Throughout the long and chequered history of the Patriarchate of Constantinople, few Pontiffs have been enthroned in more discouraging circumstances than H. H. Meletios IV. Not only has the Sublime Porte refused to recognise him, but the Hellenic authorities themselves have rendered the Sublime Porte's action more effective by analogous measures. The Royal Decree ratifying the judgment formulated by the Synod of Greece against the new Patriarch was communicated to the Greek High Commissioner, M. Votsis, last week; and the Greek Consular authorities are refusing to recognise the legality of any certificates concerning births, deaths, marriages, etc., emanating from the Patriarchate. Thus the Ottoman Greeks of the capital find themselves between the hammer and the anvil.

As already reported in the London Press, the inaugural speech of the new Patriarch was by no means cheerful, and although this was in harmony with the facts of the situation, it is at least a good sign as it shows that H. H. Meletios IV. has the moral courage to look facts in the face, however unpleasant they may be. It was unfortunate at least that the Director of the Theological College of the Phanar should have chosen the occasion to call upon the Patriarch in passionate terms to protect the Greeks of "Pontus." Thousands of lives have already been uselessly sacrificed in the interests of that agitation, which never really stood any chance of success, and it would surely be very unwise to do anything that would inevitably aggravate the already deplorable situation of the Greek colonies along the Black Sea coast—whatever may be left of them.

Contrary to the example of the Constantinists, the new Patriarch has set a fine example by freely pardoning those prelates who did their best to carry out the orders of the Athens Government and prevent his election. Such a proceeding was in harmony with His Holiness's moving appeal for unity in the Church upon the occasion of his enthronement.

The "Anatolian Patriarchate."

In the meantime the Angora Government has been pursuing its policy of completely abolishing the privileges accorded to Ottoman Christians by various Sultans ever since the time of Muhammad II, "The Conqueror." A willing tool has been found in the person of an unfortunate prelate named Eftimos, who is apparently to be the first "Patriarch" of Anatolia. According to this reverend gentleman, the Christians of Anatolia are in reality Turkish by blood and descendants of Turks converted to Christianity! Even the iron hand of Mustapha Kemal, however, is not finding the fulfilment of this preposterous plan very easy, and none but those who are completely ignorant of the past and present history of Turkey will be for a moment deceived by the fatuous arguments that are being adduced to justify the formation of an Anatolian Patriarchate. The subject merits the attention of those who naively believe that the Angora Government comprises all that is liberal and regenerate in Turkey.

The Political Situation.

Ever since the fall of the Briand Cabinet and the postponement of the Inter-Allied Conference, the political situation both in Constantinople and in Angora has been practically stagnant. The only development of any real importance is the journey of Yusuf Kemal Bey, the Kemalists Foreign Minister, to Europe, *via* Constantinople, where he is expected to-morrow. The precise purpose of his journey is not known, but there can be little doubt that it is connected with the principal object of Kemalists policy, namely, the complete isolation of Greece. Just as the Kemalists themselves without outside support would not be able to maintain a large army in the field, so the Angora Government has always realised that if completely cut off from outside assistance, the Greeks would sooner or later be forced to abandon the greater part of the occupied territories, if not all. It is, therefore, very probable that Yusuf Kemal Bey will attempt to persuade the Allies to make peace separately without taking Greece into consideration at all. The basis of his proposals, however, will be without any doubt the National Pact, but unless the Angora Government has decided after all to modify its interpretation of that famous pronouncement, it is difficult to see why Yusuf Kemal Bey should take the trouble to travel to Europe. The world will have to wait until he reaches Europe for the elucidation of the mystery, for, so far as can be gathered at present, the Kemalists Foreign Minister will make no statements for publication whilst in Constantinople.

Jevad Pasha in Aleppo.

The Turkish press announces that Jevad Pasha, the former War Minister who was recently released from internment at Malta, has arrived in Aleppo, and was warmly received both by the local population and by the official French authorities. Jevad Pasha was recently in Constantinople upon some mysterious errand, and it is understood that he is to take command of an army in Southern Anatolia. This army is to be formed by combining the Kemalists forces formerly utilised against the French on the Cilician front, and the forces hitherto under the command of Nihad Pasha on the so-called Mesopotamian front. This circumstance in itself is significant, and points to a renewed and energetic attempt on the part of the Kemalists to stir up trouble in the near future in Mesopotamia. It is of course unwise to attach much importance to rumour, especially in the Near East, but the welcome given to Jevad Pasha in Angora does not weaken the belief commonly held in Turkish and foreign circles generally, not even excluding all French circles, that the French authorities are at least well aware of Kemalists plans for the Spring.

ALBANIA.

*Tirana, February 22.***The Commission of Enquiry.**

The Commission of Enquiry in Albania has reached Kastrat, north-west of Scutari, where the Serbian attacks were reported. The Commission intends, in order to make the necessary enquiries, to go to Dibra in Serbian territory.

The Prefecture of Drin.

The organisation of the prefecture of Drin, which includes the regions along the river evacuated by the Serbs, has just begun. But the misery which prevails there is indescribable, for the Serbs in their destruction of a hundred and fifty villages have changed the country into a desert. The inhabitants are hard put to it to find even shelter in their ruined houses. The winter, moreover, is unusually severe, causing high mortality among a population already decimated by fire and misery. The lot of the children above all has been terribly sad.

Official Relations with Serbia.

As proof of its good-will the Government of Tirana sent on January 16 a note to the Secretariat of the League of Nations begging it to intervene and lend its good offices in the resumption of diplomatic relations between Albania and Serbia. I understand that the Albanian Minister for Foreign Affairs has just telegraphed direct to M. Pashitch at Belgrade on this subject.

Foreign Ministers in Albania.

I spoke in my last letters of the arrival of Mr. H. C. A. Eyres, the British Minister Plenipotentiary and Envoy Extraordinary, and of his official reception on January 24. So far Mr. Eyres is the sole Foreign Minister in Albania. M. Fortunato Castoldi, the Italian representative, has not yet presented his credentials, and France has not yet sent her representative, though he has been expected for two months.

In Parliament.

The Commission set up by Parliament has found that there is no ground for prosecution of Pandeli Evangheli and the members of his Cabinet, adjudging them as not guilty in the *coup d' état* of last December.

The budget is being discussed both carefully and heatedly. A provisional budget for three months has just been voted, showing the following allocations of 7,268,921 francs:—High Council, 20,360 francs; President of the Council, 9980 francs; Parliament, 140,360 francs; Ministry of Finance, 897,852 francs; Ministry of Public Instruction, 648,847 francs; Ministry of Justice 210,855 francs; Ministry of Public Works, 1,673,796 francs; Ministry of War, 2,248,875 francs; Ministry of Foreign Affairs, 282,910 francs; Ministry of the Interior, 559,634 francs; Department of Health, 272,145 francs; Department of Posts and Telegraphs, 238,847 francs; and Religious Tribunal, 64,700 francs.

Parliament has just voted the issue of Albanian money equivalent to 3,000,000 francs. The new coin is called *leke* and is worth 20 centimes, so that the total of *leke* to be issued will be 15,000,000.

Foreign Organisers.

An official *communiqué* published lately in the Albanian Press announces that the Council of Ministers has just decided to engage foreign organisers for the various Departments, namely for the Posts and Telegraphs, Army, Gendarmerie, Police, Finance, Agriculture, Health, Administration of the Interior, Survey, Justice, Public Instruction, also professors for the Normal School, the School of Agriculture, the Normal School for Girls and the boarding schools.

Most of these organisers and professors will be Austrian specialists from Vienna, but the Financial Adviser and the Adviser to the Department of Public Instruction will be English, or if it is impossible to obtain English, American. The choice of Austrians in preference to specialists of other nationalities is made for two reasons: economy, and the avoidance of any difficulty due to the rivalry between Italy and the other Great Powers.

ASIA MINOR.

Smyrna, February 16.

Considerable perturbation in business circles arises from the belief that the Greek authorities have the intention to commandeer freely whatever supplies they need for the army. So far they have only taken horses, mules, wool and cloth, but in preparation for an early resumption of hostilities on a very large scale, all kinds of stocks will probably be seized. At any rate a local printer has a very large order for forms for commandeering goods.

The £15,000,000 loan from European banks is confidently expected to shortly be a *fait accompli*; but if the money is not forthcoming the Greeks profess to be able to resist any Kemalist offensive that may be attempted. Troops are being hurried to the front, and base hospitals are well equipped to handle large numbers of casualties.

For some time the prisoners (Turkish and Greek) have given considerable trouble to the Greek authorities. The chief complaint has been that the food supplied was insufficient. Supplies from outside the prisons had been suppressed because many of the Turkish prisoners were, by these means, receiving large doses of "hashish." To-day a desperate revolt took place, and the prisoners killed two Greek officers and wounded several warders before the outbreak was quelled. M. Sterghiades, the Greek High Commissioner, has taken every precaution to obviate a repetition of the occurrence.

The American Archeologists working under Prof. Howard Crosby Butler, who is expected here in May, have decided to resume the excavation of the ancient city of Sardis. Messrs. W. Ransted Berry and Stiever have already left Smyrna for Sardis to make a preliminary survey and organise the work.

Smyrna, February 18.

The Kemalists have tried an attack on the Greek lines at Chivriili, north of the Meander Valley and south of Ushak, but met with a stout resistance. Both sides are reported to have lost heavily.

Colonel Gribbon, from Constantinople, where he is General Harington's Chief of Staff, has arrived in Smyrna and it is expected that he will visit the front with Major M. A. B. Johnston, the British Military Officer stationed in Smyrna.

TOPICS IN PARLIAMENT.

The subjoined headings are those of the official report.

India: Officers (Syce Allowance); Officers' Marriage Allowance; Officers' Servants.—Levant Consular Service (War Bonus).—Egypt: Closing of School, Assiut; Newspapers (Suspension)—Irak: King Faisal (Treaty); British Troops (Withdrawal); Council of Ministers.—Palestine: Riots, Jerusalem; Arms (Confiscation); Jewish Settlement.—(Thursday, 16th February).

India: Free Passages (Officers' Families); Indigo (Research Work).—Irak (British Troops).—(Friday, 17th February).

Greece.—Tangier.—India: Education (British Children); (Officials Passages); Indian Soldiers (Litigation) Act.—Egypt: British Goods (Boycott); Disturbance (Girga).—Middle East (Turkish Property).—(Monday, 20th February).

India: Budget; Army Family Pension Fund Rules; Moplah Train Disaster; Moplah Rebellion; Civil Servants (Pensions); Civil Service (Retirement); Bolshevik Agents.—Greece (Trade Credits).—British Army: Troops, Middle East.—Irak.—Palestine: Franchise; Mr. Costaki Saba; Emigration; Smuggled Arms.—(Tuesday, 21st February).

Egypt: Mohammed Said Pasha (Interview); National Debt; Military Court, Alexandria; Officials (Newspaper Correspondents); Sir R. Wingate (Correspondence).—Turkey (British Claims).—India: Civil Service (Retirement); Lepers; Political Prisoners.—Indian Subjects, Tanganyika.—Portugal and Greece (Treasury Bills).—Egypt: Mails Censorship; Education (Cost); Disturbance, Girga.—South Persia Rifles.—Palestine (Status).—(Wednesday, 22nd February).

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

GREAT BRITAIN AND GREECE.

To the Editor of "The Near East."

Sir,—THE NEAR EAST of January 19, containing a letter from Commander Kenworthy, M.P., entitled "Great Britain and Turkey," has only just reached me, and I would beg your indulgence for a few words in reply. It would perhaps, be too late in the day to answer your correspondent, were it not that he makes use of certain popular arguments which have been employed before by others, and will no doubt be used again if left to take root. Everyone acquainted with the Near East knows that these arguments are fallacious, but constant repetition without categorical denials has almost led them to be accepted as facts by the majority of English readers.

Commander Kenworthy begins with an appeal to our trade interests, pointing out the market which exists in Asia Minor for our textiles, and the disadvantages which our manufacturers and exporters sustain through the continuance of the war. Here, he is quite right, but with one difference; and that is that the vast bulk of the trade in the Near East is, and always has been, in Greek hands. The Turk is not a trader; he is a soldier, a peasant or an official of sorts. Your true Turk rather despises trade. On the other hand, the Greek is *par excellence* a man of commerce, and it is only by supporting Greek interests that our trade can revive in the Near East. The large Greek population in Manchester alone, most of whom are occupied in the textile industry, should be sufficient to make this clear in England. I do not say that the Turks do not like the British; I believe that the rank and file of them do at heart; but certainly the Greeks admire and respect Great Britain above all other nations. They look upon England, the country of Canning, Byron, Gladstone, and others whose memories they revere, as their one protector and friend. But when the question is raised as to whether Turks or Greeks could better further our trade interests in the Near East, one would think that a schoolboy would know enough to decide in favour of the Greeks without the slightest hesitation.

I must take exception to Commander Kenworthy's assertion that the Greeks are conducting a "campaign of annihilation of their hereditary enemies in Asia Minor." Nor is the war one that can be properly qualified as "racial and religious." The Greeks were given a mandate to pacify certain Asia Minor provinces, as all the world knows. The Treaty of Sèvres is not yet a dead letter, though there is a decided inclination in certain quarters to consider it as a "scrap of paper." It is no use labouring this question; presumably a text of the Treaty can be seen at the British Museum, or at some other official library, and anyone in doubt as to its provisions may inspect it for himself. Greece is in this war to liberate her fellow-Christians from Turkish atrocities, and yet this is called an "atrocious campaign." But there was nothing atrocious in the campaign that we undertook to liberate the "utlanders" from Oom Paul's despotism!

The annihilation and the atrocities have all been on the side of the Turks for ages past. When massacres palled, they had recourse to deportation. They have striven in every way to extirpate the Greek and Armenian races from the territories under their rule. A comparison of the census of the various provinces in Europe and Asia Minor for the last fifteen years is all that is needed to establish this fact. The independent observers who testify to Greek atrocities, mentioned by Commander Kenworthy, whoever they may be, are countered by well-known British and American war correspondents;

and, more terrible still is the unanimous testimony of the hundreds of thousands of Christian refugees flocking to Greece to escape the massacres which they knew full well were certain if they remained in their villages.

It is difficult to imagine on what hypothesis Commander Kenworthy bases his statements that the Greeks have "failed and failed dismally," and, further on, that "Now the Greeks have failed finally." The Greeks, in spite of the assistance given to Kemal in war material and stores by one of Greece's official allies, have afforded no excuse whatever for an accusation of failure. Their army is as good or better than it ever was; indeed, it is greater in numbers than it was at the beginning of the war, while the Greek positions are very strong. Greece will probably not attack in the Spring, for she has no desire to throw away more lives than she can help, but will await an assault, when she will give an excellent account of herself, as she has always done hitherto. But up to the present, occupying as she does a large slice of enemy territory, she must be considered as having won triumphantly, not failed dismally, and still less finally.

A very serious argument which has been adduced frequently of late is the effect of this war upon the Moslem population of India. It is not surprising that a man of Ghandhi's undoubted abilities should have pitched on this pretext to gain the support of the Mohammedan population of India. What is to be wondered at is how the Government of India has allowed his propaganda to pass unchallenged; and how it is that responsible British newspapers treat the matter seriously as though there were anything in the assertion save pure propaganda. If the Indian authorities allow Ghandhi to deceive the Moslems of India with specious falsehoods, they have only themselves to blame for the results. Of course, there is no question of a Greek war against the Khalifate, or Islam, or anything of the kind. Greece is fighting a certain Mustapha Kemal Pasha, a rebel against Turkey, who has a separate revolutionary government at Angora. That is the situation in a nutshell. So far as Constantinople and official Turkey are concerned, Greece is in the same position as the other Allied Powers. Greece has her Harmost, or High Commissioner there, just as have the other Powers. In short, Constantinople and Angora are different propositions altogether. And yet Ghandhi's false representations are allowed to proceed unchecked, and sections of the London daily papers which should know better, give them an air of authenticity which is astonishing to persons who know something of the situation.

Everyone, including the Greeks, wishes the campaign were over and done with; but Greece has obligations which she cannot repudiate: one of these is to protect the lives of her co-religionists in Asia Minor. If we were to take the trouble to put ourselves in Greece's place, we should see nothing extraordinary in her attitude. We have an example of our own close at hand. Blood is hotter in the Eastern Mediterranean than in the Irish Sea; Protestants and Roman Catholics are alike Christians; and yet, for all that, we have practically in our own midst what Commander Kenworthy calls a "racial and religious" war going on, and what could be called with a very little stretch of imagination a "campaign of annihilation." It is extraordinary how large the mote may appear in one's adversary's eye, and how small the beam in one's own. Let us therefore be charitable towards others.

I am, etc.,

C. S. BUTLER.

Athens.

14th February, 1922.

EGYPT: THE EUROPEAN VIEW.

To the Editor of "The Near East."

Sir,—Your correspondent who wrote on this subject (THE NEAR EAST, Feb. 9) has no anxiety as to the future, and thinks it would be well if our continental friends and neighbours would "share our philosophic view."

Those who know Egypt will concur in most of what he says, but not, I think, in some of the suggestions with which he concludes. Our occupation during the last 40 years has, he says, been tolerated by the rest of the world (*i.e.* Europe) because it has been generally appreciated that if we evacuated the country "another European" nation would inevitably take our place. It has been advantageous for all countries having commercial interests in Egypt. But it is largely the presence of our troops which has caused this feeling. If Britain were to hand over the administration of the country entirely to Egyptian hands, our French and Italian friends would be quite pleased. But "the withdrawal of the British garrison is quite another matter." The problem is not only British but international. If the average business man in England were assured that a French occupation of Egypt would not entail discrimination in favour of French trade, he would probably not have the slightest objection to the arrangement. The one essential is that in no circumstances should Egypt be left without a European garrison. Your correspondent suggests that the Egyptians themselves might be allowed "to determine the nationality of the European garrison." Or Britain, France, and Italy might each contribute a contingent to a joint force. Surely neither of these proposals could be seriously regarded.

Perhaps it would be well to state "the Egyptian View" as indicated in the latest native papers which have reached England. The claims as given *e.g.* in the "*Akhbar*" (News) may be summarised as follows:—Rejection of Lord Curzon's and Lord Allenby's memoranda, abolition of the Protectorate, abolition of martial law, release of political prisoners (including of course Zaghloul and his friends), establishment of a parliament by popular suffrage, to which Ministers would be responsible, and establishment of a Foreign Office which will appoint its ministers and consuls. Those advisers who will be temporarily retained, will advise only (no finality as to their advice being involved). They will not be members of the Cabinet. There will only be advisers—and that temporarily—in the Financial and Judicial Departments. All Secretaries and Under Secretaries of State to be Egyptians. When all this is carried out negotiations regarding the Sudan, the Capitulations, the Foreign Office, etc. can proceed. The mass of the nationalists consider that they are quite fit to govern. Why should they not do so as well as Greece or Afghanistan? They wish to lead their own lives without interference. If they are averse to a British garrison they would be equally, or more, averse to a French or Italian force. Comparatively little has been said on the subject of a garrison in the Egyptian papers.

Egyptians regard the questions now pending as purely between Egypt and Britain. There are of course some who are more pro-French in their sympathies, and at present there is a somewhat strange under-current in this direction. But although a very bitter anti-English feeling prevails at present, it may, I believe, be safely asserted that Egyptians in general would at heart prefer British influence to that of any other nation.

The remarks respecting "Our Allies and Islam" invite considerable criticism, which would, however, be out of place here. But as regards the statement that, while there is a violent anti-European movement in Egypt, "perfect peace reigns in the North African territories under French and Italian rule," it may be observed that circumstances in the latter dependencies are widely different. The system of education prevailing in those territories has not been such as to lead yet to a claim for self-government; whereas in Egypt the movement is the logical and inevitable outcome of our rule.

I am, etc.,

Feb. 23. ROLAND L. N. MICHELL.

BRITAIN AND INDIA.

To the Editor of "The Near East."

Sir,—Your correspondent F.H.S. argues that the

political crisis in India is the result of increasing poverty. May I point out that one of the greatest of Indian administrators took a precisely opposite view? When Alauddin the Khalji was faced with the risk of civil disobedience among his subjects, his first step was to seize all the property they possessed, and he pursued this course until, apart from officials and bankers, "no one possessed even a trifle in cash." The result was that "the people were all so absorbed in obtaining the means of living that the name of rebellion was never mentioned." The conclusion drawn at the time was that the possession of wealth fosters disaffection and rebellion among Hindus: it would be possible to argue from the experience of the past century that that conclusion is still true.

I am, etc.,

Outis.

THE PALESTINE ARAB DELEGATION.

To the Editor of "The Near East."

Sir,—The conclusion at which Lord Northcliffe arrived as the result of his own inquiries into the condition of Palestine made on the spot, will recommend itself to every Britisher.

Lord Northcliffe's visit disclosed two facts: (1) the seriousness of the situation in Palestine and (2) the necessity for an immediate, complete and impartial investigation.

Certain hurried commitments were made in 1917 to the Zionist Organization, which have not conduced to peace and happiness in Palestine. The Arabs, who form 93 per cent. of the population, are decidedly disaffected. They complain of a gross injustice being done to them. An impartial inquiry will either convince them of the baselessness of their complaint, or will recommend the redressing of their wrongs. No impartial inquiry has ever harmed a just cause. The Palestine Arab Delegation, therefore, appeals to the British Government, Parliament and the British Nation to reserve their decision on the Mandate until an investigation has found out the truth.

A hurried settlement that is not based on the recognition of the facts must inevitably lead to disaster. The Ideal must be realized through the channels of the Real. The Arab population of Palestine is a fact, and should be the main concern of politicians who are re-arranging the world. To ignore this fact of the Arabs in Palestine and their unwillingness to be dominated by Political Zionism may succeed for a while with the help of British armoured cars and aeroplanes. But can England afford to be ever on her guard in Palestine and the Near East, to be continuously on the defensive with the Moslem and Christian population hostile to her? Certainly not. England neither can afford this, nor is it the wish of her people that she should be so situated. The Arabs of Palestine are friends and should be treated as such, and not cowed by force of arms.

The moment the Delegation arrived in this country it asked in its official statement, called 'The Holy Land,' that a Commission of Enquiry be sent out to Palestine to examine and report. It is now glad that Lord Northcliffe has recommended this as the best way of getting at the truth.

This controversy might be kept up for years—statements made on one side and refuted by the other—without a satisfactory solution being attained.

One condition the Delegation would put forward which must readily meet with universal approval, and that is, that the Commission selected be *strictly neutral and unbiassed*, either one way or the other. If this condition is not fulfilled the inquiry would become a mere farce.

I am, etc.

(For the Palestine Arab Delegation),

SHIBLY JAMAL,

Hon. Secretary.

Hotel Cecil,

London, February 21.

GREECE AND THE ALLIES.

To the Editor of "The Near East."

Sir,—Sometime ago you did me the honour of publishing one of my letters in your valuable paper, and I now feel that I can trespass on your kindness once more, in putting forward the following facts.

The *Patris*, one of the leading Athenian papers, recently published an article stating that Mr. Lloyd George, in an interview with Mgr. Metaxakis (a full account of whose uncanonical and scandalous election as Greek Patriarch was published in the *Daily Telegraph* of January 12, 1922), said that Greece, who in the days of the Premiership of M. Venizelos had at her disposal all the wealth and support of England to-day has nothing to expect from her, *not even sixpence*, and that she must, moreover, give up Asia Minor.

It is inconceivable that a nation which was dragged into this war, in such odd circumstances, should, out of personal prejudice, be finally abandoned by those who forced it into this costly and endless enterprise.

I am, etc.,

FLIUS ELIOPOULOS.

February 11, 1922.

AN INSTITUTE OF HISTORICAL RESEARCH.

To the Editor of "The Near East."

Sir,—Will you allow me to inquire, through your columns, whether any of your readers would be interested to cooperate in some organised study of Western influence on Near and Middle Eastern peoples?

The history of this influence during the last two or three centuries is one of the keys to present oriental problems, and the intellectual and social sides are at least as important as the military, diplomatic and economic. There is an admirable field for such studies in the narratives of Western travellers, which, though often ransacked for curiosities of literature, seem never to have been surveyed systematically. But this field is so vast that no one inquiring into some particular subject can really cover it single-handed. Group work suggests itself, and I am trying to bring together at the Institute of Historical Research Malet St., Bloomsbury, a group of people interested in the studies that I have mentioned. For this purpose I am proposing to exclude India and Russia, to concentrate on the peoples and countries that have at one time been included in the Ottoman Empire, and not to go further back to start with than about the last quarter of the 17th century. On these lines I have already made a start with several collaborators.

At the Institute of Historical Research we have rooms, maps and works of reference and are conveniently near to the British Museum. If any of your readers wishes for further information, I should be glad if he or she would write to me at the Institute; I will only add that I am not asking for pupils but for collaborators, and that even those with little time to spare may give valuable help.

I am, etc.,

ARNOLD J. TOYNBEE.

(Professor of Byzantine and Modern Greek Language, Literature and History, University of London, King's College).

University of London, Institute of Historical Research, Malet Street, Bloomsbury, W.C.1.

February.

GREEK AND LATIN PAPYRI.

Exhibition at British Museum.

A special exhibition of Greek and Latin papyri, presented at various dates by the Egypt Exploration Society, was opened at the British Museum yesterday. The exhibition, which will be found in the MSS. Saloon, Case A, includes many interesting papyri of various kinds, selected to illustrate the wide range of papyrological discovery. There are examples of famous additions to Greek literature, like the *Paeans* of Pindar, the poems of *Cercidas*, and the *Oxyrhynchus* historian; theology is represented by the *Sayings of Jesus*; and the economic and social life of Egypt finds illustration in many non-literary documents, several of them rich in human interest.

FOOTBALL IN PALESTINE.

St. George's Boys' School was the first school in Palestine to give to games and physical exercise a definite place in its curriculum. Strange as it may seem to English people, who look upon games as a part of our national life, they had never been seriously attempted in any school, whether English or not, before October 1899, when St. George's School was started. Such games as there had been before amounted to no more than the spooning of a ball across a field in summer (cricket), or the aimless kicking of a bigger ball in winter (football). When Bishop Blyth introduced games as an integral part of what he had been so earnestly asked to provide—an English education—the innovation was very much criticised; not only by some of the older missionaries, who considered it frivolous to play games in the Holy Land, but by some of the pupils' fathers as well. "My son is fifteen," said a man, during a visit of protest. "I want him to walk slowly and soberly, holding a stick in his hand and looking thoughtful. I do not want him to play games as if he were an infant or a fool."

The boys, however, had their own ideas on the subject, and they carried the day triumphantly. Very soon they were playing an excellent game, and the Saturday matches became quite a feature of Jerusalem life. The Arabs turned out in numbers to watch the boys at play, and more than once a match was held up while a procession of Moslem ladies, securely veiled, strayed in leisurely fashion across the pitch, or in front of the goal, beautifully unconscious of the anguish they were causing. At first games were played on an empty field near St. George's, and the first matches (all three of which our own School won) took place in a corner of the Plain of Rephaim. A later playground was a portion of the camping ground of Godfrey de Bouillon at the Siege of Jerusalem (1099)—or, to be exact, of the English and Norman contingents of the First Crusade.

The question of a permanent playground soon became urgent. General feeling everywhere was now strongly in favour of games, and the growth of the School made a large playground a necessity. Bishop Blyth had long had in view the imperative need of securing a piece of ground immediately adjoining St. George's property on the south, and touching the wall of the school compound. This land belonged to several owners, in varying numbers of shares, a circumstance which added greatly to the difficulty of its purchase, (land questions being, in any case, very difficult under Turkish laws); yet a third of the shares had been acquired before the Bishop left Jerusalem in 1914. The Bishop of London, during his visit to Palestine, also realised the urgency of this question, both for the boys' sake and for the safeguarding of the property in general. Now, after the war which has so completely changed the surface of the world, there has come the chance to complete this affair, and thus to secure the College against the pressure of too-near or undesirable neighbours, while giving to the School the playground which is an integral part of its plan. It is not too much to say that the future of the school is vitally concerned, and so, indeed, is the whole of that group of buildings known as "St. George's," which the late Sir Charles Wilson enthusiastically described as "the finest and most harmonious modern buildings in Jerusalem."

Those who know anything of the work and its needs, its scope and its future, will readily grasp the importance to it of this great chance. But there are many more who have no personal knowledge of the Holy Land, who are yet most closely bound to it by sons and brothers whose lives were adventured—and in many cases given—for the freedom of Palestine and its people. Will not they, too, help in memory of the past school-days of those young soldiers, to secure to coming generations of the Boys of Palestine so great a boon! Donations should be sent to the Rev. E. M. Bickersteth, 12, Warwick Square, London, S.W.1.

In the Indian Legislative Assembly on February 22 Sir William Vincent read a telegram from Mr. Montagu, the Secretary for India, expressing his gratitude to the non-official members for their recent vote of confidence.

A message from Angora received in Paris states that one of the chief theatrical companies of Constantinople has been producing at Ismidt and elsewhere in Anatolia adaptations of Molière's "*Malade Imaginaire*," "*Mariage Forcé*," and "*Médecin Malgré Lui*."

THE BLACK PARTRIDGE.

(By L.J.)

The black partridge, or—to give it its more correct name—the common francolin, *Francolinus vulgaris*, is one of the most popular of game birds to the sportsman in the wide range of country it frequents. It is found all over northern India from the north-east to the north-west, both in the plains and in the valleys of the hills to an elevation of about 6,000 feet; and from India it extends, in suitable localities, right across Asia to the Mediterranean. It still has a habitat in Cyprus, and once was known throughout the littoral as far as Spain.

Mohammedans have a pretty conceit that all birds welcome the dawn with a prayer to the Almighty; and of the cries so interpreted none is, perhaps, more attractive than the "*O subhan tere kudrat*" (O God, of Thy power who shall speak) of the black partridge. The Hindu rendering is "*Lehsan, piaz, adrakh*," (garlic, onions, and ginger), but that, to the Mohammedan, is only the sordid and material version of the infidel, as no doubt also is the "Be quick, pay your debts" of the English. In whatsoever way, however, the cry may be onomatopoeically expressed, the clear, ringing call is a pleasant and familiar sound in camp life. It is heard all through the cold weather in the East, and in the warmer air of the lengthening days of spring it increases in intensity. By the end of March, around the sun-swept fields of corn or in the neighbourhood of jungle grasses and water, the birds begin to be noisy. They are noisier still in the hot splendour of an April day, and in May, as the nesting season approaches, they fling their cries to the skies and winds in very midsummer madness. It is, in fact, only at the first hint of autumn in the foliage that they are temporarily silent.

The gladsome greeting is always welcome, but there are other reasons why the black partridge should be popular. It is one of the handsomest of God's creatures; even the comparatively sober-plumaged hen with its warm tones of brown and buff is evidently a game bird, and the cock, black-breasted, spotted with white, with red necklet and white checks, brown wings and pencilled back, perched on a little eminence, possibly an ant-hill, and shouting its adorations for all the world to hear, is pre-eminently beautiful. It is moreover one of the best of our Eastern sporting birds, and no mean adjunct to the camp fare.

In the hills, where there is probably much else to shoot and the cover is very dense, the common francolin will not be the main feature of a day's sport; it is in the plains, in the sort of country the bird loves, that big bags have so often been made. It must have water, and, being so essentially a ground bird, it must have shelter for purposes of concealment. But where there is water, it is likely that there will be grasses, the tall *sarkanda* grasses nodding their silvery plumes in the breeze and sun-light, other grasses, tamarisk jungle perhaps; also where there is water, there may be cultivation, rain or irrigated, and although the bird may not be dependent on cultivation for food inasmuch as it will feed on white ants, larvae, insects of all kinds, grass seeds and shoots, the readiness with which it resorts to crops shows that crops in the neighbourhood are a great attraction. It is not a bird of open and desert plains, and in mustard, wheat, barley, cotton or sugar-cane fields it will often be met in considerable numbers. So it will be found in the tracts irrigated by the great canals of northern India, where there will always be water and cover and crops; and in the low-lying land flanking the rivers, where grasses and tamarisk and scrub jungle with patches of cultivation are a common feature of the landscape.

An ideal spot is a certain locality some few of us still hold in affectionate remembrance. It is a flat country, yet not so flat that an immense natural drainage does not meander through it. In times of heavy rain the drainage is liable to be a wide stream of water, during the rest of the year it is dry; but some water always lies in deep channels and hollows unless there is extreme drought, and on the land damp with inundation

crops are raised, and grasses grow in great abundance, the tallest of them, the *sarkanda*, swaying their shapely heads to and fro in the warm air. The scattered villages are few and far between, the spot is far removed from the haunts of sportsmen, and there undisturbed for many years the black partridges swarmed. In addition to a few quail, a few grey partridges may be, a chance duck or two, a snipe, and many hares, any good gun would bag forty brace in a day.

Places like that no doubt still occur in India and beyond the confines of India to the Near East, but they are fast disappearing. Though the gun is the worst of the black partridge's enemies, it has many others. A ground bird, dependent on concealment in its battle for existence, it chooses a site for its nest with such cunning that nests are very difficult to find. The nest is just a hollow in the ground sparsely lined, and there at the end of June or in July some ten or twelve pale blue eggs are laid. If the eggs escape marauders, the chickens in their forage for food assuredly pay their toll, nearly a dozen may be hatched, but it is rare to see more than three or four in a brood. There are kites and hawks in the upper air in the day time, and jackals, wild cats, and mongooses on the ground by day and by night seeking their meat from God. It says much for the watchful terror of the parent birds that any chickens survive. Still they do. The black partridge is not what would be called a prolific breeder, but in comfortable quarters, in out of the way places, where wild nature is the only hostile element, it seems able to take care of itself and prosper and multiply. But when on top of all that comes the merciless gun, it is very easily shot out. In many localities where they were once numerous, they are now unknown.

And that is the pity of it. It is so good a sporting bird, it does not run, and it rises from brake or crops so strong and full of flight, that the sportsman finds it difficult to cry "hold enough." The bag increases in the ambition for a big bag, but a long succession of big bags means extinction. All of us would be sorry to see the black partridge in its beauty disappear, we should miss the inspiring call which is so closely associated with the deluge of sunshine of the Eastern landscape; but unless some measures can be taken for the bird's protection and preservation, it is only too likely that it will become as extinct in the East as it is on the littoral west of Palestine.

THE PRINCE OF WALES AND ST. DUNSTAN'S.

The Prince of Wales sent the following message to Lady Sanderson, the President of St. Dunstan's Fund in India on the occasion of a dance recently held at the Grand Hotel, Calcutta:—"I am very interested to hear that a dance is being given in aid of St. Dunstan's and I wish it every success. I regret very much that I am unable to be present. The very sad death of Sir Arthur Pearson is a terrible blow, not only to all of us, but to the hundreds of men who have been blinded in the great war. It is up to us to leave no stone unturned to ensure that St. Dunstan's goes as far as it can in the same way as it did under the wonderful guidance of Sir Arthur Pearson."

NEAR EAST BOOKSHELF.

THE DEBT TO ISLAM.

"ARAB THOUGHT AND ITS PLACE IN HISTORY." By De Lucy O'Leary, D.D., Lecturer in Aramaic and Syriac, Bristol University. (London: Kegan, Paul, Trench, Truener and Co., 10s. 6d. net.)

One of the many arresting events of those centuries which we are prone to stigmatize as the "Dark Ages," or as the "Middle" Period between the brilliant days of Greece and Rome and those of the Renaissance, was the strange and devious path whereby Greek philosophy and science travelled round by Baghdad, North Africa and Spain, permeated Latin Scholasticism, and prepared the ground for the day when it was possible to proceed direct to the stores of ancient learning without the help of the Oriental. The part that had been played by Syrian, Arab, and Jew was a singularly romantic one; and it is well that we should be reminded from time to time that, although we have kicked away the ladder by which our forefathers rose, we owe a great deal more to it than we are often prepared to recognize.

Dr. O'Leary aims at tracing the transmission of Hellenistic thought through the medium of Mohammedan philosophers and of Jewish thinkers living in Mohammedan surroundings; he shows how it became modified and considerably altered in the course of transmission, and how the finished product proved to be a disturbing factor which tended to disintegrate the traditional theology of the Church. While our western civilization can be traced back to the Roman Empire, and to the influence of Greece, the Mohammedan influence, as it came through Spain, seems at first entirely alien. But what the Mohammedan and Jewish thinkers had done was to take material which had been essentially part of the Hellenistic Roman stock, brood upon it, and remould it during the period of their seclusion from Christendom, and finally produce the old material in fresh form. Thus, while the Christian Church had taken the simple Christian elements, and, under the influence of Greece and Rome, had worked out her own theology, a new stage arose when a new wave of Oriental genius presented its contribution, which, like the preceding, needed reshaping and readjustment by Western minds who went direct to the Greek originals.

Dr. O'Leary's main argument is essentially in accord with what we know of the function of the ancient Semites. They were not strikingly original; they were "middle-men"—in several senses. They helped to diffuse material culture, but they distinguished themselves by stamping their personality upon what they sent forth or what passed through their hands. They took what they could of Hellenistic thought and left their impress upon it; or rather they re-created it into a new organism. Surrounded by Sumerians, Egyptians, and Indo-Europeans, the Semites lived in an area where three continents met. In all the intensity of their passion they gave new form and new life to what they assimilated, and it is no strange fact if it left a deeper impression on Jewish and on Christian thought, than on the Mohammedans themselves (p. 295). In other words, although Hellenistic culture left a very distinct and enduring impression on Mohammedan thought, among the Jews, who had reached a more advanced stage of development, the influence was greater. Finally among the Christians themselves there was a more penetrating criticism of its fruits, and a greater ability to estimate it and utilize what was best in it.

In the nature of the case the book is rather difficult in parts, but the author has made it interesting—we

note, for example, the account of the way in which the Latin translations were made (p. 277)—and it will repay careful reading. He makes us understand how philosophy—not to mention theology—could be a tremendous force dominating social, legal and political ideas. Thereby we are in some measure able to realize how our western thought, highly specialised, "differentiated," but ill-co-ordinated, severs us from the Oriental. So, because we, as an Empire, have grave responsibilities in the East, it behoves us, as best we can to understand the principles and presuppositions with which Oriental life and thought are permeated, and Dr. O'Leary's book may thus contribute to a better understanding of the East. It certainly helps towards an appreciation of the part the East has played in our own development, and to a clearer perception of the close interrelation of eastern and western movements in the absolute history of human thought. In a book that has to deal with many points of detail there are naturally some that provoke dissent. It suffers here and there from misprints, and much as we appreciate the chronological table which the writer has provided, we sadly miss an index.

S.A.C.

POETRY OF THE SIKH RELIGION.

"THE SISTERS OF THE SPINNING WHEEL." By Puran Singh. (London: J. M. Dent & Son, Ltd., 6s. net.)

This is a volume of religious poetry written in English by a Sikh, the larger part of it being translated from "Guru Granth," the sacred book of the Sikhs. There is a long and most interesting introduction by Ernest and Grace Rhys, giving an account of the beginning of the Sikh religion and a brief history of its founder Narak, who was born in 1469—and who, like the Prophet Amos, was neither a prophet nor the son of a prophet, but an herdman, and of the nine Gurus or teachers who followed him in succession until 1708. We are also shown how the difficulties of preserving their freedom made it necessary for the Sikhs to adopt a militant attitude like that of the Mohammedan religion, which was not at all the attitude of their gentle founder. There is also a brief autobiography of the author of the book. He writes wonderfully naturally in English and often expresses his meaning with real beauty, but every now and then we are pulled up by expressions that are commonplace and are obviously those of one writing in a foreign tongue. The atmosphere of the poems is that of deep spiritual devotion, and the subject of most of them is the state of bliss to be derived from Nam—true union with God. In many of them are expressed the ideas of God's presence in everything and of the inability of the human intellect to comprehend his greatness.

"All the march of things is divine, be it of star or wind or water or of tree."

"Hate no one, bear enmity to none, in each and everyone is He."

"There are skies above skies and earths below earth and man's mind is tired of this great search, It cannot reach the end of His Vastness."

The similarity between St. Matthew, Chapt. VI, and one translation from "Guru Granth" is striking.

"O man! why art thou so crest-fallen in the thought of thy bread, why this "What shall I eat?" and "Whence?"

Behold the flocks of cranes fly in mid-sky and they have their little ones safe-buried in sands behind, and they have no such fear; they ask not who shall provide for their little ones.

My friend, thy distress is not the want of bread; thy misery is thou hast not yet seen the Reality face to face."

In the fantasy of the language through which the spirit of devotion is expressed we are sometimes reminded

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

of George Herbert, particularly in one poem called "An Offering" and in the lines beginning "Who shoots at me? Ah! these arrows steel-tipped with keen, keen edges."

One rather long poem, taken from a writing by the fourth Guru, Aijan, who was put to death by Jahanjir, and called "The Sweetest" is full of the ecstasy of loving worship. Apart from the beauty of some of these writings this book should be of interest to all students of the Sikh religion and also to those who will be introduced for the first time to the teaching of the saintly Nanak and his successors, much of which seems to be expressed in a Sloka which we find here translated:

"Is not life a serious thing?
Is not death there?
No other way of escape, but live."

MUSICAL NOTES.

ON GRAMOPHONE RECORDS.

In the last batch of "His Master's Voice" records it is again the vocal ones that are the most notable. Perhaps the best of all is Destinn's singing of "Morro, ma prima in grazia," from Verdi's "Un Ballo in Maschera." Here that purity of tone and intense feeling for line which characterise the world's greatest dramatic soprano are very evident; it is a fine record indeed. Her phrasing is everywhere exquisite, but particularly in the use of *portamento* does she convey the pathos of the piece. There is, further, a marvellous change of tone in the last note but one which is wonderfully reproduced.

Chaliapine is represented, or, better, presented, in Schumann's "The Two Grenadiers." I say presented because this song shows him as a bad artist. First, it is here sung in Russian, which of itself upsets the actual notes; next, Chaliapine takes liberties with the notes as Schumann wrote them; and, lastly, he so twists and kinks the rhythm as to make the song lose its sustained splendour. He sings magnificently, of course; and one is moved by the splendid dramatic impulse which urges on to its climax in the "Marseillaise," but all the same one is convinced at the end that all this re-moulding is quite unjustified.

A double sided record by Peter Dawson contains Verdi's "Creed" from "Othello" and Mozart's "Non piu andrai" (from "Figaro"), both being sung in English. In the first the singing is impassioned, but not greatly dramatic, spacious without being intense; and the second, though pleasant enough, is scarcely sufficiently graceful or light-hearted for Mozart.

We will turn now to the instrumental records, which are, generally speaking, the most interesting.

There are two records of string-quartet playing: a double-sided one by the Catterall Quartet containing the *Allegro* movement from Haydn's Quartet in G major (Op. 76, No. 1) and the *Agitato* movement from Brahms' Quartet in B flat (Op. 67), and a single sided one by the Flonzaley Quartet containing the *Polka* from Smetana's Quartet in E minor. To me personally these quartet records are the most pleasing of all, and to everyone I think they are those of which one latest tires. The Catterall quartet, which comes from the North of England, has earned distinction in the matter of interpretation. Their Hadyn playing is spirited and unusually delicate,

but their sense of tonal values is here overestimated, and there is insufficient finesse. But for Brahms their direct, rather brusque style is much more suitable, and the whole is informed with good rhythmical vigour, with the viola doing especially excellent work. Both movements are finely recorded. Of the Flonzaleys I can think of nothing new to say: to me they are the greatest quartet in all imaginable worlds. The fullness and balance of their tone in this *polka* are even in reproduction marvellous, and their rhythm is perfection.

Of the orchestral records there remain the "Tristan and Isolde" Prelude in two parts, played by Sir Landon Ronald with the Royal Albert Hall Orchestra, and Humperdinck's "Hansel and Gretel" Overture in two parts played by the Adrian Boult with the British Symphony Orchestra. In the Wagner the richness of the orchestral texture is partly blurred, but some idea of its extraordinary colour can be obtained, and in the Humperdinck, which is always popular with the British public, there is notable playing, the contrasts being seized with admirable discipline.

The Royal Philharmonic Society.

It is not often that two conductors at the last minute disappoint organisers of a concert, but a belated illness overtook both Sir Landon Ronald, who was originally to have conducted the Royal Philharmonic Orchestra at the Queen's Hall on February 23, and Mr. Eugene Goossens, who was taking his place. To say, therefore, that Mr. Frank Bridge, who eventually did conduct, failed in a few particulars, would be very ungraciously to point out the obvious. Mr. Bridge is a very fine musician indeed, but no musician can carry off a stiff orchestral programme with practically no rehearsal. In his unfortunate circumstances Mr. Bridge did boldly and well, for shortcomings were only seriously apparent in his accompaniment of M. Jacques Thibaud's playing of Lalo's "Symphonie Espagnole" and in his reading of the now famous Bach-Elgar Fugue in C minor. Strauss' "Don Juan" was the best performed thing of the evening, its architectural merits being very clearly clearly demonstrated, and with especial distinction in the balance of tone. Not that I care for the work; in fact it does not appeal to me at all strongly. But of still less value is the vacuous "Spanish Symphony" for violin and orchestra of Lalo, and its padded insipidities were made tolerable only by the superb solo-playing of M. Thibaud. There is no soloist living who plays with the chiselled beauty of this Frenchman: his sense of proportion is exquisite. Certainly he made the most of the Symphony, investing it with no wanton, sentimental originality, but with just that degree of individual subtlety that makes accompanying so difficult an art. Particularly his rhythm in the second movement (*Scherzando*), and his technical mastery in the fifth (*rondo*) were things to cherish and to marvel at. His playing, not the music, easily deserved the encore that he gave: Kreisler's arrangement of a song from "Coq d'or." One could not expect that Mr. Bridge would give us in Butterworth's "Shropshire Lad" the entire essence of the thing, that dripping film of slow beauty; its loveliness, as of drenched blossoming, was made a little dry and too long drawn out. Nor is it just to criticise the Bach-Elgar Fugue, which demands a very special technique. And it may be that Goossens has spoiled for us all other conductors' readings of it.

To finish the concert came Beethoven's Fifth Symphony (sportingly played without any breaks for applause). It may be shameful impertinence, but by most of this Symphony I was put in a state not far from boredom. And that this was mainly due to knowledge of the work I dare not doubt: for Mr. Bridge was managing the orchestra well, except in some *pizzicato* passages and there was beautiful playing in the wood-wind, particularly in the *andante* movement. I haven't the pluck or the impudence to say that I never want to hear the "Fifth" again, but it will have to be a very fine conductor indeed to make me re-possession the opinion of it that I once thought was irrefragable.

ANDANTE.

PERSONAL AND GENERAL.

March 2 (New Style).

February 17 (Old Style).

Ragab 3, 1340 A.H. of the Moslem Calendar.

Adar 2, 5681 of the Jewish Calendar.

The Hon Lady Alexander has left Marseilles for India.

The Earl of Bessborough has returned to London from France.

General Bruce, leader of this year's Mount Everest expedition, left Delhi on February 23 for Naini Tal.

Gholam Housein Khan Ansari, Secretary at the Persian Legation, has returned to town from Persia.

