been pleased to appoint Mr. C. E. S. Palmer to be H.M. Consul at Damascus; Mr. R. E. W. Chafy to be H.M. Consul for Continental Greece, with the exception of the Province of Thessaly, The Morea, and the Island of Negropont, to reside at The Piræus; Mr. H. A. D. Hoyland to be H.M. Vice-Consul at Patras; and Mr. H. G. Chick, C.I.E., to be H.M. Consul in the Delta of the Nile, the Provinces of Galioubieh, Dakahlieh, Menou-

fieh, and Charkieh, and the whole of Upper Egypt to the 22nd parallel of North Latitude, excluding the maritime portion of the Mudiria of Keneh, to reside at Cairo.

Captain F. A. L. Andrews, C.B.E., who during the past year has been serving, says *The Times*, with the Ministry of Shipping Joint Arbitration Board, is appointed to the *Julius*, in command, and as Captain of the Naval Base at Constantinople. He succeeds Captain E. R. Jones, who was appointed on December 11, 1918, or within a few days of the Allied Fleets taking up their station off the *Porte*. The *Julius*, which fills the rôle of dépôt-ship, is merely a harbour craft, formerly called the *Nixa*. On her books some forty-four British naval officers are borne for duty at various places in the Eastern Mediterranean and the Black Sea.

OBITUARY.

Jonkheer de Steurs, Dutch Minister at Athens, died last week.

The death is announced of Mr. Thomas Watt Smyth, late Judge of the Punjab Chief Court. Passing the Indian Civil Service examination in 1860, he was called to the Bar in 1872, and was for twenty years out of the twenty-seven of his active service on the judicial side, being successively Small Cause Court Judge, Divisional Judge, and finally Judge of the Chief Court.

The death is announced of Lieutenant-Colonel Henry Peers Dimmock, O.B.E., M.D. (Durham), M.R.C.S., L.R.C.P., He joined the Indian Medical Service in 1880. His first civil district charge was at Shikarpur, in Sind, where he discovered that the excessive mortality in the large gaol there, as in other prisons of Northern India, was due to epidemic cerebro-spinal meningitis. In Bombay, where he was posted in 1891 as obstetric physician of the J.J. hospital and professor of midwifery at Grant Medical College, he was a conspicuous figure for nearly 20 years, for the last seven of them as principal of the college and senior medical officer of the hospital.

The death has occurred of Sir George Head Barclay, formerly British Minister at Teheran and Bucharest. Before being appointed Envoy Extraordinary and Minister Plenipotentiary to Persia in 1908, he had served, among other places, in Rome and Constantinople. After serving at Teheran for four years, he was transferred to Bucharest, and while he was there the Great War broke out. He remained at his post until the last week of November, 1916, and left for Jassy only on the imminent approach of the enemy forces. He returned to Bucharest at the end of November, 1918, and retired on pension in the following August. Sir George was created a C.M.G. in 1898, C.V.O. in 1906, K.C.M.G. in 1908, and a K.C.S.I. in 1913.

NEWS IN BRIEF.

Moscow announces the formation of two new Soviet Republics, the Daghestan Republic and the Highland Republic, both in Northern Caucasia.

The Georgian Government has closed the premises of the Central Committee of the Georgian Communist Party, and has suppressed the Georgian Communist newspaper.

It is reported from Paris that the Supreme Council, which on January 26 offered to recognise the independence of Georgia as a *de jure* State, has now carried that offer into effect.

The Hellenic National Assembly adjourned until January 31, as results in certain areas which returned Venizelist Deputies had not yet been confirmed by the Electoral Courts.

An Armenian named Terzecharian fired with a revolver last week at M. Avedis Aharonian, president of the Armenian Delegation to the Peace Conference. The shot missed its mark, and the aggressor was arrested.

A resolution will be moved in the Upper and Lower Chambers of the Indian Legislature, declares a Delhi telegram, recommending the ratification of the draft convention adopted by the Washington Labour Conference.

The funeral of the Jesuit Father Plater took place at Malta on January 23, the Archbishop officiating, and the Chief Justice, heads of departments, and representatives of Labour and other clubs having their part in an imposing ceremony.

It is reported in Constantinople that the Azerbaijan Government having suspended its supplies of oil to Georgia, the Georgian Government has arrested the Azerbaijan Consul in Tiflis and seized the Consular funds. Hostilities between Georgia and Azerbaijan are expected.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON, TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

A SOUND MOVE.

IN THE NEAR EAST of December 16 last it was urged that a conference should be called at which British, French, Greek, and Turkish representatives should be invited to arrive at a settlement which, while not ignoring the facts of the war, promised to restore peace to the Near and Middle East and to leave the various peoples free to concentrate their efforts on economic reconstruction. This step, it is satisfactory to note, is about to be taken. An Inter-Allied Conference is to be held in London this month, and, on the proposal of the British Government, invitations have been issued to the Greek and Turkish Governments to send representatives to take part in a discussion of the Near Eastern question. Both Governments have accepted, and the Porte has undertaken to urge the Angora Nationalists to be represented at the Conference. If Mustapha Kemal is well advised, he will avail himself of this opportunity of putting an end to a situation which, whatever personal *kudos* his actions may win for him, cannot satisfy the patriotic aspirations that originally inspired his movement. Behind the greatest political triumphs at this time, as Signor D'Annunzio discovered at Fiume, lurks the shadow of economic disaster, and sooner or later sane heads are forced to realise that priority has to be given to the material welfare of the people at large. In the face of the world's economic crisis, indulgence in national or personal ambitions which threaten to delay the return to normal conditions of work of any race or large community is a luxury that cannot be tolerated. It is to be hoped, therefore, that the British and French Governments will appreciate the necessity of retaining control of the Conference in their own hands; in other words, that they will not endeavour to escape their responsibility by leaving the Greeks and the Turks to compose their own differences. Both the latter have electorates or political opponents to take into consideration, and cannot be expected of themselves to abandon the respective attitudes that they have already taken up, the Greeks that of "the Treaty of Sèvres, the whole Treaty and nothing but the Treaty," the Turks that the Treaty must be torn up and the *status quo* of 1913 restored. It should not be difficult to make each party understand and acknowledge that the Allies' attempt at a settlement has been a failure—the calling of the Conference implies that the Allies themselves admit the fact—and that Greeks and Turks have been invited to assist in drafting an agreement that is practical of application. But just as the Greeks have to recognise that the responsibilities imposed upon them have been too great for them to undertake at the present moment with any chance of material success to Greece, so the Turks must be reminded that neither their failure as a Government before the war nor their defeat in the war can be ignored.

One of the mistakes made by the authors of the Treaty of Sèvres was to imagine that they could force the pace in the East. They thought that a great Greece meant a strong Greece, forgetting that territorial aggrandisement may often be a source of weakness. Having been given new lands, the Greeks, not unnaturally, are strongly opposed to surrendering them, and no Greek Government can be expected to consent of its own free will to the least modification of the Turkish Treaty. It should not be

impossible, however, to persuade a people as intelligent as the Greeks that it can never be worth their while to be given territory which they can only hope to retain at a cost altogether disproportionate to its value or to the benefits that its possession offers them. National policy in the Balkans has been dominated too much in the past by Tom Tiddler tactics. The premature pegging out of claims is apt to emphasise the weakness of pretensions. Few will doubt that Greece would be in a much stronger position to-day as the residuary legatee of Turkey in Smyrna, if she had not occupied the town in 1919. An Allied occupation would have brought the population all the relief that they wanted; it would not have antagonised the Turks, and might have obviated the subsequent developments in Anatolia. After a lapse of time the future of the port would have been decided on the merits of the question and without the need for the employment of a large military force. Greece in the meantime would have been composing her own domestic differences and building up a civil service capable of administering not only the old kingdom but also Greater Greece, however far afield it might eventually extend. Nothing could exceed the irony of the situation in which M. Venizelos found himself placed. While urging upon the Allies Greece's claims to fresh responsibilities, he gave occasion to the Greek people to denounce the administrative incapacity of his own Government. Venizelists are hardly likely to credit their political opponents with greater administrative ability than themselves, and will be the first to admit that Greece needs longer experience in the art of government before she can cope successfully with any considerable extension of empire.

The fate of Smyrna, it may be expected, will prove the crux of the problem to be solved by the Inter-Allied Conference. Some misgivings must have assailed the authors of the Treaty of Sèvres when they felt compelled to give the town an opportunity of deciding its own fate at the end of five years. The mistake made was to hand over Smyrna at once to the one people to whose occupation of it the Turks would take exception. At the time of the Armistice they would have accepted with their traditional fatalism the final severance of the town in favour of any Great Power among the Allies, and if the feeling prevailed that the Greeks had the reversion of it Smyrna might have been held in trust for them indefinitely or for a stated time. As things are, the autonomy of the town and district will provide the best solution. Smyrna itself has shown unmistakably that it has no desire to be governed from Athens, however keen the Greek population may be for union with Greece. She might govern herself under a Council that would consist of Greeks, Turks, Armenians, Jews, and nationals of the Great Allied Powers, with a Governor who, if the wishes of the inhabitants were consulted, would, we imagine, have to be British. A Greek Governor, we believe, would be a mistake. No point is gained by insisting on the shadow, when the substance has been secured. As there are grave objections to a mixed police force of Greeks and Turks, it would be necessary to seek a homogeneous force elsewhere, preferably a bi-lingual one; the gendarmerie for the outlying districts could be Turkish. Greek and Turkish representation on the Council, with perhaps forty and thirty per cent. of the members respectively, would respond to the predominance of these races in the town. The administration, however, would reflect the cosmopolitan character of the port, and economic relations with the Anatolian interior on the one hand, and with the world overseas on the other, would be maintained unimpaired.

THE SITUATION IN TRANS-CAUCASIA.—I.

Never in the course of recent years has the situation in Transcaucasia been so complicated as at the present moment. Azerbaijan's independence gone since the spring of 1920, Armenia succumbed, Georgia threatened, Russia triumphantly reconquering her lost Caucasian provinces—such is the general situation of the country. Historical events have a logic of their own, and the theories of puny mortals seem powerless to affect their appointed course. Thus Russia is reintegrating in spite of the attempts of the border peoples to profit by the principle of self-determination which the Russian Revolution proclaimed; and we see the small nations one after another overwhelmed by the ancient master of their destinies seeking to re-establish his domination. The fate of Armenia is indeed a warning to Georgia to be on her guard more watchfully than ever.

The sequence of events in the Armenian Republic is already known in outline: the Turkish attack launched in September last; the repeated appeals of the Armenian Government to the Allies for diplomatic, if not military, intervention; the unbroken silence of the Western Powers; the widespread rumours that the Allies were supporting the Kemalists in order to liberate Baku from the Bolsheviks; the disastrous influence of these reports on a people and army already worn out by six years of incessant warfare; the insistence of the Bolsheviks upon their mediation, which was to be supported by the entry of their troops into Armenia; Armenia's acceptance of mediation and refusal of military help; and then, in rapid succession, the passage of Bolshevik forces into Armenian territory in spite of the Erivan Government's protests; the proclamation of a Soviet régime in Northern Armenia, occupied by the Reds, and the subsequent Sovietisation of such part of the Republic as had not fallen into the hands of the Turks. The time has not yet come to examine all the causes which brought about the Sovietisation of Armenia, and, it would seem, the loss of her independence after a precarious existence for two and a half years. Here I wish to deal only with the peace negotiations between the Kemalists and Armenians and their influence upon the coup at Erivan.

It should be noted, in the first place, that the Turkish advance and the complete isolation of the country caused both among the people and in the Government a psychological change highly favourable to an Armeno-Turkish reconciliation. The party in power, which had followed exclusively a pro-Entente policy, realised that, besides participating in the Allied negotiations with official Turkey, it was necessary to come to an understanding with Anatolian Turkey, the country's most dangerous neighbour. Soon after the acceptance of the harsh armistice imposed by the Turks, the leading Dashnak (*i.e.*, Governmental) paper, *Arach* ("Forward"), began to publish articles advocating a just and lasting peace with Turkey, and arguing in favour of an agreement with the Turks if it were a question of choosing between them and the Russians. Armenia, it was said, would make territorial concessions for the sake of maintaining the principle of independence.

Meanwhile, Kiazim Bey, the representative of Angora at Tiflis, made it known that the National Assembly of Anatolia sincerely wished to assist in the creation of an independent and viable Armenia, and even allowed it to be understood that his Government was ready to negotiate with Armenia upon territorial

questions concerning Turkish Armenia. Thus, in spite of the severity of the armistice, there were grounds for hoping that the conference at Alexandropol which was to follow would succeed in settling the Armeno-Turkish problem once for all upon an amicable basis. The Armenian delegation agreed to discuss territorial questions apart from the Treaty of Sèvres, and presented a map proposing frontiers, the moderation of which would have astonished the Turks had they not been intoxicated by their military success. According to the Armenian plan, the new Republic was to include Russian Armenia and the districts of Bayazed, Bulanik, and Melazgerd, a region of about 100,000 square kilometres, with a population of three millions. The Turks, however, would not listen to such a scheme, and proposed a treaty leaving to Armenia only a fraction of the former territory of the Republic. In the other provinces a plebiscite was to be taken under the protection of the Turks; but since the majority of the Armenian population left their homes before the occupation, and since, too, the younger of those who remained have been deported by the Turks, no one knows whither, it is easy to guess what results the plebiscite would give. Armenia's military forces were to be restricted in future to a gendarmerie and a frontier guard of 1,500 professional soldiers, with 120 machine guns and eight light guns.

This treaty, in short, involved the practical annihilation of Armenia, and made a striking contrast with the declarations of the Turks. To Armenians it became clear that peace and tolerable relations with the Turks were farther off than ever. Impartial observers in Transcaucasia could not understand the sudden change in the attitude of the Kemalists, who previously had seemed to appreciate the necessity of preserving Armenia as a buffer-State between Russia and themselves. Originally the Bolsheviks had given their approval to the Turkish scheme; but the sweeping success of Kemal and the unrest among the Moslem populations of Azerbaijan and Daghestan decided them to despatch Russian troops into Armenia before the expiration of the Armeno-Turkish armistice, in order to bring the Kemalists to a halt before they reached Azerbaijan. The general public is not aware that Russian troops had actually entered Armenia before the Soviet Government's declaration to Angora that any advance towards Azerbaijan would be considered a *casus belli*. Thus, it became clear that henceforward Turkey would have to deal not with Armenia, but with Russia—a Russia with her eyes on her former frontiers. In spite of their formal alliance, the Turks suspected and feared the return of Russia to Armenian territory, and accordingly the treaty imposed at Alexandropol was aimed against Russia rather than Armenia.

The negotiations which are now taking place between the Kemalists and the Bolsheviks, who by force of circumstances have come to Armenia as liberators, turn upon the question whether the provinces of Kars and Nakhitchevan shall be ceded to the Armenians without a plebiscite. The Turks show no sign of yielding, and the Bolsheviks are sending continuous reinforcements of Russian troops into Armenia. The Georgian Government, disquieted by the concentration of Red forces at Akstafa (the frontier station of Azerbaijan on the Transcaucasian railway, from which a good road leads into Armenia), has demanded an explanation from the Soviet representative at Tiflis, Scheinmann. Though asked orally, the latter has thought fit to reply in writing that these dispositions are not in any sense directed against Georgia. The Turks draw the obvious conclusion. Bekir Sami Bey, the Kemalist Ambassador at Moscow, who was passing

through to Tiflis, had some personal experience of the Russian preparations, for his special train took three days instead of eighteen hours from Baku to Tiflis, owing to the continuous movement of Red troops and supplies towards Akstafa.

The new Armenian Government—the "Revolutionary Committee of the Socialist Soviet Republic of Armenia"—has just addressed a proposal to the National Assembly of Angora for the revision of the treaty of Alexandropol signed by the previous Government on the eve of the *coup d'état*. The Turks find the request embarrassing, and Bekir Sami Bey has departed in haste for Kars to confer with Headquarters. It is not difficult to foresee that, by refusing, the Turks would risk incurring the active hostility of the Russians; and they will have need to consider carefully whether the probable consequences would justify their provoking a conflict with the Russians—at any rate, before the Treaty of Sèvres has been revised. But—who knows?—we may yet witness another Russo-Turkish war before the curtain rings down on the tragedy "1914—."

Tiflis, December 14, 1920

R. N.

PRESS ON THE NEAR EAST.

The Turkish Treaty.

The *Morning Post* (of January 12) pleads for a revision of the Treaty of Sèvres on the ground that the consequences of its enforcement "may be prejudicial to the interests of the British Empire." It says:—

The primary need to a much-harassed country like ours is peace—peace, above all, in the Middle East—and we have to ask ourselves whether the Treaty of Sèvres, which humiliates the pride of a warrior race with what it must believe to be a fiendish ingenuity, will make for peace and security in a part of the world in which we are vitally concerned. From that point of view, the main blemish of the Treaty is a psychological one—it not only deprives Turkey of valuable territory and a great port, but it hands over that territory and port to the hated and despised enemy, the Greeks. On the eve of the Smyrna offensive we ventured to draw attention to the dangers inherent in such a move, contending that it might place too severe a strain on the resources of Greece, and would undoubtedly stiffen the Nationalist resistance in Anatolia. Both these fears have been fully realised. The prolonged mobilisation of the Greek Army was the deciding factor at the recent elections, with the result that King Constantine is now in Athens, and M. Venizelos is an exile in Nice. These events have gravely shaken Hellenic prestige and authority in the Middle East, and though we note that the Royalists are seeking to carry out the military enterprise of M. Venizelos in Anatolia, we can scarcely expect from it decisive results. For Constantine is the King not of a nation, but a faction, and the policy of reprisals on which he has embarked will make neither for the security of his subjects at home nor for the efficiency of his army abroad.

On the other hand, Mustapha Kemal Pasha has brought to his banner the strongest forces in Turkey. The seat of power in the Turkish Empire is in Angora, not in Constantinople. Constantinople, indeed, is no longer a Turkish city—we become dizzy in trying to enumerate the missions which besiege the unhappy Sultan. Surely it is absurd to insist in Constantinople on a ratification of which the only result will be to bring discredit on Tewfik Pasha, and thus destroy a popularity which is one of the few assets left to his country. Constantinople is almost in the same parlous state as Vienna, with its bankrupt Treasury, its importunate officials, its recurring political crises, and its failure to influence or guide the forces which are gathering outside. Surely the Allies ought to concentrate their attention on Angora and see whether some workable arrangement cannot be made with Kemal.

Persia.

The *Irish Times* of January 18 writes on the change that has come over popular opinion in Persia towards Great Britain.

The Persian Government has transferred its affections from London to Moscow. The Bolsheviks have been very busy in the Middle East, where already they have gathered Azerbaijan, Armenia, and Bokhara into their net. Now they are pursuing Persia. They have brought forward a Russo-Persian convention which, on the face of it, seems to be much more attractive than the British proposals. The Soviet Government offers to cancel all Persia's debts to Russia, to renounce all concessions in the country, and to compensate the Persian people for the invasion of their territory. It asks for nothing in return save the acceptance of the Bolshevik system by the Persians. The ease with which skilled agitators have been able to ensnare a large section of the Persian people is not difficult to understand. The British troops will be withdrawn from Persia in the spring. Then, unless she accepts the Bolsheviks' offer, she will be at the mercy of the "Red" Army, which is still at Enzeli. We cannot blame the Persians, if they take what seems to be the line of less resistance; but, on the other hand, the Foreign Office cannot allow

Persia to become a vassal of Moscow without a struggle. British interests in that country are very great, and, if it be at all possible to save the throne for the Shah and frustrate the sinister designs of the Bolsheviks, they demand that every effort shall be made in the attempt.

PERSIAN POETRY.

Lecturing before the Société Internationale de Philologie recently Mr. M. H. Ispahani said that in Persia, as in other countries, the earliest poets either found their inspiration in religion or else gave expression to national and popular feelings and recounted legendary and mythical folklore. Persia had passed through so many cataclysms that her pre-Arabian records were only available through contemporary historians and travellers of other nations. All records had been destroyed at the time of the overthrow of the ancient Akaminian or Jamshidian Empire. This was followed, first, by a thousand years of Babylonian supremacy and, afterwards, when the Babylonians had been expelled, by a period of glory, which ended with the Alexandrian invasion, when all records were again destroyed. Later came the Arabic invasion, but it was not fair to say, as had been done, that Islam had had a blighting influence on Persian poetry; the Arabs were themselves a highly poetic people. The greatest of Persian poets was Firdousi, who lived some time before the Arabic invasion, and who composed the "Shah Nameh," a wonderful poem of sixty thousand couplets, in which he incorporated the legend and history of Persia up to his time. The poet sent this to Sultan Mahmoud of Ghazni, who should have paid a gold coin for every couplet; but, moved by an economic Minister, sent silver coins instead. Firdousi gave the money to a sherbet seller, wrote a satire on Mahmoud, and then fled for his life. Later the Sultan repented of his parsimony, and sent a present of indigo to Firdousi of the value of the sixty thousand gold coins; but this arrived too late. Firdousi died the same day, and his high-spirited daughter with the proceeds of the indigo built a rest-house with a well for travellers.

Syed Ameer Ali, who presided, said it was extraordinary there should be such a lack of interest in this country to-day in the language and literature of Persia. In the earlier part of the nineteenth century that language and literature had formed a real subject of interest to all Englishmen going to the East, and it was strange it should be so neglected now, when Persia was politically so important to the British Empire. Persia had been a country of enormous interest in all times, and had never gone down. She had absorbed the Macedonians of Alexander, and later had absorbed the Arabs. She would survive her present difficulties. It only needed a little interest in the life of the Persians and their aspirations for their country's independence to enable them to restore their national existence and vitality.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Mails to the Near East—

Attention was drawn in these columns last week to the deplorable position with regard to the mail services between this country and Constantinople. How bad conditions are may be judged from the statement in the current issue of the *Journal of the British Chamber of Commerce of Turkey and the Balkan States* that seven trains arrived at Constantinople from Paris in recent weeks without any British mails. There are three trains a week from Paris, so that sixteen days passed without any mails from this country. Our contemporary had previously commented on the practice of French firms of sending by registered letter post goods which should have gone by parcels post. The packages on which as much as 33 francs odd have been paid in postage have been delivered to the addressees without passing through the Turkish Customs, thus giving our Allies an unfair advantage over British traders.

—and France.

It is not unnatural to suppose that these two things are connected, and that the reason why the French are unable to find much accommodation for British mails to Constantinople is that the service is already fully occupied in taking registered packages. If it is due to some other cause it is up to our Allies to say what that cause is, and why it has so far been impossible to find a remedy for it. But any criticism that may be made must fall equally on our own authorities at home, whose inept handling of the position has been very marked. Representations have been made, no doubt, but they must have been presented in a very half-hearted spirit, otherwise it would not have been necessary to continue ventilating the grievances of British traders with regard to mail communications to one or other part of the Near East. It is satisfactory to learn that as the result of representations made by the British Chamber of Commerce at Constantinople steps have been taken which, it may be hoped, will remedy the position as far as that centre is concerned.

Greece and Smyrna.

Writing some time ago, I pointed out that the position of Smyrna as a commercial centre would depend entirely on the wisdom which characterised Greece's policy there. For the port to develop as it should it is clearly essential that Greece should do everything possible to smooth the path of commercial reconstruction, and should avoid taking any step that would restrict the activities of traders of other nationalities. News received during the last few days suggests that under the new Administration this line of action is not being pursued. The Greek authorities have imposed certain commercial restrictions which have resulted in strong protests being made by the British and other chambers of commerce to their respective High Commissioners in Constantinople. It is maintained that the measures will bring about the commercial ruin of the port, and their immediate withdrawal is demanded. These energetic representations from bodies composed of the traders who played the chief part in raising Smyrna to the position it occupied before the war, and whose co-operation is essential to Greece if that country's ambitions are to be realised in Smyrna, will no doubt result in the measures being repealed. But it should not have been necessary to make them!

Egypt's Industrial Future.

All who have the welfare of Egypt at heart will find great cause for satisfaction in the promise shown in the exhibition of Egyptian industries at Cairo. From the account given by our Correspondent, it is clear that in a number of lines the Egyptians have proved themselves equal to producing goods on a level with those that they have previously imported from the West. The result will presumably be that in the future Egypt will be capable of supplying itself with a number of commodities and even perhaps of developing a small export trade with neighbouring markets, such as Palestine and the Balkans. But given that that may be the case, local circumstances make the industrial outlook for the country very limited, for the materials for the principal industries of the world are

lacking. But within limitations there is great scope for development, which is good for Egypt, and cannot seriously affect British trade, for the articles that Egypt can make she has imported in the past mainly from Europe, in particular from the Central Powers, and even in the lines in which Egypt can specialise the constant growth of the Egyptian market affords the best guarantee that there will always be abundant scope for the importer.

An Indian Bank's Credit Scheme.

One of the most interesting of the various export credits schemes that have been advanced as a solution of the problem of enabling the resumption of trade with Europe is that of one of the leading Indian exchange banks. The scheme, which has been drawn up principally from the Indian point of view, is illustrated from the case of Germany. It is proposed in the first place that an International Commission should be established which would determine the gold value of credits that it would approve against the security of the assets which a country desiring help would be prepared to assign as security for commercial credits. Germany, the country in question, would then create an institution to be known as the German International Produce Clearing House (India Section), with its head office in Germany and a branch in London, with full authority to act on behalf of the Government. The leading German banks would be associated with the Clearing House, and no credit would be arranged unless it had been applied for by one of the associated banks. The London branch of the Clearing House would have associated with them the London clearing bankers and approved London accepting houses, to whom whatever securities had been agreed upon would be pledged.

Its Advantages.

As regards India, it is proposed that the Government of India should accord to the London bankers and accepting houses its unconditional guarantee that all drafts drawn under the credits to be issued under the scheme would be duly provided for at maturity, for which consideration the Government of India would be entitled to charge the German Clearing House a commission on the total amount of credits coming within the scope of its guarantee. Letters of credit would be issued in sterling, and drawn on and payable only in London and in sterling, so that the onus of exchange would rest entirely with the Clearing House, and no credit would provide for bills at a longer usance than six months' sight. It is maintained that the scheme has the advantages of simplicity and rapidity of operation, and it is considered that it would provide Germany or whatever country might be concerned with the most convenient method of obtaining all the raw materials from India that they desire. As regards India, it is pointed out that it would mean the recovery of her Continental customers, increased revenue to the Government, and strength and stability to her sterling exchange.

Advertising in Egypt.

One effect of the war in Egypt was to give a great stimulus to the study of English, and the result of this is emphasised in a Consular report on the question of advertising and giving publicity to British goods in that country which has just come into my hands. The large number of

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

British troops who were quartered in Egypt during the war, and who spoke for the most part only English, naturally compelled the trading community to learn the language, and now the position is that English ranks as one of the two languages which the British trader can utilise for the sale of his goods to the native community.

The Oil Question.

It is understood that the British reply to the American Note regarding the exploitation of the world's oil resources will shortly be delivered. Its effect, I trust, will be to correct the entirely unfounded views of British policy that have been allowed to gain currency on the other side of the Atlantic. The position America has taken up on the question is totally indefensible, and surely also rather Gilbertian in view of the fact that she controls within her own borders 80 per cent. of the world's oil output. Having these vast resources, it would appear that America desires to prevent other nations from safeguarding their oil supplies. The policy of Great Britain, as Sir Charles Greenway has explained, is the policy of the "open door," but that naturally cannot be interpreted as meaning that we must give up concessions legitimately acquired by us before the war. It was open to America to have anticipated us, but it is not to be expected that we can make sacrifices in order to compensate for a lack of enterprise on the part of our rivals in the past. As a *business* race, our friends in America will appreciate this point. Unwittingly, no doubt, they have been led into a misapprehension of the position, and as they have ever shown themselves willing to acknowledge an error, it is to be anticipated that when the situation has been made clear to them they will readily withdraw what has been said. The episode has, in short, been purely a question of a misunderstanding, and, as Sir Charles Greenway pointed out in a recent speech, which is reported in another column, there is no reason for rivalry in the oil business. There is room in the oil trade of the world for all, and, as he truly remarks, there is no reason why the "participation in the work of oil production by other nations, and the safeguarding by each country of its own oil position, should not be carried out in a perfectly friendly spirit and without any undue encroachment upon the vested interests of those already in the trade."

A HANDICAP TO BRITISH TRADE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—From my personal experience and reports I have received from my travellers in the Near East, British travellers can get very little support from local British Chambers of Commerce in the Near East of Europe, and it would be advisable if the British Government would appoint agents in towns like Sofia, Belgrade, Zagreb, and Bucharest, who could assist British travellers and traders when travelling in these countries.

Spain, Germany, Czechoslovakia, Italy, and France are getting every assistance from their diplomatic and commercial people, while an Englishman is seriously handicapped in this direction. Even the list of importers issued by the Board of Trade is all mixed up, and firms who have left these places years ago are still mentioned, which means a great loss of time in looking them up.

In Sofia the other day a traveller for my Bradford house, in asking for information re a firm in Sofia, was given the simple answer, "They are Jews, and not to be trusted." Such information from a man on the spot, who ought to know better, is misleading, and brands any buyer because he is a Jew. The man who gave the information ought to know that the majority of the traders in Central Europe are Jews, some of them quite respectable tradespeople; with life-long experience and good reputation.

I hope that the British Government will take steps to assist travellers for British firms in the Near East, so as not to let foreign competition cut the ground under their feet. We have advocated the development of trade in the Near East, and all over the world, during the war, and must take steps to see all our plans realised for the benefit of the trade of Great Britain.—Yours faithfully,

H. KRAMRISCH

(Consul for Yugoslavia in the West Riding of
Yorkshire).

26, Canal Road, Bradford, January 28.

IMPERIAL OTTOMAN BANK DINNER.

On January 27 the London management of the Imperial Ottoman Bank were entertained to dinner at the Holborn Restaurant by the ex-Service members of the London staff. The occasion was designed to place on record the appreciation of the services of Mr. R. S. C. Pearce (the assistant manager and deputy-secretary in London), who during the war edited and privately circulated an excellent periodical known as the *I.O.B. Gazette*.

Reference was made during the dinner to the complete success of this publication in ensuring, as it did throughout the whole of the war, close personal touch between the staff at home and abroad. As a memento of the occasion Mr. Pearce was presented with a silver cigarette box, suitably engraved, and afterwards amid great enthusiasm a toast was drunk wishing long life and prosperity to the bank, its committee and management. After dinner the company adjourned to the Coliseum, where an excellent programme completed a most enjoyable evening.

GEORGIAN WIRELESS STATION.

The Georgian Ministry of Supplies has concluded an agreement with a French trading and financial company for the erection in Georgia of a powerful radio-telegraphic station, by means of which it will be possible to communicate within a radius equivalent to the distance between Tiflis and London. The new station will connect Georgia with large European centres, such as Paris, London, Rome, Moscow, and others.

According to the agreement, the Ministry of Supplies is to pay for the erection of the station by means of a consignment of Sukhum tobacco in equivalent quantity. The station is to be erected within the next six months. At the same time another agreement under the same conditions was signed for the erection of four wireless telephone stations in various parts of Georgia. The central wireless telephone station will be erected in Tiflis.

OPENING FOR OLIVE OIL PRESSES IN FEZ.

H.M. Consul at Fez, writing with regard to the probable local demand for presses and pumps for the manufacture of olive oil, states that the majority of the modern presses in use in the district are of French manufacture. A complete plant of French make for the extraction of olive oil, and capable of an hourly production of 500 kilos of paste, has been recently installed in Morocco at a cost of 50,000 francs. A list of olive oil manufacturers in Morocco who might be interested in the purchase of similar plant can be obtained from the Department of Overseas Trade by United Kingdom firms interested, on application.

ENGINEERING.

Falling Prices.

There is a marked downward tendency in the costs of raw materials, and in some quarters this is regarded as being a sign of a forthcoming general lowering of prices. It would seem, however, that it is rather a result of bad trade than a sign of improvement; in order to overcome financial difficulties due to the shortage of money, manufacturers and producers generally are being compelled to liquidate their stocks. It is unlikely that British prices can fall to anything approaching the Continental level whilst the costs of labour and distribution remain so high, and British engineering firms are receiving numerous offers of Continental iron and steel which, if accepted, will do much towards aggravating the situation. In the North the opinion is freely expressed that in order to save the British industry from disaster the importation of foreign iron and steel must be stopped. To this the constructional side of the engineering industry points out that cheap iron and steel are of vital importance to the well-being of our trade, and says plainly that if British manufacturers cannot produce at the right price the goods must be bought abroad. It seems a great pity that the producing and utilising sides of every British trade should seem to be at loggerheads over this question of foreign supplies. In the great chemical industry, for example, we have such well-organised and magnificently equipped concerns as the British Dyestuffs Corporation overcoming every difficulty in research, in organisation and production; beating the German at his own game of colour making; finding out in a few months processes which he took years to discover, only to find the dye-using side of the textile industry, in their efforts to meet foreign competition, turning round and saying that the British dyes and chemicals are too expensive and that in their own interests they would welcome the free and unrestricted import of German-made colours. In the magneto industry the newest, and in many ways one of the most important, of our trades we find the same thing, inability on the part of British firms, by reason of the high cost of materials and labour and the heavy burden of taxation, to make magnetos at a less cost than £12 10s. or £15. On the other hand is a ring of German financiers, manufacturers, and Government officials turning out magnetos wholesale and offering them here for about a £5 note. The result will inevitably be that British users of magnetos, to stand against the competition from abroad, will be forced to buy German appliances, and so help to crush their fellow-manufacturers. The whole thing seems curiously disjointed, and whilst it is, of course, manifestly wrong, it is not easy to see what remedy can be applied. One thing at least is evident, and that is that no manufactured or partially manufactured goods should be allowed to come into this country from Germany except under licence from the Board of Trade.

Motor-Cycle Weight.

A good deal of consternation has been caused in motor-cycle circles by the new system of taxation, which lays it down that whilst a machine weighing, ready for the road, 200 lbs. or under shall be taxed 30s., a machine which weighs even a few ounces over that amount will have to pay £3 per annum. The general impression was that ordinary single cylinder touring machines were to be taxed 30s. in place of the £1 hitherto levied, and that the larger sum would have to be paid only by those machines, of the twin engine type, which developed 5 h.p. or over. The average 1920 or 1921 machine which last year was taxed 20s. only now has to pay at the highest rate, because it scales, with its three-speed gear-box and chain-cum-belt drive, just over the 200 lb. limit.

The law says, however, that the weight on which the tax is decided shall be the weight of the machine, as ordinarily used on the road, minus fuel and tools. There is a very serious side to this, a side to which attention has not yet been called. In order to bring their machines within the range of the lower taxation, numbers of riders will proceed to strip their machines of all such loose impedimenta and adjuncts as possible. Speedometers, so valuable a safeguard against too high a speed, will be removed. Powerful horns will give place to twopenny-halfpenny devices, just sufficient to meet the law, but quite inadequate in these days of heavy traffic. Powerful brakes may be replaced by flimsy attachments, long exhaust pipes will be removed, and the dozens of refinements hitherto used will go to the wall to enable the rider to get his machine to the 200 lb. limit. The roads, dangerous enough before, will be still more dangerous, and there is a worse aspect to this piece of fatuous legislation. In order to produce a $3\frac{1}{2}$ or 4 h.p. machine that will come under the 30s. scale, it is possible that certain makers may spring up

like mushrooms and cut down frame strength to a dangerous degree in order to get the weight within the limit.

Another aspect occurs to me. This new reading of the law will be a serious matter to makers of motor-cycle instruments as speedometers, trip recorders, handle-bar watches, route-card carriers; pump, lamp, and generator makers will also suffer, as no rider whose machine is under the limit will risk adding another half-pound or so. There will thus be an adverse effect on trade, as well as an added danger to riders and road users. I believe it is not too late for the Ministry of Transport to move in the matter, and to make it clear that the 200 lb. limit is not to be enforced within reason, provided that the machine in question is a single-cylinder machine of $3\frac{1}{2}$ or $4\frac{1}{2}$ h.p. as turned out by the makers as a standard motor-cycle for solo riding. I believe that the Ministry, together with such M.P.'s as gave any attention to the matter, intended that reading, and that the imposition I am now protesting against is the result of the brilliancy of a brain similar to that which recently caused the police to prosecute a motor-cyclist because his registration numbers were about an eighth of an inch too big.

Petrol Economy.

Much has been said in these columns from time to time in regard to the need for reducing running costs wherever possible by cutting down petrol consumption by fitting a smaller jet where sufficiently good results as regards speed could be obtained, and by the use of ordinary naphthalene added in fairly small proportions to either petrol or benzole. Attention has also been called to the advantages of using a proportion of ordinary paraffin with whatever other fuel is used. All these methods possess certain disadvantages as well as points in their favour. Mr. T. G. Tulloch, writing recently in the *Motor*, called attention to a point which is often neglected by drivers, but which, if given attention, will invariably result in an appreciable saving on an average long-distance run. As he said, probably most readers of that paper are aware of the method, but for the benefit of beginners here is the method. On descending a hill put the gear in the neutral and switch off. The engine will stop, and the car will coast down without the expenditure of any petrol at all and without having to bother about keeping the clutch pedal down. On approaching the bottom of the hill, turn on the switch and start up the engine by the self-starter and, when it is running at a sufficient number of revolutions to correspond approximately to the speed of the car to require that number of revolutions, pull the gear handle lever into top speed without depressing the clutch pedal. It is delightfully simple and silent if the engine be speeded up to correspond as near as possible to the speed of the car, so that the dog clutch engages easily; and though novices may hesitate to put in the gear without using the clutch, there is no need for any fears on this score. He added: I shall never forget the look of astonishment and delight on the face of a car proprietor in the Lake District when I gave him this tip, and he successfully brought it off the first time. In the hilly district there he calculated that he would save, with his fleet, several pounds a month. I remember a good instance which occurred to me personally some years ago on a non-stop run from London to Budleigh Salterton, 189 miles by the route through Surrey, Hampshire, Dorset, and Devon, which includes some pretty long coasts, with four up, luggage, and ranged along the footboard fourteen tins of petrol—it was during a petrol scare. By freely using the method I described the petrol consumption worked out at just over 25 m.p.g. on a 16 h.p. car.

OIL NOTES AND NEWS.

BRITISH OIL POLICY.

Sir Charles Greenway on the "Open Door."

Speaking at the launching of the Anglo-Persian Oil Company's new tanker, British Viscount, at the yards of Messrs. Swan, Hunter and Wigham Richardson, at Newcastle-on-Tyne on January 22, Sir Charles Greenway said that it had become a national necessity for each country to make itself secure, as far as practicable, in regard to its supplies of oil, and it was idle to suppose that the result of the world's oil resources should be monopolised by any one country. There was room in the oil trade of the world for all. No one country and no one group of oil men could possibly hope to develop satisfactorily the resources and meet the demands of the whole world, and the more enterprise, brains, and capital, whether of American, British, French, Roumanian, or any other nationality, that could be devoted to the discovery, production, and marketing of the vast stores of oil which undoubtedly still awaited development in the hidden recesses of the earth, the better for mankind in general. And there was no reason at all why that participation in the work of oil production by other nations, and the safeguarding by each country of its own oil position, should not be carried out in a perfectly friendly spirit and without any undue encroachment upon the vested interests of those already in the trade. All his endeavours had been directed to that end, and he was sure that by an exercise of the mutual goodwill, tolerance, and honesty of purpose with which the English-speaking peoples were credited all differences of opinion and misunderstandings in regard to the question of oil could be easily overcome.

Let them get rid once and for all of petty and selfish jealousies, and recognise that oil now played far too an important part in the welfare of every nation for it or any greatly preponderating portion of it to be under the control of any one company or group of oil men. If each country devoted its energies and brains chiefly to the supply of its own markets, and confined its activities in foreign markets merely to the extent that it might be necessary to make use of them as safety valves for the disposal of its surplus products, it would have quite enough to do to occupy the energies of its oil men, and they would make quite enough profit to satisfy any reasonable aspirations. By following that policy the difficulties and misunderstandings which would necessarily arise from attempts to secure control of oil resources in remote corners of the earth, and of supplies which could never be of any possible service to the country itself, would at the same time be entirely removed.

A good deal had been heard lately about the "open-door policy" and the necessity of this country adopting that policy in regard to the oilfields of Mesopotamia. So far as he knew, there had never been any intention to do otherwise, but the use of that phrase in connection with Mesopotamian oil was a mere euphemism for "Bolshevism," for what was proposed, or rather demanded, by their competitors in America was that they should have taken away from them property acquired legitimately and with the full knowledge and approval of the Governments concerned before the war. They had heard that Bolshevism was spreading, but he did not think it had spread so far as to induce the American or any other civilised Government to approve of or support such an act of spoliation as that—even though camouflaged under the guise of the "open-door."

THE PETROLEUM RESOURCES OF THE BRITISH EMPIRE.

At a meeting of the Royal Colonial Institute on January 25, at which Sir Frederick Black, K.C.B. (President of the Institute of Petroleum Technologists), presided, an interesting paper on the above subject was read by Mr. George Howell, F.G.S., F.R.G.S., M.I.P.T.

There was one resource, constituting one of their primary requirements, the lecturer pointed out, which was more or less absent from their present natural resources, and that was petroleum. Petroleum oils were becoming every day more and more essential as a dominating factor in the maintenance of their Empire. The present supply of petroleum from British territory did not exceed 3 per cent. of the world's production, and it was their duty and right to test, explore, and find, if it was to be found in their hidden rocks, the precious liquid, so that their future supplies could be guaranteed from British lands. That was, no doubt, a dream, the wish being father to the thought.

His paper was prepared with the thought dominating his mind that if increased attention were given it might enable the country in the future to create a similar position to America, and in that way "transmute some of our riches into still more precious riches"—petroleum.

In his opinion it was up to the champions of British industry to get busy and search out those unknown sources of petroleum, which did exist, and existed possibly in British territory, which at the present time formed the integral and component parts of their British Commonwealth. In his opinion it was possible to find vast natural petroleum resources in the "To-morrow" by the activities of a union of forces—call it the industrial triumvirate if they would—the geologist, the chemist, and the business man. The geologist had one of the greatest and national tasks ever entrusted to man to perform if the future new oil-fields of the world, now hidden deep down in the rocks, were to be brought within measurable distance of the drill. The task comprised careful geological mapping and correlation of the Earth's crusted rocks and the bringing of them into categories with the view to correlating them with the existing petroleum-bearing rocks. Many geologists were of the opinion that the study of present oil-belts in sequence was not only interesting, but helpful in the discovery of new oil-fields. If they referred to the cretaceous rocks of the Europa-Mediterranean series, rich in carbonate of lime, they would find on the coast-line of the Black Sea, at Novorossisk, what appeared to be an escarpment, or sharp cutting down of the rock-side, through water action, the depth of the cut side being over 300 ft.; as far as visibility went this appeared to be the end of these cretaceous rocks on the east. Tracing those rocks in a north-westerly direction they would find them coursing toward Europe, across the Kertch Straits and the Crimea; then through the European continent, disappearing for a time, then in their western course sharply outcropping in their sister island—Ireland.

Skilled geologists, backed by unlimited capital, would have to be prepared to go forth and cut their way through dense bush of tropical countries or spend their time in barren desert lands, or even explore the Arctic regions. Ten years ago, to suggest the Arctic Zone as petroliferous would have been courting Colney Hatch or some other invigorating sanatorium—a suggestion of a demented scientist. To-day, however, they found that Alaska was quickening to add to the petroleum supplies of America; it had been disgorging oil from many places in that region. Geologists might also have to explore—and in a systematic manner, too—such mountains as the Himalayas, Mount Nero, the Andes, as well as the Rockies. He believed the flanks of the Himalayas would afford much to interest the petroleum technologist. They might even have to wander over far-off prairies of Canada, or the veldts of Africa, or the plains of Australia, or the coastlines of important seas and rivers—the Arabian Sea, the various straits in the Pacific and the Atlantic, or the Ganges, the Brahmaputra, the Irrawaddy, and the Nile. There were, however, two initial difficulties which it seemed to him would present themselves. Firstly, the dearth of geologists; secondly, the dearth of capital from British sources.

Mr. Howell went on to deal with the outlook for oil production in Canada, Australia, and England. Turning to India, he said that the country at the present time showed great possibilities for the future production of oil in very large quantities. They could certainly look towards India as one of the potential countries to contribute to British Imperial supply. Petroleum occurred in Upper and Lower Burma (including the Arakan Islands), Assam, the Punjab, and in Baluchistan. In Upper Burma the oil-fields had steadily progressed, and the future of the territory was assured. For a long time past, boring for oil had been carried on in Ramri and Cheduba; two distinct classes of wells were brought in in those parts—those which appeared to communicate with a natural reservoir, from which the oil rose with considerable rapidity, and those sunk in rock more or less saturated with petroleum, from which the oil slowly percolated into the well. Yenang-yuang and Yenangvat fields were satisfactory; there were much richer oil-sands at greater depth than drills in the past had reached. Mr. Howell concluded his lecture with an account of the development of the Persian oil-fields.

BUSINESS OPPORTUNITIES.

ONE of the principals of a firm of exporters in the City is proceeding shortly to Roumania and other Near East countries, and will welcome any communications from firms having stocks in these countries with a view to selling these stocks. Advertiser will be in contact with all leading buyers and arrange the sales on a commission basis. Communicate in first instance with Box 177, THE NEAR EAST, 1, Devonshire Square, London, E.C.2.

AUSTIN

The Best Car Investment

The man who buys an Austin Twenty ensures a permanent value. Why? Because the design of the Austin is destined to be the standard for years to come. This claim is based on the opinions of well-known experts.

The Austin rate of output is increasing by leaps and bounds. The prompt man gets priority. Full particulars will be gladly supplied by your local distributors:

Messrs. Ed. Kirk & Co., London Garage 1, Rue Sultan Fouad, Alexandria. (Agency for cars and lorries in Egypt and the Soudan.)

Messrs. Strick, Scott & Co., Baghdad, Basrah, Mohammerah, Ahwas, Bushire, Hamadan. (Agency for our cars and are handling all our lines, in Mesopotamia and Persia.)

Messrs. Hassan Hoss & Co., Beyrouth. (Agency for Austin Cars and Commercial Vehicles in Syria.)

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—The position remains much the same. There are, so far, no signs of an increase in the demand for currants, and prices have tended to decline. Sultanias have also been in poor request, and rates are generally easier. Figs are still a neglected commodity, but the market is, however, fairly firm. Some good business has been done in dates at steady rates.

Sugar.—There has been no change in prices. West Indian crystallised has come to business at 62s. to 66s., and white Mauritius has been done at 71s. Home refined has been in active demand at the official rates.

Coffee.—Prices have declined slightly. Costa Rica at 128s. has dropped 2s., and Indian at 108s. has shed a like amount. The futures market ruled quieter and easier. Quotations are: March, 45s. 6d.; May, 46s. 6d.; July, 47s.; September, 48s.; December, 49s.

Oilcakes.—There has been a further decline in prices. Linseed cake at 17s. 6d. and cottonseed cake at 10s. 6d. are both 6d. down. Groundnut cake at 14s. has dropped 1s. 6d., while coconut cake has gained 6d., at 13s.

Oilseeds.—The market has shown a downward tendency. Indian linseed has lost 2s., at 20s. Rapeseed is lower, with Toria at 19s. 6d., and bold Ferozepore at 18s. 6d., a decline of 1s. and 1s. 6d. respectively.

Seed Oils.—Prices have declined in most cases. Linseed oil at 31s. has lost 2s. Rape oil at 53s. is unaltered. Refined cotton oil has shed 3s. to 40s., but the Egyptian variety is the same at 30s. Turpentine has lost 20s., at 80s.

CURRENT PRICES.

General Produce.—Bacon, 180s. cwt.; butter, 280s. cwt.; cheese, 170s. cwt.; eggs, 36s. per 120; chillies, 125s. cwt.; cloves (Zanzibar), 1s. 1½d. lb.; cocoa (Ceylon, good to fine), 92s. 6d. cwt.; coffee (Costa Rica), 116s. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 116s. cwt.; ginger (washed Cochín), 37s. 6d. cwt.; hams, 160s. cwt.; lard, 141s. 6d. cwt.; nutmegs, 10½d. lb., per 110's to 80's; pepper (Singapore, black), 4½d. lb.; pepper (Muntok white), 9d. lb.; raisins (Valencia), 133s. 6d. cwt.; sultanias (Smyrna), 130s. cwt.; currants (Vostizza), 90s. 6d. cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 2d. lb.; sago (small pearl), 25s. 6d. cwt.; rice (Rangoon No. 2), 16s. cwt.; rice (bran Rangoon), £6 15s. ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 3½d. lb.; wheat (Australian), 113s. qr.; wheat (English white), 82s. 6d. qr.

Metals.—Aluminium, £165 ton; bismuth, 12s. 6d. lb.; copper (standard), £70 12s. 6d. ton; copper (electro), £81 ton; gold bars, 109s. 3d. oz.; iron (No. 3 Cleveland), 215s. ton; hematite (mixed number), 240s. ton; lead (soft foreign), £23 12s. 6d. ton; manganese Poti, 2s. 5½d. unit; molybdenite, 65s. unit; nickel, £215 ton; platinum, 370s. oz.; plumbago, £37 10s. ton; quicksilver, £12 12s. 6d. bottle; silver bars, 39½d. lb.; spelter (G.O.B.), £24 15s. ton; tin (standard), £186 5s. ton; tin plate (20 by 14), 33s. box; wolfram, 16s. 3d. unit; zinc sheets, £41 10s. ton.

Chemicals.—Acids: Boric, 75s. cwt.; oxalic, 1s. 3½d. lb.; citric, 2s. 4½d. lb.; tartaric, 2s. 0½d. lb.; ammonia (sulphate), £25 8s. ton; arsenic (white powdered), £57 10s. ton; benzole (standard), 3s. 2½d. gallon; bleaching powder (35 per cent.), £21 ton; borax crystals, 38s. 6d. cwt.; cream of tartar, 170s. cwt. Potassium: Bichromate, 1s. 2½d. lb.; chlorate, 7d. lb.; caustic, £72 10s. ton; nitrate, £58 10s. ton; permanganate, 2s. 7½d. lb.; prussiate yellow, 1s. 5½d. lb.; sulphate (90 per cent.), £32 10s. ton; sodium: crystals, 150s. ton; bi-carbonate, £10 15s. ton; bi-chromate, 9½d. lb.; alkali (58 per cent.), £10 15s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £26 10s. ton; hyposulphite, £25 10s. ton; prussiate, 11½d. lb.; nitrate, £21 15s. ton; glycerine (crude, 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; sulphate of copper, £58 10s. ton; sulphate of iron, 150s. ton; lemon oil, 4s. 4½d. lb.; quinine, 3s. 8d. oz.; red lead, £44 ton; white dry lead, £49 5s. ton; white ground lead, £59 15s. ton.

Miscellaneous.—Cotton (American), 11.59d. lb.; cotton (Egyptian Sakellaridis), 21.00d. lb.; linseed (La Plata), £17 15s. ton; rape (Toria), £20 5s. ton; soya beans, £13 10s. ton; palm kernels, £22 2s. 6d. ton; Oils:—Linseed, £33 10s. ton; soya, £36 ton; cotton (crude), £31 ton; olive, 14s. gallon; ground nut, £42 10s. ton; palm, £43 5s. ton; rape (crude), £59 ton; petroleum, 2s. 3d. gallon; turpentine, 80s. cwt. Rubber: Plantation (No. 1 crêpe), 1s. 1½d. lb.; smoked sheet, 11½d. lb.; fine hard Para, 1s. 0½d. lb.

LANCASHIRE COTTON.

Rather More Inquiry.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Compared with the market last week, there has been a slight improvement in the tone, but difficulty is experienced between buyers and sellers in getting to close quarters for lots of any weight. Now and again there were indications of a rather improved inquiry, but until there is a larger offtake in piece goods there is no probability of operators being able to bring about any definite rise in prices. The financial outlook is not altogether bright, and some firms are feeling the position rather acutely, causing them to sell goods at cut prices. With regard to Egypt, the Levant, and Turkey, there has been an improved inquiry for printed and dyed goods, but many of the bids have not materialised on account of the unworkable character of the offers. Egyptian counts remain irregular, and spinners are full of complaints. Offers received would mean a big loss if worked, for buyers' prices are much below quotations, even when rates have been cut severely. Demand for the Continent shows a slight improvement. Varied reports have been given out in cloth circles, but on the whole only isolated sales have occurred. Calcutta is undoubtedly the most promising outlet of India, and it is mentioned that a large transaction has taken place in grey shirtings. Dhooties have been changing hands from day to day, but deals have only been of retail extent. The political news from India is still rather disturbing. Tentative bids have been about in greys and whites for China, but business has been patchy. It is hoped that an improvement will be registered after the Chinese New Year, in about a fortnight's time. For the other outlets, both East and West, there is no development to report. There are signs of an improvement in the home trade. Stocks of dear goods have recently been materially reduced, and there is every promise of business on a fresh basis. In American yarns for home use the tone has been very slow. Evidently manufacturers are well supplied, for there has been no disposition to purchase anything beyond lots. Prices have been easier and very irregular. With reference to export yarns, buying has been confined to sorting-up lots. Inquiry has been received for India, but as a rule the bids are entirely unworkable.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, in their report for the week ended January 27, state:—"There is little to report concerning the past week, except that it has been slightly worse than the previous one. On Tuesday last only one inquiry was forthcoming for Egyptian cotton, and when the cotton was produced it was returned as 'not wanted.' There is an increasing anxiety on the part of holders to liquidate their stocks, and certain spinners are re-offering some of their earlier purchases. Spinners, when they do have to come into the market, make bids which in better times would be laughed at, but which nowadays represent too often the utmost they are prepared to pay. Under present conditions, rather than miss business, some astonishingly low cuts have been accepted. Prices quoted for spot cotton show a wide range and the official quotations are most misleading. C.i.f. business is practically at a standstill. The small spot inquiry experienced has been about equally divided between Sakellaridis and Upper, prices on the whole displaying a marked downward tendency, the only exception being Extra Fine Sakellaridis, which holds its own fairly well, and is evidently becoming harder to find. Manchester reports have been consistently depressing until to-day, when 'a slightly better tone' was chronicled. Total sales, 900 bales, which includes 30 bales Sudan. Quotations show a decline of 1½d. per lb., with the exception of Extra Fine Sakellaridis, which is only reduced ½d. per lb.; F.G.F. Sakellaridis to-day, 21.00d."

The Earl of Bessborough, chairman of the Bank of Roumania, of the London, Brighton, and South Coast Railway, and other companies, left estate of the gross value of £272,890.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for November:—

Gum.

The exports of gum were 22,099 kilos. of bleached, of the value of £E1,273; 605,720 kilos. of hashab, of the value of £E29,021; and 373,623 kilos. of talh, of the value of £E8,470, via Port Sudan, and 6,321 kilos. of hashab, of the value of £E306, via Halfa.

Kordofan Province.—568 kantars were sold in El Obeid market during November, as against 6,768 kantars during the same month last year. The average price was £E1.185 per kantar of 100 rottles (45 kilos.). Arrivals from Mahud, 404 kantars, as against 8,489 last year. 41 kantars were sold at Um Ruaba at £E1 per kantar, as against 258 kantars last year. 135 kantars were sold at Rahad at 950 mms. per kantar, as against 477 kantars last year.

Sennar Province.—Four tons hashab and 123 tons talh gum were exported by rail during October.

Cotton.

Red Sea Province.—A November report states:—The cotton crop, unless anything unforeseen occurs, is expected to be double that of last year; but the outlook for the cultivators is not very bright owing to the very high wages paid for labour in cleaning the ground and sowing during the autumn. It is estimated that in a large majority of cases cultivators have already expended an average of £E5 a feddan.

Dura.

Kassala Province.—The market price of dura was £E1.320 mms. per ardeb of 300 rottles (135 kilos.) at Kassala and £E1.050 at Gedaref. The dura on the rain lands is being harvested, and a very heavy crop is certain over the whole province. The dura on the Gash Delta lands and Tebilol is not yet ripe, but reports as to the crop are most satisfactory. In Tebilol in particular vast areas not previously irrigated promise to give magnificent yields.

Sesame.

Sennar Province.—30 tons of sesame were exported by rail in October.

Kassala Province.—962 ardebs of sesame passed through the Gedaref market during the month. The average price at Gedaref during the month was PT.190.

Dates.

Halfa Province.—Practically the whole crop for the market has been sold. A few hundred ardebs are still in the hands of the small merchants. There is no real demand for dates, and no price in Halfa market at present. Date convoy of thirty-three and nineteen boats respectively arrived from the Southern districts at Abka on the 7th and 14th. Three boats were wrecked, one totalling 228 sacks.

Livestock, Hides and Skins.

Kassala Province.—91 cattle and 619 sheep were exported from Kassala and 819 cattle from Gedaref to the interior of the Sudan.

Red Sea Province.—72 sheep and 7 head of cattle were exported via Port Sudan during the month.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable, received from the Director-General of Commercial Intelligence, Calcutta, dated January 25:—During the week ended January 15 light beneficial rain has fallen in North-Western India. Crop prospects generally fair, but rain still urgently required in the Punjab, North-West Frontier Province, Central Provinces, and the United Provinces of Agra and Oudh, and parts of Bengal, Central India, the Bombay Deccan, Karnatak, and Madras.

Bombay cotton market firm. Fine M.G. Oomra March, Rs. 265. No present indication of interest in foreign piece-goods. Whites and prints exceptionally depressed. Indian purchasers awaiting more favourable home prices, freights, and exchange. Calcutta jute and gunny markets dull. No change in bank rates.

The construction of the following lines by the Burma Railways Company is sanctioned:—(1) Alon Saingbyin Railway, 28 miles; (2) Moulmein Railway—Moulmein to Ye, 69 miles (this will open up large saltfields); (3) Pynmana Taungdwingyi Railway, 66 miles (part of a cross connection between the Irrawaddy Valley and the main line).

Scarcity of coal declared in seven districts of Central Provinces on large scale. Emigration to Bengal coalfields and ironworks from Chattisgarh Division of Central Provinces. About 2,500 chests of Benares opium from Ghazipur Factory will be sold by Government at public auctions in Calcutta during 1921. It is anticipated that exportable surplus of Burma and Siam rice crops of 1921 will exceed estimates of 1,000,000 tons and 750,000 tons respectively.

Including movements of bullion and rupee paper, the total balance of trade against India for the nine months April 1 to December 31 is 29.00 lakhs of rupees, whereas the balance of trade for the corresponding period of 1919 was in favour of India by Rs. 64.20 lakhs.

The production of grain in Bessarabia in metric quintals during 1920 was as follows:—4,848,297 of wheat, 959,596 of rye, 5,766,079 of barley, 1,012,416 of oats, and 5,327,711 of maize.

The Tunisian Government has decided to allow the free exportation of wool to foreign countries until further notice.

COMPANY NOTES AND REPORTS.

London County Westminster and Parr's Bank.

The report for the year ended December 31 states that, after paying interest to customers and all charges, making provision for bad debts and contingencies, allowing £473,817 6s. 10d. for rebate on bills not due, the net profit amounts to £2,915,708 10s. 11d., which with £414,226 4s. 6d., the balance brought forward from 1919, leaves available the sum of £3,329,934 15s. 5d. This amount the directors have appropriated as follows:—Interim dividend of 10 per cent. (less income tax) paid in August last on the £20 shares (£5 paid up), £494,969 6s.; interim dividend of 6½ per cent. (less income tax) paid in August last on the £1 shares, £62,681 17s.; a further dividend of 10 per cent. (less income tax), making 20 per cent. for the year on the £20 shares (£5 paid up), £494,969 6s.; a further dividend of 6½ per cent. on the £1 shares (less income tax), making 12½ per cent. for the year, £62,681 17s.; to investment depreciation account £1,300,000; to bank premises account, £200,000; to reserve, £253,718; balance carried forward, £460,914 9s. 5d.—£3,329,934 15s. 5d.

The name of the bank's French auxiliary, the London County and Westminster Bank (Paris), Ltd., was changed to the London County Westminster and Parr's Foreign Bank, Ltd., on March 31, 1920, and on October 1 last the Spanish and Belgian business of the London County Westminster and Parr's Bank, Ltd., was transferred to this auxiliary, whose paid-up capital was then increased to £1,080,000 by calling up an additional £2 10s. per share on 92,000 shares. The Spanish and Belgian current and deposit accounts transferred to the Foreign Bank on September 30, 1920, amounted to £12,385,258. The Hon. Hugo Baring, one of the directors of this bank, has been appointed resident director of the Foreign Bank in Paris, and is charged with the general superintendence of the business in France. The businesses of Messrs. Beckett and Co., of Leeds and York, have been acquired as from January 1, 1921; and the Hon. William Gervase Beckett and the Hon. Rupert Evelyn Beckett, two of the partners, have been appointed additional directors of this bank. The partners in Messrs. Beckett and Co. at Leeds and York have applied for and been allotted 500,000 fully paid £1 shares at par, and the paid-up capital of the bank has thereby been raised to £9,003,718 as from January 1, 1921. Meeting, Head Office, 41, Lothbury, E.C.2. to-day.

The traffic receipts of the Suez Canal from January 15 to 21 amounted to 3,310,000 francs, against 2,560,000 francs for the corresponding period of last year.

A Reuter message states that three blocks in the business section of Athens (State of Georgia) have been destroyed by fire, and the loss is estimated at nearly £1,000,000.

United Kingdom firms desirous of shipping goods ready packed for transmission to the interior of Persia are reminded by H.M. Consul-General at Bushire that such packages should not exceed 200 lbs. in weight, and should be of the following dimensions:—34 ins. x 17 ins. x 11 ins.; 32 ins. x 15 ins. x 13 in., and so on. Two such packages make one mule load.

With the current issue of the *Manchester Guardian Commercial* is published a review of trade, industry, transport, and finance during the past year. The review contains a number of notable contributions by authoritative writers, among them articles on "The Economic World in 1920" by Professor E. Cannan and the "Dependent Position of British Dyes" by Professor H. E. Armstrong, also surveys of the various aspects of finance and commerce, and contributions from the paper's foreign correspondents. It is well produced, and admirably illustrated, and is in every way a notable production.

Applications for Terms invited.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

SALONIKA, December 31.

Heavy rains having fallen during the period of the sowings, it is considered that the approaching crop will be very poor. Quotations in drachmæ per oke are:—Wheat, 1.50; maize, 1; barley, 0.90.

There have been no transactions in cocoons. Stocks are the same as at October 31. The nominal price is 25-30 drachmæ per oke.

Stocks of white wool are exhausted. There are 8 to 10 thousand okes of black wool, the present price of which is 3½-4 drachmæ.

Stocks of opium are about eighteen to twenty thousand okes. There is no demand. The nominal quotation is 75-80 per oke.

There are no transactions in tobacco. The market is completely quiet.

There is no demand for raw skins. Stocks are estimated at 300-350 thousand pieces. The nominal quotation is 8-10 drachmæ per pair.

The price of cotton is falling. Smyrna is quoted at 4½-5½ drachmæ per oke, and American at 5½-6 drachmæ.

There are abundant supplies of sugar, and prices are falling. The present quotation is 3.70-4 drachmæ per oke.

AWARD OF KELVIN MEDAL.

At a meeting of the Award Committee, consisting of the presidents of the principal representative British engineering institutions, held in London on January 25, the first triennial award of the Kelvin Gold Medal was made to Dr. W. C. Unwin, F.R.S., he being, in the opinion of the committee, after their consideration of representations received from leading engineering bodies in all parts of the world, the most worthy to receive this recognition of pre-eminence in the branches of engineering with which Lord Kelvin's scientific work and researches were closely identified. The arrangements for the presentation of the medal will be announced shortly. The Kelvin Gold Medal was established in 1914 as part of a memorial to the late Lord Kelvin and in association with the window placed in Westminster Abbey in his memory by British and American engineers.

GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 14 to December 13, 1920:—

	Monopolies, tobacco, stamps, stamped paper, Naxos emery.	Piræus Customs.
Gross receipts Nov., 1920.....	Dr. 5,294,190.19	Dr. 4,255,134.15
Do. do. 1919.....	5,185,363.05	5,058,591.90
Difference between estimated & actual receipts for 11 months.....	1920 + 33,624,800.58	+ 42,600,227.87
	1919 + 18,963,998.13	+ 35,600,976.62

The North British Locomotive Company, Limited, Glasgow, has received orders for twenty-five 2-6-0 locomotives for the Bengal-Nagpur Railway, five metre-gauge locomotives for the South Indian Railway, and seven 2-8-2 engines for the Hulebagh Bannu Railway.

The Bank makes advances upon Bills of Lading and other export documents.

Drafts and telegraphic transfers issued.

Letters of credit granted.

Exchange and Merchandise operations effected.

ON CHANGE.

Tendency Again Irregular.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday Night.

It had been thought probable that the decisions of the Paris Conference would be reflected to a considerable extent in the market quotations. As a matter of fact, however, the news of the substantial indemnity that it had been decided to demand from Germany left the markets for the most part unmoved.

There was one significant exception, it is true—the gilt-edged group, which have been very firm in the last few days, stocks being up considerably in every case. This is, of course, due to the renewed proof of the close understanding between France and ourselves over the case of reparations.

Some of the Foreign Funds have been noticeably strong, in particular, Chinese and Japanese issues. Naturally, French loans have improved, while German Threes have relapsed on a decline in the mark.

Industrials have been generally dull, and during the week sellers have been decidedly in the predominance. Shipping securities have been quiet for the most part. Oils have been more or less featureless, but Rubbers exceptionally have been rather steady.

Near Eastern securities have on the whole been firmer. Egyptian Guaranteed 3 per cent. are 2 up at 62. Greek Guaranteed 2½ per cent. 1898 are again ¼ up at 58. Turkish Guaranteed 4 per cent. 1855 are, however, ¼ down at 67½.

Greek securities have been variable. The 5 per cent. 1881 Loan at 42 and 5 per cent. 1884 at 42 have both advanced a half point. The 5 per cent. 1890 Loan has lost ½ at 41, but Fundings have gained 1 point at 41. The 1910 Loan at 31 and the 1914 Loan at 39 are both unaltered. The 1902 Loan at 36 is 1 up.

Banks have been unsteady. Agricultural 3½ per cent. Bonds and the 3½ per cent. Guaranteed Bonds are both the same at 53 and 55 respectively. Imperial Ottoman Banks are 1 up at 8½, and National Bank of Egypt at 17½ has increased ¾. Land Banks have lost 5-32 at 4 21-32.

Land shares have declined almost all along the line. Beheras at 8½ have lost ¼, at which there were buyers, while the preference shares are unchanged at 2½. Anglo-Egyptian Land Allotments remain unaltered at 3½, while the Egyptian Consolidated Lands at 1s. 6d. have lost 3d. Delta Lands at 9s. 3d. have shed 3d., while Gharbieh Lands at 1½ are unchanged. New Egyptians have dropped 6d. to 23s., while Union Foncières at 3 have gained 5-32. Sudan Plantations have lost 1-16 at 3½.

Oils have all declined. Anglo-Egyptians have lost 7-16 at 2 7-16. Phoenix at 11s. 3d. have dropped 3d. Roumanian Consolidated have gone down 1s. 6d. to 12s., and Steaua Romana has lost 6d. at 17s.

Among Miscellaneous descriptions, Abyssinian Corporations are 3s. Alexandria Waters close at 7, at which there are buyers. Morums are quoted at 13s. 3d., and Egyptian Salt and Sodas at 30s. 6d.

The duty of two gold piastres per 100 kilos on coal imported into Turkey, which was temporarily suspended some months ago, is now again in force.

During December last 95,000 tons of petroleum were produced in Roumania, compared with 101,213 tons in November and 64,765 tons in the corresponding period of 1919. The total output for 1920 amounted to 1,034,086 tons, as against 920,410 tons in 1919. It is anticipated that this year's production will exceed last year's by a considerable amount.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Metals.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of metals required for the first six months of the financial year 1921-1922. February 7.

Ropes, Canvas, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of ropes, canvas, bunting, etc., required for the first six months of the financial year 1921-1922. February 10.

Uniforms and Boots.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of uniforms and boots for the coming summer. February 17.

Wood.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of wood required during six months from April 1, 1921. March 15.

Paints, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of paints, oils, tar, soap, etc., required during the first six months of the financial year 1921-1922. March 17.

Linen Duck.—The Egyptian War Department invites tenders for the supply of 2,750 yards of linen duck. February 15. (L.)

India.

Rails, Etc.—The Chief Engineer of the Baroda State Railways is desirous of obtaining quotations in sterling, prices to be either f.o.b. port in the United Kingdom or c.i.f. Bombay, for the following:—(1) 1,160 tons of rails, 34 lb. per yard, with 32 tons of fishplates, 10 tons of fish bolts, and 39 tons of spikes. British standards. (2) 1,800 tons of rails, 41½ lb. per yard, with 47 tons of fishplates, 12 tons of fish bolts, and 40 tons of spikes. British standards. (3) 450 tons of rails, 70 lb. per yard, 28 tons of fishplates, 5 tons of fish bolts, and 14 tons of spikes. Communications should be addressed to the Chief Engineer, Baroda State Railways, India, and sent under cover to H.M. Senior Trade Commissioner in India and Ceylon, P.O. Box 683, Allahabad Bank Buildings, 6, Royal Exchange Place, Calcutta, with the request that he will hand them to the addressee.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations
Alexandria	Piastres to £	97½	97½
Athens	Drachmae to £	25·22½	51·50-52·50
Belgrade	Dinars to £	25·22½	135-140
Bombay	Sterling to Rupee	24d.	1·4½-1·5½
Bucharest	Lei to £	25·22½	265-285
Calcutta	Sterling to Rupee..	24d.	1·4½-1·5½
Constantinople	Piastres to £	110	567-587
New York	Dollars to £	4·86½	3·85½-3·87½
Paris	Francs to £	25·22½	52·70-54·80
Prague	Kronen to £	24·02	270-290
Rome	Lire to £	25·22½	102½-105½
Sofia	Levas to £	25·22½	335
Teheran	Krans to £	50	40½
Vienna	Kronen to £	24·02	1,250-1,400
Warsaw	Marks to £	20·43	2,400-2,800

In some cases quotations are nominal.

The export of barley from Palestine is now permitted under licence.

A new branch of the Credit Foncier d'Algerie et de Tunisie was opened in Lyons, 6, Place St. Nizier, on February 1.

For the first half of 1920 agricultural machines to the value of nearly five million francs were imported into Tunisia, the majority of the machines being exported from Great Britain.

SHIPPING INTELLIGENCE.

ITALIAN SERVICE TO BATOUM.

One of the largest shipping companies in Italy has undertaken the establishment of a regular steamship service between Batoum and the ports of Italy, Great Britain, and Holland. At the beginning eight steamers will be utilised, and this number will later be increased to twelve.

INCREASED GREEK CUSTOMS RECEIPTS.

Receipts at the Piræus Custom House during the eleven months ended November 30 totalled 66,583,850 drachmæ, as compared with 48,829,333 drachmæ in the corresponding period of 1919, states the Commercial Secretary to H.M. Legation at Athens. This shows an increase of 17,754,517 drachmæ, or over 38 per cent.

The *Sphaira* states that the colossal importation of goods is no doubt due to the foresight of merchants, and that the President of the Athens Chamber of Commerce has said rightly that there will be no real need for any large importation of goods during 1921.

The great congestion of merchandise in Piræus warehouses has rendered urgent the question of warehouse accommodation for the storing of the goods arriving daily, and the final solution of this matter is now being considered by the authorities.

REPLANNING OF SALONIKA POSTPONED.

It is understood that the present Greek Government has definitely abandoned any idea of proceeding with the plans for the reconstruction of Salonika. For many months it has been obvious that the financial position of Greece would not enable her to undertake the enormous expenditure that would be involved, and the reported decision will therefore occasion no surprise.

The plans for the reconstruction of Salonika included a considerable extension of the docks, together with the development of the railway and warehouses. It was proposed, also, to construct New Union Railway stations, both at the east end and the west end of the city, and connected with an electric underground railway system between the two terminals. Electric lighting and power stations were also to be erected, while the plans further included a main drainage system and a new water supply.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Scindia, for Bombay (also taking cargo for Karachi and coast ports) (Liverpool, February 7).

Anchor-Brocklebank Line.—S.s. Maihar, for Port Said, Colombo, Madras and Calcutta (leaves London February 8); s.s. Malakand, for Calcutta (Birkenhead, February 9); s.s. Makalla, for Port Said, Colombo, Madras and Calcutta (leaves London February 19); s.s. Manaar, for Calcutta (Liverpool, February 23); s.s. Mahsud, for Port Said, Colombo, Madras and Calcutta (leaves London March 5); s.s. Manipur, for Calcutta (Birkenhead, March 9).

Bibby Line.—S.s. Herefordshire, for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 16).

Clan Line.—S.s. Clan Mackenzie, for Colombo, Madras and Calcutta (Birkenhead, February 10).

Cunard Line.—S.s. Cypria, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constanti-

nople, Bourgas, Varna, Constantza, and Sulina (Glasgow, February 19); s.s. Tyria, for Gibraltar, Patras, Leghorn, Naples, Palermo, Messina, etc. (Liverpool, February 24).

Ellerman Line.—S.s. Polo, for Patras, Piræus, Syra, Volo, Salonika, Smyrna and Constantinople (Liverpool, February 5); s.s. City of Palermo, for Gibraltar, Malta and Alexandria (Liverpool, February 12).

Ellerman's City Line.—S.s. City of York, for Calcutta (Birkenhead, February 14); s.s. City of London, for Bombay and Karachi (Birkenhead, February 14).

Ellerman's Hall Line.—S.s. City of London, for Bombay, Karachi, and the Punjab (Liverpool, February 10).

Glen Line.—S.s. Gleniffer, for Port Said, Singapore, etc. (Middlesborough, February 18); s.s. Glenogle, for Port Said, Singapore, etc. (London, February 24); s.s. Glen-gyle, for Port Said, Singapore, etc. (London, March 3).

Golden Star Line.—S.s. Mediterranean Star, for Genoa, Naples, Alexandria, and Piræus (leaves Marseilles February 8).

Harrison Line.—S.s. Patrician, for Calcutta (Liverpool, February 12); s.s. Defender, for Calcutta (Liverpool, February 19); s.s. Merchant, for Port Said, Port Sudan, Aden, Mombasa, Zanzibar, etc. (Glasgow, February 10, and Birkenhead, February 17); s.s. Electrician, for Calcutta (Liverpool, February 26).

Henderson Line.—S.s. Arracan (freight only), for Port Said and Rangoon (Birkenhead, February 9); s.s. Henzada, for Port Said and Rangoon (Birkenhead, February 23).

Holt Line.—S.s. Antiochus, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, February 10, and Birkenhead, February 17); s.s. Theseus, for Port Said, Port Swettenham, Singapore, etc. (Glasgow, February 10); s.s. Elsinor, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, February 10); s.s. Pyrrhus, for Port Said, Port Swettenham, Singapore, etc. (Swansea, February 17).

Johnston Line.—S.s. Venice, for Galatz and Braila (Liverpool, February 12); s.s. Pomaron, for Galatz and Braila (Liverpool, February 23); s.s. Incemore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, February 19).

Moss Line.—S.s. Amarna, for Gibraltar, Algiers, Malta, and Alexandria, accepting cargo for Moroccan, Algerian, Cyprus and Syrian coast ports (Liverpool, February 5); s.s. Limoges, for Gibraltar, Malta, Piræus, Syra, Smyrna, Salonika, Constantinople, etc. (Liverpool, February 19).

Papayanni Line.—S.s. Austrian, for Algiers, Malta, Piræus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 12).

P. and O. Line.—S.s. Novara, for Colombo, Madras, and Calcutta (London, February 5); s.s. China, for Bombay (London, February 11); s.s. Nellore, for Colombo, Madras, and Calcutta (London, February 11); s.s. Kalyan, for Bombay (London, February 18); s.s. Soudan, for Bombay (London, February 18); s.s. Somali, for Colombo, Madras, and Calcutta (London, February 25).

P. and O. British India Line.—S.s. Merkara, for Colombo, Madras, and Calcutta (London, February 4); s.s. Tremere, for Bombay and Karachi (London, February 5); s.s. Lena, for Bombay and Karachi (London, February 19); s.s. Morvada, for Colombo, Madras, and Calcutta (London, February 25).

Prince Line.—S.s. Syrian Prince, for Malta and Alexandria, also taking cargo for Syrian coast and Cyprus ports (Leith, February 10, and Liverpool, February 20); s.s. Soldier Prince, for Tunis, Malta, and Alexandria, also taking cargo for Syrian coast and Cyprus ports (Manchester, February 15).

NOTES OF THE WEEK.

The Allied Conference in London.

For the second time the Allied Powers are afforded an opportunity of effecting a settlement of the Near Eastern question. The arrangements made at Paris offered no settlement, as events have proved; for it has been found impossible to enforce the terms of the Treaty of Sèvres. In their Eastern policy there ought to be only one goal before all the Allies, whether they be Great Powers or Near Eastern States, and that goal is Peace in the Near East. Every proposed settlement should be examined in the light of that single aim. Hitherto it has been entirely forgotten. Great Britain supported a Greater Greece, because the latter was held to be best for British interests. A Greater Greece there must be one day, but it will be in the interests of neither Great Britain nor Greece herself, unless it is compatible with peace in South-Eastern Europe. The events of the last few months have shown conclusively that Greece may realise her utmost ambitions and obtain no advantage, if peace is not secured. It would be an ideal solution, if for "the blasting rule of the Turk" could be substituted a humane and enlightened administration that satisfied all requirements. But it is too early yet to expect Greece, with her domestic politics in the condition in which they are, to fill that rôle.

Greece and Smyrna.

The subjection of any considerable part of Turkey to Greece means for the present at best an armed and precarious peace. If the Allied Powers were prepared to enforce their will upon the Turks by the conquest of Anatolia, the position would be different. Greece single-handed may bring about the collapse of the Nationalist movement as a result of economic pressure, but it would be only a question of time before she had to defend by military means her hold on Asia Minor. The alternative is not the restoration of the "blasting rule" of the Turks, as some people seem to imagine, for it was mainly the failure of the Great Powers to perform their part that made Turkey what she was. Turkish rule may never become ideal, but, if the Allies are so minded, it can be made to conform at least with the standard that obtains in the Near East, and there need never be any repetition of the massacres that have been carried out with impunity in the past. It is a profound mistake to suppose that the sanctity of the Treaty of Sèvres is based on the presence of the Greek army in Asia Minor. The Greek occupation of Smyrna, ordered, as it was, by the Supreme Council, is responsible for the breakdown of the Turkish settlement.

If instead of Greek troops had been sent a corporal's guard from the British Army, there would have been no fighting, Smyrna would have enjoyed autonomy to-day under a Council largely Greek, and Turkey would have been chastened, peaceful, and knowing for the first time something of the advantages of good government. The solution of the present difficulty would, therefore, seem to lie in the creation of an autonomous Smyrna.

The New Greek Government.

Comment in the English daily Press on Greek affairs continues to be characterised by extreme partisanship, which is not helpful to the restoration of good relations between the two countries. It is to be hoped that the new Prime Minister, M. Kalogeropoulos, who will presumably be at the head of the delegation to the Allied Conference, will be able to satisfy the British and French Governments of the good faith of the present régime in Greece. If M. Gounaris resents being a *persona ingrata* to the Allies, he has only himself to blame for the fact; and if it entails any injustice to him he will have opportunity in his capacity as Minister to correct wrong impressions. In the meantime he has taken the first step in refraining from trying to force himself on the Allied Governments at the Conference.

Bulgaria and the Conference.

The ostrich in real life does not hide its head in the sand, and there is no reason why the Allies should do so. They will, however, share the reputation enjoyed by that maligned bird if they imagine that they can invite Greeks and Turks to London, in order to discuss the Treaty of Sèvres, without raising hopes in other quarters that the remainder of the Near Eastern settlement is also to come up for revision. Bulgaria has behaved in a perfectly correct manner since the Armistice, and it is to be expected that she will maintain her present attitude; but it requires little knowledge of Balkan politics to realise that if no statement on the subject is made by the Allies there will be a tendency in Bulgaria to attribute the failure to profit by the reconsideration of the Treaty of Sèvres to the shortcomings of M. Stambolisky. The Bulgarians will argue that they are being penalised for their exemplary behaviour, while Turkish intransigence gains its reward, and they will seek to vent their displeasure on the men who urged them to keep quiet. If the Allies value political peace and stability where it can be found they will be at pains to meet the Bulgarian line of argument. It is open to them to say that the London Conference is not the proper authority, and that Bulgaria, as a member of the League of Nations, has her right of

appeal to the constituted tribunal under Article XIX. of the Covenant, which provides that "the Assembly may from time to time advise the reconsideration of treaties which have become inapplicable and the consideration of international conditions whose continuance might endanger the peace of the world." On the other hand, the Allies may possibly have clearer views as to what makes or does not make for peace in the Balkans than they had at the time of drafting the Treaty of Neuilly, and it would be a pity if an affected anxiety for consistency or *amour propre* at this late stage prevented them from boldly profiting by their mistakes in order to build the peace and prosperity of the Near East on a lasting foundation. In any case they owe it to all concerned to forestall any trouble by a candid declaration on an important point.

