NOTES OF THE WEEK.

The Inevitable Side-Show.

The Near Eastern question still remains a side-issue for the Entente Governments. At Cannes the Supreme Council will momentarily divert its attention from the local delights of that attractive holiday resort to consider submarines and the financial rehabilitation of Europe. Both are matters of prime importance, but neither offers a problem which, as in the case of the Turkish settlement, is capable of a final decision, leaving the field clear for other subjects that have not been on the agenda paper for over three years. The discussion of Near Eastern affairs is relegated to the trio of Foreign Ministers, who, if they should arrive at a common understanding, would require a further session of the Supreme Council to give sanction to their decisions. It is, perhaps, symptomatic of the optimism with which the Governments make this fresh attempt to frame a workable settlement that they have entrusted the spade-work to their Foreign Ministers.

A New Shibboleth.

There is some danger of the Foreign Ministers being encouraged to stultify the new Turkish treaty by an attempt to compromise on the subject of safeguards. In other words the parade of confidence in the Turks which will be the basis of the fresh treaty will be offset by measures for the protection of minorities calculated to satisfy any misgivings entertained anywhere on the subject. If as a concession to Greek feeling these safeguards are to be in any shape or form Greek, it is certain that they will defeat their own object. There are only two ways of dealing with the Turks at this juncture: they must either be "hammered" or put upon their good behaviour. The Allies are not in a position or refuse to hammer them, and the Turks will not behave themselves so long as Greek jurisdiction remains established on what the Turks regard as indubitably Turkish territory. No quibbling at any conference or in any draft treaty will eliminate this fact, and the Foreign Ministers will do well to reckon with it, if they are aiming at a practical settlement.

The Problem of Safeguards.

It is difficult to see what practical safeguards for the protection of minorities are offered by partial military occupation. A number of Greeks were executed in the Pontus district at the moment when the Greek army was occupying the maximum extent of Turkish territory.

If the Turks are minded to kill isolated bodies of non-Moslems, they will do so, however many Greeks or Allied troops there may be at Smyrna. The best protection for the minorities is to prevent the Turks from being so minded, and this can be done either by removing the objects for which these excesses are committed (the objects vary, but, generally speaking, can be grouped under the single condition of the Turk with his back to the wall fighting a hostile Europe), or by convincing the Turks that they will be summarily and effectually chastised. Europe never having been united on the subject, and now, in the case of the Entente, one or more Powers playing a lone hand, the Turks have never been convinced on this point, and are not likely to be particularly convinced just now. Thus *faute de mieux*, we are reduced for a workable settlement to the non-heroic, possibly humiliating course of putting the Turk on his good behaviour. For the British Government the position may appear awkward, owing to the protests made against France's action in adopting this course in Cilicia. But France's mistake has been to expect good behaviour on the part of the Turks while the Greek army is still in the field against them. There can be no piecemeal settlement, and the head and front of French offending is the attempt to introduce one.

Political Changes in Albania.

A series of Ministerial crises within the space of a few weeks suggests that Albania is to find the course of political development as stormy as most of her Balkan neighbours have found it before her. It was inevitable, however, that Serbian aggression should arouse an echo in the country, and there is no reason for surprise that a movement should have been started to turn the tables on Yugoslavia. The appointment of Hassan Prishtina as Prime Minister would seem to have been connected with some irredentist design on Kossovo, which it was hoped might be brought to success on the strength of the Prime Minister's connexions with Italy. Wiser counsels prevailed; Hassan Prishtina was removed from power, an interim Cabinet took office, in order that Parliament should be convoked in extraordinary session, and, when it resigned, a new Government was formed with the avowed policy of accepting the *status quo*, and of living at peace with Albania's neighbours. The appointment of Hassan Prishtina seems to have brought about the downfall of the High Council or Council of Regents. Two of the four members resigned in protest, and Parliament deposed the others. A new Council

has been elected, again representative of the three religious divisions in the country, Moslem, Orthodox and Catholic.

The New Roumanian Cabinet.

As was anticipated, M. Take Jonescu, Roumania's new Prime Minister, has not been able to form a Coalition Cabinet in the party sense, but he has rallied to his support a number of business men or specialists, and the new Ministry, in spite of parliamentary isolation, may yet render a good account of itself. It is understood that the fiscal reforms introduced by the former Cabinet, which contributed to the fall of General Averescu's Government, will be modified in the light of the experience already gained. As there is nothing in the international situation to cause Roumania uneasiness, the whole attention of the Cabinet can be concentrated upon the question of economic reconstruction, and it is noticeable that M. Take Jonescu has relinquished the portfolio of Foreign Minister for that of Finance. With an interval of some weeks before Parliament meets, there should be time for the Government to settle itself in the saddle and to elaborate a programme which may encourage the hitherto warring parties to cooperate in a genuine attempt to place the country on a sound economic footing.

Yer-golem and Yer-maluk.

Whether the view of the University of Sofia that the Bulgarian Government has no business to interfere with the Bulgarian alphabet be right or wrong, there can be no doubt that the matter is outside the province of the foreigner. It may be, however, that the foreign point of view will prove of some interest to the controversialists in Sofia. The Bulgarian language happens to be at once the most ancient and the most modern of the languages constituting the Slavonic group. It is the nearest approach to the old ecclesiastical Slavonic, but it reflects the vitality and forcefulness of the nation that speaks it in having undergone constant modification in keeping with the people's progress. It has become simplified and has borrowed freely from foreign languages. The purpose of the Government in passing last June a law abolishing three letters of the alphabet, two of which, written at the end of words, have in a course of time disappeared in pronunciation, was undoubtedly to continue the process of simplification. There is much to be said for the step, although a protest from the University is natural, if it had not been first consulted. The point at issue in Bulgaria's case is not a purely literary or academic one; for no nation lives to itself these days, and there is no reason why it should regard its alphabet and language as existing solely for itself. The greater its belief in its own future, the keener must be its desire to make its language the simpler and the more easily learned, in order that it may be a channel for the spread of what is good in the Bulgarian character or in Bulgarian literature and of whatever Bulgaria may contribute to the world's general improvement. Nor can what is happening in the neighbouring Slav State of Yugoslavia be overlooked. It can only be a matter of time there before the Cyrillic script gives place entirely to the Roman, and it will be very problematical whether Bulgaria will then have anything to gain by clinging to the old writing. The initial step taken by the Sofia Government last June led many to suppose that Bulgaria, true to her character, was boldly going to take the lead in this obvious reform. This may yet be; but we trust

that when the step is taken, it will be with full agreement between the Sofia University, the Government, and the Bulgarian people.

Another Adriatic Incident.

Following hard upon the Italo-Yugoslav incident at Spalato, to which reference was made in these Notes a fortnight ago, comes news of another, at Sebenico, of much the same character. On Christmas Day, it seems, some Italian sailors from the warship 'Ajaccio' came to blows with the Yugoslavs, and were forced to retreat to their ship in some disorder. According to some versions of the story, the Italians then opened fire with machine guns on a crowd of Yugoslavs on the quay, and many of the landsmen were killed and wounded. In all probability this portion of the incident has been greatly exaggerated, and we shall find eventually that the sailors, if they fired at all, fired only a few shots over the heads of the crowd. But even so, the whole affair was extremely dangerous and deplorable. Both sides have lodged complaints, the Italians against the mobbing of their bluejackets, and the Yugoslav Government against the presence of Italian warships in Yugoslav waters. The withdrawal of the warships would undoubtedly appear to be the simplest and speediest way of terminating a potentially dangerous situation. Unfortunately the Italian Government has ordered more vessels to the scene; and as a result the Yugoslav Government is reported to have posted troops at various points of vantage along the coast. There, surely, we have the materials for a dangerous conflagration.

The Effervescence in Egypt.

The situation in Egypt brought about by the failure of the London negotiations and the subsequent resignation of the Adly Cabinet is dealt with in our leading article. We may here note some of the events that have taken place in Cairo and elsewhere as a result of the arrest and deportation of Zaghloul Pasha and of the causes that led up to it. Zaghloul himself is reported to have taken his captivity at Suez very well, and, with his fellow deportees, to have passed the time there in friendly fashion with the British officers. It would not be altogether surprising, perhaps, if the popular leader felt a certain relief at being freed from the strain of a dangerous and somewhat exacting situation. But his followers have been less ready to adapt themselves to the new position. In the first place, seven of his dissentient lieutenants have rejoined the Zaghloulist delegation; while the wife of the Pasha has announced her intention of filling the gap left by his deportation to the best of her ability. Apparently she aims at achieving her purpose by stirring up further ill-will against the British. The women teachers of Alexandria also are taking a hand in the proceedings, having 'demonstrated' in Alexandria. There have, of course, been numerous demonstrations elsewhere, including one at Foua, near Damanhour, where the Egyptian troops were forced to fire on the mob. Possibly, the most regrettable indication of the mob's feeling was afforded by attacks on girls' schools, which were of a very offensive character. Happily, the latest reports available show that the authorities have the situation well in hand, and already Moderate opinion is making itself felt, if not very strongly.

Trouble in Kurdistan.

A spirit of restlessness is abroad among the Kurds. We have already referred to the operations of Simko in

the Urumiah district, where he has flouted the Persian Government and insulted American subjects. According to an agency report, an autonomous Kurdish Government has been set up "in the neighbourhood of Tabriz," and Persian troops are reported to have lost a thousand killed in an engagement with the Kurds. We mistrust these "round figures" reports, but it would not be surprising if it turned out that Sinko had actually set up a "government" of his own. Meanwhile there has been a fresh disturbance on the other side of the border, where the Surchi Kurds, in the Rowandiz district, have been making trouble, apparently with Turkish help. A column of local levies and police on the way to Rowandiz was compelled to return to Erbil; and it became necessary to despatch a force of a thousand rifles, led by British officers, to cope with the trouble. The latest news is that the Turks and Kurds have been forced to retire on Rowandiz. But there are signs that the trouble is not by any means done with yet.

The Prince's Tour in India.

The outstanding events in India since we last wrote have been the visit of the Prince of Wales to Calcutta, the meetings of the Extremist organisations at Ahmedabad, and the Viceroy's refusal to entertain the proposal for a round table conference. The cabled accounts of the Prince's reception contain some noticeable discrepancies, but the conclusion is apparently justified that, while the effects of the campaign of intimidation were manifest, the campaign itself was arrested, and, as the days passed without disturbance, the ordinary city crowd regained its liberty of expression, and indulged freely in its favourite pastime of sight-seeing. The Prince has now left India for Burma, where he will come in contact with a somewhat different, but unfortunately not a harmonious, political situation, and, while everyone must regret that his welcome to the East should not be unanimous, it may be well to insist that, as he has said more than once, his object is to acquire knowledge of the Empire, which implies a knowledge of the cleavages of opinion by which the various portions of the Empire are distressed. Standing, as he does, above politics, he can do nothing directly to harmonise the discord, but for all that we are confident that his presence is having, and will continue to have, a good effect.

Extremists in Conference

The meetings of the Extremist organisations, the "National" Congress and the "Moslem" League, have been marked by a display of the fissiparous tendencies which experienced observers have learned to expect. It has been known for some time that sections of both bodies were dissatisfied with Mr. Gandhi's moderation, such as it is, and on this occasion they came into the open with a programme of complete independence outside the British Empire. In both organisations they have met with an initial defeat, but we take it that the internal struggle is not yet over. Meanwhile Mr. Gandhi has been given full authority to use the Congress machinery for an intensive, though of course a non-violent, campaign against the Government, and he is to concentrate all activities on the programme of civil disobedience, which he momentarily abandoned a few weeks ago. The challenge is made in a form in which it must be taken up by the authorities, and we fear that there are troublous times ahead, during which the new Constitution will be subjected to strains which it was not designed to bear.

The Attempt at Compromise.

It is not easy at this distance to estimate the strength of the movement which resulted in the proposal for a round table conference, but most of the names mentioned in connection with it fall into two classes, men who are living in the past, and men who desire to avoid commitments in the present. The case of the former class is hard. They have become accustomed to the unanimity of the old days, when no Indian bore any political responsibility, and when it was always possible to hit on a phrase to which everyone could assent: they have not realised that responsibility is the end of unanimity, and they hope that a phrase will still suffice to cure all discords. The second class represents the still older tendency to stand aside while a fight is in progress, and then adhere to the victor: they are not at the moment either Moderates or Extremists, but they are prepared to be either at short notice. Their numbers would make them valuable allies to either side, but we do not think a conference would be the right way to win them, and on the whole we are not sorry that Lord Reading found it inadvisable to accede to their request.

THE WEEK AT HOME.

New Year Resolutions.

The week after Christmas is usually the quietest in the year. Last week was no exception. A brutal murder mystery at Bournemouth excited the public; the infantile section of the community was recovering from Christmas orgies; their elders were engaged in making those new year resolutions which are, no doubt, already in process of being broken. So little news, indeed, was there that some of the papers were driven to fill up space by predictions of a general election in February.

This is a stunt, pure and simple. If it is wrong, it will be forgotten long before the time comes; while if it should by any chance happen to be right, the political correspondents will be able to point to it as a proof of prescience. The real argument against a February election is that the Government has to introduce the Irish Bill in that month, and to decide its policy on national economy; while the Conservatives swear that the House of Lords must be reformed in 1922, if at all. The Conservative attitude is dictated, of course, by the fear of a Labour Government—which is not a very likely occurrence.

France, America, and Submarines.

But home politics have taken a back seat at the moment. The interest has shifted to France, and that not because the British Cabinet has assembled at Cannes, but because of the action of France at Washington. The best friends of France—and she has very many in this country—have been puzzled by her methods. We all understood her demand for a land army, and recognised its reasonableness. But it is difficult to see her point of view with regard to submarines, unless they are built to attack the only naval power in Europe—which happens to be ourselves.

The French suggestion that a great submarine fleet is necessary to convey her black troops to Europe in the event of war is not taken very seriously. In the first place, the submarine is not a good transport ship. In the second, to employ black troops in Europe again—not in an unexpected emergency, as in the last war, but as a measure of settled policy—would outrage public opinion, and further, would be in itself a confession of French weakness.

I am afraid the conviction is slowly gaining ground here that militarism has shifted from Berlin to Paris; it is no longer possible to banish the misgivings which recent French policy has given rise to in this country. Numbers of people here are rather vague about Angora and French policy in the Near East, but there is no room for misunderstanding about the trend of French policy in Europe. One may ignore the Paris Press as much as one chooses, but the acts of the French Government are not so easy to overlook.

Apparently the same disquiet, coupled with rather more disillusionment, is felt at Washington. The Conference has limited the number of capital ships to be constructed, and has constituted a Pacific Pact; so far, good. But any idea that it would be the beginning of a reign of peace has vanished; indeed, national rivalries and militaristic ambitions have become more clearly visible. This will tend to confirm American opinion of the wisdom of isolation, and it may have a somewhat similar reaction here. The entente between Great Britain and France is giving way to a friendly understanding between Great Britain and America.

Trade in 1922.

The general attitude towards the New Year is one of chastened optimism. It cannot well be worse than the last, and we may reasonably hope that it will be better. Capital and Labour, after the great coal struggle, are now in a more tolerant frame of mind, and trade is certainly improving. It will take several months to absorb the unemployed—there are well over a million registered—but the tendency is for the numbers to fall slowly week by week. A great slump in prices has been predicted early in the year; if it comes, it will be due to the retailers at last deciding to cut their losses, and getting rid of the stocks purchased at high prices, which are now unsaleable. There is still room for reduction of prices in the cost of living, but as food goes down, rates seem to go up; so that the gain is not as great as it appears at first sight.

A Heresy Hunt.

It looked last week as though we were to have a heresy hunt of the old kind—an amusement now sadly out of fashion. Canon Greene, of Oxford, accused the Head of Ripon Hall, who is well known as a Broad Church leader, of unorthodoxy in his view of the Resurrection; but it appears that he has been misinterpreted, and the Canon has now disclaimed any desire to fire. As these controversies never do any particular good, and often do harm, it is to be hoped that nothing more will be heard of the trouble. But there are signs that some at least of the High Churchmen are only biding their time to attack those whom they stigmatise as “modernist minimisers.”

Christmas Theatres.

The pantomime is another form of entertainment that seems to be going out of fashion. Drury Lane, which is being rebuilt, has no “panto” this year; at the other theatres, I gather—for I have avoided them myself—it is frankly a play for adults, who can still

tolerate the harlequin and other absurdities. Children have their own plays—“Peter Pan,” “Where the Rainbow Ends,” and others that have almost become classics. I suppose in ten years’ time only grandfathers will go to the pantomime, and in twenty years the panto, like the grandfathers, will be dead.

Hodge on Strike.

There is a strike of agricultural labourers in Norfolk. The minimum wage having gone, the farmers have cut down their rates heavily, and Hodge refuses to work. At this time of year I suppose it does not matter very much. But Hodge is looking to the Labour Party for help, and Labour, which is essentially a town party, does not know quite what to make of it all. Labour in the towns believes in cheap food, and it is by no means certain that high wages on the farm mean cheap food in the cities. On the other hand, if the farm labourer wants to vote Labour, it would be folly to throw his vote away. But the average Labour candidate, again, is a townsman, who has no idea of the country, and rather a contempt for the countryman.

The Japanese in London.

A delegation of Japanese merchants has been visiting London, and has been suitably impressed. The Tubes appear to have struck them most, and they are loud in their praise of these crowded conveniences. Indeed, they have expressed a desire to have Tubes of their own, and have put some questions to our engineers as to the possibilities of Tubes in a country of earthquakes. I fear that the problem is insoluble.

“The Truth About Blayds.”

London has at last got a play worth going to. “The Truth About Blayds” is by Mr. A. A. Milne, who used to be one of the funny men on *Punch*, and who is now becoming much more than a funny man. Blayds is a famous poet; he is also a nonagenarian, and his greatness oppresses his family, who are merely satellites to his fame. Just before he dies he confesses to his daughter that he has never really written a line in his life; he stole the lyrics—and the cash and credit too—from a writer unknown to fame. The question is, what shall the family do? The predicament is all the worse, because the son-in-law has devoted the last few years to writing the “Life and Letters” of the genius. The only weak point is the discovery of a will which rather puts things right—a threadbare device. The upshot is that the public are never told the truth about Blayds—an Ibsenish conclusion.

The Week's Books.

Those who are frightened of the Einstein theory need not avoid “Einstein the Searcher” (Methuen), by Alexander Moszkowski. It is practically a biography without tears—by which I mean that it eschews mathematics. It appears that Einstein was born at Ulm, and received a Catholic education there and at Munich; he disliked the German educational system. His favourite recreation, as “Who’s who” would say, is improvising on the piano; his three heroes are Newton, Faraday, and Maxwell.

“Chemical Warfare” (McGran-Hill Book Co.), by General Amos A. Fries, and Major C. J. West is a frank and authoritative discussion by two American experts of the part played by chemistry in the late war, and the part it may be expected to play in the next. I quote two paragraphs of profound significance: “There is no field in which the future possibilities are greater than in chemical warfare, and no field in which neglect to keep abreast of the times in research and training would be more disastrous. Poison gas in the world war proved to be one of the most powerful of all weapons of war. For that reason alone it will never be abandoned. It cannot be stopped by agreement.” In other words, as the Washington Conference has taught us in regard to battleships and submarines, the world is willing to give up war weapons which are obsolete or obsolescent, but war weapons which are effective it finds excellent reasons, some of them tricked out in the guise of morality, for retaining on its list.

OCELLUS

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents).

EGYPT.

Cairo, December 15.

Postal Shortcomings.

Somewhere between Egypt and England recently something has happened to the postal service, resulting in a 70 per cent. deterioration. Complaints have reached business men here, from their principals or agents in London, to the effect that the letters sent, though bearing date-stamps extending over seven or eight different days, have arrived together. I can testify that the same sort of thing has been happening at this end. The whole community would be deeply grateful if the dislocation were adjusted forthwith.

Cabinet Troubles.

As far as political developments are concerned, there is little to report since my last letter. The resignation of the Adly Cabinet not having been formally accepted, the Ministry continues nominally in office, though its responsibilities begin and end with the formal signature of essential documents. Strict secrecy concerning the efforts being made to form another Cabinet is being attempted; but as nothing ever remains secret in Egypt, it is known that pressure is being brought to bear upon Sarwat Pasha to induce him to take over the reins of Government. It is also understood that he has agreed in principle, subject to the recognition of a certain unknown programme. It is stated that his programme is to secure the formal abolition of the Protectorate and the cessation of such other restrictions as did not apply to Egypt before the war. It is also stated—but I have no knowledge of the accuracy of the statement—that he demands from the British Government a promise to withdraw the recent declaration of policy.

While these are nothing more than rumours, it is conceivable that they have a foundation in fact. In any case, the position will have developed before this letter gets into print. But whatever change has occurred in the situation, it is safe to assume that, fundamentally, it will be the same: *i.e.*, that the English and Egyptian points of view will still be divergent. Some British subjects of long experience in the country think that irrespective of the nature of the offer to Egypt, the fact that that offer has been made should be the guiding star for the future. It is true that the offer was not couched in conciliatory language; and it is thought in some quarters that it was too limited. But, regardless of its defects, it can be useful only if it is applied. If, in face of the uncompromising tone of the Explanatory Note, the terms are modified, the Egyptians will be convinced that unyielding opposition will be rewarded by a succession of concessions.

The Official Delegation's Note.

Two days ago the Note of the Egyptian Official Delegation on the recent negotiations, having been presented to the Sultan, was published. It revealed nothing new; but it did show that the members of the Delegation, at least, were convinced that the last word on the matter had not been said. In fact, Adly Pasha, in the concluding paragraphs, "noted with satisfaction" the tone of the Liberal Press. If one read between the lines, it was apparent that what he meant was: "A section of the British Government has over-ruled us; but we have our supporters in London, and if we continue the struggle we shall soon gain the victory." This impression will be strengthened, and, indeed, made general, if the recently-declared policy is modified. The Egyptians seem to be under the impression that the British Government is a free agent in the matter, and even the report of the Military Commission of Enquiry that conducted an examination into the causes of the riots in Alexandria last May, which stated that the French and Italian representatives had deposed that their colonies would not consent to accept the sole pro-

tection of an Egyptian force, has been brushed aside as an immaterial issue.

The Egyptians' Temper.

The difficulty, at the moment, is the formation of a Cabinet, and it is doubtful whether that difficulty has been properly understood. It is quite possible, in the circumstances which exist at the present juncture, that the formation of a Cabinet may very well prove to be the worst thing that could happen. There is a strong feeling among the leaders of the Egyptians that acceptance of Ministerial office means, *per se*, acceptance of the British policy. Naturally, British policy towards Egypt, as recently enunciated, has not met with the approval of the articulate classes. If, on the one hand, a strong personality could secure British agreement to a programme which held out hope of the ultimate realisation of the Nationalist aspirations, it would be accepted by the majority—but that would mean that the recent declaration of British policy was not as determined as it seemed; and if, on the other hand, any body of Egyptians agree to form a Ministry without handing a sop to outraged Nationalist feeling, the sequel must be an embarrassing—if not an actively troublesome—opposition within the country itself. The temper of the Egyptians has changed from "suspicious and uncertain" to deep resentment. But the resentment will die down with time.

Sunday next is December 18, the anniversary of the declaration of the Protectorate over Egypt. It is recognised that the occasion may produce Nationalist demonstrations; though there is no evidence that the manifestation of feeling will result in any unpleasantness. Nevertheless, the manner in which the day is observed will give us an indication of the feeling which, though quiescent at present, is not altogether unruffled. There was a strong feeling that trouble was hovering over the country when the news of the rupture of the negotiations came through, but the subsequent calmness infers that the general appeal to the crowds to abstain from any violation of the law has had a salutary effect. The most urgent thing has been to maintain the peace, and the fact that the late delicate stages have been negotiated in tranquillity is the best assurance that can be offered to those people who intend to pay a visit to Egypt during the next few months. The seasonal gaiety is being shared by a large number of visitors, who are declaring that they have been agreeably surprised by the nature of the entertainment, accommodation, and transport facilities offered to them.

The dreary delay in the settlement of the political problems has dulled public interest in them, and thoughts are now turning towards the festive season. A "Christmas-y" air pervades the cities, where shops are doing a brisk trade; the hotels and clubs have prepared special frivolities; tourist agencies have planned special excursions; and, altogether, Christmas promises to excel all previous seasons, by reason of the more optimistic air prevailing among all local foreign circles.

Cairo, December 24.

Outbreak of Disorder.

Yesterday morning seasonable greetings were being exchanged in Cairo generally and with the sincere hope that they would bear fruit. This morning the citizens are commiserating with one another over the calamity that has befallen Cairo. The mystery surrounding the formation of the Cabinet has become a drab serial story, with neither thrills nor finality in sight. But in place of the interest which has lately invested the various intrigues assumed to be going on in high places, there has come the sensation of an attempt at rioting in Cairo. A new position has arisen, and the outcome is not apparent. The only thing realised is that the test of strength has been forced. Either the English or the Egyptians must come out on top.

The first few days after my last letter had been written were fairly quiet. Commercial circles were getting busier, and it seemed as if the Christmas season was going to make amends for the late slackness. Last Monday, however, an inkling of the British strong policy was given when Saad Pasha Zaghloul was advised that, by order of the military authorities and in the interests of public order, the public meeting which he had called for the following Friday was prohibited. Zaghloul replied with an impudent letter, which he characterised as a protest. The next day his envoy to London, Professor William Makram Obeid, lately a teacher in the Government School of Law, but dismissed from his post at the height of his notoriety in England, came back to Cairo; and an organised reception was accorded him by, it is alleged, hired riff-raff and effendi school-boys.

The next night, following upon some inflammatory oratory on the part of some Zaghloulists, two British soldiers were shot in a side-street adjacent to the Cairo station. According to the story of the surviving men they noticed, when passing a dark street, a few men lurking at the entrance. The privates—one belonging to the East Surreys and the other to the King's Regiment—walked by, when a shot rang out and the Surreys' man fell, fatally wounded. His companion bent down to assist him, when he also was hit by a shot. The fallen man died soon afterwards but the second, though in a very dangerous condition, has a chance of recovery.

Drastic Action.

Meanwhile, it came to the knowledge of the authorities that the local situation was developing in a portentous way. Trouble was being organised, and it was realised that the clash had to come sooner or later. It was apparent that the longer the time given to the agitators the more serious would be the outbreak when it burst; and remembering the mistake of 1919, the authorities discarded thoughts of the season and considered only the public weal. On Thursday, therefore, an attempt was made to get at the base of the cancer. Letters were sent to Zaghloul and his lieutenants, ordering them to refrain from making public speeches, assist at any public meetings, receive any deputations, write to the press, or otherwise interfere in the political situation. Furthermore they were ordered to leave Cairo forthwith, and repair to their respective villages, there to remain under the surveillance of the respective local governors.

Upon receipt of the letters the nine men concerned met at Zaghloul's house. The result of the debate was decision by some of the party, led by Zaghloul, to refuse to obey the orders. The news of the orders had spread throughout the city, and a huge crowd soon congregated outside Zaghloul's residence. When his secretary read to the multitude the letter written by Zaghloul, defying the authorities, enthusiasm rose to boiling-point and demonstrations immediately developed in several parts of Cairo. Collisions with the police followed, and the upshot of the trouble on Thursday afternoon was the death of two of the rioters, the wounding of seven, and injuries to seven policemen. Towards midnight on Thursday evening a special proclamation by the High Commissioner forbade all banks and other financial institutions to advance or pay to anybody any monies

or deposits, or to honour any drafts or cash any cheques on monies or drafts held in the name of Saad Pasha Zaghloul, or of the institution commonly called the Egyptian Delegation (i.e., Zaghloul's old delegation), without his written permission.

Friday dawned dull and dark, and rain fell early. At 8.45 an officer of the British Army, attended by two soldiers, went to Zaghloul's house and informed him of the orders to place him under arrest for disobedience of an order under martial law. Zaghloul was allowed to have his breakfast; he was then taken to a waiting automobile and transported to Kasr-el-Nil barracks. A little later he was motored down to Suez—and, according to a hint given to me by one who knows, he is to have a change of air abroad. Following on his departure from his house, gangs of young ruffians, led by effendi school boys, started on a tour of sabotage. They proceeded to break valuable plate-glass windows of the foreigners' shops in the European quarters, smash show-cases, damage facades, and injure stock; they also smashed the windows of the tramcars, broke the shutters of the cars, and otherwise damaged the service to an extent which rendered it inoperative. There was no attempt at that time to injure the persons of foreigners. Meanwhile, the Egyptian policemen on patrol duty looked calmly on from safe points of vantage.

The Military Called Out.

After a little over an hour the British military were called out. Contingents were sent to the three chief police-stations, and armoured cars and armed patrols began to clear the streets. Before their arrival, however, the ruffianly youths had smashed most of the lamps about the city, injured the growing trees on the foot-paths, and had torn away the iron railings to serve as weapons. Fleeing from the troops, the demonstrators hied away to the native quarters, where they continued to cause trouble by stoning the officers of the law. Later, they commenced their inevitable incendiarism, burning down one of the gates of the Helouan railway line, stoning a passing train, and setting fire to various shops and dwelling-places. They also commenced to build barricades. An effort was made to erect a large barricade in the neighbourhood of Zaghloul's house, and only the shooting of the ringleader, caught *flagrante delicto*, stopped that effort. Another rioter fired a shot at a passing lorry load of troops, and a shot from one of the soldiers brought quick retribution. Cairo was in semi-darkness last night, and, this morning, at the time of writing, the restiveness has not yet disappeared. All Christmas leave for the troops has been stopped.

The quick rush of events has at last produced a real unity amongst the Egyptians, who have combined on a basis of disapproval of the actions of the British. They have sunk their internal differences, and are now delivering, verbally and in the Press, strong protests against the measures taken. The issue is upon us. It is not the time for any half-measures. If the British are to retreat at all, they must do so whole-heartedly and unconditionally. If they are to stay and maintain their authority, there must be no endeavour to placate a feeling which has grown intensely bitter against us.

ROUMANIA.

Bucharest, December 19.

General Averescu's Cabinet Resigns.

The Ministerial trouble which had threatened for such a long time has at last broken out, and during the past week political events succeeded one another very rapidly. The crisis was precipitated by M. Také Jonescu's move in resigning from the Cabinet. M. Jonescu sent in his resignation on Sunday, December 11, after having had a long audience with the King on the preceding day. On being remonstrated with by General Averescu, he justified himself on the ground that he could no longer belong to a Government which was in conflict with the Crown.

M. Také Jonescu's resignation was followed by that

of M. Antonescu, Minister of Justice, and it was clear that the crisis had come. In an audience granted to General Averescu the King did not consent to these vacancies' being re-filled; and the General, understanding the hint, thereupon sent in the resignation of the entire Cabinet, recommending as his successor General Coanda, President of the Senate. The King did not regard this recommendation favourably; for he knew that this would simply mean the continuation of the same Government under a different name. The Sovereign then called M. Také Jonescu to the Palace and entrusted him with the formation of a new Cabinet, giving him three days for this purpose. The main condition made by the King was, however, that the present Parliament should be maintained, as it would not be opportune at the present moment to disturb the country with general elections, the more so, as fresh elections will have to take place, in any case, early next Spring for the Assembly of the "Constituante."

M. Take Jonescu Forms the Cabinet.

The King's wishes regarding maintaining the present Parliament rendered M. Také Jonescu's task very difficult, because the parliamentary majority—belonging to General Averescu's party—had already declared its enmity against a Také Jonescu Government.

Knowing the King's desire for a coalition Government which should comprise the representatives of as many political parties as possible, in order to bring about a *détente* in the political sphere, M. Jonescu first appealed to practically all parties for their support or collaboration; but soon found out that his endeavours in this direction were not to be crowned with success. Their refusals were based chiefly on the fact that, as the new Government will have to work with the present Parliament, which is so antagonistic towards it, they feel that the new Government could not have a long life, and that it was merely meant as a stop-gap.

It may not be without interest to review the attitudes taken by the different political parties towards M. Jonescu's attempts at Cabinet-making. The Transylvania National Party, whose support is considered very necessary for the viability of any Government, declared that, while it rejoices at the collapse of General Averescu's Cabinet, it could not collaborate with M. Jonescu so long as he has not authority to dissolve the present Parliament; but it will maintain a waiting attitude until the situation is cleared and the new Government has framed its programme. The Tzaranists are indifferent who is at the head of the Government so long as it will agree to pass the Franchise Bill on democratic lines before the new elections take place. M. Jorga's group is supporting the new Government, without, however, participating in the Cabinet.

General Averescu's party is dead against the new Government, and will do all in its power to overthrow it by passing a vote of censure on the first occasion when the new Cabinet appears in Parliament. M. Marghiloman's group favours General Averescu's suggestion of forming a Cabinet under General Coanda, in which eventually the portfolio of Finance would have been allotted to M. Marghiloman. The Liberals, instead of taking advantage of the present crisis in order to come to power, pretended at first to be quite unconcerned about what was happening, but afterwards declared that they would still continue to ignore the present Parliament and to abstain from attending the sittings. It is, however, generally thought that this attitude is only meant to throw dust in the eyes of their adversaries, and that they must surely have backed the King's plan of proposing a Také Jonescu Cabinet, thinking that such a Government would pave the way for them when a fresh Ministerial crisis should break out.

All this, however, did not discourage the new Premier from his aim of forming a Cabinet, and after having been granted an extension of 24 hours for this purpose, he resorted to his own personal friends and partisans, and on Saturday, December 17, presented the following Cabinet to the King for his approval. M. Také Jonescu,

President of the Council and Finance; M. Jon. Camarashescu, Home Affairs; M. Gh. Derussi, Foreign Affairs; M. Mihail Vladescu, Ministry of Domains; M. Gh. Mironescu, Ministry of Instruction (Education); General Stefan Holban, Ministry of War; M. Gh. Lucasiévici, Public Works; M. Mitush Dumitrescu, Ministry of Agriculture; M. Stelian Popescu, Ministry of Justice; M. Vasile Dumitrescu-Braila, Ministry of Religion and Arts; M. Mihail Oromolu, Ministry of Industry and Commerce; M. C. Xenii, Ministry of Labour and Social Assistance; M. C. Cihedariu, Ministry of Communications; and M. Caius Brediceanu, Minister for Transylvania.

The King not only approved this Cabinet, but, seeing the hostile attitude of Parliament towards the new Government, sanctioned adjournment for 30 days, which would make the maximum term of prorogation allowed by the Constitution.

It is true that, with the exception of M. Také Jonescu and Vladescu, the members of the Cabinet are more or less new men, who have never been Ministers before, but they are considered as fairly experienced men in their own particular lines. There are, however, still a few more portfolios available, and M. Jonescu feels confident that by making good use of the prorogation he will still be able to win over more weighty statesmen from the other parties. Moreover, with the acquisition of M. M. Mironescu and Dumitrescu-Braila, who were up to now Vice-President of the Senate and Vice-President of the Chamber respectively, under General Averescu, M. T. Jonescu, in due course expects to gain the sympathies of a large number of the majority.

It is generally expected that the new Government's immediate activities will be concentrated on the amelioration of the financial situation by revising and modifying M. Titulescu's Fiscal Reforms and by introducing other urgent expedients in this connection. Further, in order to gain the support of the other political parties, they will also have to tackle the Franchise Bill and the Housing Question.

Certainly, they will have their hands full in consolidating their own political situation, but with a politician of M. Také Jonescu's calibre as their leader, they may still give their opponents a surprise by remaining in power longer than the 30 days predicted by everyone.

General News.

The King has conferred on General Averescu the Order of Michael the Brave, 1st Class, which is the highest Roumanian military medal.

The Crown Prince, Prince Helen and their baby have left their Sinaia residence, and are now residing in a newly acquired Palace on the Chaussée Kisseleff, outside Bucharest.

The christening of Prince Mihai will take place during the Christmas holidays. For this occasion, Princess Elisabeth and Prince George of Greece have also announced their arrival in Bucharest for next week.

A new evening paper under the name of *Lupta* made its first appearance last week. This paper is under the management and ownership of M. Constantin Mille, who was formerly one of the owners of the well-known newspapers *Adeverul* and *Dimineatza*. Although the new paper styles itself independent, it is generally known that M. Mille leans towards M. Také Jonescu's policy.

YUGOSLAVIA.

Zagreb, December 20.

Views on the Irish Question.

The solution of the Irish question still occupies attention out here. The Croatian *bloc*, that is, the Narodny Club and the Raditch party, have seized upon it as political capital, and, at a recent congress, sent a telegram of congratulation to the Irish Parliament and to Mr. Lloyd George, which will no doubt be a matter of gratification to the latter. It affords, of course, a precedent for the Croatian demands of a State within a State, for the Croats falsely imagine, or at least maintain, that there is a true analogy between the Irish case and

their own. The Belgrade Press, on the other hand, instead of reproaching us for our methods of blood and iron in the Emerald Isle, comment sympathetically, noting always that the Irish place a provincial before an imperial patriotism, sacrificing the indivisible unity of the realm for their narrow preferences. The unemotional and non-political *Trgovinski Glasnik* (the *Commercial Messenger*), winds up its comments with the remark that the fate of Great Britain no longer rests exclusively in the hands of the English, but will in future depend upon the loyalty of the Irish, who will play a greater part henceforward in the foreign policy of the British Empire.

The New Cabinet.

The cynical game of the Ins and the Outs has run its usual course. After M. Pashitch has permitted the world to see that the Democrats under Dr. Davidovitch are incapable of forming a Cabinet without the Radicals he has simply resumed his old place, with a little shuffling of portfolios. It is like the old story of the lodger who had ham and eggs for breakfast every other morning, varying it on alternate days with eggs and ham; except that here it is always M. Pashitch. The changes in the Cabinet are not very great. M. Pribitchevitch states that he declines to be a stumbling-block, and so has accepted the Ministry of Education, relinquishing the Interior to M. Voza Marinkovitch, a financier and member of a prominent Democrat family. It is this Ministry of the Interior which is the occasion of most of these political crises, on account of its great political importance; and the struggle for its possession has often enough raged at most serious moments, so that the country has been without a proper head even at such times as when its fate was in the balance at Paris two years ago.

The other changes are that M. Krizman leaves the Cabinet, his portfolio of Mines and Forests being taken over by M. Rafaylovitch, a former Liberal, to-day a Democrat, a patriotic Serb who has often enough fought for his country, and a poet to boot. About a year ago he held the portfolio of Public Health. There are one or two other changes, but the new names are as yet unfamiliar to the foreign public. The list of the new Cabinet is as follows:—

Prime Minister	and
Foreign Affairs	.. M. Nikola Pashitch
Interior	.. Dr. V. Marinkovitch
Mines and Forests	.. Z. Rafaylovitch
Education	.. Sv. Pribitchevitch
Social Policies ..	.. Dr. Krstel
Religions	.. Dr. Zherjav
Finance	.. Dr. Kumanudi
Justice	.. Dr. L. Markovitch
Communications ..	.. M. Andra Stanitch
Agrarian Reform	.. M. Krsta Miletitch
Public Works ..	.. M. Velya Vukitchevitch
Posts and Telegraphs	.. M. Zh. Mealdinovitch
Unification of Laws	.. M. Trifkovitch
Agriculture	.. Dr. Ivan Pucelj
Commerce	.. Dr. Spaho
Public Health ..	.. Dr. Karamehmedovitch

Of these, Dr. Karamehmedovitch may be prevented by reasons of health from continuing, in which case another Mohammedan will take that portfolio. Dr. L. Markovitch was Minister of the Constituent Assembly, and M. Trifkovitch is a former Minister of Justice. Probably General Zechevitch will retain the Ministry of War.

The Extravagance of Bureaucracy.

It has been suggested often enough that one method of introducing greater efficiency into bureaucracy is to halve the number of officials and give their salaries to the remainder, who in those circumstances would gladly do their work, and in most instances, be perfectly capable of doing so. The Financial Committee of the Skupshtina is now engaged on studying that problem, and a special commission will be appointed to deal with the question in detail. While it is true that certain offices are understaffed, there is certainly room for a very

substantial reduction in others. Such a reform is badly wanted, in the interests both of efficiency and economy.

The Yugoslav attitude towards bureaucracy is the same as that of every country that suffers from the complaint. A parable to this effect recently appeared in the Zagreb *Dva Sata*.—Now Saint Bureaucracy is immortal, for nothing can kill him. One day a very determined man went to see the Saint, firmly resolved to draw money from him. "Great Saint," said the man, "Thou art immortal. What, therefore, is a thousand years to thee?" "One second" answered the Saint. "And what is a thousand dinars?" "One farthing" answered the Saint. "Saint, one farthing is a mere nothing, kind Saint, give me therefore one farthing." "Certainly," replied the Saint, "wait but one second."

Yugoslavs in America.

A recent Yugoslav Exhibition in the United States has called attention to the part played by this nation in the development of America, especially in the early days. As far back as 1700, a party of Dalmatians settled there after nearly circumnavigating the globe. In 1800, a party of Croats were shipwrecked on the East Coast and founded the city of Croatan, which is long since Americanised and has forgotten its Yugoslav origin. But missionaries began as early as the beginning of the XVIIIth Century. A Croatian Jesuit, Baron Ivan Ratkaj, died in New Mexico in 1680; and he was but the first of many, of whom the most famous was Ferdinand Konshtak, who arrived in Mexico in 1730, passed into Lower California and published the first map of that State: he is well known to American geographers under the corrupted Spanish form of his name, Gonzales. In 1838 Josip Knudek arrived and founded Ferdinand, Jasper, and other communities in the State of Indiana. All these missionaries were supported by funds from Yugoslavia. There are records in Zagreb showing that between 1830 and 1840, no less than 57,400 florins were collected in Croatia and sent out to promote the foundation by these missionaries of schools and churches.

The first Slovene to arrive, so far as is known, was a Bishop Baraga, who worked unceasingly among the Indians: his see covered the greater part of Michigan, Wisconsin, Minnesota, and part of Ontario. He died full of years in 1868, leaving his name behind in Baraga County, Michigan. He published a dictionary and grammar of the Chippeway language, translated the Bible into it, and wrote a prayer-book in the Ottawa language. After Baraga, five other Slovenes became bishops among the Indians. The city of Kaintown in Minnesota bears the name of a part of Slovenia, Krajna.

By their material attainments and contribution to science and civilisation, the Yugoslavs have done their proportion well. Professor Pupin, inventor of the coil-case that plays so important a part in telegraphy, is a Yugoslav, and Nikola Tesla, best known from his disc motor, is his fellow-countryman.

A Distinguished American.

The American Admiral Niegand, who is visiting the Yugoslav ports in the battleship *Utah*, has been decorated by General Zhivko Pavlovitch in the name of the King with the Order of the White Eagle, First Class, with Swords and Ribbon. This is a very great distinction, as the White Eagle is a much-appreciated Order, second only to the Star of Karageorge, and the first class is as a rule given only to Crowned Heads and Presidents.

GREECE.

Athens, December 24.

Queen Olga's Return.

H.M. the Queen Mother, accompanied by the four daughters of Princess Alice, disembarked at the Piraeus on December 20, from the steamer *Leopolis* which had brought them from Trieste. The King, Queen and Princess Irene, as well as the Crown Prince George, Princess Elizabeth and the Princess Helene, went on board to greet the Queen Mother.

The Anniversary of the King's Return.

Splendid weather favoured the fêtes organised by the

various Political Unions to celebrate the anniversary of King Constantine's return to Greece. From early morning a large crowd assembled in the Place de la Concorde, the agreed meeting-place of the Political Unions of Athens and Piræus, and a procession was then formed which made its way to the Cathedral Square. After the religious ceremony, at which the Ministers and other high State Officials were present, the procession again reformed and went to the old Palace where an address to the King was made, expressing the joy of the people at the re-establishment of Liberty and the dynasty. The address went on to say that Hellenism had only prospered under a monarchy, and confirmed the loyalty of the people to the dynasty. The organising committee then presented the address to the King. Giving way to the solicitations of the people, His Majesty appeared on the verandah of the Palace and was loudly applauded.

At night the town was brilliantly illuminated.

Attack on Admiral Coundouriotis.

A dastardly crime was attempted last Wednesday on Admiral Paum Coundouriotis, who is President of a Committee for the distribution of moneys and other necessities to the wounded soldiers, and soldiers' widows. Just before noon, whilst the Admiral, assisted by some of the other members, two of whom were ladies, was performing his charitable duties, three individuals, dressed as soldiers and carrying sticks, rushed into the building, upsetting the furniture and threatening the war widows and wounded who were present. They then entered the private office of Admiral Coundouriotis and after attacking with their sticks the two ladies, Madame Robotsanou and Mademoiselle Pantazidis, produced revolvers and fired several shots from close range at the Admiral and Monsieur Pallis, another member there at the time. Profiting by the confusion the assailants then made good their escape.

Though shot in the stomach and in the left arm, the Admiral managed to get up and proclaiming his wounds as slight, sent Mme. Robotsanou and M. Pallis, both of whom were slightly wounded, to a neighbouring dressing station. He was then assisted to his house and thence, shortly afterwards, taken to the *Evangelismos* hospital, where he was operated on and the bullet extracted. Fortunately the Admiral's condition is causing no anxiety, and in spite of his advanced age, he is expected to recover quickly.

Admiral Coundouriotis, the only person in Greece, who, besides the King, holds the rank of full Admiral, was in command of the Hellenic fleet which rendered such valuable services both to Greece and to her Allies during the first Balkan War. He was also one of the two superior officers—the other being General Danghis, who in 1916 accompanied M. Venizelos to Salonika, where he played a very important part in the creation of the Revolutionary Government and the building up of the National Defence Army which fought with the Allies on the Vardar, the Doiran, and the Struma fronts. When King Alexander died, Admiral Coundouriotis was proclaimed Regent, which post he relinquished when the Ralli Government came to power.

His "Unknown" Assailants.

It is no secret that the murder by Venizelists of Jean Dragoumis, on August 13, 1920, was the main cause of the catastrophe which so unexpectedly befell the Liberals three months later. Whether this has taught a lesson to the Venizelists remains to be seen; unfortunately one cannot say with certainty that the party at present in power has taken the incident as much to heart as it should. Despite the almost frantic endeavours of official circles and the Government papers to convince the whole world that the murderous attack on so respected a person as Admiral Coundouriotis was merely an individual case of revenge of three wounded soldiers who had been denied a few drachmae by the Relief Committee presided over by the Admiral, on the grounds that they were Royalists, there exists an uncomfortable feeling that the cowardly attempt was prompted by the bitter political antagonism which still reigns supreme in this unhappy land. The fact that, with the exception of Admiral Coundouriotis—who very seldom is present at the time of the distribution of the money—and one or two others, the majority of the members of the Committee are well-known anti-Venizelists or of unquestionably independent political tendencies, proves the absurdity of this theory. Needless to say, the culprits have not yet been traced.

The *Athenai*, an independent paper, in a leading article asks why should needless energy be expended in endeavours to trace the assailants, as it is certain that the Government will not allow them to be caught, just as under the Venizelist Government the murderers of Jean Dragoumis were allowed to escape. The article goes on further to say that the actual guilty parties are those who in speeches and Press articles indulge in senseless tirades against any political party other than their own, and it is chiefly due to the bitter harangues of certain people, unfortunately in a position to spread their words over a large area, that these political crimes are committed.

A Memorandum, and a Manifesto.

The Central Union of Popular Political Syllogues has addressed a memorandum to the Government, recalling two preceding letters to M. Gounaris, and demanding the carrying out of certain measures indicated. The memorandum states that the feelings of uneasiness of the people are such that the danger of a popular intervention is certain and imminent, unless steps are immediately taken to abolish "the supreme menace against the 'calme interieur' of the country." This menace, the Syllogues declare, should be completely eradicated by the Government, otherwise "the people is irrevocably resolved to rise up," not only in Athens but also in the provinces, in order to exact the carrying out of the entire electoral programme of M. Gounaris.

The people will also exact that "a stop be put to the

wanton waste of public moneys, and crush Venizelism in the whole of Greece so that all danger to the State should disappear, and thus ensure an order of things in conformity with public opinion."

The Syllogues request the Government to put their demands into execution without awaiting the return of the Prime Minister, and the memorandum ends by saying that the acuteness of the irritation of the people is such that at any moment the slightest incident, even of secondary importance, may serve as a pretext for a popular uprising.

The Liberal Party has, on the other hand addressed a manifesto to the Greek people stating that their hope that those governing would perform their duties conscientiously has been deceived, despite the loyalty of the Liberals and the abnegation shown during the war by the Liberals serving with the Colours. After pointing out various acts of terrorism against known Venizelists, the manifesto culminates with the attack on Admiral Coundouriotis, and adds that it only remains to the Liberal Party to remind the Greek people of the abolition of their elementary rights of citizenship which has greatly contributed towards the unhappy issue of the national struggle.

Incident at Salonika.

News comes from Salonika to the effect that on the night of Monday last, an armed group of agitators attacked en masse the "Nouveau Club" the majority of the members of which are Venizelists.

The assailants fired several shots and completely overturned all the rooms of the Club, causing considerable damage.

BULGARIA.

Sofia, December 19.

France and Eastern Thrace.

Mention was made in my last letter of Bulgaria's claims to an economic outlet to the Aegean Sea. In connection with this the publication in several Bulgarian newspapers of a letter by Count Berguen, the correspondent of the *Journal des Debats*, is interesting.

Count Berguen addressed his letter to M. Altinoff, a secretary at the Bulgarian Ministry of Foreign Affairs, who recently wrote a book on "Thrace under Inter-Allied Control in 1919-1920." The letter takes the form of a resumé of the state of Eastern Thrace as it was when French and Bulgarians shared in the work of administration; and the writer frankly states that he arrived in Thrace in a distinctly Hellenophil frame of mind, but that little by little he became quite as distinctly Bulgarophil. He recalled a conversation that he had on his return from Thrace with a high unnamed French personality who exclaimed: "It is too late; the resolutions are taken!" The speaker was referring to the Allies' decision to hand over Eastern Thrace to Greece.

The really interesting point about the letter is its publication at a moment when Bulgaria's hopes concerning her claims to an outlet on the Aegean, and perhaps something more, are running very high. It is well known that the relations between General Charpy, the Governor of Inter-Allied Thrace, and the Bulgarians were of the friendliest, and it is asked whether the French intend to broach the claims of Bulgaria at the coming Conference on Near Eastern affairs. In political, as well as in economical matters, Bulgaria has come to look on France as her friend; and if the latter nation intends to foster this friendship, she will surely suggest that Bulgaria be represented at the Conference.

Radoslavoff Cabinet on Trial.

It is now estimated that the trial of the members of M. Radoslavoff's Cabinet who were in power when Bulgaria entered the war, and who have been arraigned before a special High Court, will continue until well on into 1922. No witnesses have yet been heard, and the time of the Court has been fully taken up with hearing the explanations of the accused persons. M. Toncheff,

ex-Minister of Finance, has been examined at great length, and his defence, at first so confident and sure, has now developed into a plea of having acted for the best. One of the charges brought against him is that he pledged the coal mines of Pernik to Germany, in return for which the latter country was to make a loan of 500 million marks to Bulgaria. It is also alleged that M. Toncheff was personally interested in the floating of the loan, and benefited himself thereby. Three days ago General Jekoff, the late Generalissimo of the Bulgarian Army, gave his explanations regarding the law for the punishment of military offenders during the war. The General began by stating that the experience gained in the Balkan Wars had taught Bulgaria that it was necessary for the military authorities to possess full powers in time of war. During 1914 and 1915 a Military Commission was studying the question of military law, but when the war broke out no decision had been arrived at. On the eve of the declaration of war King Ferdinand issued a ukase which gave plenary powers to General Jekoff, but the Sobranie did not ratify this ukase. The General stated that King Ferdinand issued the ukase for purely military, and not for political, reasons, and that in order to prevent the sentences from being too severe, civilians, not officers, presided over military Courts-martial.

This practice, the General remarked, was not in conformity with what took place in other countries during war time; and furthermore, out of an army of 900,000 strong, only 400 were condemned to death during the three years that Bulgaria was at war. He closed his defence by stating that in his position as Commander-in-Chief, he was faced with the alternative of putting into force the death penalty against deserters from the army, thus violating the Constitution, or, by not doing so, risking the demoralisation of his army. He regarded it as his duty to choose the former course, and said that he did not even now regret what he had done.

The ex-Generalissimo gave his evidence in a calm and straightforward manner, which made a good impression on those who were present. Considering that in almost all countries that were at war full powers were given to the military authorities, it is difficult to understand why Bulgaria hampered her military commanders, and one is constrained to sympathise with General Jekoff's point of view.

The Municipality of Sofia.

With the exception of a few main thoroughfares, the streets of Sofia to-day present a dirty and ill-kept appearance. They are badly in need of repair, and are bestrewn with dirty paper and all sorts of rubbish. The condition of the streets is not the only sign of decay in Sofia, and the whole town bears a vastly different aspect from that which it bore before the war. The lack of sufficient funds has been the principal reason for this state of affairs, but the want of a proper spirit of co-ordination amongst the members of the Municipal Council has also tended to increase the evil. It is, therefore, with a good deal of interest that Sofiotes are following the passage through the Sobranie of a new measure which has as its object the bettering of existing conditions. The clause in the Bill which is exciting the most attention is that which provides for the election by the Government of the Mayor and twelve Councillors of the Municipality. Hitherto the Mayor and the thirty Councillors have been elected by the people. Owing to a certain apathy on the part of the bourgeoisie, and a corresponding keenness on the part of the Communists and Socialists, the members of the Municipality have of late tended to become a retrograde rather than a progressive element in the administration of the town. If the Government succeeds in passing the new Bill through the Sobranie, the people will still possess the right to elect 60 per cent. of the Municipal Councillors, i.e. eighteen members, but the Government will be almost equally represented by reason of the fact that the Mayor and twelve members will be their nominees. It is a matter of opinion whether the Government's

action in attempting, so to speak, to dominate the administration of Sofia is legal, but the interesting feature about the matter is that M. Stambolisky himself conceived the notion, and at the time of writing is encountering a certain amount of opposition from his colleagues. Whether the party will come into line with their leader over the matter remains to be seen, but in any case it is to be hoped that the reforms may succeed in restoring Sofia to its former clean and orderly state.

ALBANIA.

Tirana, December 16.

The Crisis.

The past week has been momentous and exciting, and at one time it looked as if things might take a tragic turn, so high did feeling run; but happily the good sense of the Albanian people has gained the upper hand again and nothing regrettable has taken place. I refer, of course, to the ministerial crisis which has caused so much interest abroad and regarding which, the news agencies inform us, so many rumours have been current. But in order to understand the causes which led up to the crisis it is necessary to look backward a little and to cast a glance at the High Council.

The National Congress assembled at Lushnia from January 20 to January 25, 1920, laid down the basis of a Constitution. A High Council (in Albanian *Keshilla e Nalte*) composed of four members was to function as Head of the State, as President of the Republic, or if the expression be preferred, as *Directoire*. This is the council which is called abroad (wrongly) the Council of the Regency.

The Constitution of Lushnia gave hardly any power to the Council save that of dissolving the Chamber of Deputies in case of any conflict between it and the Government, or of charging the man it considered fit for the task with the duty of forming a Cabinet. For the rest, the High Council had to content itself with signing decrees, that is to say, ratifying nominations made by the Ministers and laws voted by Parliament. Now, the Council has always shown some discontent at this powerlessness, and has shown an inclination to make its voice heard; but the difference between it and the Government has never assumed disquieting proportions.

Akif Pasha Elbasani is President of the High Council, in virtue of his great age. He is a patriot of old standing, always recognized as such from Turkish days, and an upright honest man, of noble family, but somewhat obstinate and dogmatic. Monseigneur Louis Bumci is a Catholic Bishop, well liked and respected by all for his uprightness and his patriotism. He is sometimes blamed for having a weakness for M. Louis Gurakugi, now deputy for Scutari and not at all a popular man. Dr. Michael Tourtoulis is a venerable old man, an active patriot and very clever. He practised as a doctor for many years in Cairo, where he earned a high reputation. If he has a fault it is that he is unsettled and somewhat inconsistent in his views. The fourth member of the Council, Abdi Toptani, is a cousin of the late Essad Pasha, but he was consistently a political opponent of Essad, and has always been regarded as a sound patriot and an honest gentleman. He has never been particularly energetic, and has earned the nickname of "Abdi the Taciturn."

How the Crisis Came About.

M. Pandeli Evangheli, who had been called to office on October 17 last, had not been able to complete his

Cabinet, two portfolios—those of War and of Public Instruction—being vacant; and in a short time the Minister of Finance resigned. For the three vacant posts the High Council wished to appoint its nominees, while M. Pandeli Evangheli had his own. Akif Elbasani being unwilling to ratify the appointments of Ministers, M. Evangheli decided to go his own way. At one time it looked as if an understanding would be reached, and the Cabinet completed, when Hassan Prishtina and his friends persuaded Pandeli Evangheli to retire from power rather than precipitate a conflict; and he resigned on December 7.

The High Council called on Qazim Koculi, Prefect of Valona—the same who played such an important part in the conflicts with the Italians in June and July 1920—and requested him to form a Cabinet. He declined, however, and Hassan Prishtina was then called to power.

Parliament was in recess and was to reassemble on January 1; so that the new Premier had not to appear before the deputies. But his appointment led to general dissatisfaction, among the deputies and in all patriotic circles. Several officials and a battalion—with all its officers—withdraw to Elbasan, as a protest. There was, however, no disturbance or violence, no quarrelling, no exchange of shots even.

Hassan Prishtina was an Albanian deputy in the Ottoman Parliament (1908-12), but has never been honoured by popular re-election. He chose as his colleagues:—Louis Gurakugi, Hoxha Kadri, Kristo Dako, Zia Dibra, Constantine Tassi and Hakki Ismail. The first three mentioned, like their chief, are discredited as being partisans of Italian policy. In face of the manifestations of the national displeasure the High Council had to request Hassan Prishtina to resign. He had held office only from December 7 to December 11.

The Kosturi Cabinet.

This time the choice fell upon M. Idoménee Kosturi, an Orthodox, a native of Kortcha (Koritza), a merchant, and formerly in the Cabinet of Suleiman Delvina. He accepted office provisionally, and is governing with the Under Secretaries of State, and the secretaries-general of the chief Departments, while awaiting the reassembling of Parliament. That event has been put forward, and is now to take place in three days (the 19th inst.).

The replacing of Hassan Prishtina by M. Kosturi has restored calm to the country, and the battalion which withdrew to Elbasan has now returned, with the rest of the protestants. I may add here that a spirit of solidarity and of unity has been noticeable in Albania for some years past. The constant dangers to which the country has been exposed have taught its people some useful lessons in wisdom and moderation.

The League of Nations' Commission.

The League of Nations' Commission of Inquiry has visited Mirdita, where it has interviewed the leading chieftains of the region and the priests. It is understood to have satisfied itself that the so-called Republic of Mirdita has no existence outside the imagination of Marko Gjoni, who sits tight in Serbia. The Commission, in view of the proofs of loyalty to the Government at Tirana given by the Mirdites themselves, has deemed it unnecessary to have any interview with Marko Gjoni.

The Serbian Withdrawal.

The evacuation of Albanian territory by the Serbs continues. On the 11th inst. Mount Tarabosh, which dominates the town of Scutari, was evacuated by them and occupied by the Albanians. The population of

Scutari went out to Tarabosh to welcome the return to Albanian keeping of the dear mountain. The evacuation is not yet complete in the direction of Puka and the Drin, a further delay of ten days having been accorded to the Serbians by the Conference of Ambassadors, thus making the final date December 20.

An Appeal to Greece.

As your readers probably remember, since the departure of the French troops—that is to say, May, 1920—the Greeks have been occupying a region, containing 34 villages, situated north and east of the town of Kortcha. Certain Albanian territory situated south of Permet, Libohova and Delvina has also been occupied by the Greeks. Albania has requested the Conference of Ambassadors to invite the Hellenic Government to evacuate these places, in order that the two countries may be able to resume friendly relations; but up to the present Greece has made no reply.

The evacuation of the island of Saseno by the Italians is also awaited by the Albanians, since the southern frontier of their country as fixed in 1913 in London included the island.

CYPRUS.

Nicosia, December 20.

The second all-Greek meeting, convened in order to ratify the draft of the organic constitution of the "National Council" and its plan of campaign, took place on December 3 and 4 at Nicosia, 450 representatives attending. The Archbishop, who was supported by the Bishops of Kition and Kyrenia, and the Abbots of the three principal Monasteries, opened the meeting with a prayer, and explained the object of the assembly. The different clauses were debated at some length. There was e.g. considerable discussion as to whether the contributions of the episcopal sees, the monasteries, and churches should be paid direct to the Central Fund at Nicosia, or into the district treasuries. It was finally decided that all collections from the bishoprics and monasteries should be paid into the central fund, and those from all the churches into the district treasuries. It was also decided that there should be only four of the latter, corresponding to the four episcopal sees, and not six, according to the six administrative districts of the island. The "National Council" is to consist of 46 members as follows:—Five *ex-officio*, viz., the Archbishop, the three Bishops, and the Abbot of the Kykkou Monastery: 40 elected in the six administrative districts (Nicosia, twelve, Famagusta nine, Limassol eight, Papho four, Larnaca four, and Kyrenia three). One member is to represent the professors and teachers of the island. A resolution was carried to the following effect:—That this meeting, which has assembled in order to vote the scheme of political organization, the object of which is to effect the liberation of Cyprus by union with Greece, considers it a duty to convey to its free motherland—which has ever striven for the freedom of unredeemed Hellenism—its heartfelt greetings, praying wholeheartedly for the speedy accomplishment of its work, for the good of the whole Eastern world. A copy of this resolution was despatched by the Archbishop, through the Greek Consul, to the Hellenic Government.

General News.

As America still has a great fascination for Cypriots, the Chief Secretary has notified the public that owing to want of employment in the United States, where there are, the Government understands, six millions of unemployed, no passports for America will be issued unless the applicant can produce an official document showing that a landing will be permitted by the United States authorities.

A case of smallpox has been introduced into Nicosia by a girl from among the Armenian refugees from Cilicia. Her family has been placed in the isolation hospital, and other precautions are being taken. Further large numbers of Armenians and Greeks have been unable to land. The scenes on board the steamers have been distressing when landing was refused.

A double murder under savage circumstances has been committed in a village of the Nicosia district. A villager had entertained at his house a young man, who was betrothed to his daughter, aged 12, and his father, from another village. He accompanied them to their village, and on returning home next day found that his wife and daughter had been murdered by strangling and blows on the head. In the house had been a sum of £75, which he had just inherited, and the money was stolen. The police have arrested six men and three women on suspicion.

The monotony of life has been broken at Limassol, where there have lately been concerts, balls, and two days of races. At Nicosia and other towns preparations are being made for Christmas festivities.

The Cyprus garrison, a company of the Sherwood Foresters, is being relieved by a Company of the Hampshire Regiment.

ASIA MINOR.

Smyrna, December 14.

On the French Railway line, beyond Ushak, near Banaz, a tunnel has collapsed, and the train service will be consequently interrupted for several months.

An S.O.S. signal was received by H.M.S. Shark from a British hydroplane, but before the Destroyer could leave Smyrna, the S.N.O. Constantinople sent a message that no assistance was required.

At 3.15 this morning the Greek sentinel on the landing quay shot a man who refused to answer, or obey, the usual challenge. The wounded man was carried to the hospital in a serious condition.

Mr. and Mrs. Ernest Paterson entertained Prince George of Greece and Princess Elizabeth at their residence in Bournabat last Tuesday, when prominent members of the Colony were presented to their Royal Highnesses.

Major-General and Mrs. Raymond de Candolle also entertained their Royal Highnesses, in their residence at the Point, last Wednesday.

CORRESPONDENCE.

THE SITUATION IN EGYPT.

(To the Editor of "The Near East.")

Sir,—After reading my *Near East* of the 22nd December and the week-end cables from Egypt I am indeed in despair of our present Cabinet ever settling the Egyptian question. Four months' negotiations, which both sides describe as cordial, can only apparently bring us back to the old situation of arresting ringleaders and sending warships to Alexandria. Whose fault is it?

In India we have Lord Reading trying to soothe the Moslems by the assurance that the Turkish treaty is going to be revised in accordance with their wishes. At the same time in England the Foreign Office publishes the report of the Court of Enquiry in Alexandria, which amongst other things records that "hatred of Europeans has always existed in Egypt." Even if true it is hardly a happy method of establishing the better understanding with the Egyptians which Lord Allenby tells the Sultan we are so desirous of doing. But I challenge the statement as regards the past, whatever feeling the Egyptians may now have for Europeans in general and, owing to recent incidents, for the British in particular. If this hatred has "always existed," how is it that from Assouan to Alexandria there is hardly a village which did not before the war contain a Greek trader associating with and making money out of his Moslem neighbours? How is it that when the battle of Tel-el-Kebir was being fought not a few Europeans remained on and were unmolested in Cairo? How is it that even in Alexandria, where the scum of Europe (as many of the Europeans undoubtedly are) live cheek by jowl with the most inflammable portion of the Egyptian population, rioting

and murders are not of more frequent occurrence? The riots which occurred in Alexandria in 1882 were engineered by political agitators, as the trouble last spring, appears also to have been. Again, as in previous letters, I maintain if there was no cause for political agitation, the few extremists would be a negligible quantity. With no agitators the Europeans are as safe in the Nile Valley as in their own country. By all means arrest and deport your Extremists, but do not quarrel with your Moderates—as Adly Pasha and his delegation undoubtedly were, whatever they may be now.

When *The Near East* publishes (in large type too) the article of the *New Statesman* you, Mr. Editor, cannot be accused of refusing to hear the other side, but have your observations of late been quite fair on Adly Pasha. You have more than once implied that he would not abate one jot or tittle of his demands. But what about Lord Curzon's proposals which Adly Pasha tells us were handed to him cut and dried when he reached London and were practically the same as the maximum concession to be granted after four months' conversations? Surely too it is not difficult to read between the lines of Adly Pasha's Note, to see that it was the retention of the Army of Occupation at the Capital that was the chief, if not the only obstacle to agreement? What is the alternative? It is all very well for Lord Curzon to write stiff Notes for communication to the Sultan, but how is Lord Allenby going to govern without Egyptian assistance? As Sir Valentine Chirol tells us in his letter to *The Times* of the 24th inst., the Indian situation is by no means analogous. Lord Curzon is gambling on obtaining the assistance of Egyptians who are less patriotic than Adly Pasha to carry on the government for the time being. In the meanwhile our relations with Egypt's most reliable statesmen are being more and more embittered. I do not like to picture the consequences to follow. Let us therefore leave no stone unturned to find a solution acceptable to the Egyptians as a whole, even if regarded as too bold an experiment by Lord Curzon and the Cabinet. This solution I am firmly convinced is summed up in the word *sympathy*; sympathy which comes from the heart, not the spurious article which is so often served up in our declarations of policy, a grand example of which is at hand in the letter addressed by the British Union in Cairo, to Lord Allenby. An Egyptian reading this communication will certainly say to himself: "What hypocrites these British are! Selfishly they do their best to ensure that our interests shall continue to be sacrificed on the altar of the Capitulations and then in the same breath speak about "co-operation" and "the mutual esteem" of the British and Egyptian people which will be engendered thereby!"

As a Milnerite I must say that I sympathise with this interpretation. What is more, it is incomprehensible to me how any committee of Englishmen, in the light of the events of the past two years, can hope to advance their claims by penning such arrant piffle.

I am, etc.,

COLES PASHA.

Biarritz, Christmas.

INDIAN ARMY PENSIONS.

To the Editor of "*The Near East*."

Sir,—The Proportionate Pension scheme sanctioned for the Civil officers of the Indian Administration is a step in the right direction, in that it gives officers a chance to retire and "make good" elsewhere when they feel that they can no longer co-operate in the Reform Scheme. This is common justice as well as common sense on the part of the Government of India, for no administration can long survive without the confidence of its officers. But why, in the name of all that is fair, is similar justice not done to the Indian Army? On the Indian Army depends the security and honour of the country, and unless its officers are whole-heartedly ready to support the Government in the difficult times

ahead, it is much better that they should be allowed to go at once on such proportion of their pension as they may have earned, rather than that they should remain, a potential source of disaffection, if not of actual danger, to Government. For these are revolutionary times, and there are many adventurers, of all creeds and colours, waiting on the weakness of the central administration to carve out a kingdom for themselves in true Eastern fashion.

The Indianisation of the Indian Army is the deliberate policy of the Imperial Government: there will be little place in that policy for the British officer of the Indian Army. Why not let these officers go now, if they so desire, rather than keep them on against their will, to carry out a policy that neither they nor their men believe in? The rule of the Babu, inaugurated by Mr. Montagu, must have its trial. After that, the deluge! But it is rather unreasonable to expect those who see the deluge coming not to make sure of their ark of refuge—retirement on a reasonable pension.

After 15 years' service the Indian Policeman, under the new Pension Scheme, can retire on £450 p.a., which is sufficient to give him a good start in some other employment; whereas a soldier can only retire after 18 years on £286 p.a. Is this fair? After all, it is not the Administrator, nor even the Policeman, who will have to bear the brunt of the anarchy which will ensue from the Montagu-Chelmsford Reforms. It is the soldier who will face the actual danger and discomfort, and the soldier who will have to take responsibility for firing on mobs, and the like. It is the soldier who will have to face the brickbats and the bullets. It is the soldier who will have to hasten to the relief of forcibly converted Hindus or massacred Mohammedans, and I fancy that unless he has been fairly dealt with he will hasten very slowly.

I am, etc.,

QUAI HAI.

THE GREEK ARMY.

To the Editor of "*The Near East*."

Sir,—In your issue of December 8 you quote an article in *Looking Forward*, September, signed C. Browne, Constantinople. Treating the Asia Minor question, Mr. Browne writes:—"The Greek Army, the main trump in the hands of the Allies, is now demoralized and can no longer be counted on."

On what grounds can such an assertion be based? From what reliable source is this knowledge derived? Has Mr. Browne been personally among the Greek

soldiers? *I have.* On the Asia Minor front, I have talked with both officers and men, have slept in their camps, and jolted in their motor lorries over hundreds of miles. Thus sharing their life, I have shared their thoughts and aspirations, and this is the result of my investigation: not only are they not demoralized, but they have sworn a solemn oath that of the fair land of their fathers, which they have fought and bled for, and now partially redeemed, not one rood shall henceforth be desecrated by the Turks, who during eight centuries have soaked it in Christian blood and covered it with ruins.

During the Greco-Bulgarian war, Captain Trapman, war correspondent on the Hellenic front, wrote in the *Daily Telegraph* (August 1, 1913) of "the wonderful individual patriotism of the Greek soldier." Well, it is just that, the individual patriotism of the Greek soldier, which, against both military and political odds will, in the long run, win the day.

I am, etc.,

D. PSYCHA.

THE NYALA RAID.

(By Our Khartoum Correspondent.)

One of the finest 'shows' ever 'put up' in the Sudan was that of the defence of Nyala, where a handful of civil employees of the Government, with the assistance of some 42 policemen and warders and about 68 men of the Mounted Infantry of the Western Arab Corps; repulsed and finally put to flight a force of some 5,000 insurgents, organised under nine flags, under the supreme leadership of El Fiki Abdullahi el Siheini.

The Merkaz buildings had been previously put in a state of defence and surrounded by barbed wire in anticipation of an attack; which materialised on September 26, at about 8.30 a.m., when the insurgents advanced from the south, seven flags attacking from that direction and one flag from the west. The ninth flag simultaneously attacked the Suk, which lies to the East of the Merkaz, and which was defended by a detached post of the M.I. in a zariba.

By sheer weight of numbers the defenders of the Merkaz position were overwhelmed and forced beyond the wire on the northern side. Captain Chown died fighting within the defences and Mr. McNeill was killed whilst rallying the police and troops to the north of the fence. Three Merkaz employees and the Molahiz of Police were also killed, fighting bravely.

After the death of Mr. McNeill, El Yuzbashi (Captain) Billal Effendi Rizk, commanding the Mounted Infantry, with Mulazim Awal (Lieutenant) Hassan Effendi Mohamed Zein, Moawin Nyala Merkaz, organised a counter attack on the insurgents' rear, with the detachment which had been posted to defend the Suk. This attack succeeded, and the main position was immediately re-occupied. The insurgents then delivered a second attack, led by the Fiki Abdullahi in person, who advanced to within thirty yards of the defences before being wounded, when he was carried off by his followers, whose retreat was harassed by Arab Friendlies.

The severity of the fighting can be judged by the heavy casualties. Six hundred enemy dead were actually counted in the vicinity of the Merkaz, while the numbers of wounded and slain who were carried off must have been equally large. The Mounted Infantry lost 17 killed, two wounded, and one missing; the police, 20 killed, 12 wounded, and five missing. It is interesting to note that the proportion of casualties was heaviest amongst the police, who were armed with single-shot Martini action .303 carbines, the M.I. being armed with service magazine rifles.

The success of the stand made by a mere handful of troops, Province Police warders, and civilians against such overwhelming odds is sufficient proof of the gallantry of all ranks. While the defence owed much to the magnificent example of bravery set by Mr. McNeill and Captain Chown, a very critical situation was afterwards

retrieved by El Yuzbashi Billal Effendi Rizk and the Moawin Hassan Effendi Mohamed Zein.

It is noteworthy that no Egyptian troops were employed in this brilliant little action, the Province Police and Warders being locally recruited, and the Mounted Arab Corps being recruited from Darfur Province. The officers were all Sudani who had passed through the Khartoum Military School.

His Excellency the Sirdar and Governor-General was on his way back, and on receiving the news sent the following telegram to Brigadier General Sir Herbert Jackson in Khartoum:—

I have just seen telegram of October 14 from Governor Darfur to Civil Secretary giving details of action at Nyala. There can be no doubt that the stand made by this small force against overwhelming numbers was not only a very conspicuous achievement in itself, but averted what might have been most serious and far-reaching consequences. I deplore the loss of so many brave lives, among them McNeill and Chown, whose gallant example inspired the defence. The initiative and presence of mind shown by Yuzbashi Billal Rizk and Moawin Hassan Mohamed Zein at the critical moment of the action, after the death of these British leaders, are worthy of the highest praise. When I receive the full written report I shall take steps to bring the action into more prominent notice, but in the meantime I beg you will convey to all the survivors of the fight my thanks and express to them my high sense of the results achieved by their courage and devotion to duty.

The Fiki Abdullahi was subsequently taken prisoner, and was tried before a Mudir's court, and found guilty of waging war against the Government and of inciting his followers to murder. He was sentenced to death, and was hanged at Nyala on October 28. The Governor of Darfur called upon his principal adherents to surrender, failing which punitive measures would be taken. In the meantime the assessment of taxes on the harvest now ripening is proceeding as usual and the disloyal element in Nyala district does not appear to be large.

The Sudan Times of December 7 states:—

Khartoum, Dec. 5.

On November 22 a force composed of Camel Corps and Mounted Infantry Western Arab Corps, Egyptian Army, left Nyala to deal with those followers of the late insurgent Fiki Abdullahi el Soghayer who had not already dispersed. On November 27 the Column was attacked at Gughan el Zirga 85 miles S. S. E. of Nyala by a body of insurgents who were repulsed with a loss of 85 killed, four prisoners, and a number of wounded not ascertained. Of the Tribal Contingents co-operating with the patrol, one Arab was killed. The only casualty among the troops was the British Medical Officer, who received a slight wound in the arm while attending the insurgent wounded. The insurgents took to flight and were pursued by Mounted Infantry and Tribal Contingents. Punitive operations are proceeding.

AN EGYPTIAN PROTEST.

We have received the following telegram from Tanta, signed by Ali Khalifa. It speaks for itself:—

"Vehemently protest against your Government's trampling under foot of even simplest of personal liberty in Egypt, the flogging of students and officials, the killing of peaceful, defenceless men and women, for no other reason than legitimate claiming of usurped rights. The disgraceful breaking of promises is a blot on the escutcheon of Britain. This series of crimes has been lately crowned by the challenging of the national dignity and the intentional provocation of hostility through the harvest of our great elected leader, the personification of national ideals, Saad Zaghloul Pasha, with his colleagues, and their deportation to an unknown place. Evidently your Government is, therefore, held responsible before the civilised people of the world and before history for the disastrous effects of such mad policy, dictated by lust for blind imperialism and the enlaving of Freedom, a policy which has led, and will lead, to the deaths of innocent people, the spread of discontent and unrest all over the country, and the endangering of international interests. We assure you that the unique failure of your unreasonable Curzonian scheme will only be matched by the failure in store for your intimidatory policy. Our deep-rooted faith in the righteousness of our cause will never be shaken; we are more untired and more determined than ever to continue our efforts until the reaching of the national goal. As a sign of discontent general strike is in full swing for members of representative bodies, ulema, clergy, notables, business men, government officials, lawyers, doctors, engineers, teaching staff and undergraduates at Tanta."

The Bishop of Gibraltar last week consecrated the new English church at Algeciras.

On Christmas Day some Italian sailors at Sebenico, in Dalmatia came to blows with local soldiers and were only able to return to their ships after a struggle. The Italian Consul has protested to the Yugoslav authorities.

NEAR EAST BOOKSHELF.

EAST AND WEST.

"HELLENISM AND CHRISTIANITY." By Edwyn Bevan (London: George Allen and Unwin 12s 6d net.)

That "East is East and West is West, and never the twain shall meet" was accepted as axiomatic by the last generation. Writing of the interaction of Hellenism and Christianity, Mr. Edwyn Bevan sets out to prove that Mr. Kipling's apothegm was based on a total misapprehension of history. He maintains that civilisation is not a question of longitude, but of differences in intellectual, moral and economic development. Europe has been "Western" only for four centuries, and still contains dense masses of barbarism; while the races of Asia differ so widely that it is unscientific to place them in one category. Ancient Greece was unquestionably the cradle of Western civilisation. What, asks Mr. Bevan, gave its peculiar note to Hellenism as against all that existed outside it?

Surely the singular development of those mental faculties which we associate with rationalism, the critical intellect, the bent to submit tradition and belief to logical examination, the desire to get the values of things in their real proportions. It was because the Greeks could stand off from established custom and ask the Reason Why that they could make political progress, because they could feel the inadequacy of ancestral mythology, and ask what the world was really made of, that they could lay the foundations of rational science. It was fundamentally the same mental quality which kept their Art in all its idealism so sane, so closely in touch with Nature; which eliminated instinctively the disproportionate, the monstrous. All the development of knowledge of command over the forces of Nature, of purposeful order, which is meant by the term "Western Civilisation" to-day has had for its moving principle a rationalism whose origin is to be found in the Greek city-states.

The Christian cult in its myriad forms played a restricted part in moulding the wondrous process. Mr. Bevan, indeed, opines that the bulk of Western Society stands in need of conversion to Christianity. He, therefore, adopts "rationalistic civilisation" as a synonym of the political and economic conditions prevalent in Europe. Profound was its influence on Asiatic thought. The Arabs of old assimilated Greek science; and Persian mysticism sprang from Greek philosophy. A thousand years ago Mesopotamia enjoyed a degree of intellectual culture and material prosperity which in some respects has never been surpassed. The whole fabric was destroyed by successive waves of barbaric invasion from Central Asia; and the East sank into a lethargy which has endured till our own day.

The leaven of Greek civilisation worked on a vastly extended scale during the centuries of Roman dominion; but the empire of the Caesars was in its turn submerged by the influx of fierce northern tribes, and its intellectual culture suffered a long eclipse. Unlike Hither Asia, our continent is not at the mercy of barbaric hordes. In the 15th Century the Ottoman Turks gained a footing on its eastern confines; but Christendom, linked by religion and ideals held in common, proved strong enough to resist the tide of eastern invasion. The removal of external pressure gave free play to the human intellect; and Hellenism revived to banish the darkness of the Middle Ages. We Europeans are, therefore, heirs of the greatness of Greece and Rome; our mastery of Nature's forces is the logical result of their culture; the principles of our dominion in Asia are identical with theirs. What of the future? Mr. Bevan believes that the world is entering on an era unlike all its predecessors. History records a series of epochs each characterised by improved methods of communicating thought and by wider co-operation. Speech, writing, printing and the telephone mark successive steps in the ladder of civilisation. Nationalism carried to extreme lengths is, therefore, a deadly foe to progress:—

It is a foolish pride that would impel some fervid Nationalists to combat all extraneous influences to preserve every element of native tradition, good and bad alike. Whatever it may be in economics, *Swadeshi* in the sphere of ideas is a fatal policy for any people. Every spiritual advance which any branch of the human family achieves, it achieves not for itself alone but for mankind; and any people that refuses to profit by its suffers. Mr. Bevan is no Cassandra; he anticipates deeper

knowledge, increased sympathy and a closer fusion of interests as the results of a virtual annihilation of time and space. He is, perhaps, unduly optimistic in asserting that Westerners are impervious to the infiltration of Asiatic hordes. If there was ever a time when the heirs of Greek and Roman civilisation should take arms in protection of their precious heritage, it is the crucial years on which the world is entering.

F.H.S.

PALESTINE'S VILLAGE LIFE.

"THE PEOPLE OF PALESTINE." By E'lihu Grant. With 45 Illustrations (London and Philadelphia: J. B. Lippincott Co. 10s 6d net.)

As through a microscope, or as on a cinematograph, is not too high praise for this close, sympathetic and skilful picture of Palestine village life under Turkish rule in the early years of the present century. The book is an enlarged, well-illustrated edition (1921) of an earlier volume by Professor Grant, who was for three years resident in the big village of Ram Allah, ten miles north of Jerusalem. At the price of 10s. 6d. it is one of the cheapest books offered to the public since the war, for it appears to attain classic rank, if by classic we imply the unique erudition of the author writing from a view point which has probably passed for ever. In the twelfth and final chapter the author has a guarded and short survey of the "New Dispensation" which was ushered in by the expulsion of the Turk from Syria, as much as to say "Here is a picture of yesterday; I cannot pronounce upon tomorrow."

The book is a book of travel, a farmer's manual, a tourist's handbook, an Arabic grammar, a cookery and gardening treatise, a Biblical Commentary, a fashion book, an auctioneer's catalogue, a "Hints to Good Behaviour," a meteorological record, all so deftly interleaved that the resultant impression is a charming pastoral poem, with the Syrian peasant, Moslem, Christian or Jew, as the central theme.

"Its (Palestine's) present population," says the author, "is made of sturdy and able people. Three great religions call it Holy Land. It presents to view three distinct types of human society, the desert nomad who dwells in the tented encampment, the peasant villager who reminds us in so many ways of the people of the Bible, and the more foreign-looking and mingled folk of the large cities."

A curious fact is that the Jew hardly enters within the scope of the American professor's vision; this picture of Palestine is a picture of Arabic-speaking Moslems and Christians, under Turkish rule, whose immature ideas of nationality are theocratic and not patriotic. The urbane, kindly author seems to have no distaste for the sordid, petty, daily jarring of the "seven and seventy" sects, but perhaps, mindful of America, as we may be of the British Isles, he remembers resolutely the proverb about throwing stones in glass houses. Certainly there is no lack of religion in the "Land of Milk and Honey," but there is a remediable lack of water and, possibly, an irremediable lack of common sense. The book's one blemish: no map.

In order to avoid misunderstandings the Bulgarian authorities wish to certify that Colonel Nicoloff, who is on trial on a charge of having illegally made use of his power when Superior Supply Officer at Plovdiv during the war, was arrested for reasons which have absolutely nothing in common with his well-known sympathies for British prisoners of war in that town.

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

PERSONAL AND GENERAL.**To-Day.**

January 5, 1922 (New Style).

December 23, 1921 (Old Style).

Gumada I 6, 1340 A.H. of the Moslem Calendar.

Tibet 5, 5682 of the Jewish Calendar.

The Georgian Minister has left London for Paris.

Mr. Alex Devine has left London for Rome and San Remo.

Viscount and Viscountess Milner spent Christmas at Sturry Court.

Sir Percy Loraine, the new British Minister to Persia, has arrived in Teheran.

Lord and Lady Montagu of Beaulieu have left England for several months, which will be spent in India.

Captain F. W. Shannon, Managing Director of Shannons, Ltd., spent Christmas in Egypt.

Major-General Sir Gerald and Lady Kitson have arrived at Cairo.

The Duc and Duchesse de Montpensier are travelling in Egypt.

Mrs. T. Wintringham, M.P., is now in Egypt on a short holiday.

Admiral Condouriotis, the ex-Regent of Greece, who was shot in the body on December 21, is now out of danger.

Sir Samuel Hoare, M.P., has gone to Constantinople, where he will organize a scheme of relief for Russian fugitives.

The Greek Premier, the Greek Minister for Foreign Affairs, and other members of the Greek Mission, have arrived in Rome.

Judge Thorne, of the Mixed Courts, Alexandria, left for Cyprus in mid-December to join Mrs. Thorne, who was about to undergo an operation.

M. Yovan Yovanovitch, Consul-General for the Kingdom of Serbs, Croats, and Slovenes, left London last week for Belgrade.

Sir Malcolm Hogg, Member of the Indian Council, has left England on a business visit to India, and will return in the spring.

Lieutenant-General Sir A. S. Cobbe, V.C., Military Secretary, India Office, was last week reported to be out of danger, and progressing favourably towards recovery from his illness.

The Marquess Curzon of Kedleston left London for Cannes on Tuesday, for the meeting of the Supreme Council. He was accompanied by Marchioness Curzon, and they will stay at the Grand Hotel, Cannes.

Lady Sykes, widow of Sir Mark Sykes, gave a ball at Sledmere House, Malton, on December 28, in honour of the coming out of her eldest daughter, Miss Mary Freya Sykes, who is seventeen.

Prince Christopher of Greece has returned to Greece where he will spend Christmas (old style) with the Royal family. Princess Christopher is remaining at Cannes owing to reasons of health.

A marriage has been arranged between Thomas Beaumont Hohler, C.B., C.M.G., his Majesty's Minister at Budapest, and Cynthia, younger daughter of Lady De L'Isle and Dudley, and the late Mr. William Astell, of Woodbury Hall, Sandy.

The engagement is announced between Captain A. Cecil Pegg, 93rd Burma Infantry, youngest son of the late William Henry Pegg, of Heathfield, Sussex, and Mrs. Pegg, and Naida Olivia, younger daughter of Mr. and Mrs. Frank Tiernay, of Braeside, Berkhamsted.

The marriage has been arranged and will shortly take place between George H. Rashen (late Captain I.A.R.O., 26th Punjabis) and Jane Katharine Irwin, youngest daughter of the late Colonel and Mrs. Irwin, of Lynehow, Carlisle, and 53, Stanhope Gardens, S.W.7.

A marriage will shortly take place between Major George M. Bond, D.S.O., K.O.Y.L.I., youngest son of the late Lieutenant-Colonel C. F. Bond, 105th Madras Light Infantry, and Kathleen, third daughter of Mr. T. Gallaher, J.P., Ballygoland, Belfast, and widow of Major R. E. Bond.

The engagement is announced of Captain E. M. Hodding, late the Middlesex Regiment, youngest son of the late H. Hodding and Mrs. Hodding, Bemerton, Salisbury, and Margaret Clifton, youngest daughter of the late S. H. Carver, of Alexandria, and Mrs. Carver, The Moot, Downton, Salisbury.

The engagement is announced between Edric Charles Abbott-Young, P.W.D., India, son of the late Walter Evelyn Colebrooke Young, and Sybil, daughter of the Neville George de Bretton Priestly, of Roadside, Westhill, Putney, and the late Mrs. Priestly, daughter of Dr. Charles Homans, of Boston, U.S.A.

The engagement is announced of Anthony Conning Kilburn, late R.A.F., of Murrah Hall, Troutbeck, Cumberland, youngest son of Mr. and Mrs. C. Conning Kilburn, of Broadstone, Dorset, formerly of Calcutta, and Maud, eldest daughter of Mr. and Mrs. C. Toppin, of the College Malvern.

A marriage has been arranged, and will take place in Egypt in February, between Major M. D. Townshend, D.S.O., R.F.A., son of the late Colonel C. C. Townsend R. A. and Mrs. Townsend, and Mrs. Dorothy Carrick, daughter of Mr. James Bayley, of Willaston Hall, Nantwich, and Mrs. Bayley, of Old Dover Road, Canterbury.

A marriage is arranged and will take place shortly in Cawnpore, between Captain B. K. Dymott, 31st Punjabis second son of Major D. F. Dymott, I.M.S. (retired), and Mrs. Dymott, 5, Bath Road, Camberley, and Edith Winifred, youngest daughter of the late John Taylor, of Heaton Moor, Stockport, and Mrs. Taylor, 291, Babba-combe Road, Torquay.

The marriage was celebrated on December 20 at the British Embassy Chapel between Mr. Severin Oswald de Bilinski, C.B.E., Managing Director of the National Bank of Turkey, and Miss Adriana Hilda Leibbrandt, of Cape Town, South Africa. The service was conducted by Canon F. C. Whitehouse. Among the large gathering at the reception were included:—Sir Horace and Lady Rumbold, Admiral and Mrs. Bristol, Rear-Admiral Sir Richard Webb, Lt.-General and Lady Harington, Major-General and Mrs. Marden, Colonel and Mrs. Welch, Colonel and Mrs. Gribbon, Commander and Mrs. Bennett, Commander Gould, Commander Macdonald, Commander Jaques, Mr. A. T. Waugh, Sir Adam Block, Colonel A. W. F. Baird, Lt.-Colonel R. W. Graves, Canon and Mrs. Whitehouse, Judge P. T. Thorpe, and Colonel Ballard.

APPOINTMENTS, PROMOTIONS, etc.

Mr. John Houston Sinclair has been appointed British Resident in Zanzibar.

M. Constantin Fotitch has been appointed permanent Yugoslav delegate to the League of Nations, and has taken up his post at Geneva.

M. Virgil Tilea, Secretary to the Roumanian Legation, has returned to London from Bucharest after a prolonged absence on leave.

Mr. Frederic K. Maxwell, of the Legal Departments of the Ministries of Interior and Justice, has resigned his appointment in the Egyptian Government.

Mr. Cowasjee Jehanghir has been appointed a member of the Executive Council of the Bombay Government during the absence on special duty, as Chairman of the Indian Fiscal Commission, of Sir Ebrahim Rahimtulla.

The King has approved the appointment of the Earl of Lytton to be Governor of Bengal, in succession to the Earl of Ronaldshay, who will vacate the office in March 1922.

BIRTH.

Ogilvie. On December 31, the wife of A. Ogilvie (*née* Dawson) of a son, at 111, Burnt Ash Hill, Lee.

OBITUARY.

Lady Agnes Daniell, widow of Mr. Nugent Daniell, I.C.S., and sister of the Earl of Ranfurly, died on December 29, at 17, Lennox Gardens.

Lieutenant-Colonel Henry Martin Moorsom, M.V.O. died last week at Court Manor, West Meon, Hants, aged 82. He joined the Rifle Brigade in 1855, and served in the suppression of the Indian Mutiny, 1857-8.

The death occurred recently of M. Bakaloff, who was Minister of Public Works in the Radoslavoff Cabinet which was in office when Bulgaria entered the war. He was one of the Ministers whose trial began months ago for war responsibility.

The death occurred recently of Mr. Walter Morrison, of Malham Tarn. Mr. Morrison was keenly interested in Egypt and Palestine. He founded a chair of Egyptology at Oxford, was one of the founders of the Palestine Exploration Fund, and a lifelong member of its Executive Committee.

Regimental Sergeant-Major James Caddy, of the Ceylon Engineers, who greatly distinguished himself in rescuing children from a burning circus tent at Taunton in July, 1920, has died at sea. It would appear from cabled messages that death was due to a complaint caused by burns from which he never fully recovered.

The death occurred on Christmas Day of Admiral Sir George Lambart Atkinson-Willer, K.C.B. He joined the Navy in 1861, and in 1868 served in the Abyssinian War. After seeing much and varied service in many parts of the world, he achieved very notable distinction during the Somaliland operations in 1904, in which he landed and captured the Dervish stronghold of Illish.

Sir Francis Hugh Stewart, C.I.E., died on December 29 at Little Hallands, Seaford, aged 52. He was a partner in the firm of Gladstone, Wylie, and Co., merchants, of London and Calcutta, president of the Bengal Chamber of Commerce in 1915, member of the Bengal Legislative Council in 1911-12 and 1914, member of the Imperial Legislative Council in 1915, Commissioner for the Port of Calcutta in 1909-12, and in 1914-15 and Sheriff of Calcutta in 1914. He was Amateur Golf Champion of India in 1897. Sir Francis married Frances Henrietta, daughter of Mr. A. G. Rickards, K.C., and had three sons and four daughters.

Sir Thomas Sutherland, who was for many years Chairman of the P. and O. Company, died, in London, on Sunday night, aged 87. He was born at Aberdeen, and was only 19 years old when he entered the P. and O. Company's service. After two years in the London office he went to Bombay, and, later, to Hong-Kong. He was in China twelve years, and returned to London in 1867. He became a managing director in 1873, and Chairman of the Company in 1881. Reference to his many business activities will be found on another page. Sir Thomas sat for Greenock first as a Liberal, and later as a Liberal-Unionist. He was a Knight of the Legion of Honour and of the Order of St. John. He married in 1880 Miss Alice Macnaught, who died forty years later.

WHERE TO STAY IN THE EAST.

THURSDAY, JANUARY 5, 1922.

THE POSITION IN EGYPT.

Although the deportation to Ceylon of Zaghloul Pasha and five of his fellow-Extremists may be denounced in Egypt as a declaration of war by the British Government on Egyptian Nationalist aspirations, there is no reason why this view should be endorsed elsewhere. The recent rioting has shown that there are two parties in the Nationalist movement; all classes of Egyptian opinion may be at one in supporting the agitation for independence, but one party is strongly opposed to the adoption of violent methods for the attainment of an end which it desires no less keenly than the other. It considers that violence can only prejudice the common cause, and after the disorders of last week, which in some cases made little or no discrimination between Egyptians and foreigners, it is inclined to approve at heart, if not openly, of the firm action taken by the British authorities against the Extremists. In these circumstances it would seem advisable that the British Government should state clearly that the deportation of Zaghloul Pasha implies no change of policy other than a firm resolve to put a stop to excesses or any disturbance of the peace. The question of the future status of Egypt remains where it was after the conclusion of the negotiations in London and the presentation to the Sultan of Lord Allenby's letter. That communication specifically stated that the rejection of the British Government's proposals would not affect the principle of British policy. Effect could not be given to the proposals without the consent and co-operation of the Egyptian nation, but His Majesty's Government remained "prepared to consider any methods which may be suggested for carrying out the substance of their proposals, whenever your Highness's Government may so desire." It is necessary to emphasize this official declaration, as there is a tendency to regard the door as being bolted and barred to all further negotiations. This is clearly not the case. Until, however, an Egyptian Government can be formed to co-operate with the British authorities, Egypt will not merely stand still in the matter of political development; she must retrogress. It is to be hoped, therefore, that Sarwat Pasha has not entirely abandoned the idea of undertaking the responsibilities of office. On what points he requires assurances which the British Government may not be prepared to give him has been not made public; but if the personal antagonism of Zaghloul Pasha, which was an important factor in regard to the position of Adly Pasha, entered into the picture, the removal of the Extremist leader ought to simplify the position.

When every allowance has been made for Egyptian disappointment, there can be no doubt that not only the Draft Convention, so summarily rejected in London, but also Lord Allenby's letter to the Sultan, so wounding to Egyptian *amour propre*, contains a very practical advance towards independence. Indeed, if negotiations could be resumed with a little more sympathy on each side, there would seem to be no reason why the intro-

duction of a time-limit should not meet all Egyptian susceptibilities, without impairing the effectiveness of the guarantees required by the British Government. The chief points at issue are the retention of British troops in the country, and the appointment of Financial and Judicial Commissioners as Advisers to the respective Ministries. In regard to the first point exception is taken by the Egyptians to the presence of British troops in the capital; the necessity of retaining them in the Canal zone is conceded. For the moment, however, after the recent riots in Alexandria and under the pressure of foreign Powers alarmed for the safety of their nationals, the British Government sets special store on having complete freedom in the distribution of its troops. This phase will pass; public opinion at home will continually act as a stimulus to the exercise of economy in military budgets overseas, while on the other hand the Egyptians know that a considerable time must elapse before suitable accommodation could be provided in the Canal zone for the troops concerned. The fact that any immediate change is a physical impossibility suggests that all reasonable objections to Paragraph 10 of the Draft Convention could be met by an undertaking to reconsider the position at the end of a stated period, when the whole question might be submitted to the arbitration of the President of the United States or of someone appointed by the League of Nations. In the same way after a certain number of years, if Great Britain should still feel unable to dispense with either one or both of her Financial and Judicial Commissioners, it should be open to Egypt, in the event of her feeling aggrieved in the matter, to invite an impartial investigation at the instance of the League. The submission of all these questions to a recognized tribunal must necessarily dispose of the Egyptian contention that real independence can never be attained so long as Great Britain remains the sole arbiter of Egyptian capacity. Five years or so are a very brief space in a nation's history, however long and tedious it may seem to ambitious politicians, and sober reflexion will convince the most ardent Nationalist that Egypt will in the long run lose nothing by proceeding slowly at this stage and making sure of each step as she goes.

A somewhat bitter controversy is raging in the public press over the rights and wrongs of the present *impasse* in Egypt; but most of what is written, it is to be feared, tends to drive the parties farther apart rather than to bring them nearer together. The sincerity of both sides in the London negotiations was beyond challenge; for this reason attention should be directed to convincing both of the narrowness of the actual gap that separates them and not to enlarging the gap into a gulf. Egypt will do well to avoid being led away by false analogies at this stage. For the elucidation of her problem she can rely only upon herself and Great Britain; she cannot command the world's interest. The influence of the foreign Powers that are in any way concerned in her affairs is more likely to be thrown in the scale against complete independence, when the crisis is reached, whatever unofficial encouragement Egyptians may have received from anglophobe representatives. Great Britain's record in Egypt is too well known to be affected by denunciations for her failure to satisfy on demand every Nationalist aspiration. Moreover, any tendency to enlist foreign sympathy will inevitably make the Egyptian task harder, as will be realized by anyone who gives due weight to a remarkable passage in the letter addressed to the Sultan, where it is stated that "these claims (to the exclusive right of tendering advice) are not asserted with any desire to derogate from Egypt's enjoyment of the full rights of national self-government. They are pressed only as against other foreign Powers." In these circumstances Egypt's line of policy should be clear enough. She should accept readily what has been offered her in the Draft Convention, with the determination herself to provide in due course the guarantees that the British Government considers it necessary to supply. If all goes as well as her own people predicate, she will find herself met half way by Great Britain.

ADVENTURES IN CENTRAL ASIA.†

From Tashkend to Orenburg and Back.

By *Sirdar Ikbal Ali Shah, F.R.G.S., M.R.A.S.*

On going out next morning I found just that mixture of the European and Oriental that one might expect to find at the threshold of Central Asia. Wide streets crossed one another at right angles; and though many of the houses were built of wood, the barracks, churches, and schools were of stone. People of all races thronged the streets, Tartars and Kirghiz with a good proportion of Russians, while in the bazaar the merchants seemed to be mostly from Bokhara, Khiva and Tashkend. There was, however, a general air of leanness and want about the entire place; not that food was scarce, but its price seemed to be absolutely prohibitive. The rule of the bazaar seemed to be entirely in the hands of the profiteers, but it was a profiteering that carried great risks; for I found that if the Russian authorities suspected any merchant of making undue charges, they were apt to swoop down on him and confiscate his entire stock, which they usually sold again at as high a price as he himself would have done.

"You are the Persian who wishes to be an interpreter?" he said, in a voice like a high wind. "What are you doing in Orenburg?"

"I am a tea merchant," I replied. "I brought a large quantity of tea from Tashkend, but cannot unload it and am down to my last copper."

"Umph!" he said. "Stranded are you? Well if your tea isn't any better than the rubbish we get here I'm not surprised. You fellows seem to think you can palm off anything you like on us in Orenburg. Perhaps you think we know nothing about tea, eh?"

"Most of the tea I have brought with me is of the best quality, your Excellency," I replied, "and I shall be delighted to send you a chest of it, if you will be so good as to accept it."

"Upon my word, that's very kind of you," he said, "and I won't say no. Seeing you're on the rocks (his language was on a par with his appearance) I'll take you on as my interpreter, but I can't give you more than house-room and rations, and I am taking it for granted that you really know the languages as you say you do."

"I can assure you on that point," I made haste to say. "When would you like me to start?"

"Oh, right away," he said. "Only go and see about that tea first, will you?"

I immediately returned to the town with a trooper, who in true moujik fashion carried the chest of tea all the way back to the camp on his shoulders. Then I reported myself for work. The Major-General was delighted with the tea and took me aside quite confidentially.

"Now, look here, Whats-your-name," he said, "I never remember these Asiatic names, I'll tell you quite frankly that I know none of the lingos spoken in these parts, so I want you to accompany me round the camp when I make my tours of inspection. You will also find out what the men are saying about things, mix with them freely and report to me. You understand?"

I quite understood that he wanted me to play the spy and was not surprised, as that is, and always has been, the mainspring of Russian administration. He was an easy-going kind of man, but managed somehow or other to get things done. His constant fear was that

he might be superseded in his command, and this was apt to make him hasty and nervous at times. Every morning we went round the camp. He certainly made pretty strict inquiries as regards the health and well-being of the troops, and took some pains to have abuses removed. Each evening I made a report to him, that is, when he was sober enough to hear it, for after having drunk oceans of tea all day, about four o'clock in the afternoon, when most of his duties were over, he exchanged the lighter beverage for what I took to be vodka, but what I afterwards found out was gin, which he told me in a burst of confidence reached Russia from Holland via Scandinavia and cost him a small fortune per bottle. I cannot say however, that his staff exceeded in their potations. They seemed to me to be men of the clerk or better-class shopkeeper kind, although a great many had been working-men. They were a strange mixture of efficiency and ignorance, forceful fellows in their way, who under the command of a really skilled officer might have gone far—much the sort of man, I should say, who served France so well during her Revolutionary wars—but they seemed to be wretchedly informed regarding the military power of other countries, and the things I used to hear them say about the Indian army caused me a great deal of amusement.

Things went on like this for nearly two months, when one day I heard that a Commissary had arrived from Moscow. On hearing the news the General looked decidedly uneasy and there were great burnings of papers and repeated applications to the gin bottle. Next morning when the Commissary visited him my chief was, as an American would say, "well lit up," and almost immediately a most unofficial altercation began. I was, of course, ordered out of the tent, but as I stood at the door I heard a good deal of it. So far as I could make out, separating the facts from the awful language that was freely used, the Commissary accused the General of all the military vices known to courts-martial, including peculation of stores on a considerable scale. In the middle of the rumpus I was extremely amused to hear an awful crash of glassware; and I afterwards found that the General in his indignation had been unable to keep his balance and had fallen into the veritable pyramid of gin bottles, which were only partially concealed by a canvas flap that had served as his wine cellar. This certainly did not improve matters, and when I heard someone charge for the opening of the tent, bellowing like a buffalo bull, I hastily made myself scarce. It was the Commissary, who was foaming at the mouth with rage.

"Drunkard!" he shouted. "Hog! You shall hear more of this."

Unluckily for him he had turned his faced towards the door of the tent, but as he walked backwards, waving his arms and shouting like one demented, he fell over a tent rope and landed with great force on the back of his head. He seemed somehow or other to jump to the conclusion that the General was responsible for his downfall, but as that worthy was still scrambling among broken gin bottles, he could hardly be blamed for the catastrophe. I was standing at the corner of the tent, convulsed with laughter and quite unable to move; and the Commissary, catching sight of me, whipped out his revolver and fired a couple of shots which missed me by a hair's breadth. The General, who had now recovered himself somewhat, returned the fire, on hearing which the Commissary gave vent to the most appalling yell, and ran off as fast as his short little legs would carry him. By this time the camp was fully aroused and some of the Uzbek troops running up, began firing off their rifles in the air, evidently in the

PURE SCOTCH.

belief that they were about to be attacked. The General, maddened with drink and rage, seemed to regard the whole proceedings as quite natural, and placing himself at their head, staggered off after the Commissary with loud shouts of triumph. But the denouement was one which would not have disgraced the end of a Charlie Chaplin film. The Commissary at last ran to earth in the regimental kitchen, where he took refuge behind the stove, much to the amusement of the Tartar cooks. The General and his train, who had not noticed him enter the place, swept past, and eventually the unfortunate Commissary was able to return to the railway station. A fortnight afterwards nobody was surprised to hear that the General had been commanded to report himself at Moscow. Eventually he went off, carrying the remaining gin bottles with him. How he fared I do not know, and if he was cashiered he may have swelled the list of the unemployed at the great Labour Bureau in the Nevsky-Prospekt.

Once the General had gone, I was, of course, without occupation. I had learned all I wanted to regarding Bolshevik military affairs; in fact there was nothing to learn, unless one can call a downright muddle a fit subject for investigation; so one fine morning I took the train back to Tashkend, having sold my tea at a slightly better price than that first offered for it. I arrived after the usual delay at Tashkend, and after a couple of days there took the train through Ferghana to Andijan, one of the most important towns in Turkestan and the capital of Ferghana, which is notable as a cotton growing district, and more recently has been discovered to be one of the greatest oil-producing countries in the world. It is a place of considerable antiquity, and has several fine colleges and an excellent bazaar. The place is considerably Russianized and is undoubtedly one of those points from which the Bolsheviks would have made an attack upon India, had their plans not obviously fallen through. I had not been there many days when I was taken rather seriously ill with fever. My position was now extremely awkward, for were I to go to hospital the most searching inquiries regarding me would certainly be made. The very fact, too, that I intended to return to Chitral would have seemed suspicious to the authorities. I managed, however, to drag myself to a mosque, where I was received with the greatest possible kindness, and where I lay at death's door for nearly a month, so serious was the attack. Eventually I succeeded in returning to Chitral. It is impossible for me to describe the manner in which I accomplished this, as to do so would certainly incriminate several good friends at Andijan in the eyes of the Bolshevik authorities. Suffice it to say that I was thankful to be on Indian territory once more, and I can assure my readers that I have not the slightest intention of renewing my acquaintance with Central Asia until I can do so in peace and comfort and without the dread of the constant challenge of the spy, the ispolkom and the other satellites of Bolshevism.

THE CAIRO HOSPITAL.

A cablegram has been received (says the *Morning Post*) by the Royal Institute of British Architects from Cairo announcing that in the preliminary competition for the designs for the great hospital and medical school to be erected near Cairo by the Egyptian Government, the designs of the following six architects have been selected: Mr. John Reginald Truelove, care of Imperial War Graves Commission, Longuenesse, St. Omer, Pas de Calais France; Messrs. Cackett and Burns Dick, Pilgrim House, Newcastle-upon-Tyne; Messrs. W. and T. R. Milburn, 11, Esplanade West, Sunderland; MM. Pierre and Louis Guidetti, 31, Quai Bourbon, Paris; Messrs. Lanchester, Rickards, and Lucas, and T. A. Lodge, 19, Bedford-square, London, W.C. 1; and Messrs. Nicholas and Dixon Spain, 19 Hanover Square, London, W. The result is an emphatic triumph for British architects. The competition was open to the world, and designs were received from many of the most distinguished architects in the United States, France, Canada, Italy, and elsewhere. Five out of the six places in the preliminary round have been won by members of the Royal Institute of British Architects, and the one successful foreign design is that of the firm of MM. Pierre and Louis Guidetti, of Paris. The Assessor in the competition is Mr. John W. Simpson, past-President of the R.I.B.A.

NEW YEAR'S HONOURS.

The New Year's Honours List includes:—4 Barons, 5 Privy Councillors, 17 Baronets, and 112 New Knights.

Prince Henry is appointed a G.C.V.O.

The Order of Merit is conferred on Sir James Matthew Barrie, Bt., in recognition of his services to literature and the drama.

Peerages are conferred on Sir James Buchanan, Bt., Sir Robert Nivison, Bt., Mr. Joseph Watson, and Mr. Francis Willey.

Among the Honours announced which have a special interest for our readers in the Near and Middle East are the following:—

BARONETS.

McRobert, Sir Alexander, K.B.E., LL.D., F.R.G.S.

President of the Board, Indian Chamber of Commerce, from 1898 to 1908, and Member of the Legislative Council of the United Provinces from 1900 to 1908.

Mountain, Sir Edward Mortimer.

Chairman, Eagle, Star, and British Dominions Insurance Company. For public services.

Wallace, Sir Matthew Gemmill.

For services rendered to the Defence of the Realm Losses Commission and War Compensation Court.

Yule, Sir David.

Head of the firm of Yule, Catto, and Co., East India merchants, Calcutta, and throughout India. Director of London City and Midland Bank and of the Mercantile Bank of India. For public services.

KNIGHTS.

Carruthers, William, Esq.

General Manager, Barclay's Bank, Director of British Fire Insurance Company.

Du Maurier, Gerald Hubert Edward Busson, Esq.

Actor Manager.

Duncan, James, Esq., J.P.

Managing Director of Steel Bros. and Co., Ltd., East India Merchants. Chairman Royal Insurance Co. For public services.

Hawtreay, Charles Henry, Esq.

Actor Manager.

Hobson, Albert John, Esq.

President of Association of Chambers of Commerce of the United Kingdom, 1920-21. Pro-Chancellor of University of Sheffield.

Fisher, Stanley, Esq.

Chief Justice of the Supreme Court of Cyprus.

(India.)

Muddiman, Alexander Phillips, Esq., C.S.I., C.I.E., I.C.S.

President of the Council of State.

Whyte, Alexander Frederick, Esq.

President of the Legislative Assembly.

Chevis, Mr. Justice William, I.C.S.

Puisne Judge, High Court, Punjab.

Richardson, Mr. Justice Thomas William, I.C.S.

Puisne Judge, High Court, Calcutta, Bengal.

Schwabe, Mr. Justice Walter George Salis, K.C.

Chief Justice, High Court, Madras.

Robinson, Mr. Justice Sydney Maddock.

Chief Judge, Chief Court, Lower Burma.

Avergal, M. R. Ry. Rao Sahib Muthiah, Chidambaram Muthiah Chettiyar.

Member of the Legislative Council, Sheriff of Madras.

Simpson, James Fletcher, Esq.

Member of the Legislative Council, Partner in Messrs. Gordon, Woodroffe, and Co., Madras.

Bomanji, Dhunjibhoy, Esq.

Merchant, Bombay.

Froom, Arthur Henry, Esq.
Merchant, Bombay, Member of the Council of State.
Watson-Smyth, Robert Middleton, Esq.
President, Bengal Chamber of Commerce, Bengal.
John, Edwin, Esq., C.B.E.
Merchant, Agra, United Provinces.
Jaquet, Robert Glover, Esq., C.I.E.
Late Accountant-General, India Office.

ROYAL VICTORIAN ORDER.**G.C.V.O.**

H.R.H. Prince Henry, K.G.
Cavan, General Sir Frederick Rudolph, Earl of, K.P.,
G.C.M.G., K.C.B., M.V.O.

C.V.O.

Marsh, Edward Howard, Esq., C.B., C.M.G.

ORDER OF ST. MICHAEL AND ST. GEORGE.**G.C.M.G.**

Cox, Maj.-General Sir Percy Zachariah, G.C.I.E.,
K.C.S.I., K.C.M.G.
High Commissioner and Commander-in-Chief for
Iraq.

Stevenson, Sir James, Bt.

In recognition of services as Adviser to the Secretary of State for the Colonies on business questions and as late member of the Munitions Council (1917 to 1919) and of the Army and Air Councils (1919 to 1921).

K.C.M.G.

Grindle, Gilbert Edmund Augustine, Esq., C.B.
C.M.G.

Asst. Under Sec. of State, Colonial Office.

Shuckburgh, John Evelyn, Esq., C.B.

Acting Assistant Under-Sec. of State, Colonial Office, from the India Office.

Grahame, The Right Hon. Sir George Dixon, K.C.V.O.,
H.M. Ambassador Extraordinary and Plenipotentiary at Brussels.

Barclay, Colville Adrian De Rune, Esq., C.B., M.V.O.
H.M. Envoy Extraordinary and Minister Plenipotentiary at Stockholm.

Macleay, James William Ronald, Esq., C.M.G.
H.M. Envoy Extraordinary and Minister Plenipotentiary at Buenos Aires.

HON. K.C.M.G.

Almerhum His Highness Ismail Ibni, Sultan Mohamed, IV.

Sultan of Kelantan.

C.M.G.

Lampson, Miles Wedderburn, Esq., M.V.O.

A First Secretary in the Foreign Office.

Johnson, Wilfrid Athelstan, Esq., M.V.O.

Until recently an Acting First Secretary in H.M. Diplomatic Service.

Pipon, Philip James Griffiths, Esq., C.I.E., M.C.

I.C.S., Member of the British Mission to Kabul.

Hellings, Robert Bailey, Esq.

Lately Government Agent, Southern Province, Ceylon.

Hodson, Arnold Wienhold, Esq.

H.M. Consul for Southern Abyssinia; for services on the Northern Frontier of Kenya.

Smallwood, Henry Armstrong, Esq.

Financial Sec. to the Administration, Palestine.

HON. C.M.G.

Ibrahim, His Highness Tunku, Regent of Kedah.

STAR OF INDIA.**K.C.S.I.**

Mansinhji, Captain H.H. Maharawal Shri Ranjitsinhji, Raja of Baria, Bombay.

Shafi, Khan Bahadur Mian Muhammad, C.I.E., Barrister-at-Law, Member of the Viceroy's Council.

Hailey, William Malcolm, Esq., C.S.I., C.I.E., Member of the Viceroy's Council.

Grant, Sir Alfred Hamilton, K.C.I.E., C.S.I., late Chief Commissioner and Agent to the Governor-General, N.W. Frontier Province.

C.S.I.

Sah, Captain H.H. Raja Narendra, Raja of Tehri (Garhwal), United Provinces.

Knapp, Arthur Rowland, Esq., C.B.E., Indian Civil Service, temp. Member of the Executive Council, Fort St. George, Madras.

Marjoribanks, Norman Edward, Esq., C.I.E., I.C.S., Officiating Chief Sec. to the Govt., of Madras.

Bray, Denys de Saumarez, Esq., C.I.E., C.B.E., I.C.S., Officiating Sec. to the Govt. of India, Foreign and Political Dept.

Arbuthnot, Robert Edward Vaughan, Esq., I.C.S., Financial Commissioner, Burma.

New Year Honours.

Chief interest in the New Year's Honours List attaches to the distinctions conferred upon leading members of the financial and commercial community, among whom are many well-known in India and the Near East. The awards are dealt with in detail elsewhere, and I will only mention here a few of the outstanding appointments. Sir Alexander McRobert becomes a baronet, while the same distinction falls to Sir Edward Mountain, chairman of the Eagle, Star, and British Dominions Insurance Company, and to Sir David Yule, head of Yule, Catto and Co., and a director of the Mercantile Bank of India, and of the London Joint City and Midland Bank. Another representative of the banking community who figures in the list is Sir Norcot Warren who receives the K.C.I.E., while among the new knights is Mr. Watson-Smyth, president of the Bengal Chamber of Commerce.

Greek Finances.

Considerable interest has been aroused in business circles here by the news that Greece is endeavouring to raise a large loan on the London market. As the inevitable consequence of the prolongation of the war with Turkey Greece's financial position has for a long time been one of serious embarrassment, and several attempts have been made during the past years to raise a loan in this and other countries, but always without success. The British Government has now, however, decided to permit the raising of Greek loans in England, and the Greek Government has been authorised to negotiate with British Banks for a loan of not more than £15,000,000 to be utilised for purchases in this country. At the same time the Greek Government has foregone its claim to the unpaid balances of the loans arranged under the Agreement of 1918-19, amounting to about £5,500,000, and the securities for this sum will be available for the new loan.

Loan Prospects.

It would be rash to conclude because negotiations have actually been opened that a loan will be arranged without difficulty. On the contrary it may be assumed that it will be some time before an agreement can be reached as the terms on which a loan can be raised are not likely to prove easy to settle. It has to be borne in mind that values are very different from what they were in 1914, and that Greek credit has been very adversely affected by the strain involved in its present war. There is no doubt as to the willingness of British finance houses to assist Greece if—and this is the crux of the position—they can be satisfied as to the security offered. The prospect of an approaching settlement of the questions at issue in Asia Minor would do much to smooth the path of the negotiations, and would incidentally make it possible for Greece to obtain accommodation on much better terms.

Effect on Trade.

It is worth pointing out that valuable as the loan would prove to Greece its effect here would be of no less

importance. There is the stipulation for one thing that the proceeds must be utilised here, which of itself must give a great stimulus to industry, but apart from that the fact that we are willing to assist Greece is bound to have a great effect on the commercial relations generally of the two countries. In the stipulation—an excellent stroke—we are simply following the example of pre-war competitors, and I trust that whatever concessions may be made in the course of the negotiations this will be strictly adhered to at all costs. Before the war we could afford to be foolish enough to subscribe money to be used in competing countries, but we are not in a position to do so now, and even when we are it may be hoped that we shall still maintain this eminently sound practice.

The Position in Egypt.

Until the political situation clears the commercial outlook in Egypt is bound to be obscure. In the closing months of 1921 the Egyptian market position was showing signs of some improvement, and the development of a limited but gradually increasing demand for goods has been anticipated. Recent events make it necessary to revise this view, though there is no need for the pessimism felt in some quarters as regards the outlook. It is true that an attempt is being made to emulate the example of the non-co-operators in India, but there is no reason for thinking that a movement of this nature could have any great or lasting success in Egypt. The most serious feature of the situation from the commercial point of view is the effect on trade of the feeling of insecurity that is inseparable from present conditions. As long as uncertainty prevails the tendency must be to avoid commitments, and consequently trade is likely to stagnate until the outlook is a little clearer.

Sir Thomas Sutherland.

It falls to the lot of few men to leave behind them a record of achievement such as that of the late Sir Thomas Sutherland. His was in every sense a remarkable career. At an early age he entered the service of the P. and O., rose to become head of that company, and held that position for 34 years during which his assiduous work enabled the company gradually to build

up the proud position which it now occupies. An administrator born it has been very happily said of him that he was the "Clive of the P. and O." Outside the great work for the company Sir Thomas's name is associated with two important events. He was one of the founders of the Hong-Kong and Shanghai Bank, and he was concerned in the agreement with the Suez Canal Company.

Scheme for International Credits.

It is a truism that nothing matters at the present time except the restoration of trade, and it is satisfactory to find a concrete proposal resulting from the Paris Economic Conference which will provide a means for united action in dealing with the abnormal situation with which the world is confronted. The recommendation of the conference is that an International Industrial Corporation with a capital of £20,000,000 should be established, the participants being Great Britain, France, Germany, Italy, Belgium, and the United States (if this country desires to be represented). The proposal, which is to be considered this week by the Supreme Allied Council, would appear *prima facie* to have much in its favour as a practical method of solving the problem. Clearly, as I have pointed out before, a policy of *laissez faire* will lead us nowhere. Things may right themselves but the world cannot afford to wait an indefinite period, and as all the steps taken so far have achieved little more than negative results it is obvious that other and more decided action must be taken.

Objects of the Corporation.

It is to be the primary object of the corporation to lay down the principles for the conduct of international commerce and finance, and afterwards to determine the necessary measures for industrial reconstruction in the countries concerned. Subsequently the activities of the Corporation would be devoted to the reorganisation of transport, harbour facilities etc. Obviously the capital named would be quite inadequate for comprehensive schemes of this character, and the intention is to establish a much larger undertaking. The brief details given, and the fact that the scheme has still to be approved, make it impossible to express any final view upon it. As I have said, it seems promising, and the only doubt in my mind is whether the operations of the corporation will not prove a long drawn out

process. When time is of the utmost importance it is essential that there should be no delay over preliminaries. But the idea of "laying down principles" has too much suggestion of officialdom about it. If the Corporation is to be useful it must get to work speedily and principles can be laid down *en passant*, so to speak.

Commentator.

INDIAN RAILWAY POLICY.

Legislative Assembly's Report.

Certain questions arising out of the report of the Committee on Indian Railways presided over by Sir W. Acworth, have recently been considered by a Committee of the Indian Legislative Assembly. This latter committee have now presented a unanimous report, the main points of which are as follows:—

The separation of railway from the general finance of the Government of India as proposed by the Acworth Committee is rejected, as it is impracticable in the present state of Indian finances. The committee therefore refrain from giving any opinion as to the theoretical advisability of such separation, but indicate that it might be advisable, when conditions have become more normal, and equilibrium is re-established, to re-examine the question.

As regards the capital programme the committee after emphasising the present need for rehabilitation and improvement of existing lines, state that a guaranteed programme extending over a course of years is almost as important as the provision of larger funds, and recommend that such a programme be prepared on a five years' basis, provision for each quinquennium being considered about two years before the termination of an existing period. The recommendation involves no lapses, money voted for one year but not spent within that year being carried on to the credit of railways up to a limit of the total amount fixed for a quinquennium. The financial programme should be strictly adhered to on an understanding, however, that war or other unforeseen contingencies, radically disturbing money markets, might make it necessary to curtail operations in any one year.

As regards the actual amount of the programme the report recommends that 150 crores (approximately £100,000,000) should be devoted to railway capital expenditure purposes during the next five years, and, recognising that the provision of funds to this amount may involve supplementing rupee borrowing by outside borrowing, the committee are prepared to support such borrowing, provided it is effected in the cheapest market. Immediate steps ought to be taken by the Railway Board to obtain a five years' revised programme from their agents, which, after scrutiny by the board, should be laid before the Assembly. Paramount stress ought to be laid on the improvement of conditions of travel of third-class passengers.

The committee is not at present able to contemplate the provision for any new lines, but recognise the great importance of the construction of certain feeder lines in the coalfields. They would prefer that those lines should be directly financed by the State, but in view of their urgency and the fact that rehabilitation must have the first claim on the funds available, the State should be willing that these particular lines should be constructed by private enterprise, concessions being given for this purpose. This should be subject to conditions that companies constructing these lines should be domiciled in India, raise only rupee capital, have a substantial Indian element in the directorate, and, if they work their own lines, should engage to apply the same rules as regards employment of Indians in the higher ranks as are in force on the State Railways.

The report states that the question of rehabilitation necessarily involves the consideration of the programme of expenditure chargeable against the railway revenues. The Committee consider that the present method of providing for depreciation, not by a proper depreciation fund but by making allotments from revenue for expenditure renewals and replacements should be changed, and recommend that early steps should be taken to calculate rates of depreciation for different classes of material in order that the recurrence of deterioration of recent years may be avoided, and depreciation be provided for automatically.

THE TRADE OUTLOOK.

Obstacle of the Exchanges.

In financial and commercial circles twelve months ago the opinion was almost general that we were in for a very bad year, and the event has proved this pessimistic anticipation to have been only too well-founded. It has been a period of acute trade depression without a parallel for the past hundred years. The position of this country at the beginning of 1920 might aptly be compared with a patient who has had a protracted and debilitating illness, and in the progress of convalescence has suffered a very serious setback when apparently on the road to a rapid recovery. Looking at the position now a superficial glance would suggest that the patient is simply where he was. In some directions an improvement is to be recorded, but on the other hand new complications have supervened. But a closer examination will show that in reality, though there are as yet no tangible results to point to, the general situation is distinctly better. Business opinion is as yet anything but optimistic as to the prospects, but the prevalent view is that, while the end of the depressing period of trade stagnation is not at hand, before the end of the year there will have been a vast improvement. It would be foolish in the circumstances to cherish any anticipations of a speedy trade "boom." That will come in due course; if conditions are favourable the events of 1922 may herald its approaching arrival.

Too much emphasis cannot be laid on the fact that until the exchanges approach the normal—or perhaps it would be better to say their post-war parity—there can be no prospect of any real trade revival. Until that happens any considerable development of commerce can only be by means of artificial expedients. During the greater part of 1921 an impediment to commerce with the Near East was provided by the fact that the majority of markets were still overstocked as a result of the injudicious buying of the previous year. That that factor is disappearing, indeed in many cases no longer exists, is so much to the good, but we cannot profit by it as we should owing to the lack of purchasing power in many of the countries concerned. Naturally traders simply cannot afford to undertake transactions with the exchanges at their present levels, and with the ever-present risk of violent fluctuations, and are perforce obliged to turn to countries with more favourable exchanges. It is a particularly hopeful feature in the circumstances that a number of Near Eastern countries should now be trying to raise loans on the London market, for if, as may be hoped, it is found possible to accord the desired accommodation it will do much to cement our relations with them, and will pave the way for commercial intercourse as soon as conditions make it possible, while there will be the immediate result that much, if not all, of the proceeds of the loans will be

spent in this country. Fortunately the problem of the exchanges does not present itself in all the Near Eastern markets, and Egypt, provided the political situation does not develop unsatisfactorily, should provide a promising market for British goods, as the congestion there is now practically non-existent. To Palestine, too, our traders should be able to look more and more as an outlet as the months go on, while there is an increasing opening to be found in Mesopotamia for trade enterprise. In India trade was affected during the past year by non-co-operation, and, of course, by the diminished buying power of the country due to the temporary restriction of its markets. Probably non-co-operation has done its worst, but the other factor will unfortunately have to be reckoned with until Russia and other countries are again in a position to resume their trade activities. Here, too, the exchange has handicapped trade, not for the reason that holds good elsewhere, but because the authorities were, as many people think, ill-advised enough to fix the parity of the rupee at 2s.

The most disappointing feature of 1921 was the erratic course of the exchanges. No one expected miracles, but it seemed reasonable to anticipate that so long after the war there would be a steady improvement in the exchanges. Quite the reverse happened. In some cases obvious reasons can be found for the depreciation that took place; in others the movements have been illogical. The Turkish exchange depreciated because of the chaotic conditions resulting from the absence of a settlement in Asia Minor; the drachma has reflected *inter alia* the strain on Greece's finances arising from the continuance of the war; the rupee has been influenced by the lack of exports. But there are many exchanges in regard to which no such explanation is applicable, which, taking into account local circumstances such as the last year's excellent harvest and the resources of the countries in general, should have appreciated or at any rate have remained fairly stationary. But though general conditions have been favourable, the exchanges have undergone a serious depreciation so much so that in some cases it has been necessary to introduce Government control over exchange transactions. The reason for the adverse movements is of course to be found in the fact that until lately Governments have shown an insufficient appreciation of the importance of restoring the financial equilibrium upon which the stabilisation of the exchanges depends. They are now taking measures which should have been adopted eighteen months ago. It is so much to the good however, that the energy now being displayed promises to compensate to some extent for the delay, and if the results of the policy now being pursued are what may be hoped, one can justly anticipate a very marked improvement in the Near Eastern exchanges by the autumn.

Belgium's exports to India are increasing. For the last trade year they amounted in value to £5,326,000.

The traffic receipts of the Smyrna-Aidin Railway for the week ended December 17, amounted to £5,980.

The P. and O. Company's Indian mail steamer Macedonia steamed from Gibraltar to the anchorage at Plymouth in two days 17 hours, the quickest performance since pre-war days.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended November 30, amounted to £13,304; total for year £258,324. For the corresponding period of last year the receipts amounted to £14,397; total for the year, £237,534.

The profit and loss account of the Steaua Romana (British) for the period from October 12, 1920, to June 30, 1921, shows a credit balance of £25,310, subject to income-tax and corporation profits tax.

The International Mercantile Marine Co. announces that the Red Star liner Lapland will be added to the Mediterranean service to augment the schedules already arranged for the Arabic, sailing January 21 and March 8, and the Adriatic, sailing January 7 and February 18. The Lapland will sail from New York on February 4 for Madeira, Gibraltar, Algiers, Monaco, Genoa, Naples, Athens, and Alexandria, making the return voyage from Egypt via Genoa, Monaco and Southampton.

Engineering Topics.

By Our Engineering Representative.

A New Machine.

One of the most striking features of a new high-voltage continuous current generator invented by Mr. R. Boin, a noted electrical engineer, is the special type of commutator which has been designed to prevent "flashing over" from one segment to another at high voltage. Others scarcely less worthy of attention are the rotary brushes and the air gap between the stationary armature and the rotating field system. This air gap is eccentric or rather elliptical.

The new machine has been designed for heavy duty industrial work, generating at from 400 to 500 volts, and, whilst it is at present in its late experimental stages, sufficient success has been met with to justify the expenditure of a large amount of capital in preparing for its commercial production. Its chief claims for attention are its undoubtedly high efficiency, and the great saving of both iron and copper in its design and construction. Whether it will prove more suitable for traction work than the types already in use remains to be seen, but there is no doubt that it will come largely into use in connection with the generation of power for motors and lighting.

As every engineer is aware, there are many advantages in connection with direct current high voltage work. There is not so severe a strain on the insulation of the various conductors, for example, whether for windings or transmission, and the phenomena of resonance, inductance, and power factor do not arise. There is, further, a greater element of safety in connection with the use of direct or continuous current at voltages round about 500 than there is with alternating current.

From a published description it appears that the Boin machine can be used as a dynamo or a motor, being similar in this respect to the more conventional forms of direct current machines. It can also be used as a direct current transformer. When used as a dynamo, which will naturally be the most commercial method of applying the advantages of its peculiar construction, direct current is fed to the winding on the rotating field system. The effect of rotating the latter in the elliptical air gap between itself and the stationary armature is to produce alternately a steady growth and a steady decrease in the magnetic flux through the armature windings. Commenting on this a correspondent of the *Manchester Guardian* points out that the net result is that the direct current voltage available at the terminals is more nearly absolutely uniform than it is in an ordinary generator.

The actual value of the voltage produced depends upon the relative number of turns in the field and armature windings; hence it is a simple matter to produce a very high voltage in the armature.

Commutator Design.

The main difficulty in obtaining continuous current at a sufficient high voltage to make transmission an easy and profitable matter in bulk lies in the limited voltage which can be carried by an ordinary commutator without sparking and flashing over of the current from one segment of the commutator to the next adjacent and so on as the machine revolves. In addition there is the objection that rotating machinery is required to change the voltage of direct current, whereas the well-known static transformer, consisting essentially of two insulated windings on an iron core, is all that is required to change the voltage of any alternating current.

In the Boin machine, the problem of collecting this high voltage current easily and safely is solved in a very ingenious manner. Instead of using an ordinary commutator built up from a number of parallel copper bars or segments insulated from each other by means of mica strips, a special commutator is employed which consists essentially of several insulating rings with copper studs let into their peripheries. Instead of the brush passing from one bar to another separated from it

only by means of a thin piece of mica or other insulating material it passes from one copper stud to another in a different ring of insulating material. In effect, as will be seen, as large a clearance as one pleases, a mechanical clearance at that, can be given between the electrically consecutive contacts, and there is consequently no possible danger of the flashing-over. The development of this machine will be watched by electrical engineers with more than usual interest, as should it prove commercially successful as it seems will no doubt be the case, a new lease of life will be given to high voltage continuous current generators, transmission and use.

New Electric Furnace.

Recently a new steel foundry was formally opened in Belfast. The metal is melted electrically in the manner frequently described in these columns, and the furnaces are supplied with two-phase current on a three wire system. The principal furnace, which can deal with a ton and a half of metal, has a tank furnace body which is tilted by means of gearing operated by an electric motor. When the tank is tilted the molten metal runs into a ladle which can be conveyed, by means of an electrically operated overhead travelling crane, to any part of the foundry.

Water Power.

The final report of the Water Power Resources Committee has just been issued, and is well worthy of the attention of engineers, a perusal of its pages being certain to be of interest. Naturally few proposals that could be considered to be of a constructive character have been put forward; at the same time it is evident that the committee have had the commercial aspect of the matter well in view. Chief amongst the recommendations are that the collection and information regarding rainfall should be continued, and that long-term licences for the use of water power should be issued. It is also recommended that the State should give financial aid to water power undertakings during the construction period, and that the Board of Trade of the Electricity Commissioners should be charged with the supervision of water power development. It is also suggested that tidal power should be investigated by a technical commission.

British Trade Ship.

Of some interest to engineers is the information which has just been given to the Press by the board of the "British Trade Ship," and which shows the present and prospective fall in the costs of production. In view of the general reduction in prices the terms for exhibiting have been reduced from between £1,350 and £2,100 for stalls to from £900 to £1,400, whilst the cost of showcases and counter cases has been reduced correspondingly to an average charge of about £400. The charge to be made for first class cabin accommodation for a trade representative undertaking the whole voyage, which will last for approximately 18 months, is reduced to the sum of £1,000 which includes all meals taken on board the ship. In the opinion of many this sum is still excessive, and should be still further reduced.

Stokers and Furnaces.

I am asked to say that a large number of orders have been received recently by the well known firm of E. Bennis and Co., Ltd., for their stokers and compressed air furnaces for Lancashire boilers, chain grate stokers for water tube boilers, and mechanical coal and ash handling machinery. Amongst a considerable number of orders for collieries and mills, and also for iron and steel works, I notice one for equipment for a large power station supplying energy over a very large industrial area. This order is for four chain grate stokers for special water tube boilers, and the firm are certainly to be congratulated on the high opinion which it is evident the authorities hold regarding their productions.

A SET OF FOUR

Edgar Allen Water-hardening Carbon Tool Steels for Engineers Smiths, Boiler-makers etc., carry a mark which guarantees their quality, like the Hall-mark on gold. This mark

means money saved to the consumer. Each of these steels is standardized to ensure uniformity and reliable character, and each consignment is exactly as good as the preceding and succeeding ones.

Edgar Allen's Carbon Tool Steels

are made in four qualities, from Class H, the highest grade through Classes P and E to Class C, the cheapest Tool Steel which can be trusted. A practical handbook showing the right steel to use for making chisels, punches, drills, reamers, taps and all other tools will be sent on receipt of the signed Request Form by Edgar Allen & Co. Ltd., Imperial Steel Works, Sheffield.

To **EDGAR ALLEN & CO., LIMITED,**
Imperial Steel Works, SHEFFIELD.

Cotton & Cotton Goods.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date December 28 :—

The period under review consists of but three business days, and even these have been overshadowed by the Christmas holidays. It is not surprising, therefore, that no great volume of business has been transacted. The somewhat weaker tendency noticed at the end of last week has disappeared, and a feeling of optimism has taken its place, which has more than made good the decline. Possibly this is also of a temporary nature, for, although we would like to see an immediate trade revival, there is little in the general situation at the moment to warrant such a happening. During the week-end, the news from Egypt has not been very encouraging. The political crisis there, to which we drew attention a few weeks ago, has apparently reached a climax. A boycott of British goods is talked of, and this, viewed in the light cast by recent similar events in India, can only supply further ground for misgiving amongst Lancashire manufacturers, at a time when a restoration of confidence is of paramount importance. On the other hand, reports from India continue to be on encouraging lines, and Manchester views the situation hopefully. The enquiry in Liverpool has naturally been somewhat restricted, and for the first time for many weeks no sale of Tokar or Sudan cotton has been recorded. At the end of last week, a "good" c.i.f. business was reported here, and as these reports are usually conservative rather than exaggerated in nature, this may be an indication that spinners are beginning to take a more active interest in the situation than they have done in recent months. At all events, it is refreshing to find that some at least amongst them have broken away from the tedious hand-to-mouth policy to which they have been tied so long. The era of higher prices and good business has been delayed long enough; let us hope that this is a happy augury for the New Year. Total sales, 600 bales. Quotations are raised 50 points, Good Sakellaridis exceptionally 75 points; Fully Good Fair Sakel 21.25d.

MANCHESTER REPORT.

(From Our Own Correspondent.)

Manchester, Friday.

The tone of the market during the past week has continued steadier. A feeling of optimism now prevails with regard to future developments. Naturally the Christmas holidays have interfered somewhat with business, and many buyers and sellers have not been in the mood to enter into important negotiations. Disconcerting features are still to be found, and not the least is the political trouble in Egypt. Recent advices received from that outlet do not read at all cheerfully, and it will probably be some time before shippers to that outlet have courage to operate on extensive lines. As can be expected only a few minor transactions have taken place for that part of the world. There has been some irregularity in Egyptian spinning prices, but certain producers are stiffer in quotation than a few weeks ago. A moderate business has been done chiefly in special sorts. The best of the outlets has been India, and some encouraging sales have taken place in gray shirtings, dhooties and mulls for Calcutta, and some fair orders have been booked in bleaching and printing styles for Bombay. Rather more inquiry has been met with for China, and although there has been no general buying movement some fair lines have been booked in shirtings and sheetings. White goods have been wanted for Java and Singapore. Some encouraging transactions have taken place in printing descriptions and fancies for the republics of South America. In American yarns for home consumption prices have been firmer. Bundles have been in request for India.

The next International Fair at Prague will be held from March 12—19, 1922.

Ladies' Millinery containing silk trimmed or untrimmed with flowers or feathers is now subject on import into Roumania to a Customs tax of 150 lei per piece, instead of 50 lei as recently.

Telegrams from Bucharest state that the Northern Railway Station was partly burnt down last week. A large quantity of passengers' luggage was destroyed in the fire.

AMERICAN COTTON CROP ESTIMATES.

(By E. C. de Segundo, A.M. Inst. C.E.).

As long ago as October last serious doubts began to be cast upon the accuracy of the United States Department of Agriculture estimates of the current season's cotton crop. These doubts were found to be justified upon the publication of the November ginning returns. The "man in the street," thrown upon his own resources, had recourse to statistics, and worked out that if the November ginning returns represented the average proportion of the total crop over the past ten years, then the total crop should prove to be in the neighbourhood of 10,000,000 or 11,000,000 bales, against some 6,500,000 bales officially estimated on October 3. The doubts, uncertainties, rumours, unskilful use of statistics etc., were not without their effect upon the market price of cotton both here and in the United States, and some curious and interesting anomalies in the price of cotton in Manchester and in New York on the same day, were experienced. No doubt the movements in the exchange contributed at times to accentuate and at other times to lessen these price differences.

According to the *New York Times* of December 13 the Federal Board has published a detailed explanation of how the cotton crop came to be so much underestimated. The details will be read with interest by those who only take an academic interest in the vagaries of market movements in the prices of cotton, but those who for the purposes of their business are accustomed to place implicit reliance upon the correctness of the methods whereby the official estimates are arrived at by the Department of Agriculture, will read the explanations with— to say the least—mixed feelings.

The final estimate announced on December 12 by the Department of Agriculture is equivalent to 8,340,000 bales of 500 lb. gross. The forecast of the Department on October 3, 1921, was 6,537,000 bales. The final estimate is therefore some 1,800,000 bales higher than that published in the beginning of October. In announcing its final estimate the Department gives several reasons for this discrepancy. The chief factors contributing to the misconceptions formed by the Department as to the true state of affairs are :—

(a) The insufficiency of funds applicable to travelling expenses prevented the statisticians of the Bureau from personally inspecting and checking the acreage planted in their respective states in 1919, 1920, and the first half of 1921, so that the Crop Reporting Board were forced to accept growers' reports of acreage reductions. The reports of the statisticians who, since July 1, 1921, have been able to travel, indicate that the growers' reports on June 25, exaggerated the reduction in acreage planted. It also appears that while many growers did, in fact, reduce their acreage, others, carried away by the hope of higher prices for cotton which would inevitably follow what they conceived to be an unwarranted reduction in acreage, actually increased the acreage.

(b) The Department appears to have been the victim of circumstances as well as of men in regard to the estimate of the yield of cotton per acre. It was reported that the fertilizer sold to planters last planting time was only 66 per cent. of that used in 1920. This would normally indicate a lower yield per acre. For some reason or other, the effect upon the yield per acre was not so great as anticipated. Possibly the residue of fertilizers remaining in the soil from last year was either overlooked, or had a greater effect than usual.

It would appear that the ravages of the Mexican boll weevil and of other cotton pests did not prove to be as great as was expected. Weather conditions were reported to have been generally unfavourable over large sections of the cotton belt during the growing period, but after the last condition report as at September 25, the weather changed, and during picking time it is stated to have been exceptionally favourable. Incidentally this circumstance accounts for the fact that the proportion the quantity of cotton ginned in November bears to the total crop is much higher than usual.

The yield per acre for the United States is now estimated at 126 lb. On the basis of the October 3rd forecast, it would have been 118 lb.

SHIPPING INTELLIGENCE.

DANUBE NAVIGATION INTERRUPTED.

(From Our Own Correspondent.)

Bucharest, December 19.

It has been snowing incessantly throughout the country for over a week. Few people remember such heavy snowfalls to have taken place before Christmas. In some parts of the country the snow is three metres deep. Many railway lines have been blocked for over a week, and, especially on the Constantza line, trains were caught en route and kept for days in some little station. Owing to the frost that followed and the low water-level of the rivers the Danube began to freeze. This has interrupted the river navigation completely, and as a result many towns situated on the Danube and especially at the mouth of the Danube are completely isolated from the rest of the country.

Owing to the interrupted telegraphic and telephonic communication, reports are only now coming through of the terrific gale which raged on the Black Sea for three days at the beginning of last week, causing considerable damage to vessels on the high sea and in the harbours of Constantza and Sulina.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Liverpool January 16).

Anchor Brochlebank Line.—S.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (leaves London, January 7); s.s. Maihar for Calcutta (Birkenhead, January 11); s.s. Manaar for Port Said, Colombo, Madras and Calcutta (leaves London, January 21); s.s. Malancha for Calcutta (Birkenhead, January 25); s.s. Malakuta for Port Said, Colombo, Madras and Calcutta (London, February 4); s.s. Mahratta for Calcutta (Birkenhead, February 8).

Bibby Line.—S.s. Sittang for Rangoon (Middlesborough, January 7); s.s. Oxfordshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, January 13).

Byron Steamship Line.—S.s. General Napier for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, and Braila, also calling at Volo, Salonika, Smyrna, Bourgas and Varna (Liverpool, January 10).

Cunard Line.—S.s. Tyria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Liverpool, January 7); s.s. Brescia for Genoa, Leghorn, Naples, Palermo, Messina and Catania, (Liverpool, February 2).

Ellerman Line.—S.s. Estrellano for Genoa, Leghorn, Naples, Palermo, Messina and Catania, (Liverpool, January 12); s.s. Cressado for Gibraltar, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna, (Liverpool, January 21).

Ellerman's City Line.—S.s. City of York for Calcutta (Birkenhead January 7); s.s. City of Cairo for Calcutta (Birkenhead, January 19); s.s. Trafford Hall for Bombay (Birkenhead, January 23).

Ellerman's Hall Line.—S.s. City of Auckland for Bombay, Karachi and the Punjab (Liverpool, January 11).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

Glen Line.—S.s. Glenariffe for Port Said, Port Swettenham, Singapore, etc. (London, January 12); s.s. Glenogle for Port Said, Port Swettenham, Singapore, etc. (London, January 26); s.s. Glenapp for Port Said, Port Swettenham, Singapore, etc. (London, February 9).

Harrison Line.—S.s. Tactician for Calcutta (Liverpool, January 7); s.s. Intombi for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead January 19); s.s. Author for Calcutta (Liverpool, January 25).

Henderson Line.—S.s. Martaban for Port Said, and Rangoon (Birkenhead, January 11); s.s. Henzada, for Port Said and Rangoon (Birkenhead, January 25).

Holt Line.—S.s. Telemachus for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, January 5); s.s. Agapenor for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, January 5); s.s. Titan for Port Said, Port Swettenham, Singapore, etc. (Swansea January 5); s.s. Ajax for Port Said, Port Swettenham, Singapore, etc. (Swansea, January 5).

Johnston Line.—S.s. Wingate for Piraeus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila (Liverpool, January 17).

Papayanni Line.—S.s. Malatian for Tangier, Malta, and Alexandria (Liverpool, January 14); s.s. Gerano for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 4).

P. and O. Line.—S.s. Nore for Colombo, Madras, and Calcutta (London, January 13); s.s. Perim for Bombay (London, January 14); s.s. Morea for Bombay (London, January 20); s.s. Sardinia for Colombo, Madras, and Calcutta (London, January 27); s.s. Karmala for Bombay (London, January 27).

P. and O. British India Line.—S.s. Nirvana for Bombay and Karachi (London, January 14); s.s. Tanfield for Colombo, Madras and Calcutta (London, January 21); s.s. Mandala for Bombay and Karachi (London, January 27); s.s. Morvada for Colombo, Madras and Calcutta (London, February 3).

The Bengal and North-Western Railway Company recommend final dividend of 4 per cent., together with bonus of 2 per cent., on Ordinary stock (making 11 per cent. per annum, same as last year), payable, less tax at 3s. 6d. about the middle of February.

AGENTS WANTED ABROAD.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," *The Near East*, 1, Devonshire Square, London, E.C.2, when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.

114. Importer in Karachi (India) travelling throughout India, wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities:—Exports: Medicinal herbs dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.

116. Import Merchants in Adana, Cilicia, Asia Minor, wish to represent British firms for any kind of British-made goods. Own account and commission basis. Good references provided. Send catalogues and samples with prices and terms.

117. Importer in Roumania, interested in Jute trade, wishes to get in touch with firms dealing in sacks, new and old Dundee, and Calcutta makes.

121. Exporter of Greek Ores in Athens, especially of purest quality Magnesite and Chromite wishes to be connected with interested British Firms.

LONDON PRODUCE REPORT.

Sugar.—Home refined has been in moderate request at unchanged rates. West Indian crystallized has been quiet at 39s. 6d. Czecho-Slovakian remains at 19s. 9d., while White Java is 6d. lower at 43s. 6d. Futures have been quiet and steady.

Coffee.—Prices have remained the same, Jamaica has come to business at 150s; Costa Rica at 140s.; Indian at 110s.; and Nairobi at 104s. Futures have shown a higher tendency. The quotations are:—March, 52s. 3d.; May, 52s. 9d.; July and September, 53s. 9d.

Oilseeds.—A very firm tone has been in evidence. Indian linseed has been in good demand at 17s. 3d., and La Plata has come to business at 16s. 6d. Rapeseed has improved with brown Cawnpore at 17s. 3d. and bold Ferozepore at 18s. Cotton seed has risen with Egyptian black at 12s. 9d. and Sakellandis at 12s. 3d. increases of 3d. in both cases, but Indian has shed 1½d. at 9s.

Seed Oils.—Unsteadiness has prevailed. Linseed oil at 28s. 6d. shows no change. Rape oil has been steady with the crude variety at 46s. but refined is 6d. down at 51s. Cotton oil has been steady and prices show no change. Refined remains at 45s., Egyptian crude at 37s., and deodorized at 50s. Turpentine has gained 9d. at 68s. 3d.

Oilcakes.—All prices are unchanged. Palm kernel is 160s., cottonseed remains at 36s. 6d., and Arachis cake at 44s. 6d.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended December 10:—

Sultanas.—The total estimated arrivals to date amount to 162,380 bags as against 89,140 bags for the corresponding period of last year. The total estimated sales are 152,380 bags, as compared with 82,140 bags, and the estimated stock unsold totals 10,000 bags as against 7,000 bags.

Shipments.—By s.s. Gourko for London and Hull 21,153 boxes sultanas, 25 cases figs, 106 boxes figs, and 8,954 bags figs; by s.s. Cressado for Liverpool, 24,469 boxes sultanas, five cases figs, 566 boxes figs, and 2,264 bags figs.

Markets.—Sales of sultanas during the week have been limited to 300 tons. Shippers would have operated more freely but dealers refuse to make any concessions in price and, in many cases, are not disposed to sell. Stocks now available for export are estimated at barely 4-4,500 tons, mostly medium grades. Inferior qualities and very choice grades are in limited supply. Exchanges are very weak at 740-5 and prospects point to a fall in rates.

THE LINSEED INDUSTRY IN YUGOSLAVIA.

(By Our Belgrade Correspondent.)

The total output of linseed in Yugoslavia amounts to about 200 truckloads a year, which is not sufficient for the country's requirements for seed and oil. The balance required is satisfied by imports from the Argentine and from India, and before the war a substantial amount came from Southern Russia. In Yugoslavia, the crop is sown more with a view to the fibre than to the seed, whereas in the Argentine and in India more attention is paid to the seed, with the result that a coarser fibre is produced.

There are several factories where the oil is pressed, namely at Veliki Bechkerek in the Voivodina, at Koprivnica in Croatia, and at Zagreb, Britovo, and Medvode in Slovenia. The capacity of the first is substantial, but it cannot get enough of the raw material. Under favourable conditions of price and quantity it is capable of turning out about a thousand truckloads of the oil per annum. The press at Koprivnica can produce 388,800 kilograms of the oil or 385,700 of varnish and 25 tons of putty. It depends upon local supply for its seed. The factory at Zagreb can handle a thousand tons, and also depends on local supplies for the raw material. The factory at Medvode is of the same capacity, and treats oils of flax, hemp, sunflower and pumpkins. That at Britovo is of the same capacity, but is working at half speed owing to a shortage of raw material. Besides these

factories, there is a small output by peasant proprietors for local consumption.

If these works were fully occupied, they could supply the country's requirements and leave a surplus for export, but they suffer from the competition of the Dutch presses worked by windmills. This is unfortunate, as the local material is of excellent quality and enjoys a well-deserved reputation.

As to lac, there is plenty of alcohol available in the country. Resins are worked at Porech at Vishegrad in Bosnia, as also turpentine, so only the finer qualities need be imported when these are properly at work. Asphalt and benzole are produced to a small extent in the country. It is hoped to increase and develop the output of resins to replace imported shellac so as to be able to manufacture locally such commodities as sealing-wax, colours, water-proofings, &c.

ROUMANIA'S AUTUMN WHEAT SOWING.

(From Our Own Correspondent.)

Bucharest, December 19.

According to the latest reports received by the Ministry of Agriculture the autumn wheat sowings in the Old Kingdom and Bessarabia do not cover the scheduled areas. In Transylvania, however, the entire wheat areas have been sown. As a result of the large quantity of snow which has fallen recently, the outlook for the coming crop is so far promising.

* * *

The gold-mine owners of Transylvania have addressed a memorial to the Roumanian Government asking for permission to export a further quantity of gold. Otherwise they will be forced to close down, since the prices paid locally are unprofitable.

The Consulate General of Germany in Cairo has been provisionally installed at No. 22 Sharia Tera el Boulakia.

A PERMANENT INCOME OF £500 PER ANNUM

can be obtained, after the fifth year, from a five-acre orange orchard in South Africa. Few investments offer such excellent results with security of capital. The outlay involved is only £125 p.a. for five years, or cash £562 10s. od., and the following are a few brief features of the scheme:—

1. The actual results obtained by the South African Prudential Co. show even better figures than above.
2. The Directors are well-known public men in South Africa.
3. The investor is the actual freeholder of his five-acre orchard.
4. There is an unlimited market for all the oranges grown.
5. All management work can be undertaken for a small percentage of profit.
6. The scheme is available for both investors and intending settlers.

Experts state that nothing over five miles from a railway station is a good commercial proposition. No point on the Prudential estates is beyond 2½ miles from a railway station.

Oranges from the Estates have been exhibited at the Union Government Trades Commissioners' Department, Trafalgar Square, S.W., and at the Royal Agricultural Show, Derby, last June.

Full particulars, plans, etc., from Dept. 33.

SOUTH AFRICAN PRUDENTIAL LTD.,
79, Queen Victoria Street, London, E.C.4.

LEVANT MARKET REVIEW.

The following extracts are taken from the review of the National Bank of Turkey for November:—
Produce.

Flour.—The market is overloaded with stocks of United States flour, and weak holders are accepting any prices in order to realise and settle advances from banks. United States values are fully 5 per cent. and up to 10 per cent. higher than those accepted locally for spot goods. This state of affairs is likely to continue if more heavy cargoes continue to arrive. Bulgarian flour and wheat are competing very successfully with United States produce and have reduced the consumption of the latter by 25 per cent. The position in the flour trade is unhealthy and until weak speculators unload and the market absorbs a fair weight of the present stocks, a recovery in prices to their proper level cannot be expected.

Barley.—There is no change to report and generally speaking no business is being done on the market. Prices stand at about 8 piastres per oke. There is no demand from the United Kingdom for Roumanian barleys, but advices from the Continent indicate that there are hopes of a small demand from Antwerp.

Sugar.—The following arrivals were recorded during November:—Dutch, 1,300 tons; Czecho-Slovakia, 400 tons; American, 350 tons; making a total of 2,050 tons, of which 800 tons were crystallised and 1,250 tons cube.

Rice.—1,600 tons of rice arrived during the month from the following countries:—700 tons Saigon; 250 tons Rangoon; 200 tons Siam; and 450 tons America. About 800 tons were sent to the Black Sea ports. Stocks on hand are almost nil.

Coffee.—During November 5,000 sacks arrived from Rio via Rotterdam and Amsterdam per s.s. Deucalion; c.i.f. price for Rio was about 50s. per cwt. 2,000 sacks were sent to the interior through the Black Sea ports and also to Batoum. Stocks on hand are about 2,000 sacks.

Canary Seeds.—Stocks all over Thrace do not exceed 750 tons. The market is very quiet here and a nominal price of 13 piastres per oke f.o.b. Constantinople is quoted.

Hazel Nuts.—Arrivals from Black Sea ports to date amounted to about 100,000 bags of which more than 95,000 have been exported to the consuming centres. Stocks in the Black Sea ports and interior are estimated at 75,000 bags for export to end of July 1922. Prices asked to-day are 43 piastres per oke shelled and 22 piastres per oke unshelled f.o.b. Constantinople.

Textiles, Dry Goods, etc.

Gunnies.—During October Egyptian sellers began selling 2 lb. bags at 70s. per 100 bags, although Calcutta prices were quoted round 80s. Consequently heavy quantities were bought, the local market became flooded, and sales were not sufficient to reduce these heavy stocks. Meanwhile prices both in India and Egypt dropped considerably and at the moment importers are losing over 10s. per 100 bags. As the season for gunnies is practically over, it is feared that these losses may become greater.

Hessian Cloth.—Imports have been up to the average and reasonable profits were realised. Prices at the place of origin have slumped but importers will not incur any losses owing to the excellent demand on the market.

Opium.—About 140 cases arrived from Anatolia mostly via Adalia and 60 cases were sent to the United States and Germany. As exchange became more stabilised, sellers lowered their prices and early during the month average quality druggists sold about 870 piastres per oke. Better quality druggists were fetching 850-875 piastres. Business however has been quiet even at these low prices. Salonika and Smyrna report considerable sales. Stocks on hand are 770 cases.

Grey Sheetings.—Between the months of June and September huge quantities of this commodity were purchased in America for future delivery. During October and November further quantities arrived and importers are experiencing difficulty in finding buyers.

Mohair.—Total imports from Ineboli are estimated at 5-600 bales. 1,100 bales were sold, for export. The Bradford market reports a quiet tone with very little business passing in Turkey quantities. It is authoritatively reported that the Greeks are requisitioning all stocks of mohair and wool that they can find in the occupied areas. These stocks are being transported to Smyrna where they will probably be offered for sale sooner or later. Stocks on this market are about 6,000 bales.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 125s. cwt.; (Canadian), 117s. 6d. cwt.; (American), 105s. cwt.; butter: (Danish), 175s. cwt.; (Australian), 119s. cwt.; (New Zealand), 113s. 6d. cwt.; cheese (Canadian), 101s. cwt.; (New Zealand), 91s. cwt.; lard, 73s. cwt.; eggs (Danish), 41s. per 120; (Styrian), 20s. 6d.; per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6½d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 150s. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 113s. cwt.; (Santos, superior) 62s. 6d. cwt.; ginger (washed Cochin), 67s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento 2½d. lb.; raisins (Valencias), 135s. 6d. cwt.; sultanas (Smyrna), 126s. 6d. cwt.; currants (Vostizza), 80s. cwt.; currants (Amalias), 58s. cwt.; sugar: (Tate's cubes), 52s. 6d. cwt.; (Lyle's granulated), 47s. 4½d. cwt.; (Mauritius crystals), 42s. 9d. cwt.; (West Indian crystallized), 38s. 9d. cwt.; (centrifugal), 12s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 15s. 6d. cwt.; (bran, Rangoon), £5 15s. ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common), 1s. 1½d. lb.; (medium to good) 1s. 7d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 46s. qr.; (Australian), 53s. 3d. qr.; barley (malting), 50s. qr.; barley (feeding), 39s. qr.; oats (English), 33s. qr.; oats (La Plata ex-ship), 25s. 1½d. qr.; maize (La Plata), 33s. 3d. qr.; flour, 42s. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £35 ton; bismuth, 7s. 6d. lb.; copper (standard), £65 6s. 3d. ton; copper (electro), £75 ton; gold bars, 98s. 1d. oz.; iron (No. 3 Cleveland), 110s. ton; hematite (mixed number), 101s. 3d. ton; galvanized sheets (24 G), £17 5s. ton; lead (soft foreign), £24 18s. 6d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 33s. 9d. unit; nickel, £190 ton; platinum, 266s. 3d. oz.; plumbago, £20 ton; quicksilver, £10 7s. 6d. bottle; silver bars, 34½d. oz.; spelter (G.O.B.), £27 7s. 6d. ton; tin (standard), £171 2s. 6d. ton; wolfram, 11s. 6d. unit; zinc sheets, £34 10s. tin plates (20 by 14), 20s. 7½d. box.

Chemicals.—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 4½d.; ammonia (sulphate), £15 1s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard) 2s. 5½d. gallon; bleaching powder (35 per cent.), £15 5s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 8d. lb.; chlorate, 6d. lb.; caustic, £33 ton; nitrate, £42 10s. ton; permanganate, 11d. lb.; prussiate, yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals 140s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 6½d. lb.; alkali (58 per cent.), £9 3s. 3d. ton; chlorate, 3½d. lb.; caustic (70 per cent.), £24 5s. ton; hyposulphite, £15 10s. ton; prussiate, 8½d. lb.; nitrate, £14 8s. 9d. ton; glycerine (crude, 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.), £110 ton; lemon oil, 2s. 11d. lb.; quinine, 3s. ½d. oz.; red lead, £39 5s. ton; white lead, £42 5s. ton; white ground lead, £51 15s. ton; sulphate of copper, £28 15s. ton; sulphate of iron 75s. ton.

Miscellaneous.—Cotton: (American), 10.21d. lb.; (Egyptian Sakel), 20.40d. lb.; Oilseeds: Linseed (La Plata), £16 15s. ton; rape (Toria), £18 2s. 6d. ton; palm kernels, £18 8s. 9d. ton; Oils: Linseed, £28 7s. 6d. ton; olive (Levant), £78 ton; palm, £37 17s. 6d. ton; rape (crude), £45 10s. ton; soya, £34 5s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £42 15s. ton; cotton (crude), £37 5s. ton; ground nut, £45 10s. lb.; Rubber: Plantation (No. 1 crepe), 11d. lb.; smoked sheet, 11d. lb.; fine hard Para, 1s. 2d. lb.

Company Notes and Reports.

ALGERIAN OILFIELDS.

The report of the Algerian Oilfields for the year to September 30, 1921, states that the output of Société Algérienne des Pétroles de Tliouanet, in which the Algerian company is largely interested, was 455,030 kilos. The concession referred to in last report was signed on March 9, so that the Tliouanet company is at last in a position to carry on development and add to a number of its producing wells. For this purpose the Tliouanet company has decided upon an issue of three million francs further capital. The Algerian Oilfields has a right to participate to the extent of 29 per cent. The remainder has been guaranteed by the Companies de Blanz. The issue will be made in January, 1922, and the Algerian Oilfields will take up its proportion. Trinidad Esmeralda Estate, in which Algerian Oilfields holds upwards of 50 per cent. of capital, continued its operations during the year. In October, 1920, a further property known as El Rosario, consisting of 491 acres, leasehold, was acquired. A geological survey has been made of this estate which establishes that it is the continuation of Mayaro Anticline, on which high grade oil has been struck at a shallow depth by another company operating on the Western half of the fold. No drilling has yet been done by the Trinidad Esmeralda Estate on this estate. Two wells have now been sunk on the Esmeralda Estate; in No. 1 several oil-sands were penetrated at the shallow depth which gave a small production of very high grade oil. No. 2 well was drilled to 1,800 feet, and passed through two oil-sands belonging to deeper series at 1,370 feet, and 1,800 feet respectively. Casing was set at the latter depth and testing of well started. Unfortunately soon afterwards two strings of casing collapsed at 815 feet, completely closing the hole below. A distinct slight earthquake took place at the time, and it is probable that the collapse may be attributed to this occurrence. For the present it has been decided to stop drilling until such time as conditions improve, when other wells will be put down to further prove the oil bearing capacity of the estate.

SPIES PETROLEUM.

The report of the Spies Petroleum Company states that no direct communication has been received respecting the company's properties in Grozny, which remain under the control of the Russian Soviet Government. Information received from representatives of the Grozny oil companies who have recently returned is to the effect that the company's properties are in working order and the electric power station has suffered no damage and is in operation. The managing director, together with the oilfields superintendent, visited Trinidad early in the present year, and after prolonged investigation several properties were acquired upon the advice of Messrs. A. Beeby Thompson and Partners. The care with which these properties were selected and favourable geological reports received justify the directors in the belief that they will prove of high value. It is the intention of the Board as soon as conditions permit to form a new company for working these properties and to offer shareholders the right to apply for shares when an issue is made.

EGYPTIAN SALT AND SODA.

A dividend of 22½ per cent. has been declared for the year ended August 31, 1921 (less income-tax), which will be paid to the ordinary shareholders whose names are on the register of the company on January 3, 1922. Interest coupon No. 23 on the company's bearer warrants for ordinary shares will be paid of and after January 3 at the National Bank of Egypt, 6 and 7, King William-street, E.C., and the same bank's branches in Cairo and Alexandria.

THE GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to September 30, 1921 (new style January 14 to October 13, 1921).

	Monopolies, tobacco stamps, stamped paper, Naxos emery.	Piræus Customs.
Gross receipts. Sept. 1921	Drachmae. 8,674,662	Drachmae. 4,829,214
Do. do. do. 1920	6,083,064	5,000,378
Estimated receipts for 9 months (Law of Control)	24,083,333	8,916,666
Actual receipts for 9 months, 1921	51,232,886	57,114,468
Actual receipts for 9 months, 1920	54,522,277	48,153,427
Difference between esti- 1921 mated and actual re- ceipts for 9 months 1920	37,738,552 30,738,943	48,197,801 39,236,760

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893.

The products of the sales of Naxos emery have been paid in paper drachmae since August, 1920. In the case of the Piræus Customs, the receipts in gold are included in the above statement at par.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on December 23 were as follows:—Agricultural Bank of Egypt £4.5-16; Alexandria Water Co., Ltd., £6.7-8; Anglo-American Nile Steam, £2½; Associated Cotton Ginner, £15-16; Banque d'Orient, Fr. 56½x; Behera Ord., £E8½; Brasseries d'Egypte, Fr. 50; Building Lands of Egypt, £27-32; Cassi di Sconto Priv., Fr. 24; Ciments d'Egypte Priv., Fr. 50; Ciments d'Egypte Div., Fr. 24; Comptoir Fin. et Com. d'Egypte, £1; Consolidated Lands, Pt., 5; Credit Foncier Fondateur, Fr. 910; Credit Foncier Act, Fr. 655; Credit Foncier, 1886 Oblig., Fr. 321; Crown Brewery Priv., Fr. 114; Crown Brewery Div., Fr. 130; Eaux du Caire, Capital, Fr. 80; Eaux du Caire Jouissance, Fr. 102; Egypt and Levant, S.S. Ord., 26s. 1½d; Egyptian Delta Light Railways, £3. 11-16; Filature National d'Egypte, £12½; Immeubles d'Egypte Soc an des., £3. 11-16; Khedivial Mail S. S. Ord., 110s.; Khedivial Mail S.S. Co., Pref. £2½; Kom Ombo Ste An de Wadi, £4. 11-32; Kom Ombo Ste An Fondateur £34 ex.; Land Bank of Egypt, Parts de Fond £38; Lots Turcs Fr. 28; Menzaleh Canal Navigation Pt., 225; Nungovich Hotels, £6. 3-8; Ramleh Railways, £2. 5-8; Salt and Soda, 34s. 4½d.; Tram d'Alexandrie Priv., Fr. 37; Tram d'Alexandrie Div., Fr. 52; Union Fonciere d'Egypte, £2. 19-32; Egypt Hotels, £2. 3-32; Urbaines et Rurales, £2. 15-16.

The Moreton Bay, the first of the new fleet of Australian Government-owned steamers providing a fast service between England and Australia, arrived at Port Said (non-stop from Tilbury), 12 hours ahead of scheduled time.

The Christmas mail for transmission by air from Cairo to Baghdad which was despatched from London on Thursday, December 15, last consisted of 836 letters.

The secretary of the Czecho-Slovak Industrial Federation states that the production of the machine and metal industry is about a third of peace time production, of the chemicals industry 45 per cent., and of the glass industry 70 per cent. Only three blast furnaces are working.

CZECHOSLOVAKIA'S INDUSTRIAL POSITION.

Referring recently to the present position of Czechoslovak industries, M. Bondy, the vice-president of the Prague Chamber of Commerce, said that the engineering industry is making good progress, the engine works in particular being well booked with orders for abroad, while the waggon factories are working on repairs for Roumania and Yugoslavia. In addition, considerable orders are expected from local railways. The textile industry in most of its branches is also well employed, working, to a certain extent, on contracts for foreign firms. The worst position as regards export is occupied by the beer-brewing industry, owing to the imposition of a heavy import tax on Bohemian "Pilsener" beer by Germany and Austria, where this beer is scheduled as a luxury article. The China industry has enough orders to keep all the works fully employed for a considerable time to come. The situation in the window and mirror glass industry has also improved, but employment in the hollow glass industry, especially in that situated round Bor (Haida) and Jablonec (Gablonz) remains unsatisfactory. The iron industry recently carried out several large orders for abroad, and it is estimated that for 1921 it will have a favourable balance of about one milliard Czechoslovak crowns.

OFFICE EQUIPMENT IN EGYPT.

It is rather an extraordinary fact (says the *Journal* of the British Chamber of Commerce in Egypt) that in Egypt with such a number of cosmopolitan business men who are in general smart in their methods—some of them rather too much so, in fact—there are few offices able to boast of systems and equipment embodying the latest ideas. There is the *laissez faire* attitude in some, conservatism in others, again a reluctance to force new and apparently complicated devices on an obviously unwilling staff, particularly in the case of large establishments. The net result is that what has been found of the greatest utility in the great commercial countries, is neglected in this. Card index systems are fairly widely used for recording prices of goods received, but seldom for other purposes. Tabulating machines merely on their looks are declared by the office staffs to be complicated, and the necessary fifteen minutes' trial to prove their use is therefore not undertaken despite the fact that incalculable time can be saved thereby. Similar instances can be multiplied indefinitely. It is interesting to note the attention given at home to the problem of lighting offices and workshops, and the results arrived at by the making of graphs showing the increase of work under improved conditions. The latter study is of course largely a psychological one, involving consideration of a man's natural dislike to monotony, and his reaction to brighter conditions, and is beyond the scope of this article. Any reader in Egypt can call to mind, however, cases of unsuitable offices,—largely owing, it must be admitted, to the lack of adequate accommodation elsewhere,—which could be improved by suitable painting and better lighting. It seems curious that there does not seem to be a more general use of exterior glass reflectors of light which would much improve many offices located in narrow streets.

SOCIETE ANONYME du BEHERA.

Notice is hereby given that Coupon No. 55 of the Société Anonyme du Béhéra obligations will be paid on and after January 1, 1922, at the offices of the National Bank of Egypt, Alexandria, Cairo and London (6 and 7, King William Street, E.C.4).

SOCIETE ANONYME du BEHERA.

Notice is hereby given that Coupon No. 34 of the Preference Shares of the Société du Béhéra will be paid on and after January 1, 1922, at the offices of the National Bank of Egypt, Alexandria, Cairo, and London (6 and 7, King William Street, E.C.4).

PROSPECTS FOR THE NEW YEAR.

The Greek Loan.

(From Our Own Correspondent.)

London, Friday.

There has naturally been very little activity in the brief interval since the re-opening of the Exchange after Christmas, and it will probably be some days before things are really moving. Despite the lack of business, however, a steady tone has been maintained throughout the markets, and as usual during the past few months gilt-edged have been a firm spot. A year ago the prospects were anything but encouraging, but to-day the outlook is much brighter, and it is possible to anticipate a considerable increase of business in the coming months and more cheerful markets generally. A further reduction of the Bank Rate is to be looked for, with the result that the gilt-edged market should continue to exhibit a buoyant tendency. It is not difficult to foresee a coming rise in oils. This industry is the only one that is really prosperous at the present time, and it will be surprising if its prospects fail to attract the investor to an increasing extent. In other directions the outlook is not so clear. A revival in Industrials is dependent on the course of trade, while the Rubber Industry is not yet through its period of depression.

Coming Issues.

The number of new issues in 1921 was far below the level reached in the previous year, and a noticeable feature during the latter half of the year was the number of Colonial loans. There are probably more to come, while there are a number of oil and other issues due in the near future. I referred the last time I wrote to the possibility of some Balkan loans being floated, and it is worth noting that negotiations are now in progress for a Greek loan of £15,000,000. The loan is dealt with elsewhere, and I will, therefore, confine myself to remarking that the stipulation that the money is to be expended in this country, if it is maintained, will be a very welcome step. It would not be an innovation for a recent loan was raised on that understanding, but before the war anything of the kind would have been undreamt of, though our chief commercial rivals always made a point of it. However we have evidently grown wiser since the war, and it may be hoped that henceforward whenever British investors are invited to support external loans it will be with the knowledge that at any rate a large part of the money will be spent in this country.

Turning to the markets, gilt-edged, as I have pointed out have been a feature of the week. Consols are 50, 1-8, War Loan Fives are 92, 3-8, Fundings are 76½, while the Conversion Loan stands at 69, 5-16. The India 7 per cent. issue is 104½.

In the foreign markets French stocks were favourably affected by the improvement in the exchange, and War Loan Fives are 41½. German 3 per cents. have been steady round about 3, 3-16. Italian securities have been dull as a result of the position of the Banco Italiano di Sconto, Rentes being 22. The announcement of a pending Greek loan had a marked effect on Greek securities which have made a notable recovery, gains of from one to two points being recorded all along the line. Monopolies are 32½. Fundings are 33, and the 1914 5 per cent. are 38. Japanese securities have been on the dull side, while Chinese are about the same.

Industrials Quiet.

A very quiet tone has ruled in the Industrial group. Business has been on the smallest possible scale, and alterations of prices are insignificant. Still the undertone has been decidedly good, and it would not need an expert in psychology to detect the confident atmosphere that rules in this market. Great hopes are being based on developments in 1922, and if expectations are fulfilled prices at the end of the year will make a very different showing from what they do at the present time. Iron and Steel shares have made a firm showing. Armstrongs are 15s., Dorman Longs are 15s., while Vickers are 9s., and Guest Keens are 29s. 6d. Textiles have been quiet but steady, with Courtaulds 37s. 3d. Shipping securities have a harder appearance with

P. and O. Deferred at 30s, Cunards at 18s. 3d., and Furness Withys at 25s.

Oils Featureless.

There has been little doing in the Oil market during the week. Speaking generally, prices in this section by no means represent the actual position, and once public interest reawakens in Oils the market should go ahead. Burmahs are 8, 1-8, while Mexican Eagles which have been exceptionally firm are 3, 7-8. Among Egyptians Anglo-Egyptian B are 1½, while Oilfields of Egypt are 7-32. In the Roumanian group Roumanian Consolidated are 8s, Phoenix are 8s. 9d., at which they look a promising purchase in view of the hopeful survey of the company's position at the general meeting, Dacia Romanos are 11-16, and Steaua Romanas are 11s. 3d.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

- (1) The Modern Chaotic Exchange Situation
- (2) The French Exchange Position.
- (3) German Industry and the Mark.
- (4) The Italian Lira.
- (5) The United States Dollar.
- (6) Miscellaneous Exchanges (Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

Write to-day, enclosing 1d., for Post Free Copy to

PALL MALL INDUSTRIAL INVESTMENTS, LTD.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street S.W.1.)

Egypt.

Cocoa Fibre.—The Inspector-General, Prison Department, 43 Sharia El Bostan, Cairo, invites tenders for the supply of 3,750 okes of cocoa fibre, unplaited. January 15.

Fire Pumps.—The Director-General, State Domains, Administration, Cairo, invites tenders for the supply of three hand fire pumps. January 16.

Wood.—The Director of Stores, Frontier Districts Administration, Alexandria, invites tenders for the supply of timber to specifications kept at the Administration's Stores, Arsenal, Alexandria, as follows:— 28 pieces of Canadian elm (20ft. and up by 12in. by 12in.); 40 pieces of English elm (20ft. and up by 12in. by 12 in.); 788 pieces of pitchpine (20 ft. and up by 12 in. by 12in.); 788 pieces of pitchpine (20ft. and up by 12in. by 12in.); 78 pieces of teak (20ft. and up by 12in. by 12in.); 20 pieces of beech (12ft. by 4in. by 4in.); 15 pieces of beech (17ft. by 6in. by 6in.); 600 pieces of deal boards of various dimensions. Representation by an agent resident in Egypt is essential. January 18. (D.O.T.).

Timber.—The Department of Technical Education, 14, Sharia Abdine, Cairo, invites tenders for the supply of timber required for the Model Workshops, Bulaq. Specifications, lists of timber required, etc., can be obtained at the Model Workshops, Bulaq, Cairo. January 18.

Sundries.—The Department of Public Health, Cairo, invites tenders for the supply of (1) proprietary articles; (2) sundries (includes bottles, demijohns, droppers, and baths for eyes, ointments, pots, etc., etc.); (3) dressings; (4) crude drugs and heavy chemicals; (5) fine chemicals; (6) galenicals and packed articles. Representation by an agent resident in Egypt is essential. January 20 (D.O.T.).

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of six months from April 1, 1922. January 20.

General Stores.—The Director of Stores, F.D.A., Arsenal, Alexandria, invites tenders for the supply of consumable general stores such as ropes, nails, locks, leather, soap, brushes, etc. January 21.

Bulgaria.

Telephone Instruments.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of 2,000 telephone instruments for table use, with local battery and magneto. Also for spare parts for these instruments. Tenders to be presented at the District Office of Finance, Sofia by February 20. (D.O.T.).

Porcelain Insulators.—The Bulgarian Department of Posts, Telegraphs and Telephones, invites tenders for the supply of 100,000 porcelain insulators. Tenders to be presented at the District Office of Finance, Sofia by January 25. (D.O.T.).

Telephone Accessories.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of the following parts for telephone exchanges, viz.:—Subscribers' line indicators, 2,200; indicators, end of conversation, 600; jacks, 2,500; plugs, 1,500; connecting pieces, 2,000; connecting pieces, switchboard, 20,000. A deposit of 5 per cent. of the total amount of tender is called for by way of guarantee. Local representation is essential. Tenders to be presented at the District Office of Finance, Sofia, by January 30. (D.O.T.).

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated December 23:—Season.—December 19 to 22—widespread rainfall in North-West Frontier and north and south-west of Punjab. Condition of crops.—December 22—Punjab prospects unchanged. Rain in the north and to the west of Lahore should greatly benefit wheat crops. In Central Provinces, sesamum very good; gram and linseed good; wheat on lighter soils requires rain badly. Markets.—Cotton.—December 17—Bombay cotton market steady. Fine M.G. Oomras Rs. 415 December-January; Rs. 408 March. Jute.—December 22—Calcutta jute market quiet. Firsts Rs. 55, Lightings Rs. 45. Gunnies quiet but steady. Tea.—At tea sale on December 20, Dooars, Assams and Darjeelings were excellent, Cachars and Sylhets good, and little change in prices. Common stalky teas were half anna lower, and good dusts 3 pies dearer. 454,811 packages were sold to date at an average price of 9 annas 9 pies per lb. Sellers' ideas were higher than those of buyers, and an appreciable amount of common tea was withdrawn from sale. Gap in price between commons and higher grades tending to widen again. Shellac.—December 20—Demand quiet and confined mostly to spot parcels. T.N. Rs. 155 spot. Rs. 140. January. Registration of New Companies.—Authorised capital of new companies registered in November 1921 Rs. 246 lakhs, against Rs. 1,117 lakhs in November 1920. No change in Bank Rates.

CAUCASUS OIL CONCESSIONS.

Reuter's Paris correspondent in a message dated December 24, states:—A Russian newspaper published in Paris announced that Mr. Krassin, through the intermediary of a group of capitalists owning petroleum wells in the Caucasus, has had interviews with the officials of the Quai d'Orsay regarding the question of concluding a treaty of commerce, that these negotiations had entered upon an active phase, and that at the request of a representative of the Soviets an official communication would soon be made on the subject.

It is announced here that no official of the Ministry for Foreign Affairs has had any conversations which could possibly relate to an affair of this kind, and no one has been approached in any manner on the subject by a delegate of the Soviet Government. The report in question is accordingly declared to be an entire invention and in absolute opposition to the policy followed by the French Government.

Numbers of Roumanian cattle and sheep are being exported to Constantinople, Greece, and Smyrna.

Although this year's beet crop in Roumania was abundant, large consignments of beet sugar are arriving from Czechoslovakia for marketing at prices not exceeding 14 Lei per kg.

Alcohol imported into Greece for heating and lighting purposes can be denatured only upon approval of the Ministry of Finance. It is exempt from all taxes, including port dues and municipal taxes, as well as import duties.

The Roumanian Government has decided to propose, in accordance with a plan which will be communicated later to holders, the settlement of Treasury bonds issued in foreign denominations and held by the public in various countries. Holders of such bonds are requested to communicate forthwith all particulars concerning the same on forms to be obtained at the Bank of Roumania, 17, Tokenhouse-yard, E.C.2.

Cable Address:
Lobo, Dundee.

LOW & BONAR, Ltd., Dundee, Scotland.

All Cable Codes

NOTES OF THE WEEK.

An Interesting Rumour.

"Hymeneal rumours," wrote George Meredith, might be backed to run a race with the tale of evil fortune," and it is not to be denied that rumours of the kind referred to have been finding their way from South-Eastern Europe in large numbers of late. With so many young Royalties available in that region, this was not surprising. The marriages of the Crown Prince of Roumania and the Diadoch of Greece have removed two pairs of 'eligibles;' but there remain others, prominent among them King Alexander of Yugoslavia and King Boris of Bulgaria. Rumours regarding the matrimonial intentions of the former have been particularly numerous, and it may be that the latest of them has no more solid foundation in fact than its predecessors, but it is certainly more interesting. The Belgrade Press lately announced that King Alexander was to spend Christmas (Old Style) as the guest of the King and Queen of Roumania at Sinaia; and added the hope that the visit would be followed by his betrothal to Princess Marie. Indeed, one London daily has already stated that such a betrothal has been officially announced in Belgrade. We shall await confirmation from other sources before tendering our congratulations; but such a match would obviously contribute towards the peace of the Balkans.

Nationality and Civilization.

Throughout the thinking world to-day, from the reactionary pole of thought to the revolutionary, there is a recognition of the possible lapse of civilization as we know it. The cry that the Allies' victory in the Great War saved civilization is no longer often heard, but rather that, as Viscount Milner recently said in his address to the Classical Association, "the roots of European civilization are in danger." From that school of religious thought which laments the danger, and believes it can be averted only by an universal return of Europe to the Catholic Faith, to the school of the Scythians in Russia, which welcomes it, passionately believing that their country has a cosmical mission, comes this warning, and it applies with peculiar force to the future of those lands with which we are accustomed to deal in these columns. The old idea that material progress was sufficient to secure the stability of Europe,

and, through her, of the rest of the world, is now untenable; the dogma that the economic interdependence of countries was a guarantee against war (and consequent disruption) was shattered by the last great upheaval; and yet, on almost every side of Eastern Europe and of Western Asia we find bitter, unavailing, national rivalries, and this in the face of the acknowledged awakening of the East, and particularly of Islam. To this disastrous haggling there must be an end; it must cease, or we shall disintegrate into anarchy. But how to end it? How can we re-assert the basic unity of Europe, and at the same time come to an understanding with Islam?

Aids to a Solution.

Viscount Milner stated the problem with the frankest clarity, but for a solution he had to rely on a generalisation: "moral approximation and moral approximation alone can control the elemental passions that engender antagonism between race and race." In his sketch of the factors tending to produce this moral approximation he mentioned specifically only two—Christianity and Greco-Roman culture. Now upon the respective prospects of these two things individual opinions differ; but no serious thinker, so far as we are aware, anticipates their domination over or spread through the inchoate masses of Russia and of Islam—at any rate in time to ward off a possible catastrophe. Russia appears ready to take up what we seem, temporarily at least, to have thrown down—the conception of the "white man's burden"—and to take it up in a sense which may be as pleasing to the East as was ours; and Islam, no longer regarding the West as one, but as a congeries of self-cancelling units, is awake as it has not been for upwards of a thousand years. Russia may return to the comity of struggling European nations, or it may pursue a mystic path of its own; but the condition of an Islam quiescent under European rule is gone, probably for ever, and from Morocco to Mesopotamia the Arabs are testing the power of the West. We must, therefore, try to pierce and to appreciate the ultimate designs of Russia; and we must comprehend and gauge this surgent impulse of Islam. In connection with this endeavour we note with satisfaction a suggestion made last week by Professor Toynbee at the annual meeting of the Historical Association, in a paper entitled "Western Travellers as Sources of Levantine History." He pleaded for collaboration in a systematic study of the records of travellers in the East, so that some definite

and exhaustive historical results might be obtained. This is an excellent scheme, not the least advantage in the execution of which would be the prevention of some of the countless mistakes made by the politicians of the West.

A Transcaucasian Federation.

The Transcaucasian republics of Georgia, Armenia, and Azerbaijan have entered into a federation, to which Ajaria (or Ajaristan) is also understood to have adhered. What policy the Federation will follow, what force it can command, even what are the terms of agreement between its members are all unknown at present; but it is only natural to infer that the change is the result of dissatisfaction with the existing state of things, and, therefore, anti-Bolshevist in character. If that be so in fact, it is a matter for congratulation to other countries besides those immediately affected. It is to be feared, however, that Moscow, which has stamped its mark so brutally on the three republics, will not suffer the spirit of freedom to return to them and their small companion any more willingly than she has permitted its existence elsewhere. If the Federation is to achieve any real liberty, it will have to fight sooner or later. Whether the present is a suitable time to make the effort, or whether it will be wiser to wait, only the men on the spot can judge. And what the outside world will be most anxious to learn is whether those who have directed the new movement actually desire to shake off again the northern fetters. The announcement that a conference is being held—or has just been held—at Tiflis to discuss economic and commercial relations between Angora and the Caucasian States should not be overlooked.

Difficulties for Daghestan.

At the time of writing the above note the attitude of Daghestan towards the new Transcaucasian Federation was not quite clear. A Constantinople message, since received, passes on a report that the Moscow Soviet had refused to recognize the independence of the little State, and that hostilities had broken out as a result. That tells its own tale, and unless Daghestan can get help of a substantial kind from its southern neighbours—a most unlikely contingency—the outlook for the Moslem State is far from encouraging. Another message, also received quite lately, states that three divisions of the Sovietist Army were recently assembled in the district of Batoum, that military trains were moving through Azerbaijan towards Tiflis, and that a (Bolshevist) concentration was taking place along the Turkish frontier. The conference at Tiflis, mentioned above, must have found plenty of urgent topics for discussion.

The Future of Palestine.

The *Morning Post* published last week a most interesting communication from a correspondent regarding the future of Palestine. Important decisions, we are told, may be announced shortly; and if the forecast given is approximately correct, the importance of the decisions will certainly not be questioned. In the first place: "It is understood that the British Government, on consideration, recognizes that the Zionist interpretation of the Balfour Declaration cannot possibly be enforced without the gravest injustice to the people of Palestine, without a repudiation of our solemn promises to these people," and "It may be taken for certain that there will be definite repudiation of the claims which the Zionists have sought to read into the Balfour Declaration (that Palestine is to be made Jewish in the same sense

that England is English)." Finally: "The Balfour Declaration will be defined," and the Jews will have to "stand on an equality with the other inhabitants of the country." The value of the first and second announcements depends entirely upon the "definition" given to the famous Balfour Declaration; but regarding the advisability of having an official definition of the kind indicated there can be no two opinions. Such a definition will probably be welcomed by the Jews almost as heartily as by the Moslems and Christians, since it should go far towards putting an end to a situation which is obviously highly unsatisfactory, and in which nobody seems to know where he stands. But it still remains to be seen whether the *Post's* correspondent is a true prophet.

The Sudan Raid.

The Nyala raiders and their supporters must be feeling rather sorry for themselves just now. The leader of the original attack paid the full price of his temerity a couple of months ago; and now a Reuter message from Cairo announces that one Mohammed et Tor on whom his mantle appears to have fallen, has died from wounds received in fighting, while two other leaders are in custody. Whether these losses are due to the small punitive force which left Nyala on November 22 is not stated, but presumably that is the case. The column is reported to have occupied Gereida without opposition, and to have made large captures of stock from the disaffected Masalat tribes. Finally, it is announced that the fines which are being imposed are being rapidly paid up. All this is highly satisfactory, and it looks as if the Sudan has again given proof that it has no need of instruction in the handling of such little affairs. The Masalat and their friends must surely wish that the Egyptians' hopes may be fulfilled.

A Sidelight on Persia.

A depressing picture of the Caucasus under Bolshevist rule is given in some extracts from a letter sent thence recently, and published in the *Morning Post*. The process of spoliation and plundering has gone on as thoroughly here as elsewhere, even the electric tramcars having been shipped off to Moscow, labelled "a gift from the Georgian people"; and many places being on the verge of starvation. In marked contrast with this, the writer declares that: "Conditions are good in Persia; pre-war scale of living, splendid crops, and no Bolshevism." In these days, when disinterested information regarding Persia is so hard to come by, even this scrap is something to be thankful for. But the picture presented by it is rather astonishing. "No Bolshevism?" We are glad to believe that the Persians, like other Moslem peoples, are unlikely to take kindly to the Russian plague; but "who sups with the Devil must have a long spoon," and Teheran has certainly given us all the impression that it is on excellent terms with Moscow. Has not the Mejliss quite recently ratified the Russo-Persian agreement signed last February? And is not the Moscow representative the most powerful person (in fact) in Teheran to-day? Sir Percy Loraine, the new British Minister, has lately arrived there. It will be interesting to note whether his arrival is followed by any amelioration in relations between Persia and Great Britain.

Teheran and the Kurds.

The Persian Legation announces that "According to information received from the Foreign Office in Teheran" there is no foundation for the report that an autonomous Kurdish Government has been set up in the Tabriz

district. The *communiqué* also declares that the Government forces at Suj Bulak, having been reinforced by 3,000 Persian Cossacks, had inflicted a defeat on the rebel Kurds, and that the Kurdish leader, Sardar Arshad and three of his principal supporters had been killed. If all these reports are confirmed, the Persian Government is indeed to be congratulated; but in confused conditions such as those existing in the Urumiah district to-day reports are apt to need revision; and it will not be altogether astonishing if the Kurds prove capable of giving considerable trouble to Teheran for some time to come.

The Week in India.

The past week has brought news of no important developments in India. The Moplah rebellion may fairly be described as an event of 1921, though a few leaders may still remain at large: the rest of the country has been quiet; and the only item calling for notice is the report that an attempt is being made to get together an unofficial political conference, which its promoters hope may succeed in putting an end to the present discontents. Whether such a result may be expected depends on question of representation, on which we are as yet imperfectly informed; but the history of the word "conference" in India is not very encouraging. It has been used so often for gatherings of a few busybodies, who claim to speak in the name of India, or even of humanity at large, that it now suggests the ideas usually associated with Tooley Street, and for that sort of conference India has no use at present. Real benefit might on the other hand result from a meeting of a few men of keen intellect, and sufficiently wide apart to cross-examine each other with effect. There are quite a number of bubbles, and of blisters, to be pricked, and the operation is most effective when it is conducted on mutual lines, but we scarcely expect a conference of that type to emerge from the recent *pourparlers*.