M. Virgil Tilea, Secretary at the Roumanian Legation, has left for Bucharest.

Miss Francis E. Newton has left London on her return to Haifa, Palestine.

General Haddad Pasha is leaving Baghdad for London.

Cardinal Bourne left Malta on February 24 for Naples and Rome.

The Shah of Persia reached Marseilles on February 24 from the East.

A daughter has been born to Mr. and Mrs. Gordon Maclean, of the British Consulate, Zagreb.

The marriage arranged between Viscount Tamworth and Miss Hermione Morley, was due to take place at Sialkot, Punjab, India, last Tuesday.

Colonel Bramley, Director of Public Security in Palestine, is coming home in connexion with the formation of the new British Gendarmerie Force.

Air Vice-Marshal Sir E. L. Ellington left London by on February 23 by the P. and O. express train for Marseilles, there to join the s.s. *Kaisar-i-Hind* for Port Said.

Sirdar Abdul Hadi Khan, the first Afghan Minister to the Court of St. James's, is a passenger by the incoming mail steamer from India. He will land at Marseilles, and is expected to arrive in London immediately.

Lt.-Colonel Sir Wolesey Haig, who has recently returned from Persia, and Lady Haig are staying with Colonel and Mrs. W. W. Ward at Baston Lodge, St. Leonards-on-Sea.

According to a telegram received by Dr. Weizmann, president of the Zionist Organization, Sir Herbert Samuel, High Commissioner for Palestine, is decidedly better after his recent indisposition, and is improving daily.

The engagement is announced between Mr. T. Arthur Codner, of Kingskerswell, South Devon, and Dora Ogilvy Cameron, only child of Mr. and Mrs. W. H. Aitken, Oak Hill, Torquay, and late of Ceylon.

The wedding of Brigadier-General Rudolph Hogg, C.M.G., C.I.E., Central India Horse, and Mrs Eldred Platt, youngest daughter of the late Sir Henry and Lady Green, took place last week at the Chapel Royal, Savoy.

The marriage was celebrated on February 22, at St. Margaret's, Westminster, between Major Norman Stead Turner (R.F.A., late Commanding the British base Depot, Mesopotamia) and Elizabeth Taylor (late Q.A.I.M.N.S.Res., Mesopotamia).

Major F. H. Humphrys, the British Minister to Afghanistan, had to delay the crossing of the frontier for a few days, and it is now expected that he will reach Kabul about the same time as the Afghan Minister arrives in London. His Councillor will be Mr. R. R. Maconachie and his medical adviser Major A. N. Dixon.

At Oxford University on February 21, the Craven Committee were authorised to make grants to Mr. S. Casson, Fellow of New College, towards the expenses of his proposed excavations in Macedonia, and to Mr. W. A. Heurtley, Oriel College, to enable him to prolong his studies at the British School at Athens, of which he is the Oxford student for 1921-22.

The Alexandria correspondent of the *Morning Post* writes (February 21):—The League of Nations Health Commission to the East has arrived in Egypt. The members of the Commission are Drs. Masden (Denmark), Buchanan (Britain), Blue (America), Violle (France), and Jitta (Holland). They inspected the quarantine area here, and will shortly proceed to Palestine.

The ceremony of the betrothal of King Alexander of Yugoslavia and Princess Marie of Roumania was celebrated on February 19, at the Controceni Palace at Bucharest, Archbishop Miron Krstea officiating in conformity with the Serbian rites. King Alexander presented his fiancée with an emerald ring. In the evening a private dinner was held at the Palace, and the Minister for Foreign Affairs gave a gala dinner to M. Pashitch, at which M. Bratiano, the Roumanian Premier, was present.

Three Rhodes Lectures on "The New Constitution of India" (Government of India Act, 1919) are being delivered at University College by Sir Courtenay Ilbert, G.C.B., K.C.S.I. The first introductory address was given on March 1 under the presidency of the Right Hon. The Viscount Chelmsford, and the other two lectures, which are on "Provincial Government" and "Central Government" respectively, will be given, both at 5.30 p.m., on March 8 and March 15, the Right Hon. Lord Carmichael and the Right Hon. Lord Meston, respectively to be in the chair.

Field-Marshal Viscount Allenby left Victoria by the 8.15 boat train on February 22, to return to Egypt via Brindisi. In conversation with a Press representative Lord Allenby said that an arrangement had been made with the Government to the effect that the results of his mission to this country should be published simultaneously in London and Cairo, and in these circumstances he had nothing to say as to those results. With regard to other matters, statements had already been made in the Press, to which he had nothing to add. Among those on the platform to bid farewell to Lord Allenby were Field-Marshal Sir Henry Wilson, the new member for North Down, General Sir Ian Hamilton, representatives of the Foreign Office, and a few personal friends. Lord Allenby was accompanied by Mr. Sheldon Amos, Legal Adviser to the Egyptian Ministry of Justice.

The Arab Horse Society's Show

of Arab Stallions, Mares and young stock, and also of Arab-bred horses will be held (in conjunction with the National Pony Society's Show).

AT THE

Royal Agricultural Hall

Islington, N.

on Friday and Saturday, MARCH 3rd and 4th, 1922.

APPOINTMENTS AND PROMOTIONS.

The *Gazette* announces the appointment of Colonel Bhola Nauth, C.I.E., I.M.S., as Honorary Physician to the King, Indian Military Forces, in place of Major-General P. Carr-White, C.B.E., M.B., F.R.C.S., I.M.S. (retired).

The following officers are appointed Honorary Surgeons to the King, Indian Military Forces: Colonel J. K. Close, M.D., I.M.S., and Colonel W. G. Pridmore, C.M.G., M.D., I.M.S.

M. Yevren Taditch, now at the Yugoslav Legation in Washington, has been appointed Counsellor at the Legation in London.

The Earl of Lytton, Governor-Designate of Bengal, has appointed the following members of his staff:

Private Secretary.—Mr. W. H. Wilkinson, I.C.S.

Military Secretary.—Major H. G. Vaux, C.I.E. (for six months).

Aides-de-Camp.—Capt. J. Selwyn, R.A., Capt. E.D. Eveleigh, M.C., R.A.

Mr. G. V. Colchester has been appointed to the post of geologist on the Geographical Survey of the Anglo-Egyptian Sudan in succession to Mr. C. T. Madigan, who now holds a lectureship on Geology at Adelaide University.

OBITUARY.

The death has occurred, at Galata Estate, Ceylon, of Mr. Oliver Stafford Edwards. For 36 years he was a planter in Ceylon, where he earned fame as a champion quoit player, cricketer, and long and short distance runner. Perhaps he was best known for his service in the Ceylon Planter's Rifle Corps, having over 39 years to his credit; he served with the Ceylon contingent in the South African War.

Major F. W. M. Drew, South Lancashire Regiment, died on February 17 at Jerusalem, Palestine, at the age of forty-one. He took part in the South African War in 1902, for which he had the Queen's medal with two clasps. He was engaged in the Great War, 1914-1918, when he was twice mentioned in despatches. He also gained the D.S.O.

The death is announced of Lady Feodora Gleichen, an accomplished sculptor. Born in 1861, she was the eldest of the children of Prince and Princess Victor of Hohenlohe-Langenburg. Among her productions those of particular interest to readers of *The Near East* may be mentioned, including the memorial for the Countess of Cromer at the Foundling Hospital, Cairo, the portrait bust of the Emir (now King) Faisal, and the statuette in bronze, on a lapis lazuli base, called "Victory," which was presented to the King by the Maharaja Scindhia of Gwalior.

The death is announced of the first Lieut-Governor of Burma, Sir Frederick Williams Richards Fryer, K.C.S.I., at the age of 77. Entering the Indian Civil Service in 1863, he was sent to the Punjab, and in 1878 and 1879 served with the Quetta Field Force during the Afghan War. On the annexation of Upper Burma he was transferred thither and appointed Commissioner of the Central Division, taking a prominent part in the pacification of the country. His work in Burma was interrupted by two years' service in the Punjab as officiating Financial Commissioner and additional member of the Viceroy's Council, but in 1895 he returned to Burmah as Chief Commissioner. When the province was raised to the status of a Lieutenant-Governorship he was appointed the first holder of the office, which he held for six years.

The death has occurred, as the result of a boating accident at Rapallo of Lieutenant Norman Peplow, D.S.C., R.N. After assisting at the Battle of Jutland Lieutenant Peplow was appointed to command H.M.S. *Druid*, one of two destroyers detailed to cooperate with the Army in Palestine during Lord Allenby's final advance, for which services he was mentioned in despatches and awarded the Distinguished Service Cross. He was next selected as one of the Naval representatives with the Military Mission attached to General Denikin's staff in South Russia, and in the retreat of the Russian Volunteer Army from Taganrog in 1919 was awarded a bar to the Distinguished Service Cross and the Order of St. Stanislas, 2nd class, with crossed swords, for his services on board the ice-breaker *Donskoi Gerla* during the evacuation of the British Military Mission from Taganrog. At the time of his death he was Assistant Naval Attaché at Rome.

THURSDAY, MARCH 2, 1922.

A PLEA FOR THE D.O.T.

As for once developments abroad make no call for urgent comment, it is possible to turn from the realm of politics to a question of grave import for the welfare of British commercial enterprise that has arisen as a result of the report of the Geddes Committee with reference to the Department of Overseas Trade. It was to be anticipated that the recent additions to the body administrative would be given the most searching attention by Sir Eric Geddes and his colleagues in their exhaustive survey of the possible openings for economy, in particular those Departments established during the war period, among which is numbered the Department in question. But while great changes were clearly inevitable it seemed very improbable, especially in view of the present trade situation, that the Department, which was established in 1917 as a belated answer to the demand of the business community some sixteen years ago for a Ministry of Commerce, could be in any serious danger. This expectation as we know has not been fulfilled, and the Committee, not content with advocating the abolition of the Department and the transference of its functions to the Board of Trade, have gone so far as to recommend the policy of non-interference by the State in matters of trade. The effect of the adoption of these recommendations would be to put the clock back, not to 1914, when the business community could look for assistance to the Commercial Intelligence Branch of the Board of Trade, but to the period not many years before that when no direct assistance was given to commercial endeavour. If it was clearly proved that the Department's work has been of comparatively small assistance to trade this policy would be intelligible, but in their report the Committee show that they recognise the value of some of the services rendered; their view is simply that it is a matter for the individual and not for the community. It is unfortunate that the Committee did not number among its members representatives of merchants and manufacturers; otherwise they could not have conceived the erroneous supposition that individual activities could compensate for the lack of State help. No firm could obtain for itself the information now freely at its disposal, and the fact that during the past year the Department received over two thousand inquiries for assistance from the principal Trade Associations shows plainly that its abolition would mean that there would be a very definite gap in our commercial intelligence. Another factor that possibly bore weight with the Committee may have been the belief that it is only small firms who seek the help of the Department. As a matter of fact a number of large firms have frequently consulted the Department, which has been able to give very practical and most appreciated help both here and overseas. Henceforward if the recommendations are carried into effect our firms will have to do without this support, at a time, too, when British trade will need all the assistance it can obtain; and there must be, unfortunately, a very real danger of this happening if the business community does not make its views heard on the subject with no uncertain voice.

The fact that hitherto only isolated protests have been forthcoming suggests that commerce has not yet appreciated the full import of the recommendations; otherwise it is unbelievable that objections would not have been forthcoming from all sides. It is not merely that the reversal of the Government's policy would mean the denial to traders of specific information, indeed of any

intelligence at all that would be of immediate practical value; the effects would go far deeper than that, and would be felt in a variety of ways, not all of which, we think, can have been realised by the Committee, which, it must be borne in mind, had no time at their disposal for a really intimate examination of the affairs of any one Department. One of the most obvious corollaries to the disappearance of the Department of Overseas Trade would be that a great deal of work now done by its representatives would devolve on the Diplomatic Service, which will be much too fully occupied for many years with matters arising from the War to be able, with the best will in the world, to do adequate justice to fresh obligations. Apart from the circumstances of the time diplomacy cannot be regarded as the ideal vehicle for commercial bargaining from the trade point of view. In the days of Finch it was possible to combine diplomacy with the commercial representation of a country, but the dual functions would rest uneasily on the shoulders of a modern diplomatist, accustomed to using commerce as a lever for obtaining political advantages instead of the other way about. Then there is the position with regard to the Mandated Territories. There are, of course, no consuls there at present, and it is only through the ministrations of the Department that British trade can be assisted. In these regions, particularly in Palestine, work of an invaluable character has been accomplished, and if as conditions become more settled there is a great trade expansion it will be due very largely to this excellent spade work. If the Department ceases to be, British traders will be left without any official commercial representatives in these territories. Then, the Department exercises a general supervision over the activities of the Consular Service, advising its members and giving them guidance and support. This is a very necessary and most valuable function, for there is nothing more likely to conduce to good work than the knowledge that an active organisation at home is following a representative's doings. Is this work to come to an end, or is another Department to be enlarged to do it?

Finally there is the question of the Near East and other regions which are still in the throes of post-war reconstruction. In due course these countries will have settled down—before long in all probability as regards most of the Near East States—and when that happens there will be enormous competition for trade and concessions, and success will fall to the country which has the best organisation at the moment that matters. If we destroy our commercial intelligence service, for that is what the application of the recommendations means in plain terms, we shall not be in a position to utilise the occasion to any advantage, and, as has happened before in the Near East, we shall have to give place to more circumspect rivals. That is scarcely a prospect to look forward to with equanimity, but there is nothing to be gained in clouding the issue, and that is the outlook. One thing, and one only, would seem to justify the Committee in their action, and that would be an enormous reduction of expenditure which could not possibly be effected in any other direction. But even that excuse will not avail, for the total sum that would be saved by the abolition of the Department would not be more than £80,000 at the outside after allowance had been made for pensions and gratuities to officials who would have to be retired. It seems almost superfluous to ask whether it is worth saving what is relatively a very trifling sum at the expense of such grave disadvantages as would be entailed. As a matter of fact, however, the saving would not even be £80,000, for there would be various items of no small importance to be placed upon the debit side, the effect of which might well be to turn the whole transaction into a financial failure. The lack of official information would place the onus on every firm of increasing its expenditure on intelligence, in the case of small firms through greater activity on the part of trade associations, and as regards large firms through individual action, and while neither category would be able to do more than cover a very small part of the ground the total expenditure would be great, and there would be so much the less liable to taxation.

SOME THOUGHTS ON BULGARIA IN 1922.

By "C. S. W."

On October 1, 1915, when Bulgaria entered the Great War on the side of the Central Powers, a Sofia review known as *Free Opinion* was suppressed, as well as a daily paper known as *The Balkan Entente*. Both were strong supporters of the old friendship with Russia, and both advocated a close entente between the Christian Powers of the Balkans. Clearly such views were not desired by Ferdinand at such a time, and so the periodicals disappeared "by order." The former has now been revived after a silence of over six years; but it is not the same Review. To begin with, its name is a mockery. The free expression of opinion is not permitted in Bulgaria at present. One can readily understand and even sympathise with M. Stambolisky's anxiety to prevent wild and foolish talk and writing tending to aggravate his real difficulties in adjusting the relations of Bulgaria with her neighbours. There is some real justification for a strict censorship on all writings dealing with such matters, though one hopes that it will be taken off at the earliest opportunity. But there can be no such justification for the prohibition of the freest discussion of internal affairs. The attitude of the present Government in severely censoring such discussion only does harm, not only to the Government itself, but to the nation. It does not seem possible that M. Stambolisky can fail to realise this before long. When he does, this Review may show the way to others by presenting some of the many sides from which various important internal problems can be discussed and may, as far as can be judged from the four numbers before me, be trusted to do so with a moderation that will be a novelty in Bulgaria. But this is not all. The Review is now known as *L'Opinion Libre*, and is published in French. Clearly a magazine having as its objects the cultivation of good relations with the Entente Powers and with the other Balkan States should address itself to the Bulgarian public. Most of the people whom the paper ought to be trying to influence read only Bulgarian. It is clear, therefore, that its conductors have other ideas in view; they wish to reach, not Bulgarians, but the people of Western Europe. In other words, their object is propaganda. This suspicion is confirmed by the contents of the numbers which have been sent to me. Besides some valuable historical papers on the Bulgaria and Yugoslavia of the past, these numbers are mainly devoted to reasoned arguments against various provisions of the Treaty of Neuilly. What is new is that these arguments are reasoned, and well reasoned, and that the tone adopted by the writers is eminently sane. In other words, behind all its camouflage, which I cannot but regret, *L'Opinion Libre* promises to be a Review well worth reading and considering.

The two main points discussed in the numbers before me are the effect which the Treaty has had in putting an end to the hope of uniting the whole Bulgarian nation under one State and the defenceless state of the Kingdom owing to the provisions for a voluntary army.

For centuries the Bulgarian nation was enslaved by the Turks, and all the time it dreamed of its greatness and longed for the day of liberation when the united nation could take something of its old place in the world's history. When freedom came, even though only in a modified form, the Treaty of San Stefano promised a reality not unlike their dream. When that

Treaty was disallowed and modified, the Bulgarians felt that they had been deprived of something infinitely important to them, and all their efforts since then have been directed to undoing what was then done. To omit intervening history, it was the hope of uniting the nation which induced Bulgaria, however hesitatingly, to enter the war against us. To be quite frank, it is this intense desire that will lead Bulgaria into another war unless something is done to modify the existing state of affairs left by the various treaties made after the Great War. Bulgaria has long ceased to long for Bessarabia or Northern Dobruja, though an important part of the population of these countries is Bulgarian. But the recent loss of the piece of the Dobruja which she has long held was bitterly felt, and one cannot but hope that when Roumania is once more blessed with a strong Government, she may see her way, by a *beau geste*, to return to Bulgaria what the latter regards as honestly hers, and what must always be a trouble and hindrance to Roumania herself. What is quite certain is that permanent quiet will be impossible while Roumania holds this small tract of country, and that the mere fact that she does hold it must make really friendly relations between the countries, which are so essentially necessary for both, an impossibility. One also greatly deplores the cession to Yugoslavia of the small district round Tsaribrod which constitutes a constant threat to the Bulgarian capital and incorporates a purely Bulgarian district in a foreign State. There is possibly a way round this which I shall mention presently.

There remain the very thorny questions of Macedonia and Thrace. Bulgaria claims that Macedonia and Western Thrace are Bulgarian, and clamours for their union with her. That the Macedonians themselves, or the inhabitants of Western Thrace, share these views is far from being apparent. It is, however, probable that they would rather form part of Bulgaria than of Greece or Yugoslavia, perhaps chiefly because the Bulgarians have never shown that cold welcome to the stranger in their midst which their Western and Southern neighbours have shown, and are showing at the present moment. But Macedonia has no longing to be Bulgarian. It wants to be Macedonian, and I believe that all thinking Bulgarians, outside a very small minority of extremists, as well as most Yugoslavs, would be perfectly satisfied if Macedonia were made autonomous. Not perhaps a very brilliant prospect for a settled State? Perhaps not, but nothing could be worse than the existing state of affairs, while Macedonia has more than once given men of leading to Bulgaria who might equally well be used in the administration of their own country. The NEAR EAST has advocated this course so long and so ably that I need not dwell on the arguments here, except to point out that they apply almost as strongly to that part of Thrace which is not returned to Turkey after the revision of the Treaty of Sèvres. Greece is at present holding Thrace, not by the will of the people but by the help of a large and expensive garrison which she cannot afford. The country is in no sense Greek; and to hold it will be a constant source of weakness to Greece. *Pace L'Opinion Libre* I believe that the same would be true if it were handed over to the Bulgarians.

The provisions in the Treaty of Neuilly relating to the Bulgarian Army were clearly copied from the Treaty of Versailles, though the circumstances of Germany and Bulgaria had no similarity whatever. No one doubts that it is wise to prevent the training of a big Army Reserve or that the substitution of a long-service voluntary army for one of conscripts is calculated to

ASK FOR

WHITE HORSE WHISKY

BY APPOINTMENT.

bring about this result. No one doubts either that Germany is perfectly capable of raising the army allowed to her by voluntary recruitment. But Bulgaria is in a very different case. To begin with, the numbers allowed her are so small that any Reserve resulting from conscription must necessarily be small also, while even a big Reserve is of no use to a country unable to produce arms and ammunition, as long as her supply of arms and ammunition is strictly limited. This, however, is by the way. The real argument is that Bulgaria must have some force to keep order in the country and on her frontiers, that she is a danger to herself and to Europe without such force, and that it is utterly impossible that she can raise this absolutely necessary force as long as she is obliged to recruit men for a period of twelve years. The kind of men who will be attracted to the colours under the present restrictions are precisely the kind who will be a danger to their country and to its neighbours. I remember asking a very distinguished member of the Opposition in Sofia whether M. Stambolisky would succeed in raising a voluntary army. His reply was "God forbid, for, if he does, the nation will have to be armed to protect itself from the army." This I hold to be a perfectly sane view.

I intentionally refrain from re-stating the reasons why the average Bulgarian peasant will not join the army under such conditions, as they have been stated over and over again, and are patent to any one who has spent even a short time in the country. But I would point out that the Balkans have for centuries been the home of bandits and *Komitajis*, that times are hard and consequently unusually productive of these undesirable gentlemen, that Bulgaria has at present no force to keep them under, that she has no prospects of ever having such a force, and that her neighbours are, perhaps naturally enough, looking out eagerly for causes of offence on their frontiers though they know well that, with the best of will, M. Stambolisky cannot stop them with no force behind him. The whole question is one of very urgent importance, and demands to be settled at once in a common-sense way. Is the peace of the Balkans and of Europe to be imperilled merely because some one is unwilling to admit that a mistake was made in supposing the circumstances of Bulgaria to be precisely on all fours with those of Germany?

Our Review so far shows no desire to press on with an entente between the Balkan nations, though it must be admitted that it avoids the attacks on others to which we have become too much accustomed in Balkan propaganda, Bulgarian as well as that of her neighbours. But surely its very able conductors must see the vast importance of bringing such an entente about. It will not be easy, nor will it be done in a day—too many memories of the past exist—but it can be done, and it must be done if the Balkan countries want peace and prosperity; and I can imagine no task more worthy. A beginning should clearly be made with the Yugoslavs, who are the nearest relatives of the Bulgarians, have been their most bitter enemies, and yet are their most necessary allies and friends. Fortunately, the Croats and Slovenes are free from the feelings which past history has, rightly or wrongly, instilled into the Serbs. It is for Bulgaria to take the first step. The first step, as the old proverb tells us, is not an easy one to take nor will it necessarily lead far in itself. But it has to be taken before further progress is possible

I can imagine no one more fitted to take it than the hard-headed, clear-minded Bulgarian, who loves his country dearly and is more capable than most of seeing how to serve her unblinded by false sentiment. Incidentally, the closer the entente between Yugoslavia and Bulgaria, the less are the old wounds of Nish and the recent ones of Tsaribrod, likely to be felt. Possibly the producers of our Review are pursuing these objects, but not in French. If so, I wish them all success in their courageous and patriotic task.

One other thought arises from reading this Review. It is in French. This is natural, but with one small exception, the only articles in it dealing with Western nations concern France. Is this because Bulgaria hates England or desires to avoid dealings with her? Quite the contrary is the case. Bulgaria has had a very special place for England in her heart ever since the days of Gladstone's campaign against Turkey, and Bulgarian business men well know the value of English friendship in business matters while her politicians do not undervalue the importance of her support. But Bulgaria is quite honestly puzzled. Our "man in the street" looks on the Bulgarian nation as one which deliberately, perhaps treacherously, went into the field against us and, by doing so, was responsible for the hideous tragedy of Gallipoli and for prolonging the war greatly. We see that she suffered little in the war, and we feel that she has deserved severe punishment and must put up with it. The Bulgarian feels nothing of this and does not realise that we do so. He feels that he was dragged into the war on the wrong side by an unprincipled King served by self-seeking Ministers, that he got nothing out of it except insults from his German allies, that his actively hostile acts against the English were few and unimportant and that, in the end, he has had to pay a big penalty for backing the wrong horse. He saw the Great War from afar. Not a dozen Bulgarians, I should think, have seen the devastated lands of France, and very few have realised to any degree what we suffered in the war. The two points of view are so opposed that it is useless to try to get them to meet at once.

To me the French appear to have taken the wiser way. True, they had not Gallipoli to think of. But they have realised that, now that the war is over, France's duty is to look out for what advantages she can get even from ex-enemies (when she does not fear them as she does Germany). She knows that the Bulgarians are a race of hard-working honest folk who have made marvellous strides in their forty years of freedom, whose appetite for learning and knowledge is insatiable, and whose ready attachment to those who are friendly to them is patent. She knows also that they hold the key to the Balkans. She thinks it worth her while to make known her sympathy with them, to release Bulgarian assets in France which she is entitled to hold under the Treaty, to encourage the investment of French capital in Bulgarian enterprises, and generally to do what she can without much sacrifice to show herself friendly. We are too fond of denouncing French policy. Why cannot we begin to do something of the same kind? We could do it so much better and with so much more effect. At very little cost to ourselves we may still build up relations between the Bulgarians and Britain which may stand us in good stead in the future. If we put off much longer, it will be too late. Bulgaria will suffer, but so shall we.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

Egypt.

The *Outlook* of February 18 contains an article called "Cross-Currents in Egypt" which, beginning with a comment on the "moderation" of Sarwat Pasha, proceeds to discuss his demand for the immediate calling together of the Egyptian Legislative Assembly:—

Now a general election in Egypt is always a comic opera affair; the *fellah* never goes to the polls unless he is practically forced to; and in the relaxation of authority, which will inevitably follow a British withdrawal, it will simply be a question of the most forceful party in the State collecting the largest number of votes. This is where the Zaghloulites excel. If they are left to stir up riots and create an atmosphere of intimidation it is certain that not single moderate will be returned; and though surprising changes can often be wrought in the views of an Egyptian provincial M.P. after he arrives in the capital to take his seat, still the fact that every elected member of the Assembly was pledged to oppose him would undoubtedly add to Sarwat Pasha's difficulties, and might make it impossible for him to carry out his bargain with us. While the Zaghloul party continues to be strong enough to create disturbances when and where it likes, even the most patriotic Egyptian Prime Minister may view with equanimity the retention of a few foreign garrisons.

The article concludes with an examination of the relations between British and French in Egypt:—

From the British point of view this question of the presence of our troops in Egypt has a wider significance. For forty years the Union Jack has flown over the Citadel in Cairo—not to mark the conquest of Egypt, for we have never treated the Egyptians as a conquered people; not merely to indicate the presence of our garrison; but simply to make it impossible that any other European flag should fly there. That, and not the Egyptian flag, has always been the alternative. We require now from Sarwat Pasha and from Egypt guarantees that would satisfy any reasonable man that there is no danger of such a substitution in the future. We have no objection in principle to allowing the Egyptians to govern themselves in their own way, but we cannot permit our influence in Egypt to be undermined by the subjects of any European Power because such a process could only mean, in the end, one thing—the formal intervention of that Power in the affairs of Egypt and the running up of some other European flag upon the staff from which we have removed the Union Jack. The European Power with most influence in Egypt, after ourselves, is, of course, France. Englishmen and Frenchmen have never been quite so friendly in Egypt as in other parts of the world; French newspapers in Egypt, with a wide circulation among Syrians and educated natives, have always been more or less Anglophobe; the leaders of the Egyptian Nationalists in the past have made Paris their spiritual home. We do not wish to attach undue importance to local jealousies, but there is something more than that—something which, in a critical time like this, we do not hesitate to refer to plainly. It is said that French agents have lately been active in Egypt, getting in touch with leading Nationalists and inducing them by the usual means to agree to the substitution of French influence for British, commercially and politically, when our evacuation takes place. It is not suggested that these are authorised agents of the French Government, nor even that they have

had official encouragement, but the story, if true, well illustrates the danger of making premature concessions and the kind of international complications that will arise if the government of independent Egypt is given too free a hand. Lord Curzon, it is stated, has in his possession a dossier containing a report of the activities of these people, and this was laid before Adly Pasha in London last autumn. We trust that it will be made clear to Adly's successor that this kind of thing cannot and will not be allowed.

The Moslem Problem.

Under the above heading Colonel the Hon. Aubrey Herbert, M.P., contributes an article to the *Westminster Gazette* of February 22, in which he examines the attitude of Mr. Lloyd George to the Turks. He refers to the time-honoured ignorance of the Turk in this country:—

Before the war, in England, there existed two schools of thought about the Turks. Neither of them was a school that could have passed a reasonably intelligent examination. The Liberals believed that massacre was the daily habit of the Turks, and that they ought to be driven from Europe; they held that Mr. Gladstone was the saviour of Christian minorities in the Near East, in spite of the fact that the massacres continued. The Conservatives thought that the Turks were the only gentlemen in the Balkans, that Great Britain had rescued them in the Crimean War, and that they would be our Allies when the Russians attacked India. The public is better, though not fully, informed to-day. The Turk has something to his credit as well as to his debit account; and so have all the other Eastern nationalities. The Turk's misfortune lies in his geographical situation. The Near East is a mosaic of rebellious colours. Each series of conquerors has wished vainly to paint it one homogeneous shade, but the colours stay, and will not blend.

We bred one efficient Cromwell, the author of a brief, brutal, and temporarily successful policy of repression in Ireland. Cromwell was the statesman who bequeathed to future generations agony and pain that still trouble us in February 1922.

The Turks have had no island incurrection to deal with. Continental Sinn Fein has been their inveterate enemy, and if their Cromwells have not been less efficient in their day than ours the legacy of bitter seed that they have left has been more deeply sown and more widely scattered. At this

date, blame or palliation, praise or recrimination, with regard to Turkey are all irrelevant as far as Great Britain is concerned. Politicians and orators mobilise a vindictive army of ghosts, on both sides, to no purpose. We need a statesman's peace, that will restore our good name, give real security to minorities and allay the unrest in our Eastern Empire. We need something very different from the electioneering Conference abroad. In the interests of the country, it is the British workman and taxpayer, not the British voter, who should be considered.

He then details the manifestations of the British Premier's attitude towards Turkey, and concludes:—

The Prime Minister's experience in legislation seems to have had an unfortunate effect on his conduct of foreign policy. He has constantly passed colossal legislation, only to scrap it afterwards. This can be **done** in home legislation. It is possible to pass and then to destroy an Act for the taxation of land, or an Agricultural Act, though both the passing and the destruction cause annoyance and discomfort to the community, but it is not possible to treat foreign policies, where these policies concern and initiate wars, in the same way. Mr. Lloyd George cannot raise the dead, order a battle to stop, or two races who have been set at each other's throat to cease hating.

Mesopotamia.

The *Fortnightly Review* of February contains an account, written by Robert Machray, of the doings of the British in the Middle East, since the Armistice. It consists chiefly of a *résumé* of facts, but at the end of his article the writer sets down his own conclusions as follows:—

A Great Arabia—an Arab Empire, consisting of Syria, Palestine, Arabia, and Mesopotamia—was and no doubt is, in spite of the Mandates for Syria and Palestine, the dream of Feisal and the Pan-Arabs. It is idle to say it is a noble dream, for it is impracticable in Arab conditions. Yet to some extent the British, through Government action, appear to be supporting it. For not only have they placed Feisal on the throne of Mesopotamia, but they have taken measures with respect to Arabia that are tantamount to a protectorate over that country. The greatest Arab as well as Arabian prince in the world is Ibn Saud, the Emir of Nejd-Hassa; he has a deadly feud with King Hussein of the Hejaz and therefore with Feisal; the British have bought him off with an annuity of £60,000 a year, "paid monthly in arrears," provided he keeps quiet. But what if Hussein attacks him, as he has attacked him before? Saud has always beaten Hussein, and in 1919 Mecca lay at his mercy, but the British intervened and he retired. Are we, the British, backing the wrong horse once more? As regards Mesopotamia what is to be done? Are we to continue to uphold Feisal, or should we withdraw to Basra or from the whole country? Because of India the writer advocated British retention of Mesopotamia so long as there was a prospect of the terms of the Anglo-Persian Agreement being carried out. Mesopotamia plus Persia—this was our policy in 1919-20—amply protected the flank of India. But the Bolsheviks have been too much for us in Persia, the Anglo-Persian Agreement is a thing of the past, and our prestige there is in the dust. Why this is so is too long a business to explain at the close of an article, but Persia is not now in the picture. This being the case, and considering all the implications of the Pan-Arab movement, the writer doubts the wisdom of our staying on in Mesopotamia, except at the mouth of the Gulf.

On the ground that the present Bolshevik occupation of Georgia in no way affects the international status of the Democratic Georgian Republic, the Georgian Minister in Paris has applied to the Allies for an invitation to his Government to send representatives to the Genoa Conference.

DR. HALL ON BABYLONIAN EXCAVATION.

At a meeting of the Central Asian Society, held on February 9) at the Royal United Service Institution, Dr. H. R. Hall gave an account of his experiences while excavating in Mesopotamia on behalf of the British Museum in 1919. His work had, he stated, been chiefly carried out at Ur and Eridu—the latter the most ancient and most holy city of Babylonia. Dr. Hall said he had gone out during the war to assist the Mesopotamian Government in archaeological matters, and upon reaching the country had first gone to Babylon to report upon certain excavations which had been made by German archaeologists. These had remained at Babylon quite late—until in fact the British were in possession of Baghdad—but had then abandoned their work. There was a house in which they had lived, and in which they had stored the more interesting of their finds, and this house being deserted the Arabs had naturally taken the opportunity to plunder it. When Dr. Hall arrived, however, he found that little real damage had been done; among the articles that the Arabs had appropriated were a number of tall linen collars, but the antiquities they had not thought worth taking away.

Interesting lantern slides showed the results of the excavations. Among other things were some early graves. The earliest inhabitants of the country buried their dead in coffins consisting of two opposed pots with a vent for the escape of the gases of putrefaction. The grave was most commonly although not always underneath the house. At Ur and Eridu, as elsewhere in Babylonia, building was chiefly in brick; but at Eridu the remains had been discovered of some rough stone work in the protecting walls of the city. Limestone for this had been brought from some hills—though they hardly deserved such a name—lying between Eridu and the Persian Gulf. The ruins of the ancient city were now, said Dr. Hall, twenty miles from the Euphrates, and there was no water on the site.

THE NEAR EAST INDEX, VOLUME XX.

The Index to Volume XX (July 7 to December 29, 1921), is now ready, and copies will be sent to subscribers gratis on application to The Manager, *The Near East*, 1, Devonshire Square, London, E.C.2.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the river Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K. Continent and India.

The engagement of land transport for Cargo to towns in the interior of Mesopotamia and Persia undertaken on behalf of Shippers of Through Cargo to BAGHDAD and AHWAZ.

NOTES AND NEWS.

Devonshire Square.
E.C. 2.

The B.I.F.

Once more that ever welcome annual event, the British Industries Fair, is with us, and as has been the case ever since the first fair in the now distant war period there is again a very great advance to be recorded. A general survey of the Fair will be found on another page in this issue, but owing to our having to go to Press earlier than usual it is impossible on this occasion to include our customary review of the exhibits. That will appear in our next issue. It is too early to speak of the prospects of business at the Fair, but it is known that a very great number of buyers have expressed their intention of being present.

The D.O.T.

It is not a little surprising that a storm of protest has not been roused by the recommendations of the Geddes Committee with regard to the Department of Overseas Trade. The suggestion is put forward in our leading article that the business community has failed to realise what would be involved in the disappearance of the Department, and the view is also advanced that it is doubtful whether the Committee themselves have realised all that it would entail. It is certain that if the Department goes commerce will very quickly be made aware of the fact by the lack of information on which it has come to rely, by the absence of support overseas, and in a variety of other ways. Possibly it will be argued that as the Government must be in possession of all the facts that Department can be in no danger. That is a quite erroneous view. If the Government knows there is a demand by the business community for the Department its maintenance will be assured but not otherwise.

Bulgarian Property in England.

The inadvisability of the policy adopted with regard to Bulgarian property in this country has been raised more than once in these columns. In the present issue our Sofia Correspondent reports an interview given to him on this question by an eminent Bulgarian who points out that Great Britain stands alone as regards the registration of Bulgarian property, and that this action affects those who are "the best friends England has in Bulgaria, and have always stood for English influence and interests." That is so obvious that it is difficult to understand why it has not been appreciated by the authorities. It is still not too late to retrace our steps, though it soon will be, and in the interests of British trade relations with Bulgaria it is to be hoped that a more far-sighted view will be taken.

The Ter Meulen Scheme.

The news that the Ter Meulen scheme for export credits will in all probability be abandoned does not surprise me in the least. Indeed I fear I must plead guilty to having damned it with faint praise in these columns on more than one occasion. It had such obvious drawbacks, the most important being that an inordinate interval would be required in the most favourable circumstances to bring the scheme into operation.

Why it has Failed?

The application of the scheme in respect of any given country depended upon the willingness of the authorities of the State in question to allocate specific revenues as security. With the exception of Austria, whose extremely precarious financial position assures her acquiescence in any scheme which appears to hold out prospects as regard reconstruction, the States whom the scheme was designed to help have held aloof presumably because they feared a further deterioration of their credit if they made the requisite allocations. Thus there has been no opportunity of demonstrating the efficiency or otherwise of the scheme.

The Greek Loan.

The question of the pending Greek Loan has been the occasion of considerable comment of late. The negotiations for a loan were begun several months ago, the amount desired being, it has been reported, £15,000,000, and on more than one occasion it has been thought that matters were on the verge of a satisfactory conclusion. However up to the time of writing nothing has been arranged, and the report has been current that the original parties to the negotiations on this side have withdrawn as a result of difficulties that have arisen. Whether that be so or not it appears that negotiations are still in progress, and opinion in Greek circles seem to be confident as to an early and satisfactory issue.

Turkey and Greece.

It is to be regretted that Greece's attempt to raise a loan here should have been misinterpreted by a section of Moslem opinion as meaning that Greece would be obtaining assistance here in the shape of munitions for carrying on the war with Turkey. Nothing of the kind, would be countenanced by the authorities, and the idea could not have arisen if those who hold it had been adequately informed as to the facts. There has not been any question of a Government Loan, and the terms of the Trade Facilities Act are an ample guarantee as to the utilisation of any loan that may be obtained through the medium of a private group. That it should be necessary to explain the position simply shows the sensitiveness of Moslem opinion at the moment.

THE BRITISH INDUSTRIES FAIR.

A Great Exhibition.

(From Our Own Correspondent.)

On the last occasion that the British Industries Fair was held the trade outlook was of the most unpromising description, and it was little short of marvellous that in the circumstances the volume of trade done was satisfactory. To-day very different conditions prevail. The trade depression is still with us, but signs are not wanting happily that the worst has been passed and that we are now within measurable distance of the first real trade "boom" since the war. The changed conditions seemed to permeate the atmosphere at the White City at the opening of the Fair this week. Everything seemed to speak of optimism and the expectation that this time very satisfactory business would be done with buyers anxious to anticipate trade requirements. One can only trust that the event will prove this to have been the case. Certainly general appearances at the White City on Monday justified a hopeful outlook. There were more buyers than is usual at the commencement of the Fair, and it was evident that a good deal of business was being transacted. The real rush of buyers at this section of the Fair will come later, for many of them prefer to put the Birmingham section first on their itinerary.

The Fair this year is a veritable index of British industrial prowess. Each succeeding exhibition has marked a further stage in the progress towards making this annual event a really comprehensive undertaking, representative of every phase of British industry. That ideal has still to be reached, for the Fair has not yet attained perfection, but the distance to be covered is not very great as the result of the strides that have been made since the Fair was initiated, and this progress has been particularly marked since last year. One could see noticeable gaps in the Fair of 1921; they have now been very largely filled in; indeed it is not going too far to say that the outstanding feature of the Fair is the astonishing number of new firms that are numbered among the exhibitors. If there were any people inclined to criticise the utility of this exhibition, that fact, one would imagine, would be a wholly adequate answer.

It is greatly to be hoped that, despite the adverse circumstances in the Near East, buyers from that region will not be lacking at the Fair, for there could be no better advertisement of the products of British industry than is provided by the exhibits. The range of them is, indeed, amazing, and the most casual visit to the White City cannot fail to prove a revelation both as regards the variety and the quality of the products on view. I should not dream of attempting to describe them in this brief general survey; it would make this article encyclopaedic in character, but will content

myself with saying that a buyer would have peculiar requirements if he left the Fair unsatisfied.

One may perhaps be pardoned if the first views are of a somewhat straggling nature. The extent of the Fair has a very cramping effect on the initial visit, and in the circumstances one is perforce confined to recording fragmentary impressions. One thing I noticed with special interest was the spectacle of a group of Indian buyers walking down the fairways—if I may use that expression—in animated conversation and obviously extremely intent on the various exhibits. This is the first time that I have seen an Indian at the Fair; and taking into consideration present conditions in that country it seems a very hopeful symptom.

I imagine that everyone concerned is glad that an exhibition of this description is not a monthly event. A tour of inspection round the White City is an arduous undertaking if it merely involves walking round the building; while a tour of both that centre and the Birmingham Fair would involve I do not know how many miles of exercise. Needless to say one day at the White City would not be nearly sufficient for an inspection of the exhibits; indeed it is doubtful if it could be done in much under a week, and it would seem doubtful wisdom in the circumstances to hold both sections of the Fair at the same time, though the practice admittedly has its advantages. Still it is presumably only a little time now before both sections are once more reunited in London when the Wembley buildings are ready.

I have already referred to the quality of the exhibits, and a word is also called for in regard to the great improvement there has been in the general arrangement of the stands. At previous fairs really attractive stands while not exceptional were at any rate sufficiently noticeable to attract very general attention. This time there has been a very general raising of the standard, and very many firms indeed are displaying their works in a most aesthetic manner. It is evident that the art of display has made great progress of late.

While the constant growth of the Fair gives ground for a hopeful view regarding the future of British trade one would like to feel more assured that the firms exhibiting are really taking, or are prepared to take, adequate measures to find outlets overseas. The Fair enormously useful as it is as an instrument of trade endeavour is not the be-all and end-all of trade enterprise. It needs to be supplemented in a variety of ways, not the least important of which is an advertising campaign which will really bring goods before potential buyers. Otherwise the use of the Fair can only have at best a limited utility. Do British firms realise this?

POTASH.

A new volume on the subject of Potash, in the series of Monographs on the Mineral Resources of the Empire, issued under the direction of the Mineral Resources Committee of the Imperial Institute, has just been published. The monograph has been prepared by Mr. Sydney J. Johnstone, B.Sc. (Lond.), A.I.C., of the Scientific Staff of the Imperial Institute, and is a revised and enlarged edition of a former publication. It contains 122 pages and is divided into 11 chapters. Almost the whole of the world's output of potash is used for fertilizing purposes in agriculture, and the demand for it is continually increasing, largely due to the amount of intensive farming that is now carried on. A small proportion of the potash produced is employed in the making of glass, soap, matches and gunpowder; for scouring of wool; in pharmacy, photography, electroplating, and various metallurgical industries.

The first five chapters of the Monograph describe the various sources of solute potassium salts in the world, including the immense deposits in Germany and France, as well as, amongst others, those in the United States, Abyssinia, India, Chile, Peru, Tunis, and South Africa. The remaining chapters deal with other sources of potash, including sea water, insoluble minerals, such as alunite and the felspars, flue dust from cement and blast furnace plants, and vegetable and animal substances. Analyses and statistics are given in important cases and at the end of the volume there is a list of recent publications.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

ROUMANIA.

Bucharest, February 15.

Government's Economic Policy.

On the occasion of the installation of the new members of the Bucharest Chamber of Commerce, which took place on February 11, M. Sassu, the Minister of Industry and Commerce, took the opportunity of expounding the economic policy of the present Government. M. Sassu commenced his speech by stating the regrettable fact that, despite the two and a half years of peace, the general situation of the country instead of improving has actually grown worse, and that the chief causes of this state of things applied to Roumania's trade as well as to all her other lines of activity. These causes he summed up as following:—(1) The falling off of the State's credit abroad, with the natural consequence that it entailed also the individual credit of the Roumanian merchants just at the time when large and numerous contracts were made abroad. (2) The State's financial difficulties and the absence of a reasoned programme for the financial consolidation of the country. This had largely contributed to the growing uncertainty and confusion in private commercial transactions. (3) The absence of a stable, co-ordinated and continuous economic and financial policy, in other words the ignoring of the real economic factors existing in the country.

The Minister went on to say that after the sad experience of the last two years a general patriotic effort was urgently needed to restore public and economic life to its normal condition. The present Cabinet, he said, had assumed that difficult task by adopting the following programme: The introduction of a régime of continuity by means of a wise and honest economic policy—so much needed by the commercial class; the rapid establishment of unrestricted trading within the country; the suppression of permits to individuals; the regulation of the import trade by a duty tariff corresponding with the general needs of the national economy; the synchronising of the needs of the country's commerce and national production with the requirements of home consumption; the export of home productions would be furthered in the most profitable way for this country which would tend, at the same time, to reduce the very high cost of living; an end would be put to the practice of State trading; and the State's credit would be re-established by a wise financial policy, which would greatly help the Roumanian merchants to settle their present liabilities in foreign inflated currencies. The Government has further determined to end the unfortunate transport crisis, which is considered to be closely connected with a better public administration and the entire State organisation. In

conclusion M. Sassu touched also on the new fiscal taxes, which the present Cabinet intends modifying in such a way that they will not press too heavily on the taxpayers at the present stage of reconstruction.

M. Sassu concluded by strongly appealing to merchants to assist in preventing profiteering for the purpose of reducing the cost of living, for only in that way could the moral as well as economic order of the country be restored.

Miscellaneous.

It is announced that the Paris-Bucharest Air Service will start running during the first days of May. The aeroplanes will leave Paris at 6 in the morning and will arrive in Budapest the same evening, leaving Budapest the next morning at 7 to arrive in Bucharest at about 3 in the afternoon. The Paris-Bucharest fare will cost 1,200 French francs.

It is reported that the new wireless station at Oradia Mare (Transylvania) will be ready for receiving messages within a few days.

Several commercial conventions between Roumania and other countries expire on April 1, and as the Government has not had sufficient time to prepare fresh conventions, she will temporarily grant these states the most favoured nations' clauses similar to the convention with Great Britain.

BULGARIA.

Sofia, February 19.

Sequestration of Bulgarian Property.

An eminent Bulgarian who has just returned from a business trip in France, Italy, and England, has been kind enough to give me his views on the sequestration of Bulgarian property and moneys by England. He said: "You alone amongst all the Great Powers who were at war with Bulgaria have not raised the sequestration. One of the first acts of M. Picot, the French Minister at Sofia, was to inform the Bulgarian Government that France did not intend to avail herself of the Clearing House for ex-enemy Debts, provided for in the Treaty of Neuilly. Italy followed France's example but England has not. Have you ever considered to whom the money and property that you have seized belong? It belongs to a few Bulgarians, many of them influential men, who for years past have had dealings with England, and who all had faith and confidence in England. They are the best friends England had in Bulgaria, and have always stood for English influence and interests. You are not hurting England's enemies; you are hurting England's friends. Bulgarians are not quick to realise changes, but they are now beginning to realise that amongst the Allies, England is the least

Mr. FREDERICK ROSE - - - PIRÆUS.

friendly disposed towards Bulgaria. The result of this realisation is that England is going to become unpopular and trade relations will suffer. An instance of this is that the Bulgarians who are at present serving on the Council of the British-Bulgarian Chamber of Commerce at Sofia, are considering their resignations. I do beg you to consider whether England has not more to gain than to lose by raising the sequestration on Bulgarian property and moneys in England."