The Resignation of Lord Milner.

The lively and sincere regret with which the news of Lord Milner's resignation from the Colonial Office has been received in all quarters where any knowledge prevails of the invaluable work that he has performed both in that office and as Secretary of State for War would be enhanced, if it were thought that the loss to the Government would be permanent. On all sides, however, it is hoped that after an adequate rest he will again be available for national work. Whatever the future has in store for Egypt, Lord Milner's name will remain associated with an outstanding piece of constructive statesmanship in regard to the Agreement which he has left as his solution of the Egyptian question. We could have wished that the treaty between Egypt and Great Britain advocated by him had already been ratified by the two countries, but it is satisfactory to know that, if the debate is not unduly delayed, it will not be deprived of his reasoned advocacy in its passage through Parliament. In spite of a division of opinion in the Government regarding the Agreement, it would seem impossible that the terms should now be rejected or even seriously challenged on this side.

The Palestine Mandate.

What appears to be the official text of the Draft Mandate for Palestine has now been published in the Press. The document contains little or nothing that calls for notice at this stage, unless it be the official recognition of the Zionist Organisation as "an appropriate Jewish agency . . . for the purpose of advising and co-operating in the administration of Palestine in such economic, social, and other matters as may affect the establishment of the Jewish National Home," in accordance with the decision of the Allied Powers. In some Jewish circles disappointment is expressed that the Mandate does not expressly promise the fulfilment of what the *Jewish Chronicle* describes as the Zionist aspiration: the establishment in Palestine of a Commonwealth as Jewish as England is English; but upon the whole there can be very little doubt that the execution of the terms of the Mandate will almost certainly lead up to that end. In view of the Arab attitude towards the realisation of the Zionist aspiration as defined above, it would have been unwise to embody any statement of the kind apparently desired by the *Jewish Chronicle*; but the steady influx of Jews into Palestine and the peculiar talent displayed by their race for gaining what they want will go far towards the accomplishment of the Zionist ideal. Meanwhile, the Administration is afforded the opportunity of showing the Arabs that their fears are groundless.

Persia: The Mejliss and the Agreement.

The opening of the Persian Mejliss, which was to take place on February 8, is reported to have been delayed by the refusal of a number of deputies to attend, owing to which it will be impossible to secure a quorum until other representatives arrive in Teheran. The absence of the deputies referred to is, we are told, their way of protesting against the Anglo-Persian Agreement. We should have thought that a much more effective form of protest would have been for the deputies to attend the Mejliss and oppose the proposal to ratify the Agreement with all the eloquence at their command; in which case their countrymen—and, per-

haps, the outside world—might have been enlightened as to the real reasons why any Persian should wish to see the Agreement "scrapped." As we may conclude that the Mejliss has other business to transact besides rejecting, or accepting, the Agreement, the absentees are rendering their country a very poor service by prolonging still further the suspension of that popular government which the Persian democrats have professed so much anxiety to see renewed. While these politicians have been playing their own game in their own way—and we do not pretend to understand it—a smart little engagement has taken place in North-West Persia between General Ironside's force and Russian troops. The latter lost two machine-guns and twenty-seven prisoners (eighteen unwounded) besides twelve killed, while our forces sustained no casualties. It would be of interest to learn on what grounds Moscow would justify this attack by its "regular" forces.

The Indian Memorial at Brighton.

Some people are saying that the erection of war memorials is being overdone, but we do not think that even the most censorious critic would cavil at the edifice which was unveiled last week by the Prince of Wales on the Downs near Brighton, to mark the spot where funeral rites were paid to the Hindu and Sikh soldiers who died there in hospital. The dispatch of Indian troops to France in 1914 was a great adventure towards that union of East and West which, in spite of many obstacles, goes slowly forward, and it will be aptly commemorated by the high dome of white marble which stands so near some of the prehistoric monuments of our own race. A companion memorial to Moslem soldiers is being erected at an appropriate spot, and all men of goodwill must echo the Prince's aspiration that the result may be to strengthen the ties subsisting between India and Great Britain.

The Duke of Connaught in Calcutta.

The second stage of the Duke of Connaught's progress through India has been successfully accomplished, and we can well believe that the formal inauguration of the Bengal Legislature appealed to the imagination of a race in which that quality has reached such a high development. The Duke's speech was, however, concerned largely with practical questions. The great task to be attempted by the legislators is the making of citizens, and Bengal, even more than other parts of India, has to face complex and costly problems of education and sanitation, and at the same time to foster such developments of agriculture and industries that the increasing wealth of the people may be able to support the burden of ever-growing expenditure on the solution of those problems. For some time to come, the main difficulties confronting the newly-chosen Ministers will be financial. There is so much to be done, and so little money with which to do it, that progress must be slow, and most desirable schemes may have to be postponed until the expansion of the revenue makes their undertaking possible. We do not envy the Ministers, for almost from the outset they will have to refuse many more favours than they grant, but we can cordially wish them success in rising to their new responsibilities.

Oriental Dualism.

Alongside of the particulars of the Duke's progress, the cables continue to bring us items which serve to remind us that the East is the home of dualism, that eternal conflict of the powers of good and evil which dominates so much of Oriental thought. While the Duke urges education, students are being called on to leave their schools and colleges; and while he lays stress on economic development, agriculture and industry alike are being impeded by the efforts of agitators who think nothing of the welfare of the people in comparison with their own sentiments and aspirations. On one side we have the constructive ideal of a nation advancing gradually, earning more money and applying it to worthier uses, developing at least some measure of political sagacity, and establishing a more reasonable social order; on the other, we have the call to give up the little which has been gained, and to fall back into

poverty, apathy and bondage. The issue is fairly joined, and while we may have no doubts as to the ultimate result, it would be a grave mistake to underrate the forces which the powers of darkness can employ to delay its realisation.

THE WEEK AT HOME.

LONDON, Monday evening.

Political and Metropolitan Fogs.

The political fog lifted as the metropolitan fog became more dense last week. The Paris decision as to the German indemnity was popular; Mr. Lloyd George made a speech which gently ridiculed his opponents, and the theory of a General Election in May was dropped, even by those who started it. But it had its uses. The violent protests with which the proposition was received by the Independent Liberals showed that they had no doubts as to the results of an election; and the Labour men, although less vocal, were little less perturbed. Mr. Garvin alone still advocates a General Election in the *Observer*, on the ground that it would purge the Coalition. But the Coalition seems in such good health at the moment that it rather objects to experiments in preventive medicine. It recollects the patient who "was well, would be better, took physic, and died."

The first part of the session promises to be extraordinarily dull. The idea is to discuss House of Lords reform—in other words, Mr. Asquith's ten years' old "debt of honour which brooked no delay." But nobody seems interested in it. The House of Lords frankly does not want it; although "the more intelligent Peers," as the old Radicals used to say, admit that the Upper House is far too large. But the reformers are always trying to advocate the introduction of extraneous elements—colonial statesmen, eminent Nonconformist ministers, distinguished literary men, or experts of one kind or another; and between one and another the public gets bored, and forgets all about reform. I believe that Lord Bryce once produced an admirable report on the subject, but as most people are constitutionally incapable of reading that eminent statesman's writings, very few persons know exactly what he advocated.

It does not require a very keen political nose to predict that the House of Commons will soon relegate the reform of the Lords to the cold storage safe, and get busy on anti-dumping and licensing, which will give both Government and Opposition some opportunity for strategy, *tu quoques*, and other things that politicians delight in. Broadly speaking, the Coalition Liberals want licensing reform and the Unionists want tariff reform, and each wants its colleague to swallow the other pill first. The Opposition profess to think that this is the little rift within the lute, but they are not quite so hopeful as they sound.

Exit E.P.D.

Mr. Austen Chamberlain has broken through the convention that Budget secrets must never be revealed in advance, and has announced that the Excess Profits Duty will disappear in the next Finance Bill. Further, he says that nothing is to take its place; which, if one understands him rightly, should indicate that the much talked-of tax on profits has not proved very successful.

The reason for abolishing E.P.D. is not, as is pretended in some quarters, that Mr. Chamberlain has at last listened to the arguments of business men, or woken up from a dream, or abandoned a life-long principle. It is simply the practical consideration that there are no longer sufficient excess profits to tax; and where losses have been made on the year's trading, the Treasury might have to hand something back—a horrible thought to any Government. E.P.D., in short, has done its bit; that extraordinary tax, the child of Mr. McKenna and the Fabian Society, dies unlamented at the age of seven after having been more blessed and cursed than any other impost within living memory.

Theoretically, it was an admirable tax, since only those had to pay it who were making money; and in reality those paid most who made it with the least effort. But in practice it was not so good. It penalised new enterprise at the expense of the old-fashioned busi-

ness, and therefore operated as a bonus to conservative methods; and human nature being what it is, it led to enormous extravagance—bonuses to clerks and travellers, and vast sums thrown away on propaganda. One or two societies and organisations will probably begin to feel the draught as soon as E.P.D. dies. But the removal of the duty will also help the fall of prices, since in the long run a great part of E.P.D. is paid by the public.

The only people who are likely to grumble are professional men, who have made no excess profits, have borne their full share of the burden of increased prices, and who see no hope of any reduction of income-tax. But the gradual fall in prices may slowly bring balm even to these wounded souls.

The Restoration of Canterbury.

After Westminster and St. Paul's comes Canterbury. Dean Wace has this week issued an appeal for help towards the restoration of the metropolitan cathedral—in this instance the sum required is relatively small, a mere £15,000. I cannot think there will be any difficulty in obtaining it. At Westminster Abbey £150,000 out of the £250,000 required has already come in, but the fund now mounts rather slowly. It is probable that one or two other cathedrals may have to make similar appeals in the near future.

Tom Grimes.

The death of Tom, the hero of "The Water Babies," cannot be allowed to pass unnoticed. Alderman J. Seward, of Wokingham, who died last week, began learning his living at the age of six as a chimney-sweep's apprentice. He had to climb the chimneys, often being "persuaded" by straw lighted beneath him and pins stuck into his feet. One of his tasks was to sweep the chimneys at Eversley Rectory, where Charles Kingsley lived—and it was Kingsley's mingled pity and indignation at the sight which caused him to publish "The Water Babies" in 1863—the book which helped to bring about the abolition of this cruel practice.

The Keats Centenary.

On February 23 the centenary of the death of Keats will be celebrated. Probably the usual speeches will be made, and the usual articles will be written; there is a type of mind that takes naturally to these anniversary functions. The best interpreter of Keats to-day is Robert Bridges, whose little-known study of the poet a few years back was masterly; but the Poet-Laureate shrouds himself in such impenetrable obscurity that his will probably be the last name we shall hear of in connection with the centenary.

The Vital Statistics.

We have heard so much about "a C3 nation" this last year or two that we have all been inclined to hang our heads at our own degeneracy, and perhaps to feel our pulses and look at our tongues, too, to see how we were getting on. Happily the Registrar-General's figures for 1920, which have just been published, are sufficiently reassuring to convince the most confirmed valetudinarian.

The birth-rate for 1920 is the highest for the past ten years—the reiterated demand to "produce more" has evidently been taken literally by a large section of the population. The death-rate and the infantile mortality rate are both the lowest ever recorded. The birth-rate is in fact double the death-rate, but that astonishing figure is not likely to be maintained, owing

to the prevalence of unemployment, which always checks the birth-rate in the following year. The death-rate has fallen from 21.4 per 1,000 in 1871-80 to 12.4 in 1920, a steady fall almost every year; if the infantile mortality rate (which has fallen from 149 to 80 in the same period) were to fall further to 50, as should not be impossible, and certain diseases be more successfully tackled, the death-rate might eventually fall to about 10 in the thousand.

The lesson of these figures is important. While Dean Inge and many others are always telling us that life gets less worth living every year, it is evident that the bulk of the population shows no sign of agreeing with them; for it is hardly credible that our span of life should lengthen in proportion as life gets less worth having. It will be recollected that in "Jude the Obscure," Mr. Hardy makes somebody speak of "the coming universal desire not to live." The prediction seems a little far-fetched in these highly-vitalised days.

Incidentally, a dentist tells me that a still further improvement in health, and consequently in longevity, could be obtained if everybody would make up his mind to have his teeth overhauled twice a year. In his view, teeth were meant to help one to live, "but most men dig their graves with their teeth." Perhaps the day will come when Tennyson will be revised:—

"Sound teeth are more than coronets,
And healthy gums than Norman blood."

The Railway Trouble.

Mr. J. H. Thomas has made a very frank speech about the financial trouble on the railways. He says it is a question between another 25 per cent. on the fares, or lower wages. Most of us are so hard up that we should be sorry to reduce any man's wages, but it is quite preposterous to talk of another 25 per cent. on fares. The public is already cutting its travelling as much as it can; a third addition would reduce traffic to essential business, and even that would be heavily hampered.

With all due respect to Mr. Thomas and Sir Eric Geddes, I venture to suggest that these two eminent men are wrong. What is wanted is not a reduction of wages, but a reduction of staff. Drivers, firemen, and signalmen are not too well paid, but there are too many porters and inspectors and such supernumeraries, all of whom have had large increases. It is the excess of these men which is overweighing the railway finances.

The Week's Books.

There is a great deal of interest in "Henry Scott Holland, Memoir and Letters" (Murray), edited by Stephen Paget. The author of "Lux Mundi" and the founder of the Christian Social Union did a great deal of good work for the Church in his day; his sermons—which were rather too rhetorical and emotional for the classic taste—drew crowds to St. Paul's, and he was a tower of strength to Dean Gregory in reviving the activities of the cathedral. He was fatally fluent, and his pen ran away with him; he was not really a thinker, but a cataract of words.

But his remarks were often shrewd. Take the following, for instance: "John Bull is fat, and the fat man's day is past. As soon as we pass from the grassy Midlands, and cover the wider horizons of Empire, the fat men have all disappeared. They have dropped into the abyss. In their place is the long, lean Australian, so curiously American in the type that he runs to. He is tall and compact, bony and muscular. And your African colonist follows suit. Our boys in the ranches or on the veldt cannot afford to wear an ounce of flesh beyond the decent draping of their bones. Look at India. Did anyone ever see a stout Indian official?"

"Essays in Critical Realism" (Macmillan) is published as "a co-operative study of the problem of knowledge"; it contains papers by various professors of philosophy at American Universities, including Mr. Santayana and Mr. C. A. Strong, whose *chef d'œuvre*, "The Origin of Consciousness," was issued two years ago. The book is quite extraordinarily difficult and for me, at least, essentially uninteresting; and this is, I think, very largely because the distinguished professors write in a jargon of their own and take no pains to make it intelligible. An exception should be made for Professor Santayana's paper on "Three Proofs of Realism." It is at once the shortest and the most intelligible in the volume.

A small volume on "Child Psychology," by Vilhelm Rasmussen, reaches me from the new publishing house of Gyldendal, a firm which appears, from the list of publications on the cover, to be endeavouring to popularise Scandinavian literature in this country. Modern Scandinavia is prolific of books, and of good ones, so I imagine that Gyldendal's will only have to make a judicious selection in order to succeed. They are more likely to be successful, one thinks, than was the effort to popularise Russian literature, over which several publishers burnt their fingers rather badly.

A word should be given to "Spiritualism and the New Psychology" (Arnold), the anonymous author of which gives rationalistic explanations of the supernatural phenomena. The book will annoy mediums, crystal-gazers, and the "intense" tribe, but many of its pages are convincing.

Only very determined readers will attack "The Nature of Existence" (Cambridge University Press) by Dr. J. M. McTaggart; and, unfortunately for those who are interested in the problems of which he treats, this is only the first volume, on the very last page of which the author announces that the second and concluding volume will not be published for some years. As the first is largely taken with definitions, and the second will contain the proofs, it seems a pity that they were not published both together. In the second volume Mr. McTaggart proposes to prove that time is unreal, and some curiosity will be felt as to his method of doing so, in view of the fact that in the present introduction he rejects the Hegelian doctrine that cause and effect are identical.

The professional German view of the war at sea is naturally of considerable interest to British naval men. Admiral Tirpitz and others have published their impressions, but the most convincing enemy writer so far is Commander Georg von Hase, first gunnery officer on the Derfflinger at Jutland. In his "Kiel and Jutland" (Skeffington) he sums up as follows:—"Jellicoe acted perfectly rightly in disengaging his fleet at nightfall, and so skilfully leading his squadron away during the night that our destroyer flotillas, systematically searching the outlying areas of the scene of battle, did not find them. And Jellicoe also acted perfectly rightly from a strategic point of view in not reopening the battle on June 1. By not attacking on June 1 our fleet heading for the German minefields and home ports, Jellicoe kept uninterrupted the mastery of the seas. Why should he, in this strategic game of chess, choose a mutual sacrifice of pieces when his position was such that the mating of the enemy was bound to follow? Had Jellicoe sought a decision off Horn Reef on June 1 there is no doubt that the English fleet would have had to cede its place as the strongest fleet in the world to America."

OCELLUS.

MACEDONIA

A PLEA FOR THE PRIMITIVE

By A. GOFF and HUGH A. FAWCETT, M.R.C.S. With Drawings in colour, pencil and line by Hugh A. Fawcett. Demy 8vo. 21s. net.

"The authors have dealt very thoroughly with the interior of a country which has been little opened up to the ordinary traveller. . . . The book is a mine of information."—*Outlook*.

"Really deserves reading for the very detailed account that they contrive to give, not only of country life, but of the industries, primitive and modern, the art and the population of the cities."—*Westminster Gazette*.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, January 17.

The Sultan's Tour.

The Sultan is meeting with great success in his Upper Egypt tour. So far he has visited Beni-Suef, Minia, and Assiut, and at all these places, as also at the various intermediate points of interest at which he stopped, he had a very warm reception. To-day the Ministers are leaving for Assiut in order to attend a Council of Ministers which will be held under the presidency of His Highness. This is the first instance on record of a Cabinet Council being held in the Provinces.

The Political Situation.

Since my last letter we have had a telegram from Zaghoul Pasha, stating that he had never intended to insist on the abolition of the Protectorate before the negotiations were entered upon, but that he had always been quite prepared to engage in these negotiations, provided he had an assurance that the Protectorate would be abolished after they had been concluded. This declaration has created somewhat of a stir in local political circles, as can well be imagined, and even the Delegation organ is somewhat outspoken in its criticism of its leader. There can be no dispute as to Zaghoul Pasha having originally said quite clearly that he would not entertain the idea of negotiating a Treaty on the lines of the Memorandum unless the "reservations" were agreed to, and particularly the abolition of the Protectorate was accepted; and his adversaries and even his supporters are bringing forward his previous statements to disprove his present declaration and indicate that he has not been consistent in his attitude.

It is perfectly clear that Zaghoul Pasha has lost even further ground through his latest tactical move, but it is only to-day that the real reason for this move has become disclosed. A few days before his telegram, messages were received from London stating that the *Daily Herald* declared that the British Cabinet was in complete agreement with the Milner proposals. This morning, however, *Al Mokattam* publishes a telegram to the effect that the statement of the *Daily Herald* is officially denied; that the Cabinet is still discussing many knotty points arising out of the Milner proposals, including the abolition of the Protectorate; and that it is in constant communication with Zaghoul Pasha.

A Possible Change.

From this it would appear that the latter, realising that his communications with the British Cabinet, about which he had so far not informed his supporters in Egypt, might do him harm if news thereof reached this country, decided to send the telegram in question so as to provide himself with some sort of defence when the fact leaked out. However, far from this precautionary move assisting him, it looks very much as if it will have the opposite result; for the net effect of the combination of his telegram, which amounted to a climb-down, and this official statement from London, which shows that he has been acting behind the back of his supporters in Egypt, cannot fail to be to strengthen the hands of his personal enemies, whose ranks are swelling, and to discredit him still more with his own adherents. It is, of course, somewhat early to be able exactly to gauge local opinion, since the telegram was only published this morning; but from conversations I have had there seems a growing conviction that Zaghoul Pasha is again making a fool of himself; and it would not be surprising if in the circumstances the local political situation underwent a sudden change.

The Willcocks-Kennedy Libel Action.

The Willcocks-Kennedy libel action was again mentioned in the Supreme Consular Court this morning. Reference was again made to the application that the two cases should be held together, and the Judge stated that unless some stronger motive were brought forward he would not agree to hear the cases separately. Colonel Kennedy is at present ill in hospital, and it is quite possible that he will not be able to stand his trial

on the 24th, in which event the case of Sir William Willcocks will be taken alone.

CAIRO, January 25.

Lord Allenby's Sudan Visit.

The Sultan has now reached Dendera in his Upper Egypt tour, which continues to be very successful. Another Council of Ministers will be held this week at Luxor, whither the Ministers are all proceeding by special train on Wednesday. Lord Allenby is leaving on Thursday for the Sudan. As may be remembered, he was to have left at the beginning of the month, but his departure was postponed owing to certain discussions which were in progress between the Residency and the Foreign Office. These have evidently now been concluded, but owing to the postponement and the imminent re-assembly of Parliament, his visit to the Sudan will be very curtailed, and he will be absent only about a fortnight from Cairo.

The Irrigation Libel Action.

The hearing of the Willcocks-Kennedy libel action began yesterday morning at the Supreme Consular Court. Medical evidence was called to prove that Colonel Kennedy was too ill to come up for trial; in fact, Dr. Beddoe, who is attending him, certified that he would probably not be well enough for another six weeks. So only the case against Sir William Willcocks was taken. The charges against the latter are that he has published in two pamphlets a defamatory libel against Sir Murdoch MacDonald, and that he has also been guilty of sedition in the terms of the Order in Council of 1910, which was extended to Egypt in 1915. Mr. Preston is representing the Crown, and Mr. Silley is defending Sir William Willcocks. The former occupied the first morning with his opening speech and the rest of the day was taken up with the hearing of certain minor witnesses. The chief witness for the prosecution, Sir Murdoch MacDonald, appeared to-day, and his cross-examination will start to-morrow. It is expected that the trial will last several days. The case has not aroused as much interest as might have been expected, and it is remarkable that the vernacular Press, especially *Al Mokattam*, is devoting far more space to an account of the trial than the local English Press is doing.

The Political Situation.

The political situation has undergone an interesting development. Most of the members of the Delegation are returning to Egypt, and are, in fact, due here on Wednesday. Only Zaghoul remains in Paris, together with three members of the Delegation, one of whom always lives in Paris, and all of whom are remaining for purely private reasons. The news of their return has aroused considerable comment, and as it is not clear from the explanatory telegram sent by the returning Egyptians exactly what their intentions are, their arrival is keenly awaited. At the same time, the better informed Egyptians are of opinion that the much talked-of but oft contradicted "split" is now an undeniable fact, and that the members returning, who are the more important of the whole Delegation, have at last realised the folly of following the path traced by Zaghoul Pasha and the extreme desirability from every point of view of adopting a more reasonable attitude, and obtaining the best possible terms from Great Britain.

Had Zaghoul been of one mind with his colleagues, were the Delegation generally agreed to adhere to the extreme demands that he has put forward, the obvious course would have been, it is pointed out, for him to have accompanied his colleagues back to Egypt, there to lend by his presence his full support for whatever line of action the Delegation might propose to pursue. The fact that he is remaining in Paris is, therefore, regarded as significant, and as confirming the "split"; and further weight is lent to this theory by the fact that Zaghoul has just sent a telegram calling upon the Egyptian

nation to retain its confidence in him in and turn a deaf ear to any proposals to negotiate with the British Government without a definite acceptance of his "reservations." It is recalled that when the "four" came to Egypt in September to submit the Milner proposals to the nation, they were preceded by a telegram from Zaghloul putting the whole matter in a light calculated to render the mission of his colleagues exceedingly difficult; and it is believed that his latest telegram is but another instance of his peculiar tactics, which have throughout been dictated by obstinacy and a consideration of his own position rather than by the patriotic motives of which he always talks so grandiloquently.

PORT SAID, January 25.

Boy Scouts in Egypt.

Sir Robert and Lady Baden-Powell arrived last week by the P. and O. s.s. Narkunda. As soon as possible they came ashore and went to the Casino Palace Hotel Gardens, where representative patrols of Girl Guides and Boy Scouts were drawn up for their inspection. From the British community there were contingents from Alexandria, Cairo, and Heliopolis, while the Greek community furnished patrols from Cairo and Port Said, and the Italians one from Port Said. The Girl Guides were represented by the newly-formed Swallow Patrol from Port Said, who were specially noticed by Lady Baden-Powell, who wore her uniform as Chief of the Girl Guides. She expressed herself as particularly pleased to find some Girl Guides at the first port they had touched at. After the official inspection, Sir Robert and Lady Baden-Powell spent some time chatting with the Guides and Scouts. Afterwards they went to lunch at the Casino Palace Hotel, where the luncheon party included Mr. Abdy, the Commissioner of the Scout movement in Cairo, Miss Broatch, the Captain of the Girl Guides in Port Said, and Miss Stewart, who has been assisting Miss Broatch, as she has had considerable experience in England. There were also the various scoutmasters accompanying the boys, and other guests.

On returning to the Narkunda the Boy Scouts from Cairo and Alexandria formed a guard of honour at the Custom House jetty for Sir Robert and Lady Baden-Powell, whose visit was very greatly appreciated, and has done much for the encouragement of the movement in this country. After returning on board Lady Baden-Powell sent a letter to Miss Broatch, expressing her pleasure at all she had seen, and enclosing an autographed portrait of herself to be hung in the club-room of the Girl Guides at Port Said, which Miss Broatch has provided and furnished for their use.

SUDAN.

KHARTOUM, January 16, 1921.

The Political Situation.

The final decision of the British Cabinet on the Milner Mission's report and its recommendations is being anxiously awaited by the various communities in the country. The Sudan native, though naturally loyal to England, has been subjected latterly to a great deal of propaganda from Egypt, and is inclined to fret at the delay in determining the future status of the Sudan. Left to himself, he would have plumped whole-heartedly for separation from Egypt, and an all-British form of government. For many years his complaint has been that the various Government departmental clerical staffs were almost invariably recruited from Syrians, Egyptians, and Copts, and that he was never given a chance to show his capabilities in similar posts. During the 1919 troubles in Egypt the Sudani would readily have driven the Egyptians from the country had he been allowed to do so, and have filled vacant posts with his compatriots. Now, however, thanks to the long delay and frequent interruption in negotiations, and to the steady and persistent trickle of Nationalist propaganda that has permeated the country, his feelings are mixed, and he would welcome a decision in favour of Egyptian rule. The three great religious sheikhs are anti-Egyptian, and have launched out into journalism, publishing an entirely Arabic newspaper which should do a lot to counteract the efforts of the Nationalist party in Egypt. Since the reoccupation of the Sudan, no Egyptian official has ever had any administrative control except in a distinctly subordinate capacity. The Egyptian has invariably regarded the Sudani as an "abd," or slave, and went to the length of marking the transport wagons of Egyptian battalions with the battalion number followed by "Orta abiad" (white battalion), as opposed to the

seven battalions of black troops recruited exclusively in the Sudan. In view of the difference in race, thought, habits, and characteristics of the Sudani, as compared with the Egyptians, it seems a thousand pities that the inhabitants of this vast potential country should be allowed through utter weariness of the suspense to come under the influence of the Nationalist party.

The members of the Hellenic community, which is numerically the strongest of the foreign bodies in the country, are almost to a man ardent Venizelists and pro-British in their sentiments, and as such would gladly welcome an independent Sudan under entirely British rule. The sympathies of the British officials who have devoted their lives to the development of the country can readily be imagined.

The Housing Question.

The burning question of the hour is how and where to find living accommodation. The European population of Khartoum is increasing by leaps and bounds. The postponed development of the country during the time of war has resulted in an influx of new residents within the past eighteen months; and as practically no non-Government construction has been possible, owing to the lack of labour and the high prices of materials, the situation has now become somewhat serious.

It was hoped that the Grand Hotel would have been opened this winter, and that the situation would have been materially improved thereby; but, alas! owing to the depredations of white ants and the impossibility of making good deferred maintenance, this once favoured resort of pre-war tourists is still uninhabitable. The axiom that man shall not live alone has borne fruit, inasmuch as nearly everyone who has been on home leave has returned with a wife, and with the usual insouciance of the long resident of the country has left the all-important housing problem to be solved on his arrival in Khartoum. The natural consequence has been a fierce inter-urban campaign of house-grabbing, with wailing and gnashing of teeth on the part of those unfortunates who have been unsuccessful in their endeavours. The two big Government bachelor quarters—yclept "Peabody Buildings" and the "Yellow Peril"—have been filled to overflowing—each set of quarters two and three deep—and the inhabitants of these hives of industry are reported to be in full sympathy with the views of the proverbial sardine. The lot of the married couple is far from happy. The intensive competition for the lease of any roofed edifice has resulted in a rise of rents, and as the cost of food and servants' wages have risen in proportion, they are faced with the choice of living in semi-starvation in a ramshackle building or certain bankruptcy in the one available hotel. The Government have made a half-hearted attempt to cope with the situation by putting up a series of houses for their lower-graded officials. From common "gup" one gathers that many a so-called senior would gladly resign the somewhat nebulous privileges of a higher grade to become one of the favoured few eligible for residence in one of the new houses.

It would appear that the need of encouragement to local enterprise is strongly indicated, and a suggestion has been mooted that building materials be allowed a remission of Customs import duty and preferential rates on the railways, and freedom from the house-tax for, say, five years. Contractors complain that they are mulcted to such an extent over the Traders' Tax that it pays them to do as little constructional work as possible.

The High Commissioner.

The postponement of the High Commissioner's visit to the Sudan has occasioned much disappointment. Great preparations had been made, and rumour has it that Staff work was so good that a supply of iced sodas would be available at every halting place. The fortunate individual whose lot does not lie in these latitudes will never realise the pleasure of the sunset "peg." One's whole outlook on life depends on whether the soda is properly iced or not, and the man who can provide a soda of the right temperature in the midst of a howling waste is deserving of quite a superior class of the O.B.E. It is to be hoped that the High Commissioner will be able to visit us in the near future.

The natives love a display of pomp and ceremonial, and fully appreciate the idea of His Majesty's Representative taking a personal interest in their country and surroundings.

The Egyptian Army.

A Divisional review arranged in honour of Lord Allenby was duly held on January 14 by the Governor-General, the original orders standing good, with the exception that the British troops did not take part. This is the first ceremonial parade of all arms since January, 1914, and was the occasion of very great interest on the part of all residents. The Sudani squadron of cavalry and the three Arab mounted infantry companies were particularly good. The march-past was very effective, the Sudan Sapper Section and the new Arab machine-gun batteries making their first appearance in review. The only Sudanese battalion fully represented was the 14th, mostly composed of young and very promising-looking recruits, for the greater part Dinkas and Nuers. The parade was a striking example of what can be done with the material available in spite of the small number of British officers concerned. I am of opinion that an Egyptian or Sudanese battalion entirely officered by British officers, with two British N. C. O.'s per double company, would result in a priceless combination, which would compare very favourably with any colonial or protectorate troops in the Empire. The Egyptian officer of the expedition days is now, alas! non-existent, and the new subalterns appear to be imbued with Nationalist and Bolshevik ideas, to the detriment of regimental discipline. When one's adjutant arrives late on parade, improperly dressed, and attempts to argue the point with the Second-in-Command, what can one do?

ROUMANIA.

BUCHAREST, January 23.

Coming Bye-Elections.

Five bye-elections will take place during the early days of February, one being for a seat in the Senate for the Ilfov district, which includes Bucharest. Although these bye-elections will have no material effect on the political situation, they will nevertheless show how far the people are satisfied with the present Government. The three principal political parties, i.e., the People's Party (General Averescu), the Liberals, and the Federalists, are carrying on very active campaigns for their respective candidates, and especially in Bucharest, where the following candidates have been chosen:—The People's Party will be represented by M. Dimitri Pompei, a University Professor and a great scholar; the Federalists are backing M. D. Dobrescu, who has been recently re-elected as the Dean of the Bar; while the Liberals have selected M. Vintila Bratianu, ex-Minister, and after his brother, M. Joan I. C. Bratianu, the most important man in the Liberal party. He is also reputed to be a capable financier. As all the candidates are weighty men, a very close fight is expected.

A Council of Ministers.

The other evening a Council of Ministers was held under the chairmanship of General Averescu. The agrarian question was discussed, especially the price the peasant will have to pay for the allotted land, but no definite decision could be reached owing to the various opinions on this vital point. General Rascanu, the Minister for War, who has recently returned from inspecting the Roumanian troops in Bessarabia, explained to the Council the precautionary measures which have been taken on the frontier. He emphasised that the Dniester Bank is quite safe, and that the moral of the troops is excellent. He further stated that on the other side of the river there are a few divisions of Bolshevik troops, of which no division has more than 2,000 men on a distance of 40-50 kilometres. He was of the opinion that the presence of these troops on the Roumanian frontier is due to the fact that they can obtain more food in that part of Ukraina. Secondly, he thought that this weak military cordon on the Dniester completes the ring with which the Bolsheviks have closed in Ukraina, where they wish to replace the national policy

of the Ukrainians by a Soviet régime. He concluded by stating that he had a firm conviction that the Bolsheviks do not intend to, and cannot, attack the Roumanians, being fully occupied in checking the revolts in Ukraina.

The Government has decided to close the Dniester frontier throughout its length, for goods as well as for passenger traffic. Martial law is in force over a stretch of 30 kilometres wide all along the Dniester.

Political Feeling in Transylvania.

Lately the Hungarian newspapers have started a campaign to induce the Magyar population of Transylvania to change their political attitude towards Greater Roumania. They are urging them to abandon their passive state by forming a distinctive political group, similar to that of the Saxons of Transylvania. During the last few days this Press campaign has materialised by several meetings taking place throughout the province. Of these the most important took place at Cluj last Sunday, when eighty representatives of various Hungarian corporations, associations, and institutions were present. At this meeting M. Joseph Sandor presided, who, in his opening address, referred to the Treaty of Trianon and the Convention of Alba-Julia, which ensure a relative independence to the minorities. He further declared that he is of the opinion that the Magyar population of Transylvania must take an active part in the political contest of the country.

The Royal Weddings.

The wedding of Princess Elisabeth with the Crown Prince of Greece has been fixed for (O. S.) February 12, and will take place at the Orthodox Cathedral at 11 in the morning. The Queen of the Hellenes and her youngest daughter are expected to arrive during the first days of February to be present at the wedding. They will remain in Bucharest until Queen Marie and (probably) King Ferdinand proceed to Athens to attend the wedding of Prince Carol to Princess Helena of Greece.

After the celebration of the wedding of Princess Elisabeth, a family lunch will take place at the Cotroceni Palace, and in the evening a gala dinner, followed by a ball, will be given at the Royal Palace.

Immediately after the wedding the young couple will proceed to Constantza and then on a Greek cruiser to Athens, where a brilliant reception is prepared for them.

The wedding of Prince Carol will be celebrated in the first days of March in the Cathedral at Athens. The great preparations for these two events have stopped all Royal audiences, until they are over. The Duke of Sparta is taking advantage of his visit to Bucharest to get into closer touch with the different Roumanian political leaders, and has called on every one of them separately.

Miscellaneous.

The Roumanian-Czecho-Slovakian Commission for establishing the frontier in the North of Transylvania has begun its work at Sighetul-Maramuresului.

The Hungarian Mission, which will eventually form the Hungarian Legation in Bucharest when diplomatic relations are resumed, arrived yesterday. This Mission is headed by Count Andrei de Horty.

At the last Ministers' Council it was decided that the Bill for forming a Minorities Department should be abandoned in view of the opposition it has met, even amongst the members of the Government's party.

GREECE.

ATHENS, January 25.

The New Year.

On the occasion of the Orthodox New Year a special thanksgiving service was held at the Cathedral in Athens, which was attended by the King, the Queen, the Royal Princes and Princesses, the Council of Ministers, and the high state and army officials. The Crown Prince of Roumania was also present. After the ceremony their Majesties, surrounded by the entire Royal Family, received in the Throne Room the mem-

BANQUE D'EXPORTATION PRIV. DU ROYAUME DE SERBIE.

(Royal priv. Serbian Bank for Exportation.)

BELGRADE, SERBIA.

Capital, Paid-up, 5,000,000 Dinars

The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

Also:—

THE "UNIVERSAL" CIGARETTE MACHINE.

THE "S.A." DOUBLE CIRCULAR KNIFE AND TOOL GRINDER.

"S.M." DOUBLE AUTOMATIC CIRCULAR KNIFE GRINDING MACHINE.

AUTOMATIC CIGARETTE-WASTE STRIPPING MACHINE.

**United Cigarette
Machine Co., Inc.**
80, Coleman Street,
LONDON, England.

bers of the Government and other officials, who wished them a happy New Year.

None of the Great Powers' representatives was present at the ceremony in the Cathedral, although they had been officially invited.

A telegram conveying his wishes to the army in Asia Minor was despatched by King Constantine to the Commander-in-Chief, General Papoulas.

Inspection of Restaurants.

Quite suddenly, and without giving any warning, the Police sanitary authorities inspected the restaurants in the capital, with very unsatisfactory results from the restaurant-keepers' and the clients' point of view. The majority of these places were found to be in a shocking condition as far as cleanliness was concerned. In certain of the so-called high-class restaurants of the city the kitchen utensils were found to be in a deplorable state, and many hundreds of cracked glasses, cups, and plates were destroyed by the sanitary authorities. Out of 325 restaurants inspected only 139 were found more or less clean, while 33 were simply filthy.

High Price of Foodstuffs.

A delegation of workmen has submitted a memorandum to the Prime Minister, protesting against the high price of foodstuffs. The workmen demand that energetic measures should be taken immediately by the Government to put a stop to the continuous rise of prices. They also propose the creation of committees in which the working class itself should be represented, and which will pay frequent visits to the food markets and regulate both wholesale and retail prices. The Premier assured the delegation that the Government was determined to deal very severely with those speculating in foodstuffs, and that he would be only too glad to assist the working class in its fight against the high cost of living. M. Rallis added that a delegation would be appointed forthwith, which, in co-operation with the workmen's representatives, would go thoroughly into the whole matter.

Epiphany Day.

On January 6 the usual annual ceremony of the benediction of the sea took place at Piræus in the presence of the King, the Princes, Prince Carol of Roumania, and the Council of Ministers. The Metropolitan of Athens officiated. All the ships in the port were beflagged, and when the Holy Cross was thrown into the sea twenty-one salvoes were fired by the warships.

Miscellaneous News.

On being asked by journalists whether the alliance with Serbia, which expires shortly, will be renewed, M. Rallis replied in the affirmative.

Prince Paul, King Constantine's youngest son, who has just been given the rank of naval sub-lieutenant, took the usual oath of allegiance in the presence of the Royal Family, the Minister of Marine, and the Metropolitan of Athens.

M. Venizelos has dispatched a telegram from Nice to the *Estia* requesting that journal to thank on his behalf all those who had telegraphed their wishes to him on the occasion of his name-day (December 15, O.S.).

CYPRUS.

Nicosia, January 12.

Wanted: A Political Truce.

It is to be hoped that there will now be a truce to island "politics," after a period of agitation and uncertainty, which had become more and more wearisome to many besides those of the British and Ottoman communities, and a source of constant irritation and anxiety to the latter. The warning recently given to a member of the late mission may have a salutary effect on those who may have contemplated further inflammatory orations. Nothing could be more inopportune and ill-advised than a continuation of a fruitless campaign at present. The best friends of the late deputies are those who have been advising them to recognise the situation in its true bearings, which they have so far shown little disposition to do.

The election of members of the Legislative Council will be the next event of interest. For the real advantage of that body and of the island, it would be well if, among the elect could be counted a few men of more independent

views and character than some have shown themselves to be in late years—men who would have the courage of their uncoloured opinion on important local questions, and who would represent the genuine feelings and needs of the bulk of the people, especially the rural classes, and thus infuse new blood into the debates. Hitherto proceedings have been too often marked and marred by a painful waste of time over futile bickerings, petty oppositions, and a monotonous repetition of stale political declarations.

The next session should, in any case, be of no little importance. If the machinery of government is henceforth to run smoothly, there must be honest co-operation on the part of the native element, and there should be an end to the irregular intrusion of political manifestation into the course of business.

Leaving aside the flickering interest taken in the Unionist sentiment, it may be remarked that there is a highly intelligent body of opinion which is really anxious to see what will be the next move on the part of British authority, in view of late events, of the now definite establishment of British rule, and of the too unfruitful annals of the occupation. Those, not a few, who consider that British trusteeship, much as it has done, has left many things undone, and has failed to satisfy the call for progressive development, now hope that the High Commissioner, when he returns to Cyprus, presumably after consultation to this end, will inaugurate a new era. Native opinion has not regarded favourably some of the appointments and transfers of some officials in higher posts. It asks for greater efficiency and new departures in some of the more important Government departments.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE SOUTH PERSIA RIFLES.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In looking over some old editions of *THE NEAR EAST* I noticed you had referred several times to "the South Persian Rifles," and as a late officer in the force should like to point out that you made a slight mistake in referring to it as you did.

It should properly be called the South *Persia* Rifles, not *Persian*.

The force is composed of Persians, so the mistake is easily made.—I am, etc.,

Government and Islam in Arica.

Pride of place is given to an article under the above title by Professor J. du Plessis in the *Muslim World* of January. He examines the whole question of the inhibition by colonial governments of Christian missions from entering certain spheres. First, he traces the history of European opinion upon Islam, how during the last half-century it has changed from unqualified antagonism to admiration, and how the spirit of toleration towards both the creed and the practices of Islam has spread. But, says the writer, in this toleration can be found an injustice. He says:—

"The toleration which modern defenders of Mohammedanism demand means practically its recognition as the *only* religion suitable to races in a certain stage of evolution, and the consequent exclusion of Christianity and Christian missions from areas in which Islam is held to have established a prior claim."

And:—

"It is the attitude of the British Government that gives rise to greatest uneasiness and dissatisfaction. In Egypt, as we have seen, that attitude is frankly pro-Islam. Religious education in the Government schools is solely Koranic, and compulsory for Moslem children, while Coptic children, if they succeed in securing any religious instruction at all, have to pay extra for the privilege. The Gordon College at Khartum is

a purely Mohammedan institution, where the Koran is taught at the expense of the State.

He then inspects and disposes of the arguments by which the Government policy is upheld, these arguments being:— (1) That Christian missions in Mohammedan areas are a menace to peace and quiet; (2) that Christian schools and Christian missions generally exercise a denationalising influence on the native and "destroy racial identity" (Morel); and (3) that experience proves that Islam is better adapted to the African than Christianity. He concludes his article by urging that the policy of excluding Christian missions from Mohammedan territory should be reversed.

Christian missionary statesmen call for another and more generous course of action on these grounds: the policy of restriction is unjust; it is dishonourable; and it is dangerous not merely to the interests of Christianity, but to the prestige of the Government.

It is an unjust policy, I say. With every desire to be fair and impartial, it discriminates in favour of Islam and adversely to Christianity. The *vis inertiae* of Mohammedanism exercises a numbing influence over the European official. Against the dead weight of Islam, against that passive resistance to Western ideas which the Mohammedan offers, he strives in vain. Presently he, too, learns to say *Kismet*, and begins to defer to Moslem prejudice; and this deference ends, as it must, in positive injustice towards Christianity and Christian missionary effort.

The policy of exclusion is dishonourable. However much the Government may desire to camouflage the fact, it is born of fear. Islam, from Morocco to Malaysia, presents a united front, and constitutes a political factor of enormous potency. Dr. Carl Peters, formerly Governor of German East Africa, said, very incautiously, in 1906: "There is one factor which might fall on our side of the balance, and in case of a world war might be made useful to us; that factor is Islam. And if German policy is bold enough, it can fashion the dynamite to blow into the air the rule of the Western Powers from Morocco to Calcutta." From the feeling of dread arose the policy of conciliation and excessive deference. The sleeping dog of Islam must be let lie, or, if half awake, be humoured or pacified with sops of "neutrality" and "non-interference." But the policy is none the less a pusillanimous and dishonourable one. The Great War has disproved Dr. Peter's prophecy and disappointed German hopes: Islam did not combine to "blow into the air the rule of Western Powers."

The policy of exclusion is dangerous. It compromises Christianity and it compromises Christian governments. Islam, it must be remembered, is at the same time a religion and a political and social system, and the Mohammedan cannot think of these two aspects as divorced. As little can he imagine a European culture which is not at the same time a religious force, or a Christian religion which does not imply and convey a Christian culture. The Government policy of excluding Christianity from, while introducing European rule and Western influence into, Moslem communities, is calculated not only seriously to compromise the claims of Christianity, but to bring government itself into disrepute with thoughtful Mohammedans.

MUSICAL NOTES.

M. Moriz Rosenthal.

The process by which musical reputations are made is to me a mysterious one, and I do not profess to understand how M. Moriz Rosenthal, the Polish pianist, who for long has been acclaimed as one of the world's artists, has built his up. His only recital this season was at the Queen's Hall on February 2, and it was not sufficient to show that he is, as many aver, in the class of, say, Busoni or Hoffmann. Two of his characteristics, peculiar to himself and often very beautiful, it is worth mentioning: a most sparing use of the sustaining pedal, and the scrupulous preservation of pure tone. Technically and intellectually, in fact, he is an utter purist; and it is with both the felicities and trivialities of this type that he always plays. To take first what were his finest things: Three Chopin studies, and the Chant Polonais in G. The studies were marvellously beautiful, more lovely than ever before I have heard them, and it was not merely superb technique, but a perfect sense of tone-values that here informed his playing. Again, in his own "Papillons," and in Liadoff's "Musical Box" (an encore), his finish was divine. In such pieces he has, I imagine, no equal. But for his Beethoven (the "Appassionata") I did not care; it was suave and didactic; and a nocturne and ballade of Chopin were vilely sentimental. To drag out Chopin melodies is about the cruellest act one can do to a critic; and it was a crowning mercy that immediately after the ballade in F minor came the inspired playing of the studies. Schumann's "Carnaval" was rhythmically very fine, but the conception seemed superficial, and here especially the lack of the sustaining pedal was adversely felt.

M. Sergei Koussevitsky.

Among interpreters of Scriabin's orchestral compositions there is no one in this country to equal Mr. Albert Coates, but after the concert at the Queen's Hall on February 2, it was obvious that the Russian composer really needs a Russian conductor, and that M. Koussevitsky in this rôle is absolutely the right man. M. Koussevitsky left the "Poem of Ecstasy" until the end of his programme, and it was not until this that I knew him to be a great artist. His reading of Beethoven's fifth symphony was interesting chiefly in details; the first movement was patchy, the second taken far too slowly to be restful, though the last was certainly sent home with glorious drive. Debussy's two nocturnes—"Nuages" and "Fetes"—were efficiently but not originally or distinguishedly done; but the Scriabin was simply tremendous. The disentangling of its texture, which at times is extremely intricate, was most masterfully, yet unobtrusively, accomplished; and one felt all through that the conductor's psychological perception was just and certain. In this the orchestra, which was the Royal Albert Hall, played magnificently.

The Harp.

Until January 31, when Miss Gwendolen Mason gave at the Wigmore Hall a concert of Harp with Ensemble Music, I had never been through a whole evening of harp entertainment; and the misfortune will never occur again. Whether through knowledge or ignorance worthy composers have shunned the harp as a solo instrument I do not know; but I do know that not all Miss Mason's pretty skill could induce "Le Jardin Mouillé" of Jacques de la Présle to sound anything but bespattered banality, and "Spring Fancies No. I." of Hamilton Harty made one think of anything but love. Other trying moments were caused by two songs of Mr. Philip Sainton, which, set for voice, string quartet, flute, clarinet, and harp, were generously given their first performance by Mr. John Coates. From so fine sponsors as were the artists taking part, and also from the words of the songs, one expected some successful atmospherical writing; but both in the intentions and in the achievements of the composer there seemed to be a distressingly sure absence of subtlety. Later on Mr. Coates abundantly compensated for this disappointment with his singing of some old songs with harp accompaniment; but though this instrument was exquisitely apt for such a thing as Thomas Morley's "It was a Lover and His Lass" (which was monstrously well sung), it was bare in Dvorak's "Songs My Mother Taught Me." The finest instrumental things of the evening were Goossens' "Suite for Flute, Violin and Harp"—clever writing with a seemingly intuitive sense of effect—and Ravel's Introduction and Allegro for Harp with accompaniment for String Quartet, Flute and Clarinet. In this Ravel has made a beautifully discreet use of the harp, which gives to the soft colours of the piece a mystic kind of limpid beauty.

To dilate on Miss Mason's playing is surely unnecessary, her skill is so well-known. **ANDANTE.**

It is reported from Delhi that the Government of India has issued a stirring appeal to the Indian public to assist Poland in fighting the typhus epidemic.

NEAR EAST BOOKSHELF.

- I.—"THE JEWS IN EGYPT AND IN PALESTINE UNDER THE FATIMID CALIPHS." By Jacob Mann, M.A. D.Lit. (London.) Vol. I. (Oxford University Press. 12s. 6d. net.)
- II.—"FLAMES ON THE BOSPHORUS." By Luigi Motta. (London: Odhams Press, Ltd. 7s. 6d. net.)

I.—RECOVERED FRAGMENTS OF JEWISH COMMUNAL HISTORY.

The work, "The Jews in Egypt and in Palestine under the Fatimid Caliphs," is an attempt to reconstruct the communal life of the Jews in these lands, from 969 A.D. to 1204 A.D. from collections of documents, letters, poems, and compositions, in Hebrew and Arabic, which were found in the "lumber rooms" of some ancient synagogues in Cairo. These Genizah MSS., since their value was first recognised, have been acquired by eager collectors, and are now scattered in various museums and private collections. Dr. Jacob Mann, by a patient and exhaustive research, has now endeavoured to piece certain of these scattered fragments into a continuous record, hanging the whole upon a thin thread of Egyptian History of the period of the Fatimid Caliphs. The actual text of the documents which form the materials of the narrative are to be published as a second volume. It is clear that this work, when completed, will prove a careful research of prime importance to historians of the Arab and Jewish history, covering as it does a period of considerable obscurity. For the general reader, however, there is much important information.

We have interesting sidelights upon the little Jewish community of Jerusalem and the college of study there under successive Geonim and other learned officials. The community was poor and largely dependent—as has been the same community for centuries in later times—upon outside help; they were very jealous of their special right of fixing the calendar annually by the time of the appearance of the new moon of Nisan—a prerogative of the Jerusalem Academy hitherto unknown. In comparison with the Jewish Academy of Baghdad, they had little claim to eminence in study—"So far no literary work of standing produced by the School in the Holy Land has been preserved." A section of the community which grew up in course of time was known as "the mourners for Zion." They led an ascetic life, mourning and fasting over the destruction of the Temple, and praying for its restoration and the advent of the Messiah—as have done many of their successors in Jerusalem in later years.

The heterodox Karaites (who still survive as a very small community in the Holy City) were then powerful in Syria, Palestine, and Egypt, and chronic antagonism existed between the sects. It is interesting to read that after Omar took Palestine the Jews "bought Mount Olivet as public property of the Jewish community, whereon services were held indeed for centuries on the festivals, and especially during Hoshana Rabba, in the presence of numerous pilgrims from all over the Diaspora."

In connection with this it is noted that Jewish tradition, recorded in writing centuries earlier than the Arab one, states that when Omar came it was not Bishop Sophronius but the Jews who showed him the site of the ruined temple, which they undertook to keep clean. There is no mention of the later Arab tradition that the site was a heap of refuse.

The existence at this time of a number of *Nesim* who claimed royal descent from King David (and had pedigrees to establish their claims) is interesting. They were allowed considerable privileges, were treated with honour, and allowed to confer titles of honour on whom they would.

The picture we get of this period is one full of political troubles, local rebellions—such as that of 1024-9—in which the Jews suffered greatly, culminating in the coming of the Crusaders, when those Jews who had stayed in the Holy City were massacred. In 1016 and in 1033 all Palestine was visited by earthquakes, which not only greatly damaged Ramleh, the Arab capital of Palestine—one-third of the city being destroyed—but damaged also the walls of Jerusalem, the Dome of the Rock, and "many villages were swallowed up by the ground." The 1033 earthquake wrought havoc through the whole length of Palestine.

Another sidelight on these unsettled times occurs in the many references to the redemption, which had to be made by the community, of the Jewish travellers captured by the Saracen pirates at sea. These unfortunate captives were sent to the coasts of Palestine in Greek ships, whose owners required for their ransom an equivalent in the currency of the present day of £50 per head. It was a heavy tax upon the community, but a very urgent one, as if unransomed, the captives were killed.

It will be seen in these passing references that there is much in this volume which enables us to picture life both

among Jews and Arabs in the centuries immediately preceding and following the coming of the Crusades, and the method of presentation by means of personal correspondence gives the reader a very intimate impression of life among Jews and Moslems in those dark days.

E. W. G. M.

II.—BLOOD AND FIRE.

This historical novel has been translated from Italian by Miss Helen Zimmern, and it is introduced by Mr. Le Queux with a foreword so enthusiastic that it leads us to expect something quite startlingly above the average. There is no doubt that the period of the Turkish conquests in the fifteenth century is a good one to choose as the setting for a stirring romance, and the author has thought of an attractive device in telling us of the adventures of Ruggero, Count of San Giuliano and his sister Imperia, whose castle in Meloria has been destroyed by Saracens, and who, when the story begins, are sailing the Mediterranean in their ship the *Andromeda*, which is all that is left to them. They are taken prisoner by Selim, a stepbrother of Mohammed II., and then fall into the hands of Mohammed himself, just before he succeeds in taking Constantinople. It is not until after the fall of the city that they make their final escape out to sea, taking with them to safety Selim's aged mother, Agira, and Wenulda, Mohammed's beautiful sister, who loves Ruggero. Selim, who has grown to love Imperia, gives his life to help them to escape. We cannot help thinking that Mr. Le Queux's evident enjoyment of the story has led him to overestimate its merits. It can truly be described as a tale of peril and adventure, but the frequency and almost rhythmic regularity with which the characters, either singly or in pairs, are brought to the verge of death and rescued in the nick of time, end by being distinctly monotonous—and, although a story which has for its central episode the sack of Constantinople could hardly avoid being full of bloodshed, the amount of fighting which the author has managed to pack into it is almost incredible.

No one expects the historical novel to be accurate in every detail either as to dates or the exact actions of the people in it who did really live; but here the effect of the last chapter, where Selim achieves his "supreme vengeance" by blowing up the galley which contains his tyrannical stepbrother, is rather marred by the fact that Mohammed died nearly thirty years later, having in the meanwhile conquered Serbia and Greece, besides other parts of the Near East.

Possibly in the original Italian an atmosphere suggestive of the place and time is more vividly conveyed; we only catch it at intervals in this translation, which must, we feel, fail to do justice to the novel. Sometimes, indeed, the badly-sustained effort to achieve a mediæval dignity in the conversations and the general floweriness of the language make it difficult to take the book seriously.

PERSONAL AND GENERAL.

TO-DAY.

February 10 (New Style).
January 28 (Old Style).
Jumada II., 1, 1339 A.H. of the Moslem Calendar.
Adar 2, 5681, of the Jewish Calendar.

Viscount Furness left London last week for the Continent.

Sir Robert and Lady Baden-Powell have left Bombay for Delhi.

The Duc de Vendôme has postponed his departure from Tunis for Algiers.

M. Venizelos is the guest of Sir Arthur Crossfield at The House at Highgate.

Viscountess Astor, M.P., will return to London on February 14 from Algiers.

Sir Alfred Mond has left Jerusalem for Egypt after a fortnight's visit to Palestine.

The Hon. Mrs. Henry Rimington-Wilson has arrived at the Hotel St. George, Algiers.

Sir Gerald and Lady Ryan left London yesterday for Algiers, and will return early in March.

The Danish Minister and Mme. de Grevenkop-Castenskiöld will remain in Tunis until the end of this month.

M. Yovan Yovanovitch, the Yugoslav Consul-General in London, has taken up his offices at 81, Knightsbridge.

The Marquess of Graham has left for Algiers, and will be absent at least a month. No letters will be forwarded.

President Masaryk, of Czecho-Slovakia, who has been suffering from influenza, has decided to take a holiday in Capri.

General Pellé left Paris on February 3 for Constantinople to assume his duties as French High Commissioner.

Our Cyprus Correspondent writes (January 12):—
Mr. A. K. Bovill, O.B.E., has retired from the office of Principal Forest Officer.

Lt.-Colonel Gallagher, D.S.O., Chief Commandant of Police, will act as Commissioner of Larnaca.

Mr. Francis FitzGerald, C.B.E., Chairman of the Anglo-Belgian of Egypt Co., and of the Fayoum Light Railways Co., has left London for Cairo.

Prince Nicolas of Roumania is leaving for Bucharest to attend the wedding of Princess Elizabeth of Roumania and Prince George of Greece, which will take place on February 25.

Mr. J. O'Grady, the Labour M.P., arrived in Alexandria on February 5, for ten days' rest in Egypt. Unofficially, he is meeting notables and officials with regard to the question of the Milner report.

General Franchet d'Esperey, who commanded the Allied armies in Macedonia, has presented the French Legion of Honour to the city of Belgrade. He was received by the Prince Regent, who conferred upon him the rank of Honorary Voivode of the Serbian Army.

The engagement is announced between Stoyan Boris Gavrilovitch, of Watcombe Hall, Torquay, second son of Professor Bogdan Gavrilovitch, of Belgrade, Serbia, and Florence Caroline, youngest daughter of Sir Arthur and Lady Schuster, of Yeldall, Twyford, Berks.

Sir Arthur Peel, British Minister to Bulgaria, entertained at the British Legation, Sofia, on January 28, the members of the English-Speaking League of Bulgaria. Some seventy guests were present. The League exists to encourage the extension of a knowledge of the English language in Bulgaria.

Sir Arthur L. Webb, K.C.M.G., Consulting Engineer to the Egyptian and Sudan Governments, and Mr. H. MacClure, Consulting Engineer to the Sudan Construction Company, arrived in Khartoum on January 17. It is understood, says the *Sudan Times*, they are proceeding on a tour of inspection to Jebel Aulia and Makwar.

At the Royal Society of Arts, Indian section, on April 22, Lieutenant-Colonel Sir E. W. M. Grigg will lecture on "The Common Service of the British and Indian Peoples to the World," and on May 27 Mr. William Raitt, F.C.S., cellulose expert to the Government of India, will lecture on "Paper-pulp Supplies from India."

The Cairo correspondent of the *Morning Post* states that Lieutenant-General Congreve, G.O.C. Forces in Egypt, who is coming to London on leave, is unlikely to return to his present command. Brigadier-General Morris will act as G.O.C. for the present. When Lieutenant-General Congreve's leave expires, it is probable that Major-General Sir John Shea, who is now in Palestine, will become G.O.C. Egypt.

APPOINTMENTS, ETC.

M. Lombardos, Deputy for Zakynthos (Zante), has been elected President of the Hellenic National Assembly in Athens.

Lord Reading has appointed Major C. Kennedy-Craufurd-Stuart, C.B.E., D.S.O., 127th Baluchis, to be his Military Secretary.

Mr. R. Hewison, O.B.E. (Director of Agriculture), has been appointed an additional member of the Governor-General's Council.

Signor Catalani, who was formerly Italian Minister to Persia, and is at present staying in London, has been appointed Minister to Venezuela.

Mr. Sidney R. Hignell, C.I.E., has been appointed by Lord Reading to be his Private Secretary; and Major W. Muir, 15th Sikhs, who is now home on leave, has been appointed Comptroller of the Household.

Mr. Chetpat Pattabherama Ramaswami Ayyar, High Court Vakil, has been appointed Advocate General for the Presidency of Madras, in succession to Mr. Kadamangudi Srinivasa Aiyangar, who has been appointed a member of the Madras Executive Council.

The King has been pleased to approve the following appointments:—

Mr. Louis Charles Crump, I.C.S., to be a Puisne Judge of the Bombay High Court, in succession to Mr. M. H. W. Hayward, I.C.S., who was recently appointed a member of the Governor's Executive Council.

Mr. Benjamin Lindsay, I.C.S., to be a Puisne Judge of the Allahabad High Court, in succession to Sir George Knox, I.C.S., who is retiring from the bench in July.

OBITUARY.

Captain Lucas G. Stovin, Royal Navy, died at "The Moorings," Ramsgate, last week, at the age of seventy-one. He served, among other places, in the East Indies and the Persian Gulf, and received the thanks of the Indian Government for services in connection with the recovery of a Bahrain dhow under difficult circumstances in the Persian Gulf. For his services in punishing piratical acts committed by the Arabs on the same station he was again mentioned in despatches, and received the praise of the Admiralty for his zealous exertions.

OUTFITS FOR EGYPT, INDIA, AND THE FAR EAST.

Gentlemen visiting the East this Winter can be supplied with suitable clothing and the necessary equipment for travel, camp, or bungalow, at short notice.

List "H" giving full particulars and prices by return on application.

Kit renewals required by officials returning from leave, and complete outfits for those newly appointed, at moderate cost.

THRESHER & GLENNY,
INDIAN & TROPICAL OUTFITTERS,
152 & 153, STRAND, LONDON, W.C.

ROUMANIA AND THE BRITISH ARMY.

On February 4, in the presence of a large company of British officers and representatives of Roumania and Allied nations, the Roumanian Standard presented by the Army of Roumania to the British Army was placed in the Great Hall of the Royal Hospital, Chelsea, though eventually it is to be deposited in the British War Museum. The ceremony, though simple, was very impressive. The formal presentation of the standard was made by Colonel Ioan Paun, of the Roumanian Army, who handed it over to General Sir G. F. Milne, representing the Army Council.

Later Colonel Paun was entertained at the Carlton Hotel at luncheon, over which Lieut.-General Sir G. M. W. Macdonogh presided. On the same day both M. Boerescu, the Roumanian Minister, and Colonel Paun placed wreaths at the Cenotaph.

AN APPEAL FOR ENGLISH BOOKS.

We have received from the English-Speaking League of Sofia, Bulgaria, an appeal for books suitable for the purposes of the League, which exists for the extension of the use of the English language in Bulgaria. THE NEAR EAST will be glad to forward to the League books that may be sent for the purpose to the offices at 1, Devonshire Square, London, E.C.2

NEWS IN BRIEF.

Ten thousand Jews entered Palestine during 1920.

Martial law has been proclaimed at Split (Spalato), in Dalmatia. Mr. Gandhi is being assisted by the Ali brothers in his non-co-operation agitation amongst the Calcutta students.

The Czechoslovak National Assembly has decided in favour of ratifying the peace treaties with Hungary and Bulgaria.

New Danish Legations have been created in Czechoslovakia, Greece, Roumania, and Yugoslavia, and a new Consulate in Calcutta.

A Moscow telegram says that Roumania proposes that the forthcoming negotiations with Soviet Russia should be conducted at Riga.

Mahsuds continue to make attacks on pickets and convoys on the North-West Frontier, and several casualties are reported on both sides.

General Gouraud, the High Commissioner of Syria, has announced that a samples-fair and an exhibition will be held in Beyrout in April.

Ratifications of the Treaty of Rapallo were exchanged in Rome on February 1 by Count Storza, representing Italy, and M. Antonievitch, representing Yugoslavia.

The *Sudan Times* announce that Messrs. Thomas Cook and Sons are registering Sudan passengers wishing to avail themselves of the opportunity of getting home on leave.

The War Office states that the evacuation of all superfluous troops from Mesopotamia is now in progress, many of the regiments originally drawn from India returning to their former stations.

At East Putney, on February 6, a meeting was held at "The Mosque" on the occasion of the formal opening of the premises recently purchased by the community as an Ahmadiya Islamic Institution.

The Constituent Assembly of Yugoslavia, on February 2, adjourned for forty days to enable the special committee to prepare a scheme of the Constitution, which will serve as a basis for deliberations.

Admiral Sir John de Robeck was to have left Malta yesterday with two battleships and four destroyers for Smyrna, whither Rear-Admiral Sir Reginald Tyrwhitt proceeded last week in H.M.S. Cardiff.

At the request of the Secretary of State for India the Burma Legislative Council will meet on February 12 to consider the question of constitutional reforms. The official members of the Council will not take part in the debate.

Regular reports are being received from Kabul of the progress of the negotiations between the Afghan Government and the British Mission. Conferences take place two or three times a week, and a very frank exchange of views is being made.

Since the return of the deputation of Roumanian Socialists from Moscow a deadlock has arisen in the Roumanian Socialist Party, and the final choice between the Amsterdam and Moscow Internationals, is being left to its Congress, which has been summoned for May 6.

The reconstruction of the Baghdad-Busreh railway, after the damage done during recent disturbances, was complete on January 27 from Baghdad to Guehan, 20 miles south-east of Hillah, and from Busreh to Khan Jadwal, nine miles north of Diwanie, leaving only a distance of 20 miles to be repaired.

Reuter's Cairo correspondent telegraphs:—Following on the Sultanieh Decree forbidding contributions from the wages of workers or others to any trade union, association, or other professional group, Viscount Allenby has issued a proclamation that this law shall be applicable to all inhabitants of Egypt, of whatever nationality.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

WHERE TO STAY.

For the convenience of visitors from overseas "THE NEAR EAST" offers its services in booking rooms at hotels in the United Kingdom, on receipt of instructions preferably a week before the date of arrival. When instructions are telegraphed the message can be abbreviated as follows:—

"EASTAPROX, LONDON, TWENTIETH MATLOCK TWO

(The visitor's name and place of residence abroad to be added)."

which would indicate that two rooms were required at Matlock on the 20th of the month.

THURSDAY, FEBRUARY 10, 1921.

THE MESOPOTAMIA MANDATE.

In a manner not yet explained, the text of the draft mandate for Great Britain in Mesopotamia has been made public through the enterprise of an American journal. The British Government, as author of the draft, was apparently minded to withhold publication until the approval of the interested Allied Powers had been secured and the document could be submitted to the Council of the League of Nations. In the Note which the Secretary of State for the United States addressed to the British Government last November on the subject of mandates and oil resources it was specifically requested that the draft mandate forms should be communicated to the American Government for its consideration before their submission to the Council of the League, in spite of the fact that mandates are the concern of the League alone and that the United States have refused to join the League. We may conclude, therefore, that the draft text has been officially communicated to the United States, and that the anxiety of the Washington Government to keep the oil agitation alive has facilitated the unofficial publication of the text. There would seem to be no reason, however, why the draft scheme should not have been published officially, in order that the fullest publicity should be given to any modifications of the draft proposed by other Powers. It will be of interest to learn whether the altruism of the British Government does altogether commend itself to actual or potential mandatories. Certainly, if the United States had not refused the mandate in Armenia on general principles, we can well imagine that there would have been no enthusiasm for assuming responsibilities on the terms which will satisfy Great Britain, and if any modifications are proposed they are as likely to be in the direction of strengthening the Mandatory's position as of weakening it still further. The United States Government will be hard put to it to bring its oil grievance within the four corners of the mandate; for its contention, as far as can be gathered, amounts to this, that all pre-war concessions in Mesopotamia, which happen to be British, should be cancelled, in order to give America a chance to benefit from British pioneer work. If publicity can be given promptly to any such demand on the part of Washington the British Government can count on the fullest support in rejecting it. Although the United States were the last in the war and the first out of it, there is no desire on the part of the Allies to differentiate against them in any way; but, on the other hand, there can be no obligation to confer upon them rights and privileges which would not be given to any other Power.

By the terms of the draft mandate Great Britain undertakes, within three years from the coming into force of the mandate, to frame, in consultation with the native authorities, an organic law for Mesopotamia, taking account of the rights, interests, and wishes of all the populations inhabiting the mandated territory. This organic law is to contain a provision designed to facilitate the progressive development of Mesopotamia as an independent State. Pending the coming into effect of the organic law, the administration of the country is to be conducted in accordance with the spirit of the mandate. In spite of the fact that Great Britain has borne the cost of liberating Mesopotamia from the Turks and of administering it during the transition stage, and will continue to bear the cost of government

until the country is self-supporting, it is agreed that there is to be no discrimination against the nationals of any State which is a member of the League of Nations as compared with the nationals of the mandatory in matters concerning taxation, commerce, or customs duties. The effect of this provision is to preclude the chance of Great Britain's recovering directly any of the large sums already spent upon Mesopotamia, and presumably only expenditure incurred after the coming into force of the mandate will rank as a loan to the Arab Government. In view of the outcry that has been raised against the continued occupation of Mesopotamia by certain parties in Great Britain on the score of finance, it may be expected that the economic aspect of the mandate will in particular be severely criticised. But it would be inconsistent with the spirit of mandates if fiscal preference were secured for the mandatory State, and the latter must be content to reap its reward indirectly. Evacuation of Mesopotamia to-day would mean the entire loss of all the money hitherto spent upon the country; much, perhaps most of that money can never be recovered for the British taxpayer; but there could be no surer way of making all of it a dead loss than for Great Britain to attempt to evade the burden of responsibility now.

It is difficult to dissociate the agitation in favour of a policy of scuttle in regard to Mesopotamia from the desire, so overwhelming in some quarters, to embarrass the present Government. There is no less urgency for economy in the administration of Mesopotamia than there is in that of the United Kingdom; and it has to be admitted that expenditure in that country since the occupation has been incurred in a lavish and irresponsible manner. But there is no reason why the most drastic reduction in expenditure should not be compatible with the fulfilment of obligations that cannot be evaded without loss of honour. The mistakes made during the past three years have been sins of omission rather than commission, the outcome of a policy of neglect on the part of the British Government, which left military and civil officials to rival one another in extravagance, albeit with the best intentions. To-day the lesson has been learnt; with order restored in the country, the troops required may well be part of those constituting the Empire's army on a peace footing, who will have to be quartered somewhere; the officials to be maintained for the assistance of the Mesopotamian Government will be, in part at least, a charge on the local administration, although Great Britain will have to lend money until Mesopotamia is self-supporting. Evacuation to-day will not restore the money already spent, but it requires little prescience to make all save the wilfully blind realise that evacuation would in the end prove more costly than the duties of the mandatory State. If the British leave Mesopotamia, their place must inevitably be taken by another Power, at first by Turkey. If no further incentive existed, that development alone would suffice to rekindle in Germany the desire to revive an Eastern hegemony, for once again the spear poised against the British Empire at its most vital spot would be waiting to be grasped. Can anyone suppose that the cost to Great Britain of a revival of German Imperialism will be covered by the total of Mesopotamia's budgets for three or four years, even at the present figure? With the knowledge now possessed of the devious ways in which the ground was prepared for the world-war, it is incredible that Britons, who in the past have denounced the remissness of previous Cabinets in meeting the German danger, should to-day urge a course which must directly contribute towards the hastening of the next world-war.

THE SITUATION IN TRANS-CAUCASIA.—II.

The Russians have a remarkable capacity for colonisation. They never succeeded, it is true, in organising their vast country into a really civilised State or in adapting themselves to amicable relations with people of a higher culture, such as the Poles and the Finns. But in the East—both Near East and Far East—they played the part of true civilisers, spreading science and material advancement, and establishing some kind of law and order in place of confusion and anarchy. For them, the process of expansion involved no hazardous expeditions across the oceans, but only a persistent movement outwards from the centre, which brought one piece of contiguous territory after another under Russian sway. They made Siberia a prosperous land, and built the Trans-Siberian railway. They brought security to Turkestan, and created a lucrative cotton-growing industry. Similarly, the peoples of the Caucasus owe much to Russia—especially for the period of calm which gave them a chance of consolidating their national strength.

The creation of a Georgian Republic as it exists to-day would have been inconceivable if the Georgian people had never profited by the benefits of the Russian regime. Divided into a number of rival principalities always at loggerheads with one another, weakened by foreign and civil war, the Georgian people found under Russian domination a chance to rally its national forces, to develop its ancient culture, and to recreate in embryo a united nation. The German nobility took advantage of the security given by the Russians to develop a high standard of intellectual culture and to create many institutions of great value to the people. Towards the end of the 19th century a new intellectual class, democratic in origin, began to arise, thanks to the numerous Russian schools and colleges. This was the class which contributed most towards the raising of the general intellectual level of the people and their political organisations under the banner of social democracy ("Menshevism"). In fact, two or three decades have sufficed to organise among the Georgian peasants and workers a very powerful Socialist party, which has played an important part since the beginning of the Russian Revolution and held power throughout the two and a half years of Georgia's independence without serious opposition from any other political group.

The Armenians also turned the Russian regime to advantage by creating a national centre, by working in peace to develop their culture, and by building up a rich and influential *bourgeoisie*. But they were unable to devote all their energies to the political education of the people, owing to the existence of the Armeno-Turkish question. The pitiable condition of the Armenians under the Turkish yoke necessitated the concentration of national activities upon an organisation for combating Turkish tyranny. Thus, for thirty years, the flower of the Armenian youth devoted themselves to the cause of their brothers of Turkish Armenia. Some fell, arms in hand, fighting against Turkish soldiers or gendarmes; many perished in prison. In consequence of the absorption of their energies in this struggle, the Russian Armenians found themselves at the Revolution much inferior to the Georgians in general political education and organisation. As for the Tartars, they enjoyed all the privileges of Russian citizenship without some of its duties; they were exempt, for example, from compulsory military service.

These advantages tended to neutralise the glaring defects of Tsarism. But although purely cultural progress was encouraged, rather than hindered, by the Russian authorities, every manifestation of national life having a political character met with rigorous persecution. The Press was strictly controlled, political societies and meetings prohibited, and the propaganda of liberal ideas forbidden. In spite of this, the Caucasian peoples were closely attached to Russian culture and, through it, to European civilisation and modern ideas. The most important result, however, was to bring them into intimate relations with one another. The idea of a Caucasian federation was always warmly

received among the local political parties; and economic and geographical, not to mention political, conditions seemed to provide a substantial foundation for the Transcaucasian Federation which was established after the Revolution. The experiment, unfortunately, lasted only a few weeks, but politicians continued to emphasise the need for working out a new basis for a Transcaucasian confederation. At one time the mountaineers of the Northern Caucasus suggested not a Transcaucasian, but a Caucasian confederation, including Tartar Azerbaijan, Armenia, Georgia, and the North-Caucasian Republic. On other occasions the question was brought forward by each of the three Transcaucasian States in turn.

It does not appear to be true, as is often alleged, that the failure of the Transcaucasian Federation was due to Armenia. The idea, indeed, had been first canvassed and supported in the Armenian Press and among Armenian political circles. Armenia, moreover, stood to lose most by its failure, for the war with the Turks, and the incorporation of some of her richest provinces in Georgia and Azerbaijan, gave her least chance of all of establishing a viable Republic on her own. Surrounded as she was by countries actually or potentially hostile, she had every incentive to ally herself closely with the rest of Transcaucasia.

The question of federation was raised again in the spring of 1919, when the Georgians and the Tartars, fearing an attack by Denikin, proposed a military alliance of Georgia, Azerbaijan, and Armenia to meet that danger. In their view, such an alliance would necessarily have led to a Confederation. A conference held at Tiflis resulted in a Tartar-Georgian agreement for common action in the event of an attack by Denikin. Armenia, however, found herself unable to join, owing to the pressing danger from the Turks and to the amicable relations which existed between herself and Denikin. Other attempts were made, notably in the autumn of 1919, during the meeting of the Armenian and Azerbaijanian Prime Ministers, but without any practical result.

All the foreign Powers which have intervened in the Caucasus during recent years have been impressed by the desirability of a close union of the various peoples, the suppression of tariffs and Customs duties between them, and the unification of their railways, monetary systems, and so forth. The Germans, who entered in May, 1918, had worked out a scheme for a Caucasian State, and tried to persuade the three Republics to adopt it, but their efforts came to nothing. The Americans, too, strove to form a Confederation in the autumn of 1919, but in vain. Even the Kemalist Turks have persistently hinted to the Governments of Georgia and Armenia that, although they question the strength or importance of those States as they exist, they would

consider a Caucasian Confederation an adequate rampart against any movement from the North.

The causes of these repeated failures are many, but the principal one is undoubtedly to be sought in the mutual distrust of the Transcaucasian peoples. The Transcaucasian Federation of the spring of 1918 proved that if the peoples have certain common interests, they have also other interests which are divergent, and in some cases conflicting. All parties have agreed upon the necessity of discovering a basis of unity, but the difficulty has been to find an acceptable formula for the application of the principle in practical affairs. It is no secret in the Caucasus that even the Tartar-Georgian alliance was never very solid, and that both parties were always on the alert against each other.

The question of a union of the Transcaucasian peoples is the critical problem for Allied policy in the Caucasus. The Allies recognise that the creation of a buffer State between Russia and Turkey would serve their interests. But the peoples are so mingled and their interests so interdependent that it would be practically impossible to create a strong buffer State out of a single one of the national groups. Azerbaijan monopolises the oil, Georgia is the country of transit, Armenia debouches on Persia, and the communications of all three with the world at large pass through the same port—Batoum. Hence, evidently, if the Transcaucasian Republics are to maintain (or to regain) their independence, they must find some form of union compatible with freedom in their internal affairs. The peoples of the Caucasus still aspire to an independent existence, in spite of everything. They are not ungrateful for the material prosperity which Russia gave them, but none the less they wish to determine their own destinies. Their own interests—and the interests of the Allied Powers—require mutual collaboration and mutual concessions. Even now, despite the recent movement back towards Russia, if they can devise a formula for unity in diversity, they have still a chance of achieving political salvation.

THE CARAVANSERAI.

*Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultan after Sultan with his Pomp
Abode his Hour or two, and went his way.*

—OMAR KHAYYAM.

I see that there has been some correspondence in the *Busreh Times* on the subject of lions in Irak. The editor remarks in a note that he does not think there are any lions left in Mesopotamia nowadays; and hazards the opinion that few people living in the country "have ever seen a lion except perhaps in a menagerie." As far as my personal observations and investigations carried me, they led me to the same conclusion a good many years ago; for the only lion case I could ever hear of was one in which an American traveller "thought" he had seen one in the dim light of early morning, and had driven it off by waving his arms and hopping towards it. That story, I am free to confess, left me *quite* unconcerned, and as far as I could make out, none of the Arabs of Lower Mesopotamia, at any rate, had any good idea of what a lion looks like. On the other hand, they did not hesitate to describe some wild cats which I shot as "lions," and I understand that they referred to some Danish boarhounds by the same title. Loftus and other travellers of his time undoubtedly saw lions in the country, and it would be interesting to know the date of the latest authenticated appearance of one. Can any reader help?

In my *Morning Post* I read a few days ago, of a number of camels, goats, mules, and horses from the Drury Lane production setting out for Newcastle. The "Garden of Allah," it seems, is to be presented in the provinces, and the migrating quadrupeds were bound, in the first place, for Newcastle. What the chilly (and, dare I add, grimy) North will make of the play I do not know; though I suppose it will take to it as kindly as London has done. But I strongly suspect that the mules and camels, with their attendant Arabs, will find the change not at all to their liking. According to the *Post*, they ("the animals and some of the Arabs," at any rate) will encamp on a plot of ground outside Newcastle. It does not sound exactly cosy in this weather, does it?

A very charming lady who has lately returned from India tells me that she travelled on a big ex-German steamer which was barely half full. The boat was in use as a military transport; but even so it seems very strange to me that, in these days of complaints about shortage of accommodation, any steamer should be allowed to sail (or steam) between India and Home with so much cabin room running to waste, so to say. It may be that this is not the exact season that most people would choose to come to England; but there can be very little doubt that many officials and civilians would be thankful for the opportunity of getting home, or sending their women and children home, at a moderate price; and surely the making of arrangements which would enable them to do so on transports that have so much room to spare should not be beyond the capacity of the shipping authorities. If so, they had better hand over their job to Messrs. Cook and Son.

CORSAIR.

A MOSLEM PROTEST.

We have received from the Hon. Secretary of the London Moslem League (Mr. M. H. Ispahani) a copy of a letter addressed by him on behalf of the Committee of the League to the Prime Minister. The letter refers to the intention expressed by King Constantine, in his speech to the Greek Chamber, to continue the campaign in Asia Minor, and to the advance eastwards of the Greek Army in that region. In the opinion of the Committee, the result of this advance, "with its attendant miseries, sufferings and destruction of lives," will be "so prejudicial to British interests in the East that they feel it their duty to bring its full significance to the notice of the Prime Minister." They are of opinion that the ferment in India is "principally due to the conditions prevailing in Asia Minor," and they are convinced that "the restoration of normal conditions in India is impossible so long as Greek ambitions keep Asia Minor in a constant state of disturbance." The news of the sufferings of the Turkish people resulting from Greek aggression and oppression has, the letter states, created intense anxiety and sympathy among the people of India, and unfortunately the British Government is held responsible, however unjustly, for the continuance of the painful tragedy in Western Asia. The letter then urges a revision of the Treaty of Sevres, and renews a suggestion put forward in an earlier letter for the taking of plebiscites among the Moslem populations of Asia Minor and Thrace on the question of their subjection to Greek rule. It concludes with the expression of loyalty to the King, and a request for prompt consideration of the Committee's suggestions.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Great Britain and Greece.