New Ideas in Indian Universities.

Sir Harcourt Butler's speeches and actions during his recent visit to Cawnpore have brought into prominence two ideas which may prove to be of great importance in the development of higher education in India. One of these is that the new universities now being established should aim definitely at specialisation in order to meet local needs. Hitherto India has looked rather to standardisation, and the existing institutions are all very much alike, attempting to cover too much ground with wholly inadequate resources. In Cawnpore on the other hand, if Sir Harcourt's ideas materialise, as they usually do, there will be a university as closely related to the environment as those of Leeds and Manchester; the ordinary subjects of a liberal education will not be neglected, but the dominant note will be the development of applied science. Cawnpore already possesses an agricultural college, and the foundations of a technological institute have after many years' discussion at last been laid; a university arising in great measure out of these elements will be particularly well adapted to benefit the great industrial city, and also the wide rural district of which it forms the commercial centre.

The Civic University.

The second idea, also familiar in this country but still unknown in India, is that those cities which aspire to have a university should put down a reasonable proportion of the cash required for buildings, equipment and endowments. In all such matters India still dreams

of the inexhaustible treasure-houses of her rulers, but enlightenment is now proceeding rapidly; the Ministers brought into existence under the new Constitution have already realized that they are not in a position to give universities and similar boons away to every suppliant, and Cawnpore has been told frankly that the matter rests largely in its own hands. We hope it will not be allowed to rest for long. The city contains men who could individually put down the needed funds without inconvenience, but it would be better that all the rich men should join to provide a university of which they and their descendants, could be proud. With one or two honourable exceptions, the citizens have hitherto been slow to realise the responsibilities of wealth, but they have now an opportunity of setting a magnificent example to the rest of India.

THE WEEK AT HOME.

Ireland Accepts.

After four days' more debate, the Sinn Fein Parliament in Dublin has accepted the Treaty with Great Britain. At one time it seemed very doubtful whether there would be a majority for the agreement, but the extremists appear to have lost ground during the Christmas holidays; and Mr. de Valera, who has been accused by the *Freeman's Journal* of showing the petulance due to wounded vanity, did not play his cards particularly well. On the other hand, Mr. Arthur Griffith and Mr. Michael Collins both showed themselves strong men, moderate in expression but formidable in argument.

The majority—64 to 57—is narrow enough. But it is suggested that it does not accurately represent the feeling of the country, which is supposed to be more nearly 75 per cent. for the Treaty, and 25 per cent. against. How far that calculation is correct we shall only be able to tell when the elections have been held, and much depends on Mr. de Valera. He declares that he is "sick of politics", but it is more probable that he is annoyed at not being allowed to play the autocrat. It is possible that he will lead a Hertzog movement against the new Government, and it is evident from the speeches delivered by several republican politicians that he can rely on a certain amount of support; but the Government itself will be run by Messrs. Collins and Griffith. It is too early to prophesy as to their success in initiating a constructive policy.

No General Election.

The talk of a general election in February, to which I referred last week, has rather died down again. It seems that the Liberal Coalition Whips, with a few members of the Government—the Prime Minister, Lord Birkenhead, and Sir Robert Horne—approved the idea as good strategy, for the Opposition is very depressed at the moment, and the Government still has the kudos of the Irish settlement. But Mr. Austen Chamberlain does not want an election, nor does Sir George Younger, who as Chief Conservative Whip, is a very formidable person when he chooses to assert himself, as he has done on the present occasion.

More important still, neither London nor the country wants an election. London has its own particular reason, since it has a County Council election in March, which will be a trial of strength between the Socialists and Conservatives, and the metropolis does not want this overshadowed by a parliamentary argument. The objection of the country at large is that too much politics is bad for business at a time when trade is reviving, and that as by common consent the Government would win, although probably by a reduced majority, an election would settle nothing.

Cannes.

Another reason against a general election comes, curiously enough, from Cannes. Mr. Lloyd George, having settled the Irish question, is now considering

schemes for the reconstruction of Europe—minus the Near East, which he leaves to Lord Curzon. The Prime Minister's speech, which was duly acclaimed as a "bomb-shell," followed the lines anticipated, in advocating a conference of the Powers with Germany and Russia. The pessimism which this proposal has caused in France is not quite understood on this side of the Channel; there is no suggestion that we should bill and coo with Moscow and Potsdam, but to continue biting thumbs at each other seems to us absurd. Broadly it is proposed that Russia must revoke the repudiation of her debts—Lenin by restoring Capitalism has already taken the first decisive step in that direction—that the German reparations scheme be cut down to practicable limits, and that some of the French (and consequently also Italian) debt to Britain be cancelled. It is difficult to see why this should cause such a pothor in Paris, but unfortunately any stick seems good enough to beat us with at the moment.

I understand that the Near East does not come into the field of vision. According to one of the political wits, the difficulty is that Mr. Lloyd George's side of Downing Street does not know exactly where the Near East is, and does not like to ask Lord Curzon's side of the street, where they keep a few maps, for the information. But this, like the story that the Cabinet thought Angora was a goat, and asked the Board of Agriculture to take the matter up, must be accepted with a grain of salt; it is like the pre-war anecdote of the harrassed statesman who, asked what were the chief imports of Bulgaria, answered hastily "Buxtons and Bouchiers."

However France may dislike Mr. Lloyd George's new policy of European reconstruction, it is on the whole being well received in this country, and it has had a good press in America. It is felt by many that reconstruction in Europe is the best, and indeed probably the only road, to renewed prosperity at home.

The End of Eatanswill.

There was a fire last week at the sleepy but pleasant little Suffolk town of Sudbury. In ordinary circumstances this would hardly call for notice, but Sudbury has long been identified by Dickens scholars as Eatanswill, and unfortunately the fire burnt down the "Rose and Crown," which was the hotel where Mr. Pickwick stayed, where Mrs. Leo Hunter read what Count Smorltork called her "Ode to a Perspiring Frog," and where Mr. Winkle played havoc with the heart of Mrs. Pott. Fortunately, Dickens pilgrims can still see the "Angel" at Bury, a few miles away, where Mr. Pickwick was deceived by Jingle and Job Trotter; and the "White Horse" at Ipswich, where Mr. Peter Magnus proposed to the lady in curlpapers, has changed little in a century.

The Honours List.

The New Years list of honours contains nothing of unusual interest. Sir Charles Hawtrey and Sir Gerald du Maurier are added to the long list of theatrical knights; and Sir James Barrie received the Order of Merit, which was very popular. One of the new barons makes whisky—a lord spiritual, as somebody of the Malaprop tendency remarked; and one of the new baronets is famous all over the world for a custard powder. Another runs a tobacco firm. There are 112 new knights—a round hundredweight, 37 baronets, and four barons. We do things wholesale in these days.

Grand Juries.

The Grand Jury system, suspended during the war, has been revived this month; and in almost every case there have been strong protests, first, that the system is too antiquated to be any longer of use, and secondly that it costs money and waste time. A curious defence has been put forward, to the effect that it is a safeguard against Bolshevism; but how or why is not explained. The system was originally a safeguard against tyranny and abuse of the law, but in the present day effective publicity and the operation of the Court of Criminal Appeal make it superfluous. And almost any criminal lawyer laughs at the idea that under English procedure the law may operate too harshly against the innocent; the difficulty is rather, as every prosecuting barrister will agree, that the dice are loaded in favour of the guilty.

Hardy Annuals and Crime.

There has been a mild epidemic of influenza, and a severe epidemic of January sales; but these are hardy annuals. Rather more unusual is a sudden outburst of murder or suspected murder cases, which has filled the newspapers with horrors and the tea-table with shudders. One of these cases, the Bournemouth murder, has been so bungled by the local police that it may result in a reform of the criminal system. At present Scotland Yard is not called in to investigate a murder case outside its own district, partly on the grounds of expense—the cost falls on the county rates—and partly because the local police naturally want the credit of catching the criminal. But in fact they are not quite up to the job in difficult cases, and although they resent the idea of getting specialised assistance, the public are becoming uneasy at their failure. Sir Basil Thompson, the late Chief of Scotland Yard, who knew more murderers than most people, has outlined a scheme of reform, and it is to be hoped it will be adopted.

Bankrupt Theatres.

The New Year opens with another loud outcry from the theatrical profession. The Christmas season has been disastrous, and one play after another has been taken off with only a few days' run. Last summer the result of the coal strike was bad enough, but the winter of their discontent is far worse. One of the troubles seems to be that theatre rents and expenses are too high, so that unless a play runs it loses money; it is also suggested that the "stars" take more money out than they bring in, while the "stars" in turn accuse the stage carpenter and the limelight man and other "noises without" of getting too high wages. What may be the truth of this matter, as Pepys says, God knows; it is beyond me.

A Record Billiard Break.

Last week saw a record billiard break, Newman in his match against Falkiner scoring the tremendous total of 1274 at one visit to the table. His opponent Falkiner, by the way, was not discouraged by this terrific score; he was once a miner, and has all the proverbial pluck of the miner without any of the alleged roughness. He is a singularly graceful artist to watch.

The Australian Tour.

The Australian Cricketers did very well out of their 1921 tour in England. After all their expenses were paid, each player and the manager received £766, and £10,000 will also be distributed among the six State Associations. Their report advocates that in the next tour there shall be additional matches against the Gentlemen of England and the Players of England, and also one against the North, at Manchester. The Scottish match, which was a great success, will be a permanent fixture.

The Week's Books.

"Washington and the World's Peace" (Collins) is a collection of the articles written by Mr. H. G. Wells at the recent conference. He chronicles the "phases of enthusiasm, hope, doubt, depression, and irritation" at the sessions, but his final feeling is that the Conference was "a successful and hopeful beginning in open international co-operation." Mr. Wells' own personal attitude is expressed as follows: "I believe so firmly in this great world of peace that lies so close to our own, ready to come into being as our wills turn towards it, that I must needs go about this present world of disorder and darkness like an exile, doing such feeble things as I can towards the world of my desire, now hopefully, now bitterly, as the moods may happen, until I die." Elsewhere he declares that "this is not a doomed world we live in; it is a world idiotically spoilt."

"Northwest Australia" (Simpkin Marshall) by R. Logan Jack, is a wonderful record of exploration and discovery from Captain Cook to the present time, and it includes many of the author's own adventures.

It is not very often that one gets hold of a good novel, but "The Street that Ran Away" (Mills and Boon), by Elizabeth Croly, is a delightful fantasy that will appeal to the imaginative.

THE NEAR AND MIDDLE EAST.

(From Our Own Correspondents).

ROUMANIA.

Bucharest, December 28.

Political.

Although a change of Government has taken place, the crisis does not seem to have come to an end; and the King is still consulting the various political leaders. The appointment of a government like that formed under M. Také Jonescu, which has no parliamentary majority and is represented by a single party, and a small one at that, has aroused great dissatisfaction among the different democratic parties, and especially among those of the new provinces. They all feel that the Constitution has been slighted; they are determined that this case should not be used as a precedent for the future; and they are now endeavouring to form a so-called *Constitutional Bloc*, their war-cry being that the Government should be the true expression of the nation's voice. The *Bloc* further demands that the present Parliament, despite the majority's unpopularity, should be kept alive for just so long as would be necessary to pass the franchise bill, but under a "concentration" Government under a strictly neutral chief, and that this Cabinet should in due course preside over the new elections. The name of M. de Flondor, the Bukovinian Leader, has been put forward as a possible chief, owing to the fact that he enjoys the sympathy and esteem of practically all parties, and has kept aloof from active politics for the last three years. It is true that M. Také Jonescu has offered M. Flondor a portfolio in his Cabinet, but it was declined. M. Flondor held that the only way out of the present *impasse* would be a concentration Government, which should comprise the leading men of all parties. With the exception of the Liberals, all other parties are in favour of this scheme. There are, however, difficulties to be overcome before the project could materialize. For the last ten days M. Flondor has been working hard to bring the various leaders under one banner; for should this attempt fail, it is common knowledge that the power will fall into the hands of the Liberals like a ripe apple. Naturally, the Liberals are refusing to join in the "concentration" and are doing everything possible to prevent it from succeeding. They would like to be called to power by the King in the midst of a strong ministerial crisis, for with a General Election under a neutral Cabinet their chances of success would be considerably reduced. Nothing definite is expected to develop until after the Orthodox Christmas holidays.

Despite all the political manoeuvres, the new Ministers are attending to their duties assiduously, and M. Také Jonescu is at the same time doing his utmost to gain the support of as many Deputies and Senators as possible before Parliament reopens, in order to be able to carry out his political programme with the present Parliament.

In connection with the new Government's programme the Prime Minister made the following declarations to the Press: "The present Government is neither a party Government nor a coalition of parties, but has been called to power by confidence of the King, and has, therefore, a Mission to fulfil. In the first place the Government has assumed the task of making it possible for those parties which had withdrawn from Parliament to return. In this respect I have succeeded, for with the exception of the Liberals all other parties have consented to attend the sittings. Our second task is to see that the present Parliament should carry through the important Franchise and Fiscal Reforms." With regard to the Franchise Bill the Government intends to adopt the Decree Law of the Bratianu Government, which is to unify the voting system throughout the country, including Bukovina and Transylvania, where hitherto the voting system differed from the rest of the country. As to the Financial Reform, the Government intends to propose that the levy on capital should be suspended at least

until it can be ascertained how much can be collected from the progressive income tax. The quotas on the aggregated income, however, will be reduced.

Roumanian Immigrants from America.

Roumanians residing in Canada and the United States have sent a delegation to Roumania to study the question of returning to their country of origin. Their numbers reach many thousands, and they are mostly Roumanians originally from Transylvania, who preferred emigration to Magyar oppression. A good many of them have resided in America for 10 to 20 years, and are fairly well-off. The two principal reasons for wishing to return now are: first, the desire to see their country again, especially since it has been freed from the foreign yoke, and, secondly, the advantage offered in converting their dollars into lei at the present rate of exchange. For Roumania such an immigration would be of great benefit and importance from many points of view; for it would not only mean an influx of Roumanian capital, but would provide the country with skilled labour and men of enterprising spirit of Roumanian nationality, the need for whom has been greatly felt, especially since the country has trebled in size.

Bucharest Station on Fire.

A big fire broke out at the Gara de Nord on Sunday morning at five o'clock and lasted throughout the day. The entire right wing of the station was burnt down. The damage is estimated at about 15 million lei, without, however, including the loss of the archives that perished in the fire, and which will be very hard to replace. The fire is supposed to have started in one of the rooms above the booking offices. There are several versions of its origin. Some put it down to a short circuit of the electric wires, or to the defective iron stoves used in the offices, while others suspect that it was wilfully caused.

General News.

The new Belgian Minister at Bucharest, M. Eugen Robyns de Schneidaner, presented his credentials to the King with the usual ceremonial in the presence of M. Derussi, the Minister for Foreign Affairs, last Saturday.

Princess Kyra, the daughter of the Grand Duchess Cyril, who has been staying for several months with her aunt, the Queen of Roumania, left Bucharest on Monday for England.

The appointment of M. Titulesco, former Minister of Finance, as Roumanian Minister to London, has now been officially conformed.

Queen Marie, accompanied by Princesses Marie, Ileana and Kyra, attended on Christmas morning the divine service held at the Anglican Church in Bucharest. The British, American, French and Swiss Ministers and many members of the respective Legations, as well as a large number of the British colony, were also present. The service was conducted by the Bucharest Chaplain, the Rev. Claude Hinscliff.

Another Christmas celebration took the form of a party attended by the whole British colony and a number of American friends. It was given at the Y.W.C.A., and the Chaplain and Mrs. Hinscliff acted as host and hostess. The British Minister, Sir Herbert

Leaders of the World's Office Equipment and Filing Systems.

The Shannon Limited

Head Offices: -
ROPEMAKER ST., LONDON, E.C.

Succursale au Caire, EGYPT. TEL. 1956 P.O.B. 819.

Dering was present, with Lady Dering, and among others were the American Minister and Mrs Jay, and the First Secretary of the British Legation, and Mrs. F. Millington-Drake. Thanks to the kindness of these ladies and gentlemen and to the efforts of the British community, there were two bands—one gypsy and one jazz—excellent refreshments, and, as a climax, a present off a Christmas tree for every guest present.

On this occasion the Rev. H. Adeney, the former Bucharest Chaplain, was presented with an address and a handsome gold watch, a large silver inkstand, and other valuable objects, by Sir Herbert Dering, on behalf of a large number of British and American friends, in recognition of the great services rendered by him for sixteen years in ministering to their spiritual needs. Mr. Adeney had asked to be released from the chaplaincy in order to be able to devote his full time to the missionary work, for which he came to this country. Besides, as the British colony has grown considerably during recent years, a full-time Chaplain was urgently necessary. It is largely due to the zeal and energy of Mr. Adeney that the British colony at Bucharest can now boast of having a proper church building.

YUGOSLAVIA.

Zagreb, December 28.

"Black Hand" and "White."

The newly formed Government appeared to be in danger of being still born, owing to a further dispute between the Radicals and the Democrats regarding the Minister of War. As this portfolio is always held by a soldier, and as soldiers are not supposed to take part in politics, one would expect this ministry to be exempt from the usual party bickerings. But the Democrats roundly asserted that General Zechevitch, the Minister, was but a nominee of an association of officers known as the *Bela Ruka*, the White Hand, a clique which supports the Radicals, and apparently dictates to them, on the analogy of the famous *Crna Ruka*, or Black Hand, which exerted so powerful an influence on Serbian politics before the Union. The Black Hand no longer exists, and the Democrats assert that the Radicals called into existence the White Hand, on the homoeopathic principle, that the day of its usefulness has long since gone by, that officers should take no part in politics, even behind the scenes, and that the parliamentary life of the nation must not be exposed to secret and irresponsible influences.

M. Pashitch insisted on General Zechevitch as Minister of War, even in face of a threatened interpellation in the House, which would greatly damage the Government directly Parliament met. But at the eleventh hour, different counsels prevailed. General Zechevitch himself on Christmas Eve, after the new Cabinet had taken the oath, tendered his resignation to the King, which was accepted; and so this incident, which had prolonged the crisis several days and threatened to split the Coalition once more, was closed. It is not known who will be the new Minister of War, but M. Pashitch himself will hold the portfolio for the time being.

Serious Colliery Explosion.

There has been a severe colliery explosion at Zenica, involving considerable loss of life and great material damage. Fire-damp had accumulated in one section of the mine, which was fortunately isolated from the main workings, and had its own ventilation. The inspectors reported absence of fire-damp, and ordered the miners in to the face, when one of the inspectors went to examine the fans. All the party were carrying electric lamps. Suddenly there was a fearful explosion. There were eight killed, including the inspectors, mostly being victims to the consequent fall of roof rather than to the explosion itself. Fortunately, the fans were working well, or the number of victims might have been very much greater; for there were about three hundred miners engaged in that section. It is anticipated that it will take a fortnight to clear the falls of roof and re-open the district. The victims will be buried at the public expense.

Czecho-Slovak Immigrants.

It is interesting to note how many Czechs and Slovaks there are in Yugoslavia. A journalist who has studied the question estimates them at 150,000. The Czechs live mostly in Croatia, and the Slovaks in Srem and the Voivodina. The Czechs began to immigrate during the reign of Maria Theresa and Joseph II, when the Hapsburgs were doing all in their power to mix the races in the southern portions of their dominions, but there was a substantial influx during the last century, especially in the year 1883. Owing to the identity of faith and similarity of languages, the Czechs in Croatia have been largely assimilated, but the Slovaks have retained their national consciousness, probably because they have been brought more into contact with Germans and Magyars, and partly, perhaps, owing to a greater natural conservatism.

Liubliana, January 2.

The King's Visit to Slovenia.

After having been twice obliged by ministerial crises to postpone his hunting trip to this part of the world, the King at last carried out his intention in the last week of December, 1921, and on Monday, the 27th., accompanied by Prince Paul, he arrived at Kamnik in the Alps to enjoy a few days' sport and rest. Unfortunately the former was rather spoiled on the first day by recent falls of snow, which had caused the chamois to shift their ground; but the second was wholly successful. The King had at least two really fine days up in the mountains, and is reported to have been delighted with the beauty and grandeur of the scenery. On Thursday, the 29th., he paid a two hours' visit to Liubliana.

Already at a very early hour in the afternoon, the Dunajska cesta, by which the King was expected to enter the town, was thronged by expectant and enthusiastic crowds, and there was a great gathering outside the Government House itself, where His Majesty was during his brief stay the guest of the Viceroy, Dr. Hribar. When in response to much cheering—"Long live King Alexander! Long live Prince Paul! Honour to King Peter the Liberator! Long live Yugoslavia!"—the King at last came out on the balcony, he was acclaimed yet more heartily, and the crowd sang the Serbian hymn. Similar scenes recurred at the station, only there they almost partook of the nature of a private reception on an unusually large scale. Standing on the platform, the King talked to the various military and civil notabilities who were presented to him, enquired about matters of local interest, and so, in the course of friendly, informal conversation, prepared to enter the compartment. It was then that the most characteristic scenes took place, showing the abyss which happily separates the modern democratic era from the former Austrian despotism. The platform was packed, the crowd cheered incessantly, when suddenly the news spread: "The King will speak." Dead silence. And then the King, in his clear, pleasant voice, addressed those present as follows:—

"Dear Brothers! I thank you, for the hearty reception I have received throughout Slovenia, in the country, in the villages, the towns, and now in Liubliana itself. All of you who greet me here to-day as your King, pray accept my sincere thanks. When you go home, give my greetings, in town, in every village, and in every house, to those who are not here to-day. Tell them: 'The King dearly loves the Slovenes and beautiful Slovenia!'"

Of course these simple words went straight to the hearts of his hearers. Plain working men elbowed their way to the front, and when the police tried to hold them back, retorted: "He's our King!..... We're going to get a sight of him!" After this, the King shook hands with those nearest him, and the crush and enthusiasm reached their highest point. Spontaneously the crowd sang the Yugoslav national anthem, which is the Serbian hymn, and the Croatian and Slovene national paeans combined, and finally the "Hej Slovani." At last, at 6.12, the Royal train steamed out of the station amid a display of love and loyalty ab-

solutely inconceivable in the old days. At the window of his compartment stood the young King, waving his hand and calling out : " Na avidenye ! " (" An revoir ! ") and the crowd shouted back : " Yes, come back soon ! We shall expect you for the Sokol Gathering ! Long live King Alexander !—Long live Yugoslavia ! "

BULGARIA.

Sofia, December 28.

Bulgaria and Western Thrace.

By the time this letter is in print, the Allied Conference on the Near Eastern question will be on the point of beginning, but nothing has yet transpired which gives ground for thinking that Bulgaria's claims to an economic outlet to the Aegean Sea will be considered by the Conference.

The Sofia Press has been incessant in its demand that Bulgarian claims should be recognised, and on December 24, the *Zora* observed in a special article : " One must not forget that by virtue of Article 48 of the Treaty of Neuilly, Greece is still only holding a mandate for the Allied Powers in Thrace. Certain Great Powers hoped that Greece would show herself worthy of this Mandate by according full rights of protection to minorities, and by also allowing Bulgaria an economic outlet to the Aegean Sea. The Greeks have done neither of these things, and one trusts that the great Powers will see fit to make a change in the existing conditions. "

The Bulgarian point of view has been very clearly and succinctly stated by the *Zora*. Greece does not yet own Thrace ; she shares co-sovereignty over it with Great Britain, France, Italy, America, and Japan. Naturally enough, she has begun to regard it as her own, because for eighteen months Thrace has been governed and administered solely by Greek officials. But the Great Powers have to decide, either at the coming Conference or at a later date, the future of Thrace. If their intention is to leave Thrace as it is at present, i.e. under Greek administration, it will be better for all the countries concerned if an announcement to this effect is made as soon as possible. If on the other hand, the Powers are determined to fulfil their pledge, and grant Bulgaria an economic outlet to the Aegean Sea, it will also be more satisfactory if the necessary steps are taken at once.

As the Powers have formally agreed to grant Bulgaria an outlet, she has the right to suppose that the outlet will be forthcoming. This raises the question where the outlet will be, and under what conditions it will be granted. Dedeagatch is the port specified in the Second Treaty of Sèvres, and a Commission consisting of three members, named by the League of Nations, Greece and Bulgaria respectively, is charged with the task of putting into force the machinery necessary for the creation of the outlet. So much is known and no more.

Sofia University and the Government.

Some months ago the Government passed a law by which three letters were abolished from the Bulgarian alphabet. The University protested against this change, but without effect. At the beginning of December, M. Popoff, the Rector of the University during 1921, made a speech at the annual meeting of the University. This speech was afterwards printed and circulated. It was written according to the old alphabet, that is to say, it contained the three letters which are no longer allowed to be used. M. Omartchevsky, Minister of Education, had his notice called to the matter, and addressed a letter to M. Popoff asking him to furnish a full explanation why the latter had allowed the law to be thus

broken. M. Popoff replied by drawing the Minister's attention to the fact that the University resented the change in the alphabet, but that personally he took full responsibility for the matter.

To this the Minister retorted by sending an official to the University with instructions to close, with a Government seal, the rooms of the Secretary and Treasurer of the University. This action was hailed with great indignation by the University, and a hastily convened meeting of the Senate decided to send a letter to the Minister asking for an explanation of his high-handed conduct. At the same time they informed the Minister that if he did not take steps to remove the seals by a certain day, the Rector would himself remove them. Meanwhile M. Omartchevsky had issued a circular letter to all the Professors of the University, who number about fifty, asking them what point of view they intended to take in this dispute.

As soon as the Senate heard of this circular letter, they forbade the Professors to reply personally, and instead wrote to the Minister informing him that he had not the right to approach the Professors in such a manner, and that all correspondence must be sent to the Senate, under whose orders the Professors are.

The Minister, who is also the Censor, did not allow any mention of the dispute to appear in the local press, but the affair has become public property, and great interest was evinced as to what the Government's attitude would be. Yesterday the news was forthcoming that the seals had been removed, *not by the Rector*, so the incident may be presumably regarded as closed.

General News.

On Christmas morning a service was held at the Protestant Church of Sofia which was attended by many English and American residents. In the evening a dance was given at the British Legation by the Hon. W. A. F. and Mrs. Erskine. The whole of the British colony, besides numerous Americans, was present.

M. Bakaloff, ex-Minister of Commerce, died in prison at Sofia on December 25. He was a member of the Radoslavoff Cabinet that was in power when war was declared, and he was at the time undergoing trial.

Sofia, January 2.

An Echo of the Dimitroff Murder.

The murder of M. Dimitroff, the ex-Minister of War, promises once more to become a matter of public interest. A few days ago a letter, purporting to be written by the assassins of the Minister, was received by many Ministers, ex-Ministers and newspapers at Sofia. The accusations contained in this letter are of such a serious character that it is as well to state that up to the present there are no proofs which go to show that it is authentic.

The letter, which is typewritten, is a long epistle, and consists of a *résumé* of the papers found in the pockets of the murdered Minister. M. Dimitroff's habit of carrying important papers in his person was well known, and it has been hazarded that the principal motive actuating the murderers was the desire to obtain possession of these papers. The letter begins by stating in detail the sums of money spent by M. Dimitroff while he was travelling abroad at the country's expense. These sums run into many millions of levas and are, to say the least, somewhat excessive. The letter goes on to give particulars of the Minister's financial dealings, both abroad and in Bulgaria. Clippings from his diary are also mentioned, while there are references to certain persons who have met their death in somewhat strange circumstances. It also contains a promise that facsimiles of certain of the dead Minister's letters will be

published. Altogether the letter constitutes a serious charge against the Government, who will no doubt speedily take steps to issue a complete denial of the contents of the document, which, it is worthy of remark, bears no signature.

The Radoslavoff Cabinet on Trial.

The first witness in the above trial was General Fitcheff, Minister of War from September 1914 to June 1915, and now Bulgarian Minister at Bucharest. Put quite simply, General Fitcheff's evidence consisted of a direct accusation against ex-King Ferdinand and M. Radoslavoff, the Premier, of having planned to enter the war on the side of Germany. General Fitcheff said that he was not in agreement with this policy and felt bound to resign his post as Minister of War. He was succeeded by General Jekoff, who afterwards became Commander-in Chief. General Fitcheff mentioned that the journey of General Jekoff to Constantinople in the summer of 1915 was in the nature of a secret mission, having as its object the entering into relations of Turkey with Bulgaria. General Fitcheff's evidence was highly important, and makes the position of the accused much less favourable than it was.

The Royal Princesses.

The position of the Royal Princesses was raised in the *Sobranje* last week by M. Pastoukhoff, a Socialist Deputy. The questioner was anxious to know whether the Princesses' return bore any political character. The Prime Minister, M. Stambolisky himself replied. He stated that the return of the King's sisters need occasion no fear in the minds of the *Sobranje* or of the nation. They had simply come back to Sofia to keep their brother company, and M. Stambolisky reminded the *Sobranje* that the present Government would never tolerate any idea of Ferdinand's revisiting even his former kingdom.

This statement, coming as it does from the actual ruler of the country, will finally allay any suspicions that have been entertained either inside or outside Bulgaria that there was a chance of Ferdinand's returning.

The Government and the Country.

January is to be a month of great activity on the part of the Government. Eight out of the ten members of the Cabinet are to speak at large meetings which are being convened throughout the country. M. Stambolisky himself is to address meetings at Stara Zagora, Choumen, and Vidin. An appeal to the rural population to subscribe freely to the coming loan will be a feature of these meetings, and the Government are very optimistic on the results that will be obtained.

General News.

M. Augustus Kral, Minister Plenipotentiary of the Austrian Republic, presented his letters of credence to King Boris on Friday, December 30.

M. Ratkitch, Serbian Chargé d'Affaires at Sofia, will shortly become Minister, while M. Kosta Theodoroff, the Bulgarian Chargé d'Affaires at Belgrade will also present his letters to King Alexander.

A disastrous explosion, happily not causing any loss of life, took place at a munitions depot belonging to an Italian subject last Thursday. Upwards of 20,000 shells were blown up, and the financial damage is very considerable.

The New Year was celebrated very quietly in Sofia. A service was held in the Cathedral on New Year's morning, which was attended by King Boris, the Royal Princesses, the Diplomatic Corps, and the Cabinet; and afterwards the congregation proceeded to the Palace to sign their names in the King's visitors book.

ALBANIA.

Tirana, December 27.

The Political Situation.

The country seems now to have calmed down after its political excitement. Parliament having been summoned, as I told you in my previous letter, M. Kosturi handed in his resignation, in order to allow of the formation of a regular Government. The sittings were tumult-

uous, and the deputies had never had such an important problem to solve. Hassan Prishtina had formed his Italophil Cabinet from members with irredentist views, who hoped to be able to save Kossovo, or at least a part of that region, with Italian assistance. The Nationalist party hold that Albania requires above all things peace and calm, to live on good terms with her neighbours, and to avoid playing the game of any one of them—in a word, to pursue a policy of neutrality. It wishes to avoid any adventurous policy and to have a frank and dignified entente with Serbia, Greece and Italy.

The New Cabinet.

Jafer Ypi, Prefect of Scutari and Minister of Justice in the Suleiman Delvina Cabinet, was charged with the formation of a new Government. He selected as his collaborators: Ahmed Zogolli, Minister of the Interior; Fan Noli, Foreign Affairs; Hysein Vroni, Justice; Kol (Nicholas) Thachi, Finance; Rejeb Mitrovitza, Public Instruction; Ismail Hakki Tatzati, War; Spiro Koleka, Public Works. The new Cabinet is Nationalist, composed of men who have already had experience. There are only two members who are new: Fan Noli and Ismail H. Tatzati, the former of whom has been Albanian delegate to the League of Nations.

The Cabinet was proclaimed yesterday as formally constituted; and to-day it has asked Parliament for a vote of confidence, which has been accorded by a big majority.

The High Council.

Dr. Tourtoulis, who was in France, for reasons of health, and only returned to the country two days after the formation of the Hassan Prishtina Government, handed in his resignation, and Abdi Toptani followed his example. The two other members of the High Council, Akif Pasha Elbasani and Mgr. Louis Bumci, were subjected to lively criticism in Parliament on account of their attitude at the time of the formation of his Cabinet by Hassan Prishtina; and finally the High Council was declared dead. Elected on January 25, 1920, at the great assembly at Lushnia, the High Council has thus been in power 23 months.

To replace the four members thus disposed of, Parliament has elected: Sotir Peri, former Minister of Education (Orthodox, native of Kortcha); Omer Pasha Vroni, a landed proprietor of Berat (Moslem); Antoine Pistuli a wealthy citizen of Scutari (Catholic); and Refik Toptani, a landowner of Tirana (Moslem). There are grounds for believing that these changes, in the Cabinet and in the High Council, have created a good impression all over the country, and in Tirana educated opinion entirely approves of them.

The Serbian Withdrawal.

The evacuation of Albanian territory by the Serbian troops is almost complete. The Yugoslavs have been spreading reports to the effect that Albanian troops had been penetrating the neutral zone; but these reports are without foundation, for nothing abnormal has occurred in this region save the setting on fire of the village of Tchank, on the Drin, by the Serbian troops.

A New York Rumour.

The newspapers reproduce a New York telegram to the effect that the Albanian representative in the United States had offered the Albanian Throne to Prince Jerome Bonaparte. This report caused great surprise here, for there has been no question of choosing a Prince for the country. The question of Albania's standing in this regard has never yet been considered; but the majority of the people lean to a republican form of Government, holding that it will afford the best means of avoiding difficulties and complications.

TURKEY.

Constantinople, January 2.

Peace Talk.

With the advent of the winter active operations in Anatolia have had to be suspended, and the convocation of an inter-Allied Conference for the consideration of the Turkish problem has given rise to much speculation. In many quarters there is a feeling of optimism regarding

the possibility of a definite and general settlement in the near future. These optimistic views are based partly upon the belief that British policy is veering round to a recognition of certain Turkish territorial claims on the one hand, and that the Kemalists, when it comes to the point, will not prove unreasonable, on the other hand. It must be confessed, however, that whatever justification there may be for the first supposition, there is little evidence to support the rest of the argument. On the contrary, almost daily fresh evidence becomes available against the existence of the slightest modification of the views of the Angora Government regarding peace conditions. Those views are still defined by the National Pact, complete and unmodified in any way. If Allied interests can be safeguarded in harmony with the conditions of the National Pact, optimism would not be misplaced, but is this possible? The conditions of the National Pact involve the abandonment of the Straits and the abolition of the Capitulations apart from any question of territory. As a matter of fact, Nationalist politicians attach at least as much importance to the political and economic clauses of the National Pact as to the political conditions. There is a general tendency to overlook this point, and to assume that if only the Greeks could be persuaded to abandon Anatolia the way to peace would be free of any further serious obstacles. It must not be forgotten, however, that by the treaty concluded with the Soviet Government, the Angora Government definitely agreed that *the Straits question should be settled by a conference of delegates representing the States bordering on the Black Sea*. As none of the Allies could, under the conditions, be represented at such a conference, this can only mean that both the Soviet Government and the Angora Government have pledged themselves to settle the matter to the exclusion of the Allies. If the Greek army were unconditionally withdrawn from Anatolia, the few Allied battalions at present guarding the Straits would not be able to hold out for long against the Kemalist army. This is really the crux of the question. It is too late now to discuss the rights or wrongs of the Greek occupation of Smyrna, for it is the Greek army which stands between the Kemalist army and the southern shore of the Dardanelles and the Marmora. The truth of the matter is that the Turkish problem is essentially not a Turkish problem at all, but a Russo-European problem. When the Allies tried to settle the Straits question without troubling about Russian interests, they forgot that the geographical position of Russia must always determine Russian foreign policy, no matter what government may be in power. There are rumours concerning a conference in Constantinople to which both Turkish and Greek delegates will be invited, but the one really hopeful sign is the invitation which is to be sent to Chicherin and Litvinoff to discuss the Near Eastern question. That is certainly a step in the right direction, for there can be no permanent settlement of the problem without the participation of Russia.

A Treaty with the Ukraine.

The Turkish Press announces that the negotiations between the Ukrainian delegate, General Frunze, and the Angora Government have been concluded, and that the agreement will probably be signed to-day. General Frunze will leave at once for Kieff, and the Ukrainian Soviet is expected to ratify the convention without delay. Little is known regarding the actual clauses, but the general nature of the convention is stated to be similar to that of the Russo-Kemalist treaty of March 1921. It is described as military, political and economic alliance. In view of the exclusively military nature of General Frunze's mission, it is only logical to infer that the agreement is chiefly concerned with military matters, and it would not be pushing the argument too far to deduce that Roumania was a subject of especial consideration in the arrangements made. It is reported on reliable authority that the Turks insisted upon an undertaking on the part of the Ukraine to take active measures against Roumania in the event of Roumanian

assistance being given to Greece. The negotiations were conducted by Yussuf Kemal Bey assisted by Munir Bey, Chief Legal Adviser, Reshid Bey, Political Adviser, Mustapha Abdul Halid Bey, Commercial Adviser, and Colonel Kiazim Bey, Military Adviser.

Local Affairs.

The situation of the Central Government remains unchanged. The attempt recently made by the Angora Government to secure the Sultan's recognition of the Great National Assembly was unsuccessful, and according to the Anatolian press a commission under Jelaeddin to draft an amended Constitutional Law, by which the Sultan's administrative prerogatives will be definitely abolished. In this connection it is worthy of note that in a recent speech, Mustapha Kemal emphatically declared that the Angora Government was not a provisional administration, and that the measures promulgated were in no sense provisional. It will be remembered that the Nationalist leaders used to maintain that they were merely acting on behalf of the Sultan, who being a virtual prisoner, was not a free agent, and that as soon as the National aims had been secured, they would at once restore the Sultan's authority. The provisional nature of the Nationalist administration was clearly and emphatically affirmed on numerous occasions, both by Mustapha Kemal himself, and all the Nationalist leaders. The recent statement of the Anatolian leader is therefore of considerable significance and indicates unmistakably the determination of the Kemalists to reduce the Sultan to a mere figurehead. Very little can be ascertained regarding the attitude of the Central Government in the matter, but there is reason to believe that efforts are being made to persuade the Angora Government to postpone all consideration of the Constitutional question until after the conclusion of peace. There are, however, urgent reasons which may prevent the Angora Government from taking this course. In the first place, unless the authority of the Central Government is definitely repudiated, the Angora Government can have no legal existence in International Law, and all the treaties it has concluded are therefore invalid. Mustapha Kemal's argument is that a government exists by virtue of its legislating and administering the laws promulgated. Foreign governments have already, tacitly or otherwise, recognised the Angora Government, and the present constitutional position is therefore anomalous. Incidentally, this is another important factor that will have to be considered with the utmost attention before peace can be concluded.

CYPRUS.

Nicosia, December 21.

Ecclesiastical Trouble.

The autonomous Greek Church of Cyprus, which has not infrequently experienced troubles, is now much perturbed over another "ecclesiastical scandal," in connection with the disputed election as Œcumenical Patriarch, at Constantinople, of Meletios Metaxakis, now in America. The people and the Press are discussing the matter as seriously affecting their community. His Eminence Bishop Meletios, who is regarded as one of the ablest prelates of the Orthodox Greek Church, is well-known in Cyprus, having been for some years Bishop of Kition, before he was appointed as Metropolitan of Athens during the Venizelos régime. When King Constantine was restored, Meletios was deprived of his position, and proceeded to America where he became the head of the Greek Church Community. His recent election as Œcumenical Patriarch, while considered valid at Constantinople, is regarded by the Greek Government and loyalists as having been irregular and not in accordance with the canons of the Church. Telegrams from Athens state that neither the Government nor the Church can recognise the election, since the Holy Synod was not properly convened, and bishops who should have attended could not do so. It was, they say, carried out by a *coup d'état* and by a minority. There was not, and could not be, in the circumstances, a legal quorum of electors, and moreover Meletios was not eligible, not being of the see of Constantinople. In fact "there was not one of the regulations which was not transgressed." The discord which has consequently arisen involves all Greek Communities in fresh anxiety at a moment when it is essential that Greece should be thoroughly united and speak with one voice.

In Cyprus a very unfortunate situation has been created, as the Archbishop lost no time in dispatching a telegram of congratulation to Mgr. Meletios. This action appears to be generally regarded as injudicious. Some papers take the view that no such telegram should have been sent before ascertaining the views of the other independent Churches. It implies a recognition and acceptance of the election. It is probable that the Patriarchs of Alexandria and Jerusalem will not acknowledge it. The Cyprus Church may then be placed in a very awkward position, since it may find itself separated in this matter from the Church of "the Motherland" and other patriarchal Churches, and in communication with a Patriarch uncanonically or "anti-canonically" elected. The Church of Cyprus is one of the five great churches of the Hellenic body, and every caution should have been observed before practical acknowledgment of the validity of the proceedings. A somewhat severe rebuke is being administered to the Archbishop and his immediate advisers for having brought about the situation. It is suggested (by at least one paper which takes this view) that the best way out of the difficulty would be that Meletios should decline to accept the honour. By such an act of abnegation he would show his sense of patriotism and of desire for Church harmony, and thereby gain the highest respect and honour from the nation. It is, however, probable that the question of validity will be submitted to a full Conference or Congress in the near future, though it is feared that even so the trouble and schism may not end there.

The New "National Council."

Canvassing is now taking place on behalf of candidates to sit as representatives in the new Council which is to steer the "union" ship now preparing for a fresh cruise. Nicosia is to have 12, and already 16 have been nominated. A poll is to be taken on a day not yet fixed. Probably there will be competition in some, if not all, of the other districts. Papers urge the electors to vote only for those candidates who will devote themselves "body and soul" to the object in view and will not support any compromising solutions of the "Cyprus question"; for the papers, by dint of reiteration of this phrase, have come to talk as if such a "question" was a fact generally recognised outside the island.

ASIA MINOR.

Smyrna, December 29.

St. Eleftheros' Day.

Yesterday being St. Eleftheros' day the entire Greek Community celebrated it in honour of Venizelos. The Police and Gendarmes had received orders to urge the inhabitants not to close their places of business and keep the day as a general holiday, but their injunctions only made the people more determined to fête their lost leader. The thoroughness with which this celebration was carried out seems to have astonished the Royalist authorities, and it is rumoured that a considerable number of "shillalah" men have arrived in Smyrna from Athens; these men are expected to assist the royalist police and gendarmes in cowing the enthusiastic Venizelists.

REFUGEES IN CONSTANTINOPLE.

Refugees, victims, direct or indirect, of the Great War, are pitifully numerous in many parts of the world to-day, but nowhere are they more so than in Eastern Europe and Western Asia, and Constantinople surely shelters more of them than any other city. We have referred again and again to the plight of the Russians who have been forced to fly thither in order to avoid the Bolshevik terror, and we sincerely sympathise with them in their misfortune. Some idea of their lot may be gathered from the article, printed on another page of this issue, which won the Second Prize in our recent competition for lady readers. But it is not only Russians and Christians who are suffering in Constantinople. A letter from Lord Lamington and others published in our columns a year ago drew attention to the widespread distress prevailing then among the Moslems of Turkey, and this was followed up by a report from the Rev. Dr. Frew, which must surely have touched the hearts of all who read it.

Unfortunately it is not possible to say that things are to-day any better in this respect than they were a year ago. Mr. Allan Ramsay writing from personal experience gained on a recent visit mentions "70,000 poor derelicts, mainly children, housed in the semi-ruined barracks of Daoud Pasha . . . whose case is the most desperate of all the stricken peoples of Europe." That is a wide claim, but it is probably in no wise exaggerated, as those who know Constantinople and the Turks will be the first to recognize. There is, as Mr. Ramsay well says, nothing to be hoped for locally with a ruined country and a bankrupt Government; and if these poor children and old folk are to be saved, Europe must help and help quickly. At such a time there can surely be no thought of Cross or Crescent, but only of the suffering that has to be relieved if the teachings of either of the great religions are to be followed. A British Committee for Relief of Moslem Refugees in Constantinople appeals for funds, and the British Crescent Society is also doing good work in the vast field. The Secretary of the former is Lieutenant-Commander Neville Rolf, D.S.O., Ottoman Public Debt., Constantinople; and the Hon. Treasurer of B.R.C.S. is Mr. A. S. M. Anik, 2, Fenchurch Avenue, E.C.

Mgr. Chrysanthos, the Metropolitan of Trebizond, is in London, to lay before the Archbishop of Canterbury the Greek Government's views on the election of the Œcumenical Patriarch and on a *rapprochement* between the Churches.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address not necessarily for publication, but as an evidence of good faith. They should be written as briefly as possible and must be written on one side of the paper.

INDIAN ARMY PENSIONS.

To the Editor of The Near East.

Sir,—Isn't "Quai Hai" squealing before he's hurt, when, in the letter published in your last issue, he asks why officers in the Indian Army have not been given a chance to retire on the same footing as the Civil Services? The difference between the two cases is this. The terms of employment of civil officers have been varied to their detriment: the terms of employment of military officers have not yet been varied, though it is obvious they will shortly be varied. When orders issue for "indianising" the Army, then its officers will know whether service in the new conditions is good enough or not, and they will know what terms of retirement are offered to the dissatisfied. If the terms are inferior to those which have been offered to, let us say, the Indian Police, then will be the time to protest: to threaten a policy of ca'canny in advance is in my opinion altogether premature, and scarcely accords with the great tradition of the Indian Army.

I am etc.,
HUZOOR.

THE TRAGEDY OF CILICIA.

To the Editor of The Near East.

Sir,—Doubtless the French and the Turks are in accord in thinking that they have made an agreement, which gives them decided political and economical interests even at the cost of injuring British prestige, and shamelessly rendering homeless 200,000 Armenians, Greeks, and other Christians from Cilicia. Probably they are in accord on another point, too—that the public opinion of the civilized world may rise in hot indignation against the Franco-Kemalist agreement, that Downing Street and the White House may protest against France's secret and greedy acts, which lay the hatchet to the root of concerted action by the victorious Allies, but that public and governmental protests may soon cool down and the treacherous act may stand as a *fait accompli*. But will it? Will the millions of men and women whose sons, husbands or brothers fought the Prussian principle that "might is right," will Englishmen, Frenchmen, Italians or Americans really allow M. Briand's envoy's treaty to become a *fait accompli*, and let hundreds of thousands of poor Armenian and other Christians—who were gathered in Cilicia from the deserts, and promised a thousand times, the right to live peacefully—perish in such inhuman circumstances?

Already tens of thousands of poor Armenians have left Mersina and are fleeing away at random. Their native land, Cilicia cannot keep them; for the Turk is so bloodthirsty, and his political promises are "scraps of paper." Cyprus cannot accept more than 4,000, Syria has refused them, Egypt has done likewise, and the panic-stricken people for days roved the wild seas, before the Greek Government landed them on the islands of the Aegean, where misery will face them.

What are the sins of the Christians of Cilicia that they should on France's demand fall under her zone of influence (Sykes-Picot pact of 1916), then, be deprived of the British joint occupation of the country (after the Armistice), and finally, be handed over to their enemies?

The *Matin* cynically observes that the massacres of the Christians are the result of war only, and that as soon as peace is concluded between the Turks and them, no ground remains for massacres. But the public, especially of England, cannot be fooled so bluntly. Was there a war in Turkey in 1894-95-96, and in 1909, when Armenians were massacred in cold blood?

No: we shall not be led astray any longer either by promises that are forgotten so shamelessly, or by treaties that are made "scraps of paper" so quickly, but we ask in the name of our boundless sacrifices for the Allied cause, in the name of justice and civilization, that a stop be put to those inhuman acts that are crucifying a whole nation on a cross of gain, greed, and political opportunism.

The sufferings of the Armenians during the war will never be forgotten, but the sufferings they endured after the Armistice are more acute and worse, because they originate, directly or indirectly, in the connivance of the Allies, especially of France.

Will the English public keep silence, and Mr. Lloyd George's Liberal Government turn a deaf ear to the limitless sufferings of the Armenian people "and the honour and good name of England"? The Armenians are looking to the great and noble British nation for immediate and real political help.—I am, etc.,

R. TAKVORIAN.

Nicosia, Cyprus, Dec. 16, 1921.

CYRILLIC transliterations.

(From Our Zagreb Correspondent).

The excellent Yugoslav review, *Nova Europa*, to the literary, political and economic articles of which reference has often been made in these pages, has some articles in Cyrillic and some in Latin characters, to which nobody can object. But the editor has one habit of which we find ourselves unable to approve. Foreign names are transliterated, as is of course indispensable, phonetically, into Cyrillic, but they are treated in the same way in Latin, which is unnecessary. The doubtful advantage is that it teaches the semi-educated Yugoslav how to pronounce, at least approximately, the names in question, for the educated one does not require this instruction: it has the undoubted disadvantage that universally familiar names are unrecognisable at first glance. Some of our English names, for instance, appear in very questionable guise; who, for instance, would recognise at once Tekerej, Lord Brajs, Valpol, Carls Dzema Foks, Dzon Drajden, and Tred-Junion?

The two alphabets sometimes lead to amusing incidents. Most words look totally different, of course, but some look the same while having a different sound; for several letters are common to the two alphabets, but have different values. Thus H, P, C, B, and Y, are common to both, but in Cyrillic have the values of N, R, S, V, and U respectively. But the Serbs are so insistent on having the names of stations in Cyrillic as well as in Latin, that even when there is no difference in form, they repeat the word, quite unnecessarily, of course. Thus, in Slovenia, there is a station called Otok. Now this is the same in Cyrillic and in Latin characters. So they have it up twice, once for Latin, once for Cyrillic, and a third time for luck, I suppose; so we see in large letters: OTOK OTOK—OTOK. So everybody is pleased.

The Times announces that the battleship Centurion, Captain R. G. A. W. Stapleton-Cotton, C.B.E., M.V.O., was due to arrive on January 6 at Malta from Egypt, where she has been stationed since October 18, to refit. Other movements impending among ships of the Mediterranean Fleet include the return from Constantinople to Malta about January 19 of the battleship Benbow, Captain A. E. F. Bedford, flagship of Rear-Admiral Sir Richard Webb, K.C.M.G., C.B. She is being replaced at The Porte by the Ajax, Captain H. Ralph Crooke, C.B., which was recently recommissioned. The battleship Marlborough, now refitting at Devonport, is to be recommissioned there on or about January 24, and to leave about February 7 for the Mediterranean to relieve the Emperor of India, Captain W. A. H. Kelly, C.B. C.M.G., M.V.O. which returns to the United Kingdom for refit. Among the light cruisers on the station, of which Rear-Admiral Sir Reginald Tyrwhitt, K.C.B., D.S.O., is in command, the Concord, Captain B. M. Money, D.S.O., is relieving the Caradoc, Captain G. P. Bigg-Wither, at Constantinople. The latter ship is due immediately at Gibraltar for refit. The Ceres, Captain J. K. Im Thurn, C.B.E., left Malta for Egypt on December 23.

THE MYSTERY OF THE ORIENT.

By *Edouard Driault.*

(Continued.)

A course of lectures on Greek Independence is being given at the Sorbonne, Paris, by M. Edouard Driault, in connection with the centenary of the Greek insurrection of 1821. For his introductory lecture, of which we now give a summary in English, M. Driault chose the title "The Mystery of the Orient."

The first portion of this lecture we gave in our issue of December 29. M. Driault then proceeded to the Turkish Era. We continue our summary:—

II.—The Turkish Era.

But the Arab era and the Byzantine era, glorious as they were, foundered in the Turkish era.

The Orient was from the 15th century the Ottoman Empire, whose end we see to-day; for whatever may be the conditions to-morrow of Turkey, it will be no longer the Ottoman Empire. Hitherto there has been too much confusion between Arabs and Turks. The common religion has not effaced racial differences. Arabs belong to the white race; and the Turks are Mongols, a yellow race. There is as much difference between an Arab and a Turk as between a Frenchman and a Chinese. The Arab race has kept itself far more pure, while the Turks have intentionally mixed with vanquished races in the harems and especially in their war-like institution so characteristic of them, the militia of the Janissaries. It might be said that the Arabs became sedentary while the Turks remained nomads, camped on their conquests, as formerly the Camp of the Golden Horde, on the banks of the Volga, before the formation of the Muscovite States. The Turks have had no concern in founding anything. They have been mere warriors, with no other aim than to kill and to pillage for their enjoyment. They have destroyed and usurped the Khalifate of Baghdad. For the Ottoman Sultans were not true Khalifs, as they were not descended from Mohammed. They have usurped Damascus and Cairo, and under their domination these great Arab cities fell into silence, as if they had been reclaimed by the desert. The Turk is the desert, the Turanian, at one time the conqueror of Iran, Ahriman, conqueror of Ormuzd. They destroyed and usurped the Greek Empire. They destroyed, while still in delicate infancy, the young Christian nationalities of the Balkans, which hoped to live and expand under the loosened rule of the Byzantine emperors; on the plains of Kossovo they stamped out for five centuries the young Serbian nation, already valiant and conscious of its great future. They threatened the whole of Christianity. They penetrated almost to Malta, as far as the gates of Vienna; and they thought to feed their horses on the altar of St. Peter of Rome. For 400 years they reigned over the whole Orient. Their domination remained a conquest pure and simple, symbolised by the Janissaries, young Christians converted to Islam, and trained to the enthusiasms of holy war, which allowed the infidels no rest, and assured for its heroes the everlasting joys of Allah's paradise. They have founded nothing; they never tried to. They allowed the vanquished nations to live under their purely military administration, without suspecting that in this way they were preserving them for their inevitable renaissance. Theirs was the might, and the only use they made of it was to terrorise. Heirs of Baghdad and of Constantinople in whatever way they might be, they failed to make the most of the marvellous heritage devolved upon them. They allowed it to fall into ruins. Where is the memory of the Abbassids? Where is the magnificence of the palaces of Byzantium? Some generations of factitious renown derived from the Imperial court: and then life destroyed in the excesses and crimes of the harems. Even the race of the Sultans was lost in nervousness and foolish terrors, which made the masters tremble like slaves, the daily punishment of their tyranny from fear of its

just reward. Of the Parthenon at Athens they made a powder magazine; and it exploded under the Venetian bullets of Morosini and Koenigsmarck, and its mutilation was a symbol of Ottoman barbarism. Prostrated in the deadly delights of the seraglio, which became little better than a resort of excess, while their tired Janissaries lounged and smoked their pipes, the Ottoman Sultans had no thought for the organisation of their Empire, for giving it lasting institutions, for assuring the fusion of conquerors and conquered (the latter always kept at arm's length as a horde of *rayahs*), for work for the general prosperity, for opening roads, for exploiting the riches of the soil, for giving life, in a word, to the magnificent countries of which they were in possession. The Turkish Orient was, consequently, misery and ruin. The great road which the Phoenicians had traced, which Alexander the Great had largely opened from the Mediterranean to the Indus, which the Arab merchants had exploited fruitfully in the interest of all the peoples, this incomparable road, of which one might say that it was and is the essential artery of the ancient world, was cut by the Turks and closed to the world's commerce—an unpardonable failure which has condemned them.

And the West, which has need of the riches of Asia and of all the Far East, the West which has always stretched out its efforts towards India, the fascinating and immensely productive India, the West had to go and search its treasures by means of the voyage round Africa and even right across the world. The discovery of America resulted, but the Turks can claim no merit from it. Up to the 19th century the Turks refused to allow merchants to pass by the Red Sea under pretext that it bathed the shores on which are built the holy cities of Mecca and Medina. The Arab Khalifs had never had such scruples of pure fanaticism. The Turks made no contribution to art: a few mosques which are only copies, even when they have pretensions to sumptuousness, imitations of Byzantine or Persian art, or perhaps of the grand Arab art; no contribution to the development of science, of philosophy, in which the Arabs have been so remarkable; to the organisation of the human city, which requires the assiduous collaboration of all the peoples of goodwill. The Orient, so fruitful in works and in the boldest inventions, was as dead for centuries, for centuries lost that will never be recalled.

A GOOD ONE.

(From Our Zagreb Correspondent.)

The following incident throws an instructive light on the composition of the kaleidoscopic old Austro-Hungarian army. An Austrian officer was instructing his men upon who the enemy was, and the following conversation took place between him and a Croat soldier. "Who is the enemy, Matek?" asked the officer. Silence. "Who is our greatest enemy?" Matek's face lit up. "I know," he said, "The Magyars!" "No," said the officer angrily, "The Magyars are with us: but who is our real enemy, whom the Magyar hates too?" "I know," said Matek, "the Schwabs" (*i.e.*, Germans). "You are mad, Matek" cried the officer, "Tsar William is with our Tsar: the great and cultured German people is with us, against a low, uncultured, enemy in the Balkans. Now you know who he is?" A gleam of intelligence dawned on Matek's honest face. "Why, the Bulgars of course" he cried. "No, you idiot" cried the officer, now really angrily. "No, the Bulgars are with us against their enemy of centuries, who wants to take away our name, our faith, . . ." "Now I really do know" cried Matek in triumph, "it must be the Turk." "Go to the devil" roared the officer, "and learn geography."

Members of an Indian political delegation have arrived at Melbourne on their way to Fiji to inquire into Indian discontent there and to investigate the possibilities of setting Indian ex-soldiers and the land in Fiji.

MUSICAL NOTES.

ON CAROLS.

The subject of carols in this country is one to which the most abysmal ignorance still attaches. For there is a tendency to regard them, either as being a rather dismal product of, or an extorting prelude to, Christmas, or as being confined to a semi-sacred hymn-like tune. Indeed, if the average person were asked to name more than a dozen carols, he would be puzzled, and possibly quite unashamed. This tendency, which I suppose is one of the curses left over to us by musical Victorianism, is happily, though slowly, dying out, since deeper research is being made yearly into the history of carols. And I am sure it will be further diminished by the publication of an entertaining volume, written by Dr. W. J. Phillips: "Carols: Their Origin and History." With Words and Music. (London: Routledge and Co. 6s. net.)

Dr. Phillips' book is a quite handy and handsome presentation of facts which are only to be found in larger and less accessible works. His description of the carols, of their nature, their history, and their literary and musical content, is very simply made, the object being to popularize his theme; and the volume has the welcome addition of musical examples and of various illustrations upon some of the texts (the best of which latter is Henry Payne's curiously full design to "I saw Three Ships come Sailing in.") There is the danger in this simplification of style of becoming either monotonous or colourless, but on the whole it is avoided, and the book serves well its purpose of being an introduction to the subject.

Originally the word "carol" meant nothing more than a song-dance, and might as well be applied to Spring as to Winter; certainly its primitive associations were secular. But gradually it came to be associated with Christmas, and it is the historical narration of this association that is the best part of Dr. Phillips' work. He shows clearly how the carol developed from the Mystery-plays, into which the ecclesiastics had willy-nilly to incorporate it, so popular was this form of song with all the people; and from the fifteenth century until the advent of the Puritans in the seventeenth century (and even later in other countries than ours) the art of carol-singing and of carol-making was a distinct one.

When the author of this book proceeds to describe the varied nature of the carols, dividing them up into such groups as "Carols of the Virgin Mary," "Carols of Nature," "The Wassails," and so on, he is not so illuminating as he might be, for he rather disregards modern research into the subject. Thus when he quotes the beautiful fifteenth-century "I sing of a maid that is makeless," he might have added how freshly popular it has become through Holst's setting of it for voice and violin; similarly, it would seem impossible to write down "Wassail, wassail all over the town" without mentioning the wonderful arrangement of it by Vaughan-Williams. Among musicians to-day there is a new and wide interest in carols, both from historical and creative motives, and it is the chief blemish of this book that that fact should be rather obscured.

AN IRISH COMPOSER.

There are still people who assign high musical significance to that group of musicians who, towards the end of the nineteenth-century, were responsible for the renaissance of English music—that group whose most prominent figures were Parry, Mackenzie, Stanford, and Cowen. Of these people, Mr. J. F. Porte, whose book on Elgar I reviewed in these columns a month or two ago, is one; for he has published a painstaking study of "Sir Charles Stanford" (London: Kegan Paul. 7s. 6d. net). Historically, C. V. Stanford has much importance, as much for his interest in folk-song as for his work for English music; particularly for his research into Irish melodies and for his raising of the general standard in our academies will he be remembered. But

musically, he will, I think, apart from a few songs, be soon forgotten. However, Mr. Porte does not think so, and he has carefully made a complete catalogue, and in some cases a useful analysis, of Stanford's works. This writer's critical faculty is not strongly developed, but, for those who care for these things, his record will be very serviceable.

ON GRAMOPHONE RECORDS

For some time I have thought that a few brief comments upon gramophone records as issued in this country may be of service to readers, particularly those abroad, and I hope now to have the opportunity of saying something on the subject each week. The enormous uses to which the gramophone can now be put are disputed by no musician, and any opposition to it as a musical instrument comes from old-fashioned fogies, and is certainly dying. There will surely come a time, as the making of records becomes more perfect—and it is improving every year—when every cultured household will possess a gramophone.

Now among the companies issuing records in England there is none more enterprising than the Gramophone Company, the makers of "His Master's Voice" records, and it is upon some of their recently-issued works that I will speak this week. First I shall take some of their instrumental works, then vocal, and finally the light and more (what is called) popular kind of records.

Elgar's "Enigma Variations" have now been recorded on two double-sided records, and excellently, as far as Variation 10. From those early days when Bernard Shaw spotted the composer of these Variations as a winner, they have been growing in popularity in every civilized country (except possibly France), and it is good to have them here, conducted by the composer. If one had to find marks of supreme excellence, one could point to the fine clarity of the cannonading drums in Variation No. 7, to the purity of the clarinets' tone in No. 8, and to the exquisite wood-wind snatches in the "Dorabella." But it is, admittedly, a case of finding virtues.

Many people, I suppose, now that Saint-Saëns is dead, will buy the two double-sided records of his second pianoforte concerto, played by the Belgian, de Greef, and conducted by Landon Ronald. The amazing brilliance of the work is fully realised by the pianist, and is well reflected on the records, which deal very faithfully with the incisive, staccato touch; but for myself, I find the work thin, and over-full of academic correctness.

The glorious overture from Wagner's "Die Meistersinger" is magnificently recorded in two parts, with Albert Coates conducting, the balance of brass and strings being particularly notable; and its sensuous appeal comes through as the intoxication from strong wine. Similarly, the Scherzo from Dvorak's "New World" Symphony is made in two parts, with Landon Ronald as conductor. I have never understood why this symphony has retained its hold on public affection; but still, here it is, as well represented as you may wish by the Royal Albert Hall Orchestra.

Benno Moiseiwitch is a young Polish pianist who gained an immense popularity in England during the war, and he still holds it as a technician *par excellence*; he plays as if he sensed everything in tone-values, and he has not yet developed a great imagination. However, his last-issued record, double-sided, is peculiarly adapted to show off his virtues, for it contains a "Finlandish Dance" of Palmgren, Leschetizky's "Arabesque in A flat," and Chopin's Valse in G flat major. His delightful spickness and neatness of technique are brought out with superb fidelity, and though the individual *timbre* of the pianoforte has not yet been conquered, it is being more nearly approximated.

The two pieces played on one record by Isolde Menges, one of our finest lady fiddlers—an adaptation by her husband, Tod Boyd, of Brahms' "Waltz in A flat major," and of this arranger's own "Samoan Lullaby"—are beautifully recorded. In both there is some perfect double-stopping, and the purity of the violinist's tone is a joy.

Andante.

NEAR EAST BOOKSHELF.

RADICAL ZIONISM.

"ZIONISM AND WORLD POLITICS." By Horace Meyer Kallen, Ph.D. (London: William Heinemann. 12s. 6d. net.)

This important American work, by a member of the "New School for Social Research," is above the range of purely Jewish interests. It shows how the Jewish problem has been bound up with the growth of social, political and scientific conditions; it describes the inner nature of Zionism in Europe, America, and Palestine, and it urges, with praiseworthy frankness, a peculiarly radical Zionism which merits no less outspoken comments. Briefly, Dr. Kallen urges that the problem of Jewish settlement is the development of Palestine as a state dedicated to the advance of social justice. This means a Jewish economic state; it means "industrialization" to allow for the admission of a larger population; it means something like Guild Socialism, but more political (p. 311). In this scheme the Co-operative Society will form a basis, and the British "Co-op." would guide and train it (p. 321); and Dr. Kallen believes that the sympathy of British Labour for Zionism is not only in order that a "historic wrong" may be righted, but that "an important experiment in creative democracy" may be tried (p. 288). And as the trend of life in this country is towards "industrial democracy," it is the policy of the Jews to be in harmony with it and not with "the powers that be" (p. 290). Moreover, friendly relations must be cultivated with the Arab-speaking population, with a view to the assimilation, on the cultural level, of the Jew and the kindred Arab. Common opposition to imperialism will also unite them.

The Jews are the only people for the experiment, which in fact is inevitable for Jewish Palestine; and any resistance of vested Jewish interests could be broken down by "force or persuasion" (p. 316). The cause of the Jews and that of the masses are generally identical (p. 233), and Palestine holds a central place in a world-wide network of political and other relationships (p. 278); consequently it is interesting to know that the social-economic theory urged by Dr. Kallen has possibilities outside Palestine (p. 303). Further, a happy Palestine will require a new ideology, a new system of concordant ideas and institutions; and Dr. Kallen has no doubt that only a new ideology will save Europe. He is thus in agreement with Mr. Lenin, even to the extent of deploring the part religion takes in education, and in the view that teachers should be sent, preferably from America, to teach the young (pp. 211, 235, 284, 326 sq.). Indeed Dr. Kallen, who does not seem to have heard of the horse that died just as it was learning to live on nothing, has much sympathy with the Russian experiment, and only regrets that Bela Kun's dictatorship in Hungary was not left alone: "The success or failure of this experiment under its own weight and strength would have been a distinct service to mankind (p. 229). No doubt! True, the dictatorship "avoided, as well as it could, the errors of the Russian Soviet Republic" (p. 227), but the experiment needs severe measures, e.g. "vigorous preventive justice, education and industrialization" (p. 235). Besides, Russia undergoes socialization through "autocratic" force (p. 203), and we hear of the "hardships of an imposed communism" (p. 224), and the "vigour" of its military discipline (p. 226).

Dr. Kallen denounces the Allied blockade of Russia (p. 208 sq.) but admires that by organized Labour (p. 231). He condemns the White Terror, but not the Red, and it is doubly significant that he can speak of the "prophet-like truculency" of a Zionist champion (p. 134). Condemning sweating, exploitation, etc., he is yet aware of Jewish faults (pp. 91, 125); but emphasizing "Christian usury," he forgets both Semitic antiquities, and the capitalist promise of Deut. XV.6. Imperialists are of course anti-Jewish, and vice-versa, and he condemns in turn nearly all the "imperialisms"—national, religious, cultural, economic, and financial. But he omits the socialist imperialism of the Soviet Republic though he is aware of her "military oppression and militant propaganda in the East" (p. 212); and,

referring to early Palestine situated between the military imperialisms of Asia and Africa, forgets that Jewish imperialism was not quite unknown. Seeing that Zionism has its own mission—to raise the "barbarous" level of the fellahin (p. 295), it is a little out of place to gibe at "the traditional high moral business" when civilisation is to be defended against Russia (p. 222).

No people is so disorganised as the Jews, and Zangwill's biting epigram is repeatedly verified (pp. 86, 117, 143, 152 sq., 227, 244). Suffering has repeatedly united them, but their own differences obstructed united Jewish action to save two thirds of the Jewish population of the world from being done to death (p. 247). Anti-Semitism may be practically rooted out in Russia (p. 211), but we learn of the intense bitterness among the Jews themselves (pp. 244 sqq.). Their worst enemies seem to be always the kinsmen within their own gates. Dr. Kallen has the scantiest respect for Rabbinical and Reformed Jews, and deplores the sentimental or religious considerations which appear to hamper his secularist Zionism. He speaks of "the resentful opposition of the Secretary of State for India, an Englishman of more or less *Mosaic persuasion*" (p. 189)—we italicise a favourite phrase of his; and elsewhere he scents hostility or malice even on the part of his own people (pp. 97, 319 sq.). When, therefore, charges are brought of obstructionist or malicious Anti-Semitism it is well to bear in mind Dr. Kallen's perfectly candid remarks on the weakness, or inability, or indiscretion, or stupidity of Jews themselves (pp. 98, 100 sq., 174, 254 sq., 326).

As regards the economic theory urged by Dr. Kallen, the fundamental fact is that any sweeping theory of social improvement must be far more scientific, more logical, more sociological, and so forth, than that which is offered by him or by the Bolshevik and other extremists. He has ignored important sociological evidence. He has not understood his Old Testament history, but relies upon some second-hand "higher criticism." He misunderstands the Hebrew prophets, and his conception of "righteousness" is as fallacious as that of old which made it mere alms-giving. His idea that the land belonged to the people also quite misses the point. (Lev. xxv. 23). So, while, on the one side, "higher criticism" and the science of religion are re-interpreting the Old Testament—and Prof. Warburg has rightly perceived that the merely historic claim to Palestine is not of the strongest (p. 108), on the other side, when Dr. Kallen demands a new ideology, a new philosophy of Zion (p. 284), he must realize the ordinary principles of a unifying ideology.

The value of any unifying ideology will be judged, not least of all, by its attitude to religion, and Dr. Kallen seems to go out of his way to offend the religious and sentimental feelings which have hitherto supported Zionists and other Jews. Nor is his radical socialism tactful if he supposes that for his egregious experiment upon the unfortunate inhabitants of Palestine he can appeal to Jewish capitalists and others with a "sense of religious duty" and "social responsibility." (p. 331 sq.) Dr. Kallen must not complain if his book alienates the sympathies of other readers besides the present writer, and he can scarcely expect Palestine to be the field for a fallacious conception of "social righteousness," and raw material for a half-baked theory of social progress. His very candid book deserves candid consideration. The Jewish problem is one in which Jews themselves must co-operate; and this book may help to clear their minds. Jews have suffered cruelly and innocently, but the excesses of their own number have been chief among the contributing factors. If some of the most thorough-going Semitists have been of non-Semitic origin, Anti-Semitism, on the other hand, is also a Semitic feature, and the Old Testament itself is, in a sense, Anti-Semitic. There must be a profounder study of the Jewish problem if Zionism is to succeed, and Dr. Kallen's "study in history and social psychology" is mainly a well-written and clever piece of radical propaganda.

STANLEY A. COOK.

TWO GREAT REVIVALS.

"THE GREEK RENAISSANCE." By P. N. Ure, M.A., Professor of Classics at University College, Reading. (London: Methuen and Co., 6s net.)

Historical research has been revolutionised by the vast scientific movement which owes its birth to Darwin's "Origin of Species." No modern historian enters on his task with an arsenal of preconceived ideas, or presumes to ignore facts which do not square with some favourite dogma. The environment which moulded a nation's intellectual life is studied in the light shed by geology, archaeology, and economics. It is admitted on all sides that the roots of the present lie deeply embedded in the past and that the future looms before us as an inevitable resultant of forces which have been long in operation. The new departure is admirably illustrated by a work on the Greek Renaissance by Professor P. N. Ure, who teaches Classics in University College, Reading. He deals with every side of that marvellous civilisation to which our own stands deeply indebted; and shows us that the law of evolution produced identical effects at widely different epochs.

We are apt to restrict the term "Renaissance" to a revival of literature and art which dawned in the 15th century and has not yet spent its force. This was no isolated phenomenon: Greece became the theatre of a Renaissance in the seventh century B.C.; and the two movements have much in common. In each antecedent civilisations had been destroyed by waves of barbarian invasion, and in each a period of comparative tranquillity gave scope to the constructive genius which runs like a thin vein of gold through the quartz of human nature. Greece borrowed largely from the products of Egyptian and Asiatic culture, while the Byzantine Empire in its death-throes handed the torch of Hellenic civilisation to Western Europe. The Trojan expedition immortalised by Homer had the same effect as our Crusaders in welding inchoate nationalities into a more or less coherent entity and inspiring them with common ideals.

Although Professor Ure emphasizes the essential "modernity" of the Greek Renaissance he is careful to point out divergences between the two movements. Ancient Greece and her colonies were a congeries of City-states, each administering an area no larger than that of an average English county. Such an environment gave ample opportunity to the expansion of individuality and the exercise of constructive genius. The political unit is now immeasurably greater, and machine industry has conspired with rapid communication to stud the Western World with overgrown human hives, which stifle originality and reduce all workers to a uniform dead-level. The population of Attica in its glorious prime was less than that of the smallest London borough. On the other hand the Greek Renaissance compares unfavourably with our own in its failure to develop experimental science. This defect "limited the Greeks' sphere of thought, their mechanism for diffusing knowledge, and for political organization." But every social problem which perplexes us to-day arose in the city states of ancient Greece, and was dealt with by men who "sought objectives similar to our own and did so with a not dissimilar equipment." Educationists will concur with Professor Ure's opinion that "taken in its broadest sense, history is perhaps destined to be the most important science of the immediate future."

THE CALL.

"SOUTH WITH SCOTT." By Captain E. R. G. R. Evans, C.B., D.S.O., R.N. (London: Collins. 10s. 6d. net.)

"The object of this book," writes Captain Evans in his Preface, "is to keep alive the interest of English-speaking people in the story of Scott and his little band of sailor-adventurers, scientific explorers, and companions. It is written, more particularly for Britain's younger generations." It is impossible to think that the story of Captain Scott's wonderful achievement and tragic, heroic death can ever be forgotten, but it is certain that many who would not read the longer account nor those written from the scientific specialist's point of view, will read enthralled this condensed account of it, which is a perfect book of adventure. Captain Evans' style is absolutely simple and straightforward, but he makes every scene vivid, and his companions so real that we seem to have known them. Every detail that he tells us of the voyage, of the winter spent on Cape Evans, and of the final journey is of intense interest, and we read on and on, until in the end we seem to have been wandering too in those endless fields of snow and the oppression of the final tragedy is almost unbearable. From the moment when "the brown backed petrels began to appear, sure precursors of the pack ice" we plunge with the adventurers into a new and wonderful world, a grim world, whose peaks, the author feels, seem to be mocking the explorers. There is a vivid description of the landing on Cape Evans and the erection of the winter dwelling place. Here the newest of the ill-fated motor sledges broke through the ice and sank. Captain Scott, we are told, took the news "awfully well." It is in little touches like this that Captain Evans mostly shows his tremendous admiration for his leader, making us feel that he considers him great beyond ordinary words of praise.

The sense of tragedy gradually closes in on the reader who knows only too well what was to be the fate of five of the gallant band and who knows too that all the time Amundsen was ahead with the Norwegian flag. But before this there is much that will delight him, especially if he belongs to "Britain's younger generation," in the description of life in the Hut—a plan of which is given, showing how it was divided up—and particularly of the wonderful feast on Mid-winter Day and the "Christmas tree." We have here illustrated one of the greatest triumphs of the spirit of man, the successful determination to lead a normal life under utterly abnormal conditions. One of the clearest of Captain Evans' pictures is that of Captain Oates working unceasingly to lessen the hardships of the ponies, in a storm on the voyage, when "he seemed to be actually lifting the poor little ponies to their feet as the ship lurched heavily to leeward." "He himself appeared quite unconscious of any personal suffering, although his hands and feet must have been absolutely numbed by the cold and wet." In a blizzard when he stayed outside "trying to keep life in his charges and up to the very last, although the time had come when the animals had to be killed and eaten one by one." It was a part of the sublimely unselfish courage that sent him out to meet death in a blizzard.

It is impossible to give an adequate impression of this powerful book and we can only recommend everyone to read the story of heroic endurance for themselves.

BOOKS RECEIVED.

"Shuwa Arabic Stories." With an introduction and vocabulary. By C. G. Howard. (Oxford University Press).

"The Song of Songs: Love Lyrics of Ancient Palestine." By Morris Jastrow, jun., Ph.D., LL.D. (London and Philadelphia: J. B. Lippincott Co., 12s. 6d. net.)

PERSONAL AND GENERAL.

January 12 (New Style).

December 30, 1921 (Old Style).

Gumada I, 13, 1340 A.H. of the Moslem Calendar.

Tebet 12, 5682, of the Jewish Calendar.

Prince Nicolas of Roumania is the guest of the King and Queen of Sweden at Stockholm.

M. D. Mamartcheff, Secretary to the Bulgarian Legation, left London last week for Sofia, on leave.

Mr. Lindley, the new British Minister to Greece, has arrived in Athens.

Viscount Peel, who is in Palestine, will return to London at the end of January.

Major and Mrs. T. G. Hetherington have left Abberton Manor, near Colchester, for Cairo.

Sir J. R. Ellerman and Lady Ellerman have left London for Egypt, and expect to be away for two months.

Viscount and Viscountess Milner have returned to town from Sturry Court, Sturry, Kent.

Canon Burroughs, Dean-Designate of Bristol, will shortly leave England for Egypt, and expects to be away nearly three months.

Mr. A. O. Lamplough, the well-known painter of Egyptian scenery, left England last week on board the s.s. Narkunda.

M. Gavrilovitch, Secretary to the Legation of the Kingdom of the Serbs, Croats, and Slovenes, and Mme. Gavrilovitch returned to London last week from Cannes.

It is announced that Princess Mary has definitely selected as one of her two bridesmaids Princess Marie of Roumania.

The *Wiener Zeitung* states that ex-King Ferdinand of Bulgaria is engaged to Mlle. Hronek, a leading member of Viennese society.

Lord Northcliffe arrived at Colombo (Ceylon) on January 3, and paid a visit to the Governor, Sir William Manning.

The marriage was celebrated on December 22, between Morton Hiles (late Political Dept., Mesopotamia), and Suzanne Hansell, widow of Miles Hansell.

The Archbishop of Trebizond, with M. P. Dragoumis and M. A. Nicolaidis, members of the Greek National Assembly, have arrived in London.

Sir Murdoch Macdonald has arrived in England from Egypt. When he returns to Cairo in February he will be accompanied by Lady Macdonald.

In a chess match played between past members of Oxford and Cambridge Universities, held at the City of London Chess Club on January 7, Major R. W. Barnett, M.P., played first board for Oxford.

Brigadier-General Sir Percy Sykes is reported to have arrived in Tangier for the purpose of studying the methods pursued by Marshal Lyautey, the French Resident-General in Morocco.

The Marquess Curzon has received a message of good wishes for the New Year from M. Pashitch, Prime Minister of Yugoslavia, and has reciprocated its friendly assurance.

The marriage was celebrated on January 3, at St. Clement's, Bournemouth, by the Rev. C. Stewart, between Captain Charles Kellie, 1st Brahmans, youngest son of Colonel J. Kellie, late R.E., and Sybil Doreen, youngest daughter of the late Lt.-Colonel R. A. C. King, R.A., and Mrs. King, of Bournemouth.

A marriage has been arranged between Peter Keith Wallace, second son of Major-General A. Wallace, C.B., I.A. (ret.), and Mrs. Wallace, Fleetwood, Wellington College, Berks, and Christian, youngest daughter of Mr. and Mrs. Ernest Edmonds, of East Cosham House, Cosham.

An engagement is announced between Major Wilfrid Weatherbe, R.F.A., youngest son of the late Sir Robert Linton Weatherbe, Chief Justice of Nova Scotia, and Lady Weatherbe, and Laura Margaret, daughter of Henry Montague Laurie, I.C.S. (retired), barrister-at-law, and Mrs. Laurie, Kenbank, Dalry, Kirkcudbrightshire.

A marriage has been arranged, and will shortly take place, between Mr. Ernest Hodder Platt, late Coldstream Guards, of Le Douvre, Sark, and 12a. Barn Park, Teignmouth, and Mlle. Marie Claire Mihaesco, Legion d'Honneur, youngest daughter of General Ath. Mihaesco and Mme. Lucie Roxanne Mihaesco (*née* Jiano), of 11, Rue Antrîn, Bucharest.

The marriage was celebrated on December 12, at St. Paul's Cathedral, Calcutta, by the Rev. Canon Stokoe, assisted by the Most Reverend the Metropolitan, between Frederick Ewart Robertson, eldest son of the late Mr. F. E. Robertson, C.I.E., and Mrs. Robertson, and Brita Muriel, only child of Mr. and Mrs. H. R. Cobbold, 20, Lee Road, Calcutta.

The Rev. Ibrahim Baz has been appointed a canon of St. George's Cathedral, Jerusalem. He is the first Palestinian to receive this dignity, and deserves the thanks of the British community for his really heroic work in helping British wounded prisoners in Jerusalem during the war, when it was risk to any man's life to be known to the Turks as having British sympathies.

The marriage arranged between Major W. A. Nicholls, D.S.O., R.F.A., only son of General Sir William Nicholls, K.C.B., and Lady Nicholls, of 79, Warwick Road, S.W., and Hilda Evelyn, youngest daughter of Brigadier-General Gaussen, C.M.G., C.I.E., D.S.O., and Mrs. Gaussen, will take place at Brompton Parish Church on January 18.

A marriage has been arranged and will take place in February, between Mr. H. S. Offley Garrett, M.A., I.E.S., Professor of History in the Government College, Lahore,

OUTFITS FOR EGYPT, INDIA, AND THE FAR EAST

The Official, Business or Sporting traveller going East this Winter will find just what he wants at

THRESHER & GLENNY

A century old outfitting experience and records of what others have taken are at your service.

Write for List "H" mentioning destination and nature of appointment.

152 & 153, STRAND, W.C.2.

only son of the late Dr. E. M. Garrett, of Cambridge, and Mrs. Garrett, and Sibyl Beverly, younger daughter of the late Mr. H. H. Young, of the Cottage, Old Normanton, and Mrs H. H. Young, of the White Cottage, Holloway Hill, Godalming.

Mr. Edward James Standen, C.B., of Queen's Gate Gardens, Kensington, from 1857 to 1872 secretary to the British Commissioner on the European Commission of the Danube, and who served as Resident Director in Paris to represent the British Government on the Council of the Suez Canal Company, being appointed a member of the Managing Committee in 1888, a Crimean veteran, who died on November 1, aged 84, left £16,178.

Lord Lytton, Governor-designate of Bengal, has arranged to leave London early in March in order to arrive in Calcutta in time to meet the convenience of Lord Ronaldshay, who wishes to make over the charge of the Governorship before the end of that month. Lady Lytton and probably the three younger children will accompany him. Lord Lytton will have a holiday fortnight in Switzerland in the last half of this month if the work of preparation for five years' absence in Bengal permits.

While it was fully expected that M. Kostitch, the Yugoslav chess champion, would win the premier tournament at the Hastings chess festival, it was scarcely expected that he would do so as easily as was the case. He actually went through the tournament without even a draw, an achievement which is rare enough even in club events, and as his opponents numbered among them the British champion and an ex-British champion, it must rank as a distinctly fine performance. M. Kostitch, who will be staying in England for some time, will probably be a competitor at the London International tournament this summer.

APPOINTMENTS, PROMOTIONS, &c.

Herr Augustus Kral, the Austrian Minister to Bulgaria, presented his credentials to King Boris on Friday, thus reopening diplomatic relations between the two countries, which were broken off in October, 1918.

The Secretary of State for India in Council has made the following appointments to the Indian Educational Service :—

Mr. Surendra Nath Dhar, D.Sc. (London), M.Sc. (Calcutta), and Mr. Kayalettha Chakko Chakko, D.Sc. Eng. (London), as Professor of Civil Engineering respectively at the College of Engineering, Madras.

Mr. Arthur Errol John McLean, B.A. (Oxon), as Principal of the European High School, Maymyo Burma.

Miss Alice Henrietta Lawrence, Honours School of Modern History Oxford, Diploma in Pedagogy, London, as Inspector of Training Institutions for Women Teachers in the United Provinces.

OBITUARY.

M. Dimitrakopoulos, chief of the Progressive Party in Greece, has died in Vienna, where he had gone for a cure.

The news comes from Paris of the assassination of Count Maurice de Leusse, who left France last November for Ethiopia on a big game shooting expedition. He was murdered by native brigands when 20 days' march from Adis-Ababa.

The death is announced from Egypt of Dr. Herbert Milton. Dr. Milton had for many years past been a prominent figure in Anglo-Egyptian circles. It was in 1884, says the *Sphinx*, that he went to Egypt to take up the appointment of Principal Medical Officer at Kasr-el-Aini Hospital. In this capacity he did much excellent work, and after his resignation in 1898 he continued that work in a nursing home at Gezira, where he remained until 1916. And apart from his medical duties, Dr. Milton took a great interest in the development of Egypt.

A MILITARY HOLIDAY FOR THE NEAR EAST.

After Washington, Cannes. In the matter of conferences Pelion is being piled upon Ossa, and in the south of France a valiant effort has been made to prevent the first from eclipsing the second, by producing something more than what is proverbially associated with the labours of mountains. At Washington definite results were secured; there is at least to be a naval holiday in regard to capital ships, however much its economic and moral values are to be whittled away by competition in other types of vessels; and the Pacific Pact is a tangible contribution to the world's peace. The Pacific, however, is a long way from Europe. Cannes is nearer home, and is called upon to deal with matters of more pressing urgency. The greater interest, therefore, attaches to the second conference, and for this reason it was harder to live up to the expectations formed of it. Unfortunately, the meeting of the Supreme Council does not, in the nature of things, lend itself to concrete results. It may decide to summon an international economic conference at which Germany and Russia are to be represented, and the resolution to this effect is a notable achievement; but the main interest will attach to the decisions taken by that later gathering. The Supreme Council may also discuss the situation in the Near East; but unless the meeting of the Foreign Ministers in Paris is to be stultified at Cannes little more can be done than to prepare the ground for agreement between Great Britain, France and Italy in redrafting the Turkish settlement. What Europe is waiting for is the actual terms that are to restore peace to the Near East and remove by no means the least important contributory cause to unrest over a much wider region. But while the Entente Powers are feeling their way cautiously and without conviction to a settlement of the Turkish question, there would seem to be a good opportunity for the States of South-Eastern Europe to take a leaf out of the Washington book and to endeavour to do for themselves, and incidentally for Europe, what the Pact between the Great Powers has done in the Pacific.

Action on these lines would not imply any weakening of the desire to make a complete success of the conference to which the Cannes meeting has given its sanction. For the economic reconstruction of Europe anything short of co-operation between all the States must necessarily be inadequate. There is not the same need for catholicity to forge an effective political instrument in a restricted area. The Cannes resolution of January 6 imposes as an antecedent stipulation to the economic conference that "all countries should join in an undertaking to refrain from aggression against their neighbours." This is a most excellent condition, although a little vague, as it does not indicate the period for which the self-denying ordinance is to hold good. It enforces upon the participants the spirit of the League of Nations, whether they belong to that body or not. But the clause presumably had special application to Russia;

and if the Soviet Government should refuse to take part in the conference, there may be a tendency to let the all important stipulation drop. It would be a great mistake, if this were done. With every country pledged not to attempt aggression, the ground would be ready for a Near East Pact on the lines of the Washington Agreement. Fear of attack or the harbouring of aggressive designs is responsible for a heavy military expenditure in all the States of South-Eastern Europe, with one involuntary exception. If both factors are eliminated nothing should prevent all the countries concerned from formally agreeing among themselves to reduce their military commitments to a scale proportionate, let us say, to that imposed upon Bulgaria. The advantage of such a step is obvious. In the current budget of Yugoslavia military expenditure is estimated at a quarter of the budget total. One of the great hindrances to an improvement in the rates of exchange is the State expenditure in each country. Economic reconstruction must needs lag behind the nations' requirements until each Government adopts practical measures of economy.

The chief obstacle to a pact of this nature would be the refusal of Russia to take part in the conference or to subscribe to the condition that she should refrain from aggression. Roumania would naturally hesitate to run the risk of a reduction of her powers of defence in the face of the Bolshevik menace; and unless a fixed ratio between military strength and population were adopted by all the countries in South-Eastern Europe, the pact would be shorn of its value. To meet the difficulty presented by the Russo-Roumanian frontier, it should be possible for the Entente Powers to give the necessary assurance to the Roumanian Government. They would find the guarantee well worth the obligations it imposed, because the economic rehabilitation of South-Eastern Europe is essential to the well-being of the rest of the Continent. A further obstacle to the proposed agreement may be met with in the fact that the Peace settlement has in various respects created an unsatisfactory condition of affairs in the Balkans. Apart from the present *impasse* between Turkey and Greece, Yugoslavia has no port of her own on the Adriatic. Bulgaria is without an outlet to the Aegean Sea, and the partition of Macedonia cannot represent a settled state of things for that territory. Although the different countries might agree to a military holiday for a certain period, it would be in several cases with the reservation that they must still work openly or covertly each for the realization of its particular ambition. If, however, South-Eastern Europe could produce a statesman inspired with vision and prepared on behalf of his own country to set an example of self-denial, there should be a good opportunity at this time, not only of accomplishing the pact in question, but also of bringing the States together into useful economic co-operation, which would go far to rehabilitate that part of the world. The peoples themselves are wearied of international as well as of domestic strife, which have brought them to such a parlous condition; they would welcome the occasion that diverted the attention from party politics to a policy which promised temporary relief and, perhaps, a means of permanent escape from their existing troubles. So far the only move in this direction has come from Czecho-Slovakia, where Dr. Benes has succeeded in bringing into separate agreement with his own country, Roumania, Yugoslavia and Austria. Prompted by fear of aggression, these treaties are only negative contributions to the establishment of permanent peace; but now that their aim has been attained it should be possible to build upon them a more constructive policy. As soon as the different States of South-Eastern Europe have accepted the conditions on which they are to be represented at the International Economic Conference, they should push forward a pact of their own. Linked together by agreement in regard to a military holiday for themselves, they would be able to make a far more effective contribution to the discussions at the All-Europe Conference.

WHEN THE RUSSIANS CAME TO CONSTANTINOPLE. †

(November 1920).

By *Eveline Scott.*

As far back as I can remember and a great deal further back than that, the inhabitants of the Bosphorus have always thought of the Russians as a danger and a menace. Even as children, we caught the prejudice from our Turkish neighbours and whenever revolutionary clouds gathered on our horizon, never quite clear from promise of stormy times, we invariably thought the worst thing that could happen to us would be to have the Russians knock down the forts at the entrance to the Black Sea and take possession of Stamboul. Had it not always been the tradition to believe that some day they would inevitably conquer Turkey, make themselves overlords of the Black Sea by commanding its straits, and head of the Eastern Church by seizing old Byzantium? But there was more than a historical tradition behind our feeling. There was a present and lively fear of a Muscovite avalanche. Although we were English, we dreaded and disliked the Russians, as did our polyglot friends. If ever we heard cannonading, which was more frequent than you would believe, we used to say, cocking our ears, half as a joke and half in dread: "Hear that? The Russians are coming!"

I could not help thinking about this the other day when I stood at my window and watched, through the drizzling rain, a dozen or more old French tramp steamers chugging slowly down stream with their heavy loads of refugees from the Crimea, packed in grey lines on every available spot on deck, high and low, fore and aft, on the bridge, in the life boats, along the railings—everywhere. The Russians had come to Constantinople at last. More than one hundred thousand of them, miserable, hunted, starving creatures, without property or hope, faced with a future of complete uncertainty and pursued by the ghosts of what they had seen. Not were they the first, these Crimean civilians and remnants of Wrangel's army, to invade our city. They found thousands of their compatriots already here, for, ever since the first revolution they have been coming and coming and coming. An endless Slavic stream. It would seem that in this age of refugees, the Russian is the refugee *par excellence*. He has been trekking steadily for the last four years. From Petrograd to Moscow; from Moscow to the Volga; from the Volga to Sebastopol; from Sebastopol to Turkey—and then where next? Always the Russians have been fleeing from a terror that has dogged their footsteps, stolen their peace of mind, and finally pushed them into the sea.

They have taken possession, so to speak, of the city. You see them everywhere, in all manner of quaint and curious garb; in bedraggled uniforms of an obsolete army, in heavy furs brought from the ice-bound North, in the long, tight fitting coats, woolly caps, ammunition shoulder straps and high boots of the Caucasus mountains, in the gay and fashionable dress of the Moscow nobility, and in the nondescript, pitiful apparel of the confirmed refugee. All classes, all ages, all trades, all professions are represented. It is as though Russia had been poured like sand, freely, through a funnel into the Turkish capital. . . . Was there ever a day when we spoke with confidence of Russia as a steam-roller?

You may imagine what it means to have tens of thousands of refugees thrust into an overcrowded city, which has suffered more than most capitals in lack of opportunity to build new dwellings during the war, and which has been housing, moreover, an Allied army of no inconsiderable numbers. There has been horrible suffering. People have even gone so far as to say that it would have been less of a hardship to have faced a Bolshevik invasion than an uncertain and unhealthy foothold in a congested alien city. Bewildered authorities have done their best to meet the problem, but how can

such a problem be adequately met? There is so much of it. And where is it to end? Who will be bold enough to say when Russia will be again a safe country to live in?

Individuals, societies, organizations try desperately to alleviate some of the misery. Camps are formed outside the city; governments segregate the refugees on the Princes' Islands. Indeed, Prinkipo, made famous to the western world by Wilson's proposals that it be a meeting for pourparlers with the Bolsheviks in 1919, has been turned for some time into a miniature Crimean watering place. There, instead of the nondescript Levantines of other days, who might combine in their persons the blood of five or six nationalities, you see the sturdy Slavic figures of men and women with large frames, strong faces, high cheekbones, blue or grey eyes, and the free, rather wide, stride of a powerful race.

You can go to several apartments and *salles de vente* in Pera and buy anything from second hand clothes to furs and diamonds, fans and snuff boxes brought there by the refugees to be turned into money for bread. Who knows what treasures might be picked up? Eighteenth century lacquer work, and fine embroidery, strange and costly gems and antique china—last relics of that old autocratic order in Russia which has so hopelessly and completely collapsed. Strange tales reach your ears of men who were once lawyers in Petrograd selling newspapers in the street; of ladies who commanded five servants in their day, offering their services as nursemaids. Oh, there has been suffering! But the Russians are a proud and virile people, and you can see them rising slowly and doggedly from their low estate, and soon they will have outwitted even so malign a fate as has lately struck them down.

It is most intensely interesting to observe the changes they have wrought. Pera, the European quarter is a different place. It is Russianized. Over the foundation of unstable, shifting Levantines has been spread a layer of Slavic humanity. There are Russian newspapers and Russian restaurants. The best Armenian restaurant which for years has held prestige over all others, is completely overshadowed by two or three Russian eating places, which have excellent *cuisines* (what people know better than they how to prepare and enjoy food?) and as well, which is far more important, they have efficient service and an air that smacks of the complexity of western tastes and manners. The *Nouveau Theatre*, that tawdry tinsel theatre built out of an old Skating Rink, presents Symphony Concerts, and the musicians are all Russians. Never before in history, has Constantinople had local music that could touch it in beauty and technique. Indeed, artists of all kinds are as easily picked up on the streets of Pera to-day, as daisies on the Bosphorus hill sides in April. You can hear the best music for next to nothing. A famous bass from the Petrograd Opera House comes to your door begging you to arrange a concert for him; a celebrated pianist-composer will be more than grateful for an introduction to ladies of society who give *musicales*. Fine 'cellists play in restaurants, who in pre-war days held concert halls spellbound.

The Russians have brought other things to Pera too. They have brought gaiety and color and a devil-may-care spirit into the night life of the place. There is an intensity and abandon to their way of living which horrify the mild and thrifty native. You hear sinister tales of questionable clubs where there is loud carousing and heavy drinking every night in the year. The realism of Gorky's novels has been scattered all over a sophisticated quarter that is not unversed in the realism

SCHOOL OF ORIENTAL STUDIES.

London Institution. Finsbury Circus. E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

† This article won the Second Prize (£5) in our Ladies' Competition.

of many nationalities. But there is something peculiar and individual about the idiosyncrasies of the Russian. He is more thriftless than the Irishman, gayer than the Italian, more melancholy than the Englishman, more artistic than the Pole and in his powers of recuperation and buoyancy, outdoes the ever-persecuted Armenian, which is saying a good deal. If a Russian wants something, he wants it badly; if he decides to go down the broad road to destruction, he goes the whole way. He does not mince matters. How often do you see the exasperated benefactor throw up his hands in despair, when the Russian to whom he has given a warm overcoat sells it that same day and goes on a great and glorious spree for two whole nights and days on the proceeds, with nothing at the end of it but blank hopelessness and and further begging for warm overcoats? It is whispered that certain dark and narrow side street in Pera are not as safe as they were and that hungry men are desperate robbers. And do you think the Allied Police can cope with the situation?

The problem comes much nearer home than seeing poor outcasts on the streets or hearing an occasional fortnightly symphony concert. There is, for instance, my friend, Mrs. A. who has taken up as a *protégée* the twenty-five year old daughter of an ex-Minister. She is exceedingly well educated, speaking English and French fluently. She has lived in the best society in Petrograd and her father owned an estate outside the city. Now she is living in one room in a Bosphorus village, eking out a bare living by teaching French and acting as part time governess to tiny children. She came to me the other day and most volubly told me her story and asked my advice. She is very independent and determined to stand on her feet. Not so the Princess who was taken in by my warm-hearted cousin. "Such a woman!" remarked my cousin, whose warm heart, I fear, underwent a severe cooling process, "such a woman! Untidy, lazy, ungrateful. She turned my house into an hotel, got up at all hours, expected endless services from the maids, left her cigarette ash all over the carpets and invited her friends to spend prolonged week-ends with her. Finally I had to employ a ruse, hire a special carriage and secure the backing of an allied official to get rid of her." I remember a ride I had in the American college truck by the side of the wild Russian driver, last summer. He was fair and big, with a shaved head, blue eyes and a most intelligent manner. His English was feeble but he lost no opportunity to improve it. He chatted to me in the strangest mixture of French, German and English. He explained that he had half his diploma from the University before the war and he wanted to study more. I looked at his grimy hand and rough overalls. "Do you think, Madame," he said, "I can to learn in Robert College next year?"

The taking of Constantinople by the Russians has been an undramatic but an exceedingly thorough affair. Will this flood of new life into this old city have any permanent effect? You wonder sometimes when you hear constant stories of intermarriage; how your friend, the American Y.M.C.A. director has just taken to himself a Russian wife or how your Russian chauffeur has lately become engaged to your Armenian nursery maid, or how Mr. Dubensky has so well established himself in trade that he has leased a large office building for twenty years. On the other hand there are rare moments in which you are made to feel uneasy yourself, for the confirmed pessimist among your acquaintances will tell you that the Crimea isn't very far away from the Bosphorus after all, and that the Bolsheviks may take it into their heads to come your way. And then who knows? Your yourself may be joining with the Russians next time, in this eternal business of theirs, of refugeeing. You wonder for an uncomfortable moment. And then you look at the Allied warships in the harbour and take heart again. You turn from any misgivings as to the danger of the Russians in Russia (even now you think of them dimly as a menace to the Bosphorus) to your duty towards the Russians at your door, who knock asking you for bread, education, peace . . . and some faint hope of better days to come.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

England and the East.

In an article entitled "The Defiance of Gandhi," the *Morning Post* of December 31. once more pleads that the British Government, wherever it may be, shall govern, and proceeds to comment with satisfaction upon the speech made by the Viceroy of India last September at Simla. And in a final exhortation that Mr. Gandhi be imprisoned, it says, in the martial-law-and-no-damned-nonsense tone:—

Now, the ordinary law and Gandhism cannot exist together. With Gandhi at liberty, the ordinary law is in chains. The Viceroy goes and the "Dictator" remains. The majestic fabric of peace and order which the British race, to its eternal glory, has, after countless sacrifices and unending labour, raised for the protection and well-being of the helpless and emotional peoples of India, is now in danger. The Government of India, if India is to be saved, must answer the insolence of Gandhi with the full weight of that law which it is its duty to uphold. Otherwise Gandhi will soon be to India what Lenin has become in Russia.

The plain fact of the matter is that civilisation, if it is to survive, cannot afford another Kerensky. Without law there is no liberty. When elementary truths are forgotten nations suffer. Self-determination, that phrase "loaded with dynamite," is being detonated throughout the emotional corridors of the East, and is threatening to bring the whole structure of civilisation to dust and ashes. The ignoble surrender in Ireland has doubtless had its share in fanning the flame which is at present threatening India and Egypt, and all those tragic forces of rebellion, some fanatically sincere, some merely criminal, which are hungering to sweep across city and plain, feel that the barriers and sanctions are breaking down everywhere. Now, therefore, is the urgent time for authority, backed by law and moral force, to reassert itself. Already there are signs that the world and its rulers are returning to sanity. The so-called "Dictator of the Nile" is on his way to Ceylon, and Lord Allenby, to the intense relief of all law-abiding people in Egypt, native or foreign, is apparently determined to uphold the law. Lord Reading, if he is to be loyal to his trust and his own words, must do likewise. If his predecessor had had the courage and independence to have done his duty, Gandhi would not now be proclaiming rebellion at his congress camp, and Lord Reading would not be face to face with the menace of another Mutiny.

Egypt.

The *Spectator* of December 31, in two notes on the Egyptian situation, first details Lord Allenby's latest measure, and then says:—

As we are responsible for the peace and prosperity of Egypt, Lord Allenby's firm action must be approved. Zaghlul and the fanatics in his pay could not be allowed to terrorize the country. Yet it has to be admitted that the return to the old fashioned method of governing Egypt contrasts oddly with Lord Milner's offer, last year, of virtually all that the wildest Egyptian Nationalist could desire in the shape of "self-determination." For this sudden swing of the pendulum from the one policy to the other the Government at home are, of course, responsible. Even if the Egyptians were a highly educated people, with great political experience, they might be excused for showing surprise and indignation at the Government's sudden change of front. The May riots, of course, showed that

Egypt was no more fit to govern herself than the Philippines are, but no serious person who knew Egypt ever held any other opinion. The worst of it is that to-morrow or next week the Government may suddenly go on the other tack and revert to Lord Milner's scheme. The moderate Egyptian politicians, if there are any, cannot repose much confidence in our Cabinet.

But the *New Statesman* of the same date does not let the matter rest so lightly. It begins by stating that "the struggle in Egypt has opened 'according to plan,'" details the measures by which "Egypt is preparing to resist us by every means in her power," and then briefly relates that "for more than a generation we have had an 'Egyptian problem.'" But—"the Egypt of 1919 was not the Egypt of 1914;" and "what had been a nationalist party in the good old days was now developing into a national movement. It only remained for the British Government to thwart it, in order to make it solid and complete." It proceeds:—

But the British Government and those who support its policy add a present folly to their past folly, for they do not even now recognise what they have done. Despite all the warnings of the last three years, despite the facts before their eyes, they persist in dividing the Egyptians into categories of sheep and goats, and deluding themselves with the notion of gaining the favour of the "moderates" by crushing the "extremists." Two years ago—even a year ago—there was some sense in this differentiation. There was a left wing of the Zaghlulists which would be content with nothing short of driving the English into the sea. There was a large section, represented by men like Adly and Rushdi, who were ready to come to terms that would give the substance of what they wanted both to the Egyptian and the British peoples. And between the two was a huge mass—including, we do not doubt, Zaghlul Pasha himself—who would have accepted a settlement honestly and tactfully arrived at on the basis of the Milner recommendations. But the British Cabinet has closed the Egyptian ranks. Adly and his delegation were brought to London and fooled. Adly has returned to Egypt and resigned. There is no Egyptian Government in Cairo; there are no "moderates" in Egypt to applaud Lord Allenby's mailed fist or the mockery of freedom which Lord Curzon offers if Egypt will be of good behaviour. We are diverted—and we imagine that Downing Street is diverted too—by the naive complaints of Coalition leaders that the "moderates" "have ceased to work with us." The Cabinet knew long ago that their terms would not be accepted. Some of them, at least, did not care whether they were accepted or not. That, in our opinion, is the most serious feature of the whole affair.

The trouble in Egypt is not merely a disagreeable incident like an enlarged North-West Frontier affair. It is not an embarrassing opposition, such as we are faced with in India, to honestly conceived measures of reform which have the support of a great mass of Indian opinion. We can assert our belief that we are substantially right in India and that Mr. Gandhi is substantially wrong. We cannot, without utter hypocrisy, make any such assertion about our policy and Zaghlul's and Adly's in Egypt. Egypt is a nation, united and remarkably homogeneous; the fellaheen may be illiterate and ignorant, but that does not entitle us to pretend that they do not know what they mean, or mean what they say, when they demand independence. Egypt, moreover, has had again and again from us during the last thirty years explicit promises of freedom. Egypt has never been a part of the British Empire. And for these reasons, amongst others, Egypt is now a test case for the British people. Those who refuse Egypt her freedom are not only doing a wrong to Egypt; they are doing a wrong to this country and to the British Common-

wealth of Nations. The British Commonwealth of Nations is a new name for the British Empire. But it is also a new thing; it expresses an ideal, a contribution of the English race to the civilisation of the world. It is necessary, and it is legitimate, that the British Commonwealth of Nations should forget much of its ignoble Imperial past. It is impossible if it is to live, that it should forget the fundamental principles on which it is based. Freedom and consent are among those principles; force is not. It is a voluntary union of free peoples which has emerged from the Empire; it still has clinging to its skirts unfree peoples whom its aim must be to make free partners. Ireland has been brought into this partnership; the tremendous experiment will be made of bringing in the Asiatic races of India. But what has Egypt to do with this, it will be asked, if Egypt is outside the British Empire? The answer is that Egypt could and should be brought into partnership with the free nations of the British Commonwealth—not of course, with the exact status of the self-governing Dominions, but with a properly defined status of her own—the status, if you will, of an ally voluntarily accepting certain privileges and certain duties. That, as we understand it, would be the practical effect of our granting the Egyptian demands for independence, subject to the safeguards, which we require and they have always been willing to admit, for our legitimate interests.

It concludes with a discussion of the two main arguments used in defence of the policy of "forcing an unwilling Egypt under British tutelage." The first (which it believes to be hollow) is "the necessity of keeping a hold on Egypt for the security of our imperial communications and commercial interests."

The second excuse, which is, of course, mixed up to some extent with the first, is that the Egyptians are not fit for self-government. We shall not argue out this question; it was dealt with sufficiently by Lord Milner and his colleagues, and in any case ninety-nine out of a hundred of those who make the statement do not know what they mean by it. It is no doubt natural for Englishmen to think that they can govern other peoples—and especially Oriental peoples—better than those peoples can govern themselves. But not even Englishmen can govern another race against its will, save in one way—by the sword. That is the way that our militarists have chosen for us in Egypt. It is a form of government which we suppose will be congenial to professional soldiers and that type of administrator which regards "niggers" as designed by Almighty God to conduct themselves lowly and reverently towards white men. We do not think it will commend itself for long to the taxpayers of this country who have to foot the bill, to the merchants who trade with Egypt, or to any intelligent man who sees its inevitable reactions in India and the Middle East. We believe, in short, that the policy which is being put into force to-day in Egypt is not only a betrayal of a long series of pledges, not only offensive to the liberal sentiments of the British people, but is utterly stupid. The risks that we should take in conceding to Egypt that independence that she asks for, with the safeguards for ourselves and others that she would give, are but slight. The risk of our not being able to rule Egypt by brute force is not a risk at all—it is a certainty. It is to make such a Pyrrhic triumph for the bullies of the Coalition Cabinet that we are asked to dragoon Egypt as we dragooned Ireland, to drain our purses and to trail British honour in the mud.

An accidental shell explosion on board the Greek destroyer 'Leon,' which was lying in the Piræus, occurred recently. It appears from official inquiries that the explosion took place when one of the crew was handling a submarine bomb. The number of casualties is stated to be 21 killed and 42 injured.

THE FUTURE OF ARMENIA.

A memorandum on "Armenia and Asiatic Turkey" has been forwarded to the Prime Minister by Mr. Aneurin Williams, M.P., on behalf of the British Armenia Committee. It makes suggestions for the future treatment of the Armenian people. In the Caucasus, where the Armenian Republic of Erivan has been absorbed in part by the Angora Government and in part by Soviet Russia the memorandum contends that in principle the Armenians must some day decide for themselves whether they are to remain Turkish or Russian subjects or to form an autonomous or independent State, but no action is asked for against either Russians or Turks. As to the north-eastern portion of Turkey in Asia, a demand is made that, as proposed at the London Conference in March, 1921, and endorsed by the Assembly of the League of Nations in September, "a National Home for the Armenians, entirely independent of Turkish rule," should be established, with access to the sea. In dealing with the question of Cilicia, the memorandum describes the Treaty of Angora as a violation of the pledges given to the **Cilician Armenians** by the French and British Governments. For the purpose of safeguarding the Armenian minorities scattered over the rest of Asia Minor, the memorandum suggests the appointment of foreign Consuls, whose special duty it would be to watch and report on any serious wrongs done by the Turks to their non-Turkish subjects, and the organisation of an efficient gendarmerie controlled by European officers.

THE INDIA SOCIETY.

The first Rolleston Memorial Lecture arranged by the India Society was given at the Victoria and Albert Museum last week, by Professor Strzowski. The subject was Indo-Persian landscape in Northern art. He defined Northern art as the Iranian art which grew up under the influence of Mazdaism (the religion of Zoroaster), and gave examples taken from Italy, India, and China to show that Iran was the centre from which had come landscapes in pictures in which no attempt was made to reproduce the actual forms of nature. He claimed that the source of this artistic direction was not Hellenistic, but Eastern Aryan art, which attained its development under Mazdaism, and afterwards exercised an influence over Christian as well as Buddhist and Chinese painting. In support of this claim he drew parallels between the landscape in the mosaics at Ravenna, the wall paintings in the cave temples of Ajanta and the shrine of Tanamushi at Nara.

Mr. Laurence Binyon, the chairman, said that this was the first of a series of lectures under the memorial scheme designed to recall the great work done for the India Society by the late Dr. T. W. Rolleston. The object of the society was to stimulate interest in Indian art. Chinese and Japanese art had taken a permanent place in the minds of Englishmen, and India's achievements in that sphere should not hold a subordinate place.

THE ORTHODOX CHRISTMAS.

Christmas Day according to the Greek and Russian Calendars was Saturday, when special services were held at the Greek and Russian Churches in London. Dr. Pagonis, the Great Archimandrite, assisted by the Rev Agathangelos Moschovakis, the Archimandrite, conducted the service at the Greek Church in Moscow-road, Bayswater, which was largely attended. Among those present were M. Boeresco, the Minister Plenipotentiary, and Roumanian Chargé d'Affaires, the Greek Chargé d'Affaires and Madame Rangabé, M. and Madame Mango, and the leading members of the Greek community. The members of the Russian colony attended a special service which was held at St. Philip's Church, Buckingham Palace Road.

M. Dimitri Stancioff, the Bulgarian Minister, and Madame Stancioff on Saturday held a reception at the Legation, 51, Queen's-Gate, which was attended by the members of the colony to commemorate Christmas Day.

M. Michael Gavrilovitch, the Minister of the Kingdom of Serbs, Croats, and Slovenes, and Madame Gavrilovitch entertained at luncheon on Saturday the personnel of the Legation and a few friends.

RUSSIAN REFUGEES IN CONSTANTINOPLE.

The *Morning Post* publishes the following extract from a letter which a correspondent has received from his son, a naval officer in Constantinople:—

"I devoutly hope you are not giving anything to save miser-

able Bolshies in Russia, whilst here (in Constantinople) these 300,000 loyal Russian refugees are starving and homeless. We (the Fleet) have started saving our scraps for these unfortunate people; this ship alone is feeding 500. Even our seamen are deliberately buying more than they want for themselves, especially bread, and we find whole new loaves, put into the scrap baskets. We hope to raise £100 in our ship, but that will go no way, and unless something is done at home the Services out here (5,000 all told) can't hope to keep 300,000 starving Russians alive through the winter. This will mean cholera for a certainty. For Heaven's sake, and for our own, let us preserve these brave loyalists from starvation, that in due time they may return to their own country, and let the Bolshies die—the sooner the better!

"Lots of these poor refugees have risked going back to Russia rather than beg, or sponge all their lives on a world that seems to have no need of them; over half of these are shot by the Bolshies before they have been in Russia for 48 hours; the others are lost sight of. In a few years we may be deeply lamenting that we ever allowed these good and brave people—people on the side of law and order—to waste away, when the real fight with Bolshevism begins, as some day it must."

This eloquent appeal reinforces those which have appeared in our own columns, and it is to be hoped that it will not fall upon deaf ears.

SPORTS FOR INDIAN STUDENTS.

At the annual meeting of the Indian Gymkhana Club, held at Lord's, details were given of the financial position in respect to the recent purchase of 16 acres of pasture land at Thornbury Avenue, Osterley, for £6,500, and the progress made in equipping the ground for cricket, tennis, football, hockey, and other games. The appeal, issued in the summer of 1920 for £15,000 to cover the entire cost had yielded only £3,000 when the ground was provisionally selected last spring. Fortunately the Maharaja of Patiala, himself a great cricketer, was then in this country, and generously guaranteed the balance of the purchase money if it did not arrive in time for the date of completion, September 29. A preliminary payment of £1,000 was made, the remaining £2,000 in hand being earmarked for drainage and equipment. On September 28, the Maharaja of Patiala (who had previously subscribed) sent a donation of £4,000, and this was paid to the owners as a second instalment and the purchase price. It was agreed that the balance of some £1,500 should remain unpaid for a time so that the other princes and those who had expressed sympathy with the scheme and promised to send cheques, might provide the funds. The money is now urgently required.

Greek newspapers state that the Ecclesiastical Congress at Salonika has decided to consider the election of M. Meletios Metazakis as Oecumenical Patriarch as null and void.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the river Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K. Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

The Cannes Conference.

It would be idle to suggest that the decision arrived at at Cannes to hold a conference of all the Powers, with a view to finding a way out of the economic *impasse* in which the world finds itself as a result of the war is to everyone's liking for there is a widespread and most justifiable distrust of Russia which cannot be dispelled in an instant by a change of front on the part of the Bolsheviks which may be more apparent than real. Still it is obvious that the way to the *status quo ante* lies in the restoration of all countries, for we are all dependent on one another.

Genoa and Afterwards.

However with what Russia may or may not do we are only indirectly concerned, and the main point at issue is the results that are likely to accrue in regard to the Near East from the meetings at Cannes and Genoa. There are two matters of the first importance that demand attention. Firstly the exchanges which are hampering reconstruction, strangling trade, and in so doing are reacting on other countries where the exchanges are nearly normal with very serious consequences. Secondly the position in Asia Minor, in regard to which it need only be said that so long as a state of warfare continues it is patent that there can be little prospect for commercial enterprise, and the economic position of the belligerents can only grow worse.

The Gezireh Project.

The December issue of the *Journal* of the Sudan Chamber of Commerce contains a letter from the Director of Agriculture, Sudan Government, dealing with an article that appeared in that periodical on the Gezireh project. In the article in question, to which I referred in these columns some weeks ago, the writer *inter alia* expressed the view that 50,000 feddans was the extent of development in the Gezireh for many years. The Director of Agriculture states that "those just as capable of forming an estimate, after careful consideration, put the minimum area under crop in any one year at 100,000 feddans, and this area is limited only by the amount of water which it has been decided can safely be taken from the Blue Nile on completion of the Makwar Dam."

Private Enterprise.

Proceeding to deal with another point raised by the writer the Director of Agriculture comments on the inclusion of Kassala and Tokar as private enterprise and says that "if Kassala and Tokar be regarded as private enterprise, then the Gezireh may just as fairly be considered private enterprise. There is no essential difference between the systems which hold at Kassala and Tokar and that arranged for the Gezireh. At Kassala and Tokar the Gash and Baraka deltas are flooded annually by the natural flow of these river; and the Department of Agriculture administers these areas directly." He further points out that in two important particulars Tokar, Kassala, and the Gezireh differ from private

estates in Khartoum and north of Khartoum. "Firstly, in the method of irrigation. On the private estates in question water has to be pumped from the river—an expensive item. At Tokar and Kassala we have natural flooding and in the Gezireh irrigation by 'free flow' canal. Secondly in the question of climate. Tokar and Kassala have a climate much more favourable and the Gezireh a climate more favourable for cotton growing than that of the Nile from Khartoum northwards."

North Persian Oil Concessions.

In his reference at the meeting of the Anglo-Persian Oil Company to the extraordinary attitude taken up by the Persian Government with regard to the North Persian oil concessions Sir Charles Greenway said that one of the signatures which was being repudiated was that of a former Prime Minister, who "was cognisant of the negotiations for the sale of the concessions to us, and was, in fact, the principal guest at a dinner . . . given by M. Kostaria in London to celebrate the conclusion of the negotiations," and added that he would like to know his views on the action of his Government "and what steps he proposes taking to secure recognition by them of his acts and deeds and to deny the statement put forward by them that the concessions were obtained by coercion." In reply a long letter has appeared in *The Times* from Vossukh-ed-Dowleh, much too long for me to quote *in extenso* unfortunately, for it is a delightful example of Oriental diplomacy and certain to please his august master the Shah-in-Shah. In the course of it, while admitting that he signed the Concession Act he states that the first he heard of any negotiations between M. Kostaria and the company "was after I had resigned for the second time, and left Persia, and subsequently met him in Paris." As regards the dinner he says "it is perfectly true that on this occasion some mention of an oil concession was made, but I am bound to say that the dinner in question was not to my knowledge given in order to celebrate the conclusion of any negotiations between the Anglo-Persian Oil Company and M. Kostaria; and even if it were so intended. . . ."

—but I think I have quoted enough.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

YUGOSLAVIA.

Zagreb, December 28.

Causes of Budget Deficit.

The Finance Committee of the Skupshtina has found that the causes of the deficit in the Budget are mainly the following:—1. Great military expenditure. 2. The great number of Government officials and employees. 3. Bad administration, disregard of the elementary principles of finance and economy, and failure to collect the revenue from all available sources. Thus they have seen the beam in their own eye, and as this is the first step towards improvement, and the Committee are determined to bring about a cure if it is humanly possible there is reasonable hope that we may see some amelioration in public finance during the coming year.

Commercial Debts.

There has been a great deal of talk about the proposed moratorium on commercial debts, by which the Government hope to avert the failure of a vast number of merchants and tradesmen whom ruin stares in the face owing to the sudden and violent fall of the dinar, which makes it impossible for very many of them to meet their obligations abroad incurred when the exchange was at a much higher figure. The scheme, admittedly a desperate remedy and a choice of evils, has passed the committee stage, and will come before the Cabinet and probably be passed in a few days. The details are as follow:—

Post-war debts incurred before October 1, 1921, in sterling, French, Belgian and Swiss francs, Italian lire, American dollars, and Dutch florins will be protected in this manner. If the creditor seeks payment through the Courts and the debtor or his guarantor cannot meet his obligations, he will deposit dinars with the *Uprava Fondova* (Administration of State Funds) in Belgrade to cover his liability at the following rates:—150 dinars per pound sterling, 260 dinars per 100 French francs, 150 dinars per 100 Italian lire, 675 dinars per 100 Swiss francs, 37 dinars per dollar, 12.50 dinars per Dutch florin. By this deposit the debtor will be considered covered against all claims and the Courts will not grant any judgments or bankruptcies on their account, but the debtor will remain still liable to his creditor for the full amount in the foreign currency. He will be bound to pay his debt in foreign currency to his creditor in four instalments, the first in nine months, the second in 15, the third in 20 and the fourth in 24 months, counting from the date of deposit of the dinars, together with interest at the rate of 6 per cent. with the right of withdrawing a corresponding portion of his deposit on making each payment. The debtor will give the creditor a bill which can be exchanged upon demand for a new one every three or six months, which shall indicate the amount of dinars which he has on deposit as security.

The Courts or the *Uprava Fondova* have the right, out of the deposits in question, and before the dates of the instalments referred to, to buy the entire amount of foreign currency required, if the rate of exchange permits, and so to liquidate the liability before the instalments are due, as may the debtor himself. If the debtor is unable to deposit dinars at the said rate to cover his liabilities or to pay his instalments in foreign currency when due, and the creditor sues him, the Courts will give judgment against him and declare him bankrupt.

Miscellaneous.

The Legislative Committee of the Skupshtina has proposed that the Belgrade Municipality be empowered to tax excess land values, and it is probable that this form of tax will be introduced into the State taxes throughout the country.

The Minister of Commerce has passed a ruling that in future it will not be permitted to deposit shares of local limited liability companies at the meetings of financial institutions abroad.

The Minister of Commerce has allotted to the Inspectorship of Labour, of the Ministry of Social Policy, the duties of boiler inspection, which will be unified throughout the country and brought up-to-date.

The Commercial Treaty between Yugoslavia and Austria will be prolonged from January 1 to August 1, 1922.

ROUMANIA.

Bucharest, December 19.

Roumanian Industries Fair.

In accordance with the decision of the former Ministers' Council, the Roumanian Industries Fair will be held annually during the months of August and September at Bucharest in the existing pavilions in the Parcul Carol. The official pavilion will be used for a permanent industrial museum. The fair of 1922, however, will be international, and will be opened on August 20. The Ministry of Industry is to decide what classes of foreign articles shall be admitted to the fair.

Coins to Replace Small Notes.

The Ministry of Finance is negotiating with the Swiss firm that supplied the 50 and 25 bani metal coins for the supply of coins to replace the 1, 2, and 5 lei notes.

Bucharest, December 28.

Stagnation of Trade.

Although the Christmas season is in full swing the trade market is still very slack compared with previous seasons. The chief reasons for the stagnation are the money stringency and the consumers' unwillingness to pay the present high prices. Wholesalers, being anxious to sell, are ready to reduce their prices when it is a question of large cash deals. Retailers are satisfied with smaller profits, being afraid to be caught with stocks should the Roumanian leu go up in value. Therefore, generally speaking, stocks in hand are still sold at lower prices than those prevailing at the factories abroad, so that the few orders booked by foreign travellers are based on credit and at a fixed rate of exchange lower than the one existing to-day.

Miscellaneous.

The Minister of Communications has closed a contract with the Polish firm A. Plage and Laskiewics, of Lublin, which has undertaken to organize the new aerial line from Dantzig *via* Poland to Bucharest.

The Roumanian State Treasury having a stock of gold of 2,700 kilogrammes chiefly from the State mines of Transylvania, and seeing the high price of gold prevailing abroad, has sent a Commission to Paris for the purpose of disposing of this stock at the best price obtainable. The Commission which is headed by M. Dimopol, the Director General of the Casa de Depuneri and Consemnatuni, left Bucharest last Saturday.

The Ministry of Industry and Commerce has now decided to allow the import of carpets, which are divided into two categories:—(1) The real Oriental carpets worked by hand are allowed to be imported only by private persons and in quantities not exceeding two to three pieces and weighing not more than 25 kilogrammes. The duty for this category of carpets will be 300 lei "gold" or 6,000 lei per square metre. (2) The ordinary factory made carpets can be imported by anyone and in any quantities, while the duty on them will be double the tax existing at present.

BULGARIA.

Sofia, December 28.

The War Indemnity Question.

To-morrow the Inter-Allied Commission will hold a meeting to consider the question of the payment by Bulgaria of the first instalment of the war indemnity. It is known that the points of view of the different

delegates are not the same, some holding that Bulgaria is able to pay now, whilst others hold that a delay ranging from three to five years is necessary. An announcement of a delay should be sufficient to force up the value of the leva, which it is worth while noting has been remarkably steady for the last month. The rate on London is 590 to-day. On the other hand the forthcoming publication of the budget deficit, which is very considerable, will it is feared render it necessary for the Government to call into use the printing press.

The Internal Loan.

The Internal 6½ per cent. loan is to be floated during January, and although the first amount due to be raised only totals 100 million levas (£170,000), it is possible that if success attends the loan the printing of new bank notes, may be held over.

The value of imports during 1921 was 2,213,827,000 levas, against exports of 1,642,998,000 levas, making an excess of imports over exports of more than half a milliard levas. Unless the difference between the value of imports and exports is considerably reduced in the near future, Bulgaria's currency cannot be expected to improve in the near future.

Sofia, January 2.

The Inter-Allied Reparations Commission.

Count Cherisey, Chief of the French Delegation of the Commission, vacated his post of President at the end of the year, and Prince Borghese, the Italian Delegate, becomes President. The latter is for the moment away from Sofia, but is expected back very shortly. The Secretary Generalship of the Commission also undergoes a change, the Italian M. Corsi, being replaced by Mr. Bruce.

It was thought that a decision as to the payments to be made by Bulgaria during 1922 would have been decided last month, but so far no definite arrangement has been come to. The Commission may be said to have spent 1921 in studying the finances of the country with a view to seeing how much money can be exacted. The result of this study can hardly have failed to render them somewhat sceptical as to the ability of Bulgaria to pay the full quota, *i.e.* every six months to put aside a sum sufficient to pay 2½ milliard gold francs in 37 years.

The only satisfactory feature about present day Bulgarian finance is that the printing press is not being used. During 1921 the circulation of bank notes decreased by 659 million levas. M. Tourlakoff, the Minister of Finance, is of opinion that, failing any extraordinary expenditure, 1922 can also be got through without having recourse to the press. If this view proves to be correct, Bulgaria's financial situation has every chance of improving, more especially if the importance of unrestricted trade is realised by the Government.

Evidently the influence of the Inter-Allied Commission on Bulgarian finance is slowly establishing itself, and thanks to the thorough manner in which the Commission is doing its work, there is every reason to believe that they may yet succeed in fulfilling their dual duty of exacting the war indemnity, and at the same time putting Bulgaria's finances on a sound footing:

ASIA MINOR.

Smyrna, December 14.

The Greek Commissariat have issued a notice that from January 14, the export of olive oil from Smyrna has been forbidden.

Work on the site of the British Empire Exhibition at Wembley Park began on January 10.

The Commercial Company of Salonika announces a dividend of 1s. per share, placing £1,280 to statutory reserve, and carrying forward £4,045.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cable received from the Director-General of Commercial Intelligence, Calcutta, dated January 3:—

Condition of crops.—December 30.—In Bengal, rain desirable for spring crops in Western districts. Sind prospects improved by good rain. Bombay Presidency and Central Provinces crop prospects unchanged. January 2.—In Assam, outturn of transplanted winter rice good. Broadcast rice, tea, sugarcane, and prospects of rape and mustard fair.

All-India crop forecasts, 1921-22.—First forecast of winter oil seeds:—Rape and mustard, 1921-22 3384,000 acres; (1920-21, 2,385,000 acres); linseed, 1921-22, 2,001,000 acres; (1920-21, 1,755,000 acres).

Markets.—(a) Cotton.—December 29.—Bombay Cotton market—Fine M.G. Oomras, Rs. 475. Bombay cotton arrivals from September 1 to December 22, 786,000 bales as compared with 428,000 bales in the same period of last year. (b) Piece-Goods.—In Bombay piece-goods market no wholesale demand and ruling rates weaker. Some retail enquiry showing. Local goods moving steadily and prices firm. (c) Jute.—December 30.—Calcutta jute market firm. Sellers asking Rs. 58 for firsts and Rs. 46 for lightnings. Gunnies very quiet but steady. (d) Rice.—December 30.—Special Straits Quality Rice, Rs. 395 for December new crop. (e) Shellac.—T.N., Rs 145 spot.

Bank Rates.—Imperial Bank of India rate 7 per cent. from December 29.

THE ALMOND CROP OF PALESTINE.

At present there are estimated to be more than 4,000 acres of almond trees in the Jewish colonies of Palestine, and less than half that area scattered about the country in small units which supply mainly the local needs (says an American Consular report). The crop for the harvest just closed is approximately 2,227,000 lb. from the Jewish colonies, and probably not more than 700,000 lb. from the other sources. Old trees have borne very well this year, and with the new trees coming into bearing the current crop is considered quite a good one.

Almond growers in Palestine have not yet specialised in the soft-shell and other finer varieties, although there has been some experimental planting of these varieties. They find that the medium-sized, hard-shell nut best meets local growing, harvesting, and market conditions.

For the year ending March 31, 1921, the customs returns show exports of almonds amounting to only 28,046 kilos (61,870 lb). By far the greater part of the crop is required to meet local trade demands. The almond industry of this country has developed to a size where machinery is required for preparing the crop for market, and a few American almond hullers, used for removing the outer husk of the nut as it comes from the tree, have been imported. This work has hitherto been done by hand, but the machines introduced are giving satisfaction, and it is probable that more of the same kind will be imported. The Palestine Government has recently consented to sell almond hullers to the list of agricultural machinery which may be imported free of duty.

COMMERCIAL UTILITY OF SAFFLOWER OIL.

Safflower (*Carthamus tinctorius*) is widely grown in India chiefly as an oil seed. The oil is "one of the most valued of edible oils, and the oil cake when prepared after thorough decortication is one of the most valuable cattle foods, etc." The Agricultural Research Institute at Pusa, India, have been conducting experiments on the commercial possibilities of this oil, the results of which have been embodied in their Bulletin No. 124, recently issued. It contains a report of the experiments conducted in this country by Mr. J. Stewart Remington, Consulting Chemist, Aynsme Technical Laboratories, Grange-over-Sands, Lancashire. He concludes as under:—"Safflower seed oil should become a very valuable economic product if it can be only brought over and utilised on the home markets. It should be an excellent oil, if properly manipulated, for the colour, paint and varnish industries, also for soap and linoleum manufactures, as well as for edible and culinary purposes—in the latter case if proper means are devised as regards refining and bleaching.

OIL NOTES AND NEWS.

British Burmah Petroleum.

The final dividend of 6d. per share free of tax declared by the British Burmah Petroleum Company for the year ended July 31 makes the total yield $12\frac{1}{2}$ per cent. free of tax. This is considerably below the dividends of the two previous years, the return for 1919-20 being 20 per cent., and that for 1918-19 being $17\frac{1}{2}$ per cent., but the same as that for 1917-18. At their present price the shares yield a very fair return, and in view of the prospects of the company it cannot be said that they stand at too high a figure.

Anglo-Persian Success in New Field.

The very interesting information has been forthcoming during the past week that oil has been struck at a depth of 2,000 feet in the Anglo-Persian Oil Company's new field at Comodoro Rivadavia, in the Argentine, and that a yield of 400 barrels a day of good quality oil has been given by the well sunk. It is stated that seven other wells are being drilled in the same section, and that preparations for the testing of other areas in the Argentine are being carried out as rapidly as possible.

It will be recalled that at the recent general meeting the Chairman of the company, Sir Charles Greenway, said that the company had acquired important interest in two companies which hold large areas in the Comodoro Rivadavia, Neuquen, and other fields. "Six test wells are being put down in the first of these fields," he added, "and we have just received advice that one of them has already struck oil, but the capacity of the well has not yet been ascertained owing to a temporary plugging. In the other fields two test wells are about to be commenced." News of the results obtained from the other wells will be awaited with considerable interest.

The Steaua Romana (British).

A very interesting speech was made by Sir Charles Greenway at the general meeting of the Steaua Romana (British), Ltd., a report of which will be found elsewhere in these columns. Dealing with the efforts to rebuild the parent company in Roumania and its organisation he pointed out that before the war the company was not only a producer and refiner of oil, but had its own steamships and therefore its own transport, and its selling organisations in various parts of Europe and the Near East. The management in Roumania and the French and British companies have devoted themselves to the reconstruction of this organisation. As regards drilling operations the total drilling for last year was over 10,000 metres, and Sir Charles stated that it was hoped during the present year to drill 20,000 metres.

Prospects of Company.

As regards the outlook for the company Sir Charles pointed out that with a return to more normal conditions the earning capacity of the Steaua Romana should increase as it had done during the past two years. Obviously the earning capacity of the Steaua Romana (British) is dependent on the course of the leu, the position of which at present is anything but satisfactory. But as has been often pointed out in these columns the rate now ruling is far from representing the situation, and like everyone else who is *an courant* of the facts Sir Charles takes a very hopeful view of the outlook. He pointed to the fortunate position of Roumania as a result of the war with her territory more than doubled, and declared that the problems that confront the reconstruction of new Roumania are the causes of the fall in the leu. "It would be idle," he continued "to attempt to foretell the future of the leu, but I can give you a few facts as to the present position of the country. At present the issue of notes is made by the Banque Nationale, and amounts to some 13 milliards of lei. The basis of this currency is Government Gold Treasury bonds, but latterly the bank has refused to issue any further notes, both at the request of the Government and at the desire of the banks themselves. Taking 600 lei to the £, this means an issue in sterling of only £1 per head of the population, which is of course, an ex-

tremely small issue as compared, with that of any of the other adjacent countries, and gives very great hopes of the restoration of the financial equilibrium necessary for the re-establishment of a more normal rate of exchange. Every one of the new provinces has—like the old Roumania itself—natural resources of great value. Roumania, as you know, was before the war a large exporter of cereals, oil and timber. This trade must be re-established in due course, and therefore this country has possibilities of recovery from the present depreciation in exchange and financial difficulties greater, perhaps, than those of any other country in Europe."

Phoenix Oil and Transport.

The rise in the shares of the Phoenix Oil and Transport Company Ltd., was only to be expected in view of the promising survey of the situation given by the chairman, Mr. E. Manville, at the recent general meeting. He stated that the company had actually entered the profit earning stage, the receipts being now in excess of the expenditure, and pointed out that it was the intention of the Board to ship the bulk of the company's products to England and France, to be sold for sterling or French currency so that in this way the difficulty arising from the fluctuations of the exchange will be overcome.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna report as follows for the week ended December 17:—

Sultanias.—The total estimated arrivals to date amount to 163,560 bags as against 90,170 bags for the corresponding period of last year. The total estimated sales are 153,560 bags as compared with 83,170 bags for 1920, and the estimated stock unsold totals 10,000 bags as against 7,000 bags.

Shipments.—Sultanias are being loaded on the s.s. Brescia for Liverpool, and s.s. Borodino for London.

Markets.—Sultanias continue in demand but dealers are holding for progressively advancing prices and business is consequently restricted. Estimates of stocks remaining in the country vary between 3,000 to 4,000 tons. Arrivals are limited, farmers in the interior of the country sitting tight on their remaining stocks. Exchanges have fluctuated very widely. Sterling suddenly dropped at the beginning of the week to 710, slowly recovering to 730.

Sultanias.—In a further report dated December 24, Messrs. C. J. Giraud state that the total estimated arrivals to-date amount to 165,460 bags as against 91,645 bags for 1920. The total estimated sales are 156,460 bags, compared with 84,645 bags for 1920 and the estimated stock unsold is 9,000 bags as against 7,000 bags for last year.

Markets.—About 400 tons of sultanias were bought in the early part of the week, prices reflecting an advance of 2s. to 4s according to quality. Dealers are very firm in their views, and business is being restricted owing to their reluctance to sell. Estimates of remaining stocks are between 3,000 and 4,000 tons. Exchanges are weak with declining tendency.

CATALOGUES REQUIRED FOR IRAK.

Information has been received at the Department of Overseas Trade that the Director of the Public Works Department, Baghdad, Irak, is anxious to obtain catalogues, designs, specifications, prices, etc. of the following machinery and equipment:—; Farm tractors, road tractors and agricultural machinery, excavating machinery; irrigation pumps; piping and pipe fixtures; well boring plant and casings; steel bridges (ready for erection); cement and concrete mixers; quarry plant; brick and tile making machinery; electric lighting and power plant; pumping plants; motor cars, lorries, and tank waggons; petrol and oil tanks with measuring gauges; portable wooden houses with double roofs and walls; water craft; railway locomotives; aerial ropeways; refrigerating apparatus; small electric lighting sets with fans and accessories.

Engineering Topics.

By Our Engineering Representative.

Pit Motor Maintenance.

One of the principal factors in prolonging the life of any motor used in a dirty or dusty situation, as a colliery or flour mill, is cleanliness; cleanliness not merely outwardly manifest in polished steel and perfect paintwork, but extending to the innermost recesses of the windings. More especially is this so with motors of the induction type, and whenever one of these is dismantled it should be thoroughly cleaned and re-varnished.

One of the most usual methods adopted is to blow out the windings with a bellows or air blast, but this is by no means sufficient, and the slots should be thoroughly scraped out with a blunt scraper small enough to get into the smallest corner. After thorough scraping it should be well swilled with petrol, the usual precautions against naked lights being adopted, which will remove any traces of grease or oil. In regard to this it is as well to remember that benzol should never be used for the purpose, as it will attack the varnish or enamel used, or one or other of its constituents with the result that although the windings may look all right a breakdown, sooner or later, is inevitable.

For re-varnishing an air blast should be used to drive the insulating liquid into the crevices of the winding, and although certain varnish makers recommend brush work no amount of manipulation with a brush can get the varnish into the tiny openings into which oil spray can penetrate when the machine is running. Another point is that with a brush the varnish is apt to drag slightly, and on such a surface dust and dirt readily accumulates. When an air spray is used the surface dries perfectly smooth and glossy, and whilst the dust does not adhere to this to any extent what does collect is easily wiped off.

It is not generally realised by those who have charge of large induction motors that a good many starting difficulties can be traced to neglected and dirty slip rings. It must be remembered that when the rotor is standing on open circuit and the stator is switched on to the line there is 100 p.c. slip, which means that the voltage induced in the rotor and the resultant tension between the slip rings is at its maximum. Any dirt, grease, or dust that has been allowed to collect will accumulate to such an extent that ultimately there will be a flash-over when the stator current is closed for starting. It may be urged that there is little likelihood of such trouble, but in the case of motors not fitted with short-circuiting gear the carbon brushes are always in contact with the rings, and a mixture of fine metal and carbon dust with a percentage of grease spreads over the insulating bushes. If in the course of time, as is generally inevitable in colliery installations, a certain amount of fine coal dust and oil gets added to this it is not long before serious trouble ensues. Slip rings and all adjacent parts should be thoroughly cleaned with petrol, all dust should be cleaned away, and, in the view of the writer, the carbon brushes should be removed and replaced with brushes of copper morganite which should run for years without causing pitting on the slip rings or requiring cleaning in any way.

Motor Licences.

Now that the New Year is well on its way all my motoring readers should have received their new licences, always providing that they have not forgotten to make the necessary application. Emphasis may be placed on the fact that this year no period of grace has been mentioned, and it is probable that any car driver who ventures out without the new paper disc boldly displayed will find himself stopped and questioned by the first policeman he meets, with the usual result. There is a general impression about, which I hope is ill-founded, to the effect that the Ministry of Transport, which has to do something to justify its existence, is intending to press as heavily as possible on motorists in regard to taxation matters. This would seem to be the case, as a

commencement has already been made in the work of mulcting the car owner. There was last year a rebate on cars with engines made before 1913. It was understood by us all that this year it would be on cars with engines made prior to 1914; next year on those with engines of earlier date than 1915 and so on. But no; the Ministry apparently take the view that as they have specifically mentioned 1913 that is a date that must stand, and consequently all those who bought second-hand cars of a certain date under the perfectly natural expectation that a rebate would be allowed now find they will have to pay the full iniquitous rate. It may be supposed that next year the same thing will take place and the same rebate will be allowed on cars with engines of pre-1913 date. By that time the year will have become so firmly rooted in the official mind that it will be utterly impossible for anything but the total obliteration of the Ministry to get it out. Consequently if we live so long, we may expect, in 1950 or 1960 to have to fill up forms which will give us clearly to understand that no rebate will be allowed from our motor taxes unless our cars are fitted with engines made prior to 1913.

The Brooklands Programme.

The events so far mapped out in connection with the great motor track promise to be full of interest, and as the track is being thoroughly repaired and put into as perfect order as possible, I expect that a large number of records will go by the board. I should not be surprised if someone does not attempt to lower the famous 24 hours record, whilst several of the other records are practically certain to fall at the first attack. Most of the motor cycle records will also be broken, and it is to be hoped that this year British machines will prove all that could be wished. British motor cycle engineering does not appear to be in anything like the high state of development reached in the British car industry, and it is high time that our principal manufacturers began to set their house in order. At the moment there are two American makes of machines which are undoubtedly and admittedly superior to anything we turn out, and this should not be. If we can lead the world in car engine design there would seem no reason why we should lag behind in the smaller productions. To return to our subject, there will be the usual Easter, Whitsun, and August Bank-holiday meetings together with the two usual Saturday afternoon meetings, on May 13 and October 14. The long distance race for two and three litre cars will take place on September 16, which is also a Saturday, and on July 15, the Junior Car Club will hold the one and a half litre race. There will be, in addition, a number of events organised by outside clubs, and provided the committee take some further steps to add to the comfort of visitors—a feature which has been sadly lacking in the past—some very large attendances may be expected.

Vulcanite Protection.

For electrical and other work there have been a number of attempts made to coat metals and metal appliances with vulcanite but with but little success. It appears, however, that a Stockport firm, Messrs. Murray, Parkyn and Co., who are specialists in vulcanite work, have met with unprecedented success in their efforts to solve the problems. They are able so to coat cast iron, steel, and other metal objects with vulcanite that there is a perfect contact between the two substances, a fact which can be demonstrated by X-ray examination. Probably the greatest commercial value of the process will be in connection with chemical engineers' appliances, as it will be possible to line retorts, tanks, pans, pumps, and other appliances in such a way as to protect them completely against the action of acids in either liquid or gaseous form. Electrical tests show that the vulcanite coating will withstand an alternating current of 2,500 volts. It is understood that the process can be used for coating timber with vulcanite for various purposes.

Company Meetings.

STEUA ROMANA (BRITISH).

The Position In Roumania.

Sir Charles Greenway's Speech.

The first annual meeting of the Steua Romana (British), Ltd., was held on January 5, at Winchester House, Old Broad Street. Sir Charles Greenway, Chairman of the company, referred to the fact that the company, together with a group of the six most prominent bankers in Roumania and a French group, holds control of the Steua Romana, Bucharest, who have, during the period under consideration, made an increase in their capital in which the three groups have participated. The Roumanian company declared a dividend of 20 per cent. or 100 lei per share for 1919, and 35 per cent. or 175 lei per share for 1920.

Holding in the Roumanian Company.

The value of the British company's holding of shares in the Roumanian company has, of course, declined owing to the heavy fall in lei, with a similar fall in the value of the dividends thereon, but the intrinsic value of the latter's present and potential assets is probably much in excess of the present value of the shares. Sir Charles Greenway commented upon the various economic and industrial features of the country, and stated that owing to the great value of her natural resources, Roumania, which was before the war a large exporter of cereals, oil and timber, has greater possibilities of recovery than any other country in Europe. In the meantime, however, lei earnings will be kept in Roumania and not converted into sterling.

The British and French groups each made, in addition an advance to the Roumanian banking group to enable them to participate, and, as security for this, they each have a charge upon one half of the holding of that group in the Roumanian Company. This amount is repayable in sterling, during the last six months of 1924. The Roumanian banks have requested that the settlement of the interest thereon in sterling should be foregone for a period of four years, ending 1924, and be met by the deposit of lei, in cash or securities, with a margin of 25 per cent. to the equivalent at the current rate of exchange of the sterling due. This matter is at present under negotiation.

Dealing with the objects of the company, Sir Charles Greenway said that the purchase was made to secure for allied interests, that is Roumanian, French and British, the position formerly held by the Germans in the Steua Romana Company and in its sub-companies, agencies, and properties, and to secure control of the surplus production of oil available for export.

Drilling Operations.

Under the Roumanian, French and British management drilling was increased, 5,000 metres being drilled during the first six months of 1921, and over 10,000 during the year; while it is hoped to drill 20,000 during the present year. Refineries and storage have been repaired, and the company's tin-making plants are working at Constantza, Smyrna, Salonika, and in Bulgaria.

Jointly with the local power company the erection of a new electrical power station at Floresti, on the output of which the company will have first call, has been started, and should be completed by the end of the year. The company's distributing companies and agencies in Bulgaria, Turkey, Greece, Asia Minor, and Italy have been re-organised and valuable sequestered assets have been, or are in process of being, restored to the company. One of these which will bring into the company a very large sum of money in sterling has been admitted and is expected to be shortly realised.

One tanker of 4,000 tons has been returned and a satisfactory arrangement reached with the Reparation Commission over another 7,000 tons; while the return of others is under negotiations.

Trading Side of the Company.

On the trading side, the British Company have, during the past year, dealt with approximately 35,000 tons of petroleum products under the rights which it holds in this connection. A commercial agreement has recently been concluded with the Roumanian Company, and it is hoped that increased activity in Roumania will cause greater quantities of oil products, in excess

of internal requirements, to be available for export.

At the conclusion of his remarks Sir Charles Greenway moved, and Sir Albert Stern seconded, the resolution that the report and accounts for the year ended June 30, 1921, be received and adopted, which was carried unanimously.

COMPANY NOTES AND REPORTS.

South Behar Railway.

The report of the South Behar Railway Company for 1921 states that after paying the dividend at the rate of 5 per cent. per annum for the half-year ended December 31, 1920, a balance remained of £8,708, plus rental received from Secretary of State for India for the half-year to June 30, 1921, and other receipts, less interest on Debenture stock and sundry outgoings, leaving £18,312. An interim dividend at the rate of 5 per cent. per annum was paid, leaving £8,822 to carry forward. Adding £15,000 half-yearly rental to December 31, 1921, and other receipts, less interest on Debenture stock and sundry outgoings, there remains £18,518 to be dealt with. The directors recommend the dividend at the rate of 5 per cent. per annum for the half-year to stockholders registered December 31, 1921, leaving £9,028 to be carried forward. Meeting, 25, Buckingham Palace Road, S.W.1., January 13. 1 p.m.

British Burmah.

The directors of the British Burmah Petroleum Company recommend a balance dividend for the year ended July 31, 1921, of 6d. per share, free of tax, payable February 28, to holders registered January 17. This will make the distribution for the year 12½ per cent., free of tax. The distribution for 1919-20 was 20 per cent. free to tax.

The traffic receipts of the Smyrna Aidin Railway for the week ended December 31 amounted to £6,356.

The Indo-Burma Oilfields announce that since the last official communication, the three following wells have come in on the Yenamma field:—Number 23, producing 12 barrels per day; number 24, producing 28½ barrels per day; number 25, producing 25 barrels per day.

According to a Reuter message from New York the Vienna correspondent of the Associated Press telegraphs that the Austrian Government has allowed it to become known that Messrs. Vickers Armstrong are offering to purchase the great Woellersdorf arsenal which would be converted into works for the manufacture of locomotives for Balkan orders.

AGENTS WANTED ABROAD.

ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," *The Near East*, 1, Devonshire Square, London, E.C.2., when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.

114. Importer in Karachi (India) travelling throughout India, wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities:—Exports: Medicinal herbs dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.

116. Import Merchants in Adana, Cilicia, Asia Minor, wish to represent British firms for any kind of British-made goods. Own account and commission basis. Good references provided. Send catalogues and samples with prices and terms.

117. Importer in Roumania, interested in Jute trade, wishes to get in touch with firms dealing in sacks, new and old Dundee, and Calcutta makes.

121. Exporter of Greek Ores in Athens, especially of purest quality Magnesite and Chromite wishes to be connected with interested British Firms.

Near East Markets.

LONDON PRODUCE REPORT.

Variable Tendency Prevails.

(From Our Own Correspondent.)

Monday Evening.

Sugar.—Considerable business has been transacted during the week, especially in crystallized and West Indian varieties. Home refined has been in moderate demand at unchanged prices. West Indian crystallized has gained 6d. to 40s., while Czecho-Slovakian has shed 1s. 9d. to 18s. White Java has been a good market and has been sold at 42s. 9d. as also Cuban 96 per cent. January-February which came to business at 10s. 6d. White sugar quotations are: January-February, 17s. 3d.; March, 17s. 1½d. May, 17s. 3d.; and August 17s.

Coffee.—Very little business has been passing during the week, and prices remain firm. The futures market has been steady. Quotations are:—March 50s. 9d.; May, 51s.; and July-September, 52s.

Rice.—An improvement in the demand has made the market firmer. Large shipments of Egyptian Japan rice have been received in London during the week. Burma No. 2 has been quoted at 15s., Siam No. 1 at 13s. 6d. to 14s., and Saigon No. 1 at about 13s.

Almonds.—There has been a steady demand for this commodity, and prices have risen in many cases. Offerings of Morocco almonds have been small and prices have risen 7s. 6d. per cent. Sicily almonds are quoted at 127s. to 130s. There is a likelihood of a great scarcity of Jordan almonds in the near future. The demand for this commodity at present is limited.

Oilseeds.—Indian linseed has been in poor demand during the week, and as a consequence, has risen 9d. to 18s. La Plata has been firm at 16s. 6d. Rapeseed has been quiet with Teria unchanged at 17s. 6d., but brown Cawnpore has shown an increase of 1s. at 18s. 3d., while bold Ferozepore has remained firm at 18s. Cottonseed has again risen with Egyptian black 3d. up at 13s., and Sakellaris at 12s. 6d. also 3d. up. Indian has gained 9d. at 9s. 9d. Copra has been quiet. Ceylon, November-January, at 27s. 9d. has been in fair request, West Indian is quoted at 27s. 3d. Mauritius at 26s., and Java has been done at 26s. 6d.

Oils etc.—Prices are firm. Linseed oil has gained 2s. 6d. at 30s. Rape oil has been steady with the crude variety and refined each 1s. down at 45s. and 50s. respectively. Cotton oil has shown no improvement, and prices remain firm. Refined remains at 45s., Egyptian crude at 37s., and deodorized at 50s. Castor oil has been easier with pharmaceutical at 55s., firsts at 50s. and seconds at 45s. Fish oils have been a dull feature, and little cod oil has been offering. With regard to coconut oil buyers have been backward in coming forward. Ceylon has come to business at 47s., and Cochin at 60s. Deodorized is quoted at 51s. 6d. Turpentine has advanced 3s. at 71s. 3d.

Oilcakes.—Linseed cake has been offered at 13s. Imported Egyptian cottonseed cake has declined, and is quoted at 9s., while palm kernal cake, which has been dull, has been done at 7s. 6d. Undecorticated groundnut cake has come to business at 10s. 3d.

AGRICULTURE IN MALTA IN 1920-21.

The Superintendent of Agriculture at Valetta in his report for 1920-21 states that the past year may be described as a very good one for field crops which develop from October onward, and therefore had the advantage of the very satisfactory rainfall, and as a very bad year for all arboricultural crops maturing since April, 1920, which were greatly handicapped by the general scarcity of rain in the previous year.

The agricultural area is estimated at 46,691 acres, the cultivated area being estimated at 42,891 acres. Wheat was grown on 11,621 acres, a decrease of 1,142 acres, and the yield was 38,237 quarters as compared with 39,713 quarters. Barley was sown on 6,676 acres, this total including 2,657 acres devoted to meslin. The yield is estimated at 20,057 quarters of barley and 11,955 quarters of meslin.

The area under citrus fruits amounted to 171 acres, the production being estimated at 75,080 dozen. 2,518 acres were devoted to other fruits, of which the production was estimated at 61,716 cwt. Cotton was grown on 605 acres as against 630 acres for the previous year. The production was 106,480 lb. as compared with 137,160 lb.

AGRICULTURAL CONDITIONS IN MESOPOTAMIA.

The following extracts are taken from the Agricultural Bulletin of Irak for the month ended November 15 :—

The absence of rain has rendered possible the harvest of the date and rice crops in prime condition. Apart from these there are no crops of much importance standing on the land during the period under review.

The level of the Tigris continues to be extraordinarily low. A slight rise was recorded in both the Euphrates and Tigris towards the end of October. Extension and silt clearance of the Yusu-fiyah Canal are progressing favourably. Construction of the Butern Regulator near Amara has been commenced. Repairs to the Hindieh Barrage are nearing completion. Good progress is reported in constructional work on the extension of the Saklawiyah Canal. Advantage has been taken, so far as it is financially possible, to attend to repairs and clearance of all canals during the slack season which intervenes between the harvest of the summer crops and sowing of winter crops. Sowing of winter cereals has commenced where canal water has been available for an initial irrigation.

The harvest of white rice is nearing completion, and threshing is in progress. The bulk of the Busreh date crop has been harvested and is now packed ready for export. Dates are about an average crop, but prices are exorbitantly low. The earliest of the citrus fruits from the DIALA are being marketed. An average crop is expected. Early sown winter vegetables near the towns are making good growth. The watering of the cotton crop was discontinued early in October, and the harvest is now practically completed.

Fodder continues to be particularly scarce, except in the irrigated areas. Condition of stock is normal for the season, with the exception of sheep, which appear to be in a poorer condition than usual.

Experimental Farms.

The experimental plots of ground nuts and maize at Kut and Baquba are now being harvested. The picking of cotton continues. Land has been prepared for varietal test with wheat and also for bulk cultivation to procure a seed supply for general distribution next year. The closing of the Baghdad-Kut railway has appreciably affected the accessibility of the Kut farm.

At the Central Experimental Farm, Rustam, the main well was closed for repairs during the month. It has since been completed. Arrangements have been made to conduct experimental work with wheat on a small abandoned date garden on the estate. This site is also being used as a tree nursery. The programme of experimental work for the coming winter crops has been laid down, and about 300 acres of land have been suitably plotted. The picking of cotton continues.

Cotton grown from seed supplied from the Department is being purchased and ginned by the British Cotton Growing Association in Baghdad. The current price for this seed cotton is 3½d. per lb. This is equivalent to twice the price paid in the bazaar for seed cotton of the local variety. Despite the failure of this year's cotton crop, owing to a shortage of water, on a fairly large proportion of the 600 acres grown where, however, the crop did succeed it has impressed the local cultivator. Demands for seed for next year's crop have already been received to the extent of a few hundred acres, and a considerable increase in the area under cotton is anticipated. One important factor which will contribute towards the increased area under cotton, is the low rate at which cereals are now selling.

The recent rise in the price of fuel oil for irrigation engines has caused a fair amount of discontent amongst owners of fuel oil plant. The economic values of kerosine and oil fuel for pumping installations in the Irak are under investigation. The Baghdad agents for the Anglo-Persian Oil Company contemplate the erection of an oil tank for bulk supplies immediately upstream of Baghdad, which is nearer the centre of the lift irrigated area than are the present tanks at Khirr Depot.

There is a marked tendency towards the development of land schemes all over the country. This tendency is attributed more perhaps to the degree of security that now obtains than to any other cause.

THE DRIED FRUIT TRADE IN 1921.

A Difficult Period.

Messrs. J. C. Houghton and Co., of Liverpool, in their annual review of the dried fruit trade state:—The period under review was one of considerable difficulty and anxiety. Financial strain, strikes, unemployment, and heavy taxation, reduced the spending power of the community, consequently buyers pursued a very cautious policy in their purchases.

Currants.—During the early months we experienced a flat and lifeless state of affairs, and values declined by the end of February about 5s. to 10s. per cwt. Early in March the Government disposed to a Syndicate their remaining stock, about 7,000 tons, which had been hanging like a cloud over the market, and a welcome change for the better was the result, as more life and interest were immediately infused into the article, with an appreciable rise in values. Unfortunately this improvement was short lived, the miners coming out on strike, and the fear of the railway and transport workers joining issue, decided buyers to suspend operations, pending a settlement, so that months of trading at two of the most important periods of the year viz, Easter and Whitsuntide, were lost. Upon resumption pressure was quickly in evidence, and sellers showing anxiety to unload, prices dropped smartly. The latter end of August witnessed a considerable increase of activity, without any improvement in prices.

New Fruit.—The season's trading has been most disappointing. We had no arrivals before the end of September, fairly heavy stocks of old fruit were carried over, reducing buyers' interest in the new crop, and a cautious policy was pursued, traders acting carefully. The sensational rise during the latter part of November on the Greek market, attributable in a great measure to heavy American buying, caught traders short of supplies, and a sharp advance in price followed, as stocks held in England were extremely meagre. We close the year with some reaction from the top prices, but the tone has ruled firm, and there are signs of a renewed period of activity, as first hand stocks are estimated at only 5,000 tons against 12,000 tons last year, exclusive of stock held by Government of somewhere about 10,000 tons.

Arrivals of New Fruit.—Latest quotations are:—1921, 12,169 tons:—Pyrgos, 55s. to 56s.; Amalias, 56s. to 60s.; Patras, 58s. to 65s.; Zante, 54s. to 60s.; Gulf, 62s. to 68s.; Panariti, 70s. to 75s.; Vostizza, 70s. to 85s.; Vostizza smalls, 66s. to 75s.; old fruit, 48s. to 54s.

Valencia Raisins.—The pessimistic estimate as to the extent of the crop proved to be correct, and it is doubtful if over 7,000 tons were harvested. Quality was undoubtedly disappointing, containing a large proportion of small fruit, fine being very scarce. During the drying process part of the raisins were caught by rain, and upon arrival showed signs of being out of condition, and had to be sold at reduced figures. The market opened quietly:—Half boxes selected, 125s. to 132s.; and quarter boxes selected, 130s. to 140s. It was some time before buyers realised the smallness of the crop, and that prices were justified; once this was understood, trading commenced and arrivals were cleared as they became available at values in sellers' favour, and we finished at:—Half boxes, 130s. to 135s.; quarter boxes, 140s. to 150s.; seedless, 120s. to 125s.; out of condition, 80s. to 110s.

African Cape Raisins are becoming yearly more important, as in colour and quality they resemble the Denia fruit, more than any other raisins grown. Unfortunately Liverpool have no direct steamers, so have to rely on transshipments *via* Southampton. The few arrivals on this market met a ready sale at 90s. per cwt. When the growers have learned to grade and pack like the Denia growers, they will be felt as serious competitors.

Sultanas.—We were quite out of stock upon the arrival of new fruit, the trade having to depend very largely during the summer months on Afghan varieties. In January sales were:—Red, 85s., and yellow, 95s. to 100s., and steadily appreciated in value. Closing prices were:—Red, 105s. to 107s.; yellow, 137s. 6d. Smyrna qualities, 150s. to 170s.; and Greeks, 138s. to 140s. We commenced dealing in the new crop when the first steamer Luque was loading, prices ranging from 100s. to 120s. c.i.f. according to quality, and upon her arrival, although it was known old stocks were exhausted and new fruit would come to a bare market, lower prices had to be taken to make progress. Prices were:—Fair, 105s.; medium, 115s.; and good to fine,

134s. The demand continued slow, and with lower quotations coming through from Smyrna, caused nervousness in one or two directions, lower qualities being forced down to 95s. and sulphured to 120s., rebounding later to 103s. and 135s. respectively.

Towards the middle of November more interest was displayed, developing into an active market, and with higher prices being demanded in Smyrna, we finish the year with a strong tone; closing values:—Fair, 108s. to 109s.; medium, 115s. to 120s.; and good to fine, 125s. to 150s. Greater attention was paid this season to sulphured varieties.

Figs.—The first of the new crop came to hand per s.s. Luque, and were quickly disposed of. Skeleton cases:—Large boxes, 140s. to 150s.; small boxes, 155s.; locoums, 160s. to 180s.; and pulled, 95s. to 115s. Lower prices were accepted for later steamers. On the whole a good steady demand was experienced; practically all stocks were cleared before Christmas. Final quotations are:—Large boxes, 110s. to 125s.; small boxes and packets, 120s. to 130s.; and locoums, 110s. to 120s. Bags naturals:—Forward sales 48s. to 50s. c.i.f. for September shipment took place. Spot sales opened:—Prima, 54s. to 57s. 6d., and genuine, 58s. to 63s. 6d., and although the price eased slightly recovered and closed unchanged. Quality of skeleton cases was good, but bags naturals below last year's standard.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 122s. cwt.; (Canadian), 115s. cwt.; (American), 105s. cwt.; butter: (Danish), 156s. cwt.; (Australian), 88s. cwt.; (New Zealand), 120s. cwt.; cheese (Canadian), 96s. cwt.; (New Zealand), 89s. cwt.; lard, 75s. cwt.; eggs (Danish), 41s. per 120; (Styrian), 20s. 6d.; per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6½d. lb., cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 150s. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 113s. cwt.; (Santos, superior) 62s. 6d. cwt.; ginger (washed Cochin), 67s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento 2½d. lb.; raisins (Valencias), 135s. 6d. cwt.; sultanas (Smyrna), 126s. 6d. cwt.; currants (Vostizza), 80s. cwt.; currants (Amalias) 58s. cwt.; sugar: (Tate's cubes), 51s. 9d. cwt.; (Lyle's granulated), 47s. 7½d. cwt.; (Mauritius crystals), 43s. 1½d. cwt.; (West Indian crystallized), 38s. 9d. cwt.; (centrifugal), 12s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2) 14s. 9d. cwt.; (bran, Rangoon), £5 15s. ton; cinnamon (firsts), 1s. ¾d. lb.; mace (fair Singapore), 1s. ¾d. lb.; tea: Indian (common to good common), 1s. 2½d. lb.; (medium to good) 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 46s. 9d. qr.; (Australian), 53s. 3d. qr.; barley (malting), 50s. qr.; barley (feeding), 39s. qr.; oats (English), 33s. qr.; oats (La Plata ex-ship), 15s. 1½d. qr.; maize (La Plata) 33s. 9d. qr.; flour, 41s. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £35 ton; bismuth, 7s. 6d. lb.; copper (standard), £66 3s. 9d. ton; copper (electro), £74 10s. ton; gold bars, 98s. oz.; iron (No. 3 Cleveland), 100s. ton; hematite (mixed number), 101s. 3d. ton; galvanised sheets (24 G), £17 5s. ton; lead (soft foreign), £24 5s. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 33s. 9d. unit; nickel, £190 ton; platinum, 316s. 3d. oz.; plumbago, £20 ton; quicksilver, £10 7s. 6d. bottle; silver bars, 34½d. oz.; spelter (G.O.B.), £27 3s. 9d. ton; tin (standard), £170 12s. 6d. ton; wolfram, 11s. 6d. unit; zinc sheets, £34 10s. ton; tin plates (20 by 14), 19s. 9d. box.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 8½d. lb.; 80 to 89 lbs., 8½d. lb.; 70 to 79 lbs., 8½d. lb.; 60 to 69 lbs., 7½d. lb.; 59 lbs. and under, 6½d. lb.; (second), 90 lbs. and up, 7, 1-8d. lb.; 80 to 89 lbs., 7, 1-8d. lb.; 70 to 79 lbs., 7, 1-8d. lb., 60 to 69 lbs., 6, 1-8d. lb.; 59 lbs. and under, 5d. lb. Cows (first), 60 lbs. and up, 6d. lb.; 59 lbs. and under 6d. lb.; cows (second), 60 lbs. and up, 5d. lb.; 59 lbs. and under, 5d. lb.; Bulls (first), 5½d. lb.; (second), 4½d. lb.; Kips (first), 6½d. lb.; (second), 5½d. lb.; (third), 4d. lb.

Miscellaneous.—Cotton: (American), 11,70d. lb.; (Egyptian Sakel), 20,45d. lb.; Oilseeds: Linseed (La Plata), £16 15s. ton; rape (Toria), £17 15s. ton; palm kernels, £18 7s. 6d. ton; Oils: Linseed, £27 12s. 6d. ton; olive (Levant), £18 7s. 6d. ton; palm, £37 17s. 6d. ton; rape (crude), £37 17s. 6d. ton; soya, £34 5s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £42 5s. ton; cotton (crude), £37 5s. ton; ground nut, £43 lb.; Rubber: Plantation (No. 1 crepe), 11d. lb.; smoked sheet, 11d. lb.; fine hard Para, 1s. 2d. lb.

Chemicals.—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 4½d.; ammonia (sulphate), £15 1s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard) 2s. 5½d. gallon; bleaching powder (35 per cent.), £15 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 8d. lb.; chlorate, 6d. lb.; caustic, £33 ton; nitrate, £42 10s. ton; permanganate, 11d. lb.; prussiate, yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals 140s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 6½d.

lb.; alkali (58 per cent.), £9 3s. 3d. ton; chlorate, 3½d. lb.; caustic (70 per cent.), £24 5s. ton; hyposulphite, £15 10s. ton; prussiate, 8½d. lb.; nitrate, £14 8s. 9d. ton; glycerine (crude, 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.), £110 ton; lemon oil, 2s. 11d. lb.; quinine, 3s. ½d. oz.; red lead, £39 5s. ton; white lead, £42 5s. ton; white ground lead, £51 15s. ton; sulphate of copper, £28 15s. ton; sulphate of iron 75s. ton.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street S.W.1.)

Egypt.

Cocoa Fibre.—The Inspector-General, Prison Department, 43 Sharia El Bostan, Cairo, invites tenders for the supply of 3,750 oke of cocoa fibre, unplaited. January 15.

Fire Pumps.—The Director-General, State Domains, Administration, Cairo, invites tenders for the supply of three hand fire pumps. January 16.

Timber.—The Department of Technical Education, 14, Sharia Abdine, Cairo, invites tenders for the supply of timber required for the Model Workshops, Bulaq. Specifications, lists of timber required, etc., can be obtained at the Model Workshops, Bulaq Cairo. January 18.

Sundries.—The Department of Public Health, Cairo, invites tenders for the supply of (1) proprietary articles; (2) sundries (includes bottles, demijohns, droppers, and baths for eyes, ointments, pots, etc., etc.); (3) dressings; (4) crude drugs and heavy chemicals; (5) fine chemicals; (6) galenicals and packed articles Representation by an agent resident in Egypt is essential January 20 (D.O.T.).

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of six months from April 1, 1922. January 20.

General Stores.—The Director of Stores, F.D.A., Arsenal, Alexandria, invites tenders for the supply of consumable general stores such as ropes, nails, locks, leather, soap, brushes, etc. January 21.

Marine Articles.—The Director of Stores, F.D.A., Arsenal, Alexandria, invites tenders for the supply of marine articles, office and rest-room furniture, and tools, etc.. January 24.

Marine Boiler.—The Secretary General, Ports and Light-houses, Arsenal, Alexandria, invites tenders for the supply of a new multitubular marine boiler of the following description:—Diameter 11 feet; length 10 feet; two corrugated furnaces. Boiler working pressure 180 to 200 lbs. per square inch. Built to Lloyds rules 100 A1 and supplied with all accessories as per specification. Offers will remain valid for one and a half months from March 1, 1922.

Bulgaria.

Telephone Instruments.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of 2,000 telephone instruments for table use, with local battery and magneto. Also for spare parts for these instruments. Tenders to be presented at the District Office of Finance, Sofia by February 20. (D.O.T.).

Rails and Accessories.—Tenders are invited by the Director-General of Railways and Ports for rails, bolts, fishplates, etc. The total quantity of the material required is 5,808 metric tons. Tenders are to be submitted to the Directeur Général des Chemins de Fer et des Ports de l'Etat Bulgare, Sofia, Bulgaria. A deposit of 5 per cent. is required to qualify tenders, of which 1 per cent. must be deposited in the National Bank of Bulgaria in Sofia before the adjudication, and the certificate of receipt attached to the tender, whilst at the same time a declaration is required to the effect that the remaining 4 per cent. will be deposited when the adjudication is made. January 24. (D.O.T.).

Porcelain Insulators.—The Bulgarian Department of Posts, Telegraphs and Telephones, invites tenders for the supply of 100,000 porcelain insulators. Tenders to be presented at the District Office of Finance, Sofia by January 25. (D.O.T.).

Telephone Accessories.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of the following parts for telephone exchanges, viz.:—Subscribers' line indicators, 2,200; indicators, end of conversation, 600; jacks, 2,500; plugs, 1,500; connecting pieces, 2,000; connecting pieces, switchboard, 20,000. A deposit of 5 per cent. of the total amount of tender is called for by way of guarantee. Local representation is essential. Tenders to be presented at the District Office of Finance, Sofia, by January 30. (D.O.T.).

Materials for Bulgarian Department of Posts.—Tenders are invited by the Bulgarian Department of Posts, Telegraphs and Telephones for the supply of the following material:—(1) Porcelain insulating tubes for telephones (10,000), insulating tubing

(impregnated paper), for telephones. (2,200 metres), Ebonite caps (1,7000) and Insulated copper wire (1,000 metres); (2) Various electrician's small tools (include 900 pairs pincers, 20 brazing lamps, 100 soldering irons, 1,500 bits, 300 axes); (3) Bronze in plates and bars, iron and steel plates and bars and insulating materials. Tenders will be opened at Sofia, District Department of Finance at 4 p.m. on March 8, in the case of (1), February 27, in the case of (2), and February 14 in the case of (3). Each tender is divisible. (D.O.T.).

India.

Canvas, etc.—The High Commissioner for India invites tenders for the supply of (1) Canvas sails; (2) Copper bolts; (3) Buffers, wrought-iron; (4) Chain, iron galvanized, for signal levers; (5) Engine turntables. Forms of tender may be obtained from the Director-General, India Store Department, Belvedere-road, Lambeth, S.E.1., for Nos. 1 to 3, and January 31, for Nos. 4 to 5.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

- (1) The Modern Chaotic Exchange Situation
- (2) The French Exchange Position.
- (3) German Industry and the Mark.
- (4) The Italian Lira.
- (5) The United States Dollar.
- (6) Miscellaneous Exchanges (Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

SHIPPING INTELLIGENCE

PORT SAID NOTES.

(From Our Own Correspondent.)

Port Said, December 31.

One of the most significant items of news in this part of the world is the announcement of the Suez Canal Company that on and after January 1 ships of a draft of thirty-one feet will be accepted for transit of the Canal. This will not affect a great number of ships, especially now when cargoes are difficult to find, and ship-owners are glad to get even a half cargo, but it means that practically any ship trading in eastern waters will be able to transit the canal when she is loaded down to or even below her marks. If any ship, such as a man-o-war was deeper she would probably be unable to come through for other reasons.

Previously in these notes we have touched on the subject of motor-ships, and recently three of these vessels which are worthy of comment have passed through the Canal. The first is the *Jutlandia*, which with her sister ship the *Selandia*, was the pioneer of ocean going motor ships in the East. The *Jutlandia* was built in 1912, and has been running satisfactorily ever since. She carries 7,600 tons of cargo, and can keep up a speed of 11 knots on a consumption of $8\frac{1}{2}$ tons of oil per day. She takes a thousand tons of oil in her double bottom, sufficient for one hundred and ten days' steaming, to use a slightly incorrect term; in other words she can fill up in the East where oil is cheap, with enough to take her home and out again, and still leave a good margin for emergencies.

The second motor vessel is the Brocklebank ship *Malia*. She is engined with a new type, called the Fullager, after its designer. A small engine of this design was made and put into a coaster, and given a three month's trial. Proving satisfactory it was taken out, and another similar engine was put into the vessel in question. It is said that the voyage out was not entirely without incident, but valuable experience is being gained with a type of engine which promises a revolution in economy of consumption. Lastly the fine Danish motor-ship *Asia* passed through recently.

ICE BREAKING ON THE DANUBE.

(From Our Own Correspondent.)

Bucharest, December 28.

According to the latest news from Sulina, as a result of the measures taken by the European Danube Commission and the different shipping companies, whose ships have been caught by the ice at Braila and Galatz, two ice-breakers are now working hard up river and two other ice-breakers are expected from Constantinople. Should the present mild weather continue for a few days longer the ice-bound ships at Braila and Galatz are expected to be released by the end of this week.

TANKER CHARTERING REVIEW.

Outlook Rather Better.

Messrs. John I Jacobs and Co., Ltd., of London, in their half-yearly report on oil-tanker chartering state:—

After the issue of our last half-yearly review in June last, oil freight rates still further declined in July and August, but after this, considerable demand having arisen on the part of the Continental oil merchants for clean tonnage, the rates for this class of boat steadied, and have remained more or less stationery. Whereas the demand, such as it was, during the first half of the present year, was for large dirty boats for the carriage of fuel oil, crude oil, etc., the requirement during the second half of 1921 has been to a very great extent confined to clean boats, principally owing to the fact above mentioned, and to the depletion of stocks of lamp oil and spirits which were held on the Continent, and which had to be augmented for the winter season.

With the recent over-production of tanker tonnage, it is not surprising that builders should now be complaining about the scarcity of requirements, and tonnage can be contracted for at less than half the prices ruling last year. The amount of tonnage which continues to be launched reaches very large figures, but the accumulation of orders has now been practically eliminated. The gross registered tonnage of tank steamers afloat now reaches the large figure of about 5,000,000 tons as against the pre-war figure of about 1,500,000 tons. In a great number of cases large tank steamers have been laid up as soon as they left the builders' hands.

It is encouraging to be able to report a certain activity on the part of the Roumanian producers, and quite a number of handy boats have been fixed at figures ranging from 42s. 6d. down to 35s. from Constantza to U.K., Continent, including Rouen. The Black Sea ports have also exported a limited number of cargoes both of refined oil and spirit and of lubricating oil. Freights, of course, from Novorossiisk or Batoum ruled rather higher than those from the Roumanian port, but in spite of the uncertainty of loading conditions a large tanker was obtained at so low a figure as 31s. 6d. for a cargo of kerosene to the Thames.

With the supply of tonnage in excess of the demand, it is perhaps only natural that little business on time charter basis should have been effected, and the few definite charterers who have come into the market have easily found all the tonnage they require at from 7s. 6d. to 9s. 6d. on the deadweight, according to size and description of the steamer. The reports which continue to arrive from the Argentine Republic in connection with the oil industry out there are still full of optimism, and it would appear that there are great hopes of the Southern Republic becoming one of the great oil producing lands of the world. At the moment, the transport is practically in the hands of the Argentine Government, who have four or five tank steamers operating between Comodoro Rivadavia in Patagonia and the River Plate ports. An Argentine company, it is reported, secured after long negotiations a tank steamer for twelve months time charter at 15s. on the deadweight, and in order to conform with Argentine law, owners agreed to place the boat under the Argentine flag and conform to the Argentine Navigation Laws in connection with the crew.

The basis rate for clean tankers of from 6-7,000 tons from the Northern States to the near Continent has been 27s. 6d. with 5s. extra from the Gulf, always on the basis of two ports of discharge, including refined oil and-or spirit as the cargo. Smaller boats of from 4-5,000 tons capacity have on occasion received 5s. per ton more, but the demand has mainly been for the larger boats. For the Mediterranean there has been a limited demand for Marseilles and Cette at figures which have varied from 52s. 6d. for a small boat to 35s. for boats of about 8,000 tons capacity. Spain has been more active perhaps than the usual, taking boats to deliver cargoes this year before the new import tax comes into operation on January 1. The rate for light oil from the Northern States to North Spain may be taken at 95s. with the option of Spanish Mediterranean ports of 40s. Charterers for German account have taken up considerably more tonnage during the latter months of the year, and besides a large tanker for kerosene at 32s. 6d. from the Gulf to Hamburg, have just taken a small boat for lubricating oil from New York.

ANCHOR LINE

First-Class Passengers only.

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar & Egypt

LARGE STEAMSHIPS. UPPER DECK CABINS.

RECOGNISED BY INDIAN GOVERNMENT.

PASSENGER SAILING DATES—

MASSILIA, JANUARY 20.

ELYSIA, FEBRUARY 10.

CIRCASSIA, MARCH 10.

OLYMPIA, MARCH 22.

Anchor Line (Henderson Brothers), Ltd.,
16, Gracechurch Street, London, E.C.3.

As regards dirty cargoes, the demand has been, to all intents and purposes, absolutely confined to large boats and as low as 25s. has been done on several occasions from the Gulf to a direct port in the U.K. for either crude oil or fuel oil, whilst 27s. 6d. was paid for a gas oil cargo to the Thames. Italy has taken up a tanker lately of about 10,000 tons at 30s. for fuel oil from the Gulf to Spezia, and this compares with the rate of 280s. paid about the same time last year.

It is taking owners all their time to find sufficient employment to keep their boats at sea in spite of the fact that current rates leave nothing for depreciation and very little to put aside for contingencies. The outlook, whilst not very hopeful, is rather better than earlier in the year, and with the amount of tonnage to be built now strictly limited as to quantity owners may look forward to being able to keep their tonnage at sea over the coming year.

VIZAGAPATAM HARBOUR.

A Rival to Calcutta?

The importance of the harbour scheme now being put into execution at Vizagapatam can hardly be overestimated (says a correspondent of the *Manchester Guardian Commercial*.) The inherent advantages of the place are enormous. Its accessibility for Central Indian produce will be at least as great as that of either Bombay or Calcutta, and infinitely greater than that of Madras. It will provide the easiest and shortest route to Burma and the Straits for mails, passengers or goods.

The new harbour will be ideally protected from storms, and will be in no way inferior to Calcutta in this respect. It remains to consider its comparative accessibility from the sea, and here lies the superiority of the new harbour over Calcutta. Calcutta is one of the most, if not the most, difficult harbours to enter in the whole world. The dangers of the Hooghly are proverbial. The delay caused through its passage even at the best of times, the high piloting charges, and the ever-present danger of the James and Mary and other shoals are a few of its many drawbacks, while bores form at intervals, travel up most of its length and cause inconvenience to all vessels moored in the vicinity. At Vizagapatam, on the other hand, the new harbour will be of easy access, vessels only having to pass between the two groins to find themselves in the nearly landlocked waters of the harbour.

CZECHO-SLOVAK SALT DEPOSITS.

Salt is found in Czecho-slovakia in eastern Slovakia and in Rumania. The salt beds (says the American Trade Commissioner at Prague in a recent report) run parallel with the Carpathian Range from east to west through the counties of Sarys, Zemplin, Uzhorod, Beres, and Marmaros, and continue on through Roumania to the eastern and southern parts of Transylvania.

There are two salt mines in Czecho-slovakia—one in Solnohrad near Presov, in Slovakia, and another in Marmarozska Solotvina in Rumania. The mines at Solnohrad are flooded with water, and salt is obtained by boiling the solution and evaporating the water. The salt mines in Marmarozska Solotvina were taken over in July, 1920, from Roumania. They yielded only 8 to 10 cartloads of salt per day until November, 1920, when the working staff was enlarged and two shifts installed. The production then rose to 30 cartloads per day. The Rumanian deposits extend over an area about 2,160 metres long and 1,700 metres wide. The depth of the known beds is estimated at 170 metres. The pure salt content of the Rumanian mines has been estimated as high as 60,000,000 metric tons. Assuming a yearly consumption of 300,000 metric tons, the deposits should last for 200 years.

Although the salt deposits in the neighbourhood of Solnohrad, in Slovakia, are probably very extensive, the output of the salt mine there is small—not more than two cartloads per day. There are 132 workmen employed. There is a project now under way for building a modern salt-mining plant at a cost of about 14,000,000 crowns. The output can then be increased to about three cartloads a day. The Ministry of Public Works announces that a full development of the Slovak and Rumanian mines will more than meet the domestic needs of 80 cartloads a day.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses:—

Anchor Line—S.s. Massilia for Bombay (Liverpool, January 16); s.s. Elysia for Bombay (Liverpool, February 4).

Anchor Brocklebank Line—S.s. Manaar for Port Said, Colombo, Madras, and Calcutta (leaves London January 21); s.s. Malancha for Calcutta (Birkenhead, January 28); s.s. Malakuta for Port Said, Colombo, Madras, and Calcutta (London, February 4); s.s. Mahratta for Calcutta (Birkenhead, February 11).

Bibby Line—S.s. Oxfordshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, January 1); s.s. Lancashire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, February 1).

Cunard Line—S.s. Cypria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Glasgow, February 9); s.s. Brescia for Genoa, Leghorn, Naples, Palermo, Messina and Catania (Swansea, February 6).

Ellerman Line—S.s. Cressado for Gibraltar, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, January 21); s.s. City of Oxford for Gibraltar, Malta and Alexandria (Liverpool, January 21).

Ellerman's "City" Line—S.s. City of Cairo for Calcutta (Birkenhead, January 19); s.s. Trafford Hall for Bombay (Birkenhead, January 23); s.s. City of Sparta for Calcutta (Birkenhead, February 2).

Ellerman's "Hall" Line—S.s. Kasenga for Bombay, Karachi, and the Punjab (Liverpool, January 31).

Ellerman's Westcott and Laurance Line—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

Glen Line—S.s. Glenariffe for Port Said, Port Swettenham, Singapore, etc. (London, January 12); s.s. Glenogle for Port Said, Port Swettenham, Singapore, etc. (London, January 26); s.s. Glenapp for Port Said, Port Swettenham, Singapore, etc. (London, February 9); s.s. Carnarvonshire for Port Said, Port Swettenham, Singapore, etc. (London, February 23).

Harrison Line—S.s. Intombi for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, January 19); s.s. Author for Calcutta (Liverpool, January 25).

Henderson Line—S.s. Henzada, for Port Said and Rangoon (Birkenhead, January 25).

Holt Line—S.s. Anchises for Port Said, Port Swettenham, Singapore, etc. (Glasgow, January 24); s.s. Antiochus for Port Said, Port Swettenham, Singapore, etc. (Glasgow, January 26).

Johnston Line—S.s. Wingate for Piraeus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, Constantinople, Sulina, Tulcea, Galatz, and Braila (Liverpool, January 17).

Papayanni Line—S.s. Malatian for Tangier, Malta, and Alexandria (Liverpool, January 14); s.s. Bosnian for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 4).

P. and O. Line—S.s. Nore for Colombo, Madras, and Calcutta (London, January 13); s.s. Perim for Bombay (London, January 14); s.s. Morea for Bombay (London, January 20); s.s. Sardinia for Colombo, Madras, and Calcutta (London, January 27); s.s. Karmala for Bombay (London, January 27).

P. and O. British India Line—S.s. Nirvana for Bombay and Karachi (London, January 14); s.s. Tanfield for Colombo, Madras and Calcutta (London, January 21); s.s. Mandala for Bombay and Karachi (London, January 27); s.s. Morvada for Colombo, Madras and Calcutta (London, February 3); s.s. Nevasa for Bombay and Karachi (London, February 10).

The production of olive oil in Greece for the year 1921-22, is estimated at approximately 37,000,000 metric okes.

We have received a copy of the January issue of the *Indian and Eastern Druggist* for January, a special number in celebration of the visit of the Prince of Wales to India. The issue contains a number of articles of interest, besides the usual trade news, and has as a cover a portrait of the Prince of Wales in three colours.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Stamboul, December 24.

The stagnation recorded in our previous reports continues. Arrivals of merchandise are notably smaller. Consignments to Batoum are restricted. Buyers from that centre are beginning to obtain their supplies direct from here. The commodities most in demand are cabots and sugar

The market in manufactured goods is at a standstill. In view of the weakness of prices at Manchester and the lack of orders cotton goods are more and more neglected.

A large number of important houses of this city have opened branches in the course of the year in Roumania, principally at Galatz, to create outlets. These branches which carried through at the commencement sufficiently remunerative transactions are suffering at present from the continued depreciation of the leu and the restrictive measures imposed by the Roumanian Government, preventing merchants from exporting unsold merchandise. Large stocks have in consequence accumulated, notably at Galatz.

Produce.—Sugar: Prices continue to fall in America. The Cuban syndicate having been dissolved holders are offering their stocks at more and more reduced rates. The fall in prices has had a repercussion in Holland and Czecho-Slovakia. Quotations are :—7 dollars per 100 kilos (as against 34 dollars or more a year ago); Java, £18 10s. per ton, January-February shipment; Dutch, £20 per ton; here £22 per ton in transit; in customs, £27-28 per 100 kilos.

Coffee.—The rate which had risen at the commencement of the week has since fallen to the extent of 1s. 6d., although the statistics indicate a reduced crop. Quotations are :—Rio, Ps. 50-58 per oke, in transit; in Customs Ps. 18 per oke.

Flour.—The market is inactive with a tendency to fall. Stocks here are more reduced than before. They are estimated at 200,000 sacks; at the same time large consignments are shortly expected.

Roumanian and Bulgarian wheats which the local flour trade had commenced to import are not holding their own against flour of American origin.

Mamouret-ul-Aziz.

The report for November states :— Imports are becoming more and more restricted. There has been a fall in the prices of sugar, soap, and petrol. The first was sold at 15 piastres gold, the second at 22 piastres gold per kilo; and the third at 160 piastres gold per bidon of 16 kilos. They have fallen respectively to Ps. 12, 18, and 13c. Petrol imported from Aleppo is of American production, and is inferior to that of the Caucasus, which is worth 10 piastres gold or more per bidon.

A telegram from the Viceroy, Revenue and Agriculture Department, to the Secretary of State for India, dated January 6, states :— Our telegram dated December 31. Relief works closed in Kurnool District, Madras Presidency. Number on relief :—Baluchistan, preceding week's figures: works, 63; gratuitous, 400. Madras: works, 5,500; gratuitous, 2,466. Total 11,100.

ROUMANIAN OILS STRONG.

(From Our Own Correspondent.)

London, Monday Evening.

Contrary to the expectation maintained in many quarters there was no general revival of interest in the markets during the past week, and even gilt-edged were inclined to dullness. The rumours of a General Election in the spring had some effect of course, but the main cause of the lack of activity was the tendency of the public to avail developments, combined, I fancy, with a certain amount of profit taking in some departments. If it should be decided to hold an election shortly then I fear we must put aside all ideas of brighter markets until it is over. But there is no need to be pessimistic *ante diem*, and so far as can be seen it is just as likely at the moment that there will be no dissolution until next year. But if it is postponed we can anticipate intermittent rumours until the event. To-day the markets close on a much brighter note as a result of the Dail's ratification of the Irish Treaty.

An excellent indication of the gradual improvement in conditions is to be found in the number of new companies that are now being registered. It points decidedly to a returning confidence among the commercial community. There have been a few new issues this year so far, and the support they have received has been most encouraging for the others that are to follow and also for the underwriters, whose experiences in the latter half of 1921 were often the reverse of pleasant. There is no fresh news regarding Near Eastern loans. As was to be expected the pending Anglo-Persian issue continues to arouse interest. In some quarters it is still thought that there will be an issue of Ordinary shares, but if this should be the case it will be very surprising when it is obvious that the company can raise the required capital by means of Preference shares.

Gilt-Edged Firm.

Gilt-edged have, of course, been favourably influenced by the Irish news, and close on a cheerful note. Consols are 1-8 up at 50½, while the Conversion Loan has gained 1-10 at 66, 3-8. War Loan Fives close, however, a shade lower at 92, 3-8. The India 7 per cent. Loan is unchanged at 104½. In Near Eastern securities which rank with British Government funds Egyptian Guaranteed 3 per cents. are 70½, Greek Guaranteed 2½ per cent. 1808 are 63½, and Turkish Guaranteed 4 per cent. 1855 are 71½.

An improvement in the exchanges has been reflected in a harder tone in the foreign market. French Fives are 1½ up at 43½, while German 3 per cents have gained 3-16 at 3, 3-8. Italian securities have been dull, and Rentes are 1 down on the week at 21. Japanese bonds have displayed some weakness, while Chinese are much about the same. Greek stocks have continued to exhibit a buoyant tendency, and once again a very general advance is to be recorded. Monopolies are 34xd., a rise of 1½. Fundings are 2 up at 35xd., while the 1914 5 per cents. at 41½ show a gain of 3½. The 5 per cent. 1881 Loan is 38½, while the 5 per cent. 1884 Loan is 38½, there being in both cases a considerable advance.

Industrials Cheerful.

Though business as usual in these times has been on the small side a very cheerful tone has been in evidence, and in various directions advances are to be recorded. Iron and Steel shares have been notably firm. Armstrongs are unchanged at 15s., but Dorman Longs are 9d. up at 15s. 9d., whilst Guest Keens are 2s. up at 31s. 6d. Exceptionally Vickers are 3d. down at 8s. 9d. Tobacco shares have been a special feature of the week, with British American a strong spot at 64s. 6d. Textiles are lower on balance. Courtaulds at 30s. 10½d. have shed 4½d., while Coats are 2, 21-32.

Shipping securities have been steady. P. and O. Deferred are 2 up at 307, while Cunards have gained 3d. at 18s. 6d. Furness Withys, however, are 6d. lower at 25s.

There has been little doing in mining descriptions with the exception of a few lines. As a result of the labour situation on the Rand Kaffirs have developed weakness. Chartereds have been dull, closing at 11s. 1½d. Tin shares have been neglected.

The Rise in Phoenix.