The views of this Bulgarian, though perhaps open to criticism on one or two points of detail, represent a point of view that is thoroughly deserving of consideration. We do not want and indeed cannot afford to alienate foreign commercial sympathy to-day. Our prevailing interest is to secure markets for our goods. This can never be done if we pursue our present policy towards Bulgaria.

The Internal Loan.

Subscriptions to the above loan closed on February 10, and although the first series of 100 million levas (£160,000) has been taken up, the loan cannot be said to have been at all a success. The Government are now engaged in amending the conditions under which the loan was issued, and it is anticipated that the loan will be re-opened under more favourable conditions.

ALBANIA.

Tirana, February 12.

Exploitation of Forests.

In a communiqué dated February 14 the Government announces its intention of exploiting the forests of the country, which contain oaks, beeches, pines, and fir trees, through the medium of native and foreign companies. Those who desire to acquire such concessions, and who have at their disposal funds for security, are invited to write for particulars within seventy-five days after the date of this notice to the Minister of Public Works and Agriculture at Tirana who will furnish detailed information. The Government has decided to exploit the forests which are between Durazzo and Alessio, to the east of Kroja, to the east and north-east of Scutari and at Mirdita.

Customs Duties.

Particulars of the Customs duties on goods imported into and exported from Albania should be of interest to British merchants. On exports there is a uniform tax of 2 per cent. *ad valorem*, with the exception of olives, wool, and skins, on which the tax is 5 per cent. *ad valorem*.

Imports are subject to various duties as follows:—Playing cards, matches, paper and cigarettes, 100 per cent.; rectified alcohol intended for the manufacture of spirits, 75 per cent.; beer, wines, liqueurs, 50 per cent.; tobacco, tombac, snuff, 50 per cent.; vegetables and fruit, 50 per cent.; precious stones, pearls, 20 per cent.; ready-made clothes, boots and shoes, underwear, 25 per cent.; watches, clocks, cord, jewellery, furniture, sports goods, toys, 25 per cent.; soap, 25 per cent.; sugar, petrol, flour, etc., 15 per cent.; metal work, 15 per cent.; agricultural machinery, 5 per cent. Other commodities are subject to a duty of 18 per cent. *ad valorem*.

Communications with Neighbouring Countries.

Since the opening of navigation between Riéka and Scutari between Yugoslavia and Albania another route has also been opened for travellers and trade between the two countries—the route between Ohrida and Pogradec, on the lake of Ohrida. Two small motor boats, run by an Albanian company, provide a regular service between the two towns.

Unfortunately the Greek frontier remains closed, and the trade of Kortsche by way of Florina and Salonika, which had been so active, has been reduced to nothing since last April, and has been diverted in the direction of the Adriatic by Saranda.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Egypt.

Material for Army Clothing.—The Egyptian War Department invites tenders for the undermentioned stores:—

Reference.	Material.	Tenders due.
Muh 1922/1/22	..Felt	March 6
Muh 1922/1/11	..Grey calico cotton	March 7
Muh. 1922/1/4	..White cotton drill	March 8
Muh. 1922/1/18	..Khaki cloth for great coats	March 9
Muh. 1922/1/16	..Dark blue artillery cloth ..	March 13
Muh. 1922/1/13	..White cotton nainsook ..	March 14

Tenders to remain open for seven days. Further particulars may be obtained from and samples of the materials required can be inspected at the office of the Inspecting Engineer, Egyptian and Sudan Government, Queen Anne's Chambers, London, S.W.1.

Main Drainage Scheme.—The Department of Overseas Trade has received from His Majesty's Commercial Agent for Egypt, copies of the specifications and drawings connected with Contracts Nos. 7 and 8 for the Mansura Main Drainage Scheme, tenders for which are to be presented at the Chief Engineers' Office, Main Drainage Department, Ministry of Public Works, Cairo by noon on March 13, and April 26, respectively. (D.O.T.).

Pantaloons.—The Egyptian War Department invites tenders for the supply of 650 pairs pantaloons, Bedford cord. Further particulars may be obtained from, and a sample inspected at the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. March 13.

M.S. Angles, Tees, Bolts, etc.—The Egyptian War Department invites tenders for M.S. angles, tees, bolts, rivets, locks, etc. Further particulars may be obtained from the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1., March 13.

Uniform Clothing.—The Administration of the Egyptian State Railways invites tenders for the supply and delivery of winter clothing for the season 1922-23. The clothing required includes uniforms of blue cloth, khaki serge and dark grey cloth; blue jean suits for fitters; overcoats of blue cloth and light and dark grey cloth. Tenders on the proper form will be received by the General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo, Egypt. The clothing is to be in strict accordance with the Administration's standard samples, which can be seen at the office of the Inspecting Engineer, Egyptian State Railways, Queen Anne's Chambers, Broadway, Westminster, S.W.1., if notice is given three days before inspection. Tenderers' samples should be submitted to the Superintendent of Stores, Egyptian State Railways, Telegraphs and Telephones, Cairo, Egypt, not later than March 30. Representation by an authorised agent resident in Egypt is essential. April 6 (D.O.T.).

India.

Sewage Scheme.—The Director of Development, Bombay invites tenders for constructing and running for six months sewage scheme for Ambarnath Industrial Area. (Spec., Rs.500. Superintending Engineer, No. 3 Project Division, Directorate-building, Old Customs House Yard, Fort, Bombay). March 15.

Steam Hammers, etc.—The Madras and Southern Mahratta Railways Company, Limited, invites tenders for the supply of 7 steam hammers (7½ cwt., 10 cwt., and 15 cwt.); 11 Bogie Carriage Underframes, Broad Gauge; 1 4-Wheeled Brake Van Underframe, Broad Gauge; 5 4-Wheeled Luggage van Underframes, Broad Gauge. 56 Pairs Wheels and Axles, Broad Gauge; in accordance with the Specifications, which may be seen at the offices of the company. Tenders must be sent in addressed to the Secretary, and marked "Tender for Steam Hammers" or as the case may be. March 7.

Yugoslavia.

Tinplates, solder, etc.—The Commercial Secretary to H.M. Legation at Belgrade reports that tenders are invited for the supply free at petroleum store warehouse at Belgrade, of tinplates, tinned wire, solder, etc., required by the Direction of State Monopolies, Belgrade. Tenders are to be addressed "Uprava Drzavnih Monopola," Belgrade, and marked "Ponuda za Isporuku Materijala za Radionicu Kanti." A deposit of 10 per cent. of the total amount of the tender is required.

The goods required include:—1.—30,000 (thirty thousand) kilogrammes of tinplates, 0.32 m.m. in thickness, in sheets of 250 x 250 mm. 2.—90,000 (ninety thousand) kilogrammes of tinplates, 0.32 mm. in thickness, in sheets of 500 x 370 mm. 3.—150,000 (one hundred and fifty thousand) kilogrammes tinned iron wire of 4 mm. diameter for handles. 4.—3,500 (three thousand five hundred) kilogrammes of pure solder for soldering tins. 5.—3,500 (three thousand five hundred) kilogrammes of pure lead for soldering tins. 6.—30 kilogrammes (thirty kgs.) "nisador" (sal-ammoniac?) in pieces. 7.—250 (two hundred and fifty) kilogrammes of spirits of salt. Each tenderer must submit samples of the material offered. The following are the quantities required as samples:—One sheet of tinplate, half metre of wire, 250 grammes each of lead, solder, sal-ammoniac and spirits of salts. March 11 (D.O.T.).

Engineering Topics.

By Our Engineering Representative.

The Napier "Cub."

A few days ago, by the courtesy of Messrs. D. Napier and Sons I was afforded an exceptional opportunity of examining and inspecting as closely as I wished the most powerful aeroplane engine yet built, the 1,000 h.p. Napier "Cub." At the public inspection, I was taken, like all the others round the huge works of the company and shown the big engine, not only in various stages of completion, but running on a bench test. It was later, after the guests had departed, that I was able to see this marvellous production brought in a few seconds from quietude to the full development of its rated horse power. For my benefit it was stopped and started, run slowly and at quarter, half, and full speeds, and generally put through its paces.

It was during these private little tests that I was able to satisfy myself as to the absolute steadiness of the engine; one could have balanced a penny on any part of the frame work when the dial was reading 950 horse power, and the engine was "revolving" at 1700. Needless to say, the sound of the exhaust was perfectly audible; without exaggeration one could have described it as a solid block of noise. But the valve movement was very sweet, and when one recollects that the engine has 32 inlet and 32 exhaust valves the considered and deliberate statement that the noise of the valve movement was no greater than that given off during the running of an 8 h.p. twin cylinder motor cycle speaks volumes as to the accurate machinery of every part.

Two Pounds Per Horse Power.

The compactness and the low weight of this engine are, next to its amazing power, the most remarkable features of this engine. A motor cycle engine weighs anything from 15 to 20 lb. per horse-power. A locomotive weighs about 145 lb. per horse-power. The Diesel engine is a compact and heavy piece of machinery, and compared with all these the new engine weighs only two lbs. for every horse-power given out at its rated speed. That is, after all, the really revolutionary part about the new design. Anyone could build a powerful engine; all that means is the assembling of large enough cylinders, with long enough stroke, supplied with sufficient petrol gas. But this engine is more than that; it is the lightest engine yet made for its power; it is absolutely the most efficient power unit that has yet been turned out of any workshop. Designed and constructed throughout in a London factory it is at once a milestone in engineering progress and a triumph for British engineering.

It has not yet been decided, or at any rate it has not yet been announced, what use will be made of this wonderful product. There is no doubt, however, that when the time comes for the 1,000 h.p. Napier engine to be fitted in machines built for commercial purposes, it will revolutionise aerial transport by reason of its great power and economical running which will enable it to carry more passengers, or heavier cargoes in a given time than any other engine.

It is only by the greatest care and microscopical accuracy in the manufacture of every detail that this wonderful reliability has been obtained.

From the time the metal in its rough state arrives at the Acton factory, and is tested chemically and physically to the time the engine is assembled it has to pass through hundreds of skilled hands and to undergo scores of operations, after each of which it is measured, viewed and tested to make certain of its absolute accuracy. It is not surprising to anyone like myself who has been over every inch of the works and watched closely every detail of machining and fitting that the Napier Company are able to turn out such remarkable products. My readers are aware that, in previous notes, I have described the 6-cylinder Napier car as being one of the finest productions of the automobile world. In exactly the same way, and for the same reasons I have no hesitation in saying that this new 1,000 horse-power production is by far and away the

greatest achievement yet recorded in the history of aviation.

Car Battery Service.

The Chloride Electrical Storage Co., of Manchester, have just opened a new exide battery station and showroom at Daimler House, Shaftesbury Avenue, thus bringing the number of its battery service stations in this country up to 200 and inaugurating a new policy whereby the owner of any make of car, equipped with any make of battery can use any one of these stations, each of which is specially illuminated at night by a standard sign.

One of the points to which particular attention may be drawn is that if the battery in use on the car is of the exide type, as used on the Wolseley, Rolls-Royce, Fiat, Cadillac, Buick, Ford or others, the owner can take away in exchange for his exhausted cells a battery ready recharged, thus avoiding any delay, and enabling him to drive away whilst the repair or recharging of his own set is being done. Further, he has the advantage of a uniform tariff for all services rendered, and of a standard price list for spares.

These exide batteries are no new departure, but are, on the contrary a well-tried production. In fact the special, light weight and heavy output batteries, which are of the non-spillable type, are used, in both the British and American Air Services, a battery weighing only about 60 lb. being sufficient to start up any ordinary aero-engine.

Emphasis must be placed on the fact that the new car battery service scheme is not confined to cars using exide cells. Any motorist using a battery on his car can drive up to any of these service depots and avail himself of all privileges without having to join any organisation or pay any special fees.

Concrete Requisites.

Mr. E. F. Etchells hit the right nail on the head in the course of his recent presidential address to the Concrete Institute when he said: "What we want is a new type of mechanic or skilled workman; the expert concreter and block setter. Up to now the education of the concreter has been left very largely to chance. Of course, technical institutions include concrete as part of their engineering courses, but this is only incidental. We want to see more than this. Moreover, their courses of instruction have appealed rather more particularly to what is sometimes called 'the directing class' rather than to the artisan class on which, in the end, we must depend for good workmanship; the directing class being mainly responsible for good design." Skilled labour, trained labour, expert labour, labour taking a pride in craftsmanship is what is wanted in every branch of industry and complete success can never be reached until we have this new and responsible type of labour.

A Big Contrast.

The well-known Lincoln engineering firm, Messrs. Ruston and Hornsby, Ltd., are to be congratulated on their success in obtaining the Government of South Africa's contract for 38 heavy oil engines, to be supplied to the South African Railways and Harbours Department. The engines will be used for driving grain elevators and for generating electric power for lighting and other purposes in different parts of the country. There was a good deal of competition to be faced in connection with this contract, which in the aggregate amounted to about 2,500 horse-power, and there is no doubt that the high reputation of the firm and the excellent results always obtained from their engines in practice had much to do with the actual securing of the order.

Concrete Roads.

The construction of concrete roads will have to be undertaken on a far wider scale than highway authorities seem to imagine if we are to keep pace with other countries. The returns for 1921 for one region

show that altogether 102 miles of concrete roads were constructed during the year at a cost of 26,000 dollars per mile inclusive of everything. This compares with 39,000 dollars per mile paid previously for roads of other types. This year's programme includes the construction of a further 600 miles of roadway, all of which will be in concrete.

The Still Engine.

The commercial development of the Still engine, which was fully described in these columns some eighteen months ago, has been slow but nevertheless sure, and the fact that a large power unit of this type is to be installed in the new Blue Funnel liner which is to be built at Greenock by Scott's Shipbuilding and Engineering Co., is sufficient answer to those critics who regarded the engine as of theoretical interest, but no practical value.

This type of engine, it will be remembered, combines the advantages of the steam with those of the internal combustion engine. In the latter we have a tremendous initial force but practically no expansion; in the former the expansion power of steam is utilised throughout the stroke. The upper portion of the cylinder above the piston is in the form used for Diesel engines, whilst the lower portion is that of a steam engine. I understand that before deciding to instal this type of engine in the Blue Funnel boat Messrs. Scott have had one under continuous test for rather over a year and have found that remarkable fuel economies can be effected. I hear that a paper will shortly be read on the subject of the Still engine before the Greenock Association of Shipbuilders and Engineers, and the subsequent discussion should bring out many points of interest.

Taxation Reform.

During the past few weeks I have met a number of the leading men in the British Automobile industry, manufacturers of cars, accessories, and components as well as wholesalers, and on each occasion I have introduced the subject of the present system of motor taxation, and we have discussed its effect on the country's trade. So far I have not heard one word in its defence; harsh, onerous, unfair, and iniquitous are some of the mildest words applied to it. Sir Alfred Mays-Smith rather put the matter in a nutshell the other day, before the Scottish Motor Trade Association, when he said that it was incumbent upon the leaders of the motor industry to do their best to secure a reversion to the petrol duties as the basis of motor taxation, or, failing that, a reduction in the scale of the existing taxes. There is all the difference in the world between a man being called upon to pay a large amount in motor taxation at the very time when his income tax and other calls become due, and in his being able to contribute the same revenue to the Exchequer by a method which extracts that revenue, as the vehicle is being used, throughout the year. In other words when petrol was taxed sixpence a gallon motorists may have grumbled but paid more or less as a matter of course. Sixpence or a shilling seemed a little matter. When it comes to paying out twenty-five or thirty pounds on the nail just after the income tax collector has made it clear that he regards your income as un-

earned, it is just the kind of thing that makes a motorist decide to sell his car.

At the inaugural lunch on the occasion of the opening of Humber House the other day Lieut.-Colonel J. A. Cole told me how the new taxation pressed on manufacturers in another and little known way. It practically makes the trade four-seasonal. Whilst previously a buyer took delivery at the earliest possible moment he now would only take the car ordered into his possession at the end of the quarter, and the question of finding floor space to house cars awaiting delivery is a very big one. It amounts to this, that makers have to buy or rent extensive premises and so add considerably to their production costs because the Government have made a cast iron taxation system and refuse to allow a car user to commence a quarter's use on any other than specified dates. As Mr. Cole said, whatever system is adopted for collecting the ten millions of tax inflicted upon motorists it is imperative that the four-a-year licence must be cut out.

The volume of protest against the system of taxation is not by any means a protest against taxation itself. The motorist does not object to paying for value received. What he does object to is paying in a manner which he considers unfair and inequitable. At the back of his mind what he chiefly objects to is paying out his hard earned money for the upkeep of what he regards as a horde of useless officials. There is, however, no need to labour that aspect of the situation.

A Big Two-Stroke.

It is understood that plans have been prepared for the construction of a two-stroke Diesel engine of 5,000 brake horse power for use on shipboard. The engine will run at 72 revs. per minute, and turbo-scavenging will be adopted which will do away with the necessity for a piston scavenging pump on the engine itself. Two separate three-stage air compressors will be used, and each cylinder will have a diameter and stroke of 900 and 1,550 millimetres respectively.

Stock and Share Markets.

ANOTHER GOOD WEEK.

Gilt Edged Quieter : Other Markets Firm.

(From Our Own Correspondent).

London, Tuesday Evening.

A buoyant tone has continued to prevail during the past week. This time, however, it has not been gilt-edged that have monopolized the attention. The notable advance that has taken place in this market has reduced the yield on the various stocks to less attractive figures, and the result has been that prices have eased off somewhat and that there has been a general broadening of business in which all markets have shared, with the exception, of course, of Rubber and certain mining groups. I indicated the probability of this happening last week it will be remembered, and while the present buoyant conditions of the markets continues it is to be anticipated that its effect will be mainly felt outside the Consols group

A Word of Warning.

I am very much inclined to doubt the stability of the present position. Conditions fully justified an advance in Gilt-edged, but it seems to me that the advance has been overdone, and I should not be in the least surprised to see a very marked setback in the course of the next few weeks. Bear factors are not wanting, it may be pointed out; they have as a matter of fact had a certain amount of effect during the past week in checking the advance in gilt-edged. There is the adverse Irish development for one thing, while the prospects of a General Election loom always more heavily on the horizon. Further afield too it cannot be said that the omens are altogether too promising, and he would be a courageous buyer in my view who would take some of the stocks at the prices to which they have been hoisted. Of course I may be wrong, and this auspicious beginning of the year may prove to be the herald of the El Dorado for which holders of falling stocks have been waiting. But I scarcely think so, and the time seems clearly one for great caution.

Shortage of Stock.

The rise in shares other than gilt-edged is easily explained by the fact that in most groups there is a pronounced shortage of stock. Holders of stocks who have been seriously affected over a long period are not going to part now that there seems more than a chance of the reversal of the wheel of fortune, so prices are simply put up without sufficient transactions to justify the change.

Outside the gilt-edged group one of the most interesting developments has been the sharp rise in bank shares. This is to be attributed, naturally, to the enhanced value of the hidden reserves resulting from the "boom" in the Consols Market. Apart from this chief interest has centred in the strength of the more prominent industrials and of the leading descriptions of the oil market. As those who have followed my comments in recent weeks will have realised, in my opinion there is more money to be made in oils at the present time than any other market provided that care is exercised in the choice of shares. Those who have followed my recommendations have had no reason to complain for every one of the shares I have advocated has moved upwards, though in several cases only after fluctuations. Still that is all in the game.

Gilt-Edged.

Turning to the markets Gilt-edged after commencing the week well suffered a slight set back, and prices are below the previous week's level. Consols at 55½ are 1½ lower, War Loan Fives have eased off half a point at 96, while the Conversion Loan at 71.3-8 is 1.7-8 lower. Indian stocks have shared in the decline. The India seven per cent. Loan at 106 is 1½ down, the three per cent. Loan is 2 down at 53, while the 3½ per cent. Loan has shed half a point at 62.

On the whole the tone in the foreign markets has been firm, and there has been a considerable amount of activity in various directions. French stocks have been a specially strong spot with War Loan Fives 2½ up at 46. German three per cents. have eased off another fraction at 2.5-8, but Italian Rentes are steady at 25½. Chinese securities have been hard. The 1896 Loan is up to 91½, a gain of 2½, while the 1913 issue has risen 4½ to 96½. Brazilians have come in for good support, Fundings being 6 up at 58, while the 1911 Loan shows a gain of 3 at 58. Russians have been neglected. In Greek securities Monopolies are 32½.

Industrials Firm.

A much better tone has ruled in the Industrial group, and while business is still far below what may be accounted the normal things are decidedly on the up grade, and price movements have generally been in favour of holders. Tobaccos have been strong with Bats 3s. 6d. up at 66s. 3d., while Imperial Tobaccos are about the same as before. Dunlops are unchanged at 6s. 9d.

The Textile group has been rather firm on the general improvement in the outlook, Coats being ½ up at 2½, while Courtaulds have gained 4½d. at 37s. 9d. In Iron, Coal and Steel securities, a steady tone has prevailed. Armstrongs are 1s. up at 14s., Vickers at 9s. 3d. show a gain of 1s. 6d., Guest Keens are 2s. up at 31s., while Lamberts are 1-8 up at 2.

In shipping securities P. and O. Deferred have been a firm spot, and are 20 up at 320. Cunards are 1s. 7½d. up at 19s. 7½d., while Furness Withys at 27s. 10½d. show a gain of 3s. 7½d.

Oils Buoyant.

There has again been a good deal of activity in the Oil Market, and prices in the majority of cases show an advance. Burmahs at 5.25-32 are 1-16 up, while Mexican Eagles are 3-16 up at 4.5-16. Trinidad issues have been steady with Centrals at 3.5-8, a gain of 1-16. Kern Rivers at 21s. 3d. show a gain of 9d.

Among Egyptians Anglo Egyptian B are 1.9-16, while Oilfields of Egypt are 5s. 9d., an increase of 9d. In the Roumanian group Roumanian Consolidated are 9d. up at 9s. 3d., while Phoenix at 15s. 3d. show a gain of 1s. 9d. Dacia Romanos at 11-16 are unchanged, while Steaua Romanos are 1s. 3d. up at 12s. 6d.

Banks Firm.

Banks have generally been firm, but the Indian group have been dull. Chartered of India at 15½ are ¼ down, while National of India have dropped a similar amount at 35½. P. and O. Banking Corporations are 12, while Imperial of Persias are ¾ up at 6½.

ECONOMIC CONDITIONS IN PALESTINE.**Scope for Motor Transport.**

The following extracts are taken from the report of Mr. R. Harari, late Director of Commerce and Industry, Government of Palestine, on the economic and commercial situation of Palestine at the beginning of 1921:—

Although economic conditions are still primitive, modern methods are making headway and hold out hopes of development and progress. The country is under-populated and under-cultivated, and lacks capital and foreign trade, but the wants of the rural districts, other than those they can satisfy by their own production, are few, and there is little poverty.

The commercial situation during the last year, has followed the commercial depression of the world markets, although the effects have been less severe in Palestine than in industrial countries. It is interesting to note that in 1920-1921 imports amounted to £5,216,633, and exports to £771,701, showing an adverse balance of £4,444,932, which is presumably accounted for by the following invisible items:—(a) re-export to, and transit traffic for Syria and the French Zone. (b) expenditure of Zionist Commission and religious and relief missions. (c) Army of Occupation. (d) remittances from abroad. (e) tourists. No accurate figures are available for trade between Palestine and the territory east of the Jordan, but a rough estimate of the dutiable imports passing through Palestine to Transjordan approximates to £E.300,000.

Business is conducted mainly through commission agents, or by small merchants, working with limited capital and bank credits. There are few important firms, and little business initiative. The reason is to be sought in the exhaustion brought on by the war, and in the recent world crisis rather than in the lack of business ability.

The banks have pursued a cautious policy, calling in loans and paying down credits, and have thus saved their clients from the heavy losses they would otherwise have incurred from the slump in the world markets.

Large scale industry has not obtained a footing in the country and practically all manufactured articles are imported except those that can be produced locally by relatively unskilled labour in small workshops and under primitive conditions. Recently attempts have been made by Jewish industrial groups to develop industries connected with building and allied trades and with textiles. Agricultural Industries, *viz.*, those dealing primarily with agricultural raw material such as the wine, soap, and milling industries have made better progress, but are somewhat backward in their methods; there are, however, signs of progress. The tourist season was unsatisfactory although sufficient accommodation had been made available and the railway provides every facility for quick access from Egypt.

In addition to the upkeep of roads, considerable work has been carried out in the repair and adaption of existing Government buildings and in the provision of local water supplies for which the Government grants advances to local bodies.

Transport.

The question of electrification of the railways is receiving serious consideration in connection with the Rutenberg projects for deriving power from the waters of the Jordan and the Yarmuk. The electrification of the Jaffa-Jerusalem section would require some four millions Kilowatt hours, and that of the Haifa-Semakh section a further six millions.

During the current year experiments have been conducted in the use of loco-tractors for the purpose of supplementing and feeding the main railway lines.

Considerable scope exists for the development of motor transport. It is estimated that roughly 1,000 cars (mainly Ford, touring type) are on the road; larger numbers could be employed with advantage, but the high price of benzine and the lack of mobile repair units have so far acted as a deterrent.

There are about 3,000 kilometres of metalled roads, and approximately 10,000 kilometres of track. A considerable amount of resurfacing and repair to roads has been in progress but the only completely new construction is the road between Tiberias and Semakh.

Condition of Ports.

The two harbours, Jaffa and Haifa, are little better than open roadsteads, affording scanty protection against inclement weather. Their shallow waters necessitate the use of lighters,

thus greatly increasing the expense of handling cargo. Small landing places are to be found at Gaza, Caesarea, Tanturah and Acre. Although it is doubtful whether the water-borne trade of the country will, within the next few years, warrant the outlay of large sums upon harbour improvement, a minimum expenditure must be incurred almost immediately to render existing ports tolerable, and schemes to this effect are under consideration for both Jaffa and Haifa.

Although shipping belonging to 23 companies calls at Jaffa and Haifa regular sailings are assured only by the Khedivial Mail, Prince Line, Messageries, and Lloyd Triestino.

The mineral wealth of Palestine is practically unexplored, but building stone is plentiful, and open air quarries are being worked throughout the country. Lime is burnt in kilns; common salt, potassium and bromine salts, and asphalt exist in large quantities in, and around, the Dead Sea, and phosphate deposits are reported near Bethlehem. The prospects of mineral oil in the neighbourhood of the Dead Sea Hebron, and Haifa, are such as to have attracted the Standard Oil Company, and the D'Arcy group, who claim to have received concessions in these areas from the Ottoman Government.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

Monday Night.

Sugar.—The home refined market has been comparatively quiet during the week, prices remaining steady. Tate's cubes are firm at 52s.; mineral water sugar at 47s.; London granulated at 46s. 6d.; and Lyle's granulated at 46s. 6d. Export descriptions have been a dull feature. West Indian crystallized is unchanged at 40s. 6d., while Czecho-Slovakian has advanced 3d. at 19s. 3d. Cane sugar (96 per cent.) quotations are:—February, 15s.; March, 13s. 9d.; May, 13s. 9d.; and August, 13s. 9d. White sugar quotations are:—February, 19s.; March 19s. 7½d.; May, 18s. 7½d.; and August, 18s. 9d.

Coffee.—Supplies have improved during the week, and prices have remained firm. Costa Rica and Indian are unaltered at 126s., and 106s. respectively. Nairobi is the same at 110s., as also Jamaica at 150s. Very little change has taken place in the futures market, and prices are now at 51s. 6d. for March; 52s. 9d., May; 52s. 6d., July; 53s. 9d., September; and 54s. 3d. for December.

Tea.—The market has been brisk for the Java and Sumatra varieties, while Indian has shown a poor demand with quality poor. Fine China tea is steady at 2s. 11½d. lb.; and good Pekoe Souchong has been a brighter feature at 11d. lb.; Common Java has been firm at 9½d. lb.

Rice.—Prices have again shown a tendency to rise especially for American Java rice which has during the last two weeks gained eightpence. There has been a small arrival of Spanish Japan rice during the week, but the market is still exceedingly short of this variety.

Dessicated Coconut.—The demand is good and prices have shown a rising tendency.

Almonds.—Buyers are looking forward to a decline in prices, but in many circles no serious drop is anticipated until the new crops are more assured.

Green Fruit.—The abnormal demand for oranges which has been in evidence during the past few weeks, is now waning. Shipments are temporarily suspended of Spanish oranges owing to storms off the Spanish coast. There is a small enquiry for Seville sours, but only for the selected medium fruit variety, supplies of bold graded fruit having been cleared. A falling off in the demand for lemons has been a notable feature of the week, there being only small supplies afloat, which has held buyers back. Bold fruit has been in some request. The poor condition of Valencia onions now arriving is even more marked than the previous week. Buying has only been sufficient to clear the markets, higher prices also being demanded. Quotations for apples have appreciated while the demand is good, especially for boxed fruit.

Oilseeds.—Prices are generally higher. Indian linseed has gained 10½d. at 20s. 10½d., while La Plata has been steady at 18s. 9d. Rapeseed is higher with Toria, 4½d. up at 16s. 7½d.; brown Cawnpore, 2d. up at 17s. 8d.; and bold Ferozepore, 3d.

up at 18s. Cottonseed has risen with Indian 3d. up at 9s. 9d.; and Sakellaridis a like amount up at 12s. 6d., while Egyptian black has gained 4d. at 12s. 6d.

Oils.—Rates are harder. Linseed oil is 1s. up at 39s. Rape oil is unchanged with the crude variety at 51s., and refined at 56s. Cotton oil is unchanged except for refined, which is 1s. up at 45s. Egyptian crude and deodorized are firm at 37s. and 49s. respectively. Turpentine has shed 2s. at 67s. 3d.

Oilcakes.—Linseed cake is firm at 310s. ton. Cottonseed cake is unchanged at 195s. ton, as also palm kernal cake at 135s. ton. Arachis cake has been steady at 225s. ton; and cotton meal cake is the same at 320s. ton.

SUDAN PRODUCE.

The following extracts are taken from the C.E.B. report for December:—

Gum.

Kordofan Province.—7,135 kantars of gum were sold at El Obeid market during December as against 3,503 kantars during the same month last year. The average price was 916 mms. per kantar. 6,047 kantars were sold at Nahud at an average price of 650 mms. per kantar of 100 rotls (45 kilos). 3,311 kantars were sold at Um Ruaba at 880 mms. per kantar as against 1,266 kantars last year. 2,883 kantars were sold at Rahad at 770 mms. per kantar as against 3,750 last year.

White Nile Province.—80 tons of gum were exported by rail from Tendelti.

Fung Province.—Market prices per kantar of 100 rotls (48 kilos).

Wheat, etc.

Dongola Province.—The abnormal spell of hot weather during December, has damaged the growth of the wheat crops, causing the young wheat to be far from robust in its early stage. At Burier Pumping Station about 350 feddans are under wheat which has made an excellent start. The area will not be quite so large as last year.

Darfur Province.—Wheat was sold in El Fasher market at L.E.2 per ardeb of 300 rotls (135 kilos).

Berber Province.—The price of wheat was L.E.3.500 per ardeb of 420 rotls (189 kilos), and of barley L.E.1.200 per ardeb of 315 rotls (142 kilos).

Berber Province.—The price of maize was 120 PT. per ardeb of 380 rotls (171 kilos).

Dates:

Halfa Province.—Early in the month the price of Barakawi dates in Mahas District fell from well over a pound to 60 Pt. per sack, but in Sukkot District there was no appreciable fall. There is still a fair quantity of dates unsold in the hands of natives

36 sailing boats with 7,000 sacks arrived at Abka the head of the second Cataract, during the middle of the month from the South. Two were wrecked on route. The state of the Halfa date market was satisfactory early in the month. The present Halfa stocks are 15,000 sacks approx.

Dongola Province.—The comparative failure of date traffic this year is due to the small demand for dates this season caused by the large stocks existing in merchants' hands in Egypt and Khartoum and to the heavy fall in local market price which is now Pt8 the keila for Barakawi compared with Pt.24 the keila last year.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated February 20:—**Condition of Crops.**—February 17. Unchanged. **Markets.**—**Cotton.**—February 16—Bombay cotton market easy. Fine M.G. Oomras Rs. 345 March, Rs. 358 May. Bombay cotton arrivals from September 1, 1921 to February 10, 1922 were 1,721,000 bales as compared with 964,000 bales during the same period of the last year. **Piece-goods.**—Bombay imported piece-goods market unchanged. **Jute.**—February 18—Calcutta jute market firm. Overseas buyers taking more interest. Hessians quiet but steady Heavies very firm with good demand. Business done in B Twills up to Rs. 37.8 and Liverpools for March-April Rs.42.

"QUALITY AND FLAVOUR"

**BOURNVILLE
COCOA**

MADE UNDER IDEAL CONDITIONS.

SEE THE "Cadbury" ON EVERY PIECE
NAME OF CHOCOLATE.

Specially packed for Export.

Cadbury, Bournville, Eng

Shellac.—February 11—Market firm and active. Good buying demand for all qualities. T.N. Spot from Rs. 162 to Rs. 167. March Rs. 164. Rice.—February 17—Special Straits quality rice Rs. 455. Bank Rate.—Imperial Bank of India rate 8 per cent. from February 16. Tonnage of Vessels entered and cleared in January 1922.—Entered: 648,000 tons as compared with 793,000 in December 1921; Cleared: 558,000 tons as compared with 542,000 in December 1921. Registration of New Companies.—Authorised capital of new companies registered in January 1922 Rs. 3,00 lakhs against Rs. 7,000 lakhs in January 1921.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ended February 11:—

Sultanas.—The total estimated arrivals to-date amount to 168,250 bags as against 97,860 bags for the corresponding period of last year. The total estimated sales are 162,250 bags as compared with 90,860 bags, and the estimated stock unsold totals 6,000 bags as against 7,000 bags for 1921.

Shipments.—Sultanas are now being loaded on the s.s. Karnak for Liverpool.

Markets.—About 10 tons sultanas were sold during the week. Several shippers have endeavoured to effect purchases in response to enquiries from abroad, but the refusal of dealers to reduce prices to compensate for the lower rates of exchange prevents business resulting. Exchanges continue very uncertain. Rates have slightly improved, Sterling having advanced to 645 with prospects of going higher.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 130s. cwt.; (Canadian), 131s. 6d. cwt.; (American), 116s. 6d. cwt.; butter: (Austrian), 112s. 6d. cwt.; (New Zealand), 149s. cwt.; cheese: (Canadian), 99s. cwt.; (New Zealand), 96s. cwt.; lard, 28s. cwt.; eggs (Danish), 37s. per 120; (Styrian), 28s. 6d. per 120; chillies 102s. 6d. cwt.; cloves (Zanzibar): 1s. 4½d. lb.; cocoa (Ceylon, good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 125s. cwt.; (East Indian), 132s. 6d. cwt.; (Central American), 105s. cwt.; (Jamaica), 76s. 6d. cwt.; (Mocha, longberry), 112s. 6d. cwt.; (Santos, superior), 63s. 6d. cwt.; ginger (washed Cochin), 57s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 3½d. lb.; (Muntok, white), 8d. lb.; pimento, 2½d. lb.; raisins (Valencias), 110s. cwt.; sultanas (Smyrna), 121s. 6d. cwt.; currants (Vostizza), 76s. cwt.; currants (Amalias), 58s. 6d. cwt.; sugar: (Tate's cubes), 51s. 6d. cwt.; (Lyle's granulated), 46s. 4½d. cwt.; (Mauritius crystals), 43s. 9d. cwt.; (West Indian crystallized), 41s. 3d. cwt.; (centrifugal), 13s. 6d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 14s. 1½d. cwt.; (bran, Rangoon), £5 18s. 9d.; ton; cinnamon (firsts), 11½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea; (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 7½d. lb.; (fine to finest), 2s. 9d. lb.; Ceylon (common to good common), 1s. 2d. lb.; (medium to good), 1s. 6d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 9d. lb.; wheat (English white), 54s. 6d. qr.; (Australian), 57s. 6d. qr.; barley (malting), 56s. qr.; barley (feeding), 39s. 6d. qr.; oats (English), 33s. 6d. qr.; oats (La Plata ex-ship), 27s. 9d. qr.; maize (La Plata), 40s. 6d. qr.; flour, 47s. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £35 ton; bismuth, 9s. lb.; copper (standard), £59 18s. 9d. ton; copper (electro), £66 15s. ton; gold bars, 95s. 9d. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 95s. ton; galvanised sheets (24 G), £15 15s. ton; lead (soft foreign), £20 2s. 6d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 27s. 6d. unit; nickel, £175 ton; platinum, 260s. oz.; plumbago, £20 ton; quicksilver (G.O.B.), £11 7s. 6d. ton; tin (standard), £148 7s. 6d. ton; wolfram, 10s. 6d. unit; zinc sheets, £34 10s. ton; tin plates (20 by 14), 18s. 9d. box; silver bars, 34,1-8d. oz.

Chemicals.—Acids: Boric, 66s. cwt.; oxalic, 7½d. lb.; citric, 1s. 11½d. lb.; tartaric, 1s. 3½d. lb.; ammonia (sulphate), £10 1s. 3d. ton; arsenic (white powdered), £40 5s. ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £14 5s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 7½d. lb.; chlorate, 5s. lb.; caustic, £33 10s. ton; nitrate, £42 10s. ton; permanganate, 9½d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 130s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 5½d. lb.; alkali (58 per cent.), £8 18s. 9d. ton; chlorate, 3½d. lb.; caustic (70 per cent.), £23 ton; hyposulphite £15 10s. ton; prussiate, 9½d. lb.; nitrate, £14 5s. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.), £110 ton; lemon oil, 3s. 4½d. lb.; quinine, 2s. 11½d. oz.; red lead, £35 10s. ton; white lead, £39 10s. ton; white ground lead, £49 12s. 6d. ton; ton; sulphate of copper, £27 15s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first), 90 lbs. and up, 7½d lb; 80 to 89 lbs., 7½d. lb; 70 to 79 lbs., 7½d. lb.; 59 lbs. and under, 6½d. lb.; (second), 90 lbs. and up, 6,7-8d. lb.; 80 to 89

lbs., 7d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 6d. lb.; 59 lbs. and under, 5d. lb. Cows (first), 60 lbs. and up 4½d. lb.; (second), 60 lbs. and up, 4½d. lb.; 59 lbs. and up, 4½d. lb.; Bulls (first), 5d. lb.; Kips (first), 6,3-8d. lb.; (second), 5½d. lb.; Calcutta Market. Prices in rupees per 20 lb. Arsenic hides (cowsl-Agras, 10.8 to 15.8 (10 to 15.8); Durbhangas, 8.8 to 10 (8 to 10.8); Patnas, 6 to 8 (6.8 to 7.8). Salted cows: 4.8 to 7 (4.8 to 7.8). Arsenic hides (buffalo): 4 to 9 (4 to 6.8). Skins: Calf, 8 to 10 per 20 lb.; goat, 250 to 280 per 100 pieces.

Miscellaneous.—Cotton: (American), 10,30d. lb.; (Egyptian Sakel), 10,75d. lb.; Oilseeds: Linseed (La Plata), £20 2s. 6d; ton; palm kernals, £18 7s. 6d. ton; castor seed (Bombay), £14 7s. 6d. ton; sesame seed (China), £23 6s. ton; soya beans, £12 10s. ton; Oils: Linseed, £38 10s. ton; olive (Levant), £74 10s. ton; rape (crude), £30 15s. ton; soya, £35 5s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank) £3 15s. ton; coconut (Ceylon), £41 10s. ton; cotton (crude), £35 10s. ton; ground nut, £43 10s. ton; Rubber: Plantation (No. 1 crepe); 8½d. lb.; smoked sheet, 8½d. lb.; fine hard Para, 11½d. lb.

COMMERCIAL BREVITIES.

It has been decided to put the British Trade Ship scheme back a year owing to the trade depression.

Negotiations for the formation of the Czech Lloyd are said to be progressing satisfactorily.

Belgian steelworks have received an order for 5,000 tons of rails from Bulgaria.

A message from Belgrade states that an oil spring has been discovered in the Kotor region of Dalmatia.

It is reported that oil exports from Roumania in 1921 amounted to about 300,000 tons, compared with about 247,000 tons in the previous year.

Mr. T. Gavin Jones, Director of the British India Corporation, Ltd., Cawnpore, has been elected President of the Upper India Chamber of Commerce for the ensuing year.

The Czecho-Slovak negotiations with Russia for a commercial treaty are nearing their end, and a commission "is shortly expected at Prague with a view to their completion.

At the general meeting of the Prague Clearing House it was announced that in 1921 the bills, cheque, invoices, &c., received for mutual exchange amounted to 82,337,000,000 crowns as compared with 41½ milliards in 1920.

Definite certificates in respect of the issue of 8½ per cent. mortgage debenture stock of the British Burmah Petroleum Co., Ltd., are now being issued in exchange for fully-paid scrip certificates to bearer.

The Imperial Mineral Resources Bureau has been informed by the Geological Survey of India that the quantity of gold extracted from the mines in India during the month of November, 1921, amounted to 35,811,565 oz., valued at Rs. 24,57,880.

H.M. Representative at Sofia has reported that in virtue of a recent decision of the Bulgarian Veterinary Council cattle and raw cattle products will only be allowed to be imported into Bulgaria if accompanied by veterinary certificates issued by the official veterinary authorities of the country of origin.

The Czecho-Slovak Government has arranged an express passenger service by the Elbe and Danube routes, i.e., from Prague to Hamburg, and Bratislava to Galatz, while the recently-founded shipping companies have contracted with the State railways for transport at a fixed tariff.

The Banque Marmorosch Blank and Co., announce a dividend of 100 lei per 500 lei share, free of tax. The rate of the tax last year was 5 per cent., but this year the tax has been raised to 15 per cent., and is being paid by the bank. The bank's capital is 925,000,000 lei, and there are reserves of 164,000,000 lei.

Southern Punjab Railway.

The net revenue of the Southern Punjab Railway Company, Limited, for the year ended September 30, last was £331,738, of which £105,816 is payable to the Secretary of State for India as the share of surplus profits due to the Government. This leaves £225,922, to which must be added £148,876 brought from September 30, 1920, making a total of £374,797. The directors propose to pay a final dividend on the ordinary stock of £9 per cent. (making with the interim dividend of £5 paid in September last a total distribution of £14 per cent. for the year), from which English income-tax at 3s. 1d. will be deducted, leaving £142,797 to be carried forward, subject to excess profits duty and corporation profits tax if found due. As regards excess profits, the directors state that the Special Commissioners have decided against the company, but the question of an appeal is under the consideration of the Board.

FINANCE AND MARKET REPORT.

The following extracts are taken from the monthly circular of the Imperial Ottoman Bank :—

Ottoman Finance:

The revenues of the Ottoman Treasury in January, 1922, included the ordinary receipts, such as customs, vilayets, etc., and extraordinary receipts. The latter include :—1. Two advances made by the Ottoman Public Debt on December 31, 1921, and January 21, 1922, to the amounts respectively of £T250,000 and £T450,000, secured by the Government's participation in the profits of the Tobacco Regie for the eighth and following years. 2. The payment to the Government of its share in the receipts of the cable from Constantinople to Constantza as well as in the profits of the Société des Téléphones. The Government has made use of the balance of the December receipts of the Ottoman Public Debt advances of £T700,000, and of the January revenues, in order to pay on January 1 salaries for the second half of August, and on January 21 those for the first half of September; at the same time it has been able to effect payment of the so-called priority salaries, to settle the general expenses of the Ministries, and to meet the pensions of widows and orphans, etc. The Administration of the Ottoman Public Debt up to January 31 received the sums of £T57,000 from the State Disposals Board, in reduction of the advance of £T1,000,000 made to the Ottoman Government and guaranteed by its stocks and the gold reserve of the Internal Loan

Markets.

Constantinople.—The situation remains unchanged, still dominated by the uncertainty of political, economic, and financial factors. Transactions both in imports and exports have been insignificant.

Exports.

Tobacco.—This is the principal article of export. Arrivals from the interior :—786,000 kilogs of which 210,000 were exported. Stocks available, 3,500,000. Average prices ruling : from 45 to 250 piastres per kilog., according to quality. Strong demand, especially for good qualities; the extreme pooriness of the new crop accounts for the rise in prices of existing old crop.

Mohair.—The present remaining stocks can be estimated at 5,360 bales.

Gum.—Remaining stock, 1,075 bags.

Opium.—Remaining stock 622 cases.

Imports.

Manufactured Articles.—Business still limited, although available stocks on the market are not very important.

Calcutta Sacks.—Practically no demand; considerable stocks amounting to about 1,000 bales are slowly disposed of with great difficulty.

Sugar.—Marked rise in the quoted prices of crystallised sugar, concurrent with the upward movement shown by other markets. Average prices ruling : £20 to £22. Present stocks almost exhausted. On the other hand, "cubes" stocks are disposed of very slowly.

Coffee.—Prices quoted show an upward tendency, on the reported deficit of the Brazilian crop. Good demand. Arrivals have been sold afloat, and the existing stocks are insignificant.

SHARP FALL IN COTTON INDEX.

71 Per Cent. Above Pre-War.

The general average of current cotton prices is given by Mr. Frederick W. Tattersall, in his cotton trade circular issued last week, as 171, which compares with 191 in the middle of January and with the exception of last March is lower than in any month during 1921. In each case the price ruling on July 31, 1914 is taken as a basis of 100. All the items dealt with register a fall on the month. Egyptian cotton, which now stands at 206, heads the list with a drop of 35 points, and this easier movement is reflected in Egyptian yarn which is 25 points lower at 150. Declines of 15 points in American yarn and 10 points in American cotton have occurred and the figures are now 172 and 156 respectively. Cloth values have lost 12 points at 163, bringing down the general average 20 points.

LANCASHIRE COTTON DIVIDENDS.

£122,500 Distributed in January.

The stocktaking results to the end of January of 78 Lancashire cotton firms engaged in the production of cotton yarn only, and having a total paid-up, ordinary share capital of nearly £11,000,000 and a total spindleage of more than eight millions, have been announced during the past few days.

Dividends ranging from 3 1-3 per cent. to 20 per cent. per annum absorbing £122,500 have been declared by 35 mills, but the directors of 43 concerns have been unable to recommend any payment at all.

Out of 56 companies whose reports relate to the three months trading to the end of January, 31 have been forced to pass the dividend. One mill paid 3 1-3 per cent., five per cent., two each 6 2-3 per cent. and 9 per cent., eight 10 per cent., one 13 1-3 per cent. and six 20 per cent. per annum, requiring a sum of £55,323. The average dividend per company for the quarter is 4.88 per cent. per annum, compared with 5.71 in October, 6.44 in July, 7.33 in April, and 22.11 in January, 1921, for the same 56 concerns, whose aggregate paid-up ordinary share capital amounts to £6,142,135, and which have 5,477,274 spindles consisting of 4,294,424 mule and 1,182,850 ring.