One of the most serious problems with which the new Greek Government has been confronted has been the financial question. Our Athens correspondent deals with the position in a message which will be found in another column in this issue. He points out that owing to the great expenditure entailed to maintain the Greek forces in Asia Minor, the Government's requirements amount to about four million drachmæ daily, and there is thus a deficit of, roughly, sixty million drachmæ monthly. Obviously, a loan is the only recourse open to the Government, and an attempt has been made to obtain one from America, but, according to our correspondent, small hopes are entertained of help in that direction; a view which is amply borne out by recent reports from America. Attempts are now being made to enter into negotiations here, and in certain contingencies it would not be surprising if Greece found this country much more willing to come to her aid than the United States. The ties of sympathy between Great Britain and Greece have always been very strong, and recent events cannot be allowed to obscure the wider issue that Greece has now immensely enhanced responsibilities in the Near East, and that upon their adequate fulfilment a very great deal must depend. But a loan, if such be arranged, can mean at the best merely a temporary solution of the financial position, the permanent settlement of which must depend on a rigid policy of economy by the Greek Government. And that, of course, cannot be hoped for so long as conditions demand the existence of large forces in Asia Minor.

America and Mesopotamia Oil.

America's dissatisfaction at the position with regard to the Mesopotamian oilfields would appear to have increased as a result of the publication of the unofficial text of this country's mandate for Mesopotamia. It would appear probable that the paragraph to which exception is taken is that which states that "the mandatory must see that there is no discrimination in Mesopotamia against the nationals of any State which is a member of the League of Nations (including the companies incorporated under the laws of such State) as compared with the nationals of the mandatory or any foreign State in matters concerning taxation, commerce, or navigation, the exercise of industries or professions, or in the treatment of ships or aircraft. . . ." There is really nothing in the paragraph which can justly be interpreted as indicating discrimination against America in regard to the exploitation of the Mesopotamian oilfields, but the phrase which presumably touched America on a sore point is the reference to membership of the League of Nations. It would seem that America regards participation in oil development as the legitimate reward of victory, but since the Armistice she has done nothing to safeguard the results of the Allies' success, and yet expects to share equally with the other Allies who have from the beginning to the end borne the burden and heat of the day, while herself accepting none of the responsibilities.

Retaliation?

Unquestionably, it is much to be regretted that further comments on the other side of the water should not have been suspended pending the arrival of the British reply to America's Note. As it is, opinion there is tending in the direction of restricting foreign enterprise, and it has also been proposed that an embargo should be placed on the export of oil from America in certain conditions. As regards the latter suggestion, a contemporary not inaptly points out that America's exports are largely dependent on her imports of oil, and it would be equally open to other countries to take similar action.

Artificial Trade Barriers—

Discussing the international commercial situation at the annual meeting of the London County, Westminster, and Parr's Bank, Mr. Walter Leaf criticised very strongly the proposal to erect what he termed "artificial trade barriers." The fundamental principle of international banters, he declared, was that "if thou wilt not buy, neither shalt thou sell," and he expressed surprise that there should be talk about "anti-dumping," "key industries," and the like, the effect of which would be to hamper the imports which were

needed to pay for the goods which filled British warehouses, and for which a large part of Europe was hungering. In his view, legislation of this kind will put an effective bar to any export credits' scheme that may be adopted, and will effectually bar any prospect of any improvement in the position of the Continental exchanges. Unfortunately, the question is a many-sided one, and, while admitting the disadvantages attaching to a scheme of special protection, it has to be borne in mind that the object for which it is desired to safeguard our key industries is to prevent any danger in the future of our again being taken unprepared. The real difficulty is obviously in deciding what are, and what are not, legitimate "key industries." "Anti-dumping" is another question altogether, and ought not to be linked up with the problem of "key industries." Here, too, while any measures may be condemned *prima facie* as handicapping the promotion of international trade, there is another side to the question, and that is the effect on the industries of this country if Germany, for instance, were allowed to "dump" goods at will at a time when the state of the labour market causes grave disquiet.

—And Near-Eastern Commerce.

Great Britain, it has to be remembered, stands in a somewhat unique position as regards the necessity for protective tariffs, and any measures that might be adopted would only affect trade with Germany, and they could not by any stretch of imagination be placed on a parallel with the vexatious systems of artificial barriers that have been set up in Europe, and especially in the Near East. I imagine that Mr. Leaf must have had the region with which this journal deals particularly in view when he said that the economic depression on the Continent was largely due to those barriers which states were setting up between themselves. The problem of "key industries" is unknown to Near Eastern countries, and it is difficult also to see how "dumping" could affect any of the states other than by giving the inhabitants an era of low prices. But, despite there being no real reason for it, restrictions of all kinds hamper commerce between the individual states, and, so long as this condition obtains, it is obvious that the process of economic recovery must be retarded. As Mr. Leaf aptly points out, the Brussels Conference unanimously passed a resolution recommending that "each country should aim at the progressive restoration of that freedom of commerce which prevailed before the war, including the withdrawal of artificial restrictions on and discriminations of price against external trade." So far, unfortunately, the Near Eastern states as a whole have shown no indications of willingness to follow this policy.

Progress of British Trade Corporation.

Despite the adverse conditions, the report of the British Trade Corporation for the past year shows a record of consistent progress. The profits amounted to £119,300, as against £88,340 for 1919. The dividend is, however, maintained at 8s. per share, or 4 per cent., and £61,900 is carried forward. Considering the circumstances, the results achieved by the corporation in its brief career can only be regarded as highly satisfactory.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, January 17.

The Economic Situation.

Cotton has somewhat improved in price, but the movement in favour of holding up as much as possible until the market improves is still strong. This past week another large meeting of cotton-growers, purporting to represent one-third of the whole cotton area, was held in Cairo, when it was decided to constitute an association for the general protection of the agricultural interests of the country as regards both the production and the marketing of crops. In the matter of the present cotton crisis the members of the association engage themselves not to sell their cotton at a price below sixty dollars without the permission of the association. In the event of any member doing so he would be subject to a fine of £E1 per kantar, and have his name published in the papers as a defaulter. It is to be laid down that if members receive permission to sell below sixty dollars 5 per cent. of any amount exceeding forty dollars which they receive for their crop shall be paid to the association. The promoters intend to get the banks to agree to advances up to 50 per cent. of the present value of the crops of individual members on the condition that the loans will not be called in or owners be compelled to sell before October 31 next. A further meeting is to be held towards the end of this month in order to obtain signatures to the agreement. Every member must possess at least ten kantars, and the promoters say they expect to be able to control at least two million kantars of the 1920 crop. This is certainly a praiseworthy effort in the direction of co-operation, the success of which will, of course, depend on the extent to which the more affluent members of the agricultural community afford the association material support, and the banks are prepared to accord the facilities which the promoters want from them. At the same time, this combine, while it is highly probable that it will not attain the result of raising the price of cotton as the promoters expect, may have consequences of serious import to the country, which they evidently do not realise.

CAIRO, January 23.

"Monopolist" Lighting.

A good deal of feeling has been aroused by the action of the Electric Light and Gas Company in increasing the tariff by something like 30 per cent. The company, in both cases, has a concession from the Government, and it is considered that such an increase is quite unwarranted, especially in view of the fact that the price of coal has considerably diminished and the company has in the past been able to declare fairly substantial dividends. The Government appears to have taken no action in the matter, and the general public are powerless to do anything except through the Press. A contrast is drawn with what has taken place in Alexandria, where the municipality has throughout put up a determined and generally fruitful opposition to the exploitation of what it calls "monopolist" companies and Cairenes are asking themselves whether, notwithstanding the drawbacks in other respects, it would not be more satisfactory for their interests if they also had a municipality instead of having to rely upon the Government to protect them.

PORT SAID, January 25.

The Slump and Shipping.

Port Said, in common with the rest of the world, is feeling the slump in trade, but perhaps it is not so much affected as many other places, its business activities being principally connected with shipping rather than cotton, and the fall in freights has not sensibly diminished the number of ships coming through yet.

The stringency of money and the necessity of finding ready cash have made some of the retailers have sales in which the reductions in prices have not been wholly fictitious.

One cannot help again reverting to the uncertainty of conditions at home which is killing British trade. The construction of a large warehouse here has been held up for over a year owing to the non-arrival of the iron necessary. An English firm promised it last May, but after several months said that owing to labour conditions at home they did not know when they could fulfil the order. The order was then given to a Belgian firm, who delivered the goods in Port Said two months after the contract was signed. There is no comment suitable!

It was customary before the war for most of the leading business houses in the town to supply their customers with calendars at the beginning of the year, but few are doing it now. One retailer said that he had had some on order in England since last September, but they had not come to hand yet. Another said that the cheapest calendars he could get were priced at 4s. each, with a minimum order of 500. As he said the least number that he would need would be 2,000 he did not feel justified in expending £400 on what, after all, is fancy advertising. A local printer has been selling office calendars, with his own name very conspicuously displayed, at 7s. each.

THE SUDAN.

KHARTOUM, January 16.

Mechanical Transport.

The Darfur campaign showed up the many difficulties involved in maintaining an efficient transport service in a practically roadless country. Since then the Egyptian Army have gone into the problem with varying results. It appears an essential fact that convoys should consist of not less than six vehicles, with repairing depots at intervals of not more than 100 kilometres. The High Commissioner made a memorable trip from Wad Medani to Gedaref and Kassala and back, with a convoy of some twenty odd cars, including two heavy Rolls-Royce armoured cars, a Rolls-Royce Box car, a Talbot Box car, several Crossley's R.A.F. touring models, and tenders, and, of course, the ubiquitous and ever-useful Ford. On results the tour was an unqualified success, but mainly owing to the efforts of the personnel in charge of the convoy. It is practically impossible to get any statistics of such a trip that could be published for various obvious reasons. The perfect vehicle for desert work has not yet been evolved, and I am inclined to think that an air-cooled engine on the principle of the "Franklin," with a D. J. Smith producer plant, working on charcoal, a staple product of the country, would go a long way towards solving the problem.

The only published record, as far as I know, of any long trip in this country is that by Mr. Joseph Rhodes, of the Sudan Government, who travelled in a 15-ton Fiat light lorry, and whose experiences and ideas give one food for thought. One of the first of the gentler sex to do any long distance trips in the Sudan, was Mrs. Rosita Forbes, who journeyed from Medani to Gedaref in a 5-ton Fiat lorry, and from Gedaref to Kassala and thence to Asmara in a light Fiat. Her account of her travels and experiences will be welcomed by many residents in the country.

GREECE.

ATHENS, January 15.

The Financial Position.

Speaking to a journalist on the financial situation of the country, the Minister of Finance, M. Calogeropoulos, said:—"We will make the best of it. We are determined to do all in our power to retain the Army on a war footing, and we are prepared to spend our last centime for this purpose. I am hoping, however, that it will not come to that, and that the Allies will finally believe in the sincerity of our intentions."

Wheat Imports.

According to information supplied by the Minister of Foodstuffs, 33,000 tons of wheat will shortly be shipped to

Export to Near East

this country from America. On January 17 an adjudication will be held in Athens for the supply of a further 35,000 tons of wheat. The Minister of Foodstuffs states that these 68,000 tons will suffice for the needs of the country for the next three months.

ATHENS, January 25.

A British Loan?

The Ralli Government is actively engaged in endeavouring to conclude a foreign loan, but up to the present its efforts have not met with the desired success. So far the Greek Government has succeeded in meeting its obligations by withdrawing the 200 million drachmæ—the balance of the loan of 400 millions concluded by M. Venizelos—but this sum, which is being used for the settlement of many debts and for the extra expenditure in connection with the indemnities paid to civil servants and officers who had been dismissed by the previous Government and have now been reinstated, will not last for ever, and the Government is showing signs of nervousness. The normal State revenue only amounts to two million drachmæ *per diem*, and is quite insufficient to meet the Government requirements, which, owing to the vast expenditure which the maintenance of the army in Asia Minor entails, are approximately four millions daily. There is thus a deficit of about sixty million drachmæ per month, which could only be covered by a loan. At first the Government considered the possibility of concluding an internal loan, but the idea was abandoned, as it was thought that the two loans which had already been concluded in the country during the last twelve months were more than enough, and that a third would not be a success. The only solution, therefore, would be to conclude a loan abroad, for which the Government is offering special guarantees. America was at first sounded, but although that country has not definitely declined, very meagre hopes are entertained as to a successful issue. The Government has now directed its attention to Great Britain, which, it is thought, is rather friendly disposed towards M. Venizelos's successors, and will not refuse to do something in order to relieve the financial crisis.

Cheap Olive Oil in Crete.

Owing to the prohibition of the export of olive oil from Crete this commodity has fallen considerably in price in the island. Good quality oil is now offered at 3 drachmæ per oke, whereas in Athens one has to pay as much as 5.40 drachmæ.

ROUMANIA.

BUCHAREST, January 23.

Banca Nationala.

It is announced that the Government has come to an agreement with the Banca Nationala for the prolongation of its privilege for a further twenty years. This privilege will extend to the whole country, including the new provinces. The capital of the bank is to be increased by a new issue of shares open to public subscription. The State will reserve 12,000 shares as a price for the prolongation of the privilege.

Purchase of Army Equipment.

I am now able to give further particulars of the Roumanian Government's purchase of army equipment. The supplies consist of 500,000 complete uniforms and 750,000 pairs of army boots. The uniforms, as well as the boots, are of American and English make, of very good quality, and were old stock left behind to be disposed of after the war. The

offer was made to the Roumanian Government by Messrs. Barabas Leroy, of Paris. Payment will be in two year Treasury Bonds. A complete uniform costs 150 French francs, and the authorities are very satisfied with the purchase, as they have completed the whole army's equipment for a sum of about 500 million lei.

The Department of Supplies and Reconstruction has contracted a further purchase, on the same conditions of payment, of large quantities of sugar and rice. In connection with this, a special commission has left for Paris provided with Treasury Bonds to the value of 98 million French francs to cover the above purchases. The commission will go to Marseilles to take delivery of the goods in order to transport them to Roumania.

Trade Situation.

The New Year has not started with hopeful prospects for trade. Many merchants have had to carry over large stocks which they received during the autumn, not to mention the large stocks still lying on the quays at the ports, the consequence being that a great portion of the merchants' capital is locked up. The atmosphere is rendered still more unfavourable by the existing stagnation, and during the holidays wholesalers as well as retailers have sold very little. Under such conditions the various offers for goods which come from firms abroad and in the country find no response. England and America, who only a very short time ago sold f.o.b. their ports and payment in advance, are now sending offers with samples, and a great number of travellers, who are very willing to accept even sales on open credit from 9-12 months. Owing to the wholesalers abstaining from ordering any more goods until their present stocks are exhausted, the great wave of reduction in prices which is so rampant abroad has not yet had much influence on the local market.

Miscellaneous.

A marked improvement has taken place in passenger traffic, but goods transport is still in a hopeless condition.

CYPRUS.

NICOSIA, January 12.

Trade Depressed.

An unfortunate depression prevails in the sphere of trade. There has been a check to all carob transactions. The prices obtained by growers were good, and the outlook for merchants appeared promising. But the results of a shipment to Liverpool proved disappointing, and have led promptly to a fall in prices in England, and to the expectation of a further fall. The consequence has been a disastrous stagnation. A large quantity of carob beans is being held in the hope of a better turn of events; which means some deterioration as time goes on. As regards raisins, there is a real movement towards better methods of preparation, but too late to have much effect on last autumn's output. It is, however, quite probable that the present year will see some real advance, in some parts, at any rate, and if the results should be advantageous, as they could not fail to be, the movement should rapidly become more general. Cyprus raisins, when properly handled, are excellent, and are readily bought at good prices, but the supply of this article does not yet meet even the local demand. There has been some rain, but the distribution has not been satisfactory. There is, however, no need yet to be at all despondent regarding cereal crops.

"STANDARD" TOBACCO MACHINERY

Every Description of
Automatic Mechanical
Equipment for the
**TOBACCO
INDUSTRY.**

*THE "STANDARD-JUNIOR"
CIGARETTE MACHINE*

THE "STANDARD" CIGARETTE MACHINE

*"STANDARD" CIGARETTE
PACKING MACHINE*

THE "STANDARD-JUNIOR" CIGARETTE MACHINE

Is the ideal model for small manufacturers. Although low in price, it is a highly developed apparatus capable of the utmost perfection of output up to 7,500 Cigarettes per hour and requires only two attendants of ordinary intelligence to operate.

Compare this with the cost of producing Cigarettes by hand or with obsolete inefficient machines.

THE "STANDARD" CIGARETTE MACHINE

embodies every conceivable practical refinement for the production of Cigarettes upon a commercial basis, i.e., on a large scale with manufacturing costs brought to the irreducible minimum. It is capable of a higher consistent output of faultlessly made Cigarettes than any other machine existing, and is exclusively adopted in the largest factories throughout the World.

"STANDARD" CIGARETTE PACKING MACHINES.

No Cigarette Factory is up-to-date without the most modern and efficient Packing Machinery, viz., the "STANDARD." These machines can be adapted for packing Cigarettes of any pre-determined size and quantity in either paper "cups" or cardboard "shell and slide" packets, after wrapping them automatically in paper or tin foil or both.

ENGINEERING.**The Tractor Industry.**

With a view to ascertaining the present extent of the tractor industry in the United States, reports have been asked for and received from some 80 firms engaged in the industry. From these it appears—and the figures should be read and considered carefully by British firms—that during the year 1919 they manufactured a total of 164,590 tractors of all kinds. In the previous year, according to published returns, 132,697 were turned out, so that the increase is considerable. A point which has to be taken into account is a fairly general assertion that the output would have been a good deal higher had it not been for labour troubles and the comparative scarcity and high prices of raw materials.

Some food for thought lies in the fact that during the year 136,162 of these tractors were sold in the United States, only 19,693 being exported. The balance is, of course, in stock. It would seem that makers had expected to export a much higher proportion, and we are faced, therefore, with the deduction that either the price of the American tractor was too high for foreign buyers or that some prejudice exists against American machines in overseas market. If it is a question of price, both British and American manufacturers and suppliers are in the same boat. If, on the other hand, it is a matter of prejudice, there would seem to be an opportunity for British firms to make their tractors more widely known. The Latin-American Press Service pointed out some few weeks ago that, whilst there was a fair demand in Brazil and other Latin-American countries for tractors for comparatively light work, there was a strong feeling against buying these from the United States, and pretty much the same story comes from Colombia, Cuba, and Mexico.

There is no doubt that British made tractors are equal, if not superior, to the best American types and designs, and this fact has been amply demonstrated by the Austin Motor Company, who are turning out tractors by the hundred which are models of efficiency. There are, of course, certain difficulties in the way of export, but these can be overcome, no doubt. Whether that be so or not, one thing is evident, and that is that buyers, whether in the Near East, in South or Central America, or in China and Manchuria, can rest assured that when they obtain British-made tractors they will find them economical, highly efficient, thoroughly reliable, and able in every way to withstand the conditions they will be called upon to meet without any need of frequent repair or highly skilled attention.

Welding Cast Iron.

It appears that the difficulties sometimes met with in welding cast-iron by means of the electric arc are not due to any trouble found in melting the metal or to the presence of impurities, but are due to the fact that the sudden intense heat of the arc over a local area results in the production of a hard weld and the introduction of contraction stresses which are sometimes so great as to result in cracking. When the carbon welding process is used cast-iron welding rods may be fused into a cast-iron piece, but the Lincoln Welding Company inform me that using the metal electrode process and a soft iron or steel electrode, it is impossible to make a reliable weld between the added material and the cast-iron. However, by using the metal electrode process certain work can be done by the introduction of steel studs in the cast-iron pieces to be welded together, so that a certain amount of strength is obtained by the bond formed between the steel studs by the welded material. Care should be taken not to play the arc on the weld any longer than is necessary to give complete fusion, and after the weld is completed the piece should be wrapped in asbestos paper or cloth and allowed to cool, according to the size of the piece, from eight to twenty-four hours.

OTTOMAN PUBLIC DEBT.

In order that it may be possible to establish within the prescribed time with the Allied Clearing Offices their claims to repayment at the pre-war rate of exchange of the amount due to them of the funds in marks lying in Germany on account of the Ottoman Converted Unified 4 per cent. Debt, 1903-1906, the British holders of bonds of this loan are invited to deposit, before March 1, the arrear coupons due March, 1915, to March, 1920, inclusive (Nos. 23 to 33), with the Council of Foreign Bondholders, 17, Moorgate Street, E.C.2, from whom details of the exchange can be obtained.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated January 31:—During the week ended January 22 crop prospects generally fair. Recent rainfall very beneficial in the United Provinces of Agra and Oudh and Bihar and Orissa, and beneficial in the Punjab, North-West Frontier Province, and parts of Central India, Bombay and Madras, where more rain is still required. Crops in Bombay, Deccan and Hyderabad are poor. Bombay cotton market easy; fine M.G. Omra, March, Rs. 251. Piecegoods market shows little improvement, but slightly better inquiry. Calcutta jute market quiet with drop in prices. Hessians steady with fair business done. Heavy goods very quiet. Freight rates on jute and gunnies continue to fall. Imperial Bank of India's rate is 7 per cent.

LANCASHIRE COTTON.

Market Further Depressed.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Another unsatisfactory week has been experienced, and if anything the situation has gone from bad to worse. There has been talk of an increased curtailment in production, and even when low rates are taken, there is no definite relief, so naturally many firms are contemplating closing their factories altogether for an indefinite period. In raw cotton circles a very unsettled feeling prevails, and there seems to be no end to the weakness in prices. This is due principally to the undecided attitude of American farmers in regard to the reduction in the next cotton crop, but even if next season's supplies are cut down by half, there is no prospect of any shortage. At the present moment the tightness of money is not quite so pronounced as was the case a month or so ago, but even now difficulties are experienced in financing trade, and many firms are naturally harassed by the heavy stocks of dear goods. With regard to cloth, no business worth mentioning has taken place for the outlets of the Near East, but dribbling lots have gone through to Turkey and the Levant. It is reported that there is a shortage of goods in the interiors of various countries; but there are large supplies of dear stocks that are held up at the distributing centres, particularly in Egypt. The news received from India has not been encouraging, and inquiry has fallen off, and only isolated sales at cut figures have been reported. Dhooties, in small lots, have gone through for Calcutta, but the transactions have been generally most unremunerative to the seller. Trade with China has been sluggish, but a brighter outlook is in sight in view of the near approach of the Chinese New Year. Fancies such as cambrics have been in request for Java on certain terms. On the whole, the position of affairs at present is against any increased activity. In export yarns a few odd lines have been booked chiefly for India and the Continent, and demand has also been in evidence for the Levant, but generally speaking the market has been sluggish. With regard to Egyptian counts a very dull state of affairs has existed, and prices continue poor.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended February 3:—

Conditions show practically no change since our last report. Holders of Sakellaridis, especially, have shown an increased willingness to part, and quotations have again given way materially. Spinners appear ashamed to make the low bids they do, yet in nine cases out of ten they get their cotton. In fact, the opinion is rapidly gaining ground that it is fatal to business to refuse a bid of any kind. A fair general inquiry has been experienced, but the actual amount of business resulting was only moderate, and most of that took place at cuts well below the official quotations. We would again impress upon our friends that these quotations are misleading, and that when a reduction is made it is generally a couple of days behind time! For example, although to-day's quotation for fully good fair Sakellaridis is given as 19.00d., or roughly 3d. over contracts, the same cotton could certainly be picked up here and there on the market at about 1d. over the current price of contracts. Trade reports continue to vary round the small compass of bad to worse. C.i.f. business is conspicuous by its absence. Total sales 1,000 bales, which includes 20 bales Sudan. Quotations of Sakellaridis are reduced 2d. per lb., with extra fine exceptionally 1d. lower. Brown and Upper are reduced 1d. per lb.

LONDON PRODUCE REPORT.

Dried Fruit.—Business has improved to a certain extent. There has been a larger demand for currants, and it is evident that supplies in the country are now by way of being exhausted. Figs have also been in much better request. Sultanias, however, continue a weak feature, and rates are generally lower.

Sugar.—The market has been weak. West Indian Crystallised has been done at 63s. to 64s. 6d.; White Mauritius, however, is unchanged at 71s. Home refined has continued to rule in active demand at the official rates.

Coffee.—Prices are lower on balance. Nairobi good bold-greenish has been done at 117s. 6d. to 120s.; while Uganda good gold has come to business at 88s. The futures market shows little change. Quotations are: March, 45s. 6d.; May, 46s.; July, 46s. 6d.; September, 47s.; December, 48s.

Oilseeds.—The market has been pronouncedly weak. Indian linseed has come to business at 17s., a drop of 3s., while La Plata is also down at 15s. 3d. Rapeseed has been weak. Toria has been done at 19s., and bold Ferozepore at 18s., a decline of 6d. in each case.

Seed Oils.—Prices are again lower. Linseed oil at 13s. 6d. is 6d. down. Crude rape oil has lost 3s. at 50s. Refined cotton oil has fallen 2s. to 38s., while Egyptian crude is 3s. lower at 27s. Turpentine is unchanged at 80s.

CURRENT PRICES.

General Produce.—Bacon, 180s. cwt.; butter, 317s. cwt.; cheese, 160s. cwt.; chillies, 125s. cwt.; eggs, 30s. 6d. per 120; cloves (Zanzibar), 11½d. lb.; cocoa (Ceylon, good to fine), 90s. cwt.; coffee (Costa Rica), 114s. cwt.; East India bold, 112s. 6d. cwt.; Mocha longberry, 116s. cwt.; ginger (washed Cochín), 37s. 6d. cwt.; hams, 160s. cwt.; lard, 125s. cwt.; nutmegs, 10½d. lb.; 110's to 80's; pepper (Singapore, black), 4½d. lb.; pepper (Muntok, white), 9d. lb.; raisins (Valencia), 133s. 6d. cwt.; sultanias (Smyrna), 120s. cwt.; currants (Vostizza), 90s. cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 2d. lb.; sago (small pearl), 25s. cwt.; rice (Rangoon No. 2), 15s. 6d. cwt.; rice (bran Rangoon), £6 15s. ton; tea (Indian), 6½d. lb.; Ceylon, 6½d. lb.; Java, 3½d. lb.; wheat (Australian), 105s. 6d. qr.; wheat (English white), 75s. qr.

Hides and Skins.—Ox and heifer: first, 90 lbs. and up, 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 6½d. lb.; 59 lbs. and under, 6½d. lb.; cows: first, 60 lbs. and up, 4½d. lb.; 59 lbs. and under, 4½d. lb.; cows, second, 60 lbs. and up, 4d. lb.; 59 lbs. and under, 4d. lb.; bulls (first), 4½d. lb.; bulls (second), 3½d. lb.; kips (first), 6½d. lb.; kips (second), 5½d. lb.; kips (third), 4½d. lb.; horse hides, 6s. to 19s. Calcutta Market.—Prices in rupees per 20 lbs. Arsenic hides, cows: Agras, 9.0 to 15.0; Durbhargas, 6.0 to 7.8; Patnas, 5.0 to 16.0; salted cows, 4.0 to 8.8; arsenic hides, buffalo, 2.8 to 7.8. Skins: calf, 8.0 to 10.0 per 20 lbs.; goat, 90.0 to 130.0 per 100 pieces.

Metals.—Aluminium, £165 ton; bismuth, 12s. 6d. lb.; antimony, £41 ton; copper (standard), £68 6s. 3d. ton; copper (electro), £78 10s. ton; gold bars, 107s. 0½d. oz.; iron (No. 3 Cleveland), 215s. ton; hematite (mixed number), 240s. ton; lead (soft foreign), £23 7s. 6d. ton; manganese Poti, 2s. 5d. unit; molybdenite, 62s. 6d. unit; nickel, £215 ton; platinum, 300s. oz.; plumbago, £37 10s. ton; quicksilver, £12 5s. bottle; silver bars, 38d. oz.; spelter (G.O.B.), £24 7s. 6d. ton; tin (standard), £169 5s. ton; tin plates (20 by 14), 31s. 6d. box; wolfram, 16s. 3d. unit; zinc sheets, £40 ton.

Chemicals.—Acids: boric, 75s. cwt.; oxalic, 1s. 3d. lb.; citric, 2s. 4½d. lb.; tartaric, 2s. 0½d. lb.; ammonia (sulphate), £25 8s. ton; arsenic (white powdered), £57 10s. ton; benzole (standard), 3s. 2½d. gallon; bleaching powder (35 per cent.), £21 ton; borax crystals, 38s. 6d. cwt.; cream of tartar, 170s. cwt. Potassium: bi-chromate, 1s. 2½d. lb.; chlorate, 7d. lb.; caustic, £70 ton; nitrate, £60 ton; permanganate, 2s. 4½d. lb.; prussiate yellow, 1s. 4d. lb.; sulphate (90 per cent.), £34 10s. ton. Sodium: crystals, 150s. ton; bicarbonate, £10 15s. ton; bichromate, 9½d. lb.; alkali (58 per cent.), £10 15s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £25 10s. ton; hyposulphite, £25 10s. ton; prussiate, 11½d. lb.; nitrate, £21 15s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (125 per cent.), £155 ton; sulphate of copper, £37 10s. ton; sulphate of iron, 150s. ton; lemon oil, 4s. 4½d. lb.; quinine, 3s. 6½d. oz.; red lead, £44 ton; white dry lead, £49 5s. ton; white ground lead, £59 15s. ton.

Miscellaneous.—Cotton (American), 9.67d. lb.; cotton (Egyptian, Sakellaridis), 19.00d. lb.; Linseed (La Plata), £16 2s. 6d. ton; rape (Toria), £19 10s. ton; soya beans, £13 5s. ton; palm kernels, £20 12s. 6d. ton. Oils: linseed, £31 15s. ton; soya, £32 10s. ton; cotton (crude), £29 ton; olive, 13s. gallon; ground nut, £40 ton; palm, £40 15s. ton; rape (crude), £54 10s. ton; petroleum, 2s. 3d. gallon; turpentine, 82s. 6d. cwt. Rubber: plantation (No. 1 crêpe), 1s. 1d. lb.; smoked sheet, 10½d. lb.; fine hard Para, 1s. 0½d. lb.

The traffic receipts of the Egyptian Delta Light Railways for the week ended January 10 amounted to £E13,733, making the total for the year £E395,700. For the corresponding periods of last year the receipts were £E16,188 and £E294,615 respectively.

DRIED FRUIT.

Messrs. J. C. Houghton and Co., of Liverpool, in their monthly report state:—

Currants.—The volume of business passing shows no sign of development, buyers being content to adopt a waiting attitude, and no distinct improvement is to be looked for so long as the present depressing economic conditions continue. In fact, a really substantial revival does not seem possible until the Government scheme relating to European trade is seriously carried out. The European countries which were well nigh ruined by the war cannot rehabilitate themselves without external assistance, and so long as this is withheld export trade is paralysed. The adverse movement in the Greek exchange had an unsettling effect on the market, and some holders reduced their prices, without however increasing sales to any extent. The trade was chiefly in speciality parcels of Zante growth, at 80s. to 82s.; shade dried Vostizza quarter-cases, at 90s. to 96s.; also some good Pyrgos, at 64s. to 68s.; old fruit of good quality shows value, 32s. to 45s. Quotations are: Pyrgos, 64s. to 68s.; Amalias, 68s. to 70s.; Patras, 68s. to 72s.; Gulf and Panariti, 77s. to 87s.; Zante, 75s. to 80s.; Vostizza, 88s. to 96s. Total arrivals from commencement of season to date, 18,165 tons.

Valencia Raisins.—Selected. No inquiry existing, and seedless offered without any response.

Sultanas continue to be pressed for sale, and where transactions take place lower prices are accepted. Quotations are: Ordinary to medium, 120s. to 125s.; good to fine, 127s. to 140s.; Greeks, 125s. to 135s. Further arrivals of Afghans are to hand, but the trade shows very little interest in the fruit. Quotations are: Red variety, 90s. to 95s.; yellow variety, 100s. to 115s.

Figs continue their downward course, and bags Naturals are selling in retail quantities at 35s. to 45s.

COTTON STOCKS IN LIVERPOOL.

The Liverpool Cotton Association reports that the actual stock of cotton in Liverpool on January 28, as declared by warehouse keepers, was as follows (in bales):—American, 670,161; Brazilian, 36,654; Egyptian, 44,463; Peruvian, 171,831; West Indian, etc., 1,558; African, 50,989; East Indian, etc., 72,660.

TRADE OF THE BAHRAIN ISLANDS.

H.M. Political Agent at Bahrain, in a report on the trade and commerce of the Bahrain Islands in the year ended March 31, 1920, states that the total value of imports into Bahrain amounted to £1,414,423. This compares favourably with £1,350,060 in 1918-19, there being an increase of £64,363, which is satisfactory considering the poor state of shipping.

The total value of exports for the year 1919-20 amounted to £946,344 as against £1,317,811 in 1918-19, a decrease of £371,467. The pearl trade continues to dominate the commercial situation.

CULTIVATION IN THE SUDAN.

The following particulars are taken from the C.E.B. report for November:—

Halfa Province.—The Dameira crops are all in and have been above the average of recent years, both in yield and quality. All natives are busy preparing their ground for the Shitwi crops. Efforts are being made to get in all seeds at the same time, with the hope that it will be easier to deal with any bird pests later. Vegetables are very late this year in coming on the market.

Red Sea Province.—Several showers of rain fell during the month, and the grazing along the littoral as far as Mohd. Ghul is reported to be very good. The crops are reported to be far above the average for this province.

White Nile Province.—So far as can be judged at the present, the total crops of dura and dukhn of the province will be estimated at about 550,000 ardebs. The cultivators were seriously handicapped at critical stages of their crops by the universal prevalence of fever owing to the numbers of mosquitoes which bred out in pools and wet grass during the heavy rains. Fortunately, the form of malaria was comparatively mild, and deaths few, but the lack of people in sufficiently good health to weed adequately the large areas sown has turned into a half million ardebs what might otherwise easily have been a crop of three-quarters of a million ardebs. Heavy showers of late and unwanted rain also did considerable damage at the last stage of the crop. Considerable damage is stated to have been done to dukhn in the southern district by the "dueikh" insect. Generally speaking, there has been too much rain for dukhn. The form of the name of the insect pest which has affected the simsim crops so considerably is given from the southern district as aruma.

Sennar Province.—Crops in Sennar, Singa, Dinder, and Northern Karkoj are excellent.

Manufacturers and Merchants may address their enquiries to the Head Office for Trade Lists of Importers and Exporters.

COMPANY MEETINGS.

LONDON COUNTY WESTMINSTER AND PARR'S BANK.

The International Situation.—"Export Credit" Schemes.

The annual ordinary general meeting of the shareholders of the above bank was held at the Head Office, 41, Lothbury, E.C., on February 3. Mr. Walter Leaf (the Chairman) presided.

The Chairman, after referring to the warnings he had uttered at the meeting a year ago, said the world now recognised that the war had not made it richer, as appeared during the time of unrestricted inflation, but that it was all the poorer. Losses had to be cut on a larger scale, and the natural man always hated cutting a loss. Last year he laid stress on individual extravagance: this year the complaint must be laid against the Government. Individual waste had been largely cut down under the stress of the times. Mr. Lloyd George asked that a lead in economy should be given by individuals. That lead, he (the Chairman) honestly thought had been given: it was high time that the Government should follow suit. The pressure of taxation was such that savings were seriously diminished—that was the real reason of the diminution of credits, and it was mainly in the direction of Government retrenchment that they must look for the possibility of a restoration of their resources.

Having mentioned the changes which had taken place in the Paris management, following the reorganisation of that branch, and alluded to other matters of domestic interest, he made a running commentary on the leading figures in the balance-sheet, observing that the percentage of their "advances" to current, deposit and other accounts at the end of 1918 was 30.8, on December 31, 1919, 42 per cent., and in the balance-sheet then before them 42.4 per cent., whilst their discounts in the past twelve months had also risen from 16.2 to 19.7 per cent. This was a sufficient answer to complaints of restriction of credit. During the boom of last spring the percentage of advances rose on June 30 to 47.8 per cent., but the reduction had been slow and gradual.

The Profits.

Proceeding, he said the year had been one of high rates of interest and hence, on the other hand, of large profits, and, on the other, of a large fall in the value of all investments. Both sprang from the same cause, and the latter had gone far towards cancelling the former. Their profits, already trenched upon by the growth of their expenses, due partly to income-tax, but still more to the liberal increases made in the salaries of the staff—an increase justified by the high cost of living—had been absorbed in providing an investment depreciation fund which enabled them to meet to the full the entire difference between the cost of their investments and the market price on December 31. Since then there had been a material depreciation, but, in this, their position was typical of that of the general industry of the country; it had been everywhere a year of large profits, but ended with the imperative necessity of writing down the value of the stocks, if the position was to be kept sound. The process was painful, but it had to be faced and the banks could, at least, claim to be setting the example when they urged borrowers that loans must not be used to bolster up prices when the only honest course was to cut the loss. To shrink from cutting losses was the way to panic. There was, he thought, no need to fear a panic, and the general situation was easier than a few weeks ago. A great deal in the way of quiet liquidation of losses had already been done without any disaster; large failures had been very few and had been well faced. A great deal had to be done yet, but there was every hope that this could also be dealt with. The most disquieting feature in the outlook was the Continental position, and the problem was how to sell on such terms of credit as would afford reasonable opportunities to their customers to buy. Having alluded to certain favourable factors in the Home trade position, the growth of exports, the improved labour position, the fall in the price of raw materials, and evidence of savings on a considerable scale, he said it could not be denied that taxation had reached a most serious point, but he saw no radical remedy for the present discontent except in world-wide disarmament. It was in the League of Nations that their best hope lay.

International Situation.

The international situation was at the root of everything that most disturbed their view. A year ago he said that all depended on their getting the current of international trade once more flowing freely, but the last twelve months had seen far too little advance in that direction. No progress had been made in setting on foot the exporting power of the enfeebled nations

of the Continent; in consequence their exchanges had gone from bad to worse and their own exports were crippled. They were driven to further issues of a discredited currency and to the process there seemed at the moment to be no end. Their endeavours were being directed to some scheme of barter to which goods could be exchanged for goods. At the moment they were discussing what was known as the Ter Meulen scheme, under which the depressed Continental countries should make themselves responsible for the purchases of their nationals, by the issue to them of bonds, under the auspices of the League of Nations, which they could give in payment for the goods they bought. Another alternative, brought forward by Sir Edward Mountbatten, was also before them, and had the advantage that it did not depend upon the rather ponderous machinery of the Ter Meulen scheme, but enabled them to face the position on their own grounds, with support in reserve from their own Government, with the aid of a part of the £26,000,000 which they had already earmarked for the assistance of export to the ravaged countries. Other proposals were before them, but the ultimate guarantee for all plans was the same. It was essential that all purchases made from them by foreign countries should be balanced by equivalent exports from them, which would enable the respective issuing countries to provide funds for the due redemption of their obligations. It was on the maintenance of this equivalent export that all schemes hung.

Mischievous Legislative Proposals.

It was amazing to him that, at the very moment when these plans were before them, they should be disturbed by rumours of further proposals to hamper the free exchange of goods, on which not only the scheme but any possible hopes of restoring their own pre-war position were entirely dependent. The fundamental principle of international barter, which in normal times was perhaps somewhat obscured by the smooth working of the exchanges, was that "if thou wilt not buy, neither shalt thou sell." It was most distressing to find that, at the very moment when one would have thought that this maxim was forcing itself upon the intelligence of the blindest, they should hear talk about "anti-dumping," "key industries," and the like, all of which were simply a demand for hampering or even prohibiting the imports which were needed to pay for the goods of which their warehouses were at the moment full to overflowing, and for which a large part of Europe was hungering. Plainly, if legislation to this effect were passed, it would put an effective stop to the Ter Meulen scheme, or to any modification of it. It would effectually bar any prospect of any improvement in the position of the Continental exchanges. It would, moreover, by keeping up costs at home place a most powerful means of competition in all neutral countries in the hands of nations whose exchanges were at a discount, and would probably be immediately effective in crushing their own foreign trade, which was surely burdened enough as it was. The economic depression of the Continent was largely due to the artificial barriers which the new states were setting up between themselves. This they were all agreed was wrong. Only a few months ago there sat in Brussels a conference of all the best financial intellects in Europe, and they drew up a series of resolutions showing the principles on which alone the economical restoration of the world was possible. With all their resolutions the best opinion everywhere was in agreement. The conference unanimously passed a resolution recommending that "within such limits and such time as may appear possible each country should aim at the progressive restoration of that freedom of commerce which prevailed before the war, including the withdrawal of artificial restrictions on and discriminations of price against external trade." They had surely had enough of Government interference with trade, and that in this critical moment, such intervention should be extended to the most vital and most delicate part of their commerce seemed to him only too likely to lead to disaster.

Adherence to Economic Laws.

He did not wish to sit down with the word "disaster" on his lips; he did not believe there was any need for disaster. He was convinced that, if their difficulties were allowed to work themselves out on their natural lines, they could see their way through them all. One great lesson of the war was that economic laws would have their way in the end, and that Government attempts at interference with them, if they postponed the inevitable result, only aggravated it. They had had an outcry, which had largely attained its end, for the removal of all political interference with trade and industry. Do not let them at the moment when the removal of the last of these mischievous interventions was in sight, recur to the bad old plan. Let them be far-sighted enough to resolve that they would have no more attempts to bolster up unsound positions and set their faces boldly to the task of working out their own salvation.

The report was unanimously adopted and other formal business transacted. A cordial vote of thanks to the Chairman closed the proceedings.

LEVANT MARKET REVIEW.

We give the following extracts from the market review of the National Bank of Turkey for December:—

During the month of December there has been no improvement in the business situation at Constantinople, and it is difficult to see any marked amelioration until the political troubles of the country are settled. The rapid decline in Turkish currency added to the commercial nervousness here, and dealings have generally been very small indeed. Considerable stocks lie uncleared at the customs, and, until the exchange reacts in favour of Turkey, these goods will probably remain there, incurring heavy expenses unless shippers arrange for their withdrawal and storage. There is a certain eagerness, however, to dispose of existing stocks even at a moderate loss. This can be carried too far. Merchants should look forward to the reopening of markets and to the heavy demands for manufactured goods from Anatolia, and other regions which have been cut off from the source of supply for some time. Curtailed production in the manufacturing countries, and the impossibility of reducing to any great extent the costs of production and transport, will doubtless result in keeping prices at the present level and even of raising them again in some lines of goods where the prices have fallen temporarily below present cost. Merchants here are already finding that although it is difficult at the present time to find a market for their existing stocks, it is, on the other hand, impossible to replace these stocks at lower prices.

Manufacturers' prices for the New Year for woollen and cotton goods show surprisingly little fall in comparison with the present prices of stock goods. Small buyers from Anatolia are reported to be in Constantinople, buying chiefly Manchester goods and hardware. These are generally transported into the interior via Adalia or the Black Sea ports.

The question of a commercial exchange has again cropped up here, and is reported to be occupying the attention of H.E. Hussein Kiazim Bey, Minister of Commerce and Agriculture. The usefulness of such a chamber has been generally recognised for some time past both here at Constantinople and in Anatolia. It is thought that it would benefit the poor peasants considerably also; for these people, ignorant of ruling prices, mortgage their crops to unscrupulous moneylenders at exorbitant rates. With an exchange, and widely published prices, the peasant would have a much better idea of the price of the crops. Such an exchange has been instituted at Smyrna for some period with excellent results, and it certainly is time that the capital should follow and establish one here.

The situation in Thrace appears to be as stagnant as here, and very little business is reported from Adrianople or the other towns. The rapid depreciation in Turkish currency during the month has aggravated the situation for merchants who had liabilities to meet in sterling or dollars and who did not provide for their exchanges. On the other hand, those indebted in Turkish currency have seen the depreciation in their goods set off in part by the depreciation of the currency, and the exchange was therefore favourable to them. The general effect, however, is that the purchasing power of the public is reduced, and the fall of retail prices which should have occurred has been arrested. One unfavourable factor is the state of the finances of the Turkish Treasury, which is falling further in arrear with the pay of the Army and the Government employees. The cutting off of this large monthly expenditure is causing a great shortage of money in circulation, and the shopkeeper must be hardly hit by the falling off in sales.

Great inconvenience has been caused to British merchants here through the heavy delays in the mails from England. In many cases as much as three weeks have elapsed between the date of posting in England and the date of receipt in Constantinople. This seems all the more strange when it is remembered that the Paris mail arrives here in six days. It is understood that representations have been made to the British Government by the High Commissioner here, and it is to be hoped that the mails will be speeded up as a result.

Flour and Cereals.—There have been regular arrivals during the month, altogether totalling about 90,000 sacks of 140 lbs., from America, Bulgaria, and Roumania. These were of various qualities, and the prices paid varied from £T13½ to £T14 per sack. Exports during the month were trifling, to the Turkish Black Sea Ports and Batoum. There is a tendency to a firmer market, due to the rise in price in America, and to the depreciation of Turkish currency, and the market closed on December 31 at £T13½-13¾ per sack. The market remains well stocked.

Barley.—The prices continue to be much greater than those ruling in the European markets, although the market is well stocked. Since last month the market has hardened considerably, and there has been strong buying at 10½-11½ piastres per oke.

This is probably due to the fact that barley is now being ground into flour for mixing with wheat flour.

Sugar.—During the month about 2,000-2,500 tons arrived, chiefly Java, from New York, Marseilles, and Holland, some of which was re-exported to Roumania. Prices paid varied from £stg. 59.60 to £stg. 53.54 for different qualities. There now remains at Constantinople a very small stock.

Rice.—Arrivals in December rose to about 800 tons, from Marseilles and America. Prices generally had a tendency to drop, transit prices paid being 19-22 pts. per oke for Saigon No. 1 and 33-35 pts. per oke for American Blue Rose. A few small parcels were sent on to Roumania, and market remains well stocked. Closing prices: Saigon No. 1, 18-19 pts. per oke; American Blue Rose, 33 pts. per oke.

Coffee.—The market is very well stocked, and was increased by the arrival of 3-4,000 bags from Rio and Marseilles. The demand here is poor, owing to the falling off of the transit trade; there were no re-exports. Prices in transit: About 45 pts. per oke, good Rio 60-70 pts. per oke.

Canary Seed.—No trade has been done, and the price continues nominally at about 16 pts. per oke f.o.b.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

Paper, etc.—The Government Press, Cairo, invites tenders for the supply of the following material, required for the financial year April 1, 1921, to March 31, 1922:—Paper and Bristol board (tenders close March 15), ink, roller composition, and glue (tenders close March 1), binding cloth (tenders close March 10), antimony (refined), pig lead, tin (in rods or ingots) (tenders close March 10). The tenderer must be a person residing in Egypt or must have a representative there, and tenders should be addressed to the Controller of Printing and Stationery, Old Ismailia Palace, Sharia Qasr el Aini, Cairo. Copies of the specifications, conditions of tender, and samples may be inspected by United Kingdom firms interested on application to the Department of Overseas Trade.

Paper, Stationery, Office Requisites, etc.—The Central Stores Department, Ministry of Finance, Cairo, invites tenders for the supply of the following articles:—Paper of various types, writing, blotting, wrapping (thick and thin), typewriting carbon, oiled, copying tissue, drawing (including Whatmann), sectional and tracing, file covers, envelopes, filing cards, elastic bands, waste-paper baskets (wicker), note books, copying books, manifold books, cardboard boxes, brooms, broom heads (hair and "Basmat"), brushes (hard floor), brushes (long hair), typewriting brushes, artists' brushes, card index cabinets, calico, despatch cases (leather), paper clips (wire), copying rolls, gelatine, cord (particoloured, green and red), duplicating machines (composition), dust-bins, dusters, paper fasteners, letter files, floor cloths, gum, inks of all kinds, labels, lead seals, numbering machines, nails, galvanised iron pails, coir mats, water-colour paints, pencils, penholders, pen nibs, cardboard and leather portfolios, typewriting ribbons, erasers, sacks (calico), sealing wax, sponges, string, strong tape, typewriting machines. A provisional deposit equal to 2 per cent., or a bank guarantee of 10 per cent. of the value of the offer, must accompany each tender. In addition, the tenderer must be a person residing in Cairo or must have a representative in Cairo, and must give in his offer the address at which notices may be served upon him. In connection with this contract particular attention is drawn to the following extract from the special customs regulations for Government contracts covering the supply of stores of foreign origin:—"The Customs will accept duty on the contractors' c.i.f. purchase price instead of the c.i.f. value at the time of clearance, and will grant special facilities for clearance provided that the contractor complies with certain regulations." The regulations referred to, together with a copy of the schedule of articles required and conditions of contract for this tender, may be consulted at the Enquiry Room, Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1. Tenders should be addressed to the Director, Central Stores, Ministry of Finance, Cairo, and will be received up to noon on February 24.

Greece.

Light and Power Plant.—Tenders are invited for the provision of electric light and power for the town of Rethymo in Crete. A booklet (in modern Greek), giving the conditions of tender, together with a summary translation and a plan of Rethymo, can be seen at the Department of Overseas Trade, 35, Old Queen Street, S.W.1. March 26.

India.

Hardware.—The South Indian Railway Co., Ltd., invite tenders for the supply of hardware. Specifications and forms of tender may be obtained from the company's office, 91, Petty France, Westminster. February 23.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

ADRIANOPLE.

Commercial activity here increased during November and December. Permission to export granted by the Commission de Ravitaillement in Bulgaria has encouraged many of our merchants to import flour of the first quality and food-stuffs of all descriptions from the latter country, where the cost of commodities of the first necessity is much reduced. In general the trade position here can be regarded as very good. The crises with which the world markets have been affected have not been reflected here, and we are happily without any financial trouble.

During the first half of November very bad weather was experienced, and work in the fields came to an end. On the contrary, during the whole of December the cultivators were able to work their lands, and large surfaces were prepared for the spring sowings. The cultivation of tobacco in Thrace is beginning to take the importance that it deserves. Large advances have been made to cultivators by the Tobacco Régie and by private companies in anticipation of the crop. The authorities are concentrating their efforts on the development of agriculture in Thrace, the plains of which form a veritable granary.

JAFFA.

The report for December states :—The commercial position here remains much as in the previous week. Business transactions are confined solely to the needs of local consumption, and in view of this state of things various classes of cereals have undergone a new fall in prices.

As regards cotton goods, foreseeing a new fall in prices, holders are endeavouring to sell their stocks at reductions varying from 25 to 40 per cent. under cost price.

During the month about 30,000 cases of oranges were exported to Liverpool. The price obtained up to the present is about 22-23 shillings.

Olive Oil.—In view of the abundant crop of the present year, and having regard to the large offerings from Smyrna and Mytilene, local soap manufacturers are abstaining from entering into contracts of any importance.

There have been very few arrivals of sesame, and in consequence of the favourable prices of the new Sudan crop the price has fallen from £T4 to £T3.5 per kilo on our market.

The rains have favoured the preparation of the fields, and even in a certain part of Nablous the new crop is said to be good.

Irregular Tendency Prevails.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday night.

Marked irregularity has characterised the markets this week. The uncertain outlook abroad, and the general trade position, are quite sufficient to counteract any favourable features that may be in evidence, and the welcome news of the coming removal of the Excess Profits Duty failed to have much effect on the markets. Still, it is a factor that is going to count, and *alibi equalibus*—in other words, provided there are no further adverse developments—may be trusted to bring about a very marked improvement in quotations before many months are passed.

Gilt-edged stocks have been fairly firm during the week. Foreign bonds have, however, been somewhat irregular, and some selling from abroad has further reduced rates in some cases.

A rather brighter tone has prevailed in the Industrial group, but to-day renewed depression has set in, and prices have gone back almost all along the line. The Oil market has shown particular weakness in the face of a flood of liquidation, and rates in many cases are much lower. Rubbers continue to show little activity, and, with the price of the commodity a shade lower, the tendency is for lower rates to prevail.

Near Eastern securities which we rank among Government stocks have been fairly firm. Egyptian Guaranteed 3 per cent. are unchanged at 62, while Greek Guaranteed 2½ per cent. 1898 and Turkish Guaranteed 4 per cent. 1855 are unaltered at 58 and 67½, respectively.

Greek securities have been weak. The 5 per cent. 1881 Loan is 3 down at 39, while the 5 per cent. 1884 is a similar amount down at 39. The 5 per cent. 1890 has lost 2 at 39, while Fundings at 39 are 2 down. The 1910 Loan is 30, a decline of 1, but the 5 per cent. 1914 Loan at 39 is unaltered. The 1902 Loan has lost a point at 35.

Banks have been variable. Agricultural 3½ per cent. Bonds and the 3½ per cent. Guaranteed Bonds are unchanged at 53 and 55 respectively. Imperial Ottoman Banks are ½ down at 8, while National Bank of Egypt have lost ¼ at 17. Land Banks at 4 23-32 have recovered 1-16 of their previous week's fall.

Land shares have been fairly steady. Beheras are unchanged at 8½, while the Preference shares are unaltered at 2½. Anglo-Egyptian Land Allotments are the same at 3½. Egyptian Consolidated Lands are 1½d. down at 1s. 4½d., but Delta Lands are 5d. up at 9s. 8d. Gharbieh Lands are unchanged at 1½. New Egyptians are 6d. down at 22s. 6d., while Union Foncières have dropped ½ to 2½. Sudan Plantations are unchanged at 3½.

Oils have almost all declined. Anglo-Egyptians are unchanged at 2 7-16, but Phoenix are 9d. down at 10s. 6d. Roumanian Consolidated have lost 1s. at 11s., but Steaua Romana are unchanged at 17s.

Among miscellaneous descriptions Abyssinian Corporations are unchanged at 3s. Alexandria Waters remain at 7, at which there are unsatisfied buyers. Morums are the same at 13s. 3d., but Egyptian Salts and Sodas are 6d. down at 30s.

Sir Frederick T. Rowlatt, who, as already announced, retires from the Governorship of the National Bank of Egypt on March 1 next, after fifteen years' service in that position, has been elected to a seat on the board. He will be succeeded as governor by Mr. B. Hornsby, at present sub-governor of the bank in Alexandria.

COMPANY NOTES AND REPORTS.

British Trade Corporation.

The report of the British Trade Corporation for the year 1920 states that, in consequence of the disturbed state of Transcaucasia, the branch at Batoum has been temporarily closed. The Danzig branch has made considerable progress, and the Belgrade branch has substantially consolidated its position. Notwithstanding the unsettled state of the Near East, the reports from the National Bank of Turkey indicate an increasing business. The net profit, after payment of all expenses and making provision for some depreciation of holdings in subsidiary companies, amounts to £119,309, which, with £22,592 brought forward, makes a total of £141,901. The directors recommend a dividend of 8s. per share (subject to tax), leaving £61,901 to be carried forward. Current, deposit, and other accounts totalled £2,478,360 at the end of the year, and acceptances were £2,180,745. Meeting, Institute of Chartered Accountants, Moor-gate Place, E.C., February 23, 3 p.m.

Bengal and North-Western Railway.

The net earnings of the Bengal and North-Western Railway Co. for the year ended September 30 totalled Rs.1,34,72,453, against Rs.1,50,75,439 previous year. The company's share is Rs.79,63,960, against Rs.88,77,350. Actual rate of exchange was much higher than 1s. 4d., the book rate, and adding actual gain in remittance, £344,385, net earnings are £875,316, against £708,729. Including £91,754 brought in, providing for excess profits duty, corporation and income taxes, interest on debenture and preference stocks, interim dividend and bonus, contribution to provident fund, £35,000 for sinking fund for redemption of capital, appropriating £55,000 to investment depreciation, transferring £50,000 to reserve and making other adjustments, amount available is £292,089. Directors recommend final dividend of £4 per cent., together with bonus of 2 per cent. on ordinary stock, subject to tax at 3s. 9d., carrying forward £145,839. Meeting, Gresham House, E.C., February 15, noon.

A NEW TRADING BANK.

We understand that Messrs. Lionda and Co., Ltd., of 3, Broad Street Buildings, E.C.2, have practically completed arrangements for the formation of a trading bank for the financing of shipments to the Near East. The head office of the bank will be in London, at first at 3, Broad Street Buildings, but later separate offices will be obtained, and there will be branches at Liverpool, Athens, the Piræus and Salonika. Shippers are invited to communicate with Messrs. Lionda with regard to their requirements.

SHIPPING INTELLIGENCE.

DEVELOPMENT OF ROUMANIA'S WATERWAYS.

M. George Popescu, Director-General of the Department of Harbours and Waterways of the Ministry of Communications in Roumania, deals in a recently issued pamphlet (which may be seen, together with a translation of the more important passages, at the Department of Overseas Trade) with the navigable waterways and hydraulic reserves of Roumania.

He points out that Roumania possesses to-day 1,200 kilometres of navigable ways on the Danube, 700 kilometres on the Pruth, and 700 kilometres on the Dniester; that is to say, 2,500 kilometres, to which must be added that of new territories. Some waterways are accessible to sea-going vessels (with a draught of six metres), as in the case of Sulina and Braila. Vessels of two metres can navigate the Danube at all times. On the Pruth, during the driest season, only vessels of one metre can be navigated.

Dealing with the future programme for the improvement of Roumania's navigable ways, the writer says that the Danube, from Galatz down, should have a depth corresponding to the needs of vessels of large tonnage. A minimum depth of eight metres he regards as absolutely necessary in order to allow vessels of 8,000 tons to go to Galatz. In conjunction with this the canalisation of the rivers Pruth and Sireth should be taken in hand so as to float vessels with a draught of at least two metres at low-water level.

On the Danube, he points out, it is necessary to increase the efficiency of and to modernise the installations of river ports by the building of quays, platforms, warehouses, docks, and mechanical appliances for loading and discharging, and to develop railway communications, etc. These improvements will diminish the labour required, reduce expense, and at the same time enable vessels to complete operations quicker. After improving the Danube, the navigation on the Dniester, the present frontier towards Russia, should come under consideration.

MOROCCAN COASTAL SERVICE.

A well-known British steamship company has now inaugurated a coastal service between ports in Morocco in conjunction with their service of general cargo steamers between London, Antwerp, and Morocco. This company is now in a position to accept cargo to and from any port on the Moroccan coast. The intention is to use Tangier and Fedhala as transshipment ports, the former for the northern and the latter for the southern ports; and with the protection afforded on the off-shore side of Tangier Bay, and in the sheltered basin of Fedhala, to tranship cargo direct over-side from the ocean-going vessel to an auxiliary motor schooner, and vice versa in the case of homeward traffic from Moroccan ports. The net result of this arrangement will be that traffic to or from the several ports in Morocco, which have not hitherto been served by direct sailings, will be despatched and/or delivered, as the case may be, promptly, without the necessity of being landed at Casablanca or some other port, and awaiting a suitable opportunity for onward despatch.

Preliminary work is now being actively carried on in Croatia by the company formed recently at Agram by the Anglo-Saxon Petroleum Company, in conjunction with the Yugoslav Government, to work extensive oil concessions there.

Moss Line.—S.s. Limoges, for Gibraltar, Malta, Piræus, Syra, Smyrna, Salonika, Constantinople, etc. (Liverpool, February 19).

Papayanni Line.—S.s. Austrian, for Algiers, Malta, Piræus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 12); s.s. Dido, for Algiers, Malta, Piræus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 12); s.s. Assyrian, for Malta and Alexandria (Liverpool, February 19).

P. and O. Line.—S.s. China, for Bombay (London, February 11); s.s. Nellore, for Colombo, Madras, and Calcutta (London, February 11); s.s. Kalyan, for Bombay (London, February 18); s.s. Soudan, for Bombay (London, February 18); s.s. Somali, for Colombo, Madras, and Calcutta (London, February 25).

P. and O. British India Line.—S.s. Lena, for Bombay and Karachi (London, February 19); s.s. Morvada, for Colombo, Madras, and Calcutta (London, February 25).

Prince Line.—S.s. Syrian Prince, for Malta and Alexandria, also taking cargo for Syrian coast and Cyprus ports (Leith, February 10, and Liverpool, February 20); s.s. Soldier Prince, for Tunis, Malta, and Alexandria, also taking cargo for Syrian coast and Cyprus ports (Manchester, February 15).

OIL OUTPUTS.

Anglo-Egyptian Oilfields.—Gemsah production for week ending January 22, nil tons (last week, nil tons). Hurgada production for week ending January 22, 4,012 tons (last week, 4,099 tons).

The export from Turkey of all locally caught salted fresh-water fish is now free.

National Bank of Greece.—The Administrative Council announces that the dividend for the second half-year has been fixed at 240 drachmæ per share.

A memorandum has been presented to the Roumanian Government by the syndicate of sugar manufacturers in that country declaring that the manufacturers will be in a position to meet the requirements for home consumption next year.

NOTES OF THE WEEK.

The Near East Conference.

At the time of writing it is understood that the London Conference on the Near East will begin next Monday. Tewfik Pasha and Mustapha Reshid Pasha will represent the Porte, while the Angora "Nationalists," after a good deal of boggling and manoeuvring, are sending a delegation containing "deputies" from at least half-a-dozen towns and districts. Greece is to be represented by M. Kalogeropoulos, whose right-hand man will be M. Coromilas; the Armenian chief delegate will be Boghos Nubar Pasha, than whom no better could be selected; and, we learn from a Bombay report, the Aga Khan has been invited to attend the Conference to represent the views of Indian Moslems. According to this report his Highness was to leave Bombay only on February 12; which, unless he is to fly part of the way, would seem to indicate that the Conference is expected to last long.

Moslem Representation.

We sincerely hope that the report regarding the Aga Khan is a true one, for we share the view expressed by the *Times of India* that although the official representatives of India would present the case for Moslem India as strongly as any Moslems could do, their action would command little public confidence in this time of political excitement. If Indian Moslems know that their views are to be fully put forward by the Aga Khan, and perhaps one or two associates, the agitators will be deprived of one weapon, and genuine Moslem feeling should be reassured. As to the self-seekers and adventurers who care nothing for Islam except in so far as they can use it to their own ends, it would, of course, be hopeless to attempt to make them acknowledge the honesty of Great Britain's intentions and actions. They dishonour the teachings of the great Arabian Prophet daily and hourly, and the pity is that, owing to the long-drawn-out process of settling the peace, they have been afforded an opportunity to play upon the feelings of millions of good Moslems who have failed to detect their hypocrisy.

Kemal and the Khalif.

In the conditions that have been allowed to grow up, it is, perhaps, too much to hope that the Moslems of India will take careful note of the lack of respect shown by the Kemalists for that Sultan and Khalif whose alleged humiliation is said to be causing so much grief to Moslems the world over. Either the Sultan

is the Khalif, and therefore entitled to the respect of all good Moslems, or else he is not the Khalif and the Moslem world need not therefore be greatly concerned about his fate. The question, as we have repeatedly pointed out, is one entirely for Moslems themselves to decide; but even Mustapha Kemal cannot have it both ways; and it is possible that a great many Moslems may want to know which way he is going to have it. As things stand, he is in the position of having threatened to dethrone the Sultan unless the latter recognises the Angora "Government" as the Government of all Turkey; and the fact that in the latter case, the Pasha offers to make his Majesty a suitable allowance and to let him continue to reside at Constantinople—under the watchful eye of a Kemalist agent!—is hardly calculated to make the insult any the less. We have no desire to offer an opinion on the more intimate aspect of the case, but it seems to us that by his impetuous action Mustapha Kemal has placed Moslems on the horns of a dilemma.

Bulgaria and the Conference.

As was to be expected, the Allied Conference to be held in London, at which Greek and Turkish representatives are to discuss the Treaty of Sèvres, has caused some heartburning in Bulgaria. In view of all the circumstances, it must be admitted that Press comment on the subject has shown a commendable restraint. It is pointed out that, while all the other Treaties have been modified, or in some way tempered in their application to facts not previously recognised, Bulgaria alone has not benefited from the tendency towards concessions on the part of the conquerors in favour of the conquered, and it is recalled that Bulgaria alone has submitted without protest to the treaty of peace as imposed on her by the Allied Powers, and loyally set about to carry it into execution. But there has been no serious suggestion, as far as we are aware, that the Bulgarians should take a leaf out of Mustapha Kemal's book. On the other hand, dignified appeals are made to the Allies to give some consideration to realities in the Balkans and to seize in the interest of the whole Peninsula the opportunity for a juster settlement than that provided by the Treaty of Neuilly.

Bulgarian Desiderata.

When it is remembered what a heavy blow the Treaty of Neuilly was to the Bulgarians, it must be regarded as significant of the restraint which the people have placed upon themselves that they can pick out one or two questions as of special significance, which they consider might be dealt with without doing greater violence to

the Treaty than has been done to the other Treaties. These questions are the voluntary army, the treatment of Bulgarian minorities in neighbouring States, and communication with the Ægean Sea. Everyone who knows anything about Bulgaria can testify to the impossibility of Bulgaria's maintaining a voluntary army, and this view has been endorsed by the Allied Military Missions in the country. As for the Bulgarian outlet to the Ægean Sea, provision was made for it by the Allies, and we can only suppose that, if M. Venizelos had not fallen from power, he would have found time by now to come to an agreement on the subject with the Bulgarian Government. Modern diplomacy is a little inclined to model its procedure on that of the nursery, which is always punctilious in the manner of presenting its *bonnes bouches*. In this instance an injustice will be done to Bulgaria, if there is any further delay on account of political developments in Greece in regulating her access to the Ægean; and we hope that the occasion of the Conference will be improved by the announcement of the steps taken to ensure that this access is to be real, workable, and effective.

Reports on Montenegro.

Once upon a time the British Government, under pressure of public anxiety regarding alleged happenings in Montenegro, sent out the one man qualified to investigate conditions in that country. Count de Salis, it was rumoured, was assaulted in the streets of Cettigne, and was forcibly prevented from pursuing his investigations. The refusal of the Government to publish his report confirmed the general impression that he had revealed a state of affairs that could not be made public without grave damage to the reputation of Serbia. In all probability the publication of Count de Salis's report would have strengthened the hands of the Belgrade authorities in dealing with a situation which had passed out of their control owing to more important preoccupations. When subsequently the British Government appealed to the better judgment of the Serbians and more particularly to the high moral sense of the Croatian element in the new Yugoslav State there was an improvement in conditions in Montenegro, where, in addition, the heavy military hand had left its impression. Public uneasiness in regard to Montenegro continued, and in July, 1920, Major H. V. Temperley was sent out to report on the state of the country. Towards the end of November elections were held in Montenegro, and Mr. Roland Bryce, of the British Legation in Belgrade, went to Cettigne with a watching brief on behalf of Great Britain. Portions of Major Temperley's report and Mr. Bryce's report, presumably in full, have now been published as White Papers. The effect of these documents, which bear internal evidence of careful and conscientious compilation, is to suggest that the British Government hope that the omission to publish the De Salis Report will now be forgotten.

The Peril of the Balkans.

Various countries of the Near East are showing a strong inclination to slip back into the bad old way of accusing one another of provocative acts, propagandist activities, the arming of "bands," and so forth; and the readiness with which such accusations, however exaggerated, are believed, is, indeed, unfortunate. At the present time the Greek papers are exercised over alleged Turkish and Bulgarian propaganda in Thrace and the reported concentration of Bulgarian bands on the frontier; they also describe the state of the Christian population in Asia Minor, save that portion of it which is under their own rule, as deplorable; and the Turks reply by launching similar charges about their compatriots and co-religionists under Greek rule. It would be easy to extend the tale, but nothing would be gained by doing so. The astonishing thing is that the countries concerned should think it worth their while to resume or encourage such tactics at this time of the day. If only they would spend half as much energy and ingenuity on suppressing their own mischief-makers as they do on trying to "discover" the "intrigues" of their neighbours, it should be no very difficult matter to bring about a renewal of the Balkan alliance, and perhaps even a

good understanding with Turkey. As it is, it looks as if things are drifting in quite another direction.

Labour Troubles in Greece.

"Labour" has been restless for the last few years in Greece, and now a strike on a comparatively large scale has been attempted. In Athens and the Piræus the gas and electric light workers, and the tramway and electric railway men suspended work; the strike was extended to the provinces, and the chief industrial centres became affected. It was to be expected that the political uncertainty in the country would have its effect on Labour circles. The Labour movement was originally based on certain real grievances of the workers, which M. Venizelos was quick to recognise were not altogether unjustified. His sympathy gave encouragement to the Labour organisations, but as a result of his prolonged absence from Greece they were deprived of the salutary check which he might have exercised, and, lacking responsible leaders they drifted in to an attitude that helped neither their own cause nor the State. The present trouble need not be attributed to any sins of the present Government. It is significant that submission of their case to King Constantine has secured for the workers full satisfaction of their demands—a further proof for the Greek public that, whatever official shortcomings may be, they will always have a personal friend at Court so long as King Constantine is on the throne.

Parliament and Mesopotamia.

The mandate for Mesopotamia is to be considered by the League of Nations on February 21; but on February 17 Sir William Joynson-Hicks is to ask that a copy of the mandate be placed on the table of the House of Commons, and whether the Government will undertake that it shall not be submitted to the League until it has received the approval of Parliament. Provided that it could be done in a non-party spirit we should like to see the whole question of Mesopotamia debated fully in the House, where there are several members who ought to be able to make valuable contributions to the discussion. Such a debate, at this stage, with the mandate on the table, would, in all probability, show that while the country is naturally anxious to see every possible economy effected in Mesopotamia, as elsewhere, it is not going to be stampeded by any Press campaign into neglecting its clear duty. Fortunately, the Government has thus far shown itself less squeezable on this subject than on many others; and the intimation, contained in a semi-official announcement issued last week, that the troops now being sent away from Mesopotamia are only those reinforcements dispatched from India last year owing to the Arab rising, "which are now no longer required," is, in the circumstances, reassuring.

Candidates for the Emirate.

While we are strongly opposed to any policy of hurried withdrawal, such as that advocated by the "stunt" Press, we shall welcome any move that will help towards setting Mesopotamia firmly on its own feet. In this connection the selection of an Emir is of the highest importance, and if the report that it is to be made very shortly be true, it is to be hoped that it will prove a step in the right direction. Subject to the single condition that the selected candidate must not be unfriendly disposed towards the Mandatory, we should like to see the choice left absolutely—as we believe it will be—to the inhabitants of Irak. The Emir Abdullah, who appeared at one time to be a strong favourite, has dropped out in favour of his brother, the Emir Faisal, and the only other candidate with any chance of winning the favour of the people would seem to be the Shereef Ali Haidar. The latter, as a correspondent reminds us to-day, must make a very strong appeal to the region in which stand the sacred shrines of the Shiah, and in which the memory of martyred Ali is held in so great reverence. The Emir Faisal, on the other hand, has won for himself a reputation unique in the Arab world, and a host of friends and well-wishers in Great Britain. Our Allies across the Channel, it is true, do not share our sentiments regarding him, but that fact need not be allowed to weigh against the Emir's chances if Mesopotamia wants him and Great Britain approves his candidature.

THE WEEK AT HOME.

LONDON, Monday evening.

Parliament Again.

The political world and its wife have now returned from the Riviera, where no doubt it has been meditating statecraft at leisure in the congenial atmosphere of Monte Carlo. Parliament opens to-morrow, and the debates on the Address will last out the week, after which the work of the session will really begin.

The reconstruction of the Government, which has engaged the gossips for so long, turns out to be a modest affair after all. Lord Milner and Mr. Walter Long retire; one will miss the latter's pleasant, rubicund face, long popular in the Lower House, the last of the typical squires. Sir Laming Worthington-Evans goes to the War Office, which will not be quite so prominently in the public eye now that Mr. Churchill has emigrated to the Colonies; Lord Lee, whose Agricultural Bill was docked by the Press in December, takes the Admiralty, in which he held a minor post some years ago. Sir Arthur Griffith-Boscawen, long Under-Secretary at the Board of Agriculture, now becomes its head—not a very easy post, as the farmers are rallying the Government over broken promises about the price of wheat.

The changes will involve a by-election, and there are others pending owing to other various retirements; half a dozen by-elections will be a pretty fair test of the trend of opinion. The contest at Cardigan between Mr. Llewelyn Williams, of the Independent Liberals, and Captain Evans, of the Coalition, seems to be rousing the Welsh breast to a frenzy of excitement. Meetings are held by enthusiastic supporters, stormed by fanatical opponents, rescued from disaster by intrepid recruits; every denomination is split from top to bottom; and the pulpits are said to resound with curses and benedictions; one almost expects to hear of the doctors in the constituency recommending Liberal or anti-Liberal pills. But the 30,000 voters are enjoying themselves hugely, and the deluge of oratory, like the Welsh rainfall, fortunately does not reach England.

Anti-Dumping and Licensing.

It is understood that the Anti-Dumping Bill is almost ready, so we shall soon be in the throes of the fiscal controversy, as in the old days. The measure is said to be on Unionist lines, with a little gain for the Coalition Liberals; the Opposition will rage and storm—particularly now that it is reinforced by the Free Fooders, Lords Robert and Hugh Cecil—but the measure is pretty certain to pass.

The Licensing Bill, which is to console the Liberals for anti-dumping, is not so forward. And in fact little can be done in this direction at the moment, for the Liquor Control Board is still in being. It is formally constituted to last until the end of the war; and as peace is not yet ratified with Turkey, the Board continues to function. It is a little odd that the Englishman's beer should wait upon the Sultan's signature; and I am quite sure that when his Majesty reads this paragraph he will realise that we too have suffered, and take the appropriate steps.

Ireland, of course, will also come up, and economy at home and indemnities abroad. Now that E.P.D. has gone, the Budget will rouse less interest, but there is further trouble looming with the railways, over the agreement with the Government. And this may lead to a good deal of time being spent on the weary topic of the State and nationalisation, which will bring the Labour Party to its feet. Labour in the House sleeps peacefully and well, but at the mere whisper of the word "State" it stirs in its slumbers and ejaculates "Karl Marx." After that it talks exuberantly for a time, and everybody else goes to sleep. Perhaps things are not so unevenly divided in the world after all.

Mr. Will Crooks to Retire.

It gives one something of a shock to see that Mr. Will Crooks, member of Parliament for East Woolwich,

is retiring. In his own district of Poplar, where most of his life has been spent, he is extraordinarily popular; to most of its people in fact "Bill Crooks" is Poplar. He seldom spoke in the House of Commons, although in a quiet way he had a good deal of influence—it was he who, contrary to all precedent, started "God Save the King" in the Chamber itself when war broke out—and his absolute personal disinterestedness ensured him respect in an assembly where the opposite quality is not unknown. He had no desire for high office, but he threw himself heart and soul into war-work—from the strain of which he has not recovered.

The Labour Party has nominated Mr. Ramsay MacDonald as his successor. He was not noted for his war-work; and he is a stranger to East Woolwich. In other respects he is a contrast to Mr. Crooks, for it is notorious that he has high political ambitions; it has always been said that he expected a seat in the old Asquith Cabinet, but that Mr. Asquith thought him good enough for an Under-Secretaryship, but not good enough for the Inner Circle without the usual official apprenticeship. He has been a prolific political author, but he is better as a speaker than as a writer. Indeed, with the possible exception of Mr. Snowden on his best days, Mr. MacDonald is the best speaker the Labour Party possesses.

He is not very popular among his colleagues, and that for several different reasons. Many of them resent his attitude during the war. Some consider that when he led the Labour Party in the House before the war, he looked on his team as merely the tail of the Liberal dog—and, in fact, he always impresses one as the typical middle-class Liberal rather than the Labour leader—and still others resent his rather superior attitude. I should imagine that his influence, if he is returned, will be given to advocating a coalition between Liberal and Labour—in which case there will be plenty of trouble awaiting him in the Labour Committee Room.

The Last Bank of Issue.

Truly these are revolutionary times. Beckett's Bank, which every Yorkshireman for generations past has looked upon as one of the bulwarks of the British Constitution, was amalgamated with one of the "Big Five" the other day; and now Fox, Fowler and Co., which has filled a similar place in Devon and the West generally, is to be amalgamated with Lloyds. This is the last of the banks possessing the right to issue its own notes.

How steady the process of absorption has been the figures since the Bank Act of 1884 indicate. In that year, when the Act was passed, there were 207 private banks in England and Wales having the right to issue their own notes. In 1901 there were only thirty. By

November, 1919, when the great amalgamations were almost completed, only six such banks were left. Now the last has vanished into history.

On the whole, one hears fewer objections now than a couple of years ago to these great banking corporations. That they had one merit, increased safety for depositors, was always admitted; but it was suggested that they would disregard local interests and needs, and drain the provinces for the towns; and further, that they would restrict credit everywhere. So far as I can discover, they seem to hold the balance pretty fairly between the country and the town—it must be remembered that it is not a very easy thing to do. And certainly there has been no general restriction of credit. In the interests of safety, they had to pull borrowers in last year, or the whole financial structure would have become top-heavy; but even so, the latest balance-sheets show an increase of loans. After all, a bank makes its dividends by lending, not by merely receiving money.

Coming Centenaries.

The centenary hunters are now in full swing. After Keats, Dante and Napoleon will be celebrated this year; next year is the centenary of the death of Shelley and the birth of Matthew Arnold (who thought the poet a "beautiful ineffectual angel"), and also the bicentenary of Collins, author of "How Sleep the Brave," and of the rollicking Smollett; while printers will reverence the pious memory of William Caxton, born six hundred years ago, and the first "father of the chapel." All these events will be the excuse for—

"Dinners, speeches, and potations,
Orgies, toasts, and bibulations."

The "Athenæum."

The end of the *Athenæum*—its last number was published last week—is one of the minor tragedies of literature. Its great days had long since passed, and its authority had worn thin as a shadow. Some years ago an author whose new book was praised to the extent of three columns in that leading critical review told me that, so

far as he could see, it did not sell an extra copy of the work. That was before the war; during the war the *Athenæum* was a monthly, and a stodgy one, more interested in sociology than literature. Since the Armistice it has made a brave struggle under an editor who was, by common consent, excellent—it is perhaps necessary at this juncture to say that I do not know him personally, and have never written a line for his paper in my life—but the *Times Literary Supplement* had got too long a start, and the older journal committed *harkari*.

The *Globe*, London's oldest evening newspaper, is also dead. It was a great property until 1908, when it was sold by the then proprietors for about £80,000. But it never recovered from its false report of Lord Kitchener's resignation in 1915, and its suspension for a fortnight on that account, and for some time past it has been moribund. Its circulation, which at one time was the largest of any evening paper in London, must have been very small recently.

It is not often that two great papers die in a week. But it must be remembered that several new ones have been started since the Armistice, and there are rumours of other new ventures pending in Fleet Street. Journalism has had a difficult time this last year, but I am inclined to think that the worst is over.

The Week's Books.

"Cecil Rhodes" (Constable), by Basil Williams, although hardly destined to be the final word on the Colossus of South Africa (for another work on the same subject is being written at the moment), is a careful, and, in places, even vivid, portrait. The author has resisted the temptation to exaggerate which many previous biographers of Rhodes have betrayed.

From the same firm comes "The Life of Ambassador Choate," by Mr. E. S. Martin. It has been well reviewed, but I must admit that I should have preferred one volume to two.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, January 31.

Lord Allenby's Tour.

The High Commissioner and Lady Allenby left on Thursday on their postponed visit to the Sudan. They broke their journey at Luxor, where Lord Allenby paid a visit to the Sultan on the latter's steamer Arabia. Later in the day their Excellencies embarked on a Sudan Government steamer and continued their journey by water.

The Political Situation.

Since my last letter the members of the Egyptian Delegation have arrived. I cannot say that the welcome extended to them was nearly as warm as one had been led to expect. They were, it is true, greeted in Alexandria and at the station in Cairo by relatively large crowds; but it soon became apparent that Zaghoul's telegram and the activities of the students and a certain section of the lawyer element had considerably diminished the enthusiasm with which they would otherwise have been received. There had, indeed, been no reason why the people should withhold from these delegates the recognition which the efforts of all the members in the national cause deserve, especially when one remembers the manner in which they were received last September. Zaghoul's telegram was, however, couched in such a way as to convey the impression that the returning delegates were working against him and against the national aspirations; and it is, therefore, not difficult to understand how it came about that the returning members met with what one might call a cool reception.

That the delegates themselves have realised the situation is evident from the contrast between their statements immediately after landing and the declaration which they issued three days later. The latter definitely puts on record the fact that the whole delegation is in complete agreement, and adheres to the decision not to enter upon official negotiations until the demand for the abolition of the Protectorate and the other reservations have been accepted, and until it has been agreed to make them the fundamental bases for the negotiations. The declaration goes on to say that, while the Delegation will not support any other body that starts official negotiations, unless such body is in agreement with the Delegation in principle and in procedure, press polemics such as have recently taken place are inimical to the national interests, since they give the impression that the country is divided, and it is essential that before the world there should be union.

In this connection it may merely be noted that on their arrival the delegates admitted that the amendments that had been proposed to them when the Milner proposals were submitted to the nation were "pious wishes" not "reservations," into which the Delegation itself had taken the liberty of converting them, and that in this connection it was quite prepared to bow to the will of the nation; and further that there was no intention of getting Great Britain to make a formal declaration of the abolition of the Protectorate before the negotiations so that Egypt could enter those negotiations as an independent State; but what was wanted was that the principle should be recognised, and that

all the reservations should be discussed during the course of the negotiations.