A rather uncertain tone has ruled in the Oil market during the week, and dullness developed in certain directions as a result of the reduction of the price of American crude. Mexican Eagles are 3-8 down at 3½, while Burmahs are somewhat lower at 5, 7-8. Among Egyptians Anglo-Egyptian are 1-10 down at 1, 7-16. In the Roumanian group Phoenix have been in special request, and are 2s. 9d. up at 11s. 6d. I indicated the probability of this last week, and expect this share to go still higher, as it looks moderately priced in view of the prospects of the company. Roumanian Consolidated are 1s. up at 9s., and at its present price this share seems a promising lock up. Steaua Romanas are unchanged at 11s. 3d.

Banks Steady.

Among banking descriptions Agricultural of Egypt 2½ per cent Bonds are 54, 3-8, while the 3½ per cent. Guaranteed Bonds are 55, 7-8. Imperial Ottoman Banks are 8½, Ionians are 4, and Bank of Athens are 2. National Bank of Egypt are 19. Chartered of India are 15½, while National of India are 37½. P. and O. Banking Corporations are 11, 7-8.

Among land shares Béhéras are 9, Béhéra Prefs being 3, 3-16xd. Egyptian Delta Lands are 7s. 10½d., Gharbihs are 1, 9-16, New Egyptians are 24s. 6d., and Union Foncières are 2, 11-16. Sudan Plantations are 2½.

Rubbers Dull.

Following a new fall in the price of the raw commodity dullness developed in the Rubber market, and in a number of cases shares have been marked lower. Still the statistical position is steadily improving, and that is the all-important consideration. Fluctuations there must be, but in general I think it may be taken that the shares are not likely to go much lower. But there is little question that a good many months must elapse, unless there should be some remarkable development in the use of rubber, before there is any great recovery, and that fact is likely to prove a deterrent to people to buy even though there is a prospect of a substantial profit in the end.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on December 30 were as follows:—Agricultural Bank of Egypt £4, 5-16; Alexandria Water Co., Ltd., £6, 31-32; Anglo American Nile Steam, £2½; Associated Cotton Ginners, £15-16; Banque d'Orient, Fr. 50½x; Behera Ord., £E8½; Brasseries d'Egypte, Fr. 50; Building Lands of Egypt, £7-8; Cassi di Sconto Priv. Fr., 100; Ciments d'Egypte Priv., Fr. 50; Ciments d'Egypte Div., Fr., 24; Comptoir Fin. et Com. d'Egypte, £1; Consolidated Lands, Pt., 5; Credit Foncier Fondateur, Fr., 910; Credit Foncier Act, Fr. 654; Credit Foncier, 1886 Oblig., Fr., 318½; Crown Brewery Priv., Fr., 114; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 80; Eaux du Caire Jouissance, Fr., 102; Egypt and Levant, S.S. Ord., 26s. 1½d; Egyptian Delta Light Railways, £3, 9-16; Filature National d'Egypte, £12½; Immeubles d'Egypte Soc an des., £5, 3-8; Khedivial Mail S. S. Ord., 110s.; Khedivial Mail S.S. Co., Pref. £2½; Kom Ombo Ste An de Wadi, £4, 11-32; Kom Ombo Ste An Fondateur £34; Land Bank of Egypt, Parts de Fond. £38; Lots Turcs. Fr. 29; Menzaleh Canal Navigation Pt., 225; Nungovich Hotels, £6, 3-8; Ramleh Railways, £2, 5-8; Salt and Soda, 34s. 6d.; Tram d'Alexandrie Priv., Fr., 38; Tram d'Alexandrie Div., Fr., 54½; Union Fonciere d'Egypte, £2, 19-32; Egypt Hotels, £2, 3-32; Urbaines et Rurales, £3.

There is a market in Constantinople and district for oil cooking stoves, ovens, and water heaters.

Mr. A. J. F. Kemp, of Messrs. A. Kemp and Son, manufacturers of gold plate in sheet, Tenby Street North, Birmingham, has been appointed Roumanian Consul in Birmingham.

Anglo-Egyptian Oil Output.—Gemsah (week ended December 30), 8 tons (last week 8 tons); Hurghada (week ended December 30), 3,363 tons (last week 2,684 tons).

Under the extended export credits scheme to stimulate export trade additional credit to the amount of £2,421,000 was sanctioned between the end of October and the end of the year.

Cotton & Cotton Goods.

MANCHESTER MARKET.

(From Our Own Correspondent.)

Manchester, Saturday.

The New Year has opened with a fairly optimistic feeling, and there is no doubt that there are definite indications that an improvement in demand can be anticipated. Any movement towards better times however, will be gradual. Numerous buyers are now convinced that more favourable opportunities of purchasing are not likely to be experienced, but free operations are checked by the tightness of money. If the present demand is maintained there should be more work to go on with in the near future. With regard to Egypt, better advices have been received from that outlet, and traders on this side are hopeful of more business being done within a very short time. Money is stated to be coming in more freely. Only a few small sales in a variety of fabrics however, have taken place for the Near Eastern outlets, generally. Egyptian yarn prices have tended to harden, and many spinners are more independent than a month ago. Some useful orders have been secured. The cloth demand for India has been on extensive lines, and although offers are still on a very low basis some encouraging transactions have taken place in gray shirtings and light cloths for Calcutta, Bombay, Karachi, and Madras. Rather more activity has been displayed by shippers to China, but transactions have been scattered. Buyers for South America have not been altogether idle. American yarn prices have continued firm, but home users have only purchased sparingly. The undercurrent of demand for bundles for India and the Far East keeps up fairly well.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson reports as follows under date January 4 :—

Up to the end of last month the recent improvement was well maintained, and the opening days of the New Year had been awaited, by most people, with considerable eagerness. It was generally felt that the trade was on the eve of better times. The first day's trading was quiet with only a moderate turnover, but sentiment was so strongly "bullish" that spot prices were all raised $\frac{3}{4}$ d. per lb. An unfortunate break in the New York futures market overnight caused a severe reaction here to-day, and yesterday's advance was completely wiped out. As was only to be expected, buyers were very shy, and the sales were smaller than ever. Nevertheless, the better tone which has been in evidence of late still remains, and while we write the futures markets are slowly regaining some of the ground lost, and this, no doubt, will be reflected in the spot prices to-morrow. The most hopeful feature in the situation at the moment is the better news which keeps dribbling through from Manchester, where, undoubtedly, a larger business is taking place. India, at last appears to be slowly but surely "coming in," and yesterday China, which for a long time now has remained quiescent, bought freely. Yarn also appears to be slowly finding a market, though prices are still far from satisfactory to the spinner. The main thing is that stocks are moving, be it ever so slowly. One cannot expect a rapid recovery; there is too great a weight of cotton here, and too many "distress" lines of yarn and cloth to be absorbed from Lancashire, for such a thing to happen, but most indications point to a steady all-round improvement taking place. A boycott of British firms is being attempted in Cairo, but otherwise the recent troubles in Egypt appear to have quietened down. The enquiry for spot cotton in Liverpool

during the past week has been on a moderate scale only; it was of a general character and calls for no special comment. C.i.f. business has fallen off again after last week's spurt. Total sales, 1,800 bales (includes 200 Sudan). Quotations show an all-round advance on the week of 25 points. Fully good fair Sakellaridis to-day 21.50d.

COTTON PRICES IN 1921.

Lower Index Number.

The index number for the general average of the prices ruling on December 31, 1921, for American and Egyptian raw cotton, American and Egyptian cotton yarns, and cotton cloth is calculated by Mr. Frederick W. Tattersall, of Manchester, at 197, assuming that the quotations for each of the commodities on July 31, 1914, was 100.

A year ago the figure was 219. at the end of 1919 it was 552, and on December 31, 1918, 374. The year 1917 closed at 342, and the final calculations for 1916, 1915, and 1914, were 186, 115, and 76, respectively.

Apart from the American cotton, which, at 176, shows an advance of 27 points compared with the previous year, quotations on balance have been more favourable to buyers. American yarn now stands 51 points lower at 190 against 241, and the reduction in cloth from 238 to 179 records an even larger decrease—59 points. In Egyptian cotton a fall of 6 points has occurred from 259 to 253, whilst Egyptian yarn prices have moved downwards 24 points from 209 to 185, which brings the average decline to 22 points.

ROUMANIAN DEBTORS.

Important Judgement regarding Bills of Exchange.

The first definite interpretation to be given of the much disputed Article 41 of the Commercial Code of Roumania is reported to the Department of Overseas Trade by the Commercial Secretary to His Majesty's Legation at Bucharest (Mr. Alexander Adams) in a judgment pronounced by the Ilfov Commercial Tribunal on November 22, last.

Article 41 stipulates that when foreign monies have to be paid on the day upon which bills fall due such foreign monies are to be paid at the rate of exchange of the date of the payment of the bill. This provision is interpreted in the judgment as applying to the great mass of debtors who paid their acceptances upon the due date, but in the case in question in which a Bucharest debtor firm had not done so the rate of exchange must be that ruling at the time when the payment is actually made.

This judgment makes it perfectly clear that bills of exchange accepted by Roumanian debtors in pounds sterling, provided the proper legal formalities are carried out, will be payable in Roumania either in pounds sterling or at a rate of exchange sufficient to enable the holder of the bill to purchase pounds sterling for the amount due at the moment and place of actual payment.

There is a market in Yugoslavia for coal, wood, paper, electrical supplies, chemicals, drugs, cocoa, chocolate, tinned meats and fish, boots, shoes, flour, &c.

Mr. P. N. Caridia has been appointed general manager of the Ionian Bank.

NOTES OF THE WEEK.

The Betrothal of King Alexander.

The rumour of the betrothal of King Alexander of the Serbs, Croats and Slovenes, to Princess Marie of Roumania is confirmed—was indeed, confirmed just after *The Near East* went to press last week; and we are glad to be able to join sincerely in the chorus of congratulations with which the event has been hailed. King Alexander has led a strenuous life, both during the time he was Regent, and since he succeeded his father on the throne last year, and he has certainly earned the rest and domestic happiness which we all hope will now be his. Both he and Princess Marie are known in this country, and the Princess, it was recently announced, will be one of our own Princess Mary's bridesmaids; so that it is not surprising that the news of their engagement has been received here with much interest and real pleasure.

A Factor of Peace.

But it is natural that the greatest satisfaction at the news should be in South-Eastern Europe. It is realised there that the betrothal is sure to draw Yugoslavia and Roumania still more closely together; while the fact that Roumania and Greece are also united by family connexions constitutes another link in a chain which, we may hope, will prove a service of strength and unity in the Balkan countries, and make for peace with neighbouring States. Quite apart from the congratulatory telegrams exchanged between M. Také Jonescu and M. Paschitch, the reports from many centres show what high hopes are already being built on the engagement. It is felt especially that the Little Entente cannot but be strengthened by it, and the view is very generally expressed that Greece will soon join that partnership. Time alone can show how far these expectations are justified, but it is not to be denied that the news of the engagement has created a more friendly atmosphere in that part of the world. "All the world loves a lover" and the peoples of south-eastern Europe are no exception to the rule.

The Cannes Conference.

As all the world now knows, the Cannes Conference has broken down, but whether the proposals emanating from it are, owing to the change in the French Cabinet, still-born, or whether they will be used by Mr. Lloyd George in his "conversations" with the French Premier as the basis of future action it is difficult even to guess. We can well understand how those proposals, the main

points of which were the welcoming of the Germans and the recognition of the Bolshevists, were so distasteful to the French nation as to bring about the fall of M. Briand, but in so far as they concerned the Near East we do not see why the arrangements agreed upon by the two Celtic Premiers should not hold. It is true that in the British Government's Memorandum these proposals were stated in rather worn and very pious platitudes, yet the essential statement of the fact, not the unactuous manner of stating it, is what matters. For the Memorandum remarks, with apparent if belated conviction, the "collapse and confusion of the normal processes of economic life" in South-Eastern Europe, and it touches the crux of the problem, as we see it, when it says that this collapse "cannot be remedied unless the produce and markets of Russia are once more made available to the world." Concord between Great Britain and France should be possible at least in the remedying of this condition of affairs. But so long as there is disagreement between these two countries on the question of Russia, so long, we are afraid, will the recovery of the Balkans be delayed. At the time of writing it is not known what the result has been of M. Poincaré's conferring with Lord Curzon on the Eastern Question, and on the Franco-Turkish Pact; but at any rate it is good, in view of the public and quite justified irritation at the delay in settling the problem of the Near East, to learn that those responsible for its solution are still anxious to present an unanimous proposal, and that consequently the frightening prospects of continued individual action by Great Britain, France, or Italy are still far from being realized.

Politics and Religion.

It is often lightly said, perhaps too lightly, that religion as a political factor in the affairs of South-Eastern Europe is dying, and, conversely, it is not always realized how closely politics affect religion there. But incidents still occur which show how strongly the old fires yet burn. We have no impertinent desire to discuss the purely religious aspect of the election as Orthodox Patriarch of Constantinople of Mgr. Meletios Metaxakis, who recently passed through London from the United States on his way to Constantinople; we merely wish to point out the lamentable bitterness with which politics are in this case attempting to control religion. Mgr. Metaxakis may proceed to his spiritual care with the greatest desire to put, as he himself when in London said was his aim, "an end to a period full of misery for all the

populations in the Levant." But against him in the field are all kinds of parties, some without doubt honest, and others whose principles descend not wholly from religious convictions.

A Schism in the Greek Church?

The visit to London of Mgr. Chrysanthos, Archbishop of Trebizond, serves to remind us of the vexed question of the Patriarchate. Mgr. Chrysanthos has come to this country with the laudable object of drawing closer the bonds between his Church and the Anglican Church—a consummation which, were there any devolution of moral principles from one to the other, would surely entail the cessation of such deplorable rivalry as is now being shown at Constantinople. But how difficult the situation is and how far off any unity in these matters, may be seen from the fact that Mgr. Chrysanthos himself does not recognize the validity of the election of Mgr. Metaxakis, though their respective spiritual aims must be identical. It really seems possible, if Royalist and Venizelist do not assuage their bitterness, that a schism in the Greek Church may arise—an event which would not be likely to raise the standing of that institution in Western eyes.

The Egyptian Problem.

The situation in Egypt may be described as not entirely satisfactory, but not nearly so unsatisfactory as the prophets of evil endeavoured to make us believe that it was bound to become by this time. The policy of firmness has justified itself thus far and—as our Cairo Correspondent indicates in the concluding paragraph of his letter—when the Egyptians realise fully that the British Government is in earnest the solution of the Egyptian problem will be much nearer. For the time being the deportation of Zaghloul Pasha and the minor firebrands seems to have drawn the various groups and parties of Egyptians together, but it is doubtful how long their unity will last, since it depends chiefly upon their opposition to Britain and secondly on their desire to prevent any Egyptian Government being formed. It is not quite clear what they expect to achieve by such a policy, even if they can carry it into effect; for it is not very long since Egypt was "carrying on" without any native Government, and managing quite well, too. But in point of fact it would not be at all surprising to learn any day that a Government had been formed. One Cairo Correspondent announced last week that it was "unofficially stated" that Sarwat Pasha had succeeded in forming a Cabinet. The message even gave the composition of the Cabinet—and a very good one it would make, too!

"Those who won't see—."

One of the chief troubles about Egypt is that there is such a very general tendency to regard—or affect to regard—the British Government's present spirit of caution as dishonest: to declare that because its conception of what Egypt should have granted to it now does not coincide with that of the Egyptian extremists, it is acting dishonestly. For this state of things, it must be admitted, our own Government is very largely responsible. It would have done well to emphasize the point of view so ably expressed by Mr. Balfour in the House of Commons on November 17, 1919, but for some reason or other it has allowed that statement to fall into the background, with the result that the Egyptians have, not unnaturally, let false hopes run

away with them altogether. At the moment the tendency is all in the other direction; the Egyptians close their eyes to all that was offered them at once, and to all that was promised them in the future; they profess that they cannot have any more faith in British promises; and they declare that if they cannot get exactly what they clamour for—and at once—they will have nothing at all. In a word, they are in a state of political sulks. In the circumstances we cannot blame them, perhaps, or cannot blame them alone; but it is to be hoped that they will speedily abandon their present attitude, and reconsider the position as it actually is.

"Yawash, Yawash!"

In the preceding Note we have touched upon a side of the question which seems to have been studiously ignored by many people in this country as well as by the professional Egyptian agitators. It is, however, worth bearing in mind; for, after all, Great Britain has, somehow or other, earned the reputation of keeping her promises; and it is hard to understand why they should be disregarded now. It is unpleasant to observe that the opponents of this view are numerous, and markedly emphatic in their utterances; but that does not, even in these days of word-production, necessarily prove that the view is not a sound one. The British Union in Egypt has been blamed for views expressed in its Memorandum to Lord Allenby. In its annual report, just issued, it refers to the "strongest sympathy with aspirations towards a more independent State" felt by its members "long resident in Egypt who know and like the Egyptians," and declares that though the view has been misinterpreted, it is true. And it adds: "To agree to the entire independence demanded, and to jump from present conditions at once to a self-governing independent State would be rendering Egyptians a bad service, and would lead to eventual chaos and regrets." In other words the Union would make haste slowly. And, perhaps, "*Yawash Yawash*" is no bad advice at the present juncture.

Progress in Irak.

Encouraging reports of progress in Lower Mesopotamia have been received in London lately. King Faisal continues to make an excellent impression, and has lately given an illustration of his diplomatic skill. Certain Muntafik Arabs had shown an intention not to pay their land tax, but his Majesty visited them personally and by his eloquence in appealing to their loyalty persuaded them to reconsider that decision, and pay up promptly. No better proof of his power with his own people could be forthcoming, as those who know the Muntafik and their record will readily agree. Moreover, throughout the country the people are settling down to business, and the wealthier classes in particular are showing keenness to invest their money in up-to-date industrial undertakings. An election was held last month, and is reported to have aroused a good deal of interest; and it is hoped that the General Assembly when it meets will very soon pass an organic law and ratify the treaty now in course of negotiation by Sir Percy Cox on behalf of the British Government. The Tribes, it is to be noted, are strongly in favour of the retention of the British Divisional Advisers, and the British Officials are said to be in favour with all the people save a small clique of young Syrians, who have their own axes to grind.

THE WEEK AT HOME.

Cannes and Cannots.

London, Monday evening.

The breakdown of the Cannes Conference was not unexpected. Quite early in the week it was anticipated that M. Briand would find his position impossible, and would resign; the facts being that, broadly speaking, he agrees with Mr. Lloyd George's policy, but cannot carry the French Chamber with him. His resignation came in rather a questionable form, it is true; he stood not upon the order of his going in Paris.

His successor, M. Poincaré, is personally very popular in England. But his policy is not our policy, and no amount of argument will make it like our policy. Downing Street and the Quai d'Orsay now take entirely different views of the future of Europe, and it is no use blinking the fact. In these circumstances the Cannes Conference has become known as the Cannot Conference, and what is to happen at the proposed Genoa Conference, where we were to talk things over with the Germans and Bolsheviks, no man knows. There was some hope here that Mr. Lloyd George would become a pacificator of Europe, and that a certain amount of co-operation would now become possible between the late enemies on the Continent. Friendship, of course, is out of the question; but what we have at present is not real peace, but a truce with a monthly crisis. It would be a good thing to end that recurrent uncertainty once for all; but only England and Italy look at matters from that point of view. We find it difficult to follow French policy, and more particularly French politics, with their too great personal rivalries and quick succession of ministries—a factor that can hardly be good for the continuity of French methods—and while there is still a sincere desire to patch up the Entente, these successive incidents make it increasingly hard to do so. The major fact is that we want a policy of reconstruction in Europe, and France does not. She is not prepared to join with us in the former, and we do not see what good is to come out of the latter.

At the risk of repeating what I said a few days ago, I must again point out that the net result of these continual failures is to assist the advocates of British isolation. Why worry about Europe when there is the rest of the world to colonise, develop, and trade with? is the argument of this section. Reconstruction, it admits, is the right policy, but if Europe will not have it, then do not worry; let us get on with our own affairs. and not waste time trying to combine incompatibles.

There is always a natural swing in this direction after a great war, but the disillusion of an unreal peace have assisted the movement. It is rather strikingly reflected, by the way, just now in the money market, where Indian and Colonial loans have been snapped up with avidity, and more are to follow. There is plenty of money here awaiting investment, but I doubt whether much of it is going across the Channel.

The General Election.

We are in for a great outburst of political oratory this next fortnight, and leaders of all parties are to address their followers. Fortunately, one is not compelled to read the speeches; only Mr. Lloyd George's forthcoming utterance is awaited with much curiosity, as it is expected to define his position more closely. It is generally believed that he is swinging rather to the left, and will take up the cudgels for the Coalition Liberals, of whom he is the personal head; these unfortunates get little of the limelight, and the Tories want to swallow them whole—they would like to swallow the Prime Minister too, but for fear of the subsequent indigestion. Mr. Lloyd George is credited with the idea of reuniting the Liberal Party, or at least attracting some of the Wee Frees to his banner, under the title of the National Liberal Party; this would make them more of an equivoise for the Conservative majority in the Coalition, who are accused of wanting things all their own way. How far he will succeed is doubtful, but the Prime Minister is certainly not a Conservative. The real position is summed up fairly accurately in this week's

Outlook, which remarks that it would back the Conservatives to win if they had sufficient brains, and the Liberals if they had sufficient numbers; but as things are, the Conservatives have lost their heads, the Liberals their bodies, and both their principles. In these unhappy circumstances, the offspring must remain in doubt, but like all hybrids, it will probably be sterile.

The talk of a general election continues. But the public is not excited, and the daily papers have rather moderated their support of the idea. The Sunday papers, which are more Coalition than the Coalition, are favourable.

Lord Carson Again.

Incidentally, a violent speech against the Coalition was delivered last week by Lord Carson. What he said was of no particular importance; the real importance of his speech was that it was a breach of the wholesome tradition which debars a Law Lord from taking active part in politics. The Die-Hards, of course, are in ecstasies, but one seems to recollect a musty proverb about those whom the gods wish to destroy.

A Terror to Cabinets.

Mr. Gibson Bowles, who died last week, would have cut a much bigger figure in politics had he possessed more of the herd instinct. But he could never hunt with a pack, and he was so convinced an individualist that he always attacked his own party—and he belonged to both in turn. He proved the Government wrong on several occasions, and no Government likes that, or forgives it.

He made a fortune out of *Vanity Fair* forty years ago; he was not so successful with the *Candid Quarterly Review*, which died during the War. I remember, by the way, he had an extraordinary way of paying his contributors. I received a cheque one day which was not made out to me personally, but to "No. 9," and it was signed X.Y.Z., or some such hieroglyphic; with it was a slip to say that in order to preserve the anonymity of journalism, this system had been adopted by the *Candid Quarterly*. I felt rather shy about paying it in—not, of course, from any distrust of Mr. Bowles, but from some vague idea that the irreproachable bank cashier who took my money should imagine it was a Ku Klux Klan device.

Chinese Geology.

The great days of exploration seem to have returned. The ascent of Everest has begun, Shackleton is well on his way to discover fresh seas and icebergs new, and now it is announced that Professor Gregory and his son are to explore the unknown mountain ranges of China. The Professor once wrote a jolly book on "The Dead Heart of Australia," and last autumn he published a work of profound interest (to geologists) on "The Rift Valleys of East Africa"; we shall expect another great geological survey as a result of his trip to China, but he has prom-

ised to keep an eye on botanical and zoological points also. He is the leading geologist of the age, but I imagine that his penchant for travel is largely due to the fact that he is a professor at Glasgow University, and it is well known that no human being can support existence in Glasgow without long absences.

Water Gas.

An animated controversy is being carried on as to the possibility of being poisoned by the gas companies. By the Gas Regulation Act of last year all restrictions on the amount of water gas supplied as a dilution of ordinary gas were withdrawn; and water gas contains about 42 per cent. of carbon monoxide. It is tasteless, and odourless, and I believe it provides a painless form of death; even with the present extortionate price of gas it is well within the reach of the poorest. But the question is, should the gas companies have the power to supply us with this euthanasia at so much per cubic foot when we do not really want it? Dean Inge recently discussed the ethics of suicide, but even he did not suggest that the gas companies should multiply our opportunities like this.

The Week's Books.

"Essays and Addresses" (Allen and Unwin) by Professor Gilbert Murray, requires little more than the actual mention of publication. The professor is so much more than a professor, and his essays are so much more than the ordinary run of literary essays, that his book is sure of a welcome.

Lord Dawson created quite a pother last autumn at the Church Congress by a paper on sex, which is not usually supposed to exist at Church Conferences. He has now reissued it as a pamphlet under the title of "Love, Marriage, and Birth Control" (Nisbet), in which he remarks that "the fear that discussion of this vital problem will endanger morality surely loses sight of the fact of knowledge being so fundamental to our well-being that incidental dangers encountered along its path must not deter us from its continued pursuit." Incidentally he points to the ever-widening gap between the formal teaching of the Church and the actual belief of the present generation.

I do not know that there is very much interest in the actors and actresses of the past generation; their fame seldom outlives them. But for those who are attracted by the historical stage, Mr. Percy Allen's "Stage Life of Mrs. Sterling" (Fisher Unwin) should prove worth reading. The book is much more than a biography of the lady in question; it comes so near to being a survey of the Victorian theatre as a whole, and it is so well done, that one rather wishes that Mr. Allen would turn his attention to the larger subject.

Those who read Mr. J. M. Keynes on "The Economic Consequences of the Peace" two years ago will know fairly well what to expect from its successor, "A Revision of the Treaty" (Macmillan). He does admit, however, that not all his prophecies of disaster have come off, and that "in spite of trade depression, and disordered exchanges, Europe, under the surface, is much stabler and much healthier than two years ago." The reason given is that "many of the misfortunes which I predicted as attendant on the Reparation chapter have not occurred, because no serious attempt has been made to execute it." One further quotation must suffice; "The deeper and fouler the bogs into which Mr. Lloyd George leads us, the more credit is his for getting us out. He leads us in to satisfy our desires; he leads us out to save our souls. He hands us down the primrose path, and puts out the bonfire just in time. Who, ever before, enjoyed the best of heaven and hell as we do? In England opinion has nearly completed its swing, and the Prime Minister is making ready to win a General Election on Forbidding Germany to Pay, Employment for Everyone, and a Happier Europe for all. Why not, indeed? But this Faustus of ours shakes too quickly his kaleidoscope of halos and hell-fire for me to depict the hues as they melt into one another." From all of which I conclude that Mr. Keynes does not quite like Mr. Lloyd George.

An interesting list is printed in the current "Publishers' Circular" of the number and class—not the quality—

of books published in 1920 and 1921. In the former year the 11,004 books were published, in the latter 11,026—a fairly level run. It would be interesting to know how many manuscripts were offered for publication and rejected—but publishers do not give up these secrets.

Fiction shows a decline of 178 volumes, but this does not mean any decline in the taste for romance, as the vogue of the popular railway magazine, with its machine-made short story of sentimental slush, attests. Religious books show an increase of 96—this presumably includes books on spiritualism, which still find readers—and descriptive and travel books have gone up by 102. Other increases are in books in fine arts, poetry, the drama, and essays. Scientific works seem to show a decline; it is notorious that many of these have been held over owing to the high cost of production and the relatively small sale.

A publisher with whom I was discussing the position some time ago told me that fewer books and better books were now issued than before the war; people were reading more, and more serious works. It is the middle-classes that read the novels, particularly the woman of the middle-classes; the working-classes have a taste for the text-book, especially the text-book on economics and politics, and occasionally psychology; beyond that they do not stray. Their taste for fiction is glugged by the weekly magazines; science and religion they ignore. Authoritative technical works find a steady market among specialists, both at home and abroad. Altogether things might be worse in the British publishing trade. "There is not much money to be made," said my informant, "but we earn a reasonable living, and in an interesting fashion."

"The Leipzig Trials" (Witherby) is an account of the German War Criminals' Trials and incidentally a study in German mentality. It is written by Mr. Claud Mullins, who was one of the English barristers engaged in the trials, and contains an introduction by Sir Ernest Pollock, Solicitor-General. Mr. Mullins seems to have been astonished at the German legal procedure, which is very different from that of the British Courts, but he formed the opinion that the judge had a real desire to do justice, and succeeded in attaining his end. He explains in detail the reasons why we obtained convictions, whereas the French and Belgian charges failed.

Ocellus.

A DISTINGUISHED SYRIAN.

A correspondent in Buyrout writes:—Selim E. Tabet Bey, a notable of Beyrout, who had taken a conspicuous part in the political and social life of Syria, passed away rather unexpectedly on December 18, at his residence in Zubdul, Bekaa, Grand Lebanon. His death has removed one of the most original and interesting figures in Syria. He was a rare conversationalist and host, and his summer residence in Zubdul, a beautiful estate was visited by many travellers such as the late King Milan of Serbia, Mr. Vanderbilt, Lady Westmacott, Miss Gertrude Bell, Prince Mohammed Aly, the Emir Faisal, and last but not least, Viscount and Lady Allenby. The distinguished General appreciated not only the personal charm of his host, but also, and especially, the kind and thoughtful hospitality he had shown, throughout the early period of the Armistice, to the officers and men of the British Army in Syria. It was apparently in recognition of such services that King George was pleased to send him his autograph photo through Lord Allenby. The services that he rendered during the war to so many friends, high and low, including the Maronite Patriarch, will contribute to perpetuate his memory as one of Syria's best men, more especially as in certain instances his intervention was made at the risk of his person. In his letter of condolence, Lord Allenby wrote: "Great Britain has lost a valued friend."

M. Raduloff, Bulgarian Minister of the Interior, has taken up the Portfolio of Commerce, while M. Dashkaloff, hitherto Minister of Commerce, goes to the Ministry of the Interior.

As a result of the attention called to the opium menace the cultivation of the poppy has been forbidden in Egypt.

According to the Athens newspaper *Embros*, the Soviet Government of the Ukraine has sold four submarines to the Kemalists, who are sending them without delay to Trebizond.

News has reached Athens that the Komalst Government has condemned to death 25 Enverist officers.

Mgr. Meuleman, the Roman Catholic Archbishop of Calcutta, was received in private audience by the Pope last week.

THE NEAR AND MIDDLE EAST.

From Our Own Correspondents.

EGYPT.

Cairo, December 31.

The Trouble in Cairo.

My previous letter concluded with the account of the troubles up to the Friday evening subsequent to the arrest of Saad Pasha Zaghloul. On the Friday evening slight disorders were fairly general; the city of Cairo was in partial darkness, owing to the organised destruction of the lamps in various quarters. On Saturday morning the troubles spread, demonstrations occurred in various parts of the city, and during the morning the British Military authorities assumed complete command of the city. That afternoon the Officer Commanding Cairo District proclaimed that destruction of public or private property would be rigorously suppressed, and that the soldiers had been given orders to fire in case of necessity. From that hour the hooliganism began to subside in Cairo. Demonstrations had been attempted at Alexandria, but the Alexandria police rose to the occasion superbly. Making wholesale arrests, they reduced the unruly elements to discreet inactivity.

Strike in Lower Egypt.

Meanwhile, agitators had been at work all over Lower Egypt. Serious troubles flared out at Port Said and Suez, and the British military authorities were impelled to take over both towns. Rioting also occurred at Tanta, and on the next day—Christmas Day—a "curfew" from 10 p.m. to 5 a.m., was instituted with the object of lightening the night patrol of the British troops.

Strikes were declared by almost every section of Egyptian workers, whether professional or manual. The Government officials went out for three days, but their return to duty was accelerated by the announcement that those absent would be deprived of their pay for the length of time they were away. Lawyers, all students, the cab-drivers, Cairo tramwaymen, and other sectional unions stopped work as a protest against the declared British policy and against the arrest of Zaghloul and his colleagues.

On Christmas Day the curve of trouble rose to its highest. Renewed disorders were reported from practically all centres in Lower Egypt. Zaghloul had been taken to Suez, and five of his late lieutenants—Fathallah, Pasha Barakat, Atef Bey Barakat, Mustapha Bey Nahass, Sinnott Bey Hanna, and Professor William Makram Obeid (late Envoy Extraordinary of Zaghloul to London I)—having refused to obey the orders of the High Commissioner, were sent to Suez with him. With the development of the troubles, the High Commissioner had been compelled by force of circumstances to act first and foremost as Commander-in-Chief of the British Army, upon whom had devolved the task, first of keeping the disturbance as small as possible, and later, of restoring order. The negotiations with Sarwat Pasha for the formation of another Ministry were dropped; and the Sultan, yielding to the pressure of Adly Pasha and the other members of the Egyptian Cabinet, on Christmas Day announced that he had accepted the resignation of the Adly Cabinet, which had been submitted on December 8.

Military Measures.

The British troops had occupied the most important caracols in Cairo on Friday; but there was one, near the Azhar University, which had been left to the local authorities. On Monday morning the mob determined to wreck this building. They attacked it, but the defenders were not playing the game with kid gloves on: they shot at the crowd, and they shot to kill. According to official information, five were killed and four wounded. This brought the casualties in Cairo up to about 20 killed and 70 or 80 wounded. Meanwhile, a number of isolated attacks had been made on Europeans, but never at any time during the trouble has there been any determined manifestation of xenophobia. Things became a little more serious at Suez on Monday—Boxing

Day—but the proclamation by the Base Commandant that the R.A.F. had been ordered to drop smoke bombs to the right of any perceived assembly, and to follow them with live bombs if the assemblage did not immediately disperse, produced a salutary effect. Col.-Commandant Lawson had gone to Port Said, and his measures there had had an immediate good effect.

Egyptian Unity.

From Tuesday morning, the whole trouble, which visibly had been created solely by the lowest elements of the native population, began to ease everywhere. Armed Nile boats, containing British blue-jackets, had been despatched to Upper Egypt, where, though there had been no actual disorders, it was known that agitators were active. Following on the restoration of calm, the higher classes of the Egyptians began to recoil from the shock of the swiftly-moving drama which had been staged during the Christmas season, and there was a general tendency towards unity. The dissentient members of Zaghloul's old Delegation at once fraternised with such members of Zaghloul's committee as were left; and together they issued a proclamation through every line of which ran a feeling of bitter hostility to Britain. The Native Press also published evenenomed articles, which conveyed everything but hints of reconciliation to British policy. Within two days the tone of the whole Press in Egypt was becoming dangerous.

Papers Suspended.

Quick action followed. The English *Egyptian Gazette* on Tuesday morning had published a leader in which it had hinted that the authorities had not given a sufficient explanation of the drastic action against Zaghloul and his committee. On the same day the *Istiklal*, which was founded during the régime of the Adly Cabinet and was regarded generally as the organ of that body, published an article which was deemed likely to hamper the military authorities in the execution of their duty. The *Egyptian Gazette* also had headed its report of the disturbances as "Egypt's Defiance." Both papers were suspended for two days. The tone of the Press thereupon became modified. The only disorders later in the week were at Fua, near Damanhour, the village of the Barakat family—two of the members of which were with Zaghloul. These disorders were promptly suppressed by the local authorities, though they sustained casualties in the effort.

The Departure of Zaghloul.

The returning calm allowed time for consideration of the political position. Obviously there was no hope of an Egyptian Cabinet in the circumstances, and the High Commissioner authorised the under-secretaries of the respective Ministries to assume the powers and functions of the Ministers provisionally, and pending the formation of another Cabinet. On Thursday evening Zaghloul and his five colleagues were deported to Ceylon. The news became generally known in Cairo and throughout the country on Friday evening, but up to the time of writing there have not been any noteworthy incidents connected with the deportation. I understand, from a thoroughly trustworthy source, that Zaghloul and his colleagues were well-treated at

Suez. The British officers gave up their own furniture to the internees, gave them horses to join in the daily rides, played cards with them each evening, entertained them to dinner in the Officers' Mess on Christmas night, and saw that the best food was procured for them from an adjacent hotel. I also understand that the internees were quite content with their treatment at Suez.

An Englishman Murdered.

Yesterday morning Mr. Ernest Hatton, the Locomotive Superintendent of the Cairo division of the Egyptian State Railways, left his house near the Cairo station to walk to his work. He had not gone more than a few steps when an unknown assailant shot at him from the rear. The bullet entered his back and passed through the heart, killing him instantly. It is believed that the crime was due to revenge, and probably perpetrated by a discontented workman of the railway workshops. A few cases of incendiarism also have been reported, but the situation now seems to be quite in hand. Order has been restored, but at the best an *impasse* has been reached. The Egyptians profess that they will not have the British policy at any price. Yet they are beginning to realise that the British Government meant what it said in those recently-published official documents. When the realisation is general and complete, the Egyptian problem will be much nearer solution.

Port Said, December 31.

Agitations at Christmas.

Christmas week in the European quarter at Port Said has been exceptionally quiet, though the festivities indoors have been as jolly as ever. The emissaries of the troublous factions, came to Port Said when Zaghoul Pasha was arrested, and at last have succeeded in stirring up the baser elements. The day before Christmas the mob twice attempted to march from the native quarter into the European town. The first time they were turned back by the Egyptian police. Yet a second attempt was made, with girls and children at the head of the procession, in the hope that no force would be used to stop them. However, they were turned back by the Indian troops. Next day the mob in the native quarter became more turbulent than ever, and were constantly stoning the pickets of the police and military; so after a warning to the notables of the town, who tried in vain to calm the populace, the military were obliged to fire, killing one and wounding six. There was a rumour that a Syrian had fired on the mob, but the investigations undertaken by the police have so far not confirmed the report.

The day after Christmas, an agitator who had been arrested attempted to escape, and this was the cause of more firing, which resulted in two more killed and eight wounded. In the morning, General Lawson, the O.C., called a meeting of the leading native residents, and requested them to use their influence to calm the mob; they did so with a great measure of success, and so saved a still more rigorous application of martial law. However, in the evening, as the authorities were burying three of the men who had been killed, the funeral party found the road to the cemetery barricaded, and were fired at. They replied, wounding six, who were removed to hospital.

Things are now rapidly returning to normal, and the melodious voice of the cabdriver is once more to be heard in the streets, after a three days' interval of delightful quietness. The European residents in the town feel themselves fortunate in having a Commandant of Police who, by his energy and promptitude and the loyal cooperation of all his subordinates, was able from the outset to confine the trouble to Arab-town, so that not a single window or street lamp has been broken in this quarter, and ladies and children have been out as usual.

The Girl Guides.

On the 18th and 29th the Girl Guides gave an entertainment in the Eastern Exchange Hotel to raise funds for a new club-room. For several days previously all the guides had been vying with one another as to who could sell the most tickets, and the attendance showed

that they had left no stone unturned to secure an audience in which there was no one who had not done her share. The first part of the programme was taken up with Girl Guide songs, a demonstration and an explanation of the objects of the Girl Guide movement, and the examinations for the various badges. The second part was occupied by an extremely pretty series of *tableaux vivants*, in which Guides, Brownies, and Cubs took part. Altogether it was a most enjoyable and successful time, and we hope the financial results will be in keeping.

Christmas Services.

The services at the English Church on Christmas day were well attended, and the anthem, the "Prince of Peace," rendered by the choir, who had been trained by Mrs. J. E. Roberts, was much enjoyed, as was also the solo by Miss Nanine Roberts. In the evening most of the choir went to the British Hospital, and sang some Christmas carols and hymns for the benefit of the patients.

ROUMANIA.

Bucharest, January 6.

A Crisis in Abeyance.

Owing to the approach of the Orthodox holiday season, the political squabbles have temporarily subsided, though the crisis has become in no way less acute. As the general impression continues to be that the present Cabinet is of a transitory character—having only a certain mission to fulfil, provided it succeeds in gaining the collaboration of the present Parliament—political circles are still in search of a so-called neutral personality to form a fresh Cabinet which would enjoy the support of practically all political parties as well as of the present parliamentary majority. In this connection, besides M. Flondor's, two more names have been circulated this week, those of M.M. Jorga and Maniu. Negotiations in this direction, however, have been deferred until after the holidays. On the other hand, the Liberals are still striving to come to power alone, and lately they have been declaring openly that this event is not far off. But the whole situation depends on how the present Cabinet is received by Parliament when it reopens on January 17. M. Také Jonescu is far from idle in persuading Members of Parliament to accord him their support.

Modification of the Censorship Law.

In compliance with the King's desire, expressed in his Speech at the opening of Parliament, that the exceptional measures should be removed as far as possible, the Minister of the Interior has now issued a decree-law abolishing censorship throughout the country with the exception of the military zones along the frontier lines, where martial law is still in force. The new regulation, however, maintains a preventive censorship for publications attacking the Crown, the present form of Government, the Army, or Allied States, and for publications which incite to revolt or disturb public order.

A certain section of the Press claims that this new regulation, while it somewhat alleviates the conditions existing up to now in the new provinces, has a certain restricting effect on the Press in the Old Kingdom, where hitherto the censorship had been completely removed long ago.

The British Colony and the New Year.

Over 100 members of the British Colony celebrated New Year's Eve by a dinner which took place at the *Elisée Restaurant* on Saturday evening, December 31. The British Legation was represented by Mr. E. Millington-Drake, First Secretary of the Legation. A very cheerful and congenial atmosphere prevailed throughout the evening.

Visit of King Alexander.

It is announced that King Alexander of Yugoslavia will be the guest of the Roumanian Royal Family at Sinaia during the coming Orthodox holidays. He is expected to arrive in Sinaia on Sunday morning, January 8. In some circles this visit is connected with the rumoured betrothal of King Alexander and Princess Marie. It is further remarked that King Alexander

chose to arrive in time for the celebration of Princess Marie's birthday, which is on Monday, January 9.

On the other hand it is reported that King Alexander will be accompanied by the Yugoslav Premier, M. Pashitch, and that during their stay in Roumania they will amicably settle various important questions which are still pending between the two countries.

General News.

Prince George and Princess Elisabeth of Greece, accompanied by M. Soutzos, "Maréchal" of the Athens Court and Major Lividis, Aide de Camp to the Diadoch, arrived in Bucharest on Monday evening, January 2.

The Roumanian Royal Family and their guests will spend the Orthodox Christmas Holidays at the Sinaia Palace "Pelishor."

GREECE.

Athens, December 31.

Good News.

Excitement ran high yesterday when soon after noon special editions of the papers announced that Great Britain had lifted the financial blockade on Greece and had given a free hand to British banks and other financial institutions in England to grant a loan of £15,000,000 to this country. Although up to the time of writing there is no official confirmation of this news, which, it appears, was quoted from the *Daily Telegraph*, a slight improvement of the Drachma was immediately manifested, resulting in a marked decline in the value of bank shares.

Admiral Condouriotis' Condition.

Although Admiral Condouriotis' condition has shown much improvement during the last week, the doctors have not yet permitted him to leave the hospital. In the course of his statement made a few days ago, the Admiral said he was convinced that his would-be murderers were not soldiers who had been refused assistance. He added that the Relief Committee distributed money and various commodities to all those entitled to them, and treated everybody alike without enquiring into their political sentiments. Needless to say the assailants have completely vanished.

Athens University.

Athens University is running the danger of being left without any professors, or at least with a number of professors quite inadequate for its requirements.

Soon after the Venizelist Government was deposed, the new Minister of Education, M. Zaimis—himself a professor of Athens University—dismissed about twenty-five professors, all of whom were Venizelists. Only twelve months have elapsed since, and M. Zaimis now proposes a second combing which, if carried out, will deprive the University of its best professors, and thus seriously jeopardise the future of the premier educational institution in Greece. A protest meeting organised by the students outside the University was broken up by the police.

It should be added that since M. Zaimis has been in power about 75 per cent. of the teaching staff have been transferred from one school to another, in many cases hundreds of kilometres apart, causing no little annoyance and inconvenience. As many of the masters thus transferred have refused to leave their own district, some of the schools have been left without teachers and have had to close down, whilst others are seriously handicapped by shortage of personnel.

An Incident at the Catholic Church.

An unfortunate incident occurred at Piraeus last Saturday night. During the celebration of the midnight Christmas Mass at the Catholic Cathedral of St. Paul, a group of young lads stood outside the Church and started singing a popular refrain taken from one of the songs of a musical comedy which had an enormous success last summer at Athens. The refrain is, to say the least of it, irreverent to the Pope.

A Greek Catholic, named Antoine Ragoutsis, went outside the church and remonstrated, whereupon the lads attacked him, and one, armed with a bayonet, stabbed him. The unfortunate victim was immediately taken to hospital, but died shortly afterwards, after for-

giving his aggressor. The funeral took place on Monday, and was followed by large crowds.

As a result of this incident the Catholics of Athens have submitted a memorandum to the Minister of the Interior requesting him to issue orders prohibiting in future the singing of the popular refrain referred to above.

Winged Invaders.

The farmers in the provinces of Larissa, Trikkala, and Carditza have sent a telegram to the Minister of Agriculture informing him that thousands of wild ducks and legions of other birds have invaded the country, causing enormous damages to the crops. The farmers have appealed to all the sporting societies to assist them in exterminating the winged invaders. One farmer went so far as to make an offer of 10 drachmae per head of wild duck.

General News.

According to reports from Crete the situation there has somewhat improved as a result of the vigorous measures adopted by the authorities and the arrival in the island of considerable regular forces.

The Crown Prince and his wife, Princess Elizabeth, have left Athens for Bucharest, where they will stay during the Orthodox Christmas and the New Year.

4,000 Greek and Armenian refugees from Cilicia arrived this week at the Piraeus. They will be distributed in various towns of Old Greece.

YUGOSLAVIA.

Zagreb, January 5.

The Sebenico Incident.

People are satisfied with the firm attitude taken up by the Government on the Shebenik (Sebenico) incident. The Press sees the Italians' motive, which is on a par with their policy of ruining Fiume in order to save Trieste, which has suffered so much since it has been in Italian hands. The papers reproduce with satisfaction quotations from the French Press likening Italy's ultimatum to the famous one sent by Austria in July 1914, and they add the comment that if little Serbia of those days was not afraid of the great Austro-Hungarian Empire, Yugoslavia to-day need not worry about a country like Italy. The Treaty of Rapallo has been ratified by both parliaments, and Shebenik is purely Yugoslav territory. Belgrade will not discuss the matter with Rome until the Italians withdraw and carry out their obligations under the Treaty which they are trampling under foot. In the same connection, the Zagreb papers comment on the hypocritical speech of the Italian delegate at Washington, to the effect that Italy has reduced her army, not from financial reasons, but to contribute to the atmosphere of peace in Europe, which has a truly Machiavellian ring, coming from the people who terrorise the Slav element in their territory, burn their villages, insult and murder Frenchmen in Venice and Fiume, and bombard the open town of Shebenik.

A Sensational Trial.

A sensational trial is going on at Tuzla in Bosnia, where 355 miners are accused of various offences in connection with the strike of December 22, 1920, when some were entangled in the Bolshevik plot of that date. Many took arms against the police and gendarmerie, and the Public Prosecutor demands the capital sentence against quite a number of them. It is to be hoped that the ringleaders will suffer exemplary punishment, but that the mass, who are probably simple and ignorant men, who were misled by the demagogues and Bolshevik agents, will be set free.

Zagreb, January 10.

The Royal Betrothal.

It is announced that King Alexander is betrothed to Princess Marie of Roumania, and the utmost gratification is felt on all sides at the news. There have been so many contradictory rumours regarding His Majesty's engagement and so many announcements in the Press, that public opinion was becoming somewhat sceptical about them. Hopes were at one time raised that a matrimonial alliance would be formed with Great Britain; and later a Bourbon Princess was referred to

in the papers as a probable bride for the King. The latter suggestion was not too popular, for the Bourbons, after all, represent the same tradition as the Hapsburgs, and they are no longer a reigning dynasty. The Yugoslavs in general and the Serbs in particular, though extremely democratic, are staunch monarchists; and the young Sovereign who has shared all the trials and miseries of his Army is, deservedly, most popular. As my letters will have shown your readers, he had won golden opinion in the new provinces, where the people have been astonished to hear their monarch address them in their own tongue.

His Majesty's choice is a most happy one. The Princess is charming in herself, and represents a neighbouring and friendly people with whom the Yugoslavs have much in common, and against whom they have never fought. Moreover, no change of faith is involved, and the bonds of the Little Entente will be tightened. The fact that her Royal Highness is English on her mother's side will also serve to increase the sympathy which already exists between Great Britain and Yugoslavia.

BULGARIA.

Sofia, January 9.

Another Change in the Cabinet.

Yet another change has taken place in the Cabinet. M. Dashkaloff, Minister of Commerce, becomes Minister of the Interior, vice M. Radouloff, who takes M. Dashkaloff's place at the Ministry of Commerce. The change was made suddenly, on account of the Communal Elections, which are due to be held on February 19. The Minister of the Interior plays an important part in elections, and M. Dashkaloff is recognised as the leading Government figure in this respect. He is an assiduous public speaker, and has spent most of the winter travelling around the country. In his new post he will be able in a still greater degree to influence the voters in favour of the Government.

Elections will be held in practically every village in the country, and embodying as they do 90 per cent. of the rural and 70 per cent. of the total population, they will provide an important test of the Government's popularity. Three parties will compete for the peasant votes: the Agrarians, Communists, and Bourgeois. These three groups are all very active in their electioneering propaganda, and the Bourgeois are especially optimistic regarding the results they expect to obtain. As six weeks have to run before the elections it is too early to prophesy as to the result, but the Agrarians should have a majority in at least half of the Communes, whilst the other half should be divided equally between the other parties.

The Government and Sofia University.

The conflict that has arisen between the Government, represented by M. Omartchevsky, Minister of Education, and Sofia University has not died the natural death that appeared likely. After M. Omartchevsky had caused the removal of the seals which had been placed on the rooms of the Treasurer and Secretary of the University, the Minister drew up a law which will take away from the University practically all the independence it has hitherto enjoyed. This law will be deposited at the Sobranye when the latter resumes its sittings at the end of January. In addition, M. Omartchevsky has threatened to fine the Rector, M. Miletitch, a quarter of his salary for three months, for having defied Government authority, and in the meantime the Minister has taken into his own hands the payment of the Professors of the University. The University Authorities have written to the Minister, who is also the Censor, to ask permission for their point of view to be printed in the local press; if permission is refused they state they will cause their arguments to be privately printed and distributed. This threat is equivalent to a total defiance of the Government, and if carried out will probably bring matters to a head. Impartial circles are busy discussing whether M. Omartchevsky will yield, or

whether he intends to pursue the matter to the bitter end. Opinions are divided as to his attitude, but on the whole it is thought that a compromise will be arrived at. It is not likely that the Government will care to be embarrassed with this somewhat absurd dispute, when they have elections and other more important things to think about. The conflict, which originated round the question of three defunct letters of the Bulgarian alphabet, has, however, assumed such grave proportions that it will require tact and leniency on the part of the Government to settle the affair satisfactorily. Up to the present it has not worn a political aspect, but it is possible it may do so any day, as the Bourgeois parties are all quite agreed to take the side of the University. The University Students are also behind their Rector in this "literary dispute", and have intimated that they will leave the University if any repressive measures are taken against their chiefs. The matter is capable of further and more interesting developments.

A Shocking Murder.

Bulgaria had her full share of murders, political and otherwise, during 1921; and the sixth of January, 1922, has provided yet another and perhaps the most noteworthy of all. Many versions are afloat as to the way in which the murder was perpetrated, but the following account, which was given me by an eye witness, appears to be reliable. At about 11.30 p.m. on the 6th, MM. Slavoff, Damianoff, and a third man were sitting at a table at the Panac or Grand Hotel drinking beer and smoking cigarettes. M. Slavoff is the Prefect of Petritch, a town in South West Bulgaria, M. Damianoff is a brother of an Agrarian Deputy, whilst all of the men were or had been connected with the Housing Commission at Sofia. The three men picked a quarrel with a certain Athanasoff, a retired Army Officer, who had also been connected with the Housing Commission. The Officer was entirely correct in his behaviour, says the eye witness, until one of the three men made an especially insulting remark. At this Athanasoff drew his revolver and without any warning shot the three men. Damianoff and the third man were killed outright, whilst Slavoff died of his wounds a few hours later. A waiter was also hit, and is lying in hospital severely wounded. Athanasoff then walked out into the night, to give himself up to the police the following day. As far as can be ascertained there are no political motives underlying the crime.

The Radoslavoff Trial.

This trial has now been adjourned until the end of January in order to give Counsel and Jury a well earned rest. The Court has been sitting for three months and has covered about half its work. So far the most interesting evidence, as far as England is concerned, has been that given by M. Nedelko Athanasoff, now President of the Sobranye, and formerly Minister of Railways. M. Athanasoff related how in company with M. Stambolisky and M. Draighieff he visited the British Legation a few days before Bulgaria declared war. Sir Henry Bax-Ironside, the British Minister, he declared, spoke to the Agrarians in a discouraging tone of voice, and amongst other things said: "It is well to remember that England has made war many times and has never been defeated. She will not be defeated now. If Bulgaria takes Germany's side, Russia may forgive her, but England never will." Sir Henry's first sentence was quite correct, and up to the present his second also holds good.

CYPRUS.

Nicosia, December 27.

The Legislative Council.

The election of two Maronite priests to seats in the Legislative Council gives occasion, but not the slightest justification, for abusive attacks by the Greeks. At the first election they failed, it may be remembered, because it was found that Canon Newham, who seconded their nomination, was not on the list of qualified electors. The paper *Aletheia* (Truth), which, with others, objected to any non-Greek standing as a candidate, observed that their election would not have been without compensation,

as it would have introduced a topic of mirth into the melancholy atmosphere of the Council. They have been alluded to as "Ethnological Eunuchs," "Hermaphrodites," Levantines, &c. Canon Newham also came in for sneers and vituperation. The new satirical paper *Peirasmos* makes much fun of the new members and of the Council as now constituted. In one cartoon the Maronites are depicted marching to the Council in their ecclesiastical robes, one of them leading a donkey. The Greeks, who refuse to offer themselves as candidates object to anyone else who has a perfect right to do so coming forward. Anything more petty and puerile than their present dog-in-the-manger attitude cannot be conceived. But as regards the part that is now being played by the Greek element one can only say that it is the logical outcome of the liberty that has been allowed during the last 40 years. Greeks, for example, have been allowed to carry and display *ad libitum* the Hellenic flag which (first as Ottoman and lately as British subjects) they are in no way entitled to use. The local Government in reply to numerous warnings and representations as to the results of this much-abused freedom have been invariably directed to reply that no notice was to be taken unless "a breach of the peace" were threatened. Thanks largely to the good sense of the Turkish element there has hardly ever been any collision. But in no other country in the world would, in analogous circumstances, such license have been permitted; and the results are now apparent. No one who knows Cyprus can be in the least surprised at the present situation.

Under the heading "English despotism," the *Aletheia* recently protested against the action of the Commissioner of Papho, who very properly forbade Greek Scouts to carry the Hellenic flag, when marching in and out of the town. What, it was asked, would Sir Baden Powell, who founded the Scout Movement, have thought of such a prohibition? All the papers and "union" speakers in fact now affect to talk as if they were actually Hellenic subjects.

The Greek Church Schism.

The question of the validity of the election of Mgr. Meletios Metaxakes, as Ecumenical Patriarch, is much discussed, and the result of the meeting to be held at Salonika (on December 25) is awaited with keen interest. The seven Bishops (out of twelve who constitute the Holy Synod) have telegraphed to the Archbishop of Cyprus, giving their reason for declining to take part in the Constantinople Election, and state that they will communicate the results of the convocation of the Hierarchy of the Great Church to Cyprus and to the other autocephalous Churches.

Theft at Nicosia.

Last week a Greek stranger was given a room at a hotel at Nicosia. About 2 a.m. a Greek named Paidouses, who was staying at the hotel, heard the door of his room being closed. Getting up he found he had been robbed of £13. He rang the bell for a servant, and as no one appeared, went downstairs to look for one, but without success. On returning he saw a light in the room next to his own, and on looking in found the stranger awake, and charged him with the theft. The latter admitted it, and said he would find the money in his own great coat pocket. The thief, on hearing M. Paidouses go downstairs, had replaced £8 in the pocket. The latter demanded the remainder, which was also returned. By this time other persons had been aroused, and it was found that Mr. De Boulay, Government Auditor, who was at the hotel, and M. A. Mavrogordato, of the Government Service, had also been robbed. The police were sent for and arrested the thief. It was found that he was one Kyriakos Hajjipavlou, who had served for years in hotels in Egypt and Smyrna, and that he had recently committed other thefts at a hotel at Larnaca.

ASIA MINOR.

Smyrna, January 3.

A Foolish Attack.

The sailors of the Greek warship *Lymnos* have been causing much trouble for the Greek High Commissioner,

M. Sterghiades, during this festive season. A few days ago they broke into a Frenchman's shop and threatened him with knives to make him stop his band playing the *Marseillaise*; and even when a Greek military officer intervened to quell the disturbance the sailors refused to obey, and also threatened their officer. The French Consul took up the matter and insisted on apologies being made *en due forme* by the Greek authorities, but before this was done another band of Greek sailors attacked the French Consulate and smashed some windows in the Consulate. M. Sterghiades is absent from Smyrna, so there may be an unfortunate delay in placating the French Consul who is very much incensed at these outrages.

A Surprising Result.

The first football match in the Smyrna League, between the "Armenians" and the "Barbarians" (the British team) ended in a sensational victory for the Armenians, who played on their own ground, by 5 goals to nil.

Smyrna, January 4.

The Incident Ended.

The unfortunate incident between some drunken sailors of the "*Lymnos*" and the French consular authorities has been arranged to the entire satisfaction of the French Consul, M. Destribats. The four sailors responsible for the outrage have received the maximum punishment, and the Greek authorities have apologised *en due forme*.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address not necessarily for publication but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

GREAT BRITAIN AND TURKEY.

To the Editor of "The Near East."

Sir,—In the midst of distractions and matters of interest at home, in Ireland and at Washington, the Near Eastern problem has been largely overlooked by the British Public, and by politicians and by business men in particular; yet, the relations of the British Empire with Turkey, and the reaction of those relations on our 120 million Moslem subjects, and the effect of these on trade and unemployment are of the utmost importance.

Now, if Mr. Lloyd George at Cannes really wishes to see trade revive and reconstruction commence, although he may not be able to do anything immediately with regard to Russia, Poland, Austria, etc., he could by a stroke of the pen, open up a great market to British trade, and at the same time reduce our commitments and risks in many directions. All this can be done by a change of policy towards Turkey. The Turks were never whole-heartedly in the War against us, and for generations there was a traditional relation between this country and the Ottoman Empire. Asia Minor is a vast region with which we did a most valuable trade in the past, especially in textiles; and the openings in which the trade and commerce might be revived in the future are very great. Its soil is fertile, mineral wealth is very considerable, the Turkish peasant population is hard-working, enlightened and peaceable, and in spite of the events of the last few years the Englishman has a great prestige in these regions; yet, with a blindness and foolhardiness, which in normal times would have destroyed a Government by this time, the present Coalition Government has persisted in supporting the Greeks in their campaign of annihilation of their hereditary enemies in Asia Minor. To the Greeks the war is racial and religious; it is the sort of war which the world cannot afford to tolerate in these days. They are the aggressors—they have failed, and failed dismally, yet we have continued to give them open and covert support and to egg them on in this atrocious campaign.

Independent observers have described the atrocities committed by the Greek troops, and whatever the massacres by the Turks, they could not have exceeded the cruelties of the Greeks in frightfulness. Now the Greeks have failed finally.

France has always been opposed to the support of Greek Imperialism, and has quite rightly hastened to make peace with the Turkish Government. France is the second greatest Mohammedan empire in the world; and we are the first; to both of us it is absolutely necessary that we should be on good terms with the Khalifate and treat the Turks with justice. So much for Asia Minor! We are losing trade there and wasting money; and this is causing unemployment in Britain.

But what of India? There our treatment of Turkey has aroused most antagonistic feeling among devout Moslems. Our Moslem subjects in India number over 90 millions. In the past they have always been loyal supporters of the British Raj against Hindu extremists. To-day our policy in supporting the Greeks and our general attitude against Turkey have thrown them into the arms of Ghandhi, and for the first time in the history of British India the two creeds are united against us; the results are non co-operation, boycott of British goods, unrest and disturbance. This affects trade terribly and leads to great expense for extra troops etc.

Our task in Egypt and in Mesopotamia is made more difficult for the same reason. A complete change of policy towards Turkey is required, and if Mr. Lloyd George and his advisers would be content for once to eat their own words and acknowledge their mistake in the past, they could do more for unemployment in this country by that one act than all the talk and Conferences between now and Doomsday.

I am, etc.,

J. M. KENWORTHY.

House of Commons, Westminster.

January 11, 1922.

ENGLAND AND ISLAM.

To the Editor of "The Near East."

Sir,—I returned to England a few weeks ago from India, and I am shocked to find how little English people seem to realise the immense importance of the Turkish Question to the welfare of the world in general and the British Empire in particular. Even our statesmen still indulge in the Gladstonian folly of talking as if "Christians" only were deserving of consideration in the East.

It is not too much to say that the terms of the Treaty of Sèvres sent a thrill of horror through all Asia which had watched with anguish the long series of attacks and calumnies from Europe of which the Turks, an Asiatic race, had been the victims; and that horror has been steadily upon the increase until now. It is emphatically not a question of a mere territorial re-adjustment between Turkey and Greece. It is—or ought to be—a question of our reconciliation with the Islamic world.

England made certain solemn public promises during the war to Turks and Arabs and, which is worse, to Indian Muslims, her own people; which promises have all been broken in favour of secret understandings with some European, so-called "Christian" Power; with the natural result that England, once respected in the East, is now abhorred. It is not even now too late for England to regain her old prestige, if she will keep those promises. Otherwise farewell to our good name in Asia.

I am, etc.,

MARMADUKE PICKTHALL.

January 12, 1922.

PRESS ON THE NEAR EAST.

British India.

The *Morning Post* on January 12 resumed its attack on Mr. Gandhi. It begins an article thus:—

We do not know if the British public realise that the visit of the Prince of Wales to India has been a failure. When the project was first mooted we ventured to warn the Government that it was to court disaster, and the disaster came. The Government cannot plead that they were not sufficiently warned. They knew already that the Duke of Connaught, when he visited India, had been grossly and repeatedly insulted. They knew that preparations were being made to repeat those insults and outrages upon a larger scale. They were warned of what was certain to happen by many experienced officials, some of them of the highest rank. The heads of several of the most important Provincial Governments in India warned Lord Reading of what would happen and were snubbed for their pains. The Prince went. When his Royal Highness entered Bombay, the main gateway of British India, he found the city at the mercy of a seditious and truculent mob and an organised Terror. His welcome took the shape of bloody riots, in which many lives were lost. Up-country the welcome was no better. It is notorious that where he did receive an ovation the welcome was organised in the teeth of a formidable opposition. Then Lord Reading, who had been blind to all signs and portents and deaf to all warnings beforehand, flew to the opposite extreme and sent panicky orders to Allahabad. The local government made wholesale arrests, with the result that the tide of sedition was for the moment stemmed. But immediately these good results were achieved the Viceroy veered round again and made it known that he intended to throw up the sponge and enter into a compact with Gandhi. Then came Bengal, and the Prince in Calcutta was the centre of a desperate struggle between sedition and loyalty. Everywhere, except in the native States, the friends of the British Empire in India have been so abandoned by the British Government and so intimidated by its enemies, that they hide their heads and either conceal or change their sentiments. The Viceroy may now pretend to take stern measures; but it is merely a pretence. And what is the sense of pretence? And what is the sense of pretending where Gandhi, the head and front of the sedition, is still at large? If the Government were in earnest they would arrest Gandhi and put him on his trial. If they allow Gandhi to continue to lead this movement, what is the sense in prosecuting his followers? There are only two conclusions to be drawn, either that the Government of India is afraid of Gandhi or is secretly aiding and abetting him.

It continues with comments upon "conspirators" against the British Government who are still at large, saying that by allowing such a condition of affairs to obtain we "are riding for a fall in India;" and it concludes:—

Now we have no hopes from the Government on this subject. The Prime Minister is committed to Mr. Montagu and to Lord Reading. We do not know the nature of the bond, but so much at least is certain. They have so arranged matters that the Prince of Wales is insulted in every city of British India—India which a few years ago could be guided

with a silken thread. They have notoriously failed, yet they will be allowed to remain and work further mischief if the matter be left to the Government. We address our appeal in this matter to the general public, but particularly to all those connected with our export trade in India, now abandoned to the organised terrorism of a boycott by men of whom the Government is afraid, or with whom the Government is unwilling to quarrel.

. If the policy of weakness and surrender—or worse—which allows this to be done is to be revised Mr. Montagu must go from the India Office and his friend Lord Reading must be recalled from India. And that will not happen unless the British public make it happen.

Turkey, Russia, and Constantinople.

The *Yorkshire Post* of January 10 contains an article called "The Question of Constantinople." It begins by remarking the possibility of renewed fighting in Anatolia in the spring between Greeks and Turks, and shows how the Kemalists are taking political steps to support their military movement. It mentions specifically the Turco-Ukrainian Treaty, which, it says, is obviously designed to secure the Kemalists from interference from South Russia, and to provide them with future support in regard to Constantinople. It continues:—

Not only do both Governments agree as to their future with other Powers, but a specific clause is said to deal with the question of the Straits and the Black Sea, which is to be settled by the States concerned themselves, the settlement to be based upon the inviolability of Constantinople as the capital of the Turkey. The Soviet Republic of Ukraina, with which the Kemalists desire to conclude this agreement, is not the Soviet Government of Moscow but may be considered a branch of that parent Government, and the diplomatic equalities of Lenin may be discerned in the document.

The allusion to Constantinople is specially significant. It will be remembered that whilst Article 36 of the Treaty of Sèvres laid down that the rights and title of the Turkish Government—which, by the way, was not the Kemalist Government—over Constantinople should not be affected; nevertheless the Allied Powers expressly reserved the right to modify these provisions should Turkey fail to observe the provisions of the Treaty. In other words the retention by the Turks of Constantinople was made conditional upon their good behaviour, and upon their faithful observance of the whole of the provisions of a Treaty which greatly curtailed their powers and restricted their territory. The creation of a zone of the Straits and the establishment of Inter-Allied Commissions at Constantinople, among other measures, had the effect, moreover, of placing the capital under the more or less direct jurisdiction of the Allies, and of reducing the power of the Caliphate in its own capital city to a mere shadow. The Kemalists have always fought against these restrictions, and proclaimed their intention of freeing Constantinople from the humiliating position designed for it by the Allies, and there is no doubt that they have gained great prestige and influence by their bold attitude in this respect as compared with the necessarily quiescent one of the nominal Government at Constantinople. That they should reaffirm their policy of the independence and inviolability of the city in this treaty with a Russian Government is a sign of their greater feeling of power as the result of their successful political and military campaigns.

Although no Soviet Government can be wholly in touch with a Turkish and Mussulman Administration, and sooner or later Russians and Turks must fall apart, each is so useful to the other in present circumstances that their outwardly unnatural alliance may hold good for some time to come, during which incalculable harm may be done to the cause of peace and to the interests of the Allies.

MUSICAL NOTES.

ON GRAMOPHONE RECORDS.

One has long ceased to await with tense expectation the records made by "star" artists, for human stars do not often maintain a high artistic level, but in the "Celebrity" vocal records which "His Master's Voice" have recently made there is really astonishing distinction. The old reproach that the voice was the instrument which came out worst on the gramophone is completely falsified, for the last list of records contains some which are almost miraculously perfect. First of these I myself put Chaliapin's singing of Koenemann's "When the King went Forth to War." This is one of the finest records I have ever heard, for it reproduces with incredible accuracy the chiselled and individual beauty of the great Russian's voice. One nearly persuades oneself, as one hears him (and in imagination sees him) sing, that this is a great song, so great is his conception of it. And the other record by him—Moussorgsky's "Song of the Flea"—is wonderfully typical. It inevitably must be compared with Vladimir Rosing's more realistic rendering, but there is difficulty in giving preference to either, so unique are both. To those who have not heard Chaliapin I warmly recommend these two records.

A *coloratura* singer who is extraordinarily popular with the British public, though she is now in America and has not yet been to this country, is Galli-Curci. One is tempted to say from her records alone that she is in her rôle unsurpassable, so amazingly finished is her technique. Here she is represented on two records—in the "Polonaise" from Thomas' "Mignon," and in "Sempre libera degg'io folle gaire" from Verdi's "La Traviata"—and in both the mastery of her voice is remarkable.

Caruso is heard in an Halévy aria, and in the first few notes the spell of that vanished voice is cast around. Its magnetism is indescribable, but once heard his voice will never be forgotten. This record needs a soft needle, for into the merest thing Caruso threw his inimitable passion, and though in this he does not open his flood-gates wide, he achieves certain climaxes.

One of the most distinguished records is that made by Battistini in Donizetti's "Voce fatal di morte." His is a singularly beautiful voice, and the first part of the record is worthy of him, though towards the end, there is, perhaps, a slight tailing-off.

There is another Verdi record—"Dio, che nell'alma infondere" (from "Don Carlos")—sung by Martinelli and de Luca. It is an excellently prepared record, the blend between tenor and baritone being unusually good, and if the technical performance of the duet is in one place a little imperfect, it is easily overlooked in the rich magnificence of Martinelli's voice.

It is a pity that a drop in this high level of records should be caused by an English singer in an English song—Kirkby Lunn in Elgar's "Like to a Damask Rose" for though the reproduction is only too faithful, Elgar's is a poor song, and moreover, not too well sung. But some people will like it. Similarly with a "Faust" duet, sung by Walter Hyde and Robert Radford—"Be Mine the Delight"—though in this case it is well sung. There are some who like "Faust" whole, and some who like it in excerpts; but there are also those who like it not at all. Very possibly those who admire this record will also care for a duet from Mendelssohn's "Hymn of Praise"—"I waited for the Lord"—sung by Alma Gluck and Louise Homer. The soprano's voice is a fine one, and here it comes through with crystal purity, but though the contralto's diction is equally excellent, the *timbre* of her voice is imperfectly reproduced—why, I do not understand, because in all other respects the record is superb.

A very "pretty" record and one that will certainly become popular is that made by John McCormack and Kreisler in Rachmaninoff's "When Night Descends." The clarity of this is notable, and the balance between voice and fiddle exquisitely maintained. Indeed, the record is a triumph of craftsmanship.

Andante.

NEAR EAST BOOKSHELF.

A DOCTOR IN SERBIA.

"MY BALKAN LOG." By J. Johnston Abraham. (London: Chapman and Hall. 15s. nett). Illustrated.

"My Balkan Log" records the experiences of a surgeon serving with a British Red Cross medical unit in Serbia in 1914-15. Arriving in the country in October, 1914, the hospital to which the author was attached was established at Uskub where it remained some months until, with the death or invaliding home of most of the doctors and orderlies, it ceased to exist as an organised body. It will be seen that the book covers the period of the first invasions of Serbia by the Austrians, and of the terrible Typhus epidemic which so greatly handicapped our gallant Allies in their splendid fight for their country. The book tells the story of those strenuous days as seen from the standpoint of a little band of English hospital workers at the base labouring day and night for months at their gruesome trade in the face of every conceivable difficulty, and although none of them during their stay at Uskub appear to have experienced even the trials of an air raid or heard a shot fired in anger, the risks they took daily where Typhus stalked through the land were such as might put a severe strain on the nerves of the stoutest fighter.

The horrors special to the Typhus epidemic, to say nothing of those associated with the ordinary work of the military surgeon in war time do not suffer in the telling at the hands of the author, whose Zolaesque descriptions of all things horrible that came his way give his book a certain pre-eminence in frightfulness over all the many medical war books inflicted on the public in the past seven years. The lay reader will find in this "Balkan Log" so many passages recalling the professional conversations between Bob Sawyer and his student friends which made such a profound impression on Mr. Pickwick that he may begin to doubt whether the surgeon of to-day is so greatly the superior in refinement of his predecessor of a hundred years ago as is generally believed—anyhow he might well doubt whether even Bob Sawyer at his best could beat the following passage which is typical of our author when he waxes lyrical over the day's work, a thing he does not once but many times in the course of his realistic narrative:—

Sometimes we had curious surprises. I can remember one of the first; a leg I tried to save by gouging a long gutter in the Tibia for Osteomyelitis. Our old major came along as I was doing it, shook his head and said "amputation." But I was determined to save the leg. I dressed the man myself for three days. Then he disappeared one morning; his bed was empty

and no one knew what had become of him. I went to look at the ten bodies lying in the mortuary but he was not there.

Presumably the author's object in writing this book was to bring home to the public the horrors of war as viewed from the standpoint of an English surgeon suddenly called upon to practise his craft under mediaeval conditions in an improvised hospital in a small Serbian town. If this assumption is correct, there is no denying that he succeeds admirably in producing the desired effect, and in the minds of such of his readers as have not to some extent shared his experiences in the great war the pictures of misery and suffering he paints with such a wealth of colour can hardly fail to produce feelings of the most painful description. But one may well ask was it necessary to lay the paint on quite so thick? Some millions of the author's fellow-countrymen were engaged for four years in this dreadful business of killing and maiming. Many of them saw sights in the field even more horrible than came the way of the doctors and nurses in the military hospitals, but it is rarely they can be induced to describe them, and even among the doctors reticence about such things is the rule rather than the exception. Realism loses its point when it is employed in depicting things familiar to the majority. Zola was justified in writing "La Débâcle" if only to remind a generation clamouring for war of some of its painful realities, but in days when, surfeited with horrors, we are all trying our best to forget the evil things the war forced on our notice, one is apt to resent the efforts of writers who seek under the excuse of art to revive them in our memories in all their naked horror.

The author's descriptive powers are, however, not entirely devoted to the hospital side of his experiences—he takes us occasionally out of the wards into the fresh air and shows us something of Serbia and Serbian life. It does not amount to much, for it is obvious that his opportunities for studying the country and the people were necessarily very limited, but such as it is it gives the book a certain interest it would not possess if he had restricted himself severely to the recording of the daily experiences of himself and comrades within the four walls of the hospital in which they laboured. That his sympathy with the gallant little nation in whose service he worked so devotedly in its time of trial is sincere and heartfelt is clear in every line he has written, but while it is apparent that he likes the Serb it is no less so that he has only succeeded in viewing him from the outside and having failed to discover his soul is not entirely convinced of its existence. The rites and ceremonies of the Orthodox Church, often referred to in this book, garish and tawdry as they may appear to Western eyes, are nevertheless the media by which great eternal truths are presented to the people of the Near East in the only language in which they become intelligible to them—the language of symbolism. It is a language conveying nothing to the materialist; hence many things admirably described by the author are given to us just as examples of the quaint ways of the foreign folk with whom he was brought into contact in Serbia. The thing seen is faithfully presented, the thing signified is invariably ignored.

The author is at his best when he is telling us about the men and women who shared his arduous life with him in Serbia. His character sketches are admirable, and his power of giving the reader a sense of personal acquaintance with the members of the little hospital community supplies his book with perhaps its chief attraction. He impresses us as a man with a genius for friendship, and a strong sense of comradeship, generous to a fault in his appreciation of the work of his associates, even if his estimate of the magnitude of their achievements suggests a somewhat deficient sense of proportion. Even if this book had never been written, the world would have learnt long ago that the work of the British Red Cross units in Serbia in the opening phase of the great war was wholly admirable and that it was carried on amidst appalling difficulties. It in no way detracts from the credit of their achievements that they

pale into insignificance besides those of Colonel Hunter's sanitary mission which in its grim campaign against the Typhus horror established a record in the annals of preventive medicine. Typhus inevitably reminds us of the louse, the ancient human parasite who after coming well into the lime light during the war has now mercifully retired into his pristine obscurity. It was inevitable that we should hear a great deal about him in this book, but making every allowance for the author's natural desire to bring home to this little enemy of mankind his manifold crimes, we really think he might have spared us that full page illustration of "Serbian soldiers hunting for lice." If a photograph of British soldiers engaged in such a filthy task had ever been published it would have been bitterly resented not only by their friends and relatives but by the general public, not wholly deprived of their sense of decency by the great war.

A CRITIC OF ENGLAND.

"THE TURKS AND EUROPE." By Gaston Gaillard. (London: Thomas Murby and Co. 12s. 6d. net.)

This book is a careful account of events in Turkey from the Armistice of Mudros in 1918 up to about a year ago, and of the relations between that country and the Peace Conference. Copiously illustrated with extracts from speeches, newspapers, and diplomatic correspondence, it is a very comprehensive summary of a period which is tangled in its motives and obscure in its details.

The subject is treated from a point of view which is at once novel and prejudiced, for the author is a most confirmed Turcophil and a very hard critic of England.

Without denying that the Turkish nation has much of which it can complain—the too long delay before any terms were presented to end the state of war, and the abortive nature of those terms when they were at last presented in the Treaty of Sèvres—one feels that M. Gaillard is in the position of an advocate defending a cause, in which there are many details that it were better should never see the light of day or bear the searching questions of an accomplished barrister.

For the present deplorable situation in the Near East, the Powers must take a very large measure of blame, and in their policies and manoeuvrings, France has had a full voice and share. It is neither seemly nor politic that two such Allies as France and England have been should wrangle publicly when their time of trial is over. If M. Gaillard accuses England of being inconsistent, stupid, and self-seeking, it is not inconceivable that others have imagined those same faults in the policy of France. To say that the actions of any one nation, or of any of the anti-Turkish movements within the Turkish Empire of 1914, are entirely to blame for the events which succeeded, is neither impartial nor just. On either side there must be, and are, many faults; but the author's attitude, that any or everybody except the Turkish nation is responsible, must be due to either prejudice or ophthalmia.

To take a single example, Armenian Nationality first arose as a living question when Turkish Government was a synonym for bad Government—when, granting the whole of the author's conception of Russian hegemony, any change could have been only for the better. This happened during the last century, when the spirit of nationality, together with many other spirits of more or less doubtful value, was made a subject of everything but unselfish support. Some nationalities, the Italian for instance, won out and became kingdoms or republics. They did not do it without exterior support. The Armenians found support in Russia, for Western Europe was too busy to do more than hear them and utter a few words of sympathy.

Subsequent events contained much to be regretted, but had the reviewer himself been an Armenian, he would have struggled hard to own a rifle, and also to have joined hands with the Russians in 1915—an attitude much applauded by the Allies at the time. And if the Armenians "did not behave like innocent little lambs" in March 1920, there was much that was both human and understandable in their action, even

if it were entirely unethical. Asia Minor has neither police nor law courts to adjust differences; consequently those differences are settled promptly and finally, with all the decision of a wild, primitive country. After all, if M. Gaillard had been in Lorraine in 1914, and could have procured a rifle, surely he would have kept it, and if Allied troops other than French had advanced past where he was hiding, he would probably have joined them, if he had been unable to join his own Army. Also he would probably have felt just as bloodthirsty as the Armenian, if those near to him had suffered in one of the "unfortunate incidents" which, in Northern France and Belgium, shocked Western civilization. Yet they were very insignificant compared with what happened in Anatolia.

This is to take a single point out of many with which one could disagree in this book. That it is a careful summary of events is undeniable, and it is particularly interesting in that it affords much guidance to understanding an attitude of mind which caused, on more than one recent occasion, considerable surprise in England.

The question of the Near East is a vexed one; it is one that seems almost impossible of solution. But it is certain that no solution will be found in supporting one of the many parties concerned to the exclusion of all consideration for the others. To be impartial is difficult, as will be admitted by anyone who has lived in the Near East: to be without suspicion of bias is well nigh beyond human power; to become so frankly partizan as M. Gaillard is dangerous.

We are sure that in supporting the Turks with so much prejudice, the author has done harm to a people with whom much sympathy must be felt.

IN INDIA AND AFGHANISTAN.

"EAST IS EAST." Stories of Indian Life. By Major-General T. D. Pilcher, C.B. (London: The Bodley Head. 7s. 6d. net.)

These three stories by General Pilcher leave us in no doubt as to his knowledge of India and its diverse peoples, and he has the gift of sharing that knowledge with his readers in picturesque descriptions of men and places. As a story-teller his powers are decidedly limited, and he unfolds the incidents of his plot in a jerky, mechanical way, with no oiling of the machinery.

"A Matter of Degree" a really only a string of loosely connected events used to illustrate the old Indian proverb "Trust a snake before a harlot. Trust a harlot before a Pathan. Trust a Pathan before a Brahman."

"Samson and Delilah" is a tale of Afghan revenge, which is very well worth reading for the account of the wanderings of Afzul Khan through India to find purchasers for his merchandise. It is inevitable that the reader should be reminded of "Kim," but this does not make General Pilcher's narrative any the less interesting. In "A Romance of Jetana" we follow the adventures—supposed to have taken place some year ago—of Surgeon Captain Michael Macnamara of the Indian Medical Service, as resident in a Native State, where the Rajah is a minor, and there are three chief enemies at Court ready to plot against the Irishman and to undermine his influence. It is always satisfactory to see the hero of a story refusing to fall into the traps laid by his subtle adversaries and to leave him triumphant over them.

The interest of this book lies not in the stories, which are of no real value, but in the conviction which the author inspires of the reality of his understanding of Indian life.

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

PERSONAL AND GENERAL.**To-Day.**

January 19 (New Style).

January 6 (Old Style).

Gumada I, 21, 1340, A.H. of the Moslem Calendar.
Tebet 19, 5682 of the Jewish Calendar.

M. Nicolas Emile Lahovary, First Secretary to the Roumanian Legation, left London last week for Bucharest.

Lord Killanin, who is at present in Egypt, will return to London at the end of this month.

M. Pantchow Doreff, Counsellor at the Bulgarian Legation, has returned to London from Vienna.

The Queen of Roumania and Princess Ileana of Roumania are expected to arrive in London next month.

Lord Long and the Bishop of Gibraltar have arrived at Malta in H.M.S. Surprise.

The Marquis of Salisbury and his daughter, Lady Beatrice Ormsby-Gore, have arrived at Barbados.

M. F. Nano, the Roumanian Chargé d'Affaires, has taken 58, Brompton Square, for the winter.

M. Titulesco, the newly appointed Roumanian Minister to England, is lying ill at Bucharest.

Sir Herbert and Lady Samuel have arrived at the Winter Palace, Luxor.

Major-General Sir W. S. Brancker has returned to London from Irak.

Sir Herbert and Lady Vernon and family left by P. and O. steamer Narkunda last week for Egypt and Palestine, and expect to return in April.

The Prince of Wales has given to the Zoological Gardens the collection of animals presented to him by the Maharaja of Nepal.

M. Jaroslav Cisar, specially attached at the Czecho-Slovak Legation, has returned to London from the Continent.

Sir John Norton Griffiths, M.P., and Lady Norton Griffiths have arrived at 34, Lennox Gardens, where they will be until Easter. (Telephone, Kensington 3217).

Earl Granville, the newly appointed British Minister to Denmark, will leave London at the end of the month with Countess Granville for Copenhagen.

Our Port Said Correspondent announces (December 31) that a son has been born to the Chaplain and Mrs. Johnston.

Canon Buchanan, vicar of Holy Trinity, Hull, hopes shortly to spend about four months in Palestine and Egypt, studying in particular mission work.

Sir Marshall and Lady Reid left by P. and O. steamer Narkunda last week for Egypt, the Sudan and Palestine, and expect to return to Epsom at the end of March.

Professor van Tyne, of the University of Michigan, has arrived in Calcutta, in order to study Indian political conditions with reference to the development of the new Constitution.

The marriage took place on December 22, at Princes Row Registry Office, between Major T. B. Minniken, 76th Punjabis, Indian Army, and Mrs. Dorothy Ross Bell.

Major F. H. Humphreys was received in audience last week by the King and kissed hands upon his appointment as his Majesty's first Envoy Extraordinary and Minister Plenipotentiary at Kabul.

Lady Winifred Gore has left the Flag Staff House, Bangalore, where she has been staying with Lord and Lady Ruthven, to visit General Lord Rawlinson and Lady Rawlinson at Flag Staff House, Delhi.

M. Michel B. Boeresco, the Roumanian Minister Plenipotentiary and Chargé d'Affaires, left London last week for Bucharest. M. Frederic Nano will act as Chargé d'Affaires during the absence of M. Boeresco.

Mr. H. C. A. Eyres was received on January 13 in audience by The King and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary in Albania.

The coronation of King Alexander of Serbia will take place at an early date after his return to Belgrade, at the conclusion of his visit to the King and Queen of Roumania, in about two weeks.

The marriage was celebrated on January 5, at Lahore Cathedral, India, between Captain Ronald A. C. Hill, Indian Police, younger son of Colonel Arthur Hill, R.E., retired, and Mrs. Hill, and Shelagh, only child of Mrs. Ore Deas.

Lord Northcliffe has left Madras for Delhi upon a few days' visit to the Viceroy. From Delhi he will proceed to Bombay, where he will be the guest of Sir G. A. Lloyd, Governor of Bombay. He is due to sail for England on January 21.

The marriage was celebrated on November 30, at Delhi India, between Douglas Hendrie Currie, 18th-19th Lancers, Indian Army, and Maud Vernon, youngest daughter of the late Lt.-Colonel G. W. Anson, of Garvock, Sevenoaks, Kent.

The King of Roumania has conferred the Order of Charles I. upon the King of Serbia, and the latter has decorated King Ferdinand with the Order of Kara Georgevitch with Stars and Swords, and has conferred a similar decoration with Swords upon the Crown Prince of Roumania.

M. Georges Creziano, of the Roumanian Diplomatic Corps, whose brother is secretary at the Legation here, is engaged to Helen, daughter of M. and Mme. Butculesco (Lady in Waiting to the Queen of Roumania). The wedding will take place in Bucharest at the end of this month.

The marriage was celebrated on January 4, by the Resident Chaplain, at the Church of the Epiphany, Port Said, Egypt, between A. C. E. Anthony, M.Inst. C.E., M.Inst.E.E., Haifa, Palestine, and Audrey, youngest daughter of Mr. and Mrs. Elliott, Therlestane, Hampton Hill, and late of Naini Tal, India.

A marriage has been arranged, and will take place early in March, between Lieutenant-Colonel J. S. Bogle, D.S.O., retired, Indian Army (late Queen Victoria's Own Corps of Guides), and Margaret Iris, widow of Major Charles Herbert Mallock, D.S.O., R.F.A., of Cockington Court, Devon, and daughter of Mr. and Lady Grace Bazley-White, of 50, Lexham Gardens, S.W.

On the occasion of New Year's Day (Old Style), the Roumanian Students' Association held a festival on January 14, at the Roumanian Legation, Cromwell Place, at which M. Nano (Chargé d'Affaires) presided. Monsieur M. Becza, lecturer at King's College, gave a short discourse on "Christmas and New Year in Roumania," the folklore, music, and dances being illustrated

by the students, all in national costume, as were many of the audience. Mlle. Laura Zaganescu, a Roumanian singer, well known in Paris, sang. The festival concluded with the singing of the English and Roumanian National Anthem. Services in celebration of New Year's Day, were held at the Greek Church, Moscow Road, and at the Russian Church of St. Philip, Buckingham Palace Road.

APPOINTMENTS AND PROMOTIONS.

M. Charles Maskens, Counsellor at the Belgian Embassy, has been appointed Envoy Extraordinary and Minister Plenipotentiary to Bulgaria.

M. N. Misu, a son of M. Mistu, who during the war was Roumanian Minister in London, has been appointed Secretary to the Roumanian Legation.

The King has been pleased to approve the appointment of Mr. Hugh Lansdown Stephenson, C.S.I., C.I.E., I.C.S. to be a member of the Executive Council of the Governor of Bengal, in succession to Sir Henry Wheeler, K.C.I.E. C.S.I., I.C.S., whose term of office will expire in April 1922.

OBITUARY.

The death took place on January 11 of Major-General Sir Reginald Salmon Curtis, late of the Royal Engineers. He first saw service in the Sudan in 1891, and four years afterwards took part in the Ashanti Expedition, in which he served as Director of Telegraphs.

The death is announced of Lieutenant-Colonel Henry P. Bell, late 44th Merwara Infantry, Indian Army, and 8th (Service) Battalion Leicestershire Regiment. He served in Burmah in 1891, taking part in the Wuntho Expedition and receiving the medal with clasp. He had also a clasp for operations in the Chin Hills.

The death has taken place of Major-General Sir Walter George Augustus Bedford. Sir Walter saw service in the South African War, when his work earned him mention in despatches and the C.M.G., while in the Great War his work as Director of Medical Services of the Forces in the Dardanelles and Egypt gained him a further mention and the C.B.

The death has occurred of Sir William Matthews, K.C.M.G., a past President of the Institution of Civil Engineers and a harbour engineer of world-wide repute. Examples of his work can be found in the harbours of Gibraltar, Malta, Cyprus, Ceylon, and many other places. He sat on many Commissions, notably the International Technical Commission on the Suez Canal in 1908.

The death has occurred of Mr. Thomas Gibson Bowles, a notable man who had a varied career. Among his many services were those during the military operations in Turkey which ended in 1878, after which year he did good work in the formation of the Stafford House Committee for the relief of distressed Turks, for which he received from the Sultan the Order of the Mejidie.

The death has occurred of Colonel Sir John Godfrey Rogers. Sir John joined the Army Medical Department in 1871, retiring in 1892. He first saw service in the Afghan War in 1878-81, and subsequently served in the Egyptian and Nile expeditions, with the Sudan Frontier Field Force (1885-6), and as principal medical officer with the Suakin Field Force in 1888-9. He was principal medical officer of the Egyptian Army for nine years from 1883, and later held the appointment of Director-General of the Sanitary Department of the Ministry of the Interior, Egypt, for seven years. Sir John, who gained the D.S.O. in the Sudan, was created a K.C.M.G. in 1898. He was also a Knight of the Order of St. John of Jerusalem and a Pasha in Egypt.

NEWS IN BRIEF.

Haj Amin el Hussein, the Mufti of Jerusalem, has been elected Rais el Ulema for Palestine. Four other notables have been elected as a council to administer under the presidency of the Rais el Ulema all Moslem religious funds and courts.

Djehal Beddine Avis Bey, former Vice-President of the National Assembly, has been appointed representative of the Angora Government in Rome instead of Djami Bey, who has been relieved of his office.

A Paris message states that Algerian tribesmen, who recently had 150 camels stolen by Tuareg raiders, followed the thieves across the Tunisian Sahara, overtook the Tuareg on the Tripolitan frontier, and gave battle. The Algerians killed 20 of their foes, sustained only three casualties, and recovered their camels.

THE PEASANT AND THE TARIFF.

A fiscal commission is now perambulating India, charged with the duty of preparing the way for the formulation of tariff principles suitable to the country in the new political conditions. With the general activities of the Commission we are not greatly concerned. Judging by the condensed reports which reach us from India, its experience is similar to that of other bodies of its kind. It is getting a few facts and an amorphous mass of opinions. Its members are learning by dint of painful iteration that most consumers want low prices, that most merchants desire a large turnover, and that most manufacturers aim at buying materials cheap and selling their products dear: they are also realising the difficulties felt by ordinary people in justifying by arguments the beliefs and prejudices on which they have been nourished; and they are destined to realise in due course that their labours will have but little influence on the balance of opinion. To comment on such normal features would be a waste of time; and if we refer to the Commission at all, it is with the object of drawing attention to one feature of its proceedings which is very far from normal, and which is of real significance for the near future. The Commission is not merely concerned with a tariff on imports; it is being pressed to recommend export duties sufficiently heavy to check the sale abroad of the staple products of the country, and, for a time at least, to reverse the established balance of trade; in other words it is being brought face to face with the deep-seated, secular antagonism between the country and the town; between producers and exploiters, between the peasants and their parasites, which underlies the whole history of India. About four-fifths of the population spend their lives in producing food, and while they eat most of it themselves, all of them have a margin for sale, which, small though it may be, provides them with clothes and anything else they can afford to buy. Their interests therefore require that food should be dear: the small minority of town-dwellers desire on the contrary that food should be cheap; and, if India had really progressed as far as some of her active politicians suppose, the suggestion of using the tariff to keep prices low would be scouted as utterly impracticable, because it is opposed to the obvious interests of the great majority of the people. In fact, however, the peasants have not yet found their voice; the cry for dear food has scarcely been raised in public, though a whisper is often heard in the villages; and for the moment the town-dwellers have the field practically to themselves, as the reports of the Commission's proceedings abundantly testify.

For these ardent advocates of export duties, there is this to be said, that they have history at their back. In India the towns have exploited the country throughout the centuries. Travellers of many nations visited India before the establishment of British rule, and the two facts that stand out most prominently in their accounts are the cheapness of food in the towns, and the miserable poverty of the peasants in the country. The relation between these two facts is obvious; the whole economic system, and also much of the energy of the administration, was directed to feeding the towns below

cost; and, speaking generally, the object was attained, but at the cost of a serious deterioration of the national character, a deterioration which gave us the peasants of the last century, so impoverished that they had lost even the hope of improving their position. These conditions may be said to have persisted until the new era inaugurated by the opening of the Suez Canal, when it became commercially possible to move surplus food from India to Western Europe. The development of trade during the last half century has resulted in a gradual levelling-up of Indian prices, but the process has taken time; it may indeed be said that India has come into line only during the last two years; and many of her prominent politicians have as yet failed to realise the significance of the change. Their attitude was clearly stated to the Commission by one witness, who asserted that the people of India had a right to get wheat at a half-penny the pound. Translated into accurate language, the assertion is that four-fifths of the population are bound to supply the remaining fifth with food on the basis of 20 shillings for the quarter of wheat, when the workers in other countries have to pay 50 shillings or more; and if advocates of this view were pressed to give a reason, they would doubtless say that things had always been so. From the beginning of history the peasant has been exploited in the interests of the town; therefore, the argument runs, exploitation should continue to the end of the chapter.

To Indians who take this attitude we appeal for reconsideration. India is moving, and must move, with the times, and the argument from history is at the best dangerous. The question is one of the future rather than the past, and the new environment, economic as well as political, calls for a readjustment of the point of view. On the political side, there is the obvious fact that the peasants outnumber all the other classes of the population; even now their votes suffice to control the legislatures, and, when the franchise has been extended, their preponderance will be beyond dispute. Possibly after the next election, probably after the next election but one, their control will be a reality. Is it then worth while to press for an exploitative tariff at the present juncture? When the peasants learn their power, they will brush all such measures angrily away, and the men who devised them are likely to be involved in the ruin of their handiwork. Surely the wiser course is to use the present period of transition to make the preparations necessary for the new régime, not to attempt the hopeless task of showing up a tottering edifice which must in any case shortly be demolished. And if such political considerations condemn the attempt to impose an export tariff, the economic argument is even stronger. The true lesson to be drawn from the past is that the secular exploitation of the peasant has been a disastrous failure. It explains most of the evils from which India is suffering to-day, the lack of enterprise, the preference for a parasitic life, and the essential poverty of the country. To make India rich, it is necessary, and at the same time it is almost sufficient, to foster and develop the new mentality which has begun to appear among the peasants. They are less ready to be exploited than they were; the task of statesmen is to teach them to refuse to be exploited at all, but rather to insist that the towns shall lend their brains and energies to the common object of producing enough wealth for all. The first step towards that object is to secure to the peasant the reward of his toil, and thereby furnish him with the incentive to increased exertion; that condition involves access to the markets of the world, untrammelled by tariffs or other artificial hindrances. It may be true that much of the peasant's share is at present intercepted by middlemen; that is not, as some people urge, an argument for neglecting his interests, but rather for improving the economic organisation, so that he may eventually come by his own. The aim of every patriotic Indian should be to equip the land with a free, energetic, and prosperous peasantry, and the conclusive objection to an export tariff is that it must operate to depress the peasantry even below their present level.

THE FINANCIAL AFFAIRS OF THE GREEK PATRIARCHATE OF JERUSALEM.

(By a Student of Eastern Politics.)

Considerable interest has lately been roused in England in the financial affairs of the Greek Orthodox Patriarchate of Jerusalem, by questions which have been asked in the House of Lords, and by the recent "Official Statement by the Palestine Arab Delegation" (Nov., 1921) which says that "the Wakf properties of the Greek Orthodox Church, with which the Turks never interfered. . . are being offered for sale by a Commission appointed by the Administration in such large lots that only the Zionists can buy them, while if they were divided up into smaller lots they would find Arab purchasers" (p. 10). A clear presentation of the facts of the case is therefore due to the public in England, where the deepest interest in, and sympathy for, the Church has always been felt.

The importance of the Orthodox Patriarchate of Jerusalem lies not in the number of its adherents in Palestine, but in its unique position as being the headquarters of the autocephalous Church of the country where the Founder of Christianity appeared. The position of Jerusalem as a place of pilgrimage for many centuries has resulted in the Church becoming the object of countless charitable bequests, and amassing considerable property at Jerusalem and throughout Palestine. From very early days it has possessed estates which are *ab antiquo* the property of the Fraternity of the Holy Sepulchre or its dependent monasteries. These lands are considered Wakf, that is property dedicated in perpetuity for charity or for religious objects or purposes. The constitution of wakfs requires the registration of properties in the Religious Courts, as well as in the Government Land Register Offices. The peculiar provisions of the Ottoman Land Code, still in force in Palestine, dealing with this class of property, are based upon the Islamic Law, which lays down the principle that such property cannot be alienated except by the exchange of the property concerned for other property. A complicated legal procedure is involved, which was modified (in so far as Mohammedan Wakfs are concerned) by introducing evasive legislation which allowed certain classes of wakfs to be sold whilst remaining in the nominal possession of the mosque or charitable institution concerned. This modification of the principles of Islamic Law was effected many centuries ago, and has enabled Mohammedans to obtain actual, though not final, possession of large tracts of certain classes of wakf property. Though the same system of legislation is applied also to Christian wakfs, the creation of religious endowments subject to conveyance and inheritance has never been practised among Christian communities. The point is of importance as by a recent Ordinance, the High Commissioner has modified the legal status of wakfs belonging to the Orthodox Patriarch (wakfs held *ab antiquo* by any monastery excluded) whereby they may be sold under certain conditions.

The acquisition of property was considerably increased in the nineteenth century, through the growing popularity of Jerusalem as a centre of pilgrimage, from 25,000 to 35,000 pilgrims visiting Palestine annually. Their generosity enabled the monks of the Fraternity of the Holy Sepulchre to acquire private fortunes, with which property was usually purchased, the Canon of the Church allowing, and even encouraging, the monks to acquire immovable property which on their decease

passes to the Church. It was customary for the Patriarch of the period to transfer such properties into his personal name and not to register them as wakf. The major portion of the lands around Jerusalem belonging to the Patriarchate have been so acquired, and cannot be considered in the legal sense as "lands held in perpetuity for religious endowments." In Asia Minor, Cyprus, Greece, Roumania, and Russia, there are also large properties; whilst in Bessarabia the Patriarchate possessed up to the beginning of the War estates yielding an annual revenue of £30,000.

The serious financial position of the Church in Palestine first assumed prominence in 1914 when an investigation became imperative. An eminent Greek financier then ascertained that the liabilities of the Patriarchate amounted approximately to £150,000. The deficit was the result of unproductive estates, the practice of meeting current expenditure by continuous borrowing, and the lack of any financial knowledge among the members of the Fraternity. The sale of the Bukovina estates reduced this debt by some £65,000, but the financial reforms then introduced were paralysed by the absence of any authoritative financial administration. By the end of 1914 the debt had increased to £222,000. The estimates for 1914 gave the receipts as approximately £62,000 against an estimated expenditure of £80,000, the deficit being covered by borrowing at high rates of interest. Of the receipts, £40,000 represented rents of property in Russia and Bessarabia (then a part of Russia), and £20,500 donations of Russian pilgrims to Jerusalem. The outbreak of war naturally stopped the greater portion of the Patriarchate revenues, and at the time of the British Occupation in 1917 the debt had reached the enormous figure of £500,000. Loans at ruinous rates of interests were contracted, and the members of the Community were encouraged to invest their savings or to realize their property for the Church's benefit. Property of the Patriarchate was sold at low figures without concluding legal transfers through the Government Land Register Offices, and, generally speaking, the bare necessities of living at this period were obtained on credit against bills and notes of hand.

Such was the position when the British occupied Southern Palestine, and on the re-establishment of the Civil Courts by the Military Administration numbers of appeals were entered for the immediate settlements of these debts contracted by the Church. The Chief Administrator being repeatedly petitioned to allow justice to take its course, it became necessary to protect the Patriarchate from legal proceedings by the declaration of a special moratorium. A representative of the National Bank of Greece visited Jerusalem, and arranged for the payment of a subsidy by the Bank to the Patriarchate. Subsequently a proposal was made that the Bank should take charge of the financial affairs of the Church throughout Palestine and pay its debts, on condition that its movable and immovable property was handed over to the Bank to be administered and disposed of at the latter's discretion. The Military Administration, being a temporary Government, was not in a position to agree to this proposal, which involved questions of ecclesiastical control, and was moreover strenuously opposed by the Arab Orthodox laity as tending to increase Hellenic influence in Palestine.

The position was further complicated by a serious dissension in the Synod, in July 1920, some of the chief members of which "refused to recognise the authority of the Patriarch, demanded his deposition," and appealed to the other Orthodox Churches for support.

ASK FOR

WHITE HORSE WHISKY

BY APPOINTMENT.

"The financial affairs of the Patriarchate" being in the state described, and both sides "having appealed to the High Commissioner, His Excellency appointed a Commission to enquire into the matter and to make a report." (Official communiqué).

(To be continued.)

THE SYRIAN GOVERNMENT CLERK: EGYPT.

(Being a tragic reminiscence of the pernicious Egyptian Government practice of paying its small-salaried servants monthly).

'Tis the FIRST of the month, and the Syrian clerk
Feels his dignity rise with th' occasion;
He has just drawn his pay, O, the gay little spark!
As an act that required no persuasion.

'Tis the FIRST of the month; in the café he sits,
And delights those piastres to cuddle,
As politely accosts he his boon native wits
With, "Ut fuddl, Effendim, Ut fuddl." (I).

'Tis the EIGHTH of the month; still more coffees he'll sip,
And his thoughts are in no wise depressing,
As he curls those three hairs on his sleek upper lip,
Which undoubtedly need some addressing.

'Tis the NINTH of the month, and a *rahat lakum*,
Our Effendi's *al fresco* may vary,
As he dreams of the Turkish Delights that but loom
For the young and the bold, and the wary.

'Tis the TENTH of the month; as his chief passes by,
He will rise and *Salaam* with effulgence,
And a wink that might cause Father Nile to run dry,
Or shed tears of a fruitful indulgence.

'Tis the TWELFTH of the month; any psychologist,
Who knows aught of the Pharaohs and Khalifs,
May now note a suspicion, a cloudlet, a mist,
Cross that brow lately reckless of bailiffs.

'Tis the TWENTIETH day; now the pavement he haunts,
When he ceases his Miri-proud (II) labours,
And his tarboosh's tilt, on those coffee-less jaunts,
Has an angle less sure of its neighbours.

'Tis the TWENTY-FIFTH day; by such progress bored stiff,
On a café chair flops he, my Masters!
And a sighing and sipping of water, vows, "If
There's an Allah, there's mafeesh (III) piastres."

Let a curtain be drawn o'er the days that remain,
O'er that nightmare of torture and leisure—
Though there may be mosquitoes in Egypt, her pain
Is a trifle compared with her pleasure.

A.G.B.

I.—Welcome, esquires, welcome.

II.—Government—proud. It may still be said that, with the exception of military and police services, all young Egyptians would rather have £6 a month "under Government" than £12 a month outside.

III.—There is none, or "Napoo."

IMPERIAL RESPONSIBILITIES IN INDIA.

Last week, under the auspices of the Overseas Club and Patriotic League, with Sir Ernest Birch in the chair, Sir Michael O'Dwyer, late Lieutenant-Governor of the Punjab, delivered a lecture on "Our Imperial Responsibilities to India and how we are discharging them." He said that some people in the sacred name of self-determination were asking that we should clear out of India as soon as possible. That was, in his view, an absolutely false conception of our responsibilities, based on ignorance, and action on those lines would be a crime against humanity. There might be an artificial resemblance between India and Ireland, but there was no real parallel between the conditions of the two countries. In Ireland we had been endeavouring to restore a system of government which existed down to the Union. In India, on the other hand, an endeavour was being made to establish a system which had hitherto been alien to all Oriental peoples, and which had never succeeded.

RAILWAYS IN PERSIA.

At the Royal United Service Institute on January 12, with General Sir Edmund Barrow in the chair, Mr. Frank Grove, M.I.C.E., lectured to the Central Asian Society on the proposed railway from the Mesopotamian railhead at Khanikin (on the Persian frontier, 100 miles north-east of Baghdad) to Teheran, via Kermanshah and Hamadan. A survey of the route has just been completed by Mr. Grove for Messrs. Pearson, the well-known contractors, on behalf of the Persian Railways Syndicate Ltd., who have entered into an agreement with the Persian Government for the construction of this and other railways. The lecturer described the resources of the country traversed and pointed out that Persia, though its population probably exceeded ten millions, was at present almost entirely devoid of railways. Without cheaper transport economic development was impossible. Mr. Grove also gave an account of his journey along a possible route for a branch line from Hamadan to the Persian Gulf via Ispahan, the Bakhtiari country and Ahwaz.

Mr. Grove told an amusing story regarding the delights of travel in Persia. In the robber-infested mountains between Sultanabad and Ispahan he and his companion were provided with a guard of 12 sowars and an officer. The party split up into two sections, and emerged from the hills by different routes about three miles apart. Coming in sight of one another, each party suspected the other of being robbers, and made a great show of galloping across the plains to a strategic point, and then blazing away at a range of two miles or so, until the mistake was discovered.

INDIA'S EARLY HISTORY.

Last week, under the auspices of the Royal Historical Society, Mr. F. W. Buckler gave a lecture on "The Political Theory of the Indian Mutiny." The lecturer traced the rise of the Mahratta power, the decline of the Mogul Empire, and the end of the Mogul line in the person of Bahadur Shah, who by banishment atoned for his association with the mutineers in 1857. Mention was made of the usurpations of the East India Company, Lord Dalhousie's dealings with the feudatory States, the annexation of the province of Oudh, and finally the Mutiny, which sealed the fate of the East India Company. The Mutiny, Mr. Buckler observed, was the corollary of the second Mahratta war.

The India Office announces that Varian Kunnath Kunhamed Haji, the principal leader of the insurgent Moplahs, in Malabar, was captured on January 6 with 21 of his followers. Although actually taken by the police his capture was the result of constant military pressure.

NOTES AND NEWS.

Devonshire Square
E.C. 2.

The International Economic Conference.

As a result of political developments in France the outlook with regard to the international economic conference is at present somewhat obscure. That there should be any further delay in arriving at an agreement on measures to remedy the exchanges would be most regrettable. M. Poincaré, the new French Premier, is believed in some quarters to favour a return to the old fashioned diplomatic methods of negotiation instead of the conferences that have been held at various centres since the war. If by so doing there is a prospect of obtaining speedier results then there is everything to be said for the change. But *prima facie* a round table conference would seem to be a simple and more rapid medium. Whichever it is to be it is to be trusted that the authorities on both sides of the Channel realise that the problem of the exchanges requires immediate treatment if there is to be any prospect of any great development of trade with the Continent this year.

The A.-P. Issue.

The question whether the Anglo-Persian Oil Company would or would not include Ordinary shares in their new issue next week, which has imported quite an exceptional interest to the issue, has now been answered in the affirmative. Besides a large issue of Preference shares there will be 600,000 Ordinary shares, half of which will be open to public subscription at the price, it is understood, of £3½ per share. In this instance no words of mine are likely to influence the investing public. There is bound to be an enormous demand for the Ordinary shares, and I shall be greatly surprised if the list is not largely over-subscribed within an hour or two of its opening. It will be interesting to see the opening movements when the share is officially quoted. At £3½ the return at the present rate of dividend would be a fraction over 6 per cent., but the potentialities of the company suggest that the rate cannot fail to be greatly increased in the coming year, and at the price the shares obviously represent an excellent holding.

Imperial Bank of Persia.

A very satisfactory report is forthcoming from the Imperial Bank of Persia for the year ended September 30. The net profits show an increase of nearly £8,000 at £88,200, while with the amount brought in higher the available balance amounts to £117,200 as compared with £108,100. With the first dividend of 5s. per share the distribution for the year will be the same as the previous year, 8s. per share free of income tax. The reserve receives £30,000 as before, while £10,000 is allocated to bank premises account as against £5,000 and the carry forward is £32,000 as against £29,100.

Cox and Co.

The balance sheet of Cox and Co., the Army bankers, which has just been issued, shows that the expansion of the bank's operations resulting from the war is being well maintained. Compared with the balance sheet of March 31 the totals show a considerable advance though they are well below those recorded a year ago.

The deposits amount to £18,348,000 as against £17,771,000, while cash and cash at call amounts to £6,224,000, as against £5,442,000, or roughly over 33 per cent. of the deposits.

Imperial Bank of India.

The first report of the Imperial Bank of India covered the first five months of the bank's operations, and that now available is for the half-year ended December 31. The net profits for the six months amounted to Rs.62,27,800, and with the amount brought forward the available balance is Rs.72,41,900, out of which a dividend at the rate of 16 per cent. per annum is to be paid, the carry forward being Rs.12,74,600. For the previous five months the profits were Rs.58,14,792, and the dividend was at the same rate as that now proposed.

London County Westminster and Parr's Bank.

The results obtained by the London County Westminster and Parr's Bank in 1921 show a considerable decline on the figures for the previous year as was only to be expected in view of the trade depression. The net profits are £747,800 lower at £2,167,845, but this is far more than counteracted by the fact that this time the directors have not been under the necessity of writing down investments. The dividends are the same as for 1920, though they absorb slightly more on account of the issue of more fully-paid shares, the allocations include £500,000 to the contingent fund, and the carry forward is £519,708 as compared with £460,914.

Motors in Persia.

A correspondent who has recently returned from Persia has given me some interesting details of the growth of the use of motor cars there. He was in Teheran a year or two ago, and only a few motor cars were to be seen then. Now, however, the number is in three figures, and is increasing. Unfortunately British companies are not getting the trade, and at the present time Italian cars predominate. Conditions in Persia at the present time are not very favourable, but a little enterprise in that direction by British motor car manufacturers would be distinctly worth while, for the would-be Persian buyer desires quality, and if he is shown a good car he is not likely to pass it over for an inferior make.

Commentator.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866)

Head Office: 17, TOKENHOUSE YARD,
LOTHBURY, E.C. 2.

Branch: 11, CALEA VICTORIEI BUCAREST.

Lieut.-Col Sir Albert Stern, K.B.E. C.M.G.

Bankers—

Bank of England. Messrs. Glyn, Mill's, Currie & Co.
A general Banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

ROUMANIA.

Bucharest, January 6.

State Embargo on Wheat and Rye.

Owing to the reluctance on the part of the farmers to deliver the corresponding quota of wheat and rye required for the needs of the Army and the population, as well as the quota intended for export through the State, the Government has now issued a decree placing an embargo on all available stocks of wheat and rye and the bye-products of same. Thereby the State has the sole privilege of purchasing these cereals at the fixed maximum prices, which prices, however, have been lately increased. The price for wheat, for instance, has been raised by 4,000 lei per waggon (10 tons).

Higher Postal Rates.

From January 1 on the postage on foreign mail has been raised, as follows:—Letters up to 20 grammes 3 lei, and for every additional 20 grammes a further 1.50 lei; post cards—1.80 lei; printed matter, for every 50 grammes or fraction 0.60 lei (maximum weight 2 kilogrammes); samples up to 100 grammes 1.20 lei, for every extra 50 grammes or fraction a further postage of 0.60 lei (maximum weight 500 grammes); newspapers, magazines, etc.: for every number or 50 grammes, 0.60 lei. All the above, when registered, will bear an extra postage of 3 lei.

Payments to Foreign Creditors.

At the last Council of Ministers the question of merchants' debts to foreign creditors was again debated, and on this occasion the decision was taken to adopt the views of the former Government, which was to modify Article 44 of the Commercial Code in the sense that the Tribunal should be empowered to grant a term of grace for the payment of any debt, external as well as internal, provided the debtor pays 20 per cent. of the total amount due and offers for the balance a guarantee which will be determined by the Judge. Exception, however is made in regard to debts, in the which—in agreement with the creditor—the debtor shall have furnished a conventional guarantee of at least 50 per cent. of the amount due. As this is only a proposal, it is liable to undergo changes before it becomes law.

New Governor of Banca Nationala.

The much discussed question as to who would be appointed Governor of the Banca Nationala, which post became vacant on December 31, was settled at the last moment by the appointment of M. M. Oromolu, who has

hitherto held the portfolio of Industry and Commerce in the present Cabinet. The other vacant positions of Vice-Governor, Director, and Auditor have been filled by M. M. T. Capitanovici, G. Stroescu, and L. Sculy-Loghotheti respectively.

Miscellaneous.

The Customs Department of the Ministry of Finance has decided to reduce the export taxes on the following articles; Coal to 100 lei per waggon (10 tons); timber 150 lei per cubic meter, and meat 500 lei per waggon. The export of raw hides is now free of restrictions.

The local Press announces that the British Committee for Agricultural Assistance to the Allies is making the following donation to Roumanian farmers: 90 milch-cows, 30 bulls and 60 calves of the very best breed as well as 500 fowls.

The time for the handing in of the declarations of tax-payers in connection with the new fiscal law has again been extended from the 1st to the 20th of January, for all persons residing in the country, while for foreigners who are liable to be taxed in Roumania and are residing abroad the time for these declarations has been limited to February 15.

M. I. Stoian, former Director of the Banca Natiunei, who has been under arrest for the last two months in connection with the embarrassment of the above-named bank, has now been released on bail of 200,000 lei.

M. Gh. Lucasievici, the present Minister of Agriculture, is acting *ad interim* as Minister of Industry and Commerce.

YUGOSLAVIA.

Zagreb, January 5.

The British representative has visited the Ministry of Commerce at Belgrade to discuss the question of postponement of foreign debts. The papers state that he expressed himself as very gratified with all he saw and heard and stated that the commercial and industrial circles in Belgrade have produced a very favourable impression on him, and that he will endeavour to influence the business world at home in favour of new long-term credits for Yugoslavia.

BULGARIA.

Sofia, January 9.

A Diplomatic Demarche.

At the beginning of last week the chiefs of practically all the Foreign Missions in Sofia made a protest to M. Stambolisky regarding the new laws and taxes which the Government proposes to levy on limited companies.

M. Tourlakoff, Minister of Finance was present at the meeting, and after the Prime Minister had a made short speech M. Tourlakoff explained the new laws as they would affect foreign capital. No report of his speech has reached the Press, but it is understood that a further enquiry will be made into the question before the new laws are actually put into force. One Allied Minister is of opinion that if the laws are passed as they now stand foreign capital will be definitely barred from entering the country. In the light of Bulgaria's present financial condition such a result would be deplorable.

With regard to the Piraeus-Athens-Peloponnesus Railway Company's Four per Cent. Bonds, the Bank of Athens now announces that coupon No. 20, due January 2, 1922, will be paid on presentation at 22, Fenchurch Street, E.C. 3, free of Greek income-tax and duty on transferable securities. In accordance with instructions received from Athens, holders of coupons No. 19, who had lodged them with the Bank of Athens, and received last year payment less 1s. od., representing the tax and duty, will be refunded the deductions upon application.

Oil Notes and News.

THE CRISIS IN THE GROZNY PETROLEUM INDUSTRY.

(From a Correspondent.)

At first sight the output of Grozny petroleum seems to have been progressing very favourably up to the spring of 1921. The increase seems to have been especially rapid during the first months of 1920. This development of the Grozny petroleum industry in Soviet Russia was exceptional, and the condition of all other industries, both producing and manufacturing, was steadily getting worse.

The Soviet economists triumphantly point to the Grozny petroleum industry as one which has been conducted on the Bolshevik economic system. This was the only nationalised group of industries which was apparently making progress. The opponents of the Soviet economic system have been regarding the Grozny petroleum industry with some doubt, being unable to find any explanation of the large output. In May Grozny yielded 150,400 tons of oil, an unprecedented output which exceeds even the monthly production for 1916. May, however, was an exceptional month. The report on the work done at Grozny in June and July, published in the Soviet papers, shows some alarm as to the stability of the good results obtained there, and the report proceeds to give an explanation of this successful progress. It appears that in the summer of 1921 nature came to the aid of the Bolsheviks. The success of the Grozny production is ascribed exclusively to the increased activity of the "fountains." These yielded 63 per cent. of the total output, whereas before the war they supplied only some 8 or 10 per cent. of the total. There was hardly any boring or pumping done, and the depth-bored was only 5 per cent. of that for 1915.

Every "fountain," however, is bound to get exhausted just as a time must come when the supply of oil in the old wells will come to an end. The more experienced Bolsheviks understand that production cannot depend on "fountains" alone, and that without drilling the industry must retrogress. Indeed, as early as June the "fountains" began to spout intermittently and by October their output fell to 100,700 tons (*Ekonomicheskaja Zhizn*, December 3). Notwithstanding this decline in the "fountain" output, not only were boring operations not increased, but less work was done than before. Instead of the estimated 450 *sazhens* per month (as against 2,000 *sazhens* per month in 1915) in July only 107 *sazhens* were drilled, and 55 *sazhens* in August. Such a decline in drilling was principally due to the shortage of labour. The workmen cannot remain because the Soviet organisations in charge of the petroleum undertakings do not pay them their wages. For instance, in September the workmen received only two days' rations (*Ekonomicheskaja Zhizn*, October 21). Such an unsatisfactory issue of rations may have been due to the bad harvest all over the corn-producing area round Grozny. Of course it is possible that owing to the incessant guerilla warfare in the Northern Caucasus it was exceedingly difficult to transport grain. The guerillas in every way prevented the transport of grain by rail.

It appears, however, that not only do the workers employed in an industry of such great importance to the Bolsheviks get no bread, but they do not receive even the promised wages payable in paper roubles. On October 1 the July paper money wages were still in arrears (see above-mentioned issue of the *Ekonomicheskaja Zhizn*). The Soviet Government is now no longer able to print a sufficient amount of paper money. In these circumstances the wonder is not that the workmen are leaving but that any work can be carried on. "Meanwhile, the workmen and employees," says the *Ekonomicheskaja Zhizn*, "are upholding their State at the expense of their own organisms." Of course, they cannot last long.

In the present state of affairs in Russia the Grozny petroleum industry, like all others, is doomed. The Bolsheviks do not want to give it up to private enterprise. Besides, at present who cares to invest his money in undertakings in Soviet Russia and especially in South Russia, to wit, in the Northern Caucasus, where fierce civil war is raging? The whole of the Caucasus has not made peace with the Bolsheviks. Part of the population has simply retreated to the mountains and makes raids on the Bolsheviks from there. The other part has remained at home, and has nominally submitted, but the representatives of the Soviet Government dare not show themselves in such localities without an armed escort, as they are liable to be simply destroyed at the first opportunity. There is no regular communication between Grozny and the part of Novorossisk, to which materials might be brought from abroad. All trains have to be escorted by a strong guard to prevent the local population from stopping them.

Engineering Topics.

By Our Engineering Representative.

High Tension Fuses.

It is not generally known, even amongst engineers in charge of central stations for the supply of electrical energy, that fuses are still being used to protect high pressure circuits. In the past quite a number of patented fuses have been brought out for use on circuits carrying current at pressure at and above 6,000 volts, but very few of them proved successful. Those which depended on their length for their positive action were soon found wanting and abandoned, after which that type which had as one of its component parts a steel container loaded with carbonic acid gas under high pressure had a certain vogue. The principle of this fuse was that as soon as the metal part of the fuse was melted by the sudden overload, a hole was pierced in the "sparklet" bomb and the arc was blown out by the rush of escaping gas. This type failed several times in action and is now seldom used. The introduction of an oil fuse in which oil was used for quenching and breaking the arc was a little more successful. It is a matter of history that this type, used on a certain big switchboard, caused very serious trouble on one occasion, the entire board blowing up.

Circuit Breakers.

Automatic switchgear of the circuit breaker type then came into fairly general use, but, as a central station engineer recently pointed out, switches may be designed to open at currents of 100 or 200 amperes but should the fault be a bad one and the full rush of current takes place before the throw-off mechanism can act the switch may find itself trying to deal with thousands of amperes. In a recent issue of the *Electrical Review* he points out that cases have been known, in these circumstances, where switches have blown up and have left little behind to tell the tale. The super-station has brought its own troubles, amongst which is the effect of short circuits. The heavy cost of switchgear is another, as many people are finding out to their sorrow. Electricity, as he rightly says, lives on finance, and it does not matter how perfect the technical part may be if the scheme does not pay.

A New Device.

The natural result of the slight uncertainty of action in connection with circuit breakers has been that engineers have again turned their attention to the subject of fuses for high tension work. One of the latest and apparently most successful patterns, judging by the exhaustive tests it has just undergone is an oil immersed fuse suitable for use with heavy currents at pressures up to 15,000 volts alternating. The fuse has a breaking capacity of some 25 times its normal current, which is considerable. Unlike certain types of oil fuse which have been tried and found unsuccessful, the fuse is not by any means of undue length, and it is totally immersed in oil instead of being so constructed that the act of "blowing" draws it below the liquid.

Working on entirely independent lines another firm of electrical engineers have replaced the oil usually used by a non-inflammable liquid, and in this it seems that a decided move in the right direction has been made. It is difficult to see why oil should have become so popular for this class of work, as at a very much lower temperature than any "blowing" fuse, any oil will volatilise and form an explosive gas should any air or oxygen containing compound be present. The new fuse referred to is short, and is so fixed in a glass tube that it keeps a strong spring in a state of extreme tension. This spring by means of a plunger holds back the non-inflammable liquid from the fuse and the whole is just a piece of sound but original engineering work. The moment an overload occurs the fuse parts, and the spring released pulls the severed end of the conductor apart, thus drawing out the arc. At the same time, the liquid held beyond the plunger is driven, with great force, into the gap, and at once extinguishes any arc that may be formed. The liquid is, of course, of non-conducting qualities and it is said that fuses of this kind can be designed for working on pressures up to 110,000 volts.

High Speed Blue Printing.

One of the latest introductions for use in the drawing office is a photo-printing machine for facilitating the production of blue prints, and it is safe to say that it marks a greater advance in development than has been made hitherto. It is of that type in which a sheet of sensitised paper is drawn, with its negative in the form of super imposed tracing paper, across a glass plate which lies between it and the light source, but the novelty lies in the fact that both the light and the printing paper are extremely close to the glass so that the printing process is remarkably rapid. So quickly can printing be done that no fewer than 130 double-elephant blue prints can be made in 60 minutes. This far exceeds any rate previously reached. When dealing with what is known as gallic paper, which has a tendency to become sticky when over heated the rate of printing is reduced to about 45 copies per hour, but even that comparatively slow rate is far in excess of anything that has been done previously. The light source is a new type of arc lamp in which the carbons are arranged so that no shadow is cast and the arc throws an uninterrupted light in a downward direction, and the machine is driven by a small electric-motor taking about 200 watts.

Electrically Driven Ship.

Considerable interest has been taken by engineers in a cargo vessel, recently sent out from a British yard, in which electricity is used as the driving power. All the necessary cargo winches, cranes, and hauling gear are also operated electrically and electricity is used for lighting and heating purposes. Electric fans are fitted where required to keep the air cool and pure.

The installation consists of two boilers which burn ordinary steam coal under a forced draught and supply steam to two large steam turbines directly coupled to two electric power generators. These occupy positions which in the ordinary way, would have been occupied by the port and starboard turbine sets, driving propellers through lengths of shafting. Several improvements are fitted to the turbines, amongst which may be mentioned an improved form of condenser, a new type of feed water heater and electrically driven pumps for dealing with the condensed water and for maintaining a vacuum.

These turbines run at 4,200 revolutions per minute and the electrical generators give out ample power at a pressure of 900 volts. The current is 3-phase, alternating and is carried to alternating current motors fixed in the stern of the vessel and direct coupled to the propeller shafts which are of just sufficient length, to pass through the thrust blocks. The propellers revolve at a speed of 70 revolutions per minute and under full power, the speed of the vessel is 12 knots.

One of the chief advantages is that the speed and steering of the vessel can be carried out and regulated from the bridge by means of a couple of handwheels which operate the gears and control the speed of the motors. A smaller steam driven engine provides electric power at 100 volts for lighting and other purposes and this also could be controlled, if desired, from the bridge. By this arrangement not only is considerably more space available for cargo carrying but a much smaller engine room staff is required.

H.M. Acting Consul-General at Algiers reports that the exportation from Algeria of a further quantity of barley up to a total of 30,000 metric tons (exclusive of the quantities exported to France) has now been authorised.

H.M. Commercial Secretary at Bucharest reports that in virtue of recent Decisions an export tax of 0.10 lei per litre has been fixed on wine exported from Roumania. Such wine is exempt from commission tax, whilst the barrels used in the export are free from both export and commission tax.

It is officially announced that permission has been granted for exportation from Tunis, without special authorisation, and until further notice, of logs of walnut wood, rough, squared, or sawn.

H.M. Commercial Secretary at Constantinople reports that the export from Turkey of salted fish is now permitted.

SHIPPING INTELLIGENCE.

MOTOR SHIPS.

(By Our Engineering Representative.)

It is common knowledge that throughout the whole of the past year there was a certain depression which culminated in a veritable slump in the shipbuilding world, but in spite of bad trade all records were eclipsed in the construction of motor ships. As a matter of fact the production of oil-engined vessels in 1921 was more than double that of any previous year. Figures recently compiled show that during the twelve months under review the tonnage completed amounted to 333,475 dead weight capacity, and in addition 239,850 tons were launched but not completed during the later months of the year. Engineers will be chiefly interested in the fact that Diesel engines of a total horsepower of 126,500 were installed in these vessels, whilst nearly 100,000 indicated horsepower is in-course of construction for the ships as yet incomplete. It is pointed out by the *Motor Ship* that the year 1921 was noteworthy in several other directions. The first two motor passenger liners ever built were placed in commission, ships of 14,000 tons were built, and engines up to 3,200 indicated horse power were turned out of the shops. A number of large single-screw oil engine vessels were placed in commission, a fact which indicates the high degree of confidence now placed by the shipowners in marine internal combustion engines, as hitherto it has been customary to fit twin-screw machinery in these craft. There is every reason to believe that as soon as a revival in ship-building takes place, an event which cannot now be long delayed, a boom in Diesel-engined vessels will ensue.

DANUBE HARBOUR WORKS.

Contract Given to French Firm.

The announcement just made that French firms have obtained the contract for the building of the Danube harbour works and warehouses at Budapest (says the *Liverpool Journal of Commerce*) is giving some irritation in commercial circles here. British firms could have secured this work without any trouble, and undoubtedly by it would have found a considerable amount of employment in trades in this country in which the outlook is far from hopeful. Our contractors, however, seem to be so overawed by the labour unrest that they have not gone to the extent of examining the security offered; yet, if this was good enough for the largest French firms, it would have been good enough for us. This is a case where a combination of adverse influences have so stultified enterprise that no serious attempt has been made to get the business; and herein lies a lesson for both capital and labour.

The tobacco crop in Transylvania and the Banat has yielded 2,000,000 kgs. this year.

SHIPPING DEPRESSION.

Messrs. Turner Davidson and Co., Ltd., whose prognostications as to shipping last year were thought in some quarters to be unnecessarily gloomy, state in their review for 1921 that shipping values have gradually receded during the year. Low prices have been accentuated by the sale of German tonnage at cut throat prices and by the throwing upon the market of various fleets of steamers which have been compelled to liquidate. The depression has been increased by the forced sale of new steamers contracted for which the owners have been unable to complete. The German sales are practically over, and the bulk of the contracted boats have been disposed of. There is no guarantee, however, owing to the continued depression of the freight market, that more fleets, especially those purchased at high prices, may not be thrown upon the market. The air has been sufficiently cleared to encourage some owners to purchase new tonnage on the basis of about £8 per ton, and good second hand steamers at from £5 to £6 per ton, though admittedly they see no prospect of profitable trading at present. Until trade sufficiently improves to induce the large proportion of laid up tonnage to resume business, owners of pre-war boats cannot hope to do more than make ends meet. Japan has been a purchaser of good British built boats of 15 to 20 years old at round about £3 10s. per ton. They have also relieved many liner companies of still older tonnage that were for all practical purposes useless here. The prospects for shipbuilding concerns is worse than ever. Existing cost of wages and material do not permit of ordinary tramp tonnage being built at under £12 per ton, which is of course, prohibitive. In the absence of orders it is only a question of time before a great many yards must close down.

OIL TANKERS AT CONSTANTINOPLE.

In order so safeguard shipping and other property from damage resulting from the outbreak of fire on vessels having a cargo of petroleum or its products, the following instructions have been issued at Constantinople.—Beicos and Pasha Bagtche Bays are to be inspected frequently to see that the lighters or vessels with petrol or fuel oil cargoes are not in too close proximity to one another. The operation of filling tins (which require sealing by heat) from bulk cargo or oil or benzine should be carried out in a separate lighter or on shore. Vessels carrying out this operation should be at least 20 metres apart, and no other lighter with oil in bulk should be nearer than 40 metres. Tins, after being filled and sealed, should not be kept in the same compartment of the lighter where the operation takes place. Owners of craft lying in Beicos or Pasha Bagtche Bays should carry out these instructions as soon as possible. All vessels with cargoes of petroleum and its products should be moored between Karaja Burnur and Injir Reef. If it is desired for vessels to moor to the land above the between points, permission should be obtained from the owner of the land in writing, and brought to this office to enable an official permit to be granted, otherwise vessels will be heavily fined.

GREEK TRADE IN 1920.

The total imports of Greece during 1920 amounted to: 2,131,038,928 drachmae as against 1,608,329,928 drachmae in 1919; showing an increase for the year 1920 of 522,709,000 drachmae. Imports at the Piraeus for the Athens and Piraeus markets amounted to 1,132,902,337 drachmae as against 809,004,637 drachmae in 1919.

The exports for the whole of Greece amounted to 644,112,647 drachmae, a decrease of 82,220,525 drachmae as compared with 1919. The exports from the Piraeus amounted to 77,835,321 drachmae, a decrease of 23,453,509 drachmae as compared with 1919.

We understand that a delegation from the Roumanian Ministry of Finance has left for Paris with the object of negotiating the sale of 2,700 kgs. of gold in bullion belonging to the State and obtained from the Transylvanian State Mines.

At the monthly meeting in Paris of the Suez Canal Co., held on Monday last, Lord Inchcape was unanimously elected chairman of the London committee in succession to the late Sir Thomas Sutherland.

16, Gracechurch Street, London, E.C.3.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, February 4).

Anchor Brocklebank Line.—S.s. Manaar for Port Said, Colombo, Madras and Calcutta (leaves London, January 21) ; s.s. Malancha for Calcutta (Birkenhead, January 28) ; s.s. Malakuta for Port Said, Colombo, Madras, and Calcutta (London, February 4) ; s.s. Mahratta for Calcutta (Birkenhead, February 11).

Bibby Line.—S.s. Lancashire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 1) ; s.s. Somersetshire for Rangoon (Middlesborough, February 4).

Byron Steamship Line.—S.s. Maid of Crete for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, January 30) ; s.s. Maid of Hydra for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, February 13).

Cunard Line.—S.s. Brescia for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Swansea, February 6) ; s.s. Cypria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Glasgow, February 9).

Ellerman Line.—S.s. Cressado for Gibraltar, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, January 21) ; s.s. City of Oxford for Gibraltar, Malta and Alexandria (Liverpool, January 21).

Ellerman's "City" Line.—S.s. City of Cairo for Calcutta (Birkenhead, January 20) ; s.s. Trafford Hall for Bombay (Birkenhead, January 23) ; s.s. City of Sparta for Calcutta (Birkenhead, February 4) ; s.s. City of Marseilles for Calcutta (Birkenhead, February 20).

Ellerman's "Hall" Line.—S.s. Kasenga for Bombay, Karachi, and the Punjab (Liverpool, January 31).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

Glen Line.—S.s. Glenogle for Port Said, Port Swettenham, Singapore, etc. (London, January 26) ; s.s. Glenapp for Port Said, Port Swettenham, Singapore, etc. (London, February 9) ; s.s. Carnarvonshire for Port Said, Port Swettenham, Singapore, etc. (London, February 23).

Harrison Line.—S.s. Author for Calcutta (Liverpool, January 26) ; s.s. Explorer for Calcutta (Liverpool, February 11).

Henderson Line.—S.s. Henzada, for Port Said and Rangoon (Birkenhead, January 25) ; s.s. Bhamo for Port Said, and Rangoon (Birkenhead, February 8).

Holt Line.—S.s. Anchises for Port Said, Port Swettenham, Singapore, etc. (Glasgow, January 24) ; s.s. Antiochus for Port Said, Port Swettenham, Singapore, etc. (Glasgow, January 26) ; s.s. Mentor for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, January 26) ; s.s. Troilus for Port Said, Port Swettenham, Singapore, etc. (Swansea, January 28) ; s.s. Rhesus for Port Said, Port Swettenham, Singapore, etc. (Swansea, February 2).

Johnston Line.—S.s. Incemore for Piraeus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 11).

Papayanni Line.—S.s. Bosnian for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 4).

P. and O. Line.—S.s. Morea for Bombay (London, January 20) ; s.s. Sardinia for Colombo, Madras, and Calcutta (London, January 27) ; s.s. Karmala for Bombay (London, January 27).

P. and O. British India Line.—S.s. Tanfield for Colombo, Madras and Calcutta (London, January 21) ; s.s. Mandala for Bombay and Karachi (London, January 27) ; s.s. Morvada for Colombo, Madras and Calcutta (London, February 3) ; s.s. Nevasa for Bombay and Karachi (London, February 10) ; s.s. Chilka for Colombo, Madras, and Calcutta (London, February 17).

Prince Line.—S.s. Highland Prince for Tunis, Malta and Alexandria, (Manchester, January 25) ; s.s. Merchant Prince for Tunis, Malta, Alexandria and Syrian Coast, (Manchester, February 4) ; s.s. Stuart Prince for Malta, Alexandria and Syrian Coast, (London, February 4).

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street S.W.1.)

Egypt.

Sundries.—The Department of Public Health, Cairo, invites tenders for the supply of (1) proprietary articles ; (2) sundries (including bottles, demijohns, droppers, and baths for eyes, ointments, pots, etc., etc.) ; (3) dressings ; (4) crude drugs and heavy chemicals ; (5) fine chemicals ; (6) galenicals and packed articles. Representation by an agent resident in Egypt is essential. January 20 (D.O.T.).

Drugs.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of drugs required for the period of six months from April 1, 1922. January 20.

General Stores.—The Director of Stores, F.D.A., Arsenal, Alexandria, invites tenders for the supply of consumable general stores such as ropes, nails, locks, leather, soap, brushes, etc. January 21.

Marine Articles.—The Director of Stores, F.D.A., Arsenal, Alexandria, invites tenders for the supply of marine articles office and rest-room furniture, and tools, etc. January 24.

Marine Boiler.—The Secretary General, Ports and Light-houses, Arsenal, Alexandria, invites tenders for the supply of a new multitubular marine boiler of the following description :—Diameter 11 feet ; length 10 feet ; two corrugated furnaces. Boiler working pressure 180 to 200 lbs. per square inch. Built to Lloyds rules 100 A1 and supplied with all accessories as per specification. Offers will remain valid for one and a half months from March 1, 1922.

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 100 metrical tons of coloured cotton waste. March 10.

Bulgaria.

Telephone Instruments.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of 2,000 telephone instruments for table use, with local battery and magneto. Also for spare parts for these instruments. Tenders to be presented at the District Office of Finance, Sofia by February 20. (D.O.T.).

Rails and Accessories.—Tenders are invited by the Director-General of Railways and Ports for rails, bolts, fishplates, etc. The total quantity of the material required is 5,808 metric tons. Tenders are to be submitted to the Directeur Général des Chemins de Fer et des Ports de l'Etat Bulgare, Sofia, Bulgaria. A deposit of 5 per cent. is required to qualify tenders, of which 1 per cent. must be deposited in the National Bank of Bulgaria in Sofia before the adjudication, and the certificate of receipt attached to the tender, whilst at the same time a declaration is required to the effect that the remaining 4 per cent. will be deposited when the adjudication is made. January 24. (D.O.T.).

Porcelain Insulators.—The Bulgarian Department of Posts, Telegraphs and Telephones, invites tenders for the supply of 100,000 porcelain insulators. Tenders to be presented at the District Office of Finance, Sofia by January 25. (D.O.T.).

Telephone Accessories.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of the following parts for telephone exchanges, viz. :—Subscribers' line indicators, 2,200 ; indicators, end of conversation, 600 ; jacks, 2,500 ; plugs, 1,500 ; connecting pieces, 2,000 ; connecting pieces, switchboard, 20,000. A deposit of 5 per cent. of the total amount of tender is called for by way of guarantee. Local representation is essential. Tenders to be presented at the District Office of Finance, Sofia, by January 30. (D.O.T.).

Materials for Bulgarian Department of Posts.—Tenders are invited by the Bulgarian Direction of Posts, Telegraphs and Telephones for the supply of the following material :—(1) Porcelain insulating tubes for telephones (1,000), insulating tubing (impregnated paper), for telephones. (2,200 metres), Ebonite caps (1,700), and insulated copper wire (1,000 metres) ; (2) Various electrician's small tools (include 900 pairs pincers, 20 brazing lamps, 100 soldering irons, 1,500 bits, and 300 axes) ; (3) Bronze in plates and bars, iron and steel plates and bars and insulating materials. Tenders will be opened at Sofia, District Department of Finance at 4 p.m. on March 8, in the case of (1), February 27, in the case of (2), and February 14 in the case of (3). Each tender is divisible. (D.O.T.).

Yugoslavia.

Jute.—The Belgrade Railway Direction invites tenders for the supply of 100 metric tons of jute required for cleaning purposes. Tenders will be received at the Economic Department of the Railway Direction, Belgrade (Ekonomiska Odeljenja, Železnica Direkcija, Belgrade), and samples must be submitted by the tenderer. Delivery is to be of 50,000 kilos within two months and 50,000 kilos within four months from the date of signing the contract. Tendering firms will be required to deposit, if an S.C.S. subject, 20,000 dinars, others 40,000 dinars. January 30 (D.O.T.).

India.

Canvas, etc.—The High Commissioner for India invites tenders for the supply of chain, iron galvanized, for signal levers ; and engine turntables. January 31.

Near East Markets.

LONDON PRODUCE REPORT.

Prices Generally Lower.

(From Our Own Correspondent).

Monday Evening.

Sugar.—A quiet tone has been in evidence throughout the week. West Indian crystallized has been firm at 40s., while Czecho-Slovakian has shed 6d. at 17s. 6d. White Java has shown a weaker tendency being 6d. lower at 46s. 3d., while Cuban 96 per cent. January-February has firmed up eighteenpence to 14s. White sugar quotations are :—January-February, 18s. ; March-May, 18s. ; August, 18s. 1½d.

Coffee.—The market has been steady for home trade descriptions and the demand has been maintained. Little business has been passing for the export trade. Jamaica has been done at 150s. Costa Rica has risen to 135s., an increase of 5s., Indian is 6s. up at 116s., and Nairobi has remained firm at 104s. The futures market has been weak. Quotations are :—March, 50s. 6d. ; May, 51s. 6d. ; July and September, 52s. 6d. ; December, 52s. 6d.

Tea.—The market has been very active for all grades of Indian tea, with prices for clean and common grades higher. The demand for Ceylon tea is rather poor, but Java and Sumatra tea has been in large request with all grades dearer.

Rice.—Nothing of importance has happened during the week and prices have remained steady. Carolina rice has been done at 30s., while Saigon and Burmese are both quoted at 18s.

Almonds.—There are very few almonds on the market, but prices for both Jordans and Valencias are harder.

Oilseeds.—Indian linseed has been in poor request at 17s. 6d., a decline of 6d., La Plata has improved, being 6d. up at 17s. Rapeseed has been slow, with Toria 1s. 3d. down at 16s. 3d., brown Cawnpore at 18s. 3d., and bold Ferozepore at 18s. are unchanged. Cottonseed is unsteady with Indian 1s. down at 8s. 9d., Egyptian black is 1s. 3d. lower at 11s. 9d., while Egyptian Sakellaridis has shed a like amount at 11s. 3d.

Oils.—Firmness has prevailed. Linseed oil at 30s. is the same.

Rape oil is unchanged with the crude variety at 45s., and refined at 50s. There is no improvement in the prices of cotton oil, with refined remaining at 45s., Egyptian crude at 37s., and deodorized at 50s. Turpentine has advanced 9d. at 72s.

Oilcakes.—Linseed cake has been done at 286s. per ton. Cottonseed cake is quoted at 180s. ton, palm kernal at 120s. ton, and Arachis at 210s. ton. Cottonmeal has come to business at 270s. ton.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ended December 31 :—

Sultanas.—The total estimated arrivals to date amounted to 166,390 bags as against 92,205 bags for 1920. The total estimated sales are 157,390 bags as compared with 85,205 bags for the corresponding period of last year, and the estimated stock unsold totals 9,000 bags as against 7,000 bags.

Figs.—A few small lots reached the market and were promptly bought up for shipment to Egypt.

Shipments.—Sultanas are being loaded on the s.s. Siptah for Liverpool and s.s. Borodino for London, sailing next week.

Markets.—Business in sultanas restricted owing to the holidays. Prices are very firm with advancing tendency. Exchanges weak at 70 with prospects of further decline. Brokers' estimate of the statistical position to December 31 is as follows :—Total sales Smyrna, about 391,000 kintals ; total sales Vourla, Chesme and Carabournou, about 137,000 kintals ; stocks remaining in Smyrna and in all parts of the country about 55,000 kintals ; total, 583,000 kintals ; making total estimate of the yield, 321,000 tons.

EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in December :—

Maize (Nili).—Unfavourable atmospheric conditions during the period of growth have affected the crop and delayed maturity. Harvesting was retarded by rain. The yield is expected to be considerably below the average.

Wheat and Barley.—The cold weather and the heavy rains which fell during the month have somewhat affected late sowings. In some places fields remained flooded for several days before they could be drained. On the other hand the early sown crops have to some extent benefited by the rain. The chief operations of the month were sowing, manuring and watering. Sowing has been somewhat earlier than normal. Cut-worm was reported on wheat from Asyut, Girga, Qena, and Aswan, but the damage is reported to be very slight. The conditions of the crops is, on the whole, not unsatisfactory.

Beans.—This crop too, has suffered a little from rain which caused some flower shedding. Flowering was general during the month under review, and pods have formed in some early sown fields in middle and upper Egypt. Broom rape was reported from Giza, Minya, Girga and Qena provinces. The conditions of the crops, as a whole, are not satisfactory.

Helba.—The early sown crop was in flower. Cutting the green crop has already begun. The crop is healthy.

Lentils.—Sowing was completed during December. The crop is in flower, and its condition is good.

Onions.—Transplanting has been completed. In some localities this operation was retarded by rain. The plants are growing well.

Bersim.—The first cut was being taken as well as the second in some of the early sown fields. The rain which fell during the month has had a good effect on the crops. No enemies have been reported, and the crop is in a satisfactory condition.

Sugar-cane.—Cutting for direct consumption was in progress. Some harvesting for sugar factories has been done in Minya province. Attacks of Stem-borer (*Sesamia cretica* an *scus* Mealy-bug are reported. The condition of the crops has been very slightly improved since November.

The traffic receipts of the Egyptian Delta Light Railways for the week ended December 20, amounted to £12,169 ; total for year £281,750. For the corresponding period of last year receipts amounted to £14,472 and £13,626 respectively.

A PERMANENT INCOME OF £500 PER ANNUM

can be obtained, after the fifth year, from a five-acre orange orchard in South Africa. Few investments offer such excellent results with security of capital. The outlay involved is only £125 p.a. for five years, or cash £562 10s. od., and the following are a few brief features of the scheme :—

1. The actual results obtained by the South African Prudential Co. show even better figures than above.
2. The Directors are well-known public men in South Africa.
3. The investor is the actual freeholder of his five-acre orchard.
4. There is an unlimited market for all the oranges grown.
5. All management work can be undertaken for a small percentage of profit
6. The scheme is available for both investors and intending settlers.

Experts state that nothing over five miles from a railway station is a good commercial proposition. No point on the Prudential estates is beyond 2½ miles from a railway station.

Oranges from the Estates have been exhibited at the Union Government Trades Commissioners' Department, Trafalgar Square, S.W., and at the Royal Agricultural Show Derby, last June.

Full particulars, plans, etc., from Dept. 33.

SOUTH AFRICAN PRUDENTIAL LTD.,
79, Queen Victoria Street, London, E.C.4.

OPIUM MARKET.

Messrs. Barker Brothers, Smyrna, report as follows under date December 30 :—

We issued our last circular on opium on November 5 last since when 267 cases changed hands at prices ranging from 7s. to 8s. per lb. *c.i.f.* for the low talequale grades, and 9s. 6d. to 10s. 6d. for the usual Extra Carahissar druggists and soft high render. The weather since last September has been very propitious for the sowings, but it remains to be seen under the present disturbed state of the country what the acreage under cultivation is at present; some fear it will be much less than last year, which scarcely rendered 1,500 cases. Most of above purchases have been shipped to the Continent, but we learn that a lot has gone to Piraeus (Greece) to be transhipped to the Far East. Very few cases have gone to England and the States. The exchange is now 720 piastres per pound sterling for cheque on London, and dollars 0.58 per Turkish pound. The arrivals are 971 cases against 881 at same date last year, and our stock in first and second hands is now 1,383 cases. Some 20 cases have been shipped lately on consignment to New York by a speculator; the average render of this opium is about 12 per cent.

ROUMANIA'S AUTUMN SOWINGS.

(From Our Own Correspondent.)

Bucharest, January 6.

According to the figures of the Ministry of Agriculture, the extent of this year's autumn sowings (in hectares) is as follows (the figures in brackets representing the totals for 1920):—Wheat, 1,445,000 (2,488,335); rye, 1,635,000 (265,379); barley, 75,000 (65,000); colza, 67,000 (14,200).

The wheat crop of 1921 for the whole country yielded 10.8 hectolitres per hectare on a sown area of 2,488,335 hectares.

Towards the end of December the following grain prices have been quoted at Constantza:—Maize: 310 to 380 lei per 100 kilogrammes; barley, 290 to 365 lei per 100 kilogrammes; oats, 290 lei per 100 kilos; colza-cake, 190 lei per 100 kilos.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 122s. 6d. cwt.; (Canadian), 106s. 6d. cwt.; (American), 102s. 6d. cwt.; butter: (Danish), 165s. cwt.; (Australian), 97s. 6d. cwt.; (New Zealand), 116s. cwt.; cheese (Canadian), 96s. cwt.; (New Zealand), 85s. cwt.; lard, 70s. cwt.; eggs (Danish), 32s. 6d. per 120; (Styrian), 22s. 6d. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6½d. lb.; cocoa, (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 150s. cwt.; (East Indian), 130s. cwt.; (Central American) 171s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 113s. cwt.; (Santos, superior), 61s. cwt.; ginger (washed Cochin), 67s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento 2½d. lb.; raisins (Valencias), 32s. 6d. cwt.; sultanas (Smyrna), 115s. cwt.; currants (Vostizza), 83s. cwt.; currants (Amalias), 59s. cwt.; sugar: (Tate's cubes), 51s. 3d. cwt.; (Lyle's granulated), 46s. 1½d. cwt.; (Mauritius crystals), 42s. 9d. cwt.; (West Indian crystallized), 38s. 9d. cwt.; (centrifugal), 12s. 3d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 14s. 9d. cwt.; (bran, Rangoon), £5 8s. 3d. ton; cinnamon (firsts), 1s. ¼d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common), 1s. 2½d. lb.; (medium to good) 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 47s. 9d. qr.; (Australian), 53s. 3d. qr.; barley (malting), 50s. 3d. qr.; barley (feeding), 39s. qr.; oats (English), 32s. qr.; oats (La Plata ex-ship), 20s. 3d. qr.; maize (La Plata), 35s. 3d. qr.; flour, 40s. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £35 ton; bismuth, 7s. 6d. lb.; copper (standard), £65 13s. 9d. ton; copper (electro), £74 ton; gold bars, 97s. 11d. oz.; iron (No. 3 Cleveland), 110s. ton; hematite (mixed number), 101s. 3d. ton; galvanised sheets (24 G), £17 5s. ton; lead (soft foreign), £24 8s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 33s. 9d. unit; nickel, £190 ton; platinum, 387s. 6d. oz.; plumbago, £20 ton; quicksilver, £10 7s. 6d. bottle; silver bars, 34½d. oz.; spelter (G.O.B.), £27 6s. 3d. ton; tin (standard), £107 17s. 6d. ton; wolfram, 11s. 6d. unit; zinc sheets, £34 10s. ton; tin plates (20 by 14), 19s. 9d. box.

Chemicals.—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 4½d.; ammonia (sulphate), £15 1s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard), 2s. 5½d. gallon; bleaching powder (35 per cent.), £15 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 8d. lb.; chlorate, 6d. lb.; caustic, £33 ton; nitrate, £37 10s. ton; permanganate, 10½d. lb.; prussiate, yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 140s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 6½d. lb.; alkali (58 per cent.), £9 3s. 3d. ton; chlorate, 3½d. lb.;

caustic (70 per cent.), £23 2s. 6d. ton; hyposulphite, £15 10s. ton; prussiate, 8½d. lb.; nitrate, £14 5s. ton; glycerine (crude, 80 per cent.), £80 ton; glycerine (industrial, 120 per cent.), £110 ton; lemon oil, 3s. 1½d. lb.; quinine, 3s. ¼d. oz.; red lead, £39 5s. ton; white lead, £42 5d. ton; white ground lead, £51 15s. ton; sulphate of copper, £28 15s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 8½d. lb.; 80 to 89 lbs., 8½d. lb.; 70 to 79 lbs. 8d. lb.; 60 to 69 lbs., 7½d. lb.; 59 lbs. and under, 6½d. lb.; (second), 90 lbs. and up, 7d. lb.; 80 to 89 lbs., 7d. lb.; 70 to 79 lbs. 6, 7-8d. lb.; 60 to 69 lbs., 6d. lb.; 59 lbs. and under 4½d. lb. Cows (first), 60 lbs. and up, 6d. lb.; Bulls (first), 5½d. lb.; (second), 4d. lb.; Kips (first), 6, 3-8d. lb.; (second), 5, 3-8d. lb.; (third), 3d. lb. Calcutta Market.—Prices in rupees per 20 lb.:—Arsenic hides (cows). Agras, 8.0 to 17.0; Durbhangas, 4.8 to 8.8; Patnas, 4.8 to 8s., Salted cows: 3.0 to 7.8. Arsenic hides (buffalo): 3.0 to 6: Skins: Calf, 8.0 to 10.0 per 20 lb.; goat, 245 to 280 per 100 pieces. Bombay Market.—The hide and skin market is dull. The quotations are in annas per lb.:—Dressed buffs, 8 to 13; cows, 9 to 14. Goat and sheepskins, 1 to 1.12 rupees per lb. Sixty-nine bales of cow hides were despatched to London, with a quantity of goat and lamb skins.

Miscellaneous.—Cotton: (American), 11.40 lb.; (Egyptian Sakel), 20.30d. lb.; Oilseeds: Linseed (La Plata), £16 15s. ton; rape (Toria), £17 15s. ton; palm kernals, £18 1s. ton; Oils: Linseed, £29 10s. ton; olive (Levant), £77 10d. ton; palm, £38 7s. 6d. ton; rape (crude), £45 10s. ton; soya, £34 5s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £42 5s. ton; cotton (crude), £37 5s. ton; ground nut, £44 5s. ton.

Company Notes and Reports.

British Burmah Petroleum.

The report to July 31 last states that the balance transferred from revenue account amounted to £168,560, to which have been added difference in exchange £9,966, agency fees £3,049, dividend on shares in Rangoon Oil Co., Ltd., £14,346, interest and discount £24,498, and transfer fees £950, making a total credit of £221,378. Against this have been debited sundry charges in Burma, Bombay and London, £70,577, debenture interest £35,012, and depreciation £22,455, leaving a surplus of £93,334. Adding balance brought in £14,403, surplus on realisation of investments, £9,829 and refunds in respect of taxes £64,294, the disposable profit is £181,860, appropriated as follows: Interim dividend of 6d. per share, paid July 8, 1921, £62,268; sinking funds accounts, £43,497; additional 2½ per cent. interest on second mortgage debenture stock, £1,156; leaving a balance of profit of £74,940. The directors recommend a balance dividend for the year at the rate of 12½ per cent. per annum, free of tax, payable Feb. 28, to holders on the books, January 17. This dividend will absorb £62,268, and the year's dividends will then amount to £124,536, representing 12½ per cent. free of tax, as compared with £190,266, free of tax, for the preceding year.

Including the dividend of £14,346 received from the Rangoon Oil Co., Ltd., the total sum to be handed to the trustees of the first and second mortgage debenture stocks respectively amounts to £43,497. Up to July 31, last, the trustees had purchased for redemption first mortgage debenture stock of the nominal value of £252,328, which has since been increased to £255,167 stock, and further purchases will be made with the sum of £39,346 now payable to them. With the funds placed at their disposal by the company the trustees of the second mortgage debenture stock have purchased for cancellation £31,512 of stock, and at date of this report there remains £43,488 out-standing, notice to redeem which on June 30 next has been given.

The expenditure at the refinery charged to capital account on this occasion is £20,443, and at the field £51,607. The directors have set aside for depreciation £22,455, in addition to £76,922 expended at the field on drilling and well sites charged to revenue account. From the financial point of view, the past year has been a disappointing one, the high cost of production and the marked decline in prices having made it impossible to achieve results comparable with those of the two previous years.

The company's revenue was also affected by shortage of crude oil production, due to the interruption of development work during the war period; and, in addition, the profit derived from exchange showed a falling off of over £100,000 as compared with last year; but it is satisfactory that since May last the production has increased to such an extent as to warrant the expectation that there will be a sufficiency of crude to meet the full requirements of the refinery. A large throughput and increased refining profit may therefore be anticipated during the current year. Various improvements at the field and in the refinery made during the year will also contribute to improved results, and the company's liability to excess profits duty terminated in July last.

During the past year exceptionally heavy payments fell to be made for field and drilling equipment, and for alterations at the refinery, constituting a serious drain on the company's cash resources. The importance of proceeding with the development of another of the company's oil reserve territories in Burma further increased the desirability of providing additional working capital. This was satisfactorily accomplished by the creation and issue in December of £600,000 8½ per cent. second mortgage debenture stock, redeemable at 105 per cent. on or before Nov. 30, 1936. The funds thus provided will enable an extended plan of operations to be proceeded with.

The company's interests in Egypt and Argentina are being actively developed, and recent results attained in the Comodoro Rivadavia Field in Argentina by other concerns operating in that field render the prospects of success for the company's interests there increasingly encouraging. A participation has also been secured in promising oil territory in the Punjab.

Meeting, Cannon-street Hotel, January 24, noon.

Imperial Bank of India.

The net profit of the Imperial Bank of India for the half-year ended December 31, was Rs.62,27,800, while Rs.10,14,100 was brought forward. A dividend at the rate of 16 per cent. per annum is proposed, free of tax; Rs.10,00,000 is placed to reserve

Rs.5,00,000 is transferred to pension fund, and Rs.12,74,600 is carried forward.

London County Westminster and Parr's Bank.

The net profits of the London County Westminster and Parr's Bank for the year ended December 31, were £2,167,845, while £460,914 was brought forward. A final dividend of 10 per cent. is proposed on the £20 shares, and 6½ per cent. on the £1 shares, making total dividends of 20 per cent. and 12½ per cent. respectively for the year. The sum of £500,000 is placed to contingent fund; £250,000 to bank premises account; £200,000 to rebuilding account; and £519,708 is carried forward.

Cox and Co.

The balance-sheet as at September 30 last shows: Capital, £650,000; reserve fund, £600,000; current, deposit, and other accounts, £18,348,365; acceptances for customers (per contra), £815,110—£20,413,475. Cash at bankers and on hand, £5,431,147; cash at call and at short notice, £792,781; bills receivable, £1,410,032; documentary bills negotiated, £1,301,035; Treasury bills (British and colonial), £324,755; British Government securities, £769,750; Indian, colonial, and other securities (including 308,182 "A" shares of £1 each, 10s. paid in Cox and Co. (France), Ltd., and 10,000 shares of 500f. each 100f. paid in Banque de Commerce), £640,244; advances to customers and other accounts, £8,295,012; liability of customers for acceptances (per contra), £815,110; bank premises, £626,910; balance of items in transit between head office and branches and exchange adjustments, £6,100—£20,413,475.

East Indian Railway.

To meet the wishes of the Government of India, who desire to avoid unnecessary clerical labour, the board have agreed to detailed accounts of the undertaking being prepared yearly instead of half-yearly as hitherto. Only sufficient accounts have therefore been prepared in India for the half-year ended September 30, 1921, to enable the amount of surplus profits to be arrived at. Gross receipts, Rs. 7,55,35,034, an increase of Rs. 26,44,447; working expenses Rs. 4,30, 41,291, an increase of Rs. 48,07,056; net earnings, Rs. 3,24,93,743, a decrease of Rs. 21,62,609. Percentage of working expenses on gross receipts, 56.93 against 52.45. The net earnings for the half-year, including the South Behar Railway, together with the sum received for working the Delhi-Umballa-Kalka Railway, amounts to Rs. 10,06,903. After deducting net revenue charges there is a divisible surplus of Rs. 1,22,50,734, the company's share of which is Rs. 3,98,007. This at contract rate of exchange has produced £33,167. After payment of the dividend authorised at the annual general meeting held in July last, the balance in the surplus profits account enables the directors to recommend a dividend (subject to English income-tax at 4s. 9d. in the £) of 15s. 1d. per cent. on the capital represented by deferred annuity and deferred annuity class "D". This, with 4s. 11d. per cent. received from Secretary of State for India, will make £1 in all, in addition to the guaranteed interest of £2 per cent. Meeting, Cannon Street Hotel, E.C., January 25, 12.30 p.m.

Imperial Bank of Persia.

The report of the Imperial Bank of Persia for the year ended September 30, last states that the profits for the period mentioned, after making provision for expenses of management and general charges in London, and at chief office, branches and agencies, income tax, corporation tax and bad and doubtful debts, amount to £88,195 13s. 2d., to which has to be added £29,051 9s. 8d. brought forward from last account, making a total of £117,247 2s. 10d. From this sum, £5,291 14s. 9d., the amount due to the Persian Government in terms of the Concession, has to be deducted, leaving £111,955 8s. 1d., which the directors have dealt with in the following manner:—First interim dividend for the year, at the rate of 3s. per share, paid June 15, 1921 (free of income tax), £15,000; transfer to reserve account, £30,000; transfer to bank premises account, £10,000; second interim being final dividend, at the rate of 5s. per share, paid on December 29, 1921 (free of income tax), £25,000; carry forward to new account, £31,955 8s. 1d.—£111,955 8s. 1d. The directors record with the deepest regret the death, on December 21, 1921, of Mr. A. O. Wood, C.B.E. The retiring directors are Mr. E. A. Chettle and Sir Hugh S. Barnes, who, being eligible, offer themselves for re-election. Meeting, Cannon-street Hotel E.C., January 23, 12.30 p.m.

Stock and Share Markets.

GILT EDGED PROMINENT.

Activity in Oil Shares.

(From Our Own Correspondent).

London, Monday Evening.

A very much better tone has been in evidence during the past week, and to-day, as a result of the belief that the political outlook generally is more settled, gilt-edged stocks and some of the speculative groups have displayed something akin to buoyancy. The position certainly seems more favourable than it was a few days ago, but these are admittedly uncertain times, and it requires considerable courage to prophesy more than a few days ahead. A further reduction of the Bank Rate which is very probable would give a fresh impetus to the investment tendency, but the most powerful factor in the coming weeks is likely to be the Budget, for if the expectation of a reduction of taxation is realised it is bound to make an enormous difference to the market.

Next week the first of the important new issues that are pending is to make its appearance, this being the Anglo-Persian issue. It is believed that it will consist of 2,000,000, eight per cent. Preference Shares and 600,000 £1 Ordinary shares at £3½ half of which will be allotted to the Burmah Oil Company. For the other half there ought to be remarkable competition, and I shall await with considerable interest information regarding the extent of the over-subscription to the issue. What will come along after the Anglo Persian issue is at present uncertain, but there are quite a number on the tapis, and as the investing public has shown every sign since the new year of being in a good mood there is not likely to be any undue delay in bringing them forward.

Gilt-Edged Strong.

Turning to the markets Gilt-edged show a considerable improvement on the week, and close well above the previous levels. Consols are 1½ up at 51½, war loan fives have gained ½ at 93 1-8, while the Conversion Loan is 1 3-16 up at 67 9-16. The India 7 per cent. Loan has improved ¼ to 104½. In Near Eastern securities which rank with British Government funds Egyptian Guaranteed 3 per cents are unchanged at 70½, Greek Guaranteed 2½ per cents 1898 are the same at 63½, while Turkish Guaranteed 4 per cents are 1½ up at 73.

After being dull in the first part of the week the Foreign market is to-day rather steadier on the improvement in the political situation. French Fives are 2 down at 41½, while German 3 per cents are 5-16 down at 3 1-16. Italian Rentes are rather better at 21½. Japan 1905 Loan is 87, while the 1910 issue is 62. Greek stocks have been fairly firm, though in some cases prices have not been maintained. The 5 per cent. 1881 Loan is 36, the 5 per cent. 1884 Loan is 35, while the 4 per cent 1910 Loan is 30.

Industrials Firm.

Industrials attracted somewhat more attention than usual during the week, though the volume of business was still very restricted, and price changes in consequence are not important. The tone generally, however, was notably firm. Tobacco shares have been in some steady demand round about the previous levels. There has also been activity in Textiles. Coates are 2 5-8 a decline of 1-32 on the week, while Courtaulds have gained 1s. at 37s 10½d. In Iron and Steel shares Armstrongs are 3d. down at 14s. 9d., while Vickers are 4½d. lower at 8s. 4½d. Guest Keens have shed 1s. at 30s. 6d., while Babcock and Wilcox are 2 15-32.

Shipping securities have been fairly firm. P. and O. Deferred are 2 down at 30s, Cunards are 3d. up at 18s. 9d., while Furness Withys are 3d. down at 24s. 9d.

More hopeful advices from the Rand gave rise to an improvement in Kaffirs to-day. Gedulds have been a strong feature, closing at 2 13-32. In the diamond group De Beers are 10.

Oils Active.

The news that the Anglo-Persian Oil Company intended to issue Ordinary shares has had a tonic effect on the oil market, and business has been much brisker than in the previous week. Burmahs have, of course, been a strong spot, and close 1 1-8 up at 7, while Mexican Eagles at 3 27-32 show a rise on the week of 15-32. Among Egyptians Anglo-Egyptian B are 1-16 up at 1 15-31 while Oilfields of Egypt are 7-32. In the Roumanian group Phoenix after improving as I anticipated, fell off as the

result of profit taking, and close unchanged at 11s. 6d. Roumanian Consolidated are unchanged at 9s., Dacia Romanos are 11-16, and Steaua Romanas are 11s. 3d.

Banks Steady.

Among banking descriptions Agricultural of Egypt 3½ per cent Bonds are ½ up at 54 5-8, while the 3 ½ per cent. Guaranteed Bonds have gained 5-8 at 56½. Imperial Ottoman Banks are unchanged at 8½, Ionian Banks are ½ up at 4½, while Bank of Athens remain at 2. National Bank of Egypt are unchanged at 19. Chartered of India are 1-8 up at 15 7-8, while National of India have gained ½ at 37½. P. and O. Banking Corporations are unchanged at 11 7-8, Imperial of Persia are 4½, while Bank of British West Africas are 4½.

Among Land Shares Béhéras at 8 7-8 have shed 1-8, while Béhéra Prefs at 3 5-16 are 1-8 up. Egyptian Delta Lands are 4½ down at 7s. 6d., while Gharbichs are unchanged at 1 9-16. New Egyptians are 1s. 10½ up at 26s. 4½, while Union Foncières are 1-16 lower at 2 5-8. Sudan Plantations are 3-8 up at 2 7-8.

Rubbers Featureless.

There is no change to report as regards the rubber market. The rates for the raw commodity have inclined to dullness, with the result that the share market has been on the heavy side, many of the shares being practically down on the week.

GREAT INDIAN PENINSULA RAILWAY.

The report of the Great Indian Peninsula Railway Company for the half-year ended September 30, shows, including State lines, gross receipts, Rs. 6,35,09,196, decrease Rs. 29,49,734; net Rs. 28,65,938, decrease, Rs. 1,31,75,748. The net revenue excluding State lines) amounted to Rs. 22,28,955, decrease, Rs. 1,24,11,153; total interest charges, Rs. 1,66,44,204; balance of net revenue (deficit), Rs. 1,44,15,240. Meeting, 48, Copthall-avenue, E.C., January 20, noon.

BRITISH BURMAH PETROLEUM.

A considerable decline in profits is shown in the report of the British Burmah Petroleum Company for the year ended July 31 last, the credit balance being £221,378 as against £526,353. An important factor in this result was the decreased gain on exchange at £9,966 as compared with £112,085. The available total is £181,860 as against £359,955. This time there is no allocation to the reserve, the dividend is 12½ per cent. as against 20 per cent. for 1920, and 17½ per cent. for 1919, and the carry forward is £12,673 as against £18,624.

The Bucharest Municipality has signed a contract with a Belgian syndicate for the erection in the spring of 1,000 cheap dwellings in the suburbs.

According to a recent Paris report the Creusot Works have obtained a concession for the construction of a commercial port in Budapest and a monopoly for the construction of docks and warehouses for 50 years, after which term the State will become proprietor of all the installations.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from a recent report received by the Imperial Ottoman Bank :—

Constantinople, January 2.

The financial crisis that has developed here as a result of the suspension of payments by one of the financial establishment and the fall in the exchange have put a stop to all commercial transactions. It would be difficult to indicate the prices for colonial produce, and raw materials which have fallen without considering the prices in connection with the financial needs of each merchant. The dominant note of the market is depression.

Sugars have fallen £2 per ton from last week's rate.

Flour. The arrivals of the week amount to 33,000 sacks from America; our stocks are about 180-200,000 sacks. Although the market has been heavy last week's prices have been maintained as a result of the demand for the Black Sea littoral and South Russia.

Wheat.—500 tons have arrived from Australia and Bulgaria for our milling industry.

LANCASHIRE COTTON DIVIDENDS

Out of 87 Lancashire spinning mills having a total paid up ordinary share capital of £9,825,000, fifty have not been able to pay a dividend for the quarter ended December 31 last. Six concerns have made a distribution at the rate of 5 per cent. per annum, and fifteen 10 per cent. per annum. The dividend for the remainder varies from 11 per cent. to 30 per cent per annum, and the average per company works out at 5.17 per cent per annum, absorbing £113,300. Altogether the mills contain 7,800,000 spindles. The average dividend for the previous three months trading for the same companies was 5.46 per cent. per annum. In June the figure was 5.06 and at the end of March 7.96, whereas twelve months ago the average was 18.95 per cent. per annum.

In addition to the above companies 25 have issued reports for the six months ended December 31, 1921. These mills which have an aggregate spindleage of nearly two millions, and a total paid up ordinary share capital of £2,353,000, have paid an average dividend per company of 4.63 per cent per annum, requiring a sum of £37,200. Fourteen of the firms have not been able to make a distribution to shareholders. Last June the average was 5.35 per cent. and a year ago 16.8 per cent. per annum.

The address of the Steaua Romana (British), Ltd., has been changed to 5, Angel Court, Throgmorton Street, E.C.2.

A Reuter's message from Delhi, states that the Legislative Assembly has accepted the resolution of Sir P. Sivaswamy Aiyer in favour of the formation of a mixed committee to propose measures for the recruitment of Indians as executive and engineer officers in the Royal Indian Marine, to encourage shipbuilding to establish a nautical college and to construct dockyards in India.

Cotton & Cotton Goods.

The Prospects of the Cotton Industry for 1922.

By Sir Charles W. Macara, Bart.

At the moment when those engaged in industry are looking forward with mingled hopes and fears to the prospects for trade in the opening days of the new year, it would not be amiss, perhaps, if out of a ripe experience I were to give a few of the reasons why I consider that the future may be faced with cheerfulness and confidence.

If my remarks have reference chiefly to the state of things in the cotton trade, I cannot think that they will on that account be less acceptable or less interesting to those engaged in other trades, seeing that the industry of cotton occupies the premier position in the list of exported English manufactures, and that directly or indirectly the welfare of many millions of people in this country, great numbers of whom live far beyond the confines of Lancashire are involved in the success or otherwise of the greatest of our textile trades.

Most people are aware in a general way that one of the reasons for bad trade in Lancashire during the past eighteen months is that India, England's largest customer for cotton goods, has been buying very little in the way of textiles, and they have been told that a so-called Indian reformer, named Ghandi, has been largely responsible for this state of things owing to having encouraged the natives to boycott imported cloth, and in particular goods that have been made in England. In the place of these English-made goods, it has been given out that the natives were being taught to spin and weave by hand, and in consequence of these revived handicrafts and the rapidly expanding trade in the mills of India, the outlook for the staple Lancashire trade was reported to be very black indeed.

Facts for the Jeremiahs.

The remarkable thing about these statements is that it was not the man in the street alone who swallowed them for gospel truth, but that many people in the trade who ought to have known better had begun to believe the tales of the pessimists, and to see nothing ahead but irretrievable disaster.

Fortunately the facts do not support these gloomy prognostications; indeed, had people but taken the large view they would have seen that their fears were groundless from the start, for Lancashire, as I shall have no difficulty in showing, is bound to come to the top again, and will, before many months have passed, have almost forgotten her present troubles in an unbounding prosperity. I am as confident as one can be of anything in this world that the croakers will be confounded, and for the simple reason that England, to use the common phrase, holds all the cards in her hand. It is to this country that India as well as China and other great users of cotton goods will be obliged to come if their teeming millions of population are to be clothed. Not only can India not supply her wants in this commodity, but there is no likelihood of her being able to do so for generations to come.

I have always made light of the Ghandi agitation, for I am a practical man, and am not led away with political cries either in India or elsewhere. I know, for instance, how utterly impossible it is for India to supply her own wants, and I know also that no other country in the world but England has the means of making up the deficiency. Agitators or no agitators, India is bound, sooner or later, to turn to Lancashire for help if the majority of her population is to be clothed at all.

The blame for thinking otherwise lies with that section of the press which trades in sensationalism rather than hard facts. At one moment one is reading that Japan is robbing us of our Indian markets, and at another that fifty new mills are being erected in India, and soon the natives of that country will have no use for cotton goods manufactured in Lancashire. One is just as true as the other. Japan has not the machinery to do it, and India will not be able to add appreciably to her spindleage for long years to come.

Let us analyse India's position more closely. India, as we all know, has manufactured cotton goods from time immemorial, and from the cotton she grew in former days she made cloth of an excellence unequalled anywhere in the world. This material, of the finest texture and beautifully embroidered, was hand-spun and hand-woven, took a tremendous time to complete, and when finished was only within the reach of the richest in the

land. Partly through improper seed selection and partly through bad cultivation, the cotton from which that beautiful and expensive material was made was allowed to deteriorate, and then, with the advent of the power-loom, England came along with a good and much cheaper fabric which came within the reach of rich and poor alike.

Some 85 or 90 years ago India herself began to manufacture cotton goods by power, and little by little she trained her spinners and weavers and added to her machinery until she has mills now containing about seven million spindles, and weaving sheds which contain a larger number of power-looms than these spindles can supply, the overplus having to rely on England chiefly for the yarns they consume. What the alarmists are asking us to believe is that India with these mills and the hand looms she has started is now almost in a position to supply the entire wants of a population numbering over 300,000,000.

An Enlightening Comparison.

How absurd this is, can best be grasped by making a comparison with the state of things existing in the cotton trade so far as England is concerned. The population of the British Isles is something under 50,000,000 and it requires the output of twelve of our sixty million spindles to supply this number of people with cotton goods. Consequently, if the home trade in this country calls for the product of twelve million spindles, how is India, with little more than half the spindles we need for our own use, to supply a population seven or eight times as large? The thing is ridiculous on the face of it.

Moreover, what so many people forget is that a great part of the goods which Lancashire makes for Indian consumption is not of the class which is made in the mills in India. It is finer stuff altogether, and it is doubtful, even if the natives had the requisite skill, whether it could be spun and woven by machinery in such a climate as they have in India.

A prominent native textile expert, Mr. K. Sanjiva Rao, engaged by the Government of Bihar and Orissa, bears striking testimony to the fact that India cannot provide herself with the finer quality of the goods she requires. In an official article quoted by the *Manchester Guardian* he is reported as saying:—

"The tastes of the people are rapidly changing as the standard of comfort rises, and there is an increasing demand for finer qualities of yarn and cloth, for which at present they have to look to foreign countries for supply. They cannot, at least in the near future, expect the Indian mills, whose hands are already full with the production of coarser qualities, to manufacture these, for, in the first place, India cannot produce long staple cotton necessary to spin yarn of finer counts; and secondly, India has not yet acquired that skill and ability which Lancashire has achieved in course of the last century and a quarter.

"One can feel confident that before long the average annual increase in our requirements may be expected to be no less rapid than it was before the war. Apart from the fact that cloth is wanted in continually increasing quantities for backward communities, a large number of our aborigines are yet to be clothed. Even taking the lowest estimate, India's demand in the course of the next ten years is likely to increase to 5,000 million yards of coarse cloth, besides 2,500 million yards of finer qualities, a total increase of 50 per cent. The finer varieties of cloth will have to be imported, as now, but there is no reason why they should do the same in the case of the coarser ones."

The Machinery Problem.

But supposing for a moment that the climate is suitable for the making of the finer as well as the coarser kind of goods, what are the prospects of India being able to equip herself with the means of manufacturing all the cloth she requires? Where is she to get the labour she would require within any reasonable period? People talk very glibly of putting up fifty more mills, but do they consider the cost of the erection of these buildings and the difficulties of filling mills with the machinery at the present time? You cannot by taking thought add a million or two of spindles to your equipment, and especially since the war caused such a piling up of arrears of work in the textile machinery making shops, I calculate that through depreciation and destruction in war time, the cotton trade of the world must be wanting as many as 30,000,000 spindles to bring it up to the productive capacity we had in 1914, and if this is so, what chance

is there for the equipment of new mills? My own firm has waited two years for delivery of machinery for only one section of a mill, and we were supposed to have been exceptionally favoured.

Remember, too, that India has taken nearly a century to get 7,000,000 spindles, and in years when there was no difficulty in obtaining all the machinery one wanted, Lancashire, also, now that shorter hours have brought about a reduction of output, will want more mills—the number required must be between 300 and 400 to make up for what has been lost—and she will be a rival with India for the services of the already over-burdened textile machinists. Where, then, is there much chance for expansion in India for a long time to come, even if she has money in abundance and labour ready to call?

(To be concluded).

MANCHESTER REPORT.

(From Our Own Correspondent.)

Manchester, Friday.

Taking the market as a whole the tone during the last week has been quiet but steady. The political situation throughout the world is very disturbed, and many firms are still feeling the tightness of money. It is anticipated, however, that these detrimental influences will gradually be removed, and there is every hope of more business in the near future. Fluctuations have occurred in raw cotton rates, which have naturally proved rather disconcerting. With regard to cloth not very much has been done with the outlets of the Near East. The political situation in Egypt is still very unsettled, but the latest advices received in Manchester indicate that the situation out there is gradually improving, but at the same time buyers at the moment are not disposed to enter into contracts of any importance. Quotations for Egyptian yarns have been irregular, but on the whole spinners have lost no ground. Users have only purchased sparingly. The best of the outlets with regard to cloth has been China, and some encouraging transactions have taken place in bleaching descriptions, shirtings and fancies. It has been a disappointing week for shippers to India, and only a few sales have been registered. Calcutta has been the most disappointing. Isolated transactions in shirtings and light cloths have taken place for Karachi, Bombay and Madras. Buyers for South America have not been altogether idle. The business for the home trade can only be described as having been scrappy. Prices for American counts have been well held. Users have only purchased in small lots. The undercurrent of demand for export numbers has kept up very well.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended January 11.—

The enquiry for spot cotton showed some improvement during the past week, but actual business resulting still continues to be on a small scale only. Various outside influences, particularly rumours of financial troubles, have had a somewhat depressing effect on the market, and, in the absence of increased support from the trade, prices have sagged slowly but steadily. Practically all kinds of Egyptian cotton have been asked for, and the feature of the week has been the widening that has taken place in Egypt, between Sakellaridis and Upper. This has been caused by the U.S.A. having stopped purchasing in Egypt for the time being, and the consequent breaking of the Upper basis. So far, little notice of this has been taken here, and many holders are still sticking grimly to this class of cotton. Scarce cotton has been in considerable request, mainly for Continental averaging, and a few small lots have changed hands. But it is more than a "few small lots" that are required at present if prices are to improve, or even to be maintained at their present level, and bearing in mind the weight of cotton actually in sight, some drastic change for the better in the general conditions of the trade is required, and required quickly, if a general backsliding is to be prevented. Manchester reports continue in a fairly hopeful strain; the same large enquiry continues both for India and China, and China really seems to be taking some goods; but India is apparently still holding off. Prices received from any quarter where actual business has resulted, are still wretchedly low, and this perhaps is the most disquieting feature of the situation. It remains to be seen whether or not the Indian boycott will

"fizzle out," and if it does, whether the people of India are prepared to pay the prices asked for goods manufactured from cotton at current prices. Considering everything, prices here are keeping extraordinarily steady. C.i.f. business has been very quiet. Quotations are reduced $\frac{1}{4}$ d. per lb. all round. Fully Good Fair Sakellaridis to-day 20.75d.

COMPANY MEETING.

ASSOCIATED COTTON GINNERS OF EGYPT.

The following is the report of the directors, with statement of accounts as at August 31, 1921, submitted to the shareholders at the sixteenth ordinary general meeting, held at Alexandria on December 22:—

We have pleasure in placing before the Shareholders, for their approval, our 16th annual report together with the audited accounts to August 31, 1921. The quantity of cotton ginned in our factories during the year 1920-1 was cantars 645,260.75 against cantars 789,254.12 in 1919-20. During the season ending August 31, 1921, we did not steam press. Owing to the slow movement of the cotton crop the factories of the company had to be maintained in activity for a period of eleven months i.e. from September, 1920 to July, 1921. This situation was abnormal, the cotton season usually not exceeding six months. Owing to the prolonged period during which our factories had to be kept in activity our expenses in general have been much higher. The following are the results to August 31, 1921.

	L.E.
Factories	55.546
Less: Sundry repairs and renewals in the factories	4.217
	51.329
Add: Interest earned	3.306
	L E 54.635
Less: Expenses and Management at head office	4.523
Sundry expenses	2.207
Insurance premiums	2.274
Commissions	134
	9.138
Less: Depreciations on Buildings and machinery	7.024
„ on Egyptian Unified Debt 4 per cent. at 64 3-4	355
„ on Stores	13.521
Special Reserve for contingencies	1.000
	21.900
	23.597
Less: Statutory reserve 10 per cent.	2.360
Dividend, as per Statutes, 6 per cent. to shareholders	21.060
	23.420
Leaving a balance of	177
We have therefore to deal with the following amounts:	
Statutory dividend of 6 per cent.	21.060
Above-mentioned balance of	177
Amount brought forward from last year	19.229
of which your board propose to distribute as dividend to the shareholders one shilling and threepence per share, making	21.938
and to carry forward	18.528

Your board has sold a parcel of land at Mehalla Kibir on favourable conditions and brought a plot of land at Kafr Zayat to enlarge the approach to our Ex-Zervudachi's factory in that town. Mr T. A. F. Critchley retires by rotation and is eligible for re-election. You are now asked to approve and adopt the report and balance sheet for the year ending August 31, 1921, as presented. You have also, to appoint auditors for the ensuing year, and to fix remuneration. Messrs. Russell, Harris and Co. offer themselves for re-election.

NOTES OF THE WEEK.

The Genoa Conference.

As yet we can estimate with little exactitude the results likely to accrue from the forth-coming Genoa Conference, for so far we have seen only the lime-lit stage-managers shouting over the European proscenium their vague and rather contradictory directions. Wide but loose cries proclaiming the interdependence of friend and foe—which may lead to reconciliation, but not certainly to security—vie with the hoarse but precise utterances demanding above all things safety—which may lead to isolation—and however much the respective spokesmen may profess their willingness to arrive at a common end, it is difficult to predict for their show a long run. To our own Prime Minister, for instance, we certainly ascribe an intention of establishing business arrangements with Russia, and of other modifications of former Allied policy; while the French Premier is emphatic in his refusal to assist at Genoa unless there is no calling in question of the stipulations of the Treaties.

Hopes and Fears.

Of any final or universal benefits from the Conference we are frankly sceptical, for though from our own Near Eastern point of view we surely believe, as our Constantinople Correspondent in a recent letter pointed out, that Russia holds the key to the situation, and that without her co-operation little of permanence can be achieved, our hopes of Russian statesmanship are low when we read of the view of M. Trotsky on Genoa. We observe that this man in an interview to a *Daily Herald* correspondent in Moscow said, *à propos* of the attitude of Russia towards the question of Reparations and of the revision of the Versailles Treaty:—"Reparations and the Versailles Treaty are mere usurers' demands. . . . The Treaty has already been revised by facts. The invitation to Genoa is in itself a revision of the Treaty." If this is to be the spirit in which those nations outside the Allies are to conduct, or attempt to conduct, the affairs of the Conference, we fear theirs will be a vain unanimity; and in any case, when one has everything to gain and nothing to lose, to talk as Trotsky talked is not only monstrous impudence but crass folly. Were his schemes realized for levelling the ground so that cosmopolitan enterprise might be more easily undertaken, it is possible that we should experience far more of those "usurers' demands" which the Bolshevik leader affects to detest.

Peace for Greece?

Signs multiply daily of a settlement in the Near East, and yet no concrete proposals come to hand. M. Gounaris is at the present time in London, negotiating in busy anxiety for a loan, and is reported to be willing, for the sake of a settlement, to sacrifice much of the ground gained by Greek troops; and M. Poincaré in his recent speech re-asserted the determination of France to prevent the resumption of hostilities (which unless prevented would take place about the end of March) between Greek and Turk (his ulterior and professed motive, however, being the making easier of the exercise of the French mandate in Syria). What is at the moment obscure is the personal intention of Mr. Lloyd George. The weight of British opinion on this matter seemingly does not count with our Prime Minister; it is apparently useless to point out to him that that sweet path of roses on which he set out when the Greeks occupied Smyrna is not only hedged with barren thorns, but is also a blind road. However, his virtuosity is, we know, constantly capable of a retracing of steps, and an eventual settlement will probably be made with the Angora Convention as basis; meanwhile there is little to do but dolefully and yet prayerfully ask "How long, O Premier, how long?"

M. Take Jonescu Resigns.

The Cabinet completed only a month ago by M. Také Jonescu has resigned, and Roumania has now a new Government under M. J. Bratianu. M. Jonescu was faced by so many and so great difficulties that a politician so experienced as he can hardly have had any great hope of coming through them successfully, especially as King Ferdinand was opposed to a dissolution of Parliament and fresh elections. Our Bucharest Correspondent's letters have made it clear that the cross currents were numerous and strong; but the dislike of the various parties for what they regarded as a Cabinet which put a slight on the Constitution seems to have been sufficiently widespread to unite them in pulling it down, even though it was generally understood that it was little more than a stop-gap. On the opening of the Chamber M. Také Jonescu asked for the support of Parliament for the Electoral and Finance Bills, but he failed to get it. The party of General Averescu, with which he had until lately co-operated, brought forward a 'no confidence' resolution, which was carried by a large majority (190 votes to 81), and there was nothing for M. Jonescu to do but to resign.

Roumania's First Task.

The fact that the new Cabinet was constituted with so little delay that it was able to take the oath on the evening of January 19, shows how well prepared were the Liberals for the contingency which thus arose. Whether a party Government will be able to serve the country as well as would one embracing all parties—such as King Ferdinand is understood to have desired so strongly—the Roumanians themselves can best tell. In any case, since Roumania has many problems to solve, some of them crying aloud for prompt tackling, it is much to be hoped that the new Government will devote itself to national rather than party interests, that it will hold out the olive branch to its opponents, and that a truce at any rate may be secured, in order that all parties may devote their energies to the disposal of their country's difficulties. The mere fact that in spite of Roumania's natural wealth and the strong position in which she stands after the war, the Leu should stand so low as it does on the exchanges should surely be sufficient incentive to Roumanians of all parties and of all classes to pull together strongly until the situation improves in this respect.

"Pistol-Running" in Palestine.

A case of attempted smuggling of arms at Haifa is reported to have caused much excitement among the Arabs, who regard it as going to prove that Bolshevism is penetrating the country under the cloak of Zionism. About a hundred cases, it seems, were recently being landed at the port mentioned when, owing to an accident one was broken, and subsequent examination showed that it had false sides, which concealed some automatic pistols and cartridges. In the ordinary course the cases would have passed through without any examination, as they were described as containing "agricultural implements" and—possibly with some sense of humour!—"beehives," and were exempt from Custom dues. But, naturally, after the first accidental discovery the whole batch was examined; with the result that over 300 automatic pistols and 15,000 rounds of ammunition were secured. A prominent Jew, "head of the Co-operative Workmen's Association" has been arrested, and the police are reported to be following up other clues. The incident is not, perhaps, very serious in itself; but it is unsatisfactory to learn that three men whom the police had wished to arrest in connection with the matter were able to make good their escape owing to a warning, said to have been given them by a telegraph clerk. That seems to point to a fairly careful and efficient organization. If the "co-operative workmen" should by ill fortune become involved, or if it should turn out that the smugglers had been "running" anything larger than pistols, the affair might have very serious consequences.

The Egyptian Situation.

As our Cairo Correspondent's letters show, the belief that Sarwat Pasha would have both the courage and the ability to form a Cabinet has been steadily gaining ground in Egypt; and when our Correspondent's latest letter was sent off it was thought that an announcement on the subject might be made at any minute. Up to the time of writing no news of any such announcement has reached this country, but there have been for some time unmistakable indications that Sarwat Pasha has been taking soundings in various directions, and it is now understood that he has put forward definite proposals to the British Government, with a view to making

possible his acceptance of office. Very rightly, the nature of those proposals is kept quite secret, and we can therefore only express the hope that they may be of a character that will render them acceptable. Meanwhile the Egyptians are showing greater moderation than might have been expected, and the better educated among them appear to be realising that while Great Britain desires to go as far as she can towards meeting their views she does not mean to be hustled.

The Shah of Persia.

The Shah of Persia, it is announced, is coming to Europe on a visit, for the sake of his health. The announcement comes rather suddenly and out of the blue, as it were, and his Imperial Majesty's departure from his capital follows extraordinarily close upon it. For if he keeps to his programme, he will leave Teheran for Baghdad the day before these lines are published. He is expected to be away from Persia for six months, and during his absence the Valiahd will act as Regent. That is to say, the Valiahd, who has been in Europe some months, has been recalled urgently to take up the Regency, and a Persian noble is to act as Regent's Regent until his arrival. That is the extent of the information available at the time of writing. Which countries in Europe the Royal traveller will visit, and which, if any, of his Ministers, will accompany him we do not know. We can, therefore, only express regret that his health should necessitate the journey, and wish him a safe return after a pleasant change.

The Prince in India.

Last week marked the completion of another stage in the Prince of Wales' long journey through India. He has now seen the East and the South, and turned his face northwards by way of Hyderabad. In Burma his welcome was unalloyed; but in Madras the experience of Bombay was to some extent repeated, the enthusiasm of the crowd being broken into by displays of organised lawlessness, which however were promptly repressed. The descriptions which have come to hand from these and other provinces lay stress on the progressive nature of the Prince's reception; contrary to all Indian precedent, the climax comes at the moment of departure, while the only anxiety relates to the day of arrival in new scenes. Making every allowance for the influence of the Prince's personality, these unusual features must still be taken mainly as evidence of the extent and the intensity of the campaign of intimidation organised by the irreconcilables. In almost every city which has so far been visited, ordinary citizens have at first been afraid to display their genuine feelings. Where the visit has been short, there has been no time for a change; where it has extended over some days, people have realised that it is safe to express their loyalty, and have gained courage on seeing the disorderly element suppressed. It would be still more satisfactory if they had taken a more active part in the suppression, but events at Calcutta suggest that things are moving in that direction as quickly as could have been expected.