In the case of the remaining 22 mills, with a total paid up ordinary share capital of £4,645,241 and controlling 2,611,997 spindles, comprising 2,349,381 mule and 262,616 ring, the figures cover a period of six months. Twelve firms could not pay a dividend, two declared distributions of 4 per cent., two 5 per cent., one 6 2-3 per cent., four 10 per cent. and one 20 per cent. per annum, the sum necessitated by these payments being £67,117. The average dividend per company for the half-year is 3.86 per cent. per annum, against 4.68 last July, and 13.44 twelve months ago.

MANCHESTER MARKET.

(From Our Own Correspondent.)

Manchester, Friday.

Taking everything into consideration the conditions which have prevailed throughout the market during the past week might be termed satisfactory, although at the same time the market is still far from healthy. A feature of interest has been the extensive inquiry for piece goods which has been about for the two great outlets India and China, and here and there some substantial lines have been placed. The general opinion is that there is less probability of lower values prevailing, and on account of this some speculative buying has taken place by some well known shippers. A feature has been the steadiness displayed in raw cotton circles, and if values will only advance by gradual stages, then it should not be very long before a period of greater activity is witnessed. With regard to cloth there has not been very much inquiry about for the outlets of the Near East. Recent advices received from Egypt have not read in a cheerful vein, and it is mentioned that remittances from that outlet are coming in very slowly. At the same time some transactions in a variety of fabrics have been arranged. Quotations

for Egyptian yarns have ruled firmer, and for home use a rather better turnover has been registered. There is no definite news with regard to future supplies of Egyptian cotton. Some fairly substantial cloth sales have taken place for India and China, and buyers for the remaining minor outlets have not been altogether idle. American yarn quotations have ruled firm, and the offtake tends to broaden.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows for the week ended February 22:—

The past week has produced a very welcome broadening in the enquiry, and if the business resulting has not come up to expectations, it can at least be said that an increase on last week has been recorded. A steady improvement in the weekly sales of 400 to 500 bales, such as we have recently witnessed, would very soon result in a respectable total being reached, and the undercurrent of business seems strong enough to induce hopes that such will actually be the case. As usual, Sakellaridis F.G.F.—Good has been chiefly in request, and the same grades in Upper Egyptian have this week received a fair amount of attention also. Brown and Pilon have been comparatively neglected, and the enquiry for Sudan seems to have slackened off a little. Low staple cotton still retains its adherents, but one does not hear of much business passing. More than ever it would seem a question of price. Over and over again one sees a spinner, who has come down here to buy at a price, return to his mill without buying, because he cannot reconcile the price he is asked to pay for his actual cotton with the price he is offered for his yarn. At the present time, a holder of actual cotton here, who is in a position to take a reasonable profit, could make a good turnover if he liked to do so.

Manchester reports have been consistently cheerful during the week. China continues to buy, several speculative lines have put through for India, and the trade in yarns, both for Home and Export, shows an improvement. Prices are again the stumbling block, and undoubtedly a large business is pending for the East, if only buyer and seller could get closer to one another. On the whole, and taking a broad view, business looks as if it was improving slowly but steadily, and this is exactly what is required in order to put things on a sound basis once more. In conclusion a word of warning to those who really wish to sell. There is a class of shipper who, whenever he sees that 500 bales of spot cotton have been sold in Liverpool, at once jumps to the conclusion that a trade boom in cotton has started, off goes the cable and up goes his basis a penny per lb. This does not tend to encourage buyers—rather has it the reverse effect—and in nine cases out of ten it puts the holder of the cotton quite out of the market, and his competitor, who has been content with a modest rise of 1d. (or none at all), gets the business. It should also be remembered that Liverpool is at present a cheaper market than Alexandria, and what may seem an easy price over there may in reality be a good price in Liverpool. C.I.F. business has been very quiet. Sales, 2,300 bales (includes 100 Sudan). Quotations of Brown and Sakellaridis cotton are advanced 25 points. Upper remains unchanged on the week. F.G.F. Sakel, 18.00d.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on February 10 were as follows:—Agricultural Bank of Egypt, £4.11-16; Alexandria Water Co., Ltd., £7. 3-32; Anglo-American Nile Steam, £2.19-32; Associated Cotton Ginners, £25-32; Banque d'Orient, Fr., 50; Behera Ord., £28.15-16; Brasseries d'Egypte, Fr., 76; Building Lands of Egypt, £27-32; Cassi di Sconto Priv. Fr., 125; Ciments d'Egypte Priv., Fr., 57; Ciments d'Egypte Div., Fr., 35; Comptoir Fin et Com. d'Egypte, £15-16; Consolidated Lands, Pt., 5; Credit Foncier Fondateur, Fr., 846; Credit Foncier Act., Fr., 630; Credit Foncier 1886 Oblig., Fr., 334; Crown Brewery Priv., Fr., 130; Crown Brewery Div., Fr., 130; Eaux du Cairo, Capital, Fr., 83; Eaux du Cairo Jouissance, Fr., 110; Egypt and Levant, S.S.Ord., 31s. 6d.; Egyptian Delta Light Railways, £3½; Filature National d'Egypte, £10½; Immeubles d'Egypte Soc. an des., £6; Khedivial Mail S.S.Ord., 100s.; Khedivial Mail S.S.Co., Pref., £2½; Kom Ombo Ste An de Wadi, £45-32; Kom Ombo Ste An Fondateur, £34½; Land Bank of Egypt, Parts de Fond., £38; Lots Turc., £T30½; Menzaleh Canal Navigation, £T210; Egyptian Markets, 17s. 9d.; Nungovich Hotels, £6.19-32; Ramleh Railways, £2.7-8; Salt and Soda, 29s. 7½d.; Sidi Salem, £1.

SHIPPING INTELLIGENCE.

SUEZ CANAL TRAFFIC IN 1921.

According to the report of the Suez Canal Company the number of vessels passing through the Canal during the past year was 3,975, of 18,119,000 net tonnage and carrying merchandise of 17,509,000 tons, as compared with 4,009 vessels of 17,575,000 net tonnage, carrying 17,040,000 tons in 1920. These figures are below those for the pre-war year 1913, when the net tonnage of vessels traversing the Canal was 20,034,000, the weight of merchandise carried then amounting to 25,776,000 tons.

SHIPPING AT THE PIRAEUS.

(From Our Own Correspondent.)

Athens, February 12.

There were 402 arrivals of various steamers in the port of Piraeus during January (N.S.) of the following nationalities (the figures in brackets representing the tonnage):—Greek, 308 (108,151); Italian, 39 (70,858); British, 22 (53,359); Dutch, seven (10,772); German, seven (6,965); French, seven (22,684); American, three (9,578); Belgian, two (3,415); Roumanian, two (2,704); Bulgarian, two (1,506); Spanish, one (2,418); Yugoslavia, one (200); Norwegian, one (934). The number of sailing vessels which entered the port during the same month was 208, of which 204 were Greek and four Italian.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure, and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Circassia for Bombay (Liverpool, March 6); s.s. Olympia for Bombay (Liverpool, March 17).

Anchor Brocklebank Line.—S.s. Anchoria for Port Said, Colombo, Madras and Calcutta (leaves London, March 7); s.s. Media for Calcutta (Birkenhead, March 9); s.s. Malakand for Calcutta (Birkenhead, March 11); s.s. Mahanada for Port Said, Colombo, Madras and Calcutta (leaves London, March 21).

Bibby Line.—S.s. Leicestershire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 15).

Byron Steamship Line.—A steamer will sail on March 15 from Liverpool for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna.

Clan Line.—S.s. Clan Macbeth for Bombay and Persian Gulf (Birkenhead, March 9); s.s. Clan Macbrayne for Colombo, Madras and Calcutta (Birkenhead, March 9).

Cunard Line.—S.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Manchester, March 14; Liverpool, March 16; and Swansea, March 21); s.s. Pavia for Gibraltar, Ceuta, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza and Sulina (Swansea, March 14; Glasgow, March 16; and Liverpool, March 18).

Ellerman's "City" Line.—S.s. City of Exeter for Calcutta (Birkenhead, March 14); s.s. City of Shanghai for Bombay and Karachi (Birkenhead, March 22).

Ellerman's "Hall" Line.—S.s. City of London for Bombay, Karachi and the Punjab (Liverpool, March 13).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.s. Gleniffer for Port Said, Port Swettenham, Singapore, etc. (London, March 9); s.s. Glengarry for Port Said, Port Swettenham, Singapore, etc. (London, March 23).

Harrison Line.—S.s. Governor for Calcutta (Liverpool, March 20); s.s. Electrician for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, April 20).

Henderson Line.—S.s. Chindwin for Port Said and Rangoon (Birkenhead, March 8); s.s. Burma for Port Said and Rangoon (Birkenhead, March 22).

Holt Line.—S.s. Lycaon for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 9); s.s. Agamemnon for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, March 9); s.s. Euryades for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, March 9); s.s. Deucalion for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 22).

Johnston Line.—S.s. Dromore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 25).

Moss Line.—S.s. Luque for Casablanca, Gibraltar, Malta, Piraeus, Smyrna, Salonika, and Constantinople (Liverpool, March 5).

Papayanni Line.—S.s. Andalusian for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna and Constantinople (Liverpool, March 11).

P. and O. Line.—S.s. Nellore for Colombo, Madras, and Calcutta (London, March 10); s.s. Egypt for Bombay (London, March 10); s.s. Nankin for Colombo, Madras, and Calcutta (London, March 24); s.s. Macedonia for Bombay (London, March 24).

P. and O. British India Line.—S.s. Merkara for Colombo, Madras and Calcutta (London, March 10); s.s. Australia for Bombay and Karachi (London, March 11); s.s. Mashobra for Bombay and Karachi (London, March 24); s.s. Margha for Colombo, Madras and Calcutta (London, March 31); s.s. Manela for Bombay and Karachi (London, April 7); s.s. Nuddea for Colombo, Madras and Calcutta (London, April 15).

Prince Line.—S.s. Sailor Prince for Tunis, Malta and Alexandria, (Manchester, March 12); s.s. Syrian Prince for Malta, Alexandria and Syria (London, March 18); s.s. Scottish Prince for Tunis, Malta, Alexandria and Syria (Manchester, March 25).

The offices of the general freight department of the Prince Line have been removed to 56, Leadenhall Street, E.C.

ENQUIRY BUREAU.

ADVERTISERS requiring agents abroad and readers abroad desirous of getting into touch with British Manufacturers, Export Merchants, etc., may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," "The Near East," 1, Devonshire Square, London, E.C.2. It must be understood that "The Near East" accepts no responsibility in connection with such replies.

114. Importer in Karachi (India) travelling throughout India, wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities:—Exports: Medicinal herbs dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.

116. Import Merchants in Adana, Cilicia, Asia Minor, wish to represent British firms for any kind of British-made goods. Own account and commission basis. Good references provided. Send catalogues and samples with prices and terms.

117. Importer in Roumania, interested in Jute trade, wishes to get in touch with firms dealing in sacks, new and old Dundee, and Calcutta makes.

121. Exporter of Greek Ores in Athens, especially of purest quality Magnesite and Chromite wishes to be connected with interested British Firms.

122. Merchant in Galatz, Roumania, wishes to enter into business relations with British firms willing to ship goods on consignment terms. Guarantees by Leading Banks given. Full details on application. Correspondence in French.

NOTES OF THE WEEK.

The Genoa Conference and Asia.

In the House of Commons on March 2 Mr. Harmsworth, Under Secretary for Foreign Affairs, stated that it had been decided to limit representation at the Genoa Conference to European States. This decision is greatly to be regretted, for it means that the politicians of Europe are still ignoring realities, are still being guided by political rather than economic and geographical divisions. Certainly there must be a limit to the number of States invited to the Conference, but do the optimists of Genoa seriously think that true economic stability is possible in the Near East without the consent, say, of Turkey and of Trans-Caucasia? One cannot isolate these two countries from the general Eastern problem, for though it may be said that economically they are unimportant, in the more primitive communities the axiom that "economic power precedes political power" is false, as the conference at Genoa will demonstrate. The future of Georgia and of its neighbouring republics is uncertain, but there is no point in ignoring their existence; while Turkey has it in her power to upset the best theoretically-arranged plans for the economic restoration of South-Eastern Europe. However, at Genoa delay succeeds delay, and there is yet time for Western statesmen to discover that the circulation of money does not exactly coincide with the political boundaries of Europe.

Financial Questions at Belgrade.

A conference of Little Entente economic experts is being held at Belgrade, to discuss such questions as international credits and loans, communications, economic and financial reconstruction, and allied topics. There is certainly plenty to discuss, and if the Conference can effect any improvement in the matter of the exchanges, it will be rendering good service, not only to the Little Entente, but to Europe as a whole. Meanwhile Yugoslavia is making a great effort to grapple with the problem of the falling dinar. With the object of preventing—or endeavouring to prevent—a further fall, the Ministry of Finance has issued a decree severely restricting the importation of goods from abroad, and forbidding all banks, save the National Bank, to sell foreign currencies. The plan has been subjected to considerable criticism, and it remains to be seen how long it will be found workable.

Constantinism and Greece.

On another page of this issue will be found an account

of the supersession in Greece of Venizelism by Constantinism, by a writer who, we think, puts his case very ably. This is not to say that we are by any means in full agreement with all the views expressed, but we believe that hitherto no clearer exposition of the present temper of the Greek people has been made, and that the publication of the article will therefore serve a very useful purpose. A nation does not march without good cause in the teeth of Allied opposition, and the overwhelming determination to be masters of their own fate was apparently inevitable with the repressed Greeks. But it seems to us that the writer's unfriendly feeling towards M. Venizelos is both ante-dated and altogether too warm, and that half the ills which the Greek nation undoubtedly suffered under the Cretan statesman's regime were due, not to him, but to the uncontrolled follies of his supporters. And incidentally we may remark, touching the laudatory account of the liberty enjoyed under the present regime, that the freedom of the press and of speech to which the writer refers are hardly so complete as he appears to believe. One need go no farther than to the news agencies to discover how, for instance, telegrams are still censored.

The Reply to the Arab Delegation.

Two things have recently brought the question of Palestine to the fore: Mr. Churchill's reply to the comments of the Arab Delegation on the Draft Orders providing for the Constitution of Palestine, and the meeting at the Hyde Park Hotel in support of the Arabs' claims, a report of which will be found on another page. Of the second we will say nothing here except to lay stress on the significant weight and influence of English men and women present in support of those claims. But there are two points in Mr. Churchill's statement that it is desirable to note. First, he said he could not negotiate officially with any body "claiming to represent the whole or part of the people of Palestine, since no official machinery for representation had as yet been constituted." Frankly, we do not care for this; especially when we reflect upon the cheerful good-humour with which certain subsidies are awarded to certain other Arabs who also have no representative machinery. And we further think that many things are more probable than that we shall, when these democratic legal entanglements have been set up, meet with more courteous reasonableness than that which is the mark of the Arab Delegation now in London. But we liked to have the statement, made directly and

without any humbug, that His Majesty's Government could discuss the future of Palestine on no other basis than that of the Balfour Declaration. At least we know where we are with Mr. Churchill.

An Inquiry on Palestine.

In a recent leading article we pleaded for an impartial inquiry upon affairs in Palestine, and the desirability of such a step seems to grow stronger every day. We are the last to deny that both sides, Arab and Jew, have a case, and a very good one; and it is precisely, those who are most convinced of the justice of their respective causes who will welcome such an inquiry. The Arabs want this examination; and equally the real Jew, that is the idealistic and universally respected Jew, ardently desires it. But our Government, alone of the parties concerned, is silent. We do not deny that a majority of those Englishmen whose counsels in this matter are of account favour the cause of the Arabs, but there are eminent opinions on the other side. Why then, does the Government continue in the course of superior inaction, unsatisfactory to all parties? Is it afraid of another Milner report recommending steps incompatible with the temper of its members? The demand for an impartial inquiry is no mere newspaper "stunt": it is the hope of all independent thinkers on the subject of Palestine, thinkers who are as jealous of the conservation of England's honour as of the maintenance of her interests. A decision freely made and without fear or favour, the people of Palestine will abide by: but by none other.

The Future of Egypt—

The situation in Egypt is dealt with in our leading article; and the British Government's Declaration to Egypt, together with other extracts from the White Paper published last week, will be found on another page. A new Cabinet has been formed by Sarwat Pasha, and Egypt may be said to have taken the first step on the road leading to independence. But we are not yet out of the wood; difficulties which have proved impassable in the past still await negotiation; and very wary walking will be necessary for some time yet. The great thing is, however, that the way is once more open to a full exchange of views, and that, thanks to Lord Allenby's having won the confidence of the Egyptians, that exchange is likely to be conducted in a spirit of genuine friendliness.

—and the Sudan.

In the speech in the House of Commons in which he explained the British Government's declaration, Mr. Lloyd George made clear one or two points on which there might possibly have been some misunderstanding. With regard to the reserved points, for instance, until an agreement is reached satisfactory to both sides, the *status quo* remains intact; foreign Powers are to be given to understand that the relations between H. M. Government and the Government of Egypt are the concern of those two Governments only; and "any attempt at interference in the affairs of Egypt by another Power" would be regarded as an unfriendly act. The Prime Minister was equally emphatic regarding the Sudan: "His Majesty's Government will never allow the progress which has already been made and the greater promise of future years to be jeopardised"; nor can they "agree to any change in the status of that country which would in the slightest degree diminish the security for the many millions of British capital which are already invested in its development." On

the other hand, Egypt's rights in the matter of water supply are to be fully guaranteed. All this is as it should be, and if a certain type of Egyptian should resent Mr. Lloyd George's remarks about Egypt's past relations with the Sudan, others, wiser, will recognise that they *were just*, and uttered only in explanation of British policy.

Sir R. Wingate's Advice.

When Lord Allenby was summoned to London by the Government, certain papers in this country were very ready with the demand that he should resign, on the ground that he had shown 'Prussianizing tendencies,' that his 'militaristic spirit' was making a settlement impossible, and so forth and so on. It would be interesting to know how they view the matter now, and whether they still persist in the belief that a soldier is never capable of taking a statesmanlike view of any subject. Their complacent self-assurance must have been further shaken when, after learning the truth about Lord Allenby's views on Egypt, and the part he has played in the negotiations, they discovered, through the parliamentary reports, that another soldier, Sir Reginald Wingate, had advised His Majesty's Government along similar lines, and in a like broad-minded spirit. Sir Reginald appears in fact to have had a good deal less than justice done to him in this matter, and though there may be sound reasons for the Government's refusal to publish the whole of the correspondence in which his views are embodied, the relevant portions of it could surely be given to the world.

A Telegram from Tanta.

Tanta, the Delta town which has attained unenviable notoriety by its turbulence, has added another riot to its already long reckoning. On March 2, a crowd of demonstrators, composed largely of students, behaved in such a manner that the police were forced to fire, with the result that three people were killed and some 30 wounded. The firm action restored order promptly, and up to the time of writing no further outburst has been reported. The cause of the trouble is not stated, but in all likelihood the mob was showing at once its disapproval of the formation of a Ministry and its devotion to Zaghloul and all his works. The telegram which citizens of Tanta have addressed to us, and which will be found on another page, seems to point in this direction. It suggests also that the Zaghloulites are well provided with funds, since they can afford such embellishments as 'remote' Seychelles and other refinements. Seriously, such telegrams are depressing because they seem to indicate that even Egyptians capable of drafting a telegram in good English can yet remain incapable of understanding the spirit in which the latest British offer is made. On the other side of the account we may set the firm manner in which the new Cabinet handled the outbreak, and the success attending their policy.

Trouble in the Hejaz.

King Hussein of the Hejaz is reported to have incurred much unpopularity of late by the imposition of taxes which his subjects strongly resent, and by the forcible enlistment of pilgrims and others. One of the measures which gives particular offence is the imposition of a burial tax of twenty piastres, which was abolished in Turkish days—and curiously enough largely through the instrumentality of Hussein himself, then Grand Shereef. It is difficult to find out all the truth of the matter, but there appears to be no doubt that the Hejaz

is seriously angered ; and that not only has the Mecca-Yambo road been closed by the tribes, but that there has been fighting in the capital itself. King Hussein has for some time been talking of abdicating, and complaining that he has not been fairly treated by the Allies, especially the British, and if he should actually hand over the reins of Government to his son, the Emir Ali, it would cause very little surprise.

King Hussein's Position.

We regret sincerely that King Hussein should feel that he has a grievance against Great Britain, and even more do we regret that the muddle made in our Near Eastern policy in the days of the War should give him some cause of complaint. He rendered services to the Allies in difficult times, and if his influence and, more especially, his popularity were over-estimated that was not his fault. At the same time it seems to us that his Majesty has not come off so badly after all. If he has not yet drawn his subsidy of £5,000 a month, that is because the conditions on which it was payable have not yet been fulfilled, and it can hardly be disputed that he and his family have emerged from the War with a very great accession of influence and wealth, and with possibilities of increasing both still further if they follow a wise policy. But no good purpose would be served by denying that King Hussein himself is by no means universally liked and respected in the Moslem world, and that latterly he has done nothing to make himself more respected or popular.

The Prince of Wales' Tour.

Last week saw the completion of that section of the Prince's tour which had aroused most anxiety in the prospect, the section which embraced the old Mogul capitals of Agra, Delhi and Lahore. All these cities contain dangerous elements, none of them can be called happy just now, and Lahore, in particular, was described, we fear with substantial justice, by one of the special correspondents, as the centre of the most mutinous district in the whole country. Anxiety was therefore justified, and everyone concerned must be thankful that the extensive programme was carried through with conspicuous success. The Prince has now made acquaintance with practically all the capitals of British India, and it is unpleasant to have to record that among them Allahabad, which claims to be the seat of humane learning and culture, stands out as definitely the worst mannered. What its fate would have been in Mogul times is not doubtful, for the roofless walls would already be disintegrating under the influence of sun and wind ; but Lord Reading is not a Shahjahan, and we suppose the citizens will be left to work out their own punishment by enduring one another's bad manners for an indefinite period.

The Indian Revolutionaries.

The political situation in India has changed as a result of the decision taken by the Congress revolutionaries at Delhi. The terms of their resolution as cabled are somewhat obscure, but so much is clear that the more active wing has carried the day, and has carried Mr. Ghandi with it also. The "sort of truce" which had recently been declared may, therefore, be regarded as at an end : the men now in charge claim absolute freedom in their choice of methods ; and the rejoinder to illegal methods can only be the steadfast enforcement of the law, of which we have written so often. There are signs that this last change of attitude is making a marked impression on the important section of opinion which

has hitherto hoped for a synthesis of incompatibilities, and that it may secure for the Government a larger measure of active support from politicians who have hitherto avoided definite commitments. Such developments will be very welcome, for the most disappointing feature in the history of the past year has been the failure to bring forth a general sense of political responsibility, but in any case the real burden must be borne for some time to come by Lord Reading, and under him by the provincial Governors.

The Indian Budget.

The Indian Budget which was published last week is about the worst we can remember. A year ago the decision was taken that India should be one of the few countries in the world to pay their way, and heavy additional taxation was imposed to secure that object, but everything has been a disappointment, and now there is a realised deficit of well over twenty millions sterling. For the coming year, therefore, there is the prospect of still further taxation, some of it at least open to much criticism, and justifiable only by stern necessity ; but even if the proposals pass the legislature, a point on which there is room for doubt, the financial position of the country will be nearly desperate, unless the long hoped for revival of trade should set in with promptitude and vigour. On a later occasion we shall examine in greater detail the underlying causes which have brought about this position, and for the present we must content ourselves with expressing the hope that India, which has now much more to sell than was the case a year ago, may be successful in finding customers able and willing to pay for her surplus produce.

THE WEEK AT HOME

London, Monday Afternoon

The Royal Wedding.

The marriage of Princess Mary to Viscount Lascelles on February 28 was a great popular holiday. The whole procession was admirably done ; the crowd was the largest since the King's Coronation ; and the service was as perfect as the clergy and choir of the Abbey could render it. The rest of the day was spent as a holiday, with innumerable dinners and dances ; and everybody went home happy. So much I gather from the newspapers, which also published details of the bridal train and blushes ; for I was apparently the only person in London who resisted the temptation to stand in the crush. Even on Monday the streets were packed with sightseers—heaven knows what they came out to see, as the decorations were few—but I fancy the shops did fairly well from the visitors and suburbanites.

The young couple must have been glad when it was all over, but even when they alighted at the remote country station where the first part of the honeymoon is to be spent, a reporter and photographer were both waiting for them. These are the penalties of greatness and prosperity.

Political Squabbles.

While Cupid was busy on one side of the way at Westminster, contention was engaged on the other. The loss of three by-elections in the previous week certainly did not help the Government's nerves, but it was a tonic to the malcontents. The threats of rebellion came almost entirely from the Conservatives, and not merely from the noisy but really unimportant Die-hard group. There is no doubt that a large number of Conservatives dislike being led by a Liberal, which is natural, but they seem entirely unable to produce a leader for themselves—for the *Morning Post's* suggestion of the

Duke of Northumberland is farcical. They seem also quite unable to understand that the Conservative policy—if it can be given so substantial a title—would not win seats; their tactics, in fact, are wrecking tactics pure and simple.

Mr. Lloyd George's Position.

The upshot of all the trouble is that Mr. Lloyd George has threatened to resign; he will not lead an army that is always muttering mutiny. The Conservatives in the Cabinet have persuaded him to stay on for the present and have said as much in public; the fact is that nobody wants the thankless job of being Prime Minister just now. The Coalition patient is therefore officially convalescent, but the mischief is done; it seems mortally shaken by lack of confidence in itself, but it will probably take some time to die. The pessimists (or are they the optimists?) predict that it may go off in a fit any moment, but their hopes or fears are discounted by the fact that a good many doctors at the bedside have an interest in keeping the patient alive. Probably nothing definite will happen before the Budget is introduced, but the current betting is three to one on an election before August. It remains true, however, now as it was in January that the country does not want an election this year after all. There is plenty of party spirit at Westminster, and it can be nursed into activity in any constituency where a by-election takes place, but there is little party feeling generally about.

The Blunted Axe.

The Geddes Axe, as was anticipated in these notes last week, was quickly blunted; the recommended economies of £85 millions were cut down to £53 millions, not all of which will function this year. It is a fair reduction, taking things all in all, and education, as was expected, won hands down. The common-sense of the country rejected the Geddes idea that the quickest path to the restoration of prosperity was to cease educating posterity. Unborn tomorrow, like dead yesterday, will still creep unwillingly to school.

The L.C.C. Elections.

London County had its own election last week. There seemed a general sense of apathy on Thursday, the voting day; only about 30 per cent. of the voters turned up. The Municipal Reformers (Conservatives) won fourteen seats, the Progressives (Liberals) lost fourteen; Labour gains and losses cancelled out at six each. On the new Council the M.R.'s now total 82, the other two parties 26 and 16 respectively, so the Conservatives have a clear majority over both; the centre party evidently lost votes to both sides. The Progressives press is talking about the victory of trusts and monopolies, by which they mean that the Municipal Reformers believe in private and not municipal trading; Labour is denouncing the blindness of the people whom a week before it flattered as an enlightened democracy, which simply means that it woke up with a sore head the morning after; and the victors are hymning the sound political instincts of the masses. Of all of which oratory and spleen the average Londoner takes not the slightest notice.

WHEN YOU ARE HOME ON LEAVE

YOU will doubtless require to Hire or Purchase a Car. If this is your intention, may we send you our Tariff and Particulars of our Special Service Scheme.

BROCKS L^D.

TALLY HO! CORNER,
N. FINCHLEY, N.12.

Phone:
Finchley 2777 (3 lines.)

The New L.C.J.

Sir Gordon Hewart, Attorney-General, has at last achieved his ambition, and is appointed Lord Chief Justice. It is well known that he wanted the post a year ago, but the Government could not spare his great abilities—can it now?—and it was doubtful whether it could hold his seat at Leicester which his promotion automatically vacates. It has probably made up its mind that one more loss does not matter now.

The retirement of the present L.C.J., a great judge but of a great age, has given Sir Gordon his opportunity, which the Government could hardly refuse him at the second time of asking. There is some speculation as to his successor. The normal course is to promote the Solicitor-General, but there is a pretty general feeling at the Bar that Sir Ernest Pollock, although a charming man personally, does not carry enough weight for so responsible a post.

Mr. Bevan.

The anticipation that criminal proceedings would follow the investigation in the City Equitable case has proved correct. The Official Receiver has announced that the Company's balance sheet did not represent the true condition of affairs, and a warrant has been issued for the arrest of Mr. Bevan. He was last heard of in Naples, on his way to Constantinople, but he was refused a *visa* for his passport; since then no trace has been seen of him, but he is now rumoured to have crossed the Adriatic, and to be taking refuge in Albania, which is not a very easy country in which to find anybody.

The Woman Doctor.

There is a rare pothole in feminist circles about the decision of the London Hospital not to admit any more women students to the medical schools. The official reason is that mixed classes are an embarrassment to the profession, owing to the intimate psychological details on which they have to lecture, but some of the other hospitals do not seem to have so refined a taste as the establishment in Whitechapel, since they propose to continue the admittance of women. On the other hand the three greatest hospitals, St. Bartholomew's, the Middlesex, and Guy's do not admit women at all.

The women retort that the official reason is humbug, and that the real reason is that the men are jealous of the women, and are afraid of their competition, and that the hospital authorities were glad enough to enrol women students during the War but now that they can get enough men to do without the other sex, they have reverted to a reactionary policy. This sounds a little spiteful, and as a fact women doctors do not compete very much with men. It is notorious that the bulk of them get institutional appointments, and apart from a few specialists, the ranks of G.P.'s are practically all males.

OCELLUS.

FLYING TO BAGHDAD.

First Journalist Passenger.

In a letter received this week, Mr. H. T. Montague Bell, Managing Director of "*The Near East*," who has been travelling in Egypt and the Sudan, stated that he hoped to leave Egypt for Baghdad by air mail very soon. A telegram forwarded to *The Times* by its Cairo correspondent on March 6, announces that Mr. Bell left that city on Monday. The correspondent added that Mr. Bell is the first journalist to make the trip, and that he was travelling in a two-seater.

The flight from Cairo to Baghdad has been done in 12 hours (by Sir G. Salmond), but this is hardly the season for making, or breaking records. As *The Times* correspondent points out, "this is a period of worst weather along the route, and Mr. Bell's departure had to be postponed twice owing to a storm in the Amman sector. At the time of going to press we have no news of Mr. Bell's arrival."

THE NEAR AND MIDDLE EAST.

From Our Own Correspondents.

EGYPT.

Cairo, February 18.

Lord Allenby's Victory.

By the time they reach you my last two letters will I am afraid have become somewhat obsolete as a result of the development which the situation has since undergone. No one at this end ever expected that within a week of his arrival Lord Allenby would have been able to convince the Cabinet that what he advocated was the only course that could lead to an eventual settlement of the Egyptian problem and the obtaining of just those guarantees without which the Cabinet very properly declines to enter into any treaty with the Egyptians.

Judging by the statements made by the Prime Minister and Lord Curzon in their replies to the criticisms of the address and by the attitude taken up by a certain section of the Home Press it looked very much as if a stubborn fight awaited Lord Allenby, and in consequence it was expected that it would take some considerable time for a decision to be arrived at.

Lord Allenby had an exceedingly strong case, in virtue of the reasonable nature of his proposals and of the wide support which the policy he advocates had received, not merely because the soundness of the policy was patent to all out here who were qualified to judge but also because of the universal confidence felt in his capacity to carry that policy successfully into effect. The rapid victory which he has achieved is not merely a triumph for him and for his Advisers, but it also justifies all those who both at home and from this end supported him in the attitude he had taken up.

Here in Egypt the Reuter telegram announcing the news was received with a feeling of intense relief, and the European element and the British community join in the more instructed Egyptians' triumph. Comment is at present somewhat restrained, owing to the desire first to know the exact terms of the agreement and of the letter addressed to the Sultan, which must be presented before any Cabinet can be formed and the new constitutional régime introduced.

Lord Allenby is assured a very warm reception on his arrival and already preparations to this end are being made in Egyptian circles.

The Vexed Question of the Mails.

The question of the mails is giving rise to a great deal of dissatisfaction, particularly in view of the fact that no amount of complaint appears to bring about any remedy. The whole trouble reposes in the arrangements made at the London end and the failure to connect in France and Italy with the Lloyd Triestino at Brindisi. An official explanation published in the London Press states that the cause of the delays has been the breakdown of an attempt to accelerate by one day the postal service to Egypt *via* Brindisi, and declares that as soon as information was received that the mails despatched on January 18, 24, and 25 had missed the boat at Brindisi it was decided at once to revert to the old system. I have before me a statement showing how the mails have been arriving since the beginning of the year, and a noteworthy entry in that statement is in regard to the mails despatched from London between the 28th and 30th January and between the 31st January and the 2nd February, the former of which only arrived on the 15th instant and the latter of which only partly arrived on the 10th. This would certainly not appear to fit in with the official statement that the old system of despatch had been reverted to after the mail of the 25th had missed, and the feeling here is that the authorities in London are not grappling sufficiently energetically with the question of the mails to Egypt. Before the war we had five arrivals of mail every week from Europe and although it may perhaps be too much to ask that the same efficiency as in 1914 should be shown to-day by St. Martin's Le Grand nevertheless it does

seem disgraceful that with so many ships plying weekly between European ports and Egypt it should not be possible to organise a punctual bi-weekly mail service to Egypt.

The Season.

The season is proceeding apace, though not to the extent which was expected earlier in the year, a change which is undoubtedly due to inaccurate rumours of unrest in Egypt circulated in Europe and the strong propaganda carried out by the Riviera and North-West African and Swiss winter resorts. The arrival of the American cruising steamers with several hundred tourists has considerably enlivened matters, and we have latterly been proceeding from one social event to another with almost bewildering rapidity. Dancing is all the rage and Shepherds, the Continental-Savoy, and the Semiramis have been vying with one another with their fetes, diners-dansants, and soupers-dansants. The carnival season bids fair to be celebrated with great *entrain*, and Heliopolis has given us this year some most excellent racing, which both residents and visitors have fully appreciated. Entertaining at the Residency, which has been very active, has been suspended owing to the absence of Lord Allenby in London; and Lady Allenby has taken the opportunity to snatch at Luxor a well-earned rest from her very arduous social duties.

Cairo, February 25.

Murders of British Subjects.

Barely had I posted my letter last week than the whole community was shocked by the news of a dastardly attack made on a high official of the Ministry of Education. During the week there had been three similar attacks on British subjects, in the course of which an R.A.M.C. soldier and a Railway official had been wounded, and a civilian, a New-Zealander, had been shot dead. These attacks had considerably concerned the authorities, but it was generally considered that they were merely a repetition of what had been chronicled at intervals during the past three years, or that they were due to some personal grudge against the victims. But when on Saturday Mr. Aldred Brown, the Controller-General of the Central Administration of the Ministry of Education, was fatally shot in broad daylight close to his Ministry, and Mr. Peach, Assistant Chief Engineer to the State Railways, was wounded by one of three shots fired at him while he was walking with his wife at Mataria, all these attacks assumed a very different complexion.

The New-Zealander who was murdered had been in the country only a very short time; neither the Railway Engineer nor Mr. Peach was temperamentally a man against whom his subordinates could have had any grudge; while Mr. Aldred Brown was a man of such a retiring disposition, so gentle a nature, so respected and esteemed, and so looked up to by all Egyptians who had at any time come into contact with him, that there could no longer be any question of personal motive, and it became obvious that these attacks were directed at the victims merely because they were British.

The authorities have now taken very drastic action in the matter and a proclamation has been issued cancelling all firearm licences held by Egyptian subjects, ordering the latter to hand in whatever firearms and ammunition they might possess, authorising the Military and Police

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

to search wherever they may think fit for arms and ammunition, and warning those resisting such searches that they will be liable to be shot at sight and those in whose hands arms and ammunition may be found that they will be brought before a Military Court and be liable to capital punishment. In addition instructions have been issued by the British Consulate to Englishmen not to pass through unfrequented places or walk about alone after dark, and advising them to carry revolvers; while a reward of L.E.500 has been offered for any information which may lead to the discovery of the murderers of Mr. Brown and Mr. Jordan, or the assailant of Mr. Peach. The measures introduced by the authorities are being strenuously enforced, and have had the effect, for the time being at any rate, of putting an end to the series of cowardly attacks on Englishmen which marked the preceding week. Whether the assailants will be run to earth is, however, another matter, for in none of the recent cases has any clue to their identity been left.

Europeans' Comment.

These attacks and murders in broad daylight not unnaturally cast a gloom over the British and European communities, and the foreign press has been exceedingly outspoken on the matter. The Egyptian press has in most cases expressed regret at their occurrence, and the Independent Egypt Party has issued a statement to the same effect; but all these expressions of regret have been accompanied by statements of opinion on the question of the maintenance of martial law and on the general political situation, which have somewhat marred the good effect that they otherwise might have had on the feelings of the foreign communities. It has, indeed, been noted with much surprise that contrary to what was done on the occasion of the Alexandria events in May last year no Egyptian of standing has ventured publicly to express the disapproval of these cowardly acts which has been voiced in private conversation, and in existing circumstances this is regarded as a serious political error of judgment.

With regard to these attempts and murders I find that there is a very strong feeling in European circles on the question of compensation. It is pointed out that the principle of making the Egyptian Government pay for damage done to the property of foreign residents by riots etc. during times of political stress has been established, and it is considered that this principle should be extended to damage done to human life. In the case of officials there is, it is held, no reason why these political acts should enable the Egyptian Government to escape the payment of the compensation and pension which it would have had to pay if such official had been alive when the new régime and the consequent reduction of the foreign personnel came into effect. Particularly does this apply to cases like that of Mr. Aldred Brown, who would have retired on very nearly full pension next year, and whose widow will now receive only one-third of that amount; and it is considered that in all such cases either the amount of compensation which the official in question would have received had he survived to the time for economising his services or a very much larger pension than that allowed by finance regulations should be paid to his widow.

The Anglo-American Hospital.

Dr. Morton Howell, the newly appointed American Diplomatic Agent and Consul-General, who presided over the recent general meeting of subscribers to the Anglo-American Hospital has lost no time in giving effect to the promise he then made of doing all he could to assist that institution. He has this week issued an eloquent appeal for funds to all American residents and visitors, and it is confidently expected that this will result in substantial assistance being forthcoming from his fellow-countrymen, who in the past have always generously supported philanthropic and social objects in this country.

The Ex-Khedive.

An official contradiction has been issued of the news telegraphed here from continental sources that the

ex-Khedive had embarked at Naples for Egypt. It transpires that he did go on board a steamer bound for Alexandria, but that he disembarked at Syracuse where he has gone for a holiday with friends. Although it was obvious to most people that the news as originally reported was incorrect, nevertheless it created a certain amount of excitement in certain circles; for latterly there has been a good deal of Khedivist propaganda, and there is still a somewhat strong Khedivist Party in the country.

YUGOSLAVIA.

Belgrade, February 28.

Active Politics.

As great activity in the political life of this Country as has been experienced since the Great War is now in evidence. Extended preparations have been made for the Conference of the Little Entente Premiers; this, in view of the fact that the Genoa Conference has been postponed, will now definitely take place in Belgrade on March 5. The skilful handling of Central European politics by Dr. Benesh, is giving rise to the belief that Poland will shortly join the Little Entente, thus forming a compact *bloc* of states with a population of about 72 millions. The Near East consolidated in such a way should now cease to be an eternal source of unrest, and, moreover, such a consolidation would certainly help England and France to maintain peace in ruined Europe.

There are already signs that neighbouring States are about to change their policies towards Yugoslavia. The change of the Italian Cabinet, which means the giving up of provocative tactics, and the tone of certain Italian newspapers pointing out misdeeds of the past Governments are sufficient to indicate the change for the better in Italian foreign politics. Speculations on and encouraging disorders in Slav countries have never given good results, however attractive and promising they may be. Austria and her leaders employed the methods of *Divide et impera* for over a century; these methods are as dangerous to themselves as to anybody

TOWNSMEN & SOUTH AFRICAN FARMING.

The great spaces of the Veld are being developed. Farming is increasing there. It is attracting a remarkable community, all men of substance, many of them from the Services, commerce and the other professions.

Far inland or near the sea, on the open plains and at the foot of mountain ranges, those townsmen are building homes and starting new careers to win a living from the land. It is a sign of the times.

Nowhere is that sign more heartening than in the valleys of the Union of South Africa. Almost untenanted a few years ago, some of those sunny-climated valleys are now being closely settled, and will become highly productive when the man-made lakes are completed for irrigating the rich soil. Given water, almost anything will grow luxuriantly on that soil.

Meanwhile, in preparation, all is activity. Bush is being cleared, land is being ploughed, levelled and got ready for crops; brick kilns are providing material for houses, and on every side the new comers are planning and building, not without difficulties and cares, yet hopefully for the future.

A number of the new homes have been completed in some of the valleys. Well-built brick houses, some gabled, some double-storied, many with tiled roofs, all comfortably appointed. Soon they will be embowered in gardens, and shaded by trees, for when the water comes growth will be rapid.

Whatever of difficulty the future may hold for those builders, they will at least have pleasant homes. And in the years to come, when fields and orchards stretch for miles below those homes, there will be all the pioneer's pride in work not only well but probably profitably done.

Then, in the cool of the African night, when from the foliaged residential heights they view their valley, with its twinkling lights from scores of similar homes, those builders from the towns, who had the courage and capital to restart on the land, will find contentment in their work and valley. It will be home in the highest sense—a valley essentially rural yet with plenty of social amenities within reach. For as a newcomer recently said of his valley: "From one end to the other, the society is as good as one could desire." Capital not less than £2,000 is necessary for a start.

Full particulars of the position and prospect, and of the facilities in South Africa for obtaining training and guidance, should in the first instance be obtained from the Office of the High Commissioner for the Union of South Africa, Trafalgar Square, London, W.C.2.—Advt.

else. Lately Austria has paid dearly for her sins, leaving us a striking example of what one may expect to harvest after having sown evil in the neighbour's field. Without hesitation I may add that the Italians are not hated as a nation, however much the Yugoslavs may hate their foreign politics and acts during the last three years. Future relations between the two countries depend entirely upon the broadmindedness and clairvoyance of the Peninsular statesmen.

The King's Return.

King Alexander arrived here last night from Bucharest, whither he went ten days ago to attend the religious ceremony of his engagement to the Roumanian Princess. This ceremony had to be delayed owing to the Yugoslav Court's being in mourning for the late King Peter. Bright festivals which have taken place in Bucharest have found a strong echo in Yugoslavia. Preparations have already begun for the celebration of the first royal marriage of the dynasty of Karageorgevitch, which is, according to the latest reports, to take place on June 4. Roumania is the only nation having common frontiers with Serbia and also an undisturbed friendship dating back as far as the arrival of the Slavs in the Balkans. A Royal Marriage would further strengthen the friendly relations between the nations whose interests have been identical for such a long time.

The Communists' Trial.

The biggest trial ever known in the history of Serbian law was brought to an end last Friday. All the accused belonged to the "Red Party," whose members were chiefly recruited among the lowest classes. It was only too obvious right through the trial that these poor men, with the exception of a few intellectuals, have been fooled into doing the things which have finally brought them into conflict with the law. Steyitch, the man who threw the bomb at the King last summer, presents a poor spectacle. His behaviour is strange, and he made himself ridiculous by saying that he did not want to kill the King with the bomb, but merely to protest against the terror which is oppressing the poor. He also denied all the statements made and duly signed by him some months ago when he was arrested. The Court, however, did not take into consideration his denials, and has passed the death sentence on him, while granting him the right to appeal. The rest of the conspirators have been given different sentences ranging from two to twenty years' penal servitude.

Such is the unfortunate epilogue of an insane agitation and propaganda, which has now been cut short of all its outward signs of life and activities. Even labour syndicates have been closed down, and permission to re-open is granted only if sufficient guarantee is provided that they function solely to protect the working classes from the economic point of view.

Anti-Separatists' Demonstrations.

Throughout Dalmatia, but particularly in Ragusa and Spalato wild meetings and processions are taking place to condemn the foul politics of the Croatian *Bloc* Leaders whose foolish attempt to divide Yugoslavia is heartily despised both by Serbs and Croats living in Croatia and Dalmatia. Dalmatia is most sensitive against any attacks on the Union, and the re-action is therefore felt there much more strongly than anywhere else.

Last Friday some men belonging to Raditch's party came to Dubrovnik (Ragusa), and attempted to hold a conference and organise their followers. Unionists prevented the conference taking place and threw out of the hall all the leaders, who took refuge in a house belonging to a friend of theirs. A crowd besieged the house from which a bomb was thrown, luckily without injuring anybody. Revolver shots quickly echoed the explosion of the bomb, and the angry mob started rushing the house. Separatists have to thank the mounted police for their lives, for if it had not been for their timely arrival the results would have certainly been much more unpleasant.

GREECE.

Athens, February 18.

A Franco-Greek Incident.

An incident which, in view of the deep anti-French

feeling prevailing here at present, is causing much irritation among public opinion, has occurred between the Greek Government and the French Chargé d'Affaires in Athens. On the 10th inst., the French cargo boat 'Espoir' carrying coal and petrol to Mersina was stopped by a Greek warship, and conducted to the naval arsenal at Salamis. Shortly afterwards the French representative, M. de Marcilly, called in person on the Minister for Foreign Affairs *ad interim*, and informed him that as the French Government had not so far recognised the right or the status of a belligerent to either of the adversaries, the international law regulations in force with regard to the seizure of goods considered contraband of war were not applicable in this case. Moreover, M. de Marcilly pointed out to M. Cartalis that the coal transported by the 'Espoir' was very urgently needed in Cilicia, where the French authorities were assisting the Turks to re-establish normal conditions of life and to ensure a more regular circulation of the trains. The French Chargé d'Affaires added that Greece had no right whatsoever to search steamers flying the French flag, especially in view of the refusal of the French Government to grant such permission to this country. The Minister for Foreign Affairs replied that as Greece was in a state of war with the Kemalists she had every right to seize goods which, in her opinion, would in any way be of use to the enemy in his struggle for supremacy. He added, however, that the matter would be dealt with that evening by the Council of Ministers, when a definite reply would be given to M. de Marcilly.

On the following day the French representative was notified that although the Greek Government still persisted in its original views to the effect that by seizing the French vessel it was merely safeguarding the nation's interests, Greece was willing to treat the matter leniently; and it had therefore been decided to allow the 'Espoir' to depart, after, however, she had discharged her cargo of coal and petrol, which would be considered contraband of war. But, as was only to be expected, this reply did not satisfy the French Chargé d'Affaires, who called again at the Foreign Office and handed to M. Cartalis a *note verbale* on behalf of the French Government, which had now taken the matter in hand, demanding the immediate release of the steamer and its cargo.