In the light of the hostile attitude worked up against them it is, perhaps, not surprising, considering all the circumstances, that the delegates should have issued the subsequent declaration. It will certainly clear the way and enable them to establish relations with all classes and elements, and it is conceivable that, as a result of this contact, out of the difficulty, as regards the British Government, which persistence in the attitude adopted by Zaghoul appears to have created, a way will be found acceptable to all but the ultra-Extremists and those who, like the students and lawyers, have no sense of responsibility and always incline to idealist doctrines.

The Irrigation Libel Action.

The Willcocks-Kennedy libel action continues its weary, and to the general public, uninteresting, course. Practically the whole of the week has been taken up with the examination-in-chief and the cross-examination of Sir Murdoch MacDonald, who, when the Court rose on Saturday, had spent thirteen hours in the witness-box. Nothing very sensational has transpired beyond the production of the complete Blue Nile Memorandum, of which only the second page was put in by the accused at the Nile Projects Commission inquiry, and the authorship of which is attributed to Sir Murdoch MacDonald, who says he has no recollection of having written it.

The cross-examination is based on the plea of justification, consisting of twenty-one long paragraphs. The evidence is of a highly technical nature, and it is, therefore, not surprising that judge and counsel and the general public, not to mention the jury, are at times bewildered by the mass of figures, diagrams, and technical terms which are promenade before them in the course of the explanation of divers points at issue. The case is likely to last some time yet, for there are several witnesses still to be called, amongst them Mr. Hurst, the Director of the Physical Department, whose evidence comes second in importance only to that of Sir Murdoch MacDonald.

GREECE.

ATHENS, February 1.

The President of the Chamber.

The nomination of the President of the National Assembly, which was to have taken place on January 24, had been postponed until yesterday owing to the lack of confirmation of the election of a considerable number of deputies, mostly Venizelist. In the meantime M. Stratos, with his sixty adherents, whose attitude had been causing a good deal of uneasiness amongst Government circles, was persuaded by M. Rallis to support the Government candidate. The other independent parties followed suit, the result being that yesterday's election ended in a complete victory for the Government candidate, M. Lombardo, who obtained 248 votes out of 319. The Venizelist candidate, General Danglis, secured only 71 votes. This figure, however, should not be taken as an indication of the Liberal Party's real strength, which, including the members absent for one or other reason from yesterday's sitting, should reach about 100.

The new President, in a short speech, thanked the Chamber for his election, adding that he was proud to be the President of the first National Assembly in which representatives of Greater Greece also participated. Replying to M. Lombardo's speech, M. Bacalpassis, a deputy from Thrace, and one of the youngest members of the Chamber, expressed the everlasting gratitude of the people of Thrace towards the Allied Powers and those who, both diplomatically and on the battlefield, had fought for their liberation.

Situation in Asia Minor.

Colonel Pallis, the sub-Chief of Staff of the Greek Army operating on the Asia Minor front, has arrived

YUGOSLAVIA EXPRESS AGENCY, LTD.

Offices at Belgrade, Brod, Sarajevo, and Metkovich.

DIRECT ROUTE via MALTA AND METKOVICH.

from Smyrna. He was immediately received by the Minister of War, M. Gounaris, whom he put *au courant* of the military situation on that front. It is now established beyond doubt that the recent operations in Asia Minor, about which there had been conflicting reports, were a complete success for the Hellenic arms.

According to accounts received from Smyrna, the situation in that part of Asia Minor not under Greek occupation is deplorable, and the sufferings of the Christian population in the hands of the Turks are indescribable. The Orthodox Bishop of Patara has been deported by order of Mustapha Kemal, and all the Greek and Armenian churches and schools in that region have been forced to close, while their properties are confiscated and distributed among the Kemalists.

Forged Passports.

The police have laid hands on a gang consisting of about thirty persons who earned their living by issuing forged passports. Their victims were, as a rule, young men from the country who were anxious to leave this country and proceed to America in order to escape military service. The price charged for the issue of each passport depended upon the financial status of the would-be emigrant, and amounted to anything between 2,000 to 4,000 drachmæ. It appears that the members of the gang were realising substantial profits from their business, as one of them alone was found to be in possession of 72,000 drachmæ.

Propaganda in Thrace.

The Greek papers say that the anti-Greek propaganda which was carried out in Thrace by the Turks and Bulgars during the Allied occupation is again in full swing. Various individuals who had been expelled because of their anti-Greek sentiments and intrigues have now returned to that country. Among these is the famous Tewfik Bey, who was expelled by General Charpy for holding revolutionary meetings and inducing the Thracian population to oppose by force the

advance of the Greek troops. According to information received by the Governor of Thrace, bands of Bulgarian irregulars are once again concentrating on the frontier, holding themselves in readiness to penetrate into Greek territory as soon as the occasion presents itself.

General News.

The new Governor of the National Bank of Greece, M. Maximos, took the usual oath last Monday in the presence of the King and the Minister of National Economy.

The new Roumanian Minister to Greece, M. Djouvara, handed his letters of credit to King Constantine last Tuesday morning. He stated that the two forthcoming marriages between members of the Hellenic and Roumanian Royal Houses would greatly contribute towards the development of both political and economic relations between the two nations.

The Sanitary Council of the Minister of Interior held a meeting to discuss the measures to be taken against the "flu," which is once again raging both in Athens and the provinces. No definite decisions were arrived at, but it is thought that unless there is an early abatement of the epidemic, all theatres, picture houses, and other places of amusement will be compelled to close.

To a delegation of "unredeemed" Greeks, which visited the Premier yesterday to ask him what was the position of the Greek questions from an international point of view, M. Rallis replied that the rights of Hellenism were so evident that the Allies could not possibly fail to recognise them.

TURKEY.

CONSTANTINOPLE, February 1.

Fears, Hopes, and Suspicions.

The decision of the London Conference of Allied Prime Ministers to convoke a meeting of Greek and Turkish representatives seems to have been as great a

THE "UNIVERSAL" CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE
NEAR AND MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

surprise for the Greeks as for the Turks, and for that reason aroused considerable excitement. Amongst Ottoman Greeks the announcement produced feelings of pessimism altogether disproportionate to the occasion, and the recently-formed Committee of National Defence is said to have decided to prepare for the worst. The following extract from an article published in the *Proia*, of January 31, fairly reflects the Ottoman Greek point of view:—

The Great Allied Powers have not recognised, do not recognise, and never will recognise Constantine. They do not even recognise Greece, over which he reigns, as a friend and ally. Yet the interests of Hellenism demand that they should. If those who are at present in power, in the intoxication of their triumph, have not yet repented of having voted for the fall of Venizelos, and of having brought about the return of Constantine, that is no reason why unredeemed Hellenism should bow to their will, and of its own accord cast the Hellenic question and the desires of the nation into the abyss. (Unredeemed Hellenism) can never agree to that. It is bound by a sacred obligation devolving from five centuries of sacrifices. It is duty imposed upon it by the death of Paleologus, the hanging of the Patriarch Gregory, and the immense woes of the last few years of war. Unredeemed Hellenism can never accept a vote the consequences of which have been so deplorable.

Turkish opinion, on the other hand, seems to be more divided. True, practically all the Turkish papers are crowing over the Greeks, but the Turks seem to have realised that it would be rash to jump to the conclusion that the Allies have any other intention than to attempt to find a *modus vivendi* without altering the fundamental principles upon which the Treaty of Sèvres is based. On the whole the Turkish Press is cautious in its comments. But the Turkish Press reflects only a small fraction of Turkish opinion—that is, the Press of the capital; for the censorship prevents the publication of Nationalist opinions. In the present circumstances, Nationalist opinion is of considerable importance, and in this respect, unfortunately, the prospects of an agreement, a practicable agreement, appear to be very slight. Whilst the anti-Unionist circles in Constantinople are expressing the greatest pleasure that the suggestion for the holding of the forthcoming conference should have come from Lord Curzon, the Nationalists and Unionists see in that very circumstance another perfidious manœuvre of the British Government. The Nationalist point of view seems to be that as the Allies have offered no assurances with regard to the modification of the Sèvres Treaty in accordance with Turkish aspirations, and as this is the only basis upon which they can consent to discuss matters, it would be useless for them to accept the Allies' invitation. The Central Government, while realising that the Allies have given no pledge, take the view that the Turkish cause will be heard with greater benevolence than last year, and that if that cause is pleaded in a careful and moderate manner, there is a good chance of important concessions being obtained.

It is possible that the Turkish delegate, without being the official mandatory of the Nationalists, may combine his official representation of the Sublime Porte with the holding of a watching brief for the Nationalists, and that the latter, if the preliminary results of the Conference are favourable, may send a delegate at a later stage of the proceedings. Izzet Pasha's name has been persistently mentioned as Turkish delegate to the Conference, but it is still doubtful whether the Nationalists will let him go. On the whole, it is very much to be feared that the success of the Conference will be rendered impossible by the obstinate intransigence of the Nationalists.

A Greek Committee of National Defence.

As time passes there seems to be a constantly decreasing probability of a reconciliation between the Ottoman Greeks and their Hellenic brethren who welcomed Constantine back to Athens. The Greeks of Constantinople, perhaps taking a leaf out of Mustapha Kemal's book, have formed a Committee of National Defence, which is directed by certain of the most energetic and enthusiastic supporters of M. Venizelos. A number of Venizelist officers who, to put the matter politely, have "resigned" their commissions, are now in Constantinople, and have found a more congenial sphere of activity under the direction of the Committee.

The Greeks of the Ottoman Empire have always been remarkable for their *esprit de corps*, and this characteristic has never been more evident than at the present moment. This is illustrated, for instance, by the circumstance that the price of Greek newspapers in Constantinople has been doubled, in order to provide the Committee with funds for the maintenance of Venizelist officers serving the Committee. Incidentally, Greek newspapers from Constantinople are strictly excluded from Greece and from the territory occupied by the Hellenic army in Anatolia.

It would also appear that the idea of creating a Byzantine Republic is becoming stronger, but precisely how the Committee of National Defence proposes to set to work upon the scheme is unknown.

CYPRUS.

NICOSIA (undated).

Negotiations proceed for the raising of a loan towards the rebuilding of the Pan-Cypriot Gymnasium at Nicosia, recently destroyed by fire. A handsome gift has come from Greece—the library of Professor Constantiniades, of Athens. It consists of 2,340 volumes, many being works of much value. They have been placed temporarily in the Archbishop's palace.

At Limassol a new hospital is being built at a cost of £10,000, as voted by the Legislative Council. It is to be furnished with up-to-date equipment. The large building which it will supersede is to be sold, and the proceeds will probably be applied to the building of a new municipal hall and offices, which are much needed.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE SHEREEF ALI HAIDER AND MESOPOTAMIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The excuse for this letter is the fact that THE NEAR EAST was the first paper to bring to the notice of the British public the claims of the Shereef Ali Haider to the Emirate of Mesopotamia, so ably stated by Sirdar Ikbal Ali Shah. The object of this letter is an attempt to state those claims in such a way that they may at once combat those arguments advocated by the rival party, and exercise some slight influence on the forthcoming discussion on Mesopotamia at Westminster.

The two salient points for our consideration are: (1) What are the claims that Ali Haider has to British confidence; and (2) what are the claims he has on the people of Irak?

The marked Anglophile sympathies which the Shereef has always shown have been admirably described by the above-mentioned writer, and it is only necessary to corroborate what has already been said and to add a few details concerning his political career. Although it has been stated by the Constantinople Correspondent of THE NEAR EAST that Ali Haider was not a member of the Committee of Union and Progress, the statement has not totally dispelled the illusion that Ali Haider's membership was an undisputed fact. The writer has in his possession considerable testimony to show that this was not the case, and may state the evidence of Mr. A. M. Metcalfe, the English tutor to the sons of Ali Haider from the year 1908: "H. H. Shereef Ali Haider was never, and always refused to be connected with the Committee of Union and Progress Party, owing to its anti-British tendency."

After the declaration of the Turkish Constitution in 1908, owing to the influence of the Grand Vizier, Kiamil Pasha, Ali Haider became a Senator, but as such took no active part in politics, for he repeatedly refused ministerial appointments. The one exception was when, for a few months in 1910, he became Minister of Evkaf (Pious Foundations) solely for the purpose of pleasing the Arabs.

When Shereef Hussein raised the standard of rebellion against the Ottoman Government in 1915, it was essential that the Turks should nominate someone in his place to the Emirate of Mecca. The Turks surmised that Ali Haider's hatred for his rival would far surpass any love he felt for the British; though, in this, they were mistaken, as they found to their cost. Accordingly, they recognised Ali Haider as Emir Shereef of Mecca, and he proceeded to Medina, with the retinue due to his position. Thousands of Arabs flocked to his standard, and urged him to advance against King Hussein and capture Mecca, while the Emirs Ibn-Saud and Ibn-Rashid offered their assistance.

With such a force at his disposal, Ali Haider could have

defeated King Hussein with the greatest ease, and could as well have driven the Arabs to a fanatical opposition against the Allies, the result of which one would not care to contemplate. On the contrary, however, he restrained all these turbulent Arab chiefs who had sworn loyalty to him, saying that it was not his desire to create more strife and trouble in a war-stricken country. The Turks and Germans tried to force him to embark on expedition after expedition, for they realised the influence, invaluable to them, that he alone could exert on the Arabs throughout Arabia. Ali Haider exerted a great influence over the natives of the Hejaz, Syria, and Mesopotamia, but not in the way the Turks wished for or expected. He never struck a blow against the Allied forces.

From the time when he set foot in Arabia to claim his heritage in 1915, it is an indisputable fact that he and his sons materially helped with food and clothes British prisoners from Kut and elsewhere that he came across in his travels. His family protected various English poor, even when it was dangerous to mention the word "English," and left comforts for those who were alone and uncared for. He continually gave help to be distributed amongst those of the Entente who might be in distress, and, on one occasion, he admitted into his house as an inmate an English woman in trouble, the widow of a Syrian.

What has been said more or less covers our first point. With regard to the second, we must realise that Ali Haider holds a unique religious position, for he is regarded by all Moslems as the living Head of the House of Mohammed. In Mesopotamia the Shiah sect of Moslems abounds, and Ali and his descendants are practically worshipped, whilst at Meshed Ali (Nejef), Kerbela (Meshed Hussein), and other places there are many sacred traditions connected with them. When Abdul-Muttalib, the grandfather of Ali Haider, visited Mesopotamia towards the end of his life, he was hailed with universal respect, and it is a fact that, in many cases, the rooms in which he slept have been held as sacred and kept solely for the use of his direct descendants, just because Abdul-Muttalib was then the living Head of the House of Ali, as Ali Haider is to-day.

Amongst the chiefs of Mesopotamia, Ali Haider has many powerful and influential friends, the Talibs of Busreh, the Haideris of Mosul and Baghdad, Nakeeb Seyid Mohiddin, and many others. If this is the case, it may be asked, why has no open demand come for him from Mesopotamia itself? The answer to this is easily given, for it has been stated in that country that Ali Haider's name is not to be brought forward in the discussion, and the people are therefore frightened of so doing. Ali Haider is, therefore, placed on a very unequal footing with other prospective candidates for the Emirate, which is not only unfair to him, but to the people of Mesopotamia as well.

When we proceed to discuss the claims for the Emirate of Mesopotamia on the respective merits of Ali Haider and others, it must first be pointed out that it is the idea of many that the natives of Mesopotamia will elect one of their own number to the Emirate. If this is to be the case, we can well contemplate Mesopotamia turned into a large-sized constituency at general election time with rifles instead of rotten eggs. As the Baghdad papers continually point out, there are only two families from which an Emir can be chosen in safety, viz., Ali Haider's and Hussein's, and from the point of view of degree Hussein's sons cannot be compared with Ali Haider.

An important question to be considered is whether the adherents of Faisal or Abdullah would create a disturbance in the country if Ali Haider were selected to fill the Emirate. This all depends on the strength of those adherents, and it is a matter for those on the spot to decide. If a conference were called in Mesopotamia consisting of the present Nakeeb and other prominent people, and Ali Haider's name were put before them as a possible candidate, it would be the best and fairest means to discover the extent of the influence he could exert. As for Ali Haider himself, his life shows that he has always been a lover of peace, and is not a reckless adventurer. It might be said that, having lived so much at Constantinople, Ali Haider might have become de-Arabised like so many other nobles of the Koreish under similar circumstances. No one who knows him personally can say this, for he has retained every characteristic of his race.

One other point to remember is that the sons of Ali Haider speak perfect English.

In conclusion, it is the desire of His Majesty's Government to secure peace and tranquillity throughout Arabia, and, if Ali Haider continues to be treated in a cavalier fashion by the British, it is possible that we shall see hostility and trouble begin between the rival houses. If, on the other hand, fair treatment is secured for him, he has promised to adopt the friendliest relations towards Hussein and his family, while the influence he has always been able to exert, when in a position of authority, over those chiefs who are to-day playing the most prominent part in the destiny of Arabia, will be exerted to the advantage of everyone.—I am, etc.,

CHAMPION.

PRESS ON THE NEAR EAST.

The Greek Elections.

Writing under the above title in the February number of the *Fortnightly Review*, Mr. H. Charles Woods sums up his impressions upon the defeat of M. Venizelos gained from a recent comprehensive tour in the Near East. The primary cause of the reverse he shows as follows:—

The first consideration is that the Liberal *débâcle* of November 14, which was the certain sign for the return of King Constantine, appears to indicate that the Hellenic people do not possess the stability, the breadth of view, and the gratitude to recognise what the ex-Premier has done for them. Put in another way, as they are deservedly famous for their patriotism and love of their country, all that one can say is that political bias has prevented the Greeks from seeing that, even if his internal régime did leave a good deal to be desired, the great Cretan was and is the only man who could have brought about the regeneration of Greece, or who could have obtained for that country the advantages which she secured as a result of the Balkan campaigns and of the European conflagration.

He proceeds to discuss the segregation of Venizelist and anti-Venizelist:—

The campaign which culminated in November last, therefore, began in March, 1915, for, whilst two intervening elections were held, and whilst M. Venizelos and the King were respectively in practical exile for part of the time, events possessed of a bearing upon the ultimate issue were in continual progress. The King undoubtedly remained and gradually became more and more identified with the sentiments of a large section of the people. This was the case because of his general popularity, because he favoured neutrality at a moment when the idea of war was not popular, and because he was able to show himself as the opponent of a policy which his partisans suggested was to be imposed from abroad. M. Venizelos, on the other hand, gradually lost ground, for the reasons that the programme for which he stood did not originally meet with public favour, that the enemy was temporarily successful, and that the Allied handling of the Greek situation was widely resented. This last-mentioned question remained most important up to the end, especially in that our failure to distinguish between "Constantinism" and "Pro-Germanism" on the one side and between "Pro-Alliyism" and "Venizelism" on the other alienated from us and from the ex-Prime Minister many Greeks who idolised the King, but who wished at a given moment to support the Allies in a policy destined sooner or later to free thousands of Hellenic nationals from the Turkish yoke.

Mr. Woods then demonstrates that, although M. Venizelos was returned to power in June, 1915, "he was not in a position to carry out the principal plank of his policy." While he was in Salonika events were taking place in Athens that undermined his power, chief among which was the Note delivered to the Greek Government in June, 1916. Of this he says:—

That Note, containing all sorts of demands, including one for the immediate dissolution of the Chamber, was itself most unpopular. That unpopularity was increased by the fact that new elections were never held, according to the Royalists, because of the attitude of the Allies, who in their (the Royalists') opinion feared a public expression of opposition to the policy of a man whose cause we had definitely espoused. And then there is no doubt that the manner in which the French handled the incidents which followed was responsible for great ill-feeling against that nation, which for many reasons is now greatly disliked in Greece. Thus, whatever were the nature of the assurances given by the King in regard to the question of the Allied landing at the Piræus on December 1, 1916, that landing is still considered to have been an infringement of the sovereign rights of an independent people. Once more, and advisable as it was for the Allies to take any measures required to safeguard their military interests in the Balkans, no present-day visitor to Greece can fail to realise that the rôle played by M. Jonnart, which included the Allied demand for the abdication of the King, in fact greatly increased the influence of a monarch who, throughout, has been the real and central figure in the whole drama.

NEAR EAST BOOKSHELF.

- I.—"NOTES ON AGRICULTURE IN CYPRUS AND ITS PRODUCTS." (Reprinted from the Bulletin of the Imperial Institute.) By W. Bevan. Director of Agriculture, Cyprus. [3s.]
- II.—"AROUND THE SHORES OF ASIA: A Diary of Travel from the Golden Horn to the Golden Gate." By Mary A. Poynter. (London: George Allan and Unwin. 16s. net.)
- III.—"THE BULGARIAN PEACE TREATY." Speeches delivered in the British Parliament, with an introduction by J. D. Bourchier. (London: Christophers. Ninepence.)

I.—AGRICULTURE IN CYPRUS.

Annual reports on Cyprus, often noticed by THE NEAR EAST, have tended to show that little substantial progress has been made in island agriculture. Sir William Ramsay's verdict that our administration "will stand out in history as a record of incapacity" may be too severe; but a perusal of these Notes leaves one more than ever convinced that the development of the island's main industry has fallen far short of what might have been reasonably expected, during an administration dating from 1878. An Agricultural Department was established in 1896, Mr. P. Gennadius being the first Director. Mr. Bevan, the present chief, regrets that the work of Mr. Gennadius on "Hellenic Agriculture" has been published in Greek only. But his valuable reports on "Agriculture in Cyprus," and his numerous leaflets, have been accessible in English, Greek, and Turkish, and it would have been well had much of his advice been adopted and carried into execution. It is no secret that each succeeding Director has laboured under a keen sense of disappointment on realising how little he could accomplish with an inadequate staff and absurdly insufficient grants.

It seems clear from the present and previous reports of Mr. Bevan that his hands have been similarly tied, and work, if not hampered, certainly not adequately supported. One feels that if there were some excuse for attempting nothing on any large scale, much more might have been done by judicious expenditure to stimulate various branches of local industry. What progress there has been has been on so small a scale that ages would be required, at the present pace, to bring about any marked improvement. Just as the Cypriot still prefers to drink his wine well flavoured by the tarred goatskin, and to take his olive oil as it comes from the unclean and rancid output of the native press, so are all his methods survivals of a primeval past. Take one example, that of cereals. Cultivation remains as in the Stone Age. The patriarchal winnowing is wasteful and injurious to the grain. There is little selection of seed; indeed, to mention one aspect, the tithe grain taken by Government (wheat, barley, and oats) includes all kinds and qualities, each mixed and stored promiscuously, and it is from these that seed corn is issued to many cultivators. At the same time, the report speaks of experiments with imported grains, which—if Government efforts were serious—should assuredly have led to good results many years ago.

As regards cotton, large tracts suitable for it cannot be used for lack of water, but this is not the only element lacking. As to the silk industry, which could be very largely increased, we read that if cocoons were reeled in the island considerable sums could be saved. We gather that this industry, instead of prospering, has rather degenerated, owing, apparently, to preventable causes.

Much might be done in the profitable field of carob production were it not for the pernicious goat. These animals are still the deadly enemies of agriculture as of forestry. "If," says the report, "they are to be preserved it is essential that both they and the shepherds be brought under strict control." But surely, after forty-two years, the control should already be such as to protect efficiently both forests and husbandry.

As regards tobacco, it is still questionable whether it can be made to compete on favourable terms with the Macedonian leaf. Fruit culture is capable of vast extension.

but whether this would be profitable seems very doubtful from the last page of the Notes.

Admitting that there is much ground for the criticism which native members of Council direct against the administration as regards agriculture, it must be observed that they have themselves done but little to help, being more engaged over fruitless political agitation than in loyal co-operation for island welfare.

Disheartening as are the conditions of agriculture (certainly through no fault of the Directors), praise must be given for such advance as has been made in some districts, including the improvement of live stock. Also Mr. Bevan is able to report that there is "a more receptive and enlightened attitude" among many of the peasants. This is a hopeful conclusion and augury for the future.

II.—SKIRTING ASIA.

At the end of 1913 Mrs. Poynter accompanied her husband on a mission which he undertook on behalf of the Ottoman Public Debt Administration. Their travels took them across Asia and to the United States and Canada; but it is with the former portion of their experiences only that this book deals—from the Golden Horn to the Golden Gate, as Mr. Hugh Poynter remarks in his introduction. It appears to have been an unhurried journey, with time for occasional "side trips" to points of special interest; and a knowledge of the Near East and its customs, with an obvious liking for and sympathy with what can only be described as the spirit of the Orient, enabled the travellers to take far greater advantage of their opportunities than anyone quite new to the East could have done. Mrs. Poynter has the seeing eye and the gift of making us see what she saw and enter into the feelings aroused by what she saw; and when she is telling us what she saw we find it far more interesting than when she tells us what other people saw, or what they told her about the places she visited.

It was on December 30, 1913, that the travellers left Constantinople, and it was at the end of May that they reached San Francisco. In the interval they had visited some of the most interesting cities of India, Burma, the Malay Peninsula, the Dutch Indies, Siam, the Philippines, China, and Japan; and the book gives us many enjoyable peeps at these cities and their inhabitants. In spirit we visit cities into which the jungle seems likely to overflow at almost any time, and into which strange denizens of the jungle actually do find their way quite frequently. For instance, Mrs. Poynter tells us that the last tiger to be seen at Singapore was killed in the billiard-room of Raffles' Hotel only some six years ago, and the frequent mention of snakes of the distinctly deadly kind remind us that the fairest Eden has its drawbacks. Upon the whole, however, the picture presented is a very attractive one.

Here is an interesting comparison drawn between the man of the Near East and his brother of the Mid-East, taken from the record of Bombay impressions:—

This mid-Eastern man does not seem at first glance so reposeful, so contemplative as the man of the Near East with whom we have been long acquainted. While he has more vivacity, he does not foregather in coffee-houses or sit in the open street to the same extent as his Near Eastern brother. Perhaps he has not the money to pay; perhaps if he be a Hindu his caste will prevent him, even if the cups were proffered him. He is not so fine a man physically as the Turk or the Arab, though some of the North India people and the hillmen are stalwart enough.

And here is another Indian impression, from Delhi this time:—

In recalling later the experiences of this day, I am sure a seemingly unimportant picture will always come to mind, that of a cart rumbling along the road and leaving a trail of dust in its wake for miles—dust that would not float away or lie, but hung in the hot, heavy, silent air just as it was raised by the passing wheels. This feature, also, is a part of India as much as her tombs and temples, an older part even than these, and makes an impression as lasting as that peculiar odour that one always notices on approaching an Indian town or village—that pungent, acrid odour of fires burning and the cooking of food out of doors. And the sunsets, glowing, glorious, and distinct from all other sunsets, are, like the long trails of dust and the scent of evening fires, one with the land.

Such impressions may have little value for the student, but they are likely to call up before the plain man or woman a much more vivid picture than many pages of scientific detail; and there can be little doubt that the book will fulfil the hope expressed by Mr. Poynter in the introduction—that it "may recall pleasant memories to those who have visited or resided in the places described, and who still 'hear the East a-calling'." It will also make those who have not yet visited the Orient wish to do so. And that shows—does it not?—that it is a good book.

III.—THE TREATY OF NEUILLY.

This small pamphlet reproduces the speeches delivered in Parliament by Lord Bryce, Colonel Malone, Colonel Wedgwood, and Lieut.-Commander Kenworthy on the second readings of the Treaties of Peace (Austria and Bulgaria) Bill in April, 1920. All these speeches were appeals for the modification of a treaty that was felt to be at variance with the Allies' pledges, and that offered no permanent settlement of the Balkan question. A more detailed analysis of the main provisions of the Treaty is attempted in the introduction, which must have been one of the last published writings of the late J. D. Bouchier on behalf of the country whose cause he had so wholeheartedly championed. The appeals have fallen on deaf ears, and only the future can show whether Europe in general and the Balkans in particular would have been better off if they had been listened to. The pamphlet forms a handy publication of reference, which speakers, publicists, and others who want to be in touch with current affairs will do well to keep by them.

BOOKS RECEIVED.

"A Book of Gardening for the Sub-Tropics." By Mary Stout and Madeline Agar. (London: H. F. and G. Witherby. 6s. net.)

MUSICAL NOTES.

A Persian Pianist.

There is at the present time in London a very great, though little known, pianist, a Persian. His private name is Hadjar, and I am informed that he is related to the Royal Family of Persia; but for public purposes he has adopted the name of Leff Pouishnoff. I heard him for the first time on February 10 at the Wigmore Hall, where he gave the second of a series of five recitals (the remainder are at the same hall on February 22, March 3, and 17); but I have little doubt from this one recital that he will become one of the world's executive artists.

This recital was devoted to Schumann and to Chopin, a recital designed, therefore, to show the poet rather than the intellectual, the feminine rather than the masculine side of M. Pouishnoff's temperament. It was a severe test, but the pianist stood it magnificently. His technique one soon forgot to admire, so certain and effortless it was; and from his pedalling to the colours of his tone he showed a definite, finely equipped, though, as yet, immature personality. The dreamy beauty of his tone in Schumann's rather turgid Romance in F sharp major (Op. 28) was followed by a perfectly exquisite interpretation of "Vogel als Prophet." But in spite of much very fine playing it was the youth (M. Pouishnoff is but twenty-eight) of the pianist which informed his "Carnaval." Too many times here his impetuosity ran to rash lengths, became streperous, in fact. In Chopin the virtuoso in him was easily demonstrated, but it did not overcome the artist; there was never any playing for effect. M. Pouishnoff is one of the most thorough and accomplished musicians who have visited London; and I shall be surprised if before the end of his recitals he has not created a *furor*. The general quietness of his methods may make his appeal less rapid, but it certainly adds to the charm of his playing. That this

Persian should have become under Russian tuition so completely familiar with Western musical thought is really a marvellous thing.

The Music Society.

It was in the memory of the late Gervase Elwes that a programme of chamber music was performed under the auspices of the Music Society at St. John's Institute, Westminster, on February 8. No appreciation of such a thing is in place; and if it be added that the vocalists were the English Singers and the instrumentalists Miss Anne Mukle and a string quartet consisting of M. André Mangeot and Misses Katherine Kendall, Rebecca Clarke, and Mary Mukle, it will be at once clear that homage to one of our finest artists was beautifully paid. It was very meet that the essential Englishry of Elwes should be remembered in a selection of Byrd, Gibbons, Purcell, and Vaughan-Williams.

The Ladies' String Quartet.

Upon its first appearance in London, a few weeks ago, when it was notoriously sponsored by Dr. Ethel Smyth, I wrote about the above quartet; and I remember mentally noting how little sincerity as a primary factor in art counts. Since that time this quartet does not appear to have improved. At a concert which it gave at the Mortimer Hall on February 7, it showed, together with any amount of keenness and desperate anxiety, real sincerity; but it simply has not the technique to make of this a virtue. Three sketches of McEwen and Beethoven's third quartet I heard played; the first was well enough, but a lack of intellect and of real grip in the Beethoven made it very unpleasing.

This new quartet was assisted (and, in fact, had to lean heavily upon) Mr. George Parker, whose choice of a wearisome extract from a Bach cantata and of some English songs was unfortunate. His best songs were two of George Butterworth's: "Is my team ploughing?" and the rollicking Sussex folk-song, "Come, my own one"; but the Mortimer Hall is an unhappy place for anyone to sing in, so difficult to reconcile are the relations between singer and accompanist.

Mr. Leonard Borwick.

It is easy to recall the time when one thought that all that the old-fashioned school of pianists did—the school of Miss Fanny Davies, and of Mr. Leonard Borwick, for example—was right. One had in these pianists a sweet confidence that "classical" music, at any rate, they played as it should be played; and at Mr. Borwick's recital at the Æolian Hall on February 9 the old faith tried hard to reassert itself. Now, for this pianist's artistry I have immense respect; but he was really asking too much of us in playing Beethoven's thirty-three variations on a waltz tune of Diabelli. Mr. Borwick actually succeeded in infusing some meaning into some of these variations, but all his skill, and very evident sincerity, could not rid one of the conviction that this 120th Opus of Beethoven should be heard only by the hardened inhabitants of one's own house. In a Chopin group the pianist's tone was uniformly excellent, but how one longed for some romance, some colour in it! Chopin is not a composer in whom these "traditional" pianists excel. For you cannot let Chopin tell his own tale; you must, for example, cover up or expose all sorts of things with the pedals; and it was particularly in disregarding this necessity that Mr. Borwick failed, except in the Prelude in C sharp minor, to move us. But how refined, how subtle an artist he really can be he showed us in Ravel's "Gaspard de la Nuit," the piercing reality of "Le Gibet" especially being magnificently portrayed. The effortless mastery shown over this extremely difficult music was a thing very rarely seen in our concert halls.

February 4 (Old Style).

Jumada II., 9, 1339 A.H. of the Moslem Calendar.

Adar 9, 5681 of the Jewish Calendar.

On his return journey to France, General Franchet D'Esperey stopped at Agram.

M. Venizelos concluded his private visit to this country on February 10, when he left for Paris.

The Hon. Cecil and Mrs. Campbell have left London for Tunis, and will be away about two months.

M. Alexandre Cretziano, Secretary to the Roumanian Legation, left London on February 13 for Paris.

General Pellé, the new French High Commissioner in Constantinople, arrived there on February 10.

Captain Petroff-Tchmakoff has arrived in London to assume the duties of First Secretary at the Bulgarian Legation.

M. Aharonian, President of the Armenian Peace Delegation, will come to London for the forthcoming Near Eastern Conference.

The Dowager Maharani of Cooch-Bihar embarked for India in the mail steamer Mantua at Marseilles on February 12.

The marriage of Mr. F. W. Victor Ellvers with Miss Audrey Elliott will take place on March 29 at All Saints, Srinagar, Kashmir.

Princess Beatrice was expected last week at Oran, Algeria. After a short stay there she will leave for Algiers, where she is to spend the rest of the winter.

It is announced that on May 19 Sir Charles Greenway, Bart., will lecture before the Central Asian Society upon "The Oil Resources of Mesopotamia."

Lieut.-Colonel Paun, of the Roumanian Army, is arranging a section of historical trophies and Roumanian equipments to be placed in the British War Museum.

General Lyautey was to have left Casablanca on February 15 to consult with the French Government on important questions in regard to the French protectorate in Morocco.

The Senate of Durham University has decreed the establishment of a Diploma in Arabic. Candidates, who need not be graduates, will be required to keep three terms and to pass the requisite examination. Two separate syllabuses are provided, one intended specially for missionaries in Mohammedan lands, the other for persons desirous of entering on an official or a commercial career there.

Bishop Taylor-Smith, Chaplain-General of the Forces, is proceeding on a tour of inspection in Egypt, Palestine, and the Mediterranean, and will not return before the end of April.

From Cambridge it is announced that the managers of the Craven Fund have made a grant of £150 to the managing committee of the British School at Athens in aid of further excavations at Mycenæ.

The marriage arranged between Captain J. D. MacKenzie, 41st Dogras, I.A., and Miss Phyllis M. Thomson, 163, Woodstock Road, Oxford, will take place, leave permitting, towards the end of March, in Bombay.

A marriage has been arranged, and will shortly take place at Constantinople, between Philip Basil Cuddon, the Hampshire Regiment, and Evelyn, daughter of Mr. and Mrs. Cummings, of Cheltenham, Gloucestershire.

Sir Frederick and Lady Lewis and Miss Frieda Lewis have left England for a yachting trip up the Mediterranean. Included in the party are Sir John and Lady Esplen, Lady Fisher, and Mr. G. H. Shakespeare. They will be away for two months.

Mr. Theodore D. Moscona, of the Manchester Egyptian and Oriental Society, gave a lecture on February 10 at the University of Manchester, on "Coptic Clergymen Whom I Have Known." Prof. M. Canney, M.A. (Professor of Semitic Languages, Manchester University), was in the chair.

The engagement is announced of James Drummond Anderson, I.C.S., eldest son of the late J. D. Anderson, D.Litt., I.C.S. (retired), teacher of Bengali, and Mrs. Anderson, Mostyn House, Cambridge, and Jean, youngest daughter of William C. Macpherson, C.S.I., I.C.S. (retired), and Mrs. Macpherson, of Blairgowrie, Perthshire.

M. Michel B. Boeresco, Roumanian Minister, and Lieut.-Colonel Douglas Capitaneano, Military Attaché, entertained at luncheon last week, at St. James's Club, Major-General Wilkinson Dent Bird, Lieutenant-Governor of the Royal Hospital, Chelsea, who was in command of the Guard of Honour supplied by the Coldstream Guards when the Roumanian Standard was deposited at the Royal Hospital. There were also present Lieut.-Colonel Paun, of the Roumanian Army, and M. Djuvara, Secretary of the Legation.

A special course of three public lectures will be given during the Lent Term at the University of London, King's College, by Dr. F. Chudoba, Lecturer in Czechoslovak Language and Literature. They will be delivered on February 24, March 10, and March 24, and the subjects will be respectively:—"Historical Relations between England and Bohemia," "The Early Development of Czech Literature down to the end of the Hussite Wars," and "The Development of Czech Literature from the end of the Hussite Wars to the end of the Thirty Years' War."

APPOINTMENTS, ETC.

M. Minos G. Yanopoulos has been appointed Secretary to the Greek Legation in London.

Fosshe Zeitung states that Count Von Spee has been appointed German Chargé d'Affaires in Athens.

Dr. Kumanudi has been appointed Minister of Finance of Yugoslavia. He was formerly Professor at the University in Belgrade.

OBITUARY.

The death has occurred of Sir William Blake Richmond, K.C.B., R.A., the famous portrait-painter. Much of his inspiration he derived from his frequent sojourning in Greece and Egypt.

The death has occurred at Teheran of Mr. William King Wood, C.I.E., C.B.E., Director of the Persian Section of the Indo-European Telegraph Department. Mr. King Wood, who was born on May 1, 1867, was first appointed to the Department in October, 1892, and became Director of the Persian Section in June, 1913. During the winter of 1898-99 he surveyed a route for a telegraph line through Central Persia from Ardistan to the frontier of India, travelling on foot or on horseback 3,000 miles, and twice traversing the Kerman desert. For this valuable work he received the special thanks of the Secretary for India.

Between 1902 and 1907, in numerous journeys, he laid out an entirely new telegraph line from Teheran to the Perso-Baluch frontier, a distance of 945 miles. For this arduous and successful work he was awarded the C.I.E. During the Great War his zeal and tact enabled him to maintain telegraphic communication between Teheran and India, in spite of all opposition and the efforts of German agents to get the line destroyed. His knowledge of Persia and the Persians enabled him to afford assistance to successive British Ministers in Persia, and in recognition of these services he was given the C.B.E. in 1919.

A Moscow message announces the death of the Russian General, Alexis Nicolaevitch Kouropatkin. The following notes are taken from the *Manchester Guardian* account of his life. Born in 1848, he joined at the age of eighteen the forces then operating in Turkestan, and took part in numerous actions, including the taking of Samarkand. Later, while studying in France, he saw the collapse of the Second Empire at Sedan, and afterwards took part in the Expedition from Algiers into the Sahara. For his services he was rewarded by Marshal MacMahon with the Legion of Honour. On returning home he was soon appointed Chief of the Divisional Staff of the army operating against Kokand under Skobelev, and again distinguished himself. On the outbreak of the Russo-Turkish War in 1877 he was appointed by Skobelev to be his Chief of the Staff. He was now a colonel and the heir-presumptive of the "White General," whom he soon followed to Central Asia, there to carry out with success the siege and the capture of Geok-Tepe. On Skobelev's death he became Russia's most renowned soldier, and for eight years he was occupied in the military reorganisation of the Empire as Assistant Chief of the General Staff. In 1890 Central Asia was formed into a province under the name of Transcaspia, and Kouropatkin returned to the scene of his early glories in the capacity of Governor-General and Commander-in-Chief of the troops of the district. Here he laboured for another eight years, building railways and developing the economic resources of the country.

NEWS IN BRIEF.

A French Air Attaché will shortly be appointed in Bucharest.

In the process of disarming the Syrian population, the French authorities have collected some 21,000 rifles during the past year.

£1,600 in British gold has been confiscated from smugglers by the French Customs authorities on board a liner about to leave Marseilles for the Near East.

An Algiers message reports that an Englishman living at Djendee, near Affreville, has been murdered by natives, who broke into and ransacked his house.

As a result of the electricians' strike, Athens was plunged in darkness at 7 o'clock on February 9, and the sitting of the Constituent Assembly was cut short.

A telegram from Beyrout received in Paris states that the Druse chiefs have requested that their country should be constituted an autonomous province placed, as is the State of Damascus, under a French mandate. No French detachment has so far penetrated to the Jebel Druse.

Applications for vacancies in the Indian Educational Service are invited by the Board of Education, Victoria and Albert Museum, from ex-Service men who hold University war degrees and credentials showing that their University career, if interrupted, would have been distinguished.

In reply to a message from the Governor of Bengal conveying the new Indian Legislative Council's expressions of devotion to the King-Emperor's throne and person, and its loyal message, the Secretary of State for India has telegraphed stating that he is commanded to express the King's gratification at the successful opening of the Council, and his appreciation of its message of loyalty.

The Secretary of State for India has received from the Government of India, with regard to the reception at Delhi of His Royal Highness the Duke of Connaught, information that all functions so far have passed off very well, though the non-cooperators were successful in reducing the size of the crowds of spectators. A very impressive ceremony was the inauguration of the Chamber of Princes. A large gathering of Princes attended it, and they accorded His Royal Highness a most cordial welcome. His speech at the inauguration of the Legislature was very well received by its members. Frequent and general applause was elicited by it, particularly by the portion containing a personal appeal, by which a deep impression was made on the audience.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

ALLIED REPARATION COMMISSION IN BULGARIA.

The Inter-Allied Commission provided for by Article 130 of the Treaty of Neuilly "to facilitate the discharge by Bulgaria of the obligations assumed by her" under the Treaty, is about to take up its duties in Sofia. It is composed of three members appointed by the Governments of Great Britain, France, and Italy. The British Commissioner is Sir Elliot Graham Colvin, K.C.S.I., formerly of the Indian Civil Service. The other members of the British Delegation are Sir Charles Stewart-Wilson, K.C.I.E., Deputy Commissioner and Secretary-General, and Colonel H. Pears, Chef du Service. According to the terms of the Treaty the Commission is to continue in existence as long as any of the payments due under the terms of the Reparation clauses of the Treaty remain unpaid. The costs and expenses of the Commission are paid by Bulgaria and are to be a first charge on the revenues payable to the Commission.

The members of the Commission and their staffs are due to leave Paris by special train on February 23.

TURKESTAN UNDER THE BOLSHEVISTS.

On February 8, before the Royal Asiatic Society, a vivid account of Turkestan under Bolshevik rule was given by Miss R. Houston. In 1913, said the lecturer, Turkestan was a peaceful and delightful region. In January, 1919, however the outbreak of civil war transformed the country into an inferno. Soldiers of the Red Army took possession of the town and tortured the people without provocation; entered houses and seized provisions and household goods. Everyone had to work, even women with children over five years old. She herself taught in a school, and if the children were dissatisfied their Soviet made a complaint. The so-called requisition laws for food were only a synonym for wholesale thieving. Sir Percy Sykes, in a brief address, congratulated Miss Houston on her lecture, which, he said, should be published in book form.

General Sir Robert Baden-Powell and Lady Baden-Powell have held a review of Indian Boy Scouts at Allahabad.

PRINCES IN COUNCIL.

Last week's ceremonies at Delhi may be regarded as marking the formal beginning of the new epoch in India. An interval of little over three years has elapsed since the announcement that His Majesty's Government had decided to undertake a task without precedent in the history of the world, and now the first stage of the great experiment is accomplished, and the institutions inaugurated by the Duke of Connaught are definitely in being. British India has, what India never had before, a Legislature based on direct election, and, despite the narrowness of the initial franchise, already entitled to speak for the great mass of the population hitherto governed by the autocracy of Delhi or Whitehall. The rest of India has as yet no such organ for expressing the popular will; in its place there is an institution, surely unique in modern history, which is designed to give expression to the collective opinion of the autocratic rulers recognised by the British Government. It would not be easy to overrate the significance of either institution, and if on the present occasion we confine our attention to the Chamber of Princes, our justification lies in the fact that owing to its very novelty its nature and functions lend themselves readily to misconception. The idea of an elected legislature is familiar to all, though not all countries have yet gained experience of its practical working; but to many of our readers the idea of a chamber of autocrats may sound almost grotesque in these days when autocracy is so commonly regarded as a thing of the past, and it will be worth our while to explain the circumstances in which this institution has come into existence, to indicate its present functions, and to attempt a forecast of what it may become.

The extension of the British power in India proceeded by a gradual movement, and in accordance with the facts of a highly complex situation. In some places there was no effective government, in others the existing government was of such a nature that its subversion was judged imperative; in this way British India was formed by slow degrees. Elsewhere there were governments which the British were not disposed to subvert; their existence was recognised, and their powers defined, by treaties entered into with their rulers, and thus we find interspersed among the British provinces several hundreds of States, extending in the aggregate to 700,000 square miles and containing populations of more than 70 millions. The treaties were made with individual States, and the limitations imposed by them differ widely, but the essential point is that the States rest on treaties, and the good faith of Britain is pledged to their maintenance. Relations between the Indian Government and the States are diplomatic, except in those rare cases where active intervention is justified by breaches of a ruler's engagements, and, as is only to be expected, the princes are jealous and tenacious of their rights. It is obvious that a council of these princes could be formed only with their consent, and in point of fact a demand for such an institution has gradually arisen among them. The demand is by no means unanimous, for some of the most "advanced" States, and some of the most sagacious princes, are known to have discouraged the proposal, but it has been pressed actively by

others, and has won the favour of the majority, with the result that the Chamber of Princes is now definitely in existence. Its functions follow naturally from the conditions of its origin. It cannot have, and does not aspire to have, any power of interference in the internal affairs of any of the States, it cannot intervene between individual States and the Government of India, and from the nature of the case it can possess no executive authority. When these forms of activity have been excluded, there still remains an extensive field of usefulness, which cannot be better defined than in the words of the Royal Proclamation by which the Chamber of Princes has been called into existence. The Viceroy, it is here announced, will take its counsel freely in matters relating to the territories of the Indian States generally, and in matters which affect those territories jointly with British India, or with the remainder of the Empire; it is thus an advisory body available for consultation on questions of three classes, in regard to two of which a need has long existed, while a demand for the third is rapidly coming into being. The first class consists in great part of matters of procedure; the system of intercourse between the Viceroy and the States is by no means perfect, and must in any case change with changing times; it is not desirable that these changes should be determined by the Viceroy alone, and the new Chamber is an eminently suitable body for discussing those modifications of form and practice which are apt to produce very substantial results. The importance of the second class, the joint interests of Provinces and States, is increased by geographical conditions, for States and Provinces are inextricably mingled on the map, and the needs of the people imperatively require harmonious and concerted action in matters which are independent of political frontiers. Railway policy, to take one instance, must be determined largely by the natural conditions, which may involve the construction of a trunk line through a dozen or more political units; in matters of sanitation, again, action over a large area may be rendered nugatory by the maintenance of insanitary enclaves; currencies, posts, and telegraphs must sometimes overstep frontiers; and in many branches of the administration there is an urgent call for action based on common principles. Agreement on such matters is almost hopeless while each State remains in primitive isolation, and the best chance of securing it is to bring the States together for consultation with each other and with representatives of the Central Government. As to the remaining class of questions, the interest of the States in matters which concern the whole Empire, it must suffice to say that the position was conceded when Indian princes were summoned to the War Cabinet and the Imperial Conference; those precedents cannot be ignored, and it is obviously desirable that some formal arrangement should exist by which the views of the princes can be put forward with authority on matters in which their concern has already been admitted.

From the outset then the new Chamber of Princes will have an assured position and definite functions, but perhaps its chief significance lies in the future. For the moment it can only formulate the conclusions of autocrats, but it is impossible to believe that autocracy can survive indefinitely in the States while responsible democratic government is making way throughout the length and breadth of British India. No constitutional means exist for imposing democracy on the States, and no thoughtful person is likely to suggest such a measure; the change must come from within, but the forces tending to produce it are already at work, and we anticipate a gradual and cautious movement in the direction of liberalisation, leading eventually to a time when the Princes shall meet in council, no longer autocrats, but constitutional rulers entitled to speak for their subjects. When that time comes the Chamber of Princes will stand out as one of the two great organs for the expression of Indian opinion to the world, representing that large portion of the country which has no voice in the legislature of British India; its forms and its composition will doubtless alter with changing circumstances, but even to-day we can regard it as the forerunner of an institution which shall form an essential part of India, the new India which Britain has undertaken to build out of the ruins of the old.

MOSLEM WOMEN OF JERUSALEM

By ESTELLE BLYTH.

There is for all Western women a great fascination about the veiled and guarded lives of their Eastern sisters, and little is known as yet concerning Moslem women at Jerusalem, where old custom is still firmly established, and such liberty as the Turkish women enjoy is almost unknown. We

[Photo by Mr. Martin Briggs.]

JERUSALEM: A TYPICAL STREET.

will begin by describing a wedding; for that is the most important event in a Moslem woman's life.

The preliminaries of a wedding take place weeks, or even months, beforehand, and are conducted with a rigid observance of custom and tradition that shows the power of the old generation over the younger. When her son has attained a marriageable age (anything from eighteen upwards) the mother sets to work in earnest to find him a bride. Probably she has had her eye fixed for some time upon a likely girl; if not, she will discuss the matter with her friends, and in this way she will soon hear of a suitable bride. She then discusses everything in detail with the girl's mother, and the arrangements are made to the satisfaction of the two mothers, the contracting parties having no say at all, let alone the fathers. If a man is of full age, and has no near relation to whom he can entrust so delicate a matter, he will depute some old woman (a recognised agent in such affairs) to act as his ambassador.

The girl having been promised in marriage, the prospective bridegroom pays down a sum of money agreed on between the parents; this custom has given rise to the belief that a Moslem buys his wife; but the money represents rather a settlement upon her. The money is absolutely her own, and no one can touch a farthing of it; she can have it in any form she chooses—in cash, furniture, clothes, or jewels; if her husband divorces her she can take it with her, and no

one has the power to stop her. I am reminded here of two cases bearing on this money settlement. A man borrowed money from a friend, which he found himself unable to repay; the lender then insisted upon marrying the debtor's little daughter, saying that if he could not have the money he would still have something! The only sufferer here was the bride, a wild little creature of thirteen, who ran away three times during the first few months of her married life. After that she settled down most happily. In this case the bridegroom made no settlement on the bride, but instead forgave her father the debt. In the other case, a man divorced his wife because he wanted to marry again and could not afford to support two wives. The first wife was partly revenged, however, for her settlement had been in kind, and so she was able to take with her practically the whole of the household furniture, leaving the man to re-furnish the house for the second wife.

The wedding ceremony always takes place at night. In the afternoon the bridegroom's friends escort him to the mosque for prayers; if there is no mosque near enough, these prayers can be said at a friend's house instead. This is the only religious part of the ceremony. The wedding takes place at the bridegroom's house, which, by the way, he must not enter himself until after the bride has gone in. After dark, about seven o'clock, the bride is taken to her new home, being escorted thither by her friends and relations with much shouting and clapping of hands; while tall brasiers, filled with flaming wood and charcoal, throw vivid lights and shadows across the moving figures. In the centre, under a canopy and closely veiled, walks the bride, a sword being held over her to signify the readiness of her men-folk to protect her in case of need. She must be fairly tired even now, for before leaving her old home she has had to sit upright on a chair with her eyes shut, holding out open hands into which her friends drop such offerings of money as they can afford. At the bridegroom's house, the bride and her nearest relations and friends are shown into a room where the ceremony of robing the bride takes place. It is a very protracted affair, as everyone lends a hand. The wedding-dress is often an heirloom, most costly and beautiful. Such was the case with a bride we once saw, who was wearing her grandmother's wedding-dress of the loveliest sapphire blue velvet richly embroidered in gold, with a high close-fitting cap of the same, from which hung a soft veil of rose-coloured silken gauze powdered with spangles of gold. Friends and relations vie with one another in lending the bride their choicest ornaments to wear on the greatest day of her life, not only for kindness, but for luck; and so the bride is radiant with gold chains, pearls, diamonds, and all the chief treasures of many jewel-cases. Her cap will be studded

THE "MOSQUE OF OMAR," JERUSALEM.

with diamond earrings and brooches, and her fingers heavy with rings; gold leaf is deftly laid over her nails, and her fingers and hands are stained with henna. While the bride is being dressed the women and children, who fill the room to overflowing, sit round her, chattering busily and passing frank and admiring comments upon her and her clothes; breaking off from time to time to eat rich cakes and sweetmeats or to utter the wedding cry. This is a

most curious sound, and girls learn while young to produce it; they place their hands on their hips and, leaning forward a little, emit a long, shrill, and earsplitting scream which at close quarters has the most distracting effect upon the untrained foreign ear. However, it expresses the height of joy, and announces to all the world that a wedding is taking place to-night.

When at last the bride is adorned to the complete satisfaction of herself and her friends, she is conducted to the room in which the bridegroom is awaiting her. This takes a long time, as she must walk very slowly, signifying her reluctance to quit her maiden estate; her eyes are shut and her hands held up before her face, the palms turned inwards. All the other women cluster about her like flies round a honeycomb, some bearing lighted tapers, whilst one holds over her a drawn sword to show her husband that if he is not good to her the men of her own family

OLIVE TREES NEAR JERUSALEM: ON THE JERUSALEM-JAFFA ROAD.

will interfere for her protection. From time to time the wedding cry shrills out. It must be remembered that only women are present; the bridegroom is the one man allowed in, as all the women are unveiled. It is, indeed, the one occasion on which he can see the faces of women who are strangers to him, or only distantly related; but he is far too shy and nervous to enjoy the opportunity as he might under less trying circumstances. Moving with slow, reluctant steps, the bride is guided to a chair at the bridegroom's side, where she seats herself. He lifts her veil to obtain a clearer view of her, and then gently passes his hands over her face to show that he is her master. It is said that some men give a blow instead, but I have never seen this done, and certainly no man of good birth and breeding would do such a thing. In any case, it must be a very trying moment for them both; for the man now sees his bride for the first time, and she, poor thing, is still obliged to keep her eyes fast shut, for to open them would be immodest as well as unlucky. After this, refreshments are brought in, and then the bridegroom leads the bride to their own room, where at last she may open her eyes and see her husband.

The wedding festivities now begin in good earnest, though, as the bridal pair have retired, it is only the guests who enjoy them. There is singing, dancing, playing on musical instruments, and any amount of talking, while constant relays of rich sweets and scented lemonade, syrups, and coffee help to keep the assembly busy and contented. The wedding guests bring with them as many changes of costume as they can afford, and these they don in public at intervals during the night, to the envy and admiration of one another.

The bride is not allowed to leave the house for eight days after the wedding, but these days are filled with a succession of visitors who come to inspect her clothes and presents. Her nearest male relations also visit her during this period, and bring her further gifts; at such visits the women of the bride's family may be present, but, of course, none of her husband's relations. It is considered polite for visitors on these occasions to stay a long time, usually several hours on end, and they must be generously entertained. The Syrians have great ideas of hospitality, and will always give of their best, so that a wedding is a severe tax on the family finances, and usually means going into debt.

The married life of a Syrian Moslem woman of the upper class is not the degraded and restricted existence that so many English women imagine it to be. The men, more often than not, are good husbands and fathers, and in her management of the house and the children the wife is practically unfettered. If she chooses to shut up the house and go off for the whole day on a visit, or to picnic under the trees with her friends, she does so without troubling to mention the fact to her husband; and he, returning at midday to find the house deserted and locked up, departs quite placidly to

seek his dinner in some cookshop in the town. As a woman grows older her authority increases, and a mother-in-law has absolute power over the married son and his wife and children, which power she may not always use too kindly. It must be understood that this refers to Moslem townswomen of the upper class; the lot of the peasant women is indeed a hard one.

The Turkish ladies, as a rule, are carefully educated, and know French well. Those we came across in Jerusalem dressed in the latest French fashions under their covering *izzar* (or sheet), which was of silk, while their pretty features were clearly visible through the thinnest of black gauze veils. They read French novels, and moulded themselves as much as possible upon French models; and they never troubled to disguise their contempt for the Syrian ladies, whom they considered old-fashioned and dowdy beyond expression. Readers of Pierre Loti's novel, "*Désenchantées*," will remember the Turkish ladies so delightfully described by him.

Religion, selfishness, and also respect on the part of the men have combined to seclude the Moslem townswomen, and these are strong barriers to overthrow, even if the Syrian Moslem women were ready for a complete change of life and thought. A Moslem gentleman once put the case from his standpoint: "Have I then so little honour for my wife or my daughter as to let her walk unveiled in the town, so that any common fellow can look at her face?" And he went on to explain the Moslem view of Western customs. "We do not think that English fathers care very much for their daughters, or they would not let them come out here alone, with no man to look after them." He was referring to the way in which single missionary ladies settled, one or two together, in outlying towns and villages, working from the highest motives and putting up with much discomfort and even hardship; but, to his mind, the situation was indefensible. The Moslem point of view cannot be dismissed as ridiculous by those who are ruling their land. Colourless and monotonous as the life of the Syrian Moslem woman seems to us, it is not unhappy. The unrest of Western ideas is only slowly penetrating her still unawakened faculties. Her round, contented face shows that she is perfectly satisfied with life on the whole; if it gives her little, it gives her all she asks of it—as yet. She knows nothing about women's rights, and never talks about them; she is content to take them, and within her small realm her authority is seldom disputed.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

The Fair.

Next week the British Industries Fair will be upon us again, but this time, unfortunately, in anything but favourable conditions. A year ago trade was flourishing, and it seemed at a superficial glance as if we were in for several years of plenty; the fair was thronged with buyers, and the results were fully in accordance with anticipations. Within the short space of twelve months the position has altogether changed, and the fair will be held in an atmosphere of unprecedented trade depression—a depression which is not limited to one country or one continent, but is literally world-wide. But that fact should by no means be taken to indicate that excellent results will not attend the fair; as a matter of fact, the contrary is almost certain to be the case. In the opinion of the most competent observers, the trade slump has passed the worst point, and from now onwards things will gradually begin to improve. Assuming that buyers will take the long view, and will endeavour to prepare for the inevitable trade "boom," it may safely be anticipated that very substantial orders will be placed. They will certainly be there in their thousands, and they are not making the journey from all parts—and especially from the Near and Middle East—merely to undertake the arduous duty of walking round miles of exhibits for nothing.

Soviet Oil "Concessions."

After utilising all the portable valuables on which they could lay their hands, it was only to be expected that the Bolsheviks would turn as a last resort to concessions as a means of obtaining the wherewithal for carrying on their propaganda. Oilfields in these days naturally hold out special attractions to the concessionaire, and it is not surprising, therefore, to learn of the report that the Bolsheviks have been industriously attempting to dispose of concessions in the Baku and Grozny oilfields. It would appear that efforts have been made to interest groups in a number of countries, but always with no result when the location of the "concessions" was learnt. Obviously the only hope left to the Bolsheviks is that they should dispose of the "concessions" to the rightful owners of the properties; but if the Soviet rulers pin much faith to that eventuality they must possess even more eccentricity than they have been credited with—and that is saying a good deal.

Anglo-Persian Oil.

The continuous expansion of the interests of the Anglo-Persian Oil Company made it certain that additional capital would eventually be required, and in a circular just issued to the shareholders the directors now propose large increases of capital. It is proposed to issue Second Preference shares, part of an authorised issue of £10,000,000, and to create an additional 5,000,000 Preference shares, ranking *pari passu* with those now to be issued. It is further proposed to raise the cumulative dividend on the First Preference shares to 8 per cent. The additional capital is required for further pipelines, tank vessels, refineries, etc., to enable the company to deal with the largely increasing output of crude oil, and for the additional distributing facilities that will be required after the end of next year, when the existing contracts with the Asiatic Petroleum Company expire.

Trade and Unemployment.

A very able survey of some of the problems of unemployment was given by Mr. E. C. de Segundo in a paper which he read recently before the Royal Society of Arts. Mr. de Segundo dealt dispassionately and very thoroughly with this many-sided subject, which constitutes the most vital issue of the day, indicating the outstanding facts of the case, and the lines on which, in his view, the sound industrial state should proceed; and he undoubtedly succeeded in making a very real contribution to the solution of the problem. Very rightly he laid great emphasis on the fact that our trade relations with foreign countries must be taken into careful consideration in working out any scheme for the mitigation of unemployment in this country. As he points out, increased production of itself will not cause adequate relief unless commodities are produced of a character and at a price that will (a) reduce imports and (b) enable us successfully to compete with other producers in foreign markets. Of these two points the latter is obviously the more impor-

tant, and the remedy is almost wholly in the hands of Labour, which at present, by exorbitant requirements, is making the path of our competitors easy.

"Dumping" and Key Industries.

Mr. de Segundo joins issue with those who would have nothing of any measure of protection against "dumping" or for the safeguarding of "key industries." His opinion is that a new industry, if deemed worthy of support, should be protected against foreign competition long enough to give it a proper opportunity to hold its own, and that all industries adjudged to be essential should be permanently protected in a suitable manner. Judged merely from the standpoint of tending to enlarge the scope for employment, this view has everything in its favour; but if it can be proved, as those who are now arguing for unrestricted trade are endeavouring to show, that only absolute freedom from restrictions will serve to restore normal trade conditions to the world within a reasonable time, then this view would obviously lose its force. But, as I pointed out last week, other and more cogent reasons enter into the argument, at any rate so far as "key industries" are concerned.

The Imperial Bank of India.

The end of last month saw the commencement of the operations of the Imperial Bank of India, which, as my readers are aware, has been constituted by the merging of the three famous Presidency banks—the Bank of Bengal, the Bank of Bombay, and the Bank of Madras. The departure is one of great importance for the development of Indian banking. The three banks which have now disappeared played a great part in the economic development of India, but with the changed conditions arising out of the war it was obvious that India would henceforward need a central institution which would be to India to a limited extent what the Bank of England is to this country. It is intended in due course to extend the operations of the new bank by the opening of numerous branches throughout those parts of India which have hitherto suffered by the lack of adequate banking facilities.

Egypt's Cotton Trust.

Judging by the latest reports to hand, it would appear certain that the recently-formed association of Egyptian cotton growers intends to make a bold bid to enhance the price of cotton. The main obstacle with which the syndicate was bound to be confronted was the financial aspect of the scheme. It is stated, however, that the syndicate has been able to obtain the support of an American bank, which is prepared to advance half the value of the cotton. Given that that is the case, the success of the syndicate's operations must nevertheless be extremely doubtful. An attempt of this kind has been made before in America, and was defeated, I believe, by the temporary curtailment of production in Lancashire. At the present time the demand for cotton is so restricted that it is comparatively immaterial what the syndicate does, but when in due course cotton is again in great demand, and it should be found that Egyptian could be obtained only at an unsatisfactory price, it is at least possible that ways could be devised to render an attempted "corner" unworkable.

EGYPT.

CAIRO, January 22.

Unfavourable Financial Position.

The State accounts for August just published by the Ministry of Finance are not altogether very pleasant reading, though they do not come as a surprise to those who have followed recent developments in the local financial and economic situation.

Revenue during the five months in question has amounted to £E13,723,896, as against £E10,043,899 at the end of August, 1919. There is therefore an increase of £E3,679,997, for which customs receipts (£E1,540,093), tobacco dues (£E600,018), railways (£E835,182), military exemption dues (£E101,820), Ghaffir cess (£E165,317), and mixed courts fees (£E185,254) are mainly responsible.

Expenditure has amounted to £E15,537,043, as compared with £E9,371,726 during the same period last year—i.e., an increase of nearly 70 per cent., or £E6,165,317, towards which railways (£E3,684,360), indemnities for cost of living (£E707,557), education (£E156,215), prisons (£E143,100), irrigation (£E126,011) and survey (£E107,534) are the main contributors.

As a result there is a deficit of £E1,813,147, as compared with a surplus of £E672,173 at the end of August, 1919. In other words, the situation for the financial year is £E2,485,320 worse than it was a year ago, and it is not surprising that the Ministry of Finance have issued instructions that the budget for the new year must be rigorously cut down to only the most necessary expenditure, and that new works must be excluded as much as possible.

It should be pointed out, however, that the first six months of the year are usually the worst, in that while normally expenditure is evenly spread over the whole year, the third heaviest item on the receipt side, viz., the land tax, is as to quite 60 per cent. collected during the later periods of the financial year. It is highly probable that a good deal of the leeway may be made up during the remaining months, since nearly 70 per cent. of the railway expenditure, which is the heaviest item in the current budget, has already been paid out. Nevertheless, we must expect in the future, unless and until new sources of revenue are created, a contraction in revenue, and, if not an expansion in, at any rate a maintenance of the current rate of expenditure.

GREECE.

ATHENS, February 1.

Shortage of Flour.

The authorities at Corfu have cabled to the Ministry of Foodstuffs asking for an immediate despatch of flour, as the entire stock in the island has been consumed. In addition to Corfu, Patras and Salonika have been clamouring for flour. Although stocks are running very low indeed, the Government has ordered the immediate despatch of 500,000 okes of flour to Patras and Salonika. The Minister of Foodstuffs states that this shortage of flour will only be felt for another fortnight or so, as three boats with a cargo of 9,000 tons each are expected to arrive at the Piræus during the first week in February.

CYPRUS.

NICOSIA, January 26.

Economic Depression.

The papers discuss seriously the present economic depression, which is attributed largely to the new tastes in the mode of living. Many blame the wave of extravagance which has swept over the island since the war, and urge a return to economy. The importation of many luxuries should, at least temporarily, be curtailed. Figures recently published show a large excess in the value of imports over exports for the quarter ended September 30. Imports were valued at £509,374 (as against £422,776 for the corresponding quarter in 1919); exports at £314,442 (as against £307,990). The excess of imports over exports was thus £194,932.

The chief imports included cotton cloths £40,229, sugar £24,920, petroleum £22,421, mechanical appliances, iron, etc., £20,809, cars £15,778, preserved foods £13,533, chemical fertilisers £12,619, woollen cloths £11,321, coffee £10,701, and tobacco £9,917. It is necessary that the balance should be brought again to the right side, and meanwhile an equilibrium could without difficulty be restored, as advocated, by checking much expenditure on various luxuries which are quite a new feature in the island. The money that has enriched many Cypriots through the war should have enabled many of the rural classes to pay off their debts; and in the towns money is available, and should be applied to the extension of profitable enterprises.

Locusts.

As the season for the hatching out of this pest approaches the question of the annual campaign presents itself. For some years the Government has been satisfied with the method of spraying the young insects with a solution that has been fairly effective. But the discovery of a new preparation by Mr. Solomides, of the Agricultural Department, seems to promise still better results. If its merits as an insecticide are all that is claimed for it, it should—on the acquisition of an international patent—supersede all other solutions in use, and consequently be adopted in Cyprus, the land of its origin. It is said to be more deadly in its effects, while harmless to vegetation and other animal life, and to be comparatively cheap. The inventor's demonstrations in France and England have been very successful. Facts and figures regarding the progress of locust destruction appear, for some unaccountable reason, to be studiously kept out of reports and Blue-books.

Yugoslavian Chambers of Commerce are being opened at Berlin and Munich.

Roumanians have recently made considerable purchases of clothing at Constantinople, for export to Bessarabia, Bukovina, Dobruja, and Transylvania.

American portable buildings containing from five to seven rooms each have been erected at Bebek, about five miles from Constantinople.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended January 10 amounted to £E13,282, making the total for the year £E408,932. For the corresponding periods of 1919 the figures were £E14,004 and £E308,619.

COTTON GROWING IN MESOPOTAMIA.

I.—Experimental Work.

(FROM A CORRESPONDENT.)

BAGHDAD.

Details of the history of the experimental work with cotton in this country may be gathered from the published reports of the cotton expert who was seconded for this work from the Indian Agricultural Service in the autumn of 1917. He imported cotton seed of the best procurable varieties—both American and Egyptian—and has grown them now for three years on experimental plots. It was his desire to repeat this work with the best half-dozen varieties on four experimental stations scattered over the country. This extension work was started in 1919 and repeated in 1920. With the outbreak of the recent disturbances work was temporarily discontinued on these farms, and the value of any experimental work conducted on them has been vitiated. It was fortunate that the work could be carried on unchecked at the cotton farm near Baghdad.

Other experiments have been laid down, each of which has an important economic bearing. From the experiments conducted in 1918 and 1919 it has been definitely proved that Mesopotamia can grow cotton as good as the best "Egyptian" and better than the best "American." In regard to yield, it is hoped that the work undertaken in the current season will give results of value in determining the commercial possibilities of cotton in this country.

A search is being made for that variety of cotton which will give the best average returns to the cultivator. To discover that particular variety is no easy matter for two reasons. First, it is only after experimenting on a variety of soils for three or four years that the average yielding capacity of any variety can be discovered; and, secondly, during this period the relative value of each variety under trial may vary to such an extent as to displace it from the position it held on the basis of previous prices. There is, however, at the present time a very marked tendency for the finer quality types of cotton to command high premiums, and as long as the motor tyre trade continues to use long stapled cotton for tyre manufacture, the demand is likely to remain. This factor has assisted in eliminating a number of short stapled varieties of cotton under trial. Some of these were very heavy yielders—more especially those bred from seed selected by officers of the Agricultural Departments in India from American cotton grown there spasmodically for the past few decades.

Of the three varieties which would appear to be eminently suited for cultivation in this country, two are of Egyptian and one is of American origin. At the end of the current season it is hoped that the authorities concerned will be in a position to decide definitely what particular variety they are going to distribute for commercial cultivation in the coming season. A study of the cotton problem in other cotton-growing countries reveals the grave dangers attendant on the promiscuous cultivation of a number of varieties. To allow this contingency to arise in this country would be tantamount to setting a premium on bad farming.

All experimental work with cotton undertaken during the past three years has been devised so that material assistance can be given to the industry on a commercial scale when the time arrives for the Agricultural Department to start its propaganda work in earnest. Seed of the best variety of cotton has to be provided in sufficient quantity to meet the prospective demand; the best time of planting and the method of planting had to be discovered; the water requirements of the crop had to be ascertained.

Much information of value has been collected, and arrangements have been made to meet the demand for seed.

The work has now arrived at that stage when propaganda work might be started in earnest. Up to the present no attempt has been made to induce the Arab population to grow more cotton. The more influential landholders have from the commencement maintained a perfunctory interest in the work, so also the commercial community. In order, therefore, to pave the way for propaganda work in the coming season, representatives of the local landholders, and also of the commercial community, were invited to visit the cotton farm near Baghdad towards the end of last September. In this connection the following extract from the *Baghdad Times* of October 1 is of interest:—

By invitation of the Officiating Director of Agriculture and Cotton Expert to the Department, a representative gathering of officials and British and local gentlemen interested in commerce and agriculture attended an exposition at the cotton farm below Baghdad on the evenings of September 28 and 29. . . . Members of the Department showed the party round the farm, gave a most interesting account of the experiments in growth of the different varieties of cotton, and outlined plans for the future.

Captain Thomas expressed the desire of the Department to afford all facilities for further inquiries to those interested in the question of cotton cultivation. The demonstration and practical results obtained speak volumes for the untiring labour which has been exerted in the development of this most important cultivation. The insight into the plans and hopes for the future of cotton in Mesopotamia created the deepest interest in the minds of those present.

Subsequent to the visit it would appear that the representatives of both the commercial community and landowners regarded the visit as constituting a red-letter day in the development of the resources of Mesopotamia.

This brings us to the all-important subject of the commercial aspect of cotton cultivation in Mesopotamia, which we shall deal with in a later issue, to be followed by a consideration of the cotton crop as a factor in the political situation.

ROUMANIA TO-DAY.

Transport the Key to the Position.

We give below a report issued by Messrs. Watson and Youell on conditions in Roumania, dated February 12:—

We have to-day received the following telegram from our Galatz house, dated February 12:—"Railway goods traffic restarted. Signs revival." This traffic has been held up since the railwaymen's strike on October 19.

The stocks of grain in the country of last year's crops are reported to be as follows:—About 2,000,000 tons of maize of good quality and in excellent condition; and about 300,000 tons of barley and oats.

The country was covered with snow in November, which, gradually melting, put the land in excellent condition for ploughing, enabling good progress to be made during the winter; and it is reported that a considerable area has been put under cultivation with barley and oats, and the ground is being prepared for maize planting in March and April. It is also reported that a certain amount of spring wheat has been sown this winter, but the maximum selling price of wheat fixed by the Roumanian Government mitigates against this cereal being cultivated on a large scale, and the probabilities are that there will be none for export again this year.

The measure of exports will, of course, be regulated by the extent of transport from interior points to shipping centres, especially railway transport; and it is refreshing to hear that this has been resumed. This will also enable the

congestion of imported goods at the respective ports, especially at Galatz and Braila, to be relieved.

Given the necessary railway transport, there should be fair quantities of timber for export from the Danube this year, and as the oilfields imported considerable quantities of plant and working material last year, and are likely to continue importing such plant and material, this year the output of oil should be much greater than last. There are insufficient oil storage tanks and refineries in the country, and until these are increased there will continue to be a shortage of fuel oil available whilst the Roumanian Government prohibit the export of crude oil.

Two groups of contractors, one British and the other French, have offered to take over the railway repairing shops in the country, and their proposals are being considered and debated in the Roumanian Chamber of Deputies. The Roumanian State Railway Direction are very short of locomotives, and although some new ones have been imported from America, and negotiations are in progress for the purchase of others, it will take a good long time before the requisite number of locomotives are acquired to put the railways in anything like normal conditions. The railway workshops, therefore, if adequately equipped and organised, would do much towards repairing the locomotives and other rolling stock in the country and keeping them in working order. The problem of the very adverse exchange on Roumania could undoubtedly be solved by the restoration of reliable railway transport.

THIS YEAR'S FAIR.

On Monday next the British Industries Fair for 1921 will be opening its doors at the White City to the buyers of the world. This will be the seventh London fair and promises to surpass its predecessor even as that in its turn added to the roll of success. It is estimated that there will be some four and a-half miles of stands displaying British goods at the White City.

Since its inception in 1915 the record of the British Industries Fair has been one of continuous growth in scope,

utility and reputation. Started as a means of promoting the manufacture in the United Kingdom of articles previously made in enemy countries, the fair made so instant an appeal and received such warm support from its exhibitors that it has never looked back, and is now established in a predominant position among the great trade fairs of the world.

Participation in the fair, limited to manufacturers in specified British trades, is both cheap and simple, offering equal opportunities to both large and small firms. This year's exhibitors cover both categories and form the most representative body of British manufacturers ever assembled. Their names alone are a guarantee of the quality of the goods to be displayed, and their keenness to exhibit is shown by the fact that the available space in every section of the fair has been applied for several times over.

The goods to be displayed in the London section include books, cutlery, silver and electro-plate, jewellery, watches and clocks, hard haberdashery, glassware of all descriptions, china, earthenware and stoneware, paper, stationery and stationers' sundries, printing, fancy goods, including travelling requisites and tobacconists' sundries, medical and surgical instruments and appliances, leather for the fancy goods, bookbinding and upholstery trades, brushes and brooms, toys and games, sports goods, scientific and optical instruments, spectacle ware and opticians' supplies, photographic and cinematographic apparatus and requisites, drugs and druggists' sundries, and musical instruments.

The Birmingham Fair also opens on February 21, at the Castle Bromwich Aerodrome. The overseas visitor will have the opportunity to inspect some twenty sections covering the trades for which that city is world famous. Every type of fitting for lighting and cooking and a wide range of hardware, including household ironmongery, will be on display, together with metal furniture and saddlery, indiarubber goods, and motor accessories. In fact, almost every branch of the British metal industry will be represented. The exhibits at the well-known Kelvin Hall, Glasgow, will include textiles of all sorts, ready-made clothing, hats, boots, carpets, foodstuffs, chemicals and dyes. This fair opens and closes a week later than the other sections.

ENGINEERING.

A New Belting.

Ordinary oak-tanned leather has been used for generations for the purpose of transmitting power, by reason of its resistance to tension, the ease with which it can be handled, cut, and jointed, and its remarkable resistance to wear. It possesses certain disadvantages, however, which are well-known to every engineer, amongst which may be mentioned its tendency to slip, especially when in a dry state; and the fact that it cannot be made to grip a small pulley running at a high speed unless considerable tension is used. This has the effect of bringing about rapid wear of both belt and bearings, and it is impossible to transmit power without an extremely high loss by friction.

Attempts have been made from time to time to use chrome leather for power transmission, but hitherto these have been far from satisfactory, as chrome leather in itself possesses comparatively little resistance to tension. Fasteners will pull out, rivets or stitches give way, and unless a very wide belt, in comparison to the power transmitted, is used, the belt itself will give way. In favour of chrome leather are the facts that it does not become unduly dry, it is soft and flexible, gripping metal surfaces well, and has a high power of adherence, especially when dressed with a little ordinary tallow or castor oil.

In the new type of belting referred to, full advantage is taken of the good points of both beltings. The grip and adherence of the chrome leather is added to the tensional strength of the ordinary oak-tanned belt, and a number of improvements in design have been made, based on sound scientific principles, all of which tend to increase the efficiency of the belt.

This happy combination of the two consists of a backing of high-grade oak-tanned leather to the underside of which longitudinal strips of chrome leather are attached by rivets. These strips are of a good width, and the arrangement is such that a narrow air space lies between each strip. There is one strip of chrome only for the one-inch width of belting; for a two-inch belt two strips are used; the three-inch and four-inch have three strips, and beyond that size there is an additional strip for each inch and width. Instead of a backing of oak-tanned belt, a backing of balata belt can be used if preferred, and for special purposes the under, or pulley side of the belt, can be scored with grooves running the same way as the chrome strips to enable the belt to get a better grip on a well-rounded pulley of small diameter. The rivets with which the chrome and oak-leather belts are joined together have solid heads, but hollow shanks, and the ends are well hammered into the chrome, so as to leave depressions of appreciable area. These, added to the hollow ends of the rivets, allow a small air space at each rivet which causes a sucking action during use which still further assists the gripping power of the belt.

I understand that belts of this type have recently emerged with credit from exhaustive tests at the National Physical Laboratory, and that the superior adherence and transmission qualities claimed for the belt have been amply confirmed. The makers recently conducted a test for the co-efficient of friction with one of these belts, running it over two pulleys, and transmitting 26 horse-power. The pulleys in this test were about 35 inches in diameter, by about ten inches wide. The belt was five inches in width, and had five strips of chrome on its underside. Its speed during the test was approximately 29½ ft. per second. The test was carried out by means of a brake horse-power testing-machine, the arm of which acted upon a steelyard which had previously been calibrated and tested. The tensions determined were 228.15 kilograms on the tight, and 6.15 kilos on the slack sides. The angle of "lap" on the driving pulley, the belt being very loose on the underside, was 145 degrees. Using the same formula as is employed by the National Physical Laboratory, it will be seen that these data indicate a co-efficient of 1.42, which can only be considered as an extremely satisfactory result.

It is pointed out by the makers that the increased adherence given by this belting enables a given power to be transmitted with a proportionately reduced tension in the belt, and with a consequent saving in the wear of the belt and the bearings. Alternatively, the width of the belt may be reduced without affecting the total adherence. The reduc-

tion in width may, it is said, be so much as 30 per cent., and for that, and the reasons given above, it would appear that the new belt should be eminently suitable for centrifugal fans, blowers, or electric motors, where, owing to the high speeds used small pulleys have to be employed for either driving or driven purposes.

A Car de Luxe.

In spite of the efforts of foreign, chiefly American, competitors, to produce motor-cars of as well-made a type, and as luxurious a design as the best British products, it appears that when any discriminating purchaser, regardless of expense, wishes to own as fine a production as money can buy, he comes to this country to make his selection. This thought is the outcome of inspection of a remarkably handsome 40-50-h.p. Rolls-Royce cabriolet which has just been sent me for inspection by my friend Mr. Johnson, the general manager of the company.

The car, before delivery to the purchaser, is to be exhibited at the forthcoming Indian Motor Show at Delhi, and it will certainly do a great deal to enhance the already high reputation of the firm in that country. The three-quarter cabriolet body is by Messrs. Maythorn, the well-known carriage builders.

ANGLO-PERSIAN OIL.**Second Preference Share Issue.**

In a circular dated February 14, the directors of the Anglo-Persian Oil Co., state:—Additional capital is required for providing the further pipe-lines, tank-vessels, refineries, etc., necessary to enable the company to deal with its largely-increasing output of crude oil, and also for the additional distributing facilities which will be required after the end of 1922 (when the existing contracts with the Asiatic Petroleum Co. expire) to enable the company to dispose of its refined products independently and to the best advantage.

The directors propose, when the necessary resolutions have been passed, to make an issue of second preference shares (part of an authorised amount of £10,000,000), ranking both as regards dividend and capital after the existing preference shares. In view of the fact that the dividends on the proposed second preference shares would, unless otherwise provided, rank before the participating dividend of 2 per cent. on the existing preference shares, the directors consider that it is desirable to protect the interests of the existing preference shareholders by merging this participation of 2 per cent. with the cumulative 6 per cent., thus making the existing shares 8 per cent. cumulative first preference shares as from April 1, 1921. The right to participate up to the extra 2 per cent. is at present non-cumulative, and only becomes payable after a dividend of 6 per cent. has been paid on the ordinary shares. Under the arrangements proposed this 2 per cent. will become not only fixed and cumulative, but it will also be a charge on the profits in priority to any dividend on any other class of shares.