Political Developments.

The political situation has shown some development since last we wrote of Indian affairs. The suggested round-table conference has not taken place, and at present it is rather out of the picture, but the mugwumps, to use an ugly but expressive term, have held a conference to see whether a conference is possible, and they have learned that the thing could be done, provided the extremists' terms were granted in full as a prelimin-

ary. Mr. Gandhi accordingly has given the Government nearly a fortnight in which to surrender, and is even reported to have called off for the moment the strike of revenue-payers, which has already been started in a few localities. The central legislature, on the other hand, has rejected resolutions proposed in both houses for the holding of such a conference, and it is probably safe to infer that the Government will now feel itself sufficiently sure of support to maintain the attitude which it adopted last month. The choice lies between suppression of intimidation and surrender to the men who use it as a weapon; the issue is becoming plain even to those Indians whose political vision has been slow to clear; and, though no close forecast can be made at present, the chances appear to be that the support given to the administration will increase rather than diminish as time goes on.

The Attitude of the Legislature.

It cannot be said that the majority by which the Legislative Assembly supported the Government was so decisive as to give entire satisfaction to the friends of India in this country. The subject cannot be examined in detail until the division-lists arrive, but apparently a small majority of the unofficial votes cast was hostile, while nearly half the private members either abstained from voting, or stayed away from the debate. The high proportion of absentees on a question vital to the future of the country is perhaps the most significant feature. The prospect would be gloomy indeed if we could infer that nearly half the members were indifferent as between Lord Reading and Mr. Gandhi, but it is much more probable that the lack of moral courage, so long familiar among Indian politicians, was responsible for most of the abstentions, and it is mainly on this ground that we suggest the likelihood of a gradual increase in the support given to the Administration. Timid legislators will usually follow Mr. Pickwick's advice, and shout with the largest crowd; and, glancing back through the centuries, we must agree that in India that course is justified by history.

THE WEEK AT HOME.

London, Monday evening

Voces et Praeterea Nihil.

Last week was a week of political oratory, party manoeuvres, comings and goings, and declarations of faith. The upshot is that Parliament is postponed from January 31 for a week, that the General Election is postponed indefinitely, and that the Coalition remains in a state of coalescence.

As to the speeches, are they not reported in *The Times* and elsewhere? Some acute critic has remarked that the things which statesmen do not say are far more important than the things they do say; and another observer has enunciated the paradox that politics is like matrimony—the real tragedies are not in the quarrels that take place, but the disagreements that are silently averted. All of which means I suppose, that nobody has got entirely his own way. The Unionists are pressing for the dissolution of the Coalition; the Lloyd George Liberals are organising themselves into a National Liberal Party. The former are disappointed because the Coalition continues, but pleased that the election is off; the latter are sorry there is no election, but rather elated with their new party plumes, and the assurance that Mr. Winston Churchill will lead them when the Prime Minister is too busy.

The reform of the House of Lords is also postponed. There was never anything in it. The Conservatives want the restoration of the Peers' veto, but they felt it

would never do to ask for that *tout court*, as both Liberal and Labour would refuse; the cry of reform was therefore introduced. But the Conservatives are never quite happy as advocates of reform, and while they were agreed about the veto, no two men were agreed as to the principles of reform. Some play has been made with the idea of an Imperial Senate. But to establish a Senate is in effect to abolish the House of Lords, which is the last thing the Conservatives desire. Consequently nothing will be done for the present, and nobody cares twopence.

From the speeches of Mr. Lloyd George and Mr. Chamberlain we learnt nothing except that the Government is a very good Government, and that members of the Cabinet have an infinite admiration for each other; there was just a faint hint, too, that nobody else would do quite so well. This is a disease that always attacks statesmen in office for some years—an *idée fixe* of their own indispensability. Mr. Balfour had it, Mr. Asquith caught it in turn, and the bacillus seems to be active in Downing Street again.

The future rôle of the Government is to be economy at home, and peace abroad. Mr. Lloyd George intends to work hard as the pacificator of Europe; English politics will be delegated to his principal lieutenants. The foundations of the new Europe are to be laid at Genoa in March—if M. Poincaré permits; retrenchment is to be the watchword at home, with the possibility of a reduction of taxation in the forthcoming budget. After that, according to present official calculations, it would be only decent to have a General Election to give us an opportunity of showing our gratitude.

Whenever it does come, an election will be a leap in the dark, for the electorate had no real choice in 1918, and the new franchise will be effectively exercised for the first time at this next contest. As to its result, those who know most are the first to admit that they know least; and a prediction now would probably look absurd in six months' time. At the moment the National Liberals (*née* Coalition Liberals) are up and the Unionists down; Labour also has its tail between its legs. It has plenty of candidates, but money is short, the Trade Unions are hard up, their membership is low and dispirited. All the omens are for the return of the Government, unless they make some ridiculous mistake, by a smaller majority; in which case Mr. Lloyd George will secure a lease of power until 1927.

Another Irish Pact.

Reports good and bad have come from Ireland recently. On the sinister side is the admission that a fresh outbreak of lawlessness has occurred, which may tax all the energies of the temporary government at Dublin to put down. To the credit side of the account is the publication of an agreement between Ulster and the Free State. Ulster secures the lifting of the ban on her trade, which was gravely embarrassing her industries; and the boundary Commission, which has agitated her politicians, not without reason, is also to be revised. The two States are also to go into the question of a joint council afresh, in order to find some more satisfactory solution.

The agreement does credit to both sides, and is a step towards reconstruction as important as the December treaty for a Free State. It will possibly displease Die-Hards in both camps, but it indicates a decline of the fanatical party spirit which has been the ruin of Ireland, and it attests the growth of the saner method of compromise.

Lincoln in Danger.

A large crack has appeared in the north-west tower of Lincoln Cathedral, and there are several smaller cracks in the interior walls. It is believed that the noble fabric, which may be seen for miles around, can be saved if the work of repair is put in hand at once, but the position is urgent, as every storm palpably increases the damage and weakness. It is said that £50,000 is required to save the building, and an appeal has been issued for contributions. I cannot doubt that it will be liberally responded to.

The L.C.C. Election.

Preparations are making for the London County Council election early in March. The Municipal Reformers (Conservatives) and Progressives (Liberal) have again formed a compact not to fight each other where the Labour Party is contesting the seat; the Labour Party in London municipal politics is apparently more extreme than its counterpart in national affairs. Indeed, it is said to be near to the Communist platform; at any rate, it professes an advanced Socialism.

The real danger facing all parties is the indifference of the electorate, which has been steadily growing. Twenty years ago the fight between Progressives and Moderates, as the Municipal Reformers were then called, meant enthusiasm, cheers and counter-cheers, rotten eggs and a high poll; since 1907, when the Municipal Reformers ended the long dominance of the Progressives, the number who took the trouble to go to the poll has diminished. At the last election only 17 per cent. of those entitled to do so voted.

The result of the election will probably have some influence on the enquiry now being conducted into the reform of London Government, and the possibility or advisability of enlarging the boundaries of the L.C.C. Several of the outlying boroughs have petitioned against being incorporated in the County, as was anticipated; but the enquiry is as yet only in its initial stages, and it has so far been conducted with a politeness that speaks volumes for the lack of public interest.

The Problem of Lunacy.

Another enquiry is being held into the treatment of lunatics, consequent on certain charges made last year by a medical officer. The official case is that "permanent mental disease can be prevented by early treatment," and that "asylums really are but hospitals for persons suffering from mental diseases." Both statements have been attacked. If the former is true, it is asked why the patient in an incipient stage of the disease is sent to an asylum at all; if the latter, it is asked why people do not mind going into a hospital whereas they hate being sent to an asylum.

The answer is too easy. So long as the public draw a distinction between physical and mental disease, a man will not mind admitting that he has been cured of appendicitis or rheumatoid arthritis or some similar trouble, but he will be rather diffident of confessing that he has been cured of insanity. And while it is true that a great amount of permanent mental disease can be prevented by early treatment, it must always be recollected that a large number of those in asylums have been insane or idiotic from birth. Here there is no possibility of prevention. A further large percentage is of feeble-minded or persons of bad ancestry, who have failed in the battle of life. It is possible they could have been cured, but they can only remain cured on condition of being more or less isolated and cared for. They are unequal to the wear and tear of daily work.

As to the treatment of lunatics, I believe it to be generally good. But it must be remembered that many of them are exasperating, and some are offensive and dirty in their habits; and I doubt whether the care of mental disease attracts quite the same high type of nurse as one finds in the ordinary hospital. I once went to an asylum (as a guest for an afternoon, *bien entendu*) and I must admit that I pitied the nurses more than the lunatics.

Rain and Influenza.

It has rained so steadily these last few days, with snow, hail, sleet, and blizzards by way of change, that the drought which lasted all 1921 seems at last to have vanished. It was time; for a good many places are now being rationed for water. It will take at least a month's wet to make up the deficiency, for the deep-level reserves of water are almost exhausted in the South of England, and unless we get the rain before the spring the position will be difficult. The summer rains are usually absorbed by vegetation, and during the warm weather we live on the reserves accumulated during the winter. For that reason we are for once not grumbling over the leaden skies.

The influenza epidemic is steadily increasing, but it cannot be ascribed to the wet, since it began in December, which was remarkably dry. The deaths have mounted in London from 14 in the week ending December 10, to 551 in the week ending January 14, and it is much the same in the other great towns. It is not of a severe type, and for that reason people are liable to neglect it with serious or even fatal results.

The Week's Books.

"The Secrets of a Savoyard" (Jarrold) by Mr. Henry A. Lytton, comes pat at a time when the Gilbert and Sullivan operas have been revived with enormous success. It is full of amusing stories, of which I will quote only one. An actor at rehearsal sat down so clumsily that he broke a chair. "I said," remarked Gilbert, "Sit down pensively, not expensively."

"Last Days in New Guinea" (John Lane) by Captain C. A. W. Monckton, is extraordinarily interesting for its revelation of the native mind. Sorcerers, for example "would sometimes be hauled before a Court by indignant chiefs charged with some manifestly absurd and impossible crime, such as causing a virgin in a distant village to produce still-born twins, or the moon to alter its course and colour, with consequent devastating influence on a certain crop." The accused would plead guilty; when the magistrate remonstrated that he could not possibly be convicted on the evidence, the sorcerer would persist in his plea—for if and when convicted "he would establish his reputation as a man capable of marvellous things, a man to be feared and conciliated with gifts." It paid to be condemned.

"The Menace of Money Power" (J. Cape) by Charles P. Isaac, advocates the removal of State restriction on the issue of credit and the growth of note-issuing banks, in other words, free trade in money. It is a study in unorthodox economics which would probably make any professor of political economy faint.

OCELLUS.

THE NEW ROUMANIAN CABINET.

Upon the resignation, following a want of confidence resolution, of M. Také Jonescu, the new Government at Bucharest was constituted as follows:—

Premier and Minister of War ..	M. Jonel Bratiano.
Finance	M. Vintyla Bratiano.
Interior	M. Vaitoianu.
Foreign Affairs	M. Duca.
Industry	M. Sassu.
Education and Ad Interim Commerce	M. Angelescu.
Agriculture	M. Constantinescu.
Public Worship and Ad Interim Public Works	M. Banu.
Labour	M. Marzescu.
Justice	M. Florescu.
Bessarabia	M. Inculetz.
Bukovina	M. Nistor.
Minorities	M. Zigrea.
Communications	M. Mosoiu.
Transylvania	M. Cosma.

BRITISH GENDARMERIE FOR PALESTINE.

The Colonial Office has issued the following statement:—

As part of the general scheme for the reduction of Imperial expenditure in the Middle East, the Secretary of State for the Colonies, in consultation with the Palestine Government, has decided to raise a small force of British gendarmerie for service in Palestine. The force, which will consist of about 700 officers and men, will be added to the existing police and gendarmerie forces in Palestine, but will be recruited and administered separately. It will be trained and armed as a military police force, and, while normally employed upon purely police duties, will be available for use, in case of necessity, as a military force.

Special arrangements will be made to recruit this force from existing units to be disbanded during the current year. No applications should be addressed to the Colonial Office.

FREEMASONRY AT CONSTANTINOPLE.

On December 27, Mr. W. E. Drakeford was installed as Worshipful Master of the Oriental Lodge. This Lodge is under the English Constitution and its number is 687. During the war the activities of the Lodge ceased, owing to the death or departure of many of its members, but after a hard struggle it was able to start again in 1920, and is now making satisfactory progress.

THE NEAR AND MIDDLE EAST.

From Our Own Correspondents.

EGYPT.

Cairo, January 7.

The Situation Quiet.

During the past week the political ebullition has subsided. There have been one or two nasty incidents, doubtless connected with the political feeling, but there is no evidence to show that these shots at men in positions of authority were not mostly inspired by personal animosity. Zaghoul Pasha and his colleagues have gone, and little is being said about their departure. Madame Zaghoul has signified her intention of carrying on her husband's work, and a local paper has referred to her as "Egypt's Joan of Arc," adding the pious hope for a better fate for her than her French predecessor! The local Press is full of rumours about the possibility of the formation of a Cabinet in the near future, but as late as this morning I have been officially assured that there is no tangible foundation for these rumours. In other words, Egypt is dull, politically and commercially, though socially there is considerable activity in Cairo and the beauty spots of Upper Egypt.

The Chances of A Settlement.

Well-informed circles are of the opinion that a position has arisen whence a settlement may be evolved. They point out that it was necessary, before any real business could be discussed, that the extremist and obstructive elements among the Egyptians should be compelled to realise that there must be a limit to Egypt's ambitions. A message from Palestine has advised that the extremists in that country have been deeply impressed by the timely display of firmness in Egypt, and it may safely be said that the same remark is applicable to Egypt. The recent events have driven the Egyptians into each other's arms, but there is every indication that the hitherto unequivocal opponents of any statesmanlike settlement have been dominated by the more rational sections among the Egyptians. The clear recognition by Great Britain of Egypt's right to independence, and the equally clear admission by the Egyptians that Britain has a right to certain guarantees, have facilitated the formation of a basis for an arrangement. The British Government needs to display tact; neither a mailed fist policy nor one of weak submission will get us anywhere. But the happy medium is bound to bring satisfactory results.

Madame Zaghoul.

There are those who see in Madame Zaghoul the strongest opponent to a reconciliation. That Madame Zaghoul cannot be expected to display any spirit of conciliation in the prevalent circumstances is obvious, but at the same time the men who were advising her husband have either been chased off the political stage, or they have amalgamated with the strong committee of prominent Egyptians who hitherto stood behind the Adly Cabinet. The latter have swamped the Zaghoul ranks, and thus Madame Zaghoul either must co-operate with them or must play a lone hand, depending upon the lower agitators for assistance. There is also the fact that she is a woman, which, in a Moham-medan country, is a very heavy handicap. As a figure in contemporaneous history she may command admiration; but as a leader of the Die-hards she is not a material factor in the situation to-day.

The Report on the Alexandria Riots.

One of the most important documents lately published has been the report of the Military Court of Enquiry upon the Alexandria riots. The Egyptians naturally resent it deeply, but they have been forced to realise that it is a fact, and that the spirit which it has so clearly delineated is one of the most insuperable bars to the attainment of complete independence. What effect it has had in other parts of the world is immaterial in this respect; it has convinced the Egyptians that the world will insist upon proper guarantees, and this belated realisation is the most satisfactory feature of the

momentary position in Egypt. Incidentally, the Egyptians have protested against its publication at this juncture, on the grounds that "such publication was liable to stir up partisan feeling." That shows the way the wind was being blowing.

A Dastardly Attempt.

Last Thursday morning, as Badr ed-Din Bey, the Director of the Criminal Section of the Public Security Department, was on his way to his office, a tall cadaverous Egyptian waited for him near the Ministry, and shot him in the right lung as he passed. Badr ed-Din Bey, although badly wounded, turned on his assailant, drew a revolver, fired at him and struggled after him, at the same time calling upon passers-by to arrest the miscreant. The bystanders all looked the other way, and the Bey, exhausted, fell. He was taken to the hospital, and the latest bulletin advises that "he is still living." It sounds ominous. Badr ed-Din was fired at in the same locality six months ago, but on that occasion the shot missed him. He was prominent in the prosecution against the members of the "Vengeance Society" in 1920, and last year he directed the efforts of the authorities in maintaining order during Zaghoul's trip up the Nile. Because he has been such a faithful servant in an unpopular position, he to-day lies at the point of death from an assassin's bullet! Every effort is being made to arrest the criminal, but to date he is at large.

The Vernacular Press.

The authorities, having a difficult and delicate task to perform, are not countenancing any inflammatory talk in the vernacular Press. During the week the *Minbar*, lately the leading organ of the Zaghoul party, was suppressed for an indefinite period for the publication of articles likely to impede the military authorities in the execution of their duty. The rest of the native Press is now maintaining a much more moderate tone. One of their editors has confided to me that the editorial department would be gratified at the re-imposition of the Press Censorship, as a number of the more hot-headed spirits are constantly invading the editorial sanctions and demanding the insertion of fiery articles against the British. The editors dare not comply, and so are placed in an awkward position, which the Censorship would eliminate. On the other hand, the re-imposition of the Censorship would give rise to other complaints.

Stagnation of Business.

There is considerable talk about the boycott of all British goods by the Egyptians, and in the provinces an attempt has been made to boycott the Egyptian Markets Company, Ltd., but, on the whole, no serious attempt has yet been made to embarrass either British shops or British banks. A warning has been sounded by some of the more sensible Egyptians concerning any attempt to deluge the native Bank Misr with a large number of accounts, the Egyptians pointing out that the Bank has not yet established the necessary machinery to use a large sum profitably, while retaining the money for short calls. Business, generally, however, is absolutely stagnant. It has been so bad for such a long

time that even old and well-established firms are feeling the pinch. There is hope, however, that as soon as the present crisis is over, there will be a much brisker period. Hope, at the moment, is about the only thing left.

Cairo, January 14.

Hopes of a Cabinet.

Except when riots are actually in progress in Egypt, news is always just round the corner. Such is the position this morning, because the only real news at the moment concerns the formation of a Cabinet, and it is currently rumoured in well-informed circles that an official declaration on the subject will be made this evening—or to-morrow. To the student of politics, recent developments which have led up to the position are rather interesting, because they involve three quick changes of local public opinion in practically as many weeks. But as both sides have been following a policy of rank opportunism, these changes are not altogether surprising. It is unanimously believed now that Sarwat Pasha will form a Ministry, and that most of his old colleagues in the Adly Cabinet will resume portfolios.

When the Egyptian Official Mission returned from London with no agreement, and dispirited, there was at once a wave of antagonism to Great Britain throughout Egypt. It seemed as if the British Government would have to revise its policy, or accept responsibility for the government of Egypt for an indefinite period. The Egyptians, on the whole, were not disposed to violence. Then Zaghloul and his colleagues were arrested, and there was an ebullition of lawlessness on the part of the riff-raff, which signified growing bitterness against England. But as the troubles died away the Egyptian leaders began to reconsider the position. They had become convinced that, on broad lines, British policy would remain firm, but they thought that perhaps, as the price of their co-operation with the British, they could secure a number of further concessions. They have played that game, and no great surprise will be felt locally if Sarwat Pasha is able to form a Ministry upon terms which, to speak tactfully, permit of a further reconciliation of Anglo—Egyptian aims.

A Brighter Outlook.

If this reconciliation does not permit the assumption on the part of the Egyptians that it is necessary merely to stand aside and sulk to gain their points against England, but, on the other hand, facilitates the formation and general acceptance by the Egyptians of a working Cabinet, the outlook will be infinitely brighter than it has been for years. It is highly probable that Sarwat's Cabinet will not have the full support of the Egyptians as a whole; but when it is recalled that at a time when popular excitement was seething—on the occasion of Zaghloul's return last year—the Adly Cabinet was able to impose itself upon the Egyptians and deal efficiently with its obstructive opponents, there is every reason to believe that a Sarwat Ministry would be able successfully to employ the same tactics. The Oriental, individually and collectively, will yield once he realises that he has met his master. The danger exists when he has reason to think that his opponent is afraid of him.

The most significant development during the week, and one almost certain to have a material bearing on the course of politics in Egypt during the future, was the resignation of Abdel Aziz Bey Fahmy, one of the most capable Egyptian politicians, from the reconstituted *Wafd* or unofficial Egyptian Delegation, formerly headed by Zaghloul. The Bey, who had always opposed Zaghloul's policy of extremism, was ill when the *Wafd* took its decision to publish a manifesto demanding, among other things, the return of Zaghloul and his companions. When he had recovered, he at once wrote to the *Wafd* and tendered his resignation, nominally on the ground of ill-health, but, so those acquainted with the inside position allege, really because he could not be a party to an agitation for the return of the exiles. It is probable that the resignation will be followed by one or two others, for the same reason. These men will have a strong following, as there is considerable annoyance at this obviously untimely demand.

The Extremists.

Yet it is likely that the Zaghloulist elements of the *Wafd* will remain parties to the agitation. Therefore, a split must come soon, and probably when the formation of the new Cabinet is announced. In all likelihood those who objected to Zaghloul's policy will follow the Cabinet, provided a satisfactory basis is obtained, whereas the Zaghloulist element will be bound to remain in opposition. It will be noticed that the question is one of personalities rather than conflicting policies—but then that is what politics really amount to in a country such as this. And if the divergence of opinion did not come on this point, it would be sure to arise on something else. The problem is not whether there will be an opposition, or whether there will be an overwhelming opposition, but whether Sarwat can secure a basis that will allow the influential sections to give him the necessary support. If he can obtain a few strong lieutenants, he will be able to make his Ministry master of the situation.

YUGOSLAVIA.

Belgrade, January 16.

Montenegrin Activities.

Italy is continuing her machinations. The old Montenegrin official gazette *Glas Crnogorska* continues to appear in Rome, as the "official organ" of "H.M. King Michael I" and "Milena the Regent." A recent number appealed to all Montenegrins abroad to return to their country in as large numbers as possible to carry on the struggle there. This is, of course, dictated from Rome. The next manifestation was more serious, for M. Yovanovitch, the Yugoslav delegate at the League of Nations, has been obliged to contradict the report of the massing of Serbian troops on the Albanian frontier, and to declare that his Government had allowed the League's Commission to pass on to Serbian territory. This *démenti* was provoked by a report coming from Albania, obviously inspired from Rome, conveying false statements.

A Remarkable Demonstration.

There recently died at Sushak an old veteran of the war, Bogdan Stefanovitch, who was a volunteer in the Yugoslav regiment on the Salonika front. His parents are at present in the south of Serbia, and were unable to attend the funeral, but the Serbs and Croats of the neighbourhood came in their thousands and offered a touching tribute to the dead warrior, and sincere manifestations of their patriotism. Be it noted that these were practically all Croats, unaffected by the demagogic utterances of Stepan Raditch. It is interesting to note that great numbers of Croats from Fiume wished to cross the demarcation line to pay their last respects to the dead hero, but it goes without saying that the Italian authorities took good care to prevent them.

A Case of Espionage.

While the Italians are busy in the South-West, the Hungarians are carrying on the old game in the North. A sensational case of espionage has been reported from Subotitsa, which now appears to be of greater significance than was at first believed. The interesting part is the fact that a convent near Sombor was the headquarters of the spy organisation, though the strings were pulled by Magyar irredentists, chiefly lawyers, at Subotitsa. The nuns had frequent opportunities of travelling and took advantage of this to convey into Hungary detailed reports on the position in Yugoslavia.

Tribute to Molière.

The Serbs are very appreciative of French literature, and yesterday at the temporary theatre in the old Riding School the Society of the Friends of France and the Society for Modern Languages and Literature celebrated the Tercentenary of Molière. Unfortunately the matinée began at 2.30, with the consequence that the public came crowding in half an hour or more late, which made it almost impossible to follow the lecture of Serbia's most brilliant literary authority, Prof. Bogdan Popovitch. This was followed by an excellent

performance in French of a scene from the "Ecole des Femmes" and one in Serbian translation of "Les Fourberies de Scapin."

Monsieur Chataigneau, Prof. of French languages, Belgrade University, made a short speech, which was much appreciated by his audience, which was composed exclusively of lovers of French literature. It is unfortunate that the National Theatre could not have been used; for the acoustic properties of the old Riding School leave much to be desired.

GREECE.

Athens, January 7.

The Raising of the Financial Blockade.

The possibility of concluding a loan, of which I spoke in my last letter, caused a small panic on the Athens Exchange. Bank shares and securities depreciated considerably, and the Drachma immediately began to rush upwards. On Friday morning before the arrival of the telegram announcing the raising of the financial blockade by Great Britain, the pound sterling was worth 114 drachmae on the open market. On Saturday morning nobody would buy at 98. From early Monday the banks were invaded by people selling sterling and dollars as fast as they could. It is estimated that from Saturday to Wednesday the Syndicate of Banks bought 2,300,000.

In view of this rapid depreciation of securities and the panic created thereby, the Committee of the Stock Exchange requested the Government to authorise an extraordinary liquidation. This, however, was refused by the Minister of Finance, who said that such a measure was contrary to regulations, and that the closing of the Stock Exchange even for a day, would further increase the panic. The brokers, therefore, themselves proceeded to arrange a voluntary liquidation with their clients, and to the settling of the accounts. Only two brokers were unable to fulfil their engagements, one with a deficit of 50,000 drachmae, and another with 300,000 drachmae.

On Wednesday afternoon, however, the panic subsided on the increase of prices of Government securities, and bank shares and foreign exchange became steadier, showing a slight decrease in value as compared with those of the previous week. Consequent upon this, a marked tendency to purchase exchange was noticed, especially in the sterling. The market has now resumed its normal activities.

The whole affair would appear to have been an exaggerated optimism with regard to the granting of a loan, the first news received out here being a definite statement to the effect that such a loan had actually been granted, and in view of this it was naturally concluded that the value of the Drachma would appreciate. When, however, more definite news came through as to what had actually transpired, it was realised that Great Britain had raised the financial blockade as far as she was concerned, and authorised financiers to grant a loan, to consist chiefly of purchases of goods of British origin and to the extent of 15,000,000 Drachmae. It was readily understood that Great Britain was only one of the three signatories to the financial blockade, and that without a similar raising of the blockade on the part of the other two signatories, no real appreciation in the value of the Drachma could result.

The New British Minister.

On Tuesday last by the mail steamer from Brindisi, Mr. Lindley, the new Minister for Great Britain to the Greek Government, arrived in Athens. The *personnel* of the Legation, the Consul-General for Great Britain, and the authorities of the port of Piraeus went on board to greet him. Later, accompanied by the *Chargé d'Affaires*, Mr. Bentinck, Mr. Lindley visited Monsieur Cartalis, temporary Minister for Foreign Affairs, and handed in his letters of credence.

A Catastrophe.

The Royal Hellenic Navy has had one of its finest ships temporarily put out of action as the result of an explosion caused by the mishandling of a bomb on the

T.B.D. 'Leon' whilst lying at anchor in the port of Piraeus.

According to the official *communiqué* issued by the Ministry of Marine, it would appear that at 10.45 a.m. on Wednesday, January 4, the explosion took place in the submarine torpedo compartment, resulting in the complete destruction of the stern of the vessel. The T.B.D. 'Ierax' and the cruiser 'Psara' anchored close by also suffered slight damage. Unfortunately several deaths were caused not only on board the 'Leon' but also on boats lying near, by the flying fragments, and also on the quay side. It is of course impossible to give the exact number of victims, but up to the present it has been ascertained that 17 officers and sailors were killed and 13 wounded. The number of civilian casualties is not known.

The funeral of the victims took place at the Piraeus on the following day. Amongst those present were Colonel Yanicostas, representing the King, Prince Paul, the Chief of the British Naval Mission to Greece, Admiral Smith, the Council of Ministers, the members of the British Naval Mission, and the Military and Naval Attachés of the Foreign Legations. Following the cortège were Greek, Roumanian and Italian bluejackets.

It is stated that the work of repairing of the 'Leon' will take at least two months, the expenditure being estimated at about 100,000 drachmae. Fortunately the boilers and most of the armament have not been damaged.

Greeks and Albanians.

It is reported that the Albanian Catholic Bishop, Fan Noli, who has installed himself in the Greek Metropole at Korytsa, has commenced expelling the Greek clergy. The Albanian Bishop has even seized and confiscated the property of Greeks. Teachers and professors of Greek schools and gymnasiums are said to have been compelled to resign and seek posts in Albanian schools. Parents who refuse to allow their children to attend these schools are prosecuted, and in general the situation of the Greek population is represented as insupportable.

The Commission of the League of Nations met the Delegation of the High Epirotes at Roulias, a small village on Greek territory, where a letter from the Metropolitan and a memorandum on the subject of atrocities and expulsions were handed to it.

General News.

Prince Christopher and Princess Alice have returned to Athens from Cannes and Corfu respectively.

King Constantine has received the Committee of the various political Syllogues, who presented His Majesty with the address which was published on the occasion of the anniversary of his return to Greece.

A general meeting of the Union of editors of Athens newspapers has decided to celebrate a requiem mass for the repose of the souls of journalists killed in the recent operations in Asia Minor.

BULGARIA.

Sofia, January 15.

A United Front.

It is the custom of the Bulgarian Journalistic Society to publish every New Year a newspaper, called *Le Journal des Journaux*, which discusses the most important question of the day. This year, Western Thrace was the subject selected, and the opinions of the leaders of the various political parties was given. Concerning the claim of Bulgaria to be granted free economic outlet to the Aegean Sea, there was complete agreement, and to a foreigner who has become accustomed to the continual party strife this unanimity was somewhat refreshing. The points of view of MM. Stambolisky, Gueshoff, Malinoff, Sakasoff, Kosturkoff, and Gnedaiëff, the chiefs of the Agrarian, Nationalist, Democrat, Socialist, Radical, and Liberal parties respectively, need not be dealt with individually, as they all tend towards the same end. They repeat the right of Bulgaria to have an economic outlet, and ask when the Allies will consider their claim. It is said that the Allies will hold

a conference on Near Eastern affairs at Constantinople in March, and that the question of both Eastern and Western Thrace may then be discussed. This will surely be a propitious moment for regulating this question of an economic outlet. Only a few days ago a wireless message from Athens announced that the Greeks were considering plans for the construction of a harbour at Dedeagatch, and as this port is named in the Second Treaty of Sèvres as being a possible outlet, the message is of some import.

Dedeagatch at present is worth very little, being an open roadstead which can be used only during two-thirds of the year; and even then lighters have to be employed. Its only advantage lies in the fact that the railway runs down to the water's edge. Nevertheless its geographical position renders it the most desirable outlet for Bulgaria, as the territory lying in the south-west corner of Bulgaria is the most fertile, and also contains the great majority of important industries which export their produce. Kavalla is the only alternative to Dedeagatch, but this port is in Macedonia, and at present the railway passes through Drama, a town some thirty miles inland, over the hills.

Choice of a Delegate.

Whether Bulgaria's outlet be at Dedeagatch, Kavalla, or some other port, it is necessary for her to take steps in order that, if she be given a chance of stating her case, she may state it clearly and well. Hitherto M. Stambolisky himself has always represented her at important Conferences, and it is probable that he will be the Bulgarian Delegate to the Economic Conference at Genoa. It is doubtful whether he will be able to absent himself again from Bulgaria to attend a Near Eastern Conference, always assuming that Bulgaria is allowed to attend. It is, therefore, a question of who should represent Bulgaria. The Agrarians are not rich in Ministers who speak foreign languages, and in addition they do not possess any men who have a real knowledge of foreign affairs. If Bulgaria is allowed to take part in a Near Eastern Conference, her point of view will have to be put forward with great tact and discretion. The Diplomatic Corps still counts a few professional diplomats in its ranks, chief among whom is M. Stancioff, the Bulgarian Minister in London; and it would be a wise step on the part of the Government if they were to consider the advisability of allowing one of these specialists to put forward Bulgaria's case. There are, of course, in Bulgaria several prominent politicians who possess the necessary requirements, but these men belong almost exclusively to the Opposition parties, and it is not likely that the Government would be willing to make use of their services.

Colonel Nicoloff Acquitted.

It may be remembered that Colonel Nicoloff, the kind benefactor of the British prisoners of war in Bulgaria, was arrested last September. According to information received from trustworthy sources, the charges at first levied against the Colonel stated that he was too pro-British during the war. Afterwards, following a petition made by the British Colony in Sofia to the Prime Minister, it was found that he was charged with other crimes. In any case, it is very gratifying to Colonel Nicoloff's numerous friends to hear that he has been completely exonerated from every charge, barring one, brought against him. The one charge refers to a Government mill, which he is alleged to have closed in order to benefit thereby a mill in which he himself held an interest. He was fined 40,000 levas (£70) on this charge, but he has lodged an appeal. It is significant that nearly all the witnesses who were due to give evidence against him failed to appear at the trial. Colonel Nicoloff has received many letters and telegrams of congratulation from his English friends.

General News.

The Democrats and Radicals engaged in *pourparlers* with the object of forming a Coalition. It is said that the Radicals insist on the point that the Nationalists should not form part of this Coalition.

There have been no new developments during the last

week in connection with the Government-Sofia University dispute.

At the end of January an Italian Chamber of Commerce will be opened at Sofia.

ALBANIA.

Tirana, January 15.

The Authors of the Ministerial Crisis.

The Chamber of Deputies has decided to form a High Court for the purpose of trying those responsible for provoking, by their *coup d'état* on December 7, the recent ministerial crisis. Those chiefly concerned are Hasan Prishtina, Hodja Kadri, and perhaps Mustapha Kruja also. The first two of the accused are deputies of the prefecture of Drin, which was occupied by the Serbs in 1921, and where for the legislative elections the votes of refugees had to be taken. The whole region has now been evacuated, the elections of the past year have been annulled, and new elections will shortly be held for the ten deputies to whom the prefecture is entitled.

The Budget.

The Chamber is engaged in warm discussion over the Budget of 1922. The general tendency is towards economy, as promised by the President of the Council himself, Jafer Ypi, when he sketched out his programme before Parliament.

Foreign Engineers.

The economy effected in the ordinary expenses ought to be set apart for works of Public Utility; for the whole country claims "reparations" and the establishment of the means of communication. To make an effective start to this work twenty-six engineers have been summoned to Albania, of whom fourteen are Austrian and twelve Italian.

Great Britain's Minister.

The nomination of Mr. Eyres as Minister Plenipotentiary of Great Britain has produced throughout Albania expressions of thankfulness, so loved and respected by all is the name of the new Minister. They remember with gratitude the courage with which Mr. Eyres faced the rigours of the climate when he inspected the regions occupied by the Serbs. Mr. Eyres had to make a report on his visit—and a detailed one, judging by the very sympathetic passages which Mr. Fisher read before the Council of the League of Nations on November 17.

The Recognition of Albania.

Following the five Great Powers who recognized *de jure* the Albanian Government in the session of November 9 of the Conference of Ambassadors at Paris, the Belgian Government has likewise recognised Albania. And following this example comes Roumania, who has just recognised officially the Albanian Consul who is at Bucharest.

Frontiers Commission.

The technical delegates who will demarcate the southern frontiers of Albania have been already designated. The British delegate is Colonel F. L. Giles; General Telini has been nominated by Italy; and Commandant Perret by France. The Commission meets at Paris on the 18th inst., and at Florence on the 25th inst., for the purpose of studying certain documents concerning the Albanian frontier which are in the possession of the Italian Government. Thereafter the Commission will come on to Albania, where its arrival is eagerly expected.

The Albanian Orthodox Church.

As I have mentioned in an earlier letter, the Albanian Orthodox Church is to be made anotonmous—an autocephalous Church. Fan Noli, the Albanian bishop, whose diocese up to the present has been in the United States, is now at Kortcha, where he is engaged in organizing the Orthodox clergy. Already Divine Service is conducted in the Albanian language throughout the prefecture. These steps on the part of the Albanian clergy should not give rise to any complications, but should help to smooth away some of the difficulties that surround a very thorny question which threatens to disorganise the Œcumenical Patriarchate of Constanti-

nople. The Albanians remain outside the struggles that have begun at the Phanar, having decided to break away from the latter.

TURKEY.

Constantinople, January 10.

The Conference of Cannes.

In connection with the Conference of Cannes and the Allied scheme for the re-establishment of peace in the Near East, it is a striking fact that the Turkish Press generally is apparently attaching little importance to the project. It is as if it were a foregone conclusion that the attempt to restore peace will be a failure like the Conference of London in March last year. If sentiment be disregarded, and facts alone considered, it will be realised that the Turkish Press has very good reasons for its attitude. Mustapha Kemal himself, and most of the leaders of the Angora Government have emphatically stated that they cannot even discuss the slightest modification of the National Pact. If further confirmation were required, it has been provided by the conclusion on January 2, of a treaty between the Angora Government and the Ukraine Soviet Government. Article 4 of that Treaty is practically identical with Article 5 of the Russo-Turkish treaty concluded in Moscow on March 16, 1921, which provided for the settlement of the Straits question by the States bordering upon the Black Sea. As has already been pointed out, while it may be a matter of indifference to the Allies what particular flag flies over Smyrna, the Straits question is a matter of very great importance indeed. Hence the real problem, so far as the Allies are concerned, is not the territorial question at issue between Greece and Turkey, but the Straits question at issue between the Allies, particularly Great Britain and Russia. The issue has once again been made clear upon the eve of a conference convened by the Allies for the purpose of restoring peace, and once again Russia has proclaimed that the only road to permanent peace lies through Moscow.

The Constitutional Conflict.

The attention of readers of *The Near East* has been drawn on more than one occasion to the importance of the conflict between the Angora Government and the Imperial authority. It would appear that this conflict, which fell into abeyance during the Greek offensive, has once again been revived. The deputy for Mersina, Selaheddin Bey, recently introduced a bill for the reformation of the Angora Government on the lines of responsible parliamentary government as existing in Europe and America. This bill, as a result of Mustapha Kemal's personal opposition, was rejected by the Great National Assembly, and the Angora Government is elaborating a project of its own, which the Assembly will be asked to approve. As the scheme is being drawn up by representatives of the majority in the Assembly, there is little doubt that it will become law, so far as Anatolia is concerned. Little is known concerning the details of the scheme, but its general principles provide for the abolition of the administrative prerogatives of the Sultan. When moving the rejection of the measures mentioned above, Mustapha Kemal made a speech which lasted four hours, and in terminating he clearly foreshadowed the intention of the Angora Government to abolish the authority of the Sultanate. He stated that the Great National Assembly was in no sense a provisional assembly, nor were the laws it had promulgated, provisional measures; the people had acquired complete sovereignty and could only be deprived of that sovereignty by the means used to secure it. In these circumstances it will be interesting to see how the Central Government will act in regard to the formation of the delegation which will be invited to represent Turkey at the forthcoming Conference. The Angora Government maintains most emphatically that the Central Government has no right whatever to speak on behalf of the nation, since the Angora Government is the sole and supreme legal government, and there is every indication that this attitude will not be modified in any way.

CYPRUS.

Nicosia, January 9.

The Chief Justice.

No Chief Justice during the period of British rule has enjoyed to a greater extent, and deservedly so, the sincere esteem of the people of Cyprus, than the present Chief of the Judicial Department, Sir Stanley Fisher, who, has recently received the honour of Knighthood. An interesting ceremony took place on January 3, in the High Court of Nicosia, when the British, Greek, and Turkish Judges, the King's Advocate, and the members of the Bar, assembled to express their gratification and offer their congratulations. Sir Stanley was addressed by the King's Advocate, M. P. Constantinides and M. Th. Theodotou. The speech of the latter, which was warmly applauded, was as follows:—

"My Lord, H.M. the King of Great Britain, through the title which he has bestowed upon you, has awarded honour in your person to British justice, on account of which the British nation may justly pride itself. British justice is one of the pillars which uphold the British Empire; and those ministers of justice who convincingly and scrupulously carry out their duties render great services to their country. But apart from the honour which has been justly conferred upon you, know that you possess another, and no less honourable distinction, namely the unanimous and unqualified esteem of the Cypriot people, on account of the assiduity, integrity, and impartiality with which you carry out the high duties of your office."

Sir Stanley, who was much moved, expressed his warm thanks.

General News.

A feast has been celebrated at a Greek Club, the "Love of the people," in honour of M. N. Katalanos, who was expelled from Cyprus last year, for seditious conduct, and who is now at Athens. An Abbot, professors, and others were present. Speeches were made, and a poem by a Greek bard was recited. Telegrams of greeting were sent by the Club, the Committee of Education, editors of papers, and other admirers.

The High Commissioner is not likely to proceed to England before February or March.

On January 2 a fire broke out at Government House, but it was extinguished before much damage had been done by servants and police on the spot.

The export of olive oil is now allowed.

THE EVACUATION OF CILICIA.

(From An Occasional Correspondent in the Levant).

As far as it is possible to judge of the situation from this rather distant point of observation, it is already being realised in France, that the Franco-Turkish Agreement was the outcome of short-sighted political opportunism. The ostensible reason given in the official version, that is the alleviation of an intolerable military burden, serves but to emphasize the political myopia of the authors, inasmuch as it betrays a weakness that even a second rate Power would have striven to cover at any cost. Great Britain, though distracted by many formidable problems at home and abroad, stoutly resisted the clamours of a section of the Press and of a faint-hearted opposition for the complete withdrawal from Mesopotamia on the mere ground of economic expediency; because she felt she had no right to abandon to its fate a country that she had just liberated, and which had not had sufficient time to organise its defence against a dangerous hostile neighbour. But the position in Mesopotamia bears no comparison with that of Cilicia. In her recent action there, France has completed her moral bankruptcy in the East.

If, however, the alleviation of the military burden were but a pretext, and the real reason was the dealing of a counterblow to England by setting up Kemal against Faisal, it constitutes a still greater proof of the inanity of such policy. England, whose interests in the East far outweigh those of France, must have been

feeling seriously incommode by the Anglo-French Agreement that she had to conclude under the stress of war; and nothing could have given her greater reason for rejoicing than to see France, by an incomprehensible political "gaucherie," set her free from the moral chains of such a highly inconvenient entente. France is beginning to awaken, perhaps too late, to this immeasurable blunder, and it is amusing to see how she is now trying to retrieve the fatal step.

The fact is that French policy, in both Syria and Cilicia, was a tangled mass of contradictions, and the Franklin-Bouillon pact has only set the seal to such a policy in Cilicia. In Syria French policy has been vacillating between the Christians, the Druses, and the Moslems, with the inevitable result that, by taking up and dropping each of these elements in turn, France has lost the sympathy and confidence of all. In Cilicia it has been oscillating similarly between the Greeks and Armenians and, latterly, the Turks, with the self-same result.

The account of refugees from that unhappy region reveals the hardly credible fact that the panic was in great measure caused by French officials themselves. Some, through a real sense of chivalry and humanity that could not tolerate the shedding of French blood in vain, and the betrayal of the sacred trust of the lives of Christian populations; and others in the hope of retaining their high salaries and the opportunities of making handsome profits, egged on the Christians to threaten a wholesale exodus, hoping thereby to force the hand of the Government, and to stop the evacuation. It was, however, playing with fire. The feelings of the Christians were already in a highly inflammable state, and the result has been the utter ruin of that once rich province. Even many of the non-Turkish Moslems of Adana, and most of the Moslem Fellaheen of Tarsus, who had been made to demonstrate for the French and to sign petitions begging for their mandate, have taken to flight, through fear of eventual Turkish vengeance.

Some idea of the economic dislocation and loss that resulted from the evacuation is given by the fact that out of 17 industrial establishments at Adana (flour mills, ginning, spinning, and weaving factories), two or three only, owned by Turks, remain working; and that all the commercial houses of the Greeks, who dominate the trade of the country, and the majority of the Armenian firms are closed down. At Mersina one big flour mill, two ginning factories, and three or four cottonseed oil presses, as well as all the workshops and little foundries run by Armenians are said to have closed down. At Tarsus one big spinning and weaving works owned by a Greek, and four or five ginning factories are said also to have closed down. There remains a weaving works owned by an Egyptian.

The Banque Française de Syrie, having, according to report, advanced amounts estimated at between 300,000 and 400,000 Turkish pounds against goods stored in the merchants' own warehouses, has been able as a French firm to get orders for the refusal of passports to those merchants who had received advances against such goods. In spite, however, of this precautionary measure, the Bank, will it be feared, sustain some loss in this connection. The foreign banks in Cilicia have by the wholesale exodus of the Armenian and Greek populations, been suddenly faced with the difficulty of the depletion of their staffs, most of their *personnel* having been recruited from among these two elements, especially the Greeks. 25,000 tons of cotton goods, rice, sugar, etc., are said to have been shipped from Mersina to Smyrna, Constantinople and Beyrout.

Adana is said to be practically depleted of its Christian inhabitants. The population of this town was formerly estimated at from 60,000 to 70,000 souls. Since the Armistice there was such a large influx of Christians, especially Armenians, that the population has almost doubled; but since the order of evacuation it has suddenly dwindled to about 30,000. This large deficit is, however, being slowly covered by the influx of Turks. Even some of the Moslems of non-Turkish origin and many of the officials who have served under the French have left Adana.

A letter from Mersina conveys the interesting and significant item of news that the Turks, who are now in control of all the administrations save the passport office, and who have hoisted the Turkish flag in the town, are preventing postal communication with Palestine and Egypt. Another letter says that the Post Office now is in a fearful muddle. France may soon discover that the Young Turk is a very awkward ally, addicted to the commission of follies for which she may have to stand the consequences.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

"UN NAVIRE ANGLAIS EN CILICIE."

To the Editor of "The Near East."

Sir,—It is now almost a year since you did me the honour of publishing one of my letters in your interesting and valuable paper, and I feel it my duty, on account of an article published in the *Matin* of December 2, under the above heading, to trespass again on your courtesy. I think that infantile tirades of this kind in the present state of feeling between us and our Allies should be discouraged by all liberal minded men both French and English. But as I am particularly mentioned in the article in question, it is only right that I should have an opportunity of replying. The article in question illustrates the petty jealousies which have all along characterized the attitude of a small clique of Frenchmen, with regard to their alleged rights and interests in Cilicia.

As a matter of fact, beyond a few religious educational establishments, which before the war were not officially acknowledged by the French Government, the French have no interests in Cilicia, unless that pernicious 1916 Agreement made between M. Picot (who was born in Constantinople) and the late Sir Mark Sykes under circumstances never yet brought to light, can be called an interest. The writer of the article has been badly misinformed as to the number of British subjects in this province, for as a matter of fact they number some forty or fifty, or did when I left; and on the contrary, there are actually only three Frenchmen who are residents there, one of whom is a Levantine while the other two are married to Armenian wives. Only one owns any property; the others have only the property of their wives, who are Turkish subjects in the eye of the law of the country.

The French Government however, have one big right in Cilicia which we hope will not be overlooked: the right to make good the terrible devastation caused by their occupation of a once rich province. The beginning of this duty they have already performed by withdrawing their army and handing over to the former owners.

By the Angora Agreement the French have wisely altered the boundary of Cilicia and Syria to very near its original and ethnological position, and thus restored to the Turks one of the richest parts of the province of Adana, inhabited almost entirely by Turks. This also is an act of justice which I am sure will be rightly appreciated.

It seems a thousand pities that we could not have come to some arrangement with France in the beginning of the Armistice, whereby we could have handed them Palestine in exchange for the Mandate for Cilicia. France would have then had a compact territory to develop and organize, and we could, I feel sure, have come to some sound arrangement with the Turks, whereby we could have helped them to reorganize their country and settle down after the upheaval of the war. I am convinced that an arrangement of this kind, would have

been acceptable to the Turks ; in fact, they would have welcomed it. If this had been done, a battalion of British troops in the capital of each Vilayet for a few months until the Turks got settled down and demobilized, would have been all that was necessary and not a drop of blood need, or would, have been shed.

It must have been obvious to our Government at the time of the Armistice, that a beaten Turkey could not possibly re-arrange her Government and settle down without some outside advice and practical assistance, and at that time the whole of the Turks with the exception of a few members of the C.U.P. practically brought up in Germany were ready and longing for some sort of temporary British control, as they were disgusted with the iniquities of the few who dominated the old Government and exploited the country for their own and Germany's profit. I was convinced at the time that our Government knew this and would act accordingly ; but as time went on it became apparent that this was not so. Thus, this fine opportunity of creating permanent peace with Turkey, and securing the punishment of the real culprits of the War, was allowed to escape us, and by unreasonable delays, by the occupation of Cilicia by the French with Armenian levies, and the subsequent atrocities on unarmed and innocent Turkish families the maladministration and persecutions of those who for the present shall be nameless, and by open statements that Cilicia would be Armenian, suspicion gradually crept into the minds of the Moslems. Next followed the Greek occupation of Smyrna and the subsequent regrettable incidents, and then the occupation of Constantinople.

The whole country was then convinced of the sinister motives of the Allies, and there were not wanting those who assisted and propagated this belief ; and the sequel is what we see it to-day ; and it will remain as it is, or get worse, unless we can see things in the proper perspective and alter our policy of attempted coercion.

Let our Government follow the wise lead of the French and hold out the hand of friendship to the Turks ; acknowledge the Kemalist Government, which is the only Government in Turkey to-day with any power of organization ; be generous and sporting to a beaten nation whom they have all along misunderstood ; and try kindness for the sake of humanity and the sake of the hundreds of thousands, perhaps millions, who will have to pay the penalty of a harsh and uncompromising attitude towards a fine race of fighting men.

I am, etc.,

PERCY CHRISTIAN.

Famagusta, Cyprus, January 4.

(The article in *Le Matin*, to which Mr. Christian refers, announced that a British warship was being despatched to Mersina, and added, ironically, that it had been assured that this move did not mask any warlike intentions, and had no aim save the protection of British subjects in the Adana Vilayet. It went on to state that according to its own information there were only three such subjects in all in the region referred to. These three are then described as : Mr. Percy Christian, the holder of a forest concession in the Taurus, who had withdrawn to Cyprus a year earlier ; N. Rickards, son of a Turkish father and an English mother ; and Kasim Bey, an Egyptian who was on the best of terms with the Turks. The British bluejackets, therefore, *Le Matin* suggested, would have an easy task : the defence of the memory of two British subjects and of a Turcophil Egyptian. It concluded its extraordinary note by expressing the hope that our sailors would not, in order to kill time, take any other burden on themselves.—Ed., N.E.)

THE INDIAN MUSEUM.

To the Editor of "The Near East."

Sir,—The Indian Section of the Victoria and Albert Museum, housed in the eastern wing of the Imperial Institute, has an influential Committee headed by Sir

C. McLeod, a Deputy Keeper with Assistant, and a full staff of attendants. Yet nothing whatever is done to popularise its contents ; and it is quite unknown to the public. Visiting the huge building on a fine Saturday afternoon, I found a dozen people wandering aimlessly through a succession of halls filled with magnificent specimens of manual arts and crafts. No official was present, to explain the marvels exhibited in exhaustless profusion. In the Natural History Museum small parties are personally conducted through the various departments, and listen with keen interest to lectures describing life in its myriad forms. It is surely of equal importance to give the British public some idea of the arts and crafts in our great dependency. The example set by the authorities in Cromwell Road might well be followed by those of the India Museum. If the Deputy Keeper's time is fully occupied, this cannot be said of all the members of the Committee. I suggest, therefore, that they should take turns in serving as cicerones on Saturday and Sunday afternoon.

I am, etc.
F.H.S.

January 19.

MUSICAL NOTES.

GRAMOPHONE RECORDS.

Before coming to the directly popular kinds of record which "His Master's Voice" Company have sent me, I must mention one or two the merits of which I am more confident in appreciating and upon which there was no space in the last two weeks to remark.

A record that is to be treasured is the Elman String Quartet in Mozart's Quartet in E. Flat. It is a beautiful piece of playing, perfect alike in sense of tone-gradation and in finish, and will be a delight to the ever-increasing lovers of Mozart.

Mischa Elman, a fiddler known in England as well as anywhere else, has an excellent record in an arrangement by himself of Beethoven's "Country Dance." It contains a few tricks dear to the modern technician of which Beethoven himself would perhaps not have approved, but it is a most distinguished piece of playing. The irresistible verve and individuality in the use of *rubato* so characteristic of Elman, are here in abundance, and the record is a most attractive one.

One of the most charming of all these records is the double-sided one containing arrangements for 'cello and pianoforte by Cedric Sharpe of two old English airs—"The Ivy Green" and "Under the Greenwood Tree." Mr. Sharpe's beautiful tone is perfectly reproduced ; his arrangements are chaste and apt ; the tunes are both delightful ; and the soloist himself poises the graceful melodies exquisitely.

Miss Marjorie Hayward is a sensitive fiddler, and she has here a record of two pieces which peculiarly suit her temperament—Cui's "Berceuse" and a "Slumber-song" of Haydn Wood. The first was originally written for pianoforte alone, but, like some of Chopin's nocturnes, it gains by being arranged for violin and pianoforte. Miss Hayward plays it with very delicate purity. The second is a pleasant enough trifle, but it is rather short-breathed, and there is poverty of idea in the pianoforte accompaniment.

A record certain to attain that popularity which to me is inscrutable is that containing two songs by Edna Thornton—the traditional Irish "I know my love" and Hamish MacCunn's "Lie there my lute." Mme. Thornton is, of course, a fine singer, but though her first song is clear, it is for me too arch and broken in line ; and though the second is well sung, it is a poor composition, with a painfully unoriginal accompaniment.

Finally, there is the record containing Handel's "Revenge, Revenge," and "The Mahogany Tree," both sung by Robert Radford, the English bass. The first is a spirited and clear piece of singing, but not very notable ; and on its back is an amazing consort. This song, by Herbert Sharpe, is the ordinary type of ballad,

full of routine movement, and full of *clichés*. The prominent accent of its triple time keeps its impulse dutifully, but it is a strange partner to Handel. It should be noted that, like so many of the poorer types of song, this song has a chorus, which on the record is sung so thinly and poorly that one wonders whence its performers were gathered.

Popular.

I now approach, with some hesitation because of my plain ignorance on the subject, and with a sense of rather irresponsible fun, the popular records, which consist mainly of dance music, military band music, shop-ballads, and music-hall ditties. Of all the list of records now under consideration I certainly prefer the first and last types.

All the records hereafter mentioned are double-sided, and when two pieces are named together, it means they are on the same record.

First of all we take the things played by the "Queen's" Dance Orchestra. Two waltzes—"Sweet and Low" and "Silver Star"—are neither of them very attractive; the first has a common tune and is poorly orchestrated, and the second, though it is better played, has also no variety in its instrumentation. A better record is that containing two one-steps—"The Bull-Frog Patrol" and "Come Along," for in the first are most intriguing little tumbles in the melody, and moreover, all the instruments are worthily busy. It is consistently effective. The second is played well, but it is really much ado about nothing. Variety is the soul of the Fox-trot, and it is the neglect of the axiom that makes "Beautiful Faces" monotonous; in its partner, however, a One-step called "Why?" there is much better stuff in the filling-out parts, and the way in which the tune is tossed from one instrument to another is quite attractive. The best record (I am not speaking now from the point of view of reproduction) of this orchestra is that containing "Circulation Waltz" and "Gossiping Fox-trot." The first is a really excellent dance, extremely well-played, with an un-hackneyed and continuously onward movement: the Fox-trot is effective in parts, but at other times is mediocre.

In my opinion the best of these Dance Orchestras is the Benson Orchestra of Chicago. They have two records here containing "My Sunny Tennessee," a Fox-trot, and "Ma," a one-step; and "Tuck me to sleep in my old 'Tucky home," a fox-trot, and the "Wabash Blues," another fox-trot. The band plays with most extraordinary slickness and raciness, and is frankly exciting. The first is a simply topping tune, with a most appealing middle portion for fiddle and pianoforte alone, and such perfection of discipline as ought to

make the delights of its almost original syncopation known as far as the ball-rooms of Baghdad. The kick and verve of these two pieces are irresistible (until of course repetition stales, as it will all such things as we are considering). And in the other two fox-trots there is an engaging variety in the instrumentation, while the way in which the melodies are drawled out and slurred is genuinely amusing.

In the same category, but not in the same class, are the two records made by Paul Whiteman and his Ambassador Orchestra. "Have you forgotten?" a medley fox-trot, is a sentimental tune relieved only by the cleverness of its treatment, but its partner, "Second-hand Rose," a fox-trot, contains very pleasing syncopation. The other two fox-trots,—"Sweetheart" and "In a boat" lack freshness and spice generally.

Another not very exciting record is that made by Eubie Blake and his Shuffle along Orchestra, with a one-step, "Bandana Days," and a fox-trot, "Baltimore Buzz." Next to getting a good tune the most important thing is to provide interest in the padding, and neither of these pieces avoids monotony in this respect.

The three military band records are made by the Coldstream Guards and contain respectively "Corinella" (by Markham Lee) and "Fragrance-Entr'acte"; "Jolly Boys" and "Christmas Gems"; and parts of Offenbach's "La Vie Parisienne." The first is commonplace and academical in conception, and, too, a tendency to *rallentando* is sadly over-indulged; while the second, though well-performed, had but one idea. The second record would make anyone ignorant of the potentialities of the military band wonder what musical value it can have. Pot-pourri is well enough in its way, but it satisfies only the superficial.

In praise of ballads I am going to say nothing, because, as my readers well know, I believe them to be the curse of England; but I will jot down a few notes on the records containing them. In "The Call" and "The Street of Quiet Windows," both sung by the lady-tenor, Ruby Helder, there are all the stock-in-trade tricks. Of "Roadways" and "The Sun-God," sung by Peter Dawson, one can only say that the first is very Hermann Löhrish, and the second, by W. G. James, is pseudo-oriental, with a parade of force and no reality. But either of these songs is preferable to "The Haunted Gardens" and "A Japanese Love-Song," sung by Ruby Heyl, which have no distinction whatever from any point of view. "Starshine" and "Tea Leaves" as sung by Walter Glynne are very dull; and the only really distinguished record of all these ballads is that made by Carmen Hill in "At Parting" and "Oh, promise me." This mezzo-soprano has a delightfully pure and clear voice, and though she here sings for effect, her methods are justified. From the ballad point of view this last record is an excellent one.

Andante.

NEWS IN BRIEF.

"Spanish" influenza has broken out in Constantinople.

One result of the persecutions to which the Christians belonging to the old Assyrian Church have been subjected has been a considerable increase of these Christians in the United States. Some attempt is being made to minister to their spiritual wants in the new country to which they have gone. The Bishop of the Assyrian-Nestorian Church in Mesopotamia recently ordained six candidates to the priesthood in St. James's Church, Chicago. There are 10,000 Assyrian-Nestorians in America.

Further investigations in Ceylon coastal waters have led to the discovery of new pearl oyster banks between Negombo and Chilaw.

At the suggestion of the Government of Palestine, a "Palestine Promotion Society" is to be formed for the purpose of fostering the tourist traffic and improving and extending hotel accommodation and means of transit.

The *Sudan Times* reports that Mek Kwal Rob, chief of the Dinka tribes on the Bahr el Arab, south of Kordofan recently paid a visit to Khartoum. This was the first visit he has made to the capital, and he was much pleased with what he saw. He was received by the Governor-General before returning to his country by way of Kordofan.

It was announced in Paris last week that the Ambassadors' Conference had approved the instructions given to the Allied Commissioners, who are to delimit the frontiers of Albania.

A NATURALIST IN CENTRAL AFRICA.

"OUT OF THE WORLD—NORTH OF NIGERIA. EXPLORATION OF AIR." By Angus Buchanan, M.C. (London: Murray, 16s. net.)

Captain Buchanan made the expedition of which he gives an account in this volume on behalf of Lord Rothschild in order "to link up the chain of Zoological Geography across that portion of Central Africa which lies between Algeria in Northern Africa and Nigeria in West Africa." For nine months, from January till September 1920, he explored, travelling without any European companion from Kano through French Nigeria and the deserted mountain region of Air and back again, and secured many specimens of animals, birds and insects which were new to the Zoologist. The chapter in which he explains his methods of finding, stalking, shooting, and then—before many hours of the desert heat has passed—skinning and setting his specimens, gives a clear idea of a task requiring a very high degree both of skill and endurance. He gives interesting descriptions of the French forts where he rested on his journey to the North. Zinder, where the country begins to be desolate and the population scanty, is 140 miles from Kano. Near Tanout, 85 miles farther on, he camped in a belt of country where ostriches are found, and tried in vain to shoot one, with the assistance of an aged native, a famous local hunter. Aderbissinat, besides protecting the caravan route, guards a precious store of water. Here the bush ends and the true desert begins and the inhabitants of Air—the Tuaregs—claim it as the beginning of their country. Travelling through the desert from Aderbissinat to Agades, Captain Buchanan suffered from fever, and it was with relief, and after a great effort that he reached Agades, and was met by the officers stationed there with the hospitality which he found in all the French forts. We are shown Agades very deserted, very far in the wilderness with the primitive structure both of the Sultan's "palace" and the European officers' mess-room. It is difficult to obtain supplies so far away from civilisation, and it was said to Captain Buchanan of the Sengalese troops and of their officers "We have men there who are strong; but oh! they are not fat."

Between Tenout and Agades, a distance of 169 miles, there is no native village. From Agades the low foothills of the mountains of Air are visible and the explorer set out from there in the company of the Chief of Baguezin, leaving a great part of his baggage behind. The country changed gradually from the sand of the Sahara to "brown-grey rock" and after making many difficulties the Chief, Mineron, led him over the Pass to the mountain stronghold of Baguezin. The hunting over the precipitous rocks in which the author took part with Mineron was dangerously exciting, and on his return journey he was amused to hear that the Chief had described him as climbing the rocks "like the Ragindouchi (wild sheep)."

Leaving his camp equipment at Baguezin, Captain Buchanan spent fifteen days exploring Northern Air. After Timia, which he found beautiful and where he saw signs of rare industry among the inhabitants, he found the country absolutely barren and empty. He could find no definite explanation of the deserted villages, with "confident gazelles resting in the street places," which give such an added air of sadness to the land. At Assodé, the most northerly point reached in this expedition, there is a ruined mosque, containing a great store of Mohammedan literature. The danger to life in these parts was shown by the fact that when Captain Buchanan and his native followers returned to Timia, they found that it had been raided by a band of robbers, who had made off with the camels and left several of the inhabitants wounded. On the return journey south from Agades the rainy season had begun, making a great difference in the appearance of the country. Only one of his native followers, the faithful John, remained with him all through the expedition. He was engaged at Lagos, and at Lagos with tears in his eyes he saw his master sail away.

The snapshots illustrate the story well; we particularly like the one showing some wild men whom the author saw in Northern Air. There is a list of new species and subspecies discovered during the expedition.

We recommend this book to all who are interested in stories of travel. It is a straightforward account of a difficult and solitary undertaking perseveringly carried out—and it is not only because Captain Buchanan tells us that he and his camels travelled for over 1,400 miles, that we are left with a vivid sense of the vast distances and boundless empty spaces of the Sahara.

GEORGIA AND THE BOLSHEVISTS.

"LA GEORGIE SOUS LA DOMINATION DES ARMEES BOLCHEVISTES." (Paris, Octobre, 1921. Edition de la Presidence de l'Assemblée Constituante de la République Georgienne.)

This pamphlet is a damning indictment of Bolshevik imperialistic methods, and is not spoilt by an excess of propaganda. After a brief period of freedom of three years, when the Georgians, richer in theory than practice, applied the boldest experiments in socialism, their fair country was overrun by the Bolsheviks, whose scorpions are more fierce than were the whips of the Tsarist régime.

There is the familiar picture of utter suppression of liberty of any sort, of loot, rapine and devastation, of a cruel and crushing bureaucratic tyranny, of destruction of national life, of a virtual destruction of industry, of famine and disease.

All labour is conscripted. Between March and July 1921, prices rose from 5,000 to 10,000 per cent: the daily wage is 1,000 roubles, which is the price of 50 grammes of bad bread, less than that of an egg, while to earn the price of a pair of shoes would take three years. There is an absence of almost all commodities, and especially of medicines, for almost everything has been removed to Russia, including almost the entire railway stock, both rails, locomotives and trucks, of the country.

It is a military tyranny naked and unashamed, which in a few months has reduced this rich country to a desert.

SUDAN DIRECTORY.

We have from time to time wished for a Sudan Directory, and at last the wish is gratified. The Sudan Advertising and Publishing Company has produced the first Directory ever published in the country, and, we are glad to say, has produced it very well. The volume contains over 700 pages, is well printed and strongly bound; and as far as we have been able to test it at this distance, appears to be trustworthy and helpful. The system of tag-indexing certainly simplifies the task of running a reference to ground, so to say; and the information contained is varied and useful. In addition to the names and addresses of the ordinary directory there are sections dealing with Administrative Ordinance and Regulations, Health, Irrigation, Railways and Steamers, etc., etc.

BOOK RECEIVED.

"The Sudan in Evolution: A Study of the Economic, Financial and Administrative Conditions of the Anglo-Egyptian Sudan." By Percy F. Martin, F.R.G.S. With a Foreword by General Sir Reginald Wingate, Bart., G.C.B., G.C.V.O., etc. (London: Constable and Co. 42s. net.)

January 26 (New Style).

January 13 (Old Style).

Gumada I, 28, 1340 A.H. of the Moslem Calendar.

Tibet 26, 5682 of the Jewish Calendar.

Mr. and Mrs. Malcolm Arbuthnot have left Mentone for Algiers.

Prince Nicolas of Roumania returned to town from Norway last week.

Brigadier-General A. Asquith and the Hon. Mrs. Asquith have left Cairo for the Sudan.

Nasserol Molk, ex-Regent of Persia, has arrived in London from France.

Lieut.-General Sir John and Lady Du Cane have come back to town from the Riviera.

Mr. Alex Devine has returned to England from Italy and the Riviera.

Sir Arthur and Lady Crosfield have returned to London from Switzerland.

M. Boeresco, Roumanian Minister in London, has arrived in Paris.

Lord Oranmore and Browne and the Hon. Dominick Browne have returned to London from Dublin.

Mrs. F. W. Hughes, of Sydney, N.S.W., has arrived from India per steamship Mantua, and is staying at the Knightsbridge Hotel.

Mr. H. A. MacMichael, D.S.O., Assistant Civil Secretary, arrived in Khartoum on January 2 on return from leave.

M. M. B. Gavrilovitch, Attaché at the Yugoslav Legation, and Mme. Gavrilovitch have taken up their residence at 20, St. George's Court, W.2.

A marriage has been arranged, to take place shortly, between Captain J. C. Williams, Co. Kildare, Ireland, and Mafda Gordon Canning, only daughter of the late F. W. Gordon Canning, of Pursa, Chumparun, India.

The Aga Khan, who was unable to continue his journey to India in November owing to ill-health brought on by an accident, embarked for Bombay in the P. and O. mail steamer Macedonia at Marseilles on January 20.

Lady Brownlow and the Hon. Sarah Cust have taken their departure for Gibraltar, where they will be joined by Lord Brownlow, who is the guest of Admiral Sir William Nicholson in his Majesty's ship Barham.

The Earl of Lytton, Parliamentary Under-Secretary of State for India, has left London for Murren, Switzerland. He will return to England in the first week of February, and will leave Marseilles for India on March 10 to take up his duties as Governor of Bengal.

An engagement is announced between Humphrey Bateman Moore, youngest son of Dr. G. E. Moore, Redcroft, Maidenhead, and Dorothy Norah Stringfellow, eldest daughter of Mr. and Mrs. H. P. Stringfellow, Claremont, Exmouth, and Bombay.

The engagement is announced between Thomas Anthony Freston (17th Cavalry and I.C.S.), elder son of Mr. H. W. Freston, Oakleigh, Alderley Edge, and Winifred Reynolds, younger daughter of Mr. and Mrs. W. G. Reynolds, Longview, Harrogate.

The marriage was celebrated on January 19, at St. Paul's Cathedral, Valetta, Malta, between Arthur Gordon Kekewich, of the Royal Garrison Artillery, and Eileen Mary (Mollie), daughter of Mr. and Mrs. Arthur D. Thorpe, of Hastings.

The King has granted licence and authority to Mr. A. Houtum-Schindler to wear the decoration of "Second Class of the Order of the Lion and the Sun (Persia)," which was awarded for "valuable services as 'Directeur de la Caisse Centrale de la Trésorerie Générale' at Teheran."

The relatives in London of Colonel Dodge, D.S.O., who was arrested by the Bolshevik Extraordinary Commission at Batoum on December 9, have received a telegram stating that Colonel Dodge has safely reached Constantinople, and was to leave for England by train not later than January 25.

Among those who left London on January 19 by P. and O. express for Marseilles, there to embark in the P. and O. steamship Macedonia, were the Earl and Countess of Carnarvon and Lady Evelyn Herbert for Port Said, and Sir Percy and Lady Newson and Sir Henry Belfield for Bombay.

Mr. Montagu, Secretary of State for India, will preside at a meeting of the Indian Section of the Royal Society of Arts to-morrow afternoon, January 27, when a paper on "The Timbers of India and Burma," by Mr. Alexander L. Howard will be read. The chair will be taken at 4.30 o'clock.

The engagement is announced between Beryl, daughter of Colonel J. S. E. Western, C.B.E., late Punjab Cavalry and General Staff, and of Mrs. Weston, and Lieutenant Thomas Murray Oswell, Royal Navy, son of Commander T. J. Oswell, Royal Navy, and Mrs. Oswell, of Warren, Hombury St. Mary, Surrey.

Mrs. Carey Evans, elder of the Prime Minister and Mrs. Lloyd George, concluded her visit to her parents last week, and left the Premier's official residence in Downing Street for her return journey to India. Mrs. Carey Evans, with her two little girls and their nurse, sailed from Tilbury, on January 20.

Reuter's Agency learns that M. Gounaris, the Greek Prime Minister, who returned to London from Cannes on January 15, expects to leave here in a few days for Athens via Paris, where M. Baltazzi is staying at present. M. Gounaris is here in connection with the loan of £15,000,000 recently authorised by the British Government to be privately raised in this country, and negotiations are now proceeding.

APPOINTMENTS AND PROMOTIONS.

The King has appointed the High Commissioner for Irak (Major-General Sir Percy Zachariah Cox) to be Commander-in-Chief as well as High Commissioner.

His Majesty has given directions for the appointment of Mr. William Thomas Porter and Mr. Gaulterus Stewart Schneider, K.C., to be Puisne Justices of the Supreme Court of Ceylon.

The *Sudan Times* announces that Mr. R. Wedd, Assistant Director of Lands, has been appointed Advocat General in place of His Honour Judge N. G. Davidson, at present in Baghdad.

As reported in our Tirana letter this week, Albania was recently recognised by the Roumanian Government, and Mr. Basile Lazarides-Dogani (former Under secretary of State in Albania in 1914 and now Secretary of the General Direction of the Banque de Crédit Roumain) has been appointed Honorary Consul of Albania in Roumania. The Albanian colony in Roumanian is an important one, and there was great need of a Consulate.

It is announced that Mr. Clarmont Percival Skrine, Assistant Political Agent in the Chagai district of Baluchistan, has been appointed Consul-General at Kashgar, Chinese Turkestan. Mr. C. P. Skrine, son of Mr. Francis H. Skrine, the distinguished writer and reviewer, entered the Indian Civil Service in 1911, and has been Vice-Consul at Kerman, Consul for Kerman and Persian Baluchistan, and in 1919 was an Under-Secretary to the Government of India in the Foreign and Political Department.

Captain Henry D. King, C.B.E., D.S.O., V.D., M.P., Royal Naval Volunteer Reserve, has been appointed a R.N.V.R. Aide-de-Camp to the King, in the place of Captain the Duke of Leeds, A.D.C., Royal Naval Volunteer Reserve, resigned, to date January 2. Captain King gained the D.S.O. for his distinguished and gallant services with the Royal Naval Division in the Gallipoli operations. He was twice mentioned in Sir Ian Hamilton's despatches, and highly commended for his work during the period of General Sir Charles Monro's command from October 1915, to the evacuation in January, 1916.

OBITUARY.

The death has occurred of Colonel John Biddulph. Colonel Biddulph at the age of eighteen joined the 19th Hussars, and nearly the whole of his military career was spent in India. He served in the Indian Mutiny campaign, and was subsequently for many years in the Political Department. He retired from the Service in 1895. Colonel Biddulph was a great traveller, a very keen sportsman, and a zealous numismatist. He was the author of several works, including "The Tribes of the Hindoo Koosh," "The Nineteenth and Their Times" (as accounts of the four cavalry regiment of the British Army that have borne the number 19) and an attractive little volume on "Stringer Lawrence," who was known as the Father of the Indian Army.

The death has occurred of Viscount Bryce, O.M., G.C.V.O., in his eighty-fourth year. To readers of "The Near East" he will chiefly be remembered by his life-long defence of the Armenians against Turkish oppression. He had travelled in the country of the people whose cause he so strongly pleaded, but he leaves only one book on that land, "Transcaucasia and Ararat." But all the Christians of the East will cherish his memory, for both in and out of Parliament he spoke on their behalf. His wider work as a man of letters and an agent in the making of Anglo-American friendship does not fall within the scope of our comments.

EGYPTIAN WOMEN'S PROTEST.

In common with other journals we have received a telegram dated Cairo, January 21, and signed on behalf of the "ladies of Egypt" by Hoda Chaaoui, threatening that unless certain conditions, which are set forth at length, are complied with, the ladies of Egypt will boycott everything that is English—merchandise, merchants, artisans, functionaries, doctors, pharmacists, dentists, &c.

GREAT BRITAIN AND IRAK.

If Dean Stanley's old lady were alive to-day, it is doubtful whether she would find "that blessed word Mesopotamia" quite "so comforting" as she did at the time when she secured immortality for herself. Indeed, if she read half the hard things about that country and our occupation of it that an important section of our Press seems never to tire of printing, the poor old soul would probably substitute a quite different adjective for "blessed," and would almost certainly never wish to hear another word about the Land between the Rivers. Yet recent reports indicate that Mesopotamia, or Irak, is settling down to the ways of peace and looking forward to more stable conditions and greater prosperity than it has enjoyed for many centuries. Trade is improving generally, and with the awakening of confidence, the Arab of the towns is beginning to exhibit something of the enterprise that distinguished him before the irruption of Hulaku Khan and his hordes stamped out all enterprise save that of the soldier. The Busreh of to-day is at least as great a port as that from which our boyhood's friend Sinbad set out on his marvellous voyages; its wharves and quays are no less busy than those of the Abbasside days, and it could show Sindbad some things in the way of dredging, lighting and buoying that would doubtless surprise him as much as did the Great Roc. Baghdad, the capital, has changed beyond all recognition from the state of comparative apathy and decay in which it existed before the war. Those who knew it at the close of the last century listen with wonder to travellers recently returned thence, who speak of its electric light, its ice plant, its railway stations, its motor cars, its street of trim cottages with little gardens that remind one of English homes, and the hundred and one other innovations and improvements. And the same tale holds good of most of the country outside the cities. Hillah, the ancient Babylon, has so far advanced that at least one British firm has found it worth while to establish a branch business there; and we hear of electric lighting and other undertakings in places which less than twenty years ago contained hardly a score of houses, and where travellers found it hard to obtain accommodation of any kind at all. At Ur, which it was considered dangerous for Europeans to visit in Turkish days, there is now a railway station; and the Desert, formerly traversed only by the slow-moving caravan or comfortless *arabanah*, has been crossed and recrossed by the swift and often comfortable motor-car.

The Irak of King Faisal is, then, a very different land from the sadly neglected and ill-administered Irak of

Turkish days. But, we may be told, railways, motor-cars, electric lighting and the other things mentioned are, after all, evidence only of material progress, parts of the scaffolding of civilization rather than of civilization itself. What evidence is there of any change beneath the surface? Naturally, it is more difficult to secure, but it is there; and competent observers who knew the people of Irak long before the war and have lived among them many years tell us that though the Arab may still be much as he was, there are signs of change, of improvement in some respects, in him also. At Nejef, Kerbellah, Kufa, and one or two other places, an ultra-conservative spirit may still survive, and a tendency to fanaticism may be very easily observable; but elsewhere there is progress, if slow, and even the Desert Arabs have assimilated at least a few modern ideas. The case, referred to recently in *THE NEAR EAST*, of one of the most important and most independently-minded, of the Tribes, the Muntafik, allowing themselves to be persuaded into paying their taxes, instead of forcing their collection at the cannon's mouth, is, to those who know the country and remember what the Muntafik country was under Turkish rule, full of hope. We should not dare to predict that the Arab will never look back—to be frank, we quite expect that he will—but there are signs of progress already, and we hope, and believe, that the country will continue to move forward, though its advance may well be intermittent at first. In any case, a start has been made in the right direction.

Taking this view, we deprecate strongly the very persistent attempts made, and still being made, to stir up in this country a popular demand for immediate withdrawal—the policy of scuttle, in fact. Great Britain has freed the country from its long bondage, and she cannot seriously contemplate allowing it to fall once more into the hands of the Turks. She is responsible for Faisal's election as King of Irak, and she cannot allow him to fall a victim to tribal intrigues or to the vindictive feeling of Damascus—or Paris. We do not want a modern version of the story of Zaid, the descendant of Ali, who was invited by the men of Kufa to lead them in their struggle for freedom, and then treacherously abandoned by them. The Kufans of those days had no reputation to lose; but that cannot be said of Great Britain. Yet we observe that one of the latest writers on the subject, in *The Times*, advocates an immediate withdrawal, regardless of "honour," "pledges," and "prestige." (The inverted commas are his, and their presence is not without interest.) Now, we are told, is the golden moment to evacuate; but what makes it so is not made clear, to us at all events, in the articles, though we have read them attentively, and find ourselves in agreement with the writer on many points. It is easy to pick holes in our policy in Irak, but that is no reason for abandoning the country and its people either to conquest by the Turk or to anarchy brought about by intrigue set afoot in the West. What is wanted is not withdrawal, but an early carrying out of some of our promises that still await fulfilment, and possibly a closer interest shown by the British Parliament in the situation as it is and as it promises to develop. With rumours and reports of "Pan-Arab" ambitions we need not immediately concern ourselves, though all movements of the kind require careful watching. For our own part we believe that a Confederation of Arab States is an object worth bearing in mind and worth helping forward as occasion offers; and in such a confederation the Nejd and Ibn Saud could, we feel sure, play a useful part. But it is not for Great Britain to take a leading part in endeavouring to bring it about: that is work for the Arabs themselves. To be successful our work in Mesopotamia must be carried on with the single aim of doing it well for its own sake.

THE EGYPTIAN QUESTION.

*(From an English Resident.)**Port Said.*

Recently an employer in Egypt was asked by one of his workmen what he should do with two bricks that he was holding. "Go and throw one at Zaghloul and the other at Adly," was the testy reply. The workman did not do it, but the order represents the feeling of many in Egypt, who are thoroughly sick of Egyptian politics.

The Delegation has returned, having accomplished little except eliciting the maximum terms that the British Government are disposed to grant. In spite of the elaborate attempts by interested parties to obscure the issue, the main questions are fairly simple. The Egyptian, who for three thousand years or more has been governed by foreigners with varying degrees of severity, has had in the last two generations a personal liberty unknown before. His head has been turned by fallacious reasoning on "self-determination" lines, and he now clamours for a nebulous abstract which he calls "independence," which interested persons who hope to get into positions of authority have told him will be to his advantage. Again it is indisputable that some of our politicians have told the Egyptian that we are going to clear out of Egypt, and leave him to his own sweet will here. Probably the more farsighted have made a mental reservation, that we should leave Egypt if and when the Egyptians were able to take over the control of affairs. Other types of politician have no doubt wished us to leave Egypt because it would make a weak link in the Empire; for the Empire and all it stands for seem to arouse in them a deep loathing.

To come to the other side of the question, Egypt, in itself is of little intrinsic value to the Empire. As long as no other country stepped in and erected a tariff or other legislative wall to prevent English spinners buying Egyptian cotton at market rates, it would not matter to us who ruled Egypt. What gives Egypt its importance to the British Empire is the existence of the Suez Canal, which is an absolutely vital link to us as a nation and a company of nations.

The Egyptians themselves have acknowledged the necessity of the Canal being under our control and protection, and it appears as if the recent negotiations failed because of the divergent views regarding what constitutes adequate protection. The Egyptian idea seems to be that we should have a garrison along the Canal bank: the British contention is that we should have garrisons at Cairo, Alexandria, and other necessary points in the Delta as well.

Early in the late war the Turks attacked the Canal, and although everything was in our favour they succeeded in holding up traffic for two or three days. The authorities then began to realize that we could not protect the Canal by sitting on the banks; so our armies eventually pushed on up to Alexandretta, five hundred miles away on the north-east, and we fought the Senussi at Sollum, two hundred miles to the westward. What was the reason of this "far-flung battle line?" It was to protect the Suez Canal. What were the defences of London during the war? They were Verdun on the south and Scapa on the north. So, to talk as a leader writer in a great London daily, recently did about considering that "the War Office went too far in insisting on the maintenance of troops in the interior of Egypt, whereas the demand for security could be met by stationing troops in the Canal Zone," is the height of ignorant fatuity; and it seems to me that such suggestions could only be made by someone who was deliberately trying to mislead uninstructed opinion at home, or whose mind was still in the days of bows and arrows and had never heard of long range artillery or motor-transport.

There is another side to the question, not primarily a military one, but even more important still, and that is the water supply. Few people realize that there is no water in the Canal Zone, and that every drop consumed

there has to be brought by an open canal from the Nile near Cairo, and that a hostile mob with explosives could in ten minutes cut off the water supply of the Canal zone. This means that the towns of Port Said, Ismailia, and Suez would be left without water, to say nothing of the garrison in the Canal Zone. It is not generally known in England that when the Turks and Germans made their attack on the Canal in 1915, owing to the possibility of a few men getting across and cutting the water supply, the ships in Port Said were told to fill every available tank, and to be prepared to condense for all they were worth. It may be argued that the Egyptians would never damage the Fresh Water Canal, as their own people who were supplied by that particular canal would suffer as well. But no one who knows the Egyptian mentality thinks that that would have much weight when he is a certain mood; and as Belbeis, which is forty five miles from the Suez Canal, is the last big town that the Fresh Water Canal passes through on its way to Ismailia, there is plenty of room for it to be cut on its way there without affecting any very great number of Egyptians outside the Canal Zone. This water question alone is sufficient to necessitate a garrison in Cairo and other parts of the Delta.

Some at least of the Egyptians have complained that the terms of the agreement rejected by Adly was not as generous as the Milner proposals. Whether they are, or are not, is beside the question for the moment. But the Egyptian has no reason to complain, for when Lord Milner came out here he was boycotted and every obstacle was put in the way of his finding out the truth; and whenever the Nationalists got wind that any members of the Commission were to visit any particular place, bands of student hooligans preceded them, to warn and intimidate the population against having any communication. Most Europeans in Egypt think that many of the Milner proposals would have been unworkable, e.g. the one that gave Britain the right to use the Egyptian railways in time of war or national peril. The opinion of railway officials themselves is that by the time the railways had been under Egyptian control for a couple of years, there would be little railway left. Probably one or two special trains would be kept in repair to take Ministers from Cairo to their country estates, but little else would be moving.

Zaghloul Pasha has told the people that he is out for complete independence, and it has been cleverly insinuated to the masses that the bulk of Egypt's income goes to pay the European employees of the Government, and that when they get Independence, all this will be saved, and consequently the Egyptian will have little or no taxes to pay. Adly Pasha is possibly more alive to the realities of things, but he has been obliged to promise the people at least as much as Zaghloul, and consequently he has not been able to accept, without what would be looked upon as a complete *volte face*, what the British Government feel they can offer, and what his own better judgment must tell him is all that can be given.

People in England hear of the political agitation in Egypt, and imagine it really means something, not knowing that it is carried on almost entirely by school-boys who play truant whenever they feel like it and call it "a political strike"; by students who don't study; and by lawyers who may possibly know something about law but are entirely ignorant of order. Imagine, say, the boys attending a Council school at Hull, tele-

SCHOOL OF ORIENTAL STUDIES.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

graphing to Mr. Lloyd George, demanding his resignation or the boys in the lower forms at Eton refusing to attend classes because one of the masters was a Coalitionist or a Radical; or the undergraduates from Oxford mobbing a Minister on his way to the Palace to consult with the King regarding the formation of a new ministry, and telling him that if he did not go home they would "do him in," with his family—and the Minister in question, knowing the police could not or would not protect him, thinking there was enough in the threat to make him turn back and go home again! Or picture the lawyers of the country holding up the business of the courts by a five days' strike, and incidentally inflicting great loss and inconvenience on their clients, because of some purely political question. Yet this sort of thing happens in Egypt, and is called "the manifestation of the sacred will of the Egyptian nation in its desire for Independence."

I have not touched on the lesson of the Alexandria riots last spring, when the Egyptian Government was powerless or unwilling to protect life and property. But I hope I have done something towards showing that the time for the "independence" which a certain small section of the population is clamouring for, is not yet.

THE FINANCIAL AFFAIRS OF THE GREEK PATRIARCHATE OF JERUSALEM.*

(By a Student of Eastern Politics.)

(Concluded.)

The Commission was appointed in January, 1921, to consist of Sir Anton Bertram, Chief Justice of Ceylon, and Mr. H. C. Luke, Assistant Governor of Jerusalem. It included amongst its terms of reference a consideration of measures for the liquidation of the Patriarchate debts. It recommended the appointment of a Government Commission to exercise financial control for a time, "with a view to putting in order the finances of the Patriarchate and preserving it from bankruptcy." The report of the Commission (just published) deals with ecclesiastical as well as financial questions, and is an able and copious document. The current revenues are estimated at not more than £E22,000 per annum, which is obtained from house rents in Jerusalem, Jaffa, and Ramleh, the greater portion of which have already been collected for three years in advance: whilst the expenditure necessary for the maintenance of the Fraternity of the Holy Sepulchre and of such charitable work as is now undertaken is estimated at £E61,800. It will easily be realized that unless steps are taken immediately to save the Patriarchate of Jerusalem is doomed.

The Patriarchate estates in Bessarabia have already been mentioned. These vast properties were administered by the Imperial Russian Government on behalf of the Church, and it is certain that their income would go a long way towards readjusting the financial position of the Church, so far as annual requirements are concerned. Unfortunately, at a time when every pound is of urgent necessity, the Roumanian Government has expropriated these properties under the provisions of the Agrarian Law of March, 1920. It remains to be seen what compensation will be obtainable from Roumania, but at the present rate of exchange of the leu it cannot go very far.

In September the High Commissioner appointed a Commission of Control. The Bertram Report recommended that it should consist of three Christian members, but at the request of the Patriarch and the laity two others were appointed, one representing His Beatitude, and the second after consultation with the Orthodox laity. The Commission is responsible for the payment of debts and the discharge of the obligations of the Patriarchate "in such order and in such instalments as in its uncontrolled discretion it may determine." The Ordinance constituting the Financial Commission em-

THE IDEAL CAREER

MANY Civil Servants, Mining Engineers, and commercial men in the Near and Middle East contemplating retirement from their present duties (whilst still in the prime of life) are confronted with the difficulty of selecting some suitable outlet for their energies in a climate which is free alike from the climatic disadvantages of the tropics and the severity of that of the British Isles.

A congenial occupation with an open air life in contact with a British community are also essentials.

ORANGE GROWING

in South Africa offers unrivalled opportunities to the INVESTOR or SETTLER. £1,350 cash, or five annual payments of £300, will provide an ideal career or a substantial income to an investor (about £1,000 p.a. according to official brochure) if invested in *the best* orange lands. Zebediela Estate, Transvaal, is stated by such acknowledged experts as R. A. Davis and C. A. Simmonds to be the finest orange estate in South Africa, and the largest in the world (580,000 Washington Navel and Valencia Late Trees), with irrigation works costing over £250,000 and providing 10,000 acre feet to supplement a rainfall of 25 inches. Planting commenced in 1918, and development has now reached an advanced state under the personal supervision of R. A. Davis and W. Ingham M.I.C.E., M.I.M.E., respectively, officially approved horticultural and irrigation experts. The

DELIGHTFUL CLIMATE

is thus described by Dr. William MacDonald.

"Free alike from the cold winds and destructive frosts of the High Veld, or the depressing fevers of the Low Country, this elevated Bush Veld is without doubt one of the healthiest agricultural regions in the world."

In the Township on the estate a number of settlers of a most desirable type have already erected their residences. There are ample opportunities for sport, including boating.

SHOOTING & FISHING,

whilst the erection of an up-to-date hotel is amongst projected improvements.

In a report on Zebediela Estate by Mr. C. A. Simmonds, an authority on citriculture in South Africa, endorsed by the Union Government, it is stated:—

"The climate is healthy and just right for producing first-class oranges that will keep well, and carry to our most distant markets oversea.

"The soil is really first-class for citrus culture. It is deep, well drained, and is easily worked red loam. Oranges grown on this soil will be juicy, fine flavoured, and of a good colour."

If you wish to participate in THE BEST Orange Estate, write to:—

AFRICAN REALTY TRUST, LTD.

(Capital £400,000 fully subscribed, £183,000 paid up),

EGYPT HOUSE, NEW BROAD ST., E.C. 2

Note.—Under the Laws of the Union of South Africa, Europeans only are permitted to own land on this estate.

powers it to contract loans on the security of any immovable property, to assume control of all revenues, in consultation with the synod to regulate the annual budget, and to assume the administration of any department, property, or operation of the Patriarchate. It may "sell any immovable property belonging to the Patriarchate or hold in the name of any person on its behalf, or for its benefit," provided that the property concerned is not attached *ab antiquo* to any monastery. All sales must receive the special authorisation of the Patriarch in Synod.

As far back as the beginning of 1919, the Patriarch had commenced negotiations with the Jewish land development company for the sale of considerable properties around Jerusalem, consisting of lands acquired comparatively recently by monks, on whose decease they had reverted to the Church, which cannot be regarded as *wakf*. Before the appointment of the Financial Commission some six plots were disposed of around Bethlehem, and others had been sold but not legally transferred, the purchasers obtaining Letters of Possession, a practice common in Eastern countries. In July the Patriarch had signed the deed of sale of the lands above mentioned to the Jewish company, and the Commission, upon its formation, was faced with an accomplished fact which required only the High Commissioner's ratification to make the deed a legal instrument. The Commission was able to arrange that the sale should not take effect until the public had been given an opportunity of making offers for the property in question and better terms were obtained for the Patriarchate. A list of sites offered for sale, which had received the sanction of the Synod, (including the particular sale referred to above), was published in the press of Palestine, Egypt, Syria, and Cyprus, thus ensuring that wealthy Orthodox churchmen throughout the Near East should be cognisant of the fact. The plots for which a genuine and advantageous offer had already been received, were offered for sale as one lot, but some dozen other properties were advertised as being divisible into small building lots. It is understood that up to the present no offers have been received for any of the properties, excepting the plots already under negotiation for sale to the Jewish company.

The Arab press in Palestine, while criticising the sale of lands to the Jewish company, has been unable to offer any constructive criticism. It has requested the Government either to buy this particular lot, or to lend the Patriarch sufficient money to pay off his debts; but like most Governments nowadays the Palestine Government is not overburdened with spare cash. It is difficult to see what other course the Government could have adopted to remedy matters, and while the purchase of one group of properties by the Jewish company will scarcely cover 75 per cent. of the debt, there remain large unproductive properties belonging to the Patriarchate, amounting in value to approximately £2,000,000. Meanwhile the debt is steadily increasing.

PRESS ON THE NEAR EAST.

Egypt.

"The Egyptian Question," says Sir Valentine Chirol in an article entitled "The Egyptian Deadlock" contained in the *Fortnightly Review* for January, "may be primarily, and as to the methods of settlement, an Anglo-Egyptian question, but in its reactions upon the Eastern world, and even beyond it, it is far more than

that." And he goes on to say that the British Government is here confronted with the same fundamental issues as in Ireland, though the respective negotiations with the two countries have been carried out in very different atmospheres. He then traces briefly the history of Britain's connection with Egypt from the War to the present day, giving due weight to the Milner Report. Towards the end of his article Sir Valentine comes to the breakdown of the negotiations between Lord Curzon and Adly Pasha, on which he says:—

The rock on which the negotiations were shipwrecked was sheer militarism, and it is no secret that, whilst the Foreign Office was disposed to take a broader view of the political factors in the problem, the view that prevailed was that of the War Office, backed by Mr. Churchill, who, when he was in Cairo last spring, did not disguise, even in conversation with Egyptian Ministers, his hostility to the recommendations of the Milner Commission. Not only has the War Office view prevailed on the question of the army of occupation, but Lord Allenby's note, setting forth the policy of His Majesty's Government, breathes altogether a very different spirit from the Milner Report. Its tone is one of masterful reproof and sometimes of petulant irritation. The recital of England's great services to Egypt during the long period of reconstruction after 1882, and of her sacrifices in the war against Turkey, is perfectly legitimate, though perhaps needlessly self-righteous. Much is made of the security and prosperity of Egypt during the war, but not a word of recognition is given to the loyal co-operation of the Egyptian Ministers, of whom Adly was one, nor to the many and onerous and valuable services rendered by the Egyptian people, including the Egyptian army, which contributed materially to the success of the military operations conducted from the Egyptian base.

Some people believe in the intrinsic potency of such a "firm declaration of policy." But how many "firm declarations of policy" have we not had, since the Armistice, in the Near East and the Middle East and all the world over, and how many of them have not been successively jettisoned? If, rightly, insistence on the Protectorate, after the Milner Report and the failure of the London negotiations, is regarded more than ever by Egyptians of all classes as a breach of all our assurances in the past, what value are they likely to attach to Lord Allenby's renewed assurance that, if Egypt will only behave herself, she will get the recognition of her independence some day or other? Even his more immediate promise "to provide for the ever-increasing development of native talent" by employing a larger number of Egyptians in every branch of the administration, "and notably in the higher branches hitherto too extensively filled by Europeans," is one which has been too often made and never kept to have much value in Egyptian eyes. As to the abolition of Martial Law, of which Lord Allenby holds out the prospect, subject to an Act of Indemnity being passed and put into operation, how is any Egyptian Legislature to be got together now that would not regard it as its first duty to protest against the whole policy set forth in the British note?

Before concluding on a note that is by no means hopeful, the author makes an interesting comment upon the puzzled attitude of those whose instincts impel them to

support the British Government's measures :—

What is, no doubt, at the back of many Englishmen's minds is the belief that the Egyptians are still utterly unfit for self-government and the fear that, if we relax our hold, there will be revival of all the old abuses of indigenous administration and probably of internal disorders which would give other foreign Powers a pretext for asserting for the protection of their own interests and communities the rights of interference we should have ourselves surrendered. That such a danger might exist cannot be a together denied. But the authors of the Milner Report rightly considered it a lesser danger than that of driving the Egyptians into irreconcilable hostility by a definite refusal to fulfil the expectations raised by our own repeated promises and by all our professions of policy during and since the war, and indeed by all the still older traditions of British statesmanship. Nor, in view of the far greater material and moral ascendancy of Great Britain in Europe since the war, as well as of the ease with which at any time British reinforcements can be poured into Egypt, could we be precluded from exercising our obvious right of re-entry if the worst came to the worst and a situation were again to arise, calling, as in 1882, for foreign intervention.

Abyssinia.

Very little is written nowadays on the subject of Abyssinia, chiefly on account of the prevailing ignorance upon present-day conditions in that country. But in its issue for January 18 the *Westminster Gazette* prints the first of three articles, written by "two Correspondents lately in Abyssinia," on "Abyssinia To-Day," this being subtitled "The Home of Slavery." It begins :—

Abyssinia is the only remaining free and independent native State in Africa. It is also the last home of open slavery. In its capital, Adis Ababa, there are more slaves than free men. The British Legation itself is full of slaves, owned by the Legation servants, who would not take service if they were not allowed to bring their chattels with them. The Legation compound is British soil, yet not only do slaves who enter it not become instantly free, but if they have escaped from their owners, their owners can and do enter it without hindrance to recapture them. That is an odd enough fact ; but a still odder one is that a great many of these slaves are British subjects captured by slave-raids into British territory. Slave-raids, however, require rifles and ammunition, and as France, England, and Italy have bound themselves under the Arms Convention of 1919 not to supply munitions to the Abyssinians, it is only America who is now importing, or seeking to import, arms into the country—arms destined mainly to fill the great Abyssinian slave-markets. At this moment a large consignment of American cartridges and automatic rifles is lying at the French port of Jibuti, awaiting the consent of the French authorities to its transport into the interior, and there is reason to believe that the French authorities, not being very much in love themselves with the Arms Convention and fearing an "incident" with the American Government—which probably knows nothing at all of the affair as yet—may shortly give their consent.

The authors then briefly recount the great work that the Emperor Menelik, builder of Adis Ababa, did for Abyssinia. Upon his death in 1913, however, the country fell to pieces, and already it "has relapsed into a state that approaches barbarism." For instance—

The roads have been left unrepaired, the bridges have crumbled, the water mains have become choked up, the mills are mostly out of order, except a few which have been sold to foreigners, the hospital is in ruins, the school has practically ceased to function, and the great trunk telephone

system is monopolised by the present Regent for his own private use. The Central Government exercises no authority that is worth mentioning at a greater distance than ten miles from the Palace ; and in the capital itself the inhabitants enjoy little or no security either for their persons or for their possessions, so that even the Legations have to be constructed more like forts than like private residences.

The articles continues with a description of the corruption and decay now ripe in Abyssinia, where there is now, especially in the provinces, "no pretence of the maintenance of order." In short—

there is nothing in Abyssinia that can be described as "order," and as for the "law," it is quite useless to appeal to it unless the complainant is rich enough to purchase the justice he seeks, and even then it may still be useless if the defendant happens to have a powerful protector. In further articles we shall describe Abyssinian "justice" more fully and the obstacles which it places in the way of the European trader. Also we shall describe the nature and extent of the slave trade as we have ourselves witnessed it.

The conclusion consists of a statement of the fact that, but for a few historical details, the authors of these articles are relying on nothing but their own first-hand information.

ARTICLES TO NOTE.

"Abyssinia under Menelik and after," by G. E. Underhill ; and "River Control in Mesopotamia," by Evelyn Howell, C.S.I., C.I.E., in the *Quarterly Review* (January).

The Trade Outlook in Egypt.

The present commercial position in Egypt is dealt with by our Cairo Correspondent in a message which appears in another column. He emphasises the point that as long as the present uncertainty prevails there can be no development. That is the crux of the whole position. No business man is going to launch out until he can see his way clear before him, and so long as there is any possibility—however remote—of untoward happenings there can be no question of the increased business activity which was expected about this time. Stability is what Egypt requires above all else, and until that fact is realised by responsible Egyptian opinion the present stagnation is bound to continue.

The Tourist Season.

The most satisfactory feature of the present position is that the tourist season has not suffered so much as might have been feared. Of course it has been affected to some extent, but our Correspondent points out that the firm measures taken by the authorities have had the effect of reassuring intending visitors to Egypt, so that a fair influx of tourists is expected during the latter half of the season. It may be hoped that the moral of this will be appreciated. In the most favourable conditions Egypt could not have looked for anything approaching a pre-war season on this occasion, but if in the future she is to be able to look regularly on the tourist season as the assured source of revenue that it was before the war it is obvious that the conditions must be such as to attract tourists and not to drive them to other and quieter resorts.

The Trade Ship.

The programme of the tour of the British Trade Ship which is to begin her Odyssey in the early autumn of 1923 would seem to be open to some criticism. The outward journey is by way of South America, and the vessel will return by the Suez Canal touching at Malta and Gibraltar on the way home, thus apparently as at present arranged not visiting any of the great distributing centres of the Levant and the Balkans. If this is the case the promoters of the enterprise will be making a great mistake. Admittedly conditions at the moment do not favour trade with the regions in question, but there is ground for hoping that the exchanges will before long improve, and when that happens these markets will offer a great field for British enterprise, and they certainly ought not to be neglected by any undertaking which aims at the development of British trade.

The Indian Market.

Sir Charles Macara's article on "The Prospects of the Cotton Industry for 1922," the concluding portion of which we publish this week, should give considerable comfort to those concerned with the industry who had come to hold the opinion that recent developments were bound seriously to affect our trade in cotton goods with India. The fact is that because efforts have been made since the war to develop India's industries there

has been a tendency to jump to the conclusion that India would soon be able largely to supply her requirements. But any such assumption is unfounded. It is impossible in a brief space of time to accomplish the work of generations, and one would think it would be obvious that there are too many ifs in connection with industrial developments in India for any undue pessimism as to the outlook.

The Outlook.

Of course, as time goes on, India is bound to supply her own requirements to an increasing extent, but India's requirements, it must be remembered, will certainly expand, and this development should provide ample scope for the activities of both Lancashire and India. It certainly would do if things remain as they are at present. Now, as it is aptly pointed out in a recent report, India and Lancashire compete against one another in very few lines of cotton goods. Naturally there is no saying what may happen in the distant future, and that need not concern us. Sir Charles, it may be noted, sums up the present position by saying that "not only can India not supply her wants in this commodity, but there is no likelihood of her being able to do so for generations to come."

Roumania's Oil Production.

It had been expected that once the reconstruction of Roumania's oilfields was well under weigh that progress would be rapid and continuous. This has unfortunately not proved the case, the reason being that in common with all other undertakings in the country the oil industry has been handicapped by the lack of transport facilities. The returns of the oil production for 1921, while showing a distinct advance on those for 1920—the figures being 1,160,885 tons as against 1,034,019 tons—cannot be regarded as other than disappointing in the circumstances. The most satisfactory feature of the statistics is the great improvement in the production during the closing months of the year, and with the progress now being made with reconstruction it is possible therefore to look forward with confidence to the attainment of the pre-war output at a not very distant date.

REPORTS FROM OUR OWN CORRESPONDENTS.

EGYPT.

Cairo, January 14.

Commerce and the Political Crisis.

There is general hope here on every side that Sarwat Pasha will be able to form a Cabinet. In the present stagnation the country is losing ground in every way. It is small consolation to the business firm facing ruin to know that the *impasse* was inevitable. And it is patent to all concerned that as long as the political crisis hangs like a noxious vapour over the community there can be no development. The only uncertainty has been the question of the extent of the political changes and the possibility of troubles. With a well-defined Anglo-Egyptian policy accepted by both sides both of these uncertain factors would disappear, and the commercial circles in Egypt would be able to progress from the cross-roads of doubt and hesitation where they have halted for weary months. The boycott movement, introduced by an overture of much talk, has never threatened to become really serious, and the feeling that the crisis was approaching solution has deadened the interest in it of even the Egyptians themselves.

The Cotton Position.

Meantime the cotton market continues steady at a fair level—high enough to pay for the cost of cultivation and leave a little over. Some of the bigger landowners, their fingers burnt by playing with fire when the boom-fever was at its worst, are agitating for a Government guarantee of a minimum price. But the fellahin, in the mass, are content with the present price. Their contentment is proved by the fact that of late they have been beseeching the powers that be to sanction greater cultivation this season, in place of the one-third of the area to which the cultivation has been restricted. I understand that their request cannot be complied with, though there are those who think it should be granted, as it is manifestly unfair to compel the Egyptian cotton-growers to stint their production when America is piling up a swamping surplus. The most significant fact connected with the steadiness of the cotton market is that it has given an impetus to the stock and share market, which, in turn, has resulted in greater business, a slight easing of money, and a consequent slight activity in business circles. Given a political settlement quickly, business in Egypt will pick up rapidly.

The Tourist Season.

Cairo and Upper Egypt are now never without their contingent of tourists. We are approaching the end of January, when the big parties are coming, and accommodation has been fully booked—and could, I hear, have been sold over and again for February. The early spring is a perfect time for a holiday in Egypt, and all indications point to a few weeks' feverish gaiety, with the parties from the big liners leading the revels. For a short period the fate of the season hung in the balance, but the prompt and timely firmness of the authorities, followed by the complete restoration of normal tranquillity and the eradication of the trouble-making elements, has guaranteed the remaining months of the season and every hope is entertained that the briskness of the end will atone for the slackness of the beginning.

BULGARIA.

Sofia, January 15.

The Supplementary Budget.

The figures for the Supplementary Budget for the financial year April 1, 1921 to March 30, 1922, have just been published. The total sum amounts to 364,865,000 levas. The Civil List, Sobranje, Cabinet, and Supreme

Administrative Court receive 13,681,000 levas; Public Debt, 37,922,000; Ministry of Foreign Affairs, 52,667,003; Ministry of the Interior (A), Police, 8,824,000; and (B.), Health Department, 29,780,000; Ministry of Education, 4,802,000; Ministry of Finance, 19,870,000; Ministry of Justice, 19,164,000; Ministry of War, 64,400,000; Ministry of Commerce, 52,502,000; Ministry of Agriculture, 12,830,000; Ministry of Public Works, 2,328,000; Department of Compulsory Labour, 10,270,000; Department of Railways and Ports, 20,874,000; Department of Posts, Telegraphs, and Telephones, 15,305,000; Accountants Court, 185,000; and Miscellaneous Expenses, 460,000 levas.

M. Tourlakoff, the Minister of Finance made the following statement in regard to the Supplementary Budget:—"The necessity for a Supplementary Budget had been caused by the slender credits previously voted, and also by the rise in the cost of living. The State Budget for the financial year 1921-1922 had provided for expenses of 2,900,000,000 levas and receipts of 2,127,000,000 levas a deficit of more than 700 million levas. By means of increased receipts this deficit had been reduced to 103 millions. If we add the supplementary credit, i.e. 364,865,000 levas to the above deficit, we get a total deficit of 467,865,000 levas. Fortunately we shall be able to reduce some of the expenditure provided for in the ordinary Budget, and at the same time we shall be able to increase our receipts. Firstly, the sum of 240 million levas put aside for the Army will not all be required owing to the inability of the Government to recruit more than a few thousand volunteers. Secondly, the expenses incurred in Customs and other State Departments will be reduced, and I consider that the total deficit will not amount to more than 270 million levas. As to receipts, the increased Customs Tariffs, the income tax, and the sum of 75 million levas, being the Government's share of the profits realised by the National Bank, will all go to swell the State Funds. As a last resort, there is the 100 million 6½ per cent. Internal Loan, due to be opened on January 15. In any case we shall not borrow from the National Bank, because we are determined to avoid having to print any more bank notes."

One economy under consideration is the closing of of certain of the Bulgarian Legations abroad. It is probable that London and the Hague will be combined, Berlin and Vienna, Paris and Brussels, and Prague and Budapest.

ASIA MINOR.

Smyrna, January 10.

"Salonicuting" Smyrna.

British merchants are beginning to realise that Smyrna, commercially speaking, is slowly but surely sharing the fate of Salonika; being, in fact "Salonicuted." The export trade is perhaps the first to "go under." One of the oldest export companies, which was in pre-war days a highly prosperous concern, has decided to liquidate its affairs; another has been compelled to reduce employees' salaries by 50 per cent.; a still prosperous company has reduced salaries by 35 per cent.; and a company in which are invested the greater part of the pre-war savings of the colony is not yet in a position to pay interest on its debenture bonds, still less on its shares. Until the railways are freed from military operations and the guerilla warfare ends in the agricultural districts there is little hope of the export trade improving. On the contrary as things go, it is more than likely that it will become gradually less.

Importers, who had a fairly good time for the first two years after the Armistice, have had considerable difficulty

in making ends meet during 1921. One of the oldest British companies has had to show a small loss on the year's trading; whilst most of the post-war concerns have simply faded away. So long as the Greek Military Base in Smyrna was buying, and paying for supplies, many importers did a satisfactory business; but since the Base received orders—3 months ago—not to buy in Smyrna, and has not been able to pay for last year's purchases, the import trade is stagnant. At the present rate of exchange—Ps.700 to sterling—it is impossible to purchase in the United Kingdom. The same remark applies to purchasing from the United States; and hence the bulk of the imports of Smyrna now come from the European Continent.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"THE MYSTERIES OF FOREIGN EXCHANGES" are thoroughly explained in this 40 page Booklet profusely illustrated with Maps and Charts in the following chapters:—

- (1). The Modern Chaotic Exchange Situation,
- (2). The French Exchange Position.
- (3). German Industry and the Mark.
- (4). The Italian Lira.
- (5). The United States Dollar.
- (6). Miscellaneous Exchanges.

(Belgium, Austria, Poland, Roumania, etc.)

Every Investor and every Merchant should read this publication.

Trafalgar House, Waterloo Place,
Pall Mall, London, S.W.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.
(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.I.)

Egypt.

Marine Boiler.—The Secretary General, Ports and Lighthouses, Arsenal, Alexandria, invites tenders for the supply of a new multitubular marine boiler of the following description:—Diameter 11 feet; length 10 feet; two corrugated furnaces. Boiler working pressure 180 to 200 lbs. per square inch. Built to Lloyds rules 100 A1 and supplied with all accessories as per specification. Offers will remain valid for one and a half months from March, 1, 1922.

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 100 metrical tons of coloured cotton waste. March 10.

Bulgaria.

Telephone Instruments.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of 2,000 telephone instruments for table use, with local battery and magneto. Also for spare parts for these instruments. Tenders to be presented at the District Office of Finance, Sofia by February 20. (D.O.T.).

Telephone Accessories.—The Bulgarian Department of Posts, Telegraphs, and Telephones invites tenders for the supply of the following parts for telephone exchanges, viz.:—Subscribers' line indicators, 2,200; indicators, end of conversation, 600; jacks, 2,500; plugs, 1,500; connecting pieces, 2,000; connecting pieces, switchboard, 20,000. A deposit of 5 per cent. of the total amount of tender is called for by way of guarantee. Local representation is essential. Tenders to be presented at the District Office of Finance, Sofia, by January 30. (D.O.T.).

Porcelain Tubing, etc.—The Bulgarian Direction of Posts, Telegraphs, and Telephones invites tenders for the supply of the following material:—(1) Porcelain insulating tubes for telephones (1,000), insulating tubing (impregnated paper), for telephones. (2,200 metres), Ebonite caps (1,700), and insulated copper wire (1,000 metres); (2) Various electrician's small tools (include 900 pairs pincers, 20 brazing lamps, 100 soldering irons, 1,500 bits, and 300 axes); (3) Bronze in plates and bars, iron and steel plates and bars and insulating materials. Tenders will be opened at Sofia, District Department of Finance at 4 p.m. on March 8, in the case of (1), February 27, in the case of (2), and February 14 in the case of (3). Each tender is divisible. (D.O.T.).

Bulgaria.

Telephone Pole-line Hardware.—The Bulgarian Postal Authorities invites tenders for the supply of telephone pole-line hardware (4 pin carriers for insulators, bolts, etc.). Tenders, accompanied by a deposit of 5 per cent. of the whole amount to be addressed to the District Office of Finance, Rue Rakovski, Sofia. Tenders may be submitted for each or all of the items required. March 21 (D.O.T.).

Telephone Materials.—The Bulgarian Postal Authorities invites tenders for the supply of:—(1) 3,000 Junction pieces for Batteries; (2), 200 kgs. of watch makers oil; (3) 5 kgs. graphite (in grains); (4) 500 kgs. hydrochloric acid; (5) 5,000 kgs. lead; (6) 50 kgs. solder ("etai au colofane"). Tenders accompanied by a deposit of 10 per cent. of the total amount of the tender to be addressed to the District Office of Finance, Rue Rakovski, 102, Sofia. Tenders may be submitted for one or more than one, or all of the items, and delivery is required within four months. March 27. (D.O.T.).

Telephone Accessories.—The Bulgarian Post and Telegraph Authorities invites tenders for the supply of:—1, Lamp fuses; 2, Cartridges fuses for protection from lightning; 3, 3 amp fuses; 4, line Annunciators; 5, Carbon lightning arresters. Tenders must be accompanied by a deposit of 5 per cent. of the total amount and may be submitted for each or all of the items, and should be addressed to the District Finance Office at Sofia. March 15. (D.O.T.).

Yugoslavia.

Jute.—The Belgrade Railway Direction invites tenders for the supply of 100 metric tons of jute required for cleaning purposes. Tenders will be received at the Economic Department of the Railway Direction, Belgrade (Ekonomska Odeljenja, Zeleznica, Direkcija, Belgrade), and samples must be submitted by the tenderer. Delivery is to be of 50,000 kilos within two months and 50,000 kilos within four months from the date of signing the contract. Tendering firms will be required to deposit if an S.C.S. subject, 20,000 dinars, others 40,000 dinars. January 30 (D.O.T.).

India.

Chains, etc.—The High Commissioner for India invites tenders for the supply of chain, iron galvanized, for signal levers; and engine turntables. January 31.

The Corporation of Calcutta invites tenders for the supply and laying of 30 miles of riveted steel pipe, 60in. to 33in. in diameter.—March 16.

Engineering Topics.

By Our Engineering Representative.

Bolts and Nuts.

A complaint recently reached me regarding the quality of ordinary bolts and nuts as supplied for general work over the counter. The statement was made that it was next to impossible to get these of standard sizes, and as this seemed remarkable I went round to a number of retailers and purchased odd bolts and nuts, of Whitworth sizes, to test the complaint. I did this in London, in Swansea, and Cardiff, and in Sheffield, and found, as I imagined would be the case, that all were exactly to standard sizes, were interchangeable, and were of a uniform height, quality, and finish. My correspondent, however, had stated positively that he had bought nuts which were too large or too small for the bolts, that he had bought bolts on which he could not even start nuts, and also bolts on which the nuts would "slip on." He added that he generally had either to "tap" out the nuts or to run the dies down the bolts. I have now got to the bottom of the trouble which appears to be that my correspondent has been so unfortunate as to possess machinery in which the bolts or nuts that require occasional renewing are of mixed British and American origin. Now an American nut is slightly smaller—I believe by about one-hundredth of an inch—than the British standard nut, and it consequently follows that whilst such a nut would have to be forced on to a British bolt, a British nut would be slack on an American bolt.

A Light Car Test.

I have received from the makers of the A.C. light car a copy of a certificate from the Royal Automobile Club relating to their 11.8 h.p., four cylinder standard production, which was the subject of an observed trial for flexibility. Trials of this kind in the past have generally been carried out on 6-cylinder cars of high horsepower, but the A.C. seems to have done remarkably well. The test was through the most crowded of London streets, and a most difficult course was traversed, all on the top speed. Without the slightest change of gear the car was then taken down to Brooklands, and circled the course at well over 44 miles per hour. Still without changing gear the engine was then throttled down until a man, walking at a moderate pace, could keep ahead of the car. Now that is really a very fine performance, and although it is not new, I think it is the first time it has been carried out on an 11.8 h.p. engined car. Everyone knows that these little engines can develop immense power and speed by reason of the comparatively high number of revolutions they make per minute, but it has never before been demonstrated so vividly that they are as docile as a big 6-cylinder on top gear.

Sparkling Plugs.

During last year I made some exhaustive tests on various British makes of sparking plugs, such as K.L.G., Lodge, C.A.V., Forward, etc., and was surprised at the uniformly good results I obtained. Details have reached me of the re-designed Lodge priming plug in which the height, which militated against its use in some engines, has been reduced so that it is now barely a quarter of an inch longer than the standard models. I have never tried this particular design so can say nothing as to the claims made in regard to easy starting. I note, however, that the design now approximates very closely to the standard 3-point plug. The insulator is of Steatite, and the priming tube has been slightly increased in bore to facilitate the flow of petrol into the cylinder. The priming valve has also been greatly improved, ensuring gas tightness, and the design is now such that it is impossible for the valve to stick. The use of this plug, fitted in place of a plug of the usual type, enables liquid petrol to be introduced into the cylinder, and on engines where no priming taps are fitted this is a great boon as piston and rings are freed from gummed oil and it is an easy matter to turn the engine over. Further than that, however, the ad-

mission of petrol by way of the sparking plug means that petrol is just where it is wanted when the spark occurs. In the neighbourhood of the spark there is a rich mixture, no matter how poor it may be elsewhere in the ignition chamber, and consequently there is said to be no difficulty in starting the engine at the first pull. It is claimed that the use of this plug, on cars fitted with electric starting sets, increases the life of the starting battery and also reduces the strain and wear on the starting gears. I notice, further, that the double-pole and two-ignition plugs made by the firm have been reintroduced. The use of a double-pole plug in conjunction with an ordinary plug in the same cylinder head provides two sparks simultaneously, which will give increased power to the engine should the ordinary plug be in a pocketed position. By means of the two-ignition plug either battery or magneto ignition, or both, can be used at will. I hope some day to have an opportunity of visiting the Rugby works of this company and of describing the methods of manufacture in these columns.

Non-Magnetic Iron.

The new type of iron, of high specific resistance, which has been placed on the market under the above name, and which is intended for electrical use has an exceptionally low degree of permeability which renders it valuable where there is a danger of undesirable eddy currents. It appears that the permeability of this iron is no higher than that of brass, and tests which have been carried out with most delicate instruments show that its value in that respect is 1.03 as compared with 1.00 for air. So far as resistance to the passage of electrical energy is concerned it is nearly 50 per cent greater than that of ordinary cast iron, some comparative figures, in micro-ohms per cubic centimetre, being 140 for the new iron, 95 for cast iron of the ordinary quality and 7.5 for brass. It appears also that the effect of change of temperature on this resistance is far less than in the case of cast iron, and the iron becomes slightly less permeable as its temperature rises. There is no difficulty in machining this iron, and it can be melted and cast as easily as any other grade, and presents the same appearance. Its mechanical strength is about the same as that of cast iron, but it is slightly more malleable, and I understand that the cost of casting varies from 50 to 100 per cent. more than that of castings of ordinary iron, according to size and difficulty of moulding and pouring.

Preventing Oxidation.

A new process has been devised for preventing the surface oxidation of metals or alloys exposed to high temperatures, a problem on which chemical engineers and metallurgists have been working for some time past. In the method referred to the metal or alloy is placed in a retort which is filled with finely divided aluminium, and the whole is brought to a red-heat, and allowed to remain in that condition for some time. The aluminium will penetrate the surface of the metal to any desired depth, this depending on the length of time the metal or alloy is allowed to remain exposed to its action. The result of exposure at high temperatures after this treatment is that the surface becomes covered with a uniform coating of aluminium oxide, and it is stated that metal treated in this manner will withstand a temperature of 900 degrees cent., before oxidising, a phenomenon which occurs at about 600 degs. cent. with untreated metals. The result of the treatment is that such metals as copper, nickel and brass can be made immune to certain acids, and iron and steel can also be treated successfully by the new process. Exhaustive tests under working conditions show that rolled, wrought, drawn, or pressed metals take a more satisfactory coating than castings, and it goes without saying that any rolling, grinding, hammering, or machining must be done before the metal or alloy is subjected to the treatment.

Near East Markets.

LONDON PRODUCE REPORT.

Sugar Dealer.

(From Our Own Correspondent.)

Monday Evening.

Sugar.—A firmer tendency has been the feature of the week. Home refined has gained 6d. all round, prices now being fixed at 52s. for Tate's cubes, 52s. 3d. for coffee crystals, and 46s. 9d. for mineral water sugar. Imported sugars have appreciated, West Indian crystallized having risen 1s. to 41s., and Czecho-Slovakian also 1s. at 18s. 6d. Stocks are very limited of Java and Natal Crystals, supplies being almost exhausted. White sugar quotations are :—January—February, 18s. 9d. ; March, 18s. 9d. ; May, 18s. 7½d. ; August, 18s. 9d.

Coffee.—A variable tendency has prevailed. Supplies of Nairobi are short, and prices are high. Jamaica has been firm at 150s. Costa Rica has shown an increase of 5s. at 140s., while Indian is 6s. down at 110s. The futures market has been steady. Quotations are :—March, 50s. 6d. ; May, 51s. 6d. ; July, 52s. 3d. ; September, 52s. 3d. ; and December 52s.

Tea.—The lower grades of Indian tea have been in marked request. Prices have been firm for all kinds of Ceylon tea, while Java and Sumatra have been in good demand at moderate prices.

Rice.—Prices being so high for Spanish Japan rice, buyers are turning their attention to Egyptian. An increasing demand for Honduras Carolina rice has been a noticeable feature during the week. Burmese and Saigon are both quoted at 18s.

Dessicated Coconut.—A little more business has been passing. Spot stocks are lower, and shipper's forward quotations are steady.

Almonds.—Supplies are scarce and quotations for Jordan almonds are firmer.

Green Fruit, etc.—Prices for oranges are higher, the demand being fair. Lemons have come to business better and steady prices are being maintained. Exceptional prices are being asked for Valencia onions, and there is little hope of a decline, unless supplies are increased.

Oilseeds.—Indian linseed has risen 6d. to 18s., and La Plata shows no change at 17s. Rapeseed has been steady with Toria at 16s. 3d. ; Brown Cawnpore at 18s. 3d. ; and bold Ferozepore, at 18s. Cottonseed shows signs of improvement with Indian, 3d. up at 9s., Egyptian black 9d. up at 12s. 1d., and Sakellarides 3d. up at 11s. 6d.

Oils.—Prices are slightly higher. Linseed oil has been firm at 30s., while rape oil has risen with the crude variety 3s. up at 49s., and refined 1s., up at 51s. Cotton oil has shed 2s. in all cases with refined at 43s., Egyptian crude at 35s., and deodorized at 48s. Turpentine is 3d. down at 71s. 9d.

Oilcakes.—Linseed cake has come to business at 300s per ton, an increase of 24s. Cottonseed cake at 180s ton is unchanged as also palm kernal at 120s. ton. Arachis cake is quoted at 220s. ton, a rise of 10s, while cottonmeal has gained 20s. at 290s. ton.

The following information has been received by cablegram from the managing agents of the Indo-Burma Oilfields (1920) at Rangoon :—Yenanma Field—Well No. 28, 788ft. trial balings 12 barrels in 24 hours. The pipe-line has been in operation since January 5. Padaupin Field—Well No. 4 struck oil sands, 1,784 ft. ; total depth drilled, 1,790 ft. ; still in sands oil flow; estimate the yield at strong 100 barrels per day; drilling stopped to save oil pending completion tanks. The managing agents state that 500 barrels of oil should be produced every day as from January 31, and production should rapidly increase.

CINNAMON PRODUCTION.

The current number of the Bulletin of the Imperial Institute contains an interesting article on cinnamon, its sources, production and trade. The article gives a detailed account of the production of the bark in different parts of the Empire as well as in foreign countries, and a description of the aromatic oils yielded by cinnamon and related trees. The finest cinnamon bark is produced in Ceylon, where the Portuguese found the tree growing wild when they arrived in the Island in 1505. Since that date Ceylon has been famed for this spice, but owing to the small financial return it gives to the growers, much of the area under cinnamon in the Island has been replaced by the more profitable coconut and Para rubber. Ceylon cinnamon, moreover, has had to compete, particularly in the Continental markets with a cheaper product of coarser flavour from the Far East. Cinnamon bark reaches this country in two forms : the ordinary "quills," used as spice, and "chips," which are distilled for the production of cinnamon oil used in medicine.

The leaves of the cinnamon trees yield an entirely different oil from that of the bark ; this oil contains eugenol (the characteristic constituent of oil of cloves) which is employed in the manufacture of vanillin, the well-known flavouring agent. Cinnamon eaf oil is produced largely in the Seychelles.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for November :—

Gum.

Kordofan Province.—The amount of gum sold in El Obeid market during November was 1940 kantars as against 568 during the same month last year. The average price was 869 mms. per kantar. 846 kantars were sold at Nahud at an average price of 120 mms. 172 kantars were sold at Um Ruaba at 550 mms. per kantar as against 41 kantars last year. 94 kantars were sold at Rahad at 525 mms. per kantar as against 185 kantars last year.

Wheat, etc.

Darfur Province.—Wheat was sold in El Fasher market at LE.2 per ardeb of 300 rottles (135 kilos).

Berber Province.—The price of wheat rose to LE.3.500 per ardeb of 420 rottles (189 kilos) and barley to PT.120 per ardeb of 315 rottles (142 kilos). The price of maize was PT.130 per ardeb of 380 rottles (171 kilos).

Dura.

Nuba Mountains Province.—Dura crops promise well on the whole.

Blue Nile Province.—Dura brought into Maradas in ardebs of 300 rottles (135 kilos) as follows :—Medani, 2,626 ardebs ; Hassa Heissa, 5,340 ardebs. Highest price 375 mms. per ardeb ; lowest price 321 mms. per ardeb.

Darfur Province.—In El Fasher market, dura was sold at PT.71 per ardeb of 300 rottles (135 kilos).

Berber Province.—Prices, per ardeb of 380 rottles (171 kilos) ; White dura LE.1.500 mms. ; red dura, LE.1.500 mms. ; Feterita, dura, LE.1.200 mms.

Fung Province.—Market prices of dura per ardeb of 300 rottles (135 kilos) in Singa, PT.40 highest, and PT.30 lowest.

Sesame.

Kordofan Province.—34 ardebs of sesame were sold in El Obeid market in November at an average price of LE.1.091 mms. per ardeb of 330 rottles (148 kilos).

Kassala Province.—The sesame crops in the South of the Province have been reaped and assessed. The crop is a poor one, from August 1916 to the end of July 1921.

Oakey's SILVERSMITH'S SOAP, for Cleaning and Polishing Silver, Electro Plate, &c. Tablets, 61
WELLINGTON "WELLINGTON BLACK LEAD" in Solid Blocks
 1d., 2d., and 4d. 1s. Boxes.
 The Original Preparation
 for polishing Cutlery.
 Canisters, 1d., 2d., 3d., 6d. 1s., 2s. 6d., and 4s. each.
KNIFE Polishing Paste, Furniture
 Polish, Plate Powder.
POLISH.
 Glass Paper, Emery Cloth, Black Lead Packers,
WELLINGTON MILLS, WESTMINSTER BRIDGE ROAD, LONDON, S.E.1

Dates.

Halfa Province.—A report states that about the middle of the month a few merchants arrived at Wadi Halfa from Egypt to purchase dates. At first they were only able to purchase the balance of last year's crops—about 1,500 sacks. About the middle of the month there was a brisk demand in Sukkot and Mahas districts and approximately 2-3 and 1-3 the crops of these districts respectively were sold at from 132 to 150 Pt. for Barakawi and L.E.2 for Gondeila. The Mahas crop is estimated at 6,500 sacks. 7,300 sacks in 47 boats were dispatched to the 2nd Cataract from these districts—three boats were wrecked with the loss of about 530 sacks. At the end of the month the market again became dull and prices in the South fell rapidly.

Rainfall and Cultivation.

Darfur Province.—Heavy rain fell in Eastern Darfur district on October 16. Rains reported on five days in Zalingei District and there was a heavy storm on October 25.

Mongalla Province.—Rains in Kagul registered 220 mms, rain falling on 12 days. This is the heaviest fall in any month of the current year. In Mongalla 58.2 mm. on eight days as against 92 mm. on 10 days in 1920. In Tombe, 25.9 mm. on four days.

Halfa Province.—The Dameira crops have all been harvested with most satisfactory results. Natives are busy preparing their land for the shitwi crops.

Kordofan Province.—Crops are generally speaking fairly good, but will be considerably less than last year.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna report as follows for the week ending January 7 :—

Sultanias.—The total estimated sales to date amounted to 167,010 bags as against 92,485 bags for 1920. The total estimate sales are 158,010 bags as compared with 85,485 bags for the corresponding period of last year, and the estimated stock unsold totals 9,000 bags as against 7,000 bags for last year.

Shipments.—The following steamers are now loading with sultanias and figs:—S.s. Borodino for London, with 20,404 boxes of sultanias; 43 cases of figs, and 161 bags of figs. This steamer has 250 cases of sultanias and 500 bags of figs also on board for Hull. S.s. Brescia for Liverpool, with 18,889 boxes of sultanias and 380 bags of figs, and s.s. Siptah for Liverpool with 8,927 boxes of sultanias. Of the above shipments, about 16,000 boxes are for the account of the C.W.S. of Manchester.

Markets.—Sultanias are firm with advancing tendency. There are many enquiries on the market, but dealers are reluctant to sell, and the majority are holding off for higher prices. Exchanges are weak having touched 660 at one moment, gradually recovering to 690-5. Prospects point to a generally higher level of values being established, stocks of sultanias being very reduced and held in strong hands. Stocks of figs are about exhausted, the occasional odd lots coming to market being eagerly bought at extreme prices for shipment to Egypt.

The annual "Cotton Diagram" of Messrs. Reynolds and Gibson, which has just been issued, gives in a clear and concise form the fluctuations in the rates of the various grades of cotton. It also gives details of the cotton crops during the period, and particulars of the changes in the Bank rate.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 125s. cwt.; (Canadian), 105s. cwt.; (American), 97s. 6d. cwt.; butter: (Danish), 177s. 6d. cwt.; (Australian), 102s. cwt.; (New Zealand), 118s. cwt.; cheese (Canadian), 95s. cwt.; (New Zealand), 86s. cwt.; lard, 67s. 6d. cwt.; eggs (Danish), 86s. per 120; (Styrian), 21s. 6d. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6½d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 150s. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. cwt.; (Mocha long-berry), 113s. cwt.; (Santos, superior), 61s. cwt.; ginger (washed Cochín), 67s. 6d. cwt.; nutmegs (110's to 80's), 11d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 125s. cwt.; sultanias (Smyrna), 115s. cwt.; currants (Vostizza), 83s. cwt.; currants (Amalías), 59s. cwt.; sugar: (Tate's cubes), 51s. cwt.; (Lyle's granulated), 45s. 10½d. cwt.; (Mauritius crystals), 43s. 3d. cwt.; (West Indian crystallized), 39s. 6d. cwt.; (centrifugal), 13s. 9d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 14s. 9d. cwt.; (bran, Rangoon), £5 8s. 3d. ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 7½d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 48s. qr.; (Australian), 53s. 9d. qr.; barley (malting), 45s. 6d. qr.; barley (feeding), 41s. qr.; oats (English), 34s. qr.; oats (La Plata ex-ship), 26s. 3d. qr.; maize (La Plata), 36s. 3d. qr.; flour, 40s. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulis), £35 ton; bismuth, 7s. 6d. lb.; copper (standard), £65 11s. 3d. ton; copper (electro), £73 10s. ton; gold bars, 97s. 4d. oz.; iron (No. 3 Cleveland), 95s. ton; hematite (mixed number), 98s. 9d. ton; galvanised sheets (24 G), £16 7s. 6d. ton; lead (soft foreign) £24 1s. 3d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 31s. 3d. unit; nickel, £190 ton; platinum, 387s. 6d. oz.; plumbago, £20 ton; quicksilver, £10 7s. 6d. bottle; silver bars, 34½d. oz.; spelter (G.O.B.), £26 15s. ton; tin (standard), £167s. 7s. 6d. ton; wolfram, 11s. 6d. unit; zinc sheets, £34 10s. ton; tin plates (20 by 24), 19s. 3d. box.

Chemicals.—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 4½d.; ammonia (sulphate), £15 1s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard), 2s. 5½d. gallon; bleaching powder (35 per cent.), £15 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 8d. lb.; chloride, 5d. lb.; caustic, £33 10s. ton; nitrate, £42 10s. ton; permanganate, 10½d. lb.; prussiate, yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 140s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 6½d. lb.; alkali (58 per cent.), £9 3s. 3d. ton; chloride, 3½d. lb.; caustic (70 per cent.), £23 5s. ton; hyposulphite, £15 ton; prussiate, 8d. lb.; nitrate, £14 5s. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.), £10 ton; lemon oil, 3s. 1½d. lb.; quinine, 3s. ½d. oz.; red lead, £39 5s. ton; white lead, £42 5s. ton; white ground lead, £51 15s. ton; sulphate of copper, £28 10s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 8d. lb.; 80 to 89 lbs. 8d. lb.; 70 to 79 lbs. 7d. lb.; 60 to 69 lbs. 7d. lb.; 59 lbs. and under, 6½d. lb.; (second), 90 lbs. and up, 7d. lb.; 80 to 89 lbs., 6,6-8d. lb.; 70 to 79 lbs. 6½d. lb.; 60 to 69 lbs., 7d. lb.; 59 lbs. and under, 6½d. lb.; (second), 90 lbs. and up, 7d. lb.; 80 to 89 lbs., 6,7-8d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs. 6d. lb.; 59 lbs. and under, 5d. lb. Cows (first), 60 lbs. and up, 6d. lb.; 59 lbs. and under, 5,7-8d. lb.; cows (second), 60 lbs. and up, 5d. lb.; 59 lbs. and under, 5d. lb. Bulls (first), 5½d. lb.; (second), 4½d. lb.; Kips (first), 6,3-8d. lb.; (second), 5,3-8d. lb.; (third), 3½d. lb. Calcutta Market. Prices in rupees per 20 lb.: Arsenic hides (cows): Agras, 8.0 to 13.8; Durbhangas, 6.0 to 8.0; Patnas, 5.0 to 6.0. Salted cows, 3.0 to 8.8. Arsenic hides (buffalo), 3.0 to 6.0. Skins: Calf, 8.0 to 10.0 per 20 lb.; goat, 245 to 280 per 110 pieces. Bombay Market. Prices in annas per lb.:—Dressed buffs, 8 to 13; cows, 9 to 14. Goat and sheepskins, 1 to 2 rupees per lb. Sixty bales of cow hides and 183 bales of lambskins were despatched to London during the week.

Miscellaneous.—Cotton: (American), 11.00 d. lb.; (Egyptian Sakel), 18.75 lb.; Oilseeds: Linseed (La Plata), £17 12s. 6d. ton; rape (Toria), £16 2s. 6d. ton; palm kernals, £18 3s. 9d. ton; Oils: Linseed, £30 10s. ton; olive (Levant), £77 10s. ton; palm, £39 5s. ton; rape (crude), £44 10s. ton; soya, £34 15s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ext-tank), £3 15s. ton; coconut (Ceylon), £41 5s. ton; cotton (crude) £37 ton; ground nut, £44 5s. ton.

CZECHO-SLOVAKIAN OIL PROSPECTS.

New boring operations carried out in Czecho-Slovakia have proved more successful than was at first anticipated, and a bed of oil has been struck which was under such pressure, probably from gas, that the oil was forced above the surface to a height of nearly 170 ft. in a constant stream. So great was the flow that it was three days before the bore could be capped, and extreme measures had to be taken to prevent the neighbourhood being flooded, the reserve reservoirs being inadequate to deal with the stream.

Company Meetings.

IMPERIAL BANK OF PERSIA.

Strong Financial Position.

The thirty-second ordinary general meeting of the Imperial Bank of Persia was held on January 23 at the Cannon Street Hotel, E.C., Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. (the Chairman), presiding.

Mr. Sydney Rogers (Manager and Secretary) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said:—

During the year under review the import trade, both through the Gulf Ports and via Baghdad, has been active. But so far the export trade has shown very few signs of revival. This is the main cause of the falling off in the total in our balance-sheet of bills receivable. Needless to say, it is of great importance to the prosperity of the country that an effort should be made to stimulate the export of Persian commodities, as at present the balance of trade is heavily against Persia. According to the figures received for the year ended 20th March, 1921, the total imports amounted in value to 482,000,000 kranis, or approximately £9,500,000 sterling, of which no less than £7,500,000 represents British and Indian trade.

The evil effects of over-trading during the short-lived boom immediately following the war have been to a great extent disclosed during the past year, and I am afraid there is still a good deal of clearing up to do generally. The heavy fall in the price of manufactured goods and the enormous stocks accumulated in foreign markets, shipped at the time prices were greatly inflated, have had the effect of locking up a very considerable amount of capital, with the result that stagnation in trade has followed, and the restriction of credit has brought about for us as for others, a smaller turnover.

The total of the balance-sheet for the year under review stands at £7,172,369, and, compared with the figures of the preceding year, £8,260,996, shows a reduction of £1,088,626. Our note circulation has risen from £670,204 to £733,327, while deposits are down from £3,228,336 to £2,805,374. Bills payable, endorsements and adjustments, are smaller this year, showing a reduction from £3,378,404 to £2,616,712. This is mainly owing to slightly better facilities and greater rapidity of communication in Persia, and a return to more normal conditions.

The net profit for the year shows an increase from £80,242 to £88,195, and permits us to carry forward £31,955, as against £29,051 brought in. This result is obtained after paying to the Persian Government £5,291, against £4,000 of last year, the interim and final dividends aggregating 8s per share, and the allocation of £30,000 to reserve account. Although we have this year transferred £10,000 to premises account, this item shows on the assets side a reduction of only £5,302. This is due to some necessary expenditure on new premises. Cash in hand at bankers and in transit stands at £3,055,204, as against £3,339,574, a reduction of £284,369. Investments are slightly lower at £1,499,172, compared with £1,535,222 last year; these have in accordance with our usual practice, have been adjusted at the lowest quotations of the day on the 20th September last. Bills discounted, loans and advances at £1,872,801, however, show an increase compared with £1,738,789, which was the figure of last year. Since the 20th September a rather large advance to the Persian Government, made against special security and included in the figures given, has been repaid. Bills receivable at £695,073 show a considerable reduction on the previous figures of £1,591,989. I hope that in the future trade recovery to which we look forward this item in our balance may improve. Our reserve account now stands at £310,000. In view of the serious depression in trade I think we are fortunate in being able to place so considerable a sum to this account again this year. But we are not satisfied with the total reached, and hope that we may be able to continue to add to it yearly in the future.

In conclusion, I think you will agree with me that the accounts disclose a strong financial and liquid position, which will enable us to take advantage of all opportunities which may offer good openings for new business, and I have much satisfaction in adding that this position is arrived at after having made every provision necessary for bad and doubtful debts.

The Chairman concluded by moving the adoption of the report and accounts.

Mr. W.A. Buchanan seconded the motion.

Sir J. D. Rees spoke at some length upon the importance of studying the Mohammedan subjects of the Empire, and of arriving at a just and generous peace with the Turkish Empire in the interests of trade.

The motion was carried unanimously, and the retiring officers were re-elected.

THE GREAT INDIAN PENINSULA RAILWAY COMPANY.

Review of Half-Year's Working.

The One-Hundred and Forty-fourth Half-yearly General Meeting of the Great Indian Peninsula Railway Company was held on January 20 at the company's offices, 48, Copthall-avenue, London-wall, E.C.

Sir Charles H. Armstrong (chairman of the company) in the course of his remarks said:—When I addressed you six months ago, at our last half-yearly meeting, I was not very sanguine as to the prospects of the current year, but I must admit I did not anticipate that for the first six months to September 30 last the result would be so very unfavourable. The explanation is an excessive and, I hope an abnormal expenditure, due largely to a serious increase in the cost of our coal supplies. Finding, as we did some months ago, that we were not receiving from the Bengal coalfields as much as we had been led to expect, and as our stock was running dangerously low, we were compelled to buy additional supplies in this country, in South Africa, and elsewhere, so that we might have a sufficient stock during the monsoon months and more or less up to the end of the year. Our coal bill is likely, therefore, to be a heavy item in future, although, I hope, not as expensive as it was in the early part of the period now under review.

Our gross receipts during the six months were Rs.6,35,00,000 and our gross expenditure Rs.6,06,00,000, leaving a sum of only Rs.28,66,000 as net earnings. After bringing into account interest on capital expenditure and other charges, there was a deficit of Rs. 1,44,000,000 as against a deficit in the corresponding period of last year of Rs.2,77,000, the net difference between the two periods being Rs.1,41,00,000.

During the period under review we collected on behalf of the Government of India Rs.34,00,000 on account of surtax, in addition to our gross receipts. This tax, which was rather hurriedly imposed at the last Budget, and which cannot be defended from any point of view, continues until March 31. From April 1 it is intended to bring into operation a higher scale of rates, and this to some extent ought to improve our position next year, but I am doubtful if the advance will be sufficient to cover our greatly increased expenditure.

During the half-year we have not been able to make any progress with our suburban electrification project, an urgent and very necessary work in connexion with the Bombay development scheme. All preliminary work has been completed, and we are quite ready to go ahead when the necessary funds can be found, but from the latest news to hand no funds for this purpose are likely to be allotted for some years. If, as is likely, the Government of India, are unable to help us, it would not, I think, be difficult to arrange a satisfactory financial transaction in this country by which payments would be spread over a period of several years, but an arrangement of this nature would need, of course, the sanction of the Secretary of State. The importance of this work is very urgent, as it would not only reduce the cost of working, but would be of material assistance to Bombay in the years to come in helping to move expeditiously its rapidly increasing population, which will have to live at some distance from the city. Offers of the character I have referred to have been made to us already, and we have also had similar offers in connexion with the supply of rolling stock, of which we are badly in need.

There are no resolutions to be dealt with at this meeting, other than one for the adoption of the report and accounts. The guaranteed interest of 1½ per cent. for the half-year was distributed in December as usual.

Mr. J. E. Dallas (managing director) seconded the resolution, which was unanimously carried.

Cotton & Cotton Goods.

THE PROSPECTS OF THE COTTON INDUSTRY FOR 1922.

(Concluded.)

By Sir Charles W. Macara, Bart.

Anyone who knows the facts knows that the difficulty which the labour question presents in India must itself make progress very slow, and especially if the native mills are to invade the finer section of trade which Lancashire has made so peculiarly her own. There is no stability about Indian labour. The operatives are drawn from an agricultural population who have but a transient interest in mechanical industry, and consequently the prospect of getting a sufficiency of highly-skilled workpeople is very remote.

Lancashire, on the other hand, has the inherited skill of generations to fall back upon, and can rely on operatives who have no equal in the world. And not only is the ability of our workers unmatched, but it is a well-known fact that it takes the combined efforts of three workpeople in the East to equal the output of one Lancashire mill operative.

With such advantages as Lancashire has in the way of production and skill, it is easy to see how impossible it is for India to compete, and perfectly puerile to think that Gandhi with his out-of-date hand-loom crusade can have any but the most insignificant effect upon the situation. He might as well try to fight the modern weapons of war with bows and arrows.

Where Gandhi Might do Real Service.

India may, and doubtless will, develop slowly, as in the past, her cotton trade in the future and to this Lancashire has not one word of discouragement to offer, but for the present she is totally incapable of doing without the assistance which Lancashire alone can give. Mr. Gandhi may be sincere in his intentions, but what he is doing at present is simply to stand in the way of the natives getting the cotton goods which Lancashire can supply her with more cheaply than anyone else.

If Mr. Gandhi wishes to do a real service to India and to his fellow-countrymen, he could best do it by encouraging the growth of more and better raw cotton. India, I have always held, could supply Lancashire with as good cotton as ever America produced if she properly organised and cultivated her crops—better by far than any other country in the British Empire. Would it not be a fine ideal to associate the two countries in a great cotton bond of fellowship, India to use her magnificent soil and climate for the production of raw material of the first class, and England, which has so many advantages on the manufacturing side, to exchange the cotton goods in which she excels for the cotton India could raise?

The Indian Natives' Best Friend.

This suggestion by no means precludes the native mill-owners of India from making all the cloth it is possible to make in that country, for, as Mr. Rao has been quick to see, cloth will in future be "wanted in continually increasing quantities for backward communities, and large numbers of aborigines yet remain to be clothed." That is the situation exactly. There is abundance of work for both Indians and Englishmen in supplying the wants of India, and there need be no jealousies or restrictions on either side. It is one of the truisms of the cotton trade that the more cotton goods are known and the more they are required, and it is a most noteworthy fact that in most countries where English textile machinery has been introduced, the people who have begun to manufacture for themselves have called more and more for the products of Lancashire spindles and looms. It is a mistake to imagine, therefore, that Lancashire has the slightest feeling of antagonism towards Indian manufactures; all that we ask is a fair field and no fiscal disadvantages, and we ask this as much in the interests of the native of India as ourselves. One thing that Mr. Gandhi and his friends should keep before them continually is the fact that every advance in Indian import duties means an increased hardship to the native population, for the profits of protection go to the enrichment of the factory masters of their own country, and not to the cheapening of the clothing worn by the poorest of the people.

Lancashire Still Supreme.

Therefore, I repeat that it is a total impossibility for India to get the goods she require in her own country. The hand-loom which Gandhi relies upon cannot hope either to compete

with the power loom or make up the huge deficiency there would be if Lancashire cotton goods were banned; and the slow progress made in developing Indian mills in the past shows how little is to be expected for many years to come in the way of meeting the demand. Granted that there is an acceleration in mill building, the progress must be painfully slow owing to the fact that the textile machinists of Lancashire, upon whom Indian mill owners depend almost wholly, are so overwhelmed with arrears of repairs, renewals, and extensions to home mills that they can give little attention to orders from other parts of the world.

Taking all these circumstances into consideration, I say that there is a vast deal too much made of the competition which India can offer either by power or by hand, and that Lancashire is in no danger of losing that supremacy in the cotton trade that she has won by the sheer grit and merit of her sons and daughters, aided by a climate which is unmatched in any part of the world for special purposes of producing cotton goods of the highest quality.

The Re-Capitalisation Bogey.

From what I have written above, it will be seen that those engaged in the cotton trade in England need have no fear of losing their most important market, nor can I see anything else which is likely to bring permanent injury to the staple Lancashire industry if our affairs are managed with wisdom and foresight. The troubles we have had to meet during the past twelve to eighteen months have been altogether exceptional, and have been brought about by the extraordinary conditions caused by the war, and the mal-administration of those who have been responsible for the Government of the country during the past half dozen years.

One has seen it stated in the press and elsewhere that "over capitalisation" was responsible largely for the state of things we have had of late. To make statements of this character is to display the utmost ignorance of the trade and the causes which have been at work. I have followed the re-capitalisation movement very closely, and I make bold to say that it is this re-capitalisation which has been the salvation of the industry. The enhanced value of mills and machinery made it highly necessary to put concerns on a new basis, while it had been obvious to anybody who has studied the matter that had our mills not been re-capitalised, they would in a comparatively few years have paid away all their capital in excessive war taxation.

Mills Still Worth Double Their Cost.

This has been demonstrated in the cases of the few exceptions which have refused to re-capitalise. They have found themselves with nothing to replace their machinery, and have been obliged to raise money either by means of "call" or in some other way. Far from prices paid for cotton mills being too high, I do not think that buildings and machinery can be replaced to-day for double the price paid for the most costly of these concerned.

It is only necessary to give in support of what I say the figure of the cost of building mills before the war and at the present time. In pre-war days it was possible to build a ring spinning mill for about two guineas a spindle, and a mule mill for 25s. a spindle. At the present time a ring mill cannot be put up at less than seven pounds a spindle, while a mule mill will cost fully five pounds.

Stick to Your Shares.

The lesson to be drawn from the state of things I have here set forth is one of encouragement to all who are either engaged in or connected with the industry. Prosperity is undoubtedly returning, and I have great confidence that before long both the workers and those who have invested their money in the trade will again reap their reward. It is unlikely that the world in future will be satisfied with a reduced standard of clothing, and seeing that cotton, it is estimated, clothes nine-tenths of the people of the world, and is by far the cheapest of clothing, and that before the war the trade was developing at the rate of four million spindles a year, I cannot but be fortified in my opinion that cotton will soon come into its own again.

I would, therefore, bid workers to be of good cheer, and advise shareholders whenever possible to hold fast to their shares, so that they may be compensated for the lean times we have gone through of late. The cotton trade is one of the

soundest and best organised we have in this country, and cannot but do well again when it has freed itself from all the harassments and troubles brought upon it by the war.

MANCHESTER MARKET.

(From Our Own Correspondent.)

Manchester, Friday.

Trading in the market during the past week has been on a very limited scale, and the tone has been extremely quiet. The fluctuations which have taken place in raw cotton rates with a lowering tendency resulted in buyers being less disposed to place orders with spinners and manufacturers. We keep hearing the story that the outlets abroad are all bare of Lancashire piece goods, and that it will not be very long before a real buying movement commences. The buying power of our customers abroad is not of the same extent as a few years ago, but if the financial stringency was not so acute then perhaps we should witness a broadening of demand. Not much cloth inquiry has been about for Egypt and the Levant, and only a few miscellaneous sales have been registered. Better advices have been received from Constantinople. Egyptian spinners have met with a slack demand, and producers tend to lose ground. Quotations have been rather easier. There has been a distinct slackening off in the piece goods demand for China, and it is apparent that our customers have satisfied their immediate wants. Whites and fancies have been in most request, but no mention has been made of any contracts of weight. Not much activity has been displayed by shippers to India, and only a few sorting up lots have been sold for Calcutta and Madras, chiefly in light bleaching descriptions. In the American yarn section the tone has been dull, and prices have favoured buyers. Only a patchy offtake has been registered. Some small orders have been booked in export numbers for India, but less business has been about for China.

COTTON PIECE GOODS EXPORTS.

In 1921 the shipments of cotton cloth from Great Britain amounted to 2,902,659,000 square yards, which without exception is the smallest figure for more than fifty years. The last occasion on which the total was less than this was in 1869, when the aggregate only reached 2,868,630,000 yards. In 1913 which was the highest record, the exports were 7,075,558,400 yards. The poor showing which last year's total makes, however, confirms the reports of the low stocks held by traders abroad, and this in itself may be considered a hopeful factor in the trade outlook.

When values are dealt with, however, the record year was 1920 when the sum raised by the export of cotton piece goods was £315,733,164. The total in 1921 was £137,168,336. Last year the average price per square yard was 11.34d., compared with 17.08d., in the previous year, which of course was the high record. In 1913 the figure was 3.32d., with 5.44d., in 1917, and 12.18d. for 1919.

An interesting feature so far as quantities are concerned is that in 1914, the largest consumer of Lancashire cotton products—India—bought 45 per cent. of the total, but there was a gradual reduction to 22 per cent. in 1919. By 1920, however, the figure had risen again to 31 per cent. and the upward movement was maintained last year, when the proportion was 38 per cent.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date January 18:—

Lack of trade support has been the feature of the past week, and in its absence our market has continued the steady sagging movement to which we drew attention in our last report. Today, for the first time, an attempt at a halt has been made, in face of the strength displayed by Alexandria, and quotations were raised 25 points, presumably in sympathy with the futures market. Alexandria, in fact, is a tower of strength just at present, and we can only hope that this strength is justified. As might have been expected, Lancashire has lost all confidence in the current value of raw cotton, and spot buying during the week has fallen off to the most meagre dimensions. The small

enquiry was of a fairly general character, with Fully Good Fair Brown cotton rather to the fore. Tokar cotton continues to find an outlet, and it is becoming apparent that the better staple lots are gradually disappearing. There is a very large stock here, however, of the "fair average staple" variety, and it is known that a considerable line of the latter cotton has recently been tendered, the allowances obtained varying roughly from between 400 and 450 points off contracts. As a result, holders of Tokar cotton will find it increasingly difficult to obtain good prices until this docket cotton has been disposed of.

Manchester reports have not been very cheerful on the whole, and that centre appears to be going through a particularly bad period of depression and apathy. The hopes entertained that India would soon be making her buying power felt are very slow of realisation, and the one bright spot is China, who is apparently continuing the good work which was begun last week. The customary reports concerning the wretched prices obtained by manufacturers continue. The stock in Great Britain at the end of last week showed a decrease of about 8,000 bales on the previous week's total, while the average takings by spinners in this country continue to average between 5,000 and 6,000 bales per week. C.i.f. business has been only on moderate lines, taken all round. Sales, 1,300 bales (includes 230 bales Sudan). Quotations of Sakellaridis are reduced 125 points, those of Brown and Upper 75 points. Fully Good Fair Sakellaridis 19.50d.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated January 9:—Weather Forecast.—It is probably that the rainfall of north-west India in January, February and March, and that of the west of United Provinces of Agra and Oudh in January and February, together with snow-fall on neighbouring hills, will be in excess. Condition of Crops. January 6—In Bengal, spring crops fair and rain desirable. In Bombay, there have been heavy and untimely rains in many parts of Bombay Karnatak, which are doing damage to standing crops considerably; otherwise no change. In Central Provinces, sesamum very good, wheat, gram, and linseed, good. Punjab prospects unchanged. More rain has fallen in the north-west of Punjab, to the great benefit of wheat crops, but rain is required in central east and south-east of Punjab. January 9—In Assam, cotton poor, otherwise prospects unchanged. Markets.—Cotton.—January 5—Bombay cotton market, weak. Fine M.G. Oomras, Rs. 456 December-January, Rs. 443 March. Piece-goods.—Bombay piece-goods market unchanged. Jute.—January 7—In Calcutta jute market advices from consuming markets indicate much easier tone and rates about 10d. down. Gunnies quiet. Rice.—January 6.—Special Straits quality rice Rs. 380 for December new crops. Shellac.—T.N. Rs. 150. No change in bank rates. Freight.—Holland British India Line now offer to book cargo for London at 5s. under Conference net rates and propose making London first port of call. Conference rates remain unaltered.

A further cable dated January 16 states:—

Condition of Crops.—January 13—Bengal crop prospects unchanged. Rain much needed for spring crops. In Bombay Karnatak recent rain has damaged rice, jawar and standing wheat crops and seriously pulse crops. Rust feared in wheat crops; prospects of other crops unchanged. In Khandesh, wheat seriously damaged and rust feared. Sind crops generally unchanged. In Central Provinces, wheat suffering somewhat on light soils, but prospects of other crops unchanged. North-east of United Provinces of Agra and Oudh wheat and grain normal; sugarcane good. January 16—Assam crop prospects unchanged.

Markets.—January 12—Bombay cotton market dull. Fine M.G. Oomras Rs. 389 March. Bombay cotton arrivals from September 1921 to January 6, 1922, 1,049,000 bales as compared with 568,000 bales in the same period of last year. Bombay piece-goods market unchanged; local goods in fair demand. Calcutta jute and gunny markets very quiet. At tea sale on January 10 selection was good; strong market for common teas, which advanced about one anna. For all teas up to Re. 1 market very firm. Above that prices lower, the finest selling at two to three annas below previous rates. Dusts steady. 484,874 packages sold to date at an average price of nine annas 11 pies per lb. Special Straits quality rice, Rs. 392.8 for December new crop. Shellac.—T.N., Rs. 155. No change in bank rates.

TEXTILE MACHINERY SHIPMENTS IN 1921.

One of the few British industries which is not suffering from a dearth of orders is the Lancashire textile machinery trade, and most firms are quite unable to accept business for early delivery.

The exports from the United Kingdom last year were 156,995 tons, representing a value of £25,148,832 against 63,314 tons costing £9,153,773 in the previous year, and 178,074 tons worth £8,281,848 in 1913.

With such a boom in this trade it is not surprising that values tend to appreciate. In 1913 the average price per ton was £47, but in 1920 the figure was £145 whilst last year the average was £160.

Buyers in Eastern countries were responsible for over 60 per cent. of the total quantity shipped abroad in 1921. India alone took 38 per cent. Japan 14 per cent., and China 10 per cent. Of the European markets, France with 15 per cent. was the most important.

TURKISTAN STEAMSHIP CO.

The Turkistan Steamship Co., Ltd., has been registered as a private company with a nominal capital of £100,000 in £1 shares (50,000 preference and 50,000 ordinary). The objects are to adopt an agreement with Frank C. Strick and Co., Ltd., and Gray Dawes and Co., and to carry on the business of ship-owners and brokers, chartering agents or brokers, insurance brokers, managers of shipping property, freight and salvage contractors, carriers by land and sea, forwarding agents, marine and marine accident insurance, &c. First directors :—Sir Duncan Carmichael, 122, Leadenhall-street, E.C., merchant; G. T. Hotblack, 122, Leadenhall-street, E.C., merchant.

CHAMPION REEF GOLD MINES.

The statutory report states that the company was incorporated on October 31, 1921, with a capital of £260,000, divided into 520,000 shares of 10s. each. In accordance with the reconstruction agreement dated November 3, 1921, the shares were issuable credited with 4s. per share as paid, being part consideration for the sale and transfer of property from the Champion Reef Gold Mining Co., of India, Ltd. (in liquidation). Up to January 13, 1922, 512,512 shares have been allotted; 1s. per share has been called up on 512,505 shares, amounting to £25,625 5s., making them 5s. per share paid; and £665 11s. 1d. has been received on account of future calls; 10s. per share has been received on seven subscribers' shares, and £62 17s. has been received on shares applied for, but not yet allotted. The issue of shares was over-subscribed. The allotment of the balance of 7,488 shares will be made in due course. Preliminary expenses are estimated to amount to £6,000. Meeting, 6, Queen-street-place, E.C., January 31, noon.

Czecho-Slovak enamel ware manufacturers, who have been attached to the German Enamel-ware Syndicate, have now formed their own association.

DEMAND FOR INVESTMENT SECURITIES.

Oils Inactive.

(From Our Own Correspondent).

London, Monday.

During the past week activity has been mainly confined to the investment group which has again made a very good showing. A contributory factor to the strength of the gilt-edged group was the withdrawal of the 5½ per cent. Treasury Bonds and the substitution for them of 5 per cent. Bonds. Generally speaking conditions have favoured the markets, and the more optimistic view now being taken as to the economic outlook has not been without its effect. If only the Powers would get to work without delay and elaborate a scheme for remedying the adverse exchanges it would be possible to look forward to the future with a very considerable degree of confidence. Unfortunately the prospects of this at the present time seem rather uncertain.

An indication of the excellent state of the financial position here is to be found in the rapid success of the week's new issues. Admittedly they have all been particularly promising, but then it is possible to recall cases in recent months of equally good issues which were neglected. It points very plainly to the return of confidence to the investor. Naturally there is a tendency to take advantage of the favourable position, and we are promised quite a crop of new issues in the next few weeks. There is still no news as to pending Near Eastern Loans, but it should not be long now before something is heard regarding them.

Gilt-Edged Buoyant.

The gilt-edged market developed considerable strength during the week, and gains are to be recorded all along the line. Consols are 1½ up at 53, War Loan Fives have gained 3-8 at 93½, while the Conversion Loan at 68½ is 1-3-16 up. Indian stocks which had not hitherto shared in the buoyancy of the gilt-edged group, have also been in demand, and are substantially higher. The 7 per cent. Loan is 2 up at 106½, the 3 per cent. Loan is 54, and the 3½ per cent. Loan is 61½. In Near Eastern securities which rank with British Government stocks Turkish Guaranteed 4 per cent. 1855 are 1½ up at 74½, Egyptian Guaranteed 3 per cents. are unchanged at 70½, and Greek Guaranteed 2½ per cents. remain at 63½.

The foreign market has been somewhat dull and featureless. French Loans have been weak, War Loan Fives closing ¾ down at 40½. German 3 per cents. at 3 have shed 1-16. Italian Rentes are unchanged at 21½. Japanese stocks have been fairly steady. The 1905 Loan is ½ up at 87½, but the 1910 issue has shed ½ at 61½. Chinese stocks have been weak. Brazilians have been firm on American buying, while Mexican securities especially Utility issues have been in marked request. Russians have fluctuated considerably, and close on a weak note as a result of a good deal of selling during the week, inspired presumably by the belief that there is no prospect of appreciable improvement in the near future.

Greek securities have been firm. The 5 per cent. 1881 Loan is 1 up at 37, while the 5 per cent. 1884 Loan has gained 2 at 37. The 4 per cent. 1910 Loan is unchanged at 30, the 5 per cent. Funding Loan is 35, and the 5 per cent. 1914 Loan is 39.

Industrials Steady.

On the whole a fairly steady tone has ruled in the Industrial market. As usual in these times, however, the volume of business has been of the scantiest description, and price changes in most cases are not of any great importance. Tobacco shares have been rather a strong feature. Bats are 65s., and Imperial Tobacco are 63s. African and Easterns have been a firm spot, closing at 35s. Crosse and Blackwell issues have been noticeably hard, the Ordinary being 7s. 6d. Among Telegraphs some activity has prevailed in Radios and Marconis.

There has been little change in Textiles. Coats at 2,21-32 show a gain of 1-32, while Courtaulds are 1½d. down at 37s. 9d.. Iron, Coal, and Steel securities have been variable. Armstrongs are 9d. down at 14s., Vickers have shed 7½d. at 7s. 9d., while Guest Keens are 3d. lower at 30s. 3d. Babcock and Wilcox are 1-32 up at 2½, while Lamberts are 1,27-32.

Shipping securities are about the same. P. and O. Deferred are unchanged at 30½, Cunards remain at 18s. 9d., while Furness Withys are 3d. up at 25s.

Mines have been quiet and dull for the most part. Geduld's have again been a feature, and close 3-32 up at 2½. Diamonds have been harder on support from the Continent, and De Beers are ¼ up at 10½.

Oils Dull.

There has not been much doing in the Oil market during the week, and prices in some cases are slightly lower. Burmahs are 1 down at 6, the cause presumably being that buyers at the end of the week would not be entitled to a preferential allotment in respect of the new Anglo-Persian issues. Mexican Eagles are 3-32 down at 3½. For some time now this share has moved within fairly narrow limits, and potential buyers are obviously waiting for better news from Mexico. At its present price I regard the share as a fair speculative purchase, and one which should within a few months show a fair profit. Trinidad issues have been active, Centrals advancing to 4,1-8. In my view Centrals are another promising purchase for a profit in the near future, while there are possibilities about Kern Rivers which now stand at 19s. 6d.

Among Egyptians Anglo-Egyptian B have shed 3-32 at 1,3-8, while Oilfields of Egypt at 3-16 are 1-32 lower. Gemisah are 7s. 7½d. In the Roumanian group Phoenix, as the result of further profit taking, close 6d. lower at 11s. Roumanian Consolidated are unchanged at 9s. Dacia Romanos remain at 11-16, while Steaua Romanas are 3d. down at 11s.

Banks Firm.

Among banking descriptions Agricultural of Egypt 3½ per cent. Bonds are unchanged at 54-5-4, while the 3½ per cent. Guaranteed Bonds remain at 56½. Imperial Ottoman Banks are unchanged at 8½, while Ionian Banks and Bank of Athens remain respectively at 4½ and 2. National Bank of Egypt are 1-8 up at 19,1-8. Chartered of India remain at 15,7-8, but National of India are 1-16 up at 37,13-16. P. and O. Banking Corporation are 1-8 up at 12, Imperial of Persia have gained ¼ at 5, while Bank of British West Africa are unchanged at 4½.

Land shares have been rather dull. Béhéras are again 1-8 down at 8½, but Béhéra Prefs are the same at 3,5-16. Egyptian Delta Lands have shed 3d. at 7s. 3d., but Gharbiehs are unchanged at 1,9-16. New Egyptians at 25s. 3d. are 1s. 1½d. down, while Union Foncières are the same at 2,5-8. Sudan Plantations have shed ¼ at 2,5-8.

Rubbers Dull.

The feature of the week has been the decline in the price of the raw commodity to 9½d. or under 2d. more than the lowest figure reached last year. Naturally the share market has been dull in consequence. The movement of the raw commodity is probably only a temporary feature, and the indications point to a gradual appreciation in price. Stocks here, it must be remembered are slowly but very surely going down. Once conditions are favourable for the resumption of Continental buying there will be a vast change in the position. In the meantime shareholders will find cause for encouragement in the efforts now being made to extend the uses of rubber. *En passant* I should hesitate to say that share values, may not go a little lower, but there will not be much in it, and I should say that the time is not far distant when a few purchases might be made to advantage. The difficulty, of course, is that nobody likes to lock up money in indefinitely, and it is so obvious that some time must elapse before we shall again be able to speak of buoyancy in the Rubber Market.

Among Miscellaneous descriptions Alexandria Waters are 6,7-8 Egyptian Markets are 17s. 9d., and Egyptian Salt and Sodas are 13s.

CONSTANTINOPLE LOAN AGREEMENT.

With reference to Article 13 of the Deposit Agreement dated November 9, 1921, in regard to the Constantinople Municipal Five per Cent. Loan, 1909, Messrs. Baring Brothers and Co., notify that as over two-thirds of the total issue of bonds have been deposited the committee has decided to make the agreement operative and to authorise the return of bonds deposited duly endorsed. The endorsed bonds are now ready for exchange for the relative interim receipts which should be presented through the intermediary of a London bank or other London agent. Messrs. Baring Brothers and Co. is authorised for the present to continue to receive deposits of bonds under the agreement and to return them duly endorsed.

SHIPPING INTELLIGENCE.

MOROCCAN FISH FOR FRANCE.

The fishing experiment of the big trawler, Jules Elby, equipped with the latest freezing apparatus, in Moroccan waters, which has now returned to Havre, have not been very satisfactory, says the *Journal of Commerce*. Receipts amounted to 130,000 francs, whereas expenses for the 32-day voyage reach 150,000 francs, from which it is concluded that big trawlers are only suitable for the Dogger Bank. In the catch were 7,000 cod, but most of it was lobster and similar fish. For the first time in Havre the cargo was sold upon sample, and the method was not entirely satisfactory, for it was found that the freezing plant had not preserved all cases of fish in an equal degree, and in consequence much that was sold as one class of goods had to be taken back and resold later at a smaller price.

FRENCH SHIPPING ACTIVITIES.

Greater activity is noticeable in the Messageries Maritimes and other French lines, serving the Near and Far East from Marseilles now that political troubles appear to be less acute in Egypt. A considerable tonnage of building materials will be sent from France shortly to Syria, according to the *Journal de la Marine Marchande*. It is, on the other hand, to be remarked that freights from Marseilles to the Far East are firmer, among the articles which are being exported being wines for Japan and China, *articles de Paris*, soaps and perfumes, and trinkets of French manufacture.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, February 4).

Anchor Brocklebank Line.—S.s. Malancha for Calcutta (Birkenhead, January 28); s.s. Malakuta for Port Said, Colombo, Madras, and Calcutta (leaves London, February 4); s.s. Mahratta for Calcutta (Birkenhead, February 11); s.s. Stockwell for Port Said, Colombo, Madras and Calcutta (leaves London, February 18); s.s. Mahrona for Calcutta (Birkenhead, February 25); s.s. Anchoria for Port Said, Colombo, Madras and Calcutta (leaves London, March 7).

Bibby Line.—S.s. Lancashire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 1); s.s. Yorkshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 15).

Byron Steamship Line.—S.s. Maid of Crete for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, January 30); s.s. Maid of Hydra for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, February 13).

Cunard Line.—S.s. Cypria for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Swansea, February 6); s.s. Brescia for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika,

Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Glasgow, February 9).

Ellerman's "City" Line.—S.s. City of Sparta for Calcutta (Birkenhead, February 4); s.s. City of Marseilles for Calcutta (Birkenhead, February 20).

Ellerman's "Hall" Line.—S.s. Kasenga for Bombay, Karachi, and the Punjab (Liverpool, January 31); s.s. Kentucky for Karachi and the Punjab (Liverpool, January 31).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

Glen Line.—S.s. Glenogle for Port Said, Port Swettenham, Singapore, etc. (London, January 26); s.s. Glenapp for Port Said, Port Swettenham, Singapore, etc. (London, February 9); s.s. Carnarvonshire for Port Said, Port Swettenham, Singapore, etc. (London, February 23).

Harrison Line.—S.s. Author for Calcutta (Liverpool, January 26); s.s. Explorer for Calcutta (Liverpool, February 14).

Henderson Line.—S.s. Bharno for Port Said, and Rangoon (Birkenhead, February 8).

Holt Line.—S.s. Antiochus for Port Said, Port Swettenham, Singapore, etc. (Glasgow, January 26); s.s. Mentor for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, January 26); s.s. Machaon for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, January 26); s.s. Teiresias for Port Said, Port Swettenham, Singapore, etc. (Glasgow, February 9).

Johnston Line.—S.s. Incemore (first steamer of the season for the Danube), for Piraeus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, February 11); s.s. Pomaron for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 18).

Moss Line.—S.s. Siptah for Gibraltar, Malta, Piraeus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Sulina and Constantza (Liverpool, January 28); s.s. Hatasu for Gibraltar, Algiers, Malta and Alexandria (Liverpool, January 28).

Papayanni Line.—S.s. Bosnian for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 4); s.s. Egyptian for Mellila, Malta and Alexandria (Liverpool, February 4).

P. and O. Line.—S.s. Sardinia for Colombo, Madras, and Calcutta (London, January 27); s.s. Karmala for Bombay (London, January 27); s.s. China for Bombay (London, February 10); s.s. Nyanza for Colombo, Madras and Calcutta (London, February 10).

P. and O. British India Line.—S.s. Mandala for Bombay and Karachi (London, January 27); s.s. Morvada for Colombo, Madras and Calcutta (London, February 3); s.s. Nevasa for Bombay and Karachi (London, February 10); s.s. Chilka for Colombo, Madras, and Calcutta (London, February 17).

Prince Line.—S.s. Merchant Prince for Tunis, Malta, Alexandria and Syrian Coast (Manchester, February 4); s.s. Stuart Prince for Malta, Alexandria and Syrian Coast (London, February 4).

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on January 6 were as follows:—Agricultural Bank of Egypt, £4.7-16; Alexandria Water Co., Ltd., £7; Anglo American Nile Steam, £2½; Associated Cotton Ginners, £7-8; Banque d'Orient, Fr. 56½x; Behera Ord., £E9.3-8; Brasseries d'Egypte, Fr. 55; Building Lands of Egypt, £7-8; Cassi di Sconto Priv. NOTES OF THE WEEK.

The Near Eastern Conference.

Before *The Near East* appears again, Lord Curzon will have met the Allied Foreign Ministers in Paris, and though it might be interesting to anticipate their proposals it would be fruitless. Such an examination would serve no purpose, simply because details in this matter are of very little account : the one thing necessary is unanimity. For whatever Great Britain, France, and Italy choose to do, that, so long as it be done in concert, we believe can be done. On the face of it the probability of such joint action does not appear great. It would seem that little hope of complete unanimity could be derived from a situation in which Turkey, Greece, and Russia are the three main local factors; for if Great Britain is friendly with the second, she is suspect by the first and last, while France is friendly only with the first, and Italy with the first and last—a tangle indeed of confused interests and desires. But we are not hopeless that at last the Allied representatives may arrive at the realisation which we have long been urging—that, however, conflicting subsidiary interests may be, the one great purpose, peace in the Near East, can be attained only by commonly-conceived plans and commonly-executed measures.

Great Britain, France, & Italy.

We attach no credit to ourselves when we express our belief that, of all the motives of Western Powers now concerned in a settlement of the Near East, Great Britain's are the least interested. There is wide suspicion of us, we know; it will be perhaps the most difficult and the most important of the duties attaching to Lord Curzon at the Conference to break down this suspicion. Once France and Italy, particularly France, are persuaded of our good faith in the Near East, the remainder, we believe, will be easy, for disagreement is a quite possible basis for business, but suspicion, never. We have no all-embracing policy in the Near East, we dislike all talk or intention of hegemony, and any appearances to the contrary are the result of open accident, not of secret design. In the Straits, for instance, where our predominance is so much disliked, our purpose is as honest and as clear as the daylight; and again, with the Arabs, our support of whom is anxiously questioned, we seek no goal but peace. It is true, lamentably true, that British policy has been sometimes vague, and sometimes even contradictory, this being due mainly to our

new and transient methods of conducting foreign affairs; but it is equally true that as a nation we have no desire to oust either France or Italy from influence in the Near East. As far as we can see, the policy of France, admirably logical and consistent though it may have been, has depended in great part on our policy, almost following the principle of opposites, and certainly there have been on her part far too much rivalry and suspicion, though we surely would not attribute this to the French as a whole. And of Italy, we hope we are doing her no injustice if we say that her policy in the Near East has been one of frank opportunism, one from which her renowned idealism and liberalism have with puzzling success been absent. She has acutely taken advantage of our mistakes, and, confident of her place on the highlands of Anatolia and of the Caucasus, she can look down without envy upon our hitherto miserable attempts to settle with Turkey and with Russia.

A Final Opportunity.

About the meeting of the Allied Foreign Ministers at Paris, which is due to take place within a day or two, there is a sense of historical importance, for it may well be the last of its kind. Unless there is unanimity now, we do not see how later it can be reached; if the three Great Powers cannot approach each other now, we think that they will soon break farther away. Presumably each one now knows where the others stand, and some points will be found bearing a common solution. Of a theoretical solution indeed we do not entertain much anxiety; it is rather in the execution of the plans that difficulties will arise. If Turkey is recalcitrant over any question, say that of Thrace, there must be no boggling over the enforcement of the Allies' terms. In this connection we set some store, though it may not immediately be necessary, on an understanding with Russia, whose constant support of Turkey's demands has been perhaps the most remarkable and important factor in the whole Near Eastern situation since the Armistice. Western statesmen well know that the Russo-Turkish friendship cannot last, and it will not be out of their power to dissolve it. But in any case we do not anticipate that a show of force will be necessary to convince Turkey: an united front will suffice.

A Communique on Egypt.

On Sunday evening the Foreign Office issued a *communiqué* announcing that Lord Allenby has been summoned to England "to give information and advice to his Majesty's Government as to the present situation

in Egypt." Advantage was taken of the opportunity to restate the British Government's attitude towards Egypt and the demand for independence, and to make clear the policy pursued "both during and since the Adly Mission to England." The full text of the statement will be found on another page, and we hope that it will afford as much satisfaction to our readers as it has given to ourselves. In our issue of December 8 we expressed the opinion that the Egyptians wanted more than they had a right to expect and that the British Government was not prepared to concede all that it might safely grant. The outline of policy issued on Sunday seems to show that the latter statement will no longer hold good, that our Government is in fact prepared to concede all that it can grant without risking a charge of neglecting its duty towards the Empire.

A Triumph for Moderate Counsels.

The issue of the *communiqué* constitutes a triumph for moderate opinion on both sides and those responsible for bringing it about deserve well both of Great Britain and of Egypt. We have never taken such a gloomy view of the British Government's conduct as a very large section of the Press has done, but we realise that to issue a statement such as that of Sunday in the present state of things must have required some courage; and we are glad that it has been done. Great credit is also due to the Egyptian Moderates, who, headed by Adly and Sarwat Pashas, have declined to follow blindly the policy advocated by Zaghloul Pasha and his lieutenants. The way is now once more open for the resumption of negotiations, and the prospect of reaching a settlement is brighter than it has been for many a long day.

Friends of Egypt.

In a letter published in the Press last week, a number of well-known men propose the formation of an association of the friends of Egypt in this country. The organizers are men with real knowledge of Egypt and of the problems it presents, and they are unlikely to allow the proposed association to be stampeded by cranks or faddists; and we can, therefore, welcome their proposal quite unreservedly. Their aim is to remove the obstacles to an amicable understanding between Egypt and the British nation, and they hold that the divergences of view revealed in the published official correspondence do not appear sufficient to justify the failure to come to terms. They believe that "there is common ground on which moderate and reasonable opinion on either side can meet," and for our part we share the belief, and regret sincerely that the breakdown was ever permitted to occur. The Association aims at "showing the Egyptians that they have friends in this country who do not despair of a settlement and who are prepared to work for it." To that we may add, what the writers themselves could not—"and friends of the right type, whose advocacy will help instead of hindering." The mere publication of the letter can hardly fail to have strengthened the hands of the moderates in Egypt already, and to have brought nearer the prospect of the formation of a Cabinet.

An Abdication Rumour

In the early part of last week a London daily published a telegram from its Athens correspondent to the effect that King Constantine was to abdicate, the Allied Powers having intimated that normal relations with Greece could not be restored until he made way for Prince George. The intimation, according to the report cited,

had been conveyed through the British Minister in Athens, the Hon. Francis Lindley, and King Constantine had finally arrived at the conclusion that the interests of his country would best be served by his abdication. To give the message the necessary finish, we were informed that should King Constantine decide to change his mind "recent financial arrangements" would be cancelled, and finally that M. Venizelos had intimated his willingness to place his services at the disposal of his country, "once King Constantine is out of the way." It was a circumstantial story, and in some quarters it found credence for a few hours, but, as was only to be expected it was very soon officially denied.

Whence Launched?

While it may be not entirely strange that rumours regarding the abdication of King Constantine should be numerous at the present time, it certainly is strange that one of them should reach London in such a form as that of the message referred to above. The story, ridiculous in its details though it may be, is calculated to do harm to British interests in Greece; and it would be interesting to know how it came into being. The question of King Constantine's relations to the Greek people is one for him and them to decide; and though it may influence the attitude of the Allies towards Greece in the future, as it has influenced them in the past, they are unlikely, we imagine, at this late hour of the day to act in such a manner as that suggested by the report quoted. In any case,—and this is for us the most important point—the suggestion that it was or should be, the British Minister who would be likely to deliver a message which would be, obviously, almost as offensive to the Hellenic people as it would be to King Constantine himself, appears to us to be both malicious and absurd. It may be that King Constantine may yet consider that his abdication would benefit his country, and act upon the belief; and it may be that he may be asked to abdicate by some outside Power, or Powers. But such a story as that to which we have referred is never likely to prove an "intelligent anticipation of events." To our minds the only touch of artistic verisimilitude about it is the suggestion that M. Venizelos would, in the circumstances indicated, be willing to take office again; and even that is in flat contradiction to his own declarations.

A New Persian Cabinet.

Persia has yet another new Cabinet, the Kavam es Saltanah having been replaced as Prime Minister by the Mushir ed Dowleh, and a general adjustment of other posts having taken place. The Sardar Sipah, however, still remains Minister of War, a feat which, amid so many and such rapid changes, inevitably calls up memories of a certain Vicar of Bray. The Kavam es Saltanah's fall is generally ascribed to his finding the financial difficulties of the country too great for him to overcome, and more especially to the disappointment of his anticipations in regard to certain loans. Whether his successor's Cabinet—which took office on January 21—will find its task any easier in this direction is somewhat doubtful, and the Acting Minister of Finance, the Mudir ul-Mulk, is not to be envied. The finances of Persia may almost be said to have drifted into a state of chronic embarrassment, and it is difficult to see what prospect there is of their improving in the near future. But perhaps the United States Minister, now on his way out to Persia, may be destined to play the part of *deus ex machina*.

The Situation in India.

During the week the cables from India have given us more views than news, and almost the only fact worthy of note has been the definite abandonment of the boycott of foreign cloth by the Indian dealers in Calcutta. To tell the truth, their hearts were never really in the movement, and if they gave it their support, the reason was to be found in their fear of the organised gangs of so-called volunteers, who for a short time were allowed to do very much as they liked. The volunteers have now been put out of action, while the dealers have found themselves threatened from an unexpected quarter by the competition of Afghan merchants, who will sell foreign cloth or anything else, if there is money in it, and who would be quite ready to teach "volunteers" a lesson in minor tactics if any interference were attempted with their business. So the Calcutta dealers are selling cloth again, and, since faces have to be saved, they are blaming Mr. Ghandi, who promised Home Rule for January 1, and has failed to deliver the goods; but the true significance of the incident lies in the evidence it furnishes that ordinary people are again more or less able to live their own lives in peace.

Civil Disobedience.

Some pleasant reading is afforded by the accounts of the spread of what is called civil disobedience, mainly in the form of a refusal to pay revenue, in the Madras district of Guntur, which is between Hyderabad and the East Coast. The measures which are being taken to cope with it are of the kind we anticipated when discussing the subject not long ago; the holdings of recalcitrant peasants will be promptly sold up, the dupes will lose their sole means of livelihood, and the agitators in the background will presumably shift their quarters in time to avoid serious consequences to themselves. The possibility that purchasers may be afraid to come forward has of course been foreseen, and provision has, we are glad to see, been made to utilise any land left on the hands of the Government to provide for members of the depressed, or oppressed, classes, who have for so long been asking for a chance to better their condition. Land-hunger is so intense in this part of India that there is little prospect of holdings being left unoccupied for long; it is unlikely therefore that the dupes will be able to secure reinstatement by repentance, and we suppose they will in due course become objects of charity, like the unfortunate Moslems who were tempted to emigrate to Afghanistan.

Lord Northcliffe on India.

Of views as distinct from news, we can only refer to the considered statements of Lord Northcliffe, which have, of course, enjoyed a wide circulation, and which are said in some quarters to be largely responsible for the recent fall in India stocks. So far as the internal situation is concerned, the general effect of these statements is in the direction of "gingering up" Lord Reading's Administration, but it is not easy at this distance to be sure whether that particular treatment was indicated by the diagnosis; sometimes a doctor thinks it well to prescribe what his patient asks for. Speaking for ourselves, we must confess to a certain amount of disappointment that Lord Northcliffe should have left India without publishing an account of an interview between himself and Mr. Ghandi. Doubtless there were difficulties in the way, but the contact of such dissimilar personalities could scarcely have failed to send out some sparks of truth and light; and even

sparks would be welcome just now, when some of Mr. Ghandi's most intimate advisers are in jail, and the opportunity presents itself of penetrating to his undiluted individuality.

THE WEEK AT HOME.

London, Monday Evening.

Revival of Party Politics.

We have had another week of political oratory, and the speaking has been distinctly above the average recent level. It is true that Mr. Lloyd George's last effort was very disappointing—he is never at his best until he has been attacked—but the Independent Liberal revival meeting showed distinct signs of life. Mr. Asquith had more punch than for a long time past, but he was outshone by Lord Grey, who had evidently lost none of his old power in five years' retirement. The interesting point of his speech for the tacticians was that he confessed himself ready to co-operate with Lord Robert Cecil—the Whig with the Tory—and that the latter has publicly welcomed the proposal. But Hatfield House only sways six or ten votes, so that it will not make much difference in practice.

Mr. Winston Churchill replied for the Coalition a day or two later, and attacked Lord Robert; but he, like his leader, was not at his best, and the subsequent retort from the elder Cecil was very affective—a quotation of the celebrated lines from Dryden's "Absalom and Ahithophel" which fitted the Colonial Secretary with unkind precision. The fact seems to be that the Coalition batting has become stale, and the Opposition are getting the wickets at the moment. But they have only begun to do so since the General Election was postponed—that is to say, since they were relieved of the fear that the Coalition would declare its innings closed.

The party engines have been got to move again, but they want a year at least to get up steam; and I am not at all sure that the public really welcomes this outburst of political activity. The deciding issue at the next election will be neither the Coalition programme nor Independent Liberal gibes, but the attitude of Labour. If people are still frightened of Labour then the Coalition is safe, if not, not.

The Trial that Failed.

We had all been looking forward to a first-class sensation at the Old Bailey last week, in the trial of Mr. Bigland for criminal libel against Mr. Bottomley. The case was expected to last a fortnight; half Fleet Street and nearly all the Temple were there. But within an hour everything was over. Mr. Bottomley applied for an adjournment and, that being refused,

failed to produce any evidence; the case accordingly collapsed, and the prisoner was acquitted. It was the most astonishing thing that has happened in the Courts for many a year. The failure to proceed with the trial placed Mr. Bottomley in an equivocal position, for the accusations which Mr. Bigland made against him were by no means pleasant reading. He has, however, issued a statement that he intends to clear his honour, and people are waiting with some interest for the next stage.

The Vatican.

The death of the Pope was not a matter of direct interest outside the small Roman Catholic community in these islands. The old Protestant note which made itself conspicuous fifty years ago on such occasions was certainly lacking, but the biographies usually noted that the late Pope was not, to put it mildly, an asset to the Allies in the late war. It is recognised that the break-up of Austria means a change in the position of the Papacy, but that does not concern us very greatly. There is, of course, no chance of an Englishman's being elected.

The National Health.

In spite of influenza, drought, and the popularity of murder at the moment, statistics published last week showed that the national health has again improved. While the Malthusians want to make it more difficult to be born, it seems to be becoming increasingly difficult to die. The death-rate is the lowest on record, having sunk from 21.4 per thousand in 1871-80 to 12.1 last year. A great deal of the fall is due, of course, to the declining infantile mortality, but it is undeniable that old people live longer, and enjoy their life too. It is partly due to sanitation, partly to better surgery; but mainly, according to the best authorities, to the more temperate indulgence in eating and drinking.

Lord Bryce, who died last week in the middle eighties, was a typical young old man; but I have heard him spoken of almost in the tones one adopts about those who are cut off in the flower of youth, so full of vigour did he seem. After this, one can believe the story of the Civil Servant, retired compulsorily at sixty-five, who decided to read for the bar in order to occupy what he called "the inevitable coming of early middle age."

The most striking example of longevity, however that I have heard of for some time, appeared in print a few days ago. It was announced that the Bishop of London who has just recovered from a dangerous illness at the age of 64, has gone with his elder brother, ten years his senior, to stay with his mother at Bournemouth.

A Treasure House.

Another great London mansion is likely to disappear this year—the Burdett Coutts house, at the corner of Stratton Street, Piccadilly. Many of the works of art, which include Reynolds, Raeburns, Romneys, and Gainsboroughs, will be sold this spring; a first folio Shakespeare is for sale; letters from Pitt, Fox, Lafayette, Scott, and some three hundred letters from Dickens—there has been no such opportunity for the American collector for many a long year.

It is an echo of the old world, but I doubt whether many people would care to live in Piccadilly in these days, even if they could afford it—it is too noisy. A bedroom window facing the Park sounds ideal, but as you have to keep it shut if you want to sleep at all the average sensible person prefers a quieter if less fashionable address.

The Heretic at Home.

The heresy hunt, to which I referred about a month ago as likely to be dropped, seems certain to be prosecuted after all. A lively controversy has sprung up in the newspapers on "Shaken Creeds," in which deans, and other dignitaries belabour each other; and the accused cleric, Mr. Major, of Ripon Hall, Oxford, has replied to his tormentors in a pamphlet and a letter to the Press. The gist of his attitude is in the following declaration: "I venture to think that to teach as symbolically true, statements which are scientifically or historically false, without frankly saying that they are

scientifically and historically false, is apt to lower our reputation for veracity, at any rate with the vast majority of Englishmen."

That seems to put the thing in a nutshell, and one is rather surprised at the number of clerics who have since accused Mr. Major of "confused thinking." There has been a great deal about Adam and Eve in the discussion, but in its later developments, the Athanasian Creed has inevitably been introduced, with an increase of heat and deminution of light. However, the recriminations have so far been conducted with a greater regard to propriety than is usual in ecclesiastical polemics, and I understand that one or two laymen have entered the discussion. So far, like Daniel in the lions' den, they have received no visible hurt from their intrusion.

Public School Diet.

Another controversy of the day, which seems to be evoking more interest than that of the creeds, relates to the feeding of schoolboys. Indignant parents write to the papers to say that their boys are not being properly fed at school, and that as they pay £200 a year for keeping them there eight months in the year something better than bread and margarine should be doled out for supper; harrassed housemasters reply that, so far from profiteering by starving young England, it is impossible to put money by for one's old age, so capacious is the interior of youth, and so utterly does boy-nature abhor a vacuum, particularly in its inside. Doctors and physiologists have joined in with learned talk about calories and vitamins; but meanwhile it is announced that yet another public school is to be founded, this time out of a disused ducal mansion.

My own impression is that the food at public schools is reasonably good; it is what some sardonic person has called the system of education that is hopelessly bad. The schoolmaster still thinks in Latin, and sighs for the restoration of Greek; he continues to look on those youthful languages, English and French, as essentially barbaric tongues; and like the classical don the world over, he persuades himself that the niceties of grammar are "the humanities." The mentality of a pedagogue must be a very curious study, but it is incomprehensible to the ordinary person.

The Week's Books.

"The Evolution of Consciousness" (T. Fisher Unwin) by A. Wyatt Tilby, is a psychological study. It describes the chronological development of the senses as the basis of perception, and then plunges into a discussion of the Will in Nature—which it divides into successive stages, the will to live, Desire, and Purpose; a study of Sex, Memory, Intellect follows, with an analysis of the Categories of Thought; Thought itself being derived from action, in direct contradiction to the classical doctrine. The statement is made that consciousness is essentially of a chemical nature, consisting of an unending series of actions and reactions.