The Greek Government has not yet replied to the French note, but it is generally thought that the answer will again be in the negative, in which case it would be difficult to foresee how the case would develop.

Threatened Bakers' Strike.

The Athens and Piraeus bakers have notified the Minister of Supplies and the Chief of Police that as their demands for an increase in the price of bread have not been accepted by the Government, they would cease work and close their shops as from next Monday.

This threat, however, did not alarm the Government, which, having scored a big victory over the electrical and tramway employees two months ago, is confident of being able to crush the new strike from its very beginning. The bakeries are to be placed under military control and the bakers' hands will be paid by the State, while orders were issued to the effect that all bakeries in the two towns should be immediately supplied with abundant quantities of flour. In addition to these measures it has been decided that bread for the civilian population shall also be produced by the army bakeries.

It would surprise nobody if, in view of the firm attitude adopted by the authorities in the matter, the bakers suddenly announced the postponement of the strike.

Results of the Census.

The returns of the census which was taken on January 1, 1921 are now published by the Ministry of National Economy. According to these the population of the whole of Greece, including Western and Eastern Thrace, is 5,535,850 made up of 2,750,639 males and 2,785,211 females. The men serving in Asia Minor are not included in the above figure.

BULGARIA.

Sofia, February 26.

The Communal Elections.

The eagerly awaited Communal elections were held on Sunday the 19th, and although the result of the voting in two minor districts has not yet been announced it is possible to form a very fair idea of the situation. The Government have obtained approximately 43 per cent. of the total votes that were cast. This figure is considerably lower than anticipated in Government circles, and in view of the fact that the elections represent the opinion of practically all the peasants in Bulgaria it cannot be said to be very satisfactory from the Agrarian point of view.

The Turkish element in Bulgaria almost invariably votes with the Government, partly because the Turks in power usually exercise a certain amount of "peaceful persuasion" on the Mussulman population. If the votes of the Turks, who mostly come from the region round Shumen, are subtracted from the Government percentage, it will be found that the Agrarians have not more than 37 per cent. of the rural population behind them. In addition to this, the towns which did not take part in the recent elections contain a very small percentage of Agrarians, and if their vote were also included, the Agrarians would not have more than 33 per cent., or in other words a third of the country. It is thus a self-evident fact that the Government have to a very great extent lost the confidence that they previously enjoyed.

Communists Lose Ground.

The Communists' vote is also slightly reduced, it being estimated that their representation does not exceed 16 per cent. This is perhaps the most satisfactory feature about the elections, manifesting as it does the commonsense and anti-Leninism of the Bulgarian peasant. Lastly come the Bourgeois parties, whose united vote was almost as great as that of the Government. In most of the villages, the Bourgeois sank their party differences and formed a *bloc* against the Agrarians. The results achieved were notable, the Bourgeois vote showing an increase from 25 per cent. in the last elections to 40—41 per cent. in the present. The position of the Bourgeois parties remains, however, anomalous. At Sofia, where each party has its headquarters, there is still the old personal animosity, and there are no outward and visible signs of a Coalition. In the provinces, the peasants have been more far-seeing than their leaders, and without waiting for orders, have made a *bloc*. It now remains to be seen whether Sofia will take a lesson from the provinces, or will persist in its present narrow-minded and selfish attitude. If party leaders

do not agree to coalesce, it is quite within the bounds of possibility, that their adherents, taking matters into their own hands, will insist on the *bloc* and force its formation themselves. In any case the failure of the Bourgeois to unite, continues to constitute the strength of the Government. The latter have lost their influence amongst the peasants to a quite extraordinary degree, and it will be very interesting to watch political developments during the next few months.

The Military Commission.

The Inter-Allied Commission of Control has received orders to close down, and the English contingent, under command of Captain Marson, left yesterday. Colonel Plunkett, the chief of the English section, and his other officials are leaving next week, whilst the French and Italian are also due to go in a few days. General de Fourtoun, the President of the Commission, has fixed on March 1 as the date of his departure. In the place of the Commission, a so-called "Organ of Liquidation" is being set up. The French Colonel d'Amarzet, who is now at Budapest, will preside over this "Organ," and he will be assisted by one Japanese, one British, one Italian, and two French officers. To the uninitiated, the need of such an "Organ" is hard to understand; for the declarations that General de Fourtoun made last week led one to understand that Bulgaria was disarmed and demobilised.

The work of the new body will apparently be to clear up several outstanding matters. It would have been thought that this work could have been perfectly well carried out by the Military Attachés of England, France and Italy. Bulgaria has heavy Treaty obligations without yet another one being added. The duration of time that the "Organ" will function for, has not been announced, but it is sincerely to be hoped that it will speedily accomplish its work, and set the country free from the expense of its maintenance.

A Contradiction.

A few weeks ago a statement appeared in an English daily that the expenses of the Inter-allied Commission of preparations at Sofia exceeded the annual grant for the Bulgarian Ministries of Agriculture, Interior and Justice. Several local newspapers reproduced this statement, but in the *Echo de Bulgarie* last week a well worded and categorical denial appeared. This stated that the money spent by the Commission did not exceed the grant allowed for any one of the three Ministries in question, let alone all three. Of late there has been a tendency in the foreign press to attack the Commission of Reparations. The attacks have sometimes taken a personal form, and as the Commission has never thought it worth while to reply to the ridiculous charges brought against it, it is doubly gratifying that the Government has thought fit its own accord to deny at least one false statement.

Yugoslavia.

M. Rakitch, who has been Yugoslavian Chargé d'Affaires at Sofia for close on a year, presented his Letters of Credence to King Boris on February 25. Although the new Minister's address did not contain anything very striking, it was very cordial and made special reference to the desire of Yugoslavia to live on good terms with her Eastern neighbour. M. Kosta Theodoroff, Bulgarian Chargé d'Affaires at Belgrade, will present his Letters of Credence to King Alexander next week, and diplomatic relations between the two countries will then be completely re-established.

It is also of interest to note that Yugoslavia has followed the example of Greece and Roumania in renouncing her right to try Bulgarian war criminals. The latter will be tried locally, although Yugoslavia reserves the right to intervene if she considers that the trials are not being carried out in a proper manner.

Luncheon at the Palace.

King Boris entertained the members of the Inter-Allied Military Commission of Control to luncheon last Friday. Their Royal Highnesses Princess Eudoxie and Nadejda, M. Stambolisky, M. Thomoff, the Minister of War, and Colonel Topaljihoff, the Chief of Staff, were also present.

TURKEY.*Constantinople, February 23.***Yusuf Kemal Bey's Mission.**

Yusuf Kemal Bey, the Commissioner for Foreign Affairs of the Angora Government, is expected to leave Constantinople at the end of this week for Marseilles. It was originally intended that he would first visit Rome, but it was found that all steamers sailing between Constantinople and Italian ports call at the Piræus, and Yusuf Kemal Bey was unwilling to risk the unpleasantness suffered by Bekir Sani Bey last year. At least, this is the excuse which the public is expected to accept, but it is more probable that the true reasons for the change in the itinerary are concerned with the political crisis in Italy.

During his stay in the capital, Yusuf Kemal Bey has visited and has been visited by each of the Allied High Commissioners, and he has also had interviews with numerous statesmen and ministers, as well as with the Heir Apparent. He was welcomed with the greatest enthusiasm at Haidar Pasha station upon his arrival, but he is not altogether optimistic regarding the outcome of his mission in Europe. In the first place he has not succeeded in persuading the Central Government to invest him with official authority as the envoy of the Imperial Government as well as of the Angora Government. It is reported that he will therefore be accompanied by Hamid Bey, Turkish member of the Ottoman Bank Directorate and President of the Refugees Commission of the Ottoman Red Crescent Association, who has acted for some time past as the semi-official representative of the Angora Government in Constantinople. Hamid Bey will be furnished with certain documents by Turkish association and corporations in the capital, and will therefore claim to represent the Turkish population of Rumelia.

With regard to the object of his mission Yusuf Kemal Bey has made long communications to the local press, which have been commented upon at length; but these announcements and comments contained nothing new, and merely consisted of somewhat wearisome permutations of the clauses of the National Pact. At the same time, it is worthy of note that both Yusuf Kemal Bey himself, and the editors of the local press, have scrupulously avoided all mention of the Straits Question, whether in regard to the attitude of the Angora Government in the matter, or as concerns the undoubted attitude of the Allies. It will be remembered that the Angora Government has pledged itself to a solution of the problem without reference to any other countries except those whose coasts are washed by the Black Sea; and in view of the silence of Yusuf Kemal Bey himself in this connection, it is probable that he had been instructed to attempt to persuade the Allies to discuss peace terms without reference to this very important question. It is also probable that a similar course will be proposed with regard to the question of the Capitulations and economic matters. In other words, the Allies will be invited to make peace purely on the basis of territorial considerations, to recognise the abolition of the Capitulations, and to discuss such matters as the status of foreign subjects and financial and economic questions after the conclusion of such a peace. The Allies will also be asked to recognise the "treaties" concluded by the Angora Government, including those by which the Allies are excluded from a settlement of the Straits Question. If Yusuf Kemal Bey is not altogether optimistic in the circumstances, it can only be because his vision stretches somewhat farther than the four walls of the Great National Assembly.

Bolshevist Intrigues.

The Conference of London last year was preceded by strenuous efforts on the part of the Bolsheviks to prevent the efforts of the Allies to restore peace from being successful, and the same tactics are again being pursued. On the one hand, all possible pressure is being exerted

to prevent the granting of concessions to any foreigners, and on the other hand, the Bolshevik envoy, Araloff, is doing his best to prevent the Angora Government from making any of those political concessions which will be necessary if peace is to be concluded at all. His latest effort, according to a telegram from Angora dated February 21, has been to address a letter to the National Assembly, in which the proposed Conference of Genoa is depicted as an effort on the part of the Allies to sow discord between two noble and devoted friends, Russia and Turkey. Araloff assured the Assembly that the Machiavellian plot would never succeed, and bade the Assembly to be of good cheer, for: "You are not alone, the entire Russian nation is at your side, because our aims are identical . . . by union our victory is certain."

The telegram stated that the letter was read to the deputies amidst frenzied applause.

The Patriarchate and the Porte.

Rumours have recently been current to the effect that the new Patriarch, H. H. Meletios, IV., is about to make overtures to the Sublime Porte with a view to effecting a reconciliation. It has been officially denied that any such overtures have yet taken place, but in the course of an interview granted yesterday to a local journalist, His Holiness made the following statement:—"I shall act for the best as soon as the time is propitious, and when the right moment arrives. The establishment of relations with the Porte must be carried out in such a manner that justice and liberty will be guaranteed." From this statement two deductions may be made: the Patriarch is not opposed, in principle, to a reconciliation, and, secondly, His Holiness is a diplomatist.

In the course of the same interview, His Holiness stated that his programme included the convocation of an oecumenical synod in the near future.

An International Incident.

The arrest of the French steamer 'Espoir,' by the Greek cruiser 'Naxos,' and the seizure of its cargo of coal, has given rise to an incident which may produce important results. It would appear that the 'Espoir,' was stopped by the Greek cruiser off the coast of Asia Minor near Mersina, and that the cargo was confiscated as contraband of war. The Greek authorities, it is understood, have agreed to release the steamer, but are refusing to return the cargo, and the French have sent the cruiser 'Strasbourg' to Smyrna, although it is not known for what precise purpose.

CYPRUS.*Nicosia, February 14.***The Greek "National Council."**

This body is now complete; but there have been several surprises as regards its composition. Several prominent persons who were considered certain to be elected have failed to obtain seats, notably Dr. Zanneto of Larnaca, who has been a member of all the delegations to London. This may be due to the fact that at the general meeting he expressed disapproval of the policy of abstention from sitting on the Legislative Council. The new body was to start its work of organisation in mid-February, but the meeting has been postponed, and now awaits the call of the Archbishop. Members are exhorted by the Press to work whole-heartedly for the cause; but it is recognised that a not inconsiderable party are opposed to "Nationalist" tactics, and consider that the leaders have not taken the wisest road towards the goal at which they aim.

Proposed Sanatorium.

Few examples of progress are more noteworthy in Cyprus than that relating to matters of health, both in town and village communities. Qualified medical attendance has been steadily replacing this indifference fatalism, and the many superstitions of the people. In addition to the work of Government Medical Officers and the District Hospitals, Greek doctors are now residing in many large villages, and are doing very good service. One of them has submitted to the High Com-

missioner a proposal for the establishment of a sanatorium for consumptives, in what is unquestionably a very suitable climate. A project for the private establishment of such an institution in the hills by an eminent English doctor very nearly came to realisation some years ago. But it fell through on reconsideration, largely owing to the anomolous conditions of the island tenure, which have been the cause of the failure of so many good projects in the island.

General News.

Major Bayly, Commissioner of Nicosia, is about to retire. During his service in Cyprus, first as Commandant of Police, and later as Commissioner, he has gained the esteem both of officials who have served under him, and also of the Cypriot people. He will be succeeded by Mr. Hart Davies, Assistant to the Chief Secretary, whose place will be taken by Mr. Ellis.

Dr. Thompson, Chief Medical Officer, has left for England, and it is said will relinquish Government service; though he may return and practise privately in Cyprus. Dr. E. Corsellis, D.M.O., Limassol, has often acted previously in taking his place, and it is presumed that he will succeed to the post of Chief of the Department, to which his long and meritorious service certainly entitles him.

Preparations are being made for various Easter gaieties. In Nicosia races will be held on April 17 and 18.

AN EGYPTIAN PROTEST.

We have received from Tanta the following telegram dated March 2, and signed by doctors, Chamber of Commerce, lawyers, notables, teaching staff, engineers, religious lawyers, and labourers:—

While Egyptian people evinced an earnest desire to come to an agreement in which National claims are recognised, and those interests of English and foreign communities which do not clash with these sacred rights, are safeguarded English persisted in adopting an attitude which necessarily widens gap between Egypt and Britain, and dictates a policy characterised by playing on words and giving undue importance to them without touching the substance or seriously tackling the real issue between the two countries. Such schemes as Milner's, Curzon's, Allenby's note, and latest letter of English Government to Sultan, have merely convinced Egyptians of bad faith and unchanging character of English policy in Nile Valley. Keeping in exile of Nation's mandatory, Zaghloul Pasha and colleagues absence of freedom of press, exceptional measures, prohibition of publishing of views of Egyptian Wafd continued violation of personal freedom in short rigorous application of martial law are unfailing indications for disclosing nature of policy with which Lord Allenby is charged to carry out in Egypt. Citizens of Tanta therefore vehemently protest against policy indicated in last letter to Sultan against the recent deliberate insult of transporting Zaghloul Pasha on board warship, to remote Seychelles at present moment and declare that any Ministry formed before return of deported leaders and before fulfilment of all conditions of Egyptian Wafd, shall not enjoy slightest confidence of Egyptian people.

THE EGYPTIAN CABINET.

The new Egyptian Cabinet has been formed as follows:—Premier, Minister of the Interior and Minister of Foreign Affairs, Abdel Khalek Sarwat Pasha; Communications, Wassif Simeika Bey; Justice, Mustapha Fathy Pasha; Public Works, Hussein Wassif Pasha; Wakfs (Pious Foundations), Gaafar Wali Pasha; Education, Mustapha Maher Pasha; Finance, Ismail Sidky Pasha; Agriculture, Mohammed Shoukry Pasha; War, Ibrahim Fathy Pasha.

BRITISH SUBJECTS IN EGYPT.

The text of the Order in Council of December 13, amending in certain particulars previous Orders affecting Egypt, was published in the *London Gazette* of February 21. Henceforth every British subject resident in Egypt must be registered at the

Consulate of the Consular district in which he resides. Any British subject arriving in Egypt must apply for registration within a month of reaching the country; any British subject who neglects to obtain registration "shall not be entitled to be recognized or protected as a British subject in Egypt." The Supreme Court for Egypt is also granted, "as far as circumstances admit," the same jurisdiction in matrimonial causes in respect to British subjects as is exercisable by the High Court in England.

INDIAN WOMEN STUDENTS.

To meet Lord Lytton, Governor Designate of Bengal and Lady Lytton, Mrs. Patrick Villiers-Stuart gave an At Home on February 24 (postponed from the previous day) at 18, Pelham Street, S.W., in support of the work of the Indian Women's Education Association. The guests included Princess Sophia Duleep Singh, Lady Erleigh, Lady Mond, Sir Dhunibhoy and Lady Bomanjee, Lady MacDonnell, Lady Monro, Dr. Kate Platt, Mrs. Bahadarji, Mr. and Mrs. Kotval, and General Villiers-Stuart.

Sir Mancherjee Bhownagree, chairman of the committee, in conveying the congratulations and good wishes of the company to Lord and Lady Lytton, said that he had the privilege in youth of seeing Lord Lytton's father proclaim Queen Victoria Empress of India at Delhi on January 1, 1877. Sir M. Bhownagree added that an influential committee had been formed in Calcutta to collect funds for the association. He appealed to Lord Lytton to encourage such provision of funds for India's educational needs in India itself.

Lord Lytton said that his work as chairman of the Indian Students' Committee had made him cognisant of the service Association was doing in training Indian women for the teaching profession. The war had led to shortness of money for good objects in all parts of the world, and he knew that in Bengal itself there was great need for funds for educational expansion. But he would gladly bring to the notice of the committee formed in Calcutta, and of others, the necessity for this valuable work in London to be supported by money from India.

GORDON MEMORIAL COLLEGE, KHARTOUM.

The annual reports of the Gordon Memorial College, Khartoum, are always good reading; for year by year they tell a story of fine work well done—much of it by men working in a climate which they must surely find very trying. We have now received the report for the year 1920, and we find it as full of the right spirit, and telling the same tale of satisfactory progress all along the line, as all its predecessors that we have read. As Sir Reginald Wingate, Chairman of the executive Committee, writes in his introductory note, "Steady progress in all directions is the dominant note," and he is fully justified in reflecting that "those of the original subscribers who read the Annual Reports must feel genuine satisfaction that their benefactions have borne good fruit."

The plan of calling an extra meeting of the Committee in the summer, to which we referred last year, has given satisfactory results, and is likely to lead to much closer touch being maintained with the local authorities. Another point on which Sir Reginald Wingate touches is the effort being made by the College to grapple with the difficulties of teaching the Arabic language and literature, and of teaching other subjects in Arabic. He refers, too, with satisfaction to "the fact that two Sudanese teachers have been found proficient enough to replace two Egyptian members of the staff, one as a senior Teacher of Arabic and the other as a teacher of Religious Law." The research works, sports, and all sides of the College's activities are all in a healthy state of activity, we are glad to note. It is curious to find the chairman writing: "The depredations of hyenas amongst flocks and herds are being successfully dealt with by a preparation of strychnine, which resulted in 300 of these voracious animals being killed within four months in one district alone." That is a branch of service which no 'Home' school is likely to be called upon to perform, but it is an example of 'applied science' which is certainly very beneficial to the Sudan.

Pressure on our space forbids an extended notice of the Report in this issue, but we hope to be able to return to the subject very shortly.

A new quarter is to be built in Tiberias, Palestine, and 100 workmen are already engaged on the construction of streets.

A meeting held at Yannina by refugees from North Epirus has sent telegrams of protest to the Allied Powers against alleged excesses committed by the Albanian authorities.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be written as briefly as possible and must be written on one side of the paper.

BRITAIN AND INDIA.

To the Editor of "The Near East."

Sir,—Your correspondent "Outis" can scarcely expect to be treated seriously in holding up Alauddin Khalji's method of dealing with Indian unrest as a model for statesmen of the present day. Our knowledge of the 13th century is derived from records kept by men who were more anxious to curry favour with the sovereign than to state the unbiassed truth. Such evidence is not to be relied on. But on the large assumption that this Asiatic despot acted as "Outis" asserts, I would suggest that he made rebellion an excuse for fleecing the few who had something to lose; just as our King John fomented pogroms in order to extract money from his luckless Jewish subjects. Moreover, Alauddin Khalji's India differed *toto cælo* from the huge overpeopled but undermanned empire of to-day: the economic and political problems with which its rulers are confronted lay in the womb of a distant future. Can "Outis" point to any modern revolution which has been engineered by the moneyed class? Capital is timid and conservative; the "haves" knowing that they are hated and envied by the "have-nots," invariably side with the Powers that be in times of civil stress. "Outis" may possibly instance the "English Revolution" of 1688, in which many rich folk were undoubtedly concerned. But my dictionary defines "Revolution" as "A fundamental change in the Government of a country," and quotes a dictum of Macaulay—"The violence of revolutions is generally proportioned to the maladministration which has produced them." The movement of 1688-9 was very far from satisfying that definition; it brought about a change of dynasty, but left the British Constitution inviolate. Of a different type were the cataclysms which desolated France at the close of the 18th century and have brought utter ruin on Russia in one day. They were the work of a penniless "Intelligentsia" who stirred the starving masses to madness by dint of stump oratory and then held them in subjection by inaugurating a reign of terror. Both revolutions effected fundamental changes in the body-politic at the cost of fearful bloodshed, and in each case the wealthy classes were slaughtered or driven into exile. History seems, alas, to be repeating itself in India.

I am, etc., F. H. S.

March 5.

YUGOSLAVIA AND ALBANIA.

To the Editor of "The Near East."

Sir,—With reference to the *démenti* published by the Serbian Press Bureau regarding the alleged statements of M. Pashitch in the Skupshtina, if the facts are as stated, I can only regret that I was misled by reports current here. It is nevertheless a remarkable fact that similar reports found their way to Paris and many other European centres, e.g. *Le Temps* of January 28 published a report from a Belgrade correspondent in which M. Pashitch is reported to have said:—

"Avec l'Albanie, la situation est toujours incertaine. Depuis le meurtre d'Essad pacha, le chaos règne en Albanie, et la Yougoslavie, qui est continuellement attaquée par les Albanais, doit recourir aux armes pour défendre ses frontières. . . ."

And again:—

"Lors du règlement du problème albanais, à la con-

férence de la paix, j'ai demandé l'application de la ligne du Drin, considérant qu'il est impossible d'avoir une autre frontière. La localité de Lime a été attribuée à l'Albanie; mais j'espère que nous l'obtiendrons un jour."

If the reports were inaccurate, I must say that it was not unnatural that they should find ready credence in Albania; for M. Pashitch always speaks unfortunately of this country, and is at pains to represent the internal situation here in the most unfavourable colours. He claims that the Albanians attack the Serbs, when impartial witnesses, such as those of the League of Nations Commission of Inquiry have testified to the contrary; he speaks with regret of Essad Pasha! He declares also that he demanded the Drin frontier when the Peace Conference was fixing the frontiers; and thus he shows us once more that he wished to see Albania further diminished and dismembered.

A methodical campaign against Albania is conducted in Yugoslavia, where public opinion is daily excited by fantastic reports. Thus the semi-official *Agramer Tagblatt*, of Zagreb, in a recent issue published a long article, doubtless inspired from Belgrade, discussing an alleged alliance between Albania, Bulgaria, and Hungary, directed against Serbia! Such false reports find room in the columns of the Serbian journals almost daily.

Another time the Belgrade Government complained to the League of Nations about some alleged misdeeds of the Albanians in the neutral zone. Their Commission of Inquiry was charged to investigate the affair, and in its report to the League, dated January 31, it declared that after minute investigation: "in no case was the Commission able to ascertain the truth of the same" (*i.e.* the alleged misdeeds).

It would be easy to multiply instances of this kind, but probably I have written enough to explain how it came about that the report of M. Pashitch's speech which I forwarded to you in my letter of January 19, should have obtained such ready evidence here.

I am, etc.,

YOUR ALBANIAN CORRESPONDENT.

Tirana, January 28, 1922.

THE NEW CONSTITUTION OF INDIA.

The first of a series of three Rhodes lectures on the new constitution of India was given at University College, London, on February 28. It was written by Sir Courtenay Ilbert, G.C.B., but in his absence, due to an attack of influenza, it was read by his daughter, Mrs. Herbert Fisher. Lord Chelmsford presided. In the course of some opening remarks, he said that the announcement of the British Government's policy made on August 20, 1917, was the basis of the present Government of India Act; and Mr. Montagu and he had treated the announcement as their terms of reference when drawing up or considering proposals for constitutional reform in India. It was charged against them that they had brought dyarchy into the new constitution. They had both striven to keep away from dyarchy, but had found that unless they used the dyarchic method they could not find a scheme that would fit into the four corners of the announcement.

The lecture was then read by Mrs. Fisher. Among other things it stated that a responsible government was the most significant phrase used in the declaration of August, 1917. While in the self-governing dominions responsible government was at home in India it was an exotic. In South Africa it had been made possible by imposing on the majority of the population, racial disabilities which would not be within the region of political possibility in India. One fundamental difficulty was as to whether the existence of any Indian Government could be made dependent on the vote of the legislature? The expedient had been adopted of dividing into two fields the domain of government in each important province, one of these reserved for the Governor in Council, the other to be administered by the Governor acting with ministers who might be removed from office by a hostile vote. The constitution was elastic; the list of subjects under the control of ministers responsible for the electorate could be increased or reduced according as circumstances made advisable. There was no constitution, however ingeniously framed, which could not be made unworkable by an impracticable and sufficiently obstinate minority; there was hardly any which could not be made to work with a sufficient amount of good will. The new arrangements in India were temporary; provisional experimental growth was aimed at, not a static condition. The new constitution was not a building but a tent.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

Egypt.

Upon the general situation of Egypt the *Daily Telegraph* of March 2 says:—

The Egyptian Charter of Independence is not a treaty or convention. There was no Egyptian Government with which we could make a satisfactory and adequate agreement; though it is highly satisfactory to note that the new scheme has been so well received in Egypt that a Cabinet was formed, under Sarwat Pasha as Premier, immediately upon Lord Allenby's return. In the circumstances, it was determined to proceed by way of a unilateral declaration—a voluntary act of renunciation. Mr. Lloyd George has invited Parliament to declare that the Protectorate is terminated, that Egypt is free to work out such national institutions as may be best suited to the aspirations of her people, and that martial law will be abolished as soon as an Egyptian Government feels that it can be dispensed with and an Act of Indemnity passed. Thus are the rights and claims of the Nile people amply and explicitly recognised. At the same time, there are essential rights and claims of the British Empire which are maintained with equal emphasis. The first and chief of these is that Egypt shall be genuinely free as against the outside world. If we relinquish our paramount control, we intend to take good care that no other European Power shall step into our place. On that point we shall take no chances and leave no scope for misunderstanding. The Prime Minister puts the matter very plainly in his message to the Dominion statesmen. He insists that, however independent and sovereign the Nile State may be, it has, from the nature of things, special relations with the British Empire which must be preserved and secured. Those relations, says Mr. Lloyd George, with seasonable bluntness, we shall not allow to be questioned or discussed. "We will regard as an unfriendly act any attempt at interference in the affairs of Egypt by another Power, and we will consider any aggression against the territory as an act to be repelled by all the means at our command." This is a direct warning, and it should be duly noted by those whom it may concern. We drop the formal Protectorate, but, all the same, we shall hold ourselves ready to protect Egypt if Egypt is threatened by external menace. There is to be no fishing in troubled waters in the Nile Valley, even if our withdrawal should lead to temporary confusions and dislocations which may offer tempting opportunities to ambitious diplomacy. Should Egypt find herself in difficulties—though we hope she will not do so—she will always be able to rely upon the aid of Great Britain and the other nations of the British Empire, with which a permanent alliance and entente is prescribed by their interest as well as her own. More than this, we still reserve our rights to secure the inter-Empire communications through the isthmus, and the protection of foreign communities and minorities. The new independence of Egypt must be developed with due regard to our Imperial necessities and obligations, which will be carefully defined in the Declarations. In accordance with this principle, we do not propose to let go our hold upon the Soudan. It is to Britain more than to Egypt that this great tract of tropical and sub-tropical Africa owes its redemption towards civilisation and prosperity. Unaided, Egypt could not govern or even keep the Soudan. We shall not abandon it to

Cairo officialdom, or expect the conscripted peasants of the Delta to overawe the fierce tribesmen who would have swarmed far down the Nile if they had not been broken by British arms and British leadership. We shall still take charge of the Soudan; but we shall give Egypt effective guarantees for a sufficient supply of the life-giving water which flows to her from the South. In a word, we shall do everything we can to provide Egypt with all she needs for her economic security and her political stability. Subject to the safeguards and limitations with which we cannot dispense, her fate will be in her own hands, and she will have the chance of showing how far her people have the capacity to understand and utilise those democratic and constitutional agencies which will now be at her disposal. It is a great experiment, and it will be no fault of the British Government or the British nation if it is not crowned with success.

Egypt and Lord Allenby.

The *Westminster Gazette*, of March 1 contains an article entitled "The Swing of the Pendulum," beginning with a statement of the fact that the documents recently published (communicated to the Sultan of Egypt by Lord Allenby) "represent a new swing of the pendulum."

For the moment, at any rate, Lord Allenby's authority has neutralised the influence of the reactionary elements in the Cabinet; but it is no secret that the latter still cherish a hope that, as a result of further disturbances in Egypt, the protests of the foreign communities and the possible inability of the moderate Egyptian leaders to "deliver the goods," their turn may yet come again. It is very necessary, therefore, that public opinion in this country should remain on the alert. The Egyptian problem, like the Irish problem, is not settled yet, and the terms of the new Declaration are too vague to bind the Government to any definite policy. The claim for a permanent military occupation has not been withdrawn; it has merely been modified by a statement of the British Government to be appointed after fresh elections have been held. In December the door was banged upon further negotiations; now it has been reopened. That, as far as the documents themselves are concerned, is all that can be said. There is, of course, however, an unwritten understanding that the British Government is in fact willing to reconsider its position completely on the military issue; indeed, if there were not, there would be no sense in the new steps which have just been taken. The new situation turns upon the policy and personality of Lord Allenby. He is trusted by the Egyptian leaders, and he returns from his consultations in London with what are practically plenipotentiary powers both of negotiation and of executive action. We may congratulate both the Egyptians and ourselves that our common interests should be in such competent hands. On this occasion, at least, there can be no doubt that the only wise course, indeed, the only possible course now open to us, is to trust and support the man on the spot and to see that he is not hampered by any further vacillations that may occur in Downing-street.

Turks and Greeks.

In the *Westminster Gazette* of February 24, Colonel the Hon. Aubrey Herbert, M.P., pleads for a consistent British policy for the Near East. He begins:—

Something has to be done, and that swiftly, to find a settled policy with the Turks, if we are to prevent more trouble within our own Empire with the Moslem races. Let me make a brief summary of the position. The French have made friends with the Turks. The relations of the Italians and the Turks have varied, but only from the plus or minus of friendship. The Greeks are exhausted after many years of warfare, and are approaching every day closer to bankruptcy. The Turks are inadequately equipped, but capable and ready to

go on fighting indefinitely. Angora and Constantinople say caustic things about each other in public because circumstances compel them, but there is no permanent quarrel between the two. Indeed an alliance between them is as obviously natural as the alliance between Turks and Bolsheviks in unnatural. Mustafa Kemal and his men had the choice of surrendering their country to the Greeks or of receiving arms and ammunition at the price of friendship with men whose lawlessness is a challenge to the fundamental principles of Islam.

But if the Turks are poorly furnished with modern weapons, the fixed topography of their mountains and their rivers is a well-nigh impregnable fortress to them. Behind him Mustafa Kemal has recruiting grounds that stretch to Central Asia, with men of his own blood and creed. If that blood is diluted, and if that creed is heretical, still common misfortunes have great power to make brothers of the sufferers.

He then gives the Turkish view of Turkey, India, Arabia and Egypt, and concludes by examining the bases of peace:—

What would the Greek terms be? Greece, unwounded but sick in her kingdom, is desperately wounded in her Empire, and her finance is chaotic. Greece sorely needs rest and the recovery of her trade. She wants to take her place again among the nations, and desires Ministers to be regularly accredited to the head of her State. Great Britain can help her. The first necessary step is the recognition of King Constantine. In years to come history will comment on the fact that Mr. Lloyd George, whose enthusiasm for democracy has been widely advertised, gave Thrace and its people, with his left hand, and Asia Minor and its inhabitants, with his right, as a personal gift to M. Venizelos, while he refused to recognise the hereditary King of Greece, whom his people had called back from exile. These will probably be cited as minor inconsistencies in the life of a great man. These inconsistencies have done much to damage us, and consistency is as essential in the making of peace as a modicum of justice. It would be possible for Lord Grey to restore order, for he invariably follows a consistent and prudent line. He, however, is almost the last man likely to receive such an invitation from Mr. Lloyd George.

One other point remains. What is the British Army doing in Constantinople? The German fleet is at the bottom of the sea, the Bolshevik navy consists of a few torpedo-boats. Victory and circumstances have achieved the neutralisation of the Bosphorus and the Dardanelles. Why, then, should the British taxpayer be called upon to support an army whose very presence creates the real dangers to which it may be exposed?

Here then, are the three possible bases for peace discussions:

1. The evacuation of Asia Minor by the Greeks. The Turks are prepared to give, not paper, but real guarantees for the security of minorities.

2. Thrace should be a living and a neutral province, no longer the armed menace to Constantinople which disturbs two continents and a locked door to the commerce of Bulgaria.

3. The Prime Minister's excommunication of Greece is out of date, and when peace is signed Great Britain should do all she can to help the State that is a war victim and that has been unusually badly treated.

ARTICLES TO NOTE.

"The Yugoslav-Albanian Frontier," by Henry Baerlein, and "The Coming Changes in India," by Major-General L. C. Dunsterville, C.B., C.S.E., in the *Fortnightly Review* (March).

"Real Difficulties of the Indian Problem," in the *Nineteenth Century* (March).

COMMERCIAL RELATIONS BETWEEN SPAIN, IRELAND AND THE AEGEAN, 2,000 to 700 B.C.

The commercial relations between Spain, Ireland, and the Aegean formed the subject of an address given by Mr. W. T. Edmiston-Scott on February 17, at 8, Tavistock Street, London, N.W. The lecturer based his argument mainly on philological evidence obtained from the study of the Basque and other languages. Among other things he stated that the mines of Spain must have been known and worked long before the rise of Phoenicia; for before the dawn of history Spanish lead was imported direct into Greece along with its Iberian name, and the most ancient piece of Egyptian bronze ever discovered was dated about 3,000 B.C. From that time onwards it appeared that in the making of bronze tin was mixed with the copper to an ever greater extent, except during the Trojan age; and the very low percentage of tin in the Trojan bronze had been assumed to be due to the cutting off of the Spanish supplies. From the time of the rise of Assyria onwards the Phoenicians had exploited the mines of Galicia for gold, silver, tin, lead, copper and iron; and this exploitation probably reached its zenith about the time of Solomon when silver had become so abundant in Phoenicia and Canaan as to be of little account. It was part of Solomon's policy to make an alliance with Phoenicia in order that he might share in the results of this exploitation of the Spanish mines. In the other direction the metals were carried to Ireland and thence to northern Europe.

By the middle of the first millennium B.C. the working of the Spanish mines became more difficult—partly because of piracy in the eastern Mediterranean and partly because of wars in Spain against Carthaginians and Romans—and the countries of western Asia were cut off from the source of supply of the metals which they used for their chariots of iron and otherwise in the equipping of their armies. Western Asia was of but small account as a mineral producing area, and thus the rise and fall of eastern nations was intimately linked up with the culture and civilisation of pre-historic Spain. When they were cut off from the riches of Spain such countries fell. The development of the Phoenician navy coincided with the period of that country's commercial supremacy, which was built on Spanish ore and Spanish slave labour in the mines. It was impossible to understand the ancient rivalry between Greeks, Romans, Etruscans and Phoenicians without understanding the importance of Spain to them. Sidon had founded Carthage to secure a strategic advantage over Greece and Etruria in the control and distribution of Spain's mineral wealth. It was to be noted that the wealth was still of great military and naval importance. The ocean bottom from Bilbao to the English channel was strewn with the remains of ships sunk by the German submarines when carrying iron ore to Great Britain during the recent war.

GREEK SCULPTURE.

On February 18, at the Royal Institution, Dr. Ernest A. Gardner delivered a lecture on "Masterpieces of Greek Sculpture." He said that the great contrast between Greek and modern sculpture was that we were always asking for some new thing, while the Greek artists were content to reproduce the same types and subjects, which were to a great extent prescribed for them by religion, or by the requirements of the State, and consecrated by a long period of tradition. The Greek sculptor had the great advantage in dealing with the athletic type of the male nude figure, in which he remained unsurpassed because he had constantly before him in the palaestra the finest men and youths of Greece, to be seen in every attitude, so that he was practically free from the trammels of the posed model, which constituted a great drawback to modern art. Hence he avoided the stilted pose. Moreover, he had the advantage of a system of drapery which did not conceal the body, while not disfiguring the drapery itself. The lecturer illustrated his discourse by means of lantern slides, showing photographic reproductions of such famed statues as those of the brothers Cleobis and Biton, the sons of the priestess of Argos, the Apollo of Terrea, the Apollo of Munich, the Raving Maenad in the Capitoline, the Venus Genetrix and the Mourning Woman, once the property of the Duke of Portland, and acquired by the British Museum. A copy of this statue had been made as a monument of Sir H. Beerbohm Tree.

Dr. Gardner discoursed on the progress made by Greek sculptors from the days of the crude and almost bovine statues of the two brothers. Gradually, they imparted a feeling of life into their works, which revealed an attempt to give an expression; they infused life and character into their statues, although in a crude shape at first. Later on, the muscles ceased to be exaggerated as in earlier efforts, and finally they individualised the head.

We understand that the King has conferred the title of Royal on the 101st Kohat Pack Battery, Frontier Force, in recognition of the services rendered by the Indian Artillery in the war.

Field-Marshal Viscount Allenby, just before returning to Egypt, wrote to the Rev. G. Napier Whittingham, author of "The Home of Fadeless Splendour, or Palestine of To-day," saying: "I congratulate you on having produced a work which is in the first rank of literature concerning the Holy Land."

An Athens message states the total number of Greek prisoners in Turkish hands is only 312, but it appears that they are neither fed nor receiving pay, whereas Turkish prisoners in Greece are both rationed and well paid for their work. A representative of the International Red Cross Committee is visiting Angora to inquire into this grievance.

MUSICAL NOTES.

SHAKESPEARE AND JOHN COATES.

If there ever come a composer who will make songs as Shakespeare made verse, he may, if he come soon, find his ideal interpreter in John Coates. The very spirit of Shakespeare has descended on our English tenor: there is no mood, grave or gay, but he is a master of it. In the two recitals which Mr. Coates has been devoting to settings of Shakespeare he has shown us, with superb craftsmanship, the wisdom, the geniality, and the humour of the dramatist; in short the essential Englishry of the two is beautifully matched. You may sometimes think that Mr. Coates' art is greatest in passages of sustained eloquence, for he is a magnificent orator, but at other times you will think there is nothing like his humanity or his wit, for he is the warmest and profoundest of buffoons. All this command he enjoys, but combined with it, a rare, enthusiastic knowledge of the obscure mines of English song; and though the difficulties of his search were often apparent, he has succeeded in his two recitals at Chelsea Town Hall in giving us representative settings of Shakespeare by English composers of practically all periods.

At his last recital, on February 28, Mr. Coates began with Byrd's "O Mistress mine," and, being a little late, I shrived my soul to know that I had missed hearing him in it. Byrd's songs aren't sung every day, though they deserve to be. The other great song on the programme was Arne's "Come away, Death," and the surpassing way in which this, with its pathetic, majestic phrasing, was given made me regret all the more that I had missed the work of the only other big composer represented. When Mr. Coates sang "Who is Sylvia?" he did a rather risky thing. Having sung Leveridge's setting, which, though it could not dislodge the memory of Schubert's, I liked very much, he sang an unpublished setting by A. K. Duff, and claimed it, moreover as "the real stuff." (This, incidentally, was after his audience had encored it). Curiously enough, I found myself well on the side of the publishers who refused it, and wondering hard what Mr. Coates could see in this simple, unpretentious melody. Certainly there were few *clichés* in it, but of spontaneity, inevitability, or simultaneous thought in vocal and accompanying part there was no trace. In particular, the pianoforte imitated, flowered after, the thought of the melody, having no character of its own. The song may, however, achieve a passing popularity. How different, in its possession of individuality, was that which followed, Martin Shaw's "I am that merry wanderer of the Night!" Here the whimsical quips were exploited in most engaging fashion: but Shaw and Coates always were a happy combination. Much as I admire Gerrard Williams' setting of "It was a Lord's daughter," I think Shield's version sits very well by its side; and a similar balance of judgment could be maintained on the settings of the no less whimsical "When that I was and a little tiny boy" by J. Vernon and Robert Ralph respectively. The first is an excellent song, though its excellence would not be so apparent in any other singing than Mr. Coates': he subtly put all sorts of variety into it. And Robert Ralph is very successful with his inconsequent but spontaneous wandering in and out of keys.

Mr. Coates gives another recital at Chelsea on March 14, when he will draw upon English love songs.

ANDANTE.

ROUMANIA AND THE DAVIS CUP.

It is announced that M. Nicolas Misu (Secretary to the Roumania Legation in London) has sent to the President of the United States Lawn Tennis Association a challenge on behalf of Roumania for the Davis Cup. This will be the first time Roumania has taken part in the competition for the international championship—further evidence of the advance that lawn tennis is making in all parts of the world.

MODERN INDIA.

Under the auspices of the Royal Asiatic Society Dr. F. W. Thomas recently read a paper entitled "Some Notes on a Recent Tour in India." Sir Henry Howarth presided.

The tour was undertaken at the end of 1920, and Dr. Thomas spoke of his meetings with Indian scholars of repute. It was the age, he said, of University education, and in this respect India was not holding back. New Universities were springing up all over the country, as well in the native States as in the British Provinces. Further, the idea of original investigation and research was beginning to flourish. He had been much impressed by the enthusiasm of native scholars, whose earnest desire was to work in harmony with their European confrères. Much also was being done in the way of research by non-official bodies. The total native output of books in India was now at least as great as the British. Dr. Thomas proceeded to deal with archaeological research in India, which he characterised as one of the wonders of the age. He had been struck by the immensity of the explorations and excavations being carried out. Museums were full to overflowing with priceless objects of archaeological interest, such as sculptures, inscriptions, and bronze. In Bombay the grand new Prince of Wales Museum was starting with a fine collection of sculpture, while the temples of Southern India were models in themselves. In India one passed in a short period through many centuries. Modernisation had gone further than he expected. Everywhere one found sewing machines, bicycles, motor-cars, tennis clubs and bridge clubs, and reading-rooms, a passion for railway travelling and sending telegrams. The state of India was diarchal in more senses than one. There were two times, two spaces, two kinds of telegram, and two kinds of learning, the old and the new.

THE ARAB HORSE SOCIETY.

There was a very fine display of Arab horse-flesh at the National Pony Show held at the Royal Agricultural Hall last week, and the meeting was in every way a great success. The Show was visited by Queen Alexandra, the Princess Royal and Princess Maud. We are unable to allot as much space as we should like to a report, and must content ourselves with indicating the awards, which were as follows:—

Stallions, three years and over (8)—1 and 2, Lady Wentworth (Shovronek by Ibrahim and Rasim by Feysul); 3, Lieutenant-Colonel P. D. Stewart, Kineton (Crosbie); 4, H. V. Musgrave Clark, Lewes (Chandi); res., R. B. Colton Fox, Malton (Radium).

Colts and fillies, not exceeding three years (10)—1, Lady Wentworth (Nisreen by Nureddin 11.); 2 and 3, S. H. Hough Theydon Bois (Hama by Joseph and Avaby Dwarka); 4, S. G. Hough (Nuri Pasha by Nureddin 11.); res., Lieut.-Colonel P. D. Stewart (Sohrab by Crosbie).

Eastern stallions four years and over (1)—1, Mrs. M. A. Bromwich, Canterbury (Guer Gour by Agha).

Arab-bred stallions, three years and over (1)—1, T. J. Timmis, Eccleshall (Gray Cross by Crosbie).

Arab-bred colts, fillies, and geldings, not exceeding three years (6)—1, Miss M. S. Calmady-Hamlyn, Bristow (Arabian Nights by Chandi); 2, His Majesty the King (Kalends by Rasim);

3, T. C. Armitage, Taunton (Just Across by Crosbie); 4, Lieut.-Colonel P. D. Stewart (Wood Nymph by Crosbie).

Arab-bred colts, fillies and geldings (2)—1 and 2, H. R. H. the Prince of Wales and Duke of Cornwall (Warbrook and Souwester by Dwarka).

Among the Special Prizes awarded were:—

Best Arab stallion or colt—Lady Wentworth's Skovronek; res., Lady Wentworth's Rasim.

Best Arab colt—S. G. Hough's Nuri Pasha.

Best Arab filly—Lady Wentworth's Nisreen.

Best yearling Arab colt or filly—S. G. Hough's Hama.

Best Arab colt or filly (in Class 23)—Miss M. S. Calmady-Hamlyn's Arabian Nights.

Best yearling Arab colt or filly (in Class 23)—His Majesty the King's Kalends.

At the annual meeting of the National Pony Society the Rev. D. B. Montefiore was elected to the Council.

Later, on March 4, at the annual meeting of the Arab Horse Society, Mr. S. G. Hough, who presided, said that there had been an increase in the membership during the year, the total now being 195. When the Society was formed four years ago they had about 20 horses, and now there were 200 in the stud-book. The great value of Arab blood and the capacity of the Arab horse to carry great weights a long time at a good pace was shown by the winning of Crabbet against all other breeds in the American tests, and by the success of the Arab in the Lewes trials. The report was adopted, and the following members were elected to the Council:—Mr. Robert Alexander, Major E. G. Atkinson, Captain T. A. Clarke, Mr. L. Edmunds, Mr. R. B. Colton-Fox, Mr. E. Hartley, Lieut.-Colonel E. F. Lance, Major R. Lomer, Lord M. Idleton, and the Comte de Zogheb.

NEAR EAST BOOKSHELF.

EGYPT'S GREAT PROSPECTS.

"Nile Control." Vol. I. By Sir Murdoch Macdonald. Second Edition. (Cairo: Government Press P.T. 20).

Since the first edition of "Nile Control" appeared in 1920, the engineering profession has, we understand, given its author the strongest proofs of its appreciation of his work, while Mr. Hurst, the head of the Egyptian Physical Department, to whom the author states he was indebted for much assistance, has in the interval become Dr. Hurst, a transformation which indirectly represents the interest and confidence of Oxford in the Nile projects. During the same interval the projects have been examined and approved by an international Commission. Their report was published towards the end of 1920 and the principal parts of it have been reprinted and conveniently incorporated in the new edition of "The Nile Control" so that you have in the same cover the proposals laid before the Commission and their opinion on them.

On the other hand, the proposal to build a dam on the White Nile has been temporarily shelved and the operations which had begun have been stopped. This was the first and one of the most important works proposed. It was to form a reservoir considerably larger than that at Assuan and the project presented, apparently, no great engineering difficulty. The scheme is understood to be in abeyance partly because the estimated cost of it at present prices is more than Egypt is able to afford and partly, no doubt, owing to the unsettled political condition in the Nile Valley.