The existing preference shares are repayable on liquidation at a premium of 10 per cent. on the amounts paid up thereon. As a further benefit to the holders of these shares it is proposed that this provision should be altered, so that if for the six months prior to liquidation the average price of the shares on the market has been higher than the above 10 per cent. on the amount paid up thereon, then the preference shares will be repaid at such average market price. These alterations will considerably augment the security and value of the existing preference shares.

The existing preference shareholders will at the same time be asked to authorise the creation of additional £5,000,000 preference shares ranking *pari passu* with those now issued.

To preserve the present voting majority of his Majesty's Government when all the preference shares have been issued, it is proposed that the existing preference shares and the new second preference shares shall have one vote for every five shares instead of one vote per share. The participating dividend of 2 per cent. on the existing preference shares for the year ending March 31, 1921, will, if the resolutions are passed, be paid six months earlier than usual, viz., on July 31 next, together with the dividend of 3 per cent. for the half-year to March 31, 1921, and thereafter the fixed dividend of 8 per cent. per annum will become payable half-yearly on January 31 and July 31. The return of proxy forms on or before February 19 is requested.

An extraordinary general meeting is called for noon on February 22 at Winchester House, and will be immediately followed by a separate general meeting of preference shareholders.

Standard TOBACCO MACHINERY

The utmost improvement in production methods marks the general tendency with up-to-date firms for the re-establishment of trade.

In the case of Tobacco Factories this tendency is reflected in the universal substitution of "STANDARD" Mechanical Equipment for other makes of lower efficiency.

An investigation of the capabilities of "STANDARD" Machines convinces beyond dispute that they effect real economy in manufacturing costs and as the result have been adopted in the World's Largest Cigarette and Tobacco Factories. This fact in itself speaks volumes for "STANDARD" Service.

The "STANDARD" CIGARETTE MACHINE

For quality and quantity in Cigarette production this Machine is unexcelled and is adaptable for the manufacture of cigarettes of all kinds and classes.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Sugar.—The market has shown no change. West Indian Crystallised has been done at 63s. to 64s. 6d.; White Mauritius is the same at 71s. Home refined has been in good demand at the official prices.

Coffee.—Prices have risen considerably. Costa Rica has been done at 132s., an advance of 4s., and Indian, at 116s., is 8s. up. The futures market has remained quiet. Quotations are:—March, 44s. 6d.; May, 45s. 6d.; July, 46s. 6d.; September, 47s. 6d.; December, 49s.

Oilseeds.—The market has shown signs of improvement. Indian linseed has come to business at 19s. 6d., an increase of 2s. 6d.; while La Plata, at 17s. 6d., is 1s. 9d. up. Rapeseed is lower, with Toria 6d. down at 18s. 6d. Other transactions include cottonseed at 9s. 3d. and Egyptian black at 10s. 3d.

Oilcakes.—Prices have been variable. Linseed cake, at 16s., has lost 1s. 6d., while cottonseed cake is 6d. up at 11s. Groundnut cake is unchanged at 14s., but coconut cake has declined 6d. to 12s. 6d., and arachis cake has come to business at 12s. 6d. to 15s. 6d.

Seed Oils.—Oils have been variable. Linseed oil has advanced 2s. to 33s. Rape oil, at 50s., has dropped 3s. Refined cotton oil has lost 2s. at 38s., but the Egyptian variety is unchanged at 30s. Turpentine has lost 10s. at 70s.

CURRENT PRICES.

General Produce.—Bacon, 180s. cwt.; butter, 298s. cwt.; cheese, 160s. cwt.; chillies, 125s. cwt.; eggs, 30s. 6d. per 120; cloves (Zanzibar), 10½d. lb.; cocoa (Ceylon, good to fine), 81s. cwt.; coffee (Costa Rica), 117s. 6d. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 112s. 6d. cwt.; ginger (washed Cochín), 35s. 6d. cwt.; hams, 160s. cwt.; lard, 125s. cwt.; nutmegs, 110s. to 80s., 10½d. lb.; pepper (Singapore black), 4d. lb.; pepper (Muntok, white), 8½d. lb.; raisins (Valencia), 130s. cwt.; sultanas (Smyrna), 119s. cwt.; currants (Vostizza), 90s. cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 24s. 6d. cwt.; rice (Rangoon No. 2), 14s. 6d. cwt.; rice (bran Rangoon), £6 15s. ton; tea (Indian), 7½d. lb.; Ceylon, 7d. lb.; Java, 3½d. lb.; wheat (Australian), 94s. 6d. qr.; wheat (English white), 70s. qr.

Metals.—Aluminium, £165 ton; bismuth, 12s. 6d. lb.; antimony, £41 ton; copper (standard), £68 15s. ton; copper (electro), £77 10s. ton; gold bars, 106s. 7½d. oz.; iron (No. 3 Cleveland), 20s. ton; hematite (mixed number), 230s. ton; lead (soft foreign), £23 2s. 6d. ton; manganese Poti, 2s. 4½d. unit; molybdenite, 60s. unit; nickel, £212 10s. ton; platinum, 320s. oz.; plumbago, £35 ton; quicksilver, £12 5s. bottle; silver bars, 36d. oz.; spelter (G.O.B.), £24 5s. ton; tin (standard), £162 ton; tin plates (20 by 14), 31s. 6d. box; wolfram, 15s. 6d. unit; zinc sheets, £39 10s. ton.

Chemicals.—Acids: boric, 75s. cwt.; oxalic, 1s. 1d. lb.; citric, 2s. 5½d. lb.; tartaric, 2s. 0½d. lb.; ammonia (sulphate), £25 12s. 6d. ton; arsenic (white powdered), £56 5s. ton; benzole (standard), 3s. 1½d. gallon; bleaching powder (35 per cent.), £20 10s. ton; borax crystals, 38s. 6d. cwt.; cream of tartar, 170s. cwt. Potassium: bi-chromate, 1s. 2½d. lb.; chlorate, 7d. lb.; caustic, £65 ton; nitrate, £58 10s. ton; permanganate, 2s. 3d. lb.; prussiate yellow, 1s. 3d. lb.; sulphate (90 per cent.), £34 10s. ton. Sodium: crystals, 150s. ton; bicarbonate, £10 10s. ton; bi-chromate, 9½d. lb.; alkali (58 per cent.), £9 10s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £24 ton; hyposulphite, £24 ton; prussiate, 11d. lb.; nitrate, £20 10s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (125 per cent.), £155 ton; sulphate of copper, £37 10s. ton; sulphate of iron, 150s. ton; lemon oil, 4s. 4½d. lb.; quinine, 3s. 6½d. oz.; red lead, £42 10s. ton; white lead, £43 2s. 6d. ton; white ground lead, £57 5s. ton.

Miscellaneous.—Cotton (American), 9.27d. lb.; cotton (Egyptian, Sakellarides), 17.50d. lb.; linseed (La Plata), £14 15s. ton; rape (Toria), £18 ton; soya beans, £12 ton; palm kernels, £18 5s. ton. Oils: linseed, £30 5s. ton; soya, £28 15s. ton; cotton (erude), £27 10s. ton; olive, 11s. 6d. gallon; ground nut, £37 10s. ton; palm, £37 ton; rape (crude), £53 10s. ton; petroleum, 2s. 3d. gallon; turpentine, 80s. cwt. Rubber: plantation (No. 1 crepe), 1s. 0½d. lb.; smoked sheet, 10½d. lb.; fine hard Para, 1s. lb.

IMPERIAL BANK OF INDIA.

In accordance with the terms of the Imperial Bank of India Act, 1920, the undertakings and business of the Bank of Bengal, the Bank of Madras, and the Bank of Bombay were transferred to the Imperial Bank of India on January 27, and all communications which otherwise would have been addressed to any one of the above banks should now be addressed to the Imperial Bank of India. Sir N. H. Y. Warren and Sir Robert Aitken are the managing governors of the bank; Mr. S. A. H. Sitwell is secretary and treasurer, Bengal; Mr. N. M. Murray is secretary and treasurer, Madras; and Mr. R. A. Don is secretary and treasurer, Bombay. The London offices of the Bank are for the present at 2, Prince's Street, E.C. Sir Bernard Hunter is the manager.

LANCASHIRE COTTON.

Market Depressed.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

The tone of the market which has prevailed through the past week can be rightly termed distinctly depressing, for business has been extremely dull. Sellers have experienced another unsatisfactory period, and the larger inquiry that was in evidence only a short time ago has practically died away. At the present moment there are no expectations of any immediate revival of demand, in fact, the position appears to be going from bad to worse. Here and there the opinion is expressed that the bottom in prices has been reached, but who can prophesy the time when buyers will regain confidence and commit themselves to lots of any weight, when there is no stability in the price of the raw material? If dealers in England knew to what extent the acreage in America was to be reduced, then we should probably see some increased activity in the yarn and cloth section, for producers would be able to purchase the staple to suit their requirements. It has been a very uninteresting week in the Egyptian cotton market, there having been practically no demand, and prices have eased to a further extent. No particular change can be reported in the cloth demand for Egypt and the Levant, though here and there isolated sales have taken place, chiefly in bleaching cloths and fancies. On the whole, however, inquiry has been very sluggish, and any bids that have been about have generally been accepted with a loss to the seller. In Egyptian spinnings the position of affairs appears to be going from bad to worse. Producers have been naturally looking at the situation through a pessimistic eye; and well they might, for it is mentioned that certain producers have been forced to sell at simply ruinous figures. With regard to cloth inquiry for India there has not been anything worth mentioning, and even when bids have been received, they have generally been impracticable. China appears to have slipped into a groove of depression and beyond a few trifling lots of greys and whites the business reported has been of a negligible quantity. The remaining outlets East and West continue quiet, and buyers are holding aloof. The American yarn section has been uninteresting, and prices when tested have favoured buyers. Isolated transactions have occurred for the Levant in extra hard descriptions.

COAL PRODUCTION IN GEORGIA.

The production of coal at the collieries in the province of Tkivbuli has been increased by 23 per cent. during the last few months, notwithstanding the decrease in the number of workers caused through general mobilisation. In view of the stoppage of the supply of naphtha by the Bolsheviks, and of the necessity of substituting the industrial liquid fuel by coal, the union of the miners of Georgia decided to work on Sundays and public holidays. This decision is being carried out by the workers conscientiously and whole-heartedly.

COMPANY MEETINGS.**LAND BANK OF EGYPT.****Increased Profits.**

The following is a translation of the report of the Land Bank of Egypt for the year ended September 30, which was presented at the annual general meeting held at Alexandria on December 7:—

The various measures taken by the British and Egyptian Governments at first for regulating the cultivation and the trade in cotton having been withdrawn, a rise which was perhaps excessive was produced during the first part of the cotton season. The very high prices reached in January and February have been followed by a constant decline up to the end of the year. Although the proprietors of moderate means who constitute the greater part of the clientele of the Land Bank of Egypt have not benefited as a whole from the high prices, they have nevertheless been favoured by prices unknown before 1919-20. The profits of previous years have been employed by the producers in meeting their debts, and the amount left in their hands this year has enabled them to bring their lands into full cultivation, and subsequently to enlarge their rural estates.

The rise in the prices of agricultural products has naturally resulted in a considerable rise in land values; in some districts the increase has exceeded what might reasonably have been looked for. Naturally the Land Bank was not influenced, in the estimate of the value of its properties, by this excessive increase. The development of mortgage transactions which we recorded in our last report increased during the course of the past year. The borrowers are for the most part buyers of land who have applied to us to finance their purchases. Thanks to this state of affairs, the bank has been able during the year to conclude 254 new loans for £E887,016.806, and to effect 39 sales for £E54,877.602. The total of our mortgage investments, not including those comprised under "tiers adjudicataires d'immeubles," amount to £E3,834,878.191, as against £E3,521,468.341 for the previous year. It is necessary to go back to the balance-sheet of the year ended March 31, 1914, before the period of serious economic disturbances caused by the war, to find a total approaching that of the year 1919-20. The total of our annuities under recovery then amounted to £E269,631; to-day it has been reduced to £E160,931.115, of which £E55,860.853 concern previous years, while £E105,270.262 represent the amount falling due in the year. Our various reserves and provisions for the future amounted in 1913 to £E325,382.161. In our balance-sheet for 1919-20 the same accounts figure at £E594,324.826, not including £E18,700 for the equalisation of dividend. The liquidation of our property is being carried out as in the past. Mortgaged properties put up for sale have readily found purchasers when the adjudications were made, and our account "properties acquired" has been reduced from £E127,868.980 to £E65,146.315 as a result of 22 complete sales and 26 partial alienations for a total sum of £E64,805.

Gross Receipts.

Our gross receipts amount to £E368,970.418, as against £E342,871.756 the previous year. Our expenditure, on the other hand, has risen owing to the increase in French taxes and the measures we have taken to improve the position of the staff, to whom we take this opportunity of expressing our

thanks. The amortisations which we consider necessary are as follows:—(1) Head office, furniture, brokerages on mortgage loans, £E5,506.003; (2) loss on the value of shares of the statutory reserve, £E12,219.494; (3) administration of the estates and sundry expenses, £E2,291.386—£E20,016.887. The provisions for the future that are allowed for amount to £E17,589.223, and are comprised as follows:—Provision for the amortisation of debentures and debenture charges, £E14,589.223; provision for risks on loans, £E3,000. After these deductions from the profits, both for amortisation and for contingencies, the available profits amount to £E144,403.652, or higher than those of the previous year, which were £E140,174.084. In the opinion of the board it is advisable to continue a prudent policy and not to distribute the whole of the net profits made during the past year. The exceptional character of some of the profits, on the one hand, notably those obtained from the sales of properties or profits on exchange, and, on the other hand, the certain increase in expenditure due to higher taxation and to the increased salaries of the staff, made it requisite for us to prepare for the future. We propose, therefore, a distribution of 9s. 6d. per share, and of £3 15s. for each founder's share, and to carry forward £E16,000. The bank's position will thus be strengthened, and we shall be enabled to maintain a certain stability in the distribution of future dividends. The board is fully confident that you will approve the proposals presented to you.

The general meeting (1) approved the accounts and balance-sheet for the year ended September 30, 1920, and gave the directors their discharge for their administration. (2) Approved the division of profits proposed by the directors, and fixed the dividends as follows:—9s. 6d. on the ordinary shares, £3 15s. on the founders' shares. An interim dividend of 3s. per share having been paid on June 15, it will remain to pay as a final settlement for the year 1919-20 6s. 6d. per share. (3) Decided to carry forward £E12,867.246, or 333,564.21 frs. for the shares and £E4,979.255 or 129,080.05 frs. for the founders' shares. (4) Re-elected MM. R. C. Abdy, P. Zarifi and Ed. Bourre, the retiring directors. (5) Nominated as auditors MM. Franz Sofio, H. Pougin, and A. Ferren at the same remuneration as before. (6) Fixed the directors' fees at £5 per meeting.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 7:—During the week ending January 29 beneficial rain has fallen. Crop prospects generally fair but rain still urgently required in the Punjab and North-Western Frontier Province and in parts of Central India, Bombay and Madras. Bombay cotton market dull. Fine M.G. Oomra, March, Rs. 241. Piecegoods market dull with little demand and easier rates. Calcutta jute market quiet but steady. Hessians quiet with some buying from America. Prices rose on expectation of mills curtailing work to 4 days per week but have since fallen again upon mills deciding to continue working 5 days per week. Heavy goods very dull. Tea market lifeless except in good liquoring grades. Burma rice forward buying restricted as stocks up country being held in hope of higher prices. No change in bank rates. S.s. Boyne, the first steamer of the Canadian Government Merchant Marine, from Montreal to India direct, has arrived.

The traffic receipts of the Smyrna-Aidin Railway for the week ended February 5 amounted to £8,774.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

ALEPPO.

The report for December states:—The stagnation which has existed in our market for some time seems to be on the point of developing into an unprecedented crisis as a result of the general decline in values abroad, especially in cotton goods. Our market is overflowing with manufactured goods, imported months ago at relatively high prices, which continue to undergo a ceaseless and disastrous fall in price, and cannot be disposed of as the outlets in the interior are not available owing to the interruption in communications. On the other hand, the fall abroad is discouraging exporters of the products of our district.

The lack of rain during December and the severe cold which is continuing deprives the district of the necessary pasturage for cattle, and is making the sowings difficult and belated, the result of which, it is to be feared, will be that the coming harvest will give only a moderate yield.

ALEXANDRETTA.

The report for December states:—As a result of the economic crisis in America and Europe, and of the fall in the prices of commodities which has followed the merchants of Aleppo and those of the whole of Syria have suffered very considerable losses. Our market, however, occupied as it is principally with transit business, has not been very seriously affected. All the same, transactions between Aleppo and our port have greatly diminished.

Communications between Aleppo and Alexandretta continue to be assured. On the other hand, those between Antioch and Alexandretta have been interrupted on several occasions by bands of brigands, the result being that trade between the two centres has come to a standstill.

We continue to lack telegraphic communications with Europe and Syria, which renders very difficult the quotation of the exchanges, and compels us to maintain a large margin between purchases and sales.

The Bulgarian Government propose to introduce a Bill with the object of encouraging production, and to this end it is proposed to give the workers a share of the profits of the industries.

Tone Generally Dull.
(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday night.

Conditions have been generally unfavourable during the week in almost all markets, and it will evidently need a very strong tonic to bring about a pronounced upward tendency. So far the removal of the E.P.D. has had a most transitory effect, though obviously it will eventually exercise a most important influence.

The gilt-edged market after showing considerable firmness amidst the prevailing depression, is closing on a weak note. Foreign bonds have been variable, with Japanese and Chinese issues fairly strong.

Industrials have been pronouncedly weak. Except with regard to a few shares there has, however, been no great amount of liquidation, and indeed, for the most part business has been carried on on very restricted lines. Oils after an irregular week have firmed up somewhat.

Near Eastern shares which rank among Government securities have been featureless. Egyptian Guaranteed 3 per cent. are unchanged at 62, while Greek Guaranteed 2½ per cent. 1898 are unchanged at 58, and Turkish Guaranteed 4 per cent. are the same at 67½.

Greek securities have risen. The 5 per cent. 1881 Loan and the 5 per cent. 1884 have both advanced 1 at 40, at which there were buyers. The 5 per cent. 1890, at 40, and Fundings, at 40, are both 1 up. The 1910 Loan is unchanged at 30, but the 5 per cent. 1914 Loan has dropped a point at 38. The 1902 Loan is unaltered at 35.

Banks have remained unchanged. Agricultural 3½ per cent. Bonds are the same at 53. Imperial Ottoman Banks and National Bank of Egypt are unchanged at 8 and 17 respectively. Land Banks, at 4 23-22, are unaltered.

Land shares have shown a very irregular tendency. Beheras have shed a point at 7½, while the Preference shares are unaltered at 2½. Anglo-Egyptian Land Allotments are the same at 3½. Egyptian Consolidated Lands have lost ¼d. at 1s. 4d., and Delta Lands are 5d. down at 9s. 3d. Gharbieh Lands are unaltered at 1½, while New Egyptians, at 22s., have dropped 6d., and Union Foncières have lost ¼ at 2½. Sudan Plantations at 3½ have declined ¼. Oils have declined. Anglo-Egyptians have shed 2-16 at 2 5-16, and Phoenix, at 10s. 3d., have declined 3d. Roumanian Consolidated have lost 1s. at 10s., but Steaua Romana is unaltered at 17.

FOREIGN EXCHANGES.

Country.	Method of Quoting.	Parity of Exchange.	Latest Quotations
Alexandria	Piastres to £	97½	97½
Athens	Drachmae to £	25 22½	52 25-53 25
Belgrade	Dinars to £	25 22½	138
Bombay	Sterling to Rupee	24d.	1 4½-1 4½

Warsaw	Marks to £	20 43	2,800-3,000

In some cases quotations are nominal.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Wood.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of wood required during six months from April 1, 1921. March 15.

Steam Rollers.—The Mechanical Department of the Public Works Office, Cairo, invites tenders for the supply of two 10-ton steam rollers. March 10.

Roofing Tiles.—The Superintendent of Stores, Egyptian State Railways, Telegraphs, and Telephones, Bulaq, Cairo, invites tenders for the supply of 40,000 "Marseilles" roofing tiles (specification, 50 millimetres). March 17.

Lubricating Oils.—The general manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo station, invites tenders for the supply of 1,630 metric tons of mineral lubricating oils (specification, 200 millimetres). April 9.

India.

Rails, Etc.—The Chief Engineer of the Baroda State Railways is desirous of obtaining quotations in sterling, prices to be either f.o.b. port in the United Kingdom or c.i.f. Bombay, for the following:—(1) 1,160 tons of rails, 34 lb. per yard, with 32 tons of fishplates, 10 tons of fish bolts, and 39 tons of spikes. British standards. (2) 1,800 tons of rails, 41½ lb. per yard, with 47 tons of fishplates, 12 tons of fish bolts, and 40 tons of spikes. British standards. (3) 450 tons of rails, 70 lb. per yard, 28 tons of fishplates, 5 tons of fish bolts, and 14 tons of spikes. Communications should be addressed to the Chief Engineer, Baroda State Railways, India, and sent under cover to H.M. Senior Trade Commissioner in India and Ceylon, P.O. Box 683, Allahabad Bank Buildings, 6, Royal Exchange Place, Calcutta, with the request that he will hand them to the addressee.

Water Pipes, etc.—The Municipal Committee, Simla, invites tenders for supplying, laying, and constructing cast-iron (steel or hume) water pipes, sluice valves, washout valves, specials, etc. Tenders are also invited for supplying, erecting, and running for one month a new purification plant consisting of filters, coagulating and chlorinating gear pipes, and all fittings for water supply. (Specifications at Municipal Office, Simla, Rs.10.) March 28.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended February 10:—Extreme dullness has characterised the spot market during the past week, and the general situation shows no improvement since our last report, the only feature worthy of comment being a further narrowing of the premium which spot Sakel holds over contracts; in fact, the premium which remains is more apparent than real, for, in spite of official quotations, fully good fair Sakel can be purchased on the spot at about 1d. over February contracts to-day, and the tendency is towards a still further narrowing. A limited, but fairly steady, demand appears to exist for the best Sakel, and also for Sakel between fully good fair and good, but it is hardly necessary to state that bids are not attractive to sellers. A large number of five bale purchases were made this week—a fact which speaks for itself. A weak future market has not helped matters, and as we write the outlook is extremely depressing. Manchester reports continue to be gloomy, and c.i.f. business is again on negligible lines. Total sales, 700 bales. Quotations of upper are reduced 50 points, Brown 100 points, and Sakellaridis is 150 points lower on the week. Fully good fair Sakel 17.50d. (official quotation).

SHIPPING INTELLIGENCE.

SHIPPING AT THE PIRÆUS.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, February 1.

Four thousand eight hundred and ten steamers arrived at the Piræus during 1920, of the following nationalities:—Greek, 3,774; British, 243; Italian, 229; Inter-Allied, 156; American, 75; Russian, 71; Roumanian, 61; French, 59; Dutch, 47; Swedish, 24; Spanish, 18; German, 23; Japanese, 11; Canadian, 2; Belgian, 4; Norwegian, 9; Polish, 1; Uruguay, 1; Danish, 1; Serbian, 1. The number of sailing vessels of various nationalities which entered the port during 1920 was 5,851. The arrivals at the Piræus during 1919 were 3,389 steamers and 7,479 sailing vessels.

FORTHCOMING SAILINGS

Anchor Line.—S.s. Kingsmere, for Bombay (also taking cargo for Karachi and coast ports) (Glasgow, March 2, and Liverpool, March 7).

Anchor-Brocklebank Line.—S.s. Makalla for Port Said, Colombo, Madras, and Calcutta (leaves London, February 19); s.s. Manaar, for Calcutta (Birkenhead, February 23); s.s. Mahsud, for Port Said, Colombo, Madras, and Calcutta (leaves London, March 5); s.s. Manipur, for Calcutta, (Birkenhead, March 9); s.s. Mahrona, for Port Said, Colombo, Madras, and Calcutta (leaves London, March 23).

Bibby Line.—S.s. Gloucestershire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 2); s.s. Oxfordshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 16).

Byron Steamship Line.—S.s. Lord Erskine for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, February 19).

Clan Line.—S.s. Clan Macdonald, for Bombay and Persian Gulf (Birkenhead, February 19); s.s. Clan Alpine, for Colombo, Madras, and Calcutta (Birkenhead, February 24).

Cunard Line.—S.s. Tyria, for Gibraltar, Patras, Leghorn, Naples, Palermo, Messina, etc. (Liverpool, February 24); s.s. Cypria, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, February 26).

Ellerman Line.—S.s. Trentino, for Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, March 12).

Ellerman's City Line.—S.s. Melford Hall, for Calcutta (Birkenhead, February 26); s.s. City of Lahore, for Calcutta, (Birkenhead, March 14).

Ellerman's Hall Line.—S.s. City of Karachi, for Bombay, Karachi, and the Punjab (Liverpool, February 28).

Ellerman's Westcott and Laurance Line.—S.s. Douro, for Gibraltar, Malta, and Alexandria (London, February 19).

French-Levant Line.—A steamer, for Bordeaux, Algiers, Mersina, Alexandretta, Beyrout, Jaffa, Port Said, Alexandria, and Cyprus (Hull, February 26).

Glen Line.—S.s. Gleniffer, for Port Said, Port Swettenham, Singapore, etc. (London, February 24); s.s. Glengyle, for Port Said, Port Swettenham, Singapore, etc. (London, March 10); s.s. Glenogyle, for Port Said, Port Swettenham, Singapore, etc. (London, March 24).

Glynn Line.—S.s. Alaveno, for Genoa, Leghorn, Naples, Catania, Messina, and Palermo (Liverpool, February 28).

Golden Star Line.—S.s. Mediterranean Star, for Genoa, Naples, Alexandria, and Piræus (leaves Marseilles, March 1).

Harrison Line.—S.s. Benefactor, for Calcutta (Liverpool, February 28); s.s. Defender, for Calcutta (Liverpool, March 14).

Henderson Line.—S.s. Henzada, for Port Said and Rangoon (Birkenhead, February 23).

Holt Line.—S.s. Pyrrhus, for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, February 24); s.s. Agapenor, for Port Said, Port Swettenham, Singapore, etc. (Swansea, March 3).

Johnston Line.—S.s. Pomaron, for Galatz and Braila (Liverpool, February 23); s.s. Cranmore, for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 5); s.s. Ince-more, for Piræus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 5).

Maindy Line.—S.s. Maindy Transport, for Antwerp and Moroccan ports (London, early in March).

Moss Line.—S.s. Limoges, for Gibraltar, Algiers, Malta, Piræus, Syra, Smyrna, Salonika, and Constantinople (Liverpool, February 19).

Papayanni Line.—S.s. Assyrian, for Malta and Alexandria (also taking cargo for Beyrout, Alexandretta, Jaffa, Haifa, Mersina, Port Said, Cyprus, etc.) (Liverpool, February 19).

P. and O. Line.—S.s. Kalyan, for Bombay (London, February 18); s.s. Somali, for Colombo, Madras, and Calcutta (London, February 25); s.s. Kaisar-I-Hind, for Bombay (London, March 11); s.s. Devanha, for Colombo, Madras, and Calcutta (London, March 11).

P. and O. British India Line.—S.s. Lena, for Bombay and Karachi (London, February 19); s.s. Morvada, for Colombo, Madras, and Calcutta (London, February 25); s.s. Mashobra, for Bombay and Karachi (London, March 4); s.s. Hatarana, for Colombo, Madras, and Calcutta (London, March 12); s.s. Australia, for Bombay and Karachi (London, March 19); s.s. Nardana, for Colombo, Madras, and Calcutta (London, March 26).

Power Line.—S.s. Pangbourne, for Gibraltar, Tangier, Larache, Rabat, Casablanca, etc. (London, February 19); s.s. Petworth, for Gibraltar and Moroccan ports (London, early March).

Prince Line.—S.s. Soldier Prince, for Tunis, Malta, and Alexandria (also taking cargo for Syrian coast and Cyprus ports) (Manchester, February 18).

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended January 29:—The sales this week on our market amount to 37 cases, but for the three previous weeks we have had no sales to report. The prices paid this week for druggist manufacturing qualities are 12s. 6d. to 14s. 6d. per lb. as to quality and morphia strength. The exchange is to-day 585 piastres per pound sterling, or cheque, and 0.65 dollars for one Turkish pound of 100 piastres. The arrivals are 1,131 cases, against 1,405 at same date last year. Our stock in first and second hands is now 1,138 cases.

Messrs. Barker Brothers report as follows for the week ended February 5:—The sales this week on our market amount to only seven cases of druggists' manufacturing qualities (11½ to 12 per cent. of morphia strength), at 12s. 6d. to 13s. 6d. per lb., c.i.f. The exchange is now 580 piastres per £ sterling for cheque, and 0.66 dollars for one Turkish pound of 100 piastres. The arrivals are 1,171 cases against 1,475 at same date last year, and our stock in first and second hands is now 1,171 cases.

OTTOMAN UNIFIED CONVERTED 4 PER CENT. DEBT, 1903-1906.

The Council of Foreign Bondholders give notice that, in accordance with the announcement of the Council of Administration of the Ottoman Public Debt, which was published in the Press on the 4th instant (copies of which can be obtained on application to the undersigned), British holders of the above Bonds are invited to deposit with the Council (acting as depositary on behalf of the said Council of Administration of the Ottoman Public Debt) the eleven arrear coupons due March, 1915, to March, 1920, inclusive (Nos. 23 to 33), for the purpose of (1) establishing within the prescribed time with the Allied Clearing Offices the claims of the holders to repayment at the pre-war rate of exchange of the funds deposited in Germany during the war, and (2) receiving a distribution on account of one shilling and threepence in respect of each of the said eleven coupons per unitary Bond of £20.

Receipts will be issued in exchange for the deposited coupons, reserving the rights of the holders.

The eleven coupons must be deposited en bloc, and all deposits must be made before 1st March, 1921.

A special Declaration of British nationality will be required, which, together with lists, can be obtained on application.

The above-mentioned payment is subject to the deduction of income-tax and twopence per receipt for stamp duty.

The Inland Revenue has authorised deduction of income-tax at the rates in force at the time when payment of the coupons would, but for the war, have been made.

COUNCIL OF FOREIGN BONDHOLDERS.

NOTES OF THE WEEK.

The Allies in Conference.

With the Greek and the Turkish aspect of the settlement that the Allies will try to reach in London this week we deal elsewhere in this issue. Much of the uncertainty attending the issue of the Conference is due to the fact that the Allies themselves are not in agreement as to their aims, and the position has not been simplified by such statements as that attributed to the French Prime Minister that he will never ratify the Treaty of Sèvres while King Constantine remains on the throne. If the Allies can muster no more effective statesmanship than that of the Angora order, the outlook is gloomy. M. Briand's declaration is tantamount to saying that the Allies' Near Eastern settlement had nothing to do with justice or realities, but was based entirely on King Alexander of Greece remaining on the throne for ever with M. Venizelos as his Prime Minister for the same period. The provisions of the Treaty of Sèvres for the most part are sufficiently wrong in themselves without these further admissions of muddle-headedness on the part of the authors. Unless, therefore, the Allied Governments can get back to principles the Conference may prove a work of supererogation.

Modifications of the Treaty of Sevres.

The only safe basis on which the Allies can hope to build a lasting settlement in the Near East is that of peace between the different peoples. It is the height of irony that in their first attempt to settle the Near Eastern question, fresh from imposing terms upon Germany, they should have deliberately created one or more Alsace-Lorraines in the East, and should have expected oil and water to mix in their arrangements for the Greeks and Turks. With the French desire to modify the Treaty of Sèvres, therefore, we have every sympathy, provided that the proposed modifications have some solid foundations, and are not merely prompted by pique or selfishness. M. Briand's references to King Constantine, however, will not inspire confidence in regard to the reason for the French attitude, and it remains for the British Government to lead the discussion on to higher ground. Whether that higher ground is compatible with the desire to restrict the discussion to the Smyrna clauses of the Treaty alone must be regarded as doubtful. We cannot help thinking that the Allies will find themselves in a safer position if they decide to take into reconsideration at the outset the territorial clauses

affecting both Thrace and Smyrna. They know well enough that the position in regard to Thrace is not stabilised, and, however convenient it might be to avoid the subject to-day, there would seem to be little sense in bringing Turkey and Greece into line in one direction with the certainty of having to reopen the question again in a few years' time.

M. Venizelos and Greece.

We could wish in the interests of Greece, of fairplay, and of strict diplomatic procedure that something had been done to regularise the position of M. Venizelos in regard to the Conference. He claims to be attending in his "private capacity"; but while no one challenges or doubts his wholehearted championship of Greece's interests, the fact remains that he has fled his country, and has indulged in slighting references towards his King, which, in the mouth of anyone else, would have prevented the speaker from being received by responsible people in any other State. But the Allies have allowed Near Eastern affairs to get into such a hopeless tangle that they find no incongruity in running with the Greek hare as well as with the Greek hounds. It is to be regretted that Greece has lost the services of M. Venizelos; but if here again we apply the peace test, no one can suggest that Greece will know peace and political stability with a fresh exchange between King Constantine and M. Venizelos. Time may work wonders, but it should be given a fair field, and we can hardly believe that M. Venizelos himself is anxious to force the pace. The strange infatuation of the Allies can only embarrass him. He has been careful to explain how it was that Greece grew weary under his régime, or rather the Administration that governed in his name while he was absent from the country. Even the present Prime Minister and Chief Delegate to the Conference was arrested and imprisoned, to be liberated because there was not one tittle of justification for this high-handed action. To-day, in Greece, the Venizelist Government is identified with the acts of the "security police," whose leader is reported to have found parts of Africa less exposed to extradition warrants than France. Time must be given for ill-feeling to die down, and the Allies should be thankful for whatever régime guarantees the maintenance of order and internal peace.

The "Milner Report."

The Report of the Special Mission to Egypt, which, under the chairmanship of Viscount Milner, has been in effect considering the future relations of that country and Great Britain, was issued as a White Paper last

Friday. Although it contains little that is new regarding the main conclusions reached by the Mission, it is a deeply interesting report, for it gives a good deal of fresh information about the difficulties encountered by Lord Milner and his colleagues and the methods by which those difficulties were overcome; while the reasons which led up to the conclusions set forth are stated with a clearness and directness that must win the respect even of those who cannot accept the conclusions themselves in their entirety. It is unfortunate that its appearance should so nearly have synchronised with the opening of the London Conference, since this may result in its receiving less careful attention from the public than it certainly deserves. For our part, we must frankly admit that the fact makes it impossible to deal adequately with the Report this week, and we shall, therefore, reserve our chief comment for our next issue. In the meantime we may note that the Report has been accorded a reception far more favourable than might have been expected upon the whole, although criticism of its recommendations has not been by any means wanting.

A Word to the Egyptians.

The most interesting question about the Report at the time of writing is whether the Egyptians will make up their minds to accept the view which it puts forward, or whether they will determine to grasp at the shadow and lose the substance. They must, however, bear in mind that when they have reached their decision, decisions will have to be taken elsewhere. In a word, if there is to be a Treaty there must necessarily be two parties to it—and Egypt will be only one of them. The report makes it clear that while there is a not inconsiderable body of moderate opinion in Egypt, it is unhappily the case that the Egyptian temperament lends itself only too readily to be played upon by the agitator, and that, as a result, there is a very large body of opinion—no matter for the moment how manufactured—which cannot possibly be described as moderate. We are anxious to avoid saying anything that might increase the difficulties of the problem, but we cannot refrain from adding that the present situation appears to indicate that even at such a critical time as the present the spirit of intrigue is not absent from the inner circle of Egyptian Nationalism. If that spirit be not promptly crushed out of existence, it may well be that the work done in London at the cost of so much labour and patience may be undone in a very short time in Cairo and Alexandria.

Mr. Winston Churchill in the East.

It is announced that Mr. Winston Churchill is going to pay a short visit to Egypt, and possibly to Palestine, for the purpose of obtaining first-hand up-to-date information upon Middle Eastern questions. So far, the proposal is quite a good one, but when we are told that British representatives from Aden, Koweit, and Bahrain are to be called off to Cairo to meet him and "confer" with him, we are not entirely enthusiastic about the suggestion; and when we learn further that Sir Percy Cox may also be summoned from Mesopotamia to be present our enthusiasm dwindles to vanishing point. For unless all these men of action are to be conveyed from their own centres of work to the "conference" by aeroplane, it is obvious that some time must be occupied on their journeys; and that means that they will be called away from their work at a time when—if we read the signs aright—they can ill be spared.

The Duke at Delhi.

The heavy ceremonial programme at Delhi has been successfully accomplished, and in the result the Duke of Connaught stands out as the Nestor of the new India. To each audience in turn he has offered wise counsel as well as cordial greeting, and the best thing that can happen is that the institutions inaugurated by him should approach their task in the spirit displayed in his addresses, the spirit of hopeful looking forward. The India of the past has been too apt to look backward, to brood over former glory and more recent woe. We do not suggest that the past should be forgotten or ignored, for it has lessons which may be of great value if they

are rightly learned; but it is the future that matters most, and the importance of the past lies in its use as incentive and as warning. If India was ever glorious, it can hope to be glorious again, and if there has been a time of depression, a study of the facts will do much to facilitate improvement. But to brood is not to study, and the dangers of the practice are sufficiently illustrated in India at the present moment, when strong efforts are being made to drive the people backward; the event is still doubtful, but the Duke's call to go forward is not likely to be without result.

The Indian Legislature at Work.

The first proceedings of the Indian Legislature are not discouraging. In the state of feeling which prevails, it was inevitable that the story of Amritsar should form the subject of a debate, and the acceptance by the Assembly of a resolution, from which a demand for punitive measures had been eliminated, was perhaps the most satisfactory outcome which could be expected. In the Upper Chamber the initial debate took place on a resolution recommending the abolition of what are known as the "repressive" laws, and here, too, a barren controversy seems to have been avoided. The truth is that these repressive measures fall between two stools; they are sufficiently drastic on paper to be irritating, but the leniency of their application has of late rendered them almost ineffective. By and by, when Indian popular Ministers have gained practical experience of the effects of unconstitutional opposition, they will probably insist on measures of repression at least as drastic as those now in existence, and they will use their powers with a vigour which may take some people by surprise. There is something to be said for keeping these weapons safe in the armoury until Ministers require them, but from the practical point of view it is perhaps as well in this matter to leave the future to take care of itself.

The Agrarian Question in Oudh.

Of the various provincial legislatures, that of the United Provinces will have to face the most difficult task, for the reform of the Oudh Tenancy law is to be the first undertaking of the reconstructed Government. The fact that the tenants have substantial grievances was recognised by Sir Harcourt Butler in his speech at the opening of the Council, and we may take it that some concessions to them are certain; but the constitution of the Council, in which the landed interests predominate, renders revolutionary changes improbable, and the debates will afford a searching test of the political capacity of the new legislature. As we said when writing of the recent disturbances, the key to the position is held by the great landholders known as *talukdars*. If they stand on their privileges they can make remedial legislation uncertain and its practical effect almost nugatory, but there are indications that their leaders, some of whom are remarkable for their practical sagacity, are willing to move with the times, and if they adopt a statesmanlike policy at the present juncture there is no reason why Oudh should not quickly regain its old reputation as a happy province.

Burma.

The discussions over the new constitution for Burma have reached a further stage. It will be recollected that the local authorities were of opinion that Burma should develop from the outset on lines different from those of India, and with that object they proposed institutions which were condemned whole-heartedly by that small proportion of the population which as yet takes an active interest in the question. The Secretary of State rejected these proposals, and referred the whole subject for discussion to the Legislative Council, and this body has now recorded its approval of the dyarchic system already adopted for the provinces of India. Apparently there is no alternative scheme in the field, and we may conclude that Burma will make a start on Indian lines, leaving the question of ultimate divergence to be settled by time; but if the views of the Council are accepted there will be one difference from the outset, for the members are unanimous in favour of female suffrage.

THE WEEK AT HOME.

LONDON, Monday Evening.

Cardigan and Westminster.

The Cardigan election was frankly a personal vote of confidence in Mr. Lloyd George, rather than the Government. The Coalition candidate was his private secretary; the Independent Liberals put up their strongest local man, Mr. Llewellyn Williams, and Labour stood out. The Independents brought down all the big guns of the old party to assist their man; Sir John Simon even left the greatest legal practice of modern days on three separate occasions to look after itself in order to make speeches in Welsh villages. The Asquith ladies also did their best, while Mrs. Lloyd George toured the constituency on the other side.

But the shrewd electioneers saw the way things were going about a week ago, and when the Wee Frees claimed two or three days before the polling that whatever the result might be, their man would have put up a good fight, one knew the result already.

I doubt whether the independent Liberals could have defeated the Prime Minister's man in the Prime Minister's own country in any event; but I am quite sure that here, as in so many other cases, they are making a profound mistake in tactics in continuing this personal vendetta against Mr. Lloyd George. It is amusing. It causes laughter and cheers at excited meetings—indications which are often delusive. But it is not quite cricket, and the average elector, who is not altogether a fool, realises that there is a good deal to be said on the other side. Certainly, as at Cardigan, it does not win by-elections. And when it comes to practical politics, the Independents have nothing solid or constructive to offer—indeed, there are two rival schools among the Wee Frees, the "old gang" holding out for the old cries, while the new Manchester school formulates new doctrines which the older members will not accept. Until they sort things out in their own house, they are not likely to be acceptable to the country as a substitute for the Coalition.

At Westminster, after a very poor King's speech—any journalistic hack could have bettered its English—the Government settled down to work. The House is little changed, except for Lord Robert Cecil and Lord Hugh Cecil sitting on the Front Opposition Bench. The Labour Party, however, has done one wise and one foolish thing. It has elected Mr. Clynes, instead of Mr. Adamson, its sessional leader, and Mr. Clynes carries mental weight, whereas Mr. Adamson only carried physical weight. Indeed, Mr. Clynes is a singularly graceful and good speaker, with a voice of very fine *timbre*—with just a touch, in fact, of that bell-like quality which men recall in Gladstone. Mr. Clynes, too, often says good things, which stick in the memory, and he has a sense of responsibility in his words. If only he had a constructive political intellect, he would go very far indeed, but he possesses every gift except that most important one of all.

On the other hand, Labour has issued a manifesto against the German indemnity. It is not its own—the thing has evidently been inspired, and probably written by some of those outside intellectual influences which Labour always distrusts, and too often obeys. Somebody has fooled labour again—they must be a singularly gullible crowd, or perhaps it is the way their system works. Anyway, it will not do them any good in the country, which believes in the German indemnity, and does not pay any attention to the arguments against it, for the simple reason that these are put forward by men whose record during the war was not above suspicion. We are not all economic experts, but most Englishmen have a keen political nose.

To Dump or not to Dump?

Dumping will soon be the question of the day. The Opposition, in an attempt to raise prejudice in advance, have already disclosed their hand; they intend to denounce the protection of key-industries as a means of bribing the profiteer, and increasing the cost of living.

I have heard many a feeble political cry, and I have also often been astounded at what passion will make people believe in; but I have never heard quite such a feeble cry as that, or one that was less likely to take folk in. It has not even the elements of probability.

Most of the internal troubles of the Government have come from the increased cost of living; is it probable that they would take steps to add to their own embarrassments at the very time when the cost of living is falling? (It fell 14 points last month.) Nor will the theory that the Government is tender to the profiteers work any better. It has taxed them pretty thoroughly, and has kept on E.P.D. to the last moment when there were any excess profits to exact. In any case, the profiteer is not in the new key-industries; that is far too uphill a job for him—the get-rich-quick people are found in the old trades where sudden increase of demand made abnormal profits possible; and more particularly, perhaps, among the distributing interests—Free Traders almost to a man—which founded fortunes by merely sitting on the goods which the public were clamouring for.

Cigars and the Budget.

Incidentally, a curious situation has arisen in the cigar trade. Owing to successive increases of duty, hardly anybody now smokes Havanas; they are altogether too expensive. The Havana cigar trade is consequently moribund, and those engaged in it are naturally asking that the duty should be reduced to a reasonable amount, which, they say, and probably with justice, would benefit both the Treasury and themselves by increasing the consumption again.

On the other hand, the trade in British-made cigars has increased out of all knowledge; and the quality has also steadily improved, until one can now get quite a decent smoke at a reasonable price. Presumably a fair amount of money has been sunk in the business, and these people would not welcome a reduction of the duty, which indirectly protects them.

Another Mining Crisis.

Those hopeful souls—of whom I was not one—who anticipated that the mining settlement last autumn would bring permanent peace to the coalfields, are now perturbed by the reports of another imminent crisis in the coal trade. The settlement was altogether too complicated, and the atmosphere of goodwill was apparently transient and illusory. Now control is to go, another great conflict seems preparing between owners and operators on the question of wages. Not very much has been published up to the present, as both sides appear to be perfecting their plans behind the scenes. But since the desire for an agreement is less strong than the desire for another trial of strength, it is likely that, for the time at least, matters will go from bad to worse.

A Revival of Trade?

The dispute comes at the worst possible time. There are signs in various quarters that the bottom of the slump has been reached in various trades, and, although unemployment has not diminished, it is getting no worse. Indeed, some manufacturing towns have reported a slight revival of activity this last month, and there is hope that things may slowly improve this spring. No agreement has been come to with the building trade unions, but houses are nevertheless being built all over the country, although less slowly than is required, and any activity in the building trade helps all round. A recent series of municipal loans for building purposes has been well taken up, and several great capital issues are known to be pending; and, although industrial shares are generally extremely depressed, the brokers admit that things are likely to look up soon.

Further, a recent attempt at a railway strike—a revival of "direct action" by Mr. Bromley which was not supported by his rival, Mr. Thomas—failed to come off, and it was evident that master and man alike had had enough of strikes for the present. All these are hopeful signs, but if there is another serious dispute in the coal trade, which is a basic industry that affects all the rest, they will count for little.

Rates and Ratepayers.

The trouble over the high rates, which is pretty general in most municipalities, has come to a head at Norwich. More than thirty shillings in the pound is demanded in that otherwise charming city, and a good many of the inhabitants either cannot, or will not, pay. One or two other boroughs, almost as heavily rated, are reporting much the same experience.

It happens that in the highest-rated districts a Labour majority generally has control, and it is too much to ask of human nature to expect that political capital should not be made out of municipal bankruptcy—indeed, that is the only sort of capital that can be made out of so hopeless a position. "Extravagant and visionary Socialistic schemes" are blamed, to which the Socialists retort that they are only in power in the poorer towns, where the rating is necessarily higher. There is a great deal of truth in their answer, but it does not cover the whole ground; on the other hand, the advocates of economy are overdoing the part, and under the cover of economy they conceal the real motive, which is pure reaction.

A Change of Tenant.

When Devonshire House was sold a few months ago, the gossips began to discuss the future of its neighbour, Lansdowne House. That great mansion has now been let furnished to Mr. Selfridge, and there has been some tendency for the writers of society paragraphs in the papers to speak as if the golden age had passed, and to cry *Sic transit gloria mundi*, because "a mere tradesman" follows a great marquis. But this is all nonsense; what is happening is a mere repetition of the past, and *plus ça change plus c'est même chose*. The Lansdowne family was founded on trade, the cloth and tailoring business, I believe, which is not very far removed from the occupation of the new inhabitants of Lansdowne House. If history repeats itself, in another hundred years Mr. Selfridge's great grandson will probably be a Peer—the Duke of Callisthenes, for example—and one of the old guard of the Tory party.

Public Schools Again.

The discussion on public schools has broken out again, Dean Inge as usual being responsible. But Dr. Lyttelton, the late Headmaster of Eton, has also rushed into the fray. He declares that what the English boy needs more than anything else is discipline, and that this is what he gets at a public school. He has no great opinion of the intellectual capacities of contemporary youth; "only a genius perhaps here and there has ever induced English boys to think, and even the geniuses have only succeeded with a few." I suppose most schoolmasters are persuaded that boys are stupid; as a schoolboy I remember we thought precisely the same of our masters.

Perhaps that is the root of the trouble; but since, by the mercy of Providence, I was not made a schoolmaster, the solution of that problem is beyond me.

But I think Dr. Lyttelton is altogether wrong when he says that "no one can inspire a boy with the conviction that this universe and mankind at large are

interesting as long as he grows up at home to believe the opposite." From what I have seen of the world, the average boy finds the universe and mankind at large (with the possible exception of schoolmasters) an extraordinarily interesting affair; his curiosity is voracious, and it is only the silly round of useless pedagogy which dulls his inquisitiveness.

As a boy, for instance, I perfectly recollect my schoolmaster discovering me reading Shakespeare out of school hours, and telling me to put that kind of thing away and get to work on something useful. When appealed to for a definition of utility, it turned out to be Cornelius Nepos! I must in candour admit that when a few days later in class I construed "an enemy of the human race" *sotto voce* as a schoolmaster, and was overheard, I deserved the chastisement which followed. But there was something in the mistranslation, after all.

The Increase of Drunkenness.

Some figures have been published, showing that drunkenness is increasing. But the statistics of convictions for drunkenness are always notoriously unsatisfactory, the practice of the police in arresting, and of magistrates in convicting too convivial souls varying a great deal in different districts, largely on account of personal whim. The temperance people are naturally using these figures in furtherance of their pussyfoot campaign, but the country is not visibly impressed thereby, any more than it is by the reported results of prohibition in the United States. The other side is pinning its hopes to the reformed public-house.

Anglican Finance.

A committee of inquiry has at last been appointed to inquire into the whole question of Church finance. The committee is a strong one, and it needs to be, for no more complicated or difficult question exists, and it will have hard work to cope with the various conflicting interests within the Church. It is doubtful whether the inquiry can proceed very far without touching on the thorny question of episcopal appointments and private patronage, a Serbonian bog which engulfs almost all who venture on it; but the time is surely appropriate for a complete reform, now that the Enabling Act has altered the whole basis of power in the Church. The union of small benefices in depopulated villages would also help to solve the problem, but here the Church has to fight a good deal of local feeling.

Rubber Streets.

The experiment of paving one of the main roads in South London with rubber instead of wood blocks has proved so successful that the substitution of rubber for wood is likely to be considered favourably in many other main thoroughfares. The initial cost of rubber is considerably higher, but it is said to last ten times as long, which would make it cheaper in the end. But a greater merit even than its cheapness is the fact that it is silent, and anything that reduces the racket of London will be a boon. If the street vendors could be supplied with rubber lungs!

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

GREECE.

ATHENS, February 9.

The New Cabinet.

The climax of the Ministerial crisis caused by the dissension between M. Rallis and M. Gounaris, over the question of Greece's representatives at the London Conference, was reached on Saturday, when the Prime Minister, M. Rallis, tendered his resignation to the King. With his rival safely out of the way, M. Gounaris's chances of securing the Premiership and subsequently "appointing himself" first Greek delegate greatly increased; but so did the value of sterling, which on Saturday night was quoted at 60 drachmæ. On Sunday morning, however, M. Gounaris had a nasty little surprise in the form of a telegram received by the British Legation from London and given to the Greek newspapers for publication. This expressed the astonishment caused in the British capital at the news that M. Gounaris's name was mentioned as a likely member of the Hellenic delegation at the Near East Conference. The telegram went on to say that the Allies were well aware of the anti-Entente sentiments of M. Gounaris, and that his being entrusted with a mission upon which largely depended the interests of Greece would certainly not be to that country's advantage. The contents of this telegram caused much excitement in political circles, and by noon it was known to everyone that M. Gounaris had definitely decided to postpone his journey to the British Metropolis until some more opportune date. At 7.30 in the evening the new Government was formed as follows:—

Prime Minister and Minister for Foreign Affairs	M. N. KALOGEROPOULOS
Minister of War	M. D. GOUNARIS
Minister of Marine	M. RALLIS, JUN.
Minister for Home Affairs and Ways and Communications ...	M. P. TSALDARIS
Minister of Finance	M. P. MAVROMIHALIS
Minister of Agriculture	M. G. BALTADJIS
Minister of Justice	M. N. THEOTOKIS
Minister of Education and Public Assistance	M. TH. ZAIMIS
Minister of Food Supplies	M. P. PROTOPAPADAKIS

The Minister of Marine, M. Rallis, jun., resigned on Monday morning.

The London Conference.

The decision of the Allied representatives at the Paris Conference to hold a new meeting in London for the purpose of settling once and for all the troublesome Near East question was a bitter blow to all political and public circles here. But the bitterest pill of all was the news that Mustapha Kemal, too, had been asked to send his delegates, Greece being thus put on the same level as the Turkish rebel. Although the Royalist Press of the capital pretends to view the situation with optimism, and M. Rallis himself, prior to his resignation, said that he in no way went back upon the optimism which he had always shown about the upholding of the Treaty of Sevres, very serious fears are entertained whether the Greek delegates will succeed in convincing the Allies of the soundness of this Treaty. The great question now is who will represent this country? Nothing definite has so far been decided, but it is almost certain that the new Prime Minister, M. Kalogeropoulos, will be at the head of the delegation. The other members are yet to be found, but it is persistently rumoured that the High Commissioner for Smyrna, M. Stergiadis, who has just arrived in Athens, will accompany the Premier. M. Gounaris, whose stubborn attitude in the matter was really the cause of M. Rallis's resignation, has at last realised that, not being *persona grata* with the Allied Governments, his presence at the London Conference would do more harm than good to his country's interests, and has decided to stay at home. The Venizelist and the Independent section of the Press, in face of the evident danger of a revision of the Treaty unfavourable to Greece, openly point out that the only person who could save the situation would be M. Venizelos. Telegrams from Paris and London inform us that the ex-

Premier is already working very hard—quite unofficially, of course—to prevent his work from falling to pieces; and if only those governing Greece at present would forget the past and, sacrificing their *amour propre*, give their hand to the great patriot who has done, and is still doing, so much for his country, the danger—if such a danger does exist—of losing Smyrna or Thrace would probably be averted, and the close collaboration which would necessarily follow would surely mark the commencement of a new era of revival and progress for Hellenism.

The Liberals Score.

The Parliamentary elections in the small island of St. Eustratios, in the province of Mitylene, which had been put off last November, took place on January 30. The final results now to hand are as follows:—Out of 108 votes the Venizelist candidates, M. Marangos obtained 93; M. Vamvoulis 88, M. Vallis 87, M. Mitrelis 87, M. Paritsis 87, M. Vassilakakis 86, M. Saltas 86, M. Kyprianos 84, M. Lelios 83, M. Savas 78, and M. Kaldis 78. Of the eleven Royalist candidates the most successful was M. Tountas, who secured thirty-one votes, *i.e.*, forty-seven votes less than the least successful Venizelist candidate. Two of the Royalist candidates only obtained seventeen votes each. All twelve deputies elected in the whole province of Mitylene belong to the Liberal party.

ROUMANIA.

BUCHAREST, February 11.

Political.

There is nothing very definite to report on the progress of Government business in the Chamber. The Liberal Party has recently gained two seats at by-elections, bringing their number in the Chamber up to about eight. Their Press is very active in attacking the Government and predicting its coming fall. Feeling is running so high on the subject of the Railway Repair-shops Contract (mentioned elsewhere) that if a vote of confidence be taken on this question the Government may perhaps come to grief over it.

There is some talk of an attempted *rapprochement* between the Government and the Federation, which includes the Transylvanian parties; but so far little progress can be noticed in this direction. On the other hand, it is asserted that the Federation is organising a systematic plan of campaign against the Government. There are shortly to be some by-elections in Moldavia, and several of the Federation leaders go to Jassy to attend a preliminary meeting there on February 13. After that they go on to Kishineff to a meeting which will be held to discuss the present administration of Bessarabia. Later, they will carry their campaign into the district of Oltenia. It is a great pity that General Averescu has not been able to come to some kind of working arrangement even with any one of the parties composing the Federation, whose leaders include some of the most respected and able politicians and patriots in the Parliament.

The Royal Marriages.

The marriage of the Princess Elizabeth to Prince George of Greece has been definitely fixed for February 27. The ceremony will take place in Bucharest, and Prince Nicolas, the younger brother of King Con-

stantine, and his wife will visit Bucharest for the occasion. It will be remembered that Prince Nicolas' wife was a Russian Grand Duchess, and is therefore a relative of the Queen of Roumania. The marriage of Prince Carol with Princess Helen of Greece will take place in Athens a fortnight later. M. Mishu, the Minister of the Royal Household, who went to Athens a short time ago to make the preliminary arrangements, has just returned to Bucharest. The National Bank has given Princess Elizabeth a marriage gift of one million lei.

The Late Sir George Barclay.

Many of the Roumanian newspapers contain articles expressing deep regret at the news of the death of Sir George Barclay, who was universally regarded as a warm friend of this country—the *Progres* calls him "one of our oldest and best proven friends"—and of appreciation of his services while Minister in Bucharest.

The Weather.

The winter began very early this year with an exceedingly cold spell in November, when there was a good deal of snow and a temperature that touched 12 and 14 degrees below zero (centigrade). During the latter half of December and the beginning of January it was much milder, the grass began to show green, and the iris leaves to put up green points, and people began to wonder if the winter could really be over. That was a vain hope, however, for towards the beginning of February there was another heavy fall of snow lasting for more than two days, and the temperature has remained very low ever since. Some of the main streets in the city have been kept fairly clear by means of snow ploughs and an army of workmen: but even they are still covered with some inches of hard snow, and in many places there are drifts several feet deep. The tramways have not been stopped, though reduced to one wagon each, and only one train (Bucharest-Galatz) has been reported as held up completely, though

several have been very much delayed. The four or five weeks of mild weather in December and January gave the agriculturists an opportunity of continuing their sowings, which were interrupted by the early frost in November, and very favourable reports were received at the Ministry of Agriculture of the amount of work done in this respect. The present fall of snow is therefore just what they would have wished for, to protect their seeds from a later frost. Thus, one may hope that the harvest will be less unfavourable than was at one time feared.

TURKEY.

CONSTANTINOPLE, February 7.

The Rupture between Angora and the Porte.

Throughout the course of the negotiations between the Sublime Porte and Angora with regard to the Allied invitation to Turkey to send delegates to the London Conference, the attitude of the Nationalists has been characterised by uncompromising arrogance. Tewfik Pasha went as far as possible on the path of concessions, but the Nationalists became more and more uncompromising. Their final demands, which led to a complete rupture, are worthy of close examination, for they clearly reveal the nature of the influence which is dominant in Angora to-day. Those demands were briefly as follows:—

- (1) The Sultan to recognise the Nationalist Assembly and its Executive Council as the sole legal Government of Turkey, and to issue an Imperial Irade to this effect.
- (2) The exclusive right of the Nationalist Assembly to negotiate with Foreign Powers in the name of Turkey to be likewise recognised.
- (3) The acceptance by the Sultan of a Nationalist delegate at the Imperial Court for purposes of *liaison* with the Nationalist administration.

The message embodying these extraordinary demands concluded with an assurance that in the event of their

The "U.K." CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and by an interchange of parts also crimped cigarettes.

IN DAILY USE THROUGHOUT THE NEAR & MIDDLE EAST.

Embodies the following advantages:—

Works satisfactorily with any kind of tobacco. Apparatus supplied for printing cigarettes in one or two colours or one colour and bronze. Manufactures and tips cigarettes at one and the same time. Automatically sorts the cigarettes. Apparatus for pasting with starch or liquid paste as required. Fitted with device for stripping waste cigarettes or cigarette rods.

being accepted the Imperial Civil List would be paid by the Nationalist administration.

Janissaries and Bolsheviks.

Very little reflection is needed to enable one to realise the true purport of these demands. If the Sultan were to recognise the Great National Assembly as the sole legal government of Turkey in the sense required, it would be tantamount to resigning the last vestige of the once absolute authority of the Sultanate. The Sultan would become a mere figurehead, obedient to the slightest touch of the strings held by the Nationalist leaders and passing through the fingers of their representative. The offer to pay the Imperial salary was, under the circumstances, to add insult to injury. Henceforth there can be no more pretence. The struggle which commenced with the accession of the present Sultan must continue until one or the other side is completely vanquished. It is really a repetition of the struggle between the Sultan's grandfather, Mahmud II., and the Janissaries. Unfortunately the modern Janissaries have a sinister and ferocious ally with them—the Bolsheviks. The policy of the Nationalist administration is clearly dictated from Moscow, and it is to be feared that the grip of the "Moskoff" is now firmly established in Anatolia. Precisely how this has come about is a long story, but reference to former letters will reveal something of the process, of which one of the most important factors has undoubtedly been the activity of Talaat and the other Unionist leaders who fled after the Armistice from Turkey and found an asylum in Germany. These individuals have made various attempts to return to Turkey, and have more than once offered their services to Mustapha Kemal, but the latter has always rebuffed them in no uncertain manner. The reason for this attitude on the part of the Nationalist leader is chiefly of a personal nature; for there is practically no difference between the Nationalist scheme of Islamic union and the Unionist dream of Turkish hegemony over the Islamic world. The preachers are different, but the theme is the same. It was obvious from the beginning that the continuation of the Nationalist movement was only possible with outside help, and Mustapha Kemal made every effort to obtain what was necessary from the rest of Islam. The result was not a success, however, and he was obliged to turn elsewhere. It was then that the Bolsheviks entered upon the scene, and by the same token, the Unionists also. Direct methods having failed, the latter adopted a policy of gradual infiltration, and it was not long before the Great National Assembly was constituted with a membership composed almost exclusively of adherents of the committee. The significance of this circumstance lies in the fact that the strength of the committee has always been the obedience of its followers to a *mot d'ordre*, and the fact that during the armistice negotiations in 1918 the Unionists were openly saying that they would now become Bolsheviks. It is unnecessary to examine the quality of Unionist Bolshevism—even in Moscow it is improbable that any illusions are nourished in that direction—but the fact remains that while the army is faithful to Mustapha Kemal and Kiazim Karabekir, the political machinery of the Anatolian administration has been captured by the Unionists.

Why the latter have embarked upon the perilous sea of Bolshevism is a question involving interesting considerations, not the least interesting of which is the part undoubtedly played by Germany behind the scenes. It is true that hitherto the presence of Germans in Anatolia has not been detected; but there can be very little doubt that Talaat's activities have been guided by the quondam allies of Turkey. It is also most improbable that Germany has completely abandoned the hope of one day resuming the important part she once played in the East, and the simplest way of preparing the way for this revival of the "Drang nach Osten" would be to delay the establishment of peace in the East as long as possible.

The final result of the negotiations has been that two missions are being sent to London, one on the part of the Nationalists, and one on the part of the Sublime Porte. It is greatly to be feared that the Nationalist

mission will be little better than a wrecking mission, and unless the Allies make up their minds to support Tewfik Pasha by giving him both moral and material support, the conference will not advance matters in any way.

CYPRUS.

Nicosia, February 1.

The Legislative Council.

The election of nine Members of Council, which the ill-considered resignation of all the Greek representatives rendered necessary, has been carried out; the result being that all these persons have been re-elected unopposed, except M. E. Zeno, whose name had by mistake been omitted from the list of qualified voters, and who was therefore ineligible. In his place M. M. I. Michailides, one of the most prominent and esteemed citizens of Limassol, has been elected. While the absence of M. Zeno, an able advocate, will be regretted, the Council will gain the services of a valuable member in M. Michailides, who was in the Chamber some years ago, and who is likely to express an unbiased opinion on all local matters. He had no intention of offering himself as a candidate, at any rate, before the next general election. Before the nomination day a circular had been sent to all parts of the island, signed by the late members, repeating once more the aims of the *enosis* party, and asking for support. The papers argue that the election entirely disposes of Colonel Amery's doubt as to the feelings of the Cypriot Greeks. Of course, it does nothing of the kind, since (as so often explained) the influence of the union faction, backed as it is by the Church, the Press, and the Greek legal body, remains practically unchallenged. It would seem that the proposed campaign in villages is abandoned. It remains to be seen what will be the next move of the re-elected members, and to what it will lead, should obstructive tactics be renewed. Such a state of things could hardly be allowed to repeat itself. It is improbable that the Council will be summoned to meet until the High Commissioner returns.

Trouble Over Church Elections.

The election of Church Committees in all towns and villages, which counts for so much in Cyprus, has been recently held. Every village has its committee, with jealously-guarded functions. A recent order of the ecclesiastical authority decreed that no persons should be allowed to vote unless they had paid by a fixed date a fee of 2s. in towns and 1s. 6d. in villages. The Archbishop, in face of protests, had, at the eleventh hour or rather later, given directions that all voters should be accepted, but this was too late. The result has been that the votes of a large number of persons were refused, that the elections do not represent the wishes of the people, and that a state of dissension and ill-feeling has been aroused. The Church is blamed for a situation which the Press describes as a scandal and a "labyrinthine situation." It would seem that the best way out of it would be to hold, under the Prelate's directions, a fresh election in all places where friction and discontent have been brought about.

General News.

There is but little general news. Crime shows no reduction: another double murder has been committed in a Greek village.—A novel enterprise has been started in the shape of a brewery at Nicosia, from which beer of good quality is promised and advertised. This indicates an increasing state in the towns for a drink which has begun to compete with the juice of the grape.—The supplies of grain issued to bakers for breadmaking being exhausted, the Government is about to furnish wheat at 12s. per bushel, and barley at 3s. 4d. "Government bread" will then be sold at 4½ piastres (6d.) the oke.—There has been some rain, which is welcome in all parts.

Candid Opinions

concerning

CIGARETTE MACHINES

Naturally no manufacturer decries his own productions, hence you would probably be inclined to somewhat discount any eulogies, however modest, *we* might voice regarding our "STANDARD" Cigarette Machine.

It is superfluous, however, for us to ask you to accept what *we* say in the face of spontaneous expressions of opinion such as the following—one of numerous we are continually receiving from all parts of the world from extensive and satisfied users of our machines.

Purveyors to H. E. the High Commissioner for Egypt

The 15th January, 1921.

American Machine & Foundry Company, Limited,
59, Holborn Viaduct,
LONDON E.C.1.
(England)

Dear Sirs,

It gives us much pleasure in testifying to the perfection of your "Standard Machine" and must say that, in our opinion, your machine is the standard type of any other cigarette machine we have had in use in our factory prior to yours.

In fact, with the help of 20 Standard Machines we have now in full swing, we have succeeded to secure machine-made cigarettes equal to any hand-made ones, if not better. Besides this advantage the Standard Machine with its simplicity can be handled with an ordinary operator.

We remain, Dear Sirs,
Yours faithfully,

pr. K. & G. MELKONIAN
SUCCESSORS

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

THE STATUS OF ALBANIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Exactly two months ago, on December 17, 1920, Albania was admitted to the League of Nations unanimously by the thirty-five present States' representatives.

Now the Powers are hesitating to recognise Albania officially. I think this is due to their believing that Albania has, like the new States of Poland, Georgia, Armenia, Lithuania, etc., been born during the great war. In reality, Albania has been officially recognised since 1914 by the great and little Powers. These Powers then appointed Ministers in Albania, entering into diplomatic relations with her. Now the matter is not to recognise Albania, which has already been recognised as a State, but to resume the interrupted diplomatic relations.—I am, etc.,

Hotel Cecil, London, Feb. 21, 1921. LUMO SKENDO.

A "BLACK" EGYPT.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Whatever we do with Egypt in the Imperial sense for the protection of the trade route, let us bear in mind that any legislation which may discourage Europeans from settling in the country (to which Khedive Ismail persistently invited them) and interrupt the Arabian and Syrian immigration into it, would play havoc with its prosperity, and turn the country, in a generation or two, into a black one. The Copts have long ago been reduced to intermarrying between themselves, and we notice already a sad falling off in the Arabian type among the Mohammedans.

Europeans may not notice or mind this state of affairs, but the Eastern peoples do, and would, in fact, like to see the immemorial intimacy between Egypt and all the Arabic speaking countries re-established and strengthened as much as possible.—I am, etc.,

February 19, 1921

A. SEFI.

THE TREATY OF SEVRES.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The protest against the peace terms which they are attempting to force upon Turkey, reported in your issue of January 2, is good to read, and will have caused immense satisfaction to all who, like the writer, have lived long in Turkey, and have an intimate knowledge of the country and its people. That those responsible for these peace terms have been grossly misled by some one, and that the treaty is unjust and quite impossible of acceptance, is obvious. Were our political experts blinded by the obscurity caused by almost mondial war-clouds? Whatever was the reason, surely, in the present temper of the world, it was a fatal error to attempt to coerce a people who were fighting in the last ditch, as it were.

It is now more than two years since this experiment commenced with Turkey, and what are the results? Can we honestly say that there has been even a small measure of success?

Let us look at the cost. Hundreds of thousands of valuable lives lost and millions of money have been squandered, but this is not all, for the greater part of this rich country has been devastated, towns, villages and homesteads burnt to the ground and hundreds of thousands of homeless destitute and starving people ever on the move from one refuge to another. Surely when the war was finished two years ago, and we find this sort of thing going on, there must be something radically wrong somewhere; and those of us who have made their homes in Turkey and know the country thoroughly, cannot help feeling deep resentment, that neither we nor our interests were ever consulted. The gross ignorance of this country, displayed in certain letters and articles in the Press, is perfectly astounding; neither the ethnology nor the geography seems to be known. By the change of Government in Greece a door has now been opened which leaves a fair and honourable road for retreat from an untenable position in that part of Turkey occupied by Greek troops; and it should now be possible to do that which should have been done in the beginning—i.e., make a fair and just peace with the Turkish nation; for surely it would be to the advantage of Greece both politically and economically to have the Turks, who are their neighbours, as friends and allies, rather than to turn the old festering wound into one of gangrene. So far history shows no instance of one nation being able to govern another whose people are bitterly hostile, to mutual advantage; it always has and always will lead to trouble.

If the present opportunity is allowed to go by, it will be absolutely unpardonable.

It must be remembered that Turkey was forced into war against us by circumstances beyond the control of her people; that she fought fairly, as every British officer and man who fought against her will acknowledge; and that having lost, she

has had to pay the natural penalty of being shorn of two-thirds of her Empire. Surely after this she should have been helped to reorganise the small portion left, instead of having been goaded into open revolt and forced to seek the aid of Soviet Russia, her ancient enemy. A Turk can never be a Bolshevik; but we can turn him into a brigand and an outlaw if we continue the present policy, although he is by nature the most law-abiding and obedient citizen in the world.

It is a fact well known that the Turks at the Armistice and even before, hoped, and had every confidence, that once the war was over, England, with her proverbial sporting instincts, would offer them a hand, and assist them in building a new and reformed Turkey out of the remains of their old and unwieldy Empire. Had something a little like this been done, the Turkish nation would have been our grateful friend and ally; and a vast field for commerce and enterprise would be ready to the hands of all comers.

A very great deal has been spoken and written about that excellent policy, self-determination; yet we see no signs of this principle being applied to Turkey. On the contrary, we see those who have risen in revolt against a bitter injustice, and to fight for their hearths and homes, their rights and honour, described as insurgents and rebels, although they represent probably 99 per cent. of the entire nation.

Let us hope that the protest you published, signed by so many influential men, will have the desired effect, and that the many thousands of other Britishers who hold the same opinions will also use their every influence to bring about a state of peace in the Near East.—I am, etc., PERCY CHRISTIAN.

LIVING PRIME MINISTERS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I always read with great interest in the pages devoted to "The Week at Home," but isn't there a mistake made (in your issue of January 20), in the announcement re the Prime Minister's salary, that Mr. Balfour is the only ex-Premier now living? I thought that Lord Rosebery, who has always been ploughing his lonely furrow, was still in the land of the living. Perhaps I am mistaken.—I am, etc.,

Abbasieh School, Alexandria.

January 29, 1921.

NEW PERSIAN CABINET.

The new Persian Cabinet has been constituted as follows:—

Prime Minister and Minister of Interior	SIPAH DAR AZAM
Minister for Foreign Affairs	MUHTASHAM-ES-SALTANEH
Minister of Public Works	NASR EL-MULK
Minister of Public Education	AMIN EL-MULK
Minister of War	AMIR NIZAM
Minister of Posts and Telegraphs	SARDAR-MOTAMED
Minister of Justice	SALAR-LASHKAR
Acting Minister of Finance	MIRZA EISSA KHAN

As the result of excavations at Pagasæ, in Thessaly, a palace of the Mycænean period has been discovered in very good preservation.

Distinctive postage stamps are reported to have been issued by Kemal Pasha's Government at Angora, but no examples have as yet come under the notice of philatelists in this country.

PRESS ON THE NEAR EAST.

Egypt.

Writing, under the title "The Trouble in Egypt," in the *Liverpool Daily Courier* of January 26, the Hon. W. Ormsby-Gore, M.P., commences by stating that without doubt "the Nationalist movement is a national movement." He continues:—

Sensible Egyptians realise that their country cannot afford to do without British assistance, and the agitators who pretend that they will substitute something better for British efficiency are not representative. Yet the Liberal politicians do represent the educated Egyptians, and although there is a large illiterate mass which does not think any further than the necessity for picking the winning side, all reasonable Englishmen must admit that the new movement for Egyptian nationhood does represent, in one form or another, a very real, if undeveloped, conception, of national consciousness.

He concludes by doubting whether the Foreign Office even now recognises that "the Near East is a New East."

The "unchanging East" has changed rapidly in the past few years. The idea of self-government has caught on. And this is where we must be cautious lest we do grave injustice to the great commercial community of French, Italian, and Greek traders. They were more than satisfied with their status under the Capitulations. Indeed, our difficulty is not going to be to get Egypt to work with Great Britain, but to persuade this foreign commercial community to accept the jurisdiction of Egyptian courts. Firmness in Egypt will not be unwelcome even in these days of emancipation. The fellahin have always throughout history spent enormous patience and energy in backing the top-dog, and they are still Oriental enough in their preference for a benevolent autocracy over democratic forms of government, especially one that is clean and just. But you cannot justify a Government merely because it is just. Independence in Egypt must come, and soon. But it will not come because of any weakness on our part, but rather out of our strength. If the agitator does not realise this, he will have to learn it. He speaks for nobody but himself. Because Egypt as a whole desires independence, it does not follow that everybody in Egypt wants us to go. On the contrary, most of the country has very good reasons for wishing us to remain. The British connection has been the foundation of Egypt's prosperity, and its severance might well be her ruin. We believe that, without being tyrannous, we can still be Egypt's guide, philosopher, and friend.

A Lesson from Smyrna?

The *Manchester Guardian* of February 17 contains some impressions from its Smyrna correspondent on "The Western Community and the Greeks." He begins by speaking of the physical discomforts of the town:—

Appropos of this, I had a conversation with a British resident in Smyrna who does not belong to the native English population, and who talked with detachment as well as knowledge. In this part of the world, he argued, the people were really moving on sounder lines than we were in Western Europe. Here they cut their coats according to their cloth. The Smyrniots spent no money on their town; it was badly paved, badly drained, badly lighted, badly served in every way, and yet business was done here and profits were made. The Near Eastern peoples were like proletarians rising in the world. Western Europe, on the other hand, was like a bankrupt aristocracy. We had been ruined by the war, but we could not change our style of living. We insisted on retaining certain decencies or luxuries, whether we could pay for them or not, and we were living extravagantly beyond our income.

After lucidly explaining the difference between the Franks of Smyrna and the Turks of the hinterland, on the one hand, and the Greeks, on the other, he says:—

Who is to be the Turk's political successor? After the Armistice the Western community in Smyrna, accustomed to manage the economic life of the country by tact and long experience, looked forward to the maintenance of Turkish sovereignty over an undivided Anatolia, but under Western advice and effective control. They were confident that a form of Western control could be devised which would be both effective and at the same time acceptable to the Turkish community, and they contemplated the renewal of the old partnership between Frank and Turk, this time with the Turk as subordinate partner in the political as well as the economic sphere. But they had not reckoned with the Greek and with the force of the Hellenic idea.

He concludes by describing the English and French resentment against the Greek "intruders."

MUSICAL NOTES.

The Langham Choral Society.

It has been said that the musical recreation of England will date from the time when the oratorios of Mendelssohn cease to be performed; and it is indeed probable that their unending performance rather stunts than stimulates the musical sense. Therefore, it was a pity to see the excellent Langham Choral Society descend from Berlioz' "Faust," which they performed last year, to "Elijah," which they did at Queen's Hall on February 18. This dull work, very dull except for a few choruses, was, of course, well within the scope of the choir, which was, but for the basses in concerted work, finely balanced; and it was sung with extremely good tone. There seemed to be a tendency rather to accent the rhythm at the expense of smooth phrasing, but this was possibly necessary to check the turgidity of Mendelssohn's melodies. The orchestral parts were as usual very well managed; and of the soloists Madame Elsa Stralia (whose pure voice unfortunately will not blend with others) and Mr. Joseph Farrington as Elijah were easily the best. Many hopes are being built on the Langham Choir, and there is no apparent reason that by it, under the very keen and vivid conductorship of Mr. Hugh Marleyn, we should not have performances of some of the lesser known choral works.

Miss Murray Lambert.

By playing two concerti in one evening, the Mendelssohn and Hamilton Harty's in D minor, Miss Murray Lambert was asking at her concert at the Queen's Hall on February 14 for the severest tests of criticism. There is much in the playing of this ambitious violinist that is good; she has spirit, sincerity and a certain elasticity of rhythm (which was delightfully shown in the last movement of the Mendelssohn). But her tone, though pure, is neither rich nor big, and did not stand out sufficiently from the orchestral accompaniment; her intonation, moreover, is rather painfully erratic. At this concert she had the benefit of Mr. Hamilton Harty's conducting; and both in his own concerto and in Strauss' "Death and Transfiguration" this most vivid composer drew some very fine playing from the London Symphony Orchestra. Two small pieces by Michelangelo Rossi and Benedetto Marcello, which were given their first performance in London, were quite charmingly insignificant; and "Two Pieces founded on Irish folk-tunes for Solo Violin, Organ and Strings," by G. O'Connor-Morris, were equally unimportant, the beauty of the original tunes being overlaid.

Miss Lilius Mackinnon.

Of Miss Mackinnon's genius for Scriabin I have said much in these columns, and it was disappointing to find that she indulged it only once at her recital at the Wigmore Hall on February 15—and that in the concerto (Op. 20), in which the orchestral part was played on a second piano by Mr. Ivan Philippovsky. In this the recitalist's interpretation was extremely lucid and beautiful, but as a whole the result was not very attractive, owing, of course, to the lack of contrast in tone. Further, there is something utterly different in the respective spiritualities of Franck and of Miss Mackinnon, and it was probably the substitution of intellectual for spiritual qualities that made her reading of the "Prelude, Choral and Fugue" seem unconvincing. The mildly commonplace nature of studies by Szymanovsky and Glazounov showed them unworthy of this fine pianist, whose subtlety was better exposed in the "Two Sarcastms" of Prokofieff.

Mr. Leonard Borwick.

One of Mr. Borwick's cardinal virtues is that he plays, whether we care to listen to him or not, exactly what he likes. At his second recital at the Æolian Hall on February 16 he played Brahms, Schubert, Medtner, Scriabin and Debussy; and although we did not care in the least for the Schubert (most of whose pianoforte works might be lost without much harm to the world), the other composers were very finely done. The fast movement from Scriabin's second sonata was exquisitely played, and a transcription for the pianoforte of Debussy's "Fêtes" was marvellous. There is something irresistible in the lucid grace of Mr. Borwick's interpretation of the moderns.

NEAR EAST BOOKSHELF.

- 1.—"THE JEWS OF AFRICA." By Sidney Mendelssohn. (London: Kegan Paul, Trench, Trubner, and Co. 10s. 6d.)
- 41.—"DOSTOEVSKY AND HIS CREATION: A Psycho-Critical Study." By Yanko Lavrin. (London: Collins. 7s. 6d. net.)

I.—JEWS IN AFRICA.

This account of the Jews of Africa—especially in the sixteenth and seventeenth centuries—is admittedly a compendium (the author calls it a "mosaic") of information gathered from many sources, especially from the works of English travellers. The material so collected is here made accessible to many who have not time to pick it out of many volumes. Commencing with Abyssinia the reader is carried successively to the Jewries of Egypt, Tripoli, Tunisia, Algeria and Morocco, and in each land the author tells a tale of difficulties surmounted and of persecutions, exactions and robberies bravely borne.

With regard to Abyssinia, the author has gathered together the various, and contradictory, traditions which refer to a Jewish kingdom there which, according to some, flourished about 1,000 years ago. The interesting Jewish community of the falashas are supposed to be survivals from that State.

There are many strange local rites. "The Jews in Djebel (in Tripoli) used to celebrate a third day of Pentecost, quite unknown to Judaism elsewhere. . . . Curiously enough the Mahomedans associated themselves with the celebration of this feast." "Another very quaint Jewish custom . . . relates to the destruction of Jerusalem. It is to have one corner of the wall of their dwelling-place coloured black as a sign of mourning. At Djerba and Ifren the Jewish *fiancé* who visits for the first time the newly whitewashed house of her husband, throws an egg at the angle of the wall situated in front of the gate, so as to disfigure its whiteness."