An old clergyman, who was a hardened reviewer of books in his spare time, once told me that nobody could set up to be an honest critic unless he had read every word of the book criticised before he began his review; there might, in his opinion, be one immortal sentence that would redeem an otherwise utterly stupid production. Judged by that high standard of reading every word, I am afraid, "The Oxford English Dictionary" (Clarendon Press) of which the tenth and last volume is published, would find no reviewers. I certainly have only taken a word here and there, beginning honestly enough with A, who ate the apple (probably an allusion to Adam), but skipping B., who bit it (also omitted in the Genesis story) and only sampling the unsuspected wealth of K and Q. Here we have X, Y and Z, the last words being Zymotic, Zymurgy (which as everybody knows, or ought to know, is the art of fermentation), and Zyxt, a Kentish form of "Thou seest," now rare. It is curious to find among our Z-words Zeitgeist and Zeppelin, both acclimatised in the last few years; but the familiar Zenith (from the Arabic word meaning a path) was also an importation.

OCELLUS.

THE NEAR AND MIDDLE EAST.

From Our Own Correspondents.

EGYPT.

Cairo, January 21.

Suspense Without Anxiety.

There has been no change in the local political situation since the despatch of my last letter. The position still remains as it was then: Sarwat Pasha has reached an agreement with the representative of His Majesty's Government on the lines on which it is possible to form a Ministry, and both parties to this agreement are now awaiting its ratification by the British Cabinet. Although in itself unfortunate, this continued delay is not regarded locally as significant, as it is fully recognised that, with the Premier's preoccupations in Cannes and elsewhere, sufficient time could not be spared for mature consideration by the Cabinet of proposals of so far-reaching a character.

A Forecast.

One or two of the best-informed vernacular journals, which do not usually lend themselves to flimsy rumours, have published forecasts of the new scheme. As no official announcement has been made on the matter it is impossible to say whether these forecasts have any foundation in fact, but there is reason to believe, as the Arabic papers have stated, that the new basis for Anglo-Egyptian co-operation in the Government of Egypt embraces the concessions offered in the Curzon Note, with the proviso that the conditions attached thereto should be the subject of further official negotiations. One hesitates to dilate on the matter, since there is no certainty whether this assumption of the basis recommended to the British Government is correct, but it is permissible to note, in passing, that such an arrangement would tend to heal the breach recently widened. The only danger inherent in such a scheme would be the expectation by the Egyptians that the consent of the British Government to further negotiations implied a willingness to reconsider the question of the necessary guarantees.

In one way it has been unfortunate that the delay has been so prolonged, as it has given the obstructive elements time to recover from the recent set-back, and has permitted the organisation of a strong campaign against the Sarwat group. It is reported from a number of sources that Mohamed Pasha Shoukry, who was mentioned as one of the likely ministers in the new Cabinet, has deferred to this campaign of intimidation and has withdrawn his candidature. This incident, minor in itself, is suggestive, however, of the growing power of the out-and-out extremists. It would be a thousand pities if Sarwat, in the teeth of bitter hostility to his patriotic attitude, having been able to form a Cabinet upon a basis favoured by the more enlightened of his compatriots, was embarrassed upon taking office by any widespread lawlessness. The delay is material inasmuch as it has given time for the organisation of such a display of obstructive opposition.

But there is alleged to be more at stake now than the question of the formation of a Cabinet. The question of possible developments in the event of a refusal of the British Cabinet to ratify the agreement made locally is exceedingly delicate, but those conversant with precedents set in similar circumstances elsewhere will be able to realise the logical course of events if that refusal is decided upon by the British Ministry. Manifestly the march of events during the last seven weeks has been exceedingly rapid; and it seems now to have entered a phase whence something tangible must accrue. If there is a settlement, with the abolishment of the Protectorate, the speedy withdrawal of martial law and the convocation of a National Assembly, the result will be, in all truth, startling enough. But if there is not a settlement, the sequel might be more startling still! **Adlyist and Zaghloulist.**

There is a strong belief among the leading Egyptians

that the British Government will consent to sanction the basis already proposed. In that case the position of the reconstituted Wafd must become rather delicate. As has been explained in previous letters, the Adlyists and Zaghloulists merged their forces after the arrest of Zaghloul, but apparently there was no reconciliation of programmes. The Adlyist group have always desired a settlement with England, whereas the Zaghloulists have been bent upon an almost complete severance of the formal ties between the two countries. To be consistent, the Adlyists must support the Sarwat Ministry if its platform reveals a path for the attainment of the Nationalist aspirations, while the Zaghloulists have already made it clear that they do not intend to be parties to any settlement before several impossible concessions are made, including the repatriation of the exiles. The probability is that there will be a break, with the Adlyist section behind Sarwat and the Zaghloulists remaining in opposition. It will be a pity, because the schism will be widely reflected. But obviously the British cannot be held responsible for that.

The British Union.

During the past week the British Union in Egypt held its first annual meeting in Cairo. It had been expected that there would be some interesting speeches on the political events of the last eight months, but, at the request of the High Commissioner, no politics were discussed, and the meeting therefore confined itself to consideration of methods to improve its membership and extend its benevolent work. Dr. Grech Mifsud and Messrs. Beasley, Holt and Lovegrove were appointed to the executive committee to fill existing vacancies and, on the motion of the President, Mr. W. E. Kingsford, it was decided to open a benevolent fund to which *all* British subjects in and out of Egypt, without any distinction whatsoever, were to be invited to contribute. This fund is to be utilised to assist, at the discretion of the trustees, any worthy objects such as British schools, churches, patriotic movements, cases of distress, etc. Some bitter comments were made concerning the apathy of the non-official British community towards the Union, as of the large non-official British community in this country only 117 people had joined. A strong campaign for more branches and greater membership is to be initiated shortly, in order to make the Union as representative, wealthy and influential as possible.

YUGOSLAVIA.

Belgrade, January 22.

Serbs and Roumanians.

The royal betrothal continues to occupy the Press, as is very natural. It is so usual to regard Serbia as a country of turbulent and bellicose warriors, that it is refreshing to remind the public that they have never fought with the Roumanians, although they are neighbours. The Serbs know the Roumanians pretty well, for in the Timok country there is a large colony of immigrant Roumanians, generally known as Vlachs, who

Leaders of the World's Office Equipment and Filing Systems.

retain their own costumes and language. For many years they have been crossing the Danube, finding in the free institutions of democratic Serbia a relief from the feudal aristocracy of old Roumania. The Vlachs have contributed a number of public men to Serbian life, and, we may add, their women have contributed to the beauty. There is a saying that one Vlach girl will beautify a village, and the rather refined Roumanian type adds a softening effect to the more strongly marked Slav features.

Besides, historical associations between Roumania and Serbia are all of a friendly character. As far back as the XVth Century, when Tamerlane defeated Sultan Bayazid at Angora in 1402, a Serbian contingent under the sons of Prince Lazar and Vuk Brankovitch fought in the Ottoman army, with great distinction. During the fratricidal war that followed between Bayazid's sons, Musa and Suleiman, Despot Stefan Lazarevitch, son of Prince Lazar, took refuge at Constantinople, as he had been on the side of Musa who was defeated and killed near by! The Emperor Manuel received him with every mark of distinction, and forwarded him by sea to Wallachia, where Voivoda Mircha was then ruling. Mircha too received Stefan and his retinue with the greatest friendliness, entertained them for a considerable period, and finally equipped him with everything that he needed for his journey home, especially horses, and personally escorted him as far as his frontier.

Besides, no Serb can forget that his favourite national hero, Marko Kralyevitch, was killed in battle in Wallachia. The annals relate that the Despot Stefan and Marko were compelled to fight on the Turks' side, and Marko said to his comrade Kostadin that he hoped the Christians would win and that he would be among the first to perish. His prayer was granted, and both Kostadin and Marko himself were among the first killed. This was in 1394, when the voivoda Yovan Mircha ruled in Roumania.

Arrest of Komitajis.

There has been an extensive round-up of Bulgarian *komitajis* in Macedonia. After sharp fighting near Skoplye with the notorious band of Vivlyanats, a number were captured and the inquiry that followed has revealed much interesting information about the activities of the Macedonian Committee in Sofia, which has a wide-spread organisation in Serbian Macedonia. As a result of the inquiry, the Skoplye authorities have arrested no less than a hundred and fifty persons who were incriminated, and who defend themselves by saying that they were terrorised into helping the bands. As many arrests have been made in the Kumanovo province.

Serbian Evidence on Russia.

A Serbian engine-driver has just returned to Belgrade after spending some twenty years in Russia. He paints a desperate picture of the state of affairs in that unhappy country. All sense of money-value has long since disappeared:—A pound of black bread costs 10,000 roubles, a pound of horseflesh, if you are lucky enough to get it, costs 10-12,000, a fathom of firewood costs half a million, a litre of milk from 10 to 15,000 roubles, and so on! This would not so much matter if salaries were proportionate, but they are not; the system of paying in kind is abolished, and railwaymen, for instance, get a million roubles a month, which is equivalent to a sentence of death by starvation. Disease is rampant because there are no medicines available, and most of the doctors have abandoned their profession. Death by starvation in the streets is not a mere newspaper tale, for he has seen it with his own eyes in Petrograd. He concludes by saying that he has been a Socialist for 20 years, but what he has seen of its practice in Russia has effected a permanent cure.

Mohammedan Loyalty.

There has been so much talk of the anti-national attitude of the Yugoslav Mohammedans that it is cheerful to read the other side of the picture which, as being less sensational, attracts small attention in the Press. Recently there arrived in Belgrade Ibrahim Hakki, a teacher from Tetovo, bringing a New Year's Gift to the

King in a form which is as poetical as original. It consisted of some apples from Tetovo on which an inscription had been most cleverly carved while they were still green, "Happy New Year 1922," "Long live King Alexander," and similar loyal greetings, the maturity of the fruit had in no way spoilt the pretty effect of the carving, and the apples were delivered to the Marshal of the Court on New Year's day as evidence of the loyal devotion of his Majesty's Mohammedan subjects from the old town of Kalkendelen, now known by its rightful and ancient Slavonic name of Tetovo.

ROUMANIA.

Bucharest, January 15.

King Alexander's Visit.

King Alexander of the Serbs, Croats, and Slovenes, arrived in Sinaia on Sunday morning, January 8, on a three days' visit to the Roumanian Royal Family. He was accompanied by M. Yankovitch, the Chamberlain of the Serbian Royal Court, General Hagitch, Royal Adjutant, M. Antitch Ciolac, Yugoslav Minister at Bucharest, Colonel Damianovitch, and M. Nastasovitch, from the Yugoslav Ministry for Foreign Affairs. He was met at the station by King Ferdinand, Prince Carol, and Prince George of Greece, as well as by the members of the Cabinet, M.M. Také Jonescu, Derusi, Camarashescu, and General Holban. The military honours were rendered by a company of the 2nd "Mountaineers" Regiment, which is under the command of Prince Carol, while the band was playing the Serbian Royal Anthem. After having passed the troops in review the Sovereigns and their suites drove in motor-cars to the Monastery of Sinaia, where the Abbot officiated at a *Te Deum*. Afterwards they proceeded to the Royal Castle, Pelesh, where they were received by Queen Marie and the Princesses Elisabeth, Marie, and Ileana. At one o'clock

SOUTH AFRICAN OPPORTUNITIES FOR FARMERS

The Union of South Africa merits the special attention of farmers who contemplate settling in a Dominion. It is well suited for some fifteen branches of farming. Mixed farming, especially, has progressed greatly there during the last decade.

Some of the world's best dairy cattle are now bred in South Africa. The grading up of beef herds is also progressing well, and hog rearing for the bacon factory has become an important side-line.

South Africa is one of the foremost countries for sheep and horses, and nearly every sort of fruit is grown there on a commercial scale.

Improved methods of feeding and management are increasingly being adopted on the farms. Pastures are being built up; fodder crops are more and more grown, notably maize, alfalfa, cowpeas, oats and teff. There is a heartening increase in the number of creameries, and of factories for making cheese and bacon: co-operation is spreading.

The result is that whereas a few years ago the Union of South Africa imported, it is now increasingly exporting dairy produce of a quality accorded high awards at the principal British Shows.

Yet South Africa is only at the beginning of its greatness as a farming country. It offers good opportunities to men of the right type who have the capital to start without financial assistance. About £2,000 is the minimum required. Good land is still cheap. Taxation is comparatively light. Farm labour is on the whole cheaper, and less scarce, than in most countries. Educational facilities for the young are good. Nor need the beginner start under pioneer conditions; the pioneer work has in the main been done.

There are now good facilities in South Africa for obtaining experience of local conditions, and general guidance, before investing in land. Full gratis particulars should in the first instance be obtained from the Office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, W.C.2. (Advt.).

a gala luncheon took place, on which occasion King Ferdinand made the following toast :—

"Allow me to express my own as well as my people's great pride in seeing your Majesty here as our guest, and to wish you a hearty welcome. I greet in your Majesty the valiant soldier, who, after having borne a crown of thorns, which fate did not spare to the Serbian people nor to your venerable father, gathered on the battlefields at the head of his brave Serbian troops the laurels with which history has girded his forehead. I further greet in your Majesty the loyal ally and neighbour as well as the King of a country which for centuries stood side by side with my country when it was a question of defending our mutual interests in the fight against a common peril. Since then a constant friendship was sealed by the blood shed together when the brave Serbian soldiers fought alongside with us on the tableland of the Dobruja for the same sacred aims. After so much suffering and century-long struggles our countries have now achieved their century-old aspirations and their national unity. United in battle and with the same object also in internal consolidation and in the desire of securing a stable peace, a common interest binds us henceforth in the peaceful work which will allow us also in the future to go hand in hand as good neighbours, friends and allies. The presence of your Majesty among us is for me and my people the surest guarantee of these sentiments of friendship, and in assuring you that these sentiments are sincerely and affectionately shared by myself and my Kingdom I drink to the health of His Majesty, the King of the Serbs, Croats and Slovenes."

King Alexander in response warmly thanked King Ferdinand for the cordial reception accorded to him, expressing at the same time his sentiments of gratitude and unwavering friendship. He further manifested his joy at finding himself among the Roumanian people and its Royal family, the companions in arms of the Serbian people. King Alexander concluded his toast by drinking to the health of King Ferdinand and the Roumanian Royal family.

At five in the afternoon King Alexander was the guest of M. and Mme. Také Jonescu, and in the evening a dinner *en famille* took place at the Pelesh Castle.

Royal Betrothal.

The news of the engagement of King Alexander and Princess Marie, which took place on Monday, January 9, was, although more or less expected, very pleasant indeed to the people of this country. The local papers relate that the young King proffered his suit while taking a walk with Princess Marie in the picturesque park of Pelesh Castle, and that Princess Marie seemed very happy to accept him for her life-partner. Also the King and Queen of Roumania gladly consented to this union.

To celebrate this happy event a gala dinner was given the same evening at Pelesh Castle, at which were present, besides the Roumanian Royal family, King Alexander and his suite, the afore-named Ministers and the different military and civil members of the Royal Household. The first toast was made by King Ferdinand in announcing officially the betrothal of Princess Marie and King Alexander, and he invited those present to drink to the health of the newly engaged couple. To this King Alexander replied with the following toast—

"Your Majesty, in wishing me yesterday a hearty welcome, emphasized the cordial bonds which united in the past the two neighbouring countries, and which were sealed in the defence of the same noble causes. Both our peoples have learned with the toll of sufferings, wars, and tears, so that their friendship is the best foundation for our future mutual progress. I only needed to be guided by the deep-rooted sentiments felt by my people that my thoughts should wander to the one

who will, one day, share with me the duties which are incumbent on me. It is also a great happiness that my personal feelings entirely coincide with those of my people. In receiving me in the bosom of your family, your Majesty has completed my happiness, and I strongly hope that it will mean also the happiness of your much beloved daughter. I raise this glass, Sire,—and if you will already allow me, Father,—in expressing the warmest wishes for the prosperity of your country and of the Royal family."

After the dinner the King and Queen of Roumania and the newly engaged couple accepted the congratulations of those present. The celebration was concluded by a cinema performance showing pictures of Prince Carol's voyage to the Far East.

On this occasion King Ferdinand conferred on King Alexander the Order of Michael the Brave, first class, and the "Collier" of the Order of King Carol the First, and all the other members of his suite have been decorated with medals corresponding with their ranks. On the day before his departure, King Alexander conferred on King Ferdinand the Order of the Crown of Karageorgevitch, with sword, and on Prince Carol the same Order, without sword. He further conferred on General Madarescu the Grand Cross of the "White Eagle," and on the Ministers M.M. Camarashescu, Cihodariu, and General Holban the Order of St. Sava, while N.N. Také Jonescu, Derussi, and Mishu, were presented each with an autograph, as they already possess most of the high insignia of Yugoslavia.

King Alexander left Sinaia for Belgrade on Wednesday morning, January 11, having promised to return to Bucharest for the Epiphany festival, which takes place on January 19.

It is, however, reported that King Alexander on one of his next visits will be accompanied by MM. Pashitch and Ninitch, on which occasion the real official betrothal will be celebrated, which according to the Orthodox custom implies the "exchange of rings." It is further reported that during the end of this month King Ferdinand and Prince Carol will go to Belgrade to return King Alexander's visit. The exact day of the wedding has not as yet been fixed, but it is thought that it will take place at Belgrade during the Orthodox Easter holidays.

Very cordial and congratulatory telegrams have been exchanged between MM. Pashitch and Také Jonescu, who feel that by this event their life-long policies of friendly relations between these two countries have now been crowned with success.

Political.

There is no outstanding feature to be reported in the political sphere for the past week, with the exception of the general tension with which the fateful day of January 17 is awaited, with the adjournment of Parliament. It is, indeed, difficult to forecast what fate is reserved for M. Také Jonescu's Government at the hands of the present Parliamentary majority, which is manifestly hostile towards him. The leaders of this majority boldly affirm that the first encounter of the Cabinet with Parliament will result in a deliberate vote of censure.

On the other hand, the friends of M. Také Jonescu are confident—if not of a friendly but at least of a tolerant reception, on the ground that a vote of censure would ultimately imply the dissolution of this Parliament. This would mean that the members of the majority would cut into their own flesh, for either M. Také Jonescu obtains the right to dissolve the present Parliament, or the power irretrievably passes into the hands of the Liberals, so that in any case the present Members of Parliament would lose their seats, should they vote against him.

It is safe to assume that M. Také Jonescu at present enjoys the confidence of the Crown, and it has been brought into relief that it is not a mere coincidence that M. Také Jonescu happens to be at the head of the Government while the recent Royal betrothal is taking place, for it now transpires that M. Také Jonescu, during

his last visit to Belgrade, appears to have been—in conjunction with M. Pashitch—instrumental in having brought about the royal union, and the desire may exist that he should continue to be at the head of the Government also at the time of the forthcoming wedding.

General News.

M. D. Bogosh, the Bessarabian Leader, has been appointed Minister for Bessarabia, without portfolio.

In compliance with the King's wish that the exceptional measures should be gradually removed throughout the country, it was decided at the last Ministers' Council to restrict the Military administration in Bessarabia to a zone of 30 kilometres alongside the frontier, where Martial Law is still in force.

The present Government intends to bring before Parliament the Alcohol Monopoly Bill, which is now ready. This monopoly, however, will not include wine and beer.

BULGARIA.

Sofia, January 22

Bulgaria and the New French Cabinet.

The change of Government in France has not been a matter of great import to Bulgaria, although it is feared that the fact of M. Poincaré's being determined to exact full reparation from Germany, may lead to France's adopting a similar attitude towards Bulgaria. The Sofia Press has for the most part taken up a position of detached neutrality regarding the divergences of opinion between England and France. To a careful reader, it is, however, apparent that the *Preporetz*, the official organ of the Democrats, is inclined to be hostile to the new French Government. In its number of December 16, it remarks *inter alia*; "Under the rule of the irreconcilable M. Poincaré, France is doomed to a state of isolation"; and the following day it says: "M. Briand, whose policy was moderate, and who desired to be on terms of sincere friendship with France's late Allies, has fallen. He is succeeded by M. Poincaré, who represents present-day French public opinion, and who is a strong upholder of the Treaty of Versailles." Nothing very new in these words, perhaps, but they go to show the views of the Democratic Party, which is as well organised and active as any other Party in Bulgaria to-day. The *Mir*, the paper of the Obedinists, M. M. Gueshoff, Daneff, and Thodoroff's followers, is inclined to take a more critical view of the Ministerial change. It observes that the series of disagreements that have arisen between England and France since the signing of the Treaty of Versailles have now come to a head, and that it remains to be seen whether the authors of the selfish and unjust Peace Treaties will have the courage to revise their handiwork. The Government Press has been remarkably silent about the whole matter, and is principally concerned with what may happen at the Genoa Conference.

The Conference at Genoa.

The Italian Legation at Sofia has conveyed to the Bulgarian Government the Allies' invitation for the participation of Bulgaria in the coming Economic Conference at Genoa. Provided that internal matters do not claim his attention, M. Stambolisky will attend in person, and will be accompanied by M. Tourlakof, Minister of Finance, M. Stoyanoff, Chief of the Public Debt, M. Popoff, Director of Statistics, and other financial and economic experts.

Considerable satisfaction is felt in Government circles that M. Stambolisky will at last be able to lay his views before an European Conference, and hopes are entertained that he may have an opportunity of pointing out that economic restoration in Bulgaria cannot be achieved until Bulgaria is granted a free outlet to the Aegean Sea.

Democrats and Radicals.

Turning to internal affairs, interest is at present focussed on the *pourparlers* in progress between Democrats and Radicals.

The Radicals, who some years back formed part of the Democratic party, desire a coalition with the latter; and for the past ten days have been engaged in conver-

sations with a view to achieving this object. Up to the present, no announcement has been made as to the success, or the reverse, of these conversations, but it is understood that the two parties are in agreement upon almost all points, and that before the end of the month, the coalition will be a *fait accompli*.

It would be wrong to attach too much importance to this coalition, for the Radicals have only a mere handful of deputies in the *Sobranie*, whilst the Democrats themselves only number a score and five. The importance of the move lies more in the fact that the Obedinists will be in a minority compared with the other two parties. They (the Obedinists) also profess themselves willing to enter into a coalition with the Democrats, but a wing of the latter party, aided by certain sections of the Radicals, is opposed to the Obedinists' entering. In fact, certain members of the Democratic and Radical parties consider themselves strong enough without the Obedinists, Non-party men hold that this is a wrong point of view, and that by refusing to associate with the Obedinists, the other parties will throw away any chances they may have of ultimate success. When all is said and done, the total number of Bourgeois deputies in the present *Sobranie* is under sixty, including 21 Obedinists and five or six Liberals; so it will not be very far sighted if the Democrats mount the high horse and reject the advances of the Obedinists.

"A Strange Story."

A short time ago, M. Panourias, Greek Chargé d'Affaires at Sofia, received an anonymous letter, condemning him to death. He informed the Bulgarian Government of the facts of the case, and—assuming that the authors of the letter did not put their threat into execution—imagined that the matter would end there. There was, however, published in the Government paper *Echo de Bulgarie* on the 12th inst., an article entitled, "Vieille Cloche, Vieux Son." This article scoffed at the idea of the anonymous letter being the work of serious men, and expressed great astonishment that the Athens Press should have stated that the letter emanated from Bulgarian revolutionary *Komitaji* sources. The *Echo de Bulgarie* went on to say that there were no *Komitajis* in Bulgaria to-day, excepting those that existed for charitable purposes!

M. Panourias very naturally took exception to the tone of the article, and addressed a note to the Ministry of Foreign Affairs, sending at the same time a copy to the chiefs of the Diplomatic Missions at Sofia. In this note M. Panourias pointed out that it was ridiculous to say there were no *Komitajis* in Bulgaria, citing the murder of M. Dimitroff, the late Minister of War, and many others, as a proof that the so called "Charity *Komitajis*" had not always a peaceful aim in view.

An amusing sequel to the note is the announcement that a certain Macedonian, well known in Sofia society for his active and real benevolence towards refugees, has been named as the writer of the anonymous letter. The gentlemen in question hastily paid a visit to the Ministry of Foreign Affairs, where he indignantly repudiated the idea that he would have any connection with anonymous letter writers; and the whole affair is now likely to die a natural death.

Too Many Holidays.

After a perfect orgy of holidays, beginning with Christmas, Western Style, and continuing through New Year, also Western Style, Christmas, Orthodox Style, New Year, Orthodox Style, not to mention two or three other Saints' Days, Sofiotes will now be able to settle down to a little work.

The weather has done nothing but change since the beginning of November and the cold spell in the second week of January has now given way to mild, and unfortunately exceedingly muddy, weather.

A Palace Reception.

On the occasion of the Princess Endoxia's birthday last Tuesday, a reception was held at the Palace. This is the first time Bulgarians and foreigners have met under the Royal roof since Ferdinand fled the country, in the Autumn of 1918. The Cabinet, Diplomatic Corps,

Reparations and Military Commission were well represented, whilst there were also present former Prime Ministers and their families.

The two Princesses have attended two or three dances held at the Military Club, but so far the King has never accompanied them—to the intense disappointment of the people, who are beginning to be jealous of the peasants whom His Majesty is constantly visiting.

GREECE.

Athens, January 15.

The New British Representative.

Although the departure from Athens of Lord Granville was greatly regretted by the entire Greek population, as he had shown much diplomacy and delicate tactfulness in the handling of the awkward situation which naturally arose on the overthrow of M. Venizelos' Government and the consequent return to Greece of King Constantine, this feeling of regret was to a certain extent counterbalanced by the thought that possibly the new Minister for Great Britain would come to Athens with instructions to present his credentials to the King. This opinion was generally held not only by the populace, but also among semi-official circles. The arrival of Mr. Lindley was therefore eagerly awaited, and great disappointment was caused when it was known that instead of handing his credentials to King Constantine, he reported his arrival only to M. Cartalis.

However, the Government papers, to allay the feeling of disappointment thus caused, have lately contained many leading articles on the subject of the recognition of the King, the majority of the papers claiming openly that Great Britain will, at the first favourable opportunity (which is stated to be expected shortly) instruct Mr. Lindley to present his credentials to King Constantine. In this sense it is well to quote an extract of the leading article which was published in the *Stemma*

(The Crown) a few days ago. The *Stemma* is an ultra-Royalist paper and writes as follows:—

We are informed from an official source that the arrival of the English Representative in Athens is of very great importance.

The British Minister has arrived as Representative of His Majesty the King of England and not as "Chargé d'Affaires" to the Hellenic Government. For this reason he has not presented his credentials to the Minister for Foreign Affairs but simply addressed a letter to the effect that he had arrived as the Representative of His Majesty King George.

Diplomatic circles consider this act as a result of the *pourparlers* between France and Great Britain, the former ending by giving way to the latter. It therefore only remains for a few minor details to be arranged before Mr. Lindley presents his credentials to King Constantine.

The Holy Synod and the New Patriarch.

The Holy Synod of Athens presided over by the Bishop of Athens, Mgr. Theoclitos, has pronounced its verdict on the election of Mgr. Meletios Metaxakis as Greek Orthodox Patriarch of Constantinople. The members composing the Holy Synod refuse to recognize this election, and Mgr. Meletios is condemned to live in perpetuity as a simple monk at the convent of Strofades in the island of Zante, and at the same time is deprived of all power and title in the Holy Orthodox Church. Thus relations between official Greece and the Greek Orthodox Patriarchate at Constantinople have been definitely broken off.

The New Year.

On the occasion of the Orthodox New Year the usual thanksgiving service was held at the Cathedral in Athens, which was attended by the King, the Queen, the Royal Princes and Princesses, the Council of Ministers, the Commander-in-Chief of the Army in Asia Minor, General Papoulas, and the high State and Army officials. The members of the foreign missions to Greece were also present. After the ceremony their Majesties, surrounded by the Princes and Princesses, received in the Throne Room the members of the Government and other high officials, who wished them a happy New Year.

General Papoulas.

After more than a year's absence, the Commander-in-Chief of the Greek Army in Asia Minor, General Papoulas, has arrived in Athens from Smyrna in order to spend the New Year holidays with his family. The General had a long talk with the Minister of War at the War Office, and was subsequently received in audience by the King, who awarded him the Military Medal (Class I) "for the exceptional capability shown by him as Commander-in-Chief of the army in Asia Minor, and for having by his indefatigable efforts, contributed towards the successful performance of the mission with which the Army was entrusted."

To the journalists who visited him, General Papoulas said that the situation on the Greek front was very satisfactory and that the *moral* of the men was excellent.

The British Football Club.

The British Football Club began their season in a match against the Cyprus Football Club at New Phaleron, and playing a good game deservedly won by 3—0. Showing marked superiority over their opponents they scored once through Mr. Tealy, in the first half, and twice, through Mr. Coombes and Mr. Bond, in the second half. Altogether the forward line showed signs of developing into a well organised attack. Mr. King at centre half, and Commander Road at right back both played an excellent game, and it was mainly through their endeavours that the British goal was never troubled. The goal-keeper, Mr. H. J. Clarke, had really very little to do. With such a satisfactory beginning the season is looked forward to very hopefully. League matches start on January 29 (N.S.).

Athens, January 21.

The Political Situation.

As is only to be expected, strong interest is aroused

Piræus

here by the speeches of prominent Ministers of the Great Powers when the subject under survey vitally concerns the situation or the political future of Greece? This is reflected in the eager manner in which recent declarations of Lord Curzon, to the effect that he will put forward certain propositions to a Council of Ministers to be held shortly to discuss European Affairs, have been discussed here.

With special regard to Greece Lord Curzon is reported to have declared that he will propose:—(1), That the Greek Army evacuate Smyrna and the hinterland; (2), Smyrna and hinterland be placed under the Imperial Sovereignty of the Ottoman Empire with a special autonomy; and (3), Special guarantee be demanded for the protection of the Christian population in Asia Minor.

These declarations, coming from such a source, have caused a profound sensation here, the more so when the speech of Lord Curzon at a banquet given in his honour last November is taken into consideration. A complete change of opinion would appear to have taken place in the policy to be adopted by Great Britain with regard to the Near East, and one more in accordance with the French ideas on the subject; and this is naturally causing grave anxieties to the people of Hellas.

The possibility of Greece's losing Smyrna has already been taken into consideration, and the Press is slowly preparing public opinion as to what may be expected. Everyone to-day realises that M. Gounaris' prolonged stay in Western Europe has brought nothing to the country, and that, with the exception of the possible raising of the financial blockade as far as Great Britain is concerned, and which upon careful examination does not amount to very much, the Greek Premier has sadly failed in every department. He is gradually losing his grip on Smyrna, the Epirus frontier question has been solved to Greece's disadvantage; the arrangement concluded between M. Venizelos and Signor Tittoni with regard to the Dodecanese is no longer recognised by Italy; and last but not least, although we are sick of hearing about that £115,000,000, the country still is, and is likely to remain for a long time to come, without a farthing to its name.

It is, of course, current opinion here that Great Britain is the only Power at present favourably disposed towards Greece, and Greece places much confidence in her. In the event, therefore, of Great Britain's adopting what may be termed the French attitude in the Near East, and requesting the withdrawal of the Hellenic troops from Smyrna and the hinterland, a popular outburst might very easily take place, and matters in the Near East become even more complicated.

There are many rumours afloat, which are seriously considered, to the effect that many officers at present serving on the Asia Minor front have made a compact that, should Great Britain eventually decide upon the evacuation of Smyrna and its hinterland by the Hellenic troops, they will resign their commissions and carry on the defence of that country on their own initiative, being supported financially by the Greek element of Smyrna and the numerous wealthy Greeks abroad.

The result of the Conference shortly to take place to discuss the Near Eastern problem is eagerly awaited, and it is hoped that a solution satisfactory to all parties may be arrived at, and thus terminate one of the world's greatest questions of the day. Much is hoped for by the Greeks in view of the satisfactory manner in which Mr. Lloyd George concluded the Irish controversy; and Greeks generally hope that the British Premier may be equally successful in cutting the Gordian knot of the Near East.

Epiphany Day.

On January 6 the usual ceremony of the benediction of the sea took place at Piræus in the presence of the Royal Family, the Council of Ministers, and General Papoulas. The Metropolitan of Athens officiated, assisted by the Bishop of Santorini. All the ships in the port were beflagged, and when the Holy Cross was

thrown into the water twenty-one salvoes were fired by the warships.

Intense Cold in Thrace.

Bitterly cold weather, such as has not been experienced for over twenty years has set in in Thrace. In certain villages many towns have been entirely covered by snow, and in addition to a number of human victims, hundreds of sheep and other domestic animals were frozen to death. Many trees, particularly those which require continuous warmth and sunshine, such as the fig tree and the pomegranate tree, are not expected to bear fruit again.

It is reported from Smyrna that the regions of Oushak and Afion Karahissar are also covered with snow.

Miscellaneous News.

General Papoulas has returned to Smyrna.

Prince Andrew, now a Major-General, commanding the 2nd Greek Army Corps in Asia Minor, has also returned to his post.

A rumour to the effect that M. Venizelos was murdered in California is fortunately denied.

At the annual election of the Committee of the Athens Municipal Council, with the exception of the President, who is an anti-Venizelist, the remaining seven elected members, including the vice-president and the secretary, are all Venizelists.

The nine aeroplanes which were seized on the Italian steamer 'Madrid' retained some time ago by the Greek naval authorities, have been conveyed to the Tatoi aerodrome, whence they will be dispatched to Asia Minor, to reinforce the Greek Flying Corps.

A provisional Commission has been formed in Athens for the purpose of organising an Agricultural Congress in Greece. Invitations have been sent to all the agricultural organisations in the country requesting them to be represented at the congress to be held in Athens at a date to be determined later. The Minister of Agriculture has promised to afford every facility to the Congress.

The Prefect of Police in Athens has requested the restaurant keepers to reduce the prices on their menu cards by twenty per cent. for all Government servants and officers. The restaurant-keepers have promised to comply with this request.

The publication of two new Venizelist daily newspapers, the *Eleftheron Vema* and the *Anorthosis*, is announced. Three of the seven proprietors of the former are Liberal deputies, and the journal will be edited by M. Demetrius Lambrakis, formerly Editor of the Liberal *Patris*.

TURKEY.

Constantinople, January 22.

A Bomb Shell.

The news of the fall of M. Briand's Cabinet fell like a bomb shell among political circles both in Constantinople and Angora. Nationalist organs like the *Tevhid Esfkiar*—the present disguise of the *Tasfir-i-Esfkiar*—are bravely endeavouring to prove that the change in the French Cabinet cannot make the slightest difference in the situation, but the event is nevertheless regarded as a serious blow to the Kemalist cause. One of the immediate results of the change has been a Cabinet crisis, and although nothing has officially transpired, there is no doubt that the Cabinet has been badly shaken. The name of Mahmud Mukhtar Pasha has been freely mentioned as a probable successor to Tewfik Pasha, but it must be confessed that it is difficult to see what possible advantage could be ensured—except to office hunters belonging to the opposition parties. It is probable that in the end Tewfik Pasha will remain in power, but that there will be one or two changes in the administration.

So far as can be judged from the very meagre information coming from Anatolia, the effect upon the political situation in Angora of M. Briand's retirement has been far more serious. As a matter of fact, for the last two months there have been signs of a certain reaction against the uncompromising policy of Mustapha Kemal

and his partisans. The resignation of five "commissioners" within the space of about one month clearly indicated that serious differences had arisen among the leaders of the Angora Government, and the unexpected fall of the Briand Administration has given an immense impetus to the Moderate party. The vacancies in the Angora Cabinet have been filled by hitherto comparatively obscure individuals, whose principal qualification is complete devotion to Mustapha Kemal. It remains to be seen whether Mustapha Kemal will be able to hold out against the growing demand for peace now that it is known that the Allies are generally prepared to give favourable consideration to Turkey's legitimate demands. The worst thing that could happen at the present moment would be another Greek offensive, for that would immediately reunite all parties and give the extremists a new lease of life. At the end of the old year and the commencement of the new year there has been a sequence of events which are beginning to produce results upon the general situation in the North-East. The failure of the Mopliah rising, the Irish settlement, the arrest and deportation of Zaghoul Pasha without very shocking results, and the willingness of the Soviet Government to discuss the situation with the Allies, have made even the Kemalists realise that after all the British Empire is not tottering to ruin just yet.

The Straits Question.

Readers of *The Near East* will remember that the Straits question has been described in previous letters as the real crux of the Anatolian problem, and it may therefore be interesting to reproduce what are said to be the Kemalist views of the matter.

The Armenian paper *Jagadamard* claims to have obtained from reliable sources a statement of the Angora Government's policy, framed after consultation with the Soviets of Moscow and the Ukraine. The statement contains—chance or humour?—fourteen points, to the following effect:—

1. The Dardanelles and the Bosphorus to remain under Turkish sovereignty.
2. The Straits to be free without reservation to the ships of all nations.
3. Merchant ships flying the flag of States bordering the Black Sea to pay no dues.
4. Ships traversing the Straits to be free from control.
5. The Straits to be defended by Turkish troops.
6. A mixed commission to be formed in connection with administration, port construction, and navigation facilities.
7. States bordering the Black Sea, and other Great Powers to be represented by one delegate each and Turkey by two delegates on the above-mentioned commission. The delegates and the president of the commission to be elected for three years, and the first president to be an Ottoman subject.
8. The expenses of the commission to be covered by a tax levied upon foreign ships passing through the Straits.
9. Taxes for maintenance and other expenses to be levied for a period of five years only.
10. In the event of war, the Straits to be open to international navigation as usual, under the control of the commission.
11. In the event of Turkey being involved in war, the Straits to be free to international navigation likewise, but under a guarantee that the Straits will be protected.
12. In normal times warships may pass through the Straits on condition that they remain no longer than 24 hours.
13. Warships bringing foreign missions to be allowed to remain until the re-embarkation of the missions.
14. In the event of aggression against the Straits by no matter what Power, the members of the mixed commission to make immediate representations to their respective governments. The aggressor to make good all damage caused.

It will be noticed that the above statement contains one important point differing from the clauses concerning the Straits in the Moscow and Ukraine treaties with the Angora Government, namely, the inclusion of the Great Powers in the mixed commission, as mentioned in Article 7.

In a series of amendments to the official Admiralty Flag Book recently issued particulars are given of the Royal Standard of the Serbs, Croats, and Slovenes—a square flag with a border of blue, white, and red triangles. Within the border the flag is divided into three equal parts of blue, white, and red, and bears in the centre the Royal Arms (an escutcheon bearing the emblems of the three parts of the kingdom, borne by a two-headed white eagle, and surmounted by a crown).

GREAT BRITAIN AND EGYPT.

The Foreign Office issues the following communication:—
The High Commissioner of Egypt has been summoned to England to give full information and advice to his Majesty's Government as to the present situation in Egypt and as to the communications that have been passing between him and the Egyptian ex-Ministers with regard to the future government of the country.

There appears to be an impression in some quarters that Great Britain has abandoned, or is about to abandon, her liberal attitude towards Egyptian aspirations, and that she desires to make use of her special position in Egypt to maintain a political and administrative system there incompatible with the freedom which she has declared her willingness to recognise.

This is not the case. The policy of his Majesty's Government, both during and since the Adly Mission to England, has been founded upon the following principles:—

While unwilling to cede to disorder or violence what they are prepared to grant on its own merits, his Majesty's Government have explicitly stated their readiness to invite Parliament to terminate the Protectorate which was declared in 1914; to recognise the existence of Egypt as a Sovereign State, and to agree to the constitution of an Egyptian Parliament and the re-establishment of an Egyptian Ministry of Foreign Affairs as soon as they are satisfied as to the following conditions, which they regard as vital to the interests both of Egypt and the Empire.

They must have full and effective guarantees:—

(1) That the Imperial communications, to which Egypt is essential, are assured.

(2) That Great Britain retains both the right and the power to afford that protection to the foreign communities in Egypt which the Governments of these peoples in existing conditions look to her to supply.

(3) That Egypt is safeguarded against all foreign interference or aggression, direct or indirect.

As soon as an agreement satisfying these conditions has been drawn up between an Egyptian Government and the British Government there will be no hesitation on the part of the latter in inviting Parliamentary sanction to such an accord.

THE ARAB HORSE SOCIETY.

A Council Meeting was held on Thursday, January 19, at the Grosvenor Hotel, London, Mr. S. C. Hough, President, being in the chair. There were also present:—Messrs. T. C. Armitage, H. V. M. Clark, A. Stanley Cochrane, Edward Hurlley, Captain E. Munck, Major G. B. Stewart, D.S.O., R. S. Summerhays, Brig.-General C. Templer, C.M.G., C.I.E., and Comte de Zogheb. Letters of regret for not being able to be present were received from Mr. E. R. Caltrop, Captain J. Hamilton Leigh, Lieut.-Colonel W. A. MacDougall, D.S.O., Captain the Hon. G. Saville, and Mr. R. A. Willis.

The Council decided by ballot the names of the Members for election to the Council by Members of the Society.

Lieut.-Colonel F. F. Lance was elected a Governor.

A Special Prize was added by the Council in Class 23 for the best yearling Arab-bred colt or filly.

The Council then adjourned until their next Meeting on Tuesday, April 11, at the Grosvenor Hotel.

LONDON UNIVERSITY.

Last week, at a meeting of the Senate of London University, a scheme was approved for the award of the Ronald Burrows Memorial Prize of the annual value of about £30, established in memory of the late Principal of King's College. It will be awarded to a graduate of a British university or of the University of Athens, preference being given to a student from King's College, King's College for Women, or King's College Theological Department; and the prizeman will be required to pursue an approved course of advanced study in ancient, mediæval, or modern Greek language, literature, or history, or in Greek archaeology.

The Senate received a communication from the executors of the late Sir Ratan Tata intimating their continuance for a further period of five years of his benefaction of £1,400 a year to the Ratan Tata Foundation.

MALABAR CUSTOMS.

Mr. H. E. A. Cotton, who, with Lord Pentland in the chair, lectured before the East India Association last week on "Caste and Customs in Malabar," said that there was an infinite variety of castes there. The usages which struck the visitor from the West as unnatural were stoutly defended by the native aristocracy. The aristocratic Nayar rule was based upon complete equality of the sexes. Matrimonial unions among present-day Nayars were ordinarily as permanent as in any European community, and it was claimed for the Nayar practice that it exhibited all the merits attributed to monogamy without any of the restrictions imposed by legal and social bonds which kept couples together who would be happier apart. Among a few English-educated families the patrilocal was taking the place of the matrilocal system. But the chances were slight of any extensive change. Meanwhile the student of humanity could desire nothing better than the continuance of a structure of society and institutions which showed that one portion at least of the East was unchanging. Whatever might be happening elsewhere, all things remained always the same on the Malabar Coast.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

GREAT BRITAIN AND IRAK.

To the Editor of "The Near East."

Sir.—The admirable leading article in the "Near East" of January 26 should encourage many of your readers to hope that before Mr. Lloyd George and his colleagues take the fatal step of ordering the evacuation of Irak the voice of public opinion will be raised so loudly in protest that wiser counsels will prevail. To leave the Emir Faisal to bear unaided the brunt of a combined attack on Irak by the Kemalists and Bolsheviks would be an act of criminal imbecility, only to be surpassed by saddling the new State with an expensive European administration as the price of our protection. There is no justification for asking the British tax-payer to find another penny for the cost of civil administration in Irak, but apart from our moral obligation to support the Government of this new State of our own creation the interests of British trade demand that we should continue to maintain in the country a garrison sufficiently strong to defend its frontiers in co-operation with the local forces, until such time as the latter are capable of doing so single-handed. Cutting our losses has become such an obsession with our new economists that whenever the safeguarding of British interests entails the slightest expense, rather than face it they are prepared to scrap capital assets running to many millions wholesale. One cannot help thinking that bad accountancy has much to do with the present confused state of the public mind on the subject of Mesopotamia. If people realised that for a great deal of our expenditure in the country during and since the war we have substantial assets to show in the shape of railways and other revenue earning public works, they would probably not be so easily influenced by the bellowings of the stunt press and the antics of its puppets on the anti-waste platform. It is surely about time that the Government gave some plain figures to enable us to know definitely how much we have spent in Irak (a) on military operations (b) on public works, giving under the second head the amounts expended respectively on harbour works, improvements in river navigation, the construction and equipment of railways, irrigation and other reproductive public services. It would hardly be fair to ask the new state of Irak to accept the burden of our military expenditure in the country during the war, but if it is proposed that it should take over the railways and other public works provided by the British tax-payer, it seems only reasonable that a fair price should be paid for them in the shape of Irak State bonds with interest chargeable against the local revenue. In the absence of any figures to guide one it is impossible to say whether the amount of this interest would suffice to meet the cost of the British garrison, but even if it did not completely cover it, one feels sure that it would go a long way towards doing so, and, at the worst, payment of interest could be allowed to stand for a few years until the finances of the new State were established on a sound basis. Irak to-day is a very much richer country than it was before the war, and if it is left in peace, during the next few years it will become very much richer. If the Arabs are not exasperated by the fussy administration of over-zealous officials, and are allowed to live their lives after their own fashion, their friendly feeling towards us will return, and they will become good customers of the British merchant. When the development of the oil-fields by British enterprise brings into the coffers of the local government a handsome revenue in the shape of rents and royalties, while the British shareholders cheerfully pocket the dividends, the two nations concerned will be united by the strongest of bonds—self-interest. We cannot afford at a time when

the future of British industry hangs in the balance, to throw away a promising market for British goods, a profitable field for the employment of British capital, because the Government of the day, scenting a general election, thinks it politic to create a noisy faction by running away from its duty. There is more than a suspicion that this agitation for the abandonment of Irak is inspired by certain influences that work in France to stultify our policy in the Middle East. Their unconscious agents in this country, the egregious "anti-wasters", have been skilfully stampeded into a panic anti-imperial movement, which if not speedily checked will deprive us of the fruits of two centuries of British enterprise in the East. It is high time a serious attempt was made to counteract their malign influence, and "The Near East" is to be congratulated on having had the courage to put the plain facts about Irak before the public.

I am, etc.,

SINBAD.

London, January 30, 1922.

MOSLEM FEELING AND GT. BRITAIN.

To The Editor of "The Near East."

Sir,—The Committee of the London Moslem League would be very grateful if you could be good enough to find space in your columns for the enclosed representation to the Most Honourable The Secretary of State for Foreign Affairs, on the subject of the Turkish Settlement.

I am, etc.,

M. H. ISPAHANI,

Hon. Secretary.

The London Moslem League,
18, Sloane Street, S.W.1.

January 24, 1922.

To the Most Honourable, The Marquess Curzon of Kedleston etc. .
My Lord,—

1.—On behalf of the Committee of the London Moslem League I respectfully beg to inform Your Lordship that the hope of the Moslem nations of Asia and a large part of Africa of a durable and permanent peace in the Near East is now centred on the deliberations of the ensuing Conference at Cannes.

2.—The Committee do not think it necessary to draw Your Lordship's attention to the conditions prevailing at this moment in India as a consequence of the unsettled situation in the Near East. The Moslems of India had hitherto formed one of the staunchest elements in the population of the country; they had ever since 1765, with few exceptions, been loyal and faithful to the British Government, in the conviction that it guarded their interests, religious and secular, in every part of the world, and was friendly to the two chief Moslem States of Asia, viz., Turkey and Persia. Now, unfortunately, owing to the support given since the Armistice to the avowed enemies of Turkey and to their ambitions and designs on the Turkish territories, the Mahommedans of India have become bitterly antagonised; and conditions have become so acute as to justify us in saying that the situation is volcanic. Every item of evidence that comes from India to England bears testimony to the accuracy of our statement.

3.—In Turkey, the conditions are desperate; a large part of Anatolia which, before the Greek invasion, was a flourishing region is now a desolated land, the peasants, who have survived extermination, with ruined homes and farms and without means of cultivation, are suffering acutely from want of food and necessities of life. In Constantinople, tens of thousands of refugees have congregated from Thrace and Asia Minor and are dying from starvation and cold; and the Turkish Government is so situated that it cannot raise a loan, even for the purpose of relieving the terrible distress among the refugees. The economic conditions in Anatolia and in Constantinople, the only city left to Turkey on the European side of the Straits, are worse than deplorable.

4.—The only possible way of restoring goodwill and normal conditions in India, we humbly submit and respectfully urge, lies in a just generous and equitable settlement with Turkey—a settlement which will bring back to life that distracted country and restore her economic and political independence. In such a settlement the rendition to Turkey of the whole of Asia Minor, freed from Greek designs and ambitions is to us an essential condition; for Smyrna is vital to the economic existence of Turkey. A proper and equitable adjustment is equally essential in Thrace, both from the point of view of the safety of Constantinople from the Greek guns as from the fact that Adrianople, one of the holiest cities of Islam, lies there.

5.—In support of our submission that the Musselmans of India are justified in asking for a consideration of their sentiments, we beg to refer to the fact that during the Great War at a time when the old British Army was practically annihilated, and Lord Kitchener was forming his New Army, a vast Indian force numbering 700,000 soldiers, of whom a large proportion were Moslems, faced the enemy and held him back.

6.—We take this opportunity of entering an emphatic protest against the memorandum which certain pro-Greeks and pro-Armenians are circularising for deflecting British justice and prejudicing the cause of Turkey. In our opinion their action is extremely impolitic and calculated to make more difficult the task of appeasement in India. On the grounds urged in this memorandum the Indian Moslems would be justified in moving His Majesty's Government on behalf of the Moslems in Roumania whose lot is reported to be a very hard one, nor have they such valuable and strong protectors as the Greeks and Armenians happen to possess. At the same time, we beg to say that there should be no objection to requiring from the Turkish Government adequate assurances for equitable treatment of its non-Moslem subjects consistent with its status as an independent state.

7.—The Committee beg to observe that throughout this Greek and Armenian propaganda the Turks have had no chance of defending themselves. It would be a colossal tragedy and a travesty of justice if they were to be condemned and their hands tied without a full hearing of their case. On behalf of the millions of His Majesty's Moslem subjects we respectfully ask Your Lordship to see that the settlement is such as would satisfy Moslem sentiments all over the world.

THREE POINTS IN THE TURKISH QUESTION.

To the Editor of "The Near East."

Sir,—May I be permitted, for the benefit of any of your readers who feel rather hazy about the Turk and the Greek at this vital juncture, to comment briefly on three basic points most obscure to the average man? He does not think they are obscure to him, for he sometimes reasons thus:—"Turkey fought against us in the war, the Turk has a habit of massacring Christians, and everything in Turkey is barbarous and retrograde. Why not, therefore, let the Christian Greek, even if he is not perfect, have his way, and let the Turk get back to where he came from?" Here are the answers:—1. Turkey fought against us in the war unwillingly, but had no choice; for Russia, our Ally, was her historical enemy and ever-present danger. Germany, on the other hand, happened to be *our* special danger. All other details can be disregarded. That is why Turkey fought against us: she could not help herself. We certainly helped to bring her in by our poor diplomacy for some years past. 2. The Turk has not the habit of killing Christians. It would be as just and accurate to say that we have had a habit, for the last two years, and up to the happy solution of the Dail ratification, of killing Catholics by our Black and Tans. There is more than a close analogy (modified in degree and details by reason of differences between the West and the East) between Turkey's Armenian problem and our Sinn Fein trouble. Plot and counter-plot, atrocities and reprisals. Are they not all terrible? But no one has ever accused the Turk of massacring Jews or Catholics. He (or rather the Enver set of him) was ill-advised enough to execute "reprisals" on innocent (often) populations for risings and killings of Moslems in war time. And be it remembered that Mustapha Kemal Pasha is at daggers drawn with Enver Pasha and those in power during the war. 3. Turkey, surrounded as she has always been by grasping Western Powers, all jealous of each other and snatching for concessions and opportunities of interference in her internal affairs, has never had a chance of being able to progress. The Turk is a poor propagandist. He has always been condemned unheard because he was a Moslem, was supposed to wear baggy trousers, and to throw his discarded wives into the Bosphorus in a sack. It would surprise your readers to learn (did your space permit) how far in advance of Western standards the legal position of the Turkish woman is.

Why cannot Mr. Lloyd George and Lord Curzon decide to follow the lead of France and extend a frank welcome to the sincere attempt at constructive Turkish Nationalism, now so solidly and bravely enthroned in Angora? Greek Imperialism has failed. Why should we help to prolong this miserable and senseless war?

As an Irishman, a Moslem, and the husband of a Turkish wife and also having lived nine years in Turkey, perhaps my *exposé* may be useful and not ill-timed.

I am, etc.,

A. P. TULLY.

London, January 11, 1922.

On October 16, a Persian was ordained deacon at Ispahan by the Bishop in Persia. He is the first Persian to be ordained for over 1,500 years. As a result of hearing the gospel message in a mission hospital of the Church Missionary Society he became an inquirer, and was baptized. Now he is hoping to work at Yezd.

MUSICAL NOTES.

The Royal Philharmonic Society.

There was once some point in the gibe that the Royal Philharmonic Society was behind the times, but it is one that is worthless now, for the activities of this august body lie well within the main trend of modern thought; in fact, there is positive peril in its pandering too much to its newly-found delight in being up-to-date. We have at the moment a persistent cry for the performance of works by British composers, particularly by living composers—a cry certainly natural and justifiable, but still dangerous—and we cannot afford to let the Philharmonic Society succumb to it. In smaller works, such as songs, exponents of British music may pardonably temper judgment with generosity, but we are not so rich in orchestral performances as to be able to gamble on the result.

Now it was indeed sporting of the Society to place in the programme of its last concert at the Queen's Hall on January 26 two new English works—Vaughan Williams' "Pastoral" symphony, and a Concerto-Fantasia for pianoforte and orchestra by Edgar L. Bainton—sporting but rash, for there is no doubt at all that part of the apparent thinness and unoriginality of Bainton's work was due to its coming after the quiet and individual beauty of the first work: the newness and contrast of the two compositions told against the Concerto. Of the genuineness of the Symphony there is no question at all: it is a refined and rare piece of music, peculiarly and consistently original, and reminiscent of no one but the composer himself. Here is given us no mere representation of Nature's varying moods, but rather a presentation of Vaughan-Williams' own communings with Nature. That these communings are important I do not doubt, and the perfection of their expression was obvious, but it was more the composer's philosophical foundation than his musical edifice that appealed to me on the first hearing. His Symphony is for the most part written in one mood, and drenched though it may be in the slow beauty of the English country-side, it had as absolute music too little variety and contrast to support a constant admiration. In a word, it seemed to me that the fineness of the composer's imagination exceeded the embrace of his conception, though I freely admit that other hearings of the work may make me change this opinion. After this Symphony, Bainton's brilliant Concerto appeared, as I have said, artificial and reminiscent. It contains all sorts of clever effects, which were splendidly exploited by the composer himself as conductor, and by Miss Winifred Christie as soloist, but its impulse was jerky, so that it became a thing of shreds and patches. It may be representative of British technique, but there seemed little distinction in its thought.

The rest of the programme, which Mr. Adrian Boult conducted, was made up of Bach's "Brandenburg Concerto" (No. 6—the one without violins), Wolf's "Italian Serenade," and "The Flying Dutchman" Overture. The first and last movements of the Bach there was brilliant discipline, but in the middle *adagio* we suffered some painfully erratic intonation. In Wolf's exquisite work I thought Mr. Boult unusually delicate: his perception is always good, but into this work he infused surprising subtlety of effect. He ended the concert with a rather strict performance of Wagner, being particularly and unswervingly "correct" in his delivery of themes. Undoubtedly his finest effort was in the "Pastoral" Symphony, which was given both with authority and conviction.

Andante.

The Persian Legation reports that the new Persian Cabinet is composed as follows:—Mochir-od-Dowleh, Prime Minister and Minister of Interior; Hakim-ol-Molk, Minister for Foreign Affairs; Sardar-Sepah, War Minister; Nayer-ol-Molk, Education; Sardar Moazzam, Justice; Ettela-os-Saltameh, Post and Telegraph; Abid-os-Saltameh, Public Work; and Modir-ol-Molk, Acting Minister of Finance.

NEAR EAST BOOKSHELF.

THE ORTHODOX PATRIARCHATE OF JERUSALEM.

"Report of the Commission appointed by the Government of Palestine to enquire into the Affairs of the Orthodox Patriarchate of Jerusalem:." By the Commissioners, Sir Anton Bertram, M.A., K.C., Chief Justice of Ceylon, Sometime Puisne Judge of the Supreme Court of Cyprus, and Harry Chas. Luke, B.Litt., M.A., Asst. Governor of Jerusalem. (Oxford University Press, Humphrey Milford, 12/6 net).

This book is a remarkably able and comprehensive treatise upon a very difficult problem. Into its 333 pages is packed a mass of information on matters ecclesiastical, historical, and civil pertaining to the Orthodox Church of Palestine, the Commission having realized that the dispute they were called upon to investigate had its roots deep in the past.

It has long been a matter for grave concern that the finances of the Patriarchate were going steadily from bad to worse. The Patriarchate is responsible for the spiritual oversight, and in many cases the temporal needs, of a flock of some 60,000—70,000 persons. Various charitable institutions depend upon it more or less completely, the heaviest charge being undoubtedly the maintenance of the Fraternity of the Holy Sepulchre, whose members, attached to the mother house of Jerusalem or to various branches, number 278.

In 1914 the position became critical. The debt, amounting to £150,000, was due to three main causes—the possession of large estates rendered unproductive through mismanagement or neglect; to persistent borrowing; and to the financial ignorance of the Brotherhood. Though matters were slightly bettered by the sale of property in Roumania, at the end of 1914 the debt was £200,000. With the outbreak of war all the chief sources of the Patriarchate's income abruptly ceased. No more Orthodox pilgrims came (a Russian consul once said that each Russian pilgrim meant fully £10 to Jerusalem, in alms, offerings, and purchases,) and no foreign rents were received. When the British occupied Southern Palestine in 1917, the Patriarchate, which had been living from hand to mouth, on bills and notes of credit, was £500,000 in debt. The new Administration was besieged with appeals to allow the institution of legal proceedings against the Patriarchate, and, as the sole means of protection a moratorium was declared. The National Bank of Greece offered to take charge of the finances of the Patriarchate and to settle its debts, on condition that all the Patriarchate property in Palestine was placed at its entire discretion. Such a course involved not only ecclesiastical but very acute political questions, and the Arab Orthodox laity to a man opposed it (pp. 32-36). In July, 1920, there was a serious division in the Synod of Jerusalem, caused by differing opinions upon the Greek Loan and upon "the proposed adoption of certain new 'Internal Regulations' drawn up at Athens" (p. 31). The high members of the Synod deposed the Patriarch and appealed to the Orthodox Churches everywhere for support, and both Patriarch and Synod appealed to the Palestine Government. The High Commissioner thereupon instituted a Commission of Enquiry under Sir Anton Bertram, formerly Puisne Judge of Cyprus, and Commander H. C. Luke, Assistant Governor of Jerusalem. Both the Commissioners have had long experience in Eastern and Eastern Church affairs. Mr. J. B. Barron, Director of Revenues, and Customs, Palestine, who investigated the financial question, is an authority on Eastern finance; and the two Arab Assessors, Mr. Y. Farraj and Mr. G. Siksek, are well-known members of old and influential Orthodox families. The Commission was thoroughly fitted for its important task.

The Commission strove to ascertain "whether the Orthodox Eastern Church provides a competent authority for the adjudication of disputes in particular Churches" (pp. 115-187), but came to the conclusion "that there is no ecclesiastical authority empowered to adjudicate upon the dispute" (p. 222), and that "pending a reconciliation those members of the Synod who for the time being recognise the authority of the Patriarch shall for all purposes be deemed to constitute

the Synod" (p. 225). These two main points being settled, there remained the question of the Patriarchate's debts. "They now amount to about £556,000. . . . As a result of the War, the Patriarchate has lost 64 per cent. of its income. . . . The minimum annual expenditure is about £61,800. Its possible revenues are about £22,000. . . . The Patriarchate is temporarily insolvent. . . . No other course is left but the realisation of some of the very considerable assets of the Patriarchate" (pp. 225-6). The Commission further recommended that the Government to assist the Patriarchate "to deal with its present embarrassments should establish a commission of liquidation and control," whose task would be "to liquidate the debt of the Patriarchate, to introduce economies into its annual budget, to increase its revenues by the introduction of improved methods of administration," until "its affairs should be upon a sound footing" (p. 227).

The Report deals very sympathetically with some of the chief differences in the Patriarchate, where the Greeks, having still power and place, cling desperately to the old order of Hellenic control, while the Arabs are gathering strength as a rising tide in opposition. The Imperial Regulations of 1875 (practically the charter of the Patriarchate), and the Imperial *Berai* of Abdul Hamid appointing the present Patriarch, are contributions of immense interest and value to any student of Orthodox Church affairs. There is also a list of fifteen "charges by the Bishop of the Synod against the Patriarch" (pp. 279-283). These, in their angry reiteration, seem to us to epitomise the ceaseless struggle between the Hellenic and Arab sections of the Orthodox Church. The Patriarch, as head of the whole community, is bound equally to both sides, and neither has yet been able to prove that he favours one to the exclusion of the other, though both sides have desired and also claimed partiality of treatment. We think the Bishops were mistaken in declining "officially to recognise the Commission," or to meet its request for expert assistance except by the loan of "books and papers" (pp. 4-6).

The Commission of control recommended in the Report is now in being, and is proceeding along the lines which it considers most helpful to the Patriarchate. Its very interesting and valuable work is subsequent to the Report, and cannot be dealt with here. The Ordinance appointing it is given in full. A very clear and comprehensive Memorandum on "The financial Affairs of the Patriarchate" (pp. 292-313), which is also most melancholy reading, an account of the Bessarabian property of the Holy Sepulchre, and an Index (somewhat too curt for such a work), are included. The book is thoroughly well produced to the smallest detail, as are all publications bearing the name of Mr. Humphrey Milford. The Report is certainly a weighty and notable contribution to the study of the Patriarchate of Jerusalem, and one that no student of its affairs can afford to do without.

THE EVOLUTION OF BUDDHISM.

"AN INTRODUCTION TO MAHAYANA BUDDHISM." By W. M. McGovern, Ph.D., Lecturer on Chinese and Japanese, at the School of Oriental Studies. (London: Kegan, Paul, Trench, Trubner & Co., Ltd. 7s. 6d. net.)

In the 6th Century B.C. Indian civilisation was confined to the Gangetic Delta. The soil, yearly renewed by alluvial action, enabled a fairly dense population to live in comfort and to develop a class which had leisure for philosophic speculation. The whole country was split up into hereditary principalities; but in many cases absolutism was tempered by democratic institutions. Prince Siddharta, the heir-apparent in one of these petty States, was a born philosopher. Profound meditation convinced him that all phenomena were creatures of illusion; that metempsychosis involved disease, bereavement, decay and death; that to achieve ambition was to court bitter disappointment. Only by killing worldly desire could men secure Nirvana, or relief from undergoing an endless succession of re-births in a sphere of unalloyed misery. Such was the revela-

tion preached far and wide by a great thinker destined to secure universal fame as Sakymuni, or the Buddha. His attitude towards transcendental phenomena was purely agnostic, and his method of dealing with things perceived by the senses suggests the germs of pragmatism.

The Buddha gospel attained some measure of acceptance during his lifetime; but the schism to which all religions are subject took place after his decease; and Buddhism would have shared the fate of many rival philosophies had it not been adopted by a powerful Ruler. In 256 B.C. Asoka waded through seas of slaughter to the throne of Maghada—now Behar. Remorse led him to enhance Buddhism with a convert's fiery zeal, and it became the State religion of his far-flung empire. He despatched missionaries to Ceylon, who quickly converted its entire population. Thence Buddhism spread to Burma and Siam, which, with Ceylon, are still strongholds of the original cult, known to scholars as Hinayana Buddhism.

It reached China in the first century of our era, and found favour in the eyes of the Emperor Ming Ti; but had a long and bitter struggle for existence. The literate adhered to Confucianism—which is a system of ethics rather than a creed—and which in the 13th century became the state religion of China. Buddhism, however, retained a firm hold on the educated masses. It was propagated in Korea towards the close of the fourth century, and reached Tibet 400 years later, owing to the sovereign's marriage with the Buddhist daughter of the Chinese Emperor. In 532 A.D. an embassy from Korea introduced Buddhism into Japan, where it came into collision with Shintoism—which is essentially the deification of great men and the worship of natural forces. During the Shogunate Usurpation (1608-1867), an attempt was made to instal Confucianism as the State religion; and since the revolution of 1867 Shintoism has gained ground with the military and official classes. Neither has supplanted Buddhism, which indeed, stands on firm foundations in Japan, although it is not recognised by the Government.

It has been remarked with perfect truth that every man is born a Tory or a Radical; and Buddhism has taken colour from the idiosyncrasy of the communities which have adopted it. The Hinayana school, which clings to ancient ways, is all-powerful in Ceylon, Burma and Siam; while the Mahayana school, representing more advanced thought, prevails in China and Japan. Mahayana Buddhism in its turn has undergone transformation. In China it remains conservative, although signs of progress have appeared since the Revolution; in Japan the influence of western thought has modified the trend of philosophic speculation. Thus Hinayana Buddhism may be likened to Judaism, Unreformed Mahayana, to orthodox Catholicism, and Reformed Mahayana to Modernism.

The tenets of the latter school have undergone momentous changes. At its outset the unrelieved pessimism of earlier days gave place to a more hopeful outlook on life. A sharp line of distinction was drawn between the Absolute, the Universal Buddha, the Essence of Mind, and external phenomena due to illusion. In this view every human heart contains a spark of Buddhahood, which may be fanned into the flame of perfection; and Nirvana is not liberation from the burden of life but a progressive development of the sleeping Buddha. Then came the inevitable reaction, and the latest trend of Mahayana is towards a relative pessimism. It holds that sin and sorrow cannot be lightly brushed aside or converted into joy. Evil is immanent in every form of life, but relief from its misery may be achieved by the exclusive adoration of the Infinite—*Amitabha* in Sanskrit. That alone is eternal in a universe of perpetual flux; but it is still a moot point whether the developed germ of Buddhahood retains individuality after the dissolution of its mundane tabernacle.

Professor McGovern has done well in describing the later phases of a creed which is professed by eight per cent. of the world's population. His treatise on Mahayana Buddhism is a development of the thesis

which secured his ordination as an honorary Buddhist priest in the great "Cathedral" at Tokyo. It is a valuable contribution to the literature of Comparative Religion, but few European students are qualified to follow him in threading the mazes of Asiatic philosophy.

F.H.S.

"TIGER, TIGER."

"DAYS AND NIGHTS OF SHIKAR." By Mrs. W. W. Baillie (London: The Bodley Head. 12s. 6d. net.)

Mrs. Baillie has had many and varied adventures shooting big game in different parts of India, particularly in the southern part of the Bombay Presidency, in the Central Provinces and in Kashmir. Sometimes she was with her husband, sometimes with her brother, and often alone. The most interesting of her experiences she tells in this book, and it is amazing to find each chapter containing at least one thrilling adventure.

The abruptness of the beginning and ending of the chapters and the general brusqueness of the style seem to suit the subject very well. Mrs. Baillie very evidently has a sense of humour, which must have helped to carry her through many trying experiences. There is apt to be an unpleasant monotony in a chronicle of the wounding and killing of animals, but all the accounts given here have something about them which especially arrests the attention—something unusual or something humorous—or else they tell of narrow escapes which make one hold one's breath. There are some decidedly exciting tiger and panther episodes, but Mrs. Baillie's nearest shave was when she was mauled by a bear. She slipped between two rocks, her topi being knocked over her eyes. "The bear seized the topi in his teeth, missing my head and face, and made off with it in his mouth, probably being amazed at the ease with which a human head comes off." Personally we liked best the chapter which describes the stratagem by which a sambar and fawn eluded the pursuit of some wild dogs.

All who have shot big game, especially in India, will be interested in this book, but there is as well something very attractive to the most stay-at-home reader in its breezy air of adventure and the way in which the author's personality shows through it all the time.

SKETCHES OF MALTA.

"MALTA: A Sketch Book." By Gordon Home. (London: A. and C. Black, 2s. 6d. net.)

In this book are some delightful sketches of Malta, reproduced with quite unusual excellence. Mr. Gordon Home has certainly given us the gems of the island, faithfully and artistically, but perhaps more remarkable than his sketches is the lowness of the price at which his work has been prepared. To those thousands of people who know the charms of Malta his book will be an admirable little souvenir.

BOOKS RECEIVED.

"The Forests of India." By E. P. Stebbing, M.A., late of the Indian Forest Services, Professor of Forestry University of Edinburgh, F.L.S., F.R.G.S. With Illustrations from Photographs. In 2-volumes. Vol. I. (London: John Lane. 42s. net.)

"Self-Training in Mysticism A Guide to the Mystic Way." By the Rev. H. L. Hubbard. (London: Christophers. 4s. 6d. net.)

Viscount and Viscountess Goschen and the Hon. Cicely Goschen have left England for Egypt.

Earl Cowley, Lady Sybil Grant, and Sir Marshall and Lady Reid are among the recent arrivals at Cairo.

General Sir John and Lady Maxwell will remain abroad until the end of March.

Prince Christopher of Greece has arrived in Cannes from Athens.

The Shah of Persia has left Teheran on his way to Europe. He is travelling incognito.

M. Gounaris, the Greek Premier, who had been staying in London, has left for the French capital.

Colonel the Hon. Thomas and Mrs. Grenville-Galvin have left town for Algiers.

Sir John Latta has returned to London from the Carlton Hotel, St. Moritz.

Commander John Bouboulis, Naval Attaché at the Greek Legation, returned to London last week from Venice.

King Constantine received Sir Samuel Hoare, the League of Nations Deputy High Commissioner for Russian Refugees, in Athens last week.

The Greek Legation have taken 47, Upper Brooke Street for the offices of the Naval, Military, and Commercial Attachés.

Mrs. Alec Tweedie, who collected money to put up nearly 40 Y.M.C.A. huts during the war, has collected another £430, which she is handing over to the Y.M.C.A.

The Crown Prince of Persia will shortly leave Paris for Teheran, where he will act for the Shah during the latter's forthcoming visit to France.

The Delhi correspondent of *The Times* writes (January 25):—Mr. R. R. Maconachie and Major A. N. Dickson have been appointed councillor and medical officer respectively on the staff of Major Humphreys, the new British Minister in Kabul.

The engagement is announced between Brandram Francis Sherwell Boileau, elder son of the late Mr. B. T. Boileau, and Mrs. Boileau, of Darjeeling, India, and Ness Mackenzie, only child of the late Mr. A. C. Harkness and Mrs. Harkness, 10, Abbotsford Crescent, Edinburgh.

Field-Marshal Sir William Robertson left London on January 26, by the P. and O. express for Marseilles, there to embark in the s.s. Morea for Bombay. Viscount and Viscountess Goschen, for Port Said, are also travelling from Marseilles by the same vessel.

Under the auspices of the British Institute of International Affairs, Sir Valentine Chirol will speak on February 7, at the Royal Society of Arts, John Street, Adelphi. His subject will be "Egypt," and the chair will be taken by Major-General Lord Edward Gleichen.

The marriage was celebrated on January 16, at the Russian Embassy Chapel, and on January 17, at the British Consulate, Constantinople, between Herbert Stanley Pearce, son of Thomas Pearce, O.B.E., Croydon, and Xenia, youngest daughter of the late Mr. and Mrs. Vladimir Cellarius, Warsaw.

An equestrian statue of Lieutenant-General Sir F. Stanley Maude, who died on active service whilst acting as G.O.C.-in-C. in Mesopotamia, has now been completed. This statue is to be erected in Baghdad, and it will be shipped from this country to Irak about February 11. Previously it will be on view in London.

The engagement is announced of Alfred Edgar Sullivan Fletcher, B. Sc., Indian State Railways, elder son of Mr. A. S. Fletcher, of Donington, Lincolnshire, to Mary Kennedy Everett, younger daughter of the Rev. F. J. and Mrs. Everett, the Vicarage, Aylesford, Kent.

The King has granted to Admiral of the Fleet Earl Beatty, Field-Marshal Lord Plumer, and Field-Marshal Sir Henry Hughes Wilson licence to wear the Grand Cordon of the Order of the Rising Sun with flowers of the Paulownia, a decoration conferred by the Emperor of Japan.

The engagement is announced between Reginald G. Monier-Williams, son of Mr. and Mrs. T. F. Monier-Williams, K.C.I.E., D.C.L., of Oxford, and Miss Alice Ameron-Russell, only daughter of the late John Cameron-Russell (Co. Antrim) and Mrs. Sullivan, and niece of the Dowager Lady Oakeley, of 19, Sussex Square, Brighton.

A congregation representative of the political, diplomatic, literary, educational, and other spheres of public life in which the late Lord Bryce had taken part attended the memorial service in Westminster Abbey at noon on January 27. Brigadier-General the Earl of Lucan represented the King, and Colonel Douglas Gordon, the Duke of Connaught. On January 30 an Armenian Memorial Service, according to the Armenian rite, was held at the Chapel Royal, Savoy Hill, Strand. Dr. Nazarian, the Armenian Bishop of London, assisted by English clergy, officiated.

APPOINTMENTS AND PROMOTIONS.

The following appointments to the Colonial Service have been made by the Secretary of State for the Colonies during the month ended January 10:—

Ceylon.—Mr. (late Sergt.-Instructor) T. E. H. O'Brien B.Sc., to Rubber Research Chemist; Miss J. Munro to Nursing Sister.

Palestine.—Captain L. W. Charley, O.B.E., to Assistant Director of Commerce and Industry; Mr. G. H. Stocks, to Inspector Clerk, Posts and Telegraph Department.

The King has been pleased to approve the appointment of Mr. A. W. Sturdy to the vacancy in the office of Auditor of the Accounts of the Secretary of State in Council of India caused by the retirement of Mr. H. A. Cooper.

BIRTH.

SKINGLEY.—On January 23, at Kingslea, Sutton, Surrey, to Dorothy (*née* Constantinidi), wife of Henry P. C. Skingley—a daughter.

OBITUARY.

Lieutenant-Colonel T. Murphy, who fought at Inkerman and Sebastopol, and saw the charge of the Light Brigade, has died at the age of 89.

The death has occurred of General Sir Donald James Sim McLeod, in his 77th year. General McLeod had a distinguished career in the Indian Army. He joined the Madras Cavalry in 1861. From 1877 to 1888 he served on the Indian Army Staff,

and in the Burma campaign of 1886-7 was Deputy Quartermaster General of the Madras Army. For his work in this campaign he was awarded the medal and the D.S.O. From 1890-1893 he commanded the 3rd Madras Lancers, and from 1893-5 was Assistant Adjutant-General of his district. For the last years of his service, 1903-6, he commanded, as lieutenant-general, the Burma Division. He was also colonel of the 28th Light Cavalry. His services were rewarded by his appointment as C.B., in 1898, and further in 1906 and 1913, when he was created K.C.I.E. and K.C.B.

Colonel Schaeffer, the Chairman of the League of Nations Commission of Inquiry in Albania, has died suddenly in Geneva from heart trouble. He was a native of Luxembourg, and twenty years ago was appointed Governor of Crete. He also carried out topographical work in the Sudan for the Egyptian Government.

The death occurred on January 28 of Sir Francis Henry Barker, a director of Vickers (Limited), at the age of fifty-seven. Sir Francis was the son of the late Alfred Barker, of Constantinople and Esher. He was a wide traveller, having visited nearly all the countries of Europe and most of Asia Minor.

The death has occurred of Sir John Harvey Blunt, Bt., in his eighty-fourth year. Formerly a captain the Royal Welch Fusiliers, he served with the 1st Battalion of that regiment throughout the Indian Mutiny, and was present at the taking of Fetteghur, and the subsequent operations on the Ramgunga and Gogra, and also took part in the siege and capture of Lucknow. For his services he was awarded the medal and clasp.

The death has occurred in Spain of Colonel Willoughby Cole Verner, soldier and author. Born in 1852, Colonel Verner joined the Rifle Brigade in 1873, and passed through the Staff College, taking first place and honours in 1881. He served in the Nile Expedition of 1884-5, and was present at the actions of Abu Klea and El Gobat, where he guided the fighting square in its march to the Nile, and at the subsequent fighting on Gordon's steamers near Metemneh. For this campaign he was awarded the medal with two clasps and the Khedive's Star. After service in South Africa he devoted most of his time to literary work.

NEWS IN BRIEF.

The Belgrade correspondent of the *Morning Post* states that the Yugoslav delegates at Genoa will be M. Voja Marinkovitch, Minister of Home Affairs, and M. Lazar Markovitch, Minister of Justice.

According to news from Beyrout 20 women and children have been killed in a village in the Lebanon by lightning.

While the Greek Government has decided not to ratify the sentence recently passed by the Synodical Court of Athens on Mgr. Meletios the Ecumenical Patriarch-elect, owing to technical objections, reports that it intends to recognize the election of Mgr. Meletios are denied. A second trial may take place.

Dr. Yovanovitch, the Yugoslav Minister to Switzerland, has received an urgent summons to Belgrade, where his presence is required, it is believed, in connexion with the Albanian question.

M. Randeff, Bulgarian Minister to Switzerland, has been appointed Minister to Italy as well.

Calcutta Corporation has passed a regulation prohibiting the slaughter of cows.

As the result of a severe storm, direct cable communication with Tangier has been interrupted.

A tramworkers' strike began in Constantinople on January 29, to the great inconvenience of the public.

According to the Delhi correspondent of *The Times*, it is understood that the Indian deputation to British Guiana will visit Trinidad on their way.

As the result of a collision on the North-Western Railway of India at Mardad last week, 37 Indians were injured and had to be taken to hospital.

Replying to a question in the Bengal Council, Sir Harry Wheeler said that owing to the non-cooperation movement one assistant sub-inspector and 46 constables had resigned.

The *Tribune d'Orient*, a fortnightly newspaper, is to be published in Geneva. This paper, which is to support the interests and ideals of the Near East, is to be edited partly in French, partly in Arabic.

A Yellow-book in reference to Balkan affairs up to the outbreak of the Great War is engaging the attention of the French Foreign Minister.

Delimitation of the new Serbo-Roumanian frontier through the Banat of Temesvar is now complete; three border communes were transferred to Roumania in exchange for three other communes transferred to Yugoslavia.

A message received in Paris from Angora dated January 21 states that the negotiations between the Bokhara delegates and the Anatolian Commissary for Foreign Affairs have resulted in an agreement.

It is stated from Sofia that M. Theodoroff, Prefect of Police in Sofia, and two companions were shot dead on January 24 by Colonel Athanasco, a member of the Macedonian Revolutionary Party.

According to the *Kathimerini*, the United States Minister has protested to the Hellenic Government against the action taken by certain Greek authorities in depriving Bulgarian subjects of their passports and forcibly enrolling them in the army on the Anatolian front.

WHERE TO STAY IN THE EAST.

THE STRIFE OF TONGUES.

Towards the end of last September there appeared in a Greek paper published at Salonika—*To Phos* (The Light)—an article which, in any other language, might have been suspected of serving "enemy" propaganda. According to this organ the first thing to strike a new arrival in Macedonia is the fact that the population speaks a foreign tongue. In Western Macedonia (the districts of Enidje Vardar, Vodena, Lerin, and Kostour, we are assured, the majority speaks Bulgarian—bad Bulgarian, but still Bulgarian—and the same is the case in Eastern Macedonia (the districts of Serres and Drama). This condition of things, the article continues, is lamentable; after so many years and after such hard work the Greek language has failed to impose itself in company with the freedom brought by Greece. The matter is serious and vital, according to this authority, for the first step a State is bound to take on gaining possession of foreign lands is to endeavour to absorb the language, as Germany did in Alsace-Lorraine, Poland, and Austrian territory. The extinction of the Bulgarian language in Macedonia can best be accomplished through schools. The Greek Government, however, has neglected the school question in Macedonia, whereas it ought to make a point of sending there teachers who have been carefully selected, who are well paid and freed from military service. With the accuracy of the statements of the Salonika paper we are not here concerned; but there can be no doubt that it reproduces the sentiments of a school of thought that is very widespread in South-Eastern Europe. The journal might be taken to task for its naive admissions regarding the non-Greek character of Macedonia; but its contention that the situation complained of is only to be met by ruthless repression of the Bulgarian language will command support throughout the Balkans. For the difficulty of a population speaking a foreign tongue is not confined to Macedonia. The Near Eastern settlement imposed by the Allied Powers has produced this state of affairs along, practically, every frontier; and the only remedy that seems to commend itself to the different Governments is a policy of suppression. Foreign schools and churches are closed, and the use of the foreign language is vetoed whenever official cognizance can be taken of its existence.

In view of the fact that not only the pages of Balkan history, but also the precedents quoted by the Salonika paper are eloquent of the futility of the course hitherto pursued, it would be thought that a prophet would rise up in one or other of the Balkan States to preach a different policy. There is no surer way of

keeping a language alive than to drive it underground; it becomes a matter of national pride for the oppressed community to cling tenaciously to its mother tongue, and each succeeding generation generally produces a more intensified national consciousness. If freed from persecution, a language, so to speak, finds its own level. Where those who use it are in a minority, knowledge of the language of the majority becomes almost a necessity for everyday life and the transaction of ordinary business, and in course of time the existence of a second language for the home life of a section of the population becomes little more than an interesting survival and presents no difficulties. The State, if its administration be equally liberal in other respects, can count on a reasonably loyal and satisfied community. Where violence on any large scale has been done to the principle of nationality, and the "foreign" language is the mother-tongue of a majority of the people forced against their will under the State's jurisdiction, the situation constitutes a more serious problem. Certain it is that at this period of the world's history a policy of crude repression can have no lasting success, and one is left amazed at the shortsightedness of those who would still attempt to enforce it. A State in this predicament would be well-advised to take stock of its position at the earliest possible moment. It can rest assured that it is storing up trouble for itself in the years to come, and in the meantime is incurring in maintaining its unwelcome jurisdiction an expenditure which under existing economic conditions it can ill afford. If such a question were capable of dispassionate analysis, it would be found to be to the advantage of every State to leave the jurisdiction of debatable territory to its rival in the confidence that the right will ultimately prevail and that until then the other country is weakening itself by a self-imposed burden.

If this solution may seem to be carrying cynicism too far, there is another alternative. It has been suggested in these pages that it is but a small step from the undertaking to refrain from aggression against one's neighbours—the stipulation that by the Cannes Resolution is to be imposed on countries taking part in the European Economic Conference—to a Near Eastern Pact on the lines of the Pacific Pact reached in Washington. To a "military holiday" in South-Eastern Europe, by the terms of which each State should agree to limit its military budget to a standard proportionate to that imposed by the Allies upon Bulgaria, might be added a further agreement by which the same States undertook to refrain from all propaganda and repressive measures in territories of mixed nationality. In other words, the people concerned would pledge themselves to a "nationality holiday" without prejudice to the march of events when the close period comes to an end. The compelling motive would frankly be an economic one. Each Government could reduce its Budget by the amount now spent on a policy of repression or ensuring security—from whichever point of view the subject is approached—and the non-official population, pledged not to indulge in aggressive assertion of its nationality, and receiving no encouragement from anywhere to persist in this course, would have much more time to carry on its more legitimate work and promote not only its own material prosperity, but also that of the whole Balkan Peninsula. As things are, we are conscious of preaching counsels of perfection; but we hope that sooner or later the financial chaos existing in South-Eastern Europe will bring home to each country the utter hopelessness, as well as the suicidal effect, of present policies. Desperate diseases call for desperate remedies. There can be few palliatives that have not been tried at one time or another in the Balkans; but we can think of no remedy that would deserve more the epithet "violent" than that the different Governments and peoples should formally agree to bury all hatchets and should conscientiously, officially and unofficially, live up to the spirit of their solemn undertaking. Whether the natural corollary of such a course would not be the establishment of an autonomous Macedonia is another matter.

TURKISH WAR VICTIMS.*

By Rosalind Toynbee.

(During the last week of last June, the Greek Army was evacuating the area which it had been holding for the past year round the Anatolian town of Ismid, and was at the same time removing the Christian population of the district. On the evening of September 27th, a telephone message was received in Constantinople from one of the Allied Mission Officers at Ismid, to the effect that a massacre of the Moslem population had begun, that he and the commander of an Allied destroyer present were doing all they could to control the situation, but that the outlook was grave and the immediate evacuation of the Moslem population was urgent. Upon the arrival of this message, the Allied authorities gave permission to the Ottoman Red Crescent Society to send relief ships, under their protection, to Ismid, and the writer of the following article accompanied this Red Crescent Expedition.)

At last, after such innumerable delays that there had seemed a fate against us, we started up the gulf towards Ismid. Mist lay still along the water, but there was sun above, and the air was clear and exhilarating as we stood on the bridge of the ship, looking out anxiously for the faint spider-like outline of Greek destroyers.

We had spent the night at anchor off Prinkipo, in the safety of the "neutral zone" proclaimed by the Allies in Constantinople, a few weeks before. Our captain had refused to cross that magic line in the dark, and we had been obliged to wait in desperate impatience for the daylight. Now it had come, and the ship moved quietly forward through the smooth water of the gulf.

There was a feeling of intense excitement among us all that would be very difficult to convey—it was now over thirty-six hours since the telephone call had come from Ismid, asking urgently for help. We had been warned in that message that every hour was of importance, if the lives of hundreds of people were to be saved—and from that moment to this we had been trying to get there. No one had been to blame, everyone had been anxious to help, but in a city occupied by three separate foreign Powers, the formalities and regulations are almost infinite.

The first night we had spent in a tug, steaming wildly up and down the Bosphorus, and round about the Golden Horn, searching vainly for instructions from one of the many Allied warships anchored there. That had been a strange night, with the moonlight and the searchlights and the lights from the great ships, and at last the dawn breaking over the hills behind Beikos, and a sudden flood of warm colour across the Bosphorus—but it had led to nothing, and all the next day we had waited, anchored off the point of Haidar Pasha, waiting from hour to hour for orders and the permission to start.

Rumours of all kinds had reached us,—from sailors on the control boat—from different people who came and went. One said that Ismid was already in flames and the Greeks in full retreat—another reported the hourly arrival of refugees, and still we could do nothing. Twice over we were searched for arms—of course we had none—and it was not till nearly sun-down that we received our permission to leave the harbour, and steamed off, a fleet of seven steamers, from the moorings that we had all begun to hate.

Even then our troubles were not ended, for, a few miles from the Princes' Islands, the foremost ships of our little company were turned back by an Allied destroyer. We watched the destroyer appear, steaming rapidly from the direction of Ismid, and supposed it coming to escort us past the Greek fleet, and then we saw it signal to our ships, and the ships one after another wheeled round and passed us, going back towards Constantinople signalling to us to follow.

As we came up with the destroyer it signalled to us also: Kemalists entered Ismid this morning; no need to proceed further." That was all—the destroyer had left before their entry, and what was happening now it did not know. It seemed at first that we were not likely to know either. Should we go on to Ismid in spite of this message, or should we turn back as the six other ships had done? Ours was the last, the biggest ship, and we had an Allied officer on board. The decision lay with him, and he decided to go on—we breathed again. After so many delays, so many obstacles overcome, this getting through to Ismid had assumed, I think, for all of us, a quite irrational importance, and the determination to get there persisted, after all need was past.

And so we had gone on, with a certain sense of recklessness and adventure, as we watched the friendly destroyer vanish behind our own companions towards Constantinople, and the darkness began to close in upon us, going forward towards the open waters and the end of the neutral zone.

It was then that the captain of our ship had protested, that he had in fact refused to venture his ship further until daylight. There was now, we knew, no special urgency about our journey, so we had agreed to spend the night inside the protected zone.

The captain's fears were not groundless. Already, on a former journey we had been arrested by a Greek destroyer and been forced to follow her under threat of fire. That time we had been set free again after a few hours, but a second time we might be less fortunate, especially in the heat of such military activities as must now be taking place in the Ismid region. In the daylight, we could at least look about us, and be clearly seen; in the dark we might well have been fired at without warning.

All these preliminary difficulties and excitements had had a cumulative effect, and now as we ventured out into the Ismid Gulf itself, we were strung up—apprehensive and expectant, to perhaps an unreasonable degree.

At first our progress seemed wholly uneventful—across the water, and on either shore of the Gulf, lay a thin veil of mist, and absolute stillness. We passed one or two deserted Turkish villages on the North shore; then the Goeben, and the British destroyer which always guards it; then we thought we could make out a Greek destroyer close in to the South shore, but nothing happened, and we went on undisturbed.

It must have been about an hour later that we first saw smoke, two grey columns rising up almost perpendicularly into the sky from a point some miles ahead of us, on the south shore. We were hardly sure at first if it were really smoke or only some strange formation of mist—but the sailors knew and looked grim, and as we drew nearer, the last doubt vanished: it was smoke, from two burning villages that we saw, and a few moments later another cloud burst out, nearer to us, and then another and another, some close along the shore, others higher up on the hill side.

* This article won the Third Prize in our Ladies' Competition.

ASK FOR

WHITE HORSE WHISKY

BY APPOINTMENT.

I cannot describe the extraordinary feeling of tension that possessed us all—the haunting feeling of terrible things ahead, that we did not yet know about, and this sense of dread was intensified by the strange stillness of the whole place. The long winding gulf stretched ahead of us, mysterious and sinister; as we turned each bend of the coast, we held our breaths, wondering and fearing what we might see next; and now these pillars of smoke, rising and spreading over the green tree-covered hills beside us, seemed, in a horrible way, the first sign of life in that dead place—and at the same time the first materialisation of the impending tragedy.

Even this was silent, for we were too far off to hear the crackling of flames or the falling stones and rafters—nothing but smoke, heavy clouds of smoke rolling out in ever increasing volume from one spot after another—and as we drew nearer, the red glow of flames underneath the smoke.

We steered close in to the shore, and it was then that we first saw the soldiers. We saw them first through field glasses, and then as we came still nearer, with our naked eyes—a long line of troops stretching eastward from the village just abreast of us, which had just begun to burn.

Who were they? Turks or Greeks? Where were they going? To or from Ismid? We came closer and closer, till we could see the men walking, and the mules and the baggage and the khaki uniforms; and we saw them marching slowly, in regular order, westward from Ismid and the burning villages towards the country we had just been passing—the unburned towns of Eregli and Karamursal, and many little villages whose names we did not know.

We saw the soldiers clustered round a house still standing intact, we saw them bend down, and then a burst of flame leap up as they set fire to that also—even the little jetties along the shore were burning, and the fishing boats moored to the jetties.

About this moment we were sighted by a Greek destroyer, which had been guarding the retreating column on the shore. We had been so absorbed watching the fires that we had not noticed it. Now we saw it dart out at us like a grey dragon fly, signalling to us: Stop.

We stopped and waited. It sent off a boat, and a young officer came on board. He looked white and perturbed, avoiding our eyes. Our Allied officer handed him our papers, and he read them hurriedly, hardly looking up. 'C'est bien,' he muttered and dashed down the ladder. In another moment the destroyer darted off again to its position by the land forces. We now saw several other small Greek steamers, coasting along the shore, apparently in conjunction with the infantry, but they took no notice of us.

Looking behind us, we saw first Eregli and then Karamursal begin to burn, as the head of the Greek column reached them, bigger and more solid masses of smoke and flame, burning on and on for hours, into the night.

Round the next bend of the Gulf we came in sight of Ismid, and, between us and it, a chain of Greek destroyers and the 'Kilkis,' their American-built dreadnought, with masts like Eiffel towers. We wondered how we should get through them; but at that moment an Allied destroyer appeared from behind them, and came towards us. They had been waiting for us, it seemed, and wondering at our delay. Safely escorted by this friend, we steamed in past the line of warships and found ourselves at last at our journey's end.

What we found at Ismid fulfilled our worst forebodings but no foreboding had prepared us for the full horror of what we saw. The Kemalists had entered the town the morning before, a few hours after the Greeks left, and the town was still in the state in which they found it.

Street upon street of deserted houses, broken windows, torn-off doors, streets knee-deep in broken things—fragments of china and glass, torn clothing, ripped up mattresses, pages of books, photographs, overturned sewing-machines hundreds and hundreds of broken

carts; heads and limbs of animals lay everywhere among the rubbish; slaughtered pigs, at the street corners, and in the Mosque; burned carcasses of cattle penned up in the fire, among the burned houses and shops. In the sea, along the shore, human corpses were floating—and everywhere the smell of putrefying flesh, and burning and clouds of great black flies.

Here and there among the gutted shops stood one with shutters down, undamaged and sealed—and on them in white chalk a great cross was drawn—a sign to the avenging angel to spare Christian property?

Up on the hill above the town were the graves of 58 Turks belonging to one quarter of the town, who had been killed three days before and buried in heaps of five or ten among the scrub of the hillside. They took us up to see them, and began to dig the corpses up. The sun was setting by this time—a red fiery sunset, and in the West beside the sunset glowed the steady angry glow of Karamursal town, the clouds of dark grey smoke drifting across the shining sunset light.

On the way down from the graves I found a half-burned kitten, standing stupefied among the ruins of the houses. The fur was all burned off; its nose and mouth were burned, its paws were burned so that it could not walk. A tiny ghastly thing, it stood in the road before us, too dazed to move away. I took it back with me, hoping that food and care might cure it, but a few days later it died, in spite of all I could do for it.

It seems an absurd and trifling thing to mention this kitten when hundreds of human beings had lost their lives, but somehow it stands out in my memory as symbolic of much more—symbolic of the human beings also—of the hundreds and thousands of people suffering and being sacrificed all over Asia Minor to-day.

PRESS ON THE NEAR EAST.

Abyssinia.

The writers of the article on "Abyssinia To-Day," from which we quoted last week, concluded their series in the *Westminster Gazette* of January 19 and 20. The first of these two articles describes the impossibility of trade owing to the instability of the country. There is, according to these two writers, a regular system of bribery and corruption, the purpose and effect of which are to keep the white man out. The article continues:—

For such difficulties the Courts offer no redress.

No Abyssinian Judge, however heavily he may have been subsidised—and, of course, he will always accept what is offered—can give a decision in favour of a European against a local Governor or Chief. The Judge must live, and he feathers his nest while he can. He will give judgment for a European who offers more ready cash than his opponent, provided the opponent is not the local Ruler, but naturally he will not risk deposition from a very profitable office if he can help it. From our standpoint this is the worst sort of "bribery and corruption," but the Abyssinian does not view it in that light. He sees no more dishonesty in it than we do in the vote-catching opportunism of our politicians in this country. It is simply a matter of custom. It checkmates the European trader, but that, from the Abyssinian point of view, is scarcely a disadvantage. On the criminal side Abyssinian justice is not more reputable. From the European point of view it is mediaeval in its methods and purely barbarous in its punishments. The police system affords to its members every facility for theft, blackmail, and highway robbery, but it affords no sort of protection to the community which it is supposed to serve. The recognised punishment for repeated theft—when it is not corruptly condoned—is the same to-day as it was centuries ago—namely, amputation of the right hand and of the left foot through the ankle, carried out in the open market place. A theft of

oranges from the Empress's larder was punished as recently as last May with death by hanging. And it is only five years since an old woman was buried alive in the market place of the capital for the crime of witchcraft. Hangings and executions are still carried out in public every week with all the brutality and ferocity of the dark ages, and the sight of the suspended bodies is one of the side-shows on market days in Adis Ababa. Sentences of imprisonment in the town gaol, even for short periods, are usually sentences of death, for the prisoners are herded together to the number of perhaps a hundred and fifty in a cell about forty feet by twenty. They are dependent, if they have no money, entirely on charity for their food, and most of them, if they do not die of starvation, die of typhus or small-pox.

We do not wish to make the picture too dark. Africa is Africa, and it is not entirely fair to apply European standards to a purely African State. But the question of slavery—to which we must always return—is one of the absolutes about which from the British point of view at any rate, no compromise can be admitted. It is an abomination which, though natural enough in the conditions which prevail to-day in Abyssinia, cannot, once it has been seen, be tolerated on any terms. The local British representatives cannot be blamed for facts with which they are powerless to interfere, but it is hard to understand why the British Foreign Office has not thought it necessary at the very least to register some protest against conditions of which it is fully aware.

This subject of slavery is followed up and described in the third and final article, which gives a lurid picture of the capture of slave-gangs. The system of slave-holding has such a grip on the country that "even the European inhabitants of the capital can hardly avoid becoming slave-owners." The following words conclude a remarkable series of articles:—

From this difficulty there is no obvious way out. Short of the deliberate and comprehensive assertion of European authority, which—in view of the results of the Battle of Adowa—could not be carried through without a very substantial demonstration of physical force, there appears to be no way by which the existing system of slavery in Abyssinia can be abolished. But there is one thing that is obviously possible, and that is the prevention of the importation of arms and ammunition. The Abyssinians possess millions of modern rifles, but their stock of ammunition has fallen very low indeed—possibly even as low as five rounds per rifle of the regular army—and when it is exhausted their power to raid and depopulate fresh areas, whether in British or in Abyssinian territory, will be destroyed at the same time. Munitions, therefore, are the crux of the whole question. The European Powers have contracted not to supply Abyssinian (amongst other African countries) with munitions, nor with materials for their manufacture, but America, unluckily, has not signed the contract; and so it is to America that the Abyssinian Government has lately turned. Payment was made in advance, three months ago, and the cartridges and automatic rifles, exported from the United States, are now lying at the port of Jibuti, in French Somaliland, which is the terminus of the Abyssinian railway.

The French authorities on the spot are not enthusiastic about the Arms Convention, and are inclined to suggest that it was only accepted owing to British pressure. They object, however, to its infringement by the United States—since if cartridges are to be sold they have plenty of their own that they would like to sell—and as far as we are aware they have not consented as yet to the importation of these American munitions through French territory. But they may consent at any moment unless London and Washington are aroused to the true state of affairs. The purpose of these articles is to describe the position as it appears, not merely to the writers but to every European who has spent even a short time in Abyssinia. If on any aspect of the question we have failed to convey a sufficiently precise view of the facts, we shall be glad to do our best to remedy the defect. Meanwhile we hope that the American public will realise what is being done in their name, and that the British public will face the intrinsically impossible situation created by the presence of British slaves in the British Legation at Adis Ababa.

Great Britain and France.

The *Contemporary Review* of January contains an article, written by Professor Arnold J. Toynbee, on "Great Britain and France in the Near East." The article begins with the statement that "because Greece and Turkey are still at war, the *entente* between France and Great Britain is now in danger," lamenting the fact that "big Western countries like France and Great Britain choose to endanger primary common interests like the *entente* by this roundabout pursuit of secondary rivalries." He regards an *entente* between the two Governments over the Near and Middle East as vital, and aptly considers the future in the light of a development of the present difficulties:—

Suppose our two Governments, after an inconclusive exchange of notes, drift on into acknowledged conflict in the East. On this chessboard France might win the game, for Turkish Nationalism in French hands is a better piece than Greek and Arab Nationalism in ours, and our king is less well covered. In India and Egypt, so near the centre of disturbance, we might be checkmated before the French Empire in N.W. Africa was even threatened. But we should hardly allow the Eastern game to reach this stage without moving pieces on the European board, where France's position is at least as vulnerable. A *rapprochement* here on our part towards Germany and Russia would alter the prospects of the tournament. The suggestion may seem remote—even startling—but our interests in the East are vital, and if they were threatened there by the action of France, what other counter-move could we make? If the Graeco-Turkish war drags on, our *protégé* Greece will break down (as is argued below) before France's *protégé* Turkey. With that in prospect, we shall have to create more pressing cares for France in Europe, and find a substitute for Greece in Russia.

The results of all this would be wholly bad, for an Anglo-German *entente* directed against France would be little help towards the reconstruction of Europe, and a widening of the area of conflict in the East might do something worse than shaking the French and British Empires. It might make

it finally impossible to find a *modus vivendi* between Oriental and Western civilisations. A crisis in the relations between these great divisions of mankind has been working up for four centuries, and has been dangerously precipitated by the war. A *modus vivendi* is extremely difficult to establish, and the alternative is an immense disaster. At the height of this crisis Great Britain and France have practically been placed in the position of trustees for Western civilisation by the abnormal and temporary consequence of the war.

He proceeds to discuss the possibilities of an *entente* as affected by the local Graeco-Turkish situation. First, he finds there will be no military decision in the Anatolian war, and next, that "Greece, in Western Anatolia, is proving herself as incapable of providing good or even tolerable government as Turkey has proved herself in Macedonia or Armenia." So that his conclusion is: "there is no prospect of the war ending except by exhaustion or intervention." And "Great Britain and France can only arrest the mischief that they have made between them by working together and treating the Greeks and Turks, not as powers to be played against each other, but as equal victims of an unprofitable conflict, which can only be terminated by an impartial settlement."

Impartiality is the key to a solution. Both belligerents are appealing to the Western principle of nationality, and that principle, as normally interpreted in the West, must be applied. This is, debatable territory must be assigned in accordance with the national allegiance of the majority of the population, and the minorities must either be protected, under the majorities' rule, or given mutual facilities for migration. In respect of their behaviour towards one another, all the Near and Middle Eastern nationalities are on a par. Differences in their respective statistics of achievement result from differences not of standard, but of opportunity, and attempts at settlements made on any different assumption prove either disastrous or unworkable. Greek minorities must not be put in power over Turkish majorities on the ground that they are "civilised" and "Christian," nor Turkish over Greek in order to conciliate Moslem opinion. Impartiality and co-operation! When these essentials are stated, the difficulties of an Anglo-French *entente* over the Near and Middle East appear in their full proportions. Yet this *entente* is of such importance to the two Powers and to the world, that public opinion ought to be formed on the practical possibilities of agreement. A general formula might well be the substantial acceptance by both Powers of British policy in the Arab area and French policy in the Turkish, with a golden bridge for Greece, for constructing which Great Britain fortunately happens to possess the materials.

He then comes to details, which he enumerates thus: (1) The whole mainland of the Anatolian Peninsula, including Smyrna, should be restored to the Turkish national state. (2) Every argument in favour of leaving Anatolia to Turkey tells equally in favour of assigning Cyprus to Greece. (3) The execution of (1) should be conditional upon the cession by Turkey to Armenia of sufficient territory in the North-Eastern vilayets for the Armenian National Home. (4) Greece, Armenia, and Turkey should be required to confer upon the alien minorities under their sovereignty the same rights as have been exacted for them in the defeated and newly created States in Europe. (5) In the Straits the more important provisions of the Treaty of Sèvres ought to stand. (6) As for Thrace, the province might well be left to Greece as a home for Ottoman Greeks who may emigrate from Anatolia; on the other hand, a modification of the Graeco-Turkish frontier in Thrace would be reasonable. And for (7) he considers the Arab countries, of which he writes:—

All the French criticisms of British policy towards Turkey—that it is anachronistic, unintelli-

gent, pig-headed, and a nuisance to our partners—are applicable in exactly the same measure to French policy in Syria. In the Arab area it is for France to fall into line with us. She must recognise the legitimacy of the Arab national movement; consider her mandate in Syria not as an acquisition, but as a trust; and carry it out on something the same lines as those we are pursuing in Mesopotamia. If we look from this standpoint at the retrocession of Syrian territory to Turkey provided for in the Franklin-Bouillon agreement, it will appear that France has exceeded her powers and Angora displayed a lack of statesmanship. One day the mandates over Syria and Mesopotamia will terminate, and these two independent Arab States will move towards federation. What will be their attitude towards Turkey if at their time the Bagdad Railway—the essential link between these two Arab countries—is once more in Turkey's hands? In grasping after a strip of territory from which she can derive little benefit, Turkey is jeopardising her natural destiny as *primus inter pares* in a group of independent Moslem national States in the Middle East.

But how can Turkey or Greece be expected to be wise, unless France and Great Britain set them the example?

A Calcutta message says that Babu Sant Kumar Mukherjee, Zemindar of Uttarpara, in honour of the Prince of Wales's visit, has presented 50,000 rupees to be used for medical education in Bengal.

Three public meetings organized last week by the Bengal Provincial Congress in the prohibited area were broken up by the police and 50 men arrested.

Our Liubliana Correspondent writes (January 9):—The Executive Committee of the *Association Generale* of French and Algerian Mayors has issued an invitation to the Mayors of Yugoslavia to attend the Congress of Mayors of the Allied Countries in Paris from January 26 to 29. The invitation is most cordially worded, and signed by M. Adrian Gilly, President of the Association.

Export Credits.

Sir Philip Lloyd-Greame, Secretary to the Department of Overseas Trade and Parliamentary Secretary to the Board of Trade, gave an interesting review last week at the Institute of Chartered Accountants of the various export credit schemes. He pointed out that export credits had throughout been regarded as a method for facilitating transactions lying just outside the purview of a conservative banker, but he emphasised the fact that it has never been contemplated that Government assistance should be utilised to finance trade which was inherently unsound. Such a course, he added, would not be business but outdoor relief. It is satisfactory to know that increasing advantage is being taken of the present scheme, which is in every sense an advance on its predecessors. As a matter of fact the advances during the past three months amount in the aggregate to more than the total for the preceding 21 months during which the scheme has been in operation. That fact speaks for itself.

The Banks and the Outlook.

This is the period when the banks hold their annual meetings, and as usual some very interesting speeches have been forthcoming on the general economic position. They have not been distinguished by any particular optimism on this occasion. Still there is the consolation that even the most eminent practitioner is liable at times to give a wrong diagnosis. There was general agreement on the part of the speakers that we have seen the lowest point of the trade depression, but there was a marked tendency to reserve as to the immediate outlook, which is very natural in the circumstances seeing that any general revival of trade must depend very largely on whether the Powers are able to arrive at an agreement as to the steps that must be taken to remedy conditions in Europe. A conference which resulted in a settlement of the questions at issue in the Near East would have an enormous effect on the trade position.

Fettered Trade.

Space does not permit of detailed comment on the speeches, otherwise I should like to have dealt with a number of the points raised. Both Mr. McKenna and Mr. F. C. Goodenough in dealing with the economic position of Europe laid stress on the interdependence of countries in these days. "It is no longer possible to separate the world of industry into compartments," said Mr. Goodenough, "and to expect that there can be prosperity in one direction while there is poverty in another." This is so little understood even to-day that this warning cannot be considered otherwise than timely. As Mr. Goodenough so aptly puts it "The theory of self-determination . . . has served to raise trade barriers." So we find in certain parts of the Near East a tendency to place restrictions on the commerce of neighbouring countries because it is not realised that the welfare of the whole depends on the welfare of the individual community. It is not only in the Near East that this tendency exists, but that region with its complicated frontiers has ever been a fruitful field for

this kind of thing. Clearly if there is to be economic recovery there must be a minimum of restrictions on commercial activities.

The Coming B.I.F.

In just a little over three weeks now the British Industries Fair will be upon us. It will open in a better trade atmosphere than was the case twelve months ago, for it is not now a case of facing a long period of depression but of looking forward with certainty to the gradual recovery of commerce. It is satisfactory to know that great interest is being taken abroad in the event, and as buyers endeavour to anticipate trade movements there is every reason to anticipate that a fair business will be done. It may be hoped that this time the Near East as a whole will be better represented among the visitors, though I suppose it would be too much to hope that we shall see many representatives of the Balkan countries for with the exchanges so adverse it is obvious that the business transacted must be restricted.

The Indian Market.

The outstanding features of India's trade in 1920-21 were a great decrease in exports and a substantial increase in imports, the consequence being that for the first time for some years India had an adverse trade balance. As, however, a series of good years had left India in a strong commercial and financial position this was not a very serious matter. The outlook as far as India is concerned depends very largely on the fate of the efforts now being made to cope with the adverse exchanges. While any general trade revival will benefit India it is impossible for her export trade to reach its normal dimensions until her pre-war customers are once again in a position to draw their supplies from her. On the other hand India is faced with the necessity of obtaining the commodities which she was unable to obtain during the war, and as a result her imports are likely to increase temporarily rather than to grow less. It would seem probable that the conditions obtaining in 1920-21 are likely to hold good for the present.

Roumania's Transport Problem.

A very clear idea of the task which still confronts Roumania in the re-establishment of communications will be obtained from the statement made recently to the Press by M. Cihodariu, the Minister of Communi-

cations, which is given this week by our Bucharest Correspondent. It appears that only about 1,354 locomotives out of 4,070 are in working order, while of the balance only 356 need slight repairs. The position with regard to rolling stock is somewhat similar. About one-third of the 4,000 passenger coaches are in use, and only 40,000 out of 70,000 goods trucks are in working condition. It is very far from being a happy situation, and until it is vitally altered it will be futile to expect any great advance towards normal conditions. M. Cihodariu, it will be noted, has drawn up a programme designed to place the railways on a pre-war footing in five years. It includes the reconstruction of lines, the alteration of the gauge in Bessarabia, the replacement of sleepers and other similar essentials. Naturally attention will first be concentrated on the rolling stock, and once that approaches the normal the chief obstacle to Roumania's development will be well on the way to being removed.

Conditions in Egypt.

The faculty of rapid recuperation has always been a feature of conditions in Egypt, and once a settlement of the political situation is arrived at there is little doubt that the commercial position will rapidly improve. In this connection it will be noted that our Cairo Correspondent remarks this week that the belief that a settlement will be reached has led to an improvement in business conditions. Since he wrote the pendulum has, however, swung in the opposite direction, and we have had the manifesto on non-cooperation followed by prompt action by the authorities. I do not believe that the Egyptian soil would ever be fruitful for such a movement; still it is just as well that it should have been grappled with firmly at the start, for it is conceivable that it might give rise to difficulties without being able to cause serious consequences. As it is all the movement is likely to do is to add to the prevailing uncertainty, the removal of which is essential for the revival of business activities in Egypt, and for the prosperity of the country generally.

CATALOGUES FOR TEHERAN.

The Commercial Secretary to the British Legation at Teheran reports that he has accommodation available for the display of catalogues of United Kingdom manufacturers of the following articles:—Agricultural implements, ammunition (sporting), apparatus of all kinds, arms (sporting), motor cars, basketware, bicycles, boats, boots and shoes, brushes, building materials, carriages, chemicals, clocks, cotton goods, crockery, cutlery, drugs, dyes, earthenware, electrical gear, enamels, engines (oil), engineering appliances, fabrics (art), fancy goods, firearms (sporting), fire extinguishing gear, fireworks, foodstuffs, fuels, furniture, games, gramophones, glassware, haberdashery, hardware, hempen goods, household goods, hydro-electric gear, illuminants, ironmongery, jewellery, leather goods, musical instruments, novelties, office equipment, oilmen's stores, paints and colours, photography, provisions (preserved), publications, rubber goods, sewing machines, silk goods, smallware, smoking requisities, sports goods, stationery, textiles, time-pieces, toilet requisites, toys, watches, wicker ware, wines, and woollen goods. Catalogues should be priced, and if possible, illustrated, in colours.

A NEW OIL PUBLICATION.

We have received a copy of the first number of *Oil Engineering and Finance*, a publication designed to deal with every aspect of the oil industry. The initial issue attains a very high standard, the maintenance of which should ensure the success of the journal. Amongst the articles in this first number are "The Doom of the Condensing Steam Engine and Turbine" and "Power Transmission of Oil (Elaulic Gear)", and there are full notes on oil fuel, oil refining, the oil shale industry, oil engines and other topics, each section being dealt with by an expert. With this number an excellent portrait of Sir Charles Greenway, the Chairman of the Anglo-Persian Oil Company, is given as a Supplement, and a short note on Sir Charles' career also appears.

The traffic receipts of the Smyrna-Aidin Railway for the week ended January 21, amounted to £5,461.

The Roumanian Ministry of Finance has exempted from Customs duty any machinery and raw material imported by Bessarabian industrialists.

Anglo-Egyptian oil output for the week ended January 20, amounted to:—Gemsah, 9 tons (previous week 9 tons); Hurgada, 2,259 tons (against 2,089 tons).

REPORTS FROM OUR OWN CORRESPONDENTS.

EGYPT.

Cairo, January 21.

Improved Outlook.

There is a strong hope and belief among the commercial community that a settlement of the political situation is at hand, and the feeling has induced a generally easier tendency and a more optimistic outlook. Business has revived slightly during the last few days, and the expected arrival of several thousands of tourists in a succession of cruises commencing from the 27th inst. and continuing on into the middle of March begets the hope that the final stages of the season will bring a commercial briskness to atone for the slump during the festive season. From the latest official statistics of Egypt's foreign trade it is apparent that the country is stabilising, but the recent poor cotton crop has decreased the assets to an extent that precludes any real wave of prosperity before next autumn. Egypt has not yet recovered from the reckless speculation of the 1919-20 season, but she is recovering, and the ultimate outlook therefore is bright.

ROUMANIA.

Bucharest, January 15.

Present Situation of the Railways.

In view of the importance of the transport question, which is so closely connected with Roumania's economic development, it is of interest to note the declarations, recently made in an interview to the Press, by M. Cihodariu, the present Minister of Communications, who is an expert in this branch having been for many years a member of the engineers' corps of this Department. M. Cihodariu admits that the situation of the railways is bad, and given particulars of the ways and means by which he intends to remedy this unsatisfactory state of things.

He points out that out of the 4,070 locomotives existing in the country only about 1,354 are in working order. The situation of the remainder is as follows:—356 locomotives need small repairs, 1,260 need large or almost radical repairs—necessitating on an average about six months for each engine—while the balance of 1,100 locomotives are lying outside the gates of the workshops waiting for their turn to be repaired. The total number of the locomotives out of repair represents a capital of more than five milliard lei, which capital is not only unproductive but for which the State has to pay about 300 million lei as interest. The situation of the waggons is somewhat similar to that of the locomotives. Out of 4,800 passenger coaches only about 1,600 are in use, while the balance of 3,200 coaches need various large or small repairs; and only 40,000 out of a total of 70,000 goods trucks are in working condition.

M. Cihodariu is of the opinion that the erection of new workshops is not necessary in order to carry out the repairs, as the existing plants of the State and of private concerns would be sufficient provided they undergo certain improvements. What, however, is mostly lacking is the requisite material for these repairs, the cost of which he estimates at about 500 million lei per annum.

M. Cihodariu has further worked out the following programme to be carried out within five years in order to bring the railways to their pre-war condition:—(1) Reconstruction of the lines by replacing them with heavier rails strong enough to stand the present heavy locomotives now in use; (2) doubling of the lines where it is absolutely necessary; (3) gradual changing of the wide-gauge lines of Bessarabia to the gauge existing in the rest of the country; (4) strengthening of the railway bridges; (5) renewal of sleepers improvements in the buildings of the stations; of the

signalling, etc., etc. The above reconstruction work would need a minimum sum of about 3½ milliard lei, which would represent an average cost of 700 million lei per annum. M. Cihodariu expects that his Ministry will soon be granted a credit of 500 to 700 million lei for the immediate needs of the railways. With regard to the question of continuing the military control at the railways, he considers that this measure is still necessary for a certain time.

Miscellaneous.

A large number of timber producing companies of Transylvania have recently formed an association, with head-quarters at Cluj, for the purpose of expanding their export trade.

GREECE.

Athens, January 7.

Miscellaneous.

To a delegation of Government employees which presented itself before the Minister of Finance for the purpose of requesting him to grant them a double salary on the occasion of the New Year holidays M. Protopapadakis replied that he was unable to do so owing to the heavy additional expense which this would entail to the Public Treasury.

A group of Greek capitalists has submitted a memorandum to the Minister of National Economy requesting his permission to introduce horse racing in Greece, and for this purpose is prepared to provide a race course at old Phaleron.

From January 1922 (O.S.) a regular service three times a week will be established between Athens and Paris. Trains from Athens will leave on Monday, Wednesday and Saturday, and from Paris on Monday, Wednesday and Friday. The first class fare from the Greek capital to Paris has been fixed at 1134.05 French francs, and at 970.95 French francs from Salonika.

CYPRUS.

Cyprus, January 10.

Cyprus and Palestine.

There is a desire for increased trade with Palestine and Syria, and a movement is on foot for better shipping communications. Cattle, which can always be profitably bred in the island, are being exported in much greater numbers; and if Cypriot cultivators would only rise to the occasion, the export of vegetables, fruit, and poultry could be very largely developed.

ROUMANIAN IMPORTS OF CARPETS.

H.M. Commercial Secretary at Bucharest reports that in virtue of a Ministerial Decision, dated December 24, and published in the *Monitor Oficial* for December 30, carpets of the following kinds may be imported into Roumania without the necessity of a special import authorisation, on payment of a "luxury" tax equal in value to the respective Customs duty:—Carpets of wool of any form, trimmed, with or without the weft of any other textile material, whether cut, hemmed, or combined, and carpets of jute, of palm fibre, and of other textile materials. Oriental carpets (Turkish, Persian, Indian, etc.), falling under Tariff Nos. 106 and 107 may be imported only with the permission of the Minister of Industry and Commerce and on payment in gold, at the ruling exchange, of the Customs duties prescribed in the tariff.

The traffic receipts of the Smyrna-Aidin Railway for the week ended January 14, amounted to £4,511.

The traffic receipts of the Egyptian Delta Light Railways for the week ended December 31 amounted to £E14,206; total for year £E206,046. For the corresponding period of last year the receipts amounted to £E15,341 and £E381,967 respectively.

INDIA'S TRADE IN 1920-21.

Great Excess of Imports.

The fact that a publication is a Blue Book is often quite sufficient to deter a would-be reader from further investigation, since the term has almost come to denote nothing more than a collection of dry facts and statistics. Indian Blue Books are, however, far removed from that category, and those who wish to follow the tendencies influencing Indian trade at the present time, and at the same time to see what a Blue Book should be, should read the recently issued "Review of the Trade of India in 1920-21," which gives a very clear and concise, and, it may be added, most readable account of the position. It is, of course, a drawback in the case of this review, as with all Blue Books, that it appears inevitably some considerable time after the close of the period dealt with, when in all probability—one might say in these times with certainty—the factors that were then of most importance have taken on a different value while other influences have come into play. The main value of these publications lies in the light they throw on the trend of events, and judged from that aspect the review in question is invaluable.

The period covered was in sharp contrast to the previous year. In 1919-20 India was in full enjoyment of the post-war trade "boom," the following year saw the "slump" which converted a favourable trade balance of Rs. 119 crores to an adverse one of Rs. 79 crores. But while the export trade declined to a level below the pre-war figures there was a great expansion of imports and the total trade for the year actually surpassed the record figures of 1919-20. Taken by itself the adverse trade balance might appear serious, but as a matter of fact India was very favourably situated to meet a period of trade depression by the long series of favourable years experienced before and during the war period. From a financial standpoint also India was in a strong position. Thus the "slump," when it did come, did not have the consequences that it had elsewhere. It has to be borne in mind, however, that the period in question ended with the depression at its height, that up to the present there has been but little improvement and that the import trade has been affected by well-known causes, thus it will be clear that any undue optimism would be misplaced. The writer of the review expresses the opinion, it may be noted, that the conditions essential to a revival of trade are in evidence, but how far India is likely to benefit in the immediate future from the development of trade generally which is certainly at hand, would seem to be a moot point. India's progress depends very largely indeed on the recovery of Europe, and until the Continent is in a position to give her the markets she enjoyed before the war, it is obvious that she must labour under a serious disadvantage.

Growth of Imports.

India's imports during 1920-21 amounted to value to Rs. 3,35.60 lakhs as against Rs. 2,07.97 lakhs for the previous year. This expansion was due to the fact that during the war period India was unable to obtain her normal requirements, while in the months immediately following the Armistice conditions only permitted a partial recovery of trade. At the end of the year symptoms of a glut were apparent in the distributing centres, but this, it is pointed out, was not a criterion of the position in the country as a whole. Unfortunately developments since then have not enabled the potential demand existing to be realised.

As usual cotton goods headed the list of imports with a value of Rs. 1,02.12 lakhs. The United Kingdom supplied 49 per cent. of the imports of cotton twist and yarn, as against Japan's 43 per cent., and 85.6 per cent. of the imports of piece goods, Japan again being second with 11.3 per cent. During the year it will be remembered that difficulties arose with the Indian importers in regard to orders for piece goods as a result of the depreciation of the exchange. "The situation is one of which, to the casual observer," says the review, "the

Indian mills might have been expected to take full advantage by capturing orders withheld for the time from Manchester. That they did not do so is evidence, not of any weakness of organisation, but of the comparatively small range of goods in the production of which Lancashire and Indian mills are in active competition." Second on the list comes iron and steel with Rs. 31.30 lakhs. The development of this trade was only to be expected since India has long had to do without sufficient supplies. It is worth noting that in the last pre-war year India's imports of iron and steel exceeded one million tons, while for 1918-20 they only amounted to 608,000 tons. For the year under review they were about 712,000 tons, so that it will be seen that in this branch there should be a great expansion in the next few years as India endeavours to recover the time lost through the war. The bulk of India's requirements came from the United Kingdom, who had 70 per cent. of the trade, the United States being second with 16 per cent, a considerable drop, it may be noted, from her 31 per cent of the previous year. Machinery occupied the third place with Rs. 24.09 lakhs. In this case also the United Kingdom was easily first with 79 per cent., the United States being second with 17 per cent.

The Export Trade.

India's exports, which for 1919-20 amounted to Rs. 326½ crores, fell to Rs. 238 crores, a total below the figures for 1913-14. This was because *inter alia* in the months immediately following the war markets had obtained more than they could consume under the existing conditions, so that when the inevitable period of depression came, the demand disappeared. If India had had at her disposal all her pre-war markets the case would have been very different. Jute was the principal export, then, in order of importance followed cotton, food grains, and flour, seeds, tea, hides and skins, and lac and shellac. As regards raw jute, the outstanding feature was the decrease in shipments to the United Kingdom of almost 1,000,000 bales. The United States increased her consumption from 434,000 bales to 616,000 bales, while Germany, with 403,000 bales as compared with 20,000 bales occupied the third place. The cotton market was affected among other things by the "slump" in cotton prices, the restricted Japanese demand, and the famine in China, but the consequences were rendered less serious than they would otherwise have been by the shortage of the Indian crops, and by the support forthcoming to the markets at one period from Italy and Germany. There was a marked decrease in the export of cotton piece goods, the figures being 146.4 million yards, as compared with 196.6 million yards for 1919-20. The Turkish, Persian and Egyptian markets took smaller quantities, but Singapore, Colombo, and Aden took about the same, while there was an increase in the exports to East African ports. Exports of tea, hides and skins were seriously affected by the "slump." The figures for the tea trade show exports of only 285,752 lb. as compared with 338,470 lb. for the previous year. As regards hides and skins the London and Liverpool markets were congested, while New York was also out of the market, and as there was a curtailed demand for other quarters, and as the German market was unavailable, it goes without saying that the trade suffered severely.

Owing to unsettled conditions around Smyrna imports of skins and hides have practically come to a standstill, there being little or no demand for raw materials.

Large deposits of tin have been discovered in the region of Oulmès, south-east of Rabat. The Moroccan Mines Service expresses its satisfaction with the quality of the mineral found. A large amount of tin is quite near the surface, but before exploitation can be conducted on a large scale it will be necessary to build proper roads.

Official notice has been given that all persons holding or claiming concessions operative in Mesopotamia granted by the Ottoman Government before the war of 1914-1918 are requested to forward immediately to the Ministry of Commerce, Baghdad, full particulars of the concessions they hold or claim.

Engineering Topics.

By Our Engineering Representative.

Valveless and Gearless.

An extremely interesting internal combustion engine which embodies a number of novel features has just been built at a leading British engineering works, although so far little has been said regarding it and few engineers appear to be aware of its existence. Information is to hand, however, that the bench tests have been more satisfactory than was believed would be possible, and the engine is now being fitted in a chassis and will be tested out on the road.

Briefly the engine, which has three cylinders, but which could be constructed just as efficiently with six or nine cylinders, has not a single valve in its construction, nor any gearing, and comprises fly-wheel, crank-shaft, connecting rods, pistons, cylinders, and crank case only, with the necessary ignition.

As some of my readers will have gathered by the above the engine is of the "two-stroke" type. Other than the parts, there are no valves; there is not a single cut or cast gear wheel in the engine, nor are there any cams, springs, tappets or secondary shafts. There is not even any timing gear, and the moving parts consist only of pistons, connecting rods and crank-shaft.

So far as the mechanical details of construction go the cylinder blocks are designed with two diameters having a common piston, which is connected by a connecting rod to the crankshaft in the ordinary way. The lower diameter of the cylinder is the larger, a fact which has considerable bearing on the working and power of the engine. The lower chamber, called the pump chamber of each of the cylinders, is connected by a common manifold inlet which, in turn, is brought from the carburetter, which may be of any suitable type, provided it is large enough to supply sufficient mixture. The cycle of operations may be described simply as follows: When the piston makes its first downward stroke a vacuum is formed in its pump chamber, and at the end of the stroke the exhaust port in the explosion chamber is also uncovered. The inlet port of the lower chamber is also uncovered, and the gas consequently passes into this. When the return stroke is made the charge is compressed and when the transfer port is opened it is passed into the explosion chamber of the adjoining cylinder. In a similar manner the second cylinder feeds the third, and the third transfers its carburetted charge to the first, this cycle continuing until the engine is stopped by cutting off the ignition or closing the throttle.

Diesel Developments.

Considerable strides have been made of late in connection with the development of the Diesel engines both of the two and the four-stroke type. Amongst the later and more efficient introductions may be mentioned the light-load running gear adopted by the Vickers-Petters people, by means of which a portion of the fuel can be injected well in advance of the main charge. In this way the pilot charge has time to vaporise before the main charge is allowed to enter. It appears from a number of tests carried out that fuel consumptions of as low as about 0.5 lb. per brake horsepower hour, which is equivalent to a brake thermal efficiency of 25 per cent., have been obtained, a fact which speaks for itself as to the high degree of perfection reached in the design of these prime movers.

A further direction of development has been the continued increase of compression pressures in connection with four-stroke engines, figures now being reached which would have been considered impossible a few years ago. Who, in the early days of the century, for example, could have imagined an engine which compressed its charge, before firing, to the astounding figure of 425 lb. to the square inch? Yet that is the compression at which the new Ruston-Hornsby works.

A good deal of progress has been made with the solid injection type of engines during the past five years or so, and according to some opinions expressed at a recent gathering of users of Diesel engines at which I was

present there are pretty sure grounds for asserting that the limit in connection with the high compression, mechanical injection engine has not by any means been reached. Already we are building engines of this type developing 200 brake h.p. per cylinder with a brake thermal efficiency of 35 per cent. at working load, and one may with reasonable confidence expect to see at an early date engines of this type, with four, five, or six cylinders developing up to anything from 800 to 1,200 brake horse power. Of course, as was pointed out at the meeting referred to, the further development of the oil engine, whether of the mechanical or air injection type is largely dependent upon the materials which the designer has at his disposal. Further, there is still something to be done by the metallurgist in the way of the production of metals and alloys which shall have greater tensile strength, greater resistance to stresses and strains, and greater heat resisting properties.

The Scottish Show.

The big Glasgow Exhibition has already shown that the tremendous virility of the British motor industry is rapidly assisting a recovery from the recent disastrous slump. The exhibits, fully representative of all that is best in their several directions show a marked advance on pre-war productions, whether in the form of cars for pleasure or business use, components or accessories. The goods-carrying type of commercial vehicle, as well as the passenger conveying models are the latest products of British shops, and whilst it would be invidious to single one make out from the others for special notice, the large single deck omnibus of the Commercial Cars, Ltd., of Luton, has always been a centre of attraction. This was of the front entrance type, and is built to seat 29 passengers, and something must be said as to the excellence of its body finish which is in brilliant red with silver plated fittings. As regards accommodation with the exception of one row the seats are arranged to face the entrance. These are upholstered in dark green and thoroughly sprung. A gangway runs down the centre. Artificial lighting is effected by electric lights let into the roof. The body is mounted on a "Commer Car" 3P type passenger chassis. Power is transmitted from a 40 h.p. four cylinder engine through the "Commer" patent gearbox with four speeds and a reverse thence through an intermediate and propeller shaft to the full floating live axle. Throughout this bus embodies the very latest developments in passenger carrying vehicles.

So far as tyres are concerned the Scottish Show has demonstrated once more the great popularity of Dunlop productions, not only in tyres but also in wheels. The straight-sided tyre is one of the principal features of the exhibition, and quite a large percentage of the cars shown are fitted with Dunlop tyres, or wheels or both.

Electrical equipment for both cars and motor cycles was well in evidence, and the C.A.V. exhibits, on the stand of Messrs. Thompson and Brown Bros., Ltd., embraced all the latest electrical productions of the pioneer electrical instrument makers in the country. Perhaps one of the most interesting exhibits is the latest type of starting and lighting battery, the "C.A.V.—Willard." A full range of commercial motor car, and motor cycle productions was also on view, comprising dynamos, starters, batteries, lamps, electrical components of all descriptions for ensuring the comfort of the present day motorist, whether he be the driver of the latest luxury car, or the delivery van, lorry or motor cycle. The starters incorporate the popular "Bendix" drive and have been considerably simplified, and I understand that dynamos are made to suit the requirements from the heaviest vehicle to the cycle car owner, or the motor cyclist.

French Tours.

In view of the large number of motorists taking advantage of the efficient and trouble-saving arrangements provided by the Automobile Association for tour-

ists to the Riviera, it has been decided to extend the A. A. Patrol service to certain of the Riviera roads. An A. A. inspector has already left England to survey the best routes to the Riviera and to transmit information concerning roads, hotels, etc., likely to be of service to A.A. members. The patrolled roads I am informed will be in the neighbourhood of Nice, Cannes, and Monte Carlo, while the Automobile Club de Nice will continue to extend its valuable services in connection with all motoring matters to members on the Riviera.

Diesel Locomotives.

It is now some time since the first Diesel engine was adapted for marine purposes, and now it appears that this extremely efficient type of prime mover seems about to invade the realms of locomotive engineering. An eminent engineer has just put forward a design for a railway locomotive directly driven by Diesel engines, which he considers can be made quite as easily startable and controllable as a steam locomotive and which should be quite as flexible in action. He suggests main engines of the two-stroke, opposed piston type working at a compression pressure of about 400 lbs. to the square inch. The starting would be affected by means of separate compressed air cylinders formed at the ends of each main combustion cylinder, and fitted with covers and stuffing boxes to take piston rods. The auxiliary engines for providing the starting air would consist of a couple of two-cylinder 50 h.p. hot bulb engines each driving a separate three-stage compressor. The engine as designed would give a rated tractive effort of 16,000 lb., and it appears that a working full size model has given results practically equal to those of a steam locomotive of similar size and the latest type

OIL NOTES AND NEWS.

The Anglo-Persian Success.

It was, of course, a foregone conclusion that the new Anglo-Persian issue would be a great success, but it can scarcely have been expected that the response of the public would have been so overwhelming as proved to be the case. 2,000,000 Preference shares, and 600,000 Ordinary Shares were offered, the sum required being £4,050,000. For the Preference Shares the company received subscriptions amounting to £21,000,000, while the total for the Ordinary Shares was £36,000,000, making together £57,000,000 or an amount sufficient to cover the whole issue about 14 times. Needless to say it is a record.

British Burmah Petroleum.

In the course of an interesting speech at the general meeting of the British Burmah Petroleum Company the chairman, the Hon. Lionel Holland, said that he and his colleagues looked forward to the future of the concern with confidence. Just as the oil industry, he pointed out, was the last of the great industries to suffer when trade contracted, so it would be among the first to benefit by any trade expansion. "And of any recovery," he added, "when it occurs, in demand and prices this company should be in a good position to reap the benefit. Except for the one important factor of the prices ruling for oil products, its current financial year has begun favourably. With an increased production our stocks have been replenished, nor is there any likelihood this year of the supply of crude oil falling short for any month of the full requirements of our refinery."

Extended Interests of Oil Companies.

The tendency has been very marked of late for oil companies to extend the sphere of their operations. Touching on this subject Mr. Holland pointed out that the British Burmah Company have interests in Egypt, and in the Argentine through its holdings in the Eastern Petroleum and Finance Company, and in the British Sinai Petroleum Company. "While the future oil possibilities of Egypt and Sinai" he remarked "are of great interest, in view especially of their great marketing situation if further oil lands of commercial value are brought into production there, it is at present rather to our stake

in the Argentine Republic that we look with confidence for more assured and early success. . . . There, in the Comodoro Rivadavia field—which bids fair to become one of the more important oilfields of the world—the Eastern Petroleum and Finance Company, in association with this company, has an option over an six or seven blocks covering the very considerable area of 16,500 acres. . . . Our own blocks—picked out of many that we could have obtained—are admirably placed and distributed. Those on the northern portion of the field adjoin the Astra property, and to the immediate south of our boundary several very productive wells have been brought in. Our western blocks are about three miles distant from the well quite lately brought into production by the Anglo-Persian interest."

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"THE MYSTERIES OF FOREIGN EXCHANGES" are thoroughly explained in this 40 page Booklet profusely illustrated with Maps and Charts in the following chapters:—

- (1). The Modern Chaotic Exchange Situation.
- (2). The French Exchange Position.
- (3). German Industry and the Mark.
- (4). The Italian Lira.
- (5). The United States Dollar.
- (6). Miscellaneous Exchanges.
(Belgium, Austria, Poland, Roumania, etc.)

Every Investor and every Merchant should read this publication.

LONDON PRODUCE REPORT.

Sugar Still Advancing.

(From Our Own Correspondent.)

Monday Evening.

Sugar.—Prices have again advanced. Home refined has improved 6d. in all cases. Tate's cubes are now 52s. 6d.; coffee crystals are 52s. 9d., and mineral water sugar has come to business at 47s. 3d. London granulated and Lyle's granulated are quoted at 46s. 9d., and 47s. respectively. In export varieties West Indian crystallized has jumped 1s. to 42s., and Czechoslovakian at 18s. 9d. has risen 3d. White sugar quotations are:—January, 20s., February, 19s.; March, 18s. 6d.; May, 18s. 3d.; and August, 18s. 4½d.

Coffee.—Very little business has been passing during the week, and prices have remained firm. There is still a scarcity of the Nairobi variety which is quoted at 110s. Jamaica is steady at 150s. Costa Rica has been dull at 140s., and Indian is firm at 110s. The futures market has been barely steady. Quotations are:—March, 49s. 9d., May, 51s.; July, 51s. 9d.; September, 52s.; December, 52s. 3d.

Tea.—There has been a poor demand for most grades of tea during the week, although there has been a firm market for Java tea. China tea has come to business at 3s. lb.; and common Java at 9d. lb.

Rice.—The new rice crop is not expected here before the end of March or the beginning of April at the very earliest. Honduras Carolina rice is still a good feature, but supplies of the Egyptian Japan rice are exhausted; relief is anticipated when the market will be replenished by one or two shipments in a week or two. Burmese and Saigon are both 2s. down at 16s. respectively.

Dessicated Coconut.—There has been a good deal of realization by weak holders, and offerings have been readily absorbed at lower prices.

Almonds.—There has been little demand for Valencia almonds, while supplies are more plentiful. Sales are better for Moroccan and Sicily almonds.

Green Fruit, etc.—Prices for oranges have reached the highest point yet touched this season. The increased consumption of this fruit is attributed to its use as a precaution against influenza. Supplies of lemons are short, but the demand is weak. Offerings have included some new crop Naples fruit, but quality is poor and sales are feeble. Prices of all varieties of apples have risen. No change has been in evidence with regard to Valencia onions.

Oilseeds.—Unsteadiness has prevailed. Indian linseed has

gained 1s. 3d. at 19s. 3d., and La Plata is 1s. 6d. up at 18s. 6d. Rapeseed has been firm with Toria at 16s. 3d., brown Cawnpore at 18s. 3d., and bold Ferozepore at 18s. Cottonseed is still unsettled. Indian remains unchanged at 9s. Egyptian black has shed 5½d. at 11s. 7½d., and Sakellaridis has dropped, 1½d. at 11s. 4½d.

Oils.—Prices are harder. Linseed oil at 32s. 9d. is 2s. 9d. up. Rape oil is higher with the crude variety 1s. up at 50s., and refined 4s. up at 55s. Cotton oil is lower with refined 1s. down at 42s., deodorised also 1s. down at 47s., but Egyptian crude remains unaltered at 35s. Turpentine is 9d. higher at 72s. 6d.

Oilcakes.—Linseed cake has been firm at 300s. ton. Cottonseed cake at 190s. ton is 10s. up, while palm kernal is firm at 120s. ton. Arachis cake and cottonmeal have remained unchanged at 220s. and 290s. per ton respectively.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ending January 14:—

Sultanas.—The total estimated sales to date amounted to 167,690 bags as against 93,375 bags for 1920. The total estimated sales are 158,690 bags as compared with 86,375 bags for the corresponding period of last year, and the estimated stock unsold totals 9,000 bags as against 7,000 bags for last year.

Shipments.—Sultanas are being loaded on the s.s. Gitano for London, and s.s. Belgravian for Liverpool, sailing next week.

Markets.—Sultanas are firm, the Orthodox holidays tending to limit business. The few sales effected reflect an advance of about 3s. on last week. Dealers show little inclination to sell anticipating higher prices as the season draws on. Exchanges weak at 690 with declining tendency.

Arrivals of figs have practically ceased. Some limited business is reported out of stock held by local speculators, but prices paid are beyond the range of foreign markets.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated January 23:—

Condition of Crops.—January 20—Bengal spring crops moderate owing to absence of cold weather rains. Bombay prospects unchanged except for slight damage by frosts to standing crops in Sind and Upper Gujarat. Punjab prospects good but more rain wanted in eastern parts. In Central Provinces, sesamum very good; wheat, grain and linseed good. January 18—United Provinces prospects unchanged.

Markets.—Cotton.—January 18—Fine M.G. Oomras Rs. 370 December-January; Rs. 381 March. Crisis averted in Bombay cotton market owing to the failure of Bull operators to make corner in M.G.F.G. Broach. April-May delivery closed at Colaba market on January 20 at Rs. 448, giving mean of Rs. 454 for the week against Rs. 472.14 last week and Rs. 504 the week before. Healthiness in trade being restored. Ready cotton is steady with good demand from Japan, but absence of enquiry from Europe continues. Bombay cotton arrivals from September 1, 1921, to January 13, 1922, 1,206,000 bales as compared with 630,000 bales in the same period of the last year. Bombay Piece-goods market unchanged. January 21—Calcutta jute market very quiet. In heavies, some demand for B Twills at Rs. 38. Heavy hessians slightly steadier. At tea sale on January 17, qualities offered were rather inferior. For grades up to 14 annas, very strong market, especially for Cachars, Orange Pekoes, Pekoes and Broken Pekoes, and for Souchongs, which advanced 2 annas. Above 14 annas, market strong and fully firm. Dust, strong. 504,298 packages sold to date at an average price of 10 annas per lb. Shellac.—January 17—Market firm with fair demand from shippers, chiefly confined to T.N. shellac, which ranged from Rs. 153 to Rs. 165, closing easier at Rs. 160. Rice.—January 20—Special Straits quality rice Rs. 445. No change in bank rates.

The first oxygen factory in Ceylon has recently been started in Colombo. It is equipped with a Ruston Hornsby oil engine of 130 horse-power, and is being run by the Lightfoot Refrigerating Company.

BANQUE FRANCO-SERBE

Capital - Frs. 20,000,000.

London Office:—

CURRENT PRICES.

General Produce.—Bacon: (Continental), 127s. 6d. cwt.; (Canadian), 110s. cwt.; (American), 100s. cwt.; butter: (Danish), 177s. 6d. cwt.; (Australian), 105s. cwt.; (New Zealand), 127s. 6d. cwt.; cheese (Canadian), 96s. cwt.; (New Zealand), 88s. cwt.; lard, 70s. 6d. cwt.; eggs (Danish), 88s. 6d. per 120; (Styrian), 20s. 9d. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6½d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 142s. 6d. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. cwt.; (Mocha longberry), 113s. cwt.; (Santos, superior), 61s. cwt.; ginger (washed Cochín), 67s. 6d. cwt.; nutmegs (110's to 80's), 11d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 11s. cwt.; sultanas (Smyrna), 122s. 6d. cwt.; currants (Vostizza), 83s. cwt.; currants (Amalias), 58s. 6d. cwt.; sugar: (Tate's cubes), 115s. cwt.; (Lyle's granulated), 46s. 4½d. cwt.; (Mauritius crystals), 44s. 6d. cwt.; (West Indian crystallized), 40s. cwt.; (centrifugal), 13s. 9d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 14s. 3d. cwt.; (bran, Rangoon), £5 8s. 3d. ton; cinnamon (firsts), 1s. ¾d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common), 1s. 2d. lb.; (medium to good), 1s. 7½d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 47s. 9d. qr.; (Australian), 53s. qr.; barley (malting), 47s. 6d. qr.; barley (feeding), 41s. qr.; oats (English), 34s. qr.; oats (La Plata ex-ship), 27s. 3d. qr.; maize (La Plata), 37s. 9d. qr.; flour, 40s. sack.

Metals.—Aluminium, £212 10s. ton; antimony (English Regulus), £35 ton; bismuth, 9s. lb.; copper (standard), £65 1s. ton; copper (electro), £72 10s. ton; gold bars, 97s. 6d. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 96s. 3d. ton; galvanised sheets (24 G), £16 7s. 6d. ton; lead (soft foreign), £23 4s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 31s. 3d. unit; nickel, £180 ton; platinum, 440s. oz.; plumbago, £20 ton; quicksilver, £10 15s. bottle; silver bars, 34½d. oz.; spelter (G.O.B.), £26 6s. 3d. ton; tin (standard), £102 ton; wolfram, 11s. 3d. unit; zinc sheets, £34 10s. ton.

Chemicals.—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 4½d.; ammonia (sulphate), £15 11s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard), 2s. 5½d. gallon; bleaching powder (35 per cent.), £14 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 8d. lb.; chlorate, 5d. lb.; caustic, £33 10s. ton; nitrate, £42 10s. ton; permanganate, 10½d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 140s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 6½d. lb.; alkali (58 per cent.), £9 3s. 3d. ton; chlorate, 3½d. lb.; caustic (70 per cent.), £23 5s. ton; hyposulphite, £15 ton; prussiate, 8d. lb.; nitrate, £14 5s. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.), £110 ton; lemon oil 3s. 1½d. lb.; quinine, 3s. ½d. oz.; red lead, £39 5s. ton; white lead, £42 5s. ton; white ground lead, £51 15s. ton; sulphate of copper, £28 10s. ton; sulphate of iron, 73s. ton.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 8d. lb.; 80 to 89 lbs., 8d. lb.; 70 to 79 lbs., 7.5-8d. lb.; 60 to 69 lbs. 7d. lb.; 59 lbs. and under, 6½d. lb.; (second), 90 lbs. and up 6½d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 6d. lb.; 59 lbs. and under, 5d. lb. Cows (first), 60 lbs. and up, 6d. lb.; 59 lbs. and under, 5.7-8d. lb.; cows (second), 60 lbs. and up, 5d.; 59 lbs. and under, 5.7-8d. lb.; cows (second), 60 lbs. and up, 5d. lb.; 59 lbs. and under, 5d. lb. Bulls (first), 54d. lb.; (second), 4½d. lb.; Kips (first), 6.3-8d. lb.; (second), 5½d. lb.; (third), 3½d. lb. Calcutta Market. Prices in rupees per 20 lb.: Arsenic hides (cows): Agras, 10 to 13.8; Durbhangas, 6.8 to 8.8; Patnas, 5 to 6. Salted cows, 3 to 8. Arsenic hides (buffalo), 3.8 to 6. Skins: Calf, 8 to 10 per 20 lb.; goat, 245 to 280 per 100 pieces.

Miscellaneous.—Cotton: (American), 10.39d. lb.; (Egyptian Sakel), 17 ood. lb.; Oilseeds: Linseed (La Plata), £17 1s. 3d. ton; rape (Toria), £143s. 9d. ton; palm kernals, £17 1s. 3d. ton; castor seed (Bombay), £15 17s. 6d. ton; sesame seed (China), £25 5s. ton; soya beans, £12 15s. ton; Oils: Linseed, £29 10s. ton; olive (Levant), £76 ton; palm, £39 5s. ton; rape (crude), £46 10s. ton; soya, £33 7s. 6d. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £40 15s. ton; cotton (crude), £37 ton; ground nut £42 10s. ton.

NEW GOLD DEPOSITS IN CZECHO-SLOVAKIA.

According to *Narodni Listy* gold deposits have been found in Czecho-Slovakia. The experts report that gold is found there in three forms: in gold-washings, in quartz, or in combination with pyrites and marcasite. The yield of the seams has been tested in two analyses carried out by the district mining authorities in Moravska Ostrave, and the first and second experiments produced 36 and 52 grammes of gold respectively per ton of ore. The presence of ore containing copper and iron has been ascertained near Durrseifen while pyrites has been discovered near Zuckmantl and magnesite near Vidnava. Several foreign groups are already interesting themselves in the above-mentioned deposits.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Egypt.

Marine Boiler.—The Secretary General, Ports and Light-houses, Arsenal, Alexandria, invites tenders for the supply of a new multitubular marine boiler of the following description:—Diameter 11 feet; length 10 feet; two corrugated furnaces, Boiler working pressure 180 to 200 lbs. per square inch. Built to Lloyds rules 100 A1 and supplied with all accessories as per specification. Offers will remain valid for one and a half months from March, 1, 1922.

Cotton Waste.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of 100 metrical tons of coloured cotton waste. March 10.

Pumps and Motors.—The municipality of Alexandria invites tenders for the supply and installation of pumps and motors at the Kait Bey principal pump station.—April 25.

Map-Printing Paper.—The Surveyor-General of Egypt, Giza (Mudiriya), invites tenders for the supply of 1,632 reams of various classes of map-printing paper. March 1.

Electrical Fittings.—The Director, Personnel and Equipment Department, Ministry of the Interior, Cairo, invites tenders for the supply and upkeep of electrical fittings of the various offices of the Ministry of the Interior for one year commencing on April 1, 1922.—March 15.

Bulgaria.

Telephone Instruments.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of 2,000 telephone instruments for table use, with local battery and magneto. Also for spare parts for these instruments. Tenders to be presented at the District Office of Finance, Sofia by February 20. (D.O.T.).

Telephone Pole-line Hardware.—The Bulgarian Postal Authorities invites tenders for the supply of telephone pole-line hardware (4 pin carriers for insulators, bolts, etc.). Tenders, accompanied by a deposit of 5 per cent. of the whole amount to be addressed to the District Office of Finance, Rue Rakovski, Sofia. Tenders may be submitted for each or all of the items required. March 21 (D.O.T.).

Telephone Materials.—The Bulgarian Postal Authorities invites tenders for the supply of:—(1) 3,000 Junction pieces for Batteries; (2), 200 kgs. of watch makers oil; (3) 5 kgs. graphite (in grains); (4) 500 kgs. hydrochloric acid; (5) 5,000 kgs. lead; (6) 50 kgs. solder ("etaín au colofane"). Tenders accompanied by a deposit of 10 per cent. of the total amount of the tender to be addressed to the District Office of Finance, Rue Rakovski, 102, Sofia. Tenders may be submitted for one or more than one, or all of the items, and delivery is required within four months. March 27. (D.O.T.).

Telephone Accessories.—The Bulgarian Post and Telegraph Authorities invites tenders for the supply of:—1, Lamp fuses. 2, Cartridges fuses for protection from lightning; 3, 3 amp fuses; 4 line annunciators; 5, Carbon lightning arresters. Tenders must be accompanied by a deposit of 5 per cent. of the total amount and may be submitted for each or all of the items, and should be addressed to the District Finance Office at Sofia. March 15. (D.O.T.).

India.

Pins, etc.—The High Commissioner for India invites tenders for the supply of:—(1) Pins, "Adamantine" or similar; (2), Tape Cotton; (3) Cardboards; (4), Paper, glazed, for ferro-prussiate photography; (5) Copper Firebox plates; (6) Springs, Helical, &c.; (7) Axleboxes, Locomotive, Cast Steel. Forms of Tenders may be obtained from the Director-General, India Store Department, Belvedere-road, Lambeth, S.E.1., and tenders are to be delivered at that office not later than 2 o'clock p.m. on Tuesday, February 14, for Nos. 1 to 5, and on Tuesday, February 21, 1922, for Nos. 6 and 7.

Sewage Scheme.—The Director of Development, Bombay, invites tenders for constructing and running for six months a sewage scheme for Ambarnath Industrial Area. Specification Rs.500, Superintending Engineer, No. 3, Project Division, Directorate-building, Old Customs House Yard, Fort, Bombay March 15.

It is reported that a Commercial Treaty is in course of preparation between Czechoslovakia and Japan. The final negotiations are to take place at Prague. There has hitherto been but little trade between Czechoslovakia and Japan, but the Treaty will doubtless lead to an increase in mutual trade relations.

THE TIMBERS OF INDIA.

In the course of a paper before the Royal Society of Arts on January 27, on "The Timbers of India and Burma," Mr. Alexander L. Howard said that no one who had seen the furniture and other works in Indian woods as they had been produced here by our English craftsmen could fail to appreciate their great beauty and distinction. Still, from the point of view of timber consumers in this country, the chief considerations with regard to the use of these timbers were purely practical factors, such as the f.o.b. price, the cost of freight, and whether there was a sufficiency of the timber. His experience in the trade had forced him to the conclusion that in many timber producing countries particularly in the tropics, the timbers which were most esteemed by local inhabitants often proved to be the least valuable for export. On the other hand, timbers which were of little use in the country of their origin were not seldom of great importance in parts of the world with different climatic conditions. Thus the deodar and the sal, which were the principal timbers of Northern and Central India, would be unlikely to be successful in British and European markets, while woods such as Indian white mahogany, laurel wood, gurjun, white bombwe, silver greywood and white chuglam, all of which were likely to prove of very considerable value in home markets, were in small demand in India. The consequence of this was that the majority of Indian timbers likely to be appreciated by consumers in Europe were, in default of any large local demand, obtainable at a price far below their intrinsic value, and so the f.o.b. price for these timbers was, for the present at all events, very advantageous to the buyer.

Then there was the cost of freight. Since the Armistice freights, which during the war immediately after soared to a point previously unknown, had become more and more reduced till now the cost of freight was often less than it was before the war. Shipping freight cost was always rather a speculative affair, and undoubtedly if it were to go up again to anything approaching that of the war years, the trade in the timbers of India and Burma would be very adversely affected, though even in such case, he did not think it would be utterly ruined. However, it did not appear that there was the slightest prospect of any material change from present conditions for some time to come.

In connection with this same subject of freight, he was able when in India to lay the foundations of a scheme which had since enabled them to have direct shipment of timber from Indian and Burmese ports, and from the Andaman Islands. Altogether some five or six ships had been employed during the last few months, one of which was now loading at Rangoon. The first ship to be so utilized was the s.s. Rhodesia, which arrived at the West Docks from Rangoon in August last, with a full cargo from the Government of Burma of fine teak logs of large size. This import of round teak logs had given rise to an animated discussion in the technical press on the comparative advantages of bringing the timber over in this form as it came from the forest, as against the import of sawn squares, which was the form in which teak had been imported in the past. He did not intend to trouble them further on this subject, except to say that while at the start he believed that the import of round logs would be beneficial both for the producer and the consumer, he was now convinced by experience of the advantage of marketing the timber in this form.

The next consideration was that of the sufficiency of the timber supply. With regard to this there was no question, when they realized that the Government forests occupied an area of 251,000 square miles. Let them reflect for a moment that the whole area of the United Kingdom was 88,000 square miles, and that in India and Burma there were 251,000 square miles of forest.

There remained one element to be considered: and that was whether the Government of India, through the Officers of the Forest Service, would continue the energetic and progressive policy which they had lately adopted. Of the efficiency of the Indian Forest Service, it was quite unnecessary for him to speak to them there to-night, for it would be known to them all and was beyond question. All Governments and Government servants, however, were at some disadvantage in carrying out any commercial enterprise, and the local Governments of India and Burma were no more free from that disability than any others.

He would, therefore, earnestly direct the attention of the authorities concerned to the paramount necessity of obtaining

a thorough grasp of the commercial conditions in Europe, so that they might realize, for instance, the importance of producing their timber for the market in the manner and in the quantities which were required by the buyers. Only by such a proceeding would it be possible to garner the immense harvest of revenue which was available, but which was so absolutely dependent upon that point.

He was convinced that it was only by actual Government initiation and exploitation that these timbers could be brought into common use. For many years past Government had endeavoured to encourage private trading firms to exploit these lesser-known native timbers, but they had so far met with little success, and he did not think they would meet with much more in the future. The whole problem suggested itself as too complicated and hazardous an enterprise for any private, or public, corporate trading concern to undertake, until it had been established by the Government on a firm and substantial basis. It might be argued that both Government assistance and co-operation in forest industry had been largely dispensed with in other countries, and that that might well be so in India. The answer to this was that in most countries where private enterprise in forest industry had been pre-eminently successful there had been unlimited freedom and independence of action throughout the industry. In British India, however, the forests, were the property of Government, and Government was pledged to manage them with the object, not only of maintaining them in their present condition, but of improving them to the greatest possible extent in the interests of future generations. Unlimited freedom of action for private enterprise was therefore, impossible in India. He was convinced, therefore, that the great expense to which the Government of India had been put, and the advantages which had already been gained in the development of this industry, would all be of no effect unless the considerations which he had outlined were borne in mind.

COMMERCIAL BREVITIES.

The export of oil products from Roumania has been temporarily stopped in order that local requirements may be covered.

A branch of the Eastern Bank, Limited, was opened in Madras on Wednesday, February 1.

The production of crude oil in Roumania during November amounted to about 103,000 tons, compared with 110,500 tons in October.

The draft of an agreement for the establishment of a joint German-Czecho-Slovak Industrial Arbitration Court is now under discussion.

The Department of Overseas Trade is informed that the Second International Samples Fair to be held at Trieste is being organised to take place from September 3 to 18, this year.

A new company, the Slav Trading Company, has just been promoted at Prague with a capital of 3,000,000 crowns, and will occupy itself chiefly in trade with Russia.

A revision of the Commercial Treaty between Czecho-Slovakia and France is the subject of negotiations now proceeding, a reduction in particular being designed in some of the French tariff charges on imports of Czecho-Slovakia goods into France.

At a meeting of the Czecho-Slovak Coal Board held recently, under the chairmanship of the Minister of Public Works, it was decided to recommend the Government to discontinue the official fixing of coal prices.

1,316,334 tons of phosphates were exported from Tunis, during last November, of which 426,860 tons went to Italy, 314,408 to France, 140,656 to England, 116,770 to Germany, 92,000 to Belgium, and 80,009 tons to Japan.

The *Tribuna* of Prague announces that the Czecho-Slovak Steamship Company proposes to establish a Czech Lloyd, whose steamers are to ply between Russian, Roumanian, and Bulgarian ports on the Black Sea. It is proposed to extend the service later on to South America and India. In addition to private capital, the Company is endeavouring to obtain assistance from the State.

Owing to an error in transmission it was stated in Bulgarian notes in the issue of "The Near East" of January 12 that Bulgaria's bank note circulation had decreased by 659 million levas in 1921. Actually during the first ten and a half months there was an increase of 238 million levas.

Cotton & Cotton Goods.

MANCHESTER REPORT.

(From Our Own Correspondent).

Manchester, Saturday.

The outstanding event in the market during the past week has been the slump in raw cotton rates. More selling pressure has shown itself in American qualities, and in Egyptian descriptions the uncertain political situation abroad has had an adverse effect upon values. Our local market, therefore, has been very unsettled, and business has been of the smallest possible dimensions. Quotations in Egyptian yarns have fallen quite equal to the decline in the raw material, and users have held aloof. Very little business has been done in piece goods for Japan and buyers are disposed to adopt a waiting policy until the prospects are clearer. Some useful lines have been booked in gray staples and finishing cloths for Constantinople. It is now definitely stated that the boycott of imported goods has broken down in Calcutta, but it is reported that in many quarters of India the natives are refusing to purchase anything but home productions, and demand has been within a small compass. The New Year holidays are now being celebrated in China, and no increased activity can be expected until the festivities are over. Occasional sales have been recorded in gray staples and finishing cloths for South America. Manufacturers remain in a wretched position, and there is a tendency for more looms to stand idle for want of work. In American yarns for home consumption prices are distinctly easier on the week, and only a retail trade has been done. Less business has been offering in bundles for Eastern markets.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended January 23:—

Our market has experienced yet another very trying week. Only on one day was there anything like support forthcoming, and that, in the light of after events, appeared to be unjustified. Sales have averaged about 250 bales a day and prices have slumped steadily. The enquiry, particularly at the commencement of the week, was poor, and contained no special feature. Low cotton of all grades has been frequently in request, but even in this department actual business has been rare. Prices asked vary considerably, and this irregularity, which is always present when business is quiet, is particularly noticeable amongst the higher grade cotton; for example yesterday (24th inst.) Fine Sakellaridis was officially quoted at 25,000, yet Type 31 (C.C.C.) was freely offered at 23,000. per lb. Sudan cotton still meets with enquiry, and about 250 bales have changed hands.

Official reports from Manchester have made dismal reading, and China appears to be the only hope. She is reported as being in a buying mood, but it is not surprising if she holds aloof after the slump experienced in our market since the New Year began. It is hoped that if China starts, then India will follow, but, by all accounts, the situation in the latter country grows more complex day by day, instead of becoming more simplified. It is reported that the boycott, as far as Calcutta and Bombay are concerned, is virtually at an end, and that more enquiries are now being received from those centres; yet, actual business is practically nil. Deeds, not words, are required to convince us that any material improvement has taken place, and until we see them we confess we remain sceptical. If the boycott continues until April, as it is rumoured it may do, the outlook for Lancashire is a bad one. Private advices from Manchester indicate that there is rather more doing than would appear on the surface, but all accounts agree that only wretched prices are obtainable. C.i.f. business is very quiet, and this is not surprising with Alexandria standing at a premium of nearly 2d. per lb. over Liverpool. The steadiness of Alexandria is really remarkable, everything considered, and would seem to point to the fact that that market is gradually finding out it is no longer dependent on the Lancashire "outlet" for its tone, as it formerly was, and with America, Europe and the Far East becoming annually bigger buyers of Egyptian cotton it can, for a time at all events, afford to ignore the state of bad trade which exists over here. Of course, if the United States Senate impose a heavy tax (anything from 7 to 20 cents. is talked of) on all 1.1-8 inch, cotton entering that country, it would give Egyptian

shippers a very unpleasant shock, but so far this possibility, and it is a very real possibility, does not appear to have aroused much excitement in Egypt. Looking round, the situation does not appear too hopeful, and it is probable that even lower prices than those ruling at present will be witnessed in the near future. Total sales 1,200 bales (includes 220 Sudan). Quotations of Sakellaridis are reduced 175 points, with the exception of Fine and Extra Fine, which are only 125 points lower. Uppers and Brown are reduced 125 points. Fully Good Fair Sakellaridis to-day 17.75d.

NEW COMPANIES.

India Association.

The India Association, Ltd., has been registered as a private company with a nominal capital of £100,000 in £100 shares. Objects:—To construct, improve, work, manage or control, in the Indian Empire or elsewhere, public works and conveniences of all kinds, including railways, tramways, docks, harbours, piers, wharves, canals, reservoirs, embankments, irrigations, sewage, drainage, sanitary, water, gas, electric light and power installations, telegraph and telephone equipment, hotels, warehouses, markets, and public buildings; to carry on business as bankers, merchants, capitalists, promoters, underwriters, financiers, concessionaires, &c. The signatories to the memorandum of association are:—T. O. Callender (director of Callenders Cable and Construction Co., Ltd.); E. W. Smith (chairman Metropolitan Carriage, Wagon and Finance Co.); H. E. Procter (partner, Killick, Nixon and Co.); F. Byrne (director Dorman, Long and Co., Ltd.); H. C. Levis (chairman and managing director British Thomson-Houston Co., Ltd.). The first directors (to number not less than three nor more than ten) are to be appointed by the signatories. T. O. Callender signs as "subscriber and director." Registered office, Temple House, Temple-avenue, E.C.4.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on January 13 were as follows:—Agricultural Bank of Egypt, £4.17-32; Alexandria Water Co., Ltd., £7.1-16; Anglo American Nile Steam, £2½; Associated Cotton Ginners, £13-10; Banque d'Orient, Fr., 50½x; Behera Ord., £E9.1-8; Brasseries d'Egypte, Fr., 60; Building Lands of Egypt, £7-8; Cassi di Sconto Priv. Fr., 108; Ciments d'Egypte Priv., Fr., 50; Ciments d'Egypte Div., Fr., 24; Comptoir Fin. et. Com d'Egypte, £1.1-32; Consolidated Lands, Pt., 5; Credit Foncier Fondateur, Fr., 1-32; Credit Foncier Act, Fr., 608½d.; Credit Foncier 1880 Oblig., Fr., 325; Crown Brewery Priv., Fr., 118; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 80; Eaux du Caire Jonissance, Fr., 102; Egypt and Levant, S.S. Ord., 31s. 4½d.; Egyptian Delta Light Railways, £3 ½d.; Filature National d'Egypte, £10½; Immeubles d'Egypte Soc. an des., £5.5-8; Khedivial Mail S.S. Ord., 107s.; Khedivial Mail S.S. Co., Pref., £2½; Kom Ombo Ste An de Wadi, £4.5-16 Kom Ombo Ste An Fondateur, £34; Land Bank of Egypt, Parts de Fond, £38; Lots Turcs, Fr., 31½; Menzaleh Canal Navigation Pt., 225; Nungovich Hotels, £6.7-16; Ramlah Railways, £2.13-16; Salt and Soda, 30s. 10½d. Tram d'Alexandrie Priv., Fr., 42; Tram d'Alexandrie Div., Fr., 55; Union Fonciere d'Egypte, £2. 25-32; Egypt Hotels, £2.1-32; Urbaines et Rurales, £3.

ENQUIRY BUREAU.

ADVERTISERS requiring agents abroad and readers abroad desirous of getting into touch with British Manufacturers, Export Merchants, etc, may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," "The Near East," 1, Devonshire Square, London, E.C.2. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

114. Importer in Karachi (India) travelling throughout India wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities:—Exports: Medicinal herbs dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.

116. Import Merchants in Adana, Cilicia, Asia Minor, wish to represent British firms for any kind of British-made goods. Own account and commission basis. Good references provided. Send catalogues and samples with prices and terms.

117. Importer in Roumania, interested in Jute trade, wishes to get in touch with firms dealing in sacks, new and old Dundee, and Calcutta makes.

121. Exporter of Greek Ores in Athens, especially of purest quality Magnesite and Chromite wishes to be connected with interested British Firms.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Constantinople, January 10.

Sugar.—The market has been very weak with prices very depressed. This is due to the large arrivals and the lack of demand for export. The arrivals have been:—Per s.s. Argentine from Antwerp, 7,000 sacks and 3,000 cases, per s.s. Hermes from Holland, 10,000 sacks, and 18,000 cases, and by the same vessel from Trieste, 1,800 sacks and 4,400 cases. The nominal prices are:—In transit: £25 per ton for cube, £20 per ton for crystallised; in this market customs paid: 29 piastres per oke for cube, 27½ piastres per oke for Dutch crystallised, Ps.20½ per oke for Belgian crystallised.

Coffee.—Transactions are very limited, and prices in centres of origin are:—Rio No. 1 £58 per ton, Santos superior, £60 per ton.

Rice.—This commodity has fallen considerably recently. The existing stocks are occasioning losses to holders.

Butter and Oils.—The position is unchanged, and there are few transactions because of the holidays.

Flour.—A rapid improvement in the prices of American has strengthened prices here. Stocks remain at 200,000 sacks.

Constantinople, January 16.

Sugar.—The market has been somewhat better during the past week as a result of a demand for the Black Sea and for local consumption. The arrivals have been insignificant:—21 wagons of Czecho-Slovakian cube. In transit the prices quoted are (c.i.f. Constantinople) Belgian crystallised, £21 per ton, Dutch crystallised, £22 per ton, cube, £26 per ton, Czecho-Slovakian cube £25 per ton.

Coffee.—The situation is unchanged on this market. Offers from centres of production are:—Rio No. 1 £57-58 per ton, Santos superior, £60 per ton.

Rice.—A tendency to weakness prevails abroad and here. Arrivals are 100 tons from Siam. Quotations are:—Saigon, No. 1, in customs, 15½ piastres per oke, Rangoon No. 3, in customs, 17 piastres per oke, Siam, in customs, 17 piastres per oke.

Butter and Oils.—Stagnation rules as regards these two articles as a result of the large stocks existing here.

Flour.—The lack of arrivals this week has favoured this market. Prices are maintained, and stocks are reduced to 150-160,000 sacks. There is beginning to be a shortage of good quality flour on this market.

Constantinople, January 21.

Sugar.—The market has recovered a little. Prices (in transit) are £21 per ton for crystallised, £25 for cube. As regards goods in customs, following the depreciation of the exchange prices have fallen from 28 piastres for crystallised to 27½ for Dutch crystallised and 26½ piastres for other qualities, and cube to 30 piastres for Dutch and Czecho-Slovakian. The arrivals this week have been:—4,200 cases Czecho-Slovakian cube, 2,300 crystallised, 500 sacks Java sugar. Stocks here are about 400 wagons of which 100 are cube.

DULL TENDENCY PREVAILS.

Indian Loans Weak.

(From Our Own Correspondent).

London, Monday.

After a series of comparatively good weeks a check was bound to come, and this week a very uneven tone has been in evidence. Once again a large business was transacted in gilt-edged securities, but while at the outset prices rose a decline set in later as a result of the unfavourable view taken in some quarters of the position in India and Egypt, and in most cases stocks are lower on balance. The depression would probably have been more pronounced had it not been for the existence of a number of favourable factors such as the belief that a reduction in taxation will be possible if the recommendations of the Geddes Committee are carried into effect.

In these times any issue of any pretensions is assured of a fair degree of success, so that when a really excellent opportunity presents itself to the investor the result is obvious. Thus the Anglo-Persian issue was subscribed 14 times over! I cannot think of any other concern which would have attracted the investor to a similar extent. Of course the result is explained partly by the element of romance attached to the company. Then the fact that the British Government is a shareholder is, of course, a bull point, while investors are not unaware of the dividend-paying potentialities of the concern. The interesting point now is the opening price at which the Ordinary shares will be quoted on the Exchange. Obviously it will be at a substantial premium, but there is a marked difference of opinion as to the figure. I suppose an actuary could hazard a shrewd guess based on the total of the over-subscription; as I am not one I will not make a forecast.

Apart from the Anglo-Persian issue the week has been rather a lean one as far as new issues are concerned, and despite the fact that the market presents a most inviting appearance at the moment there is a very evident tendency to wait and see what is going to happen. There are a few new issues on the *tapis*, it is true, but none of Near Eastern interest, and it is evident that the negotiations for Balkan Loans are going to be rather protracted. *En passant* there was a report this week that one of the oil companies in the sphere with which this paper is concerned is to issue new capital. I understand that there is nothing in the report, but it had the effect of reducing the price of the shares to some extent.

Gilt-Edged Decline.

Turning to the markets, gilt-edged, as I have already pointed out, have shown a variable tendency. Consols have shed a point at 62, War Loan Fives have dropped 3-8 at 93.3-8, but the Conversion Loan on the other hand is 1.1-8 up at 60.7-8. Indian stocks have been a weak feature on adverse reports regarding the extent of the unrest, and have fallen away. The 7 per cent. Loan is $\frac{1}{2}$ down at 105, the 3 per cent. Loan has lost $2\frac{1}{2}$ at 51 $\frac{1}{2}$, while the $3\frac{1}{2}$ per cent. Loan is $\frac{3}{4}$ lower at 61. In Near Eastern securities which rank with British Government stocks Turkish Guaranteed 4 per cent. 1855 are $\frac{1}{2}$ up at 75, Egyptian Guaranteed 3 per cent. have shed $\frac{1}{4}$ at 70 $\frac{1}{4}$, while Greek Guaranteed $2\frac{1}{2}$ per cents. remain at 63 $\frac{1}{4}$.

The foreign market has been unsettled. French stocks have been weak, War Loan Fives being $\frac{1}{4}$ down at 40 $\frac{1}{2}$. German 3 per cent. declined on the further depreciation of the exchange, but rallied later, and are closing only 1-16 down at 2.15-16, Italian Rentes remain at 21 $\frac{1}{2}$. Japanese stocks have been fairly steady. The 1905 Loan is unchanged at 87 $\frac{1}{2}$, but the 1910 issue is again lower at 61, a drop of $\frac{1}{2}$. Chinese securities have been stronger during the week, the 5 per cent. 1890 Loan being 87 $\frac{1}{2}$, while the 5 per cent. 1913 Loan is 67 $\frac{1}{2}$. Brazilians have been quiet, but steady. Mexicans have again been in some request; but prices have tended to fluctuate. Russians have been unsteady, the 4 per cents. being down to 8 $\frac{1}{2}$, while the 5 per cents. are 15 $\frac{1}{2}$.

On the whole Greek securities have been very firm, and in a number of cases advances are to be recorded. The 5 per cent. 1881 Loan has shed a point at 30, but the 4 per cent. 1910 Loan is $\frac{1}{2}$ up at 31 $\frac{1}{2}$. The 5 per cent. Funding Loan is unchanged at 35., while the 5 per cent. 1914 Loan is $\frac{1}{2}$ up at 40 $\frac{1}{4}$.

Industrials Irregular.

It has not been a good week in the Industrial group, and prices have shown a tendency to fluctuate. There have been some firm spots, but on the other hand pronounced weakness has developed in certain directions. Taken all round the volume of business has not been large, but to that one has become accustomed as a result of experiences during the last year. Tobacco shares are down on balance, Bats shedding 2s. at 63, while Imperial Tobaccos are 1s. 3d. down at 51s. 9d. A reduction in dividend brought Maple Ordinary down to 1.3-16, a drop of 9-32, and other similar undertakings weakened in sympathy. Dunlops fluctuated considerably, and at one time were down to 5s. 7 $\frac{1}{2}$ d., rallying subsequently to 6s. 3d. British Oil Cakes showed a tendency to harden, closing at 24s. 6d. The feature in the Insurance branch was the rise of $5\frac{1}{2}$ of Sun Life Assurance to 23 $\frac{1}{2}$. Among Telegraphs Radios have been in demand, but are closing well below the best at 18s. 3d., while Marconis have displayed firmness and are now 1 $\frac{3}{4}$.

Textiles have been rather dull. Coats at 2.19-32 are 1-16 lower, while Courtaulds are 1s. down at 36s. 9d. Iron, Coal, and Steel securities have been somewhat firmer. Armstrongs are 9s. up at 14s. 9d., Vickers have gained 1s. 6d. at 9s. 3d., while Guest Keens are 28s. 9d. x d. Babcock and Wilcox are 1-8 up at 2.5-8, while Lamberts have gained 1-8 at 1.31-32.

Shipping securities have inclined to dullness. P. and O. Deferred are 10 down at 295, Cunards are unchanged at 18s. 9d., while Furness Withys are the same at 25s.

Mines have been quiet. Kafirs have been neglected as a result of the failure so far to bring about a settlement on the Rand. Gedulds are 3-32 down at 2.13-32. Diamonds have not maintained their buoyancy of the previous week, and De Beers are 1-8 down at 10.1-8.

Oils Dull.

The Oil market this week has been dull and irregular, and in a number of cases lower levels are to be recorded. Burmahs are 1-8 down at 5.7-8, but Mexican Eagles are 1-32 up at 3.25-32. Trinidad issues have been dull, Centrals being 5-16 down at 3.13-16. Kern Rivers have shed 6d. at 19s. These fluctuations are only to be expected in present conditions, and once the market is not confronted by a series of adverse factors it is extremely probable that there will be a rapid upward movement, and then those who have entered the market in time will be in a position to congratulate themselves.

Among Egyptians Anglo Egyptian B are unchanged at 1.3-8, while Oilfields of Egypt are the same at 3-16. Gemsahs are $\frac{1}{2}$ d. up at 7s. 9d. In the Roumanian group Phoenix are 1s. 3d. down at 9s. 9d., while Roumanian Consolidated are 6d. lower at 8s. 6d. Dacia Romanas are unchanged at 11-16, while Steaua Romanas have shed 9d. at 10s. 3d.

Indian Banks Lower.

Among banking descriptions Ionian Banks have been done at 95s., a decline of 5s. National of Egypt are unchanged at 18.1-8. Chartered of India are 7-8 down at 15, while National of India are 13-16 lower at 37. Eastern Banks have been done at 91s. 3d. P. and O. Banking Corporations are $\frac{1}{2}$ down at 11 $\frac{1}{2}$, Imperial of Persia are unchanged at 5, while Bank of British West Africa at 87s. are 3d. down.

Land shares have been fairly firm. Béhéras are unchanged at 8 $\frac{3}{4}$, while Egyptian Delta Lands are 3d. up at 7s. 6d. Gharbiehs are 1-8 down at 1.7-16, while Union Foncières have shed 1-8 at 2 $\frac{1}{2}$. Sudan Plantations are unchanged at 2.5-8.

Rubbers Weak.

The fall in the price of the raw commodity has continued, and it goes without saying that the share market has consequently been dull. It is difficult to account for the weakness, seeing that stocks here continue steadily to decrease, and the movement is absolutely the opposite of what was looked for after the turn of the year. Truly rubber shareholders seem to have their full meed of tribulation. I do not think rubber can long remain at its low price, but it is difficult to see how for many months to come it can go much above say 1s. 2d. per lb., and that is not nearly enough to make any appreciable difference to the shares though it would, of course, mean that companies were once again making ends meet.

Among Miscellaneous descriptions Egyptian Markets are unchanged at 17s. 9d., while Egyptian Salt and Sodas are 1s. down at 30s.

SHIPPING INTELLIGENCE

SMYRNA NOTES.

(From Our Own Correspondent.)

Smyrna, January 15.

The American s.s. Orient ran aground at the entrance of the harbour owing to the Captains' charts not being up-to-date; the buoys had been changed since the publication of the charts. Fortunately no apparent damage resulted to the steamer which was able to get off without assistance.

The Greek mail steamer Polycos from Constantinople to Smyrna is disabled, and has taken refuge at Mudros. As she has been there for the past 10 days the Smyrna public are most anxiously awaiting the arrival of her passengers and mails.

NEW P. AND O. LINER.

Messrs. Harland and Wolff launched at Greenock, on January 26, the twin-screw passenger steamer Bendigo, which has been built for the Peninsular and Oriental Steam Navigation Company. The vessel is 520ft. long, 64ft. broad, 41ft. deep, and is of about 13,100 gross tons. She is intended for service from London to Australia, *via* the Cape. Accommodation will be provided for 500 cabin passengers, and provision can be made in temporary rooms for nearly 1,000 third-class passengers.

DANUBE NAVIGATION AGAIN SUSPENDED.

(From Our Own Correspondent.)

Bucharest, January 15.

The short spell of mild weather of a week ago made it possible for some of the ships which were icebound at Braila and Galatz to reach the sea; but following on the frost which has again set in, according to the latest reports, the Danube is again frozen at different points towards the Delta. In consequence many boats are still unable to leave the respective ports, and others have been caught by the ice on the way to the sea.

The shipowners concerned attribute this shortcoming to the fact that the European Danube Commission—on whom the duty of keeping the Danube navigation open is incumbent—does not possess proper icebreakers but ordinary dredgers and only a very small number of these.

British orders for gloves have been placed with Czechoslovakia.

The United States Government has appointed two Vice-Consuls at Prague.

Catalogues are required by the British Commercial Secretary for Morocco from British manufacturers, particularly of agricultural machinery and produce-handling plant (wine and olive presses, &c.).

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Liverpool, February 4); s.s. Vindellia for Bombay (Liverpool, February 16).

Anchor Broeklebank Line.—S.s. Malakuta for Port Said, Colombo Madras, and Calcutta (leaves London, February 4); s.s. Mahratta for Calcutta (Birkenhead, February 11); s.s. Stockwell for Port Said, Colombo, Madras and Calcutta (leaves London, February 18); s.s. Mahronda for Calcutta (Birkenhead, February 25); s.s. Anchoria for Port Said, Colombo, Madras and Calcutta (leaves London, March 7).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 15).

Byron Steamship Line.—S.s. Maid of Hydra for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, February 13).

Cunard Line.—S.s. Cypria for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Swansea, February 6); s.s. Brescia for Gibraltar, Algiers, Malta, Patras, Piraeus Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Glasgow, February 9).

Ellerman's "City" Line.—S.s. City of Sparta for Calcutta (Birkenhead, February 4); s.s. City of Marseilles for Calcutta (Birkenhead, February 20); s.s. Manila for Calcutta (Birkenhead, March 4).

Ellerman's "Hall" Line.—S.s. City of Harvard for Bombay, Karachi, and the Punjab (Liverpool, February 11);

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

Glen Line.—S.s. Glenapp for Port Said, Port Swettenham, Singapore, etc. (London, February 9); s.s. Carnarvonshire for Port Said, Port Swettenham, Singapore, etc. (London, February 23); s.s. Gleniffer for Port Said, Port Swettenham, Singapore, etc. (London, March 9).

Harrison Line.—S.s. Explorer for Calcutta (Liverpool, February 14).

Henderson Line.—S.s. Bhamo for Port Said, and Rangoon (Birkenhead, February 8); s.s. Amarapoora for Port Said and Rangoon (Birkenhead, February 22).

Holt Line.—S.s. Teiresias for Port Said, Port Swettenham, Singapore, etc. (Glasgow, February 9).

Johnston Line.—S.s. Incemore (first steamer of the season for the Danube), for Piraeus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, February 11); s.s. Pomaron for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 18).

Papayanni Line.—S.s. Bosnian for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, February 4); s.s. Egyptian for Mellila, Malta, and Alexandria (Liverpool, February 4).

P. and O. Line.—S.s. China for Bombay (London, February 10); s.s. Nyanza for Colombo, Madras and Calcutta (London, February 10); s.s. Kaisar-I-Hind for Bombay, (London, February 17).

P. and O. British India Line.—S.s. Morvada for Colombo, Madras and Calcutta (London, February 3); s.s. Nevasa for Bombay and Karachi (London, February 17); s.s. Chilka for Colombo, Madras, and Calcutta (London, February 17); s.s. Merkara for Colombo, Madras and Calcutta (London, March 3); s.s. Mandra for Bombay and Karachi (London, March 9).

Prince Line.—S.s. Merchant Prince for Tunis, Malta, Alexandria and Syrian Coast (Manchester, February 4); s.s. Stuart Prince for Malta, Alexandria and Syrian Coast (London, February 4).

The total yield of sugar from last year's beet harvest in Czechoslovakia is estimated at 650,000 tons. About one-half will be available for export and sales have already been effected to the amount of 125,000 tons.

Negotiations which were commenced some time ago by the Prague ironworks with coke producers in the Ruhr district have been unsuccessful as the German authorities have declined to grant export permits owing to the coke shortage in Germany.

NOTES OF THE WEEK.

Lord Allenby's Return.

The return of Lord Allenby and the prominence accorded to that event by the Press have stirred public interest in the Egyptian question deeply. Little or no sympathy is felt in this country for the Extremists in Egypt, and the Zaghloulists have few friends here to-day; but on the other hand there is a sincere desire to come to an arrangement with the Moderates, and it is hoped that even if a permanent agreement cannot be reached at once, a temporary one may not be unattainable. There are, of course, still difficulties, which come from both sides, but a good many lions seem to have disappeared from the path quite recently. Nothing has done more towards bringing about this improvement than the belief that Lord Allenby considers it possible to come to an arrangement which will satisfy Egyptian aspirations without jeopardising British interests. The idea is a new one, perhaps, to many people in this country, but Lord Allenby inspires confidence, and the nation is prepared to accept his assurances. It is hoped that, through Parliament, the people will very soon be put in possession of all the facts of the case, and be afforded the opportunity of making their will known.

The Continental View.

Certain aspects of the case as it concerns the Egyptians and ourselves are dealt with in our leading article. Others, such as the question of the Sudan and the apportionment of the waters of the Nile, are necessarily untouched for the moment; but the not unimportant subject of the European view of the problem is handled by a correspondent, who makes some suggestions with which we do not by any means agree. With the average Englishman, for instance, we believe that the commercial aspect of the case has very little weight—that he hardly ever gives it a thought. But the writer does well to emphasize the declarations, oft repeated, of the French and Italian Governments regarding the impossibility of entrusting the protection of their subjects in Egypt to native police or soldiery. The difficulty thus referred to is not insuperable; but the solution suggested by our correspondent is not likely to commend itself either to the British Government or to the Egyptians.

The New Roumanian Cabinet.

In this country there has of late been much talk of the Geddes Axe, but so far that interesting tool—or weapon?—remains modestly concealed behind a fog

of promises emitted by various Cabinet Ministers. Roumania is doing better in this respect. The Ministry for Foreign Affairs, over which M. Duca presides, has already announced a programme of economies amounting to over Three Million Pounds, and has actually put some of them into force. Unfortunately these include a considerable reduction of the staff of the Legation in London; which, we fear, can hardly further the interests of either country. According to a Frankfurt message the Minister for Industry proposes that "all foreign undertakings and also banks should be nationalised;" and this proposal, again, strikes us as distinctly unfortunate—so much so, indeed, that we can only conclude that Frankfurt has been misinformed, though we should have expected it to be quite the reverse. For the rest, M. Bratiano's programme embraces the revision of the Constitution in accordance with the requirements of the greatly expanded State, the overhauling of the much-discussed financial reforms, and the maintenance of the closest relations with the Allies.

That Elusive Conference.

This country is losing interest in the dismal affairs of the Near East, in the settlement of which day after day nothing happens. The word goes forth; the tables are set; the great ones prepare: and not even a mouse is born! When we learned that the meeting of the Allied Foreign Ministers had been again postponed, it therefore hardly caused surprise to the ordinary Englishman, already bewildered and a little doubtful of the present Government's determination to settle the Near Eastern problem. Officially, the Conference is to meet to-day (February 9), the delay being said to have been necessitated by the consideration, by the British and Italian representatives, of a Note delivered by the French Government. That all these re-considerations, resiftings, and deferrings are really necessary we cannot find it in our minds to believe; so tired in fact are we of them that we should be pleasantly relieved to read that the Meeting had actually taken place on February 9. It is wearisome to keep pointing out how surely these constant lapses of time are blighting the prospects of a settlement, how befogged the issues weekly grow, so that one gloomy day those responsible may darkling discover that matters have gone beyond their power to resolve. We may, if we so choose, attribute this seeming laxity to the changes in the constitution of the French and Italian Cabinets, but for our own part we are far from certain that more responsibility should not

be attached to the uncustomary and, in the Near East at any rate, fruitless diplomatic methods of our own Government. Certainly there is in this country a growing feeling that the British Government intends to do nothing so long as M. Poincaré remains in power in France, a suspicion that, with its confession of temporary impotency, should, if justified, make the demission of Mr. Lloyd George imperative.

The British Government's Attitude.

It is becoming increasingly difficult to believe that our Government is in earnest in the Near East, and, whatever may be the shortcomings of French and Italian politicians, it does often appear that when Great Britain's representatives (who, we fear, in this matter really represent only our Prime Minister) approach Near Eastern matters, they advance with but one eye on their object, the other, their master-eye, being fixed on the votes at home. We see, we will not say a lack of interest, but a lack of intensity of purpose, a desire rather to experiment than to appreciate, that is making impossible any prospect of a permanent peace. We know, for instance, that Mr. Lloyd George, and hence Great Britain, is enamoured of Venizelism; and though we say nothing on this, we are very seriously indignant at the report that he has promised Mgr. Metaxakis a British cruiser, if necessary, to land at Constantinople. For we should not approve of such methods of diplomacy even if they were efficient, and in view of the suspicion with which they have naturally loaded Great Britain and of the chaos to which they have brought the Near East, we feel compelled to call for a policy which will at least make British dignity unquestioned and British motives unsuspected. Such a policy the Foreign Office could, we believe, and would pursue.

A Receding Prospect.

Altogether, therefore, it may be said that our hopes of a settlement are, with the present Premier in supreme control, daily running out. His principles in foreign affairs may or may not be sound, but in practice they amount to nothing—a negative position which is worse than a positively bad one for the peoples of the Near East. As we hinted last week, we believe, not indeed that there is not disagreement, and violent disagreement, between Great Britain, France, and Italy, but that the suspicion which everywhere and always envelopes the deeds or proposals of Mr. Lloyd George is the most powerful bar to any sort of common action by the Allies in the Near East. The standpoint of the other two countries is, we think, clear enough: that of France is on the Angora Agreement, that of Italy on the Tripartite Agreement of August, 1920. But on what does Great Britain stand? What does she intend to do? Perhaps some questions on this subject will be asked in Parliament, which re-opened this week, and it is even possible that some of them, if repeated often and tactfully enough, may be answered. It should at any rate be shown that the present delay and obscurity are intolerable, and that the country, thoroughly sick of stage-rehearsal, and wanting the real thing, may demand its money back—a procedure which would leave the present actors deservedly bankrupt.

Gallipoli Looking Backward.

Reference to the Gallipoli operations in the late war was made by two public men in speeches delivered last week. Sir Ian Hamilton, speaking at Glasgow at a military dinner, declared that had the strategy of the

campaign received the same thought as its tactics, the relief of Russia by strategy would have received as much consideration as the support of France. "As it was," he added, "the Dardanelles was never more than the brilliant flash of a great man's imagination, an improvisation. The great man's own subordinates fought tooth and nail against it. Except Lord Kitchener the War Office were almost to a man against it." Sir Ian, later in his speech, attributed the diminution of our prestige in the Near East and the Far East very largely to the evacuation of Gallipoli. He quoted a Turkish Army Order that referred to the way in which the superiority of Turkish to British troops had been shown at Gallipoli; and declared that Egypt and India are thinking that what has happened once may happen again.

"The Battle of 'If' "

The second reference to the Gallipoli reverse was made by Lord Birkenhead at a party meeting, and he was evidently concerned only to turn that great catastrophe to the advantage of his own group of politicians. His complaint was that M. Venizelos' offer of the whole Greek Army was repelled; for "had that offer been accepted the Gallipoli peninsula would undoubtedly have fallen," and 'indisputably' two years of the struggle would have been avoided. As one of Sir Arthur Quiller-Couch's characters once remarked: "It is a great battle, the battle of 'If.' " Lord Birkenhead may never have heard any other views on the subject; but we believe that the refusal of M. Venizelos' offer was due to the conditions attached to it. We have heard very strange stories about the Greeks and the Gallipoli operations; and we refuse to believe, even on Lord Birkenhead's representation, that the 'fall' of the Peninsula would have been certain had the offer been accepted. Political wire-pullers make poor historians, and the strategy and tactics they understand—and employ—are, fortunately, peculiarly their own.

Indian Politics.

In Indian circles in this country last week's principal topic was the rumour—which still remains unconfirmed—of a decision to prosecute Mr. Gandhi, the ostensible leader of the movement known as civil disobedience. We have not so far found anyone to contend that a prosecution would not be logically justified, but on the question of its wisdom we hear very different opinions. According to some observers, it is the best thing that could be done, for when the very foundations of civil order have been attacked, the challenge must be formally taken up in the only way which will convince doubters that order is going to be maintained. On the other hand it is argued that Mr. Gandhi is a leader only in a technical sense; his pace and action may catch the eye, but his direction is determined by the man who holds the reins, and since the really dangerous brains of the movement are already in prison, it would be wiser to leave the ostensible leader alone than to gratify the desire for mild martyrdom which he has often expressed. We must content ourselves with recording the existence of the conflict of opinion: to attempt to decide it would carry us too far.

The Indian Army and the Legislature.

A difficult question is raised by the formal assertion of the Legislative Assembly's claim to control military expenditure, for which, under the existing Constitution, the executive government is responsible to the Secretary of State and not to the Legislature in India. The claim

is clearly political rather than social, for the motion which was carried against the Government was supported by the unofficial European members, and it shows that the assembly's appetite for power has been sharpened by the concessions already made. Its refusal may lead to an *impasse*, its grant would go far to reduce the Secretary of State's statutory power to a shadow, and at the same time might leave the country inadequately defended, until the arrival of a foreign enemy should teach legislators the need for effective preparation. The attitude of Indian politicians towards national defence is in fact one of the most depressing features in the present condition. Their country has suffered from successful invasion time after time for at any rate a thousand years; the frontiers were never safe till Britain took them in charge; but the lesson is not yet learned, and to give them effective control of military expenditure might in existing circumstances throw their borders once more open to the invader.