It is much to be hoped that whatever difficulties there may be in the way of such a project will disappear before much more water has flowed (to waste) under the Kasr el Nil Bridge. The mass of information and data in "Nile Control" make it very clear what great prospects still reside for Egypt in further irrigation works. Egypt, irrigated by the Nile, at present takes from the river 34,000 million cubic metres or tons of water annually, including a comparatively small quantity used for the Sudan. According to the estimate adopted by the Commission that examined the projects, it appears that this figure would have to be increased to 58,000 millions to satisfy the requirements of the cultivated area of Egypt that "Nile Control" envisages. To this is added an allowance for the Sudan, and the total appears to be 64,000 millions. The difference between this quantity and that at present consumed is very large, but its importance is lessened by the fact, revealed in a table of annual statistics beginning on page 297, that almost every year the volume of water discharged by the Nile much exceeds 64,000 million tons. In only three years out of the last fifty has it been less. In the other years it exceeded this figure by varying amounts. For example, the Nile discharged 65,000 million tons in 1915; in 1916, and again in 1917 the volume discharged was 110,000 millions; it was 68,000 millions in 1918, and 75,000 millions in 1919. That is to say the difference between the amount of water now consumed by Egypt and that she will require in the future is already available and at present flows away to the sea every year. The only reason why controlling works are wanted is because this supply is irregular, varying in total from year to year and also because it is distributed very unevenly over the twelve months. Had it not been for this, it is no exaggeration to say that, throughout her history, the population and productivity of Egypt and probably her political importance might have been at least half as great again.

Even for such great builders as the ancient Egyptians the work of controlling the Nile in the way now proposed was, however, a task beyond their skill, and, moreover, the sites of the projected works, in what is now the Sudan, then lay outside the boundaries of the known world. But the position has changed in modern times,

and there are no longer any technical or geographical reasons why the importance of Egypt should not grow to be very much greater than it is. And this prospect of increased importance does not rest upon the uncertainties of developing unworked minerals resources or competing in trade, but upon the cultivation of the soil in a perfect climate with a perpetual supply of water.

It is proposed that the total area of land cropped every year in Egypt should be increased from 7,640,000 to 11,430,000 acres, an increase of about fifty per cent., while that part of the area which produces cotton will be increased from 1,677,000 acres to 2,730,000 acres, an increase of about sixty-two per cent. In the midst of so much talking and writing about other aspects of Egypt and her future, the Second Edition of "Nile Control" is an interesting reminder that, for her size she has brighter and more definite prospects than any other country.

EUROPE AND ISLAM.

"EUROPE IN ASIA MINOR: THE REAL SIGNIFICANCE OF THE NEAR EAST QUESTION." By Felix Valyl. Second Edition (London Thomas Murby & Co. 1s. 6d. net.).

This able and stimulating pamphlet was reviewed in *The Near East* when the first edition was published in March 1921; and of this second edition we need but note two remarks made by the author in his new preface. He pleads strongly and passionately for the East, for the re-instating of the East in European and American Counsels; and he attributes the denial by the British Empire to Asia of participation in international affairs to two things:—(1) "It forms part of the programme of the Anglican Church to become united sooner or later with Greek Orthodoxy;" and (2) "The selfishness of a powerful body of English merchants and commercial men who imagine that Asia was invented purely for their advantage, and that her sole function is to serve as a milch cow, providing dividends for the great English companies, whilst the Asiatic is nothing more than a beast of burden to be exploited."

THE PALESTINE EXPLORATION FUND.

An interesting account of the excavations conducted at Jerusalem in 1913-14 by M. Raymond Weill is given in the current "Quarterly Statement" of the Palestine Exploration Fund. It is contributed by Mr. Gerald M. Fitzgerald, and is based upon M. Weill's own accounts. Dr. D. G. Hogarth writes on "Greek Inscriptions from Askalon"; Miss Estelle Blyth contributes "The Battle of Hattin, July 1, 1187," and Mr. E. J. Pilcher, "A Mother in Israel." In the "Notes and News" section the Committee appeal again for financial help in the Askalon excavations, and express the hope that "the public may realise how great is the present opportunity, and come forward generously to their assistance." These are bad days for appeals; but for the credit of British archaeology it is hoped that this one will not fall on deaf ears.

We have received the first number of *Azad Gibrabay*, an Armenian weekly paper, published at Nicosia, Cyprus.

PERSIAN SELF-TAUGHT

By SAEYKH HASAN.

In Roman Characters, with English Phonetic Pronunciation.

Containing the Persian Alphabet, Transliteration and Pronunciation; Outline of Grammar with Persian Characters; Classified Vocabularies and Conversations; Travel Talk; Trade and Commerce; Persian Handwriting; Money, with English and American Values, Weights and Measures. Illustration of the Persian Coinage.

Red Cloth, 4s. net.; Blue Wrapper, 3s. net.; Postage, 3d. extra.

Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 35.

London: E. MARLBOROUGH & Co., 51, Old Bailey, E.C.

PERSONAL AND GENERAL.**To-Day.**

March 9 (New Style).
 February 24 (Old Style).
 Ragab 10, 1340 A.H. of the Moslem Calendar.
 Adar I, 9, 5681 of the Jewish Calendar.

Sir Fazulbhoy Currimbhoy has left on his return to India.

Viscount and Viscountess Milner have left London for Palestine.

The Earl and Countess of Ronaldshay will return to London from Bengal about the middle of April.

M. Titulesco, the newly-appointed Roumanian Minister to the Court of St. James, has arrived in London.

M. Radu T. Djuvara, First Secretary to the Roumanian Legation, returned to London last week from Bucharest.

Prince Saïd Halim, who is on his way from Egypt to London, arrived at Marseilles on February 28.

Lord Manners, who is visiting Brigadier-General and the Hon. Mrs. Cyril Asquith in the Sudan, will return to London in April.

Mr. C. T. Christodoulo is leaving London on an extensive business tour of the Near East. He is proceeding *via* Athens.

Lady Frances Ryder, who sailed last week for Port Said, will be the guest in Cairo of the Commander-in-Chief and Lady Congreve.

Count de Salis, the British Minister to the Vatican, on March 4 gave a reception in honour of Cardinal Bourne, who had just had a farewell audience of the Pope.

M. Frederic Nano, Secretary to the Roumanian Legation, left London on March 5, with Mme. Nano for Bucharest.

M. Gounaris, the Greek Prime Minister, is expected to return to Athens this week, and the National Assembly will reassemble on March 24.

It is announced that the eldest son of the Maharaja of Bikanir is to marry a Princess of the House of Rewa on April 18 next.

Mr. Balfour is to address a public meeting to be held at the Queen's Hall, Langham Place, on the evening of the 13th inst., under the auspices of the English Zionist Federation.

M. Constantinesco, Secretary to the Roumanian Legation, left London last week for Bucharest, where he will act as private secretary to the Minister for Foreign Affairs.

M. Diamandy, Minister Plenipotentiary and Special Commissioner of the Roumanian Government for the Liquidation of War Debts, arrived in London last week from Paris.

The engagement is announced between Gerald Moriarty, son of the late Arthur Moriarty, I.C.S., and Mrs. Moriarty, and Mollie, daughter of Mr. and Mrs. Welch, 5, Albert Road, Clifton, Bristol.

At a Council meeting of the Persia Society held on February 28, Mr. E. H. Keeling was appointed Honorary Secretary of the Society in succession to Captain C. K.

Greenway. The office of the Society is at 74, Grosvenor Street, W.I.

General Sir Ian Hamilton has presented to the Imperial War Museum Library the signed instructions handed to him by the late Lord Kitchener on his taking over command of the Mediterranean Expeditionary Force.

Mrs. Wills, of Bristol, is paying the cost of a new church which is being built at Manoharpur, Chota Nagpur, India.

The marriage arranged between Joseph Seeböhm, eldest son of Mr. and Mrs. B. Seeböhm Rowntree, of The Homestead, York, and Marianne Caroline (Carol), daughter of Sir James Thomson, K.C.S.I., and Lady Thomson, Torrington House, St. Albans, will take place at the Cathedral, St. Albans, on April 19.

A marriage has been arranged, and will shortly take place, between Henry Guy, third son of the late Rev. H. S. Cooper, M.A. late of Upchurch, Kent, and Mrs. Cooper, and Charlotte Gardner, eldest daughter of Mr. and Mrs. William Meek, of Aden, Arabia, and Airdrie, Scotland.

A marriage has been arranged and will take place on March 18, between Ernest Alfred Glanville, son of the late Stephen Glanville and Mrs. Glanville, of Greenvale Manchester, Jamaica, and Joan Irene, only daughter of Major and Mrs. Scoble Nicholson, of Trichinopoly, South India.

Sirdar Abdul Hadi Khan, the first Afghan Minister to the Court of St. James's, arrived in London last week from Paris, accompanied by his staff. He was met at the station by Mr. Lindsay and Mr. G. P. Churchill, of the Foreign Office. His Excellency is now staying at the Ritz Hotel, where he and his suite are the guests of the British Government.

The Right Hon. Srinivasa Sastri gave a dinner party last week at the Carlton Hotel, to meet the Earl of Lytton before his departure for India. Those present included:—Viscount Chelmsford, Lord Southborough, Lord Islington, Lord Pentland, Sir Valentine Chirol, Sir M. M. Bhowmagree, Lieutenant-Colonel Sir Maurice Hankey, Sir J. D. Rees, Sir William Stevenson Meyer, Sir William Acworth, Mr. H. A. L. Fisher, Mr. J. C. Walton, Mr. H. E. A. Cotton, Mr. J. N. Bore, Mr. M. D. M. Salal, Mr. Eardley Norton, Captain Burges, and Mr. Bajpai.

Colonel and Mrs. Woods, who were assisted in receiving their guests by Mr. H. Charles Woods, gave a large tea party at their flat in Victoria Street on March 2. Among others present were the Bulgarian Minister and Mrs. and Miss Stancioff, Madame Réchid Pasha, the Hungarian Chargé d'Affaires and Mrs. de Hedry, H. Chefik Bey Muftyzadé and Madame Chefik Bey, Lord Hemphill, the Rt. Hon. Ameer Ali and Mrs. Ameer Ali, the Hon. Lady Norman, the Hon. Mrs. Durant, Lady Bradford, General J. S. Nicholson, M.P., Lady (John) Henry, Mr. A. B. Geary, Mr. Athelstan Johnson, Sir Albert Seymour, Mr. Herbert Sidebotham and Miss Sidebotham, Miss M. E. Durham, Mr. G. P. Gooch, Major and Mrs. Davidson-Houston, Mr. Edwin Abbey, Mr. H. M. Wallis, Mr. Charles Macrae, Mr. Leland Buxton, Madam Selfridge Lady and Miss Conway, and Mr. L. A. Fanous.

OBITUARY.

Mr. Francis Frederick Gordon, proprietor of the *Advocate of India*, Bombay, died in London last week. Mr. Gordon, who was born in 1866, went to India at the age of 24 on the literary staff of the Bombay Gazette, and four years later he bought the *Advocate of India*. Among the reforms which he urged in his paper was the introduction of the anna nickel coin into the Indian currency. He also took an active part in measures for the suppression of plague, and claimed to have induced the Government to abolish the quarantine imposed at Bombay on Moham-

edan pilgrims to Mecca. He was a J.P. and hon. magistrate for the Presidency of Bombay.

W. H. T. B. Morton: An Appreciation.

From a Correspondent.

Your readers in Constantinople and some in Smyrna also will learn with deep regret and in many cases with feelings of personal loss of the death of "Harry Morton" who for nearly forty years was a prominent figure in the life of the English community in Constantinople.

Born in 1843, the eldest son of Dr. Morton of Aylsham, Norfolk, he very early acquired, on his native broads, that love of yachting and all aquatic sports which was so marked a feature of his after life, and which some years in the merchant service strengthened and confirmed. The writer first met him in Galata in March, 1873, and their friendship has been close and life-long. Tall, well proportioned, with sun tanned face, blue eyes and an auburn beard, he looked a typical Englishman. He was then associated with his uncle, a ship-owner and broker in Constantinople, but shortly afterwards he was offered an appointment in the Imperial Ottoman Bank in Pera under the late Sir Frederick Smythe, which he accepted and held for about thirty-three years, until his retirement in 1906. He then returned to England and lived partly in Norfolk and partly near Horncastle, at which latter place he died on the morning of Sunday, February 19 last.

He was a fine oarsman and a splendid yachtsman, and when Sir Edgar Vincent was chief of the Constantinople branch of the Imperial Ottoman Bank, he showed his confidence in his ability in the latter capacity by giving him charge of his yacht. Living at Moda he was one (and perhaps the most influential) of those who founded the Kadiköy Rowing Club, of which he became the Captain, and at the same time he owned a small cutter yacht. In both sports his successes were innumerable, both at the annual regattas at Prinkipo and Moda, which he did so much to promote, and in the club matches, and the writer has many a recollection of hard rowed races in which he rowed No. 2 to the captain's stroke, and of delightful yachting trips on the Marmora and up the gulf of Ismid.

In social life he was retiring—almost shy, but those who knew him best loved him most. His goodness of heart and simplicity of character were recognised by all who knew him. The fact that all the English children called him "Uncle Harry" bears eloquent testimony to his kindness and geniality, and now that he has "passed over" we may hope that "all the trumpets sounded for him on the other side."

W. W. S.

We regret to announce the sudden death in London of M. Alexander Ludskanoff, former Secretary of State, Member of the Sobranje, and Bulgarian Arbitrator of the Anglo-Bulgarian Mixed Arbitral Tribunal. He died on March 4 at his residence, 132, Cromwell Road, at the age of 66. He began his political career in Bulgaria during the Russo-Turkish war, when he was the Russian General Skobelev's principal interpreter. Born in Tyrnovo, the ancient capital of Bulgaria, he first studied in Bulgaria, then at the American College at Constantinople, and finally in France. He was known afterwards in Bulgaria as one of the most successful and able lawyers. He belonged to the great Russophil political group, whose first leader was Dragan Tzankoff, and which is now led by M. Daneff. M. Ludskanoff was several times a member of the Bulgarian Cabinet as Home Secretary, and as such was responsible in Bulgaria for the success of the Law of Proportional Distribution ("Repartition Proportionelle"). He was a remarkable linguist and recently was elected President of the English-Speaking League, which he had entirely organised; and he came to England last summer as Bulgarian Arbitrator of the Mixed Arbitral Tribunal. He married the only daughter of Dragan Tzankoff, and leaves two children, a son, M. Constantin Ludskanoff, First Secretary at the Bulgarian Legation in Belgrade, and a daughter.

A religious service was held at the London residence of M. Alexander Ludskanoff in the presence of his wife and daughter, the Bulgarian Minister and Madame Stancioff, Miss Stancioff, the staff of the Bulgarian Legation in London, the members of the Bulgarian colony living in London, and many English and Russian friends of M. Ludskanoff.

DOMESTIC ANNOUNCEMENT.

DEATH.

MORTON.—On the 19th February at "Moda," Thimbleby, near Horncastle in his 79th year, William Henry Thomas Browne Morton, late of the Imperial Ottoman Bank, Constantinople.

OSTRICH EGGS FROM BAGHDAD.

Sir Percy Cox, High Commissioner of Mesopotamia, and Captain Cheesman are making the experiment of sending two ostrich eggs from Baghdad to London by aeroplane to be hatched in incubators in the Zoological Gardens. A few weeks ago they forwarded a Persian beetle by air as far as Egypt, whence it came to Regent's Park by sea. Possibly the eggs will follow the same route, but there is every likelihood of their being picked up by another plane in Egypt and transported all the way by air. There will be a difficulty, unfortunately, in hatching them, since the ordinary incubators in use in this country for fowls' eggs are quite unsuitable for the eggs of an ostrich.

WHERE TO STAY IN THE EAST.

CAIRO.

THE

CONTINENTAL-SAVOY

THE MOST UP-TO-DATE AND BEST SITUATED HOTEL IN CAIRO

THURSDAY, MARCH 9, 1922.

THE NEW MOVE IN EGYPT.

Thanks to Lord Allenby, the Egyptian deadlock that followed the rupture of the Anglo-Egyptian negotiations last November is at an end. The old Duke of Wellington used to complain in his later political days that it was easier to win victories on the stricken field than in the Council Room. Not so Lord Allenby. It is just about three years since the conqueror of Syria was summoned over to the Paris Peace Conference to "advise" about Cilicia. When he arrived his advice was much more urgently needed about Egypt, where very serious disturbances had suddenly broken out to the surprise and consternation of British Ministers, who asked him to go back at once to Cairo as Special High Commissioner. During the three years that have elapsed since then British Ministers have gone on groping about for an Egyptian policy. They appointed a "strong" Commission under Lord Milner to carry on an enquiry on the spot and recommend them a policy. The Commission did its work admirably and made its recommendations. Ministers were not of course bound to adopt them, but they published them and certainly took various steps which created the impression that they intended to adopt them. It was on that assumption that Adly Pasha formed his Cabinet last spring and came over in the summer to carry on negotiations with a view to the substitution for the British Protectorate of a permanent Treaty of Alliance between an independent Egypt and Great Britain. But at the end of it all His Majesty's Government had apparently changed their minds, and they sought to impose upon the Egyptian Delegation a Draft Treaty which departed very widely from the Milner recommendations. Adly Pasha rejected it and immediately on his return to Egypt resigned with the whole of his Cabinet. What happened subsequently is fresh in our readers' minds. There was bitter disappointment in Egypt and serious disturbance. These were vigorously and promptly repressed, but Lord Allenby found himself confronted with an even more difficult situation than after the resignation of the Rushdi Cabinet in 1919. No responsible Egyptian would undertake to form a new Ministry except on conditions which the British Government refused to sanction. There was this difference, however, between 1919 and 1922, that Lord Allenby had had three years' experience of Egypt and had come to the conclusion that without the co-operation of a friendly Egyptian Government he could no longer carry on. As the last White Book shows, he gave his reasons why very frankly and fully. But British Ministers were still loth to believe him, and only when they realised the gravity of the situation which would have been created in Egypt, and perhaps also in Parliament, by his resignation, did they summon him over once more to 'advise.' He gave his advice and backed it up with such cogent arguments that he carried the position in Downing Street by storm, just as he had carried the Turkish positions in Palestine.

In his statement in the House of Commons Mr. Lloyd George of course insisted that there was no change, but only a "development" of policy. This is common form with Ministers, but his declaration has been recognised—especially in Egypt—as constituting in substance a complete reversal of the policy set forth in the explanatory Note to the Sultan which on December 3 followed the rupture of the London negotiations.

The terms of that declaration will be found in another column. In some respects it goes further to meet Egyptian national aspirations than the Milner recommendations which contemplated the abolition of the Protectorate and the recognition of Egyptian independence in return for the acceptance by the Egyptian Government in the same instrument of the safeguards required by Great Britain for the protection of her Imperial interests and of those of the foreign communities resident in Egypt. His Majesty's Government have now determined to proceed by a unilateral declaration which terminates the Protectorate and leaves Egypt free as an independent and Sovereign State to work out her own national institutions, but reserves for subsequent settlement "by free discussion and friendly accommodation" the matters on which the Anglo-Egyptian negotiators failed last year to arrive at an agreement. It may be urged that such an agreement is scarcely more likely to be reached when, under the new Constitution which will have in the meantime to be drafted and set in operation, the Egyptian Government will be responsible to a newly elected, and possibly, immature Parliament. But the Treaty which the Milner Commission contemplated would in any case have had to be submitted to an Egyptian representative Assembly, which might not have considered itself in any way bound to ratify an instrument signed before it came into existence. Now, on the contrary, whenever the final treaty comes up for sanction before the Egyptian Parliament, it will be an instrument drawn up by a Government formally responsible to that Parliament and drawn up, presumably, in full knowledge of what that Parliament desires and is prepared to accept.

The new declaration of British policy has at least so far satisfied Egyptian opinion that Sarwat Pasha, whilst definitely stating that he could not have assumed office so long as the December "explanatory" Note appeared to represent the principles guiding the British Government's policy towards Egypt, has now formed a strong Cabinet, which will doubtless have the full support of Adly Pasha, though his name does not—rather regretably we think—appear amongst its members. Sarwat Pasha is known to have been in close consultation with his old chief and colleague throughout the recent crisis, and he has indeed, as was to be expected from a member of the late Cabinet, taken the first opportunity to express his approval of the attitude of the Egyptian Delegation over which Adly Pasha presided during the London negotiations. Sarwat Pasha has thus honourably fulfilled the undertaking into which he entered with Lord Allenby before the latter's recent visit to London. The firmness which he has already displayed in dealing with some disturbances at Tanta, always notorious for ebullitions of popular temper, is an earnest of the sense of full responsibility for the administration of the country under which avowedly he has assumed office. But it is not going to be all plain sailing either for him or for Lord Allenby. The deportation of Zaghloul Pasha has doubtless deprived the Extremists of their most popular leader, or, perhaps we ought rather to say, figure-head. But even if Extremism has been scotched, it has not yet been killed, for Egyptian unrest is after all largely a local manifestation of that wide-spread unrest which has swept since the war all over the world, and not least over the Eastern world. The war itself did not create it, but gave it a tremendous impetus for which new phrases coined by the statesmen of the Allied and Associated Powers at moments of unreflecting exaltation must bear no small share of responsibility. In Egypt such elastic words as 'self-determination' were even more quickly seized upon than elsewhere as lending new emphasis to all the many promises and half-promises of self-government and freedom which we had given to the Egyptians ever since the beginning of the British occupation in 1882. It has been the misfortune, not to say the crying sin, of our Ministers that they have entangled us all through the East in a mass of conflicting undertakings which have inevitably sown widespread and not unreasonable distrust. The process of disentanglement is bound to be difficult and slow, but Lord Allenby has

at last persuaded the British Government to make a long stride towards dispelling the black cloud of Egyptian distrust. The immensely enhanced authority with which he returns to Cairo is perhaps our greatest asset at the present moment, not only in Egypt but throughout the East.

IN DEFENCE OF GREECE.

By C. S. Buller.

The recognition of King Constantine of Greece by the Allied Powers is a matter which cannot now be much longer delayed; and the recital of some of the facts that led up to the situation which caused his disavowal by his official allies may serve to place his actions in a light not hitherto visualized by his detractors.

During the European war, the public outside Greece recognized in that country two outstanding personalities: M. Venizelos, the friend of the Allies, and King Constantine, the alleged friend of Germany. Observers from within, who had followed political events on the spot since the Cretan troubles in 1896, saw M. Venizelos, ready to plunge the country into a catastrophic war for his imperialistic ends on the one side; and on the other, King Constantine, working for what he sincerely considered to be the good of his people, seeking neutrality and peace after the two victorious but costly Balkan wars of 1912 and 1913. These are the broad lines of the case, the sequence of events leading up to which are practically unknown in Western Europe and America.

The feud between M. Venizelos and the Greek royal family is not of such recent date as is generally supposed. It began with the appointment of Prince George of Greece as High Commissioner in Crete in 1893. The appointment did not fall in with M. Venizelos' views as to the reward due to his own services. During the earlier troubles in the island M. Venizelos was the leader of a band of irregulars. On the formation of the Cretan parliament M. Venizelos became, first, Minister for Foreign Affairs, and afterwards Prime Minister of Crete. Even in those days of his early thirties, he could not brook a superior, and set on foot the intrigue which eventually led to the departure of Prince George from Crete; a departure for which M. Venizelos was personally responsible.

Any one who has the slightest acquaintance with the Greek royal family knows with what strong ties of affection its members are bound to one another. M. Venizelos had surreptitiously declared war against them at that early date, but King George I was too wise and diplomatic a monarch for the challenge to take effect during his lifetime. King Constantine had greater difficulty in concealing his sentiments; hence, the beginning of the divergence between King and Prime Minister.

During the space of time which elapsed between Prince George's departure from Crete and M. Venizelos' assumption of power in Athens, the latter was steadily increasing his influence amongst political circles in Greece. Early in 1909 disaffection began to be spread amongst the officers of the Greek Army owing to statements being circulated to the effect that the royal princes were obtaining promotion for their favourites at the expense of more deserving officers. An intrigue was on foot, by whom started no one quite knew.

Whispers were current, discontent waxed greater, until the culminating point was reached on August 15, 1909, when Colonel Zorbas placed himself at the head of a military revolution. The Crown Prince Constantine was obliged to resign his position of Commander-in-Chief, and he and his brothers were relieved of their ranks in the army. Then, after a short interval, the revolutionary government invited M. Venizelos to come to Athens from Crete, in order to straighten out the tangle into which they had got themselves. M. Venizelos came, and after much coyness and show of hesitation, consented to be elected as a member of the Athens

Chamber of Deputies, and promptly became Prime Minister of the country. The princes were reinstated in the army and, during the lifetime of King George, as previously stated, all went well. There followed the Balkan wars, which earned for M. Venizelos, as political chief, the gratitude of the Greek nation; and for the Crown Prince Constantine, as Commander-in-Chief of the army, the adoration of the people.

But these two wars had proved exceedingly costly to Greece, a small nation of not three million inhabitants. Many lives had been lost, and Greece urgently required a breathing spell to reorganize her new territories and to make up for the time lost by the men of the army on their farms and vineyards. After victory, peace, hardly earned, was the cry of the nation. Thus, when the European war burst upon the world it found Greece disinclined to fight other people's battles. She had had quite enough of her own to last her for some time; she was practically exhausted, but still she would have carried out her agreement with Serbia, her ally, had that country been in a position to fulfil her part of the treaty obligations by placing a force of 150,000 men on the Greco-Bulgarian frontier. This, as is well known, Serbia could not do, and so the treaty fell to the ground. This is the truth concerning Greece's alleged "treachery" towards Serbia.

However much King Constantine desired peace for the sake of his country and his people, M. Venizelos did not share his opinion on the subject; and he used his position as Prime Minister to defy the King almost openly. He threw off nearly all semblance of allegiance to his Sovereign, and assumed the dictatorial tone that he had kept in abeyance since his departure from Crete. He took every opportunity of annoying the King, and on one occasion addressed an open letter in the public Press to Constantine, couched in terms of advice which were so insolent and arrogant as to defeat their own expressed purpose, which it was evidently their intention to do. To the experienced observer his intent was plain: namely, to bring about the fall of the King and establish himself as dictator of Greece until such time as his life's ambition could be fulfilled—that of becoming President of the United Balkan States, or Balkan Confederation. A great deal has been heard of "Tino's treachery," but if all these stories were traced to their source, by far the greater part of them would be found to be attributable to M. Venizelos' admirably organized system of intrigue and propaganda. The King's character must be blackened at any cost in order to set off the whiteness of M. Venizelos' aspirations.

M. Venizelos' flight to Salonika, his raising of the Defence Corps to assist the Allies, the King's removal from Athens, and dictator's triumphal return, all have the thread of intrigue running through them. It had become necessary to M. Venizelos that King Constantine should be forced by outside Powers to leave Greece, seeing that he more than ever retained the affection of his people. The story circulated as to the danger of a Greek attack on the Allies' rear was a myth that the foreign Ministers in Athens should have known to be without the slightest foundation. But propaganda had done its work; and to satisfy the panic of the Entente journals Greece was summoned to hand over certain of her guns to the Allies. This was a cunningly devised trap. If the King openly consented, he would lose the respect of his people. If he refused, the Allies would come and fetch them. Now, no one knew better than M. Venizelos that the Greek people would never consent to the incursion on their soil of an armed foreign force with the intent to take their guns from them. It was courting disaster which neither the King nor anyone else could forestall. The Powers were wrongly advised as to the temperament of the people; but M. Venizelos could easily have placed matters in the proper light to the Allied authorities, and thus have avoided a most distressing incident, the immediate effect of which was the proclamation of the blockade of Greece, which lasted for six months and caused immense suffering to persons innocent of the whole business. The end of the blockade coincided with the withdrawal of the King and

royal family from Greece at the end of May (o.s.) 1917, and the return of M. Venizelos as dictator; for King Alexander was a mere shadow with no official functions whatever.

In June 1917 began the reign of tyranny and persecution that ended with the general elections on November 1 (o.s.) 1920 with the overthrow of the dictator by an overwhelming majority of the Greek people. Foreign journals have bitterly blamed the Greeks for what they called their treacherous conduct and base ingratitude in ousting their "saviour" from power. Abuse has been heaped upon them, "full measure and running over"; but the public outside Greece knows nothing of the sigh of relief that went up from the whole country when the result of the elections was made known. The figures were never published in full: it was not necessary; the *débâcle* was complete.

But it is insufficient to allege tyranny without explaining in what such tyranny consisted. The world can then judge whether the internal situation in Greece during M. Venizelos' rule merited the application of so severe a term. To begin with, M. Venizelos had thrown in his lot with the Allies, and required a larger army than the small Defence Corps which was already at Salonika. He issued an order for the mobilisation of the Army. Here he met with his first check: he could not raise anything like the number of men that he wanted, for they refused to join the colours on his command, though they subsequently rolled up to a man when King Constantine called for them on his return in November 1920. Still, the men had to be found somehow. M. Venizelos' first step was to make the mayors of the villages of Greece responsible in their persons for the finding of the required quota of men from their districts. This, it was very soon found, would mean the wholesale arrest of most of the mayors in Greece. So, on second thoughts, M. Venizelos decided to make the families of the defaulters responsible for the production of their recalcitrant members. The result was the wholesale deportation of the families of defaulters from their homes all over Greece to concentration camps in the islands of Santorin, Naxos, Andros, and elsewhere. Old men, women and children were ruthlessly driven from their olive groves and vineyards for no crime of their own, and herded in concentration camps, the miseries of which are better imagined than described.

It may be of interest to note here the constitution of the two parties in Greece. The Venizelists were for the most part those of the middle or commercial classes, while the royalists consisted of the aristocracy and the masses of the people—a rare combination indeed in modern times. The gendarmerie and the police force were recruited from the people, and they were Greeks, who might be expected to sympathize with their fellows. M. Venizelos' next move, therefore, was gradually to replace the members of those forces by Cretans on whom he could depend. Very soon the whole of the Athens police and gendarmerie was composed of Cretans. Then a special bodyguard of one thousand men under a former leader of irregulars, Paul Gyparis, the chief of M. Venizelos' braves, was formed and stationed on the outskirts of Athens. They were called the "Public Security Corps," but were really a personal bodyguard for M. Venizelos. Of course, none but Cretans were admitted to their ranks. Their pay was equal to four shillings a day, with barrack accommodation and rations, which consisted of the best that the Athens market could afford.

Meanwhile, steps had been taken to crush out all memory of the exiled royal family. A new law was passed in the Chamber of Deputies defining a fresh catalogue of crimes against the "kathestos," a term invented for the occasion and which, roughly translated, means "the existing order of things." Amongst other crimes were the singing, playing or whistling the air of any royalist song; references in private conversation of a sympathetic nature to the absent King or of any member of the royal family; the possession of any picture or likeness in any form of King Constantine or

his family; and, of course, the speaking of anything against M. Venizelos or his Government. Spies were present at all the cafés, beershops, taverns and other places of common resort, on the lookout for stray scraps of conversation of a royalist tendency, or the drinking to the king "over the water." Arrests were matters of the commonest occurrence. Prosecutions under the new law were conducted wholesale, and led to many abuses. For instance, if a neighbour had a grudge against another, he had only to go to the nearest police station and state that his enemy had a portrait of the King in his house. Immediately a domiciliary visit would be paid to the suspect by the Cretan police; the man's house would be turned upside down, his drawers would be forced open and ransacked and his furniture thrown about pell-mell in the search for the incriminating evidence. If nothing were found, there would be a grudging apology from the sergeant of the police; but if anything incriminating were discovered, the guilty party would be marched off to the local police station where, as an earnest of what was to come, he would receive a severe thrashing from willing Cretan arms; and he was lucky if he got off with six months' imprisonment. Under the new law all the prisons were full to overflowing. Then the Press had to be muzzled. The daily papers used to appear with almost as many blank spaces as there were items of news, where articles and news had been censored out. A stringent censorship was also exercised on private letters and telegrams, especially on those coming from or addressed to Switzerland and Italy. Foreign Press telegrams were mutilated before despatch to any country to suit the requirements of the censorship.

It was against this state of affairs that the country revolted at the general elections in November 1920. It was the first chance the Greek people had had to free themselves, and even then there were many doubts as to their success. The polling stations were in the hands of the party in power, and experience had shown that the Cretan police would prevent the voting of persons suspected of royalist sympathies. The royalists, however, conceived a happy plan for the peaceful carrying out of their programme. They turned up at the polls early, all wearing the Venizelist badge in their buttonholes. There was no trouble whatever; on the contrary, every facility was afforded to the electors wearing Venizelist badges to record their votes. Up to the last moment the Venizelist party was cock-a'-hoop over their anticipated triumph—that is, until the votes came to be counted. The rest is known.

On the formation of the new government a *plébiscite* was taken on the question of the recall of the King, the result of which was practical unanimity in favour of his return. The war in Asia Minor was prosecuted with renewed vigour, partly in the hope that a continuance of M. Venizelos' foreign policy would placate the Powers. Instead of which, alas, Greece was abandoned by her allies and left to suffer enormous sacrifices in men and money without even the moral support of those in whose interests she was fighting as much as in her own. Notwithstanding, internal peace now reigns; there is no longer any Press or private censorship; there is no need for spies or *agents provocateurs*; anyone may speak as sympathetically of M. Venizelos as he pleases without fear of consequences. In fact, Greece is once more, free, and is looking forward to the day when her King, for whose sake she has joyfully suffered so much, will be fully recognized by the Western Powers, and when M. Venizelos will be no more than an illustrious shadow of the past.

Twenty stars of the Fox Film Company have arrived in Jerusalem for the production of a spectacular film depicting scenes from the Bible. The "big" scene, it is stated, will be the fight between David and Goliath, and will take place near the main Jerusalem-Ramallah road, but historical accuracy is not being strictly adhered to, since the scenario provides for a love-scene after the battle.

EGYPT: NOVEMBER—FEBRUARY.

Last week a White Paper "Correspondence respecting Affairs in Egypt" (Cmd. 1592) was published at the price of sixpence; and will be read with much interest by all who have followed developments in the Egyptian situation during the period covered (Nov. 17 - Feb. 27). The most important of the papers published are the "Declaration to Egypt" and the letter addressed to the Sultan by the High Commissioner in explanation of the Declaration (Enclosures 1 and 2 in No. 35). These we reproduce *in extenso* below. The correspondence which precedes it will repay careful perusal, but we can here call attention to only one or two points.

It is of the greatest significance that in the earliest papers reproduced, Lord Allenby reports that the principal advisers are unanimously of opinion that "a decision which does not admit the principle of Egyptian independence and which maintains protectorate must entail serious risk of revolution throughout the country, and in any case result in complete administrative chaos, rendering government impossible." The telegram goes on to say:—Unless His Majesty's Government are prepared to give substantial satisfaction to expectations which Egyptians have legitimately formed on the basis of apparent policy of His Majesty's Government during the past two years, it will be impossible to form any Ministry. Strong military force acting with severity could doubtless preserve certain measure of security to life and property in larger cities, but the task would be a much more difficult one in the provinces. No military administration, however, could hope to replace the complicated machinery of civil government or prevent serious injury to financial and economic interests. The advisers have been carrying on over the years in the belief that policy of liberal concession would be adopted, and have undoubtedly given this impression to various Ministers and others with whom they have been in contact. They feel bound, therefore, to point out that if a contrary policy is adopted they cannot expect to retain the confidence of Egyptian Ministers or to be able to render useful service in the future."

There are several references to the Draft Treaty, which was handed to Adly Pasha last November by Lord Curzon; and it would have been convenient if the text had been reproduced in the present White Paper. Readers of *The Near East* who wish to refer to it will find it in our issue of December 8 (p. 740).

On December 6, Lord Allenby telegraphed to Lord Curzon: "During the past twelve months I have more than once given it as my opinion that no signed agreement was practicable unless His Majesty's Government were prepared to accord to Egypt a higher degree of independence than they are clearly disposed to grant, and that it would therefore eventually be incumbent upon them to define their own policy and give effect to it. The situation which I foresaw has come into existence and it behoves us to deal with it. . . . I consider that the Draft Treaty definitely represents a policy which fulfils all our requirements so far as Egypt is concerned. This policy confers upon the people of Egypt a substantially greater participation in the conduct of their internal affairs, but at the same time ensures that our own vital interests are adequately safeguarded." He was advising H. M. Government that "the present moment is a favourable one. . . . to adopt a strong line calculated to supply a constructive programme to those Egyptian who are not unwilling to co-operate with us"; and he recalled the fact that Adly Pasha at his last interview with Lord Curzon had asked why H. M. Government "did not on its own initiative bring into operation the plan indicated in the rejected draft treaty". Later in the same dispatch we read: "I quite appreciate that the action I advocate would oblige His Majesty's Government to terminate the protectorate by a unilateral declaration on their part. You will recall that a step such as this was at one time suggested, and I cannot see why it should not be taken."

In No. 8, dated December 12, the High Commissioner reports the terms on which Sarwat Pasha was ready to take office. A week later he reports that Sarwat "has not yet been able to collect a Ministry." Then, after a series of messages describing the arrest of Zaghloul and his lieutenants, and other events in Egypt, there is a message (No. 22) giving the Sarwat's proposals for the composition of a Ministry. It is interesting to note that all the names therein mentioned actually appear in the list of members of the Cabinet just formed.

At the end of January, after first suggesting that Sir G. Clayton and Mr. Sheldon Amos should be sent to England to advise H. M. Government of the situation, the Government summoned Lord Allenby himself to London. As a result of his visit he was instructed to communicate to the Sultan the Declaration referred to above, together with a covering letter. These are as follows:—

Letter handed to Sultan Fuad by Lord Allenby:

Your Highness,
I have the honour to bring to your Highness' notice that certain passages of the explanatory note which I addressed to you on December 3, 1921, were interpreted, to my great disappointment in a manner not in accordance with the intention and policy of his Majesty's Government.

2. Judging by many comments which have been published on the subject of this note, it would appear that many Egyptians were under the impression that Great Britain was about to aban-

don her liberal and favourable attitude towards Egyptian aspirations and to make use of her special position in Egyptian order to maintain a political and administrative régime incompatible with the freedom she had offered.

3. Such an interpretation of the intentions of his Majesty's Government was quite mistaken. On the contrary, the explanatory note emphasised the dominating principle that the guarantees claimed by Great Britain are not designed to involve the continuance of an actual or virtual protectorate. Great Britain as it is stated therein, sincerely desires to see "an Egypt enjoying the national prerogatives and the international position of a sovereign State."

4. If Egyptians have regarded these guarantees as being out of keeping with the position of a free country they have, on the other hand, lost sight of the fact that Great Britain has been obliged to claim them out of consideration for her own security in face of a situation which demands great prudence on her part, particularly in the matter of the disposition of her troops. Present world conditions, however, and the state of effervescence which has prevailed in Egypt since the Armistice are not permanent factors, and it is to be hoped that while, on the one hand, the former will eventually improve, on the other hand, the time will come when, in the language of the note, Egypt's record will give confidence in her own guarantees.

5. As to any design to interfere in the internal administration of Egypt, his Majesty's Government have sufficiently stated, and repeat, that their most ardent desire is to place in Egyptian hands the conduct of their own affairs. The draft agreement proposed by Great Britain did not depart from this idea, and in making provision for the presence of two British officials in the Ministries of Finance and Justice, it was not her intention to use these two officials for the purpose of intervening in Egyptian affairs, but solely in order to preserve the contact necessary for protecting foreign interests.

6. Such is the sole bearing of the guarantees that were demanded by Great Britain. They were claimed without any desire to impede Egyptians' enjoying the full rights of a national Government.

7. Animated as she is by these intentions, it will be understood that it is repugnant to Great Britain on the one hand, to see Egyptians delay by their own acts the realization of an ideal aimed at by both parties, and, on the other, to be compelled herself to intervene to re-establish order when it is threatened in such a way as to arouse the fears of foreigners and to involve the interests of foreign Powers. It would be much to be regretted if Egyptians should see in the exceptional measures which have recently been taken any prejudice to the ideal to which they aspire or an intention on the part of his Majesty's Government to alter the policy I have indicated. In taking these measures, the sole desire of his Majesty's Government has been to put an end to a harmful agitation which, by arousing popular passions, might have such consequences as to jeopardise the whole result of the efforts of the Egyptian nation. These measures were taken primarily in the interest of the Egyptian cause, which has everything to gain by being studied in an atmosphere of calm and friendly discussion.

8. Now that tranquillity seems to be re-establishing itself, thanks to the wise spirit which is the root of the Egyptian character and asserts itself in times of crisis, I am happy to be able to announce to your Highness that his Majesty's Government are prepared to recommend the accompanying declaration for the approval of Parliament. This will, I am confident, establish a régime of mutual confidence and lay the foundation for a satisfactory and final solution of the Egyptian problem.

9. There is no obstacle to the re-establishment forthwith of an Egyptian Ministry for Foreign Affairs which will prepare the way for the creation of the diplomatic and consular representation of Egypt.

10. The creation of a Parliament with a right to control the policy and administration of a constitutionally responsible Government is a matter for your Highness and the Egyptian people to determine. Should circumstances arise to delay the coming into force of the Act of Indemnity with application to all inhabitants of Egypt mentioned in the declaration accompanying this note, I desire to inform your Highness that I shall be prepared, pending the repeal of the proclamation of November 2, 1914, to suspend the application of martial law in respect of all matters affecting the free exercise of the political rights of Egyptians.

11. It is now for Egypt to respond, and it is to be hoped she will justly appreciate the good intentions of Great Britain, and that reflection and not passion will guide her attitude.

Declaration to Egypt.

Whereas his Majesty's Government in accordance with their declared intentions, desire forthwith to recognise Egypt as an independent sovereign State; and

Whereas the relations between his Majesty's Government and Egypt are of vital interest to the British Empire;

The following principles are hereby declared:—

1. The British Protectorate over Egypt is terminated, and Egypt is declared to be an independent sovereign State.

2. So soon as the Government of his Highness shall pass an Act of Indemnity with application to all inhabitants of Egypt martial law as proclaimed on the 2nd November, 1914, shall be withdrawn.

3. The following matters are absolutely reserved to the discretion of his Majesty's Government until such time as it may be possible by free discussion and friendly accommodation on both sides to conclude agreements in regard thereto between his

Majesty's Government and the Government of Egypt:—

(a) The security of the communications of the British Empire in Egypt;

(b) The defence of Egypt against all foreign aggression or interference, direct or indirect;

(c) The protection of foreign interests in Egypt and the protection of minorities;

(d) The Sudan.

Pending the conclusion of such agreements the *status quo* in all these matters shall remain intact.

PALESTINE ARAB DELEGATION: MEETING AT HYDE PARK HOTEL.

On March 1 a crowded meeting assembled at the Hyde Park Hotel, to be addressed by members of the Palestine Arab Delegation and their supporters. Among those who were, or had promised to be present were: The Earl of Pembroke and Montgomery, Lord Apsley, the Lords Amthill, Sheffield, Islington, Sydenham, Askwith, Lamington, Lord George Hamilton, Sir William Joynson Hicks, M.P., Sir Stuart Coats, M.P., Sir William Bull, M.P., Lt.-Col. Hon. Aubrey Herbert, M.P., Mr. Rupert Gwynne, M.P., Colonel Hilder, M.P., Sir Philip Dawson, M.P., Captain T. C. Foxcroft, M.P., Sir Thomas Roydon, M.P., Hon. Gideon Murray, M.P., Mr. George Balfour, M.P., Sir Harry Brittain, M.P., Sir Douglas Hall, M.P., Lt.-Col. Dalrymple White, M.P., Col. Assheton Pownall, M.P., Captain Ainsworth, M.P., Major Boyd-Carpenter, M.P., Lt.-Col. Baldwin Raper, M.P., Hon. Alexander Shaw, M.P., Brig.-Gen. H. T. Surtees, M.P., Capt. Viscount Curzon, M.P., Professor Sir William Ridgway (Cambridge), Professor Granville Browne, (Cambridge), Professor Margoliouth, (Oxford), Professor Sir Edward Denison Ross, (London), Professor Albert E. Pollard, (London), Lt.-Gen. Sir Arthur Sloggett, Capt. Sir John Shelley Rolls, Bt., Sir John P. Hewett, The Countess Yarborough, the Lady Byron, the Hon. Everard Fielding, Miss M. A. Broadhurst, Mr. W. L. Hichens, Sir John Latta, Sir Earnest Moir, Sir Harry Foster, Admiral W. H. Henderson, General Blenkinsop, Major Gladstone, Lady Cooper, Sir Gilbert Parker, Mrs. Rosita Forbes, Mrs. Archibald Little, Mr. G. K. Chesterton, and Major Frank Fox.

Lord Lamington presided. He said there were Jews already in Palestine, and no member of the present delegation wished to turn them out, or to prevent other Jews settling in the country. But it was a different matter to have a large, powerful, outside organisation like the Zionists, who wished to plant Jews in Palestine with the idea of making a Jewish nation, to the loss and detriment of the people already there. He would read a number of messages of sympathy that had been received.

The chairman read these messages. One was from Lord Northcliffe: "I regard position in Palestine serious. Believe all immigration and importation of arms should be stopped immediately and undesirable characters expelled." Other messages were from Lord Sheffield, Lord Islington, Lord Amthill, Lord Sydenham, Professor Browne, Professor Sir William Ridgway, (Cambridge), Professor Albert E. Pollard, Sir William Joynson Hicks, Sir William Bull, M.P., Mr. Eden Phillpotts and Sir Gilbert Parker.

Shibly Effendi Jamal (Secretary of the Delegation) said that 93 per cent. of the people of Palestine were Arabs, including in these the Christians, of whom he was one. About half the remainder of the population were Jews who had lived long in the country and were only differentiated from the Arabs by their religion. The people of Palestine were not savages or nomads. They lived in cities, and had schools, colleges, hospitals, doctors, lawyers, and all the paraphernalia of civilisation. They had about a hundred newspapers to every million of people.

Explaining how the delegation had come into being, he said that as soon as the Balfour Declaration had been made a Moslem-Christian League was formed, and from the various districts, representatives were sent to a congress. Four such congresses had been held; at the last of them, held in June, there were ninety-six members. Then, the congresses getting tired of sending cablegrams to the British Government, the present delegation had been sent. Its members had been in this country seven months; they might be here another six; for they would remain until they got what they wanted. The Arabs had shed tears of joy when they saw the British troops coming along the hills; but that had not lasted long, for very soon afterwards the Declaration had been made.

That Declaration had been variously interpreted by different people; the Delegation had been four months trying to get the meaning of the phrase "Jewish national home." They had found in the dictionary the meaning of the three separate words, but when the words were combined the only dictionary was the Colonial Office, and from that authority the Delegation got an interpretation that did not satisfy them. "We recognise" said the Colonial Office, "the historical connection of the Jews with Palestine." But there were people in Palestine before Abraham, who came from Mesopotamia. Very early Abraham's descendants went down into Egypt, and remained there for four hundred years. Afterwards they came back, crossed the Jordan, conquered some of the tribes and settled in the country. But it was only a small part of the country, that around Jerusalem, which the Hebrews really held, and that they didn't get until the time of David. Really they had had possession of a small part of Palestine for about 250 years, and since the time of Titus they had ceased to hold it.