The legend "implicitly believed in by Jews of education in Algeria" of the exodus of Spanish Jews to that land, is an interesting piece of folk lore. When the persecution of the Jews in Spain commenced in 1390, the chief rabbi of Seville was by the King's order arrested and thrown into prison, together with sixty heads of Jewish families. This arbitrary act was followed by an order for the execution of those in the prison. The night preceding the day fixed for the execution, Rabbi Simon, who had been engaged in silent prayer, started up, took a piece of charcoal and sketched on the wall the figure of a boat; then, turning to those who wept he said, "Let all who fear God and wish to leave this place, put a finger, as I do, on this boat." They did so, and the figure immediately became a real boat, on which they all sailed to Algiers!

There are curious stories about the Jews in the Atlas Mountains, who, about a century ago, seem to have been a prosperous community under the special protection of local Sheikhs, and perhaps, it is suggested, descended from a once influential and powerful community of which there are ancient traditions.

The reader will find this volume a veritable store of curious facts and fables, which all those interested in the scattered race would be well repaid by consulting.

E. W. G. M.

II.—A YUGOSLAV UPON A SLAV.

Few subjects have produced more bad books or more bad writing than Psycho-Analysis. Its students have so warped its doctrines and applied them to all sorts of impossible situations that one is now a little tired and suspicious of the method. But obviously there is no person to whom this method can be more fitly applied than the profoundest and intensest genius of the last century, Dostoevsky; and it is equally obvious after reading this book that there can be few persons better qualified so to apply it than the author of this book.

M. Yanko Lavrin, a Serbian, is already well known in this country as a contributor to the *New Age*. After living for some years in Russia, he has come to this country, and is now a lecturer in Slavonic languages at the University of Nottingham. It is thus from an inside position that he can view the Slav genius who is the subject of his book, with the result that his work is admirably lucid and in a sense authoritative. Wherever it is possible he makes Dostoevsky explain himself in his own words, but in all places he keeps very close to his original, and does not, as many commentators do, indulge in wide and high interpretations.

The relation between Dostoevsky and Nietzsche is fairly well known, but this book (which incidentally and significantly is dedicated to Mr. A. R. Orage, than whom few Englishmen know more about Nietzsche) makes beautifully

clear the difference between them. Both thinkers believed passionately in the transvaluation of values, but whereas Nietzsche achieved a supposed finality in his thought that this could be established by the Superman, the Russian goes farther still and finds that here is no end, that the basis of self-will is in fact psychologically bankrupt. Dostoevsky's intense sincerity and blazing honesty carried him farther than Nietzsche, for though he found an Absolute Value he could not find an Absolute Truth. It was his lifelong struggle and passion to synthesize these two; and he failed. His was perhaps the most wonderful example of dualism in modern times, for though both his intellect and his intuition took him on separate paths beyond the normal range of man, he could never make them permanently coincide.

This book has a very valuable literary value, which cannot be demonstrated in this journal. More fittingly can we comment upon the relation of Dostoevsky to the Russian of the future. His connection with Bolshevism is not easy to establish, though it may be assumed that he would have welcomed the first Revolution and have hated those who have since been exploiting it. His ideal Russia was not the outcome of political thought, but of religious and philosophical brooding; it was to be based on religion—on the Russian conception of Christ. He loathed all forms of European Christianity, which he found to be but "a dead and rationalistic formula of His Doctrine"; especially he opposed his mystical Christ to Roman Catholicism, "in which he saw a prolongation of the Roman Empire." From the vast spirituality of the Slav race alone he believed a new method of life could arise, and it was in no way as an advocate of Slav supremacy but as a passionate lover of the world that he suggested that Constantinople should become Russian. The plain, practical Western mind has little to do with such mystic reasoning; but it is suspicion of it and refusal to attempt to understand it that make of our relations with Russia so tragic a story.

There are in this book some extremely interesting ideas which we should like, did space permit, to discuss. M. Lavrin has, for instance, a most intriguing way of pocketing and docketing certain conceptions—e.g., the difference between Reality and Actuality (the actual being included in the real), or between the mystical path of consciousness (the path of the God-Man) and the magical path (the path of the Map-God), or between culture (the complex of all the inner or spiritual values of mankind) and civilisation (the sum of all the external values). He sees both clearly and cleanly. This is, in fact, a very stimulating and attractive study, and should be obtained even by those who wrongly believe that psycho-analysis can do no good. If M. Lavrin illumines in a similar way other Slav geniuses we shall indeed be grateful to him.

"The Lebanon in Turmoil: Syria and the Powers in 1860. Book of the marvels of the time concerning the massacres in the Arab country." By Iskander Ibn Yaq'ub Abkarius. Translated and annotated and provided with an introduction and conclusion by J. F. Scheltema, M.A., Ph.D. (London: Humphrey Milford. £1 7s. 6d. net.)

NOW READY.

SERBO-CROATIAN SELF-TAUGHT

By J. J. O'BEIRNE.

For learning the language by the Natural Method, with Phonetic Pronunciation. Containing the Serbian and Croatian Characters, Phonetic System, Comparison of the Alphabets, Vocabularies, Travel by Rail, Road and Sea. Conversational Phrases; Naval and Military Terms. Outline of Grammar; Money, Weights, Measures; etc., etc.

Crown 8vo, 112 pp. Red Duxee, 4/6 net. Blue Wrapper, 3/6 net.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & CO., 51, Old Bailey, E.C.

PERSONAL AND GENERAL.

TO-DAY.

February 24 (New Style).

February 11 (Old Style).

Jumada II., 16, 1339 of the Moslem Calendar.

Adar, 16, 5681 of the Jewish Calendar.

Lord Allenby has returned to Cairo from the Sudan.

Viscount Furness is cruising in the Mediterranean in his yacht *Sapphire*.

Countess Curzon of Kedleston arrived in London on February 19 from Paris.

M. George Radkoff, Secretary to the Bulgarian Legation, left London last week for Sofia.

The rumour that General Congreve was to relinquish the Egyptian command is now denied.

Sir Michael Francis O'Dwyer, G.C.I.E., K.C.S.I., was last week elected a member of the Athenæum.

Mary Duchess of Hamilton and Brandon and the Marquess of Graham have arrived at the Hôtel St. George, Algiers.

Sir William and Lady Brunyate sailed in the P. and O. s.s. *Soudan*, which left London last week for the Far East.

Prince Nicholas of Greece left Athens last week for Bucharest to attend the wedding of his nephew the Diadoch to Princess Elisabeth of Roumania on February 27. Prince Nicolas of Roumania left London on February 19 for Bucharest to attend the marriage of his sister.

At Burlington House yesterday Professor C. G. Seligman lectured before the Egypt Exploration Society on "Ancient Egyptian Survivals in Modern Egypt."

The King has been graciously pleased to approve that the Right Hon. the Viscount Milner, G.C.B., G.C.M.G., be appointed Knight of the Most Noble Order of the Garter.

The *Gazette* announces that the Military Cross has been awarded to Temporary Lieutenant P. E. Bartlett, Special List, employed with the South Persia Rifles, for gallantry at Tul Ashki on July 22.

Lord Reading will be entertained at a farewell dinner by the Council of the Royal Colonial Institute, on Friday, March 4, at the Hotel Victoria. Mr. Montagu, Secretary of State for India, will preside.

Admiral Sir John de Robeck, commanding the Mediterranean Fleet, arrived at Constantinople on February 17, on board His Majesty's ship *Ajax*, on which Prince George is serving as a midshipman, for a few days' visit.

The London Show of the Arab Horse Society will be held to-morrow and on Saturday at the Royal Agricultural Hall. On the first day the judgings will take place from 11 a.m. to 12.30 p.m., and on the following day from 9 a.m. onwards.

Lady Moore and Mr. E. Phillips Oppenheim were among the passengers by the P. and O. Company's s.s. *Kalyan*, which left London last week for Bombay. Hon. Mary Beaumont, Viscountess Ebrington, and Admiral Sir E. Slade will join the vessel at Marseilles on Saturday.

M. Kalogeropoulos, the Greek Prime Minister, was entertained at luncheon on February 20 by M. and Mme. Psimenos at 3, Palace Court. Among those present to meet his Excellency were M. Rangabe, Greek Chargé d'Affaires, and Mme. Rangabe. Subsequently a small reception was held.

The engagement is announced between Major P. J. Gout, M.C., I.A., eldest son of the late J. A. Gout and Mrs. Gout, of Smyrna, Asia Minor, and Mabyn Katherine, youngest daughter of the Rev. H. G. Sprigg, Kingsey House, Emsworth. It is hoped that the marriage will take place the end of June.

From Oxford University it is announced that the trustees of Dean Ireland's Scholarships were authorised to make a grant from the Ireland University Fund of £50 to the British School at Athens towards the expense of its excavations at Mycenæ. These were begun last year, and have already led to interesting discoveries.

M. Boeresco, Roumanian Chargé d'Affaires, entertained at luncheon on February 18 Prince Nicolas of Roumania, Prince Nicolas Ghyka, a former member of the Roumanian Cabinet, Sir Albert Stern, Commander and Mme. Costiesco-Ghyka, Captain Hansell, Mr. Philip Gardiner (of the Foreign Office), and M. Vladesco.

A marriage has been arranged, and will take place at Nowshera, N.W.F.P., India, between Walter Warrington Haddock, R.F.A., elder son of Mr. and Mrs. W. Thorpe Haddock, of Mosboro' Hall, Derbyshire, and Wyck House, Sidmouth, and Julia Rudyerd, youngest daughter of Major-General Simpson, C.B., and Mrs. Simpson, of Strathcar, Tavistock, Devon.

The engagement is announced, and the wedding will take place on March 2, at Calcutta Cathedral, between Mr. Gerald S. Blake, M.C., Chevalier Crown of Roumania, only surviving son of the late Dr. Blake, of Upton, and Mrs. Blake, of Sible Hedingham, and Miss Enid Benskin, daughter of the late Thomas Benskin, of 78, Mount Street, W., and Mrs. Benskin, 17, Harrington Court, South Kensington.

The Persia Society has forwarded to us the first issue of its new journal, the *Persia Magazine*. This number contains a "Foreword," by the Right Hon. Lord Lamington, G.C.M.G., G.C.I.E.; a paper by C. A. Walpole, O.B.E., on "War and Post-War Developments in the Persian Gulf"; and one by Capt. J. H. Grovewhite, I.M.S., on "Some Opinions on Persia and the Persians." Its price is 2s. 6d. per issue, and it is published quarterly.

The Baghdad correspondent of *The Times* writes (February 11):—To mark his fifty-ninth birthday, Professor E. G. Browne's admirers in Persia have sent him a very fine Keshan silk rug, and, what he is likely to appreciate still more, a wonderful illumined manuscript address signed by the greatest names in contemporary Persian politics and literature. By his interest in Persian literature Professor Browne has produced a renaissance in literary and historical effort, and, as all Persian students freely admit, his profound study, which is still unequalled by any living Persian, has opened out a new horizon to them.

Our Khartoum Correspondent writes, under date January 28:—

His Excellency the High Commissioner is expected to arrive in Khartoum on Tuesday, the 1st proximo, and it is stated that he will visit the new dam constructions at Makwar and Gebel Aulia.

It is reported that Major W. E. Marshall, M.C., M.B., Government Bacteriologist, has been offered and has accepted the post of British Agent and Consul-General at Jeddah.

El Kaimakam E. D. Bally Bey, Senior Inspector of the Bahr El Ghazal Province, is shortly expected in Khartoum on his way home on leave, on the expiration of which he rejoins his regiment—the Somerset Light Infantry.

Amongst recent arrivals in the country we notice the Marquis and Marchioness of Titchfield, Lady Helen Brocklehurst, Major H. Twyford, Mrs. Goodbody, and Mrs. Alec Tweedie.

Lady Helen Brocklehurst, Mrs. Goodbody, and Mrs. Alec Tweedie proceeded up the White Nile by the S.G.S. Kaibar, the former to Refaj, and the latter two to Malakal.

Another distinguished visitor who proceeded north by to-day's train was Sir Arthur Lewis Webb, K.C.M.G., M.I.C.E., London representative of the Egyptian State Railways.

Mr. S. S. de Bilinski, chairman of the National Bank of Turkey, arrived recently and is expected to leave for the north on the 31st inst.

Colonel Wyndham-Quin has also been in Khartoum for some little time in connection with the Grand Hotel.

MEMORIAL TO DR. R. M. BURROWS.

It has been resolved by the Council, the Delegacy, and the Professorial Boards of King's College, London, to found a memorial to Dr. R. M. Burrows, for seven years Principal of the college, who died on May 14. They have decided that the memorial shall take the form of a tablet to be erected in the college chapel, together with a Ronald Burrows prize, exhibition, or scholarship, to be awarded annually to a student of the college who has distinguished himself in the field of Greek studies. It is hoped that the funds raised will be sufficient to make possible the foundation of a scholarship of such value as to afford effective assistance to promising students. The Hon. Eleanor M. Plumer has undertaken the office of hon. secretary. Professor H. G. Atkins has consented to act as hon. treasurer, and subscriptions may be sent to him at King's College, Strand, W.C.2.

APPOINTMENTS, ETC.

It is announced that the French Generals Lyautey and Franchet d'Esperey have been promoted to be Marshals.

Liverpool University Council have appointed Mr. J. R. Droop to the Charles W. Jones Chair of Classical Archaeology. Mr. Droop, who is thirty-nine, has since 1911 been prominently associated with many important excavation enterprises in many parts of the world, including Sparta, Thessaly, Melos, Crete, and Upper Egypt.

Sir Hamilton Grant, Chief Commissioner of the North-West Frontier Province, is proceeding on leave, and Mr. J. L. Maffey, who is now serving as private secretary on the staff of the Duke of Connaught in India, has been selected to act for him. Sir William Marris has left to take over the Governorship of Assam from Sir N. Beatson Bell, who was Chief Commissioner before the reformed Administration came into effect.

OBITUARY.

The death has occurred of Sir Warren Hastings D'Oyly. In early life Sir Warren served in the Bengal Civil Service, and was successively Inspector of Gaols, Magistrate and Collector, Opium Agent at Behar, and Commissioner at Bhagalpur. He retired in November, 1891. He was a man of much energy and versatility. He was a good cricketer, and when in England on furlough played for Dorset. He also attained repute as a hunter and pig-sticker, and inherited the family talent as a painter in water-colours. He contributed to the *Antiquary* in 1902 an important article on "The Heart of Queen Anne Boleyn," and more recently told "Tales Retailed of Celebrities," which was reviewed on its publication in THE NEAR EAST.

The death is announced from New York of the actor Mr. Henry B. Stanford. Mr. Stanford, who was born in 1872 at Ramleh, near Alexandria, was the son of Mr. J. Stanford, Advocate for the Crown, Egypt.

NEWS IN BRIEF.

It is reported from Belgrade that the Yugoslav Government has decided to open a legation at Fiume.

The steamer Baku has arrived at Bizerta from Constantinople with a large number of Russian refugees on board.

The Maharaja Sindia of Gwalior has waived the recovery of 28 lakhs of rupees due to State on account of war expenditure.

A wireless message from Moscow says that the Bokhara Communist Congress (the first) will assemble in Bokhara on February 20.

A Moscow message announces the forthcoming arrival in that city of delegations from the Turkish, Angora, and Azerbaijan Governments.

Delhi Motor Show was destroyed by fire on February 17. Many fine motor-cars were burned, and the financial loss is estimated at about £130,000.

Armenian troops have attacked the Georgian detachments occupying the disputed regions round Voronzovka, the latter not having retired within the period fixed by Armenia.

In a lecture delivered in Paris, General Gouraud said there were 200,000 natives of the Lebanon who spoke French. He announced that it was proposed to hold an exhibition of French wares at Beyrout in April.

The sloop Dianthus, Lieut.-Commander T. C. A.H. Ouchterlony, is to be withdrawn from the Mediterranean Station. This will leave, says *The Times*, only one sloop on the Mediterranean Station for general duties (apart from the two in the Red Sea), the Bryony, which was until recently flagship of the Commodore at Smyrna. Her return may also be expected before long, as she does not figure in the official list of the Post-War Fleet.

A set of postage stamps, says *The Times*, recently issued by the remnants of General Wrangel's ill-fated army comprises the denominations 1,000, 5,000, and 10,000 roubles, surcharged on various Russian issues. They are inscribed "Postage Russian Army," and, according to the Director of the Post Office, are not sold to civilians. It is not clear at the moment where these stamps are actually in use, but it may be presumed that the issue took place in Constantinople.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

ADVERTISER, 33; long experience Near East import, export, insurance, shipping, special knowledge coal trade, leaf tobacco; good connections, excellent organiser; been in charge important interests, seeks position good firm. Perfect French, also modern Greek, Turkish, slight Bulgarian. Highest references and recommendations.—Write Box 178, NEAR EAST, 1, Devonshire Square, E.C.2.

DELEGATES AT THE CONFERENCE.

The Greek delegates to the London Conference are staying at Claridge's Hotel. They are headed by M. N. Kalogeropoulos, Prime Minister and Minister for Foreign Affairs. The other members of the delegation are: M.M. L. Caftanzoglu, M.V.O., Minister Plenipotentiary, Secretary-General to the Delegation; D. Siciliano, Director of Political Affairs at the Greek Foreign Office; — Gounarakis, Secretary to the Governor of Smyrna; — Maximos, Governor-General of the National Bank of Athens, who is financial delegate; Military Experts: Cois. Exadactylos, Lacon, Sarianni; Naval Experts: Captains Kriesis, Argvropoulo, Bouboulis.

The Turkish delegates are lodged at the Savoy Hotel. The head of the Constantinople Delegation is the Grand Vizier, Ahmed Tewfik Pasha, who was formerly the representative in London of the Sultan of Turkey, and has been Grand Vizier three or four times before. He has with him Osman Nizami Pasha, the Ottoman Minister in Rome, and Reshid Pasha, who was already in London as Turkey's representative, Naby Bey, Turkish Minister in Paris, and a large staff of expert advisers and secretaries.

The Angora Nationalists have sent seven representatives, headed by Bekir Sami Bey, who acts as their "Foreign Minister."

According to a telegram from Beyrout, Turkish detachments attacked the town of Deir-az-Zor [on the Euphrates], in Syria, which was defended by native contingents reinforced by friendly Kurds. These contingents, aided by the French Mission, succeeded in repulsing the attack.

Of the 10,000 Jews who entered the ports of Palestine during the year ended December 31 last, 3,000 had been exiled by the Turks and were permitted to return by the British authorities soon after the Armistice. Of the 7,000 new immigrants, 3,000 from the Ukraine, Crimea, Caucasus, Armenia, and Persia came through Constantinople, while 3,500 came, via Vienna and Trieste, from Lithuania, Poland, Galicia, and Germany. The remaining 500 came from other European and American countries.

Michael Lotfallah Bey, President of the Central Committee of the Syrian Union, states that a meeting of Arabs, Syrians, and others, held in view of the London Conference on the Near East, decided to protest against the dismemberment of the country and the establishment of "colonising governments" under the mask of a mandate, as being contrary to the engagements of the Allies to the peoples liberated from Turkish oppression. The meeting also decided to ask for representation at the London Conference.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

THE ONLY ENGLISH HOTELS IN ALEXANDRIA.

THURSDAY, FEBRUARY 24, 1921.

THE LONDON CONFERENCE.

Unless all indications are at fault, the Inter-Allied Conference opened in London this week will not find the Near Eastern question easier to settle than it was a year or more ago. Yet the Allies are not without valuable experience in regard to the subject; and to-day, whatever decision may be arrived at, they can hardly plead ignorance as to the probable effect of any action that they may propose to take. The reason for the Conference, in so far as it concerns the Near East, is that the Treaty of Sèvres, which embodied the terms of peace to be imposed on Turkey, has proved up to the present moment unworkable. In holding the Conference, the Allies admit some measure of failure, and propose to re-examine the question, at least in part, with a view to finding, if possible, a more satisfactory solution. An interesting feature of the gathering is that whereas in the preparation of the original treaty the Greeks alone, in the person of M. Venizelos were listened to, and, in fact, inspired the Allies' terms, this time representatives of Turkey are to be afforded a hearing. It is known that the Greek delegates will press for the retention of the Treaty of Sèvres as it stands; the Turks, on the other hand, will at least begin by urging that the conditions of peace must be discussed *de novo*. No oratorical efforts in either of these directions will be of much practical use to the Conference, unless indeed the Greeks can persuade the Allied Governments that they have the military position in Asia Minor already in hand, that they only require *carte blanche* and funds to enable them to crush the Turkish Nationalist movement, and that thereafter the Near Eastern problem is for ever solved. If in the face of such a possibility the Turkish representatives assume an unaccommodating attitude and refuse to discuss any solution which does not start by restoring to Turkey its pre-war possessions, the Conference can be terminated at once, as the Greek contention alone can lay claim to any measure of feasibility. If, however, the Turks, including the Nationalist delegates, realise what strong support they can rally to their side in favour of a modification of the Treaty of Sèvres which will establish peace in the Near and Middle East and reopen the normal channels of trade, they will adopt very different tactics. A reasoned statement of their case, and an undertaking to bow to the will of the Allies in the event of reasonable objections being considered, and met in whole or in part, should lead to a settlement which will offer Asia Minor its first experience of peace with good government.

The course of the Conference would thus seem to hinge on the attitude to be adopted by the Turks. There may be no flaw in the Greek diagnosis of the position; the Greek army may be able within three months to dispose once and for all of Mustapha Kemal's movement; the Turkish population of Anatolia may be cowed into submission to any terms that the Allies and the Greeks impose, and the provisions of the Treaty of Sèvres may then be applied to Turkey. But most people with any

knowledge of the East will mistrust this rosy picture. If by any chance the Greek three months resolved itself into one or two years, after the manner of the Boer War, which the campaign against the Nationalists would strongly resemble, the whole fabric built upon Greek aspirations would come tumbling about the Allies' ears. Unrest throughout the Eastern world would become intensified, there could be no trade with Turkey, and the Allies would have to bear the cost of the protracted struggle. Greece herself could hardly be indifferent to a commitment which dislocated indefinitely a great portion of her economic life, and crisis would follow crisis in her political world. This view does not take into consideration the very strong feelings which France and Italy already have on the subject of the Treaty of Sèvres, and it makes no allowance for a possible refusal on the part of the British public to sanction further war expenditure even for the three months of the Greek estimate. We may admit, and even sympathise, with Greece's disappointment; but the Allies have learned something of the foolishness of ignoring realities. They must do everything in their power to effect a real settlement at the Conference, and for this reason they must explore every avenue of peace suggested.

In the first place Greece is entitled to just as much consideration as if M. Venizelos were her chief representative at the Conference. Two things can be made clear to her delegates—that the revision of the Treaty of Sèvres has been brought about not by the default of the Greeks, but by circumstances and conditions, removed altogether from their control, which neither their good will nor their sacrifices can affect; and secondly, that the Allies have no intention of handing back any Greek population to the oppression or worse that was their fate under Turkish jurisdiction before and during the war. Much is being made by Greek speakers—by M. Kalogeropoulos, the Prime Minister, no less than by M. Venizelos—of the horrors awaiting the Greeks if the Treaty of Sèvres be modified. These alarms should be shown to be entirely groundless. Not only will Smyrna have nothing to fear from the Turks as an autonomous State, but it should also be possible for the Allies to lay the foundations of a new Turkey in which neither massacre nor the oppression of non-Moslem races is to be feared. If in the drafting of the Turkish conditions of peace more thought had been given to the establishment of good government in Turkey than to the negative policy of restricting Turkish opportunities for bad government, a happier state of affairs might have existed to-day. It has to be admitted, however, that the action of our French and Italian allies in the Near East suggests that, even with Germany and Austria-Hungary eliminated, there may yet be as much intriguing in Constantinople and Asia Minor as there was before the war, and with it the constant encouragement of misgovernment. It should prove a strong inducement to the Turkish Nationalists to abandon a position which must sooner or later become untenable, if it is not so already, if they gain their point that no large Turkish community is to be subjected at this time to Greek jurisdiction. An autonomous Smyrna will unite both races in an international administration, and by the time that this experiment has been made successful a better feeling, it is to be hoped, will exist between the two peoples. As far as Greece is concerned, the change in the status of Smyrna entailed by autonomy will loom larger on paper than in reality. She will be more than compensated by having as her neighbour a Turkey with whom friendly relations are possible, and her delegates will leave the Conference knowing that the present régime in Greece has been recognised by the Allied Powers.

THE QUESTION OF THRACE.

[The British Government hopes to restrict the discussions of the London Conference to the question of Asia Minor, and if it carries its point there will be no reference to the Treaty of Neuilly. Messages from Bulgaria, however, report that at many large meetings throughout the country last week resolutions were passed asking for the admission of Bulgaria to the Conference in order that her point of view may receive consideration. In the following article the writer puts some of the principal considerations that Bulgaria might be expected to urge.—Ed.]

(FROM A BULGARIAN CORRESPONDENT.)

The recent events that have taken place in the Middle East and the new political situation they have created seem to afford a favourable opportunity for raising the question of the future of Thrace.

At this very moment, the revision of the Treaty of Sèvres is being considered by the Allied Powers, and, whether it will be effective or not, the bare fact of its having taken place leaves no doubt as to the atmosphere of uncertainty surrounding the Treaty. This is due to the reason that the Treaty of Sèvres has kept no account of the vital interests that it was meant to settle once for all. The defeat of the Venizelists at the last Greek elections was sufficient to establish its weaknesses.

As the Treaty of Sèvres in regard to the question of Thrace is but the corollary of the Treaty of Neuilly, one must recall that this last gave the Allied Powers Western Thrace; they, therefore, took from Bulgaria the territory situated between the Mesta and the Maritza, which represented Bulgaria's sole profit from the Balkan wars and had been kept ever since with the consent of Turkey. Even before the Treaty of Neuilly had been signed, Bulgaria was compelled to evacuate this region, which remained in the hands of the French military authorities, who, however, were able to preserve order throughout Thrace. They also maintained liberty of religion to the satisfaction of all the inhabitants. But, during that time, the Greek Government was actively working for the possession of Thrace, and finally at San Remo obtained the coveted region, in spite of the advice of the French military mission and against the will of the population.

It is interesting to note that the statistics drawn up by the Allied military authorities just before the San Remo Conference took place had established that the Greek element in Thrace was not numerically superior to the Bulgarian, in spite of the fact that a great many Bulgarian inhabitants had left Thrace with the Bulgarian authorities. Therefore, no ethnical majority justifies the annexation of Bulgarian Thrace to Greece, and this has been acknowledged by the Greeks themselves. In his statement to the Greek Chamber of Deputies on March 15, 1913, M. Venizelos declared that the Greek element in Thrace inhabited only the coast, and, therefore, at that period, the eminent Greek statesman deliberately renounced all claims to Thrace. But, a few years later, M. Venizelos, acting, as so often happens, against his own theories, created a Greece so great that it extends as far as the Black Sea, the suburbs of Constantinople, and the deserts of Asia Minor.

In 1919 and 1920, had M. Venizelos forgotten the statement he had had the courage to make some seven years before? The words he addressed to the Greek Parliament last May show that he had not. Alluding to his speech of 1913, the author of Great Greece added: "I then said that the Greece of the Ægean shore would not have any backbone, but that was because the grapes were not ripe. In 1913, Bulgaria was a force at our side and Turkey still existed in Europe. To-day, Turkey has ceased to live, and Bulgaria is powerless. Greece is strong, and a strong state may extend its boundaries on every side without any danger."

Last year M. Venizelos himself was the greatest force in the Near East, but since his own people have refused to follow him along the dangerous path he had chosen, to-day his word means nothing to those who still consider that Athens and not Smyrna is the capital of the kingdom of Greece. He undoubtedly remains one of the cleverest politicians of Europe, but his strength is now platonic; to use his own words, it is a case of not possessing any "backbone."

If, owing to the last developments of the situation in the Middle East and the attitude adopted by the Allied Powers towards the new elements that have been brought forward, the Treaty of Sèvres is to be altered, the question of Thrace should be one of the first to be considered. For it is not only the interests of that province and those of Bulgaria that have suffered through the surrender of Thrace to Greece, but also international concerns. As matters stand at present, Bulgaria has no free outlet to the open sea; the conditions of peace no doubt provide for Bulgaria an economic access to the Ægean, but past experiences show that for a State there is no real access to the sea except that which is guaranteed by its own sovereignty. Besides, this access is

illusory if it remains exposed to the risk of being directly or indirectly blocked by an ill-disposed or merely a rival State.

Bereft of her territorial access of the Ægean Sea, Bulgaria is deprived of the vital conditions on which the economic life of the country depends; the fact also inflicts great injury on the trade of the Mediterranean Powers, which requires the most rapid and direct maritime communications with the commercial centres of Bulgaria. It also closes the natural entrance through which the Allied Powers could in future effect their moral penetration in the midst of the Bulgarian people.

Article 48 of the Treaty of Neuilly states that the Allied Powers "undertake to ensure the economic outlets of Bulgaria to the Ægean Sea," adding that "the conditions of this guarantee will be fixed at a later date." It seems that the moment has come to give Bulgaria outlets to the Ægean under conditions which would guarantee their efficacy. Bulgaria's request is inspired by economic more than by political reasons. Being chiefly an agricultural country, Bulgaria needs to exchange her crops, her attar of roses, and her tobacco for the productions of European industry. This trade can only be effected through a Bulgarian port in the Ægean Sea, and at the present moment family considerations should not be invoked in the Balkans against the conferring of Dedeagatch or Kavalla upon Bulgaria.

The best solution of the question of the future of Thrace would be to consult the population as to its fate, and to accept the results of a plebiscite as a final settlement. If, however, this should not prove opportune, why not return to the decisions of the Treaty of Neuilly, Article 48. "Bulgaria renounces in favour of the Principal Allied and Associated Powers all rights and title over the territories in Thrace which belonged to the Bulgarian Monarchy, and which, being situated outside the new frontiers of Bulgaria, as described in Article 27 (3), Part II., have not been at present assigned to any state"? Why not constitute in its entirety the territory thus surrendered by Bulgaria into an autonomous State, independent of any Balkan State, and placed under the protection of one of the Allied Powers or one of the Neutral States of Western Europe chosen for this purpose by the Conference?

VILLAGE WATER SUPPLY IN PALESTINE.

(FROM A CORRESPONDENT.)

At a meeting of the Palestine Advisory Council, held last month and reported in a recent issue of the *Palestine Weekly*, an interesting statement was made with regard to the new scheme for village water supply loans:—"Applications for loans have been received from villages requiring financial assistance in order to lay down water systems. Many villages have springs in their vicinity, but do not possess any means by which water can be brought from the spring to the village, thus compelling the villagers to go considerable distances daily for their water supply. Arrangements have been made whereby loans up to £400 can be granted by the Government, on the collective guarantee of the Mukhtars and leading members of the village community, who will be severally and jointly responsible for the repayment. The loans will be repayable in a short term of years—three to five—with interest." This scheme will meet with general approval from all those who know what an incalculable benefit the pure water supply has proved to Jerusalem, and a reliable local water supply is a necessity if the land is to yield its best and its utmost. There is no doubt, also, that the introduction into the scattered villages of Palestine of a continuous supply of clear water will be a boon indeed to the ever-toiling *fellaha* (peasant woman).

There is, however, another side to the question, for water is one of the gravest dangers in the East. Hitherto cholera has not been a scourge of Palestine: the severe visitations there have been from time to time, and were isolated events with intervals of many years in between. Cholera is principally a water-borne disease, as we know it in China and India, where it cuts down whole districts as with a scythe: it flourishes in a warm, moist soil (round about the deltas of the Ganges and the Yang-tse-kiang, and sometimes of the Nile), and it will disappear during a season of drought, only to revive with the next heavy rains. During the last outbreak of cholera in Palestine, early in the present century, the sickness raged in Jaffa, Tiberias, and Damascus, which are all well-watered places; Tiberias was simply decimated. In Jaffa the cholera spread like wildfire after the death therefrom of a little child, whose mother flung the body into the cistern which was common to all the several families inhabiting the house, and then raised a wild lamentation for the drowning child. Friends and neighbours rushed to the rescue, but too late; they buried the child, and continued to use the cistern. In Tiberias the Jewish women washed the clothes and food utensils which had been used by the sick, at the same time and

place as they were wont to draw their water, and the plague raged on until it seemed to die out from sheer satiety.

No one who remembers that terrible time can help a feeling of anxiety at the thought of an unlimited water supply being installed in the villages and in Jewish colonies; for in neither are the people careful or sanitary in their manner of living. Water will breed mosquitoes, if nothing worse, and the mosquitoes in places like Ramleh, Jaffa, and Zamarin, or in Hezekiah's Pool, and a small Jewish quarter not far from the city, are not easily forgotten by their victims. If the new village water supply is carried out to any extent it will be found necessary to restrict its use to certain hours, and also to appoint an English travelling inspector for each district, under whose vigilant supervision it will be impossible for any village or colony to abuse a great benefit.

THE REPORTS ON MONTENEGRO.

Two reports on "The Political Condition in Montenegro" have recently been published by His Majesty's Stationery Office, the first being written by Major Harold Temperley, Assistant Military Attaché, and the second by Mr. Roland L'E. Bryce. They are numbered Miscellaneous No. 1 (1921) and Miscellaneous No. 2 (1921), and are priced at 1d. and 2d. respectively.

Major Temperley's report, which is dated October 12, 1920, deals solely with events in Montenegro since December, 1919. After briefly recounting the evacuation of the country by foreign troops, he states that there is no "real foundation for the assertion that the Serb troops have intimidated the whole population," and he proceeds to show how difficult, since one-sixth of the population of Montenegro lives in towns, such intimidation would in practice be. Since the Armistice, he says, the bodies of opinion have been constituted as follows:—(1) The followers of King Nicholas, who are fewest; (2) the Pro-Serbs, a strong party predominant in the towns such as Cetigne, Podgoritza, and Rieka; and (3) the Autochthonists, who, though differing on many points, are at one in believing in the necessity for some connection with the Yugoslav State. The report concludes with an opinion that the great majority of Montenegrins were in favour of inclusion within the Triune Kingdom.

Mr. Bryce's report is dated Cetigne, December 16, 1920. He takes up the tale where Major Temperley left it, that is, he describes the elections for the Constituent Assembly of the Kingdom of the Serbs, Croats, and Slovenes which took place on November 28, 1920. He was able, with Major Otley, to visit, and inspect personally, the voting in a large number of booths extending over a wide range, and he states definitely that the manner in which the ballot was supervised and carried out was proof against the most exacting criticism. Police and military were everywhere withdrawn, and no pressure was brought to bear by any Government authority. The political attitude of the people is described, and the number of abstentions is said to have been surprisingly small in consideration of the illiteracy of the folk. Incidentally, the effect of the elections being held on a Sunday was to increase rather than diminish the number of abstainers. The conclusions of the report are:—(1) That the elections in Montenegro were carried out with absolute fairness and respect for freedom and secrecy; (2) the results represented the views of the Montenegrin people in so far as their political education rendered the tenure or expression of such views feasible; (3) the proportion of electors who exercised their rights was highly satisfactory; and (4) no trace could be found of a body of opinion in Montenegro which was against the abstract idea of union with Serbia in Yugoslavia.

There are five appendices to this report, containing the tabulated results of the Montenegrin elections for the Constituent Assembly, translations of précis of programmes published, a list of the commodities imported into Montenegro during the period January, 1919, to October, 1920, and disposed of by the Food Controller, some notes on political trials, and, finally, "Notes on the General Situation in Montenegro at the Present Time."

THE ARAB HORSE SOCIETY.

The council meeting of the Society was held at the Grosvenor Hotel, London, on February 2, Mr. S. G. Hough (Vice-President) being in the chair. The following new members were elected:—Branch, A. E., O.B.E., Ministry of Interior, Cairo; Bromwich, Frank, Kenfield Hall, Petham, near Canterbury; Bryan, Rev. Wilmot A., Runninton Rectory, Wellington, Somerset; Jones, Mrs. D. Preston, Rusbury, Winchcombe, Glos.; Lovelace, Mary, Countess of, Ockham Park, Ripley, Surrey; Salisbury, the Marchioness of, Hatfield House, Hatfield, Herts; Templer, Brig-General C., Croft House, Tunbridge Wells; Yeoman, W. Gordon, Springhouse Park, Theydon Bois, Essex.

The secretary reported that fifty-nine entries had been received for the Arab and Arab-bred classes for the show at the Royal Agricultural Hall on February 25 and 26 next.

The Council accepted for the Stud Book, Vol. II., H.R.H. the Prince of Wales's stallion, which had been presented to H.M. the King by the Sheikh of Koweit, and given to the Prince of Wales; and also the Marchioness of Salisbury's Arab stallion, presented to her by H.H. Emir Faisal of Arabia. A committee was appointed to carry out the arrangements for the next endurance test. The Council then adjourned until their next meeting on Tuesday, April 5, at the Grosvenor Hotel, London.

THE ARMENIAN REFUGEES (LORD MAYOR'S) FUND.

Earl Curzon of Kedleston writes asking for the co-ordinated efforts of the four London Committees working for Armenian relief to meet the desperate need of Armenian refugees in Transcaucasia. According to information received from the British Chief Commissioner at Tiflis, there are thirty thousand refugees in concentration camps at Alexandropol and twenty thousand at Karaklis, besides many thousands in surrounding country. The whole country is impoverished, and one hundred thousand people at Alexandropol will soon be starving unless immediate help be provided. Relief work has continued in Erivan and Karaklis, funds having been granted by the Armenian Government for this purpose. Food cannot be obtained in Georgia. The British Chief Commissioner at Tiflis has formed a relief committee to deal with supplies received. Funds may be sent to the representatives of the Committees as below:—Aneurin Williams, M.P., Armenian Refugees (Lord Mayor's) Fund, 96, Victoria Street, S.W.1; Miss E. J. Robinson, Armenian Red Cross and Refugee Fund, 35a, Elsham Road, London, W.14; E. Wright Brooks, Friends of Armenia, 47, Victoria Street, S.W.1; Mrs. Madeleine Cole, Women's Armenian Relief Fund, Danehurst, Putney, S.W.

THE HIGH COMMISSIONER FOR INDIA.

The office of the High Commissioner for India was opened at 42, Grosvenor Gardens, S.W.1, on February 21, 1921. From that date the High Commissioner (Sir William Meyer), his personal staff, the Indian Students' Department, and the High Commissioner's Accounts and General Departments will be located there. The High Commissioner's Treasury, however, will continue at the India Office. The Stores Department, also, will remain at the India Office for the present, while the India Store Depot will continue, as before, in Belvedere Road, Lambeth. 21, Cromwell Road, South Kensington, will continue as the Indian Students' Hostel.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:—MESOPOTAMIA (MANDATE). (February 16.)

PEACE TREATIES: Turkey (Rahmi Bey). EGYPT (MILNER REPORT). MESOPOTAMIA (MANDATE). PERSIA: Cordon Expedition.—British Forces. MESOPOTAMIA: British Forces (Withdrawals)—Railway Workers (Wages). INDIA: Civil Pensions—Army Reserve Officers (War Decoration). February 17.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

For Freight and particulars, apply to

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

Turkey and the Conference.

It would not be one whit too strong to say that the economic salvation of Turkey literally hinges on the prospect of a satisfactory issue of the London Conference. The position in Turkey at the present time could scarcely be worse, and it is obvious that if present conditions continue, a point may soon be reached when reconstruction may be all but impossible. In the best circumstances, it will be a difficult and arduous task, and one which Turkey would be quite unable to accomplish unaided. Turkey's strongest card to play at the Conference, if only she knew it, would be to insist upon the necessity of Smyrna, for trade purposes, belonging to the same fiscal jurisdiction as the vast hinterland on which the port is entirely dependent. Unless there is to be peace in Asia Minor and freedom of movement between the interior and the coast, an important portion of British trade will be interfered with. There are abundant signs that business circles are becoming alive to the fact that the territorial provisions of the Treaty of Sèvres entail a severe blow to the British exporter.

Export Credits—

One may perhaps be pardoned for wondering as the weeks slip away whether the authorities responsible really recognise that the introduction of a workable export credit scheme is a matter of urgent necessity; that it is required now and not at some future date. We have had a plethora of schemes of which at least three stand out as constituting practical methods of dealing with the problem, but beyond discussion apparently nothing has taken place. Naturally, there are very real difficulties in bringing any of the schemes into effect, but unless and until such a scheme is in operation it needs no emphasis that in present conditions there can be no resumption of trade with South-Eastern Europe on any extensive scale, and the longer that is postponed the further off must be the prospect of the economic recovery of the States in that region, and of the trade boom which will eventually lift from our shoulders the last vestige of trade depression. These considerations, one would think, would be sufficient to ensure that there should be no undue delay in arranging a scheme.

—And the Banks.

The Prime Minister referred to the question in his speech on unemployment last week, and attributed the delay in introducing a scheme to the reluctance of the banks to take a share in the risks that would be involved. That the risks that would be assumed would be very considerable must be admitted, and the attitude of the banks is quite understandable in the prevailing conditions in the country; but if they feel that the responsibility of their position will not justify their participation to the extent required there is a ready alternative, and that is for the State to step in and fill the breach. It may be urged that the State will not be well advised in risking the money of taxpayers in a scheme which appears too hazardous for the banks; but to that the reply is that the thing simply has to be done and immediately; and in default of any other means the State will have to accept the risk.

Bulgarian Bonds.

By the time this issue appears the meeting of holders of Bulgarian bonds convened by the Council of Foreign Bondholders to consider an offer made by the Bulgarian Government in regard to the debt service which has been suspended since Bulgaria entered the war, will have been held. The nature of the offer has not been announced, but if it should not amount to more than fifty per cent., it would not be surprising if the bondholders felt tempted to reject it

and made an alternative suggestion. In this connection, it may be mentioned that the Inter-Allied Reparations Mission left Paris yesterday for Sofia, and at first sight it would seem a natural course to adopt to bring the Council of Foreign Bondholders into touch with the Mission with a view to regulating the position.

Germany and the Near East.

My view, often expressed in these columns, that Germany would seize the first opportunity to attempt to regain her former position of predominance in the trade of the Near East finds confirmation in a recent article in the *Vossische Zeitung* to the effect that Germany must again endeavour to win Greek trade. The theme of the article is that Greece is ready for the old trade relationship with Germany, and that the view taken by the leading business men in Athens is that the severance of commerce with Germany was as serious for Greece as for that country. A typically German way of arguing, is it not? Needless to say, there is no evidence of any such desire on the part of Greece to receive the Teuton with open arms. Greece is far too well aware of the inevitable consequences of German economic penetration. There, as elsewhere in the Near East, the war threw a vivid light on the effect of Teutonic activities in the past. Unfortunately, the mere fact of not desiring to comply with Germany's desire is not sufficient. There is only one way to keep the door shut against the Teuton, and that is by the maintenance of close economic relations between the Allies and the Near East; and in accomplishing this task British traders have at once a great opportunity and a great responsibility.

The Farmers' Complex Weights.

I have read with great interest a little illustrated pamphlet by Major David Davies, M.P., expounding the reasons for the Bill that has been introduced in the House of Commons to standardise agricultural weights and measures. As he justly points out, one of the eternal mysteries of farming is the meaning of the quarter. It may have any one of five values for wheat, of six values for rye, and of ten values for oats. The variation of other measures is equally absurd, and affords perpetual difficulty to all engaged in the selling side of the industry. "To this day," says Major Davies, "nothing has been done to protect the farmer and dealer in agricultural produce. An unscrupulous person may, by exploiting the variations in weight, secure an unfair profit, which would be impossible if standardisation were attained. It is not the farmer and the dealer alone who are concerned. The price of bread depends on the price of corn, so it is in the interest of everyone to ensure that nothing is allowed to interfere with fair and free traffic in wheat." The Bill proposes to make it illegal to deal except in terms of cwt. of 112 imperial standard lb. unless the quantity dealt with is less than 112 imperial standard lb.—a simple reform which will at a stroke reduce the present chaotic weights to order.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

SUDAN.

KHARTOUM, January 28.

Markets Depressed.

Trade in general has been at a standstill owing to the total lack of inquiries from abroad and the financial depression in Egypt. It was hoped that the Sudan would be allowed to export cereals to India to relieve the famine, but so far nothing has materialised. Manchester piece goods are very greatly reduced, and may be purchased in the local markets for considerably less than in the United Kingdom. Abyssinian coffee has dropped heavily, although the visible supplies in the country are not estimated to last beyond the arrival of the second steamer from Gambella—i.e., about July next. Tentative inquiries have been received for sesame seed, and a slight increase in price for the cleaned article delivery Moghren Quays has been noticeable during the last few days. The action of the Government in allowing free export to foreign countries has had a good effect, and prices are as follows: Red Sesame, machine cleaned, £E13 to £E13½ per ton Moghren; White, £E18 to £E19 per ton. A certain amount of Dhurrah Feterita has been exported to Malta.

As a result of various experiments and analyses in London, it has been found that Dhurrah Feterita compares well with Plate Maize for distilling purposes, giving a non-distinctive spirit suitable for the making of commercial alcohol, etc. Unfortunately, owing to high railway and steamship freights, it is impossible for the Sudan exporter to land his dura in the United Kingdom at less than £16 to £17 per ton c.i.f., which makes competition with Plate maize at present prices prohibitive. Hides and skins are a drug on the market. Italy is unwilling to buy owing to the unfavourable rate of exchange. Fresh hides are being offered here at 25 milliemes an oke, with very few buyers.

ROUMANIA.

Exploitation of Natural Gas.

It has long been known that in Transylvania there are districts producing large quantities of natural gas, most of which has hitherto remained unexploited. The Government have now granted a contract to the "Société des Usines de fer et domaines de Reshitza" (U.F.D.R.) for the exploitation of the gas in certain of these districts for the purpose of enabling the company to construct and work a boring-tube factory for the supply of the necessary materials to the petroleum industry. The company undertakes to complete the construction of its boring-tube factory within five years from the date of the contract and to complete the gas conduit to the factory within the three following years. The contract further provides for the formation of a subsidiary company which will supply the urban and rural communes and the industries in the valley of the Danube between the gas fields exploited by the tube factory and the valley of the Muresh as far as Arad.

Purchase of Locomotives.

According to the *Moniteur Officiel*, a credit of 150,000,000 lei has been granted to the Ministry of Communications for the purpose of buying locomotives, etc. Orders have been placed in Germany and Austria.

The B.I.F.

It is gratifying to note that in several of the local papers long articles have appeared on the coming British Industries Fair, pointing out its advantages and the facilities afforded to visitors and buyers there. There is no lack of interest in it in this part of the world, but the very low rate of the Roumanian leu and the high cost of living in England may possibly prevent many interested merchants from taking advantage of the opportunities it offers.

Sulphate of Copper for the Vineyards.

The Ministry of Agriculture has purchased in England about 350 wagons of sulphate of copper crystals at 98-99

per cent. It is expected to arrive at Braila in the course of this month, and will be sold there at 11.50 lei per kilo, or 12.50 maximum, at the depôts of the agricultural syndicates and societies.

Railway Repair Shops' Concession.

The proposed concession of the railway repair shops to an English group for a period of seven years is still the subject of severe criticism in the local, more especially the *Liberal Press*. The Bill embodying this proposal has already been presented to Parliament, but the vote on it has not yet been taken. The chief objections raised are against foreign administration and labour, not against the introduction of foreign capital.

SYRIA.

BEYROUT, January 31.

The Beyrout Fair.

The fair that is to be inaugurated in Beyrout on April 1 is the first concrete manifestation of European organisation and enterprise of this kind in Syria. The undertaking is due to Commandant Fumey, director of the fair. An idea of the importance that is attached to this undertaking may be formed from the fact that the estimated expenditure is put down at thirty million Syrian piastres, equivalent to six million francs. The receipts from lease of space are reckoned at twenty million Syrian piastres, the resulting deficit being expected to be ten million Syrian piastres, or two million francs.

The authorities have been hard put to it to provide adequate space in the central part of the town, and it was a happy idea to utilize temporarily part of Allenby Street (one of the wide streets opened out through the old town by the Turks during the war), the old cemetery north of the old Seraglio, and a similar open space west of it, as well as the public garden in the square, known as the Place des Canons. The exhibition of native arts and industries is to be held in this garden, and the famous woven embroideries of Zouq, Mount Lebanon, will find a prominent place. The large space provided by the old cemetery is allotted to the agricultural section, where agricultural machinery and implements and agricultural products will be exhibited. The major part of this section has already been secured by the representative of American firms, and by the *Onnium Franco-Oriental*, a French company engaged in mechanical enterprise, and representing some French industrial concerns. A limited space is still available.

There are to be in all 488 stands, 360 of which have been taken over by French exhibitors, and the remaining stands have been left chiefly for the Beyrout merchants. The total number of exhibiting firms is expected to exceed 1,200. Wide-spread interest seems to have been aroused in the fair, and visitors have already been announced from Greece, Turkey, Mesopotamia, Egypt, and even Persia. An official invitation to the Egyptian Government is contemplated, but it is from France that the most numerous visitors are expected. Besides numbers of representatives of the exhibiting firms and other visitors, two ministers and forty senators and deputies, all guests of the authorities here, are to honour the fair by their presence. As the hotels in Beyrout are already full, and no vacant houses, or even rooms, are available—the town being already congested owing to the presence of the large number of military officers and civil officials with their families, and to the influx of large numbers from the interior since the Occupation—it is proposed to accommodate the foreign visitors in the leading hotels at the principal summer resorts in the hills around Beyrout, such as Aley, Sofar, and Brummana, and to run a special daily service of motor cars to and from Beyrout.

The Board of Trade are in receipt of information, through the Foreign Office, to the effect that the importation into Roumania of all animals and animal products transmitted through Belgium, Poland, Russia, Ukraine, Turkey, or Bulgaria, is prohibited, on account of bovine plague.

All restrictions on the cultivation and on the sale of tobacco throughout Palestine have been abolished. New Customs regulations are in course of preparation, and a fixed tariff will replace the Customs duty and surtax on imported tobacco and cigarettes. The new tariff will probably come into force on March 1.

THE BRITISH INDUSTRIES FAIR.

FIRST IMPRESSIONS.

(FROM OUR OWN CORRESPONDENT.)

One day presumably the British Industries Fair will have a permanent habitat, but that time is evidently not yet. We have been to the docks, then out to suburbia as far as the Crystal Palace, and this year visitors have to make a voyage of discovery to the White City at Shepherd's Bush. From some points of view the present change is not for the better. The Crystal Palace was not an ideal centre for exhibitions owing to its inaccessibility, but it had the outstanding advantage that it enabled the exhibits to be more or less concentrated, while it offered unlimited scope for expansion. There is no lack of space at the White City, but the straggling character of the building makes it rather unsuitable for its present purpose. Still, it has the merit that it can be reached more easily than any other centre at which the fair has been held, and buyers who have to walk the many miles of exhibits, especially those in whose memory the unending ascent to the Crystal Palace still holds a painful place, will no doubt maintain that that merit is decisive.

As a general rule first nights are dangerous to judgment, and the same proposition applies to the opening of exhibitions. In the natural course one is bound to see more than a suspicion of the work behind the scene, but that matters little, as buyers almost invariably hold aloof from the inaugural session. They did so to some extent this time, and I was able to see the exhibits with comparative comfort. A welcome change, indeed, for my usual experience has been the difficulty of seeing the exhibits for the buyers. That is a pleasure which doubtless awaits me at my next visit later in the week. But while there was freedom for inspection, one collected other impressions of a less satisfactory nature. There are, to lapse into statistics, something like four and a-half miles of stands, and a casual tour is in itself no light ordeal, but when coupled with incessant waves of heat from stoves placed at every few yards throughout the long galleries, it becomes a very arduous process indeed.

Leipzig the Unwanted.

But it was also an extremely pleasant labour, for on every side one was confronted with fresh evidence of the increasing skill of British industry. No one looking at the fair in detail could fail to be astounded at the vast strides that have been made in every branch of manufactures during the past few years, and particularly in those lines which before the war were the preserve of our great Continental rival. It is only when, as in the present case, there is a concentration of the fruits of industrial endeavour that the full meaning of the advance can be realised. It has not been progress so much as a revolution, the results of which will be seen in the years to come. To the foreign buyer, who will see the fair in his thousands, it must be a wonderful revelation of the capacity and the industrial resources of this country, and it will bring home to him emphatically that in the future there will be no need for him to go to Leipzig to place his orders, for Leipzig, great though its reputation was before the war, is now well on the way to be eclipsed by a far more ambitious undertaking.

In one important respect, the present fair differs from that of last year. In the spring of 1920 we were in the flood tide of enjoyment of the first trade "boom" after the war. Manufacturers in every industry had more orders than they could deal with; it was difficult to place a con-

tract, but it was impossible to obtain any guarantee as to the date of delivery. The effect on the 1920 fair was to make it a buyers' exhibition. Goods of every kind were in strong request, and manufacturers were in a position to make their terms. To-day the pendulum has swung completely round, for the fair is held at a time of a world-wide and unprecedented "slump"; and this time it would be correctly described as a sellers' fair. Manufacturers are now in a position to promise immediate delivery of every class of goods. Their one anxiety is to find buyers, and if the estimate of those who propose to attend the fair turns out to be approximately correct, we may, I think, look forward confidently to good business resulting.

Buyers, it must be remembered, are not actuated by conditions at the moment. They are concerned with what will be the probable position in the course of a few months' time. And it is on that ground that I am an optimist regarding the fair. All the available evidence goes to show that the present trade depression will not be a thing of long standing, and that being the case buyers must make their preparations accordingly, or run the risk of being caught "short." The prospect of the introduction of an export credit scheme, thus enabling a rapid resumption of trade with South-Eastern Europe, is also going to make a tremendous difference. I only wish it had been possible to complete the arrangement of the scheme before the fair opened. It could have been done, and it was extremely advisable that it should have been done.

Interest in the Near East.

One thing which specially interested me in my talks with the representatives of the exhibiting firms was to find out the eagerness that existed to do trade with the Near East. Owing to the unfortunate conditions that have existed since the end of the war, some firms have had a sorry experience of commerce in the Levant, but in not a single case—and I spoke to a great number of representatives—was there the slightest suggestion of an inclination to avoid that field. That, to my mind, is an omen of great hope for the future, and it shows very plainly that the efforts made over a long period of years, and in which this journal has played a foremost part, are at last beginning to bear fruit. It is sincerely to be hoped that the new-born enthusiasm of so many firms to enter the Near Eastern markets will not be killed by adverse experiences. Provided they are careful to follow the advice of the authorities and of the local Chambers of Commerce, they will find in the Near East a rich opening for trade, but if they embark upon it without enlisting the experience of those familiar with the peculiar trade conditions of that region, then they will be almost certain to come to grief, and in so doing will render a great disservice to the cause of British trade interests there by helping to make that trade outlet once more an unpopular sphere for trade endeavour.

And now I will turn to the exhibits, and, in reading my review of these, I trust my readers will bear in mind the fact that I am not gifted with omniscience, and that in the space of a few short hours before Press Day, it is impossible to do otherwise than gain the most fragmentary impressions of so comprehensive an exhibition.

Musical Instruments.

I propose first to touch on the musical instruments section. Poor and unsatisfying last year, it now presents a very different picture; and, indeed, is not far now from meriting the description of a representative assemblage of this old-established English industry. Some famous names

CREDIT NATIONAL OTTOMAN

(Established by Imperial Decree dated January 1, 1917.)

(late President of the Council of State).

Transacts every kind of Banking Business and undertakes Commercial, Industrial, Mining Enterprises, Public Works, etc.

are still lacking, but no doubt it will not be long before they, too, recognising the priceless advantages for publicity offered by the fair, will join the ranks of exhibitors. Notable among the stands was that of the Chappell Piano Company, who have on view a most interesting selection of their productions. Their representative, discussing the outlook in the Near East, stated to me that Constantinople, Egypt, and Smyrna had proved to be good markets for musical instruments, while the firm had also been successful to some extent in the Balkans. The pianos and pianoforte players of Messrs. Chappell stand climatic changes well, and a forceful policy should greatly enlarge their market in the Near and Middle East as conditions become more favourable. Other firms I noted exhibiting admirable pianofortes and player pianos were Messrs. Allison Pianos, Ltd., Messrs. Broadwood, White, and Co., Messrs. Charles H. Challen and Son, Ltd., and Messrs. John Strohmenger and Sons, Ltd. A particularly interesting stand was that of the Bell Piano and Organ Co., Ltd., showing various examples of organs and harmoniums. For the products of all these firms there ought to be a good market in the Near East. Messrs. Besson and Co., Ltd., and Messrs. Thomas Dawkins and Co., Ltd., showed a good selection of band requisites; also Messrs. Samuel Barnett and Sons, Ltd., who, among other exhibits, were also showing their well-known "Decca" gramophone, which should prove very popular in the Near East. Other firms showing notable exhibits of gramophones were Messrs. Craies and Stavridi and the Sterno Manufacturing Co.

Cutlery, Silver and Electro-Plate, etc.

This is, I think, one of the most interesting sections of the fair. It is much more imposing and comprehensive than has been the case on previous occasions, and the choicely arranged stands make a rare show with their fine selection of the products of Birmingham and Sheffield. A stand which specially attracted me was that of the Sheffield Steel Products, Ltd., who have on view a most varied assortment of magnificent cases of cutlery, together with silver plate, and tools of all descriptions. Messrs. William Hutton and Sons, Ltd., show an attractive range of their products, including silver and electro-plated goods, stainless steel, and fancy metal articles, to say nothing of some exquisite vases. Another stand to which I was attracted was that of Messrs. John McGlory and Sons, Ltd., who display table and pocket cutlery. Messrs. James Dixon and Sons, Ltd., show silver

and electro-plate ware of all kinds; Messrs. Edward Barnard and Sons, Ltd., have on view some very fine examples of silver, gold, and electro-plate ware, while another interesting stand is that of Messrs. Warrillows, Ltd., who exhibit jewellery cases, jewellers' sundries, etc. It is impossible, unfortunately, to attempt to do justice to this particularly complete section. To do that I should have to devote all the space that is available for this present article, and that is unfortunately impossible, and in consequence numerous exhibits that I should like to have noticed must be passed by unmentioned.

Toys and Games.

Were the general public admitted to the fair, I suppose this would be by far the most popular section. It certainly contains everything that could be calculated to entertain the young mind. Games there are in plenty of all descriptions; some that I had never seen before and which I can well imagine are bound to enjoy a great vogue. Then there are battalions of soldiers, and regiments, if not divisions, of dolls for the girls, while the novelties would exhaust the limited resources of my pen were I to try to describe them. Among the many firms whose exhibits deserve special mention is Harper's Novelty Toy Company, Ltd., showing constructional and picture puzzles, etc. I was glad to learn from the representative of this firm that considerable business has been done with the various Near Eastern markets. But that, indeed, as I have already remarked, was the story universally told to me at the exhibition. The English Novelty Company show some remarkably good wooden toys, and they are catering specially for the export market. Another interesting stand was that of the British Metal and Toy Manufacturers, Ltd., who display an excellent variety of mechanical and non-mechanical metal toys, including clockwork trains, motor-cars, model vertical steam engines, etc. I shall have some more to say about this section in my concluding article on the fair, in which I shall deal with the remaining sections, as it is of special interest, seeing that it represents virtually a new item in our export trade. Before the war Germany and Austria held the trade in cheap toys and games. The quality of the work shown by the firms now exhibiting indicates very plainly that if only they are not handicapped by costs they should have little difficulty in taking the place of the Central Powers in the Eastern bazaars.

NATIONAL BANK OF TURKEY

(Affiliated to the British Trade Corporation).

ESTABLISHED 1909 BY IMPERIAL FIRMAN.

CAPITAL - - - £1,000,000 Sterling.

BOARD OF DIRECTORS.

CONSTANTINOPLE.

S. DE BILINSKI, C.B.E. (Chairman).
SIR ADAM BLOCK, K.C.M.G.
F. EDWIN WHITTALL, C.B.E.
H.E. AHMED DJEMAL BEY.
H.E. NAIL BEY.

LONDON.

A. G. M. DICKSON (Chairman, London Committee).
SIR HENRY BIRCHENOUGH, K.C.M.G.
C. S. GULBENKIAN.
R. H. MACAULAY.
E. N. MEYER.

Head Office: CONSTANTINOPLE (Union Han, Galata).

Telegrams: "BRITBANK, CONSTANTINOPLE."

London Office: 50, CORNHILL, E.C.

Telegrams: "NATBANK, LONDON."

Branches: STAMBOUL, SMYRNA.

Transit Warehouse: STAMBOUL.

Bonded Warehouse: TUTUN GUMRUK, STAMBOUL.

The Bank has Agents in all the principal Cities of Europe, America, and the Far East, and has Correspondents throughout the World.

Every description of Banking business, in all its Financial and Commercial branches, undertaken.

Business Houses trading with Turkey can insure Foreign Exchange with the Bank. Banks, Commercial Houses and others having interests in Turkey are invited to apply for terms.

Manufacturers and Merchants may address their enquiries to the Head Office for Trade Lists of Importers and Exporters.

ENGINEERING.

The Fuel Problem.

From all quarters one hears of the scarcity of fuel. In India exports of coal have been prohibited with the exception of a small supply for the Ceylon State Railways, a supply that is to come to an end in March. In Latin America extraordinary efforts are being made to increase the output of such coal as is to be found in Brazil and Chile; in Germany a Government Bureau has been appointed to work in conjunction with manufacturers to see what use can be made in industry of the peat brown coal and lignite which is obtainable in fairly large quantities in that country. Needless to say, engineers in all these countries are turning their attention to the possibilities of conserving supplies of high-grade fuels by using low-grade and waste coal in the pulverised form which is claimed to possess so many advantages.

A system in which the fuel is delivered to the burners by means of air pressure instead of by conveyors or other mechanical means is said to be giving every satisfaction, and as it has now been in use for nearly two years sufficient time has certainly been allowed in which to give a mature judgment. In one of the first installations the fuel was carried a distance of rather over 1,500 feet by air pressure, and in some later plants this distance has been exceeded. The powdered coal is blown through pipe-lines four inches in diameter, and such is the speed and ease at which it can be handled that it is possible to convey four tons of the fuel the distance mentioned in slightly less than five minutes. Of course, such speed of handling would not be possible were the coal not powdered to the very finest limits; indeed, so minute are the particles that it might almost be said that the coal was reduced to colloidal form.

The powdering is preceded by passing the coal through a crushing machine of the double-roll type, by which it is broken into pieces not exceeding one inch or one and a quarter inches in size in any direction. It is then passed through a magnetic separator, which removes any fragments of iron or iron ore, after which it passes through a second rough-crushing machine, which reduces it to fragments not exceeding half an inch in area or length.

These fragments are then carried by means of a screw conveyor to a drying machine where by heated air and other means, such as causing the fragments to be thrown on to hot plates, so much of the moisture is removed as to leave the coal containing not more than one per cent. of water. A pyrometer, with recording instruments at the discharge end of the drying machine, is used to enable the attendant to see when the coal is ready for removal.

After this treatment, which is carried through very quickly, the coal is elevated by means of an endless chain of buckets to a bin, from which it is discharged into a patent pulverising machine provided with an air-separation device. The quantity of coal admitted to the pulveriser is regulated by means of rack and pinion gates in the end of spouts, and each pulveriser is further equipped with a compartment feeder for further regulating the admission of coal.

From a description of the plant it appears that the pulverised coal is removed from each mill by an exhaustor or motor-driven fan, which, running at a constant speed, lifts by means of a partial vacuum all coal particles of a sufficient fineness, and so maintains a uniformity of product. The dust is carried up by pipe-lines to a further set of separators of the "cyclone" type, and all particles considered as too coarse are returned to the pulverisers. The dust is finally deposited in a steel bin into which air is admitted under pressure, the dust being driven in this way along the pipes to the point of use. In spite of the machinery involved, it is said that the results obtained show a considerable economy over other methods of pulverising and distribution.

A Heat Treating Furnace.

A description of a heat-treating furnace which contains some novel features is to hand from a correspondent who says that the furnace has been in operation for some time and has given uniformly good results. It was designed as a substitute for the three separate units usually required, one of which heats the steel to a temperature of about 1,500 degrees Fahr., a second heating it further up to 2,350 degrees, and the third consisting of a chamber in which the temper of the metal is dealt with in either a dry heat or an oil or lead bath. In the furnace mentioned all these three steps are carried out simultaneously with the use of a single burner employing either gas and air, gas and oxygen, or fuel oil combined with either oxygen or air.

I understand that the furnace is cylindrical in shape, this design having been chosen to ensure uniform temperatures and the elimination of cold corners, and operates with a single burner which is not built into the furnace. There are three chambers, the lowest one for hardening, the intermediate one for pre-heating, and the top compartment for

drawing the temper. The temperatures in both the intermediate and the lower compartments are determined by a pyrometer, and a thermometer is employed to determine the drawing temperature in the top division. This is controlled by an air inlet from the main air supply line and is operated by a valve and a mercury air gauge. It is pointed out that both the intermediate and the lower chambers have a reducing atmosphere, thus preventing pitting or scaling of the steel that is being heated.

My informant says that the furnace can be operated easily by one man, and that it will handle steel parts, such as milling cutters, up to four inches in diameter and ten inches in length. The time required to bring the lower compartment to the proper hardening temperature from a cold start is ten minutes when ordinary tool steel is being treated, 20 minutes being necessary when dealing with high-speed steel. The temperature can be raised from 1,500 to 2,250 degrees in a very short space of time, and throughout the operation the temperature is under perfect control.

A New Rim.

An entirely new departure has been made in connection with wheel rims for automobile use, the object being to facilitate the removal of the outer cover or the replacement of the inner tube, where it has been necessary to remove these for the purpose of repairing a burst or puncture. A certain amount of speculation has existed as to the actual form of the new rim, and the principles on which it depends, but this has now been set at rest by the statement that sets of wheels of the new type have now been made and subjected to severe tests by an engineering expert.

As a result of these, this gentleman writes:—"I have witnessed the removal and replacement of a number of covers and tubes. The average time taken for removing the complete tyre, taking the tube from the cover, replacing the tube within the cover, and fixing the complete tyre again on the wheel was only three minutes, two minutes of which represented the time occupied in removing the tube and replacing same, the unlocking and locking of the flange taking only one minute. I do not know of any device which can compare with this rim in regard to the facility with which covers and tubes can be removed and replaced." I am looking forward to seeing this new rim on the road, and trust it will answer as well in practice as it appears to have done on test.

ENQUIRY BUREAU.

Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.

Replies should be addressed "The Enquiry Bureau, The Near East, 1, Devonshire Square, London, E.C.2."

ADVERTISERS in and annual subscribers to "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.

No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.

Agents Wanted Abroad.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau, The Near East," 1, Devonshire Square, London, E.C.2," when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

105. Engineering and general contractor in Mosul, Mesopotamia, wishes to get into touch with manufacturers in Great Britain.

106. Old-established English trading company with branches in Mesopotamia and Persia is willing to accept agencies there for manufacturers, etc.

107. Old established Turkish firm handling general stores situated in Smyrna and having branches in the interior invites exporters to quote prices for groceries. The firm also acts as agents for articles of general consumption in Asia Minor.

108. Hemp manufacturer in Croatia wishes to get into touch with rope manufacturers who would purchase hemp.

109. A reliable firm of Egyptian hand-made cigarette manufacturers and exporters desire to get into touch with British firms importing Egyptian cigarettes.

110. An engineer-architect in Bulgaria would like to get into touch with British manufacturers of flour-milling machinery who are prepared to consider the opening-up of business in Bulgaria.

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

112. An Alexandria firm wish to enter into business relations with United Kingdom firms dealing in the following exports:—Beers and stout; salmon, sardines, tinned fruit and vegetables; coconut oil; gunny bags; pepper, rice, flour and soap.

NEAR EAST MARKETS.

LONDON PRODUCE REPORT.

Dried Fruit.—On the whole the market is very firm. Currants have been in steady request, though business remains somewhat restricted. There has been a brisk demand for sultanas, while figs at last seem to be coming into their own, judging by the gradually increasing business that is being done. More interest is also being shown in Persian dates.

Sugar.—There is no change to report. West Indian crystallised has been done at 63s. to 64s. 6d. American granulated has come to business at 72s., and white Mauritius at 71s. Home refined has continued in good demand at the scheduled rate.

Coffee.—A steady tone has characterised the market. The futures market has been firm. Quotations are:—March, 43s.; May, 45s. 6d.; July, 47s.; September, 48s. 3d.; December, 49s.

Oilseeds.—On the week rates are rather firmer. Indian linseed has come to business at 19s., a decline of 6d. La Plata, however, is 1s. 3d. up at 18s. 9d. Rapeseed has been firm, with Toria 6d. up at 19s., and bold Ferozepore quoted at 18s. Cottonseed has been steady, with Egyptian black 6d. up at 10s. 9d.

Seed Oils.—Oils have been variable. Linseed oil has advanced 1s. to 34s. Rape oil is 2s. down at 48s. Refined cotton oil is 2s. up at 40s., while the Egyptian variety has gained 1s. at 31s. Turpentine is 7s. down at 63s.

CURRENT PRICES.

General Produce.—Bacon, 180s. cwt.; butter, 298s. cwt.; cheese, 160s. cwt.; chillies, 125s. cwt.; eggs, 30s. 6d. per 120; cloves (Zanzibar), 10½d. lb.; cocoa (Ceylon, good to fine), 81s. cwt.; coffee (Costa Rica), 120s. cwt.; East Indian bold, 112s. 6d. cwt.; Mocha longberry, 111s. cwt.; ginger (washed cochim), 37s. 6d. cwt.; hams, 160s. cwt.; lard, 125s. cwt.; nutmegs (110's to 80's), 10½d. lb.; pepper (Singapore black), 4d. lb.; pepper (Muntok white), 8½d. lb.; raisins (Valencia), 130s. cwt.; sultanas (Smyrna), 119s. cwt.; currants (Vostizza), 90s. cwt.; sugar (granulated), 72s. cwt.; No. 1 cubes, 76s. cwt.; Mauritius, 70s. 6d. cwt.; tapioca (fair Singapore), 2d. lb.; sago (small pearl), 23s. 6d. cwt.; sago flour, 16s. 6d. cwt.; rice (Rangoon No. 2), 13s. 9d. cwt.; rice (bran Rangoon), £6 12s. 6d. ton; tea (Indian), 7d. lb.; Ceylon, 6½d. lb.; Java, 3½d. lb.; wheat (Australian), 87s. 6d. qr.; wheat (English white), 65s. qr.; wheat (La Plata), 80s. qr.

Metals.—Aluminium, £157 10s. ton; bismuth, 12s. 6d. lb.; antimony (English regulus), £39 12s. 6d. ton; copper (standard), £71 12s. 6d. ton; copper (electro), £79 10s. ton; gold bars, 106s. 3d. oz.; iron (No. 3 Cleveland), 195s. ton; hematite (mixed number), 220s. ton; lead (soft foreign), £71 12s. 6d. ton; Manganese Poti, 2s. 2½d. unit; molybdenite, 60s. unit; nickel, £210 ton; platinum, 310s. oz.; plumbago, £35 ton; quicksilver, £12 7s. 6d. bottle; silver bars, 3s. 0½d. oz.; spelter (G.O.B.), £25 7s. 6d. ton; tin plates (20 by 14), 31s. 6d. box; tin (standard), £164 17s. 6d. ton; wolfram, 15s. 6d. unit; zinc sheets, £39 ton.

Chemicals.—Acids: boric, 75s. cwt.; oxalic, 1s. 0½d. lb.; citric, 2s. 4½d. lb.; tartaric, 1s. 11½d. lb.; ammoniac (sulphate), £25 12s. 6d. ton; arsenic (white powdered), £51 ton; benzole (standard), 3s. 2½d. gallon; bleaching powder (35 per cent.), £20 ton; borax crystals, 38s. 6d. cwt.; cream of tartar, 162s. 6d. cwt. Potassium: bi-chromate, 1s. 2½d. lb.; chlorate, 6½d. lb.; caustic, £60 ton; nitrate, £58 10s. ton; permanganate, 2s. 1½d. lb.; prussiate yellow, 1s. 3d. lb.; sulphate (90 per cent.), £34 10s. ton. Sodium: crystals, 150s. ton; bi-carbonate, £10 ton; bi-chromate, 9½d. lb.; alkali (58 per cent.), £9 10s. ton; chlorate, 4½d. lb.; caustic (70 per cent.), £22 10s. ton; hyposulphite, £23 10s. ton; prussiate, 9½d. lb.; nitrate, £20 10s. ton; glycerine (crude 80 per cent.), £105 ton; glycerine (industrial, 125 per cent.), £155 ton; sulphate of copper, £35 10s. ton; sulphate of iron, 150s. ton; lemon oil, 4s. 3d. lb.; quinine, 3s. 6½d. oz.; red lead, £41 ton; white dry lead, £45 ton; white ground lead, £54 15s. ton.

LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended February 17:—It must be months since business in this department has ruled as slow as during the past week. The inquiry has been negligible, and when a genuine buyer has put in an appearance he has had little difficulty in securing his cotton at a very much lower price than the figure shown in the official quotations. Cotton is pressed for sale in many quarters, but at the moment the consumer is not in a position to pick up cotton, even when the price appears to be pence under the market value. The small lots that have changed hands have been principally of Sakel growth, grading "good fair to fully good fair," and a small proportion of "upper cotton," the latter growth is quoted in Egypt at a favourable price compared with the American contract, and the basis is likely to steady somewhat from now onwards. The other growths still have margin for further decline on to-day's price of contracts. Sales 600 bales. Upper and brown show a decline of 50 points on the week, whilst Sakellaridis 100 points, with "fair" and "extra fine" 50 points down.

LANCASHIRE COTTON.

Outlook Somewhat Improved.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Monday.

Though there has not been any general improvement in the market during the week, there has certainly been a little more cloth demand, and in some quarters an increased business has been done. There are still many discouraging features about, and the day-to-day fluctuations in the price of raw cotton are naturally harassing trading developments. Stocks of dear goods are gradually being reduced, and, as there is certainly a shortage of Lancashire goods in the outlets abroad, it is only a matter of time when buyers will again commence to operate freely. But nobody can prophesy when a revival of demand will come about. The further fall in the price of silver is causing buyers to be wary before committing themselves to lots of weight. The yarn section has been full of irregular features, Egyptian counts in particular having been dull of sale. It is quite impossible for spinners to clear the output of the machinery, even when running reduced hours. Stocks are accumulating, and at the moment no particular relief is in sight. On the 11th inst, the Egyptian Fully Good Fair Sakellaridis spot rate was 17.50d., and it has since declined to 16.50d. Only scattered cloth transactions have been reported for Egypt, and the outlook in the Near Eastern outlets is generally uncertain. Isolated sales have taken place in special lines for Persia. Inquiry for India has been in evidence, but any sales that have occurred have been of slight importance. China is the most promising outlet, and some fair lines in white shirtings, sheetings, and fancies have been booked. The remaining outlets, both east and west, show some interest, but sales have been patchy. In home trade circles trade has not developed on free lines. American yarns have been in retail demand and irregular in price.

CONDITIONS IN BULGARIA.

An Anxious Period.

A brief review of the position in Bulgaria appears in the current issue of the market review of the National Bank of Turkey, from which we give the following extracts:—

The predominating factor in the market to-day is excessive nervousness. This state is general throughout the whole country without exception. Things are so bad that the retailer is to-day buying in such small quantities that he is ordering half pieces. Rumours of the crisis existing in Constantinople are going from mouth to mouth, and all are expecting a crash in this country. From all sides it is said to be inevitable, and it is hard to see how it can be avoided. The old-established firms will be glad when it comes, and business will certainly improve when this unpleasant uneasiness ceases to exist. There is also talk of the moratorium being raised. The cry of the Bulgarian merchant to-day is that he does not know what is the true level of prices, and whether basis has been reached. Until things are more steady he is like a man in the dark and is afraid to move right or left. Like others he would like to close up shop altogether until brighter prospects are in view. The experience of a British firm lately with several shipments to this country has been exceedingly unpleasant. The goods which were ordered on a falling market were all unaccepted on arrival in this country, and the manufacturers are in consequence faced with considerable losses. It hardly seems advisable under present circumstances to ship to Bulgarian merchants unless sufficient deposit or guarantee is put up beforehand to make it practically impossible for the buyer to get out if he should so desire. It is known that merchants in the country have sacrificed a 20 per cent. deposit, and refused to take delivery.

The Germans are preparing to sweep the field. In the iron and steel line they appear to wipe up all the competition. Their prices are extremely low, and they are quoting freight rates from Hambourg to Bulgarian ports at a price of about one-third of those existing from England to Bulgaria. In cloth they have also booked up many orders. They are giving credit terms, and appear to have the fullest trust in the local buyers. It is reported that a contract has been signed by a group of Belgian magnates and the Bulgarian Government for the supply of rails and rolling stock, to the value of a hundred million francs. The contract must be completed inside two years. The arrival of the Belgian representative at Sofia is expected.

The custom duties on goods imported into Bulgaria from Allied countries have now been raised. The 600 per cent. increase to bring up the duties to gold standard, as allowed by the Peace Treaty, has now been raised to 800 per cent., as from January 1 of this year.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for December:—

Gum.

The exports of gum were 5,013 kilos. of bleached of the value of ££292; 178,610 kilos. of hashab, of the value of ££8,652, via Port Sudan, and 14,893 kilos. of hashab, of the value of ££722, via Halfa.

Kordofan Province.—3,503 kantars were sold in El Obeid market during December, as against 7,313 kantars during the same month last year. The average price was ££1,006 per kantar of 100 rottles. Arrivals from Nahud were 1,686 kantars, as against 11,304 kantars last year. 1,266 kantars were sold at Um Ruaba at 95 PT. per kantar, as against 2,210 last year. 3,750 kantars were sold at Rahad at ££1 per kantar, as against 5,250 last year.

Sennar Province.—12 tons of hashab and 29 tons of talh gum were exported by rail during the month.

Cotton.

Red Sea Province.—It is anticipated that the market will open towards the end of January and will probably continue until the end of June. Picking of cotton from early cultivated area close to Tokar town is expected to begin shortly.

Kassala Province.—The area under cotton this year is very large indeed, and, on the whole, the cotton is in a very healthy state; the crop is estimated at 11,000 to 12,800 kantars of 315 rottles, unguined.

Berber Province.—Gendettu, on November 27, was looking extremely well, except the cotton at the south and at El Hosh, which was poor in places. It was also disappointing on some very hard and heavy bits of soil which drain badly. Good work was being done with further clearing of the forest land, and a good many fellata had arrived to pick. 410 kantars had been picked and there was only a little local boll-worm. Cotton near the Kitiab pump site was only fair, and very uneven on worn-out sagia land. At Zeidab, the native cotton on the island was fair, especially where the land had been ploughed.

Dura.

Kassala Province.—The assessment of Ushur is complete in Gedaref, Mefaza, and Gallabat, and is still proceeding in Kassala and Rutana districts. In Kassala and Tamarein the assessment can hardly be finished till well into February, as a fortnight ago the natives were still sowing dura in Gashdai, the extreme northern point reached by the Gash Flood. The grain crop, on the whole, is a very large one, but the damage done by the "andat" bug has been very extensive, particularly in parts of Gedaref and Gallabat, and the earlier sown flood crops of Kassala; in places the damage is as much as 50 per cent. of the crop. According to native reports the appearance of the "andat" coincides with years of exceptionally heavy rainfall. Gedaref, where the rainfall measured 40 ins., Gallabat, with over 50 ins., and the exceptionally high Gash flood in Kassala, would seem to bear out this view. The average market prices were £1.068 m/ms at Kassala and 70 PT. at Gedaref per ardeb of 300 rottles (45 kilos.).

Sennar Province.—69 tons of dura were exported by rail during November.

Berber Province.—At Wad Hamid there is a lot of fair dura, with a little stem-borer. The price of dura fell from 270 PT. in November to 240 in December per ardeb of 380 rottles, and feterita from 167 to 150 PT.

Upper Nile Province.—The price of dura varied from PT. 70 to PT. 90 per ardeb of 300 rottles. The crop is a good average one, except at Renk, where the rains failed.

EGYPTIAN CROPS.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in January:—

Wheat and Barley.—The weather was, on the whole, favourable. Rains which fell since the closure of canals for clearance have had some beneficial effect on the crops except in places where fields had been watered just before the closure. In early-sown fields the crops are in a very good condition, while in localities where sowing took place as a result of the law-restricting cotton areas, the crops are not quite satisfactory owing to late promulgation of that law. Sowing has now been completed everywhere and manuring is being carried out. Ears have already appeared in a few early-sown wheat fields. With exception of some negligible attacks of rust and cut-worm, the crops are practically free from pests.

Beans.—The weather was favourable. In lower Egypt, early-sown fields are in flower, and pods have formed in middle and upper Egypt. Some cultivators have already started cutting the green pods for human consumption. Some slight attacks of broom-rape (Halook), rust and cut-worm have been noticed. The condition of the crop is satisfactory.

Lentils.—Flowering is general in early-sown fields. Cut-worm attacks are reported from Qena and Aswân. Areas under this crop seem to be larger this year.

Sugar-cane.—Cutting for sugar factories started early in the month under review. The yield is expected to be an average one. Attacks of the stem-borer are in some parts normal and in others insignificant. There were also very slight attacks of mealy bug in Qena and Aswân.