The End of the Famine.

The announcement that the weekly famine telegrams from India have now been discontinued may be taken as marking the end of the actual distress resulting from the failure of the rains in 1920. The magnitude of that calamity can be inferred from some agricultural statistics which have just reached this country, showing the area sown and the crops gathered in the two seasons affected by drought. A rough calculation based on these figures indicates that India lost something like 20 million tons of foodgrains, or say a full year's food for about a quarter of the population, besides a million tons of sugar, another million tons of oilseeds, and five million commercial bales of jute and cotton. A few years ago losses on this scale would have brought a large part of the country to the verge of a collapse: on this occasion distress has been merely local, and the members on relief have been so small that the successive reports have scarcely called for notice. We commend these facts to the attention of those who have for so long complained of the increasing impoverishment of India under British rule; a country which can stand the loss of a quarter of its gross income must have a large reserve of strength somewhere, and the old talk about India living from hand to mouth may happily be relegated to the past.

THE WEEK AT HOME.

London, Monday Evening.

Politics and Persons.

Last week it was the turn of the Opposition orators; this week the Coalition has hit back hard all round. Lord Birkenhead has devoted a speech to criticising Labour for its "abject poltroonery," Liberalism for its desire to return to party politics—"Was the nation so happy in July, 1914?"—and Unionism, at least the Die Hard brand, for its folly in imitating the Gadarene Swine. A very Carpenter of a speech, and one that has resounded far and wide through the country. The Radical papers are pink with fury, and have almost exhausted even their stock of abusive adjectives; but the touch about the benefits of party welfare, as shown by the record of 1914, has tweaked their noses badly.

Nothing has annoyed the malcontents more than Lord Birkenhead's reminder to the Press which pictures the Coalition as on the point of death that these things have been repeated *ad nauseam* for the last two years and a half, and the Coalition still lives, and "has no intention of expiring." The only retort which has occurred to the disgruntled is that this is a mere electioneering speech; but that is a futile and foolish rejoinder. For

months past the discontented Press has been attacking the Government for not going to the country; but the moment there was any suggestion of a General Election, the idea was condemned by those very organs as extravagant, impossible and absurd. After all, what do they want?

The Government, therefore, starts the new session in good heart. The Irish business comes first—the Treaty has to be turned into an Act; then there is economy, and the edge of the Gedde's axe is to be tested; and there is to be a pious expression as to the reform of the Lords, which will sound well but mean nothing. The Lord Chancellor flatly told the Unionists who are threatening to revolt if there is no repeal of the veto that if they do rebel they will be fought in Parliament and in the constituencies. This needed saying, for the little group has been very active lately; indeed, the distinguishing feature of the Die Hards is that they never die—they always seem to jump the last ditch, and turn up for another tumble later on.

The Position of Labour.

Officially Labour is very cross with the Keeper of the King's Conscience; its leaders do not like being told that their conduct is "abject poltroonery." But that dull and respectable party deserved a kick. Its heads are so anxious to be statesmen that they forget to be human beings. Mr. Henderson, popularly known as "Uncle Arthur," breathes platitudes; Mr. Clynes says nothing very beautifully—I always like listening to him because of the exquisite timbre of his voice, but there is no stuffing in his goose; and Mr. Thomas is an absolute chameleon. Good fellows all, and they try very hard to be great men; but they are not quite the real article, and in a big situation they fail. If I were a prophet I should say that some of the younger Labour men who sit on the back benches have more character, but their time has not yet come.

The Death of Shackleton.

The untimely death of Shackleton, in the Antarctic, at the early age of forty-eight, has been felt as a national loss. This last expedition seemed to promise so well, and there was so much that he might yet do—and then, silence. He had had a hard life, and apparently it had told on him more than we knew; there can scarcely be any other explanation of the entry in his diary: "I grow old and tired." He is fittingly to be buried in South Georgia, a lonely island in the Southern Seas, whose stormy coasts are frequented only by whalers; and he has written his own best epitaph, for his last words were: "In the darkening twilight I saw a lone star hover gem-like above the bay."

He was a great leader, and the world is the poorer for his loss. But the work of the expedition is to go on.

Health and Latitude.

The Medical Research Council has just issued a very interesting pamphlet on the question of disease and environment, which well repays study. I must admit that the first glance at it rather made my flesh creep, for the author, Dr. Brownlee, points out that the further south one lives the more likelihood there is of getting cancer, each degree of latitude adding to the incidence. This to a man who has been thinking of taking a furnished house on the South Coast for the summer is disconcerting; I thank thee, Dr. Brownlee, for teaching me that risk.

As regards the difference between town and country, the average expectation of life (at birth) in Brighton is 50.19, in London 46.74, and Manchester 28.78. The figures tell their own story, but the author refrains from the obvious comment that most sensible people would rather die anywhere than live at Manchester.

There is a law (Farr's law) which indicates that density of population and death-rate can be deduced from each other, like the astronomical calculations of mass and gravity. The law is universal—with one exception, London. The death-rate certainly goes up in the metropolis according to the density of population, but it increases far more rapidly in proportion than elsewhere. The conclusion is that "London has thus achieved in some way or other a greater absolute healthiness than its density would suggest."

I once knew a man who told me that London was the finest health resort in the world, because you lived twice as fast and twice as long there as anywhere else. People said he was mad. But I am beginning to think he was a prophet.

A Tax on Cricket.

The entertainment tax provides endless conundrums. Not long ago the authorities at York Minster were up in arms, (or surplices) because the tax was levied on a sacred concert within the Cathedral for which a small admission was charged. Now a case has been before the courts because the authorities deducted a proportion of the subscriptions of members of county cricket clubs. Ingenious lawyers argued that the subscriptions were used in keeping up the premises and the ground—in fact for anything rather than seeing a cricket match and alternatively that cricket was not an entertainment—it was almost suggested that it was a science. But the revenue people won, sad to relate. They generally do.

"Brighter London."

A scheme is afoot to brighten London life. It is not, as one might suspect, proposed to put a jazz-band in the British Museum or a gramophone in the Law Courts; so far as I can make out, the suggestion is that we go to bed too early, and should have more opportunities for supper after the theatre, with concerts after the supper. The idea is that we should attract American visitors—chiefly, of course, because we like to give them a good time, but incidentally with the supposition that they have money to spend.

But as a matter of fact, is it difficult to amuse yourself in London? In the morning, I admit, there are not many entertainments except watching other people go to work, which is always cheerful; but in the afternoon, there are theatres and cinemas, dances and concerts, and a variety of entertainments; to say nothing of lectures for the seriously-minded.

It is quite true that the Londoner goes to bed earlier than he used: Colonel Newcome's London, with its "Cave of Harmony," is extinct, except for those melancholy places, the night clubs, which are more depressing than the dissecting room of a hospital. But we go to bed early because we have to get up early. After all, London is a business centre, not a city of pleasure; and it is big enough to tell the stranger within its gates that if he doesn't like it he can go elsewhere. He will not be missed.

The Week's Books.

To suggest that "The Theory of Mind as Pure Act" (Macmillan) by Giovanni Gentile, is light reading would be to say the thing that is not. It cannot have been easy to translate either—a task for which Professor Wildon Carr is responsible. The author is an Italian philosopher of the idealist school, holding very much the same views that Professor Carr's books have familiarised to English students at London University; and either Gentile or his translator has made the idealist attitude more comprehensible than it generally is to my limited intellect. (But perhaps this is the echo of an old hatred against the obscurity of Hegel). The book is one that can, of course, only be criticised after a very careful reading—perhaps two or three readings; but a preliminary glance through its pages is sufficient assurance that the translator has not wasted his time on a second-rate work.

An English translation has been published by Cassell of M. Poincaré's book, "How the War Began." It is very well done, although it does not contain all the available documents or evidence. It appears to have annoyed two or three pro-Germans reviewers in this country, and they have indulged in a few cheap sneers to no particular purpose.

The heresy hunt to which I referred last week has now broken down again, the Archbishop of Canterbury having refused to proceed further; but it has left its little mark on literature. "A Resurrection of Relics," by H. D. A. Major (Basil Blackwell) recounts the history of the doctrine of the resurrection of the dead, and its

gradual rejection by the common sense of modern churchmen. It is a curious little study in that erosion of faith by intellect which constitutes progress.

A very useful little book of psycho-analysis is "Dreams and the Unconscious" (Christophers) by Professor Valentine, of Birmingham University. The author follows partly Freud and partly Jung, but he has a little modified their ideas, and he adds some useful remarks on the ethical side of psycho-analysis. This short and common-sense study should prove valuable to many who are seeking an introduction to psychology.

Another work from the same publisher is "Self—Training in Mysticism," by the Rev. H. L. Hubbard. It is not an elaborate survey like those to which Miss Evelyn Underhill has accustomed us, but an introductory study. There has, I think, been a distinct renewal of mysticism in recent years, both as regards the study of the subject and the practice of its methods; it is perhaps the one form of religious experience which can never lose interest. For that reason this little book will probably appeal to many readers.

"Death and Its Mystery" (T. Fisher Unwin), by Camille Flammarion, is a translation of a work by the great French astronomer, which has achieved enormous popularity across the Channel. It appears to be only an introduction to a subject which the author proposes to treat at greater length—the sub-title of the present volume is "Before Death; Proofs of the Existence of the Soul."

"Painted Windows" (Mills and Boon) does not sound very complimentary as a title for the character-sketch of high ecclesiastics; the book is written by the Gentleman with the Duster, otherwise Mr. Harold Begbie. He describes Bishop Gore as having "a permanently troubled conscience"; Bishop Hensley Henson has "intellectualised the Sermon on the Mount, dissected the Prodigal Son as a study in psychology, and taken the heart out of the Fourth Gospel," and so on. The book is clever but superficial; the only criticism I can pass upon it is that, like most of these personal sketches, it necessarily deals chiefly in externals. When you do not know the subject of the biography, you mistake its smartness, its almost pertness, for adequacy; when you do know the subject, you recognise its glaring inadequacy. That is the badge, of all this tribe of books, but they are astonishingly popular.

OCELLUS.

THE BRITISH MISSION TO TURKESTAN, 1918-1920.

At a meeting of the Central Asian Society held on January 24, at 74, Grosvenor Street, London, Major-General Sir Wilfred Malleson described the experiences of a British Mission which was in Turkestan from 1918 to 1920. Very early in its history he had received a telegram of congratulation from the authorities in India because of the speed with which a certain movement was carried out, but no other word of commendation had arrived during all the rest of the time that the expedition was in being. Nevertheless he claimed that it had been useful work; notably in damping down the great danger of 1918. The chief credit in that case was due to General Dunsterville's expedition, but the Mission to Turkestan had played a great part in preventing a recurrence of the Afghan War; this it had done by carrying on a propaganda which had prevented the co-operation of Bolsheviks and Afghans.

One of General Malleson's experiences had been to issue a paper currency. He had found the country in great straits for lack of something of the sort. One difficulty was to prevent forgery, for there was no printing press capable of anything but the most simple printing; there was no possibility of engraved notes or anything of the kind. His method of surmounting the difficulty had been, first, to buy up the whole stock of suitable paper that was in the country, then to have the notes printed, and, finally, to have every note signed by a British officer.

It is stated that M. Gounaris, the Greek Prime Minister, will represent Greece at Genoa.

The Palestinian Arab deputation which has been in London for some months had an interview with Mr. Winston Churchill at the Colonial Office on February 4. It was afterwards officially stated that the Colonial Secretary had undertaken to communicate to the deputation the draft of the Government's proposals for the future constitution of Palestine. The draft is also to be communicated to the Zionist organisations.

THE NEAR AND MIDDLE EAST.

From Our Own Correspondents.

EGYPT.

Cairo, January 28.

The Political Situation.

We are still without any decision in regard to the proposals put forward by Sarwat Pasha and his friends for the formation of a new Cabinet and the carrying on of the Government of the country on constitutional lines; and it cannot with truth be said that this further delay in dealing with the situation is making matters any easier for the more reasonably-minded Nationalists, or indeed is improving the situation. As to the exact details of the proposals put forward by Sarwat Pasha, and submitted to the British Cabinet by the High Commissioner with his strong support, it is impossible to obtain any official information. This reticence is in the circumstances quite natural, and the reason for it is readily appreciated by all those who have any knowledge of how the currents of intrigue and counter-intrigue run in this country; but sufficient is known of the broad lines to satisfy every one who has followed the trend of Egyptian politics and is in touch with the present situation, that the proposed arrangement is the only sane solution to the *impasse* into which we have now drifted.

Why the British Cabinet should dilly-dally at the present juncture passes all understanding, and it looks as if they do not appreciate the gravity of the situation, though it must have been pointed out to them very forcibly from this end. Everyone knows that since the proposals were first submitted there have been other more important and more far-reaching questions to be settled; but over a fortnight has passed since the Foreign Office received these proposals and the operation of time and local influences, which have profited as usual by the delay, has now removed the Egyptian question from the relatively secondary position which it may have occupied ten days ago and has brought it into the front-rank of importance. It is, indeed, very much to be feared that if the British Government does not hurry itself and take a decision—and one of the nature of an affirmative reply—the psychological moment, when its acquiescence would have had the most salutary effect on the local situation, will have disappeared.

I can only repeat that there must be no further delay and that the British Government must recognise that the time has come for a generous gesture. Should a decision be further put off, or should the reply in any way partake of the nature of a refusal, then we must expect developments which, no surprise to us who are in touch with the situation, will come as very much of a surprise if not a shock to people at home, and may place the British Government in a very difficult position.

The Boycott.

The newly constituted Wafd this past week drew up and published its long expected programme for non-co-operation with the British and for the boycott of British goods and British society. The programme took the form of a manifesto to the Egyptian nation calling upon all patriots to follow out the injunctions contained in it. It was a strongly worded and incitative document, which was ordered to be read in all Mosques. Among other things it called upon officials and servants of the Government to refuse to take orders from their British chiefs, or to do anything which might appear to them to be contrary to the wish of the nation; and it specifically called on dock labourers to refuse to load or unload or to handle bunker coal for British ships. Since this document was certainly calculated to interfere with public order, the military authorities had no alternative but to intervene; and the eight signatories were arrested, and the five papers which published the manifesto were suspended for three days.

The signatories, who have since been set at liberty after a stern warning, included Hamad Pasha El Bassel, the Bedouin chief from the Fayoum, who was one of

Zaghoul Pasha's companions when he was interned in Malta three years ago, and who after wavering between the extreme and, as to procedure, more moderate Nationalists, had the bad luck to be "caught out" on the losing side. It is noteworthy that the dissentient members of the Wafd who rejoined after Zaghoul's deportation did not sign this document.

As regards the boycott itself, it is in reality proving a fiasco. Undoubtedly less business is being done by foreign, including British, firms, and latterly a fair number of orders for British goods have been cancelled. But just as the land crisis in 1907 and the financial crisis of 1914 proved very useful excuses for those who wanted to get out of their engagements, so the "boycott" is being given as an excuse for not making purchases by Egyptians who no longer have the same amount of money to fling about, and is being taken advantage of by merchants who foresee that the local commercial depression makes it unlikely that they will find a ready sale for the goods they have ordered.

Another Bomb Plot.

The police on Thursday evening last discovered a plot against Sarwat Pasha and other leading Egyptians who have figured prominently in recent political events. They laid their hands on six very businesslike bombs, ready for use, in the Sayeda Zeinab quarter of Cairo; and they made several arrests. The evidence now in the hands of the police is said clearly to indicate the existence of a widespread conspiracy aimed at the personages mentioned above, and we are awaiting further developments with great interest; for from what I hear it is quite possible that the authorities may now be able to link up the various bombing attempts which have been made during the last three years and the organisation behind which has so far baffled discovery.

YUGOSLAVIA.

Belgrade, January 26.

The Royal Engagement.

King Alexander has returned to Belgrade from Sinaia and met with a very enthusiastic reception. Amidst cheers he drove from the station through beflagged and decorated streets to his palace. The citizens of Belgrade have once again proved that their love for their King is not only skin deep; in spite of a bitterly cold day and the fact that the Royal train was a whole hour late (even Royal trains are not exempt from such a common misfortune in this part of the globe), their cheerfulness and rejoicing did not diminish. Soon after seven o'clock big crowds gathered in front of the Municipal building, and, led by the Mayor and Councillors, preceded by massed bands, and carrying torches and singing patriotic songs, marched through the town and halted in front of the Royal Palace, cheering the King. His Majesty appeared at the window and addressed the crowd, saying how very pleased he was to see that his joy was shared by his dear people, just as his hardships and sorrows in the dark days of war were equally borne by them.

Throughout the day perfect order prevailed with the exception of a small incident. The owner of a tea shop.

ROPEMAKER ST., LONDON, E.C.

Succursale au Caire, EGYPT. TEL. 1956 P.O.B. 249.

Italian by nationality, tried to hoist a big Italian flag, which was quickly spotted by the waiting people, amongst whom it raised great irritation and loud hissing. A gang of young Dalmatian students rushed forward, breaking the ranks of police, and tried to take the flag down; but were at once stopped by mounted police, who formed a cordon round the flag. The crowd grew larger and more threatening every second, and trouble was already in sight when a police officer went inside and requested the owner to take the flag down; which he promptly did, to the great delight of all onlookers.

But the incident was not yet closed. Next day, close on noon, when the shop was empty, the students who had meanwhile decided to punish the impertinence of the owner filled the place completely. Each ordered a small cup of coffee (which costs only one dinar) and they remained in the shop throughout the rest of the day, thus preventing other customers from entering and spending their money. The Italian soon realized the game, and called for the police, who promptly came, but could not turn out the intruders, as they were behaving most politely. When the day was over and the students departed, leaving the owner to reckon up the "fine," which is estimated to be well over 20,000 dinars (that sum being his average daily takings, which he was prevented from collecting).

The Sebenico Incident.

The mixed Italo-Yugoslav Committee of Inquiry has concluded its investigation of the recent incident in the port of Sebenico. As a result, the Italian warship stationed in the port has been replaced by a small destroyer, and the commander of the former has been suspended from his post. The Italian delegates did their best to persuade the Yugoslavs to close the incident on the spot; but the latter refused, on the ground that they had only instructions to investigate the incident, and to submit the results to the Government in Belgrade. Once again innocent bloodshed has been caused by drunken sailors, and whatever result the incident may have, it will certainly not be to improve the relations of the two nations. Sooner or later Italy must realise that the Adriatic is a free sea, and that it cannot be made "Mare nostrum." The Adriatic problem cannot be settled by sending warships into somebody else's ports, and it is clear to anybody that the days of Tangiers and of threatening naval demonstrations have gone by for ever.

Political News.

M. Pashitch's Government is now complete. The portfolio of war has been given to General Vassitch, a man who enjoys the reputation of being really the man wanted for the post-war Army which requires most careful and yet very firm handling, if it is to remain what it is meant to be. The influence of the so-called "White Hand," which was uncomfortably felt during the last Ministerial crisis, is to cease at once; and according to the general belief is to be suppressed without mercy and regardless of rank or war merits. The Army must remain the defender of the country and must not let any political poison get into its organization.

Departure of General Kritsesku.

The Roumanian military mission under General Kristesku left last night for Bucharest completely satisfied with the work done in Belgrade. It is a well known fact that the object of their mission was to conclude a defensive military agreement, but the details of the Treaty are jealously kept from the public.

ROUMANIA.

Bucharest, January 23.

Fall of M. Take Jonescu's Government.

The parliamentary sitting of last Tuesday, when M. Také Jonescu's Cabinet appeared for the first time before the Chamber, was undoubtedly a very impressive one. The public galleries were filled to overflowing, as everyone was eager to witness the proceedings at this sitting, which had to decide the fate of a Cabinet in conflict with the Parliamentary majority. It was thought M. Také Jonescu, despite the great odds against

him, might at the last moment produce a trump card of a surprising nature. In fact however, his only means of success would have been to have gained during the adjournment a sufficient majority to support him, or, failing this, the authorisation of the King to dissolve Parliament. As neither of these things had been done, it is still a mystery to the uninitiated why he exposed himself to being voted out of power by such a crushing majority. When the motion of a vote of censure proposed by General Averescu's party was put to the vote, out of a total of 271 Deputies, 190 voted against and only 81 for him. M. Jonescu was supported, besides his own partisans, by the Transylvanian National Party, and by M. Jorga's group. The majority (General Averescu's Party), the Tzaraniists and the Socialists voted against him. The Liberals were conspicuous by their absence, in continuation of their policy of ignoring the present Parliament. The hostility of the majority and of the Socialists was expected; so that it was the Tzaraniists who actually turned the scales against M. Jonescu's Cabinet.

In face of the above result M. Také Jonescu had no alternative but to tender the resignation of his Cabinet. The King, in accepting this resignation, expressed his thanks to M. Jonescu and conferred on him the Order of Carol the First.

At first rumours were current that a "concentration" Government would follow. The King, however, after conferring with the Presidents of the Chamber and the Senate, a few hours later summoned M. I. C. Bratianu, the Leader of the Liberal Party, to the Palace, and entrusted him with the formation of a new Cabinet. This action was accompanied by the King's consent to dissolve Parliament. The King further expressed the wish that M. Bratianu should endeavour to obtain the collaboration of the Transylvanian National Party. Accordingly, M. Bratianu offered M. Maniu, the Leader of the Transylvanians, two portfolios, besides the Ministry of Transylvania without portfolio; but these two were to be chosen only from the following:—Justice, Communications, Public Works, and Public Worship. In

THE CALL OF THE LAND: SOUTH AFRICAN OPENINGS.

As in the classic times of ancient Greece, and the happiest days of more lands, when the cultured were often also husbandmen, and it was the fashion to farm; so now, industrialism having received a set-back, men's thoughts turn more and more to rural pursuits as a means of livelihood.

Partly because so many other occupations are closed, but largely also because of the life, all classes, but most noticeably the cultured, are again turning to farming. The question is—Where to farm? In what country can a man of parts find a congenial environment and make an adequate farming start on a modest capital?

The Union of South Africa is such a country. Farming there does not necessarily imply settling in the backwoods, under pioneer conditions, away from amenities. On the contrary: some homesteads are indeed separated from each other by tens of miles; but there are many areas, closely settled and well-developed, where good farms may be bought at very reasonable prices and on easy terms.

So many are the kinds of farming for which South Africa is suitable, and such is the variety of environment and living conditions in that large country, that the newcomer has a wide choice. Whatever his taste and aptitude, he is likely to be suited in one or other of the many districts. And to the end that he may adequately test his aptitude and taste before committing himself, there are now good facilities in South Africa for obtaining training and competent general guidance before investing in land.

Capital, generally not less than about £2,000, is necessary for even a modest start.

Full particulars should in the first instance be obtained from the Office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, W.C.2. (Advt.).

exchange M. Bratianu asked for his partisans one-third of the seats in Parliament and one-third of the political administrative posts in Transylvania and the Banat. M. Maniu, after consulting with his colleagues, declined this offer, considering it inadequate.

The New Liberal Government.

Thereupon M. Bratianu submitted to the King a purely Liberal Cabinet, which was sworn in on Thursday, January 19. The Cabinet consists of:—

M. Ion I. C. Bratianu (President of the Council and Minister of War).

General A. Vaitaoianu (Minister of Interior).

M. I. Duca (Minister for Foreign Affairs).

M. Vintila Bratianu (Minister of Finance).

M. A. Constantinescu (Minister of Domains, and *ad interim* of Agriculture).

M. G. Marzescu (Minister of Labour and Social Welfare).

Dr. I. Anghelescu (Minister of Education, and *ad interim* of Communications).

M. V. Sassu (Minister of Industry and Commerce).

M. C. Banu (Minister of Public Worship and Arts).

M. I. Th. Florescu (Minister of Justice).

M. I. Inuletz (Minister for Bessarabia, without portfolio).

M. I. Mistor (Minister for Bukovina, without portfolio).

Dr. I. Zigrea (Under-Secretary for Home Affairs).

It is rumoured that the Ministries of Communications and for Transylvania will be eventually entrusted to General Moshoiu and Dr. A. Cosma respectively.

This time the ministerial crisis was solved within 48 hours, which goes to show that the present issue was foreseen by the Liberals, so that corresponding arrangements were made beforehand. The dissolution of Parliament will be effected by publication of the decree in the *Monitorul Oficial* on Monday, January 23, thus sparing the new Cabinet from appearing before a hostile Parliament. The new elections have been fixed to take place during the first days of March, and the new Assembly, which will have, at the same time, the character of a "Constituante," will meet on March 27.

The manner in which also, the recent crisis was solved, namely, by calling to power a one-party Government, and one that had only eight seats in the last Parliament, has again caused great dissatisfaction among all the other parties. They claim that the constitutional principle has been disregarded again, and they have therefore decided to form a *bloc* to oppose jointly the Liberals at the coming elections. It is true, the Liberals will not have an easy task before them in facing the entire united opposition at the coming elections; but, when we consider their strong political organisation throughout the country, their well disciplined staff, and the many years' experience of their leaders in the electioneering game, it seems that they have a fairly good chance to obtain just a sufficient majority to carry them through. Another point in their favour is the fact that the Opposition *bloc* is composed of parties of fundamentally divergent views and interests united solely for their purpose of opposing the Liberals; so that a disintegration or partial separation is not out of the question. The attitude of M. Také Jonescu's party, for instance, is not yet defined. It may be further added that, despite the discontent of the united Opposition, the people in general do not whole-heartedly share this feeling towards the new Government. This is largely due to the mismanagement of the former Governments, which during the last two years have been mostly in the hands of the so-called new men, who, instead of improving matters, have allowed the situation of the country to go from bad to worse.

The people are, therefore, glad to see experienced old hands back again at the helm of the State, who will have the authority to carry out a programme which, they claim, will gradually restore the economic situation of the country to its pre-war condition.

M. Vintila Bratianu, the new Minister of Finance, has already declared that he intends radically to revise the new Financial Reform Bill, by abolishing the tax on

capital and by reducing the quotas of the income tax. Thereby he expects to throw into circulation again the hidden and exported liquid capital, which is the direct cause of the present money stringency and hence of the continuous slackness of trade. As to the Budget, he intends to curtail the State's expenditure to the utmost limit. It is generally hoped that the resolutions announced by the new Minister of Finance, as well as those of his colleagues, are not mere promises but determinations that will be carried out in a firm and sincere manner. Indeed, the new Government's success at the forthcoming elections will largely depend on their deeds until then and not on their promises for after the elections.

With regard to the new Government's foreign policy, M. Duca, the Minister for Foreign Affairs, in taking over his Department, sent a circular telegram to the different Roumanian Ministers abroad to communicate to the respective States that Roumania's foreign policy remains unchanged.

General News.

On January 22, the christening of Prince Mihai, the son of Prince Carol and Princess Helen, took place with great pomp at the Royal Palace in Bucharest. The service was conducted by Miron Christea, the Primate of the Roumanian Orthodox Church, who was assisted by Archimandrite Dionisie, the Abbot of the Sinaia Monastery. King Ferdinand is god-father. Besides the Roumanian Royal family there were present: Prince George and Princess Elisabeth of Greece, General Dusmanis, the Special Envoy of King Constantine of Greece for this occasion, the Diplomatic Corps, the Cabinet and a large number of superior officers of the Bucharest garrison.

As the Serbian Royal Court goes out of mourning on February 16, it is now reported that the official betrothal of King Alexander and Princess Marie will take place at Bucharest towards the end of February. The wedding will take place at Belgrade in April.

It is announced here that two important visitors will come to Bucharest during this spring, namely, M. Masaryk, President of the Czecho-Slovak Republic, and Marshal Pilsudski, President of the Polish Republic.

BULGARIA.

Sofia, January 30.

The Near Eastern Conference.

At last the Allies have found time to hold a Near Eastern Conference, and it is announced that during the first week of February, the Foreign Ministers of Great Britain, France, and Italy, will meet in Paris to determine the future policy of the Great Powers towards the Greeks and Turks. It is therefore well to repeat once again that the claims of Bulgaria must not be lost sight of by the Conference. They do not directly affect the main issue, i.e. the Anatolian War, but they have a considerable indirect effect.

To take first Bulgaria's claims for "a free economic outlet" to the Aegean; if the Allies decide to revise the Treaty of Sèvres, and advise, which is tantamount to ordering, the Greeks to evacuate Asia Minor, the Turks will have achieved a considerable part of what they were fighting for. They will have Smyrna, possibly still under nominal Allied control, in their hands, and their population will be freed from Greek rule; and they will have achieved this by fighting, or in plainer language by making such a nuisance of themselves that the Allies felt constrained to yield to their claims. Bulgaria has not fought for Dedeagatch, which for purposes of comparison may be styled a second Smyrna, nor has she struggled to free her minorities in Thrace from Greek rule. She has simply and solely evacuated Thrace, trusting that the Allies will keep to their written word, and grant her an outlet to the southern sea. There are many people, who, when told that Bulgaria wants an outlet to the Aegean, say: "Where is she to find a suitable outlet? Dedeagatch is no port; she is much better off with Varna and Bourgas." Admitting that Dedeagatch is a very poor port, it is necessary to remember

that where there is a will there is a way, and that even if Dedeagatch cannot be made into a suitable port, there are other places, such as Porto Lagos and Kavalla, that would admirably suit the purpose.

An Economic Argument.

The hostility or perhaps indifference towards Bulgarian claims is, however, so strong, that it may be more useful if Bulgaria's desire to have a trading port on the Aegean is put forward in another way. All British interests are, for the moment at any rate, subordinate to that of finding markets for our merchandise. Our exports are a mere handful of what they were in pre-war days, and it behoves us to increase them by every means in our power. Before the war, certain of our goods found a quite good market in Bulgaria, but now owing principally to the adverse rate of exchange, there is not very much trade between the two countries. Added to the adverse rate of exchange, there is the absurdly long trade route followed by English vessels bringing our goods to Bulgaria. Germany is quoted as being our principal trade rival in this part of the world, but Central European States, such as Austria and Czechoslovakia, are competing very hard with Germany. They are nearer, and in the case of Austria can undersell Germany, whilst the Czechoslovaks can guarantee surer delivery, and are besides this showing great commercial enterprise. Germany sends the majority of her goods to Varna or Bourgas, but the other countries named use the Danube. We send by way of Athens, Salonika, Smyrna, and Constantinople! It is obvious that trade between Great Britain and Bulgaria could be conducted much more quickly and at a lesser freight charge were the latter country to possess a port on the Aegean. Added to this the fact that all ships proceeding to Varna or Bourgas have to pass through the Dardanelles is a matter, which, although easy of solution to-day, may not be so easy in the future.

One word more, it is quite useless to grant Bulgaria an outlet, unless it is an absolutely free one. A second Salonika is no good at all.

A Recruiting Tour.

M. Thomoff, the Minister of War, accompanied by Colonel Topalkikoff, the Chief of Staff, has gone on a tour in the provinces with the object of attempting to secure additional recruits for the army. It is said that if the tour is not a success, the Minister will bring before the Sobranie at its Spring session, a Bill by which a kind of "Poll Tax" will be imposed on all able bodied men between the ages of 18 and 35, who do not voluntarily elect to become soldiers. This measure will savour of conscription, but Bulgaria finds herself in such awkward straits, owing to the few volunteers who have come forward, that the Allies may overlook the measure.

Party Politics.

A new note was struck in the external policy of the Narodnik or Obedinist Party by an article that appeared last week in the *Den*, an official organ. The article was written and signed by the Editor, and dealt with the foreign policy of France. The Obedinists have come to be regarded as the Francophile Party, and it was therefore all the more surprising to read a very frank and almost bitter criticism of France. The article examined at some length French policy in Western and Eastern Europe, and came to the conclusion that, in view of France's policy of exacting the last penny from Germany, Bulgaria could not count on France's adopting a different policy towards her. It was, in fact, said the *Den*, necessary to face facts, and to realise that nothing was to be expected from France.

The Late Lord Bryce.

The death of Lord Bryce has occasioned many sympathetic articles in the local Press, Professor Stephanoff writing in the *Echo de Bulgarie* observed that the death of Lord Bryce had deprived Bulgaria of a sincere friend, who had not hesitated to condemn openly the harsh clauses of the Treaty of Neuilly, which Lord Bryce characterised as "A Treaty of vengeance, not of peace." Lord Bryce was also well known in the Balkans, on account of the interest he took in the Macedonian question, and Professor Stephanoff recalls how he had

always defended the rights of oppressed European peoples.

ALBANIA.

Tirana, January 29.

The Ministry of Foreign Affairs.

Fan Noli has returned to Tirana and has taken up his duties as Minister of Foreign Affairs, thus making his début in an administrative and diplomatic career. Great hopes are built upon him, for he has acquired much credit by his handling of affairs with the League of Nations. It is hoped that the foreign policy of the country will now acquire some stability and establish a good tradition. On the other hand it is regretted that Mgr. Noli—who, as your readers doubtless remember is an Orthodox bishop—cannot devote his energies entirely to the organisation of the Albanian National Orthodox Church, and achieve a definite solution of this problem.

The Outlook.

I have spoken in previous letters of the constitution of a High Court for the trial of those concerned in the *coup d'état* of last December. Hassan Prishtina and Hodja Kadri are kept under police supervision; Kristo Dako and Zia Dibra have been imprisoned, but the latter has managed to escape and disappear.

The attitude taken up by certain people at Shkodra is causing some little uneasiness by reason of an active propaganda which is being carried on there in favour of the summoning of a Constituent Assembly. Generally the convocation of the Assembly is not desired immediately, as it is felt that a postponement will help to smoothe away difficulties and complications.

Relations with Serbia.

The re-opening of navigation between Rieka—a Montenegrin town—and Shkodra on the Lake of Scutari, may be regarded as a good sign. This should facilitate an understanding between Serbia and Albania, and perhaps also the exchange of the mails. For her part Albania has addressed a letter to the Secretariat General of the League of Nations requesting that it will draw the attention of the members of the League to the question of the resumption of diplomatic relations between Albania and Serbia, and to ask for their assistance. The Note has been communicated by the Secretariat General to all the members of the League.

At the moment when Albania is thus showing her good will and friendly disposition towards Serbia the declaration which M. Pashitch has just made—on January 27 in the Skupshtina—has produced a deep impression mingled with stupefaction. The President of the Serbian Council appears to have thrown aside all reserve and to have overstepped all bounds in his speech. He is reported to have said: "With regard to Albania the outlook is uncertain, as always. Since the assassination of Essad Pasha chaos has reigned in Albania, and Yugoslavia, who has been continually attacked by Albanians, ought to have recourse to arms for the defence of her frontier. . . . At the time of the consideration of the Albanian problem at the Peace Conference I demanded the adoption of the line of the Drin, considering that it was impossible to have any other frontier. The region of Lim has been awarded to Albania, but I hope that we shall obtain it one day."

This strange declaration amounts to a defiance of the civilised world and of the general peace, and is at the same time an extremely interesting revelation. Up to now Serbia had pretended that she had been a friend

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

of Independent Albania within the frontiers of 1913 and that she had repelled the proposal for her partition which was made by Italy, France and Great Britain in January, 1920. Yet now we see M. Pashitch, perhaps involuntarily, admitting that he had always demanded the partition and the annihilation of Albania!

On the other hand, in speaking of Lim, M. Pashitch breathed a threat. Hardly have the League of Nations and the Conference of Ambassadors given peace to Albania before the Serbian Prime Minister launches a bolt from the blue to threaten this country. Nor is it the first time that official Serbians have behaved in this threatening way. M. Spalaikovitch openly threatened Albania at Geneva on October 2, and a few days later the Serbian Army bombarded certain Albanian villages. On November 17 at Paris, before the Council of the League of Nations, M. Boshkovitch read out a dispatch from M. Pashitch in which he foretold misfortune for Albania, giving it to be understood that Serbia would be avenged on her. Now M. Pashitch puts forward the same threat from the parliamentary tribune. At the reading of M. Pashitch's dispatch on November 17, the Albanian delegate, M. Frasheri, drew the attention of the Council to the Serbian menace, and it was at his request that the Council gave orders to the Commission of Inquiry which it sent out to Albania to see that no outside influence—that is to say Serbia—should be allowed to disturb the peace of Albania. The President of the Serbian Council speaks of attacking Albania, whilst the Commission of Inquiry has officially established the fact that it is Albania who has suffered terribly from Serbian attacks. It is hoped confidently in Albania that this attitude and these ideas of M. Pashitch are due entirely to his personal policy, and that the Serbian people will not be long to see the truth and to respond to Albanian advances with reciprocal goodwill.

The Commission of Inquiry.

Having terminated its inspection at Kortcha, the Commission of Inquiry has returned to Tirana. An incident to note is the refusal of the Greek authorities to enter into relations with the Commission. At first the Hellenic authorities seemed disposed to meet the members, and appointed a *rendezvous* on the Greco-Albanian frontier; but the Commission arrived there twice only to find nobody there to meet it. The Greeks changed their minds, and fixed first Pisoden and then Florina. Finally the Commission decided not to attempt further to get in touch with the Greek authorities.

CYPRUS.

Nicosia, January 10.

The New "National Council."

The papers publish the names of the Greeks elected to seats in this body, which is henceforth to direct the "union with Hellas" movement. In some of the districts where the number of candidates for the honour has exceeded the number of seats allotted, it has been arranged among them that only the required number should be nominated, so as to avoid the trouble and expense of a poll. All the members are well known persons and trusted in their respective districts.

The Œcumenical Patriarch.

The threatened schism in the Orthodox Greek Church in connection with the disputed election of Mgr. Meletios Metaxakis agitated the Cypriot community, both as regards the general anxiety throughout Greece and as affecting Cyprus in particular. Official telegrams from Athens state that the assembly of the higher clergy of the Œcumenical see at Salonika began its discussion on January 2. The Bishop of Cyzicus, one of the chief members of the Synod, was chosen to preside. The meeting unanimously agreed as to the validity of the assembly, which proposes to proclaim that the election of Mgr. Meletios as Patriarch was anti-canonical, and must be considered as not having taken place. The Patriarch of Alexandria, with the support of his clergy, sent the following telegram (by which he challenges the validity of the election) to the majority of the Synod of

Constantinople:—"We were distressed to learn from your telegram the conditions under which the election took place, in violation of the sacred canons. The Patriarchate of Alexandria, invoking Divine aid for the re-establishment of ecclesiastical peace, assures the Apostolic Church of Constantinople that, in conformity with the holy canons, of which mention is made in your telegram, the Church of Alexandria will devote all its efforts towards the triumph of the right." The assembly insists on the necessity of postponing a fresh election of a Patriarch till the early part of February. Other telegrams state that the Patriarchs of Jerusalem and Antioch have, as anticipated, refused to recognise the election of Mgr. Meletios.

Public Health.

An infant brother of the Armenian girl who has brought small-pox into Nicosia has died of the disease, but there has been no further spread. But, owing to the outbreak of a considerable number of cases of typhus, attention is being once more directed to the water supply of the Capital, and to the need of laying iron pipes to replace the existing old fashioned channels. It is astonishing that the public should not have insisted before this on the execution by the Water Board or Municipality of a comprehensive scheme which would guarantee a supply of unquestionably pure water, and relieve inhabitants of the apprehensions which still exist as to the present supply being a source of some danger.

ASIA MINOR.

Smyrna, January 24.

Submarine in Eastern Mediterranean.

Reports are persistently circulated that a Turkish-Bolshevik submarine is "working" the coast of Asia Minor, and from the following notice issued by the Greek Naval authorities it would appear that they give some credence to the rumours.

We forbid egress and ingress to the Smyrna harbour for merchant ships during night-time from 18 o'clock to 6. Ships entering the Smyrna gulf during night-time must anchor at Phocia and get instructions from the Greek warships there; when they resume the voyage they must keep to the north of the Artez Point of the Merminje Cape. The illuminated buoys in the Channel Yen-Kale-Pelican Point are suppressed. A Greek warship will be anchored in this channel until new buoys are laid down and will forbid passage to all ships attempting same contrary to above order.

It is also believed in Smyrna that nets have been placed in the Dardanelles to prevent submarines coming through from the Black Sea.

Naval Movement.

H.M.S. 'Tuscan' and H.M.S. 'Tomahawk' have been ordered back to Malta where they will be laid up, together with several other Destroyers of the Near Eastern Flotilla. This is the first indication in Smyrna of the "Geddes Axe" being applied. H.M.S. 'Splendid' remains in Smyrna, with Captain Mark Singleton as S.N.O.

H.M.S. 'Tuscan's' concert party provided a most enjoyable entertainment in the Collins Hall, Smyrna, recently, for the British Colony. Besides Sir Harry and Lady Lamb, Mr. Leo Lamb, the Misses Lamb, the officials of the British Consulate and representative members of the colony, there were also present the French and Italian officers of the 'Annanute' and 'Agordat' respectively. Engineer-Lieut.-Commander Grigg and Lieutenant Harsfall were inimitable in their mirth provoking "stunts," and were ably supported by their Petty Officers and men.

Smyrna, January 26.

Rumours about submarine activities in the Eastern Mediterranean continue to circulate in Smyrna. To-day's news is that a Greek ship bringing ammunition to Asia Minor has been sunk, and her crew landed at Macri and sent to Angora as prisoners.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

THE DODECANESE AND ITALY.

To the Editor of "The Near East."

Sir,—Dr. Skevos Zervos, O.B.E., President of the Dodecanesian Delegation, asked me to send you the following message on his behalf:—

"On January 15, a meeting of the Dodecanesians residing in Athens, Piraeus and other localities of Attica took place at the Propylaea of the Athens University. Many Dodecanesian ladies were also present attired in costumes of their native islands. We again protested against the non-evacuation of our Islands and the recent Italian misdeeds in Rhodes. It is a fact that Italy swallows the camel and strains at the gnat by pretending to follow the spirit of the Sèvres Treaty and the Dodecanesian Agreement, because, although she occupied Megisti (Kastellorizo) in March 1921 in accordance (?) with the Sèvres Treaty, now the Consulta by all means tries to postpone the evacuation of the Dodecanese indefinitely. We expect a clean game from Italy, the first one since 1912. *Verba Volant Scripta Manent*. The Dodecanesian Agreement cannot be considered as a scrap of paper so long as we do not cease from denouncing Italy's regrettable policy and bartering. We expect from your valuable paper and the British Press a moral encouragement to enable us to continue our struggle for Liberty and to attain our goal, union and union with Greece alone, to whom we are already united *de jure*."

I also understand that after the meeting the resolutions were handed to the Greek Government and the Allied Embassies at Athens, and that telegrams of hearty co-operation arrive daily at the Dodecanesian headquarters from Egypt, America and other parts of the world where the sons of the Dodecanese have emigrated. The Dodecanesian Delegation in this country has keenly followed the situation and submitted from time to time various memoranda dealing with the Dodecanesian desiderata, to the British Government, the President of the U.S., and the League of Nations.

I am, etc.,

THEODORE D. MOSCONA.

Dodecanesian Delegation in Great Britain,

32, Oxford Street, Manchester.

February 2, 1922.

GREAT BRITAIN AND ASIA, PAST AND PRESENT.

To the Editor of "The Near East."

Sir,—It is impossible to exaggerate the importance of the issues forming the agenda of the recent Cannes Conference, and which have been left unsettled and fruitful causes of strife and unrest in the world.

The advocates of French, Polish, Slav, Hungarian, Italian and Greek interests have all made their claims heard, and the clamour is both deafening and confusing. It is with some diffidence, therefore, that I venture a plea for the interests of the Association of Nations mistakenly called the British Empire. Those Nations fought in unison during the war. They have the right to claim that their voices shall be heard in the settlement of the terms of Peace.

And in this Association or League of Peoples, the most important section numerically is to be found in Asia. A conflict between European ambitions and Asiatic rights or liberties, or between European civilisation or European religions and Asiatic religions would at once divide the British Empire into two warring sections. I am one of those who believe that the British Empire

(I adopt the title commonly in use) has been by God's blessing a great instrument for the establishment of a rule of justice, of toleration, and of sympathy in Asia and Africa.

I am old enough to remember the unique position freely granted to British officers and the British Government throughout Asia and Africa in the sixties and the early seventies.

The Mohammedan Law Doctors of Mecca had pronounced that India was Dar ul Islam—Country of Safety—that is a country in which every Moslem had a religious obligation of supporting the Government.

In 1870 the Calcutta Mohammedan Society adopted resolutions from which I extract the following:—

"Now if any misguided wretch owing to his perverse fortune were to wage war against the ruling Powers of this country, British India, such war would be rightly pronounced rebellion, and rebellion is strictly forbidden by the Mohammedan Law. Therefore such war will likewise be unlawful, and in case anyone would wage such war the Mohammedan subjects would be bound to assist their Rulers to fight such rebels."

"The above has been clearly laid down in the Fatwah Alam-jire."

Throughout the whole East England was regarded as the Protector of the Sultan and of Islam, as well as the champion of justice, toleration, peace and sympathy for Asiatics of all religions. I can speak from personal knowledge of the attitude of the Moslems of Turkey, of the Druses of the Lebanon, and of the Arabs of Asia and Africa at that time. I was present at the first funeral of Lord Mayo at Calcutta and I will remember as long as I live the funeral procession composed of representatives of all the races and religions of India. I stood in front of the guard and within a few feet of the coffin as it rested on the gun-carriage at the foot of the steps leading up to Government House, and I could see the faces of all the thousands of mourners who passed the coffin, and I can affirm positively that these men were what they professed to be—mourners.

England was the Protector of the religions and the civilisation of the East—the British officer was the Protector of the Poor and of the helpless and had the loyal affection of 240 million Moslems and other Asiatics.

The Berlin Congress confirmed the position of England in Asia, and she might have continued to hold that position to-day had not Lord Salisbury suddenly adopted the opinion that we had backed the wrong horse. I am not aware of the reason that induced Lord Salisbury to repudiate the past policy and the past history of England—to abandon his friends, or rather the friends of England, and to embrace the Russians; but I have too high a respect for the memory of a great and honest man to suggest that he was influenced by religious prejudices, or by ecclesiastical influences. At all events now that the race has been run we have found out that Russia was and is a bad horse to back. We have lost our friends and we have not won our former enemies.

But loyalty is not killed in a day; although we had swapped horses, the Indian Moslem soldiers remained true to their salt. Turkey was willing to accept something equivalent to a British Protectorate. India sent a million and a half of soldiers to help us in the late war; thousands of Moslem soldiers have died for the British Raja, trusting to the loyalty and justice of England. The Turks surrendered to the English, inspired by the same trust. The British Prime Minister pledged himself to preserve to the Khalif Constantinople, the rich and renowned lands of Thrace and Asia Minor and the home-lands of the Turkish people.

That promise has not been kept. The Greeks, who are the most cruel, the most intolerant and the most barbarous of all the Balkan peoples, were let loose in Thrace and Asia Minor. It would not be possible to compile a full record of the massacres and outrages committed by the Greek Army in this war of extermination.

Now I do not stop to enquire whether in shifting our subsidies from the Russians to the Greeks we have or have not been backing the wrong horse. I trust that the language, the methods and the morals of the betting ring may be eliminated from British foreign policy. I do not stop to consider what the Moslem and the whole Asiatic world may think of our support of these methods of barbarism, but I do appeal on behalf of British loyalty, British good faith, British justice, and British honour. I ask that the promise made to our fellow subjects and accepted by them in good faith be observed. I ask that the British name for truth, loyalty and justice be vindicated and maintained without fear of the fanaticism of intolerant clerics—without favour to the ambition or Imperialism of Balkan politicians, and without affection for the influence of foreign capitalists. I believe in the honesty and justice of the British people and in that belief I appeal to them.

I am, etc.,

NEAR EAST BOOKSHELF.

SOUTHERN KURDISTAN.

"TWO YEARS IN KURDISTAN: EXPERIENCES OF A POLITICAL OFFICER, 1918-1920." By Captain W. R. Hay, 24th Punjab. (London: Sidgwick & Jackson, Ltd., 21s. net.)

The boundaries of Kurdistan have never been authoritatively defined, and indeed the land of the Kurds includes a slice of Persia as well as a large portion of the old Turkish empire. Before the war Turkish Kurdistan was commonly regarded as the country between Armenia and Mesopotamia, but Captain Hay's book deals only with the part included in the Mesopotamian administration, *i.e.* the area watered by the Greater and the Lesser Zab rivers, which join the Tigris between Mosul and Tekrit. The earlier pages, which the general reader will probably find more attractive than the later, give a careful account of this remote country, its geography, its fauna, its flora, its primitive people and their customs. Captain Hay's book does not compare in interest with Major Soane's well-known "Through Mesopotamia and Kurdistan in Disguise," written nearly ten years ago, but it will be indispensable to any reader of that work who wishes to bring his knowledge of the country up to date.

One of the most interesting passages in the book is the account of the local Mohammedanism:—

"The majority of the Kurdish race now belong to the Sunni or orthodox Mohammedan sect. With the exception of a few tribes, the Kurds adopted Mohammedanism at a very early date, but their faith sat lightly on them, and they were practically heathen until the Turks, with considerable political acumen, saw that the sole means by which they could attach the race to themselves was through their religion, and did everything possible to promote Islam amongst them. The result is that though traces of heathendom still exist in 'high places' upon the hilltops, and though the Kurdish peasant will neglect Ramadan and eat the flesh of the pig, the better-class Kurd is very strict in his devotions, and says his prayers regularly and at the proper time—but rather with the air of a small boy praying because he is told to by his betters and not because of any conviction of the efficiency or the necessity of prayer. I have often seen Kurds interrupt their devotions, without changing their positions, to add some remark to a conversation that interests them."

Captain Hay mentions that some of the tribes in the north must have once been Christians, and that a remnant of Kurds survives among the Nestorians. The reviewer once came across a tribe in western Kurdistan, outside the area covered by this book, who though calling themselves Moslems practised a ceremony strongly reminiscent of the Holy Communion. It is to be feared, however, that real Christians in Kurdistan are looked down upon, and the scene of the following story which the author tells of Mesopotamia might equally well have been laid in Kurdistan.

"It was some time before the tribesmen realised that the British Government was a Christian Government. It is related that one day an Arab sheikh was abusing Christians to an Assistant Political Officer when the latter remarked, 'Don't you know that I am a Christian?' The Arab replied, 'No, you are not a Christian; you are an Englishman.' The only Christians which existed in the tribesmen's mind were the degenerate but much enduring sects of which small scattered communities still survive in the country."

Of the character of the Kurdish peasant the author speaks more favourably than some previous travellers, and he evidently considers him "one of the mildest-mannered men that ever cut a throat or scuttled ship." He describes him as exceptionally industrious, steady-going, thrifty and clean, as unswervingly faithful to his master, however oppressive, and as a jealous guardian of the honour of his womenfolk. The other side of the picture—the violent temper, the love of loot, and the small respect for human life—is also touched upon. But "a really bad character who thieves for his own ends without his master's cognisance will sooner or later be ejected from his village. He will then join the local police or gendarmes, the asylum of all scoundrels."

The second part of the book is devoted to the author's experiences. Before going to Kurdistan he was Assistant Political Officer at Mandali, on the Persian border east of Baghdad, where it is surprising to hear that most of the townsmen spoke four languages—Turkish, Kurdo-Lurish, Arabic and Persian. Six months after the Turko-British Armistice, Captain Hay was appointed Political Officer of the Arbil division, and there he

remained until October 1920. It was an anxious time. The country was never really subdued. A more difficult terrain for the punitive expeditions despatched from Mesopotamia can hardly be imagined, and Captain Hay's story is one long narrative of murder, intrigue and unrest. The Surchi rising which began in January 1920, and the Arab rebellion of the same year, as it affected his district, are described with a wealth of detail which would perhaps be more suitable in an official report. That every minute incident will interest anyone who was in touch with the events as they occurred we do not doubt, but we are afraid that the general reader will be inclined to skip a good deal, and will find it rather difficult to see the wood for the trees. Nobody, however, who reads the narrative, even perfunctorily, can fail to be struck by the manner in which the few British officers in the country, most of them quite young and with little or no administrative experience, rose to the occasion under conditions of extraordinary difficulty. Pleasing features of the book, also, are the author's evident affection for some of the turbulent chieftains in his charge and his tribute to Sir Arnold Wilson, the head of the Civil Administration in Mesopotamia during the events described. The book is well illustrated by photographs.

THE INDIAN FORESTS.

"THE FORESTS OF INDIA." By E. P. Stebbing, Professor of Forestry, University of Edinburgh. Vol. I. (London: John Lane. 42s. net.)

Professor Stebbing offers in this volume the first instalment of a detailed history of the Indian forest administration. The outlines of the story which he has to tell are tolerably familiar. Indians worked out nothing approaching to a system of conservation, and if any forests survived the Mogul period, it was because the population was too scanty to destroy them. Under British rule things at first got worse, because the population, and also the demand for timber, increased rapidly; efforts towards conservation were at first inadequate, but eventually expert knowledge was called in, and the result is to be seen in the forests as they stand to-day, still imperfectly developed and exploited, but nevertheless one of the most magnificent properties in the world. The author has worked on a scale commensurate with his subject, and the present instalment carries the reader only to the year 1864. His method is to give a full précis of important correspondence, rules, and orders, taking India province by province, and adding appropriate comments. The book is consequently one for serious students, and we must leave to technical journals the task of reviewing it in detail. One suggestion, however, may be offered for consideration in producing future volumes, and that is that the illustrations, which are numerous, should be brought into closer relation with the text. In some cases the relation is obvious, but we have failed to discover the sylvicultural significance of the view of Naini Tal, or the picture of Sir Joseph Hooker among a group of hill-people; in such cases, the plate might with advantage contain a reference to the page which it is designed to illustrate.

Reuter's Constantinople correspondent states:—It is announced from a well-informed quarter that Yousuf Kemal, Commissary for Foreign Affairs in the Angora Government, will leave shortly for Rome, Paris, and London, in order to exchange views with the Allied Governments. He will be accompanied by the Director of Political Affairs and several secretaries.

The Earl of Lytton, with Viscount Knebworth, has returned from Switzerland.

Sir Charles and Lady Greenway have arrived at the Carlton Hotel, Cannes.

M. E. Fontanel, Secretary to the Swiss Legation, left London last week for Tunis, on leave.

The Bulgarian Minister, M. Stancioff, has been accredited Minister to The Hague, as well as here instead of to Brussels.

The Duke and Duchess of Westminster, who are at Eaton Hall, are suffering from influenza. They are reported to be making good progress.

Mr. J. S. Kornfeld, the American Minister to Persia, who arrived in London recently from Washington, has now left for Teheran.

Lord and Lady Montagu of Beaulieu, who are travelling in India, will return to London about the middle of April.

M. Titulescu, the former Finance Minister, who has been appointed Roumanian Minister in London, left Bucharest this week to take up his post.

The Archbishop of Trebizond, who, accompanied by two members of the Greek Parliament, has been visiting London has gone to Paris.

Lieutenant-Colonel Douglas Capitaneano, Military Attaché to the Roumanian Legation, left London last week on a short visit to Paris.

The engagement is announced from Paris of Mr. J. K. Rooker, M.C., recently of the British Mission in the Near East, and Mrs. Walter Abbott, widow of Walter Abbott, of Boston, U.S.A.

Sir Archibald and Lady Birkmyre, Mr. Birkmyre, and Brigadier-General the Hon. Charles Bruce are passengers by the P. and O. s.s. Karmala, and have left Marseilles for Bombay.

Lieut.-Colonel Sir Samuel Hoare, M.P., has returned to London from the Balkans, Constantinople, and Athens, where he had been carrying out a mission for the League of Nations, in connection with Russian refugees.

The marriage was celebrated on December 12, at the Cathedral, Bombay, between Richard Huntington Warde, M.C., B.S.C., A.M.I.C.E., and Evelyne, youngest daughter of Mrs. Lathbury, Ealing.

The Hon. Charles Bruce left London last week for Marseilles en route for India. He is starting in advance of the other members of the Expedition to make all preparations for the exploration of Mount Everest.

The marriage was celebrated on January 14, at Elkaduwa, Ceylon, between Gerald Frank Morse, son of the late F. H. W. Morse, P. W.D., India, and Mrs. Morse, Bedford, and Ethel Marguerite Laskie, daughter of W. A. Laskie, West Byfleet.

The marriage was celebrated on January 11, at Doneraile, Co., Cork, between Captain A. F. Cowdell, The Loyal Regiment, son of A. S. Cowdell, Madras, and Irene Fraser, daughter of The White Knight and Mrs. Fitz-Gibbon, of Jersey.

Colonel Sydney Muspratt had the honour of being received by His Majesty on February 3, when The King invested him with the Insignia of a Companion of the Most Exalted Order of the Star of India and of the Most Eminent Order of the Indian Empire.

A marriage has been arranged, and will shortly take place, between Captain A. E. Drysdale, D.S.O., M.C., 47th Duke of Connaught's Own Sikhs, and Vivian, elder daughter of Mr. T. A. Martine, of Azamgarh, United Provinces, India.

The King has granted to Mr. W. B. Zappert, Superintendent Alexandria Municipal Fire Brigade, authority to wear the Insignia of the Fifth Class of the Order of the Nile, conferred on him by the Sultan of Egypt in recognition of valuable services rendered by him.

The marriage arranged between Lieutenant-Colonel C. H. Watson, D.S.O., I.M.S., and Ethel Marguerite, widow of Lieutenant-Colonel H. B. Rattray, D.S.O., 45th Rattray's Sikhs, will take place at St. Stephen's Church, Cheltenham, on Saturday, February 25.

The marriage was celebrated on January 5, at Masulipatam, India, by Rev. Wm. C. Penn, between Howard Fauntleroy Saunders, I.E.S., and Ethel Nora Penn, daughter of Rev. and Mrs. Wm. C. Penn, C.M.S., Noble College, Masulipatam.

Mr. H. C. Norman, was received on February 4 in audience by the King, upon relinquishing his appointment as his Majesty's Envoy Extraordinary and Minister Plenipotentiary at Teheran, when the King invested him with the insignia of a Companion of the Most Honourable Order of the Bath (Civil Division).

A marriage has been arranged, and will shortly take place in India, between Viscount Tamworth, eldest son of Earl and Countess Ferrers, and Hermione Justice, elder daughter of Mr. and Mrs. A. Noel Morley, Lychwood, Worplesdon Hill, Surrey.

A marriage has been arranged, and will take place in India, probably in October next, between Captain J. L. Heselton, D.S.O., M.C., 3rd Battalion Worcestershire Regiment, eldest son of Mr. R. T. Heselton, of Bradford, Yorks, and Claudia J. Cole, only daughter of Mr. A. W. R. Cole, I.C.S., of Fyzabad, India.

The King has granted to Mr. John Home, Sub-Governor of the National Bank of Egypt, licence and

OUTFITS FOR EGYPT, INDIA, AND THE FAR EAST

The Official, Business or Sporting traveller going East this Winter will find just what he wants at

authority to wear the Insignia of the Second Class of the Order of the Nile, conferred upon him by the Sultan of Egypt in recognition of valuable services rendered by him.

At the University of London, King's College, M. Beza will deliver two public lectures on "Fairies in Roumanian Folklore," which are due to take place to-day and on February 16. Both lectures will begin at 5.30 p.m., and will be presided over by Dr. R. W. Seton-Watson. Admission is free without a ticket.

The marriage was celebrated on January 28, at St. Matthias' Church, Richmond, S.W., between Charles Paull Cooke, of Norwich, Norfolk, and of Le Havre, France, and Mary Surene Mead, eldest daughter of Mr. and Mrs. William Murrey Isdale, of "Heriotdene," Twickenham, S.W., late of Calcutta, India.

Mrs. Rosita Forbes delivered her lecture "Kufara, the Secret of the Sahara," at the St. James's Theatre, on February 3. The lecture was in aid of the Great Ormond Street Children's Hospital and the Victoria Hospital for Children, Chelsea, organised by the *Daily Mirror* Princess Mary Wedding Gift Fund. Lord Aberdare presided.

The marriage was celebrated on January 27, at the Cathedral, Bombay, between Alexander George Gray, second son of the late Mr. A. G. Gray, of Macclesfield, and of Mrs. Gray, now of Hale, Cheshire, and Dulce Muriel Fanny, elder daughter of Mr. and Mrs. Harry R. Wild, of Frith Haye, Berkhamsted, Herts, and niece of Mr. A. C. Wild, I.C.S., the Secretariat, Bombay.

The marriage was celebrated on January 12, at the Cathedral, Rangoon, between Cyril Walter Stevens, Captain, 23rd Burma Infantry, only surviving son of Mr. and Mrs. Stevens, of Radlett, Herts, and Doris Mabel Robinson, only child of the late Ernest H. Robinson, and elder daughter of Mrs. Macnaughton-Jones, of 63, Eton Avenue, London, N.W.

The engagement is announced between Wilfrid Pakenham-Walsh, I.C.S. (late R.F.A.), eldest son of Mr. A. R. Pakenham-Walsh (late Indian State Railways) and Mrs. Pakenham-Walsh, of 63, Vicarage Road, Eastbourne, and Guendolen Maud, younger daughter of Mr. and Mrs. Frank Elliott, of Marrick, Totland Bay, I.O.W.

It is proposed to publish a Biography of the late Rev. Professor Alexander van Millingen, M.A., D.D., the Byzantine archaeologist and writer, of Robert College, Constantinople. All friends having letters, or facts relating to his life and work either as Preacher, Teacher or Historian, are asked kindly to communicate with Mrs. van Millingen Co., The British Linen Bank, 38, Threadneedle Street, London, E.C.2.

The marriage was celebrated on January 9, at Christ Church, Port Blair, by the Rev. W. R. Park, C.I.E., O.B.E., between Marcar Sheridan Gregory, M.C., Executive Engineer, Indian State Railways, son of the late Lt.-Colonel G. M. Gregory, V.D., of Gunterstone Road, West Kensington, and Liela Louvima Gwendolin Heathcote, younger daughter of Mr. W. S. Viney, Executive Engineer, Port Blair, Andaman Islands.

Our Smyrna Correspondent writes (January 26):—Sir Harry Lamb, H.M. Consul-General has left on the 'Abbasia' for the Suez Canal, accompanying his only son Mr. Leo Lamb, who after a brilliant career at Oxford, is *en route* to China to take up a post in the British Consular Service.

Mr. Hubert La Fontaine, son of Mr. Sidney La Fontaine, President of the British Chamber of Commerce, also sails on the 'Abbasia' *en route* for West Africa, where he is an Assistant High Commissioner.

LOOKING TOWARDS LORD ALLENBY.

As we write these lines Lord Allenby is on his way to England, and the probability is that he will arrive in London before they are read. With his arrival the question of the future relations between Great Britain and Egypt enters upon a new stage, and one which most Englishmen will join most Egyptians in wishing may prove to be its last. The fact that it is a difficult question is at last generally recognised, but that is rightly regarded as only one reason the more for having it settled and done with as soon as possible; and people in this country, though not so impatient over the matter as those in Egypt, are nevertheless genuinely anxious to put an end to the present thoroughly unsatisfactory state of affairs. The question existed, of course, before the War, and at times it caused some little anxiety to those responsible for the well-being of Egypt; but it is probable that it would not have reached its present stage of development for many years to come had not the war broken out when it did, or had it not lasted as long as it did. For during the anxious years of fighting many things occurred to strengthen the Egyptians' desire for independence, and, it must be added, to make them inclined to resent the presence of foreigners in their country in positions of authority. Even so, it is possible that the demand for independence would not have been put forward in the form it has been, or have been emphasized by the methods that have been employed, had London shown more tact in handling the situation, more consideration for the feelings of Cairo and of Alexandria. The worst blunder, and undoubtedly the most costly one, since it led up to so many other mistakes, was the rejection of Rushdi Pasha's suggestion made in November 1918, that he and Adly Pasha should come to London to discuss Egyptian affairs with the British Government. The Foreign Office and the Cabinet no doubt had their hands full at the moment, but the refusal of a request advanced by one who had shown himself a good friend to Great Britain was surely a bad mistake. And since then others have been made, almost, if not quite, as bad. Especially have divided counsels in the Cabinet been reflected in a vacillating policy, which was the worst thing possible for Egypt. The ordinary man must have sometimes felt tempted to wonder whether some occult power with a grudge against Britain was not at work in the business.

In some quarters there is a tendency to suggest that the issue of the Foreign Office *communiqué* of last week was actually another blunder, since—it is suggested—it may in some way cause embarrassment to Sarwat Pasha, and may, by its phraseology, arouse fresh bitterness. While we are ready to admit that the wording of the document in question might at points have been more happy, even that much that was said might just as well have been left unsaid, we still think that the general effect of the *communiqué* should be, and is likely to prove good. For, after all, it showed quite unmistakably that His Majesty's Government are not bent upon

riding roughshod over Egyptian feeling; that they desire, on the contrary, to satisfy Egyptian aims and aspirations as far as they possibly can, consistently with the safety of Imperial communications; and—most important of all—that they do not intend to allow the extremists, either in London or in Egypt, to bring about a hopeless rupture of negotiations. In other words, the *communiqué* has kept the door open; and that is a great enough good to outweigh many evils. Moreover, the mere announcement that Lord Allenby is coming home "to give full information and advice to His Majesty's Government as to the present situation in Egypt" should by itself go far to set at rest any fears that Great Britain wishes to apply coercion in Egypt, and is ready to snatch at any excuse to do so; for it is now a very open secret indeed that Lord Allenby is far from favouring anything of the kind, and it is unthinkable that he would be brought from Egypt at such a time if his advice was to be neglected. Those who find fault with the *communiqué* appear to lose sight of these facts, or to be incapable of reading between the lines even when the reading is so easy as in this case. To find fault with the wording of the announcement when its spirit is so clearly satisfactory is to pick a quarrel with a shadow, and to risk losing the substance thereby. But we believe that there is enough good will on both sides to make such risks extremely small. The enthusiastic send-off accorded to Lord Allenby by Egypt fortifies our belief.

What makes the position so difficult at the present time is the unwillingness of responsible Egyptians to attempt to form a Cabinet. In view of Adly Pasha's perfectly natural refusal, Sarwat Pasha is regarded as the most suitable man for the difficult task at the present moment. He has been in close consultation in the Lord Allenby of late, and it is generally understood that their views upon the situation are in close agreement. It is interesting, therefore, to consider the four conditions without the granting of which Sarwat is unwilling to take office. These, as stated by himself, in an interview granted to the Cairo correspondent of the *Morning Post* are: (1) immediate abolition of the Protectorate; (2) the creation of a Constitutional Government to which the Cabinet would be responsible; (3) abolition of martial law after the promulgation of an Act of Indemnity, but martial law to be virtually abolished from the commencement of the elections; (4) the establishment of a Ministry for Foreign Affairs to expedite the organization of Egyptian representation abroad. Now, the Foreign Office *communiqué* of last week makes it abundantly clear that the British Government is perfectly ready to grant the first, second and fourth of these demands, while Lord Allenby's letter to the Sultan made it clear that there would be no difficulty about the third, subject to the guarantees mentioned in the *communiqué*. And those guarantees, three in number, are surely not unreasonable demands on the part of Great Britain. The first (the assurance of Imperial communications) is absolutely vital to her interests; the second (the protection of foreign communities in Egypt) would be enforced by others, if not by Britain; and the third, the safeguarding of Egypt against interference or aggression, is obviously to the advantage of the Egyptians. To a certain extent the second and third would be secured by the granting of the first. The securing of our communications is therefore the crux of the matter, and on that point no living man is better qualified to advise His Majesty's Government than Lord Allenby. The Government, therefore, have shown wisdom—unusual wisdom, we fear we must say—in deciding to be guided by him, and to turn a deaf ear to the versatile gentleman who is commonly reported to be his most active opponent in this matter. Frankly, we are not perfectly certain that we should be doing the kindest thing by the Egyptians in granting all their desires at once. But Britons' first duty is to themselves and the Empire, and they are confident that Lord Allenby can and will protect their interests if only the Cabinet will hearken to him.

EGYPT: THE EUROPEAN VIEW.

(By a Correspondent.)

Forty Years' Occupation.

In a few months time we shall have reached the fortieth anniversary of the landing of the British Army in Egypt, and it is not unlikely that in 1962, the Egyptians will be celebrating the fortieth anniversary of the departure of that same army from their shores. At present there are very few indications that public opinion in this country desires the continuance of the British occupation of Egypt for a day longer than is absolutely necessary for the safeguarding of our maritime communications with Asia and Australia; and the negotiations of our Government with the Egyptian Nationalists have already reached the stage of deadlock over matters of detail indicative of the near approach of a final settlement between the two negotiating parties. Of all the quick changes following on the great war this is surely the quickest of all; for it is no exaggeration to say that even two years ago the mere possibility of a British evacuation of Egypt was unthinkable to the average Englishman, accustomed as he had been for the best part of half a century to regard that country as a dependency of the British Empire.

The House of Commons has taken so little interest in Egyptian affairs in the past three years that one doubts whether to a Government resolution ratifying the granting of complete independence to Egypt it would be possible to oppose the votes of even a score of "die-hards." In a dim indefinite sort of way our legislators, like the rest of the nation appear to have come to the conclusion that we have somehow or other managed to out-stay our welcome in Egypt, and, bored rather than exasperated by the reports of risings, strikes and riots which reach them from time to time from the disturbed territory, are prepared to accept practically any proposals the Government may see fit to make for arriving at a settlement with the Nationalist malcontents. At the same time there is a fairly general feeling that we must contrive somehow "to hang on to the Suez Canal," which in the popular mind is an all red institution forming a link in the chain of our Imperial communications.

The European View.

This disposition to regard the future of Egypt as a matter of British domestic concern analogous to the case of Ireland furnishes a perfect example of that careless disregard for the feelings of other nations which has done so much in the past to exasperate and annoy our friends and neighbours on the Continent. It does not seem to have occurred to anyone in this country so far that our occupation of Egypt for the past forty years has only been tolerated by the rest of the world owing to the fact being generally appreciated that if we evacuated the country another European nation would inevitably come forward to take our place. Had it been France, Italy, and Germany would have objected; Italy, and the veto would have come from France; while if Turkey had attempted to resume her sway over the debatable land the whole of Europe would have been thrown in an uproar and the outbreak of the great war would have been anticipated. The considerations which led to the acquiescence of Europe in the British occupation of Egypt forty years ago hold good to-day. This may appear a startling statement, but if the facts are calmly examined it will be found that it embodies no more than the plain truth.

In the first place, it is necessary to recall the circumstances which led to the bombardment of Alexandria, the battle of Tel-el-Kebir and the subsequent British occupation of Egypt in 1882. These operations were undertaken to suppress an Egyptian Nationalist rising against a system which, while nominally based on the assumption that the country was a dependence of the Ottoman Empire, in reality made its Government subject to the control of the great European Powers. Of these Powers Britain and France claimed a preponderating influence, which was tacitly admitted by the rest of

the world; and when Egypt after collapsing into bankruptcy threatened to relapse into anarchy joint Anglo-French intervention was the remedy approved by European opinion as most likely to cure the ills afflicting the country. At the last moment, when it became plain that only intervention of the armed variety could meet the necessity of the situation, France made the fatal mistake of drawing back, and it was left to the pacifist Liberal Government of Mr. Gladstone to "restore the authority of the Khedive," by bombarding Alexandria, invading Egypt and smashing the Nationalist army at Tel-el-Kebir. These operations were forced upon us as the representative of the people of Europe genuinely alarmed by the excesses of the nationalist mobs, which by the wholesale taking of European lives and the destruction of European property had everywhere set the tide of public opinion running strongly against Egyptian Nationalism. It is no exaggeration to say that at the time nobody in this country contemplated for a moment even the remote possibility of the ultimate absorption of Egypt in the British Empire. We would retire from the country as soon as order was restored and the Khedive's Government re-established on a sound basis. This was the answer repeated *ad nauseam* by British Ministers in reply to the anxious inquiries of our friends and neighbours on the Continent. Before order was restored, however, in Egypt the appearance of the Mahdi in the Sudan and the great Arab rising it brought about, obliged us once more to put our army in the field. It certainly failed to "Smash the Mahdi," but it succeeded in holding the Dervish power in check for over a decade until the reconquest of the Sudan by Lord Kitchener's Anglo-Egyptian Army inaugurated a new era in the history of the country.

Guards and Policemen.

In the beginning we went to Egypt to act as policemen; we remained there for many years doing duty as frontier guards; after that we continued our occupation because we found it suited us to do so. That at any rate is the view taken of our Egyptian policy during the last forty years by most sane unbiassed people on the Continent; and considered dispassionately it really seems to state the case very fairly. That our occupation of Egypt was distasteful to many people in all the countries of Europe was fully realized by a succession of British Governments, even if the British public was oblivious of the fact; and it is indeed doubtful whether we could claim that in any quarter our presence in the country was ever entirely approved. Nevertheless, in recent years the world has generally recognised that international commerce has benefited enormously by the Occupation. Nobody can accuse us of having ever attempted to monopolize the trade of Egypt and nobody can deny that under British control she has enjoyed a material prosperity such as she had never known before. To-day, after forty years of British occupation she has a place among the richest and best governed countries in the world, and thanks to our disinterested policy towards her, far from having suffered from the effects of the great war she has actually to some extent benefited by them.

The young Egyptians to-day, convulsed by paroxysms of acute anglophobia, are suffering from a disease at present epidemic throughout the British Empire: we have no doubt that they will be better soon and so are little disposed to be anxious as to their future. All would in fact be well if we could persuade our continental friends and neighbours to share our philosophic view of the future of Egypt; but since this has hitherto proved impossible it behoves us even at the eleventh hour to try at least to appreciate the Egyptian question of to-day as viewed from the continental standpoint.

Commercial Interests.

It is well that we should recognise that from the standpoint of France, Italy and Greece, indeed of any country with commercial interests in Egypt, all the considerations which led them to regard our occupation of the country as a convenient if not a desirable arrangement in the past apply with equal force to the present and future. The handing over of the administration to a native Government, and the withdrawal from the country

of the British officials who as advisers and controllers have supervised the work of the Egyptian civil services for so many years past are not likely to be resented either in Paris or in Rome. On the contrary the restoration of Egyptian independence, and the hope it holds out of the establishment of ordinary diplomatic relations between the nations and Egypt, is probably very much to the taste of our French and Italian friends. But the withdrawal of the British garrison is quite another matter. Recent events in Alexandria have brought home very forcibly to the European community in Egypt the dangers to which they might at any moment be exposed if they had to rely for their protection on nothing better than the native police. They ask for the presence of European troops in the country as a guarantee for the security of their lives and property, and should the British garrison be withdrawn their cry for troops of another nation to take its place will most assuredly not be allowed to pass unheeded. The Nationalists of the baser sort may possibly rejoice to find that the European community in Egypt is now frankly afraid of them, but for those of the more responsible kind these manifestations of nervousness as to the fate in store for the European resident under Egyptian rule cannot fail to be most illuminating, since it brings home to them forcibly the hard fact that the interests of other nations besides Great Britain have to be taken into account in any schemes for the "liberation" of Egypt. The problem involved is international, and it is high time that not only the Egyptian Nationalists, but also our own Government recognized the fact. It is doubted whether the League of Nations in the present state of its development is competent to deal with a question as involved as that concerning the future of Egypt; but these objections do not apply to the Supreme Council of the Allies, and one cannot help thinking that if the settlement of the Egyptian question was placed in its hands, not only would Britain be relieved of a very grave responsibility, but a perennial source of misunderstanding between the leading nations of Europe would be permanently removed.

"Recessional."

Our claim that our interests in Egypt are paramount rests on a very insecure basis, and has never indeed been recognized by France and Italy. It is the same with our claim to be regarded as the natural protectors of the Suez Canal. The fact that for forty years we have maintained order in Egypt the while developing her economic resources and political institutions confers no right on us to incorporate the country in the British Empire, still less to set her up as an independent State free from all outside control; while as regards the Suez Canal it is surely preposterous to argue that because it is of more use to us than to any other nation we have a right to claim a preponderating influence in its control. Apart from the fact that it owes its origin to the enterprise of French financiers and the skill of French engineers, more than one nation can claim that its maintenance as a neutralised international highway is essential for the security of their dominions and the prosperity of their trade.

In this country Imperialism is just now out of fashion, and many of us who before the war were wont to wax lyrical over the glories of the British Empire now find ourselves actually apologising for its existence. But even if, under the hypnotising influence of "self-determination," we have ceased to think imperially the spectacle of our idle factories and ports, the bitter cry of the unemployed, and the groans of the overburdened taxpayer all combine to make us think commercially. Never were we more acutely concerned with the condition of foreign markets, and while there is a growing disposition among us to drop the White Man's Burden in so far as taking it up implies the political education of backward races, the care of their health, and their protection from rapacious neighbours, even the working man is beginning to get uneasy when he hears that in lands on which we have recently conferred the priceless

boon of self-government the inhabitants invariably exercise their newly found liberty in attempts to shut out our exports from their shores while they plot to drive our compatriots out of their territories. It is slowly dawning on the average Englishman that the only material advantage we have hitherto derived from the occupation of the vast territories in Asia and Africa coloured red on the map, lies in the fact that in these territories, opened freely by us to the trade of the whole world, we were at liberty to compete with our commercial rivals on equal terms under conditions which ensured for the trader relative security for his life and property. The arrangement was as convenient for the foreign as for the British trader, and if in any of these territories in substitution for the Pax Britannica he finds set up weak native Governments, unable to control populations fanatically hostile to European civilization and clamouring for the country to be cleared of the foreigner and closed to his trade, his old complacency towards British Imperialism will be changed into resentment against British altruism.

Our Allies and Islam.

A few years ago we prided ourselves on our success in the Government of Asiatics and Africans, firmly persuaded that other European nations engaged in the same task had everything to learn from us in the subject. To-day the position is reversed, and we are confronted by the humiliating spectacle of British-controlled Egypt in the throes of a violent anti-European movement while perfect peace reigns in the north African territories under French and Italian rule. No doubt the Angora pact has something to do with it, also the belief, widespread throughout the Mohammedan world, that France as a nation is as hostile to Christianity as Turkey herself. But this does not afford the whole explanation; due account must be taken of the fact that the veneer of western civilization existing in North Africa and Asia Minor remains as French to-day as it was when it was originally acquired early in the nineteenth century, and that nowhere is this more noticeable than in Egypt. A few years ago England would have been shaken with indignation at the bare thought of a French being substituted for a British garrison in Egypt; but to-day if the average business man in this country was assured that the French occupation of Egypt would not entail discrimination in favour of French trade, and that he would be free there in the future as in the past to compete with his trade rivals on equal terms, one doubts whether he would have the slightest objection to the arrangement. In any case he would infinitely prefer it to the alternative of Egypt without any European garrison at all. Our export trade is really the only thing that matters now-a-days. If it is restricted we starve; if it ceases we die. If Egypt ever became a French north African province, our trade with the country would inevitably suffer, but if the development of a self-governing Egypt was fortified by the presence of a French army of occupation, our trade with the country would probably flourish as of old. France could indeed render this country no greater service than by asserting her right to be heard before any treaty conferring independence on Egypt is concluded between our Government and the Nationalists. If she insisted that in default of a British garrison being maintained in the country she must be allowed to provide one herself she would probably solve the Egyptian problem in one stroke of the pen.

Self determination being the order of the day a simple solution of the existing difficulty of making Egypt safe for Europeans to live in might perhaps be found in leaving the Egyptians themselves to determine the nationality of their European garrison. Failing that, the three Powers most concerned, Britain, France, and Italy, might each contribute a contingent to a joint force to be maintained in the country for the protection of the lives and property of European residents. The one essential is that in no circumstances should the bare possibility of Egypt being left without a European garrison of some kind be as much as discussed with the Nationalists.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

Anatolian Minorities.

In the *Manchester Guardian* of January 28 is an article written by a Correspondent at Constantinople, called "Defiant Turks." It begins by pointing out that the Franco-Turkish Agreement has made the Kemalists more intransigent than ever, and continues:—

Although it is trite to remark that the vexed question of minorities is the most insoluble of the problems by which the Near East Conference will be confronted, it is nevertheless a very solemn truth, and the supreme difficulty of this issue may bring to naught this attempt at an arrangement, just as it has wrecked many another endeavour—honest and other—in the past. In case of a paper adjustment, what guarantee will there be that the result in practice may not approximate to the "protection" that was afforded the suffering minorities of Macedonia and Anatolia twenty years ago? In this particular especially will the efforts of the negotiations be vitiated from the start by the *fait accompli* of the Franco-Kemalist pact. The Nationalists will doubtless insist that the evacuation of Cilicia should serve as a model for the rest of occupied Anatolia and Thrace. What, in all sincerity, can France do but support this plea? In the devising of some plan that would in theory and practice safeguard Christian minorities the heartiest co-operation on the part of the Powers is more essential than in any other feature of a prospective settlement. With a background of a separate treaty with France, and probably one with Italy, will such co-operation be possible? It seems doubtful.

France claims to have secured effective guarantees for the protection of the Armenian minority in Cilicia, but apart from certain engagements of limited scope relative to the preservation of the property rights of the refugees and immunity from military service for six months, and the setting up of mixed commissions of control, to function temporarily, the provisions of the arrangement are ominously vague, and quite innocent of any taint of "sanctions" to guard against violations. So far there have been no reports of widespread mistreatment of the few Armenians who have not fled from the wrath to come. No doubt the watchword of the Nationalists is caution until after the liquidation of the Anatolian question, so that they may with greater plausibility plead for the restitution of their territories. The prospect of a sensible and humane policy towards minorities, both Greek and Armenian, is not bright, however, in view of the direct reports from the Anatolian interior depicting conditions in various centres as highly unsatisfactory. It is the inevitable lapse of the Turk into senseless discriminations and brutal exactions. Without a divinely inspired scheme of guarantees and an equally superhuman effort at loyal co-operation on the part of the Western Powers, what hope is there for the subject races except in wholesale migration?

India.

A recent issue of the *Outlook* contained an article upon "The Peril in Egypt and India," which, after attributing the parentage of Indian agitation to Lord Macaulay, says pointedly enough:—

The only cure for the excesses of Liberty, says Macaulay somewhere, is more liberty. We doubt if any Government in the world can proceed upon those lines when its authority is deliberately challenged, as it has been in India; and it is quite

certain that public opinion in this country will approve the stern, but not excessive, measures which are being taken to restore order in India. It is the unhappy lot of Lord Reading to clear up the mess which Mr. Montagu has made; fortunately he is a strong man, whereas his predecessor was weakness itself. We want to see constitutional progress in India, but it must be frankly recognised, as so shrewd a Radical as Lord Morley saw, that the process will be slow. A people of three hundred millions, of different languages and creeds, and with an ancestry entirely different from that of Europe, cannot move quickly, and any attempt to crowd on steam will only burst the boiler. If the Curtis-Montagu policy is continued indefinitely, it can only lead to reaction.

It is, in our opinion, essential that Mr. Montagu's resignation should be insisted on. He is, we believe, a capable financier, and in some subordinate position at the Treasury he could probably find sufficient scope for his undoubted talents; but it is necessary to make a definite and complete break in the Indian policy for which he is officially responsible, and that can only be informed direction of the Indian Secretariat in Whitehall. Lord Reading's task in Calcutta will be easier. In any case, it will be difficult enough.

Turkey.

The *Spectator* of January 28 contains an article entitled "Great Britain, France, and Turkey." After commenting upon the necessity of France's friendship it explains its position in the Turkish problem:—

Our sentiments are not at all pro-Turkish—quite the reverse—and it is hateful to us to think of restoring the Turk to any lands from which he has been removed. But things have gone so far that a restoration in certain places there will probably have to be. Let us by acting soon and wisely reduce that settlement to a minimum of evil. It is said that Greece is tired of Asia Minor and would not mind leaving Smyrna. Even M. Gounaris, who was recently in London, is credited with that feeling. If that be so it would be possible to get the Greeks out of Smyrna and set up some kind of autonomy, internationally guaranteed, before the Turks reinvaded their former province. The Governor of the autonomous State should, of course, be a Christian. If that matter were settled and the Christians in Cilicia were also secured, the chief remaining interest and responsibility of the Allies would be to provide for the permanent neutrality of the Straits. If the Turks—both the Govern-

ment at Constantinople and the Kemal Government—were willing to deal with us reasonably, we might actively help them with a loan for the restoration of the railways of Asia Minor. That would be for the benefit of everybody. In dealing with Turkey it is impossible to separate finance from politics. If there were a real agreement Asia Minor might become a settled part of the world that would free us of much anxiety and would even be a nucleus of revival in the Near East. Oddly enough, the paper currency in Turkey has been more successfully kept within bounds than in many other countries which are considered to be financially more enlightened. Credits granted to Turkey could be administered by the efficient staff of the Ottoman Public Debt. The whole scheme of a combined financial and political settlement with Turkey is really not too difficult. Control by the Ottoman Public Debt Administration would have the advantage of being in form—though of course it would not be in reality—a Turkish control.

Russia, Turkey, and Palestine.

The issue for January 21 of *Palestine* contains an article called "Cannes and Afterwards," which is full of hope from the provisional recognition of Russia. And it proceeds to show how directly the position of Russia in the East affects Palestine:—

Palestine's interest in the Eastern settlement is very great, though, perhaps, a little indirect. What Zionists desire most of all is to see the bigger questions of the Treaty of Sèvres out of the way so that the question of the Mandate can have a fair chance. The delays in ratification, as we have repeatedly pointed out, are holding back the economic development of the country, and, incidentally, are responsible for a great deal of the Arab agitation. When once we have settled with Mustapha Kemal and got the relations between Greece and Turkey on a reasonable footing, the British Government, which is perfectly sound on the Mandate, should make short work of the difficulties that have been raised in regard to it. The settlement with Mustapha will not be so difficult as at one time seemed likely. Greece is thoroughly tired of her Asiatic adventures, and provided that guarantees could be found for the safety of the Christian population, would be prepared to abandon all her political pretensions even in Smyrna. At any rate, that is understood to be the view put forward by M. Gounaris on his recent visit to London. The future of Smyrna is likely to lie in some form of autonomy under a Christian Governor chosen by international consent, and the practical problem is to devise for the Christian populations of the interior some form of protection, perhaps on the plan once worked out in Macedonia by Lord Lansdowne. In Constantinople, the sole interest of the Powers is to retain the power of sending a fleet up the Straits. Constantinople, in fact, is the head of Turkey in Chancery, and provided we retain the hold, the less we have to do with the government of the place the better. At present it is a mere focus of international intrigue. But the main new fact in the situation, which we owe directly to Cannes, is the prospect of the re-entry of Russia into the European comity. The political boycott of her Government is perhaps the principal cause of the troubles in the Near East since the war. Her mere disappearance as an associate of the European Powers in itself would have been a political compensation to Turkey sufficient to make good the ground that she had lost in the war, but, in fact, Russia has not been merely neutral, but a fairly active friend of Mustapha. In the past the Near East was kept comparatively stable by the traditional hostility between Turkey and Russia. But the effect of sending Russia to Coventry was that the only really efficient policeman north of the Taurus disappeared, and not only went off his beat, but became the aider and abettor of the criminal

classes. The result was an immense disturbance of the balance of power in the East, which went far to undo the moral of Turkey's chastisement in the war. Not Russia, but the European Powers and the Christian populations, notably the Armenians, were the losers; the only gainer by the follies of Western policy towards Russia was Moslem fanaticism.

This mistake is now likely to be set right, and Russia will take her place in the new Concert of Europe. We shall be able to discharge our responsibilities to the Christian populations, for we shall have some one to make the writ of civilisation run in the interior. Turkey, with Russia to watch, will have more serious things to think about than pan-Islamic intrigue. The unrestful Arab, only dangerous in so far as he could rely on Mustapha, will subside and will begin to turn his attention to the real friends who can do something to develop his terribly neglected estate. The Near East will put its plague of fanatical politics in the background and will get to business. We do not think we are building too high hopes on the prospect of Russia's return to the European Concert, for the whole trouble in the past few years has arisen from the fact that Europe imposed a settlement on Turkey which required physical force (or the possibility of using it) to carry out. As Lord Salisbury once put it: Ships cannot sail over the Taurus. But with Russia's return, Europe will at last have a policeman in the interior of Asia.

There should be further consequences that will be beneficial to Palestine. English people have got it into their heads that our work in Palestine is a tremendous imperialistic enterprise involving this country in all sorts of military commitments. Nothing of the kind. With Russia pulling her weight on the right side, the military problem of Palestine will be recognised for what it is and for what it was under Turkey—a mere affair of three men and a boy.

NOTES AND NEWS.

Devonshire Square,
E.C. 2.

Mr. Leaf on the Outlook.

One of the most interesting speeches delivered at the recent bank meetings was that of Mr. Walter Leaf at the meeting of the London County, Westminster and Parr's Bank, a report of which will be found elsewhere in this issue. While Mr. Leaf shares the view that indications are perceptible here and there of an improvement in the trade position, he is of opinion that "the prospect of a return to conditions of active prosperity can hardly be described as immediate." In explanation of this he points out that very little has been achieved during the past year in improving conditions in Central Europe. "Till the gloom is lightened we cannot say with any confidence," says Mr. Leaf "that we are on the way to good times. It is in the export trade of the country that there is most need, and at the moment least prospect of immediate recovery. Till we regain our export trade, the outlook must remain far from cheering."

The "Will to Prosperity."

The past year Mr. Leaf aptly described as a year of courage in facing losses, while the present one he thinks will be one of courage in recovering lost ground. "The spirit of British enterprise has not been broken," he remarked, "and the will to prosperity, if I may use a somewhat hackneyed formula, is no bad foundation for prosperity itself. But it is not a moment when one can be unduly sanguine. Recovery will come, but it will come slowly, and there may yet be troubles to face, and it behoves us to walk warily." He might with justice have added, I think, that it will come all the quicker if British firms will only show the same enterprise in regard to entering new fields such as the Near East as they do in regard to those in which they have enjoyed an assured predominance in the past. Unhappily there is as yet no indication of this, and as our Engineering Correspondent points out it appears that so far there has been no systematic attempt to develop trade with the Balkans. Is it too much to hope that this year will see the shortcoming remedied?

The Present Opportunity.

If one of our firms is asked why it is paying no attention to the Balkan markets to-day the reply in nine cases out of ten will be "What is the good? There is no trade to be obtained because of the exchanges." The short-sightedness of this policy is self-evident. If the Near Eastern exchanges were going to remain at their present rates there would be nothing to be said, but they will eventually be near the normal again, in several cases considerably sooner than most people anticipate. I suppose the British merchant is of the opinion that when that moment arrives the opportunity will have come to develop trade relations. But it will be too late then. Now is the time to do the spade work by a systematic advertising campaign, and then when conditions become normal those firms who have been wise enough to do so will be in a position to take full advantage of the market.

Alliance Bank of Simla.

A very satisfactory report is forthcoming from the

Alliance Bank of Simla for the six months ended December 31. Despite the adverse trade conditions the profits were well maintained, the total being Rs.5,73,757, to which has to be added Rs.3,31,154 brought in, the disposable balance thus being Rs.9,04,912. The interim dividends are the same as before, leaving Rs.,497,873 to be carried forward.

The Geddes Report and the D.O.T.

While the report of the Geddes Committee has still to appear a contemporary has published what purports to be an extract from the Committee's findings with regard to the Department of Overseas Trade. From this it would appear that a 75 per cent. reduction of the staff is contemplated, and it is suggested that the remainder should go over to the Board of Trade, and, to quote the extract "devote itself to giving out general information, it being expressly forbidden to answer specific inquiries about trade." It is difficult to believe that even in these times anything of the kind should be contemplated. Half the problems with which we are faced to day are in connection with the development of trade, and it would surely be a truer economy in the circumstances to enlarge the scope of the Department at the expense of some of the Departments concerned with home affairs which in present circumstances can only be regarded as luxuries.

The Department's Service.

When it is essential to effect such enormous economies in administration there must be a very real danger that the Department will suffer from the "pruning knife," but one can only hope that the Government will think twice before interfering with an organisation which has rendered very real services to the business community and which will be even more essential in the difficult months that lie before us. Before the war traders as a whole were inclined to deride official efforts to help them, but that attitude has absolutely changed as the result of the work that has been done in the last few years. In this connection a notable tribute to the Department was paid at the recent meeting of Lloyd's Bank by Sir R. Vassar Smith, who pointed out that the Department has assisted trade by obtaining much valuable information which had been of great help to manufacturers and merchants.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

ROUMANIA.

Bucharest, January 30.

Restrictions on Export of Foreign Currency.

The re-instated "Valuta" Committee has intimated its intention of restricting the export of foreign inflated currencies, by granting export authorisations only to genuine merchants who have to make payments for goods ordered abroad. For this purpose the necessary proofs, such as *bona-fide* order sheets, invoices, etc., will have to be submitted for approval to the above-mentioned Committee. In this connection instructions will be given to the Post Office authorities to the effect that letters containing remittances, cheques, and any other papers of value in foreign currency should not be allowed to leave the country without a special permit from the "Valuta" Committee. Similarly, the various local banks will be instructed not to sell any foreign exchange without a previous authorisation.

Miscellaneous.

On Sunday, January 22, the elections took place for the 28 new members of the Bucharest Chamber of Commerce. The list, headed by M. Hagi-Tudorachy was returned. The only opposition list was headed by M. N. Zanne, the former President of the Chamber of Commerce.

The 3,000 kilos of gold recently forwarded to Paris by the Ministry of Finance have not been sold but only deposited at the Banque de Paris et Pays Bas as security for amounts which this Bank will advance for account of the Roumanian State.

The new Government has re-instated the former Economic Committee consisting of the Ministers of Finance, Interior, Communications, and Industry and Commerce, whose object will be to study and co-ordinate the urgent measures of general economic interest. As soon as this Committee begins to operate it is announced that the Government will proceed to the liquidation of the Sindex Company and of the Grain Distribution Commission, so that the distribution of grain for export and home requirements will henceforth be incumbent on the above-named Economic Committee.

Mr. Malcolm McLaren, the Commercial Delegate of the International Committee for Relief to Russia, has arrived in Bucharest to negotiate with the Roumanian Government the transport question of grain destined for the famine-stricken districts of Russia.

Bucharest, January 23.

Stormy Weather.

During the last three days the weather has again changed to heavy snowfalls accompanied by a very strong gale. Many of the railway lines in the eastern part of the country are snow-bound, and, according to a telegraphic report from Constantza, owing to the strong gale on the Black Sea no boat has been able to leave this port for the last 3 days.

YUGOSLAVIA.

Belgrade, January 26.

Visas for a Year.

Good news for travellers come from Graz, where there has been a conference of representatives of the

Succession States on the subjects of passports and visas. An agreement was reached on the model of the Paris arrangement of 1920. Visas for one year will now be given, the fee being 10 French francs gold, or five if only a single journey is required, and a single franc for a transit visa. This means a great relief for travellers in those countries where the formalities incidental to securing visas have involved an immense loss of time, energy and money.

BULGARIA.

Sofia, January 30.

Italian Chamber of Commerce.

An Italian Bulgarian Chamber of Commerce was opened in Sofia yesterday, January 29. Count Aldrovandi, the Italian Minister, formally opened the Chamber, and made an interesting speech, a full report of which will be sent next week. The Minister, who goes to Rome to-morrow, said that he had the authority of his Government for declaring that Italy would strongly support Bulgaria's aspirations for a free outlet to the Aegean Sea, and also said that Italy desired to extend the ties, commercial and otherwise, that already existed between the two countries. His speech has produced a very good impression, and Bulgarian sympathy for Italy, always strong, cannot fail to be increased. King Boris was represented at the ceremony by M. Groueff, the Government by M. Tourlakoff, Minister of Finance, whilst a large and influential gathering also included the Staff of the Legation, Prince Borghese and the Italian members of the Reparations Commission, M. Vulpi, Director of the Bulgarian Branch of the Italian Commerciale Bank, M. Bodgetti, Director, of the Tobacco Company, Orientbako, etc.

The Internal Loan.

Appeals to subscribe to the first 100 million levas (£150,000) of the Internal Loan have up to the time of writing met with a poor response. Approximately 70 million levas have been taken up, but of this about half has been subscribed by Government institutions. Private banks and industrial companies have for the greater part abstained from supporting the loan. It is said that they will yet give their support, but to ensure the loan being a real success it was necessary for the richer sections of the community to lead the way. Their support coming at the end of the issue period cannot have the same effect as it would have had at the outset. The peasants for their part have not subscribed as freely as it was hoped, and although official circles still consider that a quarter of a milliard levas may be raised, there is no doubt that party feeling, together with a lack of ready money, has prevented the loan from being a thorough success.

The Second Orient Fair at Bratislava (Pressburg) will be held on July 9 to 16 this year.

Sir Walter Runciman Bart., of Newcastle, has purchased the late Lord Brassey's famous yacht, Sunbeam.

Ottoman Railway from Smyrna to Aidin.—The half-yearly ordinary general meeting of shareholders will be held at Winchester House, E.C.2. on March 31, next at noon.

YUGOSLAVIA'S INTERNAL LOAN.

(By Our Belgrade Correspondent).

It will be remembered that last autumn there was issued in Yugoslavia an internal loan of 500,000,000 dinars, at 7 per cent. interest, to be expended upon improving the communications. It was announced officially that the loan was a success, but in private conversation it is often averred that it was a failure. Let us consider the matter in some detail.

A syndicate of financial houses in the country, for it was a purely internal, domestic affair, underwrote the issue, and consequently excluded itself and all the banks concerned from subscription. Yet we have the following results announced at the end of November, 1921 (the figures representing dinars):—Serbia, 137,190,900; Croatia and Slavonia, 76,534,300; Voivodina, 48,083,800; Slovenia, 35,759,700; Bosnia, 28,322,800; Dalmatia, 8,453,300; total, 334,334,800 dinars.

Thus it will be seen that the general public absorbed over two thirds of the total, leaving a balance of 165 million dinars to fall upon the syndicate of banks, which will take it up proportionately among its members. Now there is no question that this result exceeded anticipations, for if the banks had not under-written the issue, but subscribed in the ordinary way, there can be little doubt that the amount of 500 millions would have been well oversubscribed.

The most striking point in these figures is the contribution of Serbia, which has taken up, proportionately to its economic position, a very great preponderance. It must be remembered that Serbia, that is the land within the old frontiers of the old kingdom, is a peasant community, industrially very backward, still suffering hardly from the devastation of war, with a very fair and even division of wealth: it is characteristic that the subscriptions from Serbia were chiefly in small amounts, from one hundred to one thousand dinars, while in more industrialised Croatia, the subscriptions were very much fewer in number, but individually much larger in amount. This is eloquent testimony of the burning, altruistic patriotism of the Serbian yeoman, as ready to support the State with his few dinars as with his blood. It also shows how the Serbian peasant has a far keener appreciation of the significance of the union, of the meaning of the word "State," and of political realities, than his Croat brother, to whom political freedom is a novel idea, which he has not yet learnt to understand. Again, in the western portions of the country, there is no doubt that a number of subscribers have invested large sums to advertise their "patriotism," which in many instances is but a synonym for opportunism.

It is interesting, too, to note that the securities may be hypothecated with the National Bank to the extent of 75 per cent. of the nominal value, at 6 per cent. Thus if a man holds 100 dinars worth, his income therefrom will be 7 dinars; but if he mortgages 75 per cent. of them at the National Bank at 6 per cent., there is 4.50 dinars to be deducted, leaving a balance of income of 2.50 dinars on his balance of capital of 25 dinars, which is 10 per cent.

The success of the loan is of the greatest importance to the country, for the money is to be expended upon improving the communications, the deplorable state of which was recently described by the Minister of Communications in the Skupshtina, and politically, it still further tightens and strengthens the bonds of union, for the waverers who have invested find their interests identical with the State, whatever their motives in subscribing may have been. It is confidently to be hoped that the Government will punctually meet its obligations, in which case its credit will be greatly strengthened, and the way prepared for a successful issue of further internal loans, which have been foreshadowed by the Minister of Finance.

THE ROYAL SOCIETY OF ARTS.

Fund for Purchase of Premises.

The Royal Society for the Encouragement of Arts, Manufactures and Commerce (better known as the Royal Society of Arts) is endeavouring to raise by subscriptions the sum of £50,000 for the purchase and renovation of its historic premises, built for and leased to the Society in 1775, by the famous eighteenth century architects, the Brothers Adam. In a special appeal to the considerable number of Fellows residing in India attention is directed to the important work performed for India by the Society. This appeal is signed on behalf of the Committee of the Indian Section of the Society by Sir Charles C. McLeod, Sir Charles H. Armstrong, and Sir M. M. Bhownaggee. The contributions already received from India include £500 from Mr. T. N. Muthiah Chetty, of Ramachandrapuram, Pudokotta State, and £100 from Mr. N. N. Wadia, C.I.E., of Bombay.

Engineering Topics.

By Our Engineering Representative.

Electrical Progress.

During the past year electric cooking and heating appliances made considerable strides in popular favour, and it is understood that 1921 was a record year, so far as this country is concerned, for the sale of electric fires and radiators. Extensive and well conducted propaganda methods convinced the general public that the old objections of high expense and unreliability no longer existed in connection with the most modern types of domestic electric appliances, and the result, as was only to be expected, was a welcome and steady increase in sales. Hitherto British electrical manufacturers have paid comparatively little attention to the home market for this kind of apparatus, and have been generally content to describe their products in the columns of journals which were only read by electrical manufacturers and suppliers and never reached the general public. The increased sales have been solely due to the adoption of wider methods of publicity, and the results obtained go to show how large a business could be done in England by an extension of publicity and well thought out advertising in the columns of the daily and weekly press. After all, it is the readers of such papers who are likely to use such appliances, and it seems only common sense to bring them before their notice. Commenting on the sale of electric heating and cooking devices I note that *The Times* says that there is a very wide margin still to be filled up, as represented by the difference between the number of people who use electricity for heaters, vacuum cleaners and other apparatus, and those who are quite able to afford to do so, and there is every indication that the manufacturers of such goods are preparing to make the most of their prospects, although they have still some reason to complain of a lack of corresponding activity amongst several of the supply authorities.

There are still large markets which are able to purchase, and in which British machinery has a high reputation—one of the chief of these being in the countries of the Near East—and probably more is to be done by vigorous sales methods than the industry, as a whole, seems disposed to admit. There is a good deal of truth in this, and it seems curious that so far British firms have not indulged in any really intensive propaganda work in that part of the Continent.

Dew Ponds.

Almost every one is aware that dew ponds have been used from time immemorial in this country, and a tour throughout watersheds will show that even the men of the Stone Age were adepts at their construction. Engineering science has now veered in that direction, and a leading engineer is advocating the use of properly designed dew reservoirs. His plan, so far as it has been made public, is to arrange a radiating surface for the condensation of water from the atmosphere above a cistern or tank for the reception and storage of the condensed moisture. Between the cistern and the radiating surface he interposes a heat insulating material in the time-honoured manner. I am not clear yet as to what it is he uses for the purpose, but it will be remembered that pre-historic man used a layer of straw, from a foot to 18 inches in thickness, over which he puddled a coating of clay.

In the modern scheme the cistern is sunk slightly into the ground on a site somewhat elevated above its immediate surroundings, although not necessarily on high ground. The surface excavation is used to form sloping banks which surround and shield those parts of the cistern which are not sunk in the soil. The method of our early forefathers are followed to some extent in the construction of this cistern, as it is insulated, from a heat point of view, from the earth, by suitable material and I should consider that straw, hay, peat litter and such like materials would be quite suitable. In this way, says the engineer, the protection given to the cistern prevents practically any loss from evaporation and further the water being at a

low temperature keeps the still air above the surface, and the underside of the radiator in an equally cool condition. There is consequently a dual and mutually assisting action, and the moisture in the atmosphere, striking the cold surface of the radiator, condenses and flows down into the tank. A number of tests have been made and much data collected, and it is estimated that a reservoir with an area of about 100 square yards should be able to collect about 120 gallons daily during the summer and about 50 gallons daily during the winter months. It will be of interest to hear of some results obtained in an actual installation, by which I do not necessarily mean that no actual installation has yet been made—I know nothing as to that. But I should certainly like to have some definite data as to results obtained from an installation laid down in any position other than on one of the big ranges of wide open hills as the South Downs or the Berks or Wilts Downs. It has been suggested that dew ponds, as such, are complete failures and that the water obtained in ponds made in carefully selected positions is not from dew at all, but is merely condensed mist from the huge banks of white fog so common in such localities.

Concrete Roads.

A good deal has been said in these columns as to the suitability of concrete roads for the traffic usually met with in this country, and for some time our remarks, arguments, and examples of what was being done in other countries fell on rather deaf ears. It is interesting to note, however, that the last year or so has seen a considerable change of opinion in road making circles in England, and within the last twelve months one London borough, where no fewer than 25 roads have been remade in concrete, has put in hand the reconstruction of 15 more roads in reinforced concrete. Further, I understand that the New North circular road, starting at Ealing and which is to pass through Willesden and Edmonton to the East-end and thence on to Southend is to be a typical concrete road. The plan is for this road to include two 24 feet road pavements, a central portion of 20 feet wide for trams and fast vehicular traffic and two 16ft. pathways for pedestrians. A part of this road is already under construction by the Middlesex County Council. This work has not been undertaken without due consideration. Roads constructed in the manner we have so long advocated have been under extensive trial in different parts, and complete reports as to their suitability, durability and low cost of maintenance have been collected and considered before this new and extensive scheme was finally put in hand. There is now no doubt that this method of road making will rapidly supersede other and less up to date forms of construction.

Electric Locomotives.

The electric locomotive of the battery type is proving a serious and efficient rival to the steam driven engine, particularly for shunting work. Used in America for many years it made its appearance in this country some little time ago, and all obtainable records of actual performances under working conditions go to show its high efficiency and flexibility and the ease with which it can be controlled. Railway companies themselves are finding this type useful, and the North-Western have one in use, which they took over from the Lancashire and Yorkshire Railway, at Clifton Junction. This weighs, in running order, nearly 18 tons, and it is fitted with a battery of over 70 k.w. capacity at a 4½ hours' rate of discharge. It was originally designed to handle three loaded 20-ton wagons on an incline of 1 in 189, and was adopted as an alternative to laying down five electric capstans. It is able to deal with twice as heavy a load as the capstans could handle, and the capacity of the battery is such that the locomotive could do shunting work for 3½ hours, or run light on the level for 80 miles on a single charge.

SHIPPING INTELLIGENCE.

THE DANUBE FROZEN OVER.

(From Our Own Correspondent).

Belgrade, January 26.

During last week severe cold and frosty weather has prevailed throughout the whole country, the temperature going as low as 14 C. below zero. Both the Danube and the Save are frozen almost right over. Last time the river froze was in 1907. The river navigation has been completely stopped, and all craft have been towed into the harbours. Frost and iceblocks came on so suddenly that the local boat Zamun-Belgrade was stopped in the middle of the river. It was left standing over the night, and when the day came it was frozen in with half of its pedals broken. An ice breaker towed it in to the great satisfaction of all passengers who spent a very chilly and uncomfortable night afloat.

PORT SAID NOTES.

(From Our Own Correspondent).

Port Said, January 23.

Since my last notes, when I remarked on some of the motor-ships that have passed here, there has been another through whose performances are worthy of note by shipping interests. She is the Danish s.s. Panama, which has just come from Brisbane in 31 days without a stop, averaging 11.6 knots on a consumption of 9.3 tons of oil per day. She is over 6,600 tons gross measurement, but has a crew of only 39 all told—an economical ship in every way.

There has been a certain amount of activity lately amongst men-o-war. The two Japanese cruisers Idsumo and Yakumo have been in port for several days, but left two days ago for the East. H.M.S. Centurion which has been here on and off for the last three months has now left, and the destroyer Sparrowhawk is shortly leaving for Malta where she is to be refitted. H.M.S. Ceres which is well known in Port Said, is acting as guardship, meanwhile H.M.S. Sloop Clematis which came through the Canal from the south, has been dry-docked here in the Canal Company's floating dock, and has left again for the Red Sea.

FREIGHTS TO ALEXANDRIA AND CONSTANTINOPLE.

At a recent meeting of the Levant and North Africa Section of the Manchester Chamber of Commerce, it was reported that representations were made continually throughout the first half of the year to the shipping companies regarding the high freights to Alexandria and Constantinople with the result that lower rates came into operation at the end of the year, but the Executive pointed out the importance of maintaining their vigilance in this connection.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Vindellia for Bombay (Liverpool, February 16).

Anchor Brocklebank Line.—S.s. Mahratta for Calcutta (Birkenhead, February 11); s.s. Stockwell for Port Said, Colombo, Madras and Calcutta (leaves London, February 18); s.s. Mahronda for Calcutta (Birkenhead, February 25); s.s. Anchoria for Port Said, Colombo, Madras and Calcutta (leaves London, March 7).

Bibby Line.—S.s. Yorkshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, February 15); s.s. Warwickshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 1).

Byron Steamship Line.—S.s. Maid of Hydra for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, February 13).

Cunard Line.—S.s. Brescia for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Liverpool, February 11).

Ellerman's "City" Line.—S.s. City of Marseilles for Calcutta (Birkenhead, February 20); s.s. City of Baroda for Bombay (Birkenhead, February 21); s.s. City of Dunedin for Karachi (Birkenhead, February 21); s.s. City of Manila for Calcutta (Birkenhead, March 4).

Ellerman's "Hall" Line.—S.s. City of Harvard for Bombay, Karachi, and the Punjab (Liverpool, February 11).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

Glen Line.—S.s. Carnarvonshire for Port Said, Port Swettenham, Singapore, etc. (London, February 23); s.s. Gleniffer for Port Said, Port Swettenham, Singapore, etc. (London, March 9); s.s. Glengarry for Port Said, Port Swettenham, Singapore, etc. (London, March 23).

Harrison Line.—S.s. Explorer for Calcutta (Liverpool, February 14); s.s. Patrician for Calcutta (Liverpool, March 4).

Henderson Line.—S.s. Amarapoora for Port Said and Rangoon (Birkenhead, February 22).

Holt Line.—S.s. Teiresias for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, February 16); s.s. Laomedon for Port Said, Port Swettenham, Singapore, etc. (Glasgow, February 23).

Johnston Line.—S.s. Incemore (first steamer of the season for the Danube), for Piraeus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, February 11); s.s. Pomaron for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 18).

P. and O. Line.—S.s. China for Bombay (London, February 10); s.s. Nyanza for Colombo, Madras and Calcutta (London, February 10); s.s. Kaiser-I-Hind for Bombay (London, February 17); s.s. Caledonia for Bombay (London, February 24); s.s. Nellore for Colombo, Madras, and Calcutta (London, March 10).

P. and O. British India Line.—S.s. Nevasa for Bombay and Karachi (London, February 17); s.s. Chilka for Colombo, Madras and Calcutta (London, March 3); s.s. Manora for Bombay and Karachi (London, March 9); s.s. Boyne for Karachi, Bombay, Colombo, Madras and Calcutta (London, March 9); s.s. Mashobra for Bombay and Karachi (London, March 24) s.s. Homefield for Karachi, Bombay, Colombo, Madras and Calcutta (London, April 6).

Mr. Basil Andrea Malandrinos, Greek Consul-General at Liverpool since 1895, left £8,747 gross and £7,116 net personalty.

Roumania is reported to have doubled her timber exports during 1921, the figures from January to September, 1921 as compared with the corresponding months of 1920, being 80,700 and 35,100 tons, respectively.

The total yield of pure rose oil of Bulgaria for 1921, amounted to approximately one-third the pre-war yield of 150,000 ounces. Before the war there were about 22,000 acres of rose gardens, whereas now these gardens cover less than 15,000 acres.

ANCHOR LINE

First-Class Passengers only.

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar & Egypt

LARGE STEAMSHIPS. UPPER DECK CABINS.

FITTED WITH ELECTRIC FANS.

RECOGNISED BY INDIAN GOVERNMENT.

16, Gracechurch Street, London, E.C.3.

Near East Markets.

LONDON PRODUCE REPORT.

Increased demand for Oranges.

(From Our Own Correspondent.)

Monday Evening.

Sugar.—Prices are steadier. Home refined has been in fair demand at official rates. Tate's cubes are firm at 52s. 6d.; as also coffee crystals at 52s. 9d., and mineral water sugar is steady at 47s. 3d. London granulated and Lyle's granulated are both unchanged at 46s. 9d., and 47s. respectively. In export descriptions West Indian crystallized has been firm at 42s., while Czecho-Slovakian has gained 3d. at 19s. White sugar quotations are:—February, 19s. 3d.; March, 18s. 6d.; May, 18s. 4½d.; and August, 18s. 4½d.

Coffee.—A little more business has been in evidence during the past week. Nairobis and Ugandas continue in short supply. Costa Rica is 5s. cheaper at 135s., while Indian is steady at 110s. Nairobi has gained 5s. at 115s. while Jamaica is unchanged at 150s.

Tea.—The market has been dull. Fine China tea has come to business at 3s. lb.; and good Pekoe Souchong at 11½d. lb. Common Java has been firm at 9d. lb.

Rice.—There is a shortage of American Java and Egyptian Japan rice which will only be relieved by the arrival of large shipments. Burmese is 2s. down at 14s. while Carolina rice has been done at 20s.

Desiccated Coconut.—Considerable activity has characterized the market this week, and there has been a rise in prices.

Almonds.—The market has been steady and sales have been moderate. Sicily almonds are now quoted at 130-140s. Valencia and Jordan almonds have been a dull feature with prices unchanged.

Green Fruit etc.—There has been a large demand for oranges, and in many cases the market has been cleared quicker than steamers can unload. Prices are still rising, but retail prices are very little affected. Supplies of lemons are large, with a slight falling off in request. Several shipments of Naples lemons are expected to arrive shortly. Quotations for Valencia onions are better than the previous week, while shipments are poor.

Oilseeds.—A variable tendency has prevailed. Indian linseed has been steady at 19s. 3d., and La Plata has been firm at 18s. 6d. Rapeseed has been unsettled with Toria 6d. down at 15s. 9d.; brown Cawnpore has shed 3d. at 18s., and bold Ferozepore has been steady at 18s. Cottonseed has been firm with Indian and Sakellaridis unchanged at 9s., and 11s. 4½d. respectively while Egyptian black is 1½d. up at 11s. 9d.

Oil.—Prices are higher. Linseed oil is 9d. up at 33s. 6d. Rape oil has gained 1s. in both cases, the crude variety now being 51s., and refined 56s. Cotton oil is unchanged with refined at 42s., deodorized at 47s., and Egyptian crude at 47s. Turpentine is 1s. up at 73s. 6d.

Oilcakes.—Linseed is unchanged at 300s. ton. Cottonseed cake is the same at 190s. ton, as also palm kernal at 120s. ton. Arachis cake is 5s. lower at 215s. ton, while cotton-meal cake has gained 20s. at 310s.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended January 21:—

Sultanas.—The total estimated arrivals to-date amount to 168,080 bags as against 94,660 bags for the corresponding period of last year. The total estimated sales are 159,080 bags as compared with 87,660 bags, and the estimated stock unsold totals 9,000 bags as against 7,000 bags.

Shipments.—By s.s. Gitano for London, 16,303 boxes sultanas and 60 bags figs; by s.s. Belgravian for Liverpool, 7,769 boxes sultanas, 4 cases figs, and 140 bags figs.

Markets.—Sultana market unchanged, and still under the influence of the Orthodox and Armenian holidays. Prices are firmly maintained, and lower exchange rates proportionately increase the cost in foreign currencies. There have been no arrivals of figs, and supplies up-country are practically exhausted. The exchanges are weak and declining, sterling rates varying between 670-680.

LEVANT MARKET REVIEW.

The following extracts are taken from the market review of the National Bank of Turkey for December:—

Another year has passed and the Near Eastern problem still awaits a final solution. Whether that solution will be found during 1922 is difficult to say in view of present circumstances, but it is evident that the actual state of affairs cannot continue indefinitely if Turkey is going to weather the storm.

The whole country is in a very impoverished condition, owing to the war continuing in Anatolia, thereby cutting off a most fertile district which used to export corn, silk, wool, dried fruits, opium, tobacco, etc. All the flour imported into Constantinople has to come from abroad, and the same can be said for nearly everything else. Exchange fluctuations have made it well nigh impossible for the local merchants to do business, and were it not for the Allied Finance Commission the Turkish pound would have depreciated much further than it has done. The year 1921 will long be remembered as being one of the blackest in the commercial history of the country, but there are signs that 1922 may prove more prosperous for trade in general.

Flour.—During the month this market was very depressed owing to big stocks and heavy arrivals. Sales were being effected to clear at a heavy loss. Prices in U.S.A. have slumped considerably, and prospects for the future are not bright. The total stock at present in Constantinople is estimated at 230,000 sacks.

Rice.—Total imports during the month were 1,300 tons, 400 tons came from Siam and 900 tons from Saigon at £18-10s to £21. per ton c.i.f. Constantinople from Siam, and 80-82 francs per 100 kg. c.i.f. for Saigon. Total exports from Constantinople were 500-600 tons to Black Sea ports, Batoum, and Bulgaria. Prices at the end of the month showed a downward tendency. Present stocks are estimated at a few hundred tons.

Hazel Nuts.—During the month the following arrivals were recorded:—16,000 bags shelled, 12-13,000 bags unshelled from Kerrassunde, Trebizonde and Orlou. Prices paid varied between 36-43 piastres per oke for shelled and 19-22 piastres per oke for unshelled. The following quantities were exported to the U.S.A., England, Germany, Marseilles, and Trieste:—10,000 kgs. shelled, 9-10,000 kgs. unshelled. Owing to low prices arrivals here are scarce and the market is weak.

Coffee.—Total imports from Brazil during December were about 2,500 sacks; c.i.f. prices for Rio were 52s. to 58s. per cwt. according to quality. Total exports from Constantinople were about 1,000 sacks to Anatolia, Batoum, and 250 sacks for Syria. Closing prices at the end of the month 50s.—55s. per cwt., Present stocks on hand are about 1,500 sacks.

Coal.—The sales of Cardiff coal were well maintained during December. Six full cargoes arrived with a total of 28,780 tons. The actual stocks available on the market were about 22,400 tons. F.o.b. prices for best Admiralty were quoted at 25s.; on the other hand the freight market was somewhat easier, fixtures having been made as low as 16s.

Tobacco.—Total imports of tobacco were as follows:—Samsoun, 170,000 kgs.; Broussa, 40,000 kgs.; Ismid Hendie, 230,000 kgs.; Trebizond, 10,000 kgs.; Sinope, 30,000 kgs.; Russian, 95,000 kgs.; total, 575,000 kgs. The following exports were reported for Egypt and Europe:—Turkish, 192,000 kgs.; Russian, 284,000 kgs.; total, 476,000 kgs. There has been a rise in the prices of Turkish tobacco, of 10.15 per cent. as compared with former months, but those for Russian qualities remain stationary. This rise is due to a big demand for Samsoun—Bafra brought about by the poorness of the crop and smallness of available stocks. Prices paid for good qualities Samsoun-Bafra have risen 20 per cent. over those ruling previously. Better prices are awaited, in view of the small crop and scarcity of available stocks which are diminishing rapidly.

Opium.—About 80 cases arrived from Anatolia during the month and 120 cases were shipped to the Continent and the Far East. In spite of a large demand during the middle of the month prices gradually fell with the depreciation of the pound sterling and also owing to lower quotations in Smyrna, although the latter improved at the end of the month. Salonika quotations were somewhat higher than here.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 132s. 6d. cwt.; (Canadian), 117s. 6d. cwt.; (American), 104s. cwt.; butter: (Danish), 188s. cwt.; (Australian), 115s. cwt.; (New Zealand), 140s. cwt.; cheese (Canadian), 96s. cwt.; (New Zealand), 91s. cwt.; lard, 72s. 6d. cwt.; eggs (Danish), 30s. 6d. per 120; (Sylvian), 25s. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6½d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 130s. cwt.; (East Indian), 125s. cwt.; (Central American), 110s. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 112s. 6d. cwt.; (Santos, superior), 61s. cwt.; ginger (washed Cochín), 62s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 4d. lb.; (Muntok, white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 115s. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Vostizza) 83s. cwt.; currants (Amalias), 58s. 6d. cwt.; sugar: (Tate's cubes), 52s. cwt.; (Lyle's granulated), 40s. 10½d. cwt.; (Mauritius crystals 44s. 6d. cwt. (West Indian crystallized), 40s. 3d. cwt.; (centrifugal), 14s. 4½d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 14s. 3d. cwt.; (bran, Rangoon), £5 8s. 9d. ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 7½d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 47s. 9d. qr.; (Australian), 52s. 3d. qr.; barley (malting), 55s. qr.; barley (feeding), 41s. qr.; oats (English), 32s. 6d. qr.; oats (La Plata ex-ship), 27s. 1½d. qr.; maize (La Plata), 38s. 9d. qr.; flour, 40s. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus); £35 ton; bismuth, 9s. lb.; copper (standard), £64 11s. 3d. ton; copper (electro), £72 ton; gold bars, 97s. 4d. oz. iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 96s. 3d. ton; galvanised sheets (24 G), £16 7s. 6d. ton; lead (soft foreign), £23 1s. 3d. ton; manganese Poti, 1s. 1½d. unit; molybdenum, 27s. 7½d. unit; nickel, £180 ton; platinum, 440s. oz.; plumbago, £20 ton; quicksilver, £11 7s. 6d. bottle; silver bars, 34.7-8d. oz.; spelter (G.O.B.), £25 17s. 6d. ton; tin (standard), £157 2s. 6d. ton; wolfram, 11s. unit; zinc sheets, £34 10s. ton.

Chemicals.—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 1½d. lb.; tartaric, 1s. 4½d.; ammonia (sulphate), £15 11s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard), 2s. 4½d. gallon; bleaching powder (35 per cent.), 14 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 8d. lb.; chlorate, 5d. lb.; caustic, £33 10s. ton; nitrate, £42 10s. ton; permanganate, 10½d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 130s. ton; bi-carbonate, £11 10s. ton; bi-chromate, 6½d. lb.; alkali (58 per cent.), £8 19s. 9d. ton; chlorate, 3½d. lb.; caustic (70 per cent.), £22 15s. ton; glyposulphate, £16 ton; prussiate, 9d. lb.; nitrate, £14 5s. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.), £110 ton; lemon oil, 3s. 1½d. lb.; quinine, 3s. oz.; red lead, £38 15s. ton; white lead, £41 5s. ton; white ground lead, £50 7s. 6d. ton; sulphate of copper, £28 15s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 7.7-8d. lb.; 80 and 89 lbs., 7.7-8d. lb.; 70 and 79 lbs., 7.5-8d. lb.; 60 to 69 lbs. 7d. lb.; 59 lbs. and under 6.1-8d. lb.; (second), 90 lbs. and up 6.7-8d. lb.; 80 to 89 lbs., 7.7-8d. lb.; 70 to 79 lbs., 7.8-8d. lb.; 60 to 69 lbs., 7d. lb.; 59 lbs. and under, 6.1-8d. lb.; (second), 90 lbs. and up 7.7-8d. lb.; 80 to 89 lbs., 6½d. lb.; 70 to 79 lbs., 6.5-8d. lb.; 60 to 69 lbs., 6d. lb.; 59 lbs. and under, 5d. lb.; Cows (first), 60 lbs. and up, 6½d. lb.; 59 lbs. and under, 6d. lb.; cows (second), 60 lbs. and up, 5d. lb.; 59 lbs. and under, 5d. lb.; Bulls (first), 5½d. lb.; (second), 4½d. lb.; Kips (first), 6½d. lb.; (second), 5.3-8d. lb.; (third), 3.5-8d. lb. Calcutta Market. Prices in rupees per 20 lb.: Arsenic hides (cows): Agras, 9 to 14; Durblangas, 7 to 8.8; Patnas, 5 to 6. Salted cows, 4.8 to 6.8 Arsenic hides (buffalo), 3 to 6.8. Skins: Calf, 8 to 10 per 20 lb.; goat, 24s to 280 per 100 pieces.

Miscellaneous.—Cotton: (American), 9.67d. lb.; (Egyptian Sakel), 14.75d. lb.; Oilseeds: Linseed (La Plata), £18 5s. ton; £16 12s. 6d. ton; palm kernels, £18 5s. 9d. ton; castor seed (Bombay), £14 17s. 6d. ton; sesame seed (China), £23 6s. ton; soya beans, £13 5s. ton; Oils: Linseed, £31 10s. ton; olive (Levant), £76 ton; palm, £38 5s. ton; rape (crude), £47 10s. ton; soya, £34 15s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £40 15s. ton; cotton (crude), £36 ton; ground nut £43 10s. ton.

According to a recent message from Sofia, subscriptions to the internal loan of 100,000,000 levas continue to flow in, 65,000,000 having already been subscribed.

The traffic receipts of the Egyptian Delta Light Railways for the week ended January 10, amounted to £13,534; total for year, £E309,580. For the corresponding periods of last year, receipts amounted to £E13,733, and £E395,600 respectively.

With reference to a statement which has appeared in the Press to the effect that an International Exhibition will be held in 1924 at the White City, which has the moral support of the Government, we are informed that the Exhibitions Division of the Department of Overseas Trade has, up-to-date, received no information whatever of this project.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Egypt.

Photographic Materials.—The Ministry of the Interior, Egypt (Personnel and Equipment Department, Supplies Office), invites tenders for the supply of photographic material for the year 1922 which will be received by the Director Personnel and Equipment Department, Ministry of the Interior, Cairo, not later than noon on March 15. The photographic material required includes apparatus and accessories, chemicals, and plates and papers. A copy of the conditions of tender is available at the offices of the Department of Overseas Trade (Room 53) 35, Old Queen Street, London, S.W.1. for inspection by interested United Kingdom firms, while an additional copy is available for transmission to provincial firms unable to arrange for inspection in London. Local representation is an essential condition of tendering, and the Department will be pleased to suggest to United Kingdom firms not already represented in Egypt, the names of British houses established in Egypt, through whom tenders might be submitted. (D.O.T.).

Stores.—The Department of Overseas Trade has received from the Director of Stores, Bulaq (Cairo) a number of copies of the conditions of tender and specifications for the supply of stores required by the Stores Department of the Ministry of the Interior during the period commencing April 1, 1922, and ending March 31, 1923. The goods required cover a wide range and include arms and ordnance stores, clothing, harness and saddlery fire engines, furniture, tools, and miscellaneous stores. Tenders must be received by the Director of Personnel and Equipment Department, Ministry of the Interior, Cairo, not later than noon, March 18.

Marine Boiler.—The Secretary General, Ports and Light-houses, Arsenal, Alexandria, invites tenders for the supply of a new multitubular marine boiler of the following description:—Diameter 11 feet; length 10 feet; two corrugated furnaces, Boiler working pressure 180 to 200 lbs. per square inch. Built to Lloyds rules 100 A1 and supplied with all accessories as per specification. Offers will remain valid for one and a half months from March, 1, 1922.

India.

Rubber Hoses, etc.—The Great Indian Peninsula Railway Company invites tenders for the supply of the following stores, namely—1, India Rubber Hoses, Sheets, &c.; 2, Canvas Hoses; 3, Spark Arresters, Sieves, &c.; 4, Lamp Glasses, &c. Specifications and Forms of Tender may be obtained at the company's offices, 48, Copthall-avenue, E.C.1., on payment of the fee for the specification, which payment will not be returned. February 14.

Girder Bridges.—The Bombay, Baroda and Central India Railway Company invites tenders for the supply of girder bridges (Specification, company's offices, The White Mansion, 91, Petty France, Westminster, S.W.1), February 24.

Pen Carbon Paper, etc.—The High Commissioner for India invites tenders for the supply of:—(1), Paper, Pen Carbon; (2), Paper, Typewriter; (3), Paper, writing and envelopes; (4), Ferrules, Steel; (5), Buffers, Draw-bar Hooks, Truss Bars, &c.—February 21 for 1, 2, and 3; February 28 for 4 and 5.

Lancashire Boilers.—The East Indian Railway Company invite tenders for the supply and delivery of Lancashire boilers as per specification to be seen at the company's office. Tenders marked "Tender for Boilers," should be addressed to the secretary of the company, 29 and 30, Nicholas Lane, London, E.C.4., not later than 11 a.m., Wednesday, February 15.

Yugoslavia.

Petrol.—The Economic Section of the Ministry of War and Marine, Belgrade, invites tenders for the supply of 400,000 kilos. of petrol. Tenders must be addressed to the "Directeur de la Section Economique du Ministère de la Guerre et de la Marine," and must have the inscription "Offre de pétrole par X" on the envelope. A deposit of 5 per cent. of the value offered is required from the Serbian, and 10 per cent. from foreigners. The Banque Franco Serbe, 30, Coleman Street, E.C. will be glad to furnish further particulars. February 20.

Tyres.—The Ministry of War and Marine, Belgrade, invites tenders for the supply of:—Aeroplane tyres, auto tyres, and tyres for bicycles and motor bicycles. Tenders must be addressed to the Commandant de l'Arsenal Aeronautique. They require 5 per cent. deposit of the value offered by the Serbian and 1 per cent. from foreigners. Further particulars can be obtained from the Banque-Franco Serbe, 30, Coleman Street, E.C. February 20.

Cotton Waste.—The Drzavna Zeleznicka Direkcija, Subotica (Direction of State Railways, Subotica), invites tenders for the supply of 20,000 kilos of cotton waste. March 6. (D.O.T.).

Bulgaria.

Telephone Instruments.—The Bulgarian Department of Posts, Telegraphs and Telephones invites tenders for the supply of 2,000 telephone instruments for table use, with local battery and magneto. Also for spare parts for these instruments. Tenders to be presented at the District Office of Finance, Sofia by February 20. (D.O.T.).

COTTON & COTTON GOODS.

MANCHESTER REPORT.

(From Our Own Correspondent.)

Manchester, February 4.

There has been no noticeable change in the tone of the market during the past week, but at the same time rather more inquiry has been dealt with. Business however has been on quite a restricted scale. The prices ruling in both yarn and cloth have been miserably poor, and it seems impossible for spinners and manufacturers to obtain sufficient contracts to enable them to present a stiffer front to customers. Merchants are still handicapped by being unable to liquidate dear stocks in the outlets abroad. Financial matters are still causing a certain amount of uneasiness, and undoubtedly many firms have yet to face serious losses. In the cloth section more activity has shown itself with regard to Constantinople, and grey staples and printing goods have been in request to a fair extent. Isolated transactions have been mentioned in fancies and grey shirtings for Egypt. Weak sellers have been about, and users have taken small lots. There has been more cloth inquiry about for India, the bulk of the demand being for Calcutta, and some fair lines have been booked in well known styles of gray shirtings, whilst towards the close of the week mulls and dhooties have attracted increased attention. The political situation in our Dependency however is still very disconcerting. Not much business has been done for China. Quotations for American yarns have been rather steadier but prices when tested have favoured buyers. No trade of weight has been done.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date February 1:—Again we have to record a series of quiet, drooping markets, with sales becoming still smaller, and prices displaying a marked downward tendency. During the last two days a somewhat better tone has been noticeable, but as far as concrete results are concerned, no actual improvement in business has become apparent. The customary small general enquiry has been experienced here; Fully Good Fair to Good Sakel and Uppers have been mostly in request, whilst, as a side line, quite a brisk demand (which seems, however, to lead to but little business) still continues for low cotton of almost every growth. Tokar continues to enjoy a small but steady offtake as heretofore. There is a fair quantity of Sakellaridis, in grade about Good Fair to Fully Good Fair, which is pressed for sale at easy rates, and much irregularity in prices is seen in consequence. The better grades are more firmly held, but the offtake is poor. Manchester reports speak of a better tone and rather more doing, and evidence is not wanting that spinners are beginning to regard current prices as being attractive. We are inclined to the opinion that a period of steadiness at the present juncture would prove of inestimable value to the trade generally. There are at the moment, however, too many disturbing factors in the general situation to warrant the belief that such a period is likely to occur. To name one of these factors only: the proposed increased levy on Egyptian cotton entering the U.S.A. is likely to provide Alexandria with many opportunities for fluctuations, more or less wild, before the last word is said. Our latest information points to there being but a small increase on the present temporary rate of 7 cents. on Sakellaridis cotton. C.i.f. business continues on quiet lines. In conclusion, the market, as we write, has the appearance of having touched the bottom, temporarily at least, and it remains to be seen whether the present level is sufficiently tempting to attract the cloth buyers of the East, or whether their confidence has been so rudely shaken that another further *débacle* will be necessary before they consent to open their purse-strings. Sales, 1,000 bales (includes 150 bales Sudan). Quotations all round are reduced 1½d. per lb. Fully Good Fair Sakellaridis to-day 16.50d. per lb.

The balance sheet of the National Bank of Greece for 1921 shows net profits amounting to 100,000,000 drachmae. The reserve fund stands at 85,000,000 drachmae. The dividend for the year is 550 drachmae per share. This represents 55 per cent., as compared with 42 per cent. for 1920.

The traffic receipts of the Smyrna-Aidin Railway for the week ended January 28, amounted to £6,797.

ORANGE GROWING IN SOUTH AFRICA.

EXPERT ADVICE.

The Union Government of South Africa has issued an important brochure on Orange Growing in South Africa which will well repay perusal by all who have already interested themselves in or are considering participating in any South African Orange Growing venture. Therein it is stated:—

"South African Orange Groves, in full bearing, have yielded from £200 to £300 per acre. That is to say, from ten acres of the land a yearly gross return of from £2,000 to £3,000 has been taken. Probably three-fourths of that was profit. There is consequently a wide-spread impression, strengthened as new groves come into bearing, that South African orange growing is one of the best paying undertakings extant, in which belief many of the country's keenest business men have been attracted, and capital amounting to hundreds of thousands of pounds is being invested.

"The result should be a considerable Orange Growing industry in South Africa during the next decade or so, and there can be no doubt that those who get in now when the industry is in its infancy. . . . will have seized an opportunity that does not often present itself. That is, if they get into a sound proposition, for it cannot be too strongly emphasised that the business of growing Oranges is a very technical one. Orange trees will grow almost anywhere in South Africa, but what they will yield depends on what soil and under what conditions of climate and management they are grown.

"Hence there are in South Africa, as in all citrus countries, growers whose operations return little or nothing, while others, as mentioned already, get very handsome returns."

A considerable number of officers having interested themselves in South African Orange-growing ventures, and having been somewhat perturbed by reports regarding certain South African land propositions on the market, the Officers Association decided to appoint an expert endorsed by the Union Government authorities to make a report on those ventures, whose promoters had expressed a desire to submit their undertakings to the scrutiny of independent experts. Colonel E. Thackeray, C.M.G., D.S.O., of Johannesburg, was deputed by the Officers' Association to take the necessary steps. The African Realty Trust, Ltd., having placed all available information at his disposal, Colonel Thackeray visited Zebediela Estates with Mr. C. A. Simmonds a Consulting Horticulturist endorsed by the Secretary for Agriculture of the Union Government of South Africa. Under date October 18th, 1921, Mr. Simmonds reported to Colonel Thackeray as follows:—

"On the 15th inst. I inspected the Zebediela Estates, and beg herewith to submit a concise report of same.

"I may say that I have known this property for some years, and on the occasion of my first visit I was struck by the great possibilities of these farms for extensive citrus culture.

"The climate is healthy and just right for producing first-class oranges that will keep well and carry to our most distant markets overseas.

"The lay of the land is all that could be desired, the slopes are very slight, with sufficient fall for efficient irrigation, with very little danger of erosion during heavy rainstorms, and, further, for this reason the lands would receive the full benefit of every rain.

"The soil is really first-class for citrus culture. It is deep, well drained, and is easily worked red loam. Oranges grown on this soil will be juicy, fine flavoured, and of a good colour.

"IRRIGATION.—This branch of the work is in the hands of highly skilled engineers, and the writer was impressed by the very thorough way these works are being carried out, and when completed there is no doubt a very great quantity of water will be conserved.

"The orchards already planted have been well laid out—the trees have been well cared for, and are making good growth. Every branch of the work on this Estate is being well done, and no expense is being spared to make the venture a success. Hundreds of thousands of trees are being raised in nurseries for future planting. These trees are being well looked after and properly trained.

"A thorough soil survey has been made, and it is quite apparent that only good citrus ground is being planted.

"In conclusion, I must say that I am quite satisfied that the African Realty Trust, Ltd., are doing everything possible to make a success of this Estate from the Plottolders' point of view, and I have no hesitation in recommending this proposition."

Mr. Simmonds' full report, also copy of the Union Government brochure referred to in the opening paragraph, together with particulars as to how an investor may participate in this industry on a basis which should return 75 per cent. per annum on capital invested, even reducing the estimated profit to £100 per acre, may be obtained by communicating with the African Realty Trust Ltd. (Capital, £400,000 fully subscribed, £183,000 paid up), Egypt House, New Broad Street, London, E.C.2.—Adv.

Company Meetings.

LONDON COUNTY, WESTMINSTER AND PARR'S BANK.

The Trade Outlook.

The annual ordinary general meeting of the London County Westminster and Parr's Bank, Ltd., was held at the head office, 41, Lothbury, E.C.2, on February 2. Mr. Walter Leaf (Chairman), presided.

The Secretary (Mr. F. Mytton) having read the notice convening the meeting and the report of the auditors.

A Year of Courage.

The Chairman, in the course of his speech said:—Twelve months ago I spoke to you of the year 1920 as a year of disillusion. What shall I say of 1921? It has been a year of crisis, of acute contests, of heavy losses in many directions, of hope deferred; but I think we may fairly claim for it that it has been a year of courage. Facts have been boldly faced, formulae have been cast aside, principles have been fought out to the end; and in many directions we have good hope that peace is, if not actually won, at least well in sight. Peace is what the world needs more than any other boon. It is perhaps too soon to speak of a general spirit of peace, but it is a great deal that here and there, in regions of the highest importance, we should have won at least a partial peace. We have, I trust, won peace in that region which we can still fitly call by its old name of the Pacific. We hope, too, that peace has been won between England and Ireland; let us trust that it may be followed by peace between the two parts of Ireland itself. And we have won some peace, for the moment at least, in those labour disputes which, to the mind of the social philosopher, twelve months ago presented the gloomiest point of a gloomy horizon. The outstanding event of the year in our internal economy has been the great coal stoppage. That happily ended, not in a complete victory for either side, but in an agreement to set on feet a system of profit-sharing which constitutes, I suppose, the greatest experiment in partnership between capital and labour that the world has yet seen. That system has, I believe, been honestly accepted by both partners with a determination to make it a success. It has been followed by a notable easing of the industrial strain in many other directions, and the labour outlook no longer overshadows all other problems in our own country.

The Prospects.

Meantime, however, we are still in the midst of acute industrial depression, with its accompanying curse of unemployment; and though here and there we can see signs of a lifting of the clouds, the prospect of a return to conditions of active prosperity can hardly be described as immediate. The reason for this is plain. The past year has done little enough towards clearing up that large sector of the horizon which covers Central Europe, and of which the darkest point at the moment centres over Germany. Till that gloom is lightened we cannot say with any confidence that we are on the way to good times. It is in the export trade of the country that there is most need and at the moment least prospect of immediate recovery. Till we regain our export trade the outlook must remain far from cheering.

The Banking Year.

For the banks the year has been one of great anxiety, of diminished profits and considerable losses at home and abroad. All our own losses, whether realised or anticipated, we have, of course, amply provided for. They have been well within the limits which, considering the close and intimate connection between the banks and commerce and industry, we may regard as reasonable; indeed, it is not too much to say that a bank which had made no losses during the year would only prove that it had not done its duty in assisting the general cause. For the losses made in industry and commerce have been immense. It is fortunate that they have been on the whole so well borne, thanks mainly to the equally immense profits which were made during the preceding years. There have been no great disasters in Great Britain and no sign of panic; we have all pulled together in the common interest, and we have good reason to hope that the worst of the storm is weathered.

Overseas Trade.

The great need of the country is the recovery of our overseas trade which has so seriously fallen off during the year. And when I speak of overseas trade, I mean imports as well as exports; for you cannot have one without the other. The great markets of the Far East are still in a far from healthy condition. Stocks in India show but little sign of reduction, largely from political reasons. In China, it is believed that they are being reduced, and have nearly reached the point at which fresh orders will be placed—the more so because it is being recognised that prices have approached the irreducible minimum, and that no further fall can be looked for. But what we need most is the restoration of the markets of Central Europe and Russia. Of Russia I fear I can say little that is hopeful; I should be sorry to stake much on any result that may come from the promised conference at Genoa. It is to Central Europe, and notably to Germany, that we must look for recovery. Germany before the war was our best customer outside the Empire. Until we recover our trade with her we can have no hope of commercial boom.

The Position of Germany.

For the last six months we have heard very little about German competition—and with good reason. Germany's external trade has fallen off in an extraordinary way. Although the latest figures seem to show that the corner has been turned, she has been importing far more than she can export. This in itself goes far to account for the great fall in the mark. In speaking of the great falling off in the German exports, I am not depending on German statistics, which might be misleading. I take the figures of German exports to this country as given in our own Board of Trade returns. They are sufficiently eloquent. We will compare the figures of the second half of 1913, a year of booming trade; of 1920, when the effects of war were beginning to pass off; and of last year. They are roughly as follows: 1913 41·1·3 millions; 1920, 18½ millions; 1921, 8½ millions. In the second half of last year we imported nearly £10,000,000 less than in the same half of 1920, and just one-fifth of what we imported in a really good year. What does this mean from our point of view? Clearly that Germany's purchasing power for our own products is almost annihilated.

It would follow that our first policy should be to help Germany on to her legs again, to bring her nearer to the position of our best customer outside the Empire which she used to hold. Unfortunately, our Legislature has seen fit to follow an exactly opposite course, and the Safeguarding of Industries Act is so designed as to diminish, so far as possible, what little purchasing power Germany has left—to deprive her of the possibility either of buying our manufactures or of paying the reparations which we are all the time demanding. Moreover, we are driving her to compete all the more keenly with us in other markets. The latest German figures show that on the whole her exports increased during the last months of 1921, though her exports to Great Britain were less, as I have mentioned. That is to say, we are shutting her out from buying here and making her a more formidable rival abroad. Is that the object at which reasonable men would aim?

Real Peace Needed.

I return again to the theme with which I started—that what we need is real peace. Of that peace international commerce is at once the sign and the stimulus. It can only be attained by free intercourse, untrammelled by any artificial restrictions. Our own country should lead the way. I am happy to think that saner views, though they have not yet expressed themselves in legislation, are growing apace among men of sense. We are all learning that the nations have need of one another, that none can stand by itself, and the free interchange of commodities is only the first step towards the realisation of that high aim which, however distant, we must never leave out of sight—the union of all countries for the common good.

Ladies and gentlemen, I beg to move: "That the report be received and adopted."

Sir Montagu Cornish Turner (one of the Deputy-Chairman) seconded the motion, which was carried unanimously.

The retiring directors were re-elected, the auditors were re-appointed, and after a vote of thanks to the chairman and directors had been unanimously adopted the meeting ended.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank:—

Stamboul, January 28.

The market continues to present the same quiet appearance. The sales are insignificant, orders for Anatolia and Batoum having considerably decreased. The dead season is at its height; money is scarce in this market. Imports are down to the minimum, and the rates of the foreign exchanges fall gradually.

Manufactures.—Prices show a tendency to fall. Cabots which rose during the temporary revival in September last to £T12 are neglected at £T7-7.20. Batoum, which has been the principal outlet of late, records a complete stagnation of business.

Produce.—Sugar. A marked change has taken place in the sugar market. The rate, after a continued fall, has recovered suddenly. Speculators, believing that the time to come in had arrived, have made large purchases on the chief markets, so the rates are higher. Quotations are:—American £21-22 per ton, Dutch £23½ per ton, in Customs £T28 per 100 kilos.

Coffee.—The fall recorded last week arising from the weakness of the exchange and unexpected arrivals from Rio has come to an end following the intervention of the Brazilian Government. All the markets are harder. Stocks here being much reduced, cargoes *en route* are sold at advantageous prices. Quotations are:—Rio No. 2 55s. per 50½ kilos; here, in transit, 50-55 piastres per oke; in Customs 70-75 piastres per oke.

Rice.—An improvement has taken place due to the large purchases made by Japan whose crop is announced to be short. Here some transactions have taken place for Roumania.

Constantinople, January 28.

Sugar.—The market is a little better following the rapid improvement in the prices in centres of origin and a small demand for the Black Sea littoral. We have had no arrivals this week. Quotations for sugar is transit:—Crystallised first grade, £23; second grade, £22; cubes first grade, £28; second grade £27.

Coffee.—There is nothing special to report. The prices and the position remain unchanged.

Rice.—The market has rapidly firmed up. Here owing to the lack of arrivals prices have a tendency to improve. Quotations are (in transit):—Saigon No. 1 75 piastres.

Oleos.—The arrivals are about 400 barrels. The market is quiet, and the demand is almost *nil*. Quotations:—First grade 60 piastres per oke, second grade 58 piastres per oke.

Oils.—There is no change in the position. Quotations:—Cotton oil 55-56 piastres, soya oil 52-53. This last quality is the only one in demand at the moment.

Flour.—There has been a marked reaction following the arrival of 16,000 sacks of American. Present stocks 80-100,000 sacks. Quotations (per 63 kilos)—Gold Medal £T8.90, Juliette £T6.56, Durum £T6.75, Kirma (native flours) £T8.50.9 per 72 kilos according to quality.

DULL AND IRREGULAR TONE.

Indian Stocks Weak.

(From Our Own Correspondent.)

London, Monday.

It has been a somewhat depressing week, with a very irregular tone prevailing, and prices tending downwards in most directions. Anxiety with regard to the position in India and Egypt has been mainly responsible for this, and in addition there has been a considerable amount of liquidation. It may well be that a more adverse view has been taken of the outlook overseas than is warranted; on the other hand it must be remembered that it does not take much to cause nervousness on the Exchange in these days. In fact quite a trifling incident is often sufficient to cause temporary depression. That being the case it is difficult to look forward to the course of the markets in the near future with any overwhelming degree of confidence. A certain amount of time must obviously elapse in the most favourable circumstances before the factors that are now affecting the markets are removed, and it seems, therefore, very probable that a succession of weeks of irregularity and depression lie before us. The prospect is in unpleasant contrast with the promising outlook just before Christmas. But by this time we have become accustomed to changes even of the most amazing description.

There have been very few new issues during the past week, and no great increase in the number is to be expected until the conditions generally improve. Of those to be made in the immediate future the most notable is the Shell issue, which is bound to prove very popular with investors. Other oil issues are on the tapis, but I imagine are unlikely to appear yet awhile.

Gilt-Edged Dull.

Gilt-edged have been very dull, with Indian stocks a particularly weak spot. Consols are $\frac{1}{2}$ down at $51\frac{1}{2}$. War Loan Fives are $\frac{1}{2}$ down at 93.1-8, while the Conversion Loan has shed 1-8 at 69 $\frac{1}{2}$. The India 7 per cent. Loan has dropped a point at 104, the 3 per cent. Loan is $1\frac{1}{2}$ down at $50\frac{1}{2}$, while the $3\frac{1}{2}$ per cent. Loan is $2\frac{1}{2}$ lower at $58\frac{1}{2}$. In Near Eastern securities which rank with British Government stocks, Turkish Guaranteed 4 per cents. are 1 down at 74, while Greek Guaranteed $2\frac{1}{2}$ per cents. are $\frac{1}{2}$ up at $63\frac{1}{2}$.

The foreign market has been inactive, and changes are not of any great importance. French stocks have been harder, War Loan Fives being $\frac{1}{2}$ up at 41. German 3 per cents. are 1-16 lower at 2.7-8, while Italian Rentes are unchanged at $21\frac{1}{2}$. Japanese stocks have been fairly steady. The 1905 issue is 1 down at $86\frac{1}{2}$, while the 1910 issue is unchanged at 61. Chinese securities have been steady, with the 5 per cent. 1896 Loan up at 88, and the 5 per cent. 1913 Loan unchanged at $67\frac{1}{2}$. Brazilians have been quiet, while Mexicans are about the same. Russians have been weak, the 4 per cents. losing $1\frac{1}{2}$ at 7, while the 5 per cent. are 2 down at 13.

Greek securities have been hard. The 4 per cent. 1910 Loan at $32\frac{1}{2}$ shows a gain of $\frac{1}{2}$, while the 5 per cent. 1913 Loan is a point up at $41\frac{1}{2}$.

Industrials Weak.

In the Industrial group weakness has developed all round, partly as the result of a certain amount of liquidation, partly because of the prevailing conditions to which I have already referred, the result being that the tendency has been for prices to move to lower levels. Tobacco were dull, but displayed a tendency to rally at the close. Bats are 1s. 9d. down at 61s. 3d., while Imperial Tobaccos are unchanged at 61s. 9d. The adverse report of Dunlops was followed by a decline in the shares to 5s., but they subsequently recovered to 5s. 6d., practically the same as before. Jute Industries Prefs have been a weak spot, closing at 8s. 3d. Some support has been forthcoming for African and Easterns which are now 30s.

Tea shares and Textiles have been affected by the Indian position. Courtaulds, after being rather dull, improved, and close unchanged at 36s. 9d. Coats are unchanged at 2.19-32. Iron, Coal and Steel securities have been dull. Armstrongs have lost

9d. at 14s., Vickers are 9d. lower at 8s. 6d., while Guest Keens have shed 6d. at 28s. 3d. xd. Babcock and Wilcox are 1-8 down at $2\frac{1}{2}$, while Lamberts are 3-32 down at 1.7-8.

Shipping securities have been weak. P. and O. Deferred are 15 down at 280, Cunards have lost 1s. 3d. at 17s. 6d., while Furness Withys are 1s. lower at 24.

Mines have been rather more active, with Gedulds a firm spot at 2.5-8. Diamonds have been harder, and De Beers have been in some request round about 10.

Oils Lower.

It is some time now since there was any great activity in the Oil Market, and the past week has proved no exception, though instead of inactivity and dullness a very positive weakness developed in certain directions. Burmahs are $\frac{1}{2}$ down at 5.3-8, while Mexican Eagles have shed 3-32 at 3.11-16. Trinidad issues have been weak, with Centrals 5-16 down at $3\frac{1}{2}$. Kern Rivers are 3d. lower at 18s. 9d.

Among Egyptians Anglo-Egyptian B are 1-16 down at 1.5-10, while Oilfields of Egypt are unchanged at 3-16. In the Roumanian group Roumanian Consolidated have shed 9d. at 7s. 9d., while Phoenix are 6d. lower at 9s. 3d. Dacia Romanos remain at 11-16, while Steaua Romanas are 6d. lower at 9s. 9d.

Indian Banks Dull.

Among banking descriptions National of Egypt are $\frac{1}{2}$ up at 18.7-8. Chartered of India have dropped $\frac{1}{2}$ at $14\frac{1}{2}$, while National of India are $2\frac{1}{2}$ down at $34\frac{1}{2}$. P. and O. Banking Corporations are $\frac{1}{2}$ down at 11 $\frac{1}{2}$. Imperial Bank of Persia are unchanged at 5, while Bank of British West Africa are $4\frac{1}{2}$.

Land shares have been irregular. Béheras are $\frac{1}{2}$ down at $8\frac{1}{2}$, while Egyptian Delta Lands are 6d. lower at 7s. 3d. Gharbihs are 1-8 lower at 1.5-16, while Union Foncières are unchanged at $2\frac{1}{2}$. Sudan Plantations are 1-8 lower at $2\frac{1}{2}$.

Rubbers Lower.

There is little fresh to be said with regard to Rubbers. During the week the raw commodity has gone to a lower level, and as was to be expected the share market has responded. The movement is of no significance, and so long as the stocks here continue to decrease there is no reason for shareholders to be unduly pessimistic.

WATER POWER IN YUGOSLAVIA.

The Zagreb journal *Agramar Tagblatt* has published an article concerning the formation of a syndicate for the development of hydro-electric power schemes which would be worked in collaboration with the S.H.S. State Government. This syndicate for the study of the water-power of the Bosna and Drina was formed at Vinkovci on November 6, and the first thing agreed upon was the erection near Modric of a waterpower station of 8,000 horse power capacity, and the construction of another station on the lower Drina between Koviljaca and Janje of 29,000 h.p. The projected power stations are intended to provide current for Posavina, Podrinje, Slavonia, Syrmia, Backa, Djakovstina and Osijek and should be connected with the great overland electrical system which the state contemplates. There is also the intention to connect these systems, via Zagreb, with the power system of Fala so that the project of the central Government to provide an organised network of electric power lines in an East to West direction and in a thoroughly practical manner could be accomplished without great delay. It is specially emphasised that these great undertakings are assured of the co-operation of the State, so that the participation of foreign capital would only be permitted if native capital were insufficient, a contingency which the richness of the districts interested would seem to render unlikely.

Prague has now direct telephone communication with Zurich.

It has been decided by the Roumanian Minister of Finance that the export of gold extracted from Roumanian soil shall no longer be permitted and that it must henceforth be deposited at the National Bank for the purpose of covering bank note issues.

TRADE OF BUSHIRE IN 1920-21.

In a report on the trade of Bushire in 1920-21, H.M. Consul-General at Bushire says:—

The abnormally low rates of exchange of the kran in relation to sterling and rupees, at the opening of the period under review (the year ended 20th March, 1921), induced local merchants to place large orders for goods, both in Europe and India, in spite of the fact that at the time, owing to the trade boom, delivery could only be guaranteed after fairly long periods of delay. In addition to this many merchants made the great mistake of neglecting to purchase sterling or rupees against the time when the goods should arrive. In the meantime rates of exchange increased considerably. The result was that the market became glutted with goods, and, as the supply greatly exceeded the demand, local prices fell, the merchants had difficulty in meeting the bills of exchange drawn on them, and in many cases were compelled to declare themselves insolvent. In addition locusts played considerable havoc with what would have otherwise have been a good harvest, and the consequent shortage of cereals necessitated fairly large imports of rice and wheat from India in spite of the fact that India could ill afford to spare the grain.

Against these two adverse conditions may be placed the fact that the Bushire-Shiraz road, under the protection of the South Persia Rifles, has enjoyed unusual quiet and safety during the past year. Complaints of robberies, at one time so numerous, have practically ceased. The comparative security of the road had its effect in keeping down to a minimum the hire of mule and other animal transport. The Bushire-Borasjun Light Railway, which was erected by the Military Authorities in 1919, continued to flourish until after the end of the period under review, and facilitated the quick and cheaper transport of merchandise up country; in addition to which it was well patronised by a fairly large number of passengers.

Towards the end of the year the unsettled political situation in the north had its effect on the south, with detrimental results on the dispatch of goods to the interior; indeed, some merchants brought back their merchandise from the north and it now lies in warehouses in Bushire pending a more tranquil state of affairs in the interior. The withdrawal of the Indian troops from south Persia and the reduction of the local garrison has not been without its influence on the trade of Bushire.

The fluctuations in the rate of exchange have been extreme

during the period under review, in the case of sterling dropping as low as 20.4 krans per £1, and in the case of rupees as low as 241.8 krans per 100 rupees (both in April, 1920). The maximum rates reached were 54.17 krans per £1 (in March, 1921) and 365.8 krans per 100 rupees (in February, 1921). Average rates were 37 krans per £1 sterling and 300.52 krans per 100 rupees.

The enhanced price of bar silver in the open market, which has reflected itself with the same disconcerting results as have been seen in China and India during the same period, was an adverse influence, while the reduction in British military expenditure, ranking as a reduction in exports, helped the depreciation of the kran. Moreover, the slump in Eastern products in the home markets has discouraged exports, and Persia finds it increasingly difficult to balance her trade.

Since the close of the past official year, however, various changes have taken place which are likely to have far reaching and adverse effects on the trade of the country. The reduction of the strength of the protective military forces, for example, will result, it is feared, in the revival of unsettled conditions in the interior of the country. On 21st March last, the Bushire-Borasjun Light Railway ceased to carry passengers and public goods, and, all efforts to affect a reasonable sale of the railway as a going concern having failed, it was dismantled and shipped to India before the end of August. The increased export duty on gum tragacanth has met with great opposition, as it is believed that unless this tax is modified considerably there is grave danger of Persia losing the market entirely, as, owing to favourable rates of exchange, it is possible to place Anatolian gum tragacanth on the market at little more than half the price of the same quality in the Persian product.

CIGARETTE MAKING AT JAFFA.

The Department of Commerce and Industry of the Government of Palestine have forwarded a report on conditions in that country, in which it is stated that local labour, recently introduced, has proved peculiarly adaptable to the work provided in a cigarette factory at Jaffa, which the Director of the Department recently visited. At present no Palestine leaf is used in the factory, as none suitable has yet been offered, but the Department of Commerce has stated that, in order to assist Palestine growers, packets of even 50 kilogs. will be accepted.

NOTES OF THE WEEK.

The Government and Egypt.

At the time of writing Lord Allenby has not yet met the Cabinet, but he has had interviews with Lord Curzon, and Mr. Lloyd George is understood to have spent part of the week-end at Chequers in studying his report and Lord Curzon's memorandum upon it. It is possible that a decision may be taken on the subject before these lines appear, but we feel that no good could be done by attempting to forecast it. Those with whom the responsibility lies can have no excuse if they fail to realize its tremendous importance. Englishmen and Egyptians alike look to them to do the right thing, and if they fail, will want to know the reason why. Our Cairo Correspondent indicates that in Egypt there is a fear that the question may not be dealt with entirely on its own merits; that it may be subordinated, in fact, to considerations connected with party politics in one form or another. Whatever happens, it is to be hoped that events will lend no colour to such fears and suspicions. If, unfortunately, the contrary should prove to be the case, it would not help the political prospects of those responsible.

Roumania: A False Report.

In referring last week to a Frankfurt report that M. Bratianu's Government proposed to nationalise all foreign undertakings and banks in Roumania, we expressed the belief that Frankfurt had been misinformed. Our view proves to have been correct, for the Roumanian Legation in London has been in communication with Bucharest on the subject, and is informed that the statement referred to is entirely without foundation. It is well to have the lie nailed to the counter so promptly, for though it would hardly have gained credence in any well-informed quarters, there was just the possibility that it might do some harm. Roumania has quite enough difficulties to contend with these days without having them added to gratuitously; and it is unlikely that she will go out of her way to add to them in any such manner. The Government is almost sure of a majority at the coming elections, but the size of that majority is by no means a matter of certainty, and M. Bratianu is bound to walk warily just now.

A Yugoslav Cabinet Hitch.

A telegram sent from Belgrade on February 4 announced that the Minister for Commerce, M. Spaho, had resigned, and that M. Pashitch's Government

would probably be seriously embarrassed thereby. As M. Spaho is leader of the Bosnian Moslems, and the withdrawal of their support would leave the Government without a working majority, there appeared to be justification for the view expressed; but no further announcement having been made, it looks as if the storm has been weathered. Probably M. Pashitch has found means to assuage M. Spaho's indignation, which was apparently caused by failure to satisfy the Bosnian landowners in the matter of compensation for expropriations. In any case the Skupshtina has been working harmoniously enough to approve the commercial treaty with Germany by an overwhelming majority, and to express the desire for closer and more direct commercial ties with that country. In the absence of definite news to the contrary, therefore, we conclude that the veteran Premier has avoided shipwreck on this Bosnian Moslem rock, as he has avoided it so often before on other rocks quite as formidable.

"Come Over and Help Us."

A short time ago the Balkan Committee published a resolution reflecting upon the internal affairs of Yugoslavia. It was a rather ostentatious display of interference, and perhaps neither the attention it drew to itself nor the indignation with which it was greeted was wholly unexpected. But the news contained in a recent telegram from Belgrade puts the boot on the other leg. Sixty-three Croatian Members of the Yugoslav Parliament have proposed the drawing-up of a memorandum in which a claim on foreign Powers is to be made for the creation of an independent Croatian State, or at least for autonomy within the borders of Yugoslavia. It is stated by the Frankfurt Correspondent of the *Observer* that this memorandum will be presented to the Genoa Conference. If such a knotty proposal were ever to come before Genoa it would no doubt find support in more than one quarter, for there are politicians in certain countries who long for the dissolution of Yugoslav unity. But supposing that this report of the memorandum be correct, we can imagine no more certain way of frustrating interested politicians' hopes than foreign intervention. Yugoslavia will stand or fall through its own merits or demerits; and any attempt on the part of an outsider to loosen the mortar between the bricks will but make it set the faster. In recent times there have been numerous examples of the folly of trying from outside to disintegrate a State, and nowhere have such attempts been less successful

than in the Triune Kingdom. Though Empires may be felled from outside, States dissolve from within.

Bulgaria and the Aegean.

Our Sofia Correspondent, in his letter which we published last week, referred to a point that will have to be faced fairly and squarely by the Powers if the Near East is to have peace, and if respect for Western promises is not to perish altogether out of the Balkans—the question of Bulgaria's outlet to the Aegean. With this is linked up the future of Thrace; and when these points are being considered it would almost certainly be a wise thing for the Powers to discuss among themselves that old question of which we have not by any means heard the last—autonomy for Macedonia. But it is the problem of the promised free economic outlet to the Aegean that cries most urgently for an answer, clear and definite, if Bulgaria is not to be driven to the conclusion that her good conduct in doing her best to meet the Allies' wishes has been a mistake, and that she would have gained more by following a policy of obstruction. In any case she has been promised the outlet, and the Allies, big and small alike, are in honour bound to see that she gets it within a reasonable time.

An Opportunity for Statesmanship.

The question is, we realise, an extremely difficult one, and one on which feeling is apt to run high at times; but it will have to be faced sooner or later, and the sooner the better. We believe, moreover, that it will certainly pay Bulgaria's neighbours if they behave generously to her in this matter instead of insisting stiffly that she may have her pound of flesh, but not one drop of blood. A "free port" in another Power's territory is never entirely satisfactory to either party; in practice it is apt to prove far from free; and it would be far more satisfactory all round if the "free outlet" could be approached through a "free corridor"; in other words, if Bulgaria were given a strip of territory, however narrow, linking her up with her Aegean outlet. She would have to pay for it in one form or another, no doubt, but she should be ready to do that; and the freedom from 'incidents' of one kind and another that would be inevitable under any other arrangement would be an incalculable blessing to all parties concerned. The fact that there would be another barrier, however, slender between Turkey and Greece would surely make for peace in the Balkans; though we do not lose sight of the fact that South-Eastern Europe may feel a certain nervousness about a common frontier between Bulgaria and Turkey.

The Thracian Factor.

The question of an Aegean outlet for Bulgaria would be considerably simplified if the Powers decided to give to Thrace, or any considerable portion of it, a measure of autonomy. Any proposal of the kind would almost certainly meet with vehement protests on the part of the Greeks; but it is quite possible that in their innermost hearts, Greek statesmen, capable of taking a wide view, would not be sorry to have it made, and to be able to attribute responsibility for any action taken to the Great Powers among the Allies. For it is very much open to question whether it is to the best interests of Greece to hold Thrace. Recent travellers in that region have been impressed by the number of troops that have to be maintained there, and the cost in man-power and in money of keeping up such a force must impose a heavy tax on a nation which can ill afford unnecessary

burdens at this time. At all events, it would be no disservice to Greece to raise the question at the Conference, and the Thracian factor is one that cannot be ignored in any attempt to find peace for the Near East.

The Visit of Dr. Benesh.

It is probable that before these lines are read Dr. Benesh, the Czecho-Slovak Prime Minister, will have arrived in London. He is stated to have come to discover the real attitude of the British Government to the Little Entente and to learn how the proposed Genoa Conference will affect his own programme of economic reconstruction in Central Europe. It is said that intrigues have been afoot for several weeks for discrediting Great Britain in the eyes of the Little Entente, and however plain the value of such campaigns may appear here at home, where we know for certain that the Government supports the Little Entente, we can well understand the uneasiness that opponents of the Genoa Conference and, consequently, opponents of Great Britain's influence in Central Europe, have caused in these hotbeds of rumours and alarms. Dr. Benesh is a man of as far-reaching ideas as is Mr. Lloyd George himself: he is also a statesman who has the creation of a solid structure, made almost from débris, to his credit. We hope indeed that our Premier will be able to convince this Minister of the most successful of the new States that his schemes for the reconciliation of Europe will not adversely affect Czecho-Slovakia or any other member of that family which Dr. Benesh is nurturing in so statesmanlike a way.

Railways in Irak.

The railways built in Irak during the war played a highly important part in our conquest of that country from the Turk. Of their cost men speak, even to-day, with bated breath, but in comparison with outlay in some other fields it may be said to have yielded a good return, and upon the whole the engineers have reason to feel not dissatisfied with their work. Now, it is announced, the railways are being valued by the Disposal and Liquidation Commission, with a view to their being transferred, at the valuation price, to the Government of Irak. The official statement adds that King Faisal's Government may subsequently be prepared to sell or lease them to a private commercial company. That would in all probability be a wise course; for, whatever may be the case elsewhere, it is very questionable whether State ownership of the railways would be advisable in Irak. Whether, and how, the lines would pay we do not pretend to be in a position to estimate. It must depend, of course, to a very large extent on the amount paid for them; but there are other factors to be taken into account—the ability of a private company to protect its property, the number and type of the staff employed, and so forth. It will be extremely interesting if the lines are offered for sale, to see what native opinion on the matter is, as indicated by the desire, or otherwise, to invest in the enterprise.

Disturbed Persia.

Another of those 'incidents' to which the Persian Government, perhaps wisely, attaches so little importance in these democratic days is reported. A force of gendarmes, commanded by one Colonel Lahouty Khan, who is described as "a well-known Democrat," attacked and captured Tabriz, making short work, it seems, of the Cossacks whom they found there. The motive for their action appears to have been their unwillingness

to serve under the Cossack commander, but what lay behind is unknown as yet, and will probably remain so. What is clear, according to reports that come by way of Allahabad, is that the gendarmes were joined by the Nationalist party and that they arrested the Governor-General and appointed a Deputy-Governor after their own liking. But a Teheran telegram represents their triumph as short-lived, for on February 8 a detachment of Cossacks from Suj Bulak attacked Tabriz, and, the Government troops in the city co-operating with them, captured it after three hours' fighting. Colonel Lahouty Khan and some three hundred of his followers made good their escape across the Caucasian frontier. The bulk of gendarmes and a body of Caucasian Bolsheviks are reported to have taken up a position about forty miles from Tabriz. Reinforcements are being dispatched from Teheran; but we do not entirely envy the lot of the newly-appointed Military Governor of Tabriz, Ismail Khan; for it seems probable that the Bolsheviks mean mischief.

France in the East.

Before General Pellé left Paris on his return to the High Commissionership of Constantinople, he gave an interesting lecture on "The Position of French Interests in the Orient," and since the importance of the continental view is becoming increasingly urgent, it may be well briefly to indicate what he said. First he remarked the indecision of the respective policies of Italy and of Great Britain. Though Italian interests were, he said, apparently identical with those of France, Italian policy was still irresolute; while British policy also lacked unity, though on the whole he thought it eventually would become favourable to French projects. From this it would appear that General Pellé by no means despairs of French influence in the Orient, as is the sad and unceasing wont of many journalists in Paris; his outlook indeed seems to be optimistic. The plain truth of course is that there is room in the East for all, and that talk of hegemony and similar impossible things is so much idle bletcher. But the French High Commissioner was emphatic in his references to Turkey. Turkish ambitions, he asserted, would have to be very carefully watched, and chiefly because they had not been checked in time. French expert opinion has never made the mistake of underestimating Turkish potentialities, that mistake which has caused almost incalculable miseries.

THE WEEK AT HOME

London, Monday Evening.

The Geddes Axe.

The Geddes Economy Report is out, and Whitehall is weeping tears of rage at the prospect of retrenchment; moreover, there is a sneer on the face of bureaucracy at the stupidity of a public which prefers a probable reduction of income tax to the continuance of a really adequate (if rather expensive) administration. The report proposes savings amounting to £75,061,875, divided as follows:—Army £21, Navy £20, and Air £5 million; Education £18, Health £2½, War Pensions Administration £3-10 million; and on Trade, Export Credits, Agriculture, Police and Prisons and sundries, another five millions.

Not quite all this will be lopped off, of course, but a number of respectable people will certainly get the sack for the good of their country. The controversy over the reductions is divided, like Gaul, into three parts. There are those who hold that the axe might have cut off a good deal more; but after all there is a limit to man's

inhumanity to man. The Conservatives dislike the reductions of the fighting services, and are opposed to the suggested unification of Navy, Army, and Air—Sir Eric wants to amalgamate the services like a railway system—and they will raise the cry of security. Liberals hate the idea of economies on education, and they will raise the cry of progress and the next generation. Labour likes the idea of sacking soldiers, sailors, and policemen, but it loves an official—indeed most of the Labour leaders end their days in the Civil Service at £2,000 a year—and as it does not know exactly what to say in these difficult circumstances, it will as usual say nothing particular at all.

The idea of unifying the fighting services is probably fallacious, and the reductions suggested strike one as a little too drastic. We do not expect a war, but after all such things have happened before, and the Geddes report seems to leave us rather under than over, the minimum safety line. Of course security, in the military sense of the word, is impossible; it is like the man who spends his whole income in insuring against every possible risk. But it is just as well to see that your fire insurance is adequate.

It is very much the same with education. I am not naturally predisposed in favour of the teaching profession, and they have not shown to advantage in their public wrangles over salaries—the women teachers in particular used the war as an opportunity for profiteering—but there are some economies one cannot afford, and certain of the reductions proposed in this direction will cost more than they are worth.

On the whole I fancy that the £75 millions will be whittled down eventually to a reduction of £60 millions, and I have heard of bets in the clubs on that basis. But some people will bet on anything. There was actually a sweepstake on the papalelection for a hundred pounds, and somebody sold an Italian Cardinal whom he drew but did not fancy for double the price of the ticket.

Westminster.

Parliament has been dull, with the shadows of dissolution hanging over it; and the electioneering touches in the speeches have reminded the onlooker a little of the preliminary tuning of the fiddles in an orchestra. Everybody is so anxious to get the right note, and from time to time a ghastly screech is heard, like that of a soul in torment—it is a member who has made a platform point that has not come off. The King's Speech contained nothing noteworthy, and the debate on the Address was a mere preliminary rehearsal.

The Wee Frees talked of the sins of the Government, with the usual assumption (shared by Lord Robert Cecil) that honesty resides only in themselves; Labour talked of unemployment, but could only suggest the

making of more roads out of the rates, and more Government trading at a loss, and Mr. Lloyd George talked of the pacification of Europe. He is proud of his Genoa cake, but unfortunately nobody except Russia seems to want to eat it. France does not believe in the virtue of conferences. America is suspicious of European entanglements again, and the Italian Government, which would have been host, has most unkindly fallen.

Ireland.

The situation in Ireland is again grave. The preliminary agreement between Ulster and the Free State has broken down, and last week there were serious riots between representatives of both sides. The Sinn Feiners led a foray into Ulster and kidnapped many representative Ulstermen, and there has since been a foray also by Sinn Feiners, at an Ulster frontier station. The repercussion of this was seen in the renewed outbreak of rioting at Belfast. The Ulster Government is calling for protection from British troops; the Free States authorities are seriously perturbed. These outbreaks appear to be due to the Republican faction, which has broken away from the Collins-Griffith provisional Government, and which is openly working to destroy the Treaty. Unfortunately the strength of the De Valera-ites is at least not diminishing.

The French Pact.

Meanwhile the proposed Pact with France is giving rise to some controversy. It is in fact a debt of honour, and is so regarded by most people in the country. But the Independent Liberals are in full tilt against it, despite the advice of Lord Grey—a Nestor who has been told to keep quiet for the present—and the *Daily News*, true to its old pro-Germanism, actually suggested last week that we should make a similar pact with Germany to protect that inoffensive sheep against the ravaging Gallic wolf. Labour, too, is anti-French, but its arguments were so confused that the Prime Minister had no difficulty in making fun of them.

Stock Disease.

The outbreak of foot-and-mouth disease, which has spread over most parts of the country, has assumed serious proportions. Strict measures are being taken to deal with it, but it is the worst epidemic of its kind that has been known for over thirty years. It involves serious loss, as the affected cattle are always destroyed, but experience shows that that is the only way to eradicate it. Stock-breeding is so important an industry in this country that drastic steps are necessary to protect the herds from contamination.

The Theatre Again.

Short runs and heavy losses continue to be the rule rather than the exception in the theatre, and the whole dramatic world is now occupied in the pleasing operation of feeling its own pulse. Mr. Gordon Craig has attacked the cinema; the managers are attacking the entertainment tax; the public is criticising the authors, and the authors are criticising the critics.

But apparently the real trouble is being diagnosed as speculation in theatre rents, which renders it almost impossible to make a play pay unless it fills the house every night, and that is almost out of the question, unless the play is so extraordinarily good (or bad) that it makes the hit of the season. But there seems no means of

eliminating the speculator except a catastrophe, which would cure the disease, but might kill the patient.

Railway Fusions.

"Disappearance of the Midland Railway" made an effective headline last week, that Corporation being one of the greatest in the kingdom. It has, as a matter of fact, only disappeared in the sense of being amalgamated with the North-Western, in pursuance of the Geddes policy of railway fusion. The West Coast system will in future be operated at Euston, and will include the L.N.W.R., the Midland, Lancashire and Yorkshire, Glasgow and South-Western, and the Caledonian, as well as one or two minor lines of small importance. The other great system is the East Coast, which is already in process of fusing the Great Eastern, Great Northern, Great Central, North Eastern, North British, and Highland lines. Co-operation is to replace competition, which has been ineffective for many years; and the economy in working is expected to be considerable.

Ordinary fares have not yet actually come down, and they are still monstrously heavy. But all sorts of concessions are being made. On the South-Eastern Railway the other day for instance, a polite old station-master whom I have known since perambulator days told me that I could travel first class at the price of third after half-past ten in the morning; I have grown so used to travelling third-class at the price of first that the change came as a novel surprise. Another railway company advertises to supply "season tickets half-price for wives," at least for one wife, for the booking-clerk, who is a local preacher, is said to have looked slightly scandalised when asked how many wives the regulations admitted. Market and excursion tickets, too, are issued in increasing numbers, but the week-end is still a miserable Saturday to Monday affair, at single fares and a-quarter. If the railways want to be really popular they will restore the Friday to Tuesday trip. But for the moment they seem to be bent on improving the speed, rather than diminishing the cost, of travelling; and there is a good deal to be said for that policy.

Frocks and Frills.

The papers are full of pictures of Princess Mary's wedding, travelling and honeymoon frocks, and every drawing-room, I believe, is discussing the absorbing details of these creations. Such mysteries are beyond me, but in that ceaseless pursuit of truth which distinguishes the philosopher and the journalist from the common clay, I asked a usually sensible woman for her views. The verdict was that the Princess's taste in dress was exquisite, but that her hats were a little too subdued for the present day. I leave it humbly at that.

The Week's Books.

The ordinary biography of a royal person is couched in a vein of flattery that is a little nauseating. Miss Mabel Carey, in "Princess Mary" (Nisbet) has at least avoided the worst faults of her tribe; her real difficulty in writing the life of the Princess is that the greater part of the young lady's career is still ahead of her. She was only born in 1897! It is interesting to note that King Edward wished her to be called Diamond, in memory of the Diamond Jubilee year.

I cannot count myself among the admirers of Mr. Maurice Hewlett; in fact, as a rule, I cannot read him. The fault is mine, no doubt. But I must confess I modified my opinion after looking through some of his "Wiltshire Essays" (Milford). He understands the peasant. I think perhaps he makes rather too long a claim when he suggests that they can "trace their descent, through sire or dam, to the people who were here before Stonehenge was raised by Celtic colonists." I confess I should like to see one of those genealogical trees. Mr. Hewlett incidentally prophesies that an age of poverty is ahead of us when manufactures will cease and towns decay—when "There will be no Army, no Navy, no great estates, no great farms"—only a few peasants. I hope things will not be as bad as all that.

From Our Own Correspondents.

EGYPT.

Cairo, February 4.

The Political Situation.

Since my last letter events have taken place which must have caused to many the surprise which I forecast might be created if the British Government did not speedily give a favourable reply to the proposals put forward by Sarwat Pasha and supported by Lord Allenby. A *communiqué* was issued last Monday to the effect that the High Commissioner had been summoned home in order to give the Secretary of State for Foreign Affairs information and advice in regard to the present situation; and the *communiqué* added a statement explaining the policy, which the British Government had adopted and would continue to adopt, and declaring that the Cabinet could not possibly recommend to Parliament the recognition of Egyptian independence and the abolition of the Protectorate unless an agreement was come to which would be of a nature to assure Imperial communications, safeguard foreign communities in Egypt, and protect Egypt against all foreign interference, direct or indirect.

This *communiqué* caused not only surprise but considerable disappointment. In the first place it is evident that the British Government does not at all appreciate the local situation or its immediate requirements; for the proposals made by Sarwat Pasha do not in any way affect the *status quo* in regard to the conditions in respect to which the British Government requires assurances before it can recommend Parliament to recognise Egyptian independence and abolish the Protectorate. Sarwat Pasha's proposals leave quite unaffected the military position which has hitherto enabled us to assure the protection of Imperial communications and of the foreign communities, and safeguard Egypt against foreign interference of every description; they merely provide for the introduction of a constitutiona régime which will put an end to the anarchical state of affairs that has come into existence owing to the absence of the constitutional machinery necessary for the proper administration of the country; which will permit of the initiation of constructive work of every description that has for so long been retarded; and which will divert the energies of the population into channels of more practical utility.

Grave Misgiving.

It is felt that there is also an element of bargaining in the British statement which, to say the least of it, is most unfortunate at the present juncture, where on the contrary a generous gesture appeared to be called for. Again, the *communiqué* is remarkably inconsistent, for after announcing the reason why the High Commissioner has been summoned home it proceeds to put on record a decision in regard to the very matter on which he is expected to advise and inform the Cabinet on his arrival in London. The general impression which I find reflected in every section of the Egyptian and non-Egyptian community is one of grave misgiving as to the British Government's real intentions and the outcome of Lord Allenby's conference with the Foreign Office. There is, indeed, a growing conviction that the Egyptian question is not being dealt with on its intrinsic merits, but that other, Home, considerations of which the Egyptian public can know nothing, are influencing the Cabinet in its attitude towards the question.

Everyone awaits the result of the conference in London with anxiety, and the general feeling on the matter was illustrated by the send-off given to Lord Allenby when he left Cairo on his mission to London. The company assembled at Cairo station comprised representatives of every community, the Egyptians being headed by Adly Pasha and all the ex-Ministers, and the Europeans including all those having important interests in the country. Old residents declare that it was one of the biggest gatherings seen at the station since the days of Lord Kitchener; and the conversation

which one overheard at every point left no doubt in one's mind as to the sympathy and esteem felt for the High Commissioner, and the approval with which everyone regarded the policy he has followed during the past two months, and the proposals which he has put forward for the solution of the political deadlock that has arisen.

Lord Northcliffe's Visit.

It is surely a strange coincidence which has brought Lord Northcliffe on the conclusion of his tour round the world to this country at the present critical stage. The great journalist and publicist arrived here in Cairo on Monday last, the very day on which the above-mentioned *communiqué* appeared, and he leaves again to-night for Palestine. In the relatively short time which he has spent in Cairo he has been busy interviewing prominent representatives of every class of the community having a stake in the country, including business men from Alexandria and Egyptians of every shade of opinion. Knowing the ability, and one might almost say genius, of this Napoleon of the press, one can be pretty certain that he has by now been able to obtain a very accurate impression of the true state of affairs and the requirements of the situation, which should prove invaluable to his newspapers when the Egyptian question comes up for discussion at home, as it is bound to do in the very near future.

ROUMANIA.

Bucharest, January 30.

Political.

M. Bratianu, the Prime Minister, on the occasion of his taking over the reins of Government and in the absence of Parliament, issued a manifesto addressed to the country, in which he emphasized the necessity of a strong and experienced Government in the present distressful circumstances; and at the same time he published in the *Monitorul Oficial* a declaration outlining the programme of the new Government. The essential points of this programme may be summed up, as follows. A policy of social equity; completion of the Agrarian Reform; betterment of the condition of the working class; the restoration of the financial situation of the country commensurate with its riches; putting an end to waste; re-establishment of budgetary equilibrium; diminution and abolition of taxes which are not absolutely indispensable for the needs of the State; the fostering of production; reform of the administration; repression of abuses; the insuring of educational and religious rights to every nationality, language and creed; and finally, the restoration of Roumania's prestige abroad.

It must be admitted that the programme sounds very promising, and in the interest of this country it is greatly to be hoped that the new Government will be in a position to carry it out as speedily as possible.

The Elections.

In view of the fact that the elections were fixed at a very early date, the different political parties have not had much time to prepare their electioneering campaign, and have had to plunge straight into it. This will not

Leaders of the World's Office Equipment and Filing Systems.

be an easy matter, on account of the present inclement weather and the consequent difficulties of locomotion—circumstances which are in favour of the Government, who have the advantage of having the whole administrative apparatus at their disposal. Although there are signs that the contest will be very keen in practically every constituency, it is generally felt that the Government have a good chance to win through in the Old Kingdom, Bukovina and Bessarabia. This would be chiefly due to the fact that the Opposition is not so united as was at first announced. In Transylvania, however, if the Liberals do not succeed in coming to some arrangement with the Transylvanian National Party, the chances of the Government are considerably reduced.

Economy at the Foreign Office.

M. Duca, the new Minister for Foreign Affairs, intends to reduce the next year's budget of his Department by 70 to 80 million lei, by abolishing superfluous legations, by reducing the number and salaries of the staffs at the remaining legations, and by recalling most of the Roumanian Missions abroad. Although the budget of the Ministry for Foreign Affairs was originally fixed at 28 million lei, the Exchequer actually disbursed 300 million lei to cover differences of rate of exchange. Out of this amount 165 millions were allotted to the upkeep of the Diplomatic Corps abroad. M. Duca has, therefore, decided to suppress the following legations: Madrid, Lisbon, The Hague, Christiania, Helsingfors, Tokio, and Cairo. In order that Roumania should still be represented in the above countries, the Minister in Paris will act also at Madrid and Lisbon; the Hague will fall to the Minister at Brussels; and Christiania and Helsingfors to the Minister at Stockholm. The abolished legations will be reinstated as soon as the financial situation of the country allows. The Secretaries of Legation attached to the Minister at the Vatican will also be recalled. It is further intended to cancel the posts of Consul-General at Paris, Prague, Budapest and Lemberg; and beginning from February 1, all existing legations will have only one secretary, with the exception of London, Paris, and Berlin, which will be allowed to have two. The Government has also decided to recall all commercial attachés as well as all military and civil Missions, with the exception of those entrusted with the reception of goods for the State.

Raising of the Censorship.

In response to the Opposition's complaint that the elections will not be free under the prevailing exceptional measures and censorship, the present Government has decided to modify the text of the 2nd and 3rd articles of the former Cabinet's decree with reference to the censorship. The modification reads, as follows:—Art II. Meeting will be free. Newspapers, manifestoes and electioneering posters as well as publications of any kind will no longer be subject to previous authorisations and to preventive censorship. The parties concerned, however, remain responsible for any abuses committed, which may lead to the infringement of public order. Art III. In the military zones, during the electoral campaign, the military authorities will take the necessary measures to ensure the freedom of electoral propaganda.

Roumanian-Yugoslav Military Convention.

A military convention has been concluded between Roumania and Yugoslavia. The pith of this convention is a mutual obligation on the part of either country to give military assistance to the other whenever one of these States is unjustly provoked by a third party. This convention was signed on behalf of Roumania by General Cristescu, the Chief of the Roumanian General Staff, and on behalf of Yugoslavia, by General Petichitch and Colonel Milovanovitch. It is reported that General Cristescu was very warmly received in Belgrade and that he readily agreed to the proposals made by the Yugoslav General Staff.

The Banat Frontier.

According to a report from Temesvar, the Roumanian-Yugoslav Commission for the delimitation of the Banat boundary between these two countries has arrived at

the following settlement. The frontier has remained in the principle the same as that fixed by the Sèvres Treaty, with the following modification:—Roumania has obtained the villages Csorda, Bebe, and Pusztakerestur in exchange for the villages of Gross-Gay, Crivabara, Churian and Jibova, which have been ceded to Yugoslavia. By this settlement Roumania is supposed to have gained a territory of about 4,500 acres.

Communists' Trial.

The trial of the Communists was begun on Monday, January 25, before a Court-Martial. It is the biggest trial of its kind that has ever taken place in this country, considering the large number of accused, namely 250, among whom there are some women. They will all be tried at the same time, although the accusation embraces various degrees of offences, ranging from the adherence of some of them to the third International of Moscow, others for plotting under the Communist banner, and last but not least, for the outrage perpetrated in the Senate. More than 1,000 persons will be called as witnesses, among whom are several former Cabinet Ministers. Under these conditions the trial is expected to last at least three months.

General News.

Prince George and Princess Elizabeth of Greece accompanied by Prince Carol, Princess Helen and their baby, Prince Mihai, left Bucharest on January 29, for Athens via Yugoslavia. The Roumanian Crown Prince and his family will be the guest of the Greek Royal family for one month. General Dusmanis, who represented King Constantine at the christening of Prince Mihai, left Bucharest at the same time.

The Council of Ministers has approved the proposal of the War Minister to postpone the calling up of the 1922 class until April 1, instead of February 1. This measure has been taken to allow the young men of this class to participate in the forthcoming elections.

NEW CAREERS TO SUIT THE TIMES.

When contemplating the future of a son, or a change for yourself if present occupation is not all it might be, consider farming.

There is more in it than most people suppose. In fact, it is not claiming too much to say that it is a fascinating subject, well worth studying and understanding. There is, for instance, as much incentive, as much absorbing interest, and as much scope and reward for ability, in developing and working a commercial orchard, a cattle ranch, or a so-called "mixed" farm, as will be found in the hitherto more fashionable professions.

If this be doubted, write for the illustrated publication of two hundred and fifty pages, which describes some fifteen branches of farming in the Union of South Africa. There is no charge, nor attempt to boom or sell anything. Difficulties and risks are as frankly discussed as are the attractions of the life. The whole aim is to meet the requirements of the times, to assist those who are looking for new careers, by placing before them the pros and cons, so that they may have adequate evidence on which to judge whether farming in the Union of South Africa is likely to suit them.

Lack of farming experience need not deter. Practical training can be obtained in South Africa, on a Government farm at a cost of £50 a year for board, residence and tuition, or sometimes free as the working guest of an established farmer. But such training can be of use only to those who have the capital to acquire and work land. The minimum required is about £2,000.

Full particulars should in the first instance be obtained from the office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, W.C.2.

GREECE.

Athens, January 29.

The Liberal Party.

Although nearly fifteen months have elapsed since the Venizelists were defeated in the elections and their Chief left Greece, the Liberal Party is still without a leader. At first it was hoped here that M. Venizelos' decision to disappear definitely from the Greek political horizon was but a temporary one, and that sooner or later the creator of Greater Greece would return to the country which had treated him in very much the same way that the Athenians treated the victor of the battle of Marathon, Miltiades, about 2,400 years ago. But when M. Venizelos' wedding was announced, and, later, his departure on a long tour in the United States of America, his friends in Greece began seriously to fear that their Chief's decision was irrevocable. All hope, however, is not yet abandoned among his followers, and the leading members of the Liberal Party apparently still believe that one day their idol will come back and continue the work he had so successfully started.

The party has therefore decided not to take any steps at present with a view to appointing a new leader, and the Assembly of all its leading members, which will take place shortly, will confine its activities to electing a new Administrative Committee.

In a statement made by General Danglis to the editor of the *Ethnos*, the former said that it would be difficult to find a new leader. The chief of the Liberals, added the General, is so great that he could not be replaced, and his decision to retire from politics is a great national loss.