The speaker dealt also with the claim made by the Zionists to Palestine on religious grounds. He said there was no objection to Jews coming to the country to build a temple and university, to study the language and develop their literature; the objection was to their coming in to dominate. Christians had a claim to Palestine; the Crusaders had been there 200 years, and the recent conquest had been mainly by Christian troops. The Mohammedans had a religious claim to Palestine; their third most celebrated mosque was there, and they had shrines all over the country.

Of the pledges given in the Balfour Declaration the speaker said the British Government had given an earlier pledge to restore "Arab influence and authority in the conquered provinces,"—of which conquered provinces Palestine was one. He believed the Balfour Declaration had been made hurriedly, without its consequences being carefully thought out, and if it was counted righteousness for an individual who had made a mistake to acknowledge the fact, so also a Government which had made a mistake ought to acknowledge and correct it (applause). If the Balfour Declaration was found to be a mistake, it would not be dishonour but an honour for the British Government to acknowledge that it was causing injustice to the people of Palestine, and to repeal or modify the Declaration. Before anything was settled let the British Government send out a commission to Palestine to study matters on the spot, and find out where the wishes of the people were (applause).

Captain Charles Foxcroft said that the Government was steadily whittling away the pledge it had given to the Arabs, and preparing the national home for the Jews.

Mrs. Rosita Forbes said the future of Palestine was with husbandmen and shepherds. In the Zionist colonies the work was done by Arabs. Palestine had nothing to offer to the Jew.

Major Frank Fox moved a resolution:—That this meeting of British citizens, having heard the Arab case, affirms that our pledges to the Arab population should be respected, and that Zionist immigration should be stopped until a judicial inquiry has reported as to the position in Palestine."

Major Gladstone, His Excellency Moussa Kazin (President of the Delegation), and others speakers supported this resolution, some of the later ones speaking amid a certain amount of interruption from a number of Zionists who were present. About a dozen hands were held up against the resolution when it was put to the meeting; but it was carried by a very large majority.

A vote of thanks to the chairman terminated the proceedings.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo
Steamers running at frequent intervals
between BUSREH (Persian Gulf) and
BAGHDAD on the River Tigris, and
between MOHAMMERAH (Persian Gulf)

NOTES AND NEWS.

Devonshire Square.
E.C. 2.

The D.O.T.

It is satisfactory to know that the Department of Overseas Trade is no longer in danger of disappearing. The Department owes its salvation to the fact that at the eleventh hour the business community realised the necessity of taking action, and protests against the recommendations of the Geddes Committee poured in from all sides. It would have been a fatal mistake to have carried out the proposals, which would not have been made I imagine if the work of the Department had been really realised by the Committee. As it is the expenditure on the Department is to be severely curtailed, and it is to be hoped that the greatest care will be taken to see that in the pruning process its efficiency is not greatly impaired.

The Fair.

The hopes entertained regarding the results of the British Industries Fair seem likely to be fulfilled from all I hear. Every day there has been a very noticeable increase in the number of visitors, and on Saturday I am informed that it was quite a difficult matter to move about the building. The exhibitors, our representative tells me, are looking quite optimistic, as well they might in the circumstances, and I shall look forward to hearing that a goodly amount of business has resulted. Elsewhere in this issue will be found our first review of the exhibits; the remaining portion including a survey of the Birmingham section of the fair will appear next week. Our correspondent in his opening remarks makes a spirited plea for enterprise on the part of our traders, which I heartily endorse. Representation at the fair must be followed up if lasting results are to be obtained. It is no good our merchants arguing that their activities must be restricted on account of the present conditions. A bold policy can obtain trade even in the most difficult circumstances, and I look to our traders for a display of initiative worthy of the country's commercial traditions.

Indian Budget Statement.

For some time it has been only too obvious that there would be a very substantial deficit on last year's Indian Budget, and the figures given by the Finance Member in his statement have, therefore, occasioned little surprise. It had been anticipated that there would be a surplus of 71 lakhs of rupees, but there is actually a deficit of 34 crores, which, translated into sterling means a shortage of about £22,600,000, and that on a Budget totalling about £130,000,000, is no slight matter. World conditions are given by the Finance Member as the explanation of this unfortunate position, but that only partly explains the development, and for the other causes we should not be very far wrong, I think, in looking at the situation in India itself. Of course India was bound ultimately to feel the effects of the war like every other country but they have undoubtedly been greatly intensified in her case by the prevailing unrest.

New Taxation.

The position has been met as was to be expected by a general increase of taxation. The general *ad valorem* duty on imports is increased from 11 to 15 per cent., while the cotton excise duty is raised from 3½ to 7 per cent. Imported yarn is to be subject to a duty of 5 per cent., while the duties are increased on machinery, iron, steel and railway material, alcoholic liquors excepting wines, matches, luxury articles, and imported petroleum (an excise duty of one anna per gallon being placed on Indian produced kerosene). Then the salt duty is to be increased from Rs. 1¼ to Rs. 2½ per maund while increases are made in the rates of income tax and super tax. It is estimated that the effect of the proposals, including receipts from increased railway and postal charges, will be to provide an additional revenue of 29 crores, which will leave an uncovered deficit of about 2¼ crores.

The Proposals.

Of course the proposals will come in for considerable criticism, for no Budget imposing new taxation was ever yet introduced without opposition, but it is difficult to see any other course that could have been taken by the Administration, if the expenditure is to be maintained at the present figure. After all no country can exist on credit. One of the most frequent criticisms is that the expenditure on the army is much too high, but there are obvious difficulties in the way of its reduction, and even if economies are affected in this direction, India is not likely to feel any benefit for programmes of "social progress" are unfortunately somewhat costly, as Great Britain is realising to its pain at the present time, and the prospect before India is that there is likely to be a constant increase of taxation in the future, rather than any reduction. It must be remembered that India has been greatly undertaxed in the past, but that fact is not likely to induce the nation to accept the increased burden with any greater pleasure, and the net result will be that the Administration will tend to become more unpopular.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866)

Head Office: 17, TOKENHOUSE YARD,
LOTHBURY, E.C. 2.

Branch: 11, CALEA VICTORIEI, BUCAREST.

Directors:

E. W. H. Barry, Esq.
C. De Cerjat, Esq.
The Viscount Goschen.
General The Hon. Sir H. A. Lawrence, K.C.B.
Lieut.-Col. Sir Albert Stern, K.B.E. C.M.G.

Bankers—

Bank of England. Messrs. Glyn, Mills, Currie & Co.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

THE BUSINESS MAN'S BOOKSHELF.

An Oil Encyclopaedia.

"OIL ENCYCLOPAEDIA." By Marcel Mitzakis (Chapman and Hall, 2s. 10s.)

In view of the vast development of the oil industry in recent years it is surprising that a publication of this type has not been forthcoming long ago. Oil has a language peculiarly its own, and many of its terms would defy the most ingenious surmises as to the meaning. The public interested in oil companies represents a very large body of individuals indeed, to whom the publication of this encyclopaedia will mean the filling of a long-felt gap, since it will be of immense assistance in the accurate interpretation of the annual reports and information issued from time to time by the oil companies.

The volume had its inception in a series of articles contributed before the war to an oil journal. All the information has been revised, it is pointed out in the preface, and in most cases completely re-written. The result is one on which the author is entitled to the greatest praise. The ground has been covered thoroughly and well, and a wonderfully comprehensive manual of information relating to the industry has been produced. The task of collecting the material has naturally been very arduous. M. Mitzakis points out that among the difficulties encountered were the lack of Government publications dealing with the industry during the war, the disorganisation of official bureaux in foreign countries and "how to keep up with the tremendous development, not only of most of the oil fields, but of the numerous mechanical inventions dealing with petroleum and its products." Despite these difficulties it will be found that the particulars given in the encyclopaedia are wonderfully up-to-date. That fact alone makes the work invaluable, but its rare fund of information on the most obscure points make it an essential reference book which everyone who is connected in any way with the oil industry will find it imperative to have at his disposal.

A Useful Review.

"FINANCIAL REVIEW of 1921." By J. S. M. Ward, B.A., F.S.S., F.R. Econ. S., and A. L. Please, B.A., F.S.S. (The Intelligence Department, Federation of British Industries. Price to Non-Members, 1s. 6d.)

This is the third annual appearance of this valuable review of the movements in the rates of exchange and prices of staple commodities issued by the Federation of British Industries. The general position in the various countries is the subject of interesting comment. Emphasis is laid on the point that so long after the Armistice the world and especially Europe is still groping for peace and stability. "It is generally recognised" the authors state, "that the position in Europe to-day (at the end of 1921) is more critical than it was even six months ago, and international trade is practically at a standstill." Since then conditions have shown some improvement, but we are still waiting for the Genoa Conference which is to solve the exchange difficulty and

generally will smoothe the path of trade endeavour! It remains to add that the utility of the brochure is greatly enhanced by a number of excellent tables.

THE VALUE OF THE D.O.T.

To the Editor of 'The Near East.'

Sir,—I was glad to see your strong defence of the Department of Overseas Trade in your issue of March 2. It would, indeed, be a short-sighted policy to weaken our capacity for a trade offensive when the commercial revival comes by abolishing the department. How our rivals, in particular the Germans, would laugh in their sleeves at an economy of this character! Happily there is now little danger of this happening, for the Government appear to have taken a broader view of the utility of the Department than Sir Eric Geddes and his colleagues, but it would be well all the same for the business community to remain on the alert, for strange as that may seem, politicians have been known before now to change their minds as the result of sustained pressure by a body of influential opinion.

It must seem extraordinary to many people that the Department should ever have been in danger. The explanation is to be found in the fact that the very real services it has rendered to commerce have not been widely known. Merchants and manufacturers know very well that they could not do without it, but one can understand that to some sections of the business community the need for Government assistance to trade would not be quite so clear. Banks, for instance, have their own intelligence service, and shipping companies are also well able to fend for themselves. But when it comes to a question of buying or selling commodities or of concessions, then the case is altogether different, and it scarcely needs emphasis that the state can give great assistance to its nationals in these matters.

Yours etc.,
"Trader."

London, March 3.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

GREECE.

Athens, February 18.

Exchange Fluctuations.

There has been a sharp rise in bank and company shares during the last few days. Sterling, which is still fixed at 96 drachmae by the Syndicate of Banks, has jumped up to 107 drachmae on the free market. This new depreciation of the drachma is attributed to the uncertainty prevailing as to the successful issue of the "pourparlers" with regard to the loan which M. Gounaris is endeavouring to conclude in London, and also to the fear that though the money may be finally found the amount will be very small and the conditions of the loan very onerous.

Export of Currants to America.

The total quantity of currants exported to the United States during the first ten months of 1921 amounted to 44,386, 958 lb. of the value of 6,573,002 dollars. During November and December a further quantity of 2,000,000 lb. was inspected and passed for shipment by the United States Consular authorities at Patras, while an additional 4,000,000 lb. are awaiting inspection.

Dearer Macedonian Tobacco.

The tobacco trade is once again flourishing at Serres. The prices now offered are higher than they have ever been before. The tobacco produced in the regions of Rodolivi, Kioup-Kioup, Kiriplan and Tsiriplines is sold at 58 drachmae per oke. This year's production amounted to about two and a half million okes, on nearly 30 per cent. below the previous year's figures. Two-thirds of it has already been sold.

Agricultural Production in Thrace.

According to information supplied by the Ministry of Agriculture, the production in Thrace during 1921 was as follows:—Wheat, 42,565,478 okes; barley, 30,995,224 okes; maize, 23,891,734 okes; oats, 4,195,594 okes; tobacco, 403,885 okes.

Miscellaneous.

The receipts of the Candia (Crete) Customs from April 1, to December 31, amounted to 5,152,354 drachmae.

The receipts of the Piraeus Customs during January amounted to 9,947,165.35 drachmae. Compared with the receipts during the corresponding period last year there is an increase of 3,853,669.95 drachmae.

The Minister of Supplies has authorised the export of olive oil from Corfu.

BULGARIA.

Sofia, February 26.

Budget Deficit.

Although the details are not yet available it appears that the Budget for 1922 will not balance. In the course of a long speech which he made in the Sobranje last week, M. Tourlakoff, the Minister of Finance, referred to the unparalleled difficulties that confronted the present Government. The Minister said that he was prepared to make the most drastic economies, and he hoped that the deficit would not amount to a large sum.

In connection with economies the recent Government Bank-note order is causing some comment. It appears that the order has been awarded to an American firm whose price was considerably higher than the majority of the other offers. It is said that the matter may be raised in the Sobranje, as the Commission of Reparations are understood to have written to the Government warning them that in the event of their incurring unnecessary expense, they (the Commission) would be forced to increase the amount of reparations due to be paid during 1922. The Government's attitude is that the American bank notes are made of stronger and more durable paper, and that the difference in price will be made up for by the better quality. The matter is capable of interesting developments.

English Contract Success.

The adjudication for the contract for sulphate of copper for which tenders were recently invited has resulted in the English firm Messrs. McKechnie Brothers receiving an order for 1,000 tons of the commodity in question. Their price was considered too high at first, but when it became known that the other competitors could not guarantee delivery and could not in addition provide the proper quality, this firm's offer was at once accepted.

AN IMPORTANT CONTRACT FOR BRITISH MANUFACTURERS.

Tenders were recently invited by the Public Works Ministry, Cairo, for the supply and installation of pumping machinery at Atf in Lower Egypt. This contract was open to manufacturers all over the world, and has now been adjudicated to the Associated British Manufacturers (Egypt) Ltd., at a sum slightly over £270,000. It is satisfactory to note that British manufacturers are now evidently in a position to compete with all Continental makers, as this important contract was keenly competed for by Swiss, German, French, Dutch and other manufacturers.

The installation forms part of one of the largest pumping stations in Egypt, and the machinery and material to be supplied is all British. It consists of four Willans and Robinson (The English Electric Co., Ltd.) Diesel Engines, each direct coupled to a Gwynne Pump. Each unit is capable of pumping 6.4 cubic metres of water per second. The electric power required is supplied by two Vickers-Petter Semi-Diesel Engines direct-coupled to the English Electric Co's Generators. The filtering plant is that of the Paterson Engineering Co., and the large sluice valves are supplied by Glenfield and Kennedy.

The Associated British Manufacturers (Egypt) Limited are to be congratulated in obtaining this contract. Their business in the Middle East has recently developed considerably from their head office in Cairo, and branches in Alexandria, Khartoum, Cyprus, Palestine and Syria. In this Association, in addition, to the above-mentioned firms are such well-known manufacturers as Messrs. Thos. Firth and Sons., Ltd., John Brown and Co., Ltd., The B.S.A. Co., Ltd., Dorman Long and Co., Ltd., Callender's Cable and Construction Co., Ltd., J. and E. Hall, Limited, Hawthorn, Leslie and Co., Ltd., the Weldless Steel Tube Co., Ltd., Hulse and Co., Ltd., and Jas. Howden and Co., Limited.

The above manufacturers' machines and materials are well-known in Egypt. The Willans engines are doing duty in many places, Gwynne's Pumps have been at work in many places throughout the Nile Valley ever since pumps were first installed there, and Petter's engines have become a household word throughout Egypt where they are doing duty in considerable numbers and for various purposes, giving the utmost satisfaction.

Stock and Share Markets.

GILT EDGED STILL FIRM.

Oils Sagging : Rubber Brighter.

(From Our Own Correspondent).

London, Tuesday morning.

All things considered it has not been a bad week. The uncertainties of the political situation were reflected in the gilt-edged market at the commencement of the week, and a dull tone developed, but the effect was not prolonged, and soon the upward movement was resumed, and once again the markets are closing with quite a buoyant note. As the outlook at the moment both at home and abroad is hardly encouraging this says much for the confidence of investors. Presumably the possibility of a reduction in the income tax has had a considerable effect, also the prospect of a further reduction in the bank rate.

A Czecho-Slovak Loan.

Once again we are seeing quite a flood of new issues, good, moderate and indifferent, with the chaff in my opinion, predominating. But as usual in these times most of the issues will I suppose be over-subscribed. Of the issues promised in the near future the most interesting is the Czecho-Slovakian Loan which should make its appearance in the first week in April. I understand that the amount will be £10,000,000. The occasion will be noteworthy as the first opportunity of the kind afforded to this country of helping in the reconstruction of Central Europe. Czecho-Slovakia has set a praiseworthy example to other countries in regard to finance, and this should inspire sufficient confidence to ensure the success of the issue. The Greek loan still hangs fire, but the opinion is held that an arrangement will ultimately be arrived at, though one probably not so favourable to the Greeks as they would like. There have been no developments with regard to loans for other Balkan countries, and nothing is likely to be done until after the Genoa Conference. If as the result of that gathering a policy is evolved for dealing with the adverse exchanges then things are likely to move.

Brokers and Banks.

The competition of banks with the brokers in regard to transactions in securities has always occasioned considerable feeling on the Stock Exchange. The question has been dealt with at some length by a contemporary during the past week apropos of a proposal put forward by a member of that august body for the elimination of outside competition. While one can fully appreciate the point of view of the brokers it is the general public after all who buy and sell the shares who have to be considered. It is not easy for everyone to get an introduction to a broker, and apart from that transactions through a bank are very often much simpler than through a broker. There is no prospect of any delay, and the business entails little more difficulty than cashing a cheque. Personally I should vote for a bank every time.

Gilt-Edged.

As I have already pointed out gilt-edged have closed well, and stocks are slightly up on the week. Consols are 1-8 better at 55.5-8, War Loan Fives have gained a point at 97, while the Conversion Loan at 72.1-8 shows a gain of 7-8. Indian stocks are all ex-dividend which more than accounts for the change in prices. The India seven per cent. Loan has eased off a point at 105, the three per cent. Loan is $\frac{1}{2}$ down at 52 $\frac{1}{2}$, while the 3 $\frac{1}{2}$ per cent. Loan has shed a similar amount at 61 $\frac{1}{2}$.

A much better tone has prevailed in the foreign market during the week, and in a number of cases advances have taken place. French securities have displayed exceptional strength, War Loan Fives being 47 $\frac{3}{4}$, a rise of 1 $\frac{3}{4}$. German three per cents. are again fractionally down at 2 $\frac{1}{2}$, while Italian Rentes are un-

changed at 25 $\frac{1}{2}$. Brazilians have been a firm spot. Fundings being 83 $\frac{1}{2}$, while the 1911 Loan is 58 ex-div. Chinese securities have been rather dull. The 1896 Loan is 1 $\frac{1}{4}$ down at 90. In Greek securities Monopolies are a point down at 31 $\frac{1}{2}$.

Industrials Quiet.

On the whole there has not been much doing in the Industrial group, and quiet conditions have prevailed. The undertone has, however, been firm, and it would not take a great revival of business to make a stir in the market. In tobaccos Bats are 3d. up at 66s. 6d., while Imperial Tobaccos are 53s. 6d. Dunlops are a shade lower at 6s. 6d. An active but somewhat irregular market has prevailed in Nitrate descriptions.

The Textile group has been featureless. Coats are a shade better at 2,25-32, while Courtaulds are unchanged at 37s. 9d. Iron, Coal, and Steel securities have been depressed in consequence of the industrial position. Armstrongs at 13s. 3d. are 9d. down, Vickers are 6d. lower at 8s. 9d., Guest Keens have shed 6d. at 30s. 6d., while Lamberts are 1,16 down at 1,15-16.

Shipping securities have been dull, with P. and O. Deferred 13 down at 307. Cunards are almost 1s. lower at 18s. 9d., while Furness Withy are 1s. 7 $\frac{1}{2}$ d. down at 26s. 3d.

Oils Dull.

The buoyant period for oils is over for the time being, and as a result of the development of liquidation prices are lower in a number of directions. Burmahs at 5,17-22 are $\frac{1}{4}$ down, while Mexican Eagles are 7-8 lower at 3,7-8. Trinidad issues have been irregular. Centrals at 3,5-16 are 5-16 lower, while Leaseholds are 1 $\frac{1}{4}$.

Among Egyptians Anglo-Egyptian B are 1-16 down at 1 $\frac{1}{2}$, while Oilfields of Egypt are 6d. lower at 5s. 3d. In the Roumanian group Roumanian Consolidateds are 8s. 3d., a drop of 1s., while Phoenix are 1s. 3d. down at 14s. Dacia Romanos are unchanged at 11-16, while Steaua Romanas are 9d. down at 11s. 9d.

Banks Steady.

Banks have generally displayed firmness. National of Egypt are 20,1-8. Chartered of India at 15,5-16 are 1-16 up, while National of India at 35,1-4 are unchanged. P. and O. Banking Corporations are 11,15-16, a decline of 1-16, while Imperial of Persias are the same as before at 6 $\frac{1}{4}$.

In land securities Aboukirs are 24s., Béhéras are 8,7-8, Delta Lands are 7s. 6d., Gharbieh Lands are 1,38. Sidi Salems are 1, and Union Foncières are 2,3-8. Sudan Plantations are 3,5-16.

Rubbers Better.

After weeks of dullness the Rubber market has shown distinct signs of revival during the past few days, due to the improvement in the general outlook for the industry which has been reflected by a rise in the quotation for the raw commodity. In a number of directions shares have moved up.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on February 17 were as follows:—Agricultural Bank of Egypt, £4 25-32; Alexandria Water Co., Ltd., £7, 1-8; Anglo-American Nile Steam, £2, 1-2; Associated Cotton Ginners, £13-16; Banque d'Orient, Fr. 50; Behera Ord., £E 8, 3-8; Brasseries d'Egypte, Fr. 70; Building Lands of Egypt, £27-32; Cassi di Sconto Priv., Fr. 30; Comptoir Fin et Com. d'Egypte; £31-32; Consolidated Lands, Pt. 5 $\frac{1}{2}$; Credit Foncier Fondateur Fr. 801; Credit Foncier Act. Fr. 630 $\frac{1}{2}$; Credit Foncier 1886 Obilg, Fr., 130; Eaux du Caire, Capital, Fr. 82; Eaux du Caire Jouissance, Fr. 111; Egypt and Levant, S.S. Ord. 31s. 7 $\frac{1}{2}$ d.; Egyptian Delta Light Railways, £3 $\frac{1}{2}$; Filature National d'Egypte; £10 $\frac{1}{4}$; Immeubles d'Egypte Soc. an des., £6; Khedivial Mail S.S. Ord., 100s.; Khedivial Mail S.S. Co., Pref., £2 $\frac{1}{2}$; Kom Ombo Ste an de Wadi, £4 1-16; Kom Ombo Ste An Fondateur, £34 $\frac{1}{2}$; Land Bank of Egypt, Parts de Fond., £38; Lots Turc. £T20 $\frac{1}{2}$; Menzaleh Canal Navigation PT 222; Nungovich Hotels, £7; Ramleh Railways £2 7-8; Urbaines et Rurales £3; Union Fonciere Fond £13-16.

Engineering Topics.

By Our Engineering Representative.

Compressed Air in Grinding.

A visit paid recently to a large engineering works in the South of England showed that although an air compressor plant was part of the equipment a supply pipe was not run to the grinding shop and there were no pneumatic appliances of any kind used therein. Compressed air as an industrial power has been in use for over twenty-five years but it seems that it is only recently that it has been used in grinding shops and that the practice is by no means as universal to-day as would be imagined.

With an available supply of air at a pressure of from 50 to 75 lb., a large amount of cleaning work can be done more quickly and more safely than in any other way. A blast of air will clean out the centres of a work piece far more speedily, previously to placing it in a grinding machine, than they can be cleaned with rag or waste. The momentary directing of the air blast on the ends will blow every trace of swarf or grease away and leave them as clean as when first cut. In fact, any piece of machinery, no matter how complicated in form, can be cleaned, intelligently, by compressed air more quickly than in any other way. Intelligently, in this connection, means taking care not to blow dirt from one part of the machine to another.

Any fully automatic grinding machines that chuck, grind, gauge, and discharge pieces continuously should be fitted with an air blast to remove dust and particles of abrasive, and here it may be said that where machines of this type are so fitted there is often room for a rearrangement of the air blast so as to clean foreign matter out of every moving part. Semi-automatic grinding machines should be so arranged with air blasts that every part is kept scrupulously clean, especially the limit stops and automatic feed knock-out tackle which prevents work being ground undersize.

There is much to commend the use of pneumatically operated grinders, as one of these comparatively small machines can be fixed on the bench or on a machine-bed as a tool post or centre grinder and so do work more economically than some larger machine. Again, the small pneumatics can be started and stopped so easily and used in such positions that they are often more economical to use than the heavier electrically driven grinders, advantageous though these are in general machine shop practice. With both the electric and the pneumatic grinder the design is so simple that the working parts are reduced to a minimum, and so much is this so with small pneumatics that no attention whatever is required, with the majority of designs, beyond giving a few drops of oil every week or so.

Clean Melting.

Two of the most fertile causes of trouble in working small cupolas are the use of insufficient limestone and attempting to melt too heavy a charge of iron. Another, but less common, is the use of insufficient coke between the charges.

In modern practice a 24-inch cupola should be able to melt about two tons, or as a maximum 4,500 lb. of iron per hour and as 30,000 cubic feet of air are required for every short ton, or 2,000 lb. of iron, it follows that about 68,000 cubic feet of air per hour, or 1,140 cubic feet per minute are needed. As this does not take into account loss by leakage or friction, a blower used with such a cupola should be able to supply about 1,500 cubic feet per minute. The fan should therefore, be connected with the wind box round the shell of the cupola by a pipe 10 inches in diameter and the wind box should be connected with a continuous tuyere through the lining at least 4 inches high, or else it will be impossible for the air to enter the body of fuel freely and in sufficient volume.

The weight of the iron charge depends in a great measure on the quality of the coke, and a charge that may be quite right where high-grade coke is used may be far too large when the coke is not of such good quality. Taking a 24-inch cupola as an example, the iron charge,

where low-grade coke is used, should not exceed 300 lb., a weight which may be increased to 500 lb., as a maximum when the coke is known to be of a suitable nature. Where there is some reason for doubting the quality of the latter, a charge of 40 lb. of coke and 300 of iron should be tried out for results and the amount of iron increased and of coke decreased with succeeding charges until a maximum of 500 lb. of iron and 30 of coke is reached. As regard the bad coke the thickness of this, before charging, should be such that it will extend about 30 inches above the tuyeres. In regard to the quantity of limestone used, at least 30 lbs. of broken stone should be spread over each charge, including the first, and only under very exceptional circumstances should a less amount be used.

The best practice is to provide a slag hole, which should not be more than about two inches in diameter, either at one side or to the back of the cupolas, and at a distance of about 15 inches above the sand bottom. Where short heats are the practice it will not be necessary to open this orifice, but if the heats are of anything from 2 to 10 hours' duration, the hole may be left open with advantage the whole of the time.

Cement Moulds for Castings.

A certain amount of interest has been aroused in connection with antique Chinese and Burmese hollow ware which had found its way into collectors' hands at various times, but which, until recently, has rarely been inspected by any save those who looked on them from an artistic point of view alone. Metal experts who have seen them have expressed their astonishment at the large superficial area and the thinness of the castings.

This art of casting metals thinly seems not to have been confined to Chinese and Burmese craftsmen. A good deal of Siamese brasswork is extremely thin and a pair of Persian lamps of about 32 square inches superficial area are only one-sixteenth of an inch thick, and from the surface marks it has been assumed that very fine sand was used for the moulds.

The secret of manufacture has now been made public the discovery arising from an inspection of some Chinese cast iron bowls, which were over four feet in diameter, 12 inches in height and in no place more than one-sixteenth of an inch in thickness. The foundry where these pots were made was visited, and it was seen that they were cast in permanent moulds made of cement composed of a mixture of finely broken tile, clay and burned lime, which will set with a perfectly smooth surface in a few hours and will withstand any reasonable heat.

Soldering Aluminium.

Many years ago, in connection with an electrical undertaking in the North of England I was greatly interested in the problem of soldering aluminium. At that time we met with no success; the difficulty with which the metal oxidised being a fatal bar. Since that time many more or less successful methods have been devised and one of the most promising has just been described in the *American Machinist*. It is said to have proved highly satisfactory in use and to be lasting which after all is one of the main considerations.

A pure aluminium soldering "iron" is used, made from a piece of aluminium rod of ample size for holding the heat. The parts to be soldered are tuned with a solder consisting of 81 per cent. tin, 16 per cent. aluminium and 3 per cent. copper, a composition which, if my memory serves, has been used before without any undue measure of success. But this time a different flux is used and further, the solder is prepared differently the copper being first melted and the aluminium added a little at a time, the mass being stirred and kept constantly in motion by a heated iron rod. The tin is then added with a small portion of tallow and the secret appears to be in the keeping all these metals at a heat only just sufficient to enable them to flow freely, guarding all the time against overheating.

British Industries Fair.

ROUND THE WHITE CITY.

Some Impressions.

(From Our Own Correspondent.)

Anyone who has visited the White City several times during the past week can be under no illusion as to whether or not the British Industries Fair is justifying its existence. On the occasion of my first fleeting visit on the opening day it was possible to move about with some semblance of comfort, but on subsequent days the fair has been more and more crowded, and it is no exaggeration in the case of some stands to say that it was impossible to get near them for the people. As only trade buyers are admitted, the obvious inference is that the results should be up to expectations, and this is so far borne out by what I have heard. Here and there complaints have been made of a lack of business, but in general exhibitors seem very satisfied, while the attitude of the buyers is summed up in the remark of one of them "Well they certainly have the goods here." That is but bare justice to one of the best exhibitions that has ever been held in this country.

The fact that this time there are about 1,400 exhibitors at both sections of the fair, something like 900 of them being at the White City, affords a clear illustration of the growth of this excellent undertaking of the Department of Overseas Trade. In 1923, if all goes well, the number should be in the region of 2,000. I assume that there can now be no question of holding the fair at Wembley until 1924, or 1925 at the earliest but that is immaterial as regards accommodation, for there is ample scope for expansion at the White City, where so far no use has been made of many buildings, dreary glimpses of which could be obtained through the flapping hangings in the extemporised corridors connecting certain of the sections. But while that is so I do not think that anyone will leave the White City with real regret. The straggling buildings are not really suited for a fair of this character, and there are certain structural drawbacks, not the least of which was in evidence one afternoon during a severe storm when I had seriously to consider whether it might not be necessary to utilise an umbrella.

It would be difficult to say which is the best and most representative section at the White City this year, for in general while there are one or two indifferent sections, a very high level of excellence has been attained. In every section the wealth of exhibits was a perfect revelation of England's industrial powers. It was far from easy while surveying the wide range of our contributions to the world's requirements and noting the very obvious activity that prevailed on all sides to realise that we are still passing through the trade depression. If one had only the fair to go by, one could not fail to draw the conclusion that the wheels of commerce are revolving more rapidly than ever.

One thing the fair has made clear beyond dispute, and that is that Great Britain is indisputably better situated to meet the wants of its customers than ever before. When the trade revival comes British industry has no need to fear the rivalry of its competitors on the score of quality. On every side the exhibits hold out definite proof that the technique of the British craftsman, always very high, has been immensely improved. Evidently there has been no staying the march of progress because trade is temporarily under a cloud.

Even were the business done to be small (as I have pointed out above there is every reason for thinking that the contrary will be the case) there would still be every justification for holding the fair at this juncture. Commerce is now at the parting of the ways; behind lies the worst of the depression, ahead lies the coming "boom." If buyers withhold orders now we have at any rate the satisfaction of knowing that having seen

what Britain can do we shall get the orders in due course. And apart from the personal relations he may have established every buyer who has visited the fair will be in a sense an advertisement agent for the exhibitors, since whenever trade matters are discussed the tendency will naturally be for him to extol the merits of British products. Thus a very fruitful soil will be prepared for our traders to take advantage of by a timely publicity campaign through agents on the spot, and through advertisements in journals which really cover the fields in which they are interested.

Are our merchants and manufacturers ready to this? I must confess to very grave doubt on the point from what I know of their methods in the past, particularly in the pre-war period when promising markets such as those of the Near and Middle East were entered in a most haphazard manner. It was briefly a "take it or leave it" attitude, borne of the fact that there were so many markets on which our traders could implicitly depend. If that policy is pursued now it will spell failure, and with the utmost emphasis at my command I would urge on the British commercial community the need for an intensive campaign now. To wait until the trade revival is in actual operation would be futile. It would be like waiting for the first flare before thinking seriously of an insurance policy. No it must be now if the full fruits of the markets are to be gathered.

One further point must be touched on before I turn to the exhibits, and that is the policy of traders towards the Near and Middle East. The effect that the state of the exchanges has on the mind of the average British trader is easily understandable. It seems to him hardly worth while attempting trade until the exchanges improve, and as a result of unfortunate experiences during the "slump" he is inclined to ignore the whole of the regions in question. Then, where the exchanges present no difficulty political uncertainties have had very much the same effect. Very probably a considerable interval will be required before some of the Near Eastern exchanges reach the normal, but there are others, notably the Roumanian exchange, which ought to reach parity within a comparatively short space of time, and any efforts devoted to cultivating these markets now will certainly not be wasted. Indeed, I would go further and state emphatically that in the end British traders will regret it if they fail to take steps to bring their products before these markets. Outside the Balkans there is enormous scope for trade development in markets unaffected by the exchanges. The position in Egypt has not been satisfactory, but things are settling down there; the market is admittedly very short of stocks and simply invites a little enterprise on the part of our merchants. Then in Palestine and Mesopotamia to mention only two other regions there is great scope for British trade endeavour. But as I have indicated before, success will not be achieved by Fabian tactics. Energy and resolution are required, and the determination to obtain the trade if it is possible to do so. With a policy of this character the trade will come our way. It is "up to" our merchants and manufacturers to decide.

THE EXHIBITS.

Leather Goods.

This is one of the most comprehensive sections at the White City, though it is only a case of *primus inter pares*. The display is thoroughly representative of the industry, and suggests very forcibly the prospects for the development of the export trade when conditions permit. In a brief review it would be impossible to mention more than a few of the exhibits in any of the sections and the selection is not easy where such a level standard of excellence prevails. The task is particularly difficult in regard to the leather exhibits as on stand after stand are displayed goods of outstanding quality.

One of the first stands to attract my attention was that of Messrs. James Dewsnap, Ltd., showing a very

tasteful selection of small dressing and toilet cases and fancy leather goods. Another attractive stand is that of Messrs. Charles Ruhl, displaying a charming variety of ladies' handbags in silk, velvet, and brocade. The Holywell Trunk Works have on view trunks, suit and attaché cases in all varieties, one of their specialities being their leather-welted trunks. Travelling requisites are also exhibited by Messrs. M. and A. Hess, whose exhibits include cabin and imperial trunks. Other stands of interest are those of Messrs. A. Garstin and Co., Ltd., who show trunks, dressing cases, and fancy leather goods, and Messrs. P. S. Lankester, the latter one of the most admirably arranged stands in the exhibition, showing fancy leather goods.

Boots and shoes, which are a new item in the exhibition, form a very important part of the section, the list of exhibitors including most of the well-known firms. Among the stands of special interest are those of Messrs. Frederick Cook, Ltd., Messrs. John Marlow and Sons, Ltd., Messrs. Henry Sexton and Sons, Ltd., and Messrs. A. Lovell and Co. For these very necessary commodities as for the travellers' requisites specified in the previous paragraph there is an excellent and increasing market in the Near and Middle East.

Paper, Printing, and Office Appliances.

I commented last year on the universality of this section; it has continued to grow and now covers a very large space in the fair. All the best known firms are exhibiting, and the displays of exquisite art work at many of the stands go far to making this section the most pleasing to the eye in the exhibition. One of the interesting exhibits is that of Messrs. John Dickinson and Co., Ltd., showing stationery and office requisites. Messrs. The Shannon Ltd. have as usual a most attractive display of their well-known office furniture. Messrs. Thomas De La Rue and Co., Ltd., have one of the largest and most excellently arranged stands in the section, containing examples of their well known productions, notably playing cards, fountain pens, fancy leather goods, and, in a panelled setting, examples of their stamp designs. A number of other firms are exhibiting fountain pens, among them Messrs. the Jewel Pen Co., Ltd., and Messrs. the Wyvern Fountain Pen Co. An attractive stand is that of Messrs. James Spicer and Sons, Ltd., showing general stationery, etc.

Fine art work is greatly in evidence. Messrs. Eyre and Spottiswoode, Ltd., have on view at their well-arranged stand a number of their famous art reproductions of famous pictures as well as art calendars, etc. Messrs. Raphael Tuck and Sons, Ltd., show cards, calendars, and other productions for which they are noted. Messrs. George Pulman and Sons, Ltd., display examples of prints in colour and monochrome; Messrs. Alfred Bell and Co., Ltd., have an exceedingly effective selection of etchings in colour and black and white, and mezzotints in colour; while Messrs. the Medici Society Ltd., have on view an exquisite collection of their famous prints.

A stand of special interest from the point of view of the markets of the Near and Middle East is that of Messrs. the Imperial Typewriter Co., Ltd., showing a variety of the well-known machines of that name. This typewriter is made for use in a variety of foreign languages and there should be an important export trade for this machine in the future. The publishing trade is not so strongly represented as before, and comparatively few stands are devoted to it. Notable among them are the exhibits of the Cambridge University Press, the Oxford University Press, and Messrs. Ward, Lock and Co., Ltd.

Fancy Goods.

The display of goods coming under this title is very comprehensive, and it is impossible to deal with the section as an entity as it dovetails into quite a number of other sections. Some of the exhibits have already been dealt with in my comments in the section devoted to leather goods for instance, while others must, perforce, be dealt with elsewhere. The largest stand devoted to fancy goods is that of Indian Arts and Crafts

containing a very interesting collection of Indian manufactures, including ivory inlaid articles, lacquer ware, carved wood-ware, fancy brassware, and toys. It represents an attempt to develop a market for the art of the Indian craftsman, and, if pursued, should I think have satisfactory results. Many of the exhibits seemed to me likely to prove popular in the Balkan markets. Messrs. Bowers and Simonett Ltd., show mirrors and ivory ware of a type eminently suitable for the Eastern bazaars, and the same remark applies to the exhibits of Messrs. the Tunstall Optical Co., Ltd., who have on view a most attractive range of tortoiseshell goods, etc. A word must be said also for the stand of Messrs. the Ideal Sewing Machine Co., Ltd., showing the machine of that title. Here again is a commodity for which there is a great opportunity in the markets of the Near and Middle East. Other exhibits of special interest in this section are those of Messrs. Thermos, Ltd., showing their famous flasks, also carrying cases, jars for food and butter, carafes etc., and Messrs. the Packers Supply Co., who have on view anti-pilferage devices.

Musical Instruments.

In some respects the display of musical instruments is not up to that of last year; in others a considerable advance has to be recorded. There are not nearly so many pianos on view, that being due, I assume, to the extreme depression that the trade has experienced. The gramophone stands and those devoted to similar instruments are far more comprehensive than before, and reach a very high standard. Interesting stands are those of Messrs. the Bell Piano and Organ Co., Ltd., Messrs. the Harper Piano Co., Ltd., and Messrs. White Broadwood and Co., showing pianofortes and player pianos, and Messrs. Alfred Taylor and Son, Ltd., showing pianofortes. Fourteen stands are devoted to gramophones, the exhibitors including Messrs. the Bath Cabinet Makers' Co., Ltd., Messrs. Craies and Stavridi, Messrs. the Johnson Talking Machine Co., Ltd., and Messrs. the Sterno Manufacturing Co. A stand of special interest is that of Messrs. Barnett Samuel and Sons, Ltd., who also show gramophones and in addition brass instruments, band requisites, etc. The gramophones on view represent the last work of the art, and there should be a large demand for the productions of the firms I have mentioned throughout the Near and Middle East, and, of course in India; but that can only be so if the merits of these instruments are brought before the potential buyers of these regions. It is rather strange that only one firm providing gramophone records should be exhibiting, that being Messrs. the Sterno Manufacturing Co., and bespeaks a lack of enterprise on the part of the firms concerned in this branch of industry.

(To be concluded)

ADVERTISING IN "THE NEAR EAST" PAYS.

THE Near East reaches the markets of a score of different countries stretching from Morocco to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

TOURIST TRAFFIC IN PALESTINE.**Formation of Society.**

With a view to the development of the tourist traffic to Palestine an association has been formed there similar to that established in Egypt. It will be known as the Society for the Promotion of Travel in the Holy Land.

The inaugural meeting of the society was held at the Governorate, Jerusalem, on February 6. Sir Wyndham Deedes, in the course of a statement, said that the objects of the society were already known to them, and there was no need to enumerate them. He would like, however, to deal with one objection that has been raised to the formation of this society, viz: that it was not required, and that it was unnecessary and superfluous. It was said that Palestine was so well known throughout the world that it was not in need of advertisement, but to say that was to mistake the object of the society. They did not pretend that anything they could say or write would cause Palestine to be better known throughout the world, but what they did desire to do was to cause to be made known the facilities which existed for visiting and travel in the country, which was a very different thing.

He desired to call their attention to three points which appealed to him. He thought that an obligation and a responsibility rested upon the dwellers in Palestine to form a society with those objects. They had, as heirs to a great heritage, a duty to the rest of the world. Palestine might be considered in certain respects the property of the whole world, and not of the people of Palestine only. It might with truth be said that the spiritual inhabitants of Palestine numbered many millions, and it was their duty to provide facilities to enable them conveniently to come and travel in this country. Palestine was the centre of interest to the three great world religions, and it was incumbent on them so to organise things here that when visitors came to the country they found themselves in conditions which would facilitate their pilgrimage.

The second point to which he called their attention was that in offering facilities of visiting that country, they should be careful to do nothing which would mar the actual beauty and the grandeur and peculiar character of Palestine. They would make a great mistake if, in their attempt to provide what were called the amenities of civilisation, they adopted those soul destroying evidences of civilisation which appeared in other countries. Nothing should be done to mar the atmosphere of Palestine; they owed this to Palestine itself and to its people. The third advantage which would accrue from the formation of that society was the benefit which large numbers of visitors would confer on the inhabitants of the country, by the encouragement of local industries.

THE NEAR EAST INDEX, VOLUME XX.

The Index to Volume XX July 7 to December 29, 1921, is now ready, and copies will be sent to subscribers gratis on application to the Manager, *The Near East*, 1, Devonshire Square, London, E.C.2.

THE SUCCESSION STATES AND THE AUSTRO-HUNGARIAN BANK.

The Czech paper *Narodni Lisiy* states that, in accordance with the stipulations of the Peace Treaty, the Succession States have taken over 44.9 milliards of bank-notes originally issued by the Austro-Hungarian Bank. This quota was arrived at by a process of stamping, and was distributed among the respective countries as follows: Austria 7.4 milliards; Hungary 8.5. milliards; Poland 2.7 milliards; Italy 2.5. milliards; Roumania 8.5. milliards; Yugoslavia 5.7 milliards; Czecho-Slovakia 8.3 milliards; other countries 1.3 milliards.

COPPER MINES IN TRANSYLVANIA.

An enquirer in Transylvania desires to interest British capital in a copper mine situated three kilometres from, and having road connection with, a railway station in that country. Work was stopped in 1908 from want of capital arising from uneconomical management. The output was 10,000 kgr. copper ore per day. The acid extraction of the ore yields a 71 per cent. residue, and a solution showing an ore content of 10 per cent. iron, 7.5 per cent. copper, .0002 per cent silver, .00005 per cent. gold, and a trace of arsenic. The enquirer is prepared to give a three months option on the property. A sample of the ore may be inspected and further particulars obtained on application at the Enquiry Room, Department of Overseas Trade, 35, Old Queen Street, London, S.W.1.

CZECHO-SLOVAK SUGAR TRADE.

In consequence of considerable transactions in the past fortnight (15,000 tons being disposed of in France, besides Yugoslavia, Austria, and Trieste), the sales concluded by the Czecho-Slovak company for sugar exports have attained a total of 245,000 tons for the season 1921-1922, so that with an estimated production of 570,000 tons and a consumption of 250,000 tons of refined sugar, 75,000 tons still remain available for the market. The requirements of Austria alone will amount to about 60,000 tons, and if only 50,000 tons are reserved for supplying this requirement, no more than 25,000 tons will be left for the remaining countries.

The Czecho-Slovak sugar refining factories have not yet entirely completed their work for the season, a few refineries having only recently resumed operations. From the figures hitherto supplied by the various factories it is estimated that the results will be roughly as follows: Bohemia 3,177,444 metric quintals, Moravia 1,890,731 metric quintals, Silesia 139,450 metric quintals, Slovakia 470,420 metric quintals, making a total of 5,678,045 metric quintals of refined sugar.

The Piraeus offices of Messrs. C. T. Christodoulo & Co. are opened at 115 Colocotroni.

Near East Markets.

LONDON PRODUCE REPORT.

Sugar.—The home refined market has been in normal request at unchanged rates. Tate's cubes are a firm feature at 52s.; mineral water sugar has been steady at 47s., and London granulated is the same at 46s. 6d. Lyle's granulated has lost 3d. at 46s. 6d. Unsteadiness has been noticeable in export varieties. West Indian crystallized has advanced 6d. to 41s., while Czecho-Slovakian has shed 3d. at 19s. Cane sugar quotations are:—March, 14s. 6d.; April, 14s. 6d.; May, 14s. 6d.; August, 14s. 6d.; and September, 14s. 6d. White sugar quotations are:—March, 19s.; April, 18s. 10½d.; May, 18s. 9d.; August, 18s. 10½d.; and September, 18s. 10½d.

Coffee.—Business has been brisk. Costa Rica at 126s., and Indian at 106s. are unaltered. Nairobi is firm at 110s., and Jamaica is the same at 150s. A slight increase in prices has been in evidence in the futures market with quotations now at:—March, 52s.; May, 52s. 9d.; July, 53s. 3d.; September, 54s.; and December, 54s. 1½d.

Tea.—There has been a greater demand for Indian tea, with higher rates. Ceylon supplies have improved, but prices have risen slightly. Fine China tea has shown no improvement at 2s. 11½d. lb.; good Pekoe Souchong is unchanged at 11d. lb.; and Common Java has been firm at 9½d. lb.

Rice.—New crop American Java rices have been favoured during the week and prices are comparatively low. Spanish Japan rice has been in good demand, but supplies are extremely low both in the market and afloat.

Disposal of Coconut.—There has been a steady demand with little change in prices.

Almonds.—Disposals have been steady, but prices are still rather high.

Green Fruit.—Supplies of oranges have been heavy during the week, many small shipments having arrived. The request for medium and low grade fruit is poor. Seville sours have shown a good market; arrivals for the season have now come to a termination. The demand for lemons is still weak, while fine fruit is very scarce. Prices are rising. The condition of Valencia onions has shown signs of improvement, although high prices are still demanded. An excellent demand for apples both in boxes and barrels, has been in evidence. The first arrivals of Australian and Tasmanian apples are expected this month.