Bersim.—The second cutting is general, while the third is being taken in early-sown fields. The crop is very healthy and in a good state of growth.

IRREGULAR PRICES IN RAW FUR.

The report of the London Fur Trade Association on the January raw fur sales states: The great depression in the fur trade during the last few months is steadily abating, and a much more confident feeling exists. The change was brought about mainly by the extraordinarily large number of buyers attracted to these sales by a prospect of low prices. The Continent, particularly Germany, was strongly represented, also the home trade, and there was a fair amount of orders from America, but France took very little interest in the sales. The New Year opened under extremely unfavourable conditions. The large stocks of furs in the hands of brokers, both here and in America, the continually falling values, and the uncertainty as to when the lowest prices would be reached, had the effect of bringing trade to a complete standstill. Under these circumstances the present sales were anxiously awaited for the new basis of values.

The first week of these sales (Chinese, Japanese, and Australian goods) was very disappointing; commencing, however, with the Hudson's Bay Company's collection, nearly all articles sold well, with good competition, at figures which, on the average, are somewhat below those ruling in October, some articles being higher. It is considered that the liquidation of such large stocks of goods will have an excellent effect upon trade, and if a similar happy result is obtained at the forthcoming St. Louis sales the future may be looked forward to with some confidence.

The fresh crop of American goods is much shorter than usual, and very little has been shipped to Europe. The bulk of the collection at these sales, therefore, consisted of stale goods, and it is most satisfactory to note that a very substantial part of these has now been disposed of. The latest news from America is also decidedly reassuring. The sales in New York, and especially in Montreal, have passed off much better than was anticipated, and conditions on the other side appear to have improved considerably. The quotation given show the course of prices of the articles which are most interesting to the home trade, and the fluctuations are based upon the last October sale.

Chinese and Japanese furs, no demand, practically all withdrawn; Australian opossum, best blues, October prices, pale and red, declined 25 per cent. to 30 per cent.; Wallaby, an inferior collection, declined 40 per cent.; Australian fox, Red, an inferior collection, declined 35 per cent.; silver fox, good silvery skins, full October prices; others cheaper; cross fox, best grades, advanced 15 per cent.; others, full October prices; blue fox, best grades full October prices, poor colours declined 20 per cent.; red fox, declined 20 per cent.; white fox, declined 20 per cent.; beaver, advanced 10 per cent., advance principally in large skins; otter, declined 20 per cent.; lynx, advanced 15 per cent.; marten, advanced 20 per cent.; Russian sable, unaltered; ermine, a poor collection, better grades full October prices, others declined 20 per cent.; chinchilla, mostly withdrawn; stone marten, unaltered; baum marten, unaltered; skunk, fresh skins rather higher than October, stale skins declined 15 per cent.; civet cat, all stale goods, declined 20 per cent.; American opossum, large, good skins, declined 15 per cent., seconds and smalls declined 25 per cent.; brown musquash, declined 15 per cent. to 20 per cent.; southern musquash, unaltered; black musquash, unaltered; raccoon, advanced 10 per cent.; mink, best grades unaltered, other grades declined 15 per cent.; Persian lamb, declined 25 per cent.; squirrel, dark, unaltered, reds, declined 40 per cent.; kolinsky, a poor collection, mostly withdrawn; fitch, declined 20 per cent.; white hare, dressed unaltered, raw withdrawn; wolf, best grades unaltered, lower grades declined 25 per cent.; black bear, unchanged; brown bear, unchanged; grizzly bear, unchanged; S. American fox, poor collection, declined 10 per cent.; mole, mostly withdrawn; nutria, unaltered.

COMPANY MEETINGS.

CREDIT FONCIER EGYPTIEN.

The following is a translation of the report of the Credit Foncier Egyptien, which was presented to the shareholders at the annual general meeting, held at Cairo, on January 19:—

It is of interest to record that in the course of the past year the realisations of loans, which had greatly decreased since 1914, rose to the point of approaching the pre-war average. Important transactions in land and real estate effected at high prices have, in fact, necessitated new demands for credit. If the total of redemptions surpasses, nevertheless, that of conversions—although the expropriations have come to an end—it is because the redemptions anticipated have attained in 1919-20 the record total of £E1,543,457. Numerous borrowers profited by the prosperity of the country to diminish their mortgage debt; the arrears were reduced at October 31, 1920, to £E1,125,932, the account of "Tiers-Adjudicataires" was reduced to £E199,167, and the redemption of the "Domain" carried out satisfactorily. Our mortgage position has thus improved at the same time that the course of business tends to become normal.

The financial improvement to which these various factors testify has been caused principally by the rise in the price of cotton, which, ranging from 15 to 20 talaris before the war, has followed a rising curve, the summit of which was reached in February, 1920, when it was quoted at the sensational rate of 196 talaris. The fall has not been long in showing itself, at first relatively slowly, and then extremely rapidly as the new crop was offered. Egypt has, in fact, suffered the shock of violent oscillations of price and the crises which have consequently affected the various classes constituting the body of buyers. In November, 1920, the price of 33 talaris was recorded. The exports to December 3 only amounted to 724,550 kantars, as compared with 1,933,161 kantars at the same date the previous year. If this sharp decline has produced an inevitable slackening in the receipts, but has not brought them to a standstill, it is precisely because of the strength of the position arising from the profits realised in previous years. The disposable funds which we have saved will permit us to continue all the temporary aid to Egyptian agriculture of which it has need in these difficult circumstances.

The balance of the account for annual and six-monthly payments and interest amounted, at October 31, 1919, to £E1,284,563. Adding the maturities of the year, £E2,062,142, we have a total of £E3,346,705. At October 31, 1920, our arrears were reduced to £E1,125,932, or a total collection of £E2,220,773. Provision for losses on arrears showed a balance at October 31, 1919, of £E469,298. It has been reduced to £E456,227.

The sales of the year have not only left intact the reserves of £E459,008, which figured in our last balance-sheet, but we have obtained at net cost a profit of £E15,695, which has been carried to the profit and loss account. The total of our collections amounted to £E5,751,153. The new mortgage loans have absorbed £E1,856,747, and the total of our disbursements has not been more than £E4,781,737, leaving an excess of receipts of £E969,416. That sum will be found in the balance-sheet in the difference between the total of the assets at October 31, 1920, of £E14,287,956, and the corresponding total at October 31, 1919, of £E13,318,540.

The balance of the account, Sundry Assets, stood at October 31, 1920, at £E13,920,332, including £E3,000,000 of Egyptian Privilegiée $\frac{3}{4}$ per cent., which at the cost of £E1,728,119 represent an investment at 6.01 per cent., a rate of interest approximating to that of the average for our loans. It includes also at cost price 6.522 bonds in this company for the redemption of which we deemed it advisable to utilise a part of our disposable funds. The decrease in our arrears has not appeared to us to necessitate this year any addition to the special reserve for these arrears, and of which the balance at October 31, 1920, stood at £E456,227. The liquidation of the "Domain" leaves, on the other hand, unemployed the balance of the reserve constituted in view of the risks of that liquidation, or £E459,008. We have come to the conclusion that the balance of these two accounts ought to be continued in a new reserve, added to the balance of the account for contingencies against risks of loans standing at £E287,512, under the heading, "Provision and Reserve for Sundry Contingencies," which account ought eventually to cover mortgage risks, risks of exchange, and of the decreased value of sundry assets. We have allocated this year £E147,000, which brings the balance to £E1,349,747.

The provisions of the law of June 25, 1920, regarding French taxes on movable securities circulating in France has the effect of practically doubling these taxes. This increase has not played any great part in the past year. It will be felt much more

heavily in the current year. We have reduced the expense in deducting our payments of French taxes at the average rate of exchange and not at the parity of the pound, as was done before. The profits accruing from previous remittances have facilitated this transaction this year. The retention to be effected on the dividend on the shares will thus be limited to PT. 16 5-10 for coupon No. 47.

This prospect of the increase of taxes, together with the exceptional character of numerous and important collections made during the past year, compels us to maintain at PT. 130 the total of the dividend on our ordinary shares. The special account of the reserve for dividend will thus receive a new allocation of £E60,000, which will bring the balance to £E209,344. The gross profits of the year stand at £E2,146,952, and the corresponding expenses are £E1,275,878, giving a surplus of receipts of £E871,074. We have allocated to the account of contingencies for sundry risks £E147,000, leaving £E724,074, enabling the distribution of PT. 130 on the ordinary shares, and £E36.950 on the founders' shares, less French taxes, or PT. 16 5-10 for the shares which circulate in France, or of which the coupon No. 46 has been paid in France, and 12 per cent. for founders' shares liable to French taxes. If you agree to these proposals the position of the various reserve and provision accounts will stand as follows, as at October 31, 1920:—Statutory reserve, £E592,785.668, or 15,367,094.43 frs.; extraordinary reserve, £E970,773.067, or 25,165,860.45 frs.; provision for the reduction of the premium on obligations £E574,416.580, or 14,890,902.92 frs.; provision and reserve for sundry contingencies, £E1,349,747.370, or 34,990,210.50 frs.; provision for dividend on shares, £E209,344, or 5,426,934.54 frs.; total, £E3,697,066.685, or 95,841,002.84 frs.; loan account for shares of the 1911 issue, £E154,257.336, or 3,998,894 frs.; total, £E3,851,324.021, or 99,839,896.84 frs. For the account "Provision for the Amortisation of Debentures" £E920,172.226, or 23,854,108.26 frs. The assistance of our staff has given every satisfaction, and we take this opportunity of expressing to them our heartfelt thanks.

The general meeting (1) approved the accounts for the year ended October 31, 1920, (2) adopted the division of profits proposed by the board of directors, and decided in consequence on: (a) the distribution for the year on 400,000 ordinary shares of a dividend of PT. 130 per share, £E520,000, or 13,480,233.30 frs., on 2,000 founders' shares of PT. 3.695 per share, £E73,900, or 1,915,748.54 frs.; (b) the allocation to the statutory reserve of £E49,262.463, or 1,277,056.71; to the board of directors of £E24,631.231, or 638,528.34 frs.; to the reserve for the dividend on the ordinary shares, £E60,000, or 1,555,411.55 frs.; (c) to carry forward for the account of the ordinary shares £E6,021.727, or 156,104.40 frs.; for the account of the founders' shares, £E68,089, or 1,765.12 frs.; total, £E733,883.510, or 19,024,847.96, representing the amount of the profits for the year and the sums brought forward from the previous year; (3) decided that the dividend on the ordinary shares and on the founders' shares should be payable in Cairo in piastres, and in Paris and London at the rate of exchange fixed by the board of directors, less French taxes—PT. 16 $\frac{1}{2}$ for ordinary shares which circulate in France, or of which coupon No. 46 has been paid in France, and 12 per cent. for founders' shares liable to French taxes; (4) re-elected in accordance with articles 15 and 36 of the statutes as director for five years, M. L. Escoffier; (5) confirmed, in accordance with article 77 of the statutes, the appointment as directors, provisionally made by the board, of MM. G. Griollet, H. Naus Bey, and E. Suarès; (6) re-elected as auditors for one year, MM. R. Finzi and E. Berthy.

OTTOMAN UNIFIED CONVERTED 4 PER CENT. DEBT, 1903-1906.

The Council of Foreign Bondholders give notice that, in accordance with the announcement of the Council of Administration of the Ottoman Public Debt, which was published in the Press on the 4th instant (copies of which can be obtained on application to the undersigned), British holders of the above Bonds are invited to deposit with the Council (acting as depositary on behalf of the said Council of Administration of the Ottoman Public Debt) the eleven arrear coupons due March, 1915, to March, 1920, inclusive (Nos. 23 to 33), for the purpose of (1) establishing within the prescribed time with the Allied Clearing Offices the claims of the holders to repayment at the pre-war rate of exchange of the funds deposited in Germany during the war, and (2) receiving a distribution on account of one shilling and threepence in respect of each of the said eleven coupons per unitary Bond of £20.

Receipts will be issued in exchange for the deposited coupons, reserving the rights of the holders.

The eleven coupons must be deposited en bloc, and all deposits must be made before 1st March, 1921.

A special Declaration of British nationality will be required, which, together with lists, can be obtained on application.

The above-mentioned payment is subject to the deduction of income-tax and twopenny per receipt for stamp duty.

The Inland Revenue has authorised deduction of income-tax at the rates in force at the time when payment of the coupons would, but for the war, have been made.

COUNCIL OF FOREIGN BONDHOLDERS,

JAMES P. COOPER, Secretary.

17, Moorgate Street, London, E.C.2,
7th February, 1921.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

STAMBOUL, February 12.

The situation created by the fall in prices and the depression continues. The sales for Anatolia by devious routes continue on a small scale; the arrivals of merchandise have greatly decreased. As regards the export market, excluding a certain demand for mohair, which is quoted at Ps. 70-75 per oke, extra quality, all the products are neglected.

Advices from Manchester record a new fall in prices; merchants seek to dispose of their stocks by making large concessions in the price and by making sales on credit.

Produce.—The fall has continued with all products—sugar, coffee, tea, rice, etc.

Sugar.—The new offers from America, Amsterdam, and Antwerp have still further depressed prices from £50 to £44 per ton in transit. Sugar in Customs has fallen from £T41 to £T38 per 100 kilos. The crop being exceptionally abundant in all the producing countries and sales being difficult, a further fall in prices is to be anticipated.

Coffee.—This commodity is offered at more and more reduced prices. Rio No. 1 has fallen to Ps. 42 per oke in transit. The stock here is estimated at about 20,000 sacks.

Rice.—There has been a new fall in prices. American Blue-Rose has fallen to 9½ dollars per 100 kilos., as compared with 11 dollars last week. Saigon No. 1 is offered here at Ps. 15 per oke.

Flour.—Owing to large arrivals from America and Bulgaria—arrivals which are in excess of the needs of local consumption—prices have again fallen this week from £T½ to £T¾ per sack, according to quality.

ADANA.

The report for December states :—The exports of cotton from this region have been stopped as a result of the fall that has taken place, following the news from Europe and Egypt, and the effect of that fall in our market has been to create a serious crisis. The batman of cotton, quoted at the commencement of the month at Ps. 209 for 4 okes, dropped to Ps. 140 towards the middle of the month, and at the end of the month stood at Ps. 165—notwithstanding that the importing centres, such as Greece and Italy, were holding aloof. The exports of cotton during the month amounted to 582 bales.

(FROM OUR OWN CORRESPONDENT.)

LONDON, Monday night.

Almost during the whole week depression has hung over the markets, and in the majority of cases further declines are to be recorded. The general situation is responsible for this, but a contributory cause at the end of the week has been the uncertainty as to the result of the London Conference.

The gilt-edged market has not been immune from the prevailing influences, and most of the stocks have reacted. Foreign Bonds have been irregular, but there have been one or two strong features.

The Industrial group has been very dull, with, however, a few bright features. Business, however, has not been on a very great scale. Oils have been weak, while Rubbers on a further relapse in the price of the new commodity have again moved off downward.

Near Eastern Government securities have been fairly firm. Egyptian Guaranteed 3 per cent. are $\frac{1}{2}$ up at 62 $\frac{1}{2}$, as are Greek Guaranteed 2 $\frac{1}{2}$ per cent 1898 at 58 $\frac{1}{2}$. Turkish Guaranteed 4 per cent. are, on the other hand, $\frac{1}{2}$ down at 67.

The rise in Greek securities has continued. The 5 per cent. 1881 and the 5 per cent. 1884 Loan are both 1 up at 41, at which there were buyers. The 5 per cent. 1890 is unchanged at 40, and Fundings are also unchanged at 40. The 1910 Loan is the same at 30, but the 5 per cent. 1914 Loan is 1 up at 39. The 1902 Loan is unaltered at 35.

Banks are unaltered. Agricultural 3 $\frac{1}{2}$ per cent. Bonds are unchanged at 53, and the 3 $\frac{1}{2}$ per cent. Guaranteed Bonds are the same at 55. Imperial Ottoman Banks remain at 8, but National Bank of Egypt are $\frac{1}{2}$ up at 17 $\frac{1}{2}$. Land Banks are unaltered at 4 23-32.

Land shares have been irregular. Beheras remain at 7 $\frac{1}{2}$, at which there are buyers, while the preference shares are unaltered at 2 $\frac{1}{2}$. Anglo-Egyptian Land Allotments are unchanged at 3 $\frac{1}{2}$, but Egyptian Consolidated Lands are 2 $\frac{1}{2}$ down at 1s. 1 $\frac{1}{2}$ d., and Delta Lands have shed 3d. at 9s. Gharbieh Lands are $\frac{1}{4}$ down at 1 $\frac{1}{2}$. New Egyptians are unchanged at 22s., while Union Fonciere are the same at 2 $\frac{1}{2}$. Sudan Plantations have shed 1-16 at 3 7-16.

Oils are lower. Anglo-Egyptians have lost 3-16 at 2 $\frac{1}{2}$, while Phoenix are 3d. lower at 10s. 3d. Roumanian Consolidated, however, are 6d. up at 10s. 6d. Steaua Romana are 2s. down at 15.

Among Miscellaneous descriptions Abyssinian Corporations are 3s. Alexandria Waters are 6 $\frac{1}{2}$, at which there are buyers. Morums remain at 13s 3d., while Egyptian Salt and Soda are 29s.

ORANGE BOXES FOR PALESTINE.

Certain orange growers of Jaffa desire to get into touch with United Kingdom firms with the object of receiving offers for a supply for the season 1921-1922. Box shooks for about 500,000 cases will be required for delivery in Jaffa in August, September, and October. The specification for the boxes is as follows:—Three ends each 34 cm. by 27 cm. by 16 mm.; two sides each 68 cm. by 27 cm. by 8 mm.; two top and two bottom pieces, each 63 cm. by 16 cm. by 7 mm. (the top and bottom made of two of the above pieces, their width need not be exactly 16 cm. and 16 cm., but may be 14 cm. and 18 cm. or 15 cm. and 17 cm. or even 12 cm. and 20 cm.). The shooks must be solidly cross-bound with wire. Quality of wood, fir. Samples should be sent of the wood fibre for binding ends and centre. The conditions of payment should be stated. Particulars can be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned:—

Egypt.

(The London agent of the Egyptian Government is Sir A. L. Webb, K.C.M.G., Queen Anne's Chambers, Westminster, S.W., at whose office particulars of tenders marked (L) are to be obtained.)

Wood.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of wood required during six months from April 1, 1921. March 15.

Steam Rollers.—The Mechanical Department of the Public Works Office, Cairo, invites tenders for the supply of two 10-ton steam rollers. March 10.

Roofing Tiles.—The Superintendent of Stores, Egyptian State Railways, Telegraphs, and Telephones, Bulak, Cairo, invites tenders for the supply of 40,000 "Marseilles" roofing tiles. (specification, 50 millimetres). March 17.

Lubricating Oils.—The general manager, Egyptian State Railways, Telegraphs, and Telephones, Cairo station, invites tenders for the supply of 1,630 metric tons of mineral lubricating oils. (specification, 200 millimetres). April 9.

Equipment, etc.—The Director of Stores, Egyptian Ministry of the Interior, Cairo, invites tenders for the supply of stores required by that Department for the year 1921. The material required includes:—Arms, ammunition, accoutrements, ordnance stores, clothing and necessities for the police and "Ghaffir" services; harness and saddlery; fire-engine equipment; barrack and other furniture; tools; general stores. Tenders, which can only be submitted by firms established in Egypt or having a representative there, must be received in Cairo by April 18. Copies of the specifications, etc., may be inspected by United Kingdom firms interested on application to the inquiry office of the Department of Overseas Trade, at 35, Old Queen Street, Westminster, S.W.1.

Paints, Etc.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of paints, oils, tar, soap, etc., required during the first six months of the financial year 1921-1922. March 17.

Linen, etc.—The Sub-Director of Stores, Ministry of Education, Sharia Insha, Cairo, invites tenders for the supply of bed linen, table linen, etc. (7,000 metres of cotton sheetings, 8,000 metres of tulle for mosquito nets, 1,200 blankets, Morocco wool, etc.), table requisites (12,500 china plates, 4,000 glass tumblers, 3,000 knives, 2,500 forks, 2,500 spoons, etc.) required for the school year 1921-22. March 19.

Benzine.—The Secretary-General, Ports and Lights Administration, Arsenal, Alexandria, invites tenders for the supply of 1,700 tins of benzine and 3,155 tins of petroleum (1,155 naked tins and 2,000 tins in cases) for the first half-year of 1921-1922. March 16.

India.

Rails, Etc.—The Chief Engineer of the Baroda State Railways is desirous of obtaining quotations in sterling, prices to be either f.o.b. port in the United Kingdom or c.i.f. Bombay, for the following:—(1) 1,160 tons of rails, 34 lb. per yard, with 32 tons of fishplates, 10 tons o. fish bolts, and 39 tons of spikes. British standards. (2) 1,800 tons of rails, 41 $\frac{1}{2}$ lb. per yard, with 47 tons of fishplates, 12 tons of fish bolts, and 40 tons of spikes. British standards. (3) 450 tons of rails, 70 lb. per yard, 28 tons of fishplates, 5 tons of fish bolts, and 14 tons of spikes. Communications should be addressed to the Chief Engineer, Baroda State Railways, India, and sent under cover to H.M. Senior Trade Commissioner in India and Ceylon, P.O. Box 683, Allahabad Bank Buildings, 6, Royal Exchange Place, Calcutta, with the request that he will hand them to the addressee.

Water Pipes, etc.—The Municipal Committee, Simla, invites tenders for supplying, laying, and constructing cast-iron (steel or hume) water pipes, sluice valves, washout valves, specials, etc. Tenders are also invited for supplying, erecting, and running for one month a new purification plant consisting of filters, coagulating and chlorinating gear pipes, and all fittings for water supply. (Specifications at Municipal Office, Simla, Rs.10.) March 28.

SHIPPING INTELLIGENCE.

GREEK SHIPPING CRISIS.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, February 9.

Statistics of the last three months show that Greece has together with other countries been affected by the shipping crisis. The arrivals of steamers at the Piræus—the principal port of the kingdom—have decreased considerably since last October. The crews of Greek steamers now anchored in that port are without work. Purchases of steamers, which were so numerous during recent years, have entirely stopped, while orders placed for new steamers have been cancelled. A well-known shipowner who had placed a £120,000 order with a British firm cancelled it, and forfeited his deposit of £10,000. Had he not done so he would have lost £40,000, seeing that the present value of the steamer he had ordered does not exceed £80,000. Another well-known shipowner at Chios lost £125,000 from cancellation of orders.

The Greek shipping crisis is not due solely to the heavy fall in freights and the increase of world tonnage, but should also be attributed to the exorbitant wages demanded by the Greek crews, formerly so moderate in their requirements. One of the largest steamship companies in this country has been obliged to engage the services of British crews instead of Greek because the former were satisfied with smaller wages than the latter. Numerous shipowners affected by the crisis have been compelled to lay up their steamers and dismiss the crews. The *Economist* says that the Greek Government is greatly perturbed by this abnormal state of affairs, and has requested the United States Government, which, it is hoped, will shortly supply Greece with wheat and foodstuffs, to permit the transport of these supplies by Greek steamers only.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Kingsmere, for Bombay (also taking cargo for Karachi and coast ports) (Glasgow, March 2, and Liverpool, March 7).

Anchor-Brocklebank Line.—S.s. Mahsud, for Port Said, Colombo, Madras, and Calcutta (leaves London, March 5); s.s. Manipur, for Calcutta (Birkenhead, March 9); s.s. Maidar, for Calcutta (Birkenhead, March 21); s.s. Shadwell, for Port Said, Madras, and Calcutta (leaves London, March 21); s.s. Mahrona, for Port Said, Madras, and Calcutta (London, April 5).

Bibby Line.—S.s. Gloucestershire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 2); s.s. Oxfordshire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 16); s.s. Lancashire, for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 30).

Clan Line.—S.s. Clan Lindsay, for Calcutta (Manchester, February 26).

Cunard Line.—S.s. Cypria, for Gibraltar, Algiers, Malta, Patras, Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, and Sulina (Liverpool, February 26, and at Swansea, March 1).

Ellerman Line.—S.s. Trentino, for Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, March 12).

Ellerman City Line.—S.s. Melford Hall, for Calcutta (Birkenhead, February 26); s.s. City of Lahore, for Calcutta (Birkenhead, March 14).

Ellerman's Hall Line.—S.s. City of Karachi, for Bombay, Karachi, the Punjab, and Malabar coast ports (Liverpool, February 26).

French-Levant Line.—S.s. Flore, for Bordeaux, Algiers, Mersina, Beyrout, Jaffa, Port Said, Alexandria, and Cyprus (Hull, March 8); s.s. Junon, for Algiers, Piræus, Salonika, Smyrna, Constantinople, Varna, and Constantza (Hull, March 12).

Glen Line.—S.s. Glengyle, for Port Said, Port Swettenham, Singapore, etc. (London, March 10); s.s. Glenogyle for Port Said, Port Swettenham, Singapore, etc. (London, March 24).

Glynn Line.—S.s. Alaveno, for Genoa, Leghorn, Naples, Catania, Messina, and Palermo (Liverpool, February 28).

Golden Star Line.—S.s. Mediterranean Star, for Genoa, Naples, Alexandria, and Piræus (leaves Marseilles, March 1).

Maindy Line.—S.s. Maindy Transport, for Antwerp and Moroccan ports (London, early in March).

Moss Line.—S.s. Amasis, for Gibraltar, Algiers, Oran, Malta, and Alexandria (taking cargo through to Moroccan, Algerian, Cyprus, and Syrian coast ports) (Liverpool, February 26).

Harrison Line.—S.s. Benefactor, for Calcutta (Liverpool, February 28); s.s. Defender, for Calcutta (Liverpool, March 16).

Henderson Line.—S.s. Amarapoor, for Port Said and Rangoon (Birkenhead, March 9).

Holt Line.—S.s. Agapenor, for Port Said, Penang, Port Swettenham, Singapore, etc. (Swansea, March 3).

Johnston Line.—S.s. Cranmore for Piræus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 5); s.s. Portinglis, for Galatz and Braila (Liverpool, March 15); s.s. Dromore for Piræus, Volo, Salonika, Bourgas, Varna, Sulina, Galatz, and Braila (Liverpool, March 26).

P. and O. Line.—S.s. Somali, for Colombo, Madras, and Calcutta (London, February 25); s.s. Kaiser-I-Hind, for Bombay (London, March 11); s.s. Devanha, for Colombo, Madras, and Calcutta (London, March 11).

P. and O. British India Line.—S.s. Morvada, for Colombo, Madras, and Calcutta (London, February 25); s.s. Mashobra, for Bombay and Karachi (London, March 4); s.s. Hatarana, for Colombo, Madras, and Calcutta (London, March 12); s.s. Australia, for Bombay and Karachi (London, March 19); s.s. Nardana, for Colombo, Madras, and Calcutta (London, March 26).

Power Line.—S.s. Petworth, for Gibraltar and Moroccan ports (London, early March).

Prince Line.—S.s. Cyprian Prince for Tunis, Malta, and Alexandria (March 10); s.s. Black Prince for Malta and Alexandria (London, March 15).

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated February 15:—During the week ending February 5 beneficial rain has fallen in parts of the Punjab and North-West Frontier Province. General crop prospects unchanged. Bombay cotton market easy. Fine M.G. Oomra, March, Rs. 238, May, Rs. 250. Piecegoods market quiet with some retail inquiry but no wholesale demand. Sharp break in local rates of Japanese goods has created some demand, particularly in sheetings. Calcutta jute market inactive but steady. Hessians dull. At the last Calcutta Tea Auction of February 4, 20,000 packages were sold at an average price of six annas six pies per lb. Total sales to that date 537,526 packages at an average price of five annas five pies per lb. Freight rates on jute and gunnies still further reduced. No change in Bank rates.

NOTES OF THE WEEK.

The London Conference.

As no very high hopes were entertained of the success of the Inter-Allied Conference on the Near Eastern question, expectations have not been belied. The Greeks gave a clear and emphatic statement of the grounds on which they held that the Treaty of Sèvres ought not to be altered in any particular: the Turks, after a characteristic device for delaying the proceedings of the Conference, made an equally sweeping demand for the radical revision of the Treaty. As a side issue to these claims, the Turkish representatives challenged the accuracy of Greek statistics dealing with Thrace and the Smyrna district. The Allied Governments at once rode off on this issue, and put before the Greeks and Turks the proposal that an International Commission should be appointed to investigate the question of the population of these two areas, on the clear understanding that Turkey and Greece would accept the results of such an arbitration, and that the remaining clauses of the Treaty of Sèvres should be loyally accepted by both countries. To the first of these conditions the Turks agreed with an alacrity that was meant to obviate any direct reference to the second, and when required to give their answer to the second condition, felt obliged to refer the matter to Angora. The Greeks were candid enough to show their dislike of the turn that events had taken by refusing to answer until they had received instructions from Athens.

Further Delay.

In view of the fact that the one desideratum in the Near and Middle East is the inauguration of peace based on a definite settlement, the course taken by the London Conference is not a matter for congratulation. If the Turks and the Greeks agree to the Allies' proposals, there can still be no finality for another three months; if they reject them, the Conference has accomplished nothing in the week allotted to the consideration of the Near Eastern question, and that problem remains where it was a month or a year ago. There would have been a certain astuteness in a scheme which bespoke acceptance of the Treaty of Sèvres, whether modified or not, by Greeks and Turks, provided that both parties gave unequivocal assent to the proposal. That they will do this seems rather doubtful. The Greeks are manifestly reluctant to bind themselves; the Turks, with complete confidence in the issue as far as Smyrna is concerned, and perhaps also Eastern Thrace, will probably try hard to leave themselves loopholes for attack-

ing other points in the Treaty at a later date. Thus, even when the International Commission of Investigation has reported in regard to Thrace and Smyrna, it will call for just the same antecedent conditions to give effect to its rulings as are required to enforce the Treaty of Sèvres in its present form—namely, complete agreement between France and Great Britain as to their policy in the Near East and a joint resolve to enforce it at all costs. The failure to establish these conditions has been in the past, and, if persisted in, will continue to be responsible for the existing *impasse* in the Near East.

Back to First Principles.

There could be no more lurid commentary on the territorial provisions of the Treaty of Sèvres than the readiness of the Allied Conference to reopen the consideration of their statistical basis. That any room for doubt on the subject should exist in the minds of its members indicates how little weight attached to the principle of nationality in the formation of their decisions, and how one-sided was the evidence on which they tried to arrive at a settlement. In the circumstances any approach to a juster peace must be welcomed, however tardy and halting it may be. For more than two years the Allied Governments have boggled over the Near Eastern settlement, and it would be of interest if we could have an apportionment of the blame for the delay and with it a statement of the financial consequences to Great Britain and other Powers. All that is clearly known is that the allocation of Smyrna and Thrace to Greece is the work of M. Venizelos, and to this end he was absent for some twenty months from his own country. It will indeed add to the irony of his fate if the Allies undo all his work on the strength of a two months' investigation which ought to have been undertaken two years ago.

King Boris of Bulgaria.

The announcement is made that King Boris of Bulgaria is to visit the United States this year. As geographical exigencies will almost certainly compel him to pass through England, it is to be hoped that his Majesty will receive an invitation to pay an official visit to this country as well. There is no more attractive figure on a Continental throne. When a Prime Minister of the calibre of M. Stambolisky, who played such a direct part in ridding his country of an unconstitutional monarch, can boast that they have now in Bulgaria a republic of which the President is King Boris, it is evident that the young king has already won golden opinions at home in a situation which must have proved too severe a test for anyone less endowed with high character, ability, and personal attractiveness. His tour abroad can hardly

fail to promote the interests of the Balkan Peninsula as a whole, the more so if he is able to make himself personally known to the neighbouring sovereigns and peoples. The proposal that King Boris should be accompanied by his Prime Minister is open to one objection—that it must either shorten the tour or keep M. Stamboliisky too long away from Bulgaria. The danger of the prolonged absence of a Balkan Prime Minister needs no emphasis to-day.

Another Cabinet at Teheran.

Teheran is surely having its fill of political excitement these days. Hardly had we been told that the Sipahdar Azam had succeeded in forming a Cabinet which had been approved by the Shah, when fresh news came to hand that a *coup d'état* had taken place and that the Cabinet had fallen, the Sipahdar being replaced by Seyyid Zia ed-Din. The latter has not held office before, but he has for some time exerted considerable influence in an unostentatious way, and he has qualities that may make him a very valuable servant of the Shah at this critical time. The change was brought about by Persians opposed to Bolshevism, and to the feeble policy followed by the Shah's Ministers of late. On the night of February 21 a force of Persian Cossacks coming from Kasvin, numbering about 2,500, and provided with a few field guns and machine guns, entered Teheran, where they were joined by local Cossacks to the number of 500; and after a little street fighting took possession of the capital. Their leader, Colonel Riza Khan, stated that the Cossacks, having had some experience of Bolshevism, were determined to save their country from it; and that as they saw no signs of the Government making preparations to oppose the Russian advance that must be expected on the withdrawal of the British troops, they had determined to take matters into their own hands, and to free the Shah from the influence of those who had advised him so badly. The colonel has declared himself to be pro-British, but opposed to the Anglo-Persian Agreement in its present form, and to foreign interference generally.

The "New Broom."

The Shah has accepted the situation thus brought about. He is reported to have received Colonel Riza Khan, the Seyyid Zia ed-Din, and Masoud Khan, an ex-officer of the Cossacks, who are regarded as the leaders of the movement; and has charged the second-named to form a new Government. Happily, the change has been effected with very little bloodshed, but several former Ministers have been arrested, and there is talk of their deportation. But first, it seems, they will be called upon to provide some of the funds which the new Government, determined to avoid having recourse to foreign loans, will shortly need. At present, it is reported, it has funds in hand: a statement which is as gratifying as it is surprising. Martial law has been proclaimed in Teheran, and the wineshops and gambling establishments have been closed. These drastic measures will probably make the new Government highly unpopular, but, according to the latest reports, they have produced very satisfactory results so far; and it is noteworthy that the Cossacks have secured the support of the Bakhtiariis. It is, of course, too early to judge accurately of the movement, but it is not impossible that it will turn out no bad thing for Persia. Vacillation and intrigue had brought her to a sorry state, and it certainly looked as if she wanted a strong man to save her.

The Bolshevik Attack on Georgia.

In very few centres will any surprise have been caused by the Bolshevik attack on Georgia. The refusal of the Georgian Government to accede to a demand for the evacuation of the Bortchalo district appears to have provided the pretext for an attack by the Armenian Bolsheviks, who were promptly joined by Soviet troops from Azerbaijan and, apparently, by Russian regular troops also. To add to the Georgian Government's difficulties, the Kemalists are reported to have assumed an aggressive attitude, and to have presented an ultimatum demanding the instant evacuation of Artvin and Ardahan districts; and, worst of all, some of the Bolshevik peasants went over to the enemy. It

was not surprising that Constantinople—always inclined of late to expect the worst in such cases—began to send out alarming reports about the fall of Tiflis and the flight of the Georgian Government or that Moscow should have announced once more the establishment of a Soviet Republic in Georgia. Like their predecessors from the same centres, these reports were promptly contradicted, and though the Georgians admitted that they had had to retire, they were able to announce in a message dated February 27 that Tiflis had not fallen. Unfortunately, the latest reports available at the time of writing indicate that the respite was a very brief one, and there seems to be good reason to fear that Tiflis has fallen at last.

India in Parliament.

Both Lords and Commons had a foretaste last week of one of the greatest difficulties inherent in the new constitution. Parliament remains responsible in the last resort for the Government of India, but Indian Ministers are responsible to the provincial legislatures, and if Parliament insists on interfering with their activities, there is obviously a deadlock ahead. Fortunately for all concerned, it is just the kind of deadlock which, though it looks hopeless on paper, usually yields to English common sense; and the road to its solution was indicated by the Speaker, the living representative of that quality, when he said that each case must be dealt with on its merits, but that at the start of a new era the wisest course was one of self-restraint. "Dyarchy would indeed be dyarchy" if Parliament should insist on the regular exercise of its inherent powers; they may have to be used, but everybody hopes the emergency will not occur, and in the meantime the best course for both Houses is certainly to acquire the habit of non-interference, and give Indian Ministers every chance in the performance of the difficult task which lies before them.

Indian Politics.

Last week's news from India points on the whole to further progress in the direction of political sanity. The movement is, of course, gradual, and cannot be measured accurately in a short period, but, if we look back a couple of years, we shall have no difficulty in recognising the change. To put it shortly, the leaders of the unconstitutional faction have alienated the bulk of educated opinion, which was at one time nearly solid behind them, but is now more and more disposed to join with the official element in constructive work. Many causes have contributed to this result, the most potent of which is perhaps the interference with the course of education, which has compelled parents to think seriously, but the main point is that the thinking has been done. The situation is not yet stabilised, and in India there is always the risk that some accident may result in a stampede; but the new institutions will help to ballast the ship, and at the moment there are good grounds for hoping that the weight of intellect and reason is definitely on the side of the constitution.

The Danger of the Masses.

There remains the danger that the passions of the masses may be excited to the point of unreasoning rebellion. The reality of this danger is so manifest that Mr. Gandhi has departed from the programme laid down a few months ago, and has warned his followers to let the labouring classes alone, an act which must be set to the credit side of his political account. Whether his orders will be obeyed is a different question, for it is much easier to kindle a fire than to quench it, while it must not be forgotten that times are still hard over a large part of the country, and the agitators' work is all the easier in consequence; but the mere disavowal will strengthen the hands of the authorities in dealing with any dangerous agitation that may arise, and on the whole it looks as if the crest of the wave has passed. In saying this, we do not mean to suggest that there is no cause for anxiety: broken water is sometimes dangerous, and a second wave may follow the first, but there is at least a reasonable chance that when Lord Reading reaches India he may find the situation easier than it was at the time of his appointment.

THE WEEK AT HOME.

LONDON, Monday Evening.

A Narrow Shave.

The Government was unfortunate last week. While the Prime Minister was engaged in European politics in Downing Street, which will again occupy him this week, the lesser lights of the Administration got into difficulties in Parliament. On Friday, always a dangerous day for Governments since the week-end habit became general, the Coalition majority actually fell to ten over the Supplementary Estimates—those small additional demands which always annoy members. If in the present instance the Whips had not sent out prompt messages all over Whitehall, and cabled every Parliamentary Under-Secretary and Secretary—and even the Prime Minister himself—to aid in the division, the Supplementary Estimates would have been lost, the Cabinet would have been defeated on finance, and there would have been nothing for it but to resign—a pretty prelude for Dr. Simons and the protesting Germans.

The Government feel a little dizzy and shaken after this episode, but the Opposition are even more giddy—not only because they unexpectedly came so near success, but because nobody would be more embarrassed than themselves if success actually came. Without an election they could not continue a day in the present House, where they are in so large a minority; with an election, they would certainly win a good many seats, but they would hardly get a majority.

Further, even the enlarged Opposition would consist of Liberal and Labour which, in spite of Mr. A. G. Gardiner's steady pleading for a Liberal-Labour Coalition in the *Daily News*, never has come off, and does not seem likely to come off. There is not the makings of a Government here, and for that reason neither Liberal nor Labour really want to put the Government out this year.

Moreover, it is very doubtful if they want to take up foreign affairs in their present position. They would sooner take advantage of the Government's inevitable mistakes, and criticise from without—they are looking to Mr. Winston Churchill to provide them with quite a lot of ammunition—whereas once they were in office they would have to maintain a certain decent continuity in foreign affairs, and they themselves become the target of criticism. In politics, unlike war, attack is always easier than defence.

Ireland.

The Irish problem has also been a source of trouble. In the House of Lords the Archbishop of Canterbury spoke out strongly about reprisals, emphasising that this was not a political but an ethical matter; the Lord Chancellor was less convincing than usual in his reply. It is curious to recollect that a few months ago he had quite the best of the argument with the Primate on the matter of divorce, which is the Church's own particular political interest, but on Ireland, which lies rather outside the normal range of the Bishops, Lord Birkenhead failed to make runs for the Government.

This, however, was less damaging than the blow to the Irish Secretary's reputation in the Commons. In answering questions over the resignation of a general in Ireland, Sir Hamar Greenwood contrived to give an altogether wrong impression of the events that had taken place. The House, which had no other information on that phase of the subject beyond the bare fact, naturally took him at his word, and was surprised to find the next day by his own admission that events had not occurred precisely as he had stated. His credit in consequence has fallen very considerably in every quarter, and he is certainly no longer an asset to the Government. It is being rumoured that his resignation may be announced as soon as the conclusion of the present foreign negotiations gives the Prime Minister time to enter seriously into home affairs again. His critics are not found only among the Irish and the Opposition, but among his own colleagues on the Treasury Bench and in the Cabinet itself.

The By-elections.

A good deal will depend on the results of the by-elections which fall this week. In East Woolwich, where

Mr. Ramsay Macdonald is opposing a soldier, there have been some very rowdy scenes; the other constituencies are more engrossed in politics than personalities, but the prophets hint that the Government may lose one, at least, of the seats. The prophets, however, are not such safe guides as they were, for the women's vote is always an unknown quantity in these days, and it is quite sufficient to turn the tide in every case. But all the signs indicate that the Government is in for a patch of dirty weather; the chances are that one or two of the crew will be swept overboard, but the boat itself is not likely to get wrecked.

The Nottingham Conference.

The Independent Liberals have been holding a conference at Nottingham to decide their future policy as a party, but the proceedings do not appear to have been very promising. The older type of Liberal thinks that the policy of 1906 is good enough, and needs no change; the newer school, of which Professor Ramsay Muir and other Manchester men are the shining lights, while holding to Free Trade and the other planks of the party, want a new internal industrial policy—a change in the relations of capital and labour, and an examination of the policy of nationalisation of what may be called natural monopolies, railways, coal, and water services. Their mental attitude seems to be that it is desirable to found a middle school between Labour, which wants to nationalise all industry, and the Coalition, which refuses to nationalise everything. It is their hope that such a central body of doctrine would attract the whole of the moderate and quiet opinion of England, and leave both the existing Coalition and Labour in a minority. It may be so, but it is certain that it will be denounced by both sides as opportunist and unprincipled—from the mere fact that it is prepared to examine every industry on its merits—and that it is consequently likely to be kicked both back and front. That there is room for such a political school, and that it will do good work in the country and in Parliament, can hardly be doubted; what is doubtful is whether it will succeed in getting a majority.

On the major question of capital, labour, and taxation the conference failed entirely to make up its mind, and its enemies are taunting it with having decided merely to leave that problem open for another day. That is not the stuff out of which victories are fashioned at the polls.

The Bankrupt Railways.

The railway shareholders' meetings held this week have thrown some light on the evil financial position of those corporations. The North-Western line, for instance—the premier railway of the country—states that its wages bill has gone up from six millions a year before the war to twenty millions a year now—an increase very considerably greater than the rise in the

cost of living. This is due in large part, not so much to increases of wages to individual adults as to reduction of hours, which implies the employment of a much larger staff, and standardisation of wages, which means that a boy of eighteen who is a porter receives an adult porter's wage. Very nice for the porter, no doubt, but these halcyon times are not likely to last, since the industry is paying more out in wages than the public puts in in the shape of fares, and any further increase of fares will only decrease the number of passengers. (This has, in fact, already been recognised by the railway companies, since they are now converted to the return of the excursion train.) And meanwhile station and other railway staffs are being reduced as a first step to economy.

This opens up a large question of policy which Labour will have to consider carefully. Higher wages have come to stay, and that is a good thing, because it permits a higher standard of living, which will become more noticeable as food prices fall. But since it is a law of economic nature that nobody can get more out of a quart pot than they put in, higher wages mean smaller staffs and larger individual production. Is it better to employ four men at six pounds a week than six men at four pounds a week? One would say that it is, because the four men at six pounds a week will have a higher standard of living, while the other two will find other work; whereas if all six were employed at four pounds a week, the standard would fall for all. That is the social side of the equation; its economic equivalent is that the four men should do the work of the six—which in the case of many quiet railway stations would not be very exhausting.

A Mild Winter.

The prophets who predicted a hard winter are now hiding their diminished heads in shame. After a heavy snowfall in December the weather has been consistently mild and warm; and February has equalled, if it has not beaten, last year's records. Nothing daunted, the pessi-

mists are now predicting a summer as wet and inclement as that of 1920.

As a matter of fact, the doctors tell us that these abnormal seasons are by far the healthiest. A really severe winter kills the old people by the thousand; a really hot summer sends up the infantile mortality rate by leaps and bounds. The absence of both the one and the other made a distinct difference to the vital statistics a year ago, and with the extraordinary number of young babies in the kingdom at the present moment I suppose we should pray for a moderate summer.

The Week's Books.

Admiral Sir Berkeley Milne does not add a vast amount to our knowledge in "The Flight of the Goeben and Breslau: An Episode in Naval History" (Eveleigh Nash). But the book is useful as a personal account of that very controversial episode.

Criticism can have little to say to "Later Essays" (Milford), by Austin Dobson, for Mr. Dobson's work is now beyond contemporary criticism, and if posterity does not like his writing, so much the worse for posterity.

"One Hundred Years of Singapore" (John Murray) is a handsome book in two volumes, which is issued as a memorial of the founding of Singapore a century ago by Sir Stamford Raffles. It was established, like so many of the outposts of Empire, contrary to the desire of the British Government and of the East India Company, but the foresight of Raffles (who was also a benefactor of London in that he helped to establish the Zoological Gardens) has been more than justified by events.

"Insect Life" (A. and C. Black), by Mr. C. A. Ealand, is not a complete or a highly technical study of the vast insect world—indeed, it would be impossible to compress our still inadequate knowledge of insects into one volume—but it is something more than the ordinary popular book. It deserves especial mention for the magnificent coloured illustrations, which are triumphantly executed.

THE NEAR AND MIDDLE EAST

(From Our Own Correspondents.)

EGYPT.

CAIRO, February 7.

The "Delegation" Rumours.

Beyond a somewhat active discussion in the verbiage Press and some unrest in the schools, there is little to report this week. The controversy in the Press centres round the declaration made by the five delegates which was reported last week, and the dispute is as to whether what they said therein correctly represents their position, whether there has notwithstanding been a split, and whether certain statements attributed to some of them, and conflicting somewhat with their subsequent official declaration, are true or not. It would serve no useful purpose for me to set out the details of this controversy, which has come as a boon to the papers and enabled them to fill their columns at a time when interest was beginning to wane, and I shall therefore not devote any space to it. While the dispute is obviously splitting the country up, all parties agree, however, in looking to the statement of policy expected from the British Government as the next important development, and all, even the Extremists, are anxiously awaiting this declaration, which will undoubtedly clear the air and should afford the Moderates that opportunity to come out into the open for which they state they have been waiting.

The Students Again.

As regards the schools, the trouble started in Alexandria, where on the 25th of last month two-thirds of the pupils of one of the Secondary Schools paraded the streets, attacked the offices of a newspaper which favours the opposition to the Delegation, and issued circulars calling upon the pupils of other schools to join them. On the following day practically the whole school was absent, most of the pupils having gone to welcome the returning delegates. In consequence of this lack of discipline certain of the ringleaders were punished with dismissal or rustication for eight days; this was resented by their comrades, who later on assembled in the court of the school and for several hours on two consecutive days shouted the worst insults at the headmaster and his staff, and pelted them with stones. The Ministry of Education thereupon ordered the school to be closed; immediately the pupils of other Secondary Schools struck work in sympathy, and the movement has spread to all the other Secondary Schools. The Ministry has now issued a notice to the effect that unless the pupils return at once their schools will be closed until further notice, and that no school will be opened unless a sufficient number of pupils ask to be allowed to continue their studies, and their good conduct and regular attendance are guaranteed by their parents or guardians.

Some drastic action in this connection is certainly justified. The country has suffered long enough at the hands of the students, who only as recently as last week were responsible for the creation of the hostile movement made against the returning delegates. Egypt is approaching one of the most critical and vital stages in her modern history, a juncture where she has need to be guided by the most experienced, cool-headed and far-seeing of her sons, and where any false move or any ill-considered action might cost her dear. The dangerous element are undoubtedly the students, who, taught in the early days of 1919 to intervene at their will in the public affairs of the country, and meeting, owing to the peculiar circumstances then holding, with a certain amount of success, have come to regard themselves as entitled to participate in the direction of the affairs of the country.

The Government can really do little in the matter beyond closing schools, for it is on the parents that the main responsibility rests. The latter have been guilty of almost criminal negligence owing to the slack manner in which they have brought up their children and have allowed them to flout their authority. Unless the older generation now asserts itself it is to be feared that the situation may be rendered in the near future very diffi-

cult for those who are trying to arrive at a satisfactory settlement of the political problem, which owes its present complexity solely to the ill-timed, mischievous, and purposeless activities of the students.

CAIRO, February 14.

Return of High Commissioner.

Lord and Lady Allenby arrived in Cairo this evening on their return from their visit to the Sudan. Their Excellencies have been away just under three weeks, during which they visited the irrigation sites on the White and Blue Niles south of Khartoum and most of the historical monuments between Aswan and Assiut. Meanwhile the Sultan has concluded his stay at Aswan, and is slowly coming down the river, being due back on the 17th at Helwan, where he will make a prolonged stay.

Education in Egypt.

An interesting educational development has just been made public. It is what is called the "Fahmia Wakf and Mission," instituted by a rich young Egyptian, Aly Fahmy Kamel Bey, who has offered to set aside from his private Wakf the annual sum of £E3,000 to be devoted to the post-graduate education of Egyptian students who have graduated at a Higher College or University, the post-graduate course to be taken in Europe or America or in such educational centre in any country as may offer the most suitable facilities for obtaining the kind of education, whether in arts or science, which will be most calculated to meet the particular needs of Egypt at the time. The Ministry of Education has accepted this offer, and a committee is to be formed, composed of four directors of Higher Colleges, provided that such directors are Egyptians, or of senior Egyptian professors or teachers to be nominated by the Ministry of Education, the President being the Under-Secretary of State of the Ministry of Education. The period of study granted to any one student is not to exceed three years except in very exceptional circumstances. In the first year after the foundation of the Wakf the number of students will be three, in the second year it will be six, and in the third year nine, at which figure the Mission will be maintained. Students to be eligible must be of Egyptian nationality, and their families must have been Egyptian for at least two generations; they must hold Government certificates to prove that they have completed the primary and secondary courses of study and the course of a Higher College or a University Faculty; they must not be more than twenty-three years of age at the date of selection; they must be of good conduct and character; the committee must be satisfied of their ability and fitness to be selected; and they must be in straitened circumstances.

The committee will have the power to extend the period of study beyond three years if such extension is necessary for a student to obtain a particular qualification, and it will also have the power to increase the allowances if necessary, or to reduce it or cancel the selection should the conduct of any student make such action necessary. On the completion of their courses of study the students will be free to choose their own future

careers. Neither the founder of the Wakf nor the Ministry of Education will have the right to ask them to undertake any duties or service, but they must present to the Ministry a thesis in Arabic on the particular branch of study which they have followed.

This is, as far as is known, the first occasion where a private individual not a foreigner has come forward in Egypt to assist in this manner in the development of education. Considering how wealthy the Egyptians are it is indeed surprising that nothing has in the past been done by private enterprise to encourage the extension of even agricultural education, and it is sincerely to be hoped that the spirit of emulation which in other phases has manifested itself amongst the Egyptians, will prompt other wealthy landowners to come forward and follow the excellent example which Aly Fahmy Kamel Bey has set.

‘Warrior’s Day’ in Egypt.

It has been decided to celebrate “Warrior’s Day” in Egypt on March 31, when, amongst other things, a ball will be held under the patronage of Lady Allenby. Arrangements are being made for simultaneous entertainments all over the country, particularly in those centres where British troops were stationed during the war. It is pointed out that whatever money is subscribed in Egypt will be used for the relief of ex-Service men in this country, and it is expected that a considerable sum will result from the arrangements that are now in progress.

The Students’ Strike.

The firm action taken by the Ministry of Education in regard to the students of the Secondary Schools has had a good effect. Far from the strike spreading, it has collapsed altogether, and most of the students have now resumed their studies, their parents having guaranteed their good behaviour, and the students having been told that if they break these guarantees they will be excluded from the forthcoming examinations.

The Irrigation Libel Action.

The irrigation libel action had again to be adjourned last week, this time owing to the illness of Sir William Willcocks. By special arrangement with the Crown, Sir William Willcocks was permitted to cross-examine in the absence of his counsel, Mr. Silley, and it was thus possible to conclude Sir Murdoch MacDonald’s cross-examination on Wednesday. On Thursday the cross-examination of Mr. Hurst, the next important witness, had to be interrupted, as mentioned, and the trial will now not be resumed until Wednesday next.

SUDAN.

KHARTOUM, February 6.

The Political Situation.

Propaganda from Egypt still pours into this country. The recent fracas at Gebel Aulia, when some thousand Saidi labourers from Egypt attacked some 600 Yemeni labourers from Aden, was undoubtedly due to Nationalist propaganda. The Yemeni labourers consider themselves British subjects, and their status is consequently resented by the Saidi, who are told by their compatriots that they are traitors to their country inasmuch as they are assisting British subjects to build dams which will eventually throttle Egypt. Inflammatory printed circulars are distributed wholesale, calling on “Our Brothers in the Sudan” to rise and drive the British from the country. An Arabic circular recently came into the writer’s possession, in which the British were accused of snatching one Mohammedan country after another, of vilifying the faith of the Prophet, and of driving the various inhabitants from hearth and home and reducing them to slavery. No specific charges were made, the whole document being in the nature of a fanatical shriek, unlikely to influence any native of intelligence but calculated to appeal to the uneducated masses. This unpleasant effusion was signed “The Council of the Ulama, Cairo.” There is very

THE “UNIVERSAL” CIGARETTE MACHINE.

Designed to make round, oval or Egyptian cigarettes with creased edges of any desired diameter or length with wide or narrow pasted laps, and, by an interchange of parts, also crimped cigarettes.

IN DAILY USE THROUGHOUT THE

little doubt that a great deal of this literature is distributed through certain channels in the Egyptian Army; but the authorities do not appear to consider that the time is ripe to take strong action. The bazaar gossip is at times very clever, the recent Sultania tour in Egypt being construed as evidence of the Sultan having joined the Nationalist party and having visited the various Mudirieh with a view to consolidating the party and perfecting the future anti-British policy of the country.

The Sudan Government Football League.

The recently instituted Football League has been one of the best efforts at anti-Nationalist propaganda that can be imagined. The native of the Sudan is by nature far more of a sportsman than the Egyptian, and has exhibited the greatest enthusiasm for the game. The various inter-Departmental matches are watched by numerous crowds, and partisanship and interest in the game run very high. A recent match between a team composed almost entirely of Sudani *versus* a team exclusively made up of Egyptian Effendia nearly led to bloodshed. Racial feeling towards the latter part of the game tended to make the players forget the ball and concentrate on the man. The sympathies of the native spectators were with the black team, and any score by the Egyptian eleven was received with deep gloom, whilst the Sudani team were vociferously encouraged at every opportunity. The P.W.D. eleven, composed almost entirely of black artisans, are hot favourites, the Steamers and Railways, of similar composition, running them close. Enthusiasm has spread to the small boys, who may be seen daily on the various grounds energetically chasing the leather. Football boots are naturally at a premium, though several of the more hardy players dispense with these, and, to the astonishment of the European, prefer to play barefooted!

The High Commissioner.

The postponed visit of His Excellency was made this week, the party from the Residency arriving by special train on February 1, accompanied by the Sirdar, who met them at Halfa. The various Government officials of a sufficiently senior grade, together with the officers of the British troops and Egyptian army and representatives of the various communities, were duly lined up at the station at 4.30 p.m. and presented in due course to Lord Allenby. On the 2nd inst. a visit of inspection was made to Gebel Aulia, with an official dinner at the Palace that evening. On the 3rd there was an official garden party at the Palace, on the 4th His Excellency proceeded to Makwar, returning to Khartoum, and visiting Omdurman on the morning of the 5th, leaving for Egypt again the same night. These visits are much appreciated by the populace, and it is hoped that His Excellency will make a practice of visiting this country at least two or three times every year.

The Khartoum Military School.

Anybody who has had the pleasure of watching the annual sports of the Khartoum Military School must have been struck with wonder at the fact that a team has never been sent home to take part in the Naval and Military Tournament. The physical drill, keenness, and general turnout of the cadets are most marked, and would be thoroughly appreciated at Olympia. In view of the general lack of knowledge obtaining at home as to the Sudan and the inhabitants thereof, the visit of a team of cadets should prove a good object lesson. The competition for entry to the school is very severe, and only the pick of the younger generation are accepted. The annual display generally concludes with a realistic attack on a village or mud fort carried out by the cadets, with the assistance of a section or two of the mule batteries, and is invariably a great draw to the populace.

YUGOSLAVIA.

BELGRADE, February 18.

Changes in Belgrade.

It is very pleasant, after a considerable absence, to return to Belgrade, for, although one may bless the atrocious pavements and roads, and absence of water in the afternoon, and various other inconveniences, still almost everybody grows rather fond of the place,

more so than many will admit. There are a few changes since the autumn. The British colony has increased, and a Russian Red Cross Commission has arrived from Mudros. Owing to the remarkable mildness of the winter frost has interfered little with building operations, and marked progress has been made with a number of new erections. The overcrowding is so bad that the completion of every single place of abode is a blessing. Belgrade as the capital of the Triune Kingdom of the Serbs, Croats, and Slovenes is very different from the pre-war Belgrade, the capital of a small peasant State of about three millions. Natives consider the change is hardly for the better, as the city is no longer so essentially national as it was. The influx of innumerable Croats and Slovenes and Serbs from the liberated provinces, the great increase in Government departments with huge staffs, the ever-growing foreign colony, all tend to overcrowding, to scarcity of accommodation, and the development of that cosmopolitan character which distinguishes all capitals from the essentially national provincial towns.

Other changes are rather irritating, such as the alterations in the naming of the streets. In contradistinction to Zagreb, where most of the streets and public places are dedicated to men of letters—since it is in literature that the Croat national feeling has found its outlet—in Belgrade the streets are mostly named after men of action and outstanding figures in the national history, characteristically, chiefly after soldiers. The public had become accustomed to the alteration of the Mekdonska Street to Poencareeva, as a compliment to the French, but now it is disconcerting to find that part of the Njegusheva has become Mazarikova, in deference to the great Czech protagonist, and that the old Resavska is divided into Zrinskova and Frankopanska, in honour of the Croat martyrs of two centuries ago. A change that no one will regret is from Batal Djami to the Place of Voivode Mishitch.

The Political Situation.

The political situation has cleared up, and is consolidating itself. Everybody seems full of optimism, and the outlook is certainly more healthy than it has been for a long time. The Radicals and Democrats, the two strongest parties, which might be described as the Bourgeois parties, are working well together in harness: their coalition forms the Government, under the presidency of that experienced veteran, M. Pashitch.

A committee of 42 members, representing all parties proportionately, being actually one-tenth of the house, after a prolonged discussion, has passed the Government's draft Constitution. This is a big step forward. Of the forty-two members, twenty-three voted "for." The detailed discussion in the House now begins, and it is anticipated that the Constitution will be passed without difficulty. The support of 210 members is necessary to carry the draft constitution, while a quorum of 140 can pass isolated resolutions. Now there are 98 Radicals and 94 Democrats in the House, and 5 Independents support the Government, so it requires the support of very few more votes to secure the necessary absolute majority.

M. Pashitch, who is just recovering from a prolonged indisposition, has renewed negotiations with the Agriculturalists or Peasants' Party, in the hope that they will support the Government, and perhaps accept a portfolio. It appears that the Government will undertake to pass certain of their demands, and that they will vote for the Government, but decline to join the Cabinet. With the Mohammedans the situation is

rather interesting. They insist on their own draft Constitution, but now appear to be quarrelling among themselves. There is, in fact, a split in their numbers, as it looks as though they are separating into what one might call a "Serb" section, led by Dr. Karamehmedovitch, and a "Croat" section, led by Dr. Mehmed Spaho and Dr. Hrasnitsa. The only group of any importance whose attitude really matters is Raditch's Peasant Party in Croatia. Raditch is still sitting in Zagreb, and has recently sent an extremely lengthy memorandum to the Prince; which the *Pravda* published, and had its edition promptly suppressed by the police. The paper succeeded in getting this suppression quashed a few days later, which is a triumph for the freedom of the Press out here; but it was too late to effect a good sale of the issue, although the advertisement was a good one. It is now rumoured that Raditch will come to Belgrade, but what he will do when he gets here remains to be seen. The Serbian public seem to regard him with rather amused tolerance.

New Constitutions.

We are now treated to a glut of drafts of constitutions of the most varied kinds, which would have delighted the constitution-mongers of the French Revolution. The Mohammedan Club proposes a draft providing for the unity of the kingdom under its present title, divided into the eight existing historical provinces, the abolition of feudal tenure, and the sanctity of Church property in the recognised religions, thus providing for the security of the *vakufs* in Bosnia, Herzegovina, and Macedonia.

The Narodny Club, sadly reduced in numbers and importance, proposes to call the country Yugoslavia, the Kingdom of the Serbs, Croats, and Slovenes, and its division into six provinces. The central Parliament would have exclusive control over foreign affairs, nationality, Army and Navy, war damages, Customs, financial monopolies, State property and State finance, coinage, patents, weights and measures, posts, telegraphs, and telephones, State railways (main lines only), coast and fisheries, commercial law, exchange law and communications, census, frontier guards and police supervision of foreigners. The provincial diets would have the legislative powers for all other matters. These diets to be elected for four years, with one deputy for every 30,000 inhabitants. The Constituent Assembly would be able to pass valid resolutions only with a quorum of two-thirds of its total number, and a two-thirds majority to be required to pass the Constitution. Its resolutions to take effect after one month's delay, during which time either the King or 180,000 electors might demand a ballot, by which apparently a referendum is meant, on any or all of the resolutions of the Assembly. Any changes in the Constitution affecting the provincial diets to have their consent.

The Yugoslav Club, which is another name for Dr. Koroshets' Slovene Clericals, have an original idea. They suggest that there shall be two Houses, one of which shall confine itself to legislation of a social or economic character, such as finance, communications, posts, citizenship, and social politics. Such matters as foreign affairs, the budget, dynastic matters, etc., shall be dealt with by plenary session of the two Houses. The Party maintains that centralisation is impracticable, and that the majority of Croats and Slovenes are opposed to it. No one may be a member of both Houses at the same time. There shall be six provinces, each with its own diet and government, which shall be competent to deal with purely provincial matters, commerce, public buildings, mines and forests, agriculture, food supplies, religions, public health, social politics, justice and finance. The president of the provincial government to be named by the Sovereign on the proposal of the Ministerial Council—chosen from three candidates put forward by the diet.

It seems that the Narodny Club and Slovene Clericals, conscious of their own weakness, are drawing together and trying to protect their policies by the two-thirds majority, which they hope the Government will not succeed in securing; and that in the failure of this assembly, there would be new elections, at which they

hope they will recover some of their lost position. But this seems hardly likely. It is fairly certain that if there were new elections, the party that would suffer most would be the Communists, and the Radicals and Democrats would gain. Twenty more votes to the Coalition would give them a clear working majority.

Political Progress.

The harmonious collaboration of the Radicals and Democrats is an immense relief to everybody, and is a good step towards the eventual goal of fusion of these two parties. Unfortunately, the personal equation plays a far greater part in politics out here than it does in England—greater, indeed, than political principles, which are, as yet, hardly defined. Until the old generation of politicians has passed away or retired from the arena there is little hope of fusion. Personal animosities are still too keen.

The suppression of the Communists is another cause of the undoubted feeling of optimism. The Bolshevik plot of the New Year came as a shock to the public, and there seems to be no doubt that the Government was actually in possession of proof that the threads were pulled from Moscow. The Communist organ was daily receiving news by wireless from Moscow, and seems to have been receiving orders at the same time, and the discovery of this drove a number of so-called Communists from the fold.

The Montenegro Report.

Very natural satisfaction is felt at the publication of the Temperley-Bryce report on Montenegro and the prominence given to it in the London Press. The Serbs may be forgiven for saying: "I told you so," but the propaganda conducted by ex-King Nikola and his supporters was so keen, especially when it had the interest and support of Italy, that West Europeans may be pardoned for overrating the proportions of the *zelenashi*, or supporters of the ex-King.

TURKEY.

CONSTANTINOPLE, February 14.

The Nationalist Mission.

The Nationalists have maintained their uncompromising attitude towards the Central Government up to the last moment. There is no official news even with regard to the Nationalist delegation, which is believed to have left Adalia for London, via Rome and Paris, in the course of the past week. The delegation is believed to be under the presidency of Bekir Sami Bey, Nationalist Commissioner for Foreign Affairs, and one time Nationalist Minister in Moscow. Although Bekir Sami Bey was one of the founders of the Unionist party, he has never been an extremist, and there is good reason to believe that he was opposed to the policy of the Unionist Government towards the Armenians during the war. This is said to have been the reason for his resignation of the post of Governor of Aleppo, which he held until 1915. He was selected by the Nationalist administration for the post of Minister at Moscow possibly on account of his Caucasian origin, but his stay in the Bolshevik capital seems to have given him a very unfavourable impression of both the Bolshevik leaders and the political principles which they advocate. The other members of the delegation, however, are of a different calibre, and the records of their connection with the Committee of Union and Progress make less pleasant reading. Yonus Nadi Bey, for instance, was one of the most fervent supporters of the pernicious Pan-Turanianism and extreme nationalism which led the Unionists to adopt that policy of centralisation which has finally brought the Ottoman Empire to ruin. Yonus Nadi Bey represents Smyrna in the Great National Assembly; whilst Jami Bey, who is expected to join the delegation in Paris or Rome, represents Aidin in the same capacity. The other members of the delegation, according to reports of an unofficial nature, represent Ismidt, Erzeroum, Trebizond, Saruhan, Karassi, and Adana, and the Nationalist Mission may therefore be regarded as representing the Turkish population of the occupied and contested territories. It is also reported

that the Mission is accompanied by Turkey's leading feminist, Halide Edib Khanum, but in what capacity is not known.

The Government Mission.

Tewfik Pasha, who is to preside over the Mission nominated by the Sublime Porte, left Constantinople on the evening of the 12th, with a number of legal and technical advisers from various Government Departments. It is understood that Tewfik Pasha will meet the Nationalist delegation in Paris, and will make a final and desperate endeavour to come to an understanding in order that Turkey may be represented by a single Mission, as required by the Allied Governments. The other members of the Sublime Porte's Mission will be Osman Nizami Pasha, Turkish representative in Rome, and Mustapha Reshid Pasha, Turkish representative in London.

The Nationalists have not even deigned to inform the Sublime Porte of the composition of their Mission, but have intimated that if the Government Mission consents to pursue the same lines as the Nationalist Mission, the two delegations will be able to co-operate. This, of course, simply means that the Government Mission will be required to take a back seat and leave everything to the Nationalists, a proceeding which will certainly not have the approval of the Sultan.

Accomplished Facts.

The "accomplished fact" has always played an important part in Near Eastern affairs, and the web of more than one fine scheme has been badly damaged by such a circumstance. The capture of Aintab by the French may be regarded as a circumstance of this nature, and came as a great surprise to political circles in Constantinople, where the trend of events in Cilicia and Syria has lately been obscured by more dramatic occurrences. The lesson to the Nationalists was badly needed, and should have a salutary effect upon Angora, where the impression prevails that the Allies cannot raise a rifle or a shell to emphasise their demands. It is to be feared, however, that if the Nationalists are really to be impressed there will have to be action of a much more comprehensive nature. A series of "accomplished facts" will be necessary, if only as an offset to the accomplished fact of the Turkish occupation of Armenian territory. It is reported on good authority that the Hellenic army is about to commence another offensive in the direction of Eski Shehir. There can be no harm in mentioning the matter, for if report speaks true, the Hellenic action will have commenced before this appears in print. It is to be hoped that the result will be more satisfactory than the reconnaissance in force which took place during the early part of January, and which merely had the effect of strengthening Turkish belief in the demoralisation of the Hellenic army. If the Hellenes are to be allowed to take action, that action should be successful beyond argument, otherwise the already complicated situation will only become more impossible of solution.

It seems a pity that "accomplished facts" in the past should have been allowed to bear such fruit as to

encourage the belief that such circumstances can have a radical effect upon European policy. So long as that belief prevails it will always be difficult for Europe to enforce permanent acceptance of any settlement in the numerous problems that have to be settled before the general Near Eastern problem is settled.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

MESOPOTAMIA AND THE LONDON CONFERENCE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—There is reason to believe that the Government have been warned for some time that a dangerous military situation is developing in Mesopotamia, and have been asked either to produce the necessary troops and money to safeguard our commitments or to reduce the commitments to what the allotted garrison can safeguard. A withdrawal was, I understand, actually decided upon at one time; but while Mr. Churchill was ordering it to be carried out within a month, Mr. Lloyd George forgot about the decision and announced in the House of Commons that there was no intention of withdrawing. It did not matter much, as it was discovered that a retirement could not be effected in less than twelve months. This is a point which those who are pressing for a withdrawal should bear in mind.

Now, in a year much may happen, and the first thing will be, if the Bolsheviks can possibly bring it about, an attack by them and the Turkish Nationalists on Great Britain's position in Persia and Mesopotamia. It is known that plans to this end have been made, the attack to start in the spring. In Northern Persia the Bolsheviks, if they advance in earnest, will encounter no effective opposition. As far as Mosul is concerned, we shall not fare much better in Mesopotamia, as there are no proper communications with that town, and a sufficient force cannot be maintained there with inadequate roads and transport.

A withdrawal from Mosul under pressure might have embarrassing results south of Baghdad, and would react on British prestige throughout the East.

The most effective way of upsetting the Bolshevik plans would be to bring the Turkish Nationalists over to our side, and this can only be done in time if it is done at the Conference now being held in London. The chief difficulty in the way would seem to be some curious affinity between Mr. Lloyd George and M. Venizelos, owing to which, apparently, we have to risk: (1) a set-back to British prestige in the East, (2) giving offence to the French, and (3) the still further postponement of peace while the Greeks try conclusions with the Kemalists, to say nothing of having to finance the Greek campaign, and possibly come to the rescue at a later period.

An agreement with the Kemalists would go a long way towards solving the Mesopotamian problem, for it would give us time to start a native government before we withdraw altogether, and in the meantime reduce our army to the smallest proportions.—I am, etc.,

February 1.

MIDSTREAM.

THE SHEREEF ALI HAIDER AND MESOPOTAMIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your correspondent "Champion" puts forth the claim of Ali Haider to the throne of Mesopotamia as against the claims of the family of King Hussein. Perhaps you will allow an advocate of the latter's claims to reply.

The question your correspondent raises about the claims of Shereef Ali Haider to British confidence is answered by the Shereef's attitude during the war. The fact that he did nothing to oppose us in the war is as nothing compared with the fact that Shereef Hussein did something actively in our cause. The fact that Ali Haider was willing to accept the Emirate of Mecca—if he could get it—when the Turks offered him the position upon the Arab revolt under Hussein, is sufficient indication of his aims. On the other hand, Hussein, who knew he had all to lose did his policy fail, threw in his lot with the Allies; and at the time that he raised his standard and endeavoured to form an Arab Regular Army, it seems Ali Haider came to Medina "with the residue due to his position" to try and claim the Emirate. Was this proof of his claim to British confidence? He ought to have offered Hussein his services, but he seems

to have been more concerned with capturing the Emirate, if he could get it. The fact that he did not stir up the Bedu tribesmen against Hussein is of little account; he ought never to have attempted to obtain the Emirate, but should have helped Hussein—if he was pro-British. His hatred of Hussein would not conduce to a harmonious working of his followers with the supporters of Hussein, were he head of affairs in Mesopotamia.

On the other hand, Hussein has given sufficient evidence of his claims to our confidence. He raised a successful revolt, faced the danger of Ali Haider stealing his heritage, and provided an army which Lord Allenby used in his final attack against the Turks. His distinguished son, the Emir Faisal, was the most loyal of all Arabs, and gallantly led this army across the Jordan; he has shown conspicuous ability in administering for nearly two years a difficult zone in Syria—I served in it and know of his success; despite the many disappointments to which he has been subjected as a result of French action in Syria, he has still remained loyal to us; and we should be doing both the Arabs and ourselves an injustice if we did not use his services in Mesopotamia. The debt we owe him would only then be partially paid. The next point concerns the claims Ali Haider has on the people of Irak. Since Shiah and Sunnis will have to live under either a Shiah or a Sunni king, it is a question of which should be chosen. If Ali Haider is a descendant of the last orthodox Khalif, Ali, so also is Hussein, who, further, is the oldest living descendant of the Prophet himself. They are both of the same family though removed in degree. There are Shiah sects in Syria (notably the Metwallis), but the Arabs are mostly Sunnis and therefore followers of Hussein. It is the same in Mesopotamia, and though the devotion of the Shiah sects may be very deep to Ali Haider, yet they do not constitute the majority of the Mesopotamians. But the Sunni Shereef has shown his loyalty in an active manner. The Shiah Shereef has merely shown his neutrality in a passive and not altogether benevolent manner. Between the two which, therefore, has the greater claim on our confidence? Besides the positive evidence of Hussein's activities, the negative efforts of Ali Haider are dwarfed into insignificance. His attitude towards the Emirate of Mecca is sufficient evidence of his claim to our confidence. If Ali Haider has secluded himself from his people by living in favour at Constantinople, Faisal has moved among his own and worked for that "Unity and Independence" which has been the aim of all true Arabs. What part did Ali Haider play in this effort to achieve an Arab nationality?

The evidence of the war activities of the two families speaks for itself, and on such a question as the claim to British confidence, I have no fear that justice will speak through the deeds of the respective claimants. Faisal would at least be no less tolerant of the followers of Ali Haider were he given the throne of Irak. Those of us whose privilege it has been to serve under him, have perfect confidence in his abilities. In him East and West have met and mated, and no surer guarantee of peace in Mesopotamia could be obtained than by his appointment.—I am, etc.,

W. URINOWSKI.

BRITAIN IN PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I would consider it a favour if you could spare me a little space in your paper to express a few opinions concerning a topic, dear to me and to all Palestinians.

I have just spent a month in my native land after fifteen years' exile, and in this short time have, from various sources, learned the prevailing opinions of the inhabitants as to the policy in our land. May I say at the outset that what is stated here is simply presented to your readers, not in the spirit of criticism of the Administration, but in the hopes that the Administration may know the true sentiment of the Palestinians, and, in knowing it, may have the graciousness to heed the complaints. I, with others, boldly affirm that Britain is the one of all nations that has done more for humanity in the annals of history.

The glorious entry into the Holy City was accomplished not for self aggrandisement or annexation, but solely to deliver these peoples from the Turkish yoke, which had oppressed them all these centuries. The thousands of little white crosses scattered over the country, confirm the tale of suffering and sacrifice of the British nation. Surely it is a base people who do not understand the full meaning of this victory. Gratitude was unbounded in every heart of the Palestinian, and he appreciates and reverences the Union Jack, symbol of freedom and justice.

Much was expected from these glorious conquerors and deliveries. But, alas! has this expectation been in vain? Surely not—only a misunderstanding.

From many sides I hear the remark: "Why is the country at a standstill and progress deterred, though the British have been here for three years?"

British readers, do not attribute this saying to ingratitude; the Arab is not ungrateful. It is merely the outcry of a people staggering to their feet, and in their eagerness to stand failing

in the attempt. The matter has not been brought home to them that though England occupied the land it was only temporarily. She could not expend from her home Treasury more than she had already done, on a country which she was likely to surrender. Now that the Mandate is given to her, my fellow countrymen must wait patiently for results. There is also the dread apprehension of the land being given over to the Jews. If this apprehension be founded on facts, as I am told it is, Britain should take note of this and see that justice is administered to all alike. Sentiment has never played a part in English government. Is it to play that part now? It would be worth while to inquire whence the cause of discontent has arisen. The country, we know, is passing through the critical stage of transition; and her people, though in many ways child-like, yet have the making of good and loyal citizens. But why has Britain failed to secure their support? I hope the question will be answered by a wise and clear thinker; the fact remains that the Palestinian is not giving the Briton adequate support. Recently I heard that several Government employees resigned their posts, the reason given being the incivility of the chief of their department. To one who has lived long in the West this may seem trivial, but to those officials it is a serious matter, and it must be viewed seriously by those in authority. The course to have taken should have been that of "fighting it out"; but the Oriental temperament needs training. England, we need the best of your manhood, men of high intellect and high principles, to help to build up this nation and train its peoples for future self-government. Anything of a lower standard will lead to fatal results, and surely you will grant this request ungrudgingly and avoid friction and failure. Another illustration of the cause for annoyance is the title used in official documents in addressing the Palestinian. The word "Effendi" is Turkish and not Arabic, and why differentiate between British and Arab? A small grievance, yet keenly resented. I was, indeed, grievously disappointed in the attitude taken by my compatriots towards the British Government and British officials. This attitude has some justification, as must be acknowledged by all liberal Britons who have studied the situation.

Just before I came away I heard the rumour that the Administration had decided to change the present names of places to Biblical ones. What will the Biblical names convey to the Arab who has known his villages by their familiar and long-used names? If, for the benefit of tourists and Bible students, Biblical names could be added in parentheses, it would be sufficiently explanatory. I trust, however, that this is only a rumour. Britain's task is an arduous one, and she needs, and deserves, the full support and co-operation of all the inhabitants. She assuredly will get both if these misunderstandings are cleared up. Then may we hope that the era has truly begun, which will once more make Palestine a land flowing with milk and honey.—I am, etc.,

NASRA ODEH.

The War Office announces that two infantry battalions and one cavalry regiment of the reinforcements sent to Mesopotamia last summer from India embarked from Busreh between February 15 and 17.

In the Indian Council of State last week a resolution ratifying the draft provisions of the Washington Labour Convention, including the fixing of the age of children working in factories at twelve, was carried.

Lord Allenby, states a Cairo telegram, has proclaimed as applicable to all inhabitants of Egypt the new law limiting the increase of office and shop rents to 50 per cent. of the sum obtained in August, 1914.

In reply to a question in the House of Commons, it was announced that 24,000 Assyrian refugees have been transferred from Bakuba to a camp in the Mosul vilayet and 14,000 Armenians to a camp near Busreh.

THE NEAR EAST CONFERENCE.

The London Conference began on Monday, February 21, when the Greeks presented, through M. Kalogeropoulos, the views of the Athens Government against any modification of the Treaty of Sèvres. Later in the day General Gouraud advised the Conference upon the military situation in Cilicia and Asia Minor.

The Turkish delegates were invited for Tuesday, February 22, but owing to the illness of Tewfik Pasha and to the fact that the Ottoman delegates were not ready to state their case, all that took place at the Conference was an exchange of views between the British, French, Italian, and Japanese Governments on several matters connected with the Treaty of Sèvres.

On Wednesday, February 23, the Conference heard statements from the heads of the delegations from Constantinople and Angora. Ahmed Tewfik Pasha and Bekir Sami Bey each spoke on the general principles on which peace could be restored in the East. They made very comprehensive claims, laying down the following three broad principles:—

(1) That all countries inhabited by Turks, excluding those in which Arabs are in the majority, should remain part of Turkey, and that within those areas the Turkish nation should exercise full sovereign rights.

(2) That the Turks are willing to concede to minorities the same rights as are provided for in the Minority Clauses of other Treaties, subject to themselves receiving similar rights in countries in which they are in a minority.

(3) That the Turks are prepared to concede freedom of navigation to all nations through the Straits provided that Turkish sovereignty is unaffected.

After some comments upon those proposals the Conference requested the Turkish delegates to formulate in a concrete form their views as to the points of the Treaty of Sèvres which they asked to be modified.

It was announced on Thursday, February 24, that the Allies had decided to appoint a Commission with British, French, and Italian members, to report on the conditions in Thrace and Smyrna, subject to the acceptance by the Greeks and Turks of the remaining provisions of the Treaty of Sèvres. In the morning the Conference heard the detailed statement of the modifications in the Treaty asked for by the Turks. Bekir Sami Bey, who stated that the two Turkish delegations were in agreement, read his case, listing his claims under two headings: (1) territorial and political, and (2) financial and economic.

From a territorial and political point of view the Turkish Delegation asked for the following: (1) In Europe the frontiers of 1913. (2) In Asia Minor the frontier to be fixed by a line traced in agreement with the interested parties separating the territories inhabited by an Arab majority. On the East the frontier to be the line between Turkey and Persia before the war and the frontier between Turkey and Armenia as fixed by the latest treaty between the authorities of Angora and the Government of Erivan. (3) The evacuation by the Greeks of the Smyrna territory, which should return under the full and complete sovereignty of Turkey. (4) Freedom of navigation of the Straits without compromising the security of Constantinople and respecting the full sovereignty of Turkey as well as the de-militarisation of the Straits. (5) An International Commission for the Straits on which Turkey should be represented. (6) The protection of minorities. (7) Respect for the sovereignty of Turkey in judicial matters, and the constitution of a Commission composed of foreign and Turkish jurists to draw up a scheme of judicial reform on modern principles. (8) Military and Naval forces sufficient to ensure internal order and to defend the coast and frontiers. (9) Re-organisation of the gendarmerie for the whole of Turkey with the assistance of foreign officers. (10) Turkey counts on the withdrawal of foreign troops from Constantinople and from her territory after the ratification of the Treaty.