General Papoulas' Declarations.

Prior to his return to Smyrna, General Papoulas made the following declarations to the Athens correspondent of a foreign newspaper:—"The Greek Army in Asia Minor has certainly a desire to return to its home. Nevertheless, sufficiently fed, well clothed, united in a complete fraternity, a stranger to politics, and with its moral always high and strong, it is ever ready to accomplish its duty towards its Motherland, provided it is ordered to do so. It is not likely that Kemal will attempt any important move in the near future, first, owing to the rigorous winter, which prevents any serious enterprise, and secondly, because he is deprived of those means which would ensure him success."

Speaking of the resumption of hostilities, in spring, the General said this would depend on the political situation, of which, being a soldier, he was unable to give an opinion.

Rumoured Abdication of the King.

Much excitement was felt early last week in Athens as a result of a paragraph published in the London *Daily Express*, which, was attributed to that paper's Athens correspondent, to the effect that the new British Representative to Greece had endeavoured to persuade King Constantine to abdicate in favour of his son, Prince George, in which case M. Venizelos would return to Greece and resume his political career. This information was published in the majority of the newspapers here, and caused a profound sensation.

However, on the following day, the Athens Press published a denial of the news, at the request of M. Cartalis, Foreign Minister, and also a statement of the British Representative to Greece categorically denying the information.

It is a matter of general conversation here that the Athens correspondent of the *Daily Express* has written to the Government and to the British Representative, stating that he had not sent the information to London. The origin of the news is so far a mystery.

Raid on Newspaper Offices.

Last week the police raided the offices of the bi-weekly Socialist paper *Metarithmissis* and seized and burned the issue due to appear on the following day. The police also seized and burned the copies that had been given for distribution and sale to the newspaper agency. It would appear that the authorities took exception to a caricature which was being published in this journal, depicting M. Stratos, the well-known Party leader, in

the form of a wild goat attempting to grasp the fruits of premiership. It is said that the editor of the *Metarithmissis*, M. Frangoulis, is a British subject.

Prince Christopher accompanied by Prince Nicolas' wife, Princess Helena, and her two daughters, left for Cannes via Marseilles by the s.s. 'Patris'.

The Crown Prince and Crown Princess of Roumania are expected to arrive in Athens early this week.

Mrs. Lindley, wife of the British representative to Greece, has arrived in Athens from London.

BULGARIA.

Sofia, February 5.

American Bulgarian Treaty.

The event of the week has been the disclosure of the negotiations that have been proceeding between the American and Bulgarian Governments with a view to the conclusion of a Treaty. America was never at war with Bulgaria, and although she signed the Treaty of Neuilly, she never ratified it. The new Treaty will be modelled on the Treaty of Neuilly, but will omit certain parts, notably those dealing with the Covenant of the League of Nations, the frontiers of Bulgaria, Reparations, War Graves, and Labour. The Treaty may include some commercial clauses designed to encourage trade between the two countries, but of this nothing definite is as yet known. In fact the Treaty has so far been completely shrouded in mystery, the first announcement of its existence appearing in *The Times* of January 30.

The Bulgarian Cabinet has approved of the Draft of the Treaty, which is now being considered by the Parliamentary Foreign Affairs Commission of the Sobranie, and which should come before the Sobranie next month. In the almost certain event of its being passed, it will go to Washington for ratification by the American Senate. Although it does not radically differ from the Treaty that the U.S.A. concluded with Germany, the Bulgarians

welcome its appearance, feeling gratified that America has chosen to contract a separate agreement with them.

It is worthy of remark that America has of late shown considerable interest commercially speaking, in Bulgaria, several prominent financiers having visited the country, and a good deal of Bulgarian news appearing in the American Press.

Bulgaria and Greece.

The Sofia Press has never been cordial towards Greece, but it has now begun to adopt an almost hostile attitude *vis-à-vis* her Southern neighbour. Greece is reproached for not having observed the rights of Bulgarian minorities in Thrace, and more particularly for having obliged Bulgarians to enlist in the Greek Army and fight against the Turks in Asia Minor. In addition, Greece is accused of having deported many Bulgarians from Thrace to Crete and other islands.

Bulgaria has, no doubt, a good deal of right on her side in the above mentioned matters, but she has made a great mistake in not renewing diplomatic relations with Athens. The Bulgarian Legation at Athens still stands empty, Bulgaria being represented by the U.S.A., who, to make matters more difficult are not officially in relation with King Constantine. If Bulgaria and Greece are to become more friendly, the first thing to be done is for M. Stambolisky's Government to dispatch a Minister to Athens. He will be able to protest through the usual diplomatic channels against the behaviour of the Greek authorities in Thrace, which will be a mode of procedure more likely to lead to success than the present one of printing anti-Greek articles in the Government Press.

The Communal Elections.

The elections are drawing near, and all the parties are feverishly engaged in their electoral campaigns. Last week an unpleasant incident occurred at Plevna, Dr. Daneff, an ex-Prime Minister, and now one of the leaders of the Obedinist Party, being arrested. Dr. Daneff had made a speech and afterwards was taken to prison by the local police. His sojourn there was, however, of short duration, as the electors whom he had been addressing demanded that he should be set at liberty.

As far as can be judged the Government should obtain approximately half the seats, the Bourgeois parties and the Communists dividing the rest, with a preponderance in favour of the former. The Bourgeois are confident that they will obtain more; but until the leaders of the Democrats, Obedinists, and Radicals can come to a working agreement, it is doubtful if the Bourgeois stand any real chance of success.

Re-opening of Relations with Germany.

Herr Mertens, the Minister Plenipotentiary and Envoy Extraordinary of the German Reich, presented his letters of credence to King Boris on Friday, February 3. The new Minister knows the Orient well, having been German Consul-General at Constantinople for the last twelve years.

The speech of the new Minister was extremely cordial, and he made special reference to the commercial ties that he trusted would unite Bulgaria and Germany in the future. All of Bulgaria's former allies with the exception of Turkey have now accredited representatives to Sofia.

Radoslavoff Cabinet on Trial.

The High Court has now resumed its sittings and amongst the first to give evidence was M. Liaptcheff, ex-Minister of War, and a leading Democrat. M. Liaptcheff stated that Bulgaria would have remained neutral if the Entente had made serious and concrete proposals to Bulgaria. M. Malinoff, the Democrat Prime Minister at the time of the Armistice, also gave evidence, saying that three weeks before Bulgaria declared war, he, along with MM. Gueshoff, Tsankoff, Daneff, and Stambolisky, the chiefs of the Opposition parties, told ex-Tsar Ferdinand that it was essential for Bulgaria to remain neutral. M. Malinoff added that M. Stambolisky was not any more insistent than the others in his desire for Bulgaria to remain neutral. After he had become Prime Minister in the summer of 1918, M. Malinoff ordered a court of enquiry to be held

for the purpose of enquiring into the state of the Army. It was found that the food was insufficient, the clothing in a shocking state, and that the Government had not taken the proper measures necessary to ensure the proper maintenance of the Army. The money that should have gone to the keeping up of the Army had gone into M. Radoslavoff's and other Ministers' pockets. M. Malinoff concluded his evidence by saying that he did not attach any importance to the words attributed to Sir Henry Bax-Ironside (the latter was stated to have advised M. Radoslavoff to remain neutral and not support the Entente). M. Malinoff also paid a tribute to Mr. Fitzmaurice, who, he said, won great sympathy during the short time that he was in Sofia. It will be remembered that Mr. Fitzmaurice came to Sofia from Constantinople on a special mission shortly before Bulgaria declared war.

Miscellaneous.

On Monday January 30, King Boris celebrated his birthday. A service was held at the Cathedral, which was attended by the Cabinet and other high officials.

A memorial Service for the late Pope was held at the Catholic Church, Sofia, last week. King Boris was present, also the Cabinet, the Diplomatic Corps, the Inter-Allied Commission, etc.

Major Nicol, a member of the British Delegation of the Inter-Allied Commission, was presented on January 31, by Mr. Erskine, the British Minister, with the Military Cross. Major Nicol gained his M.C. in France in 1917.

It is announced that the Inter-Allied Military Commission of Control in Bulgaria will be closed down at the end of February. One officer from England, France, and Italy respectively will be left behind to supervise the carrying out of certain work that is in hand.

TURKEY.

Constantinople, January 31.

Peace Prospects.

The postponement of the Inter-Allied Conference which was to have been held on February 1 has somewhat eased the political situation for the time being. Both the Central Government and the Angora Government appear to be waiting to see what will be the outcome of the negotiations between France and Great Britain. There seems to be little hope of any concessions on the part of the Angora Government in regard to the National Pact, but the Central Government, so far as can be at present ascertained, whilst undoubtedly prepared to make a determined bid for the maximum of concessions, would not prove altogether intractable. Whenever the Allies do make up their minds to state their final decisions, the same trouble that arose last year will once again prove a stumbling block, namely, the question: Which Government has the right to represent Turkey? The Angora Government still refuses to acknowledge the right of the Central Government even to lend its name to a delegation appointed by Angora, and it will be by no means easy to arrive at a compromise in this connection. It is believed that negotiations are proceeding at the present moment with a view to settling the point, and it is said that if no agreement is possible the present Cabinet will be replaced by another administration charged with the task of settling peace without reference to the Angora Government. Mahmud Mukhtar Pasha's name is mentioned in connection with the proposed new Cabinet, but it is very hard to say exactly how much truth there may be in what amounts to little more than rumour at present.

Moderates v. Extremists.

If any confidence may be attached to the meagre news arriving by divers channels from Angora, it would appear that the little group of moderate deputies in the Great National Assembly, who are said to be in favour of compromise, have been considerably strengthened by the support of Rauf Bey, one of the Turkish signatories of the armistice of Mudros, who won fame as the commander of the Turkish cruiser 'Hamidieh' during the

Balkan War. It would appear that Rauf Bey has been unable to fall into line with Mustapha Kemal, not only in regard to the question of foreign policy, but also in regard to the constitutional issue. It is no secret that Mustapha Kemal has long been desirous of clipping the wings of the Sultanate, in order to further his own private ambitions; but Rauf Bey, having seen the world from an angle differing from the narrow perspective of Angora, must know well the disastrous consequences of attacking the Sultanate and Khalifate at the present moment. It is impossible to judge with certainty the progress of the conflict; but while it is probable that Mustapha Kemal will be prevented from meddling with the Constitution, it is unlikely that his position as the principal leader of the National Movement will be affected.

The Funeral of Said Halim Pasha.

The funeral of Said Halim Pasha, whose body was brought from Rome, took place on January 29, and was made the occasion of a most impressive ceremonial, which was witnessed by enormous crowds. The procession was formed by large numbers of clergy, dervishes students, naval and military cadets, as well as A.D.C.'s of the Imperial Family, Ministers, and government officials of all ranks. Even the political opponents of the late Grand Vizier, such as Dr. Riza Tewfik Bey, were seen amongst those who found it possible to pay that respect to the dead which they felt obliged to deny to the living.

Another Tram Strike.

Last week, without the slightest warning, the Tramway employees came out on strike, and the long-suffering Constantinople public had to plough backwards and forwards about its business through slush and mud, such as few other capitals in the world can produce. The tram employees appear to be making it a rule to enjoy the sport of watching the public trudge through the mud whilst they themselves lounge about at street corners with Bolshevik emblems in their button-holes. As usual, in such matters it is practically impossible to judge the right on either side, but there is no doubt whatever that Bolshevik propaganda has had a good deal to do with the unrest amongst the tram employees, who have been striking at fairly close intervals for the last two years. The company has on this occasion put up a fight, and is attempting to break the strike by running a number of trams with the assistance of about fifty or sixty loyalists. The strikers claim to have about 1,500 men out, and the company therefore will have to fight hard to win. Notices have been posted up to-day to the effect that all who do not return to work will be regarded as having been dismissed, and will not be re-engaged; but it remains to be seen whether this will have the desired effect.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

GREAT BRITAIN AND IRAK.

To the Editor of "The Near East."

Sir,—The letter of "Sinbad" in your issue of February 2 calls for some comment.

It appears that upon his own conception of our trade and assets in Irak he advocates the maintenance of our garrison there. He does not seem to be aware that such a step means the re-introduction into the country of an army not less in strength than existed in June 1920, the cost of which was very much more than the trade of Irak ever amounted to, or is likely to attain in this generation. The consideration of this discrepancy was a great factor in the inauguration of the present policy, which, well or badly conceived and executed, had for its expressed aim precisely what "Sinbad" claims. Perhaps the hastening of the pro-

cess of withdrawal has been prompted by the realisation of the fact that an Arab army will never become a useful reality, and that hope of handing over to adequate local forces can never be consummated.

The Arab army, in December last, after a year of recruiting, consisted of two weak infantry battalions, the nucleus of a squadron of cavalry, a mountain battery, all drawn from low class townees, and commanded by ex-Turkish army officers. In how many years (granted freedom from *coups d'état*) will "Sinbad's" garrison be free at this rate? To talk of maintaining a British-Indian force large enough to combat possible invasions by Kemal from the north is to betray a total ignorance of the terrain and circumstances. Mosul vilayet can be assured to Faisal only by agreement with Kemal on larger issues, not by fighting him.

With regard to "substantial assets . . . in the shape of railways" etc., upon which "Sinbad" lays such stress, I fear he speaks with lamentably little knowledge. If, as he urges, Government would give us the figures of expenditure on military operations and on public works, they would probably be of such a nature as to convince the British taxpayer that several hundred years must elapse before he could be reimbursed.

It is not enough to state what public works have cost: it is what they are worth to-day that matters. Basrah harbour cost millions. To-day it is far too big for any expansion of Irakian trade, and the surplus is therefore derelict. Improvements in river navigation engulfed large sums. To-day (except for the Machariyah diversion) they consist of Tigris and Euphrates as before the war with a few bundles of reeds on sticks to show where the deep water was in 1919. Railways cost millions to construct, and were built largely from scrap bought at famine prices in India. They have been a mighty loss from the beginning, and three months ago asked for the modest sum of Rs8,500,000 at once to enable them to keep running. Irrigation, except for the Hindiyah barrage, which was built at Turkish initiative and cost, was abandoned some time since.

As to raising Irak State Bonds, considering that the country is practically bankrupt, that taxes in many districts remain uncollected, that Faisal conceived it necessary to spend Rs.700,000 in bribes to potential enemies recently, I should say such bonds would be a doubtful security.

And, finally, oilfields. It might seem that "Sinbad", like so many others in this country, imagines Irak to be as full of oil as an Arab of fleas. The only places in Irak where oil is known to exist are Hit, Kirkuk, Chia Surkh, Gil, and the Jebel Hamrin, where it is traversed by the Tigris. None of these is proved in the commercial and technical sense. Chia Surkh was twice exploited and twice abandoned by the Anglo-Persian Oil Company, when the place was in Persian territory. Kirkuk and Gil both lie in strata so faulted and distorted that any bulk of oil is highly problematical; and all of them are a respectable number of hundreds of miles from the Persian Gulf.

If, as "Sinbad" asseverates, it is high time to counteract the malign influence of egregious anti-wasters, it is equally high time to examine more carefully the value of the assets of Irak in terms of these values to Britain, and to refrain from enthusiastic generalisation.

I am, etc.,

E. B. S.

London,

February 5, 1922.

ITALY AND THE DODECANESE.

To the Editor of "The Near East."

Sir,—I venture to enclose a copy of a telegram which I have just received from the Dodecanesian association in Athens named "Nireus."

You will see from this message that the local Italian authorities in Dodecanese, who lately infringed the ecclesiastical rights of the islanders by the forcible removal of their prelate, the Archbishop of Rhodes, now encroach upon the field of politics and attempt to abolish the old political system which has been always respected

from the Roman period, guaranteed even by the Sultans of Turkey, confirmed by the Powers, and repeatedly supported by Great Britain. It is noteworthy, moreover, that this Italian action is accompanied by the threat of casting the notables of the islands into the maw of the Kemalists.

I am sorry to be obliged to point out that these repeated hostile actions on the part of the Italian Administration in the Twelve Aegean Islands towards the unfortunate native cause natural indignation throughout Hellenism, inasmuch as the late Italo-Greek treaty, relative to the cession of the Dodecanese to the Motherland Greece, is thus reduced to a mere "scrap of paper."

Fully believing that this illiberal policy in the islands is conducted without the knowledge of the Italian people, who suffered so long from a foreign domination, and struggled hard for the realisation of their national unity, I venture, through the columns of your esteemed paper, to bring this new policy of the Governor in the Dodecanese to the attention of the Italian people as well as of all lovers of liberty and justice.

I am, etc.,

MICHAEL D. VOLONAKIS.
(Delegate of the Dodecanesians).

London, February 7, 1922.

(Enclosure.)

"By decree ninth December Italian Government changed electoral laws of Dodecanese and applied uniform with Rhioes. People foreseeing complete ruin their islands refuse postpone elections and take census of population. Italians threaten notables with prison fines and delivery to Kemalists.—Nireus."

GREAT BRITAIN AND TURKEY.

To the Editor of "The Near East."

Sir,—In reading the letter printed by you from the pen of Mr. J. M. Kenworthy, under date January 11, the first thought that occurs to me is how much greater the necessity for Members of the House of Commons to concentrate on affairs nearer their own gate—affairs of no less, and possibly of greater, importance than those of the Near East.

Especially is this truth emphasised when it is so plainly evident that the knowledge displayed by Mr. Kenworthy of Near Eastern affairs is so superficial, and obviously gathered from incorrect information so freely published by the Occidental Press.

Mr. Kenworthy displays his ignorance in his contention that to the Greeks the present Greco-Turkish war is racial and religious. He might be interested to know from one who has made the closest study of the Greek Nation's attributes that the inspiration prompting the heroic endeavours of the country in her struggle in Asia Minor is the traditional one of her breed—the policy of maintaining her right to defend her own handiwork, and in so doing she is but obeying the dictates of a feeling inherent in the heart of every real Briton. Greece is striving to control and constrain a nation which historical facts and authentic figures prove has maliciously disturbed the peace of the Near East for centuries past—a nation which had become recognised as an oppressor of liberty.

The Armenian massacres have been proved beyond the realms of doubt, and are now generally admitted to have been the most outrageous exhibitions of Turkish barbarism since the Turk first established his dominion in Asia Minor. The complicity of Turkish Officers of the highest grade and of officials of high state in these inhuman atrocities has been clearly proved, and the lone hand of Greece is the one now lifted in its endeavour to avenge the blackest crimes recorded in history.

Mr. Kenworthy speaks of the Greeks' endeavour to annihilate their hereditary enemy, the Turk, and, like others with little knowledge of the Orient or its mental machinery, saddles Greece with the wrong motive. He states that independent observers have described the atrocities committed by the Greek troops, and that, whatever the massacres by the Turks, they could not have exceeded the cruelties of the Greeks. If Mr. Kenworthy desires I can produce irrefutable proof to

him, giving the direct lie to the above information.

He is, of course, probably unaware that the Greek Army in Asia Minor is at present caring for over 84,000 refugees who have sought its protection from the ravaging cruelties of the Turks. These refugees are being fed by Greek charity and housed by Greek labour, and the Government have already expended a sum exceeding 100,000,000 drachmae to help the sufferers from Turkish misrule and tyranny. In addition over 32,000 of these refugees have been taken by Greek steamers to other parts of the country and placed in special encampments formed for them, where they are sheltered and fed.

Mr. Kenworthy might, with advantage, study the later history of Greece, and I wager he would find it of engrossing interest, more interesting even than the history of her struggles of 1827. He will then appreciate and realise that the little country he so undeservedly maligns is now struggling, risking her very existence, fighting to the full extent of her resources in men, material, and money for the principle of nationality; for territory that is indisputably Greek; for the rights of civilisation and the redemption of pledges given by other nations.

I have no doubt whatever that Mr. Kenworthy, when he has closely studied the situation as it now stands, will, like the just and brave fighter we know him to be, concede to Greece the fullest and most favourable consideration of her claims for justice, and for her zeal for freedom and humanity.

I hold no brief for the country, and I have no interest in her political troubles, but the principles that are at present prompting her to superhuman efforts should command respect and support of her earnest endeavour to obtain freedom for her people in Asia Minor without restraint from any shackles that would be imposed upon them by the Turks, a nation that in all her actions during the present war has proved, as she proved in 1825, capable of the highest forms of despotism and cruelty.

I am, etc.,

EILEEN M. ROSS.

43, Kehayia St., New Phaleron, Greece,
January 30, 1922.

A GIFT FROM THE EMPRESS OF ABYSSINIA

The Empress Zauditu of Abyssinia has sent to the Anglican Bishop in Jerusalem (Dr. MacInnes), a beautifully illuminated manuscript copy of the Gospels in the old Ethiopic script, bound in brocade covered boards and enclosed in a leather case; also a brass benediction cross of the finest Abyssinian workmanship. With the gift her Majesty sent a letter, of which the interpreter gave this quaint translation:—"The prevalent Lion of the Tribe of Judah, the elected by God's grace Empress Zauditu, daughter of Menelik II. of Ethiopia to the Right Reverend the Lord Bishop of Jerusalem of Britannic Church. After we present our respectable salutation and request to God that He may bless your Lordship's function. And we have sent to your Lordship as a memory a Gospel of the Four Apostles in Ethiopic language, and a cross for benediction. We hope your Lordship will accept them with pleasure. (dated) Nehasse 22, 1913, years of grace." The presentation was made by the Governor of Abyssinia's Northern Province, who was visiting Jerusalem in connection with some ancient rights of the Abyssinian Church touching the Church of the Holy Sepulchre, rights which under Turkish rule were transferred to the Coptic community. Only two other brass crosses of the kind mentioned are known to be in the British Empire. Incidentally it may be remarked that the Empress of Abyssinia refuses to drop the traditional title "King of Kings" and to take its feminine equivalent.

FRENCH AIR ROUTE.

Among the schemes for French aerial services this year is one for the establishment of a regular line between Marseilles and Genoa, if the Aerial Navigation subsidy proves sufficient. It is not intended that Genoa should be the final terminus; it is proposed that ultimately, by way of Naples, Corfu, Athens, and Salonika, the line should be extended to Constantinople, thus furnishing an alternative route from France by air to the Near East. As much of the route will eventually lie over water, the first branch of the line, Marseilles-Nice, will be served by seaplanes constructed by the Compagnie Aéro-Maritime de la Seine equipped with two 275 h.p. motors and capable of carrying 10 passengers and over 34 cwt. of goods and luggage. The Compagnie des Transaériens de Tours will run this new route.

THE FUTURE OF PALESTINE.

Administration Outlined.

Details of the provisional drafts of Orders in Council, by which it is proposed to establish the future government of Palestine, were issued last week. The Colonial Office is still in consultation with the High Commissioner and with other authorities as to these details, which are subject to modification and have not yet reached final form.

The principal order provides for the appointment of "a fit person to administer the Government of Palestine," under the designation of High Commissioner and Commander-in-Chief and confers upon him the powers necessary for the execution of the duties normally associated with the office of High Commissioner and for giving effect to the provisions of the mandate accepted by Great Britain, at the request of the principal Allied Powers, for the general administration of the country and the establishment of a national home for the Jewish people.

The High Commissioner will have authority, with the approval of a Secretary of State, to divide the country into provinces or districts in such manner as may be convenient for the purposes of administration; all rights in or in relation to public lands will vest in him, and also all mines and minerals, subject to the subsisting right of any person to work such mines or minerals by virtue of a valid concession; and he may make grants or leases of public lands, mines, or minerals, or, on certain conditions permit such lands to be temporarily occupied. Subject to the direction of the Secretary of State, the High Commissioner may appoint such public officers of the Government as he may think fit, and all such officers will hold office during his pleasure.

For the purpose of assisting the High Commissioner there will be an Executive Council constituted in such manner as may be directed from time to time by his Majesty's Government.

Legislative Council.

From a date to be fixed by the High Commissioner in Executive Council there will be constituted a Legislative Council which shall replace any Advisory Council then existing. This Legislative Council will have full power and authority, subject to any conditions and limitations prescribed by any instructions issued by his Majesty's Government, to establish such ordinances as may be necessary for the peace, order, and good Government of Palestine; provided (1) that no ordinance shall be passed which shall restrict complete freedom of conscience and the free exercise of all forms of worship, save in so far as is required for the maintenance of public order and morals, or which shall tend to discriminate in any way between the inhabitants of Palestine on the ground of race, religion, or language, (2) that no ordinance shall take effect until either the High Commissioner shall have assented thereto or the assent of his Majesty has been given by Order in Council or through a Secretary of State; and (3) that the High Commissioner may reserve any ordinance for the signification of his Majesty's pleasure, and shall so reserve any ordinance which concerns matters dealt with specifically by the provisions of the mandate. Further, his Majesty reserves to himself the right to disallow any ordinance to which the High Commissioner may have assented within one year of the date of the High Commissioner's assent, and to signify such allowance through a Secretary of State.

The Legislative Council will consist of twenty-five members, in addition to the High Commissioner, of whom ten shall be official members and fifteen unofficial members. The unofficial members will be (1) twelve persons to be elected in accordance with such Order in Council, ordinance, or other legislative enactment as may from time to time provide for elections to the Council; (2) one person to be nominated by the Associated Chambers of Commerce in Palestine, and two persons, not holding public offices in Palestine, to be nominated by the High Commissioner, who shall exercise his power of nomination, having regard to the representation of any community or interest which, after the elections are held, shall be found to have insufficient representation on the Council, this power to be exercised in such a way that one of the nominated members shall be a Moslem, one a Christian, and one a Jew.

The elected members of the Legislative Council will be chosen by primary and secondary elections, the primary election consisting of the choice of secondary electors, and the secondary election consisting of the choice of members of the Council by colleges of secondary electors. Every male Palestinian citizen over 25 years of age will be entitled to vote at the primary elections unless he has lost his civil right or claims to be a foreign subject, or under foreign protection, or is otherwise disqualified. For the purpose of primary elections every district will be divided into voting areas. The governor of the district, in consultation with the president of any municipal council or local council in the district, and the mukhtars of the villages, will define such voting areas, and will determine the number of secondary electors to be elected in each area on the basis that every 200 primary electors will elect one secondary elector; provided that if any village or quarter has between 150 and 200 primary electors it will be entitled to vote for one secondary elector; if it has between 350 and 400 primary electors it will be entitled to vote for two secondary electors, and the same principle will be maintained where the number of primary electors exceed 400.

Any person may be elected as a secondary elector provided he is on the register of primary electors for the district.

The secondary electors will be formed into twelve electoral colleges according to the religious community to which they

belong; the number of colleges to be allotted to each religious community will be proportionate to the number of secondary electors belonging to the several communities; and each electoral college will elect one member of the Council.

Civil and Religious Courts.

The judiciary will consist of magistrates' courts, district courts, with jurisdiction in all civil and criminal matters which are not within the jurisdiction of the magistrates' court, and with an appellate jurisdiction a court of criminal assize, with exclusive jurisdiction in capital offences, land courts, a supreme court acting as a court of appeal from the district and other courts, and tribal courts for cases involving the application of local customs. There will also be (1) Moslem religious courts with exclusive jurisdiction in matters of personal status of Moslems, i.e., in suits regarding marriage, divorce, alimony, guardianship, legitimation and adoption of minors, succession wills and legacies and inhibition from dealing with the property of persons legally incompetent; (2) Jewish religious courts with exclusive jurisdiction in suits and personal status of Jewish persons; and (3) Christian religious courts with exclusive jurisdiction in matters of marriage, divorce, &c., of members of their community other than foreigners. In particular, these several religious courts will exercise exclusive jurisdiction over any case concerning the constitution or internal administration of a Wakf or religious endowment constituted before the religious court according to the law of the community. The judgments of the religious courts will be carried out by the process and offices of the civil courts, which courts will subject to various conditions, also have jurisdiction in matters of personal status, and may call in any competent jurist to advise them upon such questions.

General Provisions.

All ordinances, official notices, and official forms of the Government and all official notices of local authorities and municipalities in areas to be prescribed by order of the High Commissioner shall be published in English, Arabic, and Hebrew. The three languages may be used in debates and discussions in the Legislative Council, and, subject to any regulations to be made from time to time, in the Government offices and the law courts.

If any religious community or considerable section of the population in Palestine complains that the terms of the mandate are not being fulfilled by the Government of Palestine, it shall be entitled to present a memorandum through a member of the Legislative Council to the High Commissioner. Such memorandum shall be forwarded to the Secretary of State for submission to the Council of the League of Nations, unless the High Commissioner gives a written reason to the petitioners for not forwarding it.

Special provision is made for the Government of territories comprised in Palestine to the east of the Jordan and the Dead Sea.

The director of the American Near East Relief Committee in Constantinople states that the largest children's hospital in the world has been opened at Alexandropol in the Southern Caucasus. It will have 6,000 beds, and the patients are drawn from Russian Armenian, and Greek nationalities.

An Army Order states that the Governor-General of the Sudan has been appointed by the Army Council to be a "Superior Military Authority," in connection with the statutory power given to the confirming authority to suspend sentences passed by Courts-martial pending the orders of a Superior Military Authority.

MUSICAL NOTES.

A Musician's Wanderings.

"A MUSICAL PILGRIM'S PROGRESS." By J. D. M. Rorke. (London: Humphrey Milford. 4s. 6d. net.)

The number of books written for the general lover (amateur) of Music is lamentably small; but even smaller, and more valuable, is that of books written by the amateur for his kind, so that in recommending this book as a work of the highest class both from writer's and reader's point of view, I wish to emphasize the rarity of Mr. Rorke's achievement and the double service he has done us.

This book is the history of the author's successive musical appreciations during about twelve years; a chronological confession made to a public whose corresponding indiscretions must appear black indeed against the white (and successful!) candour of Mr. Rorke. He ingenuously claims to be a "non-musician"—a preposterous claim, by which is meant, however, only that he was educated in large part by the player-piano. This modesty I say is false, as every page can show; for not only has he extreme intelligence, but his writing at times glows as with incandescent imagination. His description of the journey from Chopin to Beethoven as a "pilgrim's progress" I suppose we must accept, though progress implies a goal, and in music there are no pilgrims, but only wanderers, who pass and re-pass the visioned heights.

Mr. Rorke's awakening to Music began late, and, as nearly all amateurs begin, with Chopin's "Funeral March." After that, in impressionable University days, came more Chopin, and still more Chopin—in fact all was Chopin, blotting out other horizons. What freed the author from this detention was "Tristan und Isolde." The sapping of his confident world had commenced—"Music was entering upon the second stage of its conquest, and taking under its sway large new areas of thought and life that one had never known it could touch." Somewhere about this changing time came Debussy, of whom with most suggestive lucidity Mr. Rorke says he "depersonalises the world." I wish indeed that he had travelled farther down this dark road of thought. A brief period was then given to Tchaikowski, "a blind-alley"—one can see from its brevity how finely discerning a musician the author was already becoming. And then, not finally, but the last mentioned in this book, came Beethoven, of whom he has written so many memorable pages of sense that I would like to fill these columns with extracts. It is Beethoven of the last period in whom he finds a lasting repose, Beethoven especially of the later sonatas and quartets. In Beethoven for him the eternal heights are scaled, the overcapping heights where he may walk supreme and not giddily, where the atmosphere is not rarefied but purified, and where, far above the mists enveloping other peaks, he can realize the Truth transcending Beauty. It is fitting that Mr. Rorke's most distinguished writing should be reserved for this climax of his adventure, but of the many things that I have marked for quoting I may find room only for this: "Other art, when it floats free, floats outward through the quality of the dawn, Beethoven's inward, through the unutterable intimacies of a world that the evening gathers home."

There is nothing new in this journey, as Mr. Rorke discovered when he reached his latest stage, but in the methods by which he has, as it were, raised the signposts, blazing his trail, as he says, he had made the way

surely easier and far more interesting for others. As it happens, there is nothing in this book, except perhaps the pages upon Wagner (about whom I know nothing), with which I am not in hearty agreement, so that I'm going to borrow a few of his best expressions:—

Chopin's art puts a living significance into music for people who would never otherwise have found it there; but in the process it eclipses, for such people, the rest of music, rather than illuminates it. Chopin must be worked through. The cure for Chopin fever is Chopin *ad lib.* All these special qualities which make this music unique will in the end reveal their limitations.

Debussy stands for a sort of vision which sees so far into the infinite significances that the concrete drama of life is diminished to a tiny play of puppets rather than magnified into melodrama. It becomes difficult to believe that Debussy, or the tendency which he represents, is on the main road, as Wagner was on the main road, of that eternal search which is art.

There are moments in some of Beethoven's late slow movements when we find ourselves breathlessly still, surrounded by a light that shines downward from above, infinitely remote, infinitely near.

Tchaikowski. it was music that was for ever surging up, full of passion, desire or fear; and it was never attained.

Privately I suspected the rest of the world; outwardly I said simply, after innumerable trials, that Beethoven was not for me. If a mood of scepticism came, so drastic that all art seemed a sort of self-intoxication, all truth a delusion, all goodness an old wives' tale, I think I would find in Beethoven the foundation on which I could rebuild faith in their reality.

Sometimes I think of all the lovely things of which the story-makers used to dream in the old days—magic carpets, helmets of invisibility, inexhaustible purses, touch-stones that turned everything into gold. And I solemnly declare that if I had the choice of all such miraculous treasures, and a player-piano were added to the list, I should unhesitatingly ask for it, as by far the most profitable miracle of them all.

I wanted to show how Mr. Rorke's enthusiasm had infected me to make my own confession—as it will infect everyone—but there is no space for it. I have room now only to wonder which of his virtues it was that impelled Dr. Ernest Walker to write so delightful an introduction to his work—his shameful frankness, his wise charm, or his very precious insight. Perhaps it was just his consuming love for Music.

Chopin and Liszt.

I wonder whether pianists will always be so selfish as to give us in their programmes whole chunks of Liszt; for the pleasure of listening to this impostor of genius is not half equal to the pleasure of playing him, and though of course, pianists are aware of this fact, they dazzlingly ignore it. There are, it is true, one or two musicians who can give us Liszt's B minor Sonata so that we do not mind it—men like Busoni, Poulshnoff, or Cortot—but in the hands of smaller fry it is in its theatrical poverty intolerable. Now Mr. Harry Field, the Canadian pianist who gave a Chopin-Liszt recital at the Wigmore Hall recently, began with three disadvantages; first, he obviously was not well; secondly, he had an execrable instrument to play on; and lastly, his first item was this sonata. It proved impossible in face of these things very greatly to enjoy Mr. Field's playing, though it manifestly would be unfair to criticise him harshly. But at least one could justifiably wonder why this pianist, whose methods are above all things earnest and careful, whose technique is never free, and whose touch, though it has its merits, is not for romantic music, should choose to play Chopin and Liszt.

Andante.

THE INDIAN HOUSEWIFE.

Delivering the opening lecture recently in connection with the Société Internationale de Philologie, Sciences et Beaux Arts, at 8, Tavitoon-Street, Golden-Square, W.C., Mr. I. N. Thakor told of the daily home life of the Indian ladies. Ladies of all classes, he said, undertook similar duties, getting up at four or five in the morning. But that excellent mode of living had been departed from by those fashionable Indian ladies who had visited London and other places. More than anything else the English language was the cause of rooting out the good features of Indian domestic life. Indeed, he should give the English language secondary place in India. Its universal use would destroy the whole of the Eastern civilisation.

A Bill dealing with the question of Czecho-Slovak property pre-war debts, etc.—in England will be submitted to the Czecho-Slovak National Assembly in the course of the Spring Session.

SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

NEAR EAST BOOKSHELF.

THE YUGOSLAVS.

"LE ROYAUME DES SERBES, CROATES ET SLOVENES." Par Albert Mousset. (Editions Bossard ; Rue Madame, 43, Paris, 1921).

"Hier stehe ich, Gott helfe mir, ich kann nicht anders, Amen." With these classic words of Luther did two Croat priests reply to an injunction of the Archbishop of Zagreb, and the result was that they were forcibly deprived of their parish: their names are Bozho Miloshevitch and Stiepan Zagorats, and their crime was the fact that they had rallied no less than eighty-four adherents among the lower clergy to their programme of reform, including the suppression of the breviary and the marriage of priests, for they were Roman Catholics, and they attacked the fundamental discipline of their Church. Their sturdy independence and moral courage are typical of the temperament of the vast majority of the Yugoslavs, and this incident shows strikingly that the Catholic Croat clergy are no less individualistic than their Orthodox Serb brethren; it also shows that there are very many Roman Catholic priests who remember that they were born Slavs and later became clerics, and this should not be forgotten when interested parties propagate the seeds of discord between Croat and Serb.

This and many another interesting fact will the reader find in M. Mousset's work, which is a compendium of up-to-date information on the Kingdom of the Serbs, Croats and Slovenes. The author knows his subject, and loves it, as he loves the people with whom he is dealing and with whom he has lived. With true French logic, he realises the actual value of the difference between Serb and Croat, a difference due to their history and circumstances, similar to the difference between Serb and Macedonian, between the Slav of the Voivodina and the Montenegrin, to the difference between Lowland Scot, the canny Lancashire lad, and the Sussex farmer. All who are interested in Yugoslavia, whether through commerce or sentiment, should study this work, for the reader will find many facts to surprise him: how, for instance, that "la vie universitaire est plus intense à Belgrade, ou vivent des savants de réputation mondiale comme Tsvitch, qu'à Zagreb et à Ljubljana", and how the *granickari*, or Serbian Cossacks of the Austro-Hungarian Empire showed the military virtues of their race on the fields of Malplaquet and Oudenarde, in the Seven Years' War, and on the field of Leipzig.

Serbia sank much of her individuality for the sake of the Union, and expects the Croats and the Slovenes to do the same. The peasant of the Shumadie, who suffered so much from the black and yellow armies, sees himself to-day commanded by officers whom he knew in the army of the enemy, and the Orthodox priests, who went to the stake for their nationality and for Christianity, whose force was perhaps more national than ethical, receive with open arms their brothers of the Roman Church, for under the Constitution, all religions are equal and free in Yugoslavia. The Orthodox are about 42 per cent. of the population, but in no way superior to the strong Catholic minority though their church is now autocephalous: the Mohammedans are under no disabilities at all; when King Peter entered Skoplye in triumph, the mayor, Reshad Effendi, welcomed him with the following words: "Sire, once we conquered this city by the sword: now we have lost it by the sword: it remains for me humbly to greet Your Majesty." This was on the morrow of Kumanovo, which avenged Kossovo, and the aged monarch replied: "Serbia is the land of absolute equality for all creeds: tell the Turkish population that no man fear aught, and let every man peacefully follow his profession and his business." In the same way, the 130,000 Protestants of Yugoslavia, the 30,000 Uniates and the Jews are absolutely free to worship in their own way. There are Memnonites and Baptists, and Moravian Friars, but they are not recognised by the law: also the *Novoverisro* New Believers, the so-called Nazarenes, whose cult

was introduced into Serbia by a Scot named Mackenzie, after whom is named the street Makenzieva Ulica in Belgrade; these came into collision with the authorities, for their creed forbade them to carry arms: they are, in fact, the conscientious objectors of Serbia.

Serbia has the Jews which it deserves: these are of the Spanish-speaking Sephardim, and the generous toleration of the Serbs has made patriots of them, and they did their fair share during the war. There is, however, a tendency towards an evolution for the worse, due to the contact of the German-speaking Askenazim from Central Europe. It is estimated that there are about 130,000 Jews in Yugoslavia; they are most numerous in Zagreb, where they have secured the greater part of the commerce.

Chapter II is a monograph of the internal politics of the country, with an account of the aspirations and characteristics of each party. Much of this will be familiar ground to the readers of *THE NEAR EAST* but this is probably the only account of the subject in one work, and as the writer is well-informed, is a valuable and interesting summary. The rest of the work will appeal more to the business man than to the general reader, for it is chiefly statistical, dealing with the resources in agriculture, minerals, forestry and industry of Yugoslavia, which leaves the reader with an impression of great wealth crying for development. It is to be hoped that Britons will not shut their eyes to the possibilities before them, so that their name may become as much respected in commercial circles in Yugoslavia as they have made it in the military world.

A LITTLE BOOK OF QUOTATIONS.

"VIATICUM OR TRAVELLER'S SCRIP." Verses and sentences chosen and arranged by J. H. Fowler. (London: Christophers).

We feel that Mr. Fowler must thoroughly have enjoyed choosing his verses and sentences and arranging them, each with a number and a heading—a sort of title to each quotation, intended to bring out its deepest meaning—and seeing them appear in such a delightfully and plainly printed and bound little volume. We feel that there will also be many who will enjoy reading it and recognising the favourites that they have in common with the compiler and finding others not so familiar to them. Four of the forty-seven small pages are taken up by a Preface. Some of the headings to the sentences make the general effect rather topheavy, but a few do help to throw a fresh light on the thought which they precede.

"THE INDIAN ANTIQUARY."

Sir Richard Temple, the proprietor and editor of the *Indian Antiquary*, has signalled the jubilee of his indispensable journal by the issue of a leaflet in which he recounts the story of the work originated by Dr. Burgess in 1872. Sir Richard writes with full knowledge, for he has conducted the journal for the last 37 years, but he characteristically understates the services it has rendered during this period to the study of Indian history. It still is, as it has always been, indispensable to the serious student, and to some people the most interesting part of his leaflet is the announcement that general indices of authors and subjects are now in preparation, the one thing that was wanting to enhance the value of the journal. The *Indian Antiquary* is published by the British India Press, Mazgaon, Bombay, and Messrs. Quaritch, of 11, Grafton Street, are the agents for Europe and America.

BOOKS RECEIVED.

"Bulletin of The School of Oriental Studies, London Institution." (London: Luzac and Co. 6s.).

"Nile Control." By Sir Murdoch MacDonald. Vol. I. Second Edition. (Cairo Government Press. Price: Two Volumes: P.T. 20).

"The Manufacture of Cane Sugar." By Llewellyn Jones and Frederic I. Scard (London: Duckworth. 25s. net.).

PERSONAL AND GENERAL.**To-Day.**

February 16 (New Style).

February 3 (Old Style).

Gumada II, 19, 1340 A.H. of the Moslem Calendar.

Shebat 18, 5681, of the Jewish Calendar.

Major-General the Hon Francis and Lady Isobel Gathorne-Hardy have arrived at Cairo.

M. Nicolas Vladesco, Third Secretary at the Roumanian Legation, has left town for Paris.

Prince and Princess Djemaleddin have arrived at the Carlton Hotel from Cairo.

Mr. F. Rodd, of the British Legation, Bulgaria, is at present in England.

After a brief visit to Palestine and Syria Lord Northcliffe returned to Egypt on February 12. and sailed for France on the following day.

General Sir Claude Jacob and Lady Jacob are sailing for India by the P. and O s.s. 'China,' which they will join at Marseilles on February 17.

General Sir C. Townshend, who represents the Wrekin in Parliament as an Independent, has joined the Conservative Party.

M. Charles Maskens, Counsellor of the Belgian Embassy, who has been appointed Belgian Minister to Sofia, will leave London next month to take up his new post,

Mr. A. S. M. Anik, a distinguished Mohammedan in London, is to be installed Master of the St. Mark's Lodge of Mark Master Masons, at the Hotel Cecil, Strand.

The Hon. Ernest Scott, the Hon. Victoria Cadogan, and Sir Johnstone Wallace are among the recent arrivals in Cairo, where Sir John and Lady Ellerman are also staying.

Lord Islington, who was Under-Secretary for India in the first Coalition Government, and retained office under Mr. Lloyd George until January, 1919, has joined the Independent Liberals.

A marriage has been arranged, and will take place in London at the end of February, between the Rev. Andrew Macfarlane, D.S.O., Indian Ecclesiastical Service, recently chaplain to the Black Watch, and Miss May Pendleton.

A marriage will shortly take place between Brigadier-General Rudolph Hogg, C.M.G., C.I.E., Central India Horse, Junior United Service Club, and Mildred Deborah of 10, West Bolton Gardens, youngest daughter of the late General Sir Henry and Lady Green.

Sir Bernard and Lady Hunter left London on February 9, by the P. and O. overland express to join the s.s. 'Mantua', which left Marseilles yesterday, for passage to Bombay. Sir Vansittart Bowater, for Port Said, and Lord and Lady Forteviot, for Colombo, are also passengers in the 'Mantua.'

Among recent visitors to the Sudan are Sir Robert and Lady Drummond-Hay, who have been visiting their son, Mr. E. W. Drummond-Hay, Deputy Governor Dongola Province; Sir William and Lady Reid; General Friend, formerly Director of Works and Stores, Egyptian Army; and Canon Burroughs.

A marriage has been arranged, and will shortly take place, between Major W. D. Hall, M.C., 50th Kumaon Rifles, Indian Army, son of Mr. W. Hall (late Executive Engineer, B.B. and C.I. Railway, India), 3, St. James Road, Tunbridge Wells, and Dorothea, only daughter of the late Colonel Trenchard Fowle, C.B., R.A., and of Mrs. Fowle, Summer Cove, Kinsale, County Cork, Ireland.

Lady Annabel O'Neill was married to Major James Hugh Hamilton Dodds, C.M.G., at All Saints', Ennismore Place, on February 9. Lady Annabel is the eldest daughter of the Marquis of Crewe by his first marriage, and in 1902 was married to Captain the Hon. Arthur O'Neill, of the Household Cavalry (eldest son of Lord and Lady O'Neill), who was killed in action in 1914. Major Dodds, son of Mr. James Dodds, of Alton, Berkhamsted, served with the Imperial Yeomanry in the South African campaign. Afterwards he entered the Colonial service, and is now Chargé d'Affaires at Adis Abeba, Abyssinia.

The King has granted permission to wear the following Decorations which have been conferred in recognition of valuable services rendered during the war:—

Order of St. Sava (Serbia).

Third Class.—Lady Boyle (Beatrice, wife of Sir Edward Boyle, Bt.) for Services in Connexion with the Serbian Relief Fund.—Mr. J. Moffat.

Fourth Class.—Mr. C. E. Bryant.

The King has given permission for the wearing of the undermentioned foreign decorations:—

Order of the Nile.

Fourth Class.—Major E. S. Oliver, Major E. D. Bally, O.B.E., Captain T. R. Colville, Captain A. C. B. Critchley-Salmonson, D.S.O., Aide-de-Camp in the High Commissioner for Egypt; Major A. J. R. Lamb, D.S.O.; Lieut. J. K. Maurice, C.M.; Mr. L. B. Bayley; Mr. D. MacK Bennett, Chief Inspector of Customs, Sudan Government; Mr. A. A. R. Boyce; Mr. J. N. Cameron; Mr. F. H. Cobb, Divisional Engineer, Egyptian Public Works Department; Mr. W. Hallas; Mr. H. C. Jackson; Mr. G. N. I. Morrison; Mr. P. Munro; Mr. A. W. Skrine; Mr. H. C. Squires, M.D.; Mr. F. Wellburn, M.A., Senior Master, Egyptian Army Military School; Mr. F. T. C. Young.

The following were severally introduced on February 8 into the presence of the Sovereign, when the King invested them with the insignia of the respective divisions of the Orders into which they have been admitted:—

The Most Exalted Order of the Star of India.

To be a Knight Commander: Sir Alfred Grant. To receive the honour of Knighthood and to be a Knight Commander: Mr. George Curtis.

The Most Eminent Order of the Indian Empire.

To be a Knight Commander: Sir John Biles. To receive the honour of Knighthood and to be a Knight Commander: Mr. Charles Bell.

The Most Exalted Order of the Star of India.

To be Companions: Col. Donald McVean, late Indian Army (also to receive a Bar to the Distinguished Service Order), Mr. Charles King.

The Most Eminent Order of the Indian Empire.

To be Companions: Col. Thomas Stodart, Indian Medical Service; Lieut.-Col. Philip Buriton, Indian Army; Sir Edgar Bonham-Carter, Mr. Robert Church, Mr. Dadiba Merwanji Dalal, Mr. Scott Durrant, Mr. John Gwynn, Mr. Archibald McLagan, Mr. Francis Rennie, Mr. Alexander Stewart, Mr. Edward Thomas.

The funeral service for the late Sir Francis Barker was held on February 8, in St. Peter's Church, Eaton Square. The service was conducted by the Rev. Austin Henry Thompson, assisted by the Rev. Ethelbert Goodchild, brother-in-law of the deceased. Among the large and distinguished congregation were Lady Barker (widow), Mr. A. Barker and Mr. V. Barker (sons), Mr. and Mrs. A. H. Barker, Sir Maurice de Bunsen, Sir Charles Ellis, Sir Charles Parsons, Sir Glynn West (Sir W. G. Armstrong, Whitworth and Co., Ltd.), General Sir Henry Mackinnon, Sir Trevor and Lady Dawson, Sir Vincent Caillard, Commander C. W. Craven, (representing Sir James McKechnie, and the Directors of the Naval-Construction Works, Barrow-in-Furness), Captain R. S. Hilton, Baron Rauch (Commissioner of the Russian Red Cross in Great Britain), Lady Edith Franklin, Lady Thynne, and Lady Wyldbore Smith. Mr. Douglas Vickers, Chairman, and Mr. V. C. Vickers, of Vickers Limited, were unable to be present owing to their having to attend the funeral of their aunt, Mrs. Grazebrook, at Banbury. Following the service, the interment took place at Chessington, Surrey, where Sir Francis Parker had his country seat.

APPOINTMENTS & PROMOTIONS.

The King has appointed Major Francis Henry Humphrys, C.I.E., to be Envoy Extraordinary and Minister Plenipotentiary to his Majesty the Amir of Afghanistan, and Mr. Harry Charles Augustus Eyres, to be Envoy Extraordinary and Minister Plenipotentiary to the State of Albania. Major Humphrys is an officer in the Indian Army and Political Agent in the Khyber. He was created C.I.E. in 1920. Mr. Eyres, who was educated at Marlborough, was appointed a student interpreter at Constantinople in 1877. He was sent to Scutari in 1881 and served also at Van, Erzeroum, Damascus, and Beyrout. From 1896 till 1914 he was Consul-General at Constantinople.

The King has appointed Mr. Bernard Archibald Platt, of the Inner Temple, to be Judge of his Majesty's Supreme Court for Egypt.

THE PARTHENON IN DANGER.

The question of the restoration of the north colonnade of the Parthenon, which was taken in hand some months ago, has, in consequence of some comment of the journal *Politeia*, given rise to considerable discussion in archaeological circles, says a message from Athens.

The previous repairs of the Parthenon, the Erechtheion, and the Propylaea, which were carried out by M. Balanos, head of the conservation department of the Ministry of Education, were it is generally agreed, a success. In their execution M. Balanos very wisely sought the advice of the most competent British, American, and German authorities. This year scaffolding has been erected on the north side of the Parthenon, and it is proposed to proceed as soon as possible with the re-erection of the fallen columns and the architrave. Several of the most distinguished archaeologists in Athens, however, hope that the competent authorities will reconsider their decision before matters have gone too far. In the previous repairs to the Parthenon missing portions were restored in marble in order to ensure unity of treatment in appearance. Now, however, one learns with dismay that in the proposed re-erection of the north colonnade of the Parthenon, a compound of limestone and cement is to be substituted for the missing blocks of marble.

A BALKAN WOLF.

Through the kind services of Lieutenant-Colonel F. L. Giles, R.E., the British Delegate on the Serbo-Bulgarian Boundary Commission, the Zoological Society has received a wolf from the Balkans, presented by King Boris of Bulgaria. Colonel Giles captured a wolf in the mountains, and deposited it in the Zoological Gardens at Sofia, pending arrangements for its transport to London. This animal unfortunately died, and King Boris, to meet the disappointment occasioned by this event, very kindly gave orders for another specimen to be caught and sent. The animal, which reached the Gardens on January 14, is about ten or eleven months old, and is very tame, coming to the bars of his cage, with wagging tail, when called. In another year's time, however, the natural savageness of the species will surely assert itself.

WHERE TO STAY IN THE EAST.

CAIRO.

THE CONTINENTAL-SAVOY

THE MOST UP-TO-DATE AND BEST SITUATED HOTEL IN CAIRO

Entirely Renewed. Overlooking Ezbekieh Gardens.

THURSDAY, FEBRUARY 16, 1922.

BRITAIN AND INDIA.

There are now distinct signs that the British nation, ordinarily slow to move, is becoming seriously anxious at the continuance of disturbing news from India, news which is all the more disturbing that it is for the most part fragmentary, and sometimes published in a form barely intelligible to ordinary readers. It is in fact not easy to appreciate the significance of each successive item, or to fit isolated details into their place in the frame work, and we propose to-day to sketch the general situation as it appears to us, in the hope that we may thus facilitate the comprehension of the large issue which is at stake. That issue itself is plain enough. As was said in the statement published last week by the Government of India, the question is between lawlessness, with all its dangerous consequences, and the maintenance of the principles which lie at the root of civilised government. Let us first see how this question has arisen. The British nation, as sovereign of India, has directed the gradual introduction of democratic self-government. A minority of Indians reject the idea of democracy, and desire to bring about a reversion to the old order of social privilege and spiritual ascendancy. In order to realise their object, they must in one way or another defeat the British nation, and their activities have been directed consistently to this end. In the first place they endeavoured to capture the minds of the middle classes, who must take a large share in working the new political institutions. Their campaign of non-cooperation, as it was labelled, failed decisively, and they then turned to the attempt to inflame the masses of the people, unversed in politics, and accustomed to the position of spectators in the gamble for power which lasted in India for so many centuries. In this attempt they have had both luck and leadership on their side. Seasons have been bad, prices have been high, and it has been easy to persuade ignorant men that they will benefit by any change; while the events in the Punjab, together with the deplorable delay in settling the Turkish question, have provided them with catchwords thoroughly well suited to inflame passions and drive a mob to extreme courses. To these gifts of fortune they have added mendacity and intimidation. The stream of lies regarding British rule and individual British officers has flowed without cessation, while the bands of so-called volunteers, in many cases paid highly for their work, have been quick to threaten when they found cajolery would not serve. In all this they have enjoyed the advantage of a leader possessing the qualities which most appeal to India. Mr. Gandhi has no particular intellectual distinction, but he is a strong personality, and his austere habits are notorious. Legends concerning him have been propagated with vigour and success; his prestige is great; and many millions of Indians look up to him as one of those rare mortals, famed in their mythology, who can compel the gods to do their bidding. It is uncertain what weight he carries in council, but it is quite certain that in action he is a great asset.

The party of which we are speaking have now openly declared war against the established government. The accepted formula is "civil disobedience." It implies that, in the areas where it is put in operation, the people as a whole shall disobey the law in general, and in particular shall withhold payment of land-revenue and other

taxes. Here we are brought into touch with history, for time out of mind Indian peasants have withheld the revenue when they believed a change of rulers to be impending, well knowing that the successful competitor would eventually collect everything that might be due. In the villages, then, incitement to civil disobedience confirms the impression, already industriously created, that British rule is tottering, and to our mind this is the real reason for the adoption of the policy. By its side, however, we have the numerous local outbreaks of violence, which bulk so largely in the cabled news. Their origin is at present obscure in the sense that we do not know whether they are ordered from the headquarters of the movement, or from one or other of its local centres; but in one case after another they have been proved to be due directly to the efforts of agitators who look to Mr. Gandhi as their leader. Their immediate effect is local, and as a rule transitory, but they serve to propagate the idea that a time of lawlessness has already arrived, and they constitute a call to the disloyal which it is impossible to disregard. In estimating the importance of these occurrences, the safest rule is to measure their gravity by their location. In Calcutta or Bombay they may mean very little, and the same is true of the well-known cities of Northern India, where the administration is supported by troops, and any outbreak can be effectively repressed. It is different in the villages, where the strength of the administration is scarcely represented, where speedy communication is rarely possible, and where a trivial initial success will multiply a mob a hundredfold, bringing to it recruits who believe that the long-expected time has at last arrived, and that they can safely rob and murder as their ancestors were wont to do. The Malabar rebellion has shown the horrible possibilities of an initial success gained in favourable circumstances, but last year's outbreaks in the rural districts of Oudh were not less alarming for a short time, and, to glance at last week's cables, the trouble in the large city of Bareilly was obviously less important than the outbreak at Chauri Chaura, a village too insignificant to be found on ordinary maps. But, whatever the actual danger, the point is that these sporadic occurrences are undoubtedly designed to produce an atmosphere of insecurity, an atmosphere which India remembers only too well, and of which the turbulent sections of the inhabitants have so often taken advantage in the past.

In this way has arisen the issue between civilisation and anarchy, for nothing but anarchy could result from the campaign of civil disobedience supported by violence. It is the obvious duty of the Government to meet force with force, and we are glad to notice that Mr. Montagu, in the address he delivered last week, spoke more strongly on this topic than on any previous occasion within our recollection. But when we write of using force, we do not mean to suggest that any sensational measures are called for by the present situation. What is wanted is the enforcement of the ordinary law by the methods which gave peace to India for more than a century, but which have recently been discarded in the interests of political development. Offences against the law must be punished vigorously, but at the same time with discrimination, and with due regard to the traditional maxim that it is better to secure the conviction of one leader than of a hundred of his dupes. Punishment however is not everything. The falsity of the idea that British rule is tottering must be demonstrated by showing its force. Ordinary movements by troops, and of such modern aids as armoured cars or aeroplanes, can be so employed as to impress the strength of the administration on any localities which have begun to question it, while the time-honoured expedient of increasing the police-force in places where lawless acts occur will be particularly valuable at the present juncture, because it brings with it the certainty that the Government stands firm. In our view that is the essence of the whole thing: convince the people that the Government still is what it has been for so long, humane and tolerant, but firm, and the present campaign of anarchy will, like its predecessor, fail.

THE ENGLISHWOMAN IN BAGHDAD.

By an English Memsahib.

Here, in the city of the Khalif, where the work of Government and Commerce is carried on, life has a lighter and a brighter side little dreamed of by folk in England, who think of Mesopotamia as a dreary desert land of intense heat, where malaria and other tropical diseases abound, and where life and property are in constant danger from Arab marauders belonging to the desert tribes. The very greatest and pleasantest of surprises is in store for the Memsahib fresh from England, who so frequently comes out to join her husband in almost a self-sacrificing spirit, all the time dreading the climatic conditions, fearing isolation, and thinking of the dirt and squalor of the East. Sympathetic friends have wished her God-speed, and with a sob in their voices hoped that she would be happy in that "dreadful country!" After a journey of four or five weeks she arrives and finds herself in a picturesque city brimming over with social life. British women in Baghdad can now be counted by the hundred and each boat that comes to Basrah adds to the number. It becomes increasingly difficult to rent a house, and the prices asked are simply exorbitant—£750 per annum according to the present rate of exchange for one containing nine rooms being considered not unreasonable by the local landlords, who have grown rich since the British occupation. The majority of British women live in the town, but there is a gradual drifting to the outskirts of the city and the suburbs of Hinaidi, Karadah, and Al-siyah (where the Civil Cantonment is) are of mushroom growth and are becoming more and more popular.

There are several good hotels in the town, and at least three clubs for Britons. Dancing is as popular here as in England, and is continued all the year round, though it requires an enthusiast to dance through an evening after a day during which the thermometer has steadily climbed to somewhere about 125 degrees F. in the shade. During the cold weather, when night frosts are not infrequently experienced, one can dance every afternoon and evening at one or other of the clubs or hotels. Most of the floors are fairly good, though a spring floor is a luxury unknown. Many of us have memories of dancing whole evenings on a concrete floor, over which tarpaulin has been stretched, and have enjoyed ourselves to the full; though the next day there has been a decidedly "morning-after-the-night-before" kind of feeling.

The etiquette of calling is the same as that observed in India, and the new comer is the first to call, except in the case of brides. At present, if the newcomer does all the calling that is expected of her, she has a long programme to complete, which is made much more difficult by the very scattered positions of houses occupied by British residents; for there is no distinctly British quarter in the town. Coupled with this state of affairs, there is a confused maze of streets, and the Iraklis who drive our taxis and private cars rarely understand English,

and appear not even to know the principal residences in Baghdad.

Apart from club life, which is as much appreciated by the feminine element as by the merely masculine, there is much private entertaining—dinners, small dances and bridge parties.

Sports and pastimes there are to be had in plenty. In the hot weather, tennis, golf and riding are the favourites, but towards the end of the year, polo, football, hockey and shooting have many ardent devotees amongst

A BIG FISH FROM THE TIGRIS.

(Photo by Special Press.)

the men. There is even a football league, and a large number of teams are drawn from the Army, Air Force, various Government departments and commercial firms. As for shooting, although the immediate environs of Baghdad are practically "shot out," there is excellent sport to be had a few miles out in the desert. Sand grouse and partridge are very common and the sportsman who is sufficiently keen to wear thigh waders, and go through the mud and water of the marshes can get such a bag of wild duck that frequently, his car is unable to hold them, and many are given to the local Sheikh for disposal. Some few men on their return from leave, at various times have brought back with them good specimens of sporting dogs, and in time, it should be possible to purchase well trained dogs here. At present, hundreds of brace of game are lost, owing to the lack of retrievers.

Gardening is becoming a popular hobby, for, under the system of irrigation adopted by the Government, the very most will be made out of the land. There are

ASK FOR

WHITE HORSE WHISKY

BY APPOINTMENT.

many British who can keep their tables supplied with fresh vegetables nearly all the year round. Potatoes are not a success, and fruit culture is a lengthy and difficult undertaking, not worth while to the British resident, who usually has but a comparatively short sojourn in this land; but most English vegetables grow with extraordinary rapidity.

Rain rarely falls between April and November, and the number of rainy days in the remaining months is not large; but when the rain does come, it succeeds in dropping the maximum amount of moisture in the minimum amount of time. Most of the roads are merely desert tracks, and the surface is churned by traffic passing over it; cars plough through it, with the mud up to the axles of their wheels, and even on the one or two good roads, skid chains are an absolute necessity. For those living in outlying parts, supplies are difficult to obtain, but the Memsahib's spirit is undaunted, and she garbs herself appropriately and faces the elements. It must be a storm of unusual and extreme intensity to keep her within doors for any length of time.

The British housewife, to whom all credit is due, succeeds in overcoming most of the difficulties of house-

keeping out here, and quickly adapts herself to the new conditions of life. She is confronted with many troubles and occasionally finds the servant difficulty quite as great as in England, though in rather a different way. Her staff frequently consists of members of different nationalities. Out here one has various servants from India, many of whom were previously army followers, who have stayed because of the attractive rates of pay offered. Then there are Persians and the local Arabs. These last make good house servants, but

are rarely good as cooks. Latterly, many Armenian and Assyrian refugees have been employed, and are spoken of quite well; their women are replacing the Indian ayahs, and appear to be devoted to their small charges—and there are numbers of tiny British children here, who thrive excellently during the first years of their lives. Of course, they have to be sent home to be educated! The native Bazaars provide for all household needs, and the cook is responsible for obtaining the supplies. His commission is not a small item, but as no bill is ever given by the local traders, it is impossible to prevent him benefitting from these transactions at his mistress's expense. The mistress does no work in the house, but it is to her interest to exercise a large amount of supervision for many of the servants are dirty, lazy, and unreliable. Though these qualities are not peculiar to native servants only!

The Bazaars are of never-ending interest, and there are few houses which have not been Easternised by the addition of Persian carpets of gorgeous colouring, brass and copper ware which is weirdly and wonderfully engraved; while in Madam's wardrobe usually reposes at least one *abba*, which is the Arab woman's cloak. *Abbas* are made of hand-woven silk in black and in gay colourings, with broad and narrow stripes in heavy gold thread. There is no better cloak for evening wear in the heat of the year, for the *abba* is both picturesque and light! Amber beads are another favourite purchase, but the price paid is frequently in excess of that asked

in England. White sapphires are brought from Persia, and other precious stones, but again discretion must be exercised, or the purchaser may find her purse considerably lighter although the "gems" she has secured are practically valueless. Although the astute and cunning bargaining of the bazaar merchant of the East is a byword all the world over, it is extraordinary how many fall an easy prey to his wiles. Needless to say, silks there are of all shades and varieties, though many are of foreign manufacture. Japan is responsible for a large quantity of the less expensive kinds.

As for the climate, most English women stand it well, providing that they take reasonable precautions; and there are always experienced folk ready with kindly and useful advice for the unsophisticated Memsahib fresh from home. The winters are not so bad as those in England, and Arab houses are built to withstand the great heat of the summer months. There is always a *serdarb*, or cool room partly below ground, which is used in the middle of the day. Windows are closed and curtains drawn almost as soon as the sun rises, and the house is not opened up again till evening. Of course, the whole family sleeps on the roof, and it is the quaint-

est sight to see hundreds of beds all round one on the various roofs; beds of all kinds and conditions, native and European, large and small, old and new.

There may be a few hardships and certain inconveniences to be borne, but ask any woman whether she would exchange lots with her sister in England, who has the benefit of all the advantages that an advanced civilisation can offer, and I think that, in spite of a certain homesick feeling that all exiles must feel at times,

she would say unhesitatingly: "No, not for worlds."

PROFESSOR E. G. BROWNE.

In Pembroke College, Cambridge, last week, says *The Times* Professor Edward G. Browne, Professor of Arabic in the University, was presented with a volume of Oriental studies, the combined work of 43 authors, representing 11 nationalities, in recognition of his great work in the study of Oriental languages and arts, and also to mark his 60th birthday. Dr. W. S. Hadley, Master of Pembroke, presided, and the company present included the Vice-Chancellor (Dr. E. C. Pearce) and many other heads of houses and distinguished scholars, as well as many ladies. Sir Thomas Arnold, one of the joint editors of the volume, said there had been similar volumes presented to other learned Orientalists, but this occasion differed from most others in the admiration and affection with which the recipient was held throughout Europe. Professor Browne was the greatest living exponent of the genius of the Persian people. The volume was then presented by Dr. Reynold A. Nicholson, the other co-editor.

Professor Browne, in his reply, said one feature of the volume gave him particular pleasure, and that was, the fact that the various contributors were drawn from European countries lately at war. Thus English and German, Austrian and Belgian, and even German and French scholars had collaborated to produce the volume. He rejoiced to see signs of reconciliation between old enemies mainly through the channels of education. The Professor was also the recipient of many other interesting gifts, including a portrait of himself painted by a Persian artist from a photograph.

A fine bas-relief of the fifth century B.C. has been found in Athens near the Temple of Thesus.

A statement by the Madras Government says that on the tariff question, India, in its opinion, should regulate her policy with a view to the production and encouragement of Indian industries and the production of revenue.

NEW STREET BAGHDAD. (Unusually Deserted.)

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

Egypt and the Empire.

In the *New Statesman* of February 4 is a strongly-worded article upon "Egypt and the Empire." It begins by remarking that in a few weeks we shall be back at the position of last autumn, the "Churchill-War Office" plan having failed. Turning to the new plan as recently published by the Foreign Office, it anticipates a considerable struggle before agreement can be reached. It goes on to say that those responsible for the destinies of this country have chosen the wrong path in Egypt "because their minds are muddled and their hand-to-mouth policies constantly fail to take account not merely of principles but of facts." And it attempts, in summing up, an appreciation of the forces in Egypt, and popular reaction to them at home:—

The immense torrent of nationalism that was suddenly liberated three years ago is as real a thing in Asia and in Africa as it is in Europe. But, while the nationalists of Czecho-Slovakia or the Balkans or Poland are acknowledged as patriots, the nationalists of countries with which we have a closer concern are assailed with indiscriminating abuse; the demand for "self-determination" there is always the cry of agitators, extremists, disloyalists or ignorant mobs. This wanton misreading of the sentiment of nationality may succeed for the moment in creating a serviceable prejudice, but eventually it will lead to the grave blunders that we have seen in Egypt. Nor do our ministers appear to understand the psychology of the "liberalism" to which they pay so much lip-service in their speeches and manifestoes. The long reign of Mr. Lloyd George has obscured the meaning of many principles, and we are not accustomed in the breathless scramble of his political gymnastics to examine our views about the character of our Government overseas. Nevertheless, the British people are at bottom liberal in the largest sense of the word, and they have become more liberal since the war. This "liberalism" may be active—it may issue in enthusiastic, and even violent, idealism—or it may lurk in a more passive form, fading often into something like indifference. But, active or passive, it is a force to be reckoned with by politicians who think to ride the whirlwind and direct the storm of foreign affairs. The Imperialism of twenty years ago is a fallen idol; it may have a handful of votaries left in the office of the *Morning Post* and the military clubs, but the great mass of the nation has forgotten it. How many Englishmen regret the "loss" of Ireland? And how many Englishmen will thrill at the thought of an Egypt dragooned into the British Empire? We do not believe that one man in a hundred in this country cares a brass button to-day about the number of red splotches on the map of the world, and we are quite certain that not one in ten thousand is willing to pay for adventures to increase them. Our militarists, we suspect, have already got an

unpleasant hint on this last head from the proposals of the Geddes Committee for the reduction of the Army. If the statesmen could grasp the full significance of these effects of the war—the strength of national sentiments, the liberal-mindedness of the British public and the tightness of the British purse—they would save both us and themselves a great deal of anxiety.

In saying all this, we are not arguing against the genuine ideals of the Empire. We do not want disintegration, but re-integration. In point of fact, the surest method of disintegrating the British Empire is precisely that which the old Imperialists are so eager to pursue—the method of holding it together by force. The futility of that method has been exposed in Ireland, it is being exposed now in Egypt, and, if we are not careful, it will be exposed before long in India. The task of statesmen is to find new bases for their imperial policy. In Egypt, at least, the way is plain. Egypt is not, and never has been, a part of the British Empire. But there is no reason why Egypt should not be bound in the closest ties, and bound of her own free will, to the British Commonwealth of Nations. She will have her own status—a status not unlike that of the "client" kingdoms allied with the Roman Empire, yet better than this, because both freer and more secure from imperial aggression. Egyptians may not like the word "client" and there is no reason why we should use it. But in fact, we must for the present have a privileged position in Egypt, unless Egypt is to grasp at the shadow and lose the substance of her independence. And we, on our side, cannot assure our interests or anyone else's by bombs and bayonets. The British taxpayers will not pay for the bombs and the bayonets, and, even if they would, an Egyptian boycott could defeat them.

India and Egypt.

The *Saturday Review* of February 4 contains an article under the above heading, in which the opening sentence is a rather startling question—"Can India be saved to the Empire?" It attributes the whole of the present trouble to the permission by Mr. Montagu and the Indian Government of Gandhi's "organization of sedition." It criticizes the newly created institutions of India, and concludes:—

There has been far too much protection for the disloyal, and far too little for the loyal in India. It is this as much as anything that has told adversely on the once splendid services by which Britain maintained her just and even-handed rule. We do not wonder that there is much discontent among British officials and officers, as they never know the moment when they may not be repudiated by the Government. Last week we commented on the highly unpleasant fact that Gandhism, which has been permitted to flourish—not too strong a word—in India, has spread to Egypt, where it may be hoped, however, that it will not be suffered to take root and grow up into the menace it has become in its native land. But we cannot be sure of this, for although the leaders of Egyptian Gandhism were arrested, they were almost immediately suffered to go free with no more than a caution! We admit that Egypt and India are not parallel cases. We are in favour, as we said in previous

issues, of making all possible concessions to Egypt, but we are convinced that a firm policy is as necessary there as in India—otherwise there will some day arise the question, Can British interests be saved in Egypt?

Articles to Note.

THE EXPEDITION TO MOUNT EVEREST.

Before a brilliant and crowded assembly in the theatre of the Royal Institution at 21, Albemarle Street, on February 3, Sir Francis Younghusband lectured on the expedition to Mount Everest. He said the mountain had been discovered in the Forties at the time of the great trigonometrical survey of India. Viewed from the Indian plains it did not stand out as a prominent peak, and, as it had no name, it had been named after the inaugurator of the survey. Its height had been then computed at 29,002 feet; recent observations gave a height of 29,141 feet. When viewed from the Tibetan side the mountain stood out well. There it was known as Chomo Lomo—the mother or goddess of the country—and by that name it had been described in the permit granted by the Grand Lama of Tibet to the expedition.

Last year's expedition, said the lecturer, had not been intended to reach the summit; its object had been to find a route by which the summit could be approached—previously no European had been within sixty miles of the mountain, and even Tibetans had not approached within twenty or thirty miles. Photographs showed a ridge on the north side of the mountain giving fair promise of an approach to the summit, but how to approach that ridge or to get on to it was not known.

The lecturer described how the expedition had gone by a circuitous route from Darjeeling to Tingra, and had endeavoured to get on to the ridge from the north side, but had everywhere been stopped by precipices. Eventually an exploration was made from the east side which was successful, the ridge was ascended and the mountain climbed to a point two miles from the summit, and at a level of about six thousand feet below it. A feasible route up the mountain having thus been found, another expedition would go out this year with the intention of reaching the summit. It would be under the command of General Bruce, who had spoken to Colonel Younghusband of climbing the mountain as long ago as in 1893. General Bruce would not himself ascend the mountain but would father the expedition; it would be his responsibility to see that all its members were well fed, well equipped and well looked after in every possible way. Native coolies engaged in climbing the mountain would be fed and clothed in exactly the same way as the Europeans. The greatest difficulty and hardships to be encountered were due to the lack of oxygen owing to rarefaction of the air. The climber always felt exhausted and could not sleep well at night. Beyond this the snow was so extremely cold that the feet were liable to frost bite while at the same time there was a risk of sunstroke because of the nearly vertical sun.

Among other things mentioned by the lecturer were the facts that barley was cultivated to a height of 18,000 feet, and the highest point at which plants of any sorts were to be found was about six thousand feet higher. Birds were found up to 18,500 feet deep. The naturalist of the party among his specimens had brought back two of fleas a new species, and seeds of previously unknown varieties of rhododendrons. These seeds had been distributed to Kew, the Royal Horticultural Society, and others interested.

A MALTESE PEERAGE.

A *Gazette* of last week gives a notification from the Malta Government Gazette that, on the recommendation of the Committee of Privileges of the Maltese Nobility, and without prejudice to any decision that may hereafter be given by a competent Court of law, the Most Noble Ethel Maud Sedley Wearing has been recognised as Marchioness dells Taflia, in succession to her father, the Most Noble Colonel Frederick Sedley, Marquis della Taflia, who died last year. The late Marquis was formerly a captain in the 5th Lancers and the 48th Regiment, and retired with the rank of hon. lieut.-colonel. He served in the China War of 1860, and had the medal with two clasps. In 1871 he married a daughter of the late Rev. G. H. Landgon, vicar of Oving, Sussex, and granddaughter of the late Admiral Sir John Ommaney. She died in 1889. The new Marchioness lives at Badgergate, Rye. In 1916 she married Captain J. W. Wearing, J.P., formerly of the 5th Battalion the King's Own (Royal Lancashire Regiment).

AN ANGLO-EGYPTIAN UNION.

At a meeting last week, at which Lord Milner was in the chair, it was decided to form a society to be known as the "Anglo-Egyptian Union" with the object of promoting a better understanding between Great Britain and Egypt. An executive committee has been appointed consisting of Sir Henry McMahon, Sir Rennell Rodd, Sir Valentine Chirol, Lord Edward Gleichen, and Mr. J. A. Spender, with powers to add to their number, Mr. J. Loder will act as hon. secretary to the committee, and all communications relating to the society should be addressed to him at 31, Lennox Gardens, London, S.W.1.

NEWS IN BRIEF.

Over 7,000 members attending the annual gathering of the Ahmadiya Brotherhood in the Punjab have contributed one anna (penny) each towards the cost of printing a pamphlet on Islam to be presented to the Prince of Wales. Speeches were made urging the members to ignore the Caliphate and Gandhi propaganda, as the best interests of Islam were served by the maintenance of British rule in India.

Herr Mertens, Chargé d'Affaires at Sofia, and formerly German Consul-General at Constantinople, has presented his credentials as Minister to King Boris.

Over 8,500 Jewish immigrants entered Palestine under Zionist auspices during 1921, although immigration was suspended for some weeks after the May riots at Jaffa, and has been somewhat restricted since.

According to an unconfirmed message from Belgrade to the *Graz Tagespost*, a Cabinet Council held on January 28, voted the ex-Emperor Charles the sum of 2,000,000f. (nominally £80,000) annually on behalf of the Yugoslav kingdom.

According to the report of the Armenian Refugees (Lord Mayor's) Fund, of 96, Victoria Street, S.W.1., numbers of children in Armenia have been reduced to live on refuse as the local Soviet Government has exhausted its means of assistance and the foreign relief organizations require more funds.

Mr. T. C. Fitzherbert, civil engineer, returning to England from the Punjab, died from angina pectoris on the steamer City of Marseilles.

On February 10 the *Morning Post* correspondent at Belgrade reported that in some parts of Yugoslavia the snow was lying eight feet deep. Roads and railways were blocked and communications were practically at a standstill.

Dr. Norman Walker addressed the members of the Indian Legislature at Delhi on February 10 on the object of his mission to inquire into the teaching of midwifery in medical schools in India.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the river Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K. Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

Devonshire Square
E.C. 2.

The D.O.T.

The details I was able to give last week from an extract published in advance of the findings of the Geddes Committee in regard to the Department of Overseas Trade summarised the recommendations, and the report which has since become available contains little more that calls for comment. The Committee's duty was to effect economies wherever possible, and they advocate the abolition of the Department as a separate entity principally because the view is taken that it is no part of the functions of the Government to assist traders except by information with regard to tariffs and such like things. It now remains to be seen whether the Government will take the same view, or whether it will endeavour to effect the extra saving required in other directions.

A Question of Functions.

Frankly I find it very difficult to understand the Committee's action. No-one is a stronger opponent of Government interference with trade or indeed with any ordinary individual activities than I am. We have seen quite enough of that and its unfortunate consequences in the last few years to want no more of it. But this is a different thing altogether and why the assistance of trade should be considered outside the administrative province passes my comprehension. I am very glad to know that the Committee's view with regard to the Department is not shared by the business community as a whole. While the reports have generally been received with applause, tinged only with the regret that the Committee has not gone further, there have not been wanting protests at the threatened disappearance of the Department. That being the case it is possible to hope, though none too confidently, that the "axe" will ultimately be found to have been blunted in this instance.

The Consular Service.

It is of some importance to consider the bearing of this development on the Consular Service and officials outside it who are concerned with trade matters. At present their duties include investigations with regard to markets and generally assistance to British trade endeavour by the provision of early information with regard to developments. It seems unthinkable that their activities should be circumscribed in the manner proposed. I cannot imagine any other country taking such a course, and I am certain we should speedily regret it, for it goes without saying that our official representatives are often in a position to obtain intelligence that would not be available to the agent of a private firm.

The Genoa Conference.

So far as can be seen we are little nearer a solution of the Near Eastern and other problems which are hindering the trade revival and keeping valuable markets closed to British traders. The delays have been irritating and unnecessary, and as a result of recent developments an atmosphere of extreme uncertainty has been created, which will be scarcely allayed by Mr. Lloyd George's statement that the Genoa Conference will not

be postponed. I am inclined to attribute a great deal of the difficulty that has arisen to the fact that the problem of our relations with Russia is to be dealt with at the same time as other problems nearer home and easier to solve. The question of the resumption of trade with Russia is to my mind essentially a matter which ought to be the subject of a separate conference. The issue at the moment must be extremely doubtful, and the soundest policy would surely be to devote our attention first to the removal of trade barriers in regions where there is no question as to the possibility of commerce in favourable conditions.

Need for a Settlement.

Any further delay in bringing about a conference would naturally have the worst possible effect on commerce, and at the risk of repetition I would urge on the authorities the imperative necessity for speedy action in regard to a Near Eastern settlement and the baffling exchanges. A solution of the Greco-Turkish deadlock would beyond question have a very definite influence on the Near Eastern exchanges, would open important markets, and would have an invaluable effect on our trade endeavour outside the region of the geographical Near East. In view of the issues at stake it is difficult to understand why no greater progress has been made towards a settlement, and it is would not be surprising if the business community began to wonder whether the Government is really alert to the needs of the situation.

More Mail Delays.

Difficulties in regard to the mail service to the Near East appear to arise every few months. This time it is the mail service to Egypt that is the cause of complaint. It appears that of late mails to Egypt have taken up to eighteen days to arrive, and in addition the deliveries have been very erratic. This has been due, it is stated, chiefly to the mails not catching the Lloyd Triestino at Brindisi, a contributing factor being the unpunctuality on the Continental railways. There are fortunately a number of routes to Egypt, and if the strong representation, that will presumably be made by the authorities are unavailing the best thing would be to change the route. Probably the threat to do so would be quite effective.

Commentator.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866)

**Head Office: 17, TOKENHOUSE YARD,
LOTHBURY, E.C. 2.**

Bankers—

Bank of England. Messrs. Glyn, Mills, Currie & Co.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

ROUMANIA.

Bucharest, January 30.

Miscellaneous.

As a result of the International Railway Conference held recently at Berne there will soon be five express trains per day between Bucharest and Western Europe.

Thanks to the abundance of snow the autumn sowings are well covered and protected from the frost.

GREECE.

Athens, January 22.

Exports of Emery.

According to statistics compiled by the Ministry of National Economy, 10,885,150 tons of emery were exported during 1921 from the island of Naxos. Of this amount 3,689,900 tons, *i.e.* about 33.54 per cent. were exported to Great Britain, France taking second place with 2,702,500 tons or 24.56 per cent. 2,050 tons were exported to Holland, 1,477 tons to the United States of America, 475 tons to Italy, and 300 tons each to Germany and Spain.

Miscellaneous.

This year's production of olive oil is estimated at about 30 million okes. Last year's production was practically the same.

A Jew has been arrested by the Piraeus port authorities for attempting to import from Smyrna $1\frac{1}{2}$ million kronen and 150,000 marks, contrary to the regulations of the Syndicate of Banks.

The Administrative Council of the National Bank of Greece has decided to pay to its shareholders a dividend of 300 drachmae for the second half of 1921.

The Greek State railways have had a loss of 17 million drachmae during 1921. In future expenditure is to be reduced to the minimum.

CYPRUS.

Cyprus, January 24.

Destruction of Trees.

It is a lamentable fact which tends to show that little change has taken place in the character of the people that malicious injury to property, especially to trees, is still one of the worst offences throughout Cyprus—an island in which everyone who plants and tends a tree is a public benefactor. Thieving and acts of

relation are to-day only too common. Special dates have to be fixed by the authorities for the gathering of the widely cultivated carobs (locust beans); otherwise owners would suffer ruinous losses from the depredations as the fruit approaches maturity. Acts of revenge very frequently take the form of cutting, ringing, and otherwise destroying fruit trees of all kinds.

Nearly a generation has elapsed since a law was passed to deal with the evil of damage, the perpetrators of which could not be traced. It provided that when damage or destruction was caused by persons unknown compensation should be paid by the taxpaying inhabitants of the village or villages in which the properties are situated. Although a good deal of good has been effected by the deterrent operation of this law the evil appears to be again rampant. The papers, including the *Aletheia* (Truth) of Limassol, the chief carob growing district—are taking the matter up. The *Phone*, of Nicosia, in an article headed the "Killers of trees," advocates the exercise of Church influence, and still more of that of the village school teachers. Nothing can course be done to stamp out this scourge until a moral change is effected in the rural classes through better education in its fuller sense. It would be well if instead of a great deal of the political agitation for which village agriculturists have little taste the town leaders would devote their influence to raising the tone of education in all the rural districts.

General News.

The general agricultural outlook is good, sufficient rain for the present having fallen. The local price of carobs is 15s. per kantar (£3 18s. the ton); of raisins 7 piastres (9½d. the oke of 2.4-5 lb). Wine fetches from 4s. 3d. to 6s. 8d. the "load" of 128 okes.

All 10s. and 5s. currency notes of 1914 will be cease to be current after January 31, and are to be changed at the Imperial Ottoman Bank or the offices of District Commissioners.

BULGARIA.

Sofia, February 3.

The Internal Loan.

Subscriptions to the internal loan now amount to approximately 100 million levas. The peasants have, however, not come forward at all willingly with subscriptions.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on January 27 were as follows:—Agricultural Bank of Egypt, £4 15-12; Alexandria Water Co., Ltd., £6.7-8; Anglo-American Nile Steam, £2.19-32; Associated Cotton Ginners, £13-16; Banque d'Orient, Fr., 50 Behera Ord., £17.7-8; Brasseries d'Egypte, Fr., 70; Building Lands of Egypt, £27-32; Cassi di Sconto Priv. Fr., 108; Ciments d'Egypte Priv., Fr., 50; Ciments d'Egypte Div., Fr., 30; Comptoir Fin et Com. d'Egypte, £15-16; Consolidated Lands, Pt., 5; Credit Foncier Fondateur, Fr., 950; Credit Foncier Act., Fr., 661; Credit Foncier 1886 Oblig., Fr., 332; Crown Brewery Priv., Fr., 950; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 120; Eaux du Caire Jouissance, Fr., 107½; Egypt and Levant, S.S. Ord., 33s. 9d.; Egyptian Delta Light Railways, £3½; Filature National d'Egypte £10.7-8; Immeubles d'Egypte Soc an des., £5.32-32; Khedivial Mail S.S. Ord., 107s.; Khedivial Mail S.S. Co., Pref., £2½; Kom Ombo Ste An de Wadi, £4½; Kom Ombo Ste An Fondateur £34½; Land Bank of Egypt, Parts de Fond., £37½; Lots Turc. Fr., £30; Menzaleh Canal Navigation Pt., 210; Nungovich Hotels, £6.9-16; Ramleh Railways, £2.7-8; Salt and Soda, 29s. 7½d.; Tram d'Alexandrie Priv., Fr., 41; Tram d'Alexandrie Div., Fr., 50; Union Fonciere d'Egypte, £2.5-8; Egypt Hotels, £2.1-32; Urbaines et Rurales, £3.

According to figures published by the official Statistical Bureau, the imports into Czechoslovakia during the first nine months of the past year totalled 2,077,000 tons, while the exports were no less than 7,352,325 tons.

Current Accounts opened in Sterling, Francs, Dinars, etc.

Insurances effected through the Bank's Brokers.

Applications for Terms invited.

Oil Notes and News.

OIL IN YUGOSLAVIA.

That petroleum occurs in what used to be southern Hungary and is now the northern part of Yugoslavia has been known for many years, and optimists have been confident of finding what they considered to be a continuation of the Roumanian oilfield in the valleys of the Save and of the Drave. Oil has actually been worked in the fork of the river Mur, known as Medjumurje, or Mur Island, but the output is quite small. In Croatia and Slavonia seepages have been known since 1852, and in a few places have given rise to petty local industries, as at Paklenica and elsewhere. Trial pits were sunk, but only to shallow depths, and borings, as at Mikleushka and Kloshtar, Paklenitsa, Ludbreg, Poganats Veliki and Pitomacha, but the science of oil geology was then too young to lead to very definite results.

The country between the Save and the Drave, the two affluents of the Danube, consists of large alluvial plains, rows of low heights consisting of Tertiary marls and sands, often with a heavy cover of loess, and several protrusions of older rocks such as crystalline schists, and some eruptive rocks as granite.

The first serious attempt to explore the country was made by the Hungarian government, which put down a boring at Bujavica, which was interrupted by the war and afterwards continued by the Yugoslav Government, with encouraging results, but no finality. Then in the spring of 1920, a Yugoslav syndicate was formed which succeeded in obtaining a concession from the Government, which took the hint, and at once issued a law specifying the conditions under which oil concessions would be granted to native applicants. This was immediately followed by a batch of applications, chiefly from Yugoslavs, but there were foreign interests concerned also, which had not been provided for in the law. The Government consequently made its own terms, and these are an interesting concrete example of the short-sighted xenophobe policy of Belgrade. The law was amended to admit foreign capital, but this was expressly limited to a maximum participation of 50 per cent. in any undertaking, and the Government claimed 20 per cent. free participation in the capital in lieu of royalty. As competition appeared this was raised to 25 per cent. too large a proportion, it is true, but not a bad way of taking royalties.

After negotiations had dragged on for four or five months, a batch of concessions was granted, mostly to native syndicates and individuals. One large concession was secured by M. Pashitch Junior, representing, it is believed, a Paris group, and another by the Shell interest, which appeared for a time to be the only serious adventurer, in partnership with a Croatian group owing to the Government's restrictions. This company at once set to work to bore and made a detailed geological survey. At the same time, the first Croatian company, mentioned above, secured the necessary financial support from England, from the Anglo-Perisan

group, it is understood, and undertook three borings, which are now in full swing. A year after the first negotiations were begun the Standard Oil Corporation appeared in the field, with a concession to the north of Zagreb, but work in the field has not yet begun. None of the other concessionnaires have so far shown any outward and visible sign of enterprise.

It is obvious that the development of an oilfield in Yugoslavia, will add immensely to the wealth and prosperity of the country, but it is to be hoped that the Government will reconsider its anti-foreign policy, for it is only groups with very great financial resources and wide experience that can hope successfully to win oil under modern conditions, neither of which are available within the country.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 6:—Condition of Crops.—February 3.—In Bengal, fair rain still wanted. In Central Provinces—Sesamum wheat and grain good to very good, and late rains have improved wheat and grain. Prospects in Bombay and North-East and Western United Provinces unchanged. Markets.—Cotton, February 2.—Bombay cotton market weak. Fine M.G. Oomras, Rs. 350 March Rs. 362 May. Bombay cotton arrivals from September 1921 to January 27, 1922 were 1,508,000 bales as compared with 787,000 bales in the corresponding period of the last year. Piece-Goods.—Bombay imported piece-goods market unchanged. Stock on December 31, 1921 was 59,618 packages. Hessians steady, with some business done. Tea.—at tea sale on January 31, mostly end of season offering general. Lower priced grades are declined about half an anna. Dusts strong. Final figures of crops estimated at 247½ Million Pounds.

The traffic receipts of the Egyptian Delta Light Railways for the week ended January 20 amounted to £E10,900; total for year £E320,486. For the corresponding period of last year, receipts amounted to £E13,282 and £E408,982 respectively.

The Scottish Show.

Even in the motor trade itself there are those who wonder whether these constantly recurring motor shows are of any practical value. I am just back from a visit to the twentieth annual Scottish Motor Exhibition at Kelvin Hall, Glasgow, having felt it my duty to be there on the opening day at least, so that I might give as accurate a view as possible of the reception the show was receiving in the northern capital. Candidly I was surprised, not only at the scope and extent of the exhibits, but at the very large number of visitors who seemed to me thoroughly representative of Scottish and north country owner drivers and the trade. There was a first class display of every imaginable type of motor car, both private and commercial, motor cycle, tyre, wheel, engine, and chassis; there were hosts of components and accessories, and altogether the show was very much of a revelation to me.

I was inclined myself before my visit to think that after the commercial vehicle show held in London during October, and the big motor show of last November at Olympia and the White City that the Scottish show was to some extent superfluous; that it would be in effect merely a repetition of what had been shown before. It was however very far from that, and I consider that the British motor industry should benefit very greatly from this extremely fine display.

One of the points which should be brought home to the overseas public in particular is that whilst British productions of a motoring character have been steadily decreasing in price there is every reason to suppose that the fall has just about reached the bottom. I am aware that it has been the practice amongst American trade journalists to cry out that the limit has been reached every time a manufacturer made a reduction, the idea being to induce people to buy at once lest a rise took place. I am not speaking in that spirit at all: I honestly believe that we are at or very nearly at the rockbottom prices for every British product, and that no further appreciable reduction in the price of anything can be made until wages come down further, railway rates are reduced, and the price of coal considerably decreased. I think, therefore, that the Scottish show records the low water mark of prices, if not for the whole of the year, at any rate for the next six months or so, and that the steadily increasing demand now being experienced will stiffen or tend to stiffen prices rather than bring about a further reduction. With regard to this price matter there is another aspect, further, which should be considered. Whilst we are comparing the cost of the modern car and the value of the £1 sterling to-day with pre-war cars, prices, and relative values we should bear in mind that there is no comparison between the efficiency and road worthiness of the modern motor vehicle and that of pre-war days. I know for a fact that the post-war Rolls-Royce is better in a host of vital respects than any car the firm turned out prior to 1913, and the same statement, I believe, would be equally true of any other high grade make. The modern car may seem more expensive than its earlier prototype, but it is a far superior product in every way.

Oil and Steam Power.

A writer recently gave some interesting figures relating to oil production, and from them deduced that oil can never take the place of coal as a motive power, and that further the steam engine or turbine will remain the principal prime mover for an indefinite period. I do not know whether his readers are supposed to mourn or rejoice over this: it seems to me that if oil is at present making headway as a power producer either by means of ordinary internal combustion engines or by Diesels and semi-Diesels, it would not do so unless in some way it was found more suitable than coal-raised steam. We then, I fancy, should express some decent sorrow that coal is likely to be so long lived. I fancy, however, that the writer rather over argued his

case. He tries to show that coal is so much superior to oil as a power producer that no one with intelligence would ever use oil or petrol. And yet I know some apparently level headed people who even go so far as to drive their cargo vessels by means of oil engines. I gather however, that the total quantity of oil produced in the world is approximately 500 million standard barrels of 40 gallons, and that it is estimated that the heat value of a ton of coal is about equal to that of four barrels of oil so that the world's output of oil is approximately equal to 125 million tons of coal. But the total output of coal is about 1,250 million tons per annum—how nicely these figures compare!—and consequently there is ten times as much coal produced as oil, and, should the world's supply of coal fail, oil would consequently be able to supply only one-tenth of the required power. Candidly, that sort of argument means little, and leads nowhere. Before we could compare the heat values of oil and coal we should have to know what type of coal was referred to; there are 50 per cent. variations in coal. It would be necessary to know how we arrive at the annual output of both oil and coal; to what extent known but at present untapped deposits of both were being taken into account; what allowance was made for the use of shale and low temperature carbonisation oils and in short a thousand and one details we have not before us at the moment.

Electrical Hay.

A new device of an electrical character has been produced for making hay when the sun does not shine, or, in the words of the inventor, for preserving new mown grass without first drying it in the sun. The freshly cut grass is stored on metal plates in silos each of about 400 cubic feet capacity. The top of the silo is closed with another metal sheet, and this and the bottom plate are connected in an electric circuit so that an alternating current at a pressure of anything from 200 to 500 volts is passed through the grass, which is, of course, a fairly good conductor. It is said that the effect of this current flow is to destroy all bacterial life that would tend to cause the damp grass to decay. It can consequently be retained in this fresh and natural state for an indefinite time and I understand that from 130 to 200 kilowatt-hours will treat five tons of grass.

Electric Winches.

Until quite recently the electric winch, for use on shipboard, was regarded with strong suspicion. It was looked up as being likely to prove unreliable; there was a general feeling that the electric motor would prove itself unable to deal with heavy and sudden loads, and there is little doubt that, but for the advent of the motor ship, the improvements which have been effected in these machines would have been restricted to a very material extent. As the leading journal devoted to the motor ship industry rightly observes, the necessity for improvement was quickly realised when it was found that the type of machinery installed on board the internal-combustion-engined vessel lent itself specially to the adoption of electrical auxiliary plant. The result of all that is it is now considered, in all responsible quarters, that for reliability electric deck machinery is equal to steam plant whilst its economy is considerably greater.

A suggestion has recently been put forward that it would be a desirable course to provide steam vessels with electrical deck machinery as a standard arrangement. Reference has been made to the absence of pipe lines, which traverse the deck and constitute a source of danger to those employed on board, while the generally clean appearance of a motor cargo vessel's deck is apparently beginning to be envied by many steam enthusiasts. Considering the annoyances and difficulties associated with the maintenance of long runs of steam piping, it is probable that the higher cost of electrical plant has alone been responsible for not rendering the steam winch obsolete many years ago.

Stock and Share Markets.

STRENGTH OF GILT-EDGED:

(From Our Own Correspondent).

London, Tuesday Morning.

In view of the unfavourable conditions it would not have been at all surprising if the markets generally had displayed considerable weakness during the past week. As it happened a fairly steady tone was maintained except in a few directions, and gilt-edged descriptions resumed their advance, which has been such an outstanding feature of the past few months. It would be unwise, however, to draw the conclusion that because for once the markets have risen superior to their surroundings this is likely to continue. On the contrary it may be assumed that unless there is a very pronounced improvement in the political outlook there will be a severe setback. At the moment of writing it must be admitted that conditions are very far from favourable. Ireland again is disturbed, the position in regard to India and Egypt is very uncertain, while so far the various conferences on the Continent have given little cause for confidence. Against these influences the only bull point the market has is the expectation that the bank rate will be reduced.

There have been a few new issues of importance during the past week. The £3,000,000 seven per cent Seine Loan met with an excellent response, while the Bengal Iron Debenture offer was more or less neglected, presumably because of the unfavourable view taken of the position in India. Then yesterday there was the £5,000,000 Shell seven per cent. Second Preference issue, which was enormously successful, the lists being closed at a very early hour. I imagine that there is now likely to be a pause in new issues pending political developments, for the investor is scarcely likely to be found in a suitable mood while the outlook is so dubious. Before I leave the subject of new issues I must mention that it is expected that the negotiations for a Greek Loan will be shortly concluded; indeed it is just possible that matters may have been arranged before these notes appear. It should not be long, therefore, before the public is offered an opportunity of helping British trade with the Near East.

Gilt-Edged Firm.

Gilt-edged, as I have pointed out, have broadly speaking had a good week. Consols are 7-8 up at 52 3-8, War Loan Fives have gained 15-16 at 94 1-16, while the Conversion Loan is 1 3-8 up at 71 1-8. The exception has been presented by Indian stocks, which have been very weak. The India seven per cent. Loan is 1 down at 103, the three per cent Loan has shed $\frac{1}{4}$ at 50, while the $3\frac{1}{2}$ per cent Loan is $1\frac{1}{2}$ down at 57. In Near Eastern securities which rank with British Government stocks, Turkish Guaranteed 4 per cents are 75 5-8, a rise of 1 5-8.

A very quiet tone has prevailed in the foreign market. French stocks have been fairly steady, and War Loan Fives are unchanged at 41. German 3 per cents are also the same at 2 7-8, but Italian Rentes are a point up at 22 $\frac{1}{2}$. Japanese stocks have been rather dull, the 1905 issue being $1\frac{1}{2}$ down at 85. Chinese securities have also inclined to weakness, the 1896 Loan being 1 down at 87, while the 1913 Loan has shed $\frac{1}{4}$ at 67. The demand for Brazilians has declined, and prices have eased off, while Mexicans have also been dull. Russians have been featureless, and rates are unchanged. In Greek securities the 1884 Loan is 38 $\frac{1}{2}$, the 1889 Loan has been done at 30 $\frac{1}{2}$, while Monopolies are 32 $\frac{1}{2}$.

Industrials Quiet.

A quiet tone has ruled in the Industrial group. There has been very little business passing, and the tendency seems to be to wait on developments. A fair business was done in tobaccos, Bats being unchanged at 61s. 3d. despite the improvement in the American exchange, while Imperial Tobaccos have firmed up 9d. at 52s. The result of the meeting of Dunlops was a relapse in the shares, but they recovered later to 5s. 10 $\frac{1}{2}$ d. In the Insurance group City Equitable Prefs are down to 3s. 6d. on the unfavourable developments. Tea shares have been a shade better, while Textiles are about the same. Coats are unchanged at 2 19-32, while Courtaulds are 4 $\frac{1}{2}$ d. down at 39s. 4 $\frac{1}{2}$ d. Iron, Coal, and Steel securities have been rather dull. Armstrongs are unchanged at 14s. Vickers are 6d. down at 8s., Guest Keens are about the same at 28s. 6d., while Lamberts are unchanged at 37s. 6d.

Shipping securities have been dull. P. and O. Deferred are unchanged at 280, Cunards have shed 3d. at 17s. 3d., while Furness Withys are 6d. down at 23s. 6d.

Indian railway shares have naturally suffered as a result of the position in India, and are considerably down. If one were certain that nothing untoward will happen there are some excellent bargains to be picked up in this group, but seeing that there must be at least the possibility of a further fall it is obvious that it would be better to wait a little before entering the market. At the same time it must be emphasised that holders would be ill-advised to dispose of their holdings.

Oils Brighter.

The Oil market has made a much better showing during the past week, and indeed last night was in a state approaching buoyancy. Burmahs are fractionally lower at 5 5-16, but Mexican Eagles are on the up grade, and at 4 1-16 show a gain of 3-8 on the week. Trinidad issues have improved with Centrals at 3 17-32 fractionally better. Kern Rivers are 3d. up at 19s. As I have said before I regard Mexican Eagles and Centrals as particularly promising purchases for a small profit in the next couple of months or so. But that, of course, depends on developments generally outside the oil industry.

Among Egyptians, Anglo-Egyptian B are unchanged at 1 5-16, while Oilfields of Egypt are harder at 5s. 9d. In the Roumanian group Roumanian Consolidated are 3d. up at 8s. while Phoenix have advanced smartly to 12s., a gain of 2s. 9d. Dacia Romanos are unchanged at 11-16, while Steaua Romanas are 6d. up at 10s. 3d.

Indian Banks Lower.

Among banking descriptions Chartered of India have shed $\frac{1}{4}$ at 14 $\frac{1}{2}$, while National of India are $1\frac{1}{4}$ down at 33 $\frac{1}{2}$. P. and O. Banking Corporations at 11 $\frac{1}{2}$ show a decline of $\frac{1}{4}$. Imperial Bank of Persias are unchanged at 5, while Bank of British West Africas remain at 4 $\frac{1}{2}$.

In Land shares Béhéras are 3-8 up at 8 7-8, while Egyptian Delta Lands are 3d. down at 7s. Gharbiehs are 1-16 down at 1 $\frac{1}{4}$.

NEW COMPANIES.

Cox's City Nominees.

Cox and Co.'s City Nominees, Ltd., has been registered as a private company, with a nominal capital of £100 in £1 shares. Objects:—To act as nominees or agents, either solely or jointly, for Cox and Co., or others. The first directors (to number not more than ten) are to be appointed by the subscribers; subject thereto, so long as upwards of half the issued shares are held by Cox and Co., the directors thereof may at any time by resolution (a) appoint one or more directors, (b) remove all or any of the directors, (c) increase or reduce the number, or (d) convene or direct one of the officers of the bank to convene a general meeting of this company.

Asiatic Petroleum (Palestine).

The Asiatic Petroleum Co. (Palestine), Ltd., has been registered as a private company, with a nominal capital of £10,000 in £10 shares. Objects:—To produce, refine, and transport oil. The signatories to the memorandum of association (each signing for one share) are H. Kenneth Lee and F. P. Winterbotham, both solicitors, of 10-12 Bishopsgate, E.C. The signatories are to appoint the first directors. Registered office: St. Helen's-court, Great St. Helen's, E.C.

Cyprus Asbestos.

The Cyprus Asbestos Company, Limited, has been formed with a capital of £300,000 in 285,000 10 per cent. Participating Preference shares of £1 and 300,000 shilling Deferred shares, and there have been issued for cash 205,000 of the Preference and all the Deferred.

The concessions taken over were acquired from a Greek syndicate. The directors include Lord Inchcape, Sir Thomas Royden Bart., and Mr. F. B. Behr. The chief engineer and managing director in Cyprus is Mr. Clement Dixon, an engineer.

Near East Markets.

LONDON PRODUCE REPORT.

Sugar Cheaper.

(From Our Own Correspondent.)

Monday Evening.

Sugar.—The tone has been generally weak. There has been little material change in the home refined market. Tate's cubes, coffee crystals and mineral water sugar have shed 6d. at 52s., 52s. 3d. and 46s. 9d. respectively. London granulated and Lyle's granulated have gone down 6d. and 9d. respectively at 46s. 3d. In export descriptions West Indian crystallized has been done at 40s. 6d., a decline of eighteenpence, and Czecho-Slovakian remains unchanged at 19s. Raw sugar (96 per cent.) quotations are:—February, 15s.; March, 12s. 9d.; May, 12s. 6d.; and August, 12s. 9d. White sugar quotations are:—February, 18s. 9d.; March, 18s. 3d.; May, 18s. 1½d.; and August, 18s. 1½d. **Coffee.**—Prices are lower. Costa Rica is 15s. cheaper at 120s., and Indian is 4s. lower at 106s. Nairobi at 110s. is 5s. down, while Jamaica has remained firm at 150s. The supply is still small with regard to the Nairobi and Ugandas varieties. The Futures market has been quieter. Quotations are:—March, 51s. 9d.; May, 52s. 9d.; July, 53s.; September, 53s.; and December, 53s. 6d.

Tea.—The market has been unsteady. Fine China tea has dropped ½d. to 2s. 11½d., as also good Pekoe Souchong at 11d. lb. Common Java has gained ½d. at 9½d.

Rice.—The market has been normal. Saigon and Burmese rice have been steady at 14s., while Carolina rice has shed 6d. at 28s. 6d.

Dessicated Coconut.—The demand has fallen off this week, while prices have remained steady.

Almonds.—Valencia and Jordan almonds are very scarce, and prices are appreciating.

Green Fruit, &c.—In the early part of the week the demand for oranges weakened, but gained strength subsequently until ultimately it almost reached the previous week's level. Supplies of lemons are in excess of the demand, little business having been passing during the week. Selected fruit has been in good request, while the market is short of bold fruit. Prices of Valencia onions are generally higher, and the demand has been better. Barrels and boxes of apples are showing a good market.

Oilseeds.—The tone has been unsteady. Indian linseed is 1s. 3d. up at 20s. 6d. and La Plata has risen 2s. 3d. at 20s. 9d. Rapeseed has been variable with Toria, 7½d. up at 16s. 7½d.; brown Cawnpore unchanged at 18s., and bold Ferozepore 3d. down at 17s. 9d. Cottonseed has been unsteady with Indian 3d. up at 9d.; Sakellaridis unchanged at 11s. 4½d., and Egyptian black, 1½d. lower at 11s. 7½d.

Oil.—A variable tendency has prevailed. Linseed oil is 5s. 3d. up at 38s. 9d. Rape oil is unaltered with the crude variety at 51s., and refined at 56s. Cotton oil has risen with refined 1s. up at 43s., and deodorized a like amount up at 48s. Egyptian crude is 12s. down at 35s. Turpentine is 4s. lower at 69s.

Oilcakes.—Linseed cake has gained 10s. at 310s. ton. Cottonseed cake at 195s. ton, and palm kernal cake at 135s. ton, have risen 5s. and 15s. respectively. Arachis cake is firm at 215s. ton, while cotton-meal cake is 10s. up at 320s.

CROP CONDITIONS IN MESOPOTAMIA.

The following extracts are taken from the Agricultural Bulletin of Irak for the period November 16 to December 15:—

The November rains have been particularly propitious over the whole of the country. Already a larger area has been ploughed for wheat and barley than is customary, and ploughing will continue for another 30 days. The exceptional fortune of this season's cultivation is the very large area that has been sown where there are no facilities for irrigation. Normally the rain-fed crop in Lower Irak is cultivated under precarious conditions, and is generally a failure, but with the advent of one or two heavy showers of rain in the early spring it is believed that a very good crop will be harvested. It will be interesting in due course to observe the effect of a largely increased cereal crop on the local prices. There is already a drop of about 50 per cent.

in the prices of wheat and barley compared with those of 1920. The current prices are nearly low enough to make the export of wheat and barley a profitable undertaking, and in the coming year it is anticipated that the local supply will exceed the local demand to such an extent as to result in fairly large exports of those cereals.

The Director of Irrigation reports that a rise of 4.6' was recorded in the Tigris at Baghdad and 2.3' in the Euphrates at Ramadi. The construction of the Butera Regulator at Amara is progressing. Clearance of the Yusufiyah canal and excavation work on its extension continue. An Irrigation Survey has been detailed to Diwaniyah to investigate two local projects. Repairs to the Hindieh Barrage are nearing completion. A training school has been opened by the Irrigation Directorate in Baghdad where eight students are now training for the posts of Assistant Irrigation Officers.

Winter cereals have germinated well both in irrigated and unirrigated areas. Crops of winter vegetables are in good condition. The harvesting of the rice crop is now completed, but threshing has been delayed by rain, and in some cases much loss has been sustained due to damage by rain both in the field and on the threshing floor. The date harvest was completed before the rains, and old date fronds are now being removed. The picking of citrus fruits continues. The sweet orange crop is reported to be above normal, while the sweet limes are below an average crop.

The Director of Veterinary Services reports that rinderpest in cattle has been attended to in the Baghdad, Nasiriyah, DIALA, Mirkuk and Dulaim Liwas. 1,645 deaths are reported to have occurred before veterinary aid could be rendered. 817 animals which had been attacked recovered after treatment. Altogether 3,756 animals were inoculated. All unaffected animals that were treated were rendered immune to the disease. The question of stamping out cattle diseases is of vital importance to a country such as the Irak where the livelihood of the major portion of the population depends primarily on its facilities for crop production. Cattle continue to be the mainstay of the agriculturist.

Grazing had become exceptionally scarce up to the advent of the first rains. Within a fortnight after the first fall of rain, grazing was general and it is improving daily. Plough animals are, in general, in poor condition owing to the heavy strain of continuous ploughing.

Experimental work with cotton, wheat, barley, berseem, maize, flax and ground nuts continues favourably on the three agricultural stations at Baquba, Kut and Rustam. The two varieties of maize ("Dent" and "Flint") imported for the first time from America, though badly attacked by stemborer, have developed extraordinarily fine cobs. There is also a keen demand for the "Dent" variety from local cultivators. In regard to the flax crop, this grew well, but considerable difficulties were experienced in rotting and scutching the fibre owing to the absence of export labour. About 100 acres of wheat have been sown with a view to growing a supply of seed to meet the demand in the subsequent season. Small experimental plots of ground nuts have done extraordinarily well. The large Japanese variety gave an average of 1.1-3 tons of pods to the acre. A forestry section of the Agricultural Directorate has been started and tree nursery work is being undertaken on a fairly large scale.

Analysis of soils continue. A further analysis of the DIALA water at various points along its course confirms the opinion previously expressed, that the high salt contents of this river during the summer months is to be attributed to the fact that while the dam at Table Mountain functions the river bed south of the dam acts as a drain for the adjoining country.

With the advent of the rains there were renewed attacks of "Aphis" more particularly on the Peach tree. It was further observed that the fulgid bug that causes the "Mann" disease of dates lays its eggs at this season. Experimental work in spraying fruit trees previously conducted near Baghdad is having the desired effect and garden owners have started undertaking this work at their own expense.

In the coming season the cultivation of cotton will be confined as far as it is possible to the three tracts, DIALA, Saklawiyah and Yusufiyah. Owing to the heavy fall in the price of cereals, a fairly large demand for cotton seed is anticipated. The Silk Assistant has toured the DIALA area with a view to undertaking demonstration work in sericulture in the coming season.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended January 28:—

Sultanias.—The total estimated arrivals to date amount to 168,180 bags as compared with 94,800 bags. The total estimated sales are 159,180 bags as against 87,800, while the estimated stock unsold totals 9,000 bags as against 7,000 bags.

Markets.—Business in sultanias is extremely limited. Dealers maintain their price in local currency and with exchange steadily declining shippers have no inducement to operate, actual costs working out to several shillings above U.K. parities. Exchanges are daily weakening, sterling rate having touched this morning as low a level as 622.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 132s. 6d. cwt.; (Canadian), 115s. 6d. cwt.; (American), 108s. 6d. cwt.; butter: (Danish), 188s. cwt.; (Australian), 115s. cwt.; (New Zealand), 140s. cwt.; cheese (Canadian), 97s. cwt.; (New Zealand), 95s. cwt.; lard, 72s. 6d. cwt.; eggs (Danish), 33s. 6d. per 120; (Styrian), 24s. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6½d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 130s. cwt.; (East Indian), 125s. cwt.; (Central American), 110s. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 112s. 6d. cwt.; (Santos, superior), 61s. cwt.; ginger (washed Cochin), 57s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 110s. cwt.; sultanias (Smyrna), 121s. cwt.; currants (Vostizza), 78s. cwt.; currants (Amalias), 58s. 6d. cwt.; sugar: (Tate's cubes), 52s. cwt.; (Lyle's granulated), 46s. 10½d. cwt.; (Mauritius crystals), 44s. 3d. cwt. (West Indian crystallized), 40s. 6d. cwt.; (centrifugal), 14s. 7½d. cwt.; tapioca (fair Singapore), 1¼d. lb.; rice (Rangoon, No. 2), 14s. 7½d. cwt.; (bran, Rangoon), 45 18s. 9d.; ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common), 1s., 1½d. lb.; (medium to good), 1s. 7½d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 8d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 49s. qr.; (Australian), 53s. 3d. qr.; barley (malting), 55s. qr.; barley (feeding), 39s. qr.; oats (English), 32s. 6d. qr.; oats (La Plata ex-ship), 27s. 6d. qr.; maize (La Plata), 38s. 9d. qr.; flour, 40s. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulis), £35 ton; bismuth, 9s. lb.; copper (standard), 261 13s. 9d. ton; copper (electro), £70 ton; gold bars, 95s. 8d. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 90s. 3d. ton; galvanised sheets (24 G), £15 15s. ton; lead (soft foreign), 461 13s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 28s. 1½d. unit; nickel, £180 ton; platinum, 395s. oz.; plumbago, £20 ton; quicksilver, £11 7s. 6d. bottle; silver bars, 347-8d. oz.; spelter (G.O.B.), £24 7s. 6d. ton; tin (standard), £154 2s. 6d. ton; wolfram, 11s. unit; zinc sheets, £34 10s. ton; tin plates (20 by 14), 18s. 9d. box.

Chemicals.—Acids: Boric, 60s. cwt.; oxalic, 7½d. lb.; citric, 2s. 1½d. lb.; tartaric, 1s. 3d.; ammonia (sulphate), £16 ton; arsenic (white powdered), £40 10s. ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £14 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 7½d. lb.; chlorate, 5d. lb.; caustic, £33 10s. ton; nitrate, £42 10s. ton; permanganate, 10½d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, £30. ton; bi-carbonate, £11 10s. ton; bi-chromate, 5½d. lb.; alkali (58 per cent.), £8 12s. 6d. ton; chlorate, 3½d. lb.; caustic (70 per cent.), £23 ton; hyposulphate £16 ton; prussiate, 9d. lb.; nitrate, £14 5s. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial, 1200 per cent.) £110 ton; lemon oil, 3s. 1½d. lb.; quinine, 3s. oz.; red lead, £38 ton; white lead, £41 5s. ton; white ground lead, £50 7s. 6d. ton; sulphate of copper, £28 15s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first), 90 lb. and up, 7-7-8d. lb.; 80 to 89 lbs., 7-7-8d. lb.; 70 to 79 lbs., 7-5-8d. lb.; (second), 90 lbs. and up 6-7-8d. lb.; 80 to 89 lbs., 6-7-8d. lb.; 70 to 79 lbs., 6-7-8d. lb.; 60 to 69 lbs., 6d. lb. Cows (first), 60 lbs. and up, 6½d. lb.; (second), 60 lbs. and up, 4½d. lb.; 50 lbs. and under, 4½d. lb.; Bulls (first), 5½d. lb.; (second), 4d. lb.; Kips (first) 6½d. lb.; (second), 5-3-8d. lb.; Calcutta Market. Prices in rupees per 20 lb. Arsenic hides (cows): Agras, 10 to 16; Durlhangas, 7 to 9; Patnas, 5-8 to 7. Salted cows, 4 to 7-8. Arsenic hides (buffalo), 3 to 8. Skins: Calf, 8 to 10 per 20 lb.; goat, 250 to 280 per 100 pieces.

Miscellaneous.—Cotton: (American), 9-70d. lb.; (Egyptian Sakel), 14-50d. lb.; Oilseeds: Linseed (La Plata), £18 17s. 6d. ton; palm kernels, £18 5s. 9d. ton; castor seed (Bombay), £14 17s. 7d. ton; sesame seed (China), £23 6s. ton; soya beans £13 ton; Oils: Linseed, £32 10s. ton; olive (Levant), £74 10s. ton; rape (crude), £49 ton; soya, £32 ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £40 10s. ton; cotton (crude), £35 10s. ton; ground nut, £43 10s. ton; Rubber: Plantation (No. 1 crepe) 8½d. lb.; smoked sheet, 8½d. lb.; fine hard Para, 11½d. lb.

ORANGE GROWING IN SOUTH AFRICA. EXPERT ADVICE.

The Union Government of South Africa has issued an important brochure on Orange Growing in South Africa which will well repay perusal by all who have already interested themselves in or are considering participating in any South African Orange Growing venture. Therein it is stated:—

"South African Orange Groves, in full bearing, have yielded from £200 to £300 per acre. That is to say, from ten acres of the land a yearly gross return of from £2,000 to £3,000 has been taken. Probably three-fourths of that was profit. There is consequently a widespread impression, strengthened as new groves come into bearing, that South African orange growing is one of the best paying undertakings extant, in which belief many of the country's keenest business men have been attracted, and capital amounting to hundreds of thousands of pounds is being invested.

"The result should be a considerable Orange Growing industry in South Africa during the next decade or so, and there can be no doubt that those who get in now when the industry is in its infancy, . . . will have seized an opportunity that does not often present itself. That is, if they get into a sound proposition, for it cannot be too strongly emphasised that the business of growing Oranges is a very technical one. Orange trees will grow almost anywhere in South Africa, but what they will yield depends on what soil and under what conditions of climate and management they are grown.

"Hence there are in South Africa, as in all citrus countries, growers whose operations return little or nothing, while others, as mentioned already, get very handsome returns."

A considerable number of officers having interested themselves in South African Orange-growing ventures, and having been somewhat perturbed by reports regarding certain South African land propositions on the market, the Officers Association decided to appoint an expert endorsed by the Union Government authorities to make a report on those ventures, whose promoters had expressed a desire to submit their undertakings to the scrutiny of independent experts. Colonel E. Thackeray, C.M.G., D.S.O., of Johannesburg, was deputed by the Officers' Association to take the necessary steps. The African Realty Trust, Ltd., having placed all available information at his disposal, Colonel Thackeray visited Zebediela Estates with Mr. C. A. Simmonds a Consulting Horticulturist endorsed by the Secretary for Agriculture of the Union Government of South Africa. Under date October 18th, 1921, Mr. Simmonds reported to Colonel Thackeray as follows:—

"On the 15th inst. I inspected the Zebediela Estates, and beg herewith to submit a concise report of same.

"I may say that I have known this property for some years, and on the occasion of my first visit I was struck by the great possibilities of these farms for extensive citrus culture.

"The climate is healthy and just right for producing first-class oranges that will keep well and carry to our most distant markets overseas.

"The lay of the land is all that could be desired, the slopes are very slight, with sufficient fall for efficient irrigation, with very little danger of erosion during heavy rainstorms, and, further, for this reason the lands would receive the full benefit of every rain.

"The soil is really first-class for citrus culture. It is deep, well drained, and is easily worked red loam. Oranges grown on this soil will be juicy, fine flavoured, and of a good colour.

"IRRIGATION.—This branch of the work is in the hands of highly skilled engineers, and the writer was impressed by the very thorough way these works are being carried out, and when completed there is no doubt a very great quantity of water will be conserved.

"The orchards already planted have been well laid out—the trees have been well cared for, and are making good growth. Every branch of the work on this Estate is being well done, and no expense is being spared to make the venture a success. Hundreds of thousands of trees are being raised in nurseries for future planting. These trees are being well looked after and properly trained.

"A thorough soil survey has been made, and it is quite apparent that only good citrus ground is being planted."

"In conclusion, I must say that I am quite satisfied that the African Realty Trust, Ltd., are doing everything possible to make a success of this Estate from the Plottolders' point of view, and I have no hesitation in recommending the proposition."

Mr. Simmonds' full report, also copy of the Union Government brochure referred to in the opening paragraph, together with particulars as to how an investor may participate in this industry on a basis which should return 75 per cent. per annum on capital invested, even reducing the estimated profit to £100 per acre, may be obtained by communicating with the African Realty Trust Ltd. (Capital, £400,000 fully subscribed, £183,000 paid up), Egypt House, New Broad Street, London, E.C.2.—Adv't.

Cotton & Cotton Goods.

EMPIRE COTTON GROWING.

Work of new Corporation.

The first general meeting of the Empire Cotton Growing Corporation was held at the Hotel Victoria, Northumberland-avenue, S.W. on February 8, the President of the Board of Trade, Mr. Stanley Baldwin presiding. Among those present were Lord Derby, Lord Emmott, Lord Colwyn, Sir Henry Birchenough, Sir Frederick Lugard, and Mr. Walter Runciman.

The report of the Administrative Council stated that the agreement with the Board of Trade, set out as a schedule to the Charter, which laid down the terms on which the Government grant was made, had been duly sealed, and the sum of £987,715 less sums advanced since April 1, 1921, and expenses incurred by the Corporation in connection with their occupation of an office in the Board of Trade had been received. The Liverpool and Manchester Cotton Associations began the collection of the levy from those firms who agreed to the charge on September 1, 1921. In the first four months the sum thus collected amounted to £15,067 10s., and the Liverpool and Manchester Cotton Associations had decided not to put into force the power taken by them under their by-laws to deduct from the sum collected the expenses incurred in administration, but to make no charge on that account.

The position with regard to the levy had been receiving the careful consideration of the Council. The assent of the owners of over 90 per cent. of the spindles in the country was obtained to the principle of a levy of 6d. per bale of 500 lb. on all raw cotton used in the country, and it was hoped that with so remarkable a degree of unanimity behind the proposal it might be arranged for the Liverpool and Manchester Cotton Associations to adopt a new by-law instructing their members to add this charge to all invoices forwarded to spinners. It had been found, however, that for legal reasons this could not be done. The Council felt that it would be unfair to allow the levy to become a voluntary matter instead of being obligatory on all, and, moreover, it would be impracticable for the Corporation to draw up any scheme of policy if it were dependent for its income on voluntary contributions which might fluctuate considerably; its work could only be carried on with hope of success if its income was assured and known approximately. Expressions of opinion were accordingly invited from the Federation of Master Cotton Spinners' Associations, and from the Cotton Spinners' and Manufacturers' Associations, as to whether these bodies would be prepared to give their full support to measures being taken by the Corporation with a view to legislative action to make the levy compulsory. Both bodies had passed resolutions warmly supporting action that might be taken to make the levy compulsory, and had sent out letters to their members asking if they individually were willing to support such action, and if they would be prepared to continue to pay voluntarily if such action be not taken. Replies to these enquiries were asked for by December 30, but the final result was not yet known.

Although payment was being made voluntarily by firms representing about 80 per cent. of the spindles, it was known that several firms agreed originally to the charge on the understanding that it would be made obligatory and universal, and the answers received so far to the circular letters made it clear that many of those firms would cease their contributions unless steps were taken to secure that object. The Chairman's Committee had further been in consultation with their legal advisers, who had prepared for them the rough draft of a Bill by which the object in view might be effected. The whole position would no doubt receive the very careful consideration of the Executive Committee, which in terms of the Charter fell to be elected at an early meeting of the new Council.

The report also dealt with the prospects of cotton growing in various regions of the Empire, including India and the Sudan.

Mr. Baldwin said the scheme was a great act of faith, a great piece of pioneer work that would not only bear fruit itself, but would be an example and an encouragement to other businesses throughout the country. From his point of view the special importance of their venture lay in this—it was the first great practical attempt of a great industry to cultivate our own Empire, and to bring into production great tracts in the world

that hitherto had not been utilized. It always seemed to him that if we devoted our brains and our money to developing our own Empire, and especially its tropical areas, and to cultivating the enormous markets in the East, we should be doing much better for our people than by battling with reconstruction in the East of Europe. The Government had shown practical sympathy in giving them a million of money. He was no lover of Government interference, if it could possibly be avoided, but if at any time they told him that in their deliberate opinion it was necessary for the success of the Corporation that legislative steps should be taken in the matter of the levy and they convinced him, he would do his best to induce the Government to give effect to it. He fully recognized the importance of the status of the Sudan being made clear and definite, for without such a clear definition of its position it would obviously be impossible for them to raise the money that might be required for the completion of the various schemes now in progress in that country, seeing that the day was past when they could look with any prospect of success to the Treasury for any help. He realized to the full their anxiety in that matter, and he would undertake to do what he could to help them.

Lord Derby, dealing with the compulsory levy, said that he had had some experience in the last few years of voluntary efforts and compulsory efforts. In this particular instance they had something being done for the common good. They had something like 80 per cent. ready to make the levy on the assumption that everybody else placed themselves in the same position. Under these circumstances he had no hesitation in saying that, speaking as a layman, he believed that the fairest thing to do and the right thing to do was to make a compulsory levy.

Mr. Runciman said the problem which the Corporation had to meet was one of the most serious that could fall to the organization of any great industry. He did not believe that the British Empire could ever be self-supporting. In this he differed from some of his friends, and he went so far as to say that unless they learnt from recent experience the necessity of not being entirely dependent upon one source of supply, they would be extremely foolish. He expressed the hope that the small minority at the present time would agree to the levy. If, however, compulsion should be necessary, the Minister was ready to place himself at the service of the Corporation.

The new council subsequently met in private.

MANCHESTER MARKET.

(From Our Own Correspondent.)

Manchester, Saturday.

Although the general conditions prevailing in the market remain very unsatisfactory here and there a rather better feeling has prevailed during the past week. The opinion is gaining ground that some of our customers are in urgent need of replenishing their supplies, but buyers are still adopting a policy of caution. There has been more talk of further financial trouble, and many firms are now facing big losses through differences chiefly in connection with yarn purchased a long time ago and not taken up. With regard to cloth the tone generally has been dull. No transactions of importance have been mentioned for the Near Eastern outlets. A prominent shipper to Egypt has given his opinion that it will be some time before trade with that outlet revives. Small lots of fancies have been put through for the Levant and Constantinople. A slow feeling has prevailed in Egyptian yarns. Fine combed numbers continue more favourably situated than carded counts. Prices on the week show very little change. Users have only taken up small lots to meet immediate requirements. Rather more cloth inquiry has been about for China, but a poor response has been registered for India in staple makes. South America has been quiet. Home trade buying has been very patchy. There has been a slight increase in the turnover in American yarns, but some wretched prices have been accepted by needy sellers.

As a result of the trip to the Balkans of the Prague Samples Fair Train Czecho-Slovak manufacturers received firm orders amounting to sixteen million kronen, negotiations for additional orders valued at ten million kronen being still pending.

COTTON PRODUCTION IN GREECE.

(From Our Own Correspondent.)

Athens, January 22.

The following figures have been obtained from the Ministry of Agriculture with regard to the production of cotton during 1921.

Provinces of Pthiotis and Phokis.—1,300,000 okas on a cultivated area of 18,500 acres, as against 400,000 okas on a cultivated area of 12,000 acres during the previous year.

Provinces of Attica and Beotia.—2,300,000 okas on a cultivated area of 36,000 acres, as against 3,150,000 okas on a cultivated area of 52,000 acres in 1920.

The Cyclades Islands.—12,350 okas on a cultivated area of 875 acres, as against 10,750 okas on a cultivated area of 490 acres in 1920.

It will be noticed from these figures that although the cultivated area during 1921 was smaller by 10,015 acres than that in 1920, 51,600 more okas of cotton were produced.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended February 8:—

Our market during the past week has been quiet, almost stagnant at times, and the course of values has again been downward. A somewhat steadier tendency has been noticeable during the last day or two, and this is all to the good, but there are, unfortunately, many disturbing factors, the influence of which will have to be modified before any sustained period of steadiness can be looked for. The political news from India is still disquieting, and although the boycott is supposed to be officially ended, its effects are still very apparent, and the native merchants, either from fear of the movement, sympathy with it, or from a purely speculative standpoint, are not coming into the market as might have been expected, and as in many quarters it had been hoped would be the case. The news from Egypt is more satisfactory, and it is hoped that Lord Allenby's visit to London may have the happiest results. Labour troubles in the U.S.A. continue to disturb the markets there, and subsequently react in Alexandria and in our market here. In short, nearly every country interested in the production of, or the manufacture of, cotton seems to be distraught with troubles more or less serious. As far as Lancashire is concerned, we are by no means out of the wood of financial troubles left us after the big slump, and at the present rate of consumption there is a visible supply of Egyptian cotton in Great Britain sufficient to last spinners for the next five months, that is, until next June. Average weekly deliveries to spinners continue in the neighbourhood of 6,000 bales, which compares with 10,000 bales for the same period in 1913. On the face of it, it looks as if the Egyptian section had settled down to a steady jog-trot, on the basis of a two-thirds production. In the meantime, yarns are moving off so slowly that large stocks must necessarily be accumulating at the mills. The weight of yarn, plus cotton, must be considerable. The enquiry here has been of limited extent and of general character, with attention being chiefly directed to the grades Fully Good Fair and below. Good to Fine cottons have been little in request, and they stand, particularly Sakellaridis, at what appears to be an exaggerated premium over the lower qualities; for examples, Fine Sakellaridis is quoted to-day at 22.25d., with Fully Good Fair at 15.50d, a difference of nearly 7d. a lb. Fine Uppers also seem at 14.75d. as compared with contracts, but there is so little business doing in these higher grades at the moment that it is difficult to test prices. C.i.f. business with Alexandria has continued very quiet. Liverpool is still much the cheaper market of the two. Sales 1,400 bales (includes 200 Sudan). Quotations are reduced 100 points for Sakellaridis, with the exception of Extra Fine, which is 75 points lower. Brown and Upper are reduced 50 points on the week.

Negotiations will shortly take place for the conclusion of a commercial treaty between Czecho-Slovakia and Portugal.

The Shemen Company are making preparations for the erection of a large oil factory in Haifa.

Narodni Listy states that as a result of the continued rise of the exchange value of the Czecho-Slovak crown the prices of hops have fallen recently by almost one half, and that a further decrease is probable.

BRITISH INDUSTRIES FAIR.

Some Facts and Figures.

With reports current on all sides of improving trade conditions, the greatest interest is being taken in the forthcoming British Industries Fair, the eighth of an unbroken series, which will be held from February 27 to March 10. The Fair, which is organised by the Department of Overseas Trade, will again consist of two sections, one for such commodities as engineering stock, hardware, tools at Birmingham, and the other for lighter goods at the White City, London. The two sections will be held concurrently and in both cases the exhibits will be displayed under one roof, or rather under one series of roofs, for no one building is large enough to hold a complete section of the Fair.

A quarter of a million invitations to buyers in the United Kingdom are being issued by the Department of Overseas Trade, and nearly 50,000 have already been sent to buyers overseas. The Fair has received considerable publicity overseas, and already a considerable number of overseas buyers have written expressing their interest and intimating their intention to attend. In many of these replies overseas buyers have raised questions of interest to themselves and British manufacturers, and as a result orders for British firms have already been secured. A point of interest about the Fair is that it is entirely self-supporting, all costs of construction, maintenance, publicity and so on being borne by exhibitors.

With the exceptions of textiles, the Fair will represent in its two sections practically every British industry. It is open to Dominions manufacturers to exhibit, but middlemen do not participate. The fact that all the exhibitors are actual manufacturers is of great value to buyers, especially those from overseas, since it eliminates the confusion and waste of time which is apt to arise when the same goods are shown at different prices and in different parts of the Fair. Other advantages for overseas buyers include the free use of a special club equipped with reading and waiting rooms, and the free services of interpreters.

Preparations at Castle Bromwich Aerodrome where the Birmingham Section will be housed, and at the White City, London, are now well advanced, and at both these big buildings the actual exhibits of many firms have already arrived. Some idea of the size of the Fair can be obtained from the fact that at the White City alone 200 tons of timber and 15 tons of nails have been used in the construction of the exhibitors' stands, which cover 200,000 square feet of actual exhibiting space. These stands, which are being painted to suit the needs of individual exhibitors have absorbed 20 tons of paints and distempers. Over 10,000 asbestos panels each weighing half-a-hundredweight have also been used. The total area of the stand walls amounts to a quarter-of-a-million square feet, the frontage of stands alone being 3½ miles in length. When the stands at Birmingham are added the total distance which a visitor will have to walk to inspect the whole Fair will be well over 5 miles.

To protect the exhibits, each stand has a muslin ceiling, no less than 12 miles of muslin having been used for this purpose. The counters which form so prominent a feature of the stands involve the use of nearly 46 miles of cloth as covering, while floor-coverings amount to 22,500 square yards. In order to ensure adequate light for the whole of these vast preparations, 13 miles of ordinary electric cable and 12 miles of flexible cable have been installed. Through this 25 miles of wire will be conveyed the current to light 8,000 lamps, each complete with shades and fittings. These lights are controlled through no fewer than one hundred and eleven fuse boards, and six miles of straining wire have been used to support this vast mass of electrical material.

COUNCIL OF ADMINISTRATION OF THE OTTOMAN PUBLIC DEBT.

NOTICE TO HOLDERS OF THE OTTOMAN 4 PER CENT. UNIFIED CONVERTED DEBT.

The Council of Administration give notice that the date for depositing for the payment of 1s. 3d. per coupon on account, coupons of the Ottoman 4 per Cent. Unified Converted Debt due March, 1915, to March, 1920, inclusive, by Allied and Neutral holders, has been extended from March 1 to August 31, 1922.

SHIPPING INTELLIGENCE.

THE FROZEN DANUBE.

(From Our Own Correspondent.)

Bucharest, January 30.

The recent heavy snowfall, which reached an average height of 40 c.m. throughout the country, has now been followed by an unusually severe frost. As a consequence the Danube is completely frozen right down to Sulina. At Braila the ice is said to be two metres thick, so that any attempt to break the ice for the purpose of freeing the icebound sea vessels is now quite out of the question, and these boats will have to remain where they are until spring. The inclemency of the weather has caused also a good many casualties. Many peasants were caught on the road by the drifting snow-storm and were frozen to death. Several cases of wolf attacks have been reported, and in one case a pack of wolves penetrated right into a village and wounded 28 men, who tried to beat them off.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, ports of departure, and closing dates for cargo being given in parentheses:—

Anchor Line.—S.S. Vindelia for Bombay (Liverpool, February 18); s.s. Circassia for Bombay (Liverpool, March 6).

Anchor Broeklebank Line.—S.S. Stockwell for Port Said, Colombo, Madras and Calcutta (leaves London, February 18); s.s. Mahrona for Calcutta (Birkenhead, February 20); s.s. Anchoria for Port Said, Colombo, Madras and Calcutta (leaves London March 7); s.s. Media for Calcutta (Birkenhead, March 8); s.s. Mahanada for Port Said, Colombo, Madras and Calcutta (leaves London, March 21).

Bibby Line.—S.S. Somersetshire for Rangoon (Middlesbrough, February 21); s.s. Warwickshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 1).

Byron Steamship Line.—S.S. Maid of Hydra for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, February 28).

Clan Line.—S.S. Clan Mackenzie for Colombo, Madras and Calcutta (Birkenhead, February 23); s.s. Clan Urquhart for Bombay and Persian Gulf (Birkenhead, February 25).

Cunard Line.—S.S. Antigone for Gibraltar, Malta, Piraeus, Salonika, Smyrna, and Constantinople (London, February 21); Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Manchester, March 16).

Ellerman Line.—S.S. Assyrian for Genoa, Leghorn, Naples, Palermo, Messina, Catania, etc. (Liverpool, February 23); s.s. Gerano for Gibraltar, Patras, Piraeus, Syra, Vola, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, February 25).

Ellerman's "City" Line.—S.S. City of Marseilles for Calcutta (Birkenhead, February 20); s.s. City of Baroda for Bombay (Birkenhead, February 21); s.s. City of Dunedin for Karachi (Birkenhead, February 21); s.s. City of Manila for Calcutta (Birkenhead, March 1).

Ellerman's "Hall" Line.—S.S. City of Dunedin for Malabar coast ports (Liverpool, February 24).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.S. Carnarvonshire for Port Said, Port Swettenham, Singapore, etc. (London, February 23); s.s. Gleniffer for Port Said, Port Swettenham, Singapore, etc. (London, March 9); s.s. Glengarry for Port Said, Port Swettenham, Singapore, etc. (London, March 23).

Glynn Line.—S.S. Sotero for Genoa, Leghorn, Naples, Catania, Messina and Palermo (Liverpool, February 24).

Harrison Line.—S.S. Inventor for Calcutta (Liverpool, March 4). A steamer will sail on April 20 from Birkenhead for Port Said, Port Sudan, Aden, Mombasa, etc.

Henderson Line.—S.S. Amarapooora for Port Said and Rangoon (Birkenhead, February 22).

Holt Line.—S.S. Laomedon for Port Said, Port Swettenham, Singapore, etc. (Glasgow, February 23); s.s. Bellerophon for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, February 23); s.s. Agamemnon for Port Said, Port Swettenham, Singapore, etc. (Swansea, March 2).

Johnston Line.—S.S. Pomaron for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, February 18).

Moss Line.—S.S. Assiout for Gibraltar, Algiers, Malta, and Alexandria (accepting cargo through to Moroccan, Algerian, Cyprus, and Syrian coast ports) (Manchester, February 18); s.s. Luque for Casablanca, Gibraltar, Malta, Famagusta, Beyrout, Haiffa and Jaffa (Manchester, February 20).

Papayanni Line.—S.S. Grodno for Syra, Volo, Salonika, Smyrna and Constantinople (Liverpool, March 11).

P. and O. Line.—S.S. Kaiser-I-Hind for Bombay (London, February 17); s.s. Caledonia for Bombay (London, February 24); s.s. Nellore for Colombo, Madras, and Calcutta (London, March 10); s.s. Egypt for Bombay (London, March 10).

P. and O. British India Line.—S.S. Nevasa for Bombay and Karachi (London, February 17); s.s. Chilka for Colombo, Madras and Calcutta (London, February 22); s.s. Manora for Bombay and Karachi (London, March 9); s.s. Mashobra for Bombay and Karachi (London, March 24); s.s. Margha for Colombo, Madras and Calcutta (London March 17);

Prince Line.—S.S. Black Prince for Tunis, Malta and Alexandria (Manchester, February 18); s.s. Soldier Prince for Malta, Alexandria and Syrian coast (London, February 25); s.s. Norman Prince for Tunis, Malta and Alexandria (Manchester, February 28).

FRUIT FARMING IN SOUTH AFRICA.

The question was raised recently by an Englishman who was going to retire shortly from service overseas at an age when most people still have an abundant store of energy left as to what was the best method of spending the remaining years of activity. For Anglo-Indians, or "Indiamen" perhaps one should say, the solution is usually residence at Bath or Cheltenham or Ealing, or some such place. But that is not to every-one's taste, even if circumstances enable one to figure fairly prominently in local society. But above all there is the question of climate, and in the case of many people it is only too clear that prolonged residence abroad has rendered them unfitted for some time for the rigorous uncertainties of the English climate. These considerations, and the obvious fact that pensions no longer suffice for the comforts that those retired have reason to expect makes very important the choice of a centre which yields comfort, a salubrious climate, and a congenial but not arduous occupation which will compensate for the shortcomings of the pension. It is said that South Africa meets these requirements with its ample scope for fruit farming, and those who are interested in the matter can obtain further particulars from the African Realty Trust Ltd., whose advertisement appears on page 230 in this issue.

It is reported that the sugar production of India from the 1921-22 crop will probably approximate to 2,350,000 tons of crude sugar, compared with the estimated yield of 2,500,000 tons from 1920-21 crop.

According to a Law recently promulgated by the "Grand Assembly" of Turkey, motor lorries for public purposes will be admitted into Turkey free of Customs duty. Spares and accessories conforming with the list laid down by the Ministry of National Economy, and oil and petrol will also be admitted duty free.

INSTITUTE OF AGRICULTURAL RESEARCH IN JERUSALEM.

The Zionist Executive in Palestine are establishing an Institute of Agricultural Research in Jerusalem. The following will be in charge of the various departments of the Institute:—Prof. Warburg (Head of the Institute) Department of Botany; Mr. I. Wilkansky (Manager of the Experimental Station) Farm Management.; Dr. P. Bodenheimer, Department of Entomology; Dr. A. Treidel, Department of Chemistry; Mr. M. Winik (In conjunction with Mikvah-Israel) Department of Chemistry; Mr. M. Wilkansky, Department of Farming; Dr. L. Fainer, Plant-growing; Dr. N. Reichert, Pathology of Plants; Mr. Zemach, Editor of Agricultural Publications.

The Departments of tree-growing, cattle-rearing, irrigation and agricultural education will be opened next year. The headquarters of the institute will be in Jerusalem. For the present the Institute will be under the charge of the Colonisation Department of the Palestine Executive, but ultimately it will be transferred to the Research Institute of the Jerusalem University.

COMPANY NOTES & REPORTS.

Alliance Bank of Simla.

The net profits of the Alliance Bank of Simla for the six months ended December 31, amount to Rs.5,73,757, to which is added the amount brought forward, Rs.3,31,154, making a total of Rs.9,04,912. The directors propose to pay the usual interim dividend at the rate of 14 per cent. on the ordinary shares (free of Indian income-tax), and to carry forward Rs.4,97,872.

Bengal and North-Western Railway.

The net earnings of the Bengal and North Western Railway Company for the year ended September 30, 1921, were Rs.1,57,59,456, against Rs1,34,72,453. The Company's share is Rs. 93,62,357, against Rs.49,63,960. Adding gain in remittance, £12,780, net earnings are £636,937 (against £875,316, when the gain in remittance was £344,385) plus £145,839 brought forward. The directors recommend a final dividend of 4 per cent. and bonus of 2 per cent. on Ordinary stock, subject to tax at 3s. 6d., carrying forward £127,445. The dividend with bonus recommended for the year is at the rate of 11 per cent. per annum, the same as in the previous year.

Smyrna and Cassaba Railway.

Holders of Ottoman, Smyrna and Cassaba Railway and Extension Co. 4 per Cent. Bonds, 1894 and 1895, are advised that under the "Traité du Reglement Trans-actionnel" confirmed by the "Tribunal de Commerce de la Seine" under date of December 24, 1921, bonds may be deposited with the Imperial Ottoman Bank, Paris, for the payment of a sum in francs, and the issue of a funding bond, also in francs, in respect of dividends up to and including February, 1922, and also the issue of new coupon sheets to date from August 1, 1922. Details may be obtained and bonds deposited for dispatch to Paris at the Imperial Ottoman Bank, Coupon Office, 25, Austin-Friars, E.C.

THE DISARMAMENT CONFERENCE.

To the Editor of "The Near East."

Sir, As one who has for so many years been engaged in the work of promoting international amity and goodwill, I cannot but take the opportunity of expressing my profound gratification at the results achieved at the Conference just brought to a close at Washington. The practical outcome of that great gathering must, I am sure, have exceeded the most sanguine of our expectations, and there must be a feeling of intense satisfaction the world over at the prospect of seeing war, if not made impossible, at least relegated a long way into the background. The dispersal of the clouds hanging over the Pacific, and the welding together of the two great branches of the Anglo-Saxon race are themselves noble achievements, as are also the decisions arrived at with respect to the reduction of armaments. The last named will materially assist us to liquidate the financial burdens which the war has left us.

The thanks of all are due to President Harding, as well as to Mr. Hughes, Senator Lodge and other prominent Americans who have been associated with him—and we must not, of course, omit to mention the great work done by his predecessor, President Wilson—while in we England can feel especially proud when we think of the tact and ability displayed by the leader of the British Delegation. Mr. Balfour has deserved well of his countrymen in many ways, but in nothing has he so signally earned the esteem and gratitude of the nation as in his dignified conduct of the British case at this Conference. It is the crowning effort of a long and honourable career.

Personally, I have had a very special interest in the work of this conference. Before it began I was asked by the Editor of one of the leading journals in the United States to write for his paper my views on the Disarmament Question, and it says much for the keen interest taken in the subject by the American people, that on publication of that article I was requested by several other newspapers in the principal cities of the States to give further expression to my opinions on this important matter. These journals include the *New York Herald*, *The New York Tribune*, *The New York Commercial*, *The New York Journal of Commerce*, *The Christian Science Monitor*, and the latest of these articles was written for the *Textile World* of Boston, and will appear in that journal on the 11th instant.

The purport of all these articles was to emphasise the supreme importance to the English-speaking peoples of co-operating instead of competing in international affairs, and thus give an object-lesson to the other nations of the world of their interdependence. When the interdependence of all the nations is fully realised universal peace will be assured. During the past sixteen years the nations have co-operated harmoniously in the supply of the two prime necessities of life—food and clothing; and my experience of great international congresses, all over the world, has convinced me that the work that has been done by the International Cotton Federation and the International Institute of Agriculture could be extended to include almost all the affairs of life.

I am satisfied that in the supply of the world's needs there is room for all, and that there is no necessity whatever for the international jealousies which have for so long disturbed and threatened us. Reduce the burden of armaments and in future agree to co-operate in all matter for the common good and we should find plentiful outlets for enterprise in developing the great developed resources of the world, which would find ample employment for all.—Yours, etc.,

CHARLES W. MACARA,

York Street,

Manchester,

February 9, 1922.

THE LATE SIR FRANCIS BARKER.

Sir Francis Barker, a director of Vickers Limited, whose death at Cannes on January 28, was announced in "The Near East" of February 2, had been ill for some considerable time, having undergone an operation last year, from which, however, he seemed to be making a good recovery. He went to Cannes for his convalescence, and there a second operation was found to be necessary. From the effects of this he never rallied and passed away in a nursing home to which he had been removed.

Sir Francis Barker was born at Smyrna in June, 1865, the second son of the late Alfred Barker of Constantinople and Elmfield, Esher, and was educated privately and at Clifton College. He received his early business training in his father's bank in Constantinople, subsequently becoming private and confidential secretary to Sir Edgar Vincent (the present Lord D'Abernon) at that time Director-General of the Imperial Ottoman Bank at Constantinople. During this period he travelled extensively in Syria and other parts of Asia Minor.

In 1899 the Parsons' Foreign Patents Company, Ltd., was formed to exploit on the continent of Europe Sir Charles Parsons' patents for marine and land turbine work. Sir Francis Barker was appointed manager of this company, and as such was instrumental in forming subsidiary companies in various foreign countries and in establishing works under the Parsons' Patents for the manufacture of land and marine turbines in those countries. He maintained his association with the Parsons' Foreign Patents Company, Ltd., to the end, and at the time of his death was a director of the Company.

In Russia, and especially in Russo-British affairs, he always evinced the liveliest interest. He was President of the British Russia Club and Chairman of the Executive Council of the Russo-British Chamber of Commerce. As organiser and founder with Lady Barker, of Kitchener House, Grosvenor Place, Sir Francis will be held in affectionate remembrance by many officers and ex-officers who there received technical and commercial training in preparation for their entry, not only into civil employment, but in many cases, into Government service.

The production of fertilisers and artificial manures in Czechoslovakia has made continuous progress since the establishment of the Republic. Last year's output showed a very considerable increase on that of the preceding year.

The Board of Trade have received a copy of a Decree, dated November 22 laying down regulations regarding the manufacture, sale, packing and labelling of butter, margarine, lard, edible oils and fats in the French Zone of Morocco.

H.M. Representative at Belgrade reports that the Direction of Monopolies has imposed the following new taxes on tobacco products imported by travellers into the Serb-Croat-Slovene State (the figures representing silver dinars):—On cigarettes per 1,000, 280; on cut tobacco, per kilog, 250; on cigars, per 100 200; on snuff, per kilog, 100.

ENQUIRY BUREAU.

ADVERTISERS requiring agents abroad and readers abroad desirous of getting into touch with British Manufacturers, Export Merchants, etc, may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," "The Near East," 1, Devonshire Square, London, E.C.2." It must be understood that "The Near East" accepts no responsibility in connection with such replies.

114. Importer in Karachi (India) travelling throughout India wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities:—Exports: Medicinal herbs dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.

116. Import Merchants in Adana, Cilicia, Asia Minor, wish to represent British firms for any kind of British-made goods. Own account and commission basis. Good references provided. Send catalogues and samples with prices and terms.

117. Importer in Roumania, interested in Jute trade, wishes to get in touch with firms dealing in sacks, new and old Dundee, and Calcutta makes.

121. Exporter of Greek Ores in Athens, especially of purest quality Magnesite and Chromite wishes to be connected with interested British Firms.

122. Merchant in Galatz, Roumania, wishes to enter into business relations with British firms willing to ship goods on consignment terms. Guarantees by Leading Banks given. Full details on application. Correspondence in French.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Egypt.

General Stores.—The Director-General, Cairo Tanzim Department, P.W.M., invites tenders for the supply of general stores during six months from April 1, 1922. Conditions may be obtained from the Stores Office, Sharia Sahel el Ghelal, Bulaq, Cairo, February 23.

Marine Boiler.—The Secretary General, Ports and Light-houses, Arsenal, Alexandria, invites tenders for the supply of a new multitubular marine boiler of the following description:—Diameter 11 feet; length 10 feet; two corrugated furnaces; boiler working pressure 180 to 200 lbs. per square inch. Built to Lloyds rules 100 A1 and supplied with all accessories as per specification. Offers will remain valid for one and a half months from March 1, 1922.

Grey Board.—The Government Press, Bulaq, invites tenders for the supply of 20,000 kilos of grey board. March 18.

Cleaning Materials.—The sub-Director of Stores, Ministry of Education, Sharia Qasr el Ain, Cairo, invites tenders for the supply of cleaning materials required for the school-year 1922-1923. March 4.

Photographic Materials.—The Ministry of the Interior, Egypt (Personnel and Equipment Department, Supplies Office), invites tenders for the supply of photographic material for the year 1922 which will be received by the Director Personnel and Equipment Department, Ministry of the Interior, Cairo, not later than noon on March 15. The photographic material required includes apparatus and accessories, chemicals, and plates and papers. Local representation is an essential condition of tendering. (D.O.T.).

Stores.—The Department of Overseas Trade has received from the Director of Stores, Bulaq (Cairo) a number of copies of the conditions of tender and specifications for the supply of stores required by the Stores Department of the Ministry of the Interior during the period commencing April 1, 1922, and ending March 31, 1923. The goods required cover a wide range and include arms and ordnance stores, clothing, harness and saddlery fire engines, furniture, tools, and miscellaneous stores. Tenders must be received by the Director of Personnel and Equipment Department, Ministry of the Interior, Cairo, not later than noon, March 18.

Aluminium.—The Surveyor-General of Egypt, Giza (Mudir-iyah), invites tenders for the supply of aluminium and zinc plates for 1922-1923. March 20.

Palestine.

Paper and Machinery.—The Government of Palestine invites tenders for the supply of paper and stationery for the period of one year, 1922-23. February 28.

India.

Girder Bridges.—The Bombay, Baroda and Central India Railway Company invites tenders for the supply of girder bridges (Specification, company's offices, The White Mansion, 91, Petty France, Westminster, S.W.), February 24.

Pen Carbon Paper, etc.—The High Commissioner for India invites tenders for the supply of:—(1), Paper, Pen Carbon; (2), Paper, Typewriter; (3), Paper, writing and envelopes; (4), Ferrules, Steel; (5), Buffers, Draw-bar Hooks, Truss Bars, &c.—February 21 for 1, 2, and 3; February 28 for 4 and 5.

Plates, etc.—The High Commissioner for India invites tenders for the supply of:—(1) Plates, mild steel; (2) beaters, steel, plate-layers; (3) pencils, writing; (4) cloth tracing; (5) wheels and axles; (6) deck spans. Forms of Tender may be obtained from the Director-General, India Store Department, Belvedere Road, Lambeth, S.E.1., and tenders are to be delivered at that office not later than 2 o'clock p.m. on Tuesday, February 28, 1922, for Nos. 1 to 4, and on Tuesday, March 7, 1922, for Nos. 5 and 6.

Yugoslavia.

Petroleum.—The Serb, Croat, Slovene Ministry of War and Marine invites tenders for the supply of 400,000 kilogrammes of petroleum. Local representation is essential. February 20 (D.O.T.).

Petrol.—The Economic Section of the Ministry of War and Marine, Belgrade, invites tenders for the supply of 400,000 kilos. of petrol. Tenders must be addressed to the "Directeur de la Section Economique du Ministère de la Guerre et de la Marine," and must have the inscription "Offre de pétrole par X" on the envelope. A deposit of 5 per cent. of the value offered is required from the Serbian, and 10 per cent. from foreigners. The Banque Franco Serbe, 30, Coleman Street, E.C. will be glad to furnish further particulars. February 20.

The traffic receipts of the Suez Canal from January 21 to 27 amounted to 2,040,000 francs, as against 2,870,000 francs.

Certificates of origin are necessary to secure "minimum" tariff benefits in Yugoslavia.

Anglo-Egyptian Oil Outputs.—Gemsah, week ended February 3, 9 tons (last week 9 tons); Hurgghada, week ended February 3, 3,610 tons (last week 3,226 tons).

Motor omnibuses for public services may enter Roumania at only 10 per cent. of the usual duty, if authority to import is obtained from the Ministry of Finance.

NOTES OF THE WEEK.

The Egyptian Conversations.

It was announced last week that complete agreement had been reached between the Cabinet and Lord Allenby as to the policy to be pursued in Egypt, and by the time these lines appear in print the High Commissioner will probably be on his way back to Cairo. There he will present a letter to the Sultan and will communicate to the Egyptian political leaders the results of his conversations in London, and according to all indications no time will be lost in taking the first steps towards the execution of the policy now happily decided upon. Various statements regarding the details of that policy have been made in this quarter and in that, but until an official announcement is made regarding them—which is likely to be done soon after Lord Allenby's arrival in Cairo—it would be unprofitable to discuss the matter. For the present we content ourselves with congratulating all those who have worked to bring about a change in a situation which, it must be admitted, looked well-nigh hopeless a few weeks ago.

Violence in Cairo.

Egypt is now to have her opportunity of showing that she is fit for the independence on which she has so strongly insisted, and we shall all trust that she will take full advantage of the chance. For her sake it is to be hoped that, for the present at any rate, no chance of making any further mischief will be afforded to Zaghloul Pasha and other dangerous extremists. An illustration of the harm that can be done by preaching violence to the unskilled and as yet somewhat unbalanced Egyptians is afforded by the deplorable series of murders of, and attacks upon, Englishmen reported during the past week from Cairo. Moderate Egyptian opinion regrets and condemns such outrages as warmly as we regret and condemn them ourselves. But with so much 'political' excitement in the air in Egypt it is difficult for moderate opinion to make itself felt; and for the present, the best way to keep order is doubtless by the strong hand.

A Bulgarian Blunder.

An extraordinary incident is reported from Sofia by *The Times'* correspondent. The Bulgarian Government, he says, circulated officially the report that the Reparation Commission in Paris had decided to postpone for three years the payment of reparations by Bulgaria. The statement being entirely incorrect, the Inter-Allied Commission at Sofia requested the Government to publish a denial of it; and, on this request being refused,

asked the local Press to publish the denial. Acting, it is stated, on Government orders, all save one of the papers approached refused the Commission's request, and the Commission thereupon dropped a very strong hint to the Government; which sufficed to secure the desired object. What malignant sprite can have prompted M. Stambolisky's Government to behave in such a discourteous and extraordinarily unwise way it is hard to imagine. *The Times'* correspondent refers to the approaching communal elections; but Agrarian prospects will not have been helped by events as they have fallen out; and the Agrarians can hardly have expected them to fall out otherwise. There remains the possibility that the announcement may have been issued in all faith, on misrepresentations made by the representative of one or other of the Powers, who, finding himself placed in a false position, has since left the Sofia Government in the lurch. In any case the result is unfortunate for Bulgaria.

Turkey and the Genoa Conference.

From whatever aspect their activities be viewed, it would appear that the Nationalists of Turkey are growing day by day stronger and more intransigent in their deeds and demands. It is, indeed, with Russia alone that they seem anxious to keep on good terms. Not only do we hear of French cemeteries in Cilicia being spoiled by the Kemalists, and of the unhappy plight of the Christians still in that region, but from various reports concerning Mustapha Kemal and his Ministers we learn that, confident in their military strength, they are unwilling to abide by any decision made by the Allies unless Turkey be treated as an equal partner in the negotiations. Mustapha Kemal, for instance, is said to have threatened neglect of any provision made for Turkey by the Genoa Conference unless a Turkish mission assist at that Conference; and Ali Fethy Bey, the Minister of the Interior in the Angora Government, is stated by the Samsoun correspondent of the *Morning Post* to have expressed surprise that Russia had been invited to Genoa without Turkey. At the same time he demanded the unconditional restoration of Constantinople, Thrace, and Smyrna.

Substance or Shadow?

No doubt much of this is bluff, but as a matter of fact, in the matter of Genoa we share his surprise, for it is at least certain that Mustapha Kemal represents Turkey as fairly as Lenin represents Russia, and it should be no more difficult to negotiate with the first than with the second. In a sense it is this very intransi-

gence of Turkey that makes negotiation with her all the more urgent. As it happens, an opportunity of direct communication is now offering itself, and it would, we think, be a belated exercise of pride not to seize it. A Kemalist Mission, under the leadership of Youssuf Kemal Bey, the Nationalist Foreign Minister, recently reached Constantinople on its way to the capitals of Western Europe: why not invite it to Genoa?

Turkish War Losses.

It has long been stated that the Turks are a dying race, and it was interesting, in connection with this belief, to read the statement made by the Turkish War Medical Service of the Ottoman military and naval losses during the Great War. Turkey suffered over half-a-million dead, and upwards of a million were invalided as unfit for further service—figures which, as the Correspondent in the Near East of *The Times* points out, are undoubtedly underestimated, since irregulars, a class on whom the Turks have always largely depended, are not included in this casualty list. Turning to the particular locations of losses, we note something ironical in the fact that the front on which the Turks suffered most was that where now are their most powerful, if not most trusted, friends—the Caucasus front. It causes one to reflect that the Russo-Turkish alliance is one of the marvels of modern history, but we still think that old instincts and old memories will prevail over the very new principles of expediency. Whether it will be Russia who first spurns Turkey, or *vice versa*, we hesitate to guess; but as soon as the Russian prop is withdrawn we shall in all probability discover a hastening in the rate of Turkey's decline. Such wars as she has recently had she cannot easily sustain and survive, but it may well be that her enforced shrinkage may mean her ultimate salvation, that her loose and corrupt frame may become a narrower but better-knit and healthier body.

The Politics of Greece.

It would be idle to pretend that the visit of M. Gounaris has made Great Britain look more favourably on the aspirations of Greece, or that the loan which he appears to be finding so much difficulty in raising would in any sense be a popular one. We do not say that there has been in this country a revulsion of feeling in favour of Turkey, or that there has been any entertainment of such pro-Kemalist ideas as have been indulged on the Continent; but it does seem that the present régime in Greece is decreasingly liked by the British people. Superficially this change of feeling—a consequence of the prolongation of the Anatolian War—is unjust to Hellenism, for the choice of their ruler and politicians is the Greeks' affair alone, and in any case Great Britain must share responsibility for the Graeco-Turkish war. But unfair or not, Allied sentiments have to be regarded by Greek politicians, even in internal matters, and there have recently been illuminating changes of policy in the Government of M. Gounaris. When the Greek Premier set out to negotiate terms of peace, he was given a formal mandate by the Greek National Assembly to accept as minimum the integral maintenance of the Treaty of Sèvres; yet in November last he told Lord Curzon that the future of Greece lay unreservedly in the hands of the Allies. That being so, it was surely to the interest of his country that unanimity should be found among the Allies as quickly as possible, but it scarcely looks as though his recent efforts in various capitals of Europe have tended towards that end.

The Greek Patriarchate.

But in nothing has the change in the policy of the present Greek Government been so remarkable, or so significant, as in their treatment of the election of Meletius IV. at Constantinople. When we remember the precautions taken by the Greek Government against the election of Mgr. Metaxakis, their anger at his elevation, and the findings of the Synod at Salonika, annulling his election and condemning him to exile, it is with astonishment that we now perceive the Greek Government constraining their hostility and observing a strict neutrality in the matter. That this reversal of policy is due to the unofficial recognition of Mgr. Metaxakis, by Allied statesmen can hardly be doubted; and it is not a wild guess to suppose that, as a penetrating writer said recently in the *Journal des Débats*, M. Gounaris, in a last bid for the safety of his Ministry, is throwing ballast overboard. Certainly those who have felt all along that Venizelism was not a doomed thing now have reason for their hopes.

Seyyid Talib Pasha.

Seyyid Talib Pasha, whose deportation from Irak last year gave rise to some criticism, is now on his way from Ceylon to Italy, where he expects to undergo a course of treatment at a spa. To a reporter who interviewed him before he left Ceylon, he expressed a wish to visit England and the hope that he might be allowed to see the King; and, far from showing resentment at his arrest and deportation, he spoke highly of Sir Percy Cox and his policy in Irak. We recall that Seyyid Talib did undoubtedly give the British Government very valuable assistance at a critical time in Irak, and we regret sincerely that it ever became necessary to deport him. But we hold that both the circumstances of the moment, and the success that followed the step fully justified the action taken. It is satisfactory to find the person chiefly concerned expressing himself in a way to show he bears no grudge; and it is no less satisfactory that replies given in Parliament lately to questions regarding his arrest show that it was not carried out in the calculated and treacherous manner that has been represented.

Another Abdication Rumour.

In reporting that the Shah of Persia passed through Baghdad *incognito* on February 1, on his way to Europe, the Baghdad correspondent of the *Morning Post* mentions a rumour that is ripe there, that H. I. M. intends to abdicate as soon as he reaches Europe. As to the truth of the rumour, it is naturally not possible for us to write with authority. But it is certainly not surprising that such reports should be abroad. The Shah, though still so young, has probably had more than enough experience of the discomforts of a Throne in these days, and if he hankers after peace and quiet, very few people would find the fact strange. But supposing the rumour should turn out a true one, what will the effect be upon Persia? Probably the Sardar Sipah would have a great deal to say on that subject, and since he has proved himself capable of taking time by the forelock, it would cause little surprise to learn that he had his plans already cut and dried.

The Outlook in India.

In India, the immediate outlook is somewhat better than it was, but it is too soon to say whether the improvement is likely to be lasting. The decision of the leading agitators to "call off" the strike against taxes and revenue is important, in so far as it means a sus-

pension of the campaign of incitement to break the law and if the law is not broken, there will be no need of punishment, though it may still be desirable, as we argued last week, to bring the real strength of the Administration more prominently before the eyes of people who may have been misled. The agitators of course claim perfect "liberty" to renew the campaign later on, and the peace of India must rest on some foundation more stable than Mr. Gandhi's changing moods, but there are indications that the extremist party is not just such a happy family as it was, while a few of the men on the fence are showing a tendency to come down on the Government side. Madras has declared decisively for law as against violence, and, if the spring harvest weighs out as well as it promises, the North of India may be inclined to think less of grievances. Temper is, however, harder to forecast than the weather, and, even at the best, it must take some time for the country to settle down.

The Debate in the Commons.

Last week's debate on Indian affairs arose on what was practically a vote of censure on Mr. Montagu, and personal questions inevitably assumed a disproportionate bulk. To our mind, its most interesting feature was the Premier's outspoken declaration that India is going to remain within the British Empire; the declaration itself was by no means new, but the fact that Mr. Lloyd George should have thought it necessary at this juncture is significant. We heard the other day of a young Indian in this country who said that "only a few murders" were needed to raise India to the condition of Ireland: there is perhaps rather less optimism about Ireland now, but apart from that question, there is no doubt of the feeling of expectation which is abroad, and the Premier's intervention was timely. So experienced an observer as Mr. Sastri interpreted the debate as indicating a stiffening of opinion in England on the Indian question. We trust that on his return to India he will succeed in bringing this undoubted change home to Indian politicians; it would be a mistake to say that they are generally distrusted over here, but they have certainly lost some ground of late, and the inclination to leave them a free hand is less than it was.

Mr. Montagu's Position.

The day after the debate *The Times* launched a thunderbolt at Mr. Montagu, and declared that a new head is wanted at the India Office. This view is pretty widely expressed just now, partly by people who believe the change to be desirable for India, partly by people who think it would be politically convenient in this country. For ourselves, though we are not great admirers of Mr. Montagu, we see no particular advantage in "swapping horses" at the present juncture. The policy laid down with authority during the debate is the policy which in our opinion is called for by the circumstances; we see no reason why Mr. Montagu should not carry it out; and it is well to remember that his popularity is much greater in India than at home. The Indian Legislative Assembly interrupted its business last week to express its confidence in his administration, and, while that action commits nobody but the members, a change just now would be rather like a slap on the face. What we ask for is the certainty that the Government in India shall not be deterred from enforcing the law by interference, or fear of interference, from the India Office. If words mean anything, Mr. Montagu has given that assurance; and, that being so it is the Government, and not the India Office, which really matters.

THE WEEK AT HOME

London, Monday Evening.

A Quiet Week.

Politics have been quiet, dull, and good-tempered during the week. There was a debate on the Geddes Axe, in which the critics of the Government merely destroyed each other. Everybody was for wholesale economy, but everybody had some pet department which was to be exempted for its good works. The result was that nobody objected very much when Mr. Chamberlain remarked that, while economies and even drastic retrenchment would be made, the report would not be carried out in full. The natural consequence is that the departments are now competing with each other for public and governmental favour, and a Darwinian struggle for life is proceeding in Whitehall.

On the principle of the survival of the fittest, there is not much room for doubt: the Navy and Education are the winners. The Admiralty, which hates Sir Eric Geddes and all his works—was he not once First Lord?—has torpedoed the report by a deadly retort of its own. Rumour has it that it was written by Mr. Amery, who learned to write in *The Times*; the dish was salted by Lord Beatty, and peppered by Mr. Churchill. It was a scaring document, but it was well received. The Government was a little tremulous over this display of direct action, but recovered its breath when it found that the public was chuckling—"Just like the Navy to be ready for battle at a moment's notice." In this case at least, Sir Eric's axe will be blunted, and the Admirals will still have jam for their tea. Even Labour, which likes to pretend that it does not believe in a navy, had no criticism to make.

Education is another story. If there is one thing that Labour is keen on, it is education, and there is no suggestion that the money is not well spent. The reductions proposed are too drastic, and although the teachers may have to jettison some of their cargo, their ship will remain afloat. The only Department that nobody has a good word for is the Labour Exchanges.

Ireland.

The Government will have no difficulty with its Irish Bill—the second reading passed by a large majority, and the Die-Hards had little to say. Indeed, they could have made out a better case than they did over the boundary question between the Free State and Ulster.

But the interest of the Irish question has passed from Westminster across the St. George's Channel. There have been further raids, kidnappings, and outrages; and Mr. Collins has caused some disquiet by his admission that a *coup d'état* is probable. The Provisional Government has no real authority until it is definitely elected, and it seems to be making a mistake by not hurrying on the election; meanwhile the Republican faction under De Valera are using every weapon to their hand, and it is not denied that their influence is increasing. They are, in fact, a minority, but they seem to have some hope of terrorising the majority. Should that occur, the situation would be grave indeed.

Unfortunately, as between Ulster and the South the position is certainly more critical. Into the complex question of the boundary I need not go; there has been a muddle, the South proposes to nibble pieces out of Ulster by referenda in small units, and charges of bad faith are freely flung on both sides. This would not matter so much were it not for physical violence; but Ulster has now called for the protection of British troops. It is evident that there can be little immediate improvement.

Fewer Prisons.

Some surprise has been expressed at the published decision of the Government to close no fewer than eight prisons. Whether this is due to the instinct of economy, and prisoners are to be packed like sardines in a tin to save the taxpayer's pocket; or whether we are really becoming less criminal, we have not been told. Bill

Sikes is too modest a person to write to the papers about it.

Public Schools Reform.

Sir Rennell Rodd is the latest to break a lance with the public school system. He has formed a Parents' Association, and has denounced the the Latin Grammar and all its works, to the horror of the pedants and the classicists. All power to his elbow; if he can break the tyranny of "Amabo, Amabas, Amabat" I will subscribe a month's income towards setting up a statue to the greatest liberator of them all.

The new protagonist remarks that boys hate school because they are crammed with useless knowledge. I believe he has hit the mark. I well recollect the fortunate accident of my youth which made the family doctor shake his head, and insist on no more school; the result was that I was revelling in Rabelais and Voltaire at a time when other luckless youths were still grinding away at Cornelius Nepos. I should not recommend the curriculum for everybody—but after all, it was not I who stocked the family library—but it had one curious result. Most boys who had a classical education hate the very name of Virgil and Horace. I am ashamed to say I never read either of them till I was thirty; when I fell in love with them at once.

A City Failure.

The City has been very depressed this last week by the failure of the City Equitable Insurance Company, which has brought down one or two allied ventures, and an old and honoured firm in the Stock Exchange. The head of the enterprise, Mr. Bevan, is on the Continent, and pending his return, the failure is somewhat of a mystery. Some lurid stories have been published about him in the sensational press, but these have been denied; it was said, for instance, that he had fled to Constantinople, but an authoritative statement declares him in France for a few days' rest after a breakdown. The failure involves well over a million of money, and several directors who are prominent public men; it is said, too, that one of the banks has lost rather heavily.

The catastrophe will not, of course, affect the stability of the great insurance companies, far less the banks; but it has made people a little nervous—a deplorable result when it is recollected that confidence was beginning to return. As it is, Stock Exchange business is practically confined to gilt-edged securities, which are quietly booming. That is always a sign of stagnant trade.

A Dispute At Edinburgh.

The usually quiet city of Edinburgh is rent by faction. In Princes Street it boasts the most beautiful thoroughfare in the world, and it is now proposed to erect overhead wires for the trams along its length. The trams have been operated for years past by underground cables; they are reasonably quick and comfortable, and there seems no reason for the change. The overhead system is unsightly and quite unworthy of the northern capital. Scotland will certainly not stand where it did in the esteem of visitors if it permits these wrinkles in the face of its fairest beauty.

Mr. Bottomley Again.

These can hardly be happy days for Mr. Bottomley. At the Old Bailey he tacitly withdrew his charge against Mr. Bigland; in a similar case in the Midlands last week

he could not well do so, and Mr. Bigland made the most damaging charges against Mr. Bottomley, while the latter refrained from giving evidence, and therefore deprived himself of the opportunity of denying them. In the result the jury acquitted Bigland, and Mr. Bottomley will now have to consider in what way he can clear his honour. He has in effect been charged by Bigland with misappropriating large sums of money subscribed by ex-service men and others to a club, and also with faking the draws in sweepstakes and prize competitions. It is to be presumed that Mr. Bottomley has a satisfactory answer, but in his own interests he would do well to clear the position up without any further delay.

The Week's Books.

"Lord Byron's Correspondence" (John Murray) has had to wait nearly a century after the poet's death for publication. Does anybody read Byron nowadays? More people on the Continent than in England, I fancy, where we have definitely placed him in the second rank of poets, below Shelley and Keats—thus reversing the opinion of his contemporaries. These volumes will make no difference to Byron's reputation as a poet; they will hardly enhance his reputation as a man. The correspondence reveals him as definitely more sensual and less spiritual than Shelley, in spite of the endless (and tedious) "chatter about Harriet."

Shelley's criticism of "Don Juan" in a letter to the author is superb in its combined courtesy and insight; "Altogether a masterpiece of portraiture; of human nature laid with the eternal colours of the feelings of humanity. Where did you learn all those secrets? I should like to go to school there. I cannot say I altogether think the bitter mockery of our common nature quite worthy of your genius. The power and the beauty and the wit, indeed, redeem all this—chiefly because they belie and refute it. Perhaps it is foolish to wish that there had been nothing to redeem."

Shelley is less happy in his appreciation of Keats. It is extraordinary to find that he thought "Hyperion" the best thing Keats had done. And this is amazing: "The energy and beauty of his powers seem to disperse the narrow and wretched taste in which (most unfortunately for the real beauty which they hide) he has clothed his writings." Had Shelley never read the "Odes"?

When Mr. Saintsbury writes a book, the only thing to do is to buy it; he is one of the only two Professors in this country who can write English, and he is the only critic who can be read with pleasure. Even when he wrote a book about wine—which he published most unkindly, at the very time when medical authority forbade me to touch it—I bought the little volume, to discover, naturally, that "A sorrow's crown of sorrows was remembering happier things." However, there are no such regrets about the present work; "A Letter Book, Selected with an Introduction on the History and Art of Letter-Writing" (Bell). The introduction alone is worth the six shillings; personally, I don't think the letters are, but that is a mere private prejudice, for the only published letters I ever read with enjoyment were those of Swift, Huxley, and William James. But no doubt that is merely original sin, for which the Professor would have ploughed me in his examining days.

"Peaceless Europe" (Cassell) by Francesco S. Nitti, ex-Prime Minister of Italy, is an important work, the burden of which can be summed up in a sentence. "Europe can only recover her peace of mind by remembering that the war is over and done with."

I may add a word on behalf of "The Virgin of the Sun" (Cassell) by Sir H. Rider Haggard. Those who want another "King Solomon's Mines" will enjoy this romance; those who don't, don't matter.

THE NEAR AND MIDDLE EAST.

From Our Own Correspondents.

EGYPT.

Cairo, February 11.

A Lull.

There has been a lull in the local political situation since the departure of Lord Allenby, and discussions are now divided between a criticism of the proposals made by Sarwat Pasha, and submitted with his strong support to London by Lord Allenby, and the statements on the Egyptian question which have been made in the House of Commons. There seems to be general agreement that at this vital juncture it would be impolitic and dangerous for the Egyptians to make any move, and that it must be left to Viscount Allenby and those in England who support him to fight out the question with the Cabinet. Sarwat Pasha would appear to be gaining ground amongst the thinking and responsible Egyptians, but as usual it is the less moderately minded element, which has everything to gain by a continuation of the present state of affairs, that is the more vocal; and thus for every writer who ventures to support the Sarwat proposals there are a dozen who endeavour to prove that he is not considering the interests of his country, and that therefore even if the British Government in the end agree to them the nation should reject them unless Zaghoul Pasha is repatriated and gives them his benediction.

The Mixed Courts.

When in November last the mandate of the Mixed Courts was extended for an indefinite period an exception was made in the case of Greece and France, who, pending further discussions, would agree only to an extension of three months. The period in question terminated at the end of last month, by which time Greece had given her assent to an indefinite prolongation, but France required further explanations and would agree only to another extension of three months. As all decisions with regard to the powers of the Mixed Courts have in the past been taken in virtue of decrees signed by the Sultan on the advice of his Ministers, and there has been no Cabinet since December 23, the High Commissioner has been compelled to issue an order under martial law extending the powers of the Mixed Courts indefinitely as regards Greek subjects and for three months as regards French subjects; this order to be replaced by a decree as soon as such a measure could be promulgated according to constitutional procedure.

This episode aptly illustrates the difficulty of administering the country under existing conditions. Although the High Commissioner, in virtue of the powers given him under martial law, has conferred on the Under-Secretaries of State all the powers enjoyed by Ministers in administrative matters, it is quite impossible for him to give them those enjoyed in legislative matters. It would, moreover, be impolitic to say the least of it for legislation for promulgation according to constitutional procedure to be submitted to the Sultan by Acting Ministers who owe their powers to martial law; and it follows that until such time as Egyptians can be found to form a Council of Ministers all measures, of no matter what nature, if they are to have the effect of law, must be promulgated by the High Commissioner himself in virtue of the powers which martial law grants him.

This is a state of affairs that cannot be allowed to go on indefinitely and the High Commissioner, for this reason alone, is fully justified in trying to persuade the home Government to agree to a compromise which will permit of the reintroduction of the constitutional regime and thus will set a term to a procedure that, permissible in an emergency, should not be resorted to as a regular thing in time of peace.

The Anglo-American Hospital.

A meeting of subscribers to the Anglo-American Hospital was held last Monday at the Residency under

the Chairmanship of the new American Diplomatic Agent, Dr. Morton Howell. The Committee reported that the scheme for a new British Hospital to take the place of the Anglo-American Hospital would have to be abandoned, owing to lack of support both here and in England, and it was decided to concentrate on improving and developing the present hospital. For this more funds would be required, but although the institution of a scheme of insurance in the form of annual subscriptions had increased the numbers of subscribers fivefold, the money available was not nearly sufficient to put the present hospital on a more satisfactory footing, and the Committee appealed to the community to give it more support in its uphill work.

There is little doubt that the Committee, which has done yeoman work in rescuing the hospital from bankruptcy, has been well advised to drop the new hospital scheme; for apart from the fact that the present is a very bad moment for raising funds for such an object, it would have been injudicious to embark on a costly scheme intended to meet the requirements of the present Anglo-American community at a time when the outlook is so uncertain and there is a possibility of the size of the community being reduced in the near future as a result of the present political discussions.

The Committee have promised to remedy some of the short-comings of the present hospital, particularly in regard to providing means of transport and more accommodation and a resident doctor, and there is no reason why the many improvements which it is proposed to make should not enable the hospital to meet all the requirements of the community. As mentioned, however, to achieve this more money must be provided, and although the Anglo-American community of Egypt is not generally speaking a rich one, the individual members could nevertheless well give it more practical support than they do at present.

The fact, that, although there are over 1,600 subscribers, barely one hundred, including the Committee, attended the first general meeting held since 1913 would certainly appear to indicate a deplorable lack of interest on the part of the community in the work which the Committee is doing on their behalf and in their interest. It is scarcely fair to the Committee, or to those who are trying to bring the hospital up to the level of a modern nursing home, which is intended to meet the needs of the community and is in fact made great use of by that community, to withhold from it support which it must have in order to make this much needed and exceedingly useful institution as successful as similar ventures run by other nationalities in Egypt.

GREECE.

Athens, February 4.

Fresh Troubles in Crete.

The situation in Crete, which has improved during

Leaders of the World's Office Equipment and Filing Systems.

Shannon LIMITED

Head Offices:—
ROPEMAKER ST., LONDON, E.C.

Succursale au Caire, EGYPT. Tel. 1956 P.O.B. 849.

the last three weeks, is again becoming serious, and is causing a good deal of anxiety to the Government. Last Monday a large number of insurgents concentrated on the heights of Nerohora and opened violent fire on the Government troops which were holding positions in the plain below. A fierce battle ensued, which lasted throughout the day, and was resumed on the following morning, the rebels being finally dislodged by the regular troops. The latter were obliged to use artillery.

The seriousness of the situation is proved by the fact that the Minister of Interior himself, accompanied by the new military Governor of Crete, Brigadier-General Dimitracopoulos, has left in all haste for Canea. Considerable reinforcements are being sent to the turbulent island.

The Greek Prisoners of War.

At the request of the Hellenic Red Cross Committee, M. Pésix, a Swiss, representing the International Red Cross Committee, is now on his way to Angora to visit the Kemalist prisoner-of-war camps. A considerable sum of money for distribution among the Greek prisoners was handed by the Greek Government to M. Pésix, who is also authorised to open negotiations with regard to the question of the exchange of prisoners, particularly of those belonging to the sanitary corps, who are considered non-combatants. It appears that the prisoners of war in Mustapha Kemal's hands are neither fed nor receiving any pay, whereas the Turkish prisoners in Greece are both rationed and well paid for the work they are doing. The total number of Greek prisoners of war actually in the hands of Turks is only 312.

Restoration of Antiques.

As a result of energetic protests by the Greek Government to Bulgaria, the latter has forwarded to Athens a long list of objects of archaeological value which were carried off during the war from various towns and villages in Macedonia occupied by Bulgarian troops. In accordance with Article 126 of the Treaty of Neuilly, these antiques should have been returned to Greece long ago.

M. Sotiriou, the archaeologist, is leaving shortly for Sofia in order to take delivery of these objects.

More Classes Called Up.

A Royal Decree was published in the Official Government Gazette on Thursday calling up the infantry, artillery and engineers of the 1910 and 1911 classes, as well as the cavalymen of the 1910 class, belonging to the circumscriptions of Macedonia, the island of Thassos, and the Greek Archipelago Islands. It is stated that this sudden calling up of more classes, especially at a time when everyone was hoping that some of the older classes would be demobilised, is due to the fact that in addition to many movements of a suspicious character which have been noticed of late in Eastern Macedonia and Thrace, the Government has received reliable information to the effect that important forces of well equipped and armed Turkish and Bulgarian *Komitaçis* have concentrated on the frontier. Greece is therefore obliged to reinforce her army in those regions in order to frustrate any attempt on the part of these *Komitaçis* to invade her territory. On the other hand it is quite possible that the situation in Crete, which is causing much anxiety in official circles, has something to do with the calling up of the two fresh classes.

The Thracian Deputies.

A delegation of the Thracian deputies called on the Minister for Foreign Affairs *ad interim*, M. Cartalis, with reference to a telegram announcing that the proposal of Lord Curzon includes a rectification of the Thracian frontiers, and would allot a part of Thrace to Turkey. The delegation at the same time emphasized the anxiety of the population of Thrace as a result of the publication of this news. M. Cartalis replied that the Prime Minister *ad interim*, M. Protopapadakis, would be in a better position to answer, whereupon the delegation called upon the latter and again formulated its enquiry. The Prime Minister replied that the Government had not received information justifying their fears, the more so in view of the fact that the negotiations between the Allies were so far only of a preliminary nature.

General News.

The Crown Princes of Greece and Roumania, accompanied by their wives, Princess Elizabeth and Princess Helena, have arrived from Bucharest.

The new French diplomatic representative to Greece, M. de Marcilly, has arrived from Paris.

The High Commissioner of Smyrna, M. Stergiadis, has arrived in Athens. He will probably be offered the post of Greek High Commissioner at Constantinople, when, it is thought, relations between the Hellenic and the Allied authorities in the Turkish capital will become more friendly.

An attempt to blow up the railway station of Kizeldjakeuy, near Xanthi, in Western Thrace, was fortunately frustrated. The perpetrators of the attempt were four Turks, two of whom were actually employed by the Railway Company. Three have already been arrested and confessed that they were acting on instructions received from the Turco-Bulgarian Committee.

Two Turkish bandits who last year strangled the young son of M. Zographos, a Greek, were executed last week in Aidin.

The Athens and Piraeus bakers are again threatening to go on strike.

ROUMANIA.

Bucharest, February 7.

Political.

As the electoral campaign advances, the original determination of the Opposition to oppose the Liberals *en bloc* at the coming elections becomes less pronounced. The demeanour of the Opposition is rather puzzling in the circumstances. With the exception of the "Takists" (M. Také Jonescu's party), who are merely carrying on a *pro forma* opposition, all the other parties are fully alive to the fact that an eventual success on the part of the Liberals would mean a serious blow to them. Moreover, the real democratic parties further realize the

FRUIT GROWING: A CAREER MERITING CONSIDERATION.

The sunny mild climate of portions of the Union of South Africa is not only pleasant residentially but peculiarly suitable for even the rarer crops.

Such delicate fruits as peaches and grapes (pears, plums, apples and oranges do equally well) are grown there to perfection. Not as a hobby, in the hot-houses of the rich; but in the open, as a business proposition affording means of livelihood to men starting with moderate capital.

South African fruit-growing has become a large industry. Able men have devoted themselves to its development. They had confidence in the country, and invested much capital. Their confidence has in the main been justified. They have overcome most of the difficulties incidental to establishing such an industry. The way has been considerably smoothed for those who start now. There is available a wealth of experience, for which the pioneers paid, but from which the newcomer may freely draw. He may do so by serving an apprenticeship in South Africa, either with an established grower of repute, or on a Government training farm.

Fruit-growing, in the Union of South Africa, implies a congenial, open-air life, in pleasant and often noble rural surroundings, yet within reach of towns, schools and general amenities. Capital, not less than £2,000 is required for a start.

Fuller particulars of the position and prospect, and of the facilities for obtaining free training and guidance before investing capital, should in the first instance be obtained from the Office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, W.C.2.—(Advt.).—

danger that they would suffer an additional blow by the fact that the Liberals, as soon as they secure a majority in Parliament for the "Constituante" will mould the new Constitution to suit their own views and ends. Notwithstanding this contingency, the Opposition owing to personal questions, ambitions and party interests, seems unable to pull together; so that the Liberals, besides other advantages, have in their favour the Opposition's differences, which they will not fail to use to their full benefit.

It is true that the Leaders of the Tzaranists and the Transylvanian National Party have recently come to an understanding to support each other at the forthcoming elections, but in Transylvania only; and that a similar arrangement is reported to have been concluded between the groups of MM. Take Jonescu and Jorga! These partial collaborations, however, do not represent the strong combination so boldly announced at first. Besides, with arrangements like the above there is also the risk that the views of the Leaders may not be shared by the party committees in the province, owing to local and personal considerations.

As far as M. Také Jonescu's particular attitude is concerned, it is not surprising that he is not taking an active part in the Opposition's campaign against the Government. It is no secret that M. Jonescu favours the "two parties rotation" system, or, in other words, he admits that M. Bratianu should run the country for a few years, so that in due time he should again be called to power.

The People's party, better known as General Averescu's party, has lost a good deal of its former popularity, owing to the unsatisfactory economic conditions which prevailed during its time of office, and is, therefore, not expected to carry much weight at the poll. The Socialists, since their disintegration into three different groups following on the fiasco of the general strike of last year, and still more on account of their leaders' having been imprisoned and implicated in the pending Communists' trial, will hardly be sufficiently organized to be taken into account at the forthcoming elections. Other parties such as the "Progressists" under M. Marghiloman and M. Jorga's group, apart from being small in number, have as little sympathy for each other as they have for the Liberals. The majority of the ethnic minorities, comprising the Germans, Hungarians, Poles, Ruthenians, Jews, Russians and Turks, will either abstain or will vote for the Government, for obvious reasons.

Thus, the only two parties that are sufficiently strong and organized to oppose the Liberals effectively are the Tzaranists in the Old Kingdom and Bessarabia, and the Transylvanian National Party on the other side of the Carpathians. Taking all points into consideration the chances of success seem more or less balanced. If the pre-war system of voting were still in force, there would not be the slightest doubt that the Government would easily come out on top, but since universal suffrage has got to be dealt with—though in its infancy—it would be rather daring for anyone to forecast the final issue at the present stage of the electoral campaign.

General News.

On Thursday, February 2, Sir Herbert and Lady Dering gave a fancy-dress ball at the British Legation, which was honoured with the presence of King Carol, Queen Marie, and Princess Marie. The other 200 guests consisted of the Diplomatic Corps and the *élite* of the Bucharest society.

With the recent change of Government the Municipal Council of Bucharest, headed by Dr. Gheorghiu, has resigned, and pending subsequent municipal elections a Liberal interim Commission has been appointed, under the presidency of M. G. Corbescu, a former Prefect of Bucharest.

M. Victor Antonescu, the new Roumanian Minister to France, who left Bucharest last week for Paris, has, at the same time, been entrusted with a special mission to continue negotiations with the French Government and bankers with reference to the settlement of the

three great financial questions, which the present Government is doing its utmost to solve as speedily as possible, namely: the consolidation of the Treasury Bonds floating abroad, the betterment of the Roumanian rate of exchange, and the question of extending Roumanian merchants' debts in foreign inflated currencies.

M. Titulescu, the new Minister for London, who is expected to leave for England in the course of this week, has been entrusted with a similar mission.

Reports from Transylvania state that the Spanish 'flu is severely raging throughout that province and especially at Cluj, where one-third of the population is said to be afflicted with this epidemic. In consequence, the schools have been closed in most towns of Transylvania.

On Monday, February 6, this country celebrated in the usual traditional way the re-union of Greater Roumania. Prior to the war, January 24, old style, represented the day of union between the two old principalities Moldavia and Wallachia, which took place in 1858 under the Moldavian ruler, Prince Cuza. As the other three provinces Bessarabia, Bukovina, and Transylvania, joined their mother country at different dates during the European War, it has since been decided to celebrate all these historical events on one single day. The 24th of January, old style, is therefore, Roumania's foremost national holiday, embodying the realisation of Roumania's national aspirations as well as the re-integration of the Roumanian nation.

BULGARIA.

Sofia, February 12.

Western Thrace.