On the financial and economic side the Turkish proposals included complete financial and economic independence for Turkey and valuation of damages and mutual reparation.

After a short adjournment, during which the Allies conferred among themselves, the Conference reassembled, and listened to a statement in regard to the statistics of the Smyrna district and Thrace, by Dr. Nihad Rechad Bey, on behalf of the Turkish Delegation, with a view to establishing by figures the Turkish majority in the population, and the economic necessity of leaving Smyrna and Eastern Thrace to Turkey in the interests of Turkey, no less than of the Allies themselves and of the Greeks. He claimed that the Greek merchants of the coast could not exist economically, independently of the Turkish agriculturists who possessed the land.

Later in the day the Conference heard a statement by the Greek Delegation in regard to the ethnological statistics of the Smyrna district and Eastern Thrace.

M. Kalogeropoulos opened by recalling that these matters had already been exhaustively investigated by the Peace Conference,

at which M. Venizelos had presented the Greek case, and that the decisions reached had been embodied in the Treaty of Sèvres. He presumed that there was no intention of reopening the whole question, but in any event the Greek Delegation was prepared to give full information. M. Gounarakis then made a detailed statement, in the course of which he quoted various statistics compiled in 1912, 1917, and more recently, and drawn from Turkish as well as from Greek sources, to show the preponderance of the Greek over the Turkish element in the populations of the Smyrna district and Thrace. Subsequently he answered questions on these and other matters affecting the Greek claims. M. Kalogeropoulos then made an appeal to the Conference for an early and final settlement, which would bring peace to the East.

On Friday, February 25, the Conference invited the opinion of the Turkish Delegation on the following proposals:—

"Viewing the difference of opinion that has arisen concerning the populations of Eastern Thrace and Smyrna in the areas assigned to the Greeks by the Treaty of Sèvres, the Powers are willing to refer the question of the populations of those two areas to an International Commission to be appointed by themselves, with instructions to examine into the figures both before and since the war, and to proceed with its investigations on the spot without delay on the clear understanding, which will be accepted by both parties, namely, by Turkey and by Greece, (a) that they will accept the results of such an arbitration; (b) that the remaining clauses of the Treaty of Sèvres shall remain unaltered, and shall be loyally accepted both by Turkey and Greece. The following supplementary conditions are attached to this proposal:—(1) That there shall be an immediate cessation of hostilities between the parties concerned. (2) That there shall be an exchange of prisoners between them on conditions to be examined and laid down. (3) That guarantees shall be given for the security of the minority populations in Greek and Turkish territories in the interval before the final conclusion of peace."

Mr. Lloyd George, the President of the Conference, explained that the exchange of prisoners referred to in (2) was intended to apply not only between Turkey and Greece, but also between Turkey and the Allied Powers. He also explained with regard to (b) that certain points in the Treaty of Sèvres which have been affected by the march of events remain to be discussed in the present Conference. Such are the provisions as regards Armenia and Kurdistan.

Bekir Sami Bey explained that the Turkish Delegation was so confident in the justice of their claims that they regarded the setting up of this inquiry as tantamount to their being admitted. Continuing, he read a document stating that the Turkish Delegation accepted the proposal of the Conference subject to the following observations:—(a) An expression of satisfaction with the application to the Turkish claims of the principle of nationality. (b) An International Administration to be substituted for that of Greece during the inquiry. It was hoped that former officials might be reinstated. The demand for the abandonment of the Turkish claims in regard to the clauses of the Treaty of Sèvres other than those relating to Thrace and Smyrna had been unexpected. (c) In the event of the claims being admitted they would agree to a cessation of hostilities between Turkey and Greece and an exchange of prisoners between all concerned. (d) Greece to send no new forces and not to move the troops now in Thrace and Smyrna. (e) The Turks will give guarantees as regards minorities provided the same condition is exacted from the Greeks. (f) The Commission to conclude its investigation within two months. (g) The Commission to take into account the numbers of Turks compelled to emigrate since the Greek occupation.

In reply to the President of the Conference, his Excellency Bekir Sami Bey stated definitely that, as the Turkish Delegation had itself initiated the proposal for an investigation, they would accept not only the investigation itself but the decision reached.

The opinion of the Greek Delegation was then invited in regard to the above proposal. M. Kalogeropoulos first declared that Greece was animated by pacific sentiments, and desired to take part in any settlement which would lead to a general peace. He then asked for and received an assurance that the proposal did not involve the disarmament or withdrawal of the Greek armies from Thrace or Smyrna while the question was *sub judice*. It was explained to him that the Turks demanded that the Greek Army should not be reinforced, and should not take any offensive step, and the same condition would be imposed on the Turkish forces. After insisting on measures to secure the observance of the Armistice conditions and laying stress on the disadvantages to the Greek Army of this continued delay in the settlement of the question, he explained that he had come to London with definite instructions from the Greek National Assembly to base himself on the Treaty of Sèvres. Consequently he could not give a definite reply until after he had received an answer to a message he had already sent to the Government at Athens.

On Saturday, February 26, nothing was officially done.

The Provincial Council of Behera protests from Damanhur (Cairo) against Mr. Churchill's recent statement regarding Egypt, and emphasises that Egypt is neither a part of the British Empire nor a British Protectorate.

Sir Herbert Samuel, presiding at the Y.M.C.A. annual meeting in Jerusalem, said the Y.M.C.A. might do much in the Holy City to develop that principle of "Liberty, Equality, and Fraternity" which should be the aim of each of the three great religions. The Mayor of Jerusalem, a Moslem, was among the speakers.

MUSICAL NOTES.

M. Leff Pouishnoff in Liszt.

It is a truism to say that none but a virtuoso can make Liszt's major pianoforte compositions interesting, but in devoting a whole programme to him even so accomplished a one as M. Leff Pouishnoff, the very remarkable Persian pianist, was rather abusing our merited goodwill. For Liszt is a pitifully unequal composer, whose psychological intensity is often combined with intellectual commonplace. In his work, the trite and the recondite, the shallow and the profound are inextricably mixed; he may be called, in fact the Dostoevsky of music. But of his poetic vision and truly pianistic feeling there is no doubt; and it was these, his two strongest aspects, that M. Pouishnoff most completely demonstrated at his recital at the Wigmore Hall on February 22. Yet in his beautiful hands even the obviousness became brilliant, and the rich warmth he infused into the real wealth of Liszt seemed to spread a false glow over the poverty. Those dreadfully dull passages in the Sonata in B minor, for instance, were superbly bluffed through; and even the "Liebesträume" became entertaining. The whole evening's performance was, indeed, a feat, but the greatest triumph in it was the exquisite playing of the "Gnomereigen" study, than which nothing more breathlessly lovely was conceivable. M. Pouishnoff is, of course, a complete master of his instrument; in the exploration and discovery of its secrets he is in the company of Busoni and Hofmann; but how fine his orchestral feeling must be was shown in Liszt's arrangement of the "Tannhäuser" overture, in which his tone colour was marvellous, his muted melodies in particular being ravishing. By the way, this young man appears to have a habit of using Chopin waltzes as encores, and it is rather as a humorous afterthought than with reverence or deference that he plays them. At his previous recital, we caught him playing tricks (admittedly one of the privileges of youth) with the C sharp minor waltz, and at this one the cool way in which he tackled on the waltz in D flat to the "Berceuse" was amusing.

Lecture Recitals.

It is not easy to discover the real purpose of lecture recitals; sometimes they are merely educative, sometimes propaganda, and sometimes an entertainment. But even if the lecturer's purpose be fixed, the results of his efforts are uncertain. In the last fortnight at the Wigmore Hall two lecture recitals were given, on February 16 and 18 respectively—the first by Mr. Arthur Hirst on "The Average Englishman's Attitude Towards Music," the second by Miss Elsie Horne on "Moods in Music"; and in both a slight extravagance of claim and lack of precision made the resultant impressions rather hazy. Mr. Hirst indeed attempted the impossible task of establishing connection between art and morality (a task which incidentally Arthur Ralfour has relinquished as hopeless), and when he proceeded to determine the essentiality of the fine arts in a nation and in the individual he found that, despite the help of Hegel and Santayana, he had to withdraw before he had really attacked the position. On the whole, Miss Horne's was a much better and usefuller performance; she, helped by Ruskin and Miss Adelaide Rind, was lucid, fluent and accomplished, but she was also (if I may say so) a little credulous; she still believed, for example, in the genuineness of the slow movement of Mendelssohn's violin concerto and in Chaminade's "Autumn," and she persuaded herself that every mood can be expressed in music.

Mr. Bertram Binyon.

The appeal of all vocal recitals is either the singer, or what is sung, or both; but to-day, probably more than at any other time, it is what is sung that chiefly attracts. Now Mr. Bertram Binyon, who gave a recital at the Æolian Hall on February 16, has definite artistic qualities, but he has also the reputation of bringing forward new works. This time the attraction was Goossens' Three Songs for Voice and String Quartet, the words of which are taken from sixteenth and seventeenth century English poets. These songs were natural and pleasant commentaries on the poems rather than original interpretations of them, and it was only in the first—"The Appeal" of Sir Thomas Wyatt—that the mood of the poem was aptly fused in the strings and the melodic outline of the voice. But this effort is indicative of a very welcome and increasing detraction from what has been called the tyranny of the pianoforte accompaniment. Mr. Binyon was finest in his Italian and French songs—particularly in a Paisiello Cavatina, an old Italian folk-song "Sperazione," a Bassani Minuetto, and in Hœ's "L'Ane Blanc." It seemed a great pity that he should choose to close so good a programme with ballads by Quilter and his excellent accompanist, Harold Craxton.

Mr. Plunket Greene.

Unfortunately, I cannot say much of Mr. Plunket Greene's recital at the Æolian Hall on February 15, because I heard

only a few of his songs. But, in any case, little that is new can be said of him. The immense public work that he has done for British singing and for British songs is not yet finished, but there were signs, sadly inevitable of course, that it is nearly done. Yet it would be the extremest ingratitude now to point out any deficiencies in the unique combination of Mr. Greene and his accompanist, Mr. Liddle; and it is possible to console oneself with the fact that past achievement cannot be marred by present example.

Mr. Rae Robertson.

The interest excited by Mr. Robertson's programme, which he played at his recital at the Æolian Hall on February 17, was worthily maintained in his first group of pieces by Purcell, Byrde and Bull. He allowed the charm of these old English masters to come clearly and simply through the centuries, and their appeal was instant and certain. It was when he played Chopin's B minor sonata and Scriabin's "Vers la Flamme" that we found how powerless a mere technique is to interpret. In both of these the harmonies were treated too insignificantly, and glow in the melodies was absent. Moreover, the tremendous climaxes towards the close of each work were not rightly seized, so that little impression of their greatness was obtained. Mr. Robertson has undeniable gifts; he has a fluent technique, and his touch is pleasant; but his pedalling is not good, and his rhythm not firm enough.

Busoni.

I do not think there is any artist in the world who can so certainly give you the intoxicating but alarming feeling that you are out of your depth as Busoni, who gave a recital at the Wigmore Hall on February 19. Small works he never dreams of playing (unless they be by himself), and after standing through Beethoven's last sonata and Chopin's in B minor, I felt overwhelmed. In the whole programme there was nothing more amazing than the contrast between the unrelenting intellectuality of the first Beethoven movement and the pure loveliness of the arietta and the variations; but the contrast seemed inevitable, and the whole was the most perfectly fashioned interpretation that has yet been given of the obscurest sonata ever written. No emotional warmth was obtruded into the Chopin, which was keenly analytical all the time; but the colours coming from a most finely graded tone and wonderful pedalling were most moving, and the grand climax was literally, quite literally, stupendous. Busoni's own composition, a new "Toccata," seemed to combine the architectural strength and dignity of Beethoven with the ceaseless grace of Bach, but there appeared to be a certain amount of parade in it. But as his is the darkest musical mind prominently before the public at the moment, it is impertinence for me to say anything about the Toccata now.

A Chamber Concert.

The gifts that the gods have bestowed on Mr. Gerald Cooper are few, but there is nothing at all wrong with his taste. He has a fine discrimination, he has modesty, and he has courage. We were not moved, it is true, at the concert which he organised at the Wigmore Hall on February 22, but there was much to be enjoyed in it. With Miss Flora Mann and a handful of strings, he went most creditably for "Domine Deus," from Bach's Mass in B minor; and with her, again, he sang some most charming old-English airs. But we were most grateful of all to him for allowing us to hear again the second Rhapsody of Arthur Bliss, a work the details of which I gave some months ago. Bliss is already a personality in English music, and this composition is one in the form of which he specially excels. There is genius in his use of the wordless voices.

Mr. Leonard Borwick's Transcriptions.

Mr. Borwick's recitals, the last of which he gave at the Æolian Hall on February 23, have proved not only his flair for certain of the classic and modern composers, but also his ability to transcribe orchestral music for the pianoforte. At his last we had Debussy's "L'Après-midi d'un Faune" extraordinarily faithfully done; it was, in fact, a revelation. I, at any rate, should never have thought that the sunny delicacy and the very subtle half-tints which the composer has obtained by use of the woodwind could have been reproduced on a percussion instrument; but there they were, marvellously yet simply suggested. All Mr. Borwick's Chopin is informed by his very individual and deliberate *rubato*, and either endures or suffers (it depends, of course, upon the listener's personal likings) through it; for my own part, I prefer a richer and more romantic reading of the F minor ballade and the Berceuse, though the restrained exhilaration of the B minor scherzo was irresistible. It was charming to find an intimately great artist like Mr. Borwick ending his programme with a delightful little study by Stravinsky; nothing could so perfectly have shown his confidence, his sympathies, and his keen judgment.

I.—THE RACIAL STRUGGLE FOR LIFE.

In 1798 a clergyman named Malthus published an "Essay on Population," in which he maintained that every species tended to increase in a greater ratio than the supply of food. So prolific, he wrote, was life in the animal and vegetable kingdoms that it would fill millions of worlds to overflowing but for the operation of certain positive checks. In the case of mankind there were war, pestilence, famine, and moral restraint. The latter found favour in Malthus's eyes. "Do not marry," he wrote, "until you can support a family"; but he was not responsible for the theories or practices which long after his death came to be known as "Malthusian." His views created a mighty flutter in ecclesiastical dovecots, and were vehemently combated by the followers of Rousseau, who believed in the perfectibility of mankind; but their substantial truth is nowadays questioned only by people whose reasoning power is obscured by prejudice.

Malthus's generalisations were based on the abnormal conditions which prevailed in England at the close of the eighteenth century. Machine industry, then in full swing, had caused an unexampled growth of population, attended by acute poverty and congestion in our insanitary towns. Had he realised the world-wide application of his doctrines, he would, perhaps, have divined the reason of the wholesale migrations which have temporarily redressed the balance of Nature. They began 3,500 years ago, when our Aryan forbears were compelled by the desiccation of their pasture-grounds in Central Asia to invade Europe in successive swarms. Like other natural phenomena, the process became rhythmical: the human tide gravitating from East to West and *vice versa* at intervals of 500 years. The mighty pendulum now swings westwards, and European civilisation is threatened by the onslaught of a thousand million Asiatics.

Such is the thesis put forward by Dr. Lothrop Stoddard. In a work bearing the significant title "The Rising Tide of Colour" he classes the globe's population as Whites, Yellows, Browns, Blacks, and Reds. The first, numbering 550 millions, are mainly concentrated in Europe. Dr. Stoddard sub-divides them into Nordics, Alpines, and Mediterranean; but he points out that ancient culture has welded them into a single race. At the close of last century their inventive genius, enterprise, and organising power had given them the hegemony of the inhabited world. The Yellows, 500 millions strong, occupy the eastern half of Asia. Although in the main successful imitators of Western civilisation, their efficiency in all the arts of war and peace is equalled by their capacity to adapt themselves to any environment. The Middle East is the habitat of 450 million Browns, who cannot be reckoned an inferior race, although their civilisation differs *toto caelo* from that of the Whites. The territory of 150 million African Blacks stretches for 20 degs. of longitude on either side of the Equator. They are sharply differentiated from the rest of mankind, their outstanding quality being enormous animal vitality, which renders them intensely emotional and equally prolific. In ethnical crossings the negro strain is invariably prepotent, and is rarely, if ever, bred out of a stock. But the black man's superstition and political ineptitude have made his habitat a mosaic of warring tribes, and the massacres ordained by ubiquitous witch-doctors caused an incredible wastage of human life. Prior to the white administrators' advent, the population of Africa was stationary; thanks to law, order, and sanitation, it is now increasing with marvellous rapidity; and in a very few decades Darkest Africa will be cursed with a super-abundant human crop. The world's tale of population is completed by forty million Reds, indigenous to America.

It will be seen that the coloured outnumber the white races by two to one; and the disproportion in their respective birth-rates is equally marked. Whites double in 80 years, Yellows and Browns in 60, Blacks in 40—in extreme cases 15 years. Despite their numerical inferiority, the Whites have, by dint of sea-power, established a world-wide dominion, which was sullenly endured as inevitable by the coloured races. But a train of causation has long been at work which threatens it with ruin. The Whites have always regarded human affairs from the angle of politics, whereas it is race only that matters. Their

strength is sapped by internecine discord, by the abortive Crusades, by dynastic struggles between England and France, by the Thirty Years' War, which has stunted Germany's political growth. Jealousy of Russia brought Great Britain into collision with a race which was destined by Nature to be linked with her in firm economic bonds. In 1902 it led us into an alliance with Japan, which enabled that Power to defeat Russia two years later. The Legend of Plassey had been taken to heart by Yellows and Browns alike: they believed that Asiatics led by Asiatics were no match for Europeans. Our prestige suffered heavily from the Battle of the Yalu River, and it has been destroyed by the Great War. The spectacle of a white world divided against itself and staggering from its huge losses in men and money fills Asia with a keen desire to escape from a hated tutelage. Japan casts longing eyes on Australasia and the Americas; she aims at becoming the spearhead with a shaft consisting of 400 million Chinese. India, Egypt, and the Middle East are seething with revolt. Pan-Islamism dreams of using the Blacks as a lever for overthrowing the Whites' dominion. A handful of Russian Jews, aided by Chinese executioners, are plotting the destruction of our economic life. Asia, in fact, has awakened from its long sleep; and a Japanese Chauvinist summarised its hopes when he boasted that "the East would put the West to bed."

The Great War has precipitated a racial struggle for existence which was bound to occur sooner or later; and the instinct of self-preservation impelled the Whites to protect their territory from the rising tide of colour. The Americas, Australasia, and the extremities of Africa were earmarked as close preserves for their race. In Dr. Stoddard's eyes these regions constitute a system of "inner dykes," which must be preserved at any cost; and he would include Equatorial Africa, which, left to its own devices, will certainly fall a prey to Islamic propaganda. Writing as an American, he is inclined to gratify the powerful instinct which raises the battle-cry, "Asia for Asiatics." European overlordship in that continent he regards as an outer dyke, and contemplates its disappearance with equanimity. Yet he is under no illusion as to the result of the white man's retirement, bag and baggage. At pp. 84-85 will be found a lurid picture of the anarchy which would descend on an India deprived of its white garrison. A greater degree of altruism might fairly have been expected in one who has read the pregnant lessons of history aright. Dr. Stoddard ought surely to realise that India is the keystone of an Empire the collapse of which would react with terrible effect on the heterogeneous population of his own country. If the League of Nations materialises, its first care should be to provide for the legitimate expansion of coloured races with a minimum of injury to the Whites.

F. H. S.

II.—THE INDIANS IN FRANCE.

In this country there has always been a minority of the public and a minority among the Press which has taken an intelligent interest in India and her peoples. Before the war this minority was as small as it was select, and outside it the Englishman, and the Press which instructed him, paid scant attention to our Indian Empire.

If since the war this attitude has undergone a change, if now the affairs of India are the subject for discussion and the material for leading articles in hitherto unfamiliar quarters, the stranger in our midst might jump to the conclusion that this newly awakened interest is due to the fact that India sent over a million men to fight the Empire's battles in the various theatres of war. He would naturally argue that it is the Indian fighting man and his deeds upon the battlefield that have aroused this interest amongst us. And he would be mystified, even indignant, if he were told that it is to quite other men than these, to men unaccustomed to loyalty and brave deeds, familiar with the platform and the Press rather than with the trenches and the battlefield, that India owes the notoriety she has lately achieved; that of the Indian fighting man, of his work, his thought, his speech, the Englishman knows and cares very little. If there was an excuse for this ignorance it is now removed by the volume before us, in which General Sir James Willcocks tells the story of the Indian Army Corps which he commanded for a year on the Western front.

In these pages we follow its fortunes from the time when the Corps of two divisions left India in September, 1914, through the desperate and confused fighting of that winter, to Neuve Chapelle, the second battle of Ypres, the costly failure at Festubert, and on to Loos—the last battle on this front in which the Indian Corps took part. It is a story

which arouses our admiration and respect, and at times our indignation.

Sir James demonstrates very clearly the mistakes in our military policy as regards our Indian Army before the war. Its equipment and training, its terms of service, its system of promotion, its machinery for supplying drafts, the organisation of its reserves, all were found wanting, and all were but symptoms of that lack of interest in the Indian Army which had been the habit of military authority in England for several years before the war. The natural result of this lack of interest was ignorance; an incapacity to estimate the psychological problems involved followed; and there ensued many mistakes and misunderstandings, of which the author justifiably complains.

But in addition to such drawbacks the Indian Corps was handicapped from the start. The Sirhind Brigade of the Lahore Division had to remain in Egypt, and the remainder of that Division and the Meerut Division immediately on landing in France found themselves rushed up to the line piecemeal into the thick of the confused fighting round Ypres and La Bassée. Brigades and battalions, and even platoons, were split up and separated from their proper units. Indian troops were flung into the fight with English battalions whom they did not know, and who knew neither them nor their language; sometimes they were separated even from their own officers. When it is considered that they were engaged in a form of warfare of which they were totally ignorant, in a strange country and in a wintry climate to which they were not inured, it can be imagined how great were the difficulties, moral and physical, which these splendid troops were asked to surmount. It is no reflection on the Indian Sepoy and Sowar to say that it is surprising that under such conditions they gave such an account of themselves against a brave and stubborn enemy.

The need was pressing; every man was wanted, and therefore the Indians were called to hold the breach; but, as Sir James points out, it is surely unnecessary to say that this corps was brought all the way from India to fulfil some nebulous political purpose; the Indians were transported 4,000 miles to France in order to defend the gates of England, whose people had not provided themselves with an adequate army.

It was not until December 7 that the Sirhind Brigade of the Lahore Division arrived and the Indian Corps was at length concentrated and finally took over the front in the vicinity of Neuve Chapelle. Except for the temporary detachment of the Lahore Division during the second battle of Ypres, the Indian Corps was fated to remain in this most featureless, wettest, and muddiest part of our line for the whole of the fourteen months that it was in France. It had to fight and rest amid the most depressing and unfamiliar surroundings conceivable—a Gurkha described it as a "snipe jheel"—without any change whatever. It is difficult to imagine what the reason for this can have been; perhaps, again, it was "policy" of some kind.

Yet, even so, they fought—and came again. In spite of very heavy losses in the ranks and in the irreplaceable and, as the author so often insists, the indispensable British officer, the Indian Corps fought on with an unsurpassable gallantry, to which the many stories of brave deeds bear witness. Their commander makes a point of mentioning by name all those of his corps who performed distinguished service, whether they received awards or not. It is a prominent feature of the book which will, we think, endear it to the Indian Army that familiar names, British and Indian, crop up on every page with the stories of how their owners lived and died; and with such stories there are many anecdotes to show how the "Jawan" regarded the war in France.

In descriptions of such confused fighting, as, for instance, that at Neuve Chapelle, the continual recitation of individual names and actions make it somewhat difficult to follow the course of events. The author perhaps forgets that, though, as a director of the operations, the terrain over which the battle surged is before his eye even as he writes, the reader may not be so sure of his ground. It is impossible to follow detail such as that given in the account of Festubert (p. 279), unless there is an equally detailed map to which reference can be made; the maps, on the whole, are inadequate and too few.

But in the description of Loos there is a marked difference, for the author is describing a fight of which he has not first-hand knowledge: the account is clear, and not overburdened with detail, and the map facing page 319 gives most of the information required. Sir James Willcocks was superseded in command of the Indian Corps in September, 1915, the command devolving on Sir Charles Anderson (formerly G.O.C. Meerut Division). Whatever were the reasons for this change, it was apparently effected in an irregular manner, and in a way which could not fail to wound deeply the feelings of a commander of Sir James' record and position. We must fully understand the severity of the blow, and sympathise with his remarks; to our

sympathy would have been more readily added our deepest admiration if these remarks had not been prolonged beyond p. 321.

At the moment there is prejudice against war books: perhaps we have had too many mediocrities in the past, or perhaps we want to forget rather than remember in the present. But the reading of this book is, we think, in the nature of a debt which Englishmen should pay to the memory of those brave men whose story is here related, that they may learn what the Empire of India stood for in 1914. Their admiration and their gratitude cannot fail. And if they read with understanding they will know how wide a gulf divides the Indian politician who clamours for Home Rule from the Indian fighting man whose voice has never yet been heard. Perhaps even yet gratitude will assume a practical shape before it is too late.

III.—POST-EXILIC JUDAISM FROM CYRUS TO ALEXANDER THE GREAT.

"Early Judaism," by Mr. L. E. Browne, deals with a period of Jewish history which is admittedly full of difficulties. Not only is the history from non-Biblical sources scanty and contradictory, but "the literary problems presented by Ezra and Nehemiah are some of the most difficult in the Old Testament." Many Biblical scholars—and notably Professor C. C. Torrey, of Yale—have so cut up these books by methods of literary criticism that it is difficult for the reader untrained in their methods to follow the narrative. This book seeks to present the facts in what this school accept as their true sequence. To do so the reader is invited to a very close and minute examination of the text and every page abounds in cross references. The author also has another purpose. He believes—and seeks to show—that at that period the Jews were at the parting of the ways, and that instead of pursuing the hope held out to them only a century before by their great prophets, of becoming the great missionary people to the world, they chose instead religious and political principles in direct contrast becoming the great missionary people to the world, they chose instead a line of exclusiveness and intolerance which led to all their subsequent misfortunes. A discussion of matters of religious controversy is not for the pages of *THE NEAR EAST*, and those interested are referred to the book itself. Two matters of more general interest may be touched upon. The great breach with the Samaritans, by the refusal of their co-operation in rebuilding the temple, is assumed to have been a mistake. It was a dangerous policy because all possible helpers were needed at the time, and because it was provoking a neighbour—the surviving representative of the Northern Kingdom—to bitter disappointment and enmity. There was no real ground. "The builders of the Temple were probably of mixed stock equally with the Samaritans." It was a symptom of the hardening spirit of exclusiveness which was growing up. Regarding Sanballat, the Governor of Samaria, further information is learned in the papyri of Elephantine, and these same documents throw a curious light upon contemporary Judaism in Egypt, for at Yeb (or Elephantine) the Jews had a temple, a rival to that of Jerusalem, without apparent offence; and, more strange still, though it was a temple of Yahu (Jehovah), other gods were also honoured there. It is much to be hoped that further papyri may be found in Egypt to answer the many questions which these discoveries have thus far raised.

E. W. G. M.

BOOKS RECEIVED.

"Nile and Jordan": An Archaeological History of the Inter-Relations between Egypt and Palestine from the Earliest Times to the Fall of Jerusalem in A.D. 70. With 5 maps, appendices and 3 indexes. By G. A. Frank Knight, M.A., F.R.S.E. (London: James Clarke and Co., Ltd. 36s. net.)

"The Spirit of French Music." By Pierre Lasserre. Translated by Denis Turner. (London: Kegan Paul, Trench, Trubner and Co., Ltd. 4s. 6d. net.)

"The 'Financier' Rubber Share Handbook, 1921." (London: The Financier, Ltd. 10s., including postage.)

Greek residents in Trebizond are said to have been compulsorily enrolled in the Turkish Nationalist forces and sent to serve in Erzeroum and Kars. All Greek schools in Trebizond have been closed.

MM. Tserepis and Kyriakis, the two Greek officers who were accused of attempting to murder M. Venizelos, were last week at Paris found guilty and sentenced to five years' imprisonment.

A Bill has been submitted to the Hellenic National Assembly by which the State grants a dowry of 400,000 dr. gold (£16,000) to Princess Helena, who is to marry the Roumanian Crown Prince.

PERSONAL AND GENERAL.

TO-DAY.

March 3 (New Style).

February 18 (Old Style).

Jumada II., 23, 1339 of the Moslem Calendar.

Adar 23, 5681 of the Jewish Calendar.

Lord and Lady Eustace Percy have left Cairo for the Sudan.

General Gouraud was entertained at luncheon on February 24 by Mr. Winston Churchill.

Prince Nicolas Ghyka, a former member of the Roumanian Cabinet, left London last week for Paris.

Lieutenant-Colonel Sir Henry and Lady Grayson are returning to London this week from Egypt.

The Dean of Rochester and Mrs. Storrs celebrated the 40th anniversary of their wedding last week.

M. Briand, the French Premier, was the guest at luncheon last week of Mr. Montagu, Secretary of State for India.

King Boris will visit America, in company with M. Stambolisky, during the coming autumn.

Captain H. P. Thomas, I.A., attached South Persia Rifles, is now in England on leave. His address is 5, Cumberland Gates, Kew Gardens.

The Duke of Connaught last week reviewed the Bombay St. John Ambulance Brigade and local contingents of Boy Scouts and Girl Guides.

M. Clemenceau, the former French Prime Minister, who has been making a tour in the East, is sailing from Colombo for Toulon to-day.

On February 26, in St. James's Parish Church, Paddington, Viscount Milner was married to Lady Edward Cecil, the widow of Colonel Lord Edward Cecil.

The marriage arranged between Lieutenant-Commander F. N. Attwood, of H.M.S. Emperor of India, and Miss Ursula De Salis, will take place at Malta on March 12.

M. Kokqvetz, the Yugoslav Minister of Commerce, left Belgrade for London last week to discuss commercial relations with Great Britain. He will also have a conversation with the French Minister of Commerce in Paris.

At a meeting of the Royal Asiatic Society to be held on March 8, at 4.30 p.m., at 74, Grosvenor Street, Mr. D. A. Lane (late South Persia Rifles) will read a paper on "The Nomad Tribes of South-West Persia." The lecture will be illustrated by lantern slides.

A marriage has been arranged, and will shortly take place in Ahmednagar, India, between Tom Eric (Tec), second son of the late Danson Cunningham and Mrs. Cunningham, of Eddesbury, West Derby, Liverpool, and Geraldine, only daughter of Colonel and Mrs. F. D. Hunt, Ahmednagar, India.

It was announced at a meeting of the Egypt Exploration Society, held last week in the rooms of the Royal Society, that arrangements have been made for the holding in May, in co-operation with the Burlington Fine Arts Club, of an exhibition of some of the finest specimens of Egyptian art obtainable.

Lord and Lady Pentland last week held a reception at their house in Cambridge Square to meet members of the Royal Asiatic Society, the East India Association, and the Earl and Countess of Reading. Among those who attended were the Marquess and Marchioness of Aberdeen, Lord and Lady Carmichael, Lord and Lady Emmott, Lord and Lady Inchcape, Sir Arthur and Lady Lawley, and Lord and Lady Pirrie.

The Council of the Royal Institute of British Architects arranged on March 1 a joint meeting with the Society for the Promotion of Hellenic Studies, when a paper was read by Mr. Jay Hambidge, with lantern illustrations, on "Further Evidence for Dynamic Symmetry in Ancient Architecture."

The engagement is announced of McInroy Este Vibert, British Vice-Consul at Brussels, only son of the late Mr. A. R. Vibert and Mrs. Vibert, of Pembroke House, Grouville, Jersey, and Sonia, only daughter of Mr. E. B. Havell, late Principal of the Calcutta School of Art, and Mrs. Havell, Copenhagen.

The Yugoslav representatives on the Italo-Yugoslav Frontier Delimitation Commission are:—General Maister, Colonel Jetchmanitch, and Colonel Dascalovitch, and the Italian representatives are Senator Salata, General Vachelli, and Colonel Garibaldi. The Commission is engaged in tracing the frontiers from Ipek up to Fiume.

Sir A. T. Wilson, formerly Civil Commissioner in Mesopotamia, has been permitted by the Secretary of State for India to retire from the service, and he has accepted the post of Resident Director in Mesopotamia, Persia, and the Persian Gulf of Messrs. Strick Scott and Co., Ltd., managing agents of the Anglo-Persian Oil Company.

Major-General Sir Charles Townshend, M.P., spoke on Mesopotamia and the Near East at a National Party meeting held at the Caxton Hall on March 1. Colonel Page Croft, M.P., presided. On March 15, under the auspices of the same body, Mr. Rupert Gwynne, M.P., will speak on "Will Mr. Montagu Lose Us Our Indian Empire?"

At a meeting of the Royal Geographical Society last week, Sir Francis Younghusband announced that the Reconnaissance Party for the forthcoming Mount Everest Expedition is now complete. Colonel Ryder (subject to the approval of the Government of India), Major Morshead and Captain Wheeler will accompany the expedition as survey officers. Dr. Kellas, who is at present in India and has for many years devoted himself to Himalayan exploration, has joined the expedition; and to reach the highest points two young men have been chosen—Mr. G. L. Mallory and Captain George Finch.

SUDAN.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, February 6.

Recent arrivals from Egypt include the following:—

The Duke and Duchess of Sutherland, Earl and Countess Ossory, Lord and Lady Maidstone, the Hon. Mrs. Greville, Count Potocki, and General Biddle of the U.S.A.

The Duke and Duchess of Sutherland and Lord and Lady Maidstone are reported to have chartered a Government steamer and are proceeding up the White Nile big game shooting.

Count Potocki is reported to be contemplating a trip by motor cars to Gedaref.

Lieutenant-Colonel E. V. Fox, D.S.O., having completed four years in command of the 2nd Bn. North Staffordshire Regiment, has retired, and is being succeeded by Lieutenant-Colonel L. J. Wyatt, D.S.O., who has just relinquished the rank of Brigadier-General on the Staff. Lieut.-Colonel Wyatt is no stranger to the Sudan, having accompanied the North Staffords as a subaltern in their march to Dongola in 1896.

NEAR EAST DEPARTMENT.

The Secretary of State for the Colonies has made the following provisional appointments in connection with the new Near East Department:—

Assistant Under-Secretary of State in charge of the Department.—Mr. J. E. Shuckburgh, C.B.

Head of the Administrative Section.—Major H. W. Young, D.S.O., who will have the assistance of Mr. R. W. Bullard, C.I.E., of the Mesopotamian Service, and probably also of an official from the Foreign Office with special experience of Palestinian affairs.

Adviser on Arab Affairs.—Lieutenant-Colonel T. E. Lawrence.

The Department will also include financial and military sections, the heads of which will be announced later. It is anticipated that the total strength of the Department, when completed, will not exceed 15, the majority of whom are already engaged in their several departments in dealing with the questions now to be concentrated in the Colonial Office.

APPOINTMENTS, ETC.

The King has approved the appointment of Mr. Charles Edwin Odgers, Barrister-at-Law, to be a Puisne Judge of the Madras High Court in succession to Sir Abdur Rahim, who has joined the Executive Council of the Governor of Bengal.

The King has been pleased to approve the appointment of Mr. Zahadur Rahim Zahed Suhrawardy, barrister-at-law, to be a Puisne Judge of the Calcutta High Court, in succession to Sir Saiyyd Shams-ul-Huda, who has retired from the Bench.

During Lord Reading's brief period of preparation for his term in India he has attached to him as private secretary at the India Office Mr. P. Chichele Plowden, of the United Provinces Civil Service. Lord Reading has now made the following further appointments to his staff:—Aides-de-Camp: Captain D. S. Frazer, 18th King George's Own Lancers; Lieutenant H. C. H. Ilingworth, M.C., King's Royal Rifles; Captain A. E. C. Harris, M.C., 7th Haryana Lancers; Captain Ralph Burton, Coldstream Guards (Reserve of Officers). Extra Aides-de-Camp: Captain R. T. Lawrence, M.C., 10th Duke of Cambridge's Own Lancers (Hodson's Horse); Flight-Lieutenant R. F. S. Leslie, D.S.C., D.F.C., A.F.C., Royal Air Force.

OBITUARY.

The death has occurred of the Right. Rev. Louis George Mylne, D.D., formerly, from 1876 to 1897, Bishop of Bombay. Bishop Mylne was a son of Major C. D. Mylne, of the Bombay Army, and was born in Paris in 1843.

The death is announced of Field-Marshal Sir Charles Comyn Egerton, G.C.B., D.S.O. Born in 1848 Sir Charles Egerton was posted to the Bengal Staff Corps in 1871. He was a young officer in the famous forced march to Kandahar under Roberts. There followed a long period of hard work on the North-West Frontier. In the Hazara expedition of 1888 he served as A.A.G., and held the same position three years later in the fighting against the Miranzai, gaining the D.S.O. Next came the Waziristan campaign of 1894-5. Egerton's name first became widely familiar to the British public by his command of the Indian contingent to Suakin in 1896. He took over nearly 4,000 men, and during a period of intense heat held Suakin and Tokar. His work was highly commended and gained the appointment of A.D.C. to the Queen. In 1901-2 he commanded the Waziristan expedition, and subsequently conducted the operations against the Darwesh Khel Waziris. His dispositions brought about as successful a termination of the operations as the scheme permitted. For four years he commanded that historic body whose traditions were so finely exemplified in him, the "Piffers"—the Punjab Frontier Force. Reorganisation brought about its disappearance a few months before he was selected to take the command of the Somaliland operations—June, 1903, to May, 1904—when after several years of inconclusive trials of strength, the so-called "Mad" Mullah was so signally defeated at Jedballi in the Ngal country (losing over 1,000 men in killed alone, while our total casualties were only 58), that he fled from British territory. For this Egerton received the G.C.B.—only 18 months after being awarded the K.C.B. He returned to India to command the Secunderabad Division, and was promoted full general in 1906. In the following year he was called by Lord Morley to the military membership of the Council of the Secretary of State. Shortly after retirement in 1917, after half a century of devoted military service in the field and at the council board, the Field-Marshalship allotted to the Indian Army, rendered vacant by the death of his attached friend Lord Roberts, was conferred on him with general approbation.

In celebration of the Duke of Connaught's visit, the Governor of Bombay has, as an act of clemency, remitted the unpaid balance (£25,895) of the compensation for damages caused in the Ahmedabad riots of April, 1919.

Greek merchant seamen, to the number of 10,000, struck on February 24, at the Piræus, demanding that Parliament should vote the agreement reached at the International Conference at Genoa on the eight-hour day and the imposition of a 4 per cent. tax on profits in favour of seamen.

APPOINTMENTS WANTED.

THE Ladies' League (under Royal Patronage), 118, New Bond Street, successfully recommends Lady Secretaries, Chaperons, Housekeepers, Companions, Secretaries, Governesses, Nursery Governesses, Nurse Companions, Lady Nurses, etc.

TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report:—

PEACE TREATIES: Mandates, Mesopotamia and Palestine. MONTENEGRO. CONSTANTINOPLE. (February 21.)

TURKISH PRISONERS OF WAR. RUSSIA: British Prisoners (Baku). MESOPOTAMIA: British and Indian Troops.—Officers' Pay, Income-tax. INDIAN ARMY OFFICERS (ADDITIONAL PENSIONS). (February 22.)

INDIA: Army Pay.—Army (Strength).—Elections (Voters).—Esher Report (Recommendations).—Auxiliary Force.—Legislative Councils (Ministers).—Stores (Purchase).—Government Reports.—Disturbances, Nihati.—Medical Service.—Shwe Dagon Pagoda. MESOPOTAMIA (MANDATE). INDIA: Imperial Police (Memorials).—Non-Co-operation Scheme.—Motor Ambulances (Government Contract).—Exchange. (February 23.)

TURKEY (BRITISH PRISONERS). INDIA: Riots, Punjab. ARMENIA. ARMENIAN AND RUSSIAN REFUGEES. INDIA: Imports (Uncleared Goods).—Wireless Telegraphy.—Arms Act. EGYPT (TRADE UNION CONTRIBUTIONS). (February 24.)

BRITISH TROOPS (INDIA). (February 25.)

NEWS IN BRIEF.

Owing to strikes Malta is now deprived of its boat, motor-car, and cab services.

A Czech-Yugoslav League has been formed in Prague with the object of promoting Pan-Slavism.

Albania has subscribed 100,000 Italian lire (nominally £4,000) towards the anti-typhus campaign.

King Constantine has decorated a number of Athenian pressmen connected with newspapers supporting the present Government.

The committee appointed by the Hellenic Constituent Assembly to draw up a new Constitution includes three Moslem deputies.

The Indian Legislative Assembly has accepted the Government resolution to appoint a committee to examine and suggest modifications to the Press Act.

THE FUTURE OF EGYPT.

The publication last August of the substance of the memorandum embodying the policy agreed upon by Lord Milner's Mission and Zaghloul Pasha's Delegation for the settlement of the Egyptian question has rendered the reading public familiar for some time with the general lines of the proposed scheme; but it is only within the last week, with the issue as a White Paper of the Report of the Special Mission to Egypt, that it has been possible to examine the reasons which led such a pronounced Imperialist as Lord Milner to recommend a course that has admittedly disconcerted a large number of his fellow-countrymen. It is unfortunate that those who have felt inclined to criticize the Mission's recommendations have not been in possession of the different facts and arguments that influenced its decisions. There may still be room for disagreement with the suggested policy, but we venture to believe that after a perusal of the Report such disagreement must be a matter of instinct rather than rely upon a challenge of Lord Milner's reasoning. Individual passages in the Report may be open to criticism; there may be minor contradictions, as when on one page it is stated that "all the Egyptians, even the humblest, have become so habituated to the new standard of orderly, equitable, and honest administration that a complete return to the abuses of the past would not be tolerated," while on the next page the British official is represented as asking himself whether under the proposed régime it will be possible "to carry on the perpetual struggle against corruption and nepotism, and for promotion by merit and not by influence, with any measure of success"; it may even be urged that zeal for a solution has rendered the Mission a little blind to Egyptian shortcomings and particularly tender to the Egyptian Delegates' susceptibilities. But, unless the whole diagnosis of the Egyptian situation is refuted, it will be difficult to repudiate Lord Milner's conclusions.

Starting from the point that Egypt is not and never has been a part of the British Empire, the Report traces the different stages in the abnormal position resulting from the British Occupation in 1882. Although as the outcome of Lord Cromer's able administration public opinion in Great Britain ceased to concern itself with the indefinite character of the situation, in reality a settlement was becoming progressively more urgent the more widely the influence of our presence in Egypt and the introduction of Western methods made themselves felt. "We have never honestly faced the Egyptian problem," says the Report, "and our neglect to do so is in a measure responsible for the present situation." Especially was this the case when, after the war, the Nationalist leaders asked to be allowed to visit London; and we read, "in spite of the insistence with which the High Commissioner appealed for their reception, the real urgency of dealing with the Egyptian problem at that critical moment had not been realised." From that point events moved more rapidly in Egypt than the Administration appear to have realised. By the time the Mission reached Egypt independent opinion was to all outward appearances solidly Nationalist, and in the opinion of the signatories of the Report it is likely to remain so. "The position," they write, "is undoubtedly a serious one, and in face of this solid phalanx of opposition it might seem at first sight as if we had no choice but either to abandon our position in Egypt altogether or to maintain it by sheer force, in the

teeth of the general and ever-increasing hostility of the Egyptian people." A closer study of the problem made it possible to entertain a more hopeful view, and so the Mission was led to its proposed solution. By sifting moderate opinion from the extremist section it found that, side by side with whole-hearted Nationalism, there existed genuine recognition of the great benefits which Great Britain had conferred upon Egypt, of the fact that the country still stood in need of British assistance, and of the very special interest which Great Britain had in Egypt as the central link in her communications with her Eastern Empire and the Australasian Dominions. Nationalism, however, insisted upon the distinctive character of the Egyptian people. "No grant to Egypt of a greater or less measure of 'self-government,' even if it went the length of what is known as 'Dominion Home Rule,' would meet the case, because Egyptians do not regard their country as a British Dominion or themselves as British subjects. This wholly differentiates the problem of constitutional development in Egypt from the same problem in countries which have for years indubitably formed part of the British Empire, as, for instance, British India. We talk of such countries gradually attaining the status of nationhood. The Egyptians claim that they already have this status. No settlement of the future of Egypt which does not recognise this claim is ever likely to be accepted by—it can only be imposed on—the Egyptian people." The difficulty confronting the Mission, therefore, was to reconcile the defence of British interests with the recognition of the national status of Egypt, while at the same time safeguarding for the Egyptians the new level of civilisation which their country has attained under British guidance. It is in a treaty between the two countries that the Mission claims to have found the solution.

As is known, the Egyptian Delegation, having secured in Egypt general approval of its agreement with the Milner Mission, returned to England with the idea of arranging for certain modifications. Chief among these was the insertion of a clause definitely abrogating the Protectorate. Lord Milner, however, decided that the competent authority to discuss the proposed alterations would be the negotiators of the actual Treaty, and the Agreement stands. The Report, the publication of which with its unmistakable sincerity in every line can hardly fail to affect the Egyptian attitude to the Agreement, goes a long way towards meeting the Egyptian objection regarding the term "Protectorate," as it points out that the aim of the Agreement was to find the basis of a Treaty "which should supersede all debates about words and phrases, and be the sole and final definition of the relations of Great Britain and Egypt." The word in dispute has not been defined, and whatever status it imposed on Egypt will lapse with the ratification of the proposed Treaty. In these circumstances it argues a lack of confidence in themselves on the part of the Egyptian delegates to affect anxiety regarding the former relationship rather than to concentrate attention on the new status. Mistakes have been made by Great Britain in regard to Egypt; they are admitted in the Report. But Britons have nothing to be ashamed of in the orderly development of their relations with the country. As the Report points out: "There is nothing new in the recognition of Egyptian independence by Great Britain. Throughout our occupation we have most carefully respected the theory that Egypt was a national unit under the suzerainty of the Sultan of Turkey, and when we abolished the Turkish suzerainty we deliberately chose to proclaim a Protectorate in preference to annexing Egypt or making her part of the British Empire." Reflection must satisfy all thinking Egyptians that a treaty based on the Agreement will be more favourable to them than they had any reason to expect. If there is opposition to the Agreement in Great Britain it will be based almost entirely on concern for the well-being of Egypt. The Milner Mission was under no illusions on one point. "We make no attempt to conceal our conviction that Egypt is not yet in a position to dispense with British assistance in her internal administration." But the signatories felt that within certain wide limits the measure of the assistance to be given

must be left largely to the Egyptians themselves to determine. In their present mood the people of Egypt may try to cut that measure too fine. If they do, retribution will assuredly follow, and the ordered political development of the country may receive a setback. The trouble, however, will be mainly theirs, and the possible harm to British interests will be in no way commensurate with the gain derived from the regularising of the relations between Great Britain and Egypt. In this view the natural anxiety of the British community in Egypt is not overlooked, and we can but hope that the optimism of the Mission in this particular also will be fulfilled. "The whole atmosphere" (in regard to the employment of British officials), runs the Report, "will, in our opinion, be completely changed when the Egyptians are satisfied that the purpose of British policy is to help them to realise their ideal of independence and not to stand in the way of its attainment."

TROY IN 1920.

By C. E. Vulliamy, F.R.G.S.

Chanak is a pleasant though dirty little town, built on the Dardanelles shore at the narrowest part of the Straits, and facing the ancient fortress of Kilid Bahr on the opposite (European) side. At one time the commercial key to the Marmora—a handy port of call on the way to Constantinople—it was sadly knocked about during the war, partly by the guns of the Queen Elizabeth and partly by the opportune Turk, who thought it an excellent occasion to expel the Christian population and wreck their quarters. Thus, although our first view of the place (in November, 1918) showed us a sea front of neat houses—white and brilliant, like a set of false teeth—we discovered hollowness and desolation behind them. Now, with the return of the Greek and Jewish elements, the town is beginning to regain the appearance of prosperity, and has many drink-shops.

Behind Chanak the hills of Anatolia arise in gloomy undulations; in front, the blue stream of the Hellespont and the ancient yellowness of the Gallipoli peninsula.

From Chanak to Troy (Hissarlik—"the place of castles") is a distance of some 18 miles. We had not been long in the place when, fired by the idea of a visit to the fields of Homeric legend, we borrowed the General's car.

Our route lay along the military road that leads to Erenkeui. It must not be imagined that the term "military road" in this case means an ideal highway. Quite the reverse. First, there was the mud, into which we sank to the footboards. Then, the continuous menace of pot-holes; not such pot-holes as stir your lordly indignation in England, but regular pits full of water, deep enough to drown a pig. Then the wooden bridges, on to which the car mounted, and from which it fell, by a sort of step. And then the traffic: strings of camels—twelve or sixteen together—led by one small Turk on a donkey; and little wooden carts which could not get out of the ruts until their owners lifted them. All these things, and more, we found between Chanak and Erenkeui. But at Erenkeui we touched the limit.

This village was inhabited before the war by Greeks. For several obvious reasons, and through several agencies, it was depopulated and completely ruined. Out of a vast number of houses only one or two had even the remains of a roof. It was a devastation of shattered white stone and of pale blue, yellow and pink plaster. The highway was a series of pits, ridges,

rubbish heaps, and disintegrated *pavé*. But from this point we took heart of grace, for below us lay the plains of Troy and the long, sloping spur, only some 6½ miles away, at the end of which stood the walls of Ilium. Another half-hour, and we had left the car and were walking by the banks of Homer's Simois (Dumruk Chai) towards the ruined city.

It will be remembered that Dörpfeld classified the remains on this site as follows: (1) A village of the Ægean Neolithic period; (2) a somewhat later fortified enclosure; (3, 4, and 5) unimportant settlements; (6) the Mycenaean or Homeric Troy, with extensive fortifications; (7) another small settlement; (8) the Hellenic Ilium, built over the accumulated débris of the 6th city; and, finally (9) a Græco-Roman town of the Christian era.

The ruins were found at the end of a long, broad-ended tongue of land which runs down from the hills and stretches out promontorially across the plain. From the lower ground beneath them they are marked by a few lumpy mounds of grass-covered earth—there is nothing dramatic, nothing suggestive even, about their aspect. Troy has been dug out; and so, when you climb to the level from which the excavators cut downward, you look into the place rather than at it. The first glance shows a number of roughly conical mounds, bristling with fragments of stone, bone, and pottery. Near the bases of these mounds lie the remains of little dry-built walls. But as you walk towards the southern or eastern sides you come on traces of the legendary glory of the place. You find a double line of massive walls—the one made of perfectly squared blocks of yellow stone; the other, curving in a series of straight sections (so that the plan is "saw-edged"), of rudely shaped stones, varying considerably in size. The first of these walls belongs to the last important foundation—the Hellenic citadel; the other is the Mycenaean wall, encircling the city of Priam. At the north-east angle of it there stood the great watch-tower and a long flight of steps therefrom—sadly ruined since the time of the discovery.

Of the Græco-Roman city, the most striking remains *in situ* are the marble fragments of a small theatre or temple to the south-east. The temple of Athene which crowned the acropolis of the earlier city, rising superbly above the level of the outer walls, has left scarcely a trace.

It was natural that our imaginations should have made an effort to visualise the Troy of Æneas and Hector. But apart from the line of the outer rampart there was little for fancy to build upon. Within the enclosure lay an amorphous pile of rubbish; a confusion of broken walls. Passing down through the later strata, the excavators have laid bare the relics of prehistoric dwellings—ancient beyond the reach of fable. Most interesting of these early traces is the sloping ramp, paved with flat stones, which led over the wall of the "second period" fortress.

In the recent war, Troy was put into a state of defence by the Turk. Trenches were cut along the northern and western scarps.

There is good evidence of burning in the abundance of reddish clay, and in various signs of calcination and charring. You have only to scratch in the mounds to pick out pieces of ancient pottery, bones, spindle-whorls, bits of metal, and cockle shells. The presence of the latter is a mystery.

But although the casual explorer would find only rubbish—howbeit most antique rubbish—it must be stated that there were others who made very interesting finds. These amateur excavations were forbidden subsequently by orders, but orders prevailed not.

against the enthusiasm of the scholar or the temporary archaeologist. The prohibition was issued after the representation of "damage" by the Turks—one of their customary exaggerations, put forward (as some of us knew) with the idea of adding to the sum of perplexity and annoyance that taxed to their uttermost the wits and patience of a sorely tried but somewhat inexperienced staff.

Without some historical and classical knowledge, and without the wonderful series of plans made by Dörpfeld, the ruins of Troy would hardly impress the visitor. But the name of Troy carries with it such a wealth of poetic suggestion, the landscape of the Troad and Hellespont contains so vast a field of legend, that he would be the dullest of men who did not feel something of the presence of gods and heroes among these tumbled stones. And so, when we looked towards the mounds at Kum Kaleh and were told that these were the tombs of Achilles and Patroclus, doubt was far from our minds. Scamander flows out to the swampy shore, and still keeps the memory of its name. The hills of Tenedos and Imbros and the snows of Samothrace rise to seaward. To the south, dimly seen, are the white ridges of Ida. With hardly a difference the view we looked upon must have been that which Cassandra saw, as, from the topmost tower, she gazed across the plain.

THE MILNER REPORT.

The "Report of the Special Mission to Egypt" (Cmd. 1131), which was published ten days ago, forms the subject of our leading article this week. It may be of interest to our readers if we give here a few extracts from the Report.

The Mission, it will be remembered, consisted of:—Viscount Milner, then Secretary of State for the Colonies (Chairman); Sir Rennell Rodd, General Sir John G. Maxwell, Brigadier-General Sir Owen Thomas, M.P., Sir Cecil J. B. Hurst (Foreign Office), and Mr. J. A. Spender; and the Terms of Reference were:—"To inquire into the causes of the late disorders in Egypt, and to report on the existing situation in the country and the form of the Constitution which, under the Protectorate, will be best calculated to promote its peace and prosperity, the progressive development of self-governing institutions, and the protection of foreign interests."

The Memorandum of August 18, 1920, to which reference is made above, was published in THE NEAR EAST of November 11, 1920, and need not now be reproduced. It may be remarked, however, that the Report states that: "This document, which presently came to be known as the Milner-Zaghloul Agreement . . . was not an agreement, but merely an outline of the bases on which an agreement might subsequently be framed." It was understood that Zaghloul Pasha and his friends "might make free use of it in public discussion in Egypt." The Memorandum, we are told, was in accordance with conclusions at which the Commission had arrived before leaving Egypt; but "as a result of our discussions with Zaghloul Pasha and his associates, we were now prepared to go somewhat further." We find the record of this advance most clearly in the section of the Report dealing with the representation of Egypt in foreign countries (pp. 26-28). We read:—

It has always been, and is from our point of view, a fundamental principle that the foreign relations of Egypt should be under the general direction of Great Britain. . . . It is obviously impossible to expect that Great Britain should shoulder the responsibility of defending the integrity and independence of Egypt against all possible dangers, if that country were free to pursue a policy of her own in foreign affairs inconsistent with or prejudicial to the policy of Great Britain. This axiom none of the Egyptians with whom we were dealing ever attempted to dispute. They were quite prepared—in a Treaty of Alliance—to give whatever pledges might be necessary to exclude the possibility of any action on the part of Egypt which could cause embarrassment to her great Ally.

Again "the impossibility of our assenting" to Egypt's being left "free to follow a foreign policy independent of Great Britain . . . was not disputed." The question was whether this principle necessarily involved the conduct

of all her foreign relations remaining in British hands. The Commission originally held that British control should be limited to Egypt's political relations, and that Egyptian commercial interests should be left in Egyptian hands; Egypt's representatives having only consular, not diplomatic, status. The Egyptian delegates, however, held quite other views, and considered that "the denial of diplomatic status to the representatives of Egypt . . . would make the settlement we were contemplating entirely unacceptable to their countrymen." They urged that Egyptian representatives "could not take any action injurious to British interests . . . without breaking the Treaty"; that the number of such representatives would be very limited, since Egypt did not desire, and could not afford, to have them in more than a few countries; and that the entrusting of Egyptian interests elsewhere to the care of Great Britain would mark "the specially intimate character of the relations between the two countries."

"The Commission," says the Report, "could not but feel that these were weighty considerations"; but it expressed some uneasiness lest the presence of Egyptian diplomatists in a few European capitals and of foreign diplomatists in Cairo, with nothing to do, "might lead to much trouble," as they might be tempted "to justify their existence by transgressing their proper functions." The Egyptian delegates, however—who had probably never heard the proverb about Satan finding mischief for idle hands to do—"would not admit that there was any real danger of this happening": under the Treaty, Egyptians would be the last to favour intrigues which might make mischief between them and Great Britain; and "the greatest safeguard which we could have . . . was the fact that the Egyptians themselves would be wholeheartedly in favour of an Alliance which fully recognised their national status and dignity." These arguments led the Commission to reconsider their position on the question. They were aware that "the concession might alarm public opinion in this country and imperil the acceptance of the agreement as a whole," but they "remain of opinion that the balance of argument is decidedly in its favour."

The paragraphs devoted to "The Defence of Imperial Communications" are likely to make more satisfactory reading for people in this country. "It was quite impossible" for the Commission to agree to the proposal that the British troops "should be stationed on the Suez Canal, and preferably on its eastern side." But while it is admitted that any force that we may keep in the country "should not be regarded in any sense as a garrison of Egypt," the question where it should be stationed was left open for the conclusion of the contemplated Treaty.

The remaining paragraphs of this section are concerned with the British officials in the Egyptian Service and reservations for the protection of foreigners. It is recognised that the Egyptians look forward, naturally enough, "to the time when the whole, or almost the whole, of the public service will be staffed by their fellow-countrymen"; and the Commission is inclined to think that the importation of British officials has been somewhat overdone of late years. But while the retirement of the British officials would not mean that the country would relapse into the deplorable condition from which we rescued it, the "new model" would be exposed to dangers of deterioration if they were suddenly withdrawn or dismissed. The Commission, however, regards it as highly improbable that anything of the sort would occur. Two contradictory pictures which are presented on pages 29 and 30 respectively do not, perhaps, help us to share their optimism. We read first:—

The number of Egyptians qualified by education and character to take part in the work of government on civilised principles has greatly increased since the occupation. All the Egyptians, even the humblest, have become so habituated to the new standard of orderly, equitable, and honest administration that a complete return to the abuses of the past would not be tolerated.

But on the next page, in a passage depicting the feelings of men holding administrative posts in the event of a change in the political status of the country, we find this:—

Will it still be possible to carry on the perpetual struggle against corruption and nepotism, and for promotion by merit and not by influence, with any measure of success? Such fears are not unnatural.

In regard to the protection of foreigners and the safeguarding of foreign interests, the Report gives clearly the reasons why the Financial Adviser and the official of the Ministry of Justice referred to in the August Memorandum are to be appointed only in concurrence with the British Government. Those reasons are so obvious that we need not reproduce them here; and—as far as they go—they are unlikely to be challenged outside Egypt. The retention of this very slight degree of control would be indeed a small price to pay for the removal of the incubus of the Capitulations.

(To be continued.)

THE CARAVANSERAI.

*Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultan after Sultan with his Pomp
Abode his Hour or two, and went his way.*

—OMAR KHAYYAM.

The Willcocks case, which is now in progress in Cairo, has set my memory to work in connection with Sir William's proposals for the restoration of Mesopotamia's prosperity. He is, of course, a man of boundless energy, and his reputation in Baghdad was that of one who seemed to take no rest, and to expect his assistants to be as tough and active as himself. The Arabs and Turks both liked him greatly, and so did the Europeans. The latter, however, did at times find the great engineer rather *too* energetic; and somehow or other he and his staff came to be spoken of—though only with a smile—as “the irritation experts.”

On one occasion, when Sir William was following up his theories regarding the site of the Garden of Eden, he suddenly “raided” Baghdad, so to say, to obtain backing for his ideas. He secured a missionary and a padre, who happened to be there at the time, and hustled them off to the Euphrates, where he propounded his views, and in a very short space of time convinced his hearers that he was absolutely right. I remember hearing about it at the time, and being amused by the picture of the audience's mixed feelings: admiration of Sir William Willcock's brilliant argument and his wonderful eye for the lie of land, and indignation at having been hustled so much over the journey.

I do not know whether the names of the Near East are really more difficult for the printers than those of other parts of the world, or whether it is merely that my eye picks them out more quickly; but it certainly does seem to me that printers trip up over them more frequently than over other names. Quite lately, for instance, the *Western Times*, an Exeter paper, had an article on hospital work in Yugoslavia, headed “Exeter Lady in Seberia.” Apparently the “comp.” was compromising between Serbia and Siberia. It seems to me that the Serbs would have done well to stick to the old spelling “Servia.” Even THE NEAR EAST has, I believe, gone astray over this particular name; only with that downrightiness which is so characteristic of it, it boldly described Serbia as Siberia.

In connection with this subject, I notice that an *Evening Standard* compositor came to grief the other day over the style and title of General Haddad, the Emir Faisal's right-hand man. In a list of people present at a luncheon given to Sir Harry Lauder by the Rotary Club, the gallant officer was described as “Pasha-general Hachdad”—which almost looks as if Sir Harry himself had “had a shot at it.” Of course, it may not be the compositor who is to blame, but the reporter. I feel strongly on the subject of handwriting just now, because my colleague, “Andante”—and, yes, I will be honest—one or two others have been making unkind remarks about my fist. But I admit that even the best of writers may sometimes fail to make his writing legible. As for the worst—well, you ought to see “Andante's” and “Commentator's.”

At Kingston Police Court not long ago an Egyptian boy, described as about fifteen years old, was charged with “wandering without visible means of subsistence.” Through an interpreter, he explained that he had been brought over to England as a servant by an Army doctor, but had run away because his master had beaten him. His home was in Lower Egypt, and he was described by the interpreter as a “half-caste Arab.” In the result, he was offered service by a lady, who had lived in Egypt and spoke Arabic, and he accepted the offer eagerly. It seems to me that there are here the makings of quite a good story, and my only surprise is that with so many enterprising journalists about we have not had a “Said, the Fisherman, in Real Life,” or something of that kind served up to us yet. I, for one, should be a great deal more interested in such a story—if it were plainly told!—than in the nauseating tales of “love,” intrigue, and so forth, that are hashed up as “romances” of real life. For, how did a youngster of that age ever make up his mind to “bolt” in a strange country, when he could not make himself understood? How long had he been “wandering without visible means,” etc.? And how, and why, did he drift to Kingston? No doubt it was just as easy for him to get there as anywhere else, say, East Ham. But it is the little facts that lend these stories their interest, and I should like to have this Said Junior's tale. By the way, I wonder what a real Arab, a man of the desert, would make of such a charge as that brought against this youngster. I should like to see the interpreter trying to make him understand it!

CORSAIR.

ARAB ARCHITECTURE AT THE CENTRAL ASIAN SOCIETY.

On February 17 Mr. M. S. Briggs, F.R.I.B.A., delivered, before the Central Asian Society, at 74, Grosvenor Street, London, W., a lecture on Saracenic Architecture, which was substantially the same as he had previously given before the Royal Institute of British Architects. As on the previous occasion, he defended the style from some of the strictures that had been passed upon it, saying that it was the product of the Moslem faith, in a semi-tropical climate, during the Middle Ages; and must not be judged according to its suitability for Christian worship, northern latitudes, and modern habits of life. It should be seen through Oriental eyes. It had an interest for the student of Gothic architecture in Europe, because some of the forms most familiar to us in our Gothic buildings—notably the pointed arch—were attributed to the Saracens. In the long intercourse of Saracen and Crusader many things had changed hands.

In a brief discussion that followed the address Major Ormsby-Gore said he had been a humble student of the architecture of the Middle East. Whether that style should be called Arab, Saracenic, or Moslem had been discussed by the lecturer, who would, he hoped, use the word Arab; for scholarship tended to prove that the earliest great Moslem monuments, such as the mosque at Samara, owed their origin to pre-Islamic Arab art. As to the inter-action of Western architecture and Saracenic, the architecture of the Island of Sicily was of great importance in this connection. In Sicily you found an extraordinary blend of Saracenic, Byzantine, and Norman styles in buildings that had survived from the eleventh century—the time of Sicily's Norman kings, Roger and Robert. It was argued that most of the Crusading churches in Palestine—such, for instance, as the Church of St. Anne in Jerusalem, just inside St. Stephen's gate—had been built by Sicilian masons who had accompanied the Crusaders. Before we had got the pointed arch in France and England the Sicilian masons had got it from the Saracens in Sicily, and had taken it back to Palestine; for the structural use of the pointed arch—which seemed to come from Southern Persia and Mesopotamia about the time of the rise of Islam—had been carried west to Sicily in the seventh and eighth centuries.

As to stalactites, Major Gore said he believed you found earlier examples in Sicily than you did in Cairo—possibly there were earlier still in Mesopotamia. On a Saracenic palace outside Palermo, dating from the end of the ninth or early part of the tenth century, there were stalactites, and on the Norman architecture of Sicily of the eleventh century stalactite vaulting was developed in the most splendid manner.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAB (Persian Gulf) and AHWAZ on the River Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K., Continent and India.

NOTES AND NEWS.

Devonshire Square,
London, E.C.2.

America and Mesopotamia.

American oil interests are evidently unwilling to abandon the attitude they have taken up over the question of the development of the Mesopotamian oilfields; at least, so one would judge from President Wilson's Note on the subject of mandates to the Council of the League of Nations, which, it is understood, has been sent partly because of America's anxiety regarding oil supplies, partly because of the problem of the cables; mainly, I suspect, because of the former. The Note indicates that a communication is being despatched giving America's views on mandates, and asking that no final decision should be taken on any matter concerning them pending its receipt. It would appear from reports that there is more than a suspicion of a political flavour behind America's action, and that, in other words, the party about to retire from power is endeavouring to safeguard itself from future criticism. But, assuming that is not the case, the Note would appear to indicate an entire *volte face* on the part of America, for it would suggest the possibility that the United States is now prepared to reconsider its position regarding participation with the Allies in the administrative tasks resulting from the peace settlement. If so, it would be all to the good, for the problems that have arisen would cease to exist. The principal objection taken to the attitude adopted by America has been that she desires to share in the fruits of victory without taking her part in the labour imposed on the Allies.

The Sudan Loan—

This week saw the issue of the balance of the Sudan Government Five and a-Half per Cent. Guaranteed Loan 1929-59, which has been authorised for the purpose of meeting expenditure on railways and irrigation. Last October the first part of the loan—£3,500,000—was issued at the price of 95½ per cent., and the amount of the present issue is £2,880,000 at 92 per cent., a difference which indicates the effect of the trade position on finance in the intervening months. The bonds, which rank equally with the previous issue, are redeemable at 105 per cent. by a cumulative sinking fund operating by annual drawings commencing on November 1, 1929, and are secured on the general revenues and assets of the Sudan, while the interest is guaranteed by the Imperial Government. Subscription to the loan is on easy terms, 5 per cent. being payable on application, 12 per cent. on March 16, and 25 per cent. on April 8, May 4, and May 30. As the return to investors by way of interest alone, to say nothing of the bonus on redemption, is 5.98 per cent., it will be realised that the loan has special attractions as an investment. The first part of the loan was rapidly subscribed, and it is to be anticipated that the present issue will also meet with a ready response, for there is no doubt that the investing public are fully alive to the advantages of a loan of this character.

—and Cotton Cultivation.

As the Government have recognised the necessity of doing all that is possible to further work of development in the Sudan by guaranteeing the interest on their loan, it is difficult to understand why they have been unable to see their way to go a step further by giving similar assistance to the scheme recently brought forward for a railway from Kassala to Thamián with a view to the extension of cotton cultivation in that region. As I pointed out at the time, the refusal was given on very inadequate grounds, and it appeared, indeed, as if some of the authorities here had a rather hazy view of the cotton position. The question is evidently one that requires reconsideration, and I hope that those responsible for the scheme will see that the Government are frequently reminded of its existence, more particularly in view of recent happenings in Egypt, which emphasise very strongly the extreme need for alternative sources of supply for Lancashire.

Trade with Bulgaria.

An important statement was made to the Press last week by M. Dashkaloff, Bulgarian Minister of Commerce, Industry and Labour, on the outlook for commercial relations between Great Britain and his country. M. Dashkaloff emphasised the desire of the Bulgarian Government for the development of trade between the two countries, but pointed out that

at the present time there is little activity in this direction. In the meanwhile, Germany is taking advantage of the position, and, by means of cheap goods, is endeavouring to regain the position she occupied in the Bulgarian market before the war. The situation is aptly summed up in M. Dashkaloff's words: "It is the decisive moment for British trade." He points out that Bulgarians have always preferred English goods, but have never been able to get them in sufficient quantities, and he makes the complaint that British industrial circles seem to think that the markets of Bulgaria are only for the Central Powers. That is certainly not the case, and the real hindrance is to be found in the dilatoriness of the Government in establishing a satisfactory export credits scheme. Once that is in working order, I do not think M. Dashkaloff will have any grounds for complaining of the lack of enterprise on the part of British firms.

Question of the Ports.

M. Dashkaloff made a number of interesting suggestions in regard to the question of developing economic relations between the two countries. For one thing, he strongly favours the establishment of a school in Bulgaria for the teaching of English. In matters of this kind, the French are usually ahead of us; they have an institution there, and it would be well, as he suggests, if we followed their example, for there is no gainsaying the value of a knowledge of language and customs in influencing national relations. He also makes the point that British shipping lines have no direct communication with the Bulgarian ports of Varna and Bourgas, and lays stress on the advantage of direct trade by means of ports on the Aegean Sea, which would not be under the control of any other State.

The Attempted Cotton "Corner."

The latest report regarding the co-operative syndicate which has been formed in Egypt to hold cotton and thus force prices up is distinctly amusing. It is understood, it is stated, that the Government, while sympathetic towards all co-operative movements, is not prepared to accede to the syndicate's request for financial aid. On what grounds assistance could be expected from the Egyptian Administration it is difficult to see, and all that can be said is that those who imagined otherwise lack nothing in self-assurance. Of course, the Government could do nothing of the kind. If a number of individuals attempt to create a "corner" in some commodity it is no part of the authorities in any country to connive at their efforts. From another point of view the report is interesting, for it suggests very strongly that the rumour that the syndicate has obtained the support of an American bank is unfounded. It was, in any case, very unlikely that any bank could be found to finance so speculative an enterprise.

The Indian Trade Crisis.

It is impossible to minimise the seriousness of the position that has arisen in regard to British trade with India as a result of the decline in the value of the rupee. Briefly, what has happened is that various trade and other associations in India, on the ground that they have been led by the Government to believe that the exchange value of the rupee would be 2s., have been urging their members to refuse payment of drafts against shipments unless drawn at that rate.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866.)

Head Office: 27, THROGMORTON ST.,
LONDON, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

E. W. H. BARRY, Esq.
THE VISCOUNT GOSCHEN.
P. NAVILLE, Esq.

GENERAL THE HON. SIR H. A.
LAWRENCE, K.C.B.
LIEUT.-COL. SIR ALBERT STERN,
K.B.E., C.M.G.

Bankers: BANK OF ENGLAND. MESSRS. GLYN, MILLS, CURRIE & CO

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Many dealers have followed this advice, with the result that the warehouses at the principal Indian ports are packed with goods. Meanwhile British traders are being pressed by the exchange banks for repayment of the advances made against shipment, while the manufacturers are requiring payment for goods ready for despatch. Of course, the position is intolerable, and, in the words of the motion adopted at a recent meeting of the East India section of the London Chamber of Commerce, the attitude of the associations in India is "contrary to all business morality" and "destructive of the sanctity of contracts," and if persisted in "will have a most damaging effect on all present and future business with India, and render impossible the continuance of the past relations between shippers in this country and importers in India." One can only trust that once the consequence of their action is brought home to them Indian importers will realise that their position is untenable. They want to conduct commerce on a basis of "heads I win, tails you lose"; but, as they will find in the future, that is a game that can only be played once.

New Bank in Egypt.

I learn that a new bank is to be formed in Egypt by the Banco di Roma and the Cassa di Sconto, with a capital of £1,000,000 in fully-paid shares of £10 each, 80 per cent. of which will be subscribed by the former bank and 20 per cent. by the latter. The new bank, the headquarters of which will be at Alexandria, will take over the Cassa di Sconto in Egypt and the branches and agencies of the Banco di Roma in Egypt, the Sudan, Syria, and Palestine. The directors of the new bank will be M. G. Vincentini, chairman of the Banco di Roma, M. R. E. Lang and M. A. Rosa, joint managers of the central administration of the Banco di Roma, Baron Felix de Menache, chairman of the Cassa di Sconto, M. Aldo Ambron, M. C. Vanucci, director of the Cassa di Sconto and general manager of the Banco di Roma for the Orient, who will be the general manager, and Ismail Pacha Sirry, late Minister of Public Works in Egypt.

COTTON GROWING IN MESOPOTAMIA.

II.—THE COMMERCIAL ASPECT.

(FROM A CORRESPONDENT.)

BAGHDAD.

In my previous article reference was made to the experimental work which had been undertaken for the past three years to discover the possibilities of Mesopotamia as a cotton-growing country. Before advising the Arab to undertake the extensive cultivation of cotton two prime factors had to be solved. These were the discovery, firstly, of that variety of cotton best suited to the local conditions of soil and climate; and, secondly, the yield of cotton that can normally be expected under these conditions. A considerable amount of valuable information and statistics have been collected which will facilitate and help to crystallise the programme of work of the Agricultural Department. Of the eighteen varieties of cotton that have been under experiment it now appears that the best suited is one grown from seed imported into India from America, but originally obtained from the Pedigree Seed Company, South Carolina, U.S.A. This has been given the commercial name of *Mesopot White*, for the reason that in character it is somewhat distinctive from its progenitor Webber 49, as grown in America.

When grown on small areas the yields of a number of the varieties of cotton under experiment have been exorbitantly high. These high yields (often exceeding 2,000 lb. of seed cotton per acre, as compared with the average of 1,200 in Egypt, 600 in America, and 300 in India) could not be taken as a basis for estimating the average yield for Mesopotamia on a large scale. Nevertheless, the yields actually obtained were indicative of the possibilities of the country.

During 1920 an attempt was made to grow on the share system eighty acres of *Mesopot White* by an Arab Sheikh and his cultivators, who were given the guidance of and were financed by the Agricultural Department. The vicissitudes of war* have to a certain extent vitiated the results of this preliminary attempt to arrive at a reliable figure which would represent the profits that could be expected from cotton cultivation.

In addition to this area, however, some 400 acres were sown by estate owners with seed of Egyptian cotton especially imported on their behalf. On the whole of this latter area the crop gave every promise of good returns, but during the disturbances the plants were neglected and most of the cotton pilfered.

The cotton crop in Mesopotamia is sown in the spring. Picking starts in August and continues until the winter

sets in. On the 80-acre estate referred to, about twenty-five miles from Baghdad, the supervisory official staff, comprised of one Indian assistant and two Egyptian cultivators, had of necessity to be withdrawn when the disturbances broke out in July. As a result, the crop, instead of being irrigated at intervals of ten days until the end of September, received no water after the middle of August. Despite this treatment, an average yield of 1,250 lb. of seed cotton per acre was recorded, and the whole of the crop has since been delivered.

It is reasonable to assume, as a result of this work, that an average yield of about 1,250 lb. of seed cotton per acre can normally be expected in this country; and, with an unfailing supply of water coupled with suitable cultivation practicable to the Arab, it is confidently believed that much larger yields can be obtained.

In many respects Mesopotamia compares very favourably with such newly developed countries as Nigeria, Uganda, the Sudan and Turkestan. In each of these countries the area under cotton was steadily increasing before the Great War, regardless of the low prices then ruling and the high cost of transport due to inadequate communications. In Mesopotamia there now exists a good railway system which taps practically the whole of the irrigated areas. Some 1½ million acres are already controlled by irrigation. Of this area it is estimated that cotton can be grown on 250,000 acres. Taking an average yield of 5-6ths of a bale of cotton per acre, the annual cropping possibilities of the country are at present about 120,000 bales, due allowances being made for a suitable rotation. The ultimate possibilities of the country, with a perfected irrigation system, are estimated at 1,000,000 bales annually.

Much has been written about the shortage of agricultural labour in this country. The writer is of the opinion that there exists a supply of Arab labour sufficient to meet the demand of the present irrigable areas. And as this area increases the incursion of Arabs, more especially from Southern Arabia, will in all probability keep pace with the new areas brought under perennial cultivation. The total population of Mesopotamia (1920 census) was discovered to be practically three millions. Of this number 1,700,000 are believed to be engaged in agricultural pursuits in Lower Mesopotamia, where all crops are irrigated. This is equivalent to seven head of agricultural population per irrigated acre, which is more than ample for the intensive cultivation of such a crop as cotton.

The development of this important line of work undertaken for the past three years mainly in the interests of the Arab population is under the guidance of the Agricultural Department. The British Cotton-Growing Association is contributing valuable assistance by erecting ginneries now ready to handle the 1920 crop. There is now available for distribution seed of *Mesopot White* sufficient to sow about 2,000 acres. Propaganda work is about to be started in earnest.

The natural resultant of these concomitant factors—suitability of soil and climate, transport facilities, perennial irrigation, a population sufficiently large to cultivate the areas commanded by existing canals, and an adequate supply of suitable seed—will be a rapid extension in the near future of the area under cotton and the establishment of an export trade in this product. In a subsequent note it is proposed to deal with cotton as a factor in the political situation in Mesopotamia.

CONDITIONS IN TURKEY.

The following cable has been received by the London Office of the Guaranty Trust Company of New York from its office at Constantinople:—The general situation is unchanged. In some quarters it is predicted that there will be a depreciation in the Turkish pound. The stock market continues dull. Efforts are being extended, particularly amongst individuals, towards the resumption of business with Russia. Imports for the first half of February are over £T4,500,000, a decrease of about £T1,000,000 over the latter half of January. Exports for the same period were over £T400,000, approximately the same as for the preceding fortnight.

FOREIGN TRADE CATALOGUES.

The Department of Overseas Trade have issued an index of foreign and colonial trade catalogues which are available in the Department. The collection, which is housed in the Foreign Samples Section at 7-11, Old Bailey, E.C.4, contains 15,000 trade catalogues of German, Austrian, U.S.A., Italian, Belgian, Canadian, Swiss, Danish, French, Japanese, Dutch, Polish, Norwegian, Portuguese, Spanish, and Finnish firms. Copies of the catalogues will be lent to manufacturers in the provinces on application to the Department of Overseas Trade, 35, Old Queen Street, S.W.1.

*The 1920 Arab rising.

Commerce and Industry.

(REPORTS FROM OUR OWN CORRESPONDENTS.)

EGYPT.

CAIRO, February 7.

Pink Boll Worm Danger.

The Government has issued a communiqué drawing the attention of cultivators to the law which forbids the storage of unginned cotton after April 30, unless it is deposited in warehouses fulfilling all the requirements laid down by the agricultural authorities with a view to preventing the escape of the pink boll worm moth. The reason for this notice is that cultivators are holding up their cotton in an unginned state in the hopes of the market rising, and that this action may mean that a very considerable quantity of cotton will still be unginned on May 1, with consequent danger to the coming crop owing to it not having been possible to kill by fumigation pink boll worm existing in the seed. The Government has taken up the matter with the more important ginners, and in order to meet the cultivators it has been arranged for the ginners to gin and store the cotton until August at an inclusive charge without any obligation on the part of the owner to sell his cotton. It is to be hoped that cultivators will pay the requisite attention to this notice, for, otherwise, not only will there not be sufficient good sowing seed for the cotton area, but whatever cotton is sown will be in danger of very extensive attack from pink boll worm.

Industrial Workers and their Wages.

A law has just been promulgated by the Council of Ministers, and confirmed by proclamation for application to foreigners, forbidding workers to cede their wages to syndicates or other bodies. This has been rendered necessary by the action of the tramway syndicate, which persuaded the workers of the Cairo Tramway to cede their wages to it. The law has been enacted as much for the protection of the workers themselves as for the prevention of any undue influence being brought to bear on them by reactionary elements.

CAIRO, February 10.

Large Deficit for Half-Year.

The State accounts for the half year just published show a very large deficit. Revenue amounted to ££16,640,008 as against ££12,269,077 last year, and expenditure to ££19,684,369 as compared with ££11,409,365. There is an increase of ££4,370,931 in revenue, but, as under expenditure there is an increase of ££8,275,004, the half year balances with a deficit of ££3,044,361 instead of an excess of receipts (££859,712) recorded at the end of the half year in 1920. The chief heads of revenue showing an increase have been customs, ££1,718,247; tobacco, ££893,969; judicial receipts, ££296,807; railways, ££985,685; Ghaffir cess, ££174,665; and military exemption fees, ££132,120; while on the expenditure side more than half the increase is accounted for by railways (££4,665,305), the outgoings of which have been about trebled, the other important items being education, ££192,217; irrigation, ££200,850; survey, ££149,471; and indemnities for the cost of living, ££1,219,467.