A meeting that was held at Sofia on February 5 to consider the question of Western Thrace was marked by scenes of great enthusiasm. The *venue* selected was the Military Club, and the large reception hall was crowded to its utmost capacity, many people being unable to gain admittance. The Society of Bulgarian Authors and Artists was responsible for arranging the meeting, and the speakers were M. Gueshoff, Former Prime Minister, Professor Moloff, ex-Minister, and General Loukoff, late Chief of Staff. After the speeches had been made the following resolution was proposed and unanimously carried:—

"With regard to the coming Conference on the Near Eastern question, the public meeting held at Sofia on February 5, 1922, after having heard the speeches of M.M. Gueshoff, Moloff, and Loukoff, are of opinion that notwithstanding the fact that two years have elapsed since the Treaty of Neuilly was ratified, and sixteen months since the Treaty of Sèvres was signed, the Near East is far from being in a peaceful state. This meeting is further of opinion that the Conferences which have been held, have not resulted in any decisions being taken likely to restore Peace, and that the access of Bulgaria to the Aegean Sea still remains problematical. In addition the presence in Bulgaria of more than 200,000 Thracian refugees constitutes a serious obstacle to the economic development of a country which is already saddled with very heavy treaty obligations. In these circumstances the meeting has decided to make an appeal to the Conference of Foreign Ministers of Great Britain, France, and Italy, that when they study the Graeco-Turkish question, they will not forget the vital interests and the legitimate rights of Bulgaria."

A copy of this resolution was conveyed the following day to the Ministers of Great Britain, France, and Italy, for transmission to the Conference.

Radoslavoff Cabinet on Trial.

A great deal of interesting evidence was given before the High Court during last week. The former Bulgarian Military Attaché at Berlin, Colonel Dotcheff, told the story of an "Army Boot" deal, arranged by a certain Guermanoff and Colonel Gantcheff. The price paid per boot was 40 marks, while boots were really procurable at 14 marks. The deal had apparently the full consent of the Minister of War, General Naidenoff, M. Tchapp-

rachikoff, former Bulgarian Minister at Belgrade, said: "In December 1914, M. Pashitch asked for an interview with M. Radoslavoff. But the latter refused. In 1915 M. Pashitch promised me that Bulgaria should have as far as the River Vardar, if we took the side of the Entente. In May and June 1915 the Entente offered more territory, in fact practically all that was in dispute between the two countries. The Serbs, however, took up an unsatisfactory attitude. The military party in Serbia wished for war against Bulgaria." Perhaps the most interesting evidence given up to date was that of M. Draguiëff, the former leader of the Peasants Party. He stated that the peasants were not for the Entente, but were for neutrality. The Narodniaks, Democrats, and Radicals were the only parties for the Entente, according to M. Draguiëff. This statement is quite contrary to what the Peasant Party have made out to be the case. They say that they, and they alone, were the friends of the Entente. In any case, such evidence coming from the former leader of the Party, is entitled to be accepted as true.

The Cold Snap.

For the last four days Bulgaria has been suffering from an intensely cold snap of weather. The result has been a heavy increase in the number of influenza cases.

ALBANIA.

Tirana, February 12.

The Handing In of Fire-Arms.

The new Minister of the Interior, Ahmed Mati, has issued an order calling upon the population to hand in their firearms to the authorities. This operation has been proceeding throughout Albania since January 18, and continues smoothly, without the slightest opposition being encountered. It must be remembered that the Albanians always had, under the Turkish régime, firearms in their possession, and that a very large number of rifles were left in the country by the Austrians and the Italians; and it was, incidentally, through the possession of these rifles that the Albanians were able to fight against the Italians at Valona, and to sustain the attacks of the Serbs.

But in view of the fact that an Albanian militia has for a year been in process of formation, it is a wise step that the Minister of the Interior has taken in ridding the people of weapons that might become dangerous in their hands.

The people, who have always been loth to give up their arms, are at present conforming obediently to the order of the Government; as at Durazzo, so at Shiak, at Tirana, at Elbasan, at Pekiù, at Karaja . . . in fact, everywhere the arms have been handed in. The surrender of arms has been proceeding equally smoothly at Scutari and in the Malissia, where Ahmed Mati was present in person to supervise the disarmament. A *béssa* (truce) has been concluded by the population of the prefecture of Drin—which includes the places evacuated by the Serbs—in order to help the Government in its plan of action and to maintain peace in the interior; anxiety been shown to avoid "incidents" on the Serbian frontier. According to Articles III and IV of this *béssa* those persons living on the Serbian frontier who have become tools in the hands of the Yugoslav authorities against Albania have been invited to return to their country, and to make their submission. It is to be hoped, in connection with these efforts at the maintenance of correct relations with Serbia, that the authorities at Belgrade will adopt a similar attitude.

Abnormal Rainfall.

During the past two months the rainfall has been quite abnormally heavy, and all the rivers have been swollen by flood waters. Numerous bridges, big and little, have been damaged, and this has resulted in a good deal of inconvenience for travellers, and interruption of communications.

Inter-Allied Troops at Scutari.

After the struggle between Albanians and Italians in June and July 1920, and the Agreement signed at Tirana on August 2 of the same year, the Italians withdrew from all Albanian territory except Saseno, where they

still are, temporarily. However, a small force of Italians has been maintained at Scutari all this time, not in the character of Italian troops, but as an international force, replacing and representing the French and British contingents which left the town in March 1920. Now that the Conference of Ambassadors at Paris has taken a definite decision, the reason for the maintenance of the Italian force at Scutari has disappeared; and the Albanian Government has just addressed a request to the Conference of Ambassadors, that it will secure the evacuation of Scutari by all foreign troops.

CYPRUS.

Nicosia, January 25.

The champions of the Greek "union" cause are carrying out their campaign according to plan, and are disseminating their proposals for organization for the enlightenment of even the most remote villages. The people are told to listen to no voices except those of the patriots who are being chosen to express their views and wishes. The Legislative Council is simply ignored. The new paper *Peirasmos* (Temptation) continues to make fun of its proceedings. The members consist of the official and Ottoman representatives and two Maronites. The National Council is in fact to supersede the Legislative body in the eyes of all Greek Cypriots.

Apart from the monotonous efforts of the "Unionists," there is an almost complete dearth of local news of any interest; and the papers are chiefly filled with telegrams and articles concerning Greece and the Dodecanese. As regards the latter, the outlook is now regarded as gloomy, since the Italian Government is under no obligation to cede the islands, seeing that the Sévres Treaty has not been, and is not likely to be ratified; and the fate of Cyprus is always considered as likely to be bound up with that of the Dodecanese. Italy is suspected of exercising pressure on the islanders in order to obtain expressions of a general desire to remain under her rule.

Mr. W. Bevan, Director of Agriculture, is appointed to act as a member of the Executive Council during the absence of the Treasurer. The Hon. Irfan Bey, M.L.C., is also appointed as a member of this Council.

ASIA MINOR.

Smyrna, February 4.

Sensational Rumours.

The past week has been perhaps the most exciting since May 15, 1919, when the Greeks landed in Smyrna. The Greek authorities forbade the circulation of Athenian newspapers because there were several articles admitting that the Greeks would have to leave Smyrna eventually. It may be safely asserted that all the foreign population and at least half the Greek population realise that the Greek army, at any rate, must leave Asia Minor before very long. It is believed that certain French establishments in the city have received orders to hold their premises in readiness for reception of French troops; and, in fact, the first of March is freely given as the date of the landing in Smyrna of French and British troops. Some of the Greek officials have also turned away troublesome applicants with the remark that, as the Turks are coming back here, it is useless to worry the Greek officials. It is also rumoured that Lord Northcliffe, who is visiting Palestine and Syria with Mr. Graves, *The Times* correspondent, will pay a visit to Smyrna and Athens.

It is not surprising that extraordinary rumours should prevail in Smyrna when the diplomatic correspondent of a London daily professes to have learnt "that several weeks ago two Greek steamers were blown up in Smyrna harbour in circumstances distinctly suggestive of foul play, and that the stringent naval enquiry then held failed to show convincingly that the explosion had been engineered from within. Indeed some of the experts referred to the possibility of submarines." No steamers have been blown up in the Smyrna Harbour since two were blown up either by the Turks or the British on March 12, 1915.

THE MYSTERY OF THE ORIENT.

By EDWARD DRIAULT.

(Continued.)

This is why the Ottoman Empire has disappeared, as disappear organisms which have become atrophied by inaction, condemned by their uselessness. For the time has come when the constitution of the human city and the exploitation of the riches of the globe exact the application of all nations. The time has come to eliminate the idle.

The Turks commenced early, more than three hundred years ago, to beat a retreat, fated by the same causes to the same destiny as the Mongols, gone without leaving a trace, like those hurricanes of sand which the desert occasionally uplifts for engulfment of caravans; the hurricane passed, other caravans set forth towards the distant markets. And the obvious leading fact, singularly impressive, in the modern history of the Orient is the reflux of the Turks from Europe towards Asia; it is the disappearance of the Ottoman Empire.

Who would deny it would deny the daylight: a phenomenon as striking as the grand sun of the Orient. **Consider the Dates.**

In 1571, Soliman the Magnificent had been dead five years, the Christian Fleet of Don John of Austria destroyed the Turkish Fleet at Lepanto, and from that moment the Mediterranean, even the eastern, escaped from the domination of the Ottomans. For never had the Christian Nations accepted the Ottomans among themselves; they always considered them as a foreign body disturbing the general economy of Europe, and destined to disappear one day or other, for lack of assimilation.

In 1683, the Turks momentarily reformed by the rough Grand Viziers, the Köprili, made a supreme effort against Vienna, and terror spread throughout the West. The King of Poland, John Sobieski, won over the Ottoman Grand Army the victory of Kahlenberg, and from there they fell back the length of the Danube into the Balkans, where Christian Europe besieged them from all sides.

Already the Almanacks of 1687, finely expressive of popular sentiment, deposited "the sick man" on his death bed, and all the doctors of Europe hastened to spare him too long an agony. Immediately, in short, the Turks lost Hungary and Transylvania. At the beginning of the 18th Century they lost even Serbia, which was restored to them temporarily by the diplomatic intervention of France at the Treaty of Belgrade of 1739, and Austria was not able to penetrate farther into the Balkan Peninsula. For the Turkish heritage was not reserved for Austria.

Then Russia came down to the Black Sea, won, under Katherine, the Crimea and the mouths of the Danube, and thought to open "the road to Byzantium." But Napoleon halted her advance there. It would have been serious for all Europe had Russia taken Constantinople, and become there the mistress of the world. And yet, even to our own days, to the days of the Great War, it looked as though Russia would be the heir of Turkey by re-establishing to her benefit the Empire of the Orient. How terrible a menace would rest upon Europe and upon the world if Bolshevik Russia of to-day reigned at Constantinople!

The Great Problem.

For this problem is ever the same, and its solution remains mysterious:—The Ottoman Empire at last has disappeared: to whom will fall the immense succession on which hangs even the fate of humanity?

Can one believe that the decadence of Turkish Islam will be stayed after three centuries of retreat and decomposition? And must one reckon with an Islamic renaissance? A contemporary historian, Mr. Lothrop Stoddard, in a remarkable book, "The New World of Islam," announces it while basing his thesis on solid

arguments. He controverts directly the late Lord Cromer's formula, "Islam cannot reform herself; or, if she reforms herself, she will be no longer Islam." But he himself abandons the Turks to their ruin, which he considers definite, and reserves the rebirth of Islam to the action of the great religious confraternities which have formed themselves in the Arab lands, the Wahabites and the Senussi: a Moslem renaissance by the Arabs, perhaps, but not by the Turks.

And thus the problem of the Turkish succession remains entire. The Great War has put an end to the Ottoman Empire, as to the Habsburg Monarchy, whatever be the condition and extent of the pieces preserved.

Its Solution.

The solutions of the future, however mysterious they may still be, fall at least within the scope of the principles proclaimed at the end of the 18th Century, by the American Revolution and the French Revolution, the right of peoples to dispose of themselves.

Now the Ottoman Empire having been merely a military encampment, its succession, from the day the Turks withdraw their tents to Asia, is to be found in the restoration of the nations which it had temporarily subjugated; and it is the moral greatness of the 19th Century and of the war of yesterday which crowned it, that it has assured the liberation of almost all the nationalities oppressed.

Already Napoleon had attempted to raise Poland from the tomb where Austria, Prussia and Russia had buried her, and he had given to Italy her national consciousness. It is known that he had also dreamed of the liberation of Greece, and had had some correspondence with Kara-George, the hero of the Serbian insurrection. He appears thus, a century after his death, as the prophet of the new times.

For a whole century and up to the time of the Great War, one has witnessed everywhere the affirmation and frequently the triumph of the principle of nationalities, and the Orient has taken on an entirely new physiognomy.

I will borrow from M. Lavissee, the illustrious Professor of this Sorbonne, an image of incomparable plenitude. Just as, says he, on the walls of Saint Sophia, once covered over by the plaster of the conquering Mussulman, the mosaics of Justinian re-appear little by little, a head of Christ, a figure of the Virgin, so in the place of the Ottoman Empire, on the political map of the Orient, have reappeared, more striking than ever, the colours of the young Christian nationalities.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

BRITAIN AND INDIA.

To the Editor of "The Near East."

Sir, I venture to think that the political crisis in India has arisen from unsound economic conditions which have not received adequate attention. In common with the whole civilised world India is suffering from the destruction of life and wealth caused by war. A chain will break at its weakest link: the social structure of India shows signs of collapsing under a strain which is severely felt in more advanced countries. Her people are born Conservatives; given a reasonable degree of material well being and non-interference with religious prejudices, they are peaceable and law-abiding. But hunger is proverbially an ill councillor: it was inevitable that men who found the price of necessities soaring upwards should be gulled by demagogues who ascribe all India's woe to foreign rule rather than to the feckless improvidence of her people. In 1798 Thomas Malthus published his famous "Essay on the Principle of Population"; his thesis being that every form of life tended to increase in a far greater ratio than the means of subsistence. In the case of the human species, however, an unstable equilibrium between the growth of life and the supply of food was maintained by the agency of war, pestilence and famine and "moral restraint." His doctrines met with a storm of disapproval from people who believed with J. J. Rousseau and Godwin that mankind was perfectable; but their essential truth is now admitted by everyone whose judgment is free from ingrained prejudice. Let us see how far Malthusianism applies to India. A century and a half ago the whole peninsula was plunged in anarchy. Satraps of the effete Mughal empire threw off their allegiances and fought among themselves for territory. Pestilence and famine raged unchecked; the countryside was ravaged by marauding bands. "Moral restraint" has never operated in India, where Hindus and Moslems obey the precept "Increase and multiply" without regard for the future. Thus every check enunciated by Malthus, except moral restraint, was in full operation; and in the last quarter of the eighteenth century the population of India cannot have exceeded 90,000,000. The British Raj, which dates from that epoch, ended internal warfare. Railways, roads, steam navigation and irrigation lessen the risks of famine, which is dealt with most effectively when it occurs. Pestilence is stamped out with equal vigour, and medical help is within the reach of every villager. The results were revealed by every decennial census. In 1881 the population of India was returned at 253,000,000: in 1921 it reached 319,000,000, showing a growth of twenty six per cent. in forty years. There are congested regions in the Gangetic Delta where an overtaxed soil supports 1200 souls to the square mile! This abnormal increase has not been attracted by any proportionate addition to the means of subsistence. Incredibly archaic and inefficient are the agricultural implements in common use; fertilizers are scarcely known; owing to the lack of grazing-grounds the cattle are miserably undersized;

the cost of food and clothing has risen of late years by 250 per cent., and 75 per cent of the population of Bengal suffer from malaria. The remedies for conditions which threaten India with utter ruin are to be found in subsoil drainage, river training, technical and civic education, the influx of British capital and relief for congested tracts by aided emigration. But social diseases of ancient growth cannot be eradicated in a day. Peace and order are essential to the regeneration of India: her plight demands cordial co-operation between the best elements of the British and native races. My moral is that a short shrift should be given to irresponsible demagogues who seek to destroy the British Raj, but have no constructive programme to offer in its place.

I am, etc.,

February 19.

GREAT BRITAIN AND ASIA, PAST AND PRESENT.

To the Editor of "The Near East."

Sir,—I have been in England for nearly four years, and although I am used to the abusive language with which Greece and the Greeks have some times been treated in the British Press, I never remember to have come across such expressions, as those used in Sir Graham Bower's letter in your to-day's issue, against my countrymen whom he calls the most cruel, the most intolerant and the most barbarous of all the Balkan peoples. Your correspondent's letter embraces many subjects, which are rather difficult to follow, and there is a somewhat Shavian tinge in it, when we are told by the writer that he was present at the "first" funeral of Lord Mayo.

Sir Graham Bower speaks of the Greeks, as some papers do, when they treat them as the only cause of the Moslem Indian unrest. If the Spaniards have been beaten by the Moors, and if the Italians are now being "licked" in Tripolitania, or if, in the near future, the Java Moslems happen to rise against the Dutch, there will apparently be nobody else to blame but the Greek.

By a curious coincidence I have heard to-day the other "son de cloche" at the Manchester Y.M.C.A. Mr. Carter, of the Indian Y.M.C.A., spoke on "India as it is to-day" and Sir Graham Bower ought to have been present, so that he would have had exposed to him the real causes of Indian unrest. The speaker referred of course to the Sèvres Treaty but in spite of all, he insisted upon the other serious claims which the Nationalists in India put forward, as for instance, the strangulation of Indian industry for the sake of the Lancashire competition. Mr. Carter told us also some true facts which are not all to the credit of the British Raj.

Denunciations must be made in the proper manner, and in the proper language and, most essentially, within the proper limits, but, when you reach big words, it is of no use retaliating, especially when you come to think that you are only a guest of a country which you have been taught to respect for its tact, fair-mindedness and fairplay.

I am, etc.,

Theodore D. Moscona.

FRENCH MILITARY MISSION IN GREECE.

✠ The following message dated Athens, February 16, has been received in London from a Greek semi-official source:—The Minister for War to-day received General Grammat, head of the French Military Mission, who introduced the members of the Mission who have recently arrived in Greece, following the renewal of the Military Convention. The French officers will later be attached to various branches of the Greek Army.

MUSICAL NOTES.

An American Guide to Music.

The differences between the respective attitudes towards music of the British and American publics are many, but nowhere are they more remarkable than in the writing of popular expositions upon the art. In the work of "highbrows" all the world over there may be points of resemblance; but I do not think that such a work as Charles D. Isaacson's "Face to face with Great Musicians" could reckon on a large public anywhere but in the United States. This book, the second of its kind, has recently been published by Messrs. Appleton at 8s. 6d. net. It is American, thoroughly American, alike in its enthusiasm and in its sentimentality.

It appears that its author, Mr. C. D. Isaacson, has been a missionary for music, for Dr. Frank Crane's busily terse introduction informs us that "he has organised popular concerts and brought the best music to the masses." So far very good. It is noble work, this apostolicism on behalf of humanity. But it is a different matter when Mr. Isaacson seeks, as in this book, to "humanise the masters." He believes that a knowledge of a composer's intimate and personal history is, for newcomers at any rate, essential to the understanding of that composer's works, and his plan is to bring the reader what he calls "face to face" with various musicians. Certainly he suggests vividly and faithfully enough the personalities of men like Wagner, Berlioz, Franck, Field, Rubinstein, Grieg, Dvorak, Moussorgsky, and many others which may be conjured up from a study of their biographies; he has the smart brevity which gives you your definite picture. But in his whole aim I believe he is profoundly wrong. A composer exists in history because of his music; his life does not matter a rap. The "understanding" of music is formed through the imagination, and through the imagination alone: knowledge, whether technical, biographical, or historical, scarcely affects it. No amount of study of Beethoven's inner life, or everyday life rather, will make you understand the Arietta of Op. III, unless you have imagination; no knowledge, however precise, of Chopin's loves, will give you the key to the "Fantasie" Ballade. These presentations of composers' personalities, therefore, cannot create in any permanent way the appeal that their works make; they can but supplement or consolidate appreciation of those works. And it is not even certain that such knowledge makes good judgement sure, as this book amply shows. I do not imagine that anyone in this country could with impunity rank Patti, for instance, or Balfe, or Stephen Foster, as "great musicians." A warm catholicism is a wise thing to have, no doubt, but an indiscriminating omnivorousness becomes an unedifying and quite unconvincing spectacle.

Settings of Shakespeare.

No singer in this country has occupied himself so thoroughly in the performance of native song as John Coates, and it might have been thought that he had exhausted every possible kind of programme of British songs. But he has too much up his sleeve ever to become exhausted. At the Chelsea Town Hall on February 14 he hit upon the ingenious and delightful plan of forming a programme from settings of Shakespeare, singing first the old (17th or 18th century), then the modern setting. As songs pure and simple, that is as flights for the voice, most of the palms went to our Arnes, our Morleys and our Boyces; but as music pure, the modern song with its concentrated imagination in the pianoforte part, more often won. For instance, between the respective settings of "Blow, blow thou winter wind" by Arne and Quilter there is no question that the first has infinitely the better melody; and there is even a greater gulf between the effortless directness of Wilson's "Take, O take those lips away," and Parry's passionate striving to attain its content. Of "Lawn as white as driven snow" alone Mr. Coates gave us only one (Linley's) setting: no wonder, because no one will ever equal this. We can't be grateful enough to him

for hunting out all these glorious old songs (at least he makes us think they're all glorious; we don't discover how empty some of them really are until we study them for ourselves), but it is impossible, every time he gives a recital, ceaselessly to reiterate his magic praises. Won't someone persuade him to write a book on the history of English song? He knows more about it than anyone else. And we might then find out what he really thinks about the different composers he sings, all of whom he pretends are equal.

Andante.

NAVAL MOVEMENTS.

Captain A. R. Palmer, who was until recently in command of the Mining School of the Navy at Portsmouth, last week took up the post of Senior Naval Officer in the Persian Gulf, with his pennant in the special service vessel Triad. He succeeds Captain J. L. Pearson, C.M.G., on the completion by the latter of two years in the appointment. Captain Palmer is well acquainted with his new post, as from 1916 to 1919 he was flag-captain to the Commander-in-Chief in the East Indies. The force he is to command consists of the Triad, and the sloops Crocus, Cyclamen, and Espiegle. The Triad is a yacht, purchased in 1915, which served in the Dardanelles, and from which some of the naval and military dispatches of that campaign were addressed.

At Constantinople last week, Commander F. B. Favell and Lieutenant-Commander A. D. D. Smyth began duty as Assistants to the British Captain at the Port. Commander Favell, until recently Admiralty Port Officer at Immingham, on the Humber, succeeds Commander W. P. Townshend, R.N.R. There are some 26 British naval officers on duty at Constantinople, apart from those in the Fleet, two being stationed at the Turkish Ministry of Marine.

SERBIA AND ALBANIA.

We have received from the Legation of the Kingdom of Serbs, Croats, and Slovenes, the copy of a telegram despatched from Belgrade on the 14th inst. It runs as follows:—

Légation Serb Londres. Journal de Londres Near East du 9 février publie une correspondance de Tirana dans laquelle entre autre on dit que le discours président conseil ministres Pasic a Skupstina 27 janvier dernier, produit impression pénible dans cercles slovenes car Pasic aurait declare que Royaume serbes croates slovenes doit obtenir region Lima que Conference Paix nous donna. Nous sommes autorisés déclarer que cette partie cette correspondance ainsi que passage ou l'on pretend que M. Pasic aspire au partage Albanie et desire se venger des Albanais ne correspondent pas verite. Dans meme discours President Conseil Ministres Pasic declara que notre délégation conference paix soutint aspirations Essad Pasha comme unique représentant legal peuple Albanais et que on reconnaisse independance sous condition ne permettre aucune puissance étrangère d'ingerer affaires albanaises. Telles sont actuellement encore aspirations de M. Pasic.—Buropresse.

(Of course we accept the assurances contained in the message, while awaiting a communication from our Albanian Correspondent.—Ed.)

AN ENGLISH HAKIM IN BABYLONIA.

"AN ADMINISTRATOR IN THE MAKING : James Saumarez Mann. 1893-1920. Edited by his Father. With Illustrations and a Map (London: Longmans Green and Co. 16s. net.)"

Amongst many magnificent qualities of character the one that impresses us most on reading this life of Captain Mann, which is told almost entirely in his own letters, is that of enthusiasm. In all his activities during the seven and a half years, 1913 to 1920, which these letters cover—a period which found him at Oxford and which ended with his death in the siege of Kufa—we are struck by the eagerness with which he devoted his keen intellect and all his powers to each new problem with which he was faced. We first find him spending much of his energy on the Balliol Boy's Club, and we see increasingly the same intense interest and the same fiery desire to give his best to the work in hand after he was whirled away from the expected routine of his brilliantly begun career on volunteering for the Army in August 1914.

Captain Mann had the gift of writing letters which, although absolutely natural and unaffected, give very vivid descriptions and tell of those things which are of real interest and will continue to be of interest. A very definite idea of different aspects of the war is given in the letters which tell of his nine months' training, the year in France in the Trenches before he was severely wounded, the year which he spent as Adjutant with the Cadet Training Battalion at Trinity College, Cambridge, the time when he had returned to France, and was with H.Q. of the 4th Army, doing counter-battery work, and at the end where he was among the first to enter some of the towns and villages which were hastily abandoned by the Germans before the Armistice.

In spite of attractive offers of work at home, Captain Mann set his heart on the East, and in July 1919 he went out to take up an appointment as Editor of the *Baghdad Times*. As a matter of fact, in his arrival in Mesopotamia he was sent as A.P.O. to Eastern Shamiyah, and the greater part of this book is taken up with his letters from Umm al Ba'rur, near Najaf, the Holy City of the Shiah.

It is a wonderful picture which these letters give us of a young man in a country absolutely new to him, amongst strange people in disturbed and troublous times, the first English Hakim in his District, mastering with extraordinary skill the difficulties of the language, the character of his people, and the windings of the endless ravelled skein of intrigue, falsehood and mistrust, and striving with all his heart to bring peace and prosperity to his District and to give justice to its inhabitants. "I think I am as good a Radical and Nationalist as ever I was in England," he writes, but he came more and more strongly to feel that the British position in Mesopotamia was justified, and he states his case clearly in a letter to the *Nation*, which is given here. The conditions of the country and the nature of his work and of his many and varied difficulties are wonderfully vividly shown. Of the Arab he writes that he "is such an inconsequent mixture of the knight of chivalry, the high-spirited child, and the fawning, false tongued Oriental; he is essentially not an Oriental at all, and his mind, like that of the Jew, is European compared with the real Eastern races. Altogether he is a funny customer; and the hardest thing about him is that he doesn't really know his own mind, and has

only the vaguest idea of what he wants, beyond the one common to all mankind, that wealth would pour down upon him without labour from the skies."

His descriptions of his different Sheikhs are delightfully clever character sketches.

One of the Sheikhs, Marzuq, although not pro-British in his sympathies, when the rising in July 1920 grew serious, stayed with Captain Mann to protect him, he having refused all official protection "on grounds of policy." We are shown that it was owing to the great esteem in which Captain Mann was held by his Sheikhs, and to the fearless energy with which he tried to make peace that a four days' truce was arranged, which allowed of the relief of the garrisons at Rumaitha and Abu Sukhair. By the terms of this agreement he was not allowed to return to Umm al Ba'rur, and five days later he was killed in Kufa by a sniper's bullet. At the end of the volume there are some appreciations of Captain Mann, written by those who knew him well and those with whom he had worked, but anyone reading this book is bound to carry away the impression of a rare personality and to feel the tragedy of the early ending of what promised to be such an exceptionally useful and brilliant administrative career. One friend writes of Captain Mann's love of music, of which there is much evidence in the letters, and some of his verses are given, verses full of the enthusiasm and idealism of youth, but haunted by the cruel sadness of the years in which it was his destiny to labour and to fight.

ACHILLES ON SCYROS.

"THE ISLAND OF YOUTH" by Edward Shanks. (London: Collins, 8s. net).

The poem which give its name to Mr. Shanks' fourth volume of verse is a long idyll describing the life of young Achilles on the island of Scyros. Achilles, it will be remembered, was destined for a glorious life and an early death, and it was to avert this doom that the goddess Thetis, his mother, brought him to Scyros and enchanted him to live there as one of the maidens of the island. While thus living Achilles fell in love with Deidamia, the king's daughter. It is of such a fragile story that Mr. Shanks has made his exquisite work. The poem begins with the awakening of the maidens of the island to the presence of a stranger in their midst, followed by a description of Scyros, the island that is now, through its possession of Rupert Brooke, notched in the minds of all Englishmen—a description full with those lush details of which Mr. Shanks has so splendid a store:—

The island Scyros floated on the sea,
And in the water shone her crags and towers,
A second self existing in the wave,
Mysterious and lovely, like the double
Which, as some yet believe for comfort's sake,
Attends each man from birth to death, remaining
What in a kinder world he might have been.
But few in Scyros were the flaws and scars
Which the transmuting mirror-sea might smooth,
And in that summer Thetis' blessing lay
Especially upon her.

Then are told the perfect conditions of life on the island in which these maidens lived and grew. It is in this part, incidentally, where the meeting of Achilles with Deidamia takes important place, that the poorest and most wooden lines of the poem occur: the stranger (Achilles) is vying with the maidens in their games:—

In their games
She was the better player. When they ran
With skirts trussed up she outran them easily,
And she was quicker with the tossing ball.

But some strange fear of Achilles suddenly possessed his play-mates, from whom he fled to the mountains, there to commune with himself and to ponder over his destiny. After "long long day" had "added to long long day in summer's fragrant count," Achilles happened to perceive a sword, brought by merchants to the island. The sight of this weapon soon made him

GREEK (MODERN) SELF-TAUGHT

(In Greek and Roman Characters).

Sold by all ENGLISH and FOREIGN BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & Co., 51, Old Bailey, E.C.

realise the nature of his fate ; his " dreadful guessing " on the future was now to be turned into action ; he had cast his die. He determines to relinquish his disguise, to be only Achilles : and upon the consequences of this resolution are written some of the loveliest lines in the poem :—

Gone was the Stranger. Whither ? Ask as well
Where the flower's beauty goes when petals fade
And the rough seed thrusts out. Yet it may be
That still a spirit haunts the isle, a ghost
Of dew and light and air, revisiting
The beach where long ago the maidens played,
And finds perhaps in some far, narrow vale,
The rude grave of a poet, dead too young,
Whom death, or life, frustrated of his hope,
Presses her faint lips to the soil and breathes
One word of half-remembered sisterhood.

From here to the end, which is the consummation of the love of Deidamia for Achilles, the poem marches with beautiful lightness and grace of step. But throughout there is an admirable proportion preserved between the deity, the human, and Nature ; nothing obtrudes and practically nothing is carelessly finished, this perfection being all the more necessary because the whole thing is of the finest and frailest texture.

There is but one other poem in this book the subject matter of which intimately concerns readers of this journal : it is called " Constantinople," and " was written in February, 1920, on reading the announcement that Constantinople was to be handed back to the Turks." It is not a very convincing effort, partly because of Mr. Shanks' audacity in supposing that the spirit of Rupert Brooke would visit in hell the spirits of Justinian and of Constantine Palaeologus just to inform them that their unworthy successors had failed to retake St. Spohia, but chiefly because of the square form of the poem. Mr. Shanks thinks, as all Western poets think, that Constantinople will one day return to Christendom, and in Justinian's last speech it is said—Nought given in the city's cause is wholly lost. The walls remain.

O raise your head, my friends, and know that while the soaring
dome shall stand
Though heathens hold it for a space the city still is Christian
land.

We should much prefer to linger on some poems vastly superior to this : on " Memory," for example, in which there is as perfect delicacy as that of which any modern English poet is capable ; or on " The Sky at Campden," which is like a painting in the finish of its conception and detail ; or on " The Nightjars," which is an admirable example of Mr. Shanks' extraordinary gift in the creative projection of the sense ; or on " The End," a grotesque study in imagined annihilation. But, though it be vandalism to which only a reviewer would stoop, we will snatch a few lines from the most artistic work in the volume, a work the cunning ethereality of which is comparable only to the harmonies of Delius, " Morning on the Hill " :—

Softly, softly, the long bare boughs are rubbed together,
A dry leaf spindles down, like a bird's light feather.
Still, oh still—
Silence hath laid, in her woods and on her hill,
The sighing wind asleep,
And thin clouds smoke over, gently creep
Across the bare furrows and rubbed grass and settle down,
Coiling faint wreaths among the golden stones of the town.

Still, oh still ! There is harm in speaking,
Sleep is too hard, speech only means waking
Into a world of words where lovely things are bound by names,
Where we pursue colour and call her flowers or flames.

One final, ungrateful word. We can't understand why so sensitive an artist could have allowed his work to be published in so hideously yellow a cover.

A V.A.D. AT SALONIKA.

" SISTERS' QUARTERS, SALONIKA." By Marguerite Fedden. (London : Grant Richards, 6s. net.)

Many books have been written about the war, but so numerous were the kinds of work and the experience of those engaged in the various campaigns that there is still room for many other records, before we have a complete list.

" Sisters' Quarters, Salonika," deals with the ad-

ventures and work of a Red Cross V.A.D. cook, who was one of the pioneers in Salonika in that particular branch of the service. Generally, it is a volume that will be of interest to those who like to read of other lands, for Miss Fedden was fortunate enough to visit Marseilles, Malta, and Egypt, *en route* ; and she gives some accounts of the customs and history of the people, and also of the work of the British hospitals in Salonika during the war. But the book will be of especial interest to those who served out there. Already we are beginning to forget the joys and miseries of camp-life, the joy of waking in the early morning to see the summit of Olympus rising above the mist, the misery of a night on duty spent in cold and rain and wind. But each chapter brings to mind thousands of little details, flies and mosquito-nets, match-rations on Saturday nights, Vardar winds, half-days with tea at Flocas, and the ride on the front of a lorry along the bumpy Monastir road.

The work of the cooks was of great importance. It was through their efforts that the necessary delicacies were prepared to tempt the appetites of the sick patients, and many thousands profited by their labours. All the work was undertaken under the greatest difficulties, and some idea of the quantities dealt with may be obtained on learning that it took four or five people three hours each day to grate or peel the lemons for the lemonade, so much appreciated in that intense heat when all the water was chlorinated. But the cooks, like everyone else in the hospitals, felt that no trouble was too great for those splendid patients who were generally so very cheerful in spite of their wounds or sickness, and of the fact that most of them saw no prospect of leave for years to come.

Miss Fedden's book is illustrated by Lieutenant F. V. Carpenter with some charming little pen and ink sketches. Particularly good is the reproduction of the intense sunshine and shadows, so vivid a recollection of Salonika : it is very well carried out by the massed black and white of the illustrations. There is also a foreword by General Sir Bryan Mahon.

MOSQUES OF CAIRO.

" SOME CAIRO MOSQUES AND THEIR FOUNDERS." By Mrs. R. L. Devonshire. Illustrated. (London : Constable & Co., 17s. 6d. net.)

Mrs. R. L. Devonshire first appeared before the public as an author during the early days of the war, when she wrote " Rambles in Cairo," describing the chief sites of Cairo for the benefit of the members of the British forces. Her effort met with such success that she decided to write more detailed biographical notes about the monuments of Cairo ; and her latest venture combines an historical with an archaeological description of some of the less known, but none the less famous mosques of Cairo. It will probably not appeal to the mere tourist, who takes usually but a superficial interest in the places he visits or the sights he sees, but to those to whom early Moslem and Egyptian history presents attractions and who see in the relics with which Egypt is strewn something more than mere stones and mortar, this informative little book should be very welcome.

It is to be hoped that Mrs. Devonshire will be encouraged to extend her activities to the other mosques of Cairo and give us similar entertaining accounts of their foundation, and of their founders, for beyond the relatively scanty references in the guidebooks there is very little information available to the general public, and a further contribution on the lines of this book will fill a real want in popular Egyptian bibliography.

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

PERSONAL AND GENERAL.**To-Day.**

February 23 (New Style).

February 10 (Old Style).

Gumada II, 26, 1340 A.H. of the Moslem Calendar.

Shebat 25, 5681 of the Jewish Calendar.

Cardinal Bourne is now on a visit to Malta.

Lord and Lady Plumer are enjoying a week's holiday in Sicily. They are due to return to Malta tomorrow.

The Hon. Lady Alexander, who is now convalescent, will leave Paris shortly for India.

Lord Cawley, who has been to Gallipoli and Egypt, has returned to London.

Mme. Gavrilovitch, wife of M. M. B. Gavrilovitch, Attaché at the Yugoslav Legation, has left for Paris.

M. Nicolas Vladesco, Secretary at the Roumanian Legation, has returned from Paris.

Prince Ghika, Roumanian Minister in Paris, will shortly be succeeded by M. Averesco.

Prince Djelaleddin, who has arrived from Monte Carlo, is staying at the Carlton Hotel.

M. Titulesco, the newly appointed Roumanian Minister to the Court of St. James, will arrive in London this week.

Viscount and Viscountess Goschen, who are travelling in Egypt, will remain abroad until April.

M. Vladimir Milanovitch, Secretary at the Yugoslav Legation, has been transferred to the Foreign Office in Belgrade.

M. Frederic Nano, Secretary at the Roumanian Legation, has been made an Officer of the Order of the Star of Roumania.

Lieut.-Colonel Douglas Capitaneano, Military Attaché at the Roumanian Legation, is back in London from Paris.

Lord Manners has left Cairo to visit Brigadier-General and the Hon. Mrs. Arthur Asquith at their home on the Sudan Plantations.

M. R. T. Djuvara, who is to remain as First Secretary at the Roumanian Legation, returned to town last week.

The Earl and Countess of Carnarvon, Lady Evelyn Herbert, Lady Guernsey, and Lady Stanley are among the visitors at present in Cairo.

M. Miran Sevasly, representative of the Armenian National Delegation at Washington, and Mme. Sevasly have arrived in London and are staying at the Grosvenor Hotel for a few days.

M. Diamandi, Minister in the Roumanian Diplomatic Service, arrived in London last week from Paris in connection with the adjustment of claims between the two Governments arising from the war.

The Right Hon. V. S. Srinivasa Sastri (Member of the Council of State of the Viceroy and Governor-General of India) who recently returned from Washington, had an audience of the King last week.

Marshal the Viscount Allenby (His Majesty's High Commissioner for Egypt) and Field-Marshal Sir Henry Wilson, Bt. (upon relinquishing his appointment as Chief of the Imperial General Staff), had audiences of the King on Friday.

A marriage has been arranged, and will take place in London on March 7, between Captain Henry Dane, Indian Army, younger son of Sir Louis and Lady Dane, and Victoria Alexandrina, daughter of General Sir Reginald and Lady Wingate.

The engagement is announced of Captain C. W. Sanders, 1st. Brahmans, eldest son of Colonel G. L'E. Sanders Indian Army (retired), and Mrs. Sanders, and Rachel Colquhoun, elder daughter of Mr. J. N. Swann, of Inglehurst, Malvern.

A marriage has been arranged, and will take place early in April, in Edmonton, Canada, between Francis Guy, youngest son of the late Bishop of Bombay and the late Mrs. Pym, and Octavia Florence, youngest daughter of Mr. and Mrs. Ruggles-Brise, of Spains Hall, Finchingfield, Essex.

Sir Dhunjibhoy Bomanji, who was knighted at Buckingham Palace last week, arrived in England recently from Bombay, where he acted as chairman of the entertainment Committee, for the visit of the Prince of Wales, and entertained the crew of the H.M.S. Renown, besides sending them by special train from Bombay to Delhi.

The Rev. Walter Levin, H.C.F., minister of the North London Synagogue, is engaged to Rose Sophie, only daughter of the Mrs. Minnie Forwood and the late E. N. Frankenstein, of 25, Palace Gate, and Abbott's Cot, Bourne End. The Rev. Walter Levin served in senior chaplain to H.M. Forces in Italy, Egypt and Palestine.

In accordance with the Serbian custom, a memorial service for the late King Peter, who died six months ago, was held on February 17 at the Russian Church of St. Philip, Buckingham Palace Road. The Yugoslav Minister, M. Gavrilovitch and the personnel of the Legation, and many of their compatriots in London, were in the congregation.

It is proposed to publish a Biography of the late Rev. Professor Alexander van Millingen, M.A., D.D., the Byzantine archaeologist and writer, of Robert College, Constantinople. All friends having letters, or facts relating to his life and work either as Preacher, Teacher or Historian, are asked kindly to communicate with Mrs. van Millingen, c/o The British Linen Bank, 38, Threadneedle Street, London, E.C.2.

OUTFITS FOR EGYPT, INDIA, AND THE FAR EAST

The Official, Business or Sporting traveller going East this Winter will find just what he wants at

THRESHER & GLENNY

A century old outfitting experience and records of what others have taken are at your service.

Write for List "H" mentioning destination and nature of appointment.

152 & 153, STRAND, W.C.2.

The engagement is announced between John Ponsonby Trousdell ((Hong Kong and Shanghai Banking Corporation), Captain I.A.R.O., third son of the late W. B. P. Trousdell, formerly of the 7th Hussars, and Mrs Trousdell of Maryland, Maidstone, and Helen Francis (Peggy) Landon, youngest daughter of Harcourt Palmer Landon, and the late Mrs. Landon, of the Lodge, Shenfield, Brentwood, Essex.

A Reuter message from Belgrade dated February 18, states :—It is announced here to-day that the marriage of King Alexander of Serbia with Princess Marie of Roumania has been fixed to take place on February 22. M. Pashitch, the Premier, and M. Mintchitch, the Foreign Minister, propose to accompany the King to Bucharest, for which city the party will leave tomorrow.

While in Bucharest the Yugoslav Ministers propose to take advantage of the opportunity to confer with the Roumanian Premier, M. Bratiano, in regard to the attitude to be adopted at the Genoa Conference.

APPOINTMENTS AND PROMOTIONS.

M. Stephan Angheloff has been appointed Second Secretary at the Bulgarian Legation.

The King has given permission to wear the following Decorations, conferred in recognition of valuable services rendered during the war :—

Order of the Star of Roumania.

Insignia of Grand Officer.—Viscount Burnham, C.H. ; H. A. Gwynne, Editor of the *Morning Post*.

Insignia of Commander.—Sir W. Grey-Wilson, K.C.M.G., K.B.E.

Order of the Crown of Roumania.

Cross of Commander.—Sir H. J. Mackinder, M.P. ; H. T. M. Bell ; O. de La Chapelle, Legal Adviser to the Roumanian Legation ; F. W. Emmett ; the Very Rev. M. Gaster, Chief Rabbi of the Spanish and Portugese Jews' Congregations in London ; M. A. Gerothwohl, Ph.D., LL.D. (Dublin) ; R. P. Goldschmidt, Consul of Roumania at Manchester ; H. Locke, Cashier of the Roumanian British Chamber of Commerce ; G. S. Orr, Consul of Roumania at Glasgow.

Cross of Officer.—C. E. Musgrove, Secretary of London Chamber of Commerce ; P. W. Runciman.

Order of the White Eagle (Serbia).

Class IV.—C. F. Roundell, C.B.E., General Inspector, Ministry of Health.

Class V.—H. Campbell, C.B.E. ; G. A. Powell, C.B.E.

Order of St. Sava (Serbia).

Class II.—The Lady Dowager Boyle.

Class IV.—Mary A. Blair, M.D., B.S.

Class V.—Miss H. Bellows, of Tuffley Lawn, Gloucester ; G. K. Bowes, M.D., M.R.C.P., M.R.C.S. ; J. R. Coventry, of Liverpool ; J. W. Harvey, of Headingly, Leeds ; M. A. Tancock.

Order of George I. (Greece).

Cross of Commander.—J. O. Jeppe, Hon Consul-General of Greece at Cape Town.

OBITUARY.

The death is announced from Madras of Bishop John Robinson, of the Methodist Episcopal Mission. He died at Bangalore, after 30 years of service in the East.

We regret to have to announce the death of Ethel Mary Pears, the eldest daughter of Lady and the late Sir Edwin Pears, which took place on February 14 at Bournemouth.

DOMESTIC ANNOUNCEMENT.

Death.

PEARS.—Ethel Mary, the eldest daughter of Lady Pears and the late Sir Edwin Pears, on February 14th, at Bournemouth.

THE SITUATION IN PALESTINE

With the Egyptian Question approaching a solution, and one which will probably lighten very considerably our commitments in the Near East, it is likely that the future of Palestine will receive more attention from both the British Government and the British Public. The average Briton is perhaps more interested in Palestine than he is in Egypt. At any rate, he generally makes acquaintance with its history—or part of it—and its geography earlier in his life than he does with those of Egypt; and lately he has begun to take that added interest in the subject which usually accompanies the prospect of having to pay for a thing in one form or another. Since Great Britain accepted the responsibility of the Mandate he has cast an eye, rather troubled at times, on Palestine now and again; and recently, there can be no doubt, he has been feeling vaguely that all is not well out there. The Palestine Arab Delegation has been telling him so ever since its arrival in London, and now Lord Northcliffe, through his many newspapers, has told him the same thing in the plainest and most forcible manner. For his lordship has said in so many words that in his opinion, "unless the situation be firmly dealt with and greater respect shown for the rights of the 700,000 Palestinian Moslems and Christians, the country runs the risk of becoming a second Ireland"; and that is not a prospect that the British taxpayer can face with equanimity. The position is in fact unsatisfactory, or there would not be so many murmurs and rumours as reach us from so many different quarters. Lord Northcliffe, therefore, has done good service in grasping the nettle boldly, and his suggestion that "a complete and public investigation of the affairs of Palestine" should be insisted upon appears to us an excellent one. Such an investigation, conducted by a competent and impartial authority, should set at rest most of the complaints and murmurs to which we have referred, and we are glad to see that Dr. Ch. Weizmann expresses his own cordial approval of the suggestion, and the belief that the overwhelming majority of Zionists would welcome such an inquiry. The Moslem-Christian Delegation has not yet expressed its views, but they can hardly be less favourable to the proposal.

If we ask ourselves what is amiss in Palestine, what makes the position so unsettled and so potentially dangerous, we are forced to the conclusion that it is the fear of Zionism felt by the Christians and Moslems. Although in a proportion, for the time, of about 10 to 1, the latter profess to be, and undoubtedly are, alarmed about the power of the Jews; and they are letting it be more and more clearly understood that if things go on as they have been going, there will be serious trouble, in which the Moslems and Christians will be united, and which may very speedily extend to the Arab world.

And the point which chiefly concerns Great Britain is that she is accused, by implication at any rate, of unduly favouring the Zionists. It is all very well for British politicians to assure the Arabs that they have nothing to fear, or to endeavour to persuade them that the introduction of Jewish capital and Jewish brains into Palestine must prove to their ultimate advantage. The Arabs retort that they see the land passing rapidly into the hands of Jewish owners, Jewish immigrants coming into the country at an alarming rate, and Jews occupying official and administrative positions in numbers quite out of proportion to their total in the land; while as for the Jewish capital and Jewish brains, they would much rather be without them at the price. These Arabs, too, find support from many Europeans and Americans. Quite lately, for instance, a well known traveller declared that "To-day there is complete Zionist domination in Palestine"; while many others, besides Lord Northcliffe, have deplored the arrogance of the extremists among the Zionists. Indeed, it is difficult to avoid the conclusion that it is the lack of restraint in expression that is responsible for much of the hostility that is evidently felt towards Zionism by most people in Palestine save Zionists. If all the Zionists had shown the wisdom of Dr. Weizmann and other prominent leaders of the movement, there might still have been opposition to Zionism, but it would not have been nearly so strong or so widely spread as it is to-day. But in any movement inspired by a great ideal there are almost sure to be fanatics, who are likely by their fiery zeal to imperil the success of the cause they have at heart; and Zionism is no exception to the rule.

Now, the future of Palestine depends very largely on the relations established in the immediate future between Jew and Arab. If more bad blood is created, the situation will become almost hopeless, but if Jew and Arab can possibly be induced to pull together all will be well. It will be Great Britain's part, as Mandatory, to endeavour to make them pull together. Both of them claim that she has given them pledges, and unfortunately both of them—or at any rate sections of both sides—declare that she has broken, or is breaking these pledges. The facts of the case are too familiar to need recapitulation here; the difficulties arise over the interpretation to be given to the Balfour Declaration and perhaps to certain documents in which it is embodied. This famous Declaration, which was endorsed by the San Remo Conference, must be regarded as expressing the considered view and determination not only of Great Britain but of the Allied Powers, and it is strange indeed that no authoritative definition of its meaning has been forthcoming. It would certainly be a step towards settled conditions if the British Government gave such a definition, and if the Allied Powers indicated their approval—or disapproval—of the definition given. It would also be well to let it be known whether any check, and if so what, is to be put upon Jewish immigration into Palestine, and what steps are to be taken for "ensuring that the rights and position of other sections of the population are not prejudiced" by such immigration. Doubtless, too, the Moslems and Christians would like to receive a positive assurance that the Zionist organization while "recognized as a public body for the purpose of advising and co-operating with" shall in fact be "subject always to the control of" the Palestine Administration, which should—and, will, of course—be kept in turn in the control of the Mandatory. Given these conditions, we believe, most of the unrest that is now so painfully evident would die away, and Jew and Arab might live together again on friendly terms, as they did in the days of Turkish rule. But for the sake of Arab, Jew and Briton alike, we should welcome that "complete and public investigation of the affairs of Palestine" suggested by Lord Northcliffe. The sooner some inquiry of the kind is undertaken the better for all parties concerned. The policy of drift cannot be followed much longer without disastrous results.

THE TURKISH SETTLEMENT.

By Sir Valentine Chirol.

It will surprise nobody if, in such a sea of troubles as he has now to face nearer home, Mr. Lloyd George, who at the time of the Paris Peace Conference, was persuaded that the East was never in a hurry, and that Turkey could therefore wait till it suited the convenience of the Big Five to deal with her, now persuades himself that no Near East settlement can be of much avail till Russia is in a position to take a hand in it. The argument is a specious one and has an element of truth in it. Russia to-day is merely an anarchical force in the Near East as everywhere else. But she will not be so always, and when she recovers from her present nightmare, she may be a more really constructive force than ever in the past. Meanwhile, however, we have to take things as they are, and bad as they are, and every day that passes without any attempt at a settlement makes confusion worse confounded. Whilst the proposed Conference in Paris still hangs fire let us try at least to clarify our ideas as to the purposes which it can hope to achieve and the methods by which they can be achieved. To this end we must have a clear idea of the situation.

First of all, there is the state of war actually existing between the Hellenic Kingdom, and that part of the Ottoman State in which not the Ottoman Sultan's, but Mutapha Kemal's writ actually runs. The Greek army landed at Smyrna at the request of the Allies, and mainly at our instigation, when the demobilisation and withdrawal of our own forces had prematurely relaxed the pressure which we could ourselves exert on the Turkish forces of resistance that revived with the long delay in framing the Turkish peace terms in Paris. The Greeks fought a first and successful campaign against the Kemalists with the consent of the Allies, and then halted in accordance with the programme agreed upon between M. Venizelos, then Greek Prime Minister, and the Supreme Council. The Kemalists were not discouraged by a temporary and strictly localised defeat, nor by the Treaty of Sèvres which followed it. The Treaty—whether wise or unwise scarcely matters now—was the last and terribly belated effort of Allied unity during the war. Friction set in between the Allies, and France especially was estranged altogether from Greece, when King Constantine was recalled to Athens and M. Venizelos driven into exile. French *haute finance*, which has always had powerful friends at the Quai D'Orsay, and had done very well out of pre-war Turkey, yearned again for the fleshpots of Constantinople, whilst Great Britain, herself handicapped by Mesopotamian discontents and by Zionism in Palestine, not to speak of Egyptian troubles, was suspected of secret opposition to France's high-handed interpretation of her mandate in Syria. Italy, whose army of occupation had been creeping along from the Gulf of Adalia into very close proximity to Smyrna when the Greeks first landed there, had neither there nor in the Dodecanese nor in the disputed borderlands of Albania any good will towards Greece. Even the British Government grew alarmed at the growing agitation amongst Indian Mohammedans against the Treaty of Sèvres which remained unratified. Meanwhile, the Greek army was being left in the air, as King Constantine could not face the unpopularity of ordering its withdrawal, and the Allies would not agree to let it go forward against the Kemalists, now more and more firmly established at Angora and closely linked up with Bolshevik Russia, who, hand in hand with them, was making hay of all the small states of the Caucasus, including the "independent" state of Armenia, to which the Allies had pledged themselves under the Treaty of Sèvres. Greece took the law at last into her own hands, and ordered her armies to march upon Angora. The Allies disclaimed all responsibility for the consequences, but Mr. Lloyd George was understood at Athens to have conveyed a significant hint that the British disclaimer did not amount to a prohibition of the Greek offensive. He certainly still desired to see the Treaty of the Sèvres enforced, even though the

Secretary of State for India, and other British Ministers were to say the least very lukewarm about it, and what hope was there of enforcing it unless the Greek army smashed the Kemalists at Angora? The Greek offensive had the results we know of, partly because a large number of heavy guns originally surrendered by the Turks to our forces after the Armistice were carelessly left behind to fall back into their possession when our troops were withdrawn, whilst the French and Italians directly helped the Kemalists by trafficking with them in war material of all sorts. The Greeks, victorious at first, failed to reach Angora and had to fall back upon the lines which they are still holding. Winter suspended all military operations. But the spring is approaching, and neither Greeks nor Kemalists can afford to postpone indefinitely another clash of arms, and a decisive Greek victory is less likely than ever. This is recognised in Athens, where the withdrawal of the Greek forces from Asia Minor would be accepted—though with what consequences for King Constantine cannot be safely predicted—so long as some provision was made for the protection of the Greek and other Christian populations against Turkish reprisals of the customary character, which would flood European Greece with a fresh inrush of refugees, already a sufficiently heavy strain upon her resources in land and money.

But Angora will insist also on the surrender of Eastern Thrace. The Turks, however, cannot drive them out at present, and the Allies would have to coerce Greece themselves. Probably nothing less than a blockade of the Greek coasts would compel the Greeks to go out of Thrace, and even if they were willing, anything beyond a rectification of the new frontier, which might even restore Adrianople to Turkey, raises the question of the Straits, and indeed throws the whole of the Balkans once more into the melting pot. The Enos Midia line would place Turkey once more in possession of both shores of the Dardanelles, and in close contact with Bulgaria, who has not yet by any means resigned herself to the loss of Western Thrace and to exclusion from the Aegean coast. In the event of a future conflict, this would mean for us Gallipoli over again in spite of all paper provisions against permanent fortifications. Can we consent to that? Can we as a naval power give up the one lever which we can use against a refractory Turkey, not merely in our own interests, but in those of a civilisation with which the Turks have so far never entered into any real communion?

Can Europe let Turkey entrench herself once more behind the Dardanelles Narrows? That is the *crux* which we have to face, let those who decry sentimentalism, or who dwell rightly enough upon the need for reopening trade with Turkey, or who dread a Kemalist menace through Kurdistan to Mesopotamia, clamour as loudly as they may for peace with Angora. And, though it should not be so, it is as matters now stand, the *crux* for us in particular, because the French, and perhaps the Italians too, would, in their present mood, it seems, prefer to see the approach to Constantinople by sea closed against us, who could alone make effective use of it, to conceding what they regard as the advantage to us more than to any one else of having it kept open. The French believe that, established in Syria, they can always in case of need bring their own pressure to bear upon Turkey in Cilicia, whence they have withdrawn for value received, without worrying about the Dardanelles. Unless harmony can be restored between the Allies we shall be going not to Angora but to Canossa. Yet we seem to be steering, in London, and in Paris at least, towards much the same hopeless deadlock as the Silesian question landed us in a few months ago. We found an issue from it then by calling in aid the much derided League of Nations. The solution which it proposed on that occasion was adopted, and though it was much criticised at the time, it has worked out on the whole very satisfactorily. Why should not the assistance of the League be invoked again? We desire nothing in the Near East for any selfish purpose of our own any more than we did in Silesia. The French can

hardly be prejudiced against the League by its action in regard to Silesia, since it upheld their views rather than our own as to a fair settlement. Nor can the Italians, who had themselves advocated a solution not far removed from that which the League finally proposed. Let the whole question of Thrace and the Dardanelles within the limits I have already indicated be submitted for consideration by the League of Nations, together with that of the guarantees required for the protection of the subject races and minorities in Asia Minor; and the Allies, bound in advance to accept its recommendations, could then go to Angora not only presenting once more a united front, but armed with renewed moral authority.

A few words in conclusion with regard to the relations of Angora with Bolshevism and Pan-Islamism. We can hardly hope to wean Kemalism definitely from Bolshevism or Bolshevism from Kemalism except by some settlement that shall relax the external pressure which has unquestionably rallied to them a large measure of more or less genuine national and patriotic support. Left to themselves they may possibly disintegrate from internal and especially economic weakness; which, however, is likely to operate more rapidly in Russia than in such a primitive organism as Turkey is and has always been. Russia, too, is, after all, at least semi-European, whereas Turkey is thoroughly Asiatic, and, if Christianity is not much of a live force in Soviet Russia, it still counts for something. In Turkey on the contrary, we have to reckon with Islam in its most aggressive form, so long as a state of war continues in Asia Minor, and Islam is being wrought into a ferment of revolt against the West, and especially against Britain, throughout a large part of the East. It is perhaps too late now to discuss how far the pro-Turkish *Khilafat* movement in India is, or was at the outset, artificial, and how far the singular encouragement given to it by the Secretary of State for India and the present and late Viceroy, who have not shrunk from condemning publicly the policy adopted by the Imperial Government towards Turkey in the Treaty of Sèvres, has promoted the now open and almost violent disaffection of large numbers of Indian Mohammedans. The fact must be admitted that their disaffection actually constitutes a grave menace to the peace of India, if not to the security of the British *raj*. Their demands go even further than any which Angora has yet publicly put forward. They include the restoration of the Sultan's authority *qua* Khalif over the whole of Arabia and therefore the abandonment by us of all the pledges we have given to the Arabs, and notably to the King of the Hejaz, whom we encouraged to revolt against the Turks, and of his son King Faisal, whom we have placed on the throne of the new kingdom of Irak at Baghdad. Curiously enough since the French concluded a treaty with Angora, Indian Mohammedans have ceased to take any vehement exception to the position assumed by France in Syria. Religion, it is true, used to sit very lightly on the Turkish Committee of Union and Progress which still dominates Angora, and Pan-Islamism, which yielded the place of honour at Constantinople to Pan-Turanianism during the great war, has come to the front again at Angora mainly as a powerful anti-British weapon. One may therefore perhaps reasonably expect that, if we can come to terms with the Kemalists concerning Asia Minor and Thrace, including the Dardanelles, they will not show as much fervour as the Indian Mohammedans for the recognition of Turkish sovereignty, whether temporal or spiritual, over Arabia, with which the Turks have no racial ties. But the task of negotiating with Angora will not be rendered more easy by the presence not merely of a representative of the Government of India already largely committed to the Indian Mohammedan view but of an Indian Mohammedan delegation to "assist," as the *Khilafat* propagandists euphemistically put it, the British negotiators in placing peace with Turkey on a broad basis which, they contend, must be acceptable not merely to the Turks but to the Mohammedans of India who are themselves not apparently quite sure of the Turks' soundness in matters affecting the religious

rights of the Ottoman Sultan as the spiritual head of Islam.

This is, however, a factor which concerns only India and ourselves. It cannot be expected to weigh very much with our Allies, and it is on the restoration of an united front with them, whether by direct negotiation or by the instrumentality of the League of Nations, on the points in which all of them are still concerned, that a tolerable settlement at Angora depends which shall not be a mere surrender of British interests and of Western civilisation.

THE CARAVANSERAI.

*Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day
How Sultan after Sultan with his Pomp
Abode his Hour or two and went his way.*

—OMAR KHAYYAM—

The following advertisement appeared not very long ago in a Roumanian paper, *Le Progrès* :—

Demoiselle étrangère 18 ans, gentille, bonne famille, honorable, instruite, bonne pianiste désire mariage sérieux avec personne agée et très riche. Ecrire en précisant nom et situation. S'adresser au journal sous : M-elle Lilly.

Will Miss "Lilly," I wonder, allow me to say that I admire her doubtless lovely cheek, and that I should like to know whether she has yet hooked the rich old man she angles for so openly. But what chiefly sets me thinking about the advertisement is the mention of 'serious marriage.' Is not marriage always a tolerably serious affair? I am told so by all my married friends and acquaintances; and in these days of high prices I find it easy to believe that it is no joke. But perhaps my knowledge of French is at fault. If so, will any kind reader let me know what other kind of marriage the Progressive young lady can have had in her mind?

A Correspondent informs me that in a town in the Delta of Egypt, which shall be nameless though probably all places are suffering alike, some supporters of Zaghloul Pasha (and incidentally themselves as well), recently went round to the various native houses collecting twenty piastres (about four shillings) from each householder, to enable them to send an affectionate telegram to their beloved Zaghloul. If any one demurred and said that he thought every one, including Zaghloul himself, was better off with things as they were, he was met with the pious remark that it would be a sad calamity if during the next peaceful political procession, Allah permitted his house or shop to be wrecked. On thinking it over the recalcitrant one would decide that twenty piastres was a fairly cheap insurance against such a lapse on the part of Allah, and accordingly pay up. So if anyone doubted the universal popularity of Zaghloul there was the twenty piastres to prove it. I say *was*, because it is estimated that at least sixty pounds was collected in that particular town only. Now, you can send a real nice, loving, affectionate telegram for at out twenty pounds, so where have the other forty gone? But the real humour of the thing lies in the fact that whatever was paid for the telegram simply goes to help swell the dividends of an already wealthy English company, and this at a time when our Egyptian hosts are concerting measures to boycott us out of the country. Truly Egypt as "the land of humour" might be added to the list of attractions, along with sunshine, dances, hotels, and so on.

Corsair,

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

The Near East.

The *Nation and Athenaeum* of February 11 contains a by no means optimistic article called "The Confusion in the Near East." It points out "that the chances of a settlement have grown no brighter in recent weeks," and continues:—

It may now be common ground that the Greeks must quit Smyrna, though not without stringent guarantees for the safety of the large Greek minority but everything else in the settlement is in dispute. France apparently is backing the Turkish demand for an effective restoration to Turkey not merely of the city of Constantinople, but of the Straits and the whole of Eastern Thrace. The real question at issue here is the future of the Straits. The present arrangement, which is theoretically an Allied and practically a British or at most Anglo-French guardianship, is indefensible in principle and would in the long run prove unworkable. Other Powers will not, and ought not, to acquiesce in our predominance, nor will a Franco-British partnership work smoothly. Russia's interests have to be considered, not to mention those of the other Black Sea States and of neutrals. Moreover, it is just this armed shadow over Constantinople which reduces the Sultan-Caliph to a puppet, and infuriates Moslems all over the East. To this bad alternative the French propose the logical opposite, and their scheme must be rejected or accepted as a whole. If Turkey is going to be the guardian of the Straits (subject, no doubt, to treaty provisions for their freedom), then it is natural and even necessary to restore Thrace also. Your guardian must have proper military means for fulfilling his task. It is said that Moscow prefers this solution to the present system, and it may well be so, for it would give her equal rights at the Straits. At present she has no rights at all, and depends on the tolerance of the West.

We confess that we approach this question with some bewilderment. As to Thrace, we have no wish to see the Greeks in control, but neither do we wish to restore Turkish rule. Either would work harshly to the other race. Thrace is greatly underpopulated, and our own preference would be for any *régime* under which fugitives of all races might be brought there to colonize its empty towns. We cannot forget Bulgarian interests in this connection and we are not hopeful that they can thrive under the Greek flag. The ideal arrangement would be to make the whole of Thrace, with Constantinople, and at least the northern shore of both Straits, an international territory under the League of Nations. We should also have welcomed an American mandate to guard such a territory. These, we fear, are Utopian solutions at present. Failing them, we are not disposed to reject the restoration of Turkish sovereignty, provided this whole territory, with the exception of the city itself, were placed under international guarantees. If that is going to be done for Smyrna, why not also for Thrace? But when we say "international" we mean the League, and not the Supreme Council. If there are to be officials and officers (as there must be) we would draw them largely from neutral States. The one thing that must be avoided is the reduction of the Sultan to the position of a vassal of Britain or France, or, worse still, of both. A genuinely international control does not involve the same humiliation, nor could it be used to control the whole of Turkey in the interests of British or French Imperialism.

For our part, if we were in the case of the Turks we would withdraw the political capital to Konia, or Brusa, and let Constantinople become a cosmopolitan free port. But that is a question which they must decide. For the rest, if it be argued that some compensation is due to the Greeks for their disappointment in Smyrna, we would answer that the remedy is in our hands. What business have we to retain Cyprus, with its nearly solid Greek population? There are other pressing matters that must be settled. The promise given to Bulgaria that she should have a commercial outlet on the Aegean has not been kept, and ought now to be fulfilled.

Egypt.

In the *Outlook* of February 11 is an article called "Spoiling the Egyptians," written by "An Anglo-Egyptian." It begins by hoping that the Government will make up its mind on Egypt with the least possible delay, and will then stick to its policy. The article is short, and, since it represents a considerable body of opinion in this country, we quote the rest of it *in extenso*:

The present troubles in India and Egypt are ascribed by political wiseacres of the "special commissioner" type to all sorts of fantastic causes: to a new-born passion among Asiatics and Arabs for democratic forms of government which we are reluctant to give them; to a sudden outburst of national sentiment, uniting in a brotherhood, which may be national, but is certainly not natural, Ceylon and Assam, Madras and Peshawar, Coptic clerks of Alexandria and the desert Bedouin—people who resemble each other in language and appearance less than we do the Bulgars; or to what is vaguely described as "the unrest in Islam," a phenomenon which has become the latest and favourite bogey man of those who once used to terrify us with stories of the "Yellow Peril." It never occurs to anyone to ascribe these troubles to our own weakness and vacillation. So long as there is a real chance that riots will produce concessions the agitators will continue to organise riots. The friends of Zaghloul Pasha can hardly be blamed if they try to get him back from exile in Ceylon by the simple method of beating up the European quarters of Cairo and Alexandria, since that is precisely the method by which they got him back from Malta a few years ago. I am not opposed in advance to every kind of concession; I am not an admirer of what has been described as the "Serve 'em right" school of Imperialism; all I ask is that the Government should make up its mind and stick to it. It is idle to talk about the impossibility of setting bounds to the march of a nation. There are nations that spring up in the night like mushrooms. In the year 1916 if a Coptic newspaper talked about "the nation" it meant by that the Copts. The Copts had among themselves a feeling of solidarity, which we can call, if we like, nationality, but it was only for themselves—a little community of Christians numbering about one in twelve of the population. Now we are presented with an Egyptian nation ready made! And the most remarkable feature of the new nations that are coming into existence all over the world is not the ease and rapidity of their birth, but the amazing precocity of their childhood. In a matter of a few months these ingenious Orientals will take a stride along the path of Western progress which we, who invented the thing, only compassed after centuries of blood and tears. Egypt, in fact, is learning the art of democratic government so quickly that she requires a new Constitution every few years. The important reforms introduced by Lord Kitchener just before the war are spoken of now, if they are spoken of at all, as though they were an event of the reign of Rameses I. Does anyone seriously believe that this lightning transformation is taking place in the land of the Pharaohs? Or are these pretences, which deceive no one, bringing the whole

principle of nationality into disrepute?

All I desire to establish for the moment is that it cannot be necessary on the grounds of national progress for the British Government to change its policy every two months. If it is, then we ought to say so, and not keep pretending, as we did last December, that we have definitely made up our minds. I will add that no one can express an opinion on the Egyptian situation with an authority equal to Lord Allenby's. If, as is known to be the case, Lord Allenby is in favour of making certain concessions to Egyptian opinion, both in the matter of the British garrisons and in the control of foreign affairs, in order to induce Sarwat Pasha or some other Pasha to form a Ministry and restore normal Government, that opinion will have an influence both in Parliament and in the country that will probably be decisive. All one asks is that these concessions, whatever they are, shall not be announced as the Government's last word on the subject unless the Government really means to stand by them. It would be better to give the Egyptians Cabinet responsibility, secret ballots, manhood suffrage, and all the rest of it straight away, with authority to form what treaties they like with anybody, and nothing but a British Army on the Canal bank to protect them from the inevitable consequence, than to dole out concessions with a niggard hand every few months, each time protesting that it is the last. That is the Oriental method, which the Oriental will beat us at every time: And it is, in a new sense, "spoiling the Egyptians."

Palestine.

The Times of February 17 contains an article on "The Condition of Palestine," and, referring to the serious condition of affairs in that country to which Lord Northcliffe has been calling attention, it says:—

We have strongly supported the Zionist ideal, which seemed to us to afford an opportunity of releasing the Jews from the ambiguous and anomalous position that they occupy in many countries, and of enabling them to recover a natural equilibrium by a progressive affirmation of their national individuality. There are many Jews who have completely identified themselves with the countries in which they live, and who are distinguished from their fellow-citizens only by their religion. To these Zionism makes no appeal. There are many hundreds of thousands of others, particularly in Central and Eastern Europe, whose condition is such that the ideals of Zionism seem to hold out to them the only hope of full and self-respecting manhood. Yet it is evident that it is a task of the utmost difficulty and delicacy to import into modern Palestine, with its quiet, easy-going Moslem and Christian population, the dreamers of the Ghettoes of Eastern Europe. They come with the marks of bitter racial and party conflict upon them. They come with the disturbing, often with the revolutionary, ideas and habits that they have imbibed during these later years of storm. They come to the home of their remote ancestors, to the cradle of their ancient tradition, with extravagant hopes and impossible claims, and have no perception of very complex realities. They condemn and criticize, often unjustly and unfairly, with a peculiarly irritating asperity, everything that conflicts with their preconceived ideal. Their very salutation of *Shalom!* or "Peace!" often has the character of a sharp challenge. In the confusion and conflict certain Bolshevik elements creep in, and the large native population that for centuries has been accustomed to regard Palestine as its own home is seriously alarmed. Lord Northcliffe rightly appeals to the numerous moderate Zionists throughout the world to restrain the extremists, whose activities are endangering the realization of the ideal. We trust that the Zionist leaders will be able to act

vigorously and authoritatively in making it clear that Zionism, if it is to succeed, must move step by step, in close and friendly co-operation with the Moslem and Christian natives of Palestine. Lord Northcliffe pays a pleasant tribute to the impartiality of the High Commissioner; but the situation bristles with so many difficulties and misunderstandings that it is high time, in the interests of the Zionists, of the Palestinian Arabs, and of the British nation, which is at present responsible for the conduct of Palestinian affairs, that a complete and public investigation of the growing complaints and disturbances should be made by a competent and impartial authority.

THE FIGHTING AT TABRIZ.

A Reuter message from Teheran, dated February 19, states:—Mukhber-es-Saltaneh, formerly Governor-General of Tabriz, has left for Teheran, *via* the Caucasus. He was ordered to return here following the recent fighting between Gendarmerie and Cosacks. Mossadegh-es-Saltaneh has been appointed Governor-General of Tabriz. It is stated that at the request of the Persian Government the Russian Minister has promised to arrange the extradition of Colonel Lahouty Khan, the Democrat leader, who headed the attack of Tabriz from the Caucasus, whither he fled when the town was taken by Government troops.

YUGOSLAVIA AND RUSSIAN DISTRESS.

The Belgrade correspondent of the *Morning Post* states (February 16):—The Cabinet yesterday decided to ask Parliament to sanction a credit of 6,000,000 dinars for the relief of distress in Russia on the condition that the Soviet Government guarantees that the relief shall be distributed by special Yugoslav delegates and that Yugoslav subjects who are still detained in Russia and number some tens of thousands shall be released. This credit is additional to the 6,000,000 dinars monthly which the Government is already spending on Russian refugees in Yugoslavia.

NOTES AND NEWS.

Devonshire Square
E.C. 2

The D.O.T.

Presumably we shall have to wait some little time before knowing whether the Government intend to endorse the recommendations of the Geddes Committee in regard to the Department of Overseas Trade or not. They have had ample evidence by now that the abolition of the Department would be against the wishes of a very large section of the business community. Indeed I do not think it an exaggeration to say that the Department has probably found at least as many supporters, if not more, among those where views have been given to the Press as any of the Departments who would be affected by the operation of the "axe." From overseas too timely support has been forthcoming in the shape of a resolution by the Australian Association of British Manufacturers viewing with alarm the recommendation and describing the proposal as "suicidal." I do not think the phrase at all too strong, and I only hope it will carry some weight with the Government.

The Genoa Conference.

It was in none too optimistic a vein that I referred to the Genoa Conference last week, and developments in the past few days appear to have made the outlook distinctly more dubious. We have had the Italian Cabinet crisis for one thing, of itself a most unfortunate happening in the circumstances. Then France desires the postponement of the Conference for a considerable period which suggests a very plain answer to the question whether our Ally was ever more than lukewarm in favour of the meeting. And while we have these delays—unavoidable admittedly—trade is suffering, and the prospects of a really successful twelvemonths from the commercial point of view become more and more remote. As I have so often pointed out in these columns the position of no country at the present time will permit of the indefinite continuance of present conditions. The wheels of commerce must be set going, and for this to come about it is essential that the Near Eastern questions should be settled at the earliest possible moment and a reasoned policy evolved to meet the riddle of the exchanges. Is it too much to ask of the politicians of the Entente that they will concentrate on this?

The Trade Position.

If some progress had been made in regard to these problems it would be possible to look forward to the future course of trade with a very considerable degree of confidence. Overseas markets are generally becoming increasingly short of stocks. The position in Roumania, described by our Correspondent this week, will serve to indicate the general situation. In a few words the openings for our produce exist, and it is only the prevailing circumstances that prevent us from taking

advantage of them. Once conditions improve our manufacturers will have no need to complain of lack of orders from fields for which they cater. There should be a veritable rush of orders. But for the moment we are waiting for the politicians.

Next Week's Fair.

It may be thought from what I have written that the prospects for the coming British Industries Fair are now none too hopeful. That is far from being my opinion. Obviously the Fair can never reach its fullest utility until world commerce is once again normal, and there will certainly be far fewer buyers from some countries of the Near East than would be the case if the exchanges were near parity and Greek and Turk were once again at peace. But there will be quite a number all the same because buyers have to consider the future and not the immediate present, and with the prospect that a trade "boom" of a very different character from that which we experienced shortly after the Armistice is not very far distant it is to be expected that a very considerable amount of business will be done at the Fair, quite enough at any rate to eclipse last year's figures. And if that is the case the Fair will be a success.

An Opportunity.

One of the greatest advantages afforded by the Fair is the publicity it gives to British industrial endeavour as a whole. Every buyer who attends it is indirectly a representative of our industries on his return, and I would like to emphasise the point that British manufacturers could not find a better time for launching a publicity campaign in foreign markets than in the period immediately following the Fair. They like buyers have to look ahead, and now is undoubtedly the time to bring their manufactures to the attention of overseas outlets, particularly regions like the Near East, which have so far only been entered spasmodically and without any real enthusiasm except on the part of a few firms who know the value of the business that is to be obtained and are determined to get their share of it.

The Gezireh Project.

The letter in the December issue of the *Journal* of the Sudan Chamber of Commerce from the Director of Agriculture, Sudan Government, dealing with the above question, reference to which was made in these columns in the issue of January 12, is replied to in an article in the current issue of that periodical. The writer emphasises the point that it is on account of the inadequate supply of labour that 50,000 feddans is in his view the extent of development in the Gezireh for many years. "This great restricting factor" he points out "has been the prime cause of the exorbitant actual costs and if not surmounted will eventually cripple development, and it appears to me that the readiest means would be an offer of some tangible inducement to settlers with a view to encouraging immigration on a vast scale."

Question of Extent of Cultivation.

The writer goes on to argue that, though the first year's task may be comparatively easy, the real difficulties will be met with when the cultivation of an area of 50,000 feddans in cotton is exceeded. "The abstract idea of 100,000 feddans in cotton, 100,000 in wheat, and 100,000 at rest in each year, both as regards area and rotation of crops is, in my opinion," he says "excellent, but, with all deference, I confidently assert that many years must pass before anything approaching 200,000 feddans can be put under cultivation of which 100,000 will be in cotton; and I further assert that, if this area cannot be put under cultivation within a very few years, the annual charge for interest on capital will become an intolerable burden to the country."

Pump Irrigation.

Dealing with the question of pump irrigation the writer says that if, as alleged, "the present position of private pumping stations in Khartoum District and North, is shaky, I beg leave to substitute for the reasons given. . . (1) the scarcity of available labour, and (2) the heavy freight rates on coal and cotton, and the heavy ginning expenses charged by the Sudan Government Railways. Agriculture, being the most important factor in the prosperous development of the country, these charges should be reduced to a minimum, and private enterprise encouraged by every practical means. If such charges could be reduced and sufficient labour at reasonable rates obtained the area at present under private cultivation could be greatly extended, with practically the same management expenses, and the yield then obtained would justify development."

Commentator.

BRITISH INDUSTRIES FAIR.

Special Trains for Business Men.

To the enterprise which has always gone hand-in-hand with the British Industries Fair must now be added that of the great railway companies who have arranged to run special excursions at greatly reduced fares for the benefit of the trade buyers visiting it.

The Fair, which is organised each year by the Department of Overseas Trade, is one of the most important trade Fairs in existence, and, in addition to representing practically every British industry, has the merit of being self-supporting. Only trade buyers are admitted to the Fair, the general public being, at the special desire of the exhibitors, rigorously excluded. The Fair will be held concurrently at the White City, London, and Castle Bromwich Aerodrome, Birmingham, from February 27th to March 10th next, and buyers from all parts of the kingdom will find that both sections can be reached with a minimum expenditure of time and money.

The fare will in most cases be approximately the price of a single ticket for the double journey where passengers making use of the special excursions, return on the same day. For passengers who desire to make a stay of from two to six days the cost of a return ticket will be about one-third more than the usual single fare.

There are already in existence numerous excursions between London and the provinces which will be available, but the special supplementary services will undoubtedly prove a great boon to buyers visiting both at London and Birmingham Sections of the Fair. Special facilities have been arranged for business men desiring to visit the Fair from stations in the Manchester, Liverpool and Birmingham districts.

It is stated that the production of naphtha in the Baku district during the past year decreased by 48,700,000 poods compared with the previous year. The reduction was chiefly owing to the smaller number of new wells exploited, which were only five, compared with 25 in 1920.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

EGYPT.

Cairo, February 9.

Great Decrease in Trade.

The December statistics just issued by the Customs Administration give us the final figures for the foreign trade of Egypt during 1921 and, as was foreshadowed by the periodical summaries previously issued, there is a very marked diminution in the foreign trade of this country. Imports amounted to only L.E.55,507,984 and exports to L.E.36,356,062 as compared with L.E.101,880,963 and L.E.85,467,061 respectively during the previous year. There is therefore a falling off of over 45 per cent. in imports and nearly 60 per cent. in exports, but thanks to the increase in re-exports there is a slight improvement in the balance in trade which is still 13 millions against Egypt.

Imports.

Under imports the chief items during the year have been:—Meat, L.E.266,478; cheese, L.E. 284,021; hides, skins, and leather goods, L.E.534,665; wheat, L.E.1,322,777; maize, L.E.418,493; barley, L.E.609,702; rice, L.E.459,584; potatoes, L.E. 179,042; flour, L.E.7,183,929; oranges, L.E.170,727; sugar, L.E.260,792; tea, L.E.131,104; coffee, L.E.561,071; vegetable-oil, L.E. 416,511; kerosene, L.E. 1,389,176; benzine, L.E.300,401; oil-fuel, L.E.553,986; other mineral oils, L.E.261,455; paper and printed matter, L.E.998,545; construction wood, L.E.1,591,143; railway sleepers, L.E.256,785; furniture, L.E.275,701; coal, L.E.3,371,946; patent fuel, L.E.107,054; cement, L.E.197,620; synthetic indigo, L.E.119,159; nitrate of soda, L.E.537,304; household soap, L.E.611,384; machines and machine parts, L.E.1,163,723; motor vehicles, L.E.494,163; cotton yarn, L.E.591,618; sewing cotton, L.E.297,746; cotton piece goods, L.E.7,942,683; cotton hosiery, L.E.458,662; cotton laces and embroideries, L.E.205,414; ready made cotton clothing, L.E.117,209; mixed cotton textiles, L.E.260,480; woollen and worsted cloths, L.E.780,257; tarbooshes, L.E.100,955; ready made woollen clothing, L.E.189,595; carpets and rugs, L.E.331,676; silk yarn, L.E.268,024; silk cloths, L.E.695,063; sacks, L.E.302,540; manufactured iron and steel, L.E.1,273,141; copper and brass sheets, L.E.319,554; plated and gilt metalware, L.E.138,591; scientific and surgical instruments, L.E.127,875; and tobacco, L.E.1,973,128.

The general drop in prices is to a great extent responsible for the remarkable shrinkage in imports and in many cases such as kerosene, coal, coffee, soap, and Manchester goods (by weight) the quantities imported are either in excess of or negligibly less than those imported during the previous year, while the values in each case show a marked diminution. At the same time there is no doubt that the decreased purchasing power of the people due to the fall in cotton and cereal prices is responsible for the general decrease in the quantities of other commodities imported during the past year.

Exports.

Under exports the principal item was of course cotton which accounted for L.E.28,375,249. The other important items were eggs, L.E.339,779; hides and skins, L.E.443,248; wheat, L.E.203,416; rice, L.E.482,053; cotton seed, L.E. 2,423,225; cotton seed cake,

L.E.586,809; onions, L.E.357,607; sugar, L.E.313,041; phosphate, L.E.185,598; cigarettes, L.E.703,720. Re-exports which were more than twice the value of the previous year were represented by maize, L.E.187,833; flour, L.E.1,952,016; coal, L.E.197,373; cotton piece goods, L.E.272,444.

With regard to the share taken by the various countries in the foreign trade of Egypt the United Kingdom imported a smaller proportion than in 1920, 30 per cent. as against 38 per cent., while the United States increased from 10 per cent. to 15 per cent., and France from 6 per cent. to 8 per cent. The chief imports from the United Kingdom were of course textiles and under the heading "cotton piece goods, classified as light and heavy" the British share was 85 per cent. out of a total of L.E.7,942,683; the nearest competitor being Italy with L.E.750,200. About one third of the coal imported came from the United Kingdom, 40 per cent. of the household soap, 35 per cent. of the cotton yarn, two thirds of the sewing cotton, 80 per cent. of the woollen and worsted cloths and half of the machinery. As regards exports the share of the United Kingdom increased from 42 per cent. to 47 per cent., and that of the United States decreased from 30 per cent. to 16 per cent. The United Kingdom took practically all the eggs, and cotton seed cake, 70 per cent. of the onions and 45 per cent. of the cotton. The falling off in the share of the United States was due to smaller cotton purchases the proportion falling from 30 per cent. to 20 per cent.

Trade between Egypt and the Sudan likewise showed a contraction, imports from Egypt falling from L.E.2,286,986 to L.E.923,273, and exports from L.E.3,954,217 to L.E.2,455,460. The importation of cattle fell off by more than half and that of sheep by nearly 75 per cent., which demonstrated the change in social and economic conditions in Egypt, while a similar contraction is shown under cereals. As regards exports from Egypt into the Sudan the chief items were wheat and wheat flour, L.E.71,221; sugar, L.E.431,450; cotton textiles, L.E.685,574; all of which were considerably less than the previous year; and tobacco, L.E.244,001 which showed a slight increase.

GREECE.

Athens, February 4.

Importation of Alcohol.

A Decree is being promulgated by the Minister of Finance prolonging up to April 30 the delay which had been granted for the importation of foreign alcohol to be used for the manufacture of paraffin. The total quantity of alcohol which may be imported from abroad must not exceed 600,000 litres. A tax of 20 lepta per litre has been imposed.

Customs Receipts.

The receipts of the Piraeus Customs during the second ten days in January (O.S.) amounted to 2,892,723.30 drachmae in paper and 52,490.90 drachmae in gold. In comparison with the receipts during the corresponding period last year there is an increase this year of 415,310.75 drachmae in paper and a decrease of 43,331.70 drachmae in gold.

ROUMANIA.

Bucharest, February 7.

Scarcity of Goods.

Since the sudden drop of the leu last autumn local merchants have not been able to place orders abroad

SERBO-CROATIAN:

Translations, technical and legal undertaken. M.B., c/o "The Near East," 1, Devonshire Square, London, E.C.2.

for fresh supplies. In consequence existing stocks are getting more and more reduced, so that it is generally felt that there will be a great scarcity of goods for the spring and summer season, especially in the cotton line.

I give below the official export figures (in tons) of Roumania's principal products during 1921 (the figures in brackets representing the corresponding totals for 1920):—Wheat, 75,691 (238); wheat-flour, 19,423 (1,902); rye, 55,864 (39,634); barley, 387,168 (419,205); oats, 165,466 (35,361); maize, 769,149 (430,390); crude oil, 15,511 (3,500); heavy fuel oil, 15,210 (24,102); refined oil, 172,971 (148,425); petrol, 145,115 (54,325); lubricating oil, 13,533 (16,560); timber, 138,792 (63,271), fir-wood trunks, 20,029 cubic metres (3,251 c.m.).

New Export Taxes.

The following new export taxes have now been put in force: Coal and lignite 10 lei per ton; wicker articles, such as trunks, baskets, etc. 10 lei per ton; fresh and preserved meat 50 lei per ton; resonance wood 15 lei per cubic metre.

BULGARIA.

Sofia, February 12.

Senator Hollis and Bulgaria.

In view of an article that recently appeared in a leading North of England daily, it is interesting to give the declarations that Senator Hollis made to me before leaving for Rome. Senator Henry Hollis who is a Democrat, and not a member of the present Senate, served for some time on the American Disposals Board in Paris. He had charge of selling United States war material in France and other European countries. A lawyer by profession, he is the legal adviser of the General Electric Company of America. His reasons for visiting Bulgaria were non-political, and have nothing to do with the treaty that is being concluded between the United States and Bulgaria. He had hoped that it might be possible for an electric railway to be constructed from the centre of Bulgaria to a port on the Aegean Sea. A visit to the area in question has, however, convinced him of the impossibility of such a scheme. The present frontiers render the construction of any railway down to the Aegean very difficult, whilst the steep gradients are a further obstacle to an electric railway.

The International Bank.

The Government scheme for forming an International Bank, details of which are given below, is also engaging the Senator's attention, as he is convinced that there is a great future for a bank that can command a large amount of foreign capital, preferably American or English. He told me that he was astonished at there being no British Bank at Sofia. Owing to the political situation Senator Hollis is of opinion that it may be possible to open up banking connections more easily by way of Constantinople than Paris. There is already one big American banking establishment, the Guaranty Trust Company of New York, at Constantinople, Senator Hollis, whose knowledge of the Balkans is not confined to Bulgaria, intends to return here in the spring, and assured me that he considers Bulgaria is a country which both deserves and is worthy of support. Once she is freed from her present impossible treaty obligations, she is capable of making vast strides. The Senator also remarked that Bulgaria was at present suffering from the indifference with which she is regarded by both America and England. It will be interesting to see if Senator Hollis succeeds in dispelling it.

The Law providing for the creation of an International Bank, is as follows:—The National Bank of Bulgaria and the Bulgarian Agricultural Bank are authorised to found a bank which shall be called 'The Bulgarian International Bank,' with head office at Sofia and branches in Bulgaria and abroad. The principal aim of this bank is to help international commerce in Bulgaria by its organisation and its powers. It will give credit to limited companies, private businesses, Co-operative societies, etc., that are of Bulgarian origin

and that do an export and import trade with Bulgaria. It is immaterial whether these companies are situated in Bulgaria or abroad.

The bank is constituted on the same lines as a Bulgarian limited company, and will conform to the Bulgarian Commercial Law. The National Bank and the Agricultural Bank will be the first to take part in the foundation of the bank, and they will take up 10 and 5 millions levas of capital respectively. The capital taken up by the banks can be doubled without any fresh legislation, providing there is an increase in the capital of the bank. The putting into force of the statutes of the bank, the total of the capital, and the conditions appertaining to subscriptions, will be decided by the National and Agricultural Banks, with the previous consent of the Ministerial of Finance, who is charged with seeing that the Law is put into execution.

ASIA MINOR.

Smyrna, February 4

Export of Barley.

The British Consul-General has just issued a notice that the Allied High Commissioners at Constantinople have authorized the exportation of 2,000 tons of barley from the port of Smyrna during the months of January and February and have expressed the hope that further extensions may be granted.

Smyrna, February 8.

Lord Northcliffe.

The Smyrna British Chamber of Commerce telegraphed to Lord Northcliffe, who is in Jerusalem, cordially inviting him to visit Smyrna in the interests of British trade. His Lordship, however, has replied that he is unable "at present" to accept the invitation owing to his early departure for Europe.

CYPRUS.

Nicosia, January 25

The Asbestos Mines.

The fortunate holders of shares in the late Asbestos Company have received £1,100 for each share of £200, thus making a net profit of £900 per share. It is hoped that all success will attend the operations of the new company.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 13.—Conditions of crops. February 10.—Prospects in Bengal, Bombay and Central Provinces unchanged. In North-East United Provinces, late-sown crops profited considerably by January rains. Punjab prospects good, but more rain wanted in South-East. Markets. Cotton February 9.—Bombay cotton market steady. Fine M.G. Oomras, Rs. 330, March; Rs. 341, May. Bombay cotton arrivals from September 1, 1921 to February 3, 1922 were 1,625,000 bales as compared with 889,000 bales during the same period of the last year. Piece-Goods.—Bombay imported piece-goods market lifeless. Some retail enquiries showing. Jute—February 11—Calcutta jute and gunny markets very quiet. B. Twills Rs. 35. Liverpool Rs. 41. Tea.—At tea sale on February 7, selections uninteresting and composed of small lots of final invoice. Exceptional best liquoring sorts and dusts, prices generally ruled easier. 541,292 packages sold up to date at an average price of 10 annas 1 pie per lb. Next sale (probably final) postponed till February 21. Shellac.—February 7.—Prices practically unchanged. T.N. from Rs. 160 to Rs. 162. Rice.—February 10.—Special Straits Quality Rice, Rs. 450. No change in bank rates.

The fig crop of the Messenia district of Greece is estimated at 16,800,000 lb. as against 24,000,000 lb. for last season.

During the five months of 1921, from April to August inclusive British India imported glass and glass-made goods to a total value of over a milliard rupees. The largest share in this amount fell to Japan which accounted for over 40 millions. Czechoslovakia supplied 5 million rupees' worth, occupying the fifth place in the list of exporting countries, after Japan, England, Germany and Belgium.

Engineering Topics.

By Our Engineering Representative.

Engine Lubrication.

The subject of solid lubricants, particularly graphite or black lead, for engine use has been discussed in these columns on more than one occasion and the general conclusion drawn has been that whilst a good quality of solid lubricant is ideal for use with steam engines, it is not quite so suitable for engines of the internal combustion type.

In connection with the latter type of prime movers it is obvious that the subject is one which must be continually reviewed. A system which suits an engine to-day may be quite unsuitable to-morrow. Higher piston speeds are constantly being introduced and air cooling is now being adopted to an extent which an engineer of 1913 would have thought impossible or at any rate inadvisable. The matter is complicated still further by the modern tendency to use fuel of a lower volatility; a tendency which will in all probability increase as the demand for fuel overtakes the supply. For that reason the paper recently read on the subject by Mr. E. L. Bass was of exceptional interest to engineers, constituting as it does the latest word on a question of supreme importance.

A leading engineer has recently suggested that an oil lubricant used in ample quantities would be of value as a cooling agent; and that by its means heat generated could be absorbed, carried away and dissipated. I have recently had an opportunity of inspecting an engine in which this suggestion was embodied, and was greatly struck not only with its efficiency but with the great prospects of development.

At present we have three methods of lubrication so universally used, in engines of different classes, as to be almost entitled to be called standard. These are the splash, forced feed and semi-forced-feed methods and are familiar to all my readers. Mr. Bass expressed the view that the full forced-feed or pressure lubrication to the bearings is by far and away the most scientific; a view which in my opinion is rather too sweeping. There is no need to go into that however; he made it clear that it was absolutely necessary with such a system that the pump and strainers must be kept in perfect condition and must be readily accessible for inspection and cleaning.

It is generally recognised that the pump in such systems should be completely immersed in the oil and the fitters used should be of the largest possible diameter as regards the screen. Further a fairly fine mesh must be used for the screen; under no circumstances should the mesh be coarser than one-sixteenth of an inch. Should a finer mesh be used it must be remembered that a greater resistance to the flow of the oil is interposed and consequently a tube of larger internal diameter must be used.

Solid Lubricants.

We have dealt with solid lubricants for steam engine use, for wire ropes and for various other purposes, and in the paper in question their value in internal combustion engine use is touched upon. In the view of the authority mentioned solid lubricants can be used for piston lubrication to considerable advantage as, being unaffected by heat, they will withstand the temperature of combustion without deterioration. He also adds the somewhat obvious remark that when graphite is employed for lubricating an engine less oil is needed.

Now the only way in which the expression "piston lubrication" can be used in connection with the piston rings and the cylinder wall. Regarding this lubrication our authority says "if properly applied they (the solid lubricants) become attached to the bearing surfaces so that they are interposed between them at all times." He further states that internal combustion engines, where solid lubricants are used in this way start up more easily and wear better.

From a theoretical point of view all this is no doubt correct; from a practical point of view it is far more open to question. First, with regard to lubrication between the cylinders walls and the rings, it is a fact that at the tremendously high speeds of the internal combustion engine it is practically impossible for any dry lubricant to "become attached to the bearing surfaces."

What really does happen is that at every stroke the graphite dust is pushed up and down the cylinder and is blown by the force of the explosion and the compression into the grooves behind the rings where it cakes in a solid mass. In course of time this accumulation of graphite becomes so pronounced that it pushes the rings outwards and so adds considerably to the friction between piston parts and cylinder wall. This friction becomes greater eventually than the dry lubricant can deal with, and a gradual loss of efficiency results. Further, the accumulation of graphite behind the rings, becomes incandescent, and by keeping the piston extremely hot further reduces the efficiency of the engine.

There is however, another aspect of the matter, and that is the claim that with solid lubricants an internal combustion engine will start more easily than it will when a good and suitable oil is used. However true this may be on the blackboard, it is not the case in practice.

Practical Disadvantages.

A considerable amount of judgment is used in the design of piston rings, the object aimed at being in the nature of a compromise. If the rings are too tight too much friction is set up; if they are too loose a loss of compression results. The practical outcome of this is that the engine designer depends on oil lubrication of his cylinders to effect a double purpose; *i.e.* to prevent friction between the rapidly moving piston and the cylinder and—and this is equally important—to form a seal between the piston grooves and the rings and between the rings and the cylinder wall. Not only does the oil act as a lubricant but it prevents the escape of mixture past the rings and so makes compression rather more than a figure of speech.

But powdered graphite, unless it is mixed with a suitable oil, in which case there would seem no need to use the graphite, does not form a seal as does the oil. Compression, at the comparatively slow speed of turning used when cranking an engine round by hand, is practically non-existent, and as a result the engine is extremely difficult to start. Further, until the graphite has begun to cake in the objectionable manner mentioned above this compression continues poorer than when a good oil is used.

Consequently whatever the theoretical value of a solid lubricant, as dry graphite, may be we have the practical disadvantages that with it an engine is extremely hard to start, is inefficient at first through loss of compression, and, as soon as that is remedied, begins to become increasingly inefficient owing to actual increase in friction and to internal heating.

Nobody's Business.

There is a popular quotation to the effect that everybody's business is nobody's business, and this is very true in regard to more than one thing in connection with motoring, a matter which has just been discovered by the *Motor Owner*. There is no law, for instance, to prevent a driver from running through city streets with his head lamps full on. It is unnecessary and unsportsmanlike, and is not often done, but it may be done and sometimes is. Everyone realises the inconvenience but no one can take action. The matter of cyclists rear lamps, so obvious as not to be worth further argument, is, we believe, on the eve of some settlement, but there is another equally grave failing in our motoring regulations. It is possible for a driver to halt his car on the wrong side of the road with his side, or even head lamps on, thus causing a painful amount of uncertainty and, in some cases great danger, to approaching traffic.

TRADE IN THE CAUCASUS.

(From a Correspondent).

Now that public attention is directed to the conference on Russian affairs that is to take place at Genoa at an early date it may not be inopportune to point out the prospects that exists for trade in the Caucasus.

The oil-fields of the Caucasus have a world wide reputation, but there are many products and minerals that have not been developed. Vast areas are covered with forests, in which many varieties of the best kinds of timber are to be found, including wood suitable for the dyeing of leather and other purposes. These forests are generally situated near the coast, so that the matter of transport is rendered less difficult. In 1919 a representative of a New York syndicate obtained a valuable concession for the exploitation of a forest. The conditions were very favourable, and the means of transit to the coast presented no difficulties, so as to render the work a most profitable enterprise.

Among other valuable products are caracul, silver fox and marten. The tobacco grown is of excellent quality, but up to the present time the cultivation has not been conducted with energy and skill. The cultivation of tea is in its infancy, and there is no doubt that under proper conditions and care it could be produced to compare favourably with Assam or Ceylon teas. Grapes of the finest quality are grown in abundance, and under proper management wine should be a lucrative article for export. There are many kinds of valuable minerals such as manganese which mineral is to be found near the coast. The silver deposits are well known. Quicksilver, copper, and sulphur require only to be worked, to give a large and profitable trade. Turquoise of the most beautiful colour are to be found, and under skilful control should provide scope for profitable enterprise.

The many varieties of enamelled silverware so extensively sold throughout the East and Russia are well known in Europe. These articles are manufactured from Caucasian silver. Some enterprising American firms have already representatives prospecting in order to see what can be done in the way of trade. In 1920 the Soviet Government, realising the commercial possibilities existing in the Caucasus sent to that country. Professor Fedoroff, of Moscow and Karkov Universities, the well-known geologist, to make investigations with a view to the exploitation of the mineral wealth and valuable products of that region.

UNBREAKABLE GLASS.

(From a Correspondent).

Dr. Horak, manager of the well-known and old-established Kavalir glass factory in Sazava, Bohemia, has succeeded, after thirteen years of research, in producing unbreakable glass. The first tests of the new product were made at the recent glass exhibition at Hradec Kralove, where the inventor demonstrated before an interested public that his glass plates and vessels remain intact when thrown to the ground from a height of over twelve feet. He roasted meat on a thin glass plate over an open fire at a temperature of 400 degrees centigrade, he melted tin in a glass pot and drove nails into a hard piece of wood with a piece of his new glass. A tiny glass tumbler scarcely a millimeter thick was heated in a stove to such a degree that wood placed into it was immediately charred to ashes. The glass, however, not only stood the heat, but even remained unbroken when plunged into cold water while still in this overheated state. The manufacture of this glass which is known as Silex-glass required special mechanical treatment and new machinery. The carborundum stones used for cutting ordinary glass are of no use in the case of Silex glass. Even a diamond sometimes fails to cut it. American, Swedish and Czech capitalists have already offered Dr. Horak large sums of money for the utilisation of his invention, although it is not yet known what particular goods he first intends to produce wholesale.

The Kavalir factory was founded nearly a hundred years ago by an ordinary glass worker, who however soon became famous for his chemical glass products and before his death he was elected an honorary member of many academies, etc. His glass was bought by Pasteur as well as by the great German chemist, and it was his factory which gave the first impetus to the great German glass industry at Jena. The Kavalir chemical glass is famous all over the world, and the new invention of Kavalir's successor will considerably enhance its wide reputation.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Egypt.

Grey Board.—The Government Press, Bulaq, invites tenders for the supply of 20,000 kilos of grey board. March 18.

Cleaning Materials.—The sub-Director of Stores, Ministry of Education, Sharia Qasr el Ain, Cairo, invites tenders for the supply of cleaning materials required for the school-year 1922-1923. March 4.

Clocks and Cast Iron Weights.—The Physical Department, No. 1, Sharia El Ensha, Cairo, invites tenders for the supply of cast-iron weights and office wall clocks. Tenders close March 15 and March 20 respectively.

Various.—The Inspector-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of various articles, such as cloth, clothing, sacks, thread, tents, cotton yarn, paints and oils, electric articles, leathers, tools, iron, ironmongery, and miscellaneous, etc., required for the Financial Year 1922-1923 by the Prisons Department. March 9.

Aluminium.—The Surveyor-General of Egypt, Giza (Mudir-tya), invites tenders for the supply of aluminium and zinc plates for 1922-1923. March 20.

Winter Clothing.—The General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo Stations, invites tenders for the supply of winter clothing for the season 1922-1923. April 6.

Yugoslavia.

Tin Plates.—The Directeur des Monopoles invites tenders for the supply of:—30,000 kgs. tin plates 0.32 thick, measuring 250 x 250 mms.; 90,000 kgs. tin plates 0.32 thick, measuring 500 x 250 mms.; 1,500 kgs. tin ware covered zinc, 4 mms. diameter; 3,500 kgs. tin solder; 3,500 kgs. lead solder; 6 kgs. sal-ammoniac; 250 kgs. muriatic acid for technical purposes. Samples are required as follows:—1 tin plate; 250 grammes lead and tin solder, sal-ammoniac and muriatic acid; $\frac{1}{2}$ metre wire. A deposit of 5 per cent. is required from the Serbian and 10 per cent. from foreigners.

Morocco.

Earthworks.—The Tangier-Fez Railway invites tenders for the construction of the earthworks of the second section ("Gharb" section) of the Tangier-Fez Railway. The length of the section is 19.09 kilometres. Tenders should be addressed to "M. le Président de la Commission Générale des Adjudications et des Marchés au Dar-en-Niaba, a Tangier." April 4.

Lighthouse Lantern, etc.—The Fedhala Lighthouse invites tenders for the supply of a lantern and lighting apparatus for the Fedhala lighthouse. The light will have a range of 11 miles in its red sector. The lantern will be mounted on a stone or reinforced concrete tower, the interior diameter of which will be about 2.2 m. Contractors desirous of competing should communicate with M. l'Ingenieur, chef du Service Maritime, Travaux Publics, Casablanca, enclosing documentary evidence that similar work has been previously executed. Communications should be in French. February 25.

India.

Sewage Scheme.—The Director of Development, Bombay, invites tenders for constructing and running for six months sewage scheme for Ambernath Industrial Area. (Spec., Rs.500. Superintending Engineer, No. 3 Project Division, Directorate-building, Old Customs House Yard, Fort, Bombay). March 15.

Steam Hammers, etc.—The Madras and Southern Mahratta Railways Company, Limited, invites tenders for the supply of 7 steam hammers (7 $\frac{1}{2}$ cwt., 10 cwt., and 15 cwt.); 11 Bogie Carriage Underframes, Broad Gauge; 1 4-Wheeled Brake Van Underframe, Broad Gauge; 5 4-Wheeled Luggage van Underframes, Broad Gauge. 50 Pairs Wheels and Axles, Broad Gauge; in accordance with the Specifications, which may be seen at the offices of the company. Tenders must be sent in addressed to the Secretary, and marked "Tender for Steam Hammers" or as the case may be. March 7.

Plates, etc.—The High Commissioner for India invites tenders for the supply of:—(1) Plates, mild steel; (2) beaters, steel, plate-layers; (3) pencils, writing; (4) cloth tracing; (5) wheels and axles; (6) deck spans. Forms of Tender may be obtained from the Director-General, India Store Department, Belvedere Road, Lambeth, S.E.1., and tenders are to be delivered at that office not later than 2 o'clock p.m. on Tuesday, February 28, 1922, for Nos. 1 to 4, and on Tuesday, March 7, 1922, for Nos. 5 and 6.

COMMERCIAL BREVITIES.

It is reported that the large Czech factories are in a bad way, the world slump having affected them very seriously.

To supplement the rail service the majority of Algerian farmers use motor trucks to transport their products.

The Compagnie Generale Transatlantique has established a passage bureau at Prague.

An important Industrial Fair is to be held at Zagreb from June 3 to 15 of this year.

Czecho-Slovakia is to make a 20 per cent. reduction in the foreign telegraph rate.

Despite the amount of new building which took place in Athens during 1921, it is understood that 9,000 houses are still required.

The traffic receipts of the Smyrna-Aidin Railway for the week ended February 4 amounted to £7,442.

The contract for the building of the British Empire Exhibition had been placed with Messrs. Sir Robert McAlpine and Sons by the executive council of the Exhibition.

The maiden voyage from London to Bombay of the British India Company's 8,000-ton motor liner Domala has completely fulfilled expectations.

H.M. High Commissioner at Constantinople telegraphs that the quarantine measures against plague imposed on arrivals from Beyrout have been withdrawn.

It is estimated that 150,000,000 kronen is concealed in gold and silver by Czecho-Slovakian citizens, who refuse to deliver it to the State Bank.

A reduction which took effect from February 1 (last) has been made in the duties payable on the export of timber from Czecho-Slovakia.

The Yugoslav merchant marine consists of 800 ships of over 10 tons, totalling 139,000 tons, and 142 steamships totalling 128,000 tons, 112 of which are engaged in coastwise traffic.

It is estimated that Greece's olive oil yield of 1921-22, will be about one-third that of the preceding season, which was 44,701,000 gallons.

H.M. Acting Consul-General at Algiers reports that the exportation of oats from Algeria to all destinations is now permitted.

The opening of the British Empire Exhibition has been postponed from April, 1923, to April, 1924, it being found that the project is so vast that it could not be adequately prepared by next year.

The total number of vessels entering Bourgas during 1920 was 739 with a total net tonnage of 334,924 tons, while as regards Varna 730 ships entered with a total net tonnage of 473,048 tons.

The Roumanian Minister of Industry and Commerce has prohibited the importation of the following luxury articles:—champagnes, wines, and liquors; fine preserves; toilet powder and powder puffs; fabrics containing more than 50 per cent. of silk; perfumes and cosmetics of all kinds.

All exports of cereals from Roumania have been prohibited for the present pending the completion of the latest returns regarding the quantity of cereals available says Reuter. Permits not yet executed are to be revised and new regulations will be published shortly.

According to the report of the official Statistical Bureau the exports from Czecho-Slovakia in August last amounted to 950,000 tons, and imports to 300,000, this producing a credit balance of 650,000 tons. Of the imports, 40,000 tons came from the U.S.A., while of the exports, 15,000 tons went to England.

The Indo-Burma Oilfields (1920), Ltd., state that since the last official announcement the following wells have come in on the Yenamma fields: No. 26, producing 18; No. 27, producing 3; No. 30, producing 61½; and No. 31, producing 25 barrels per day respectively.

A message from Constantinople, says Reuter's Paris Correspondent, announces that the Ottoman Government has abolished Customs duties on the entry into Turkey of motor vehicles destined to ensure the public services. Oil and the material necessary to ensure these services will also be admitted without charge.

During the week ending January 23, the amount of paper money in circulation in Czecho-Slovakia decreased by over 423 million crowns, and the total circulation is now over 808 millions below the maximum limit allowed by law. The amount of foreign bills and other foreign securities in the hands of the State Treasury rose by 293 millions.

A Dahir, dated December 28, last, has been issued providing that, as from January 1, 1922, goods imported into Morocco by the Algero-Moroccan land frontier are to pay a uniform duty of 5 per cent. on their value at the place where they are declared. Export duties on goods exported over this frontier are to be the same as those levied on goods exported from Moroccan ports.

It is officially stated that the railways built in Irak by Britain during the war are at present being valued by a representative of the Disposal and Liquidation Commission, with a view to the r being handed over at a valuation to the Irak Government, and that it is possible the Irak Government will be prepared to sell or lease them to a private commercial company after they have been handed over.

The conference between the coal owners and the strike committee in Czecho-Slovakia has resulted in an agreement. The collective contracts now in force are to hold good until the end of June, and the arbitration commissions will then revise the rates of pay in the different areas. The lignite miners will waive their claims to special clothing allowances. The general conference of miners will probably accept these conditions, and it was expected that work would be resumed in the course of last week.

PALESTINE CRAFTS AND INDUSTRIES EXHIBITION.

It has been decided to hold an Exhibition of Palestinian Crafts and Industries in the Citadel, Jerusalem, in April. To that end a committee has been appointed by the High Commissioner to carry out the necessary organisation. This committee will be a sub-committee of the main Crafts and Industries Commission. The following gentlemen are members:—Mr. Bowman (Chairman), Mr. Antonius, Mr. Ashbee, Mr. Epstein, Sherif Eff. Nashashibi, Dr. Ruppin, Mr. E. H. Samuel and Mr. Whiting.

In deciding the lines on which the exhibition is to be run, the sub-committee, following the terms of reference proposed for the main Commission, has decided to exclude:—(a) All products made by the aid of mechanical power (b) All food products, save the products of the olive. It has further been decided that, for the purpose of exhibition, Palestinian industries should be divided into two main groups; traditional industries and modern Industries. Traditional industries are those native to Palestine, and of a type known to have existed in Palestine for over half a century, such as weaving, tanning, pottery making. Modern industries are those that have been introduced recently into Palestine, and are based on European models—such as cement tile making etc.

For the collection of exhibits of modern industries, the committee has decided to circularise all known modern manufacturers, Chambers of Commerce and the Press, inviting them to send in samples for exhibition. The collection of exhibits of traditional industries cannot be done in this way, therefore one of the members of the Sub-Committee, Mr. Ashbee, will, in co-operation with local Administrative officials visit in turn as far as possible the various producers in the different towns of Palestine and himself select the Exhibits required. Exhibits of traditional industries are being further divided into three sections, according to use; the articles being:—(1) personal; (2) domestic and (3) outdoor including (a) agricultural, (b) building, (c), transport; (d), marine.

A sales section is being arranged where some of the duplicates of exhibits in the three "traditional" sections can be bought. It is hoped to show groups of Palestinian craftsmen actually at work in the exhibition grounds, the weaver weaving, and the potter making pots, their products being for sale at the exhibition. Where craftsmen cannot be shown at work, photographs of the more important processes will be on view.

APPOINTMENTS WANTED.

Englishman, ex-officer, age 30, unmarried, seeks prospective position of any description in Near East. Particularly cognisant with Textile Trade, and Accountancy. Country preferred Serbia, also knowledge of Language. Excellent references and good address.—W. H. H., 120, Richmond Road, Kingston-on-Thames.

Stock and Share Markets.

BOOM IN GILT-EDGED.

Indian Stocks Strong.

(From Our Own Correspondent.)

London, Tuesday Morning.

It has been a wonderful week in the gilt-edged market. For many weeks with a few rare setbacks one has been able to chronicle continued strength in this market, but it has been a question of small rises whereas during the past few days the tendency has developed into boom-like conditions, and the usual staid Consols market has been the centre of very animated scenes. What has been happening may, perhaps, best be indicated by pointing out that War Loan Fives and Fours, the Funding Loan and Victory Bonds are at the time of writing ahead of their issue prices. But the advance during the past week considerable though it has been scarcely brings out the change that has taken place. It is only when one compares present prices with the lowest touched by the war stocks that it is brought home. In some cases the difference amounts to 15½ points.

Causes of Rise.

Of course the main reason for the rise is the fact that trade at the moment offers no scope for the employment of the large surplus funds, and in the circumstances the tendency naturally is for money to gravitate towards the investment class of securities. Why it has been so pronounced during the past week has been due to special reasons. In the first place there has been the suspension of the 5 per cent. Treasury Bond issue, and the offer to holders of War Bonds about to mature of an exchange into 3½ per cent. Conversion stock—the first step towards placing British credit on a stronger basis since the war. But an influence which has had an even greater effect has been the reduction of the Bank Rate to 4½ per cent. The result of that was to bring down the rate on deposits at the banks to 2½ per cent., and that had the very natural effect of driving money on deposit into more remunerative channels. Hence the buoyant condition of the gilt-edged market, which so far as can be seen is likely to continue for the present until what may be termed the economic level is reached, when it is to be presumed that a Funding Loan will be floated.

The Prospects.

It is an axiom that activity in Gilt-edged is the invariable predecessor of developments in other markets, and signs are not wanting in the present instance as to the probability of this. But the time is scarcely yet. Isolated groups such as Oil may and probably will benefit almost immediately; indeed the group specified has of late been showing signs of considerable animation, but before any general recovery can take place the trade position must be more satisfactory than it is at present. It is a commonplace that we are nearing a boom, however, and the knowledge of that fact should serve to encourage holders of Industrials, Rubbers and other shares which at present stand far below their real value. The present is essentially the time for the investor, for not for generations is there likely to be the possibility of picking up so many bargains. Those who are sufficiently courageous to avoid the Gilt-edged group and enter instead the inactive markets are likely to be congratulating themselves in a not very far distant future.

Gilt-Edged.

And now to turn from the general to the particular. This week it has not been a question of fractional advances in Gilt-edged but of really substantial gains. Consols are 4.5-8 up at 57, War Loan Fives have gained 2.7-16 at 96½, while the Conversion Loan, at 73½ is 2.3-8 up. Even India stocks have not been able to resist the prevailing atmosphere as a result of the suspension of "civil disobedience" and a significant recovery is to be recorded. The India Seven per cent. Loan is 4½ up at 107½, the three per cent. Loan has gained 5 at 55, while the 3½ per cent. Loan is 5½ up at 62½.

The foreign market has displayed quite unusual activity, and in a number of directions strength has developed. French stocks have been a firm spot, with War Loan Fives 2½ up at 43½. German three per cents, have been dull, and are closing

1-8 down at 2½, while Italian Rentes are unchanged at 2½. Chinese securities after being very firm toned down somewhat, but are above the previous week's levels. The 1896 Loan at 89 shows a gain of 2, while the 1913 is 5 up at 72. Brazilians have been in quite exceptional demand, Fundings being 78, and the 1911 Loan 55. There has been nothing doing in Russians. Greek securities have displayed considerable strength, the 1884 Loan being 1 up at 39½, while the 1889 Loan has gained a similar amount at 31½.

Industrials Harder.

A better tone has prevailed in the Industrial group. There was a good deal of activity in tobacco shares which have made a firm showing, Bats being 1s. 6d. up at 62s. 9d., while Imperial Tobaccos are 1s. 9d. at 53s. 9d. Crosse and Blackwell have been in some demand, closing at 6s. 7½d. Dunlops have rallied somewhat, and are 10½d. up at 6s. 9d. Tea shares have improved on the better outlook in India, and this group, in my view, holds out considerable prospects for the investor who looks for capital appreciation.

There has been very little change in the Textile group. Coats are 1-32 up at 2.5-8, while Courtaulds have gained 1s. at 37s. 4½d. In Iron, Coal and Steel securities there has been a fair demand for Debentures, but the ordinary shares have been more or less neglected. Armstrongs are 1s. down at 13s., Vickers have shed 3d. at 7s. 9d., Guest Keens are 6d. up at 29s., while Lamberts are unchanged at 1.7-8.

Shipping securities have been brighter, a good demand sending the shares up. P. and O. Deferred are 20 up at 300, Cunards have gained 9d. at 18s., while Furness Withys at 24s. 3d. also show a gain of 9d.

Oils Better.

A considerable amount of activity was in evidence in the Oil Market throughout the week, and the leaders have advanced. Burmahs are 13-32 up at 5.23-32, while Mexican Eagles show a gain of 1-16 at 4.1-8, though they have been well over that rate. Trinidad issues have been firm, with Centrals at 3.9-16. Kern Rivers are 1s. 6d. up at 20s. 6d.

Among Egyptians Anglo-Egyptian B are 5-16 up at 1.5-8, but Oilfields of Egypt are 6d. down at 5s. In the Roumanian group Roumanian Consolidated are 6d. up at 8s. 6d., while Phoenix, which have again come in for support on favourable rumours are 1s. up at 13. Dacia Romanos are unchanged at 11-16, while Steaua Romanas at 11s. 3d. are 1s. up.

Banks Firm.

A buoyant tone has prevailed among banking descriptions. Chartered of India are 1½ up at 15½, while National of India have gained 2 at 35½. P. and O. Banking Corporations are ¼ up at 5½, while Imperial Bank of Persias have advanced ½ to 5½. Bank of British West Africas are unchanged at 4½.

In Land Shares Béhéras are unchanged at 8.7-8, while Egyptian Delta Lands are the same at 7s. Gharbiehs are 1-16 up at 1.5-16, while Sudan Plantations are 2.7-8.

YUGO-SLAV BONDS.

The General Directorate for Public Debts of the Ministry of Finance of the Kingdom of Serbs, Croats, and Slovenes announces that the Minister of Finance, by his Decree of September 28, allowed the General Directorate for Public Debts to commence from January 1, 1922, the exchange of the old coupon-sheets of the 2 per Cent. Lottery Loan of 1881, with new coupon-sheets containing coupons No. 41 with the date January 1, 1922, up to No. 57, with the date January 1, 1938. Holders of these bonds abroad can send their bonds to the above-mentioned Directorate, Belgrade, together with the coupon-sheets, mentioning at the same time the series and numbers of their bonds, as well as the last number in the coupon-sheets. Holders should send to the Directorate the number of the bonds, their series, and proofs of their proprietorship before the war, as well as the proof of their citizenship.

OIL OUTPUTS.

Anglo-Egyptian—Gemsah (week ended February 17th), 9 tons (last week 8 tons); Hurglada (week ended February 17th), 3,455 tons (last week 3,798 tons).

SHIPPING INTELLIGENCE.

THE PREVENTION OF PILFERAGE.

Conditions at Ports.

The final report of the committee appointed by the Chamber of Shipping to investigate claims in respect of pilferage and theft at all ports in the world which has just been issued, contains the following references to conditions at Near Eastern and India ports :—

Piræus.—The Consuls of the various Governments represented at Piræus should be requested to formulate and administer a plan for the reception of cargo from steamers discharging at that port and for delivery to consignees. An essential part of the arrangement should comprise the release of the shipowner from all responsibility in connection with the cargo from the time that the goods have been delivered ex-ship; receipts for such goods should be given immediately upon discharge within sight of the ship's rail.

Alexandria.—Conditions at this port are unsatisfactory. Cargo is discharged into Customs Sheds after which a considerable time elapses before receipts are given. During this period ample opportunity is afforded for pilferage and all loss or damage discovered prior to the giving of receipts is thrown back upon the ship. Receipts should be given immediately upon discharge within sight of the ship's rail.

Calcutta.—The Port Commissioners' system of tallying is not only highly unsatisfactory, but also untrustworthy. Evidence has been adduced before the Committee which shows a system prevailing at Calcutta discreditable to the port. The system is that on discharging the tallies are understated and the Authorities eventually adjust their tally to the actual deliveries from their premises; any deficiency which may then appear is thrown back upon the ship. Harbour Boards which have specific obligations placed upon them should not endeavour to evade those responsibilities by methods of this description.

TRAFFIC AT FEDALAH.

In the course of the year 1921, there was dealt with at the port of Fedalah, 22,000 tons imports, and 10,000 tons exports, or a total of 32,000 tons, corresponding to an average daily handling of 90 tons as compared with 400 tons in 1920. There was, moreover, 7,000 tons of fresh water shipped. This great fall in the tonnage handled is explained by the improved facilities provided at the port of Casablanca.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure, and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, March 6).

Anchor Brocklebank Line.—S.s. Anchoria for Port Said, Colombo, Madras and Calcutta (leaves London, March 7); s.s. Media for Calcutta (Birkenhead, March 9); s.s. Mahanada for Port Said, Colombo, Madras and Calcutta (leaves London, March 21).

Bibby Line.—S.s. Warwickshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 1); s.s. Leicestershire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 15).

Byron Steamship Line.—S.s. Maid of Hydra for Patras, Piræus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, February 28).

Clan Line.—S.s. Clan Urquhart for Bombay and Persian Gulf (Birkenhead, February 25); s.s. Clan Macbeth for Bombay and Persian Gulf (Birkenhead, March 9); s.s. Clan Macbrayne for Colombo, Madras and Calcutta (Birkenhead, March 9).

Cunard Line.—S.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Manchester, March 14); and Swansea, March 21; s.s. Pavia for Gibraltar, Ceuta, Algiers, Malta, Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza and Sulina (Swansea, March 14).

Ellerman Line.—S.s. Gerano for Gibraltar, Patras, Piræus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, February 25); s.s. Andalusian for Gibraltar, Malta, and Alexandria (Liverpool, March 4).

Ellerman's "City" Line.—S.s. City of Marseilles for Calcutta (Birkenhead, March 1); s.s. City of Manila for Calcutta (Birkenhead, March 4).

Ellerman's "Hall" Line.—S.s. City of Dunedin for Malabar coast ports (Liverpool, February 24); s.s. City of Paris for Bombay, Karachi, and the Punjab (Liverpool, March 2).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.s. Carnarvonshire for Port Said, Port Swettenham, Singapore, etc. (London, February 23); s.s. Gleniffer for Port Said, Port Swettenham, Singapore, etc. (London, March 9); s.s. Glengarry for Port Said, Port Swettenham, Singapore, etc. (London, March 23).

Glynn Line.—S.s. Sotero for Genoa, Leghorn, Naples, Catania, Messina and Palermo (Liverpool, February 28).

Harrison Line.—S.s. Inventor for Calcutta (Liverpool, March 2); s.s. Governor for Calcutta (Liverpool, March 20); s.s. Electrician for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, April 20).

Henderson Line.—S.s. Chindwin for Port Said and Rangoon (Birkenhead, March 8).

Holt Line.—S.s. Laomedon for Port Said, Port Swettenham, Singapore, etc. (Glasgow, February 23); s.s. Agamemnon for Port Said, Port Swettenham, Singapore, etc. (Swansea, March 2); s.s. Sycæon for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 9); s.s. Deucalion for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 23).

Johnston Line.—S.s. Dromore for Piræus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 25).

Papayanni Line.—S.s. Maronian for Melilla, Malta, and Alexandria (Liverpool, February 25); s.s. Grodno for Syra, Volo, Salonika, Smyrna and Constantinople (Liverpool, March 11).

P. and O. Line.—S.s. Caledonia for Bombay (London, February 24); s.s. Nellore for Colombo, Madras, and Calcutta (London, March 10); s.s. Egypt for Bombay (London, March 10); s.s. Nankin for Colombo, Madras, and Calcutta (London, March 24).

P. and O. British India Line.—S.s. Merkara for Colombo, Madras and Calcutta (London, March 10); s.s. Australia for Bombay and Karachi (London, March 11); s.s. Mashobra for Bombay and Karachi (London, March 24); s.s. Margha for Colombo, Madras and Calcutta (London, March 31).

Prince Line.—S.s. Soldier Prince for Malta, Alexandria and Syrian coast (London, February 25); s.s. Norman Prince for Tunis, Malta, and Alexandria (Manchester, February 28).

Near East Markets.

LONDON PRODUCE REPORT.

Recovery in Sugar.

(From Our Own Correspondent.)

Monday Evening.

Sugar.—There has been a marked improvement in the home refined market during the week with prices 3d. higher all round with the exception of Tate's cubes which are firm at 52s. The revised prices are 47s. for mineral water sugar; and London granulated and Lyle's at 46s. 6d. respectively. Export descriptions have been steady, while there has been an exceptional demand for West Indian crystallized. Prices are firm at 40s. 6d. for West Indian crystallized and 19s. for Czecho-Slovakian. Cane sugar (96 per cent.), quotations are:—February, 15s.; March, 13s. 9d.; May, 13s. 6d.; and August, 13s. 6d. White sugar quotations are:—February, 19s. 0d.; March, 18s. 10½d.; May, 18s. 9d.; and August, 18s. 10½d.

Coffee.—Steady prices have been the feature of the week. Costa Rica has risen 6s. to 126s., while Indian is firm at 106s. Nairobi and Jamaica have remained firm at 110s. and 150s. respectively. The Futures market has been steady with March at 51s. 9d.; May, 52s. 6d.; July, 53s.; September, 53s. 6d.; and December, 53s. 9d.

Tea.—The quality of Indian tea in many cases is poor. Supplies of Ceylon tea are small and offers are indifferent. Fine China tea is firm at 2s. 11½d., and good Pekoe Souchong is unaltered at 11d. lb. Common Java has been steady at 9½d.

Rice.—A firm tendency has prevailed, and prices have risen somewhat. Spanish Japan rice cannot be obtained, supplies being exhausted. Very little of this commodity is afloat at the present time, and exorbitant prices are demanded.

Dessicated Coconut.—Home trade has improved considerably during last week, export varieties have also improved.

Almonds.—Prices for all grades of almonds are increasing, and little more business has been passing.

Green Fruit.—There is still an abnormal demand for oranges, and the imports are larger and the quality is generally better. Spanish oranges have been in excellent demand and there is an abundant supply on the market which is likely to be maintained for some considerable period. The demand for Seville sour is poor. The lemon market has made good progress since last week, some larger buying having been in evidence. Prices have hardened as a result. Some shipments of Naples lemons have been offered during the week at exceptionally high rates. There has been a falling off in the demand for Valencia onions and reports show that the quality is poor. Apples are still in good request especially for box fruit.

Oilseeds.—A variable tendency has prevailed. Indian linseed is 6d. down at 20s. and La Plata has shed 1s. at 19s. 9d. Rapeseed has been weak with Toria 3d. down at 16s. 3d.; brown Cawnpore, 6d. lower at 17s. 6d. and bold Ferozepore unchanged at 17s. 0d. Cottonseed has risen with Indian, 6d. up to 9s. 6d.; Sakellaridis, 1s. up at 12s. 3d.; and Egyptian black 9d. up at 12s. 6d.

Oil.—Higher prices have ruled during the week. Linseed oil has dropped 9d. at 38s. Rape oil has been a firm feature with the crude variety at 51s. and refined at 56s. Cotton oil is higher with refined 1s. up at 44s.; Egyptian crude is 2s. up at 37s. and deodorized has gained 1s. at 49s. Turpentine has risen 3d. at 69s. 3d.

Oilcakes.—Linseed cake is firm at 310s. ton. Cotton seed cake is the same at 195s. ton, as also palm kernal cake at 135s. ton. Arachis cake is 10s. higher at 225s. ton, while cotton-meal cake is firm at 320s. ton.

SMALLER SOWINGS IN ROUMANIA.

(From Our Own Correspondent.)

Bucharest, February 7.

According to the official report of the Ministry of Agriculture the autumn sowings covered a total area of 1,445,000 hectares. This is considerably less than the autumn sowings of 1920, which covered an area of two million hectares. It is intended to make up this difference by sowing spring wheat.

OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows for the week ended January 31:—

Notwithstanding the restrictions by England, America, etc., put upon this narcotic, we have again to report fairly good sales every week which amount in all to 101 cases for this month. The average price paid for above quality in piastres is 776.50 per oke, but the reduction to sterling or dollars per lb. of above depends entirely on the falling exchange in sterling and dollars. We started the year with an exchange of Ps. 720 per pound sterling for cheque and 0.58 dollars per Turkish pound, and to-day (January 31), we are at Ps. 650 for the former, and 0.65 dollars for the latter; therefore the above average opium piastre price will be 8s. 9d. per lb. for the beginning of the month, and now 9s. 4d. as compared to 1.65 and 1.96 dollars respectively. Our stock in first and second hands is now 1336 cases.

EGYPTIAN CROPS.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in January:—

Wheat.—During the month under review the weather was on the whole favourable. The rain which fell during the month has had a beneficial effect on the crop. Many fields which suffered from the rainstorm reported in last month's Bulletin have recovered and the first ears have formed in early sown localities in Middle and Upper Egypt. With the exception of an eel-worm attack reported from Rosetta, the crop is free from pests and is growing satisfactorily, its condition being a little below the average.

Barley.—Extensive areas were sown very late. The crop is growing well and in some localities ears have already appeared. The condition of the crop is slightly below the average.

Beans.—Rain and winds have caused a certain amount of flower-shedding in some places. Flowering is general and pods are forming. Broom rape (Halook) attacks is reported from Giza, Minya, Girga, and Qena Provinces, but so far the damage caused is very slight. On the whole the condition of the crop is fairly satisfactory, though a little below the average.

Helba.—Flowering is general and the crop is growing well. Pods are forming in early-sown fields, and the condition of the plants is quite normal.

Onions.—The crop is healthy and its condition is normal.

Lentils.—The condition of the crop is normal. The plants are progressing and are free from pests.

Sugar-Cane.—A good proportion of the crop was cut during the month under review. Attacks of mealy-bug and stem-borer (*Sesamia cretica*) are again reported, but the damage done does not seem to be serious. The condition of the crop is slightly above average in spite of these attacks.

Bersim.—The first cut was general during January, while the second was progressing. Unfavourable climate conditions in certain provinces have slightly affected the crop. Some fields under temporary bersim were being ploughed up for cotton. The condition of this crop is slightly below the average.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended February 4:—

Sultanas.—The total estimated arrivals to-date amount to 168,180 bags as against 95,000 bags for the corresponding period of last year. The total estimated sales are 162,180 bags as compared with 88,000 bags and the estimated stock unsold totals 6,000 bags as against 7,000 bags for 1921.

Shipments.—3,118 boxes of sultanas, 100 boxes of figs, and 1,108 bags of figs are being loaded on the s.s. Mourino for London, also 250 boxes of sultanas for Hull. The s.s. Karnak is due in Liverpool with a shipment of sultanas.

Markets.—A fresh estimate of the existancies of sultanas on the Smyrna market reduces the stock to 6,000 bags. Arrivals from the country during the past fortnight have been almost nil. Dealers refuse to make any concessions in price and with exchanges continually declining, shippers cannot possibly work business with any chance of profit. Exchanges have fluctuated sharply during the week, moving between 608 to 654 and finally closing at about 635.

ADVANCE IN RAW FUR PRICES.

The report of the London Fur Trade Association on the January raw fur sales states:—The sales just completed have been attended by an extremely large number of buyers from nearly all countries interested in fur skins. The large quantities of staple articles met with strong competition, and the result must be reported as most satisfactory, considering the adverse rates of exchange and the unsettled conditions in many other trades. The home trade bought freely in skunk, opossum, musquash, white fox, pale red fox, and wolves. The American buyers secured beaver and marten of all sorts, also kid crosses and skins. France bought freely in numerous articles, especially in silver, blue, white and red fox. Germany bought skunk, musquash, opossum, otters, and many other articles, a considerable number of buyers being present, and the buying well divided. The comparison of prices are based upon the last October sales.

Badger, unaltered; black bear, unaltered; brown bear, unaltered; grizzly bear, declined 20 per cent.; white bear, unaltered; beaver, declined 10 per cent.; civet cat, advanced 10 per cent.; chinchilla, full October prices; ermine, advanced 10 per cent.; fisher, unaltered; fitch, advanced 15 per cent.; blue fox, declined 10 per cent.; cross fox, slightly easier; grey fox, advanced 20 per cent.; red fox, declined, 15 per cent.; silver fox, best dark silver unchanged. All others declined 25 per cent.; white fox, advanced 10 per cent.; south American fox, advanced 15 per cent.; white hare, best skins sold well. Poor neglected; kolinsky, advanced 15 per cent.; Persian lamb, unaltered; lynx, declined 10 per cent.; American marten, advanced 10 per cent.; baum marten, unaltered; stone marten, advanced 10 per cent.; minx, best grades unaltered. Others advanced 15 per cent.; mole, declined 15 per cent. monkey, declined, 50 per cent.; black musquash, advanced 10 per cent.; brown musquash, unaltered; southern musquash, advanced 10 per cent.; nutria, unaltered; American opossum, full last prices; otter, best sorts declined 10 per cent. lower sorts advanced 15 per cent.; raccoon, firm at last October prices; Russian sable, unaltered; skunk, a collection of fresh skins. Black and short stripes full October prices. Long striped advanced 15 per cent. White advanced 20 per cent.; squirrel, advanced 15 per cent.; wolf, did not show much alteration; wolverine, advanced 10 per cent.; fur seals, Cape of Good Hope declined 15 per cent. Other sorts withdrawn.

Australian Furs.—Red Australian fox, declined 15 per cent.; Australian opossum, advanced 20 per cent.; Wallaby, best qualities about last October prices; lower qualities advanced 25 per cent.

Chinese and Japanese Furs.—Civet cat, advanced 15 per cent.; red fox, declined 15 per cent.; goat rugs, declined 10 per cent.; black goat skins, unaltered; grey goat skins, unaltered; white goat skins, advanced 10 per cent.; kid skins and crosses, sold at extravagant rates; kolinsky, advanced 15 per cent.; slink lamb, unaltered; Thibet lamb skins, declined 10 per cent.; Thibet lamb robes, advanced 12½ per cent.; leopard, unaltered; marmot, advanced 10 per cent. to 15 per cent.; minx or weasel, steady; pahmi, unaltered; white rabbit, advanced 10 per cent.; raccoon, none sold; wolf, rather better demand.; Japanese badger, none offered; Japanese fox, only few sold at slightly higher prices; Japanese marten, none offered; flying squirrel, a poor collection. Mostly unsold.

ALCOHOL INDUSTRY IN CZECHO-SLOVAKIA.

According to the report of the Czecho-Slovak Spirit Commission, the production of spirituous liquors during the season 1920-1921 amounted to 684,083 hectolitres, of which 340,916 were made in the agricultural distilleries. The total production exceeds that of the previous season by 244,952 hectolitres. The home consumption amounted to 455,478 hectolitres, exports to 53,419, and 123,128 hectolitres were kept in hand as reserve stock. The Spirit Commission, it will be recalled, is a State institution under the control of the Ministries of Finance and Food Supply, and the result of its activities for 1920-1921 is that it has a credit balance of over 244 million crowns. During its three years' existence the Spirit Commission has contributed, directly or indirectly, to the revenues of the State a total sum of over 894 million crowns.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 132s. 6d. cwt.; (Canadian), 121s. 6d. cwt.; (American), 112s. 6d. cwt.; butter: (Australian), 210s. cwt.; (New Zealand), 127s. cwt.; cheese (Canadian), 110s. cwt.; (New Zealand), 95s. cwt.; lard, 71s. cwt.; eggs (Danish), 35s. per 120; (Stryrian), 27s. 6d. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar): rs. 4½d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 122s. 6d. cwt.; (East Indian), 125s. cwt.; (Central American), 105s. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 112s. 6d. cwt.; (Santos, superior), 63s. 6d. cwt.; ginger (washed Cochín), 50s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 110s. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Vostizza), 75s. cwt.; currants (Amalias), 58s. 6d. cwt.; sugar: (Tate's cubes), 51s. 6d. cwt.; (Lyle's granulated), 46s. 4½d. cwt.; (Mauritius crystals), 44s. 6d. (West Indian crystallized), 41s. cwt.; (centrifugal), 13s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 14s. 7½d. cwt.; (bran, Rangoon), £5 18s. 9d.; ton; cinnamon (first), 1s. 3½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 7½d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 2d. lb.; (medium to good), 1s. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 9d. lb.; wheat (English white), 53s. qr.; (Australian), 56s. qr.; barley (malt-), 55s. qr.; barley (feeding), 39s. qr.; oats (English), 33s. 6d. qr.; oats (La Plata ex-ship), 27s. 6d. qr.; maize (La Plata), 39s. 3d. qr.; flour, 44s. 6d. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £35 ton; bismuth, 9s. lb.; copper (standard), £61 13s. 9d. ton; copper (electro), £68 ton; gold bars, 95s. 1d. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 93s. ton; galvanised sheets (24 G), £15 15s. ton; lead (soft foreign), £21 13s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 29s. 1½d. unit; nickel, £175 ton; platinum, 395s. oz.; plumbago, £20 ton; quicksilver (G.O.B.), £24 7s. 6d. ton; tin (standard), £152 17s. 6d. ton; wolfram, 10s. 6d. unit; zinc sheets, £34 10s. ton; tin plates (20 by 14), 18s. 9d. box.

Chemicals.—Acids: Boric, 60s. cwt.; oxalic, 7½d. lb.; citric, 2s. lb.; tartaric, 1s. 3d.; ammonia (sulphate), £16 1s. 3d. ton; arsenic (white powdered), £40 5s. ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £14 5s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 7½d. lb.; chlorate, 5d. lb.; caustic, £33 10s. ton; nitrate, £42 10s. ton; permanganate, 9½d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 130s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 5½d. lb.; alkali (58 per cent.), £8 18s. 9d. ton; chlorate, 3½d. lb.; caustic (70 per cent.), £23 ton; hyposulphite £15 10s. ton; prussiate, 9½d. lb.; nitrate, £14 5s. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.) £110 ton; lemon oil, 3s. 1½d. lb.; quinine, 3s. 1½d. oz.; red lead, £36 15s. ton; white lead, £40 10s. ton; white ground lead, £49 12s. 6d. ton; sulphate of copper, £28 5s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first), 90 lb. and up, 7-7-8d. lb.; 80 to 89 lbs., 7-7-8d. lb.; 70 to 79 lbs., 7-5-8d. lb.; 59 lbs. and under, 6-1-8d. lb.; (second), 90 lbs. and up, 6-7-8d. lb.; 80 to 89 lbs., 7d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 6d. lb.; 59 lbs. and under, 5d. lb. Cows (first), 60 lbs. and up, 6½d. lb.; (second), 60 lbs. and up, 5d. lb.; 59 lbs. and under, 4½d. lb.; Bulls (first), 5½d. lb.; Kips (first), 6½d. lb.; (second), 5½d. lb.; Calcutta Market. Prices in rupees per 20 lb. Arsenic hides (cows): Agras, 10 to 15.8; Durbhangas, 8 to 10.8; Patnas, 6.8 to 7.8. Salted cows, 4.8 to 7.8. Arsenic hides (buffalo), 4 to 6.8.

Miscellaneous.—Cotton: (American), 9.68d. lb.; (Egyptian Sakel), 15.00d. lb.; Oilseeds: Linseed (La Plata), £20 17s. 6d. ton; palm kernels, £17 11s. 3d. ton; castor seed (Bombay), £14 17s. 6d. ton; sesame seed (China), £24 ton; soya beans £12 10s. ton; Oils: Linseed, £38 10s. ton; olive (Levant), £74 10s. ton; rape (crude), £50 ton; soya, £35 5s. ton; petroleum 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; cocoanut (Ceylon), £40 5s. ton; cotton (crude), £35 10s. ton; ground nut, £43 ton; Rubber: Plantation (No. 1 crepe), 8½d. lb.; smoked sheet, 8½d. lb.; fine hard Para, 11½d. lb.

ENQUIRY BUREAU.

ADVERTISERS requiring agents abroad and readers abroad desirous of getting into touch with British Manufacturers, Export Merchants, etc, may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," "The Near East," 1, Devonshire Square, London, E.C.2." It must be understood that "The Near East" accepts no responsibility in connection with such replies.

114. Importer in Karachi (India) travelling throughout India wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities:—Exports: Medicinal herbs, dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.

MANGANESE INDUSTRY IN TRANSCAUCASIA.

There has been practically no new mining of manganese in Transcaucasia during the past few years, partly because of difficulties with labour but more particularly because of the general political and economic situation, says a recent American Consular Report. Mine owners have not felt inclined to invest money in labour and other operating expenses with little or no probability of being able to profit or even to reimburse themselves by sales of manganese.

In July, 1919, the Menshevik Government of Georgia, in place of an out-and-out nationalization, organized the so-called "Temo" Export Manganese Co. by combining 27 different companies—2 English, 1 French, 2 Belgian, 9 Greek, 2 Armenian, 1 Russian, and 10 Georgian, the 10 Georgian companies representing 38 per cent. of the mines. The formation of this combination did not result in any new mining, but did result in the sale abroad of certain manganese stores already on the top of the ground. From July, 1919, until February, 1921, the "Temo" company is said to have exported and sold abroad 75,000 to 80,000 tons, of which 75 per cent. was washed manganese. The proceeds of these sales went in part to the Menshevik Government of Georgia, and the balance was divided up among the different manganese companies.

At the present time there are said to be 60,000,000 poods (62 poods equal 1 ton) of manganese on top of the ground at the mines in the Tchiatouri region, of which 35 per cent. is washed manganese. There are also said to be 8,000,000 poods already at the port of Poti, on the Black Sea, convenient for shipment by boat. The mines are in a neglected condition, many roofs having fallen in, so that in the case of some of the mines a year's work would be necessary before new manganese could be taken out. Under the circumstances, it appears safe to predict that no new mining will be undertaken so long as political uncertainties continue. At Tchiatouri there are 28 manganese-washing installations, but none of these are working. Also, the manganese on top of the ground at Tchiatouri can probably not be transported to Poti (6 hours) because of the condition of Transcaucasian railways. Therefore the only manganese stocks immediately available for sale are the 8,000,000 poods already at Poti.

ROHILKUND AND KUMAON RAIL- WAY.

The report for the year to September 30, 1921, states that the net earnings of the whole system were Rs.27,99,853, against Rs.25,89,721 for the previous year. The company's share is Rs.12,56,688 against Rs.11,71,810. The directors recommend a further dividend of 4 per cent., plus a bonus of 2 per cent. on the ordinary stock, less tax at 3s. 6d. in the £; forward, £44,204. The dividend and bonus for the year are equal to a rate of 11 per cent. per annum.

CHEAPER TEXTILE MACHINERY.

Larger Takings by China.

The total weight of textile machinery exports from the United Kingdom during January was 17,800 tons, the value of which was £2,634,271. For the previous January the comparative figures were 14,108 tons and £2,357,025, and in January 1920, 3,629 tons, and £465,510.

India, China, and Japan are the three chief markets in the order of their importance, and to each the tonnage exported in January this year was considerably in excess of that for the corresponding month last year. In the case of China the increase amounts to over 70 per cent. Larger quantities have also been shipped to Australia, the United States of America and Germany. South America, France and Holland have reduced their takings.

An interesting feature of the returns is that the prices paid by foreign customers show a tendency to ease. In January the average price per ton was £143 compared with £157 in December and £160 for the whole of last year. For the year 1913 the figure worked out at £47.

MANCHESTER REPORT.

(From Our Own Correspondent).

Manchester, Saturday.

The tone of the market during the past week has continued firm. There is evidence for believing that some buyers have continued a policy of going short, and in certain sections during the last few days there has been more inclination to keep fully covered. There now seems to be less probability of lower values prevailing. For some time past there has been a big curtailment of production of manufactured goods, and there is a feeling that this must create a shortage in the long run in distributing centres abroad. With regard to cloth advices from Constantinople have caused a certain amount of uneasiness, and only a few minor transactions have been recorded. Buyers for Egypt have not been altogether idle, and grey staples have attracted rather more attention. Some producers of Egyptian yarns have met with an important turnover, but on the whole this section remains in a poor way. Prices have ruled steady, but many needy sellers are still to be found. The most encouraging cloth demand has been for China, and quite an encouraging turnover has taken place in bleaching descriptions, with steady buying in grey shirtings, sheetings and fancies, such as dyed goods. A few lines have been booked in light fabrics for Calcutta, Bombay and Madras, but on the whole India has continued very disappointing. Home trade buyers have taken more interest in prices, and some scattered sales have been arranged in fancies and specialities. American yarn quotations have been firmer. A fair business has been done in export numbers for Calcutta and China, and cops have been in request for Holland and Germany.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date February 15:—

The somewhat steadier tendency noticeable in our market at the end of last week, and referred to in our previous report, has been well maintained. The enquiry has broadened out a little, and sales show an increase of 500 bales on the preceding week, and for the first time this year a substantial rise in spot values can be recorded. This change of sentiment has been brought about by the strength displayed by the Alexandria

futures market, and the reports of more business doing in Manchester and district. These reports have been very frequent during the last few days, and there must be obviously a certain amount of truth in them, but we doubt very much if the volume of business actually put through has been large enough to warrant a rise of over twopence a lb. in Liverpool spot values. We fear that those who are expecting a large increase in sales to accrue automatically as a result of this rise will be disappointed. It is from the Manchester end, as we have so often pointed out, that the change will have to commence, when it does come. It would appear at the moment as if a start had at last been made, but until we perceive something more concrete, in the shape of actual business, we would counsel our friends not to base their hopes too strongly on any sustained improvement. China is apparently taking an increased quantity of goods, and one hears even of some lines booked for India, but by all accounts the prices obtained are far from profitable to the sellers, and in the latter country the political situation is still so unsettled, and the possibilities of disturbance are still so grave, that it is improbable that business will broaden out there just yet. An increase of 13,000 bales was added to the stock in Great Britain during the week ending 10th inst. During the same period deliveries to spinners showed a marked decrease on previous weeks. The local enquiry has been chiefly for Sakellariadis, Fully Good Fair to Good, and there would seem to be plenty of cotton available to meet buyers at prices which, though somewhat irregular, have shown a decided stiffening during the week. Low Sakel cotton has again been in request; the selection here is not a large one, and Alexandria c.i.f. prices when tested are generally found to be too dear to suit local buyers of this cotton. Pilon, Brown and Uppers have been comparatively neglected. A little enquiry has been experienced for re-cleaned Sakellariadis, and if shippers would be content to sell at reasonable prices, this business might broaden out a little, but as a rule we find that too great a gap exists between sellers and buyers to effect business, and "straight" cotton is bought in preference. Sudan cotton contributes its usual quota to the sales total. We advise those of our friends who are anxious to make a turnover, to take advantage of the present level of prices, i.e., with Fully Good Fair Sakellariadis at 17.75d. and meet buyers when possible. C.i.f. business on the whole remains quiet. Sales 1,900 bales (includes 330 Sudan). Quotations are raised 25 points. Fair Sakellariadis exceptionally 275 points dearer.

MOTOR TRANSPORT IN CZECHO-SLOVAKIA.

State motor transport has developed very considerably in Czecho-Slovakia within the last two years. In 1914 the whole of Austria contained only 1,583 kilometres of motor routes, of which 20 routes with an aggregate length of 470 kilometres were located within the present territory of Czecho-Slovakia, while towards the end of October, 1920, State motor transport in Czecho-Slovakia was taking place on 47 routes with an aggregate length of 972 kilometres. Two types of motor bus are being used for the purposes of passenger traffic. One, supplied by the firm of Laurin and Klement, seats 16 passengers and has a 40-h.p. engine, the other, manufactured by the Paga Works will accommodate 20 passengers and has a 50-h.p. engine. The maximum speed of these vehicles is 25 kilometres per hour, and the passenger rates are 80 hellers per person per kilometre.

The Minister of Posts and Telegraphs has received 300 applications for the establishment of State motor routes in all parts of the Republic. When the orders placed in 1921 have been delivered, the Ministry will have 112 motor-buses, 21 motor-lorries and 20 motor transport vehicles of the "Walter" type. The increase in the transport rates has been rendered necessary in the main by the higher price of motor spirit.

PALESTINE RAILWAY PROVISIONING DEPARTMENT.

A Palestine *communiqué* states :— It has been alleged in certain quarters that the Railway Provisioning Department is run at a loss, which is borne by Government subsidy or military revenues—that it usurps the place of ordinary merchants and trades-people to their commercial detriment, and enjoys an unfair advantage over them because it has privileges to respect of Customs and freight charges.

When the Railways in Palestine were taken over by the Civil Administration in October, 1920, it became necessary to devise immediately a substitute system of rationing its employees, some thousands in number, who had been hitherto rationed by the military authorities. As the alternative to rationing could only have been an increase in wages involving in turn higher freight charges adverse to the interests of the general public, it was decided to form a Railway Provisioning Department, and for this purposes sanction was given for the loan from railway funds of £E5,000.

So far from being financially a failure, this department has already repaid interest at 5 per cent. more than £E3,000 of the loan, and has contributed to, rather than taken from, railway revenues, by the payments which it has made to the Railway Administration for rents, lighting, freighting, and the like. Business houses in Haifa have benefited from it, for it has placed with them extensive orders, and opened up a wider field for their operations.

Only officials of the Palestine Railways, members of H.M.'s Forces, stationed at Palestine, and all officials of the the Administration are entitled to purchase from the Department. The regulations of the Railway Provisioning Department prohibit the extension of its service to the general public.

THE INDIAN STORES DEPARTMENT.

The following *communiqué* has been issued :—A short time ago a notification by the Government of India announced that the main principle of the recommendations of a Store Purchase Committee, which had been appointed there, regarding the agency to be established for the purchase and inspection of stores for Government Departments in India, had been accepted and that a new Indian Stores Department was accordingly being constituted, in the first instance on a temporary basis, under a Chief Controller of Stores.

From allusions in the press it appears to be inferred in some quarters that the practice of indenting for Government requirements through the Store Department in London, which is now controlled by the High Commissioner for India, will be discontinued. This inference is not correct. The primary function of the new Department in India is to ensure that, in accordance with the general policy of the Government of India, stores of Indian manufacture, where these can be satisfactorily procured, should be bought in preference to imported stores. That policy is in no way a fresh departure, and the new Department in India, with a central purchasing and inspecting agency, it designed to facilitate it. No change is, however, intended in the practice of obtaining through the Department in London such stores as must still be obtained by India from outside.

SMYRNA MARKET FOR SMALL TOOLS.

The trade in modern small tools in Smyrna district is still in its infancy, as the artisans of the city, numbering perhaps 1,500, still cling to their time-honoured instruments (says an American Consular Report). However, considerable progress has been made by England, France, Sweden, and especially Germany, in supplying the Smyrna market with hammers, hatchets, wrenches, nail pullers, handsaws, files, pliers, screw drivers, planes, and boring tools. These articles, though poor in quality and haphazard in selection, are regarded with increasing favour by merchants, tradesmen, and the public in general. They are invariably made of cast iron or drop-forge material and are not much superior to the tools made locally of malleable iron. Tools designed for the finer kinds of mechanical work—those of an unusual or specialized nature, carefully and scientifically tempered or made of crucible steel—are practically unknown in this district, their need not yet being imperative.

NEW COMPANIES.

Sharristan Steamship Company.

The Sharristan Steamship Company has been registered as a private company with a capital of £45,000 in £1 shares (22,500, 6 per cent. cumulative preference shares). Objects :—To acquire and hold ships, boats and vessels of all kinds. Arrangement with Frank C. Strick and Co., Ltd., and Gray Dawes and Co. Registered Office : 27, Leadenhall-street, E.C.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on February 3 were as follows :—Agricultural Bank of Egypt, £4 23-32; Alexandria Water Co., Ltd., £7,1-8; Anglo-American Nile Steam, £2,10-32; Associated Cotton Ginners, £13-16; Banque d'Orient, Fr., 50; Behera Ord., £E8,5-8; Brasseries d'Egypte, Fr., 70; Building Lands of Egypt, £27-32; Cassi di Sconto Priv. Fr., 108; Ciments d'Egypte Priv., Fr., 57; Ciments d'Egypte Div., Fr., 35; Comptoir Fin et Com. d'Egypte, £15-16; Consolidated Lands, Pt., 5; Credit Foncier Fondateur, Fr., 935; Credit Foncier Act., Fr., 672½; Credit Foncier 1880 Oblig., Fr., 335½; Crown Brewery Priv., Fr., 120; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 83; Eaux du Caire Jouissance, Fr., 107½; Egypt and Levant, S.S.Ord., 31s. 10d.; Egyptian Delta Light Railways, £3½; Filature National d'Egypte £10,3-8; Immeubles d'Egypte Soc. an des., £6; Khedivial Mail S.S. Ord., 100s.; Khedivial Mail S.S. Co., Pref., £2½; Kom Ombo Ste An de Wadi, £6; Kom Ombo Ste An Fondateur, £34½; Land Bank of Egypt, Parts de Fond., £38; Lots Turc. £T31½; Menzaleh Ramleh Railways, £2,7-8.

The traffic receipts of the Suez Canal from January 21 to 27 amounted to 2,940,000 francs, as against 2,870,000 francs.

Edible oil olive may be expected from Tunis to all destinations without limitations as to quantity, subject, to the payment of an export duty of 50 francs per kilogs. Olive oil exported by parcel post is to pay duty at the rate of 4.25 francs per package of 10 kilogs., and 2.10 francs per package of 5 kilogs. These duties are to be levied until October 31 next.

NOTES OF THE WEEK.

Yugoslavia and Bulgaria.

A fortnight ago our Sofia Correspondent referred to the mistake that, in his opinion, Bulgaria was making in not resuming diplomatic relations with Greece, and it is safe to say that in the Balkans the greater the facilities for a prompt exchange of views between two Governments the better the prospects of maintaining peace. It is therefore good news that Bulgaria and Yugoslavia have just taken a step in the right direction, their representatives at Belgrade and Sofia respectively having now presented their credentials. Another step in the same direction, towards a friendly understanding, has been taken by Yugoslavia, who has waived her right to try Bulgarian war criminals. The Belgrade Government is to be congratulated on its action, which, it is not to be doubted, will bear good fruit. If it should set a precedent in encouraging the taking of a more generous outlook on the point of view of other States in that part of Europe, the gain for all concerned will be very great.

The Bulgarian Army.

The disarmament of the Bulgarian Army in accordance with the Peace terms is complete, and the Inter-Allied Military Commission of Control is leaving the country. The head of the Commission, General de Fourton, has expressed appreciation of the loyal manner in which the Sofia Government has fulfilled its Treaty engagements, and the Allies will doubtless bear this in mind in their future dealings with the Bulgarians. It would be a disastrous thing if the impression, already abroad, should gain ground that it paid better to follow a policy of obstruction than to abide by your word and behave honourably. We observe that in replying to questions put by Lord Newton and Lord Sydenham in the House of Lords last week, Lord Curzon declared that the question of allowing Bulgaria to recruit her Army on a voluntary basis was in the hands of the Conference of Ambassadors, who have to see that the terms of the Treaties are carried out. Lord Curzon added that the voluntary principle "was applied all round and would be applied to Turkey later on." If the first part of this statement could be taken literally, there would be no more to be said, and Europe would undoubtedly be the gainer; but unhappily that is not the case, and it is even possible that the Bulgarians would declare that certain of the Allies set them a poor example in this respect. And, after all, example is better than precept.

Poland and the Little Entente.

According to the Vienna correspondent of the *Observer*, the Little Entente is no more, for it is henceforth to include Poland and is to be known as the Quadruple Alliance. If this report be true, the credit for it must largely go to the fallen Roumanian Prime Minister, M. Také Jonescu, who unceasingly urged the desirability of an alliance with Poland. This Quadruple Alliance will immensely strengthen the position, external and internal, of all the countries which are contained in it. For not only will it present a solid defensible block in Europe, but intercommunication will surely be facilitated. We rejoice to perceive that differences in foreign policy, on which Roumania and Poland must hold views very different from those of Yugoslavia and Czecho-Slovakia, have not hindered Central European statesmen from realizing that stability is the first and immediate essential.

Consequences of the Quadruple Alliance.

It will be noted that Greece, Albania, and Bulgaria remain alike unallied, and though perhaps Greece is, through her recent connection with Roumania, nearest to an *entente*, we cannot easily see any one of these countries soon becoming attached to the Quadruple Alliance. Convinced though we may be that it is the natural destiny of Roumania and Greece, as the most "Western" powers in South-Eastern Europe, to become linked with each other, and that Yugoslavia will eventually join with Bulgaria, we see in the fundamentally and necessarily different policies in regard to Russia which these two groups will pursue the bases, not certainly of discord, but of disunion. Russia is a young country, whose development is a matter of course, and it is in the light of that development that the policies of the Balkan peoples, as being nearest to her, will be moulded. But, to revert to the short view of affairs, it may incidentally be remarked that this Quadruple Alliance makes hay of the rumoured suggestion of an alliance between France, Turkey, and Poland. The suggestion, a quite credible one, was this: on the accomplishment of a Graeco-Turkish peace, the veiled, subsisting hostility between Russian and Turk would re-assert itself, and in the event of a Bolshevik attack Turkey and Poland would come to each other's assistance, with France thus succeeding in her vendetta against Bolshevik Russia.

The Condition of Greece.

He would be a bold thinker who would guess the future of Greece, even in three months' time. Disquieting things are happening there, and how it will all turn out

no one knows. The harm that the bitterness with which party strife is being carried on is doing to the country is incalculable, and one cannot well predict an easy time for it unless a spirit of compromise becomes more prevalent than it now is. Obviously the Government is in an unhappy condition, for the internal difficulties appear to be increasing. First, there is the revolt of Crete, the seriousness of which can be gauged from the letters of our Athens Correspondent: the latest report is that the sons of M. Venizelos have been arrested in the island. There is the extremely difficult question of the Patriarchate, dividing the Church on plainly political lines. There is, again, the absurd position in the Ministry of Education: half the professors of the University have been removed during the past year. Then there are the financial difficulties, the threatened intransigence over either Asia Minor, or Eastern Thrace, the insistent and apparently unquellable rumours of the King's abdication. In fact, the outlook for Greece is about as discouraging as it well might be.

The School of Oriental Studies-

It was matter for shame that until five years ago Great Britain possessed no Oriental School in which to train that endless stream of young men which flows yearly into Asia and Africa. We were reminded, when we read last week the excellent letter issued to the Press by the Governing Body of the School of Oriental Studies in London, that the success obtained by France and by Germany before the War in their commercial methods and in their general cultural standing in the East was in no small measure due to the knowledge of languages, customs, and country which the agents of that success gained at the Schools in Paris and in Berlin. It is, in fact, impossible to over-estimate the practical value to this country of a School of Oriental Studies in Great Britain, for, as the letter referred to points out, its students, men and women, "represent a great variety of interests, including officers of the Army and Navy, Colonial and Indian officers, business men, missionaries, and undergraduates and post-graduates."

An Omission of Ignorance.

But in addition to its practical value, the school offers opportunities for Oriental research which were denied to those great men who gave England an international reputation in the study of the East. We were surprised therefore, and grieved, to learn that there are still many who do not avail themselves of the use of the School—an omission doubtless due to ignorance. There is a tendency nowadays, possibly inevitable after the War, to think that, in dealing with Asia and Africa, knowledge and sympathy are superfluous, that force and a supposed moral superiority are all-sufficient; but it is a great error. For to-day, more perhaps than at any time in history, understanding of Eastern races is the first requisite in the entering into of relations with them, as it is the only basis on which permanent mutual benefit can be achieved, and it is precisely that sympathetic understanding that may be acquired at the School of Oriental Studies.

"From the Desert."

During the War we became accustomed to receiving our news from strange sources and through unaccustomed channels; but there is still a touch of novelty about a message from the Basrah correspondent of *The Times*, who announces that a report reaches him "from a correspondent in the Desert." For our part, we find the phrase refreshing, and our acquaintance with the

Desert and its people predisposes us in favour of the Desert correspondent and his reports. In this case he tells us that an important conference is shortly to take place at Koweit, where King Faisal of Irak, the Sultan Abd el Aziz es Saud of Nejd, Sultan Ahmed ibn Johar of Koweit, and the Sheikh of Mohammerah are to meet Sir Percy Cox. There are several subjects that may profitably be discussed by the Arab rulers mentioned; and though some of them will certainly require delicate handling we may hope that, with Sir Percy Cox's tactful guidance, the discussion will be both amicable and profitable to all concerned. For reasons which will be readily understood by those who have followed post-war developments in the Arabian world, the position of the Sultan of Nejd is just now somewhat peculiar. He is easily the most commanding figure among the Arabs to-day, and it is to be hoped that the British authorities both at home and on the spot, will make it clear to him that they appreciate his difficulties, and value his loyal friendship.

Mecca and Versailles.

A Cairo paper announced lately that King Hussein of the Hejaz had at last signed the Treaty of Versailles, but there is reason to fear that the report must be regarded, even now, as premature. Colonel Lawrence did his best to obtain King Hussein's signature, but he failed; and though King Hussein appears to be willing to sign it under certain reservations, that is unlikely to satisfy his Allies. The difficulty lies, of course, in the recognition of the French position in regard to Syria, and the hope of finding a way out of it looks very slender. A consoling reflection is that the withholding of the signature has not, so far, produced any very serious complications.

But there can be no denying that for the sake of our position—and France's—in the Arab world, it would be a good thing to get the signature.

Ireland and Transjordan.

A curious instance of the way in which 'home' politics are being studied in quarters where formerly they attracted no attention at all was afforded by a statement made in the House of Lords last week. In asking for information as to the Government's Transjordanian policy, Lord Raglan stated positively that the Emir Abdullah had held up Sinn Fein as an example to Palestine. The "distressful country" appears to have achieved this kind of fame in quite a number of places where even its name was unknown ten years ago, and it is now not surprising to be told that such views are expressed here and there by Arabs. Even so, it is a little hard to understand why the Emir Abdullah should have used such unwise language; for though he has never concealed his mistrust and dislike of some of our Allies, he has heretofore always appeared to be decidedly pro-British in his leanings. Probably the remark expressed only a passing mood of irritation. At the same time, we hope that Mr. Churchill will deal very fully with the subject of Transjordan when he presents the Middle East estimates.

India.

The week has brought no marked development of the situation in India. The welcome accorded to the Prince of Wales at Agra and Delhi, cities with a wide experience of royal personages, should not be read as indicating a change in the popular attitude, but rather as a manifestation of what the people really feel. The fact that they thought the manifestation to be safe shows that the illegal pressure of the Extremists has weakened for the

time ; but the continuance of this improvement cannot be counted on, and the news of an ugly riot in Assam, a purely political strike on the East Indian railway, and one or two other items, suggest that the position is still unstable. Some of our contemporaries in this country continue to put forward proposals for spectacular action of one kind or another, but we adhere to the opinion we have previously expressed that steadiness of purpose is the chief requisite just now. Passionless enforcement of the law is no doubt dull work, but Naaman the Syrian took that view of bathing in the Jordan, and yet it proved effective when at last it was given a trial.

The Position of the Services.

In the absence of definite news, a good deal of space has been given recently to a discussion of the present position of the chief Indian Services, and the public has enjoyed the benefit of enlightenment from Oxford, Kensington, and other places where they know, but little has been heard from the men who have the best right to speak. We have been at some pains to find out the views of the rank and file of the men now actually serving in India, and we think the result may fairly be summarised in the statement that there is no change of spirit, but some loss of heart, due to apprehension for the future, rather than to anything which has so far actually happened. Five years ago the man in the district knew that he must often act on his own responsibility, and that in doing so he could count on reasonable support from the higher authorities ; his expectation of support has been appreciably weakened, not by concrete instances of its being withheld, but by vague indications of the kind which most of us accept as guides to action in ordinary affairs ; and since failure to obtain support would make his work useless to India, he is less inclined than formerly to take the risk.

The Letter and the Spirit.

The official attitude towards such feelings is that they are unreasonable, because support is guaranteed by the instructions issued to the Governors of provinces. The rejoinder is that it is not a question of the letter of the instructions, but of the spirit in which they are interpreted, and that, judging by the experience of administration during the past year, it is not likely that a Governor will carry his support of an individual officer to a point

where it might involve difficulties with his Ministers or his Legislative Council. There are of course differences between Governors, and the intensity of these apprehensions appears to vary from province to province, but we have found them wherever we have looked, and they suffice to explain the loss of heart to which we have referred. An officer has often to risk momentary unpopularity, and it has been the tradition of the services to take that risk ; but when unpopularity may involve the withdrawal of the support necessary to make the action effective, it is idle to expect the same degree of resolution as has in the past so often saved the lives and property of the Indian subjects of the Empire.

THE WEEK AT HOME

London, Monday Evening.

Three By-Elections.

Three by-elections last week yielded three successive defeats for the Government. The first, when a Manchester Labour man beat a Conservative, was of little consequence ; it was a recognised Labour seat that only went Coalition in the hectic days of 1918. The Government must expect to lose all such seats as certainly as the Liberals in 1910 lost most of the seats they won by luck or accident in 1906. The second defeat, where a Labour man beat a Conservative in Camberwell, was rather more significant ; the turnover of votes was heavy, and Camberwell is a fairly representative London suburb—and like a good many metropolitan constituencies, rather more fickle in its politics than the provinces. But there was no mistaking the significance of the third defeat, at Bodmin in Cornwall, where an Independent Liberal beat a Conservative by a thumping majority.

In each case the vote seems to have been given against the Government rather than in favour of any particular type of Opposition candidate ; and against a particular aspect of the Government. The candidates ran as Free Conservatives, and the fact that they were all beaten shows that the country will not put its money on that horse just now. The fact could have been foreseen. The one constructive idea of the Conservative party is the reform of the House of Lords—a matter on which the country, in the noble and expressive phrase of the first Duke of Wellington, does not care “a two-penny damn.” Their other great idea is economy in education, a matter on which the country cares a great deal, but not quite in the way that the Conservatives intended.

The Axe that Failed.

The Geddes axe, in fact, has failed ; it is as blunt as a shilling razor after a single shave. The idea of economy is popular in the City, at the Treasury, and all the places, in short, where they think in figures. But England does not think in figures, and there is no doubt that some of the suggested economies have been condemned by public opinion. The Navy, for instance, had a good press when it protested against its rationing ; but something like dismay was caused by the theory that we could not afford to educate our children properly any longer ; and the Liberal and Labour Press has cleverly made a good deal of capital out of the way in which Conservative opinion undoubtedly welcomed the opportunity of cutting down the amount of education given to “the lower classes.” This was, of course, the old reactionary element in Toryism, for a good many Conservatives have personally admitted to me that they disapproved of this attitude.

However that may be, the country simply will not have it. It does not like the idea of rationing education, or any other department ; it is in the adventurous mood that refuses to count the pennies.

Sir Eric Geddes had hard luck. He did his work very well, but the country did not like the finished article. It wants certain things, and, like Mr. Mantalini,

does not care what the "demnition bill" works out at.

The upshot is that, in order to restore the popularity of the Coalition—which has been squabbling internally again—Mr. Lloyd George is expected to make a great series of speeches in the country in the near future. As a platform orator he has, indubitably, no rival, but it is clear that his policy will have to support the Liberal, rather than the Conservative wing of the Coalition; that is, of course, his natural orientation.

Ireland.

It is difficult to understand precisely what is happening in Ireland. It was expected that a general election to approve the Treaty would take place in a month or six weeks, and that the Provisional Government would insist on this being done to regularise their position. Last week, however, an agreement was come to between the Provisional Government and the Republican Opposition to defer the election for three months; the result of which must be that the Treaty remains in the air. Ireland, having got what she wanted, now seems inclined to put it aside as an empty toy; perhaps even to regard it as a gift-horse to be looked in the mouth.

Since the Provisional Government has no constitutional authority until the Treaty is ratified by a new Sinn Fein Assembly, the postponement seems inadvisable in every way; particularly it gives the Republicans a further opportunity of damaging the Collins-Griffith administration while the latter is immersed in administrative work. The arrangement took the British Government by surprise, and the Cabinet has frankly confessed itself puzzled; it has put off the further stages of the Treaty Bill at Westminster until it has had an opportunity of consulting the Irish Government. Delays are dangerous.

An Engineering Strike

There is a prospect of another grave industrial conflict, this time in the engineering trade. The employers appear to have been somewhat aggressive, not as much in the matter of wages and overtime, as in that of asserting their "control" of the factories; the engineers' union apparently does not welcome the prospect of a strike, and has striven to come to terms, but the men (as well as the employers) are rather more bellicose.

Much the same situation has appeared in the publishing trade, where the packers are on strike against the advice of their union. These methods tend to weaken trade unionism, and are causing considerable anxiety among the Labour leaders.

In the Courts.

There were some interesting cases in the Law Courts last week. Perhaps the most curious was an action in which a married woman, divorced by her husband for adultery with a chauffeur, alleged that after the divorce the husband came back to her again, and proposed marriage to her! It was not disputed that they lived together again for a time, but eventually the husband married another woman, whereupon the action for breach was brought. There was no known precedent for such a case, but it was, of course, perfectly "within the law." The jury believed the lady's story, and awarded her substantial damages.

Meanwhile, the Public Prosecutor has summoned Mr. Bottomley to appear in a few days to answer in the

police court as to the disposal of certain funds in the Victory Bond Clubs. This is the natural outcome of the recent litigation, and was not unexpected.

It is thought that the City Equitable case, which has brought down several subsidiary insurance companies and is now engaging the attention of the Official Receiver will eventually involve the appearance of some of the parties concerned in another court.

Quicker Travelling.

An agitation is afoot for faster trains. It is said that locomotive speeds are less than in 1914, that the journey from London to Glasgow takes longer than in 1888—but surely the more difficult it is to get to a place like Glasgow the better?—and that only the Great Western is really up-to-date. The suggestion is that locomotives are sufficiently powerful, but that they are not run at anything like their full speed.

There is probably something in this, but railway performances vary in the most mysterious fashion. When I was a boy, the Great Northern was the fastest line in the world; it is now as slow as its catering is bad. But then thirty years ago the South-Eastern was a byword of contempt, both for slowness and unpunctuality. It is now as punctual as the sun, and its non-stop express, making allowance for the difficulties of the road, rank among the best performances in the country.

The Stock Exchange Boom.

One had become so used to reading the adjectives depressed, stagnant, lifeless, or even dead, in connection with Stock Exchange reports that it gave something of a shock last week to discover that the investor had suddenly woken from his long sleep. The reduction of the Bank rate and the cheaper Government borrowing provided the appropriate stimulus, with the result that the investment market in gilt-edged securities boomed heavily. British Government and Colonial stocks rapidly appreciated; foreign stocks and home rails rose in sympathy; and jobbers and brokers, for the first time for many a long day, were able to take a liqueur with their coffee. There were even some enquiries for the safer type of industrial shares, but the day of the industrial market is not yet. A few new capital issues have been made, however, and seem to have been well subscribed.

The rise in Government stocks automatically suspends purchasers by the Government broker, and thus directly saves the State a great deal of money—which comes in time to help next month's Budget. It needs all the help it can get, after the disastrous trade experience of last year.

The Week's Books.

"The Foundations of Sovereignty" (Allen and Unwin by Harold J. Laski, is a book of political reconstruction. Starting with the proposition that "a State in which sovereignty is unified is morally inadequate and administratively inefficient," the author proceeds to develop the theory of a pluralistic State, which is "an attempt to remedy these defects by substituting co-ordination for a hierarchical structure." It is based on a study of the impulses which are at work in the business of production and the channels we have erected for the satisfaction of those impulses; and it is indicated that "we must start from the admission that the allegiance of man is diverse and that where his loyalties conflict it is ultimately both safer and better for the community that the instructed conscience should be the source of his decision." The author follows largely in the footsteps of Graham Wallas and G. H. D. Cole.

"The Problem of War and Its Solution" (Allen and Unwin) by John E. Grant, is a book whose title almost explains itself. It denies that war is inherent in human nature, and examines it in its biological and historical aspects.

From Our Own Correspondents.

ROUMANIA.

Bucharest, February 15.

British Gift to Roumanian Farmers.

A few weeks ago I reported that the Agricultural Relief for Allies Committee, had shipped to Roumania a variety of pedigree cattle, pigs and fowls, to the value of about £10,000, to be distributed as a gift to Roumanian farmers, for the purpose of improving the breed of Roumanian cattle, etc. This shipment arrived safely last week at Constantza on the Johnston liner 'Aviemore,' and with the assistance of the Roumanian authorities was speedily forwarded on to Bucharest. This consignment, consisting of 30 bulls and 58 cows of the Shorthorn breed, 22 boars and 60 sows of the York breed, and 475 fowls of the very best English strains, is now on exhibition at the Agricultural School on the Chaussée Kisseleff, under the auspices of the Ministry of Agriculture. Major J. H. Marples, assisted by Mr. R. J. Euren, the representatives of the British Committee, are entrusted with the handing over of the gifts to the respective authorities. During the whole voyage the cattle were under the care of seven English farmers, who volunteered for the job.

On the opening day of the show, the King, the Queen and the Princesses Marie and Ileana were present, and, under the guidance of Major Marples, examined with great interest the different varieties of the animals exhibited. As it was proposed that the Royal family should also be presented with a couple of each variety for their estates, the Queen made it a point to do the selecting herself. Besides the British Minister and the Legation staff, a large number of farmers and experts were present, who greatly admired the purity of the breeds. The local press expresses lively appreciation of the generous gift of the British people.

The Roumanian Government has placed a sum of 200,000 lei at the disposal of the Ministry of Agriculture in connection with the upkeep of these animals.

British Club in Bucharest.

The British colony in Bucharest has for many years felt the need of a British Club, where the members can meet together for social intercourse, and which would serve as a recreation centre not only for Britons residents here, but also for visitors from Home. More than one endeavour has been made to start such a Club in Bucharest, but owing to difficulties, such as too small a number of permanent residents, the expense involved, and last but not least the want of the right spirit, these efforts remained fruitless. It is true that since the Armistice the colony has grown considerably, and it is now estimated at about 300. As a proof that the moment was ripe for launching such a scheme, a few weeks ago when a small number of ladies and gentlemen met to attempt another start, the idea caught on like wild-fire; and within a very short time since the initial steps were taken, the British colony in Bucharest can now boast of a fully organized Club with suitable rooms in the very centre of the town (Passagiul Imobiliara—at the back of the "Select" Restaurant). It must be admitted that the pecuniary difficulty was surmounted chiefly through the generous offer of a few gentlemen of the colony, who guaranteed the rent of the rooms for the first year. It is further thanks to the keenness and zeal of the same gentlemen that the whole work of organizing the club was carried out so rapidly to a successful issue. In recognition of their services in these matters, they were elected at the first general meeting, which took place on January 28, as members of the Committee and officers of the Club. They are:—Chairman, Mr. G. S. de M. Rogers; members of the committee, Messrs. J. H. McGaffin, W. M. Watson, H. R. Saltmarsh, J. Pitts, and J. Young; Hon. Treasurer, A. J. A. Rogers; and Hon. Secretary, A. Rolton. The British Minister, Sir Herbert Dering, has kindly consented to be Honorary

President of the Club. It is only fair to make a special mention of the activity and keenness displayed by the First Secretary of the Legation, Mr. E. Millington Drake, in assisting the Organizing Committee to start this Club.

The outstanding feature of this Club is the idea of making it a mixed Club, thus embracing the entire British Community in Bucharest. The Ladies Committee consists of: Mrs. E. Millington Drake, Mrs. A. J. A. Rogers, and Miss Thom.

Bulgarian Komitajis.

After a lull of several months, Bulgarian Komitajis are reported to have again started to attack the villages on the Roumanian side of the Dobruja frontier. This time, a gang of about 80 under the famous *komitaji* leader, Petre Enciu, made a night attack on the village Ahmatlar, and surrounding the town-hall, school and gendarmerie post, killed three Roumanian officials and wounded two others. They were armed with rifles and hand-grenades.

General News.

King Alexander of Yugoslavia is expected to arrive in Bucharest on Monday, February 20. He will be accompanied by M. Pashitch, the Yugoslav Premier, and M. Nintchitch, the Minister for Foreign Affairs. During his five days' stay in Bucharest, of which only the first three days will be official, the customary Church betrothal of King Alexander and Princess Marie will be conducted. On this occasion, among other festivities, there will be a grand reception and gala dinner at the Royal Palace and a special performance at the National Theatre.

M. Yovanovitch, the well-known Serbian painter, arrived in Bucharest a few days ago. He has been sent to Roumania by King Alexander to paint the portraits of the King and Queen of Roumania and Princess Marie. M. Yovanovitch became famous after painting the portraits of the late Emperor Franz-Josef and of the ex-King Karl of Hapsburg.

YUGOSLAVIA.

Belgrade, February 22.

Genoa Conference Prospects.

Prospects of the future conference at Genoa have caused great excitement in both political and commercial circles. Politicians are very anxious to see what will be the effect of the *début* of the Little Entente on the political scene of Europe. This will be the first time that the Little Entente will appear as one body, probably lead by Dr. Benesh, Premier of Czecho-Slovakia. Neither a detailed programme nor the attitude which they are to take at the Conference has yet been decided upon, but great importance is attached to the coming sub-conference of the Little Entente Premiers, which is to take place in Liubliana as soon as Dr. Benesh has finished his tour in England and France.

The news that England is not inclined to invite the delegates of the Little Entente to the preliminary Conference of Allied experts has caused some papers here to publish Anglophobe articles.

Separatists in Croatia led by the famous Raditch have

SUDAN.

¶ All interested in the commercial development of the Sudan are invited to communicate with the offices of the

Sudan Government Railways & Steamers.

5, Northumberland Avenue, London, W.C. 2,

where information regarding produce of the country, facilities for transport, etc., may be obtained.

prepared a Memorandum to be addressed to the Conference, in which they complain of the terroristic methods applied to them by the Government in Belgrade. The Memorandum itself is nothing but a highly condensed mass of—to use the mildest possible expression—extremely exaggerated and falsely presented incidents. According to the general belief, the object of this Memorandum is really to ease off very tight relations between the leaders of the Hrvatski *bloc* and the rural population who are already beginning to see that none of the wonderful promises made by their hotheaded leaders are coming true. Whatever game M. Raditch is playing at in Croatia, unless he adopts for his motto "Viribus Unitis" he will not be much use to his country and a bitter awakening is in store for him in the near future.

The Budget in Parliament.

The Budget for this year has finally been brought up for discussion in the Skupština. From the very beginning, the sitting assumed a stormy appearance and the members on the left and extreme left took an openly hostile attitude as soon as the Speaker opened the session. The Minister of Finance read out so-called minimum estimates, but even these did not seem to satisfy the majority of the House, and all have been returned to the Reduction Committee with the exception of those of the Ministry of Communications, the Minister of which made the question of his retaining his portfolio doubtful, unless the credits are passed *en bloc*. In a very open and elaborate statement he made it clear to everybody that the life and the prosperity of the country depend solely on its communications, and that in the present state of affairs the railways are going to ruin very fast.

War Operations in Thrace.

The constant flow of rumours coming from Greece relating to the possibility of a transfer of the warfare from Asia Minor to Thrace has begun to find an echo in the Belgrade Press, and a certain amount of uneasiness is already felt regarding the peace and security on the eastern borders of Yugoslavia. The aim of the Belgrade Government will doubtless be to preserve the strictest neutrality and to maintain the state of affairs brought about by the various peace treaties. It is worth while noting that the possibility of Bulgaria's taking a hand in the deal is not now met with the bitterness which used to be observable in the Belgrade Press in all matters concerning Bulgaria. Let us hope that this may mean the beginning of a period of better understanding between the two nations.

King Alexander's visit to Bucharest.

Two days ago King Alexander left for Bucharest in connection with his betrothal to Princess Marie.

After the Requiem Mass for the late King Peter the Belgrade Court went out of mourning on February 16, and the King is now able to attend to all ceremonial duties connected with his engagement.

The Premier, M. Pashitch, and the Foreign Minister, M. Nintchitch, are accompanying the King and will act as civil witnesses representing the Kingdom of Serbs, Croats, and Slovenes.

BULGARIA.

Sofia, February 19.

The Communal Elections.

Ninety per cent. of the peasant population, representing 70 per cent. of the total population, are to-day participating in the Communal Elections. In ordinary times these elections pass almost unnoticed, but this year all parties have conducted very vigorous electoral campaigns and the results are awaited with impatience by Government and Opposition alike. If the voting goes in favour of the Government, the news will be known to-morrow, but if the Opposition succeed in securing a majority there will be a delay of some days in announcing the results. As is generally the case with elections, one encounters optimism on all sides; the higher officials in the Government declare that the Government is certain to have a majority, although lesser lights prophesy that the Agrarians will only obtain 50 per cent. In the event

of the Government securing 50 per cent, their position will be considerably strengthened, as the Bourgeois and Communists will individually be in a minority. In fact the Government will have nothing to fear if they have a clear majority over the Bourgeois, as the latter will never be able to combine with the Communists. The latter have worked as hard as any of the other parties but it is thought that their vote is likely to show a falling off. The crux of the whole matter is whether the Bourgeois parties will beat the Government. The three main groups, Democrats, Obedinists, and Radicals—although still at variance in Sofia, have made common cause in many of the villages, and the enthusiasm shown for the Democrats is especially striking. No startlingly new election cries have been raised by Government or Opposition, but the Agrarians maintain their programme of government by the people, and insist that a return to government by Bourgeois would be as disastrous as it has proved to be in the past. The Bourgeois argue that the Government has failed to carry out what it promised, namely to improve the financial and economic state of the country, failed to get on good relations with foreign Powers, failed to maintain internal law and order, and, last but not least, failed to do away with bribery and corruption. The Communists claim that neither the Agrarians nor the Bourgeois can give to Bulgaria what she really wants—*viz.*, a replica of Lenin and Trotsky's Government.

An Election Ruse.

There has been one election ruse, which for sheer audacity deserves a place in the annals of electioneering stories. A week ago, the Ministry of the Interior issued a *communiqué* to the mayors and prefects of all villages throughout Bulgaria, informing them that the Allies had agreed to grant Bulgaria a three years' delay in the payment of her reparations. At the same time the news appeared in many newspapers, including the official organs of the Government. The natural inference to draw was of course, that the Government had succeeded

IN THE GREAT SOUTH.

Attention increasingly turns to the Dominions, and not least to the great countries of the South. Amongst thousands of people the conviction grows that their future, or that of their children, lies there.

The Union of South Africa is receiving its share of attention. Deservedly so. It is a comfortable country, with large resources; sufficiently developed to be well past the pioneer stage, yet with much development ahead.

That does not mean work for all comers; on the contrary, the supply of wage-earners at present exceeds the demand, and there is unemployment. But it does mean conditions that merit notice from those who are able to establish themselves without financial assistance or dependence on an employer.

The prospective farmer especially, if he has the necessary capital of not less than £2,000, will find much that is attractive in the Union of South Africa. Land is cheap, taxation is comparatively light in the rural areas, living conditions are pleasant. There is great variety of soil and of climatic conditions, conducive to varied production. Every sort of farming has been well established in some part or other of the country.

Not least worthy of attention is the wide choice of environment. The newcomer can hardly fail to find just the surroundings he seeks. There are the prairie-like plains and great mountain slopes of the Free State; the picturesque sub-tropical coast belt, and the more bracingly-climated highland farms of Natal; the green hills and park-like country of Eastern Cape Province the Karoo, famed for its unfailing sunshine and the tonic quality of its air; and the rich, mountain-girt valleys of Western Cape Province.

In the Transvaal there is a selection of all these environments or a choice of the remoter pastoral life, away from the highways in the ranching areas where game is still plentiful.

Particulars of the position and prospect in each branch of farming, and of facilities for obtaining training and guidance before investing, should in the first instance be obtained from the Office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, W.C.2.—Advt.

in securing an adjournment in the payment of debts, thus causing relief to the tax payer.

Directly the Inter-Allied Commission of Reparations heard what was transpiring, they sent a Note to the Government, requesting them to publish a denial at once. It is understood that the Government refused to comply with their request, so the Commission replied by drawing up a "Denial" of the news, and sent this *démenti*, direct to the principal newspapers; but on the following day, *Zora*, an Opposition newspaper, alone published it. On investigation it was found that the Censor had refused to allow the Commission's denial to appear in the other papers. Naturally the Commission at once remonstrated with the Government, and, it is believed, did not hide their astonishment at the latter's attitude. The net result is that the papers have now been allowed to publish the denial, but too late to permit of the news being known in the villages before the elections. The ruse was undoubtedly a clever one, and up to a point it may prove to be successful. It is, however, very doubtful if such an act can in the long run do anything but harm to its authors. It seems that a telegram from the Bulgarian Legation in London to the Ministry of Foreign Affairs at Sofia, announcing that there was a possibility of a three years' adjournment, was the excuse for the ruse.

General News.

M. Alexander Malinoff, leader of the Democrat party, who for some time has been in poor health, has gone abroad for a three months' change of air. During his absence M. Liaptcheff, ex-Minister of War, will act as chief of the Democrat party.

Evidence of various Army officers was given in the "Radoslavoff trial" last week. One and all of the witnesses testified to the preference that was shown towards the German troops, at the expense of the Bulgarians, during the war.

GREECE.

Athens, February 12.

The Situation in Crete.

The Minister of the Interior, M. Stais, who journeyed to Crete last week in order to ascertain the real causes of the recent troubles there, has returned to Athens. Speaking to Press representatives the Minister declared that the situation in general in the island, particularly in the western provinces, was by no means satisfactory. The main cause of the disturbances was the concentration in Crete, after the elections, of irregular elements including 1,000 men who had formed part of Gyparis' regiment. (Captain Gyparis was in command of the Corps de Sureté during the Venizelist regime). Another cause of the troubles was the attitude adopted by certain Venizelists who were unceasingly assuring the population that their chief would soon return to Greece. The anti-Venizelists said M. Stais, threw all the blame on the Venizelists; the latter, however, most emphatically repudiated this charge. The Government had decided to enforce very severe measures in order to put a stop to these disturbances, and had already had the mayor of Canea—one of the most ardent supporters of Venizelism—arrested and deported.

A Demonstration in Adrianople.

A meeting to protest against any attempt to separate Thrace from the kingdom of Greece, was held at Adrianople last Monday. It is estimated that the demonstrators numbered 13 thousand, many of whom were Turks, Armenians, and Jews.

M. Courtidis, Member for Thrace, delivered a speech in which he emphasized the impartiality and the justice exercised by the Greek Administration, and expressed the hope that the Great Powers would not commit the crime of separating Thrace from Greece. M. Courtidis was succeeded by Hamid Ihsen Effendi who proclaimed the gratitude of the Mussulman population of Thrace towards Greece, and stated that the Turks had at last found peace under the Greek flag. The inhabitants of Thrace, added the speaker, "can no longer continue

being victims of the various policies adopted by the Powers, who should realise that we do not wish to be troubled in the peaceful existence which we are now leading. When the Bulgarians were dancing in the Mosque of Sultan Selim, and Greeks and Turks were being drowned by the dozens in the Arda and Maritza rivers, where were these Powers?"

The delegates of the Armenian and Jewish communities of Adrianople also spoke in the same strain, and a resolution was finally passed to the effect that the population of Thrace would oppose, by force of arms, if necessary, any rectification of the Greco-Turkish frontier. Copies of the resolution were handed in to the Allied representatives in Adrianople, also to the Thracian deputies. Similar meetings were held in all the large towns in Thrace.

Comedy Becomes Tragedy.

During the evening performance at the Kotopouli theatre last Monday a wounded soldier who was sitting in the front row of the stalls, suddenly jumped on the stage and producing a huge knife attacked three of the actors who were playing. At first the spectators thought that the sudden appearance of the soldier was a new scene which had been added to the play; when, however, they saw the stage covered with blood they realised the truth and something like a panic followed. This became still greater when one of the spectators started firing at the soldier with his revolver. The assailant who, it was afterwards ascertained, was partially insane as a result of shell-shock, was finally disarmed and conducted to a neighbouring police station. The three actors, one of whom was seriously wounded, were conveyed to hospital.

Football.

On Sunday (February 5) to celebrate the opening of the League Season here a Football Gala Day was held.

King Constantine was invited to attend, and arrived at the New Phaleron grounds at 3.30 accompanied by

Piræus

the Queen, the Crown Prince, Prince Paul, and Prince Carol of Roumania. It had been arranged for the eight clubs participating in the League to play four short exhibition games, and on the arrival of the King all the teams marched past the Royal Enclosure. The British team played against the Naval Cadets, this being the first of the four games. Prince Paul—himself a Cadet—kicked off for the British, the game resulting in a draw, each side scoring one goal.

The afternoon was a great success, a large attendance being present and a military band giving musical interludes. The weather was excellent.

Miscellaneous News.

A Member's Club Dance was held at the British Club on Saturday night, February 4, which was attended by nearly all the well known members of the British Colony in Athens. Owing to mourning for his father, the British Minister, Mr. F. Lindley, was not present. The evening was a great success and everybody had a most enjoyable time. It is now proposed to hold a Members' Carnival Dance on the 18th inst.

While on patrol duty off Mersina, the Greek auxiliary cruiser 'Naxos' captured the s.s. 'Berkshire' of the Anglo-Egyptian Steamship Company, which was transporting coal and petrol destined for the Kemalists Army. The 'Berkshire' was escorted to the Naval Arsenal at Salamis.

According to telegrams received from Constantinople, a very enthusiastic reception was given by the Greek element of that town to the new Patriarch, Meletios IV. On the very same day the Government *Gazette* here published the Royal Decree confirming the condemnatory verdict passed on the Patriarch by the Holy Synod of Athens.

M. Stergiadis has returned to Smyrna, the Government having come to the conclusion that his presence there was more necessary than in Constantinople. M. Triantafyllakos, Member for Arcadia, has been appointed Greek High Commissioner in Constantinople, and is leaving for his new post towards the end of this week.

TURKEY.

Constantinople, February 13.

The New Patriarch.