Oilseeds.—All prices have risen. Indian linseed has gained 1½d. at 21s., and La Plata is to 1s. 6d. up at 20s. 3d. Rapeseed has risen with Toria, 3d., up at 16s. 10½d., and bold Ferozepore 6d. up at 18s. 6d. Cottonseed is firmer with Indian 3d. higher at 9s. 10½d., and Sakellarides has gained 1½d. at 12s. 7½d., while Egyptian black at 12s. 9d. shows an increase of 3d.

Oils.—A variable tendency has been maintained. Linseed oil has dropped 3d. at 38s. 9d. Rape oil is nominal. Cotton oil has remained firm. Refined is the same at 45s. Egyptian crude is 1s. up at 38s., but deodorized has remained unaltered at 49s. Turpentine has shed 3s. 3d. at 63s. 3d.

CHEAP FARM LANDS IN CANADA.

The Canadian Pacific Railway possesses some five and a half million acres of the finest land in the great farming area of Alberta, Saskatchewan, and Manitoba. This land is now being offered for sale by the company at prices varying from £3 per acre freehold, and the purchase price can be agreed over a period of years at terms which are never likely to be surpassed. The Canadian Pacific is, of course, not a land selling organisation in the ordinary sense of the word. The handling of railway traffic is its business, and for the satisfactory development of that traffic the company desires industrious, successful settlers along its lines. For this reason it is able to offer such favourable terms to settlers. Booklets containing all necessary information can be obtained on application to the Canadian Pacific Railway, Land Development, 62 Charing Cross, London, S.W.1.

CONDITIONS IN IRAK.

The following extracts are taken from the Agricultural Bulletin of Irak for the month ended January 15:—

The rainfall in Baghdad during November and December was 5.29 inches with an average of 2.2 inches for 32 years. This season's rains have up to the present been particularly well distributed for cultural operations with the winter crops of wheat and barley. The season has so far been exceedingly mild, and one result of the mildness has been to induce fruit trees to flower prematurely. It is feared that the results to the fruit crop will be disastrous should frosts follow before the spring sets in.

The Director of Irrigation reports that repairs to the head regulators of the canals on the left bank of the Diala have been completed. Channel clearance on the Yusufiyah is progressing slowly owing to the shortage of labour. The high level of the Tigris has interfered with the construction of the Butera Regulator in the Amara District. All regulators on the Tigris were kept fully open during the month to divert the rain flood water from the main river channel which, below Amara is insufficiently large to admit the passage of flood water. Work is proceeding very satisfactorily on the extension to the Saklawiyah Canal.

The seasonal rains of December were sufficient to dispense with almost all irrigation required both for the standing crops of vegetables and for the preparation of land preparatory for sowing the winter cereals. The level of the Tigris was sufficient in certain localities to permit of inundation water being used for irrigation purposes for a few days. A breach was reported in the Khorassan Canal when in flood which has resulted in the heavy silting of the Canal bed. It is feared that this silting will adversely effect the summer crop on this canal.

The condition of the wheat and barley crops is exceptionally good both in irrigated and unirrigated lands. The area under cereals is considerably in excess of normal. This applies more particularly to the 'daim' or unirrigated crops. It is only in very occasional years that cereals in Lower Irak can be matured on the rainfall only. If the sowing rains are timely the cultivator gambles on receiving subsequent rains sufficient to mature his crop. If a few inches of rain fall in the early spring months of the current year, then it is highly probable that the total yield of cereals, irrigated and unirrigated, will be far in excess of the local demand. The natural result will be a further fall in the price of cereals and in export trade.

Winter vegetables are in excellent condition. The area under irrigation near Baghdad has increased to such an extent of late that some winter vegetables cannot be marketed at a profit in Baghdad. This applies more particularly to turnips which are frequently fed off by sheep.

Condition of Animals.

The timely rainfall has resulted in a good supply of grazing all over the country. Draft animals are quickly improving in condition in spite of continued pressure of work. The lambing season has started and sheep generally are in good condition.

The Director of the Civil Veterinary Department reports that during the period under review, outbreaks of rinderpest in cattle were reported from various districts. Altogether, 2,572 animals were inoculated. Of these, 33 had already contracted the disease and were cured. Twenty of the diseased animals were so badly affected that they died after inoculation. The total number of deaths recorded before veterinary assistance could be afforded is 1,035. It is of interest to note that during a period of 2 months 4,217 head of cattle are known to have died from rinderpest. On the assumption that one half of these were, animals capable of ploughing, the reduction in the area which might have been sown under unirrigated conditions in the current season is estimated roughly at 15,000 acres.

The picking of the cotton crops is completed and cotton stalks have been removed. An experimental plot of flax grown at the Kut farm in the autumn is making good progress. Large scale cultivation of the flax crops will not be undertaken until facilities permit for the proper handling of the matured crop which involves a considerable amount of technique. The programme of work for cotton experiments has been prepared for all farms. About 200 acres of wheat have been sown at the Central Farm. Rustam, with a view to forming the nucleus of a supply for general distribution next year, Work in the Forestry Section is progressing. The analysis of soils connected with the Amara survey is nearing completion.

Samples of imported silk worm eggs which have been under inspection appear to have retained their vitality.

District Work.

The district work of the Agricultural Department at this season is largely confined to inspecting lands suited for cotton cultivation and giving cultivators the necessary advice. It has been decided to confine the bulk distribution of cotton seed in the coming season to the three areas commanded by the Yusufiyah, Saklawiyah and DIALA Canals. The representatives of the British Cotton Growing Association have proffered much valuable assistance in the distribution of seed.

Arrangements are being made to undertake demonstration work in silk culture through the kindness of the representative of His Highness the Naqib from whose estates the necessary mulberry leaves will be procured. Arrangements are in train to combat the annual outbreak of locusts in the tract immediately North of Shergat.

DRIED FRUIT REPORT.

Messrs. J. C. Houghton and Co., report as follows under date March 1 :—

Currents.—Although the month of February has witnessed little material change in the situation, buyers are relaxing their caution of previous months. Duty paid clearances were on a larger scale than in any February of recent years. The arrival of s.s. Addington with 1,500 tons certainly infused more life into the market, buyers taking greater interest in the fresh parcels available by her; particularly was this noticeable in lower grades and qualities up to 60s., and a satisfactory business was transacted in Pyrgos 53s. to 54s.; Zante and Patras, ordinary 55s. to 58s., and up to 60s. for a few better parcels. With the exception of a little fine Vostizza, 75s., other grades extremely quiet.

Prices are practically unchanged, and where quotable at a lower figure, indicate a concession in values to effect quay sales. s.s. Grodno has arrived with only 200 tons, mostly Zante growth. Quotations :—Pyrgos, 53s. to 54s.; Amalias and Patras, 55s. to 60s.; Zante, 56s. to 58s.; Gulf, 60s. to 65s.; Panariti, 65s. to 70s.; Vostizza, 68s. to 75s.

Valencia Raisins.—A few retail sales at 110s. to 115s; demand slow.

Sultanas.—There has been some enquiry for lower and medium. Common sold 107s. to 112s.; medium grade, 118s. to 120s., and good up to 130s., fine realising 145s. Holders show confidence in the position, realising that eventually the country will require all the available stock. Undoubtedly the underlying conditions appear sound, and with no further shipments expected, on any revival of demand prices should advance. Greek in fair demand 118s. to 130s. Afghans. Small consignments are cleared as they arrive, Reds, 95s., Yellows 115s.

Figs.—Move slowly. Skeleton cases, Layers, and Locoums, 95s. to 107s. 6d. and Genuine Naturals, 60s. to 64s.

INDIAN CROP FORECASTS.

The following forecasts of Indian crops have been issued :—Wheat (supplementary forecast), 28,012,000 acres, sugar cane (final forecast), 2,381,000 acres yielding, 2,592,000 tons, groundnut (final forecast), 1,946,000 acres yielding 920,000 tons, rice (final forecast), 81,234,000 acres yielding 32,994,000 tons of clean rice, cotton (final forecast), 18,485,000 acres yielding 4,480,000 bales.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud, of Smyrna, report as follows for the week ended February 18 :—

Sultanas.—The total estimated arrivals to date amount to 108,250 bags, the estimated sales are 162,550 bags, and the stock unsold is estimated at 5,700 bags.

Markets.—No material change in the position of the sultana market. About 50 tons sales are reported for shipment to the U. K. and Continent. There are evidences of increasing enquiries, and, should dealers consent to some concessions in prices, business would be stimulated. Stocks, however, are diminishing, and supplies from the country have temporarily ceased. The exchange is weak at 640-5.

CURRENT PRICES.

General Produce.—Bacon : (Continental), 136s. cwt.; (Canadian), 130s. cwt.; (American), 122s. 6d. cwt.; (Australian) 90s. cwt.; butter (Australian), 118s. cwt.; (New Zealand), 139s. 6d. cwt.; cheese (Canadian), 104s. cwt.; (New Zealand), 94s. cwt.; lard, 79s. cwt.; eggs (Danish), 30s. 9d. per 120; Styrian, 25s. per 120; chillies 162s. 6d. cwt.; cloves (Zanzibar), 1s. 4½d. lb.; cocoa (Ceylon good to fine), 102s. 6d. cwt.; coffee (Costa Rica), 127s. 6d. cwt.; (East Indian), 132s. 6d. cwt.; (Central American), 105s. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 111s. cwt.; (Santos, superior), 63s. 6d. cwt.; ginger (washed Cochin) 56s. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 4d. lb.; (Muntok white), 8d. lb.; pimento, 2½d. lb.; raisins (Valencias), 110s. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Vostizza), 72s. 6d. cwt.; currants (Amalias), 57s. 6d. cwt.; sugar (Tate's cubes), 51s. 6d. cwt.; (Lyle's granulated) 46s. 6d. cwt.; (Mauritius crystals), 43s. 10½d. cwt.; (West Indian crystallised), 41s. 6d. cwt.; (centrifugal), 13s. 9d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon No. 2), 14s. 1½d. cwt.; (bran Rangoon), £6 2s. 6d. ton; cinnamon (firsts), 11½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 7d. lb.; (fine to finest), 2s. 7½d. lb.; Ceylon (common to good common), 1s. 2d. lb.; (medium to good), 1s. 6d. lb.; (fine to finest), 2s. 7½d. lb.; Java (common to good common), 9½d. lb.; wheat (English white), 50s. 3d. qr.; (Australian), 57s. 6d. qr.; barley (malting), 57s. 6d. qr.; barley (feeding), 45s. qr.; oats (English), 33s. 9d. qr.; (Australian), 57s. 6d. qr.; barley (feeding), 45s. qr.; oats (English), 33s. 9d. qr.; oats (La Plata), ex-ship), 27s. 9d. qr.; maize (La Plata), 42s. 9d. qr.; flour 48s. 6d. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £35 ton; bismuth, 9s. lb.; copper (standard), £58 1s. 3d. ton; copper (electro), £64 10s. ton; gold bars, 93s. 10d. oz.; iron (No 3 Cleveland), 90s. ton; hematite (mixed number), 95s. ton; galvanised sheets (24 G), £15 15s. ton; lead (soft foreign), £20 10s. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 27s. 6d. unit; nickel, £175 ton; platinum 360s. oz.; plumbago, £20 ton; quicksilver (G.O.B.) £11 5s. ton; tin (standard), £144 2s. 6d. ton; wolfram, 10s. 6d. unit; zinc sheets, £34 10s. ton; tin plates (20 by 14), 18s. 10½d. box; silver bars, 32 5-8d. oz.

Chemicals.—Acids : Boric, 66s. cwt.; oxalic, 7½d. lb.; citric, 1s. 11½d. lb.; tartaric, 1s. 3½d. lb.; ammonia (sulphate) £16 1s. 3d. ton; arsenic (white powdered), £40 5s. ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £14 5s. ton; cream of tartar, 121s. 3d. cwt.; Potassium : Bichromate, 7½d. lb. chlorate 5d. lb.; caustic, £33 10s. ton, nitrate, £42 10s. ton; permanganate, 9d. lb.; prussiate yellow, 1s. 2d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium : Crystals, 130s. ton; bicarbonate, £11 5s. ton; bi-chromate, 5½d. lb.; alkali (58 per cent.) ton; chlorate, 3½d. lb.; caustic (70 per cent.) £23 ton; hyposulphite, £15 10s. ton; prussiate, 10d. lb.; nitrate, £14 5s. ton; glycerine (crude, 80 per cent.), £80 ton; glycerine (industrial) 1200 per cent.) £110 ton; lemon oil 3s. 7d. lb.; quinine, 2s. 11½d. oz.; red lead, £35 10s. ton; white lead, £38 ton; white ground lead, £48 7s. 6d. ton; sulphate of copper, £28 5s. ton; sulphate of iron, 75s. ton.

Miscellaneous.—Cotton : (American), 10.62d. lb.; (Egyptian Sakel), 10.65d. lb.; Oilseeds : Linseed (La Plata) £20 7s. 6d. ton; palm kernals, £18 8s. 9d. ton; castor seed (Bombay), £13 ton; Oils : Linseed, £38 15s. ton; olive (Levant), £74 10s. ton; rape (crude), £50 10s. ton; soya, £37 10s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank) £3 15s. ton; coconut (Ceylon), £41 5s. ton; cotton (crude), £37 ton; ground nut, £44 ton; Rubber : Plantation (No. 1 crepe), 8d. lb.; smoked sheet, 8d. lb.; fine hard para, 11½d. lb.

Hides and skins.—Ox and Heifer (first), 90 lbs. and up, 7½d. lb.; 80 to 89 lbs., 7½d. lb.; 70 to 79 lbs., 7½d. lb.; 50 lbs. and under, 6d. lb.; (second) 90 lbs. and up, 6 5-8d. lb.; 80 to 89 lbs. 6½d. lb.; 70 to 79lb. 6½d. lb. Cows (first), 60 lbs. and up, 4½d. lb.; (second), 60 lbs and up 4½d. lb.; 50 lbs. and under 4½d. lb.; Bulls (first) 5d. lb.; Kips (first), 6 1-8d. lb.; (second), 5d. lb.; Calcutta Market. Prices in rupees per 20 lb. Arsenic hides (cows) Agras, 11 to 15; Durbhangas, 7 to 10; Patnas, 6 to 7; Salted cows : 5 to 8. Arsenic hides (buffalo) : 4 to 9. Skins : Calf, 8 to 10 per 20 lb.; goat, 230 to 265 per 100 pieces.

SHIPPING INTELLIGENCE.

IMPROVEMENT OF BRATISLAVA AND KOMARNO HARBOURS.

During the war the harbours at Bratislava and Komarno on the Danube were impeded by the considerable quantities of sand deposits which accumulated there. In 1920 the Czechoslovak Government proceeded to remedy this drawback at Bratislava, and in the early part of 1921 similar measures were adopted in the case of Komarno as well, so that as a result of dredging operations the harbours are now available for shipping even at the lowest water level. This winter the harbour at Komarno accommodated 22 steamers and 119 cargo boats belonging to the various companies, besides 38 other vessels and 40 rafts. The harbour at Bratislava now contains 18 vessels in the southern basin, the minimum depth of which is 2.5 metres. Operations are now being carried out in the northern basin with a view to strengthening the landing stages and making the depth equal to that of the southern basin. At Komarno the amount of available harbour area will be considerably extended this year by dredging the back portion of the harbour belonging to the Elizabeth Island which has not been in use hitherto.

NEW GLEN LINE MOTOR SHIP.

Another motor ship has been added to the fleet of the Glen Line Ltd., this being the *Glengarry*, built by Harland and Wolff, Ltd., of Glasgow, and intended for the company's Eastern trade. The vessel, which has a gross tonnage of 9,460, is 502 ft. in length, 62 feet in breadth (moulded), and 38.6 ft. in depth (moulded). She will be propelled by two 8-cylinder 4-cycle Diesel engines which can develop a normal horse power of 6,000 i.h.p. The vessel, which has three complete decks, carries two cargo derricks for dealing with weights up to 40 tons, and 36 derricks for weights up to seven tons. She has six cargo holds.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. *Olympia* for Bombay (Liverpool, March 17).

Anchor Brocklebank Line.—S.s. *Malakand* for Calcutta (Birkenhead, March 11); s.s. *Mahanada* for Port Said, Colombo, Madras and Calcutta (London March 21); s.s. *Mahsud* for Port Said, Colombo, Madras and Calcutta (London, April 8); s.s. *Imani* for Port Said, Colombo, Madras, and Calcutta (London, April 25).

Bibby Line.—S.s. *Leicestershire* for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, March 15); s.s. *Herefordshire* for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, March 29).

Byron Steamship Line.—S.s. *Maid of Chios* for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, March 11).

Clan Line.—S.s. *Clan Ross* for Colombo, Madras and Calcutta (Glasgow, March 16).

Cunard Line.—S.s. *Sea Victory* for Genoa, Leghorn, Naples, Palermo, Messina, and Catania (Manchester, March 14; Liverpool, March 16; and Swansea, March 21); s.s. *Pavia* for Gibraltar, Ceuta, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza and Sulina, (Glasgow, March 4; Swansea, March 16; and Liverpool, March 18).

Ellerman's "City" Line.—S.s. *City of Exeter* for Calcutta (Birkenhead, March 16); s.s. *City of Christiania* for Calcutta (Birkenhead, March 27).

Ellerman's "Hall" Line.—S.s. *City of London* for Bombay, Karachi and the Punjab (Liverpool, March 13).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.s. *Gleniffer* for Port Said, Port Swettenham, Singapore, etc. (London, March 23).

Harrison Line.—S.s. *Governor* for Calcutta (Liverpool, March 20), s.s. *Electrician* for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, April 20).

Henderson Line.—S.s. *Burma* for Port Said and Rangoon (Birkenhead, March 22).

Holt Line.—S.s. *Lycaon* for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, March 16); s.s. *Eurylochus* for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 23).

Johnston Line.—S.s. *Dromore* for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 25).

Moss Line.—S.s. *Amarna* for Gibraltar, Algiers, Malta and Alexandria, accepting cargo through for Moroccan, Algerian, Cyprus, and Syrian coast ports (Liverpool, March 11).

Papayanni Line.—S.s. *Grodno* for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, and Constantinople (Liverpool, March 11); s.s. *Andalusian* for Tangiers, Malta, and Alexandria (Liverpool, March 18).

P. and O. Line.—S.s. *Nellore* for Colombo, Madras, and Calcutta (London, March 10); s.s. *Egypt* for Bombay (London, March 10); s.s. *Nankin* for Colombo, Madras, and Calcutta, (London, March 24); s.s. *Macedonia* for Bombay (London, March 24).

P. and O. British India Line.—S.s. *Merkara* for Colombo, Madras and Calcutta (London, March 10); s.s. *Australia* for Bombay and Karachi (London, March 11); s.s. *Mashobra* for Bombay and Karachi (London, March 24); s.s. *Margha* for Colombo, Madras and Calcutta (London, March 31); s.s. *Manela* for Bombay and Karachi (London, April 7); s.s. *Nudea* for Colombo, Madras and Calcutta (London, April 15).

Prince Line.—S.s. *Sailor Prince* for Tunis, Malta and Alexandria, (Manchester, March 12); s.s. *Syrian Prince* for Malta, Alexandria and Syria (London, March 18); s.s. *Scottish Prince* for Tunis, Malta, Alexandria and Syria (Manchester, March 25).

PRINCE LINE'S NEW OFFICES.

In the announcement last week that the general freight department of the Prince Line had removed to 56, Leadenhall Street; it should have been stated that the offices of the Prince Line had been removed to that address.

The directors of the Cunard Steamship Company, Limited, announce that Sir Thomas Royden, Bt., deputy-chairman, has been unanimously elected chairman of the board in place of Sir Alfred Booth, Bt., who has resigned owing to continued ill-health. Sir Percy E. Bates has been elected deputy-chairman.

FINANCE AND MARKET REPORTS

The following further extracts are taken from the monthly circular of the Imperial Ottoman Bank:—

Turkey

Ada-Bazar, Ismid.—Agriculture and cattle breeding have been considerably impeded by mobilisation, taxes and regulations of all sorts, as well as by the incursions of irregular troops; consequently, the potato and maize crops have been insignificant; most of the cattle have been removed, and the silk-worm industry has been almost abandoned. The port of Ismid shows momentary activity, which will probably disappear on the re-opening of the railway line towards Eski-Cheir, Konia and Angora, by means of which commodities arriving from the three Black Sea ports—Zongouldagk, Ineboli and Sam-soun—are transported.

Cyprus

The island appears to have suffered less than the other Near Eastern countries from post-war economic uneasiness. This fact may be partly attributed to the restrictive measures taken by banks in May and June, 1920, with regard to credit. On the other hand, the fall in prices has affected the sundry products from Cyprus on Egyptian markets, hence the poor result of the sale of locust beans, which takes the first place among Cyprian products. The plentiful recent rains warrant favourable expectations for the next crop.

Agriculture.—Serious efforts are still necessary in this connection, although the country is essentially agricultural. The Co-operative Societies for agricultural credit which have taken the place of the Agricultural Bank of Cyprus seem to enjoy more favour with the rural population. Thanks to the development of this form of credit, agriculturists will be able to find the necessary accommodation, without having recourse to usurers; but this is a matter of education and requires time.

Mines.—A considerable development of the mining riches of the Island may be expected in the near future, especially Asbestos and Iron Pyrites.

Palestine

Cereals—Owing to the abundance of rain during last month, cultivators, having already completed their sowing, are offering on the market the remainder of stocks, which have become superfluous; a new fall in the prices of cereals has resulted.

Sesame.—About 25,000 oke have been exported to Syria, with the result that the remaining stocks are insufficient for local needs. Prices remain stationary at about Pst. 3.25-40 per oke.

Oranges.—Exports during the month reached 80 to 100,000 cases. The Liverpool and Hull markets are very favourable to exporters, the average price offered of 16 to 18 shillings per case leaving a net profit of about 4s. per case. The spot prices have in consequence risen from 5s. to 6s. per case on cash deposits at the time of ordering. Should conditions remain the same at the close of the season, the financial situation of the owners of orange groves will be improved.

NEXT AMERICAN COTTON CROP.

Washington and Boll Weevil Menace.

(From Our Manchester Correspondent.)

The report of the Washington Bureau of Agriculture that the boll weevil are about five times more numerous in the cotton plantations than in any year since 1915 has been received by Lancashire with a certain amount of surprise. It might be mentioned that it is exactly thirty years since the Mexican cotton boll weevil crossed from Mexico into the Southern corner of Texas, and during the intervening period has spread over practically the whole of the cotton belt of America; in all roughly 600,000 square miles of territory are now covered, and the damage done to the crop has been stated to be at least 300,000,000 dollars annually. The report, however, that the boll weevil has increased five fold has been received with scepticism. According to Mr. B. R. Coad who is in charge of the Cotton Insect Investigations, Bureau of Entomology, U.S. Department of Agriculture, the damage done to the 1921 cotton crop by the boll weevil was in excess of 3,000,000 bales of cotton. Mr. Geo. L. Fessick, the Secretary of the Cotton Acreage Committee, Memphis, another authority, also states that with last year's acreage of 32,300,000 the crop should have been 12,000,000 bales, but owing to the ravages of the boll weevil the yield was only 8,000,000 bales. If the number of boll weevil is now increased five times, from the above figures it is safe to assume that the pest will eat between fifteen to twenty million bales of the next cotton crop. When the present growth is finished with perhaps the boll weevil will be encouraged to devote its onslaught at the famous "carry over." The thought of testing another 9,000,000 bales would no doubt whet its appetite. Of course all this is absurd in the extreme, and the Bureau figures have caused no small amount of ridicule to be thrown at the Washington Department. It can be safely said that all reports this season with regard to the crop will be received by Lancashire with the utmost scepticism, for only last year the Department of Agriculture had to apologise for one of the biggest mistakes ever made in the history of cotton growing.

MANCHESTER REPORT.

(From Our Own Correspondent.)

Manchester, Friday.

The tone of the market during the past week has continued quieter. The majority of the leading buyers have displayed an utter lack of initiative. The chief topic of conversation has been on the increased Indian import duties on Lancashire cloth and yarn, and although an increase was expected it means that the native will have either to pay more for his goods or take less, and the general opinion is that our customers in India will adopt the latter policy. With regard to the piece goods enquiry for the outlets of the Near East, the best buyer has been Constantinople, but sales of any weight have not been mentioned. Mail advices being received from Egypt read rather more cheerfully, but leading merchants do not anticipate a freer buying movement for some time. Egyptian yarns are slightly easier in quotation on the week, and users have only taken up small lots. There has been some enquiry about in export numbers, but the bids have been a long way out. The piece goods enquiry for India has only been on a small scale, and transactions have been scattered. Buyers for China have been harassed by the fluctuations in the exchange value of the tael. Not very much business has been done for South America. Fancies have been in request for certain European countries. Quotations for American counts have been irregular, and only a small offtake has been registered. Rather more demand has been about in export numbers for India, but few offers have materialised.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date March 1:—

Business has been rather spasmodic during the past week and the general impression it leaves is that of unsteadiness, although, until to-day, the fluctuations have been within narrow limits. To-day opened, however, with a dull enquiry, in which little

actual business was discernible and no one was surprised to see the sales estimated at only 200 bales. Some hammering of the March position in the futures market caused a decline of over 1½ per lb. in the early part of the day, and in sympathy with this our spot prices were reduced a penny. Futures steadied after mid-day and began to improve, whereupon a certain amount of actual business began to filter through on the spot, so that the day closes with a somewhat better feeling apparent than had at one time appeared likely.

The enquiry during the week has shown little change from those of the several preceding ones, unless possibly one can say that the bias leans slightly more towards the lower grades and that less interest has been taken in cotton which grades Good and above. The bulk of the enquiry has once again been for Sakellaridis; other growths, with the exception of Sudan, which continues to furnish its usual quota, have been comparatively neglected. A slight increase has been noticeable in the enquiry for Arizona Egyptian, but little business has actually been reported in this long staple cotton.

We have received information from a reliable source to the effect that the New Tariff Bill now before the United States Senate, which was to have imposed a heavy import duty on all Egyptian cotton imported into America, is likely to be postponed for several months at least. As an offset against this, we have the Government of India about to increase its import duties, and this is causing considerable uneasiness in Lancashire at the moment.

Manchester reports were full of promise at the commencement of the week, but during the last two days business has fallen away and the tone is not so good. Crop news from Egypt refers to a possible water scarcity, the continued restriction of acreage, and the scarcity of really good seeds for planting. It is too early yet, however, to attach much importance to these factors, though no doubt they will, in a short time, begin to loom much larger in the imagination of the trade. C.i.f. business remains quiescent. Summing up, we fear that business in actual cotton has not really got into its stride yet, and that we must continue to expect for some time a series of spurts of variable duration, interspersed with the inevitable reactions. At the moment, it would appear that we are about to experience one of the latter. Sales 2,100 (includes 250 Sudan). Quotations are reduced 100 points with Extra Fine Sakellaridis exceptionally 75 points lower.

LARGE EGYPTIAN STOCKS.

The Commercial Co., of Egypt in their report for the week ended February 24 state:—

This week's relative steadiness of our market is due again to the firmness of the New York market, where quotations for near positions have now touched 18c.50. The demand from abroad has been of moderate size and has come almost exclusively from England; Continental business has been rather dull and America again has bought practically nothing; owing to the latter keeping out of the market, Upper Egypt cotton has been neglected. The local statistical position is improving as the weekly exports are now in excess of the co-temporaneous receipts from the Interior; however, the Alexandria stock still stands at the huge figure of 2,350,000 Kantars and over half a million Kantars are expected to come down before the ginning factories shut in May. Unsold stocks of cotton held in England and America are also rather heavy and must amount to about 1 1-4 million Kantars. These are the present figures of supplies; how much will be absorbed by the commercial demand before the new crop will be ready for the market, is a most difficult question to answer. Upon the expansion of the demand the future course of prices will almost exclusively depend.

The Danube Navigation Company proposes to construct a large store for merchandise destined for the Orient at Rushuk.

The approximate gross production of the Steaua Romana Company for the month of February was 15,600 tons.

The traffic receipts of the Smyrna-Aidin Railway for the week ended February 25 amounted to £6,447.

A company has been formed at Prague for trading with Roumania.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Bulgaria.

Pole-line hardware.—The Bulgarian Direction of Posts and Telegraphs invites tenders for the supply of the following telephonic pole-line hardware:—35,000 straight supports for insulators (German type); 35,000 bent supports for insulators (German type); 5,500 fixing clamps; 6,500 yokes. Sealed tenders will be received up to 4 p.m. on April 3 at the "Bureau departemental des Finances," Rue Rakovski 102, Sofia. Tenders should be presented for the whole of the material specified, and a deposit of five per cent. of the total tender price must be made. Delivery is required of the material within five months. (D.O.T.)

Telephone Instruments.—The date for the presentation of tenders for 2,000 telephonic instruments for table use, with local battery and magneto, and spare parts for these instruments, has been extended to April 21. Tenders to be presented to the District Office of Finance, Sofia.

Egypt.

Material for Army Clothing.—The Egyptian War Department invites tenders for the undermentioned stores:—

Reference.	Material.	Tenders due.
Muh. 1922/1/16.	Dark blue artillery cloth	March 13
Muh. 1922/1/13.	White cotton nainsook	March 14

Tenders to remain open for seven days. Further particulars may be obtained from and samples of the materials required can be inspected at the office of the Inspecting Engineer, Egyptian and Sudan Government, Queen Anne's Chambers, London, S.W.1.

Main Drainage Scheme.—The Department of Overseas Trade has received from His Majesty's Commercial Agent for Egypt, copies of the specifications and drawings connected with Contracts Nos. 7 and 8 for the Mansura Main Drainage Scheme, tenders for which are to be presented at the Chief Engineers' Office, Main Drainage Department, Ministry of Public Works, Cairo by noon on March 13, and April 26, respectively. (D.O.T.)

Pantaloon.—The Egyptian War Department invites tenders for the supply of 650 pairs pantaloons, Bedford cord. Further particulars may be obtained from, and a sample inspected at the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. March 13.

M.S. Angles, Tees, Bolts, etc.—The Egyptian War Department invites tenders for M.S. angles, tees, bolts, rivets, locks, etc. Further particulars may be obtained from the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1., March 13.

Uniform Clothing.—The Administration of the Egyptian State Railways invites tenders for the supply and delivery of winter clothing for the season 1922-23. The clothing required includes uniforms of blue cloth, khaki serge and dark grey cloth; blue jean suits for fitters; overcoats of blue cloth and light and dark grey cloth. Tenders on the proper form will be received by the General Manager, Egyptian State Railways, Telegraphs and Telephones, Cairo, Egypt. The clothing is to be in strict accordance with the Administration's standard samples, which can be seen at the office of the Inspecting Engineer, Egyptian State Railways, Queen Anne's Chambers, Broadway, Westminster, S.W.1., if notice is given three days before inspection. Tenders' samples should be submitted to the Superintendent of Stores, Egyptian State Railways, Telegraphs and Telephones, Cairo, Egypt, not later than March 30. Representation by an authorized agent resident in Egypt is essential. April 6 (D.O.T.)

Cardboard Portfolios.—The Central Stationery Stores Department, Ministry of Finance, Egypt, invites tenders for the supply of cardboard portfolios as follows:—Portfolios, cardboard 28 x 37 x 7 cms, 200; Portfolios, cardboard 70 x 70 x 7 cms, 700; Portfolios, cardboard 85 x 75 x 7 cms, 300. Tenders will be received up to noon on the 25th March. Sealed samples in duplicate must be submitted with tenders. Delivery of the goods is to take place within 90 days from the date of notification of the acceptance of the offer. (D.O.T.)

India.

Locomotives.—The Bengal and North-Western Railway Company invites tenders for the supply of four superheated 4-6-0 passenger locomotives. (Specification £1. Company's Offices, 237 Gresham House). March 27.

Yugoslavia.

Tinplates, solder, etc.—The Commercial Secretary to H.M. Legation at Belgrade reports that tenders are invited for the supply free at petroleum store warehouse at Belgrade, of tinplates, tinned wire, solder, etc., required by the Direction of State Monopolies, Belgrade. Tenders are to be addressed "Uprava Drzavnih Monopola," Beigrade, and marked "Ponuda za Isporuku Materijala za Radiomcu Kanti." A deposit of 10 per cent. of the total amount of the tender is required.

The goods required include:—1.—30,000 (thirty thousand) kilogrammes of tinplates, 0.32 m.m. in thickness, in sheets of 250 x 250 mm. 2.—90,000 (ninety thousand) kilogrammes of tinplates, 0.32 mm. in thickness, in sheets of 500 x 370 mm. 3.—150,000 (one hundred and fifty thousand) kilogrammes tinned

iron wire of 4 mm. diameter for handles. 4.—3,500 (three thousand five hundred) kilogrammes of pure solder for soldering tins. 5.—3,500 (three thousand five hundred) kilogrammes of pure lead for soldering tins. 6.—30 kilogrammes (thirty kgs.) "nisador" (sal-ammoniac?) in pieces. 7.—250 (two hundred and fifty) kilogrammes of spirits of salt. Each tenderer must submit samples of the material offered. The following are the quantities required as samples:—One sheet of tinplate, half metre of wire, 250 grammes each of lead, solder, sal-ammoniac and spirits of salts. March 11 (D.O.T.).

COMMERCIAL BREVITIES.

There has been a great development of commercial activity in French Morocco since 1920.

Roumania's exports of petroleum during December totalled 59,969 tons, as compared with 17,521 tons in December, 1920.

The French authorities in Syria have under contemplation expensive improvements to the Damascus-Dera and the Damascus-Aleppo roads.

According to a recent estimate the walnut crop of Asiatic Turkey for the current season will amount to about 33,000,000 lb.

The value of Bulgaria's imports from January 1 to October 1 was 1,900,000,000 leva, the exports for the same period totalling 1,000,000,000 leva.

It is estimated that the number of sheep in Morocco is between 5 to 7 millions, and the annual production of wool is put at 10,000 tons.

It is reported that the economic situation in Georgia is becoming critical, as a result of the exhaustion of food supplies due to the widespread decrease of cultivation.

The traffic returns of the Egyptian Delta Light Railways for the ten days ended February 10 amounted to £E10,062, making the total for the year £E341,086.

On December 31, the deposits with Czecho-Slovak banks and credit institutions amounted to 24,759 million Czecho-Slovak crowns, as compared with 17,864 millions at the end of 1920, thus showing an increase of 6,894 million crowns, i.e. 38.6 per cent.

A Reuter message from Sofia states that a German-Bulgarian company has been formed with a capital of eight million leva, for the establishment of two lime-kilns in Northern and Southern Bulgaria capable of a daily output of twenty waggon-loads of lime of the best quality.

The net profit of the Bohemian Bank for 1921 amounted to 6,652,077 crowns as against 4,652,077 crowns for 1920. The dividend proposed is 7 per cent. as compared with 7 per cent. for the previous year.

The returns for last year show that Czecho-Slovakia supplied 42.3 per cent. of Austria's imports, which amounted to about 6,300,000 tons. Of Austria's exports, totalling 998,000 tons Czecho-Slovakia took 17.6 per cent and Yugoslavia 8.5 per cent.

ENQUIRY BUREAU.

ADVERTISERS requiring agents abroad and readers abroad desirous of getting into touch with British Manufacturers, Export Merchants, etc., may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," "The Near East," 1, Devonshire Square, London, E.C.2." It must be understood that "The Near East" accepts no responsibility in connection with such replies.

114. Importer in Karachi (India) travelling throughout India wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.

115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities:—Exports: Medicinal herbs dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.

116. Import Merchants in Adana, Cilicia, Asia Minor, wish to represent British firms for any kind of British-made goods. Own account and commission basis. Good references provided. Send catalogues and samples with prices and terms.

117. Importer in Roumania, interested in Jute trade, wishes to get in touch with firms dealing in sacks, new and old Dundee, and Calcutta makes.

121. Exporter of Greek Ores in Athens, especially of purest quality Magnesite and Chromite wishes to be connected with interested British Firms.

122. Merchant in Galatz, Roumania, wishes to enter into business relations with British firms willing to ship goods on consignment terms. Guarantees by Leading Banks given. Full details on application. Correspondence in French.

NOTES OF THE WEEK.

The Resignation of the Greek Cabinet.

Owing to the rejection, by 161 votes to 156, of a vote of confidence, the Cabinet of M. Gounaris last week resigned. It needed no great power of discernment to predict the fate of M. Gounaris: his demission was obvious to us many weeks ago. At the time of writing the policy of his successor, M. Stratos, has not been stated; but it would appear that it was rather the individuality than the general foreign policy of the late Government that was disliked, though it is true that its internal policy was widely disapproved of. In any case, we do not envy M. Stratos his task, which will be an extremely difficult and possibly an humiliating one, for both abroad and at home Greece is likely to be confronted ere long by difficulties of an exceptional character. The future path of the Greeks is indeed full of stones. It is easy, but wholly untrue, to say that they have been tried and found wanting, for they have been at once leaned upon and tripped by up the Allies.

The Egyptian Situation.

Events in Egypt are falling out quite as smoothly as could be expected. The opposition to Sarwat Pasha's Ministry certainly continues, and it has given such signs of activity as meetings of protest at Al Azhar and a procession of white-veiled Mohammedan ladies in taxis; but public opinion apparently refuses to be deeply stirred by such manifestations, and the Cabinet goes about its business unperturbed by them. Egyptians have been appointed as Under Secretaries in several of the Ministries, and Sarwat Pasha is preparing a decree for the Sultan recommending the appointment of a commission, formed of prominent Egyptians, to elaborate a Constitution for the country. It is unfortunate that the new Government seems almost certain to be called upon to face the trying situation that must be brought about by a serious shortage of the Nile waters. For it is expected that the supply will be as bad as that of 1914; and if that expectation be realised, it will mean that irrigation will have to be most carefully regulated, and that the Agriculturist is sure to grumble badly. In the circumstances the Government is likely to come in for a good deal of abuse for conditions which it certainly cannot control; and the agitators, who have shown that they know their particular job after a fashion, are sure to make the most of the opportunity.

Mr. Churchill on the Middle East.

On Thursday of last week, in explaining to the House of Commons a supplementary estimate for Middle Eastern Services, Mr. Winston Churchill claimed that he had on the whole a satisfactory tale to tell; and the claim was, we think, justified by the statement to which it formed the preface. The debate which followed was extremely interesting, and will repay study in the official report; and it was pleasing to find so many of the speakers drawing on their personal acquaintance with Irak, Arabia, or Palestine in order to point their arguments or to put forward practical points for consideration. Unfortunately the number and length of the speeches preclude any attempt to summarise the debate in *THE NEAR EAST*; though the gist of the Colonial Secretary's remarks and one or two criticisms to which it gave rise will be found on another page. We may, however, refer here to some of the more important points.

The R.A.F.'s Good Work.

Mr. Churchill was able to point out to his hearers that he had done even better than he had promised in last June, and that consequently expenditure had been diminished. This has been achieved by making the Air Force very largely responsible for the safety of the country, and it is the purpose of H.M. Government that the military control and security of Mesopotamia shall be placed in the coming year under the charge of an officer of the R.A.F. For the control of the country the arrangement as a whole would seem to be satisfactory, but as to the security we can only hope that no risks will be taken in the endeavour to effect economies quickly. Even a single aeroplane can work wonders with Arab or Kurdish tribesmen who have no means of replying to an aerial attack; but in the event of an attack from across the frontier by an army supplied with its own aeroplanes and with the approved weapons for opposing attack by enemy aeroplanes, there would be a very different tale to tell. And we cannot lose sight of the fact that the Irak Army has not yet come up to expectation. Mr. Churchill himself admitted as much, and our own information on the point is far from encouraging. It is therefore somewhat reassuring to be told that "in view of the unsettled condition of our relations with Turkey, we are keeping a certain force at Mosul"; though we share the hope that the establishment of better relations will soon allow of the reduction of that force.

A Hopeful Outlook.

Mr. Churchill made a good point, and one which his audience appreciated, when he declared that "we are not so much holding the country as allowing the country to hold itself." His remarks regarding the elections and the methods of conducting them were not so well received, and one of the speakers who followed him—Lieut.-Colonel Freemantle, who spoke with a personal knowledge of Irak—went so far as to express the hope that "he will drop this silly pretence of Democracy." But most speakers recognised that King Faisal was doing even better than was expected, and that he, the Nakeeb (of Baghdad), and other leading Arabs who have worked loyally with us are entitled to every help and support we can afford them during the difficult days while Irak is finding its own feet. It was also pleasing to observe that not only did Mr. Churchill pay a well-merited tribute to the "skilful and sagacious officers on the spot" who are carrying out the British policy, and to the "experienced advisers" of the Middle East Department, but that other speakers recognized the splendid work being done by those other workers, official and unofficial, who are labouring to educate the Arab, to keep him healthy, and "to prove . . . what British association with any people who are coming out of darkness into light can do."

The Situation in Palestine.

On the subject of Palestine Mr. Churchill spoke but briefly, and admitted frankly that the situation is a difficult one. In Irak, he said, he had been "free to follow the best guidance on policy that this country can produce, a policy we believe in—getting the goodwill of the inhabitants"; in Palestine "we are pledged . . . to a policy . . . which . . . must necessarily encounter a great deal of suspicion and resentment on the part of the majority of the population of Palestine." But that policy is "absolutely right in itself," and though the Government recognizes that the difficulties are there, it is—if we understand the speech—going to face them and overcome them. Faced by the question posed by the Arab Delegation, "If you are able to give a free Constitution to Irak, why cannot we have a similar free Constitution?", Mr. Churchill decided to go as far as he could in giving them representative institutions so long as that course did not lead to any clash with the "pledges to which we are committed by the Zionist policy." The speaker, it will be seen, faced his difficulty with courage. But it is a curious situation, fraught with danger. One or two speakers in the debate expressed dissatisfaction with the interpretation put upon the Balfour Declaration, and declared that this country was not bound by it. The fact that those views can be put forward in Parliament to-day surely justifies the demand for a formal declaration on the matter from the Government.

South-Western Arabia.

Mr. Ormsby-Gore, in the course of a speech which showed once more what a grip he has upon Middle Eastern questions, called attention to the position in south-western Arabia, and asked for a statement regarding our relations with, and policy towards, the Idrissi, and our future attitude in that part of the world. He referred to its importance by reason of its nearness to Eritrea and of exploration work done by the Italian colony, and referred to Aden's being taken over by the Colonial Office as an additional reason for some statement of policy being given. Incidentally, General

Seely, later mentioned that at the present moment the garrison at Aden is about as large as that which it is proposed to keep stationed in Irak when the policy outlined by Mr. Churchill is completed. Upon the whole south-western Arabia appears to be receiving more attention than at any time since 1839, with the exception, of course, of the period of the War. But British prestige has a good deal of ground to make up in that region, and we cannot be too careful.

The Indian Government's Despatch.

We wish we could say that the resignation of Mr. Montagu was the inevitable result of a selfish attempt to order affairs outside his province, and leave it at that; but the matter cannot be left there. For nothing could have been more embarrassing and more maleficent than the publication of the Viceroy of India's telegram, with its demands, among other things, for the evacuation of Constantinople, the suzerainty of the Sultan over the Holy Places, and for the restoration of Ottoman Thrace, including Adrianople and Smyrna. In our view there was no necessity whatever for the publication of this document. The views of India, and of Indian Moslems in particular, were perfectly well known to the Cabinet, and would without any conceivable doubt be worthily considered at the Near East Conference on March 22—it is necessary but to recall the careful hearing which the Prime Minister gave to the Indian Khalifate Delegation in March 1920, and the Imperial Conference in July last year, when the Indian point of view upon the Near Eastern question was given due weight. There may be nothing new in the Viceroy's proposals, but this attempt to butt them in as a wedge in the Near East Conference is proof of a surprisingly bad sense of proportion and of the fitness of things.

Its Effects—

Upon British conduct at the Conference this telegram will have, as it should have, no positive influence, but we cannot imagine that the Turks are not elated by it. The bloated and then blasted hopes which it will have aroused among Indian Moslems we discuss in our leader, and we are sure that it will fill yet more overflowing the heads of Mustapha Kemal and his partners with chuckling arrogance. Without any doubt it will stiffen the Kemalists' attitude, as any compromise or climbing down will stiffen any Nationalists' attitude; and a refusal to swallow all these proposals will make Angora only more intransigent. If India supposes that she can, even through Turkey, control Near and Middle Eastern affairs, she is mistaken; just as Turkish politicians are mistaken if they think they can control Indian affairs by playing upon religious sentiments with which they themselves have no real sympathy. For though this telegram may excite the hopes of part of the Moslem World, it will only strengthen the determination of Great Britain to act impartially and with prudent justice. It is, as we think most Secretaries for India would know, impossible to stampede this country into a decision: hasty counsels of panic merely float away into our healthy air.

—and its Impossibilities.

The chief reason given by Mr. Montagu for the publication of this despatch was his despair at the pro-Greek policy of Mr. Lloyd George, but, apart from the Greco-Turkish struggle, it would be quite impossible, without a complete, and, as we conceive it, a disastrous, change

of policy, to carry out the suggested proposals. For instance, take the restoration of the suzerainty of the Sultan over the Holy Places. This may be desired as much by Indian Moslems as by Turkey, but could we possibly have pursued our Arab policy if Mesopotamia or the Hejaz had wished for the maintenance of that suzerainty? And is it seriously supposed that the Mohammedans of Palestine—other things being equal—would care two jots about the temporal position of the Sultan? Certainly we should never dream of meddling with the spiritual pretensions of the Sultan, but we have had too much experience in Papal times to confuse the borders of spiritual and temporal power. Our Government has always shown, and particularly in recent years, infinite tact and kindness towards the Mohammedan religion, and to suppose that Great Britain, for the sake of the temporary peace of one of its possessions, will cringe to the demands of some agitators is absurd. In those parts of Islam over which this country rules the truly religious Mohammedan enjoys the completest liberty: it is another story when the spurious agitator asks to indulge in license. There is, moreover, in this Indian despatch a further ignoring of the British Government's intentions, and that is in connection with the determination to preserve the freedom of the Straits. Once international control, in which Turkey might surely share, has been agreed to, Constantinople might be evacuated, but not before. In short, from the extra-Indian point of view the publication of the telegram was lamentable, and one can best undo the mischief it has created by ignoring its existence. Occidentalism stands low enough in the eyes of the East already: it will not add to its stature by kow-towing to remote and erratic opinion.

The Angora and Constantinople Missions.

There are at the present moment, in France and in England respectively, two Turkish missions, one presided over by Youssuf Kemal Bey, the other by Izzet Pasha: they represent Angora and Constantinople. How far their claims are identical we do not know; all that we are aware of is that the first has an imperative mandate to accept nothing less than the terms of the National Pact. We may say at once, therefore, that the first mission is indulging in superfluous labours, for its claims, which include such an impossible thing as the restoration of Turkish sovereignty over the Dardanelles, are inadmissible. Of the second, all that has been made public is the news of the courteous welcome given to it by Lord Curzon. We hope that this time, before any schemes are drawn up, exact care will be exercised to discover the limits of Izzet Pasha's influence, the extent to which he is able to force on the Turks the acceptance of any proposals to which he may agree; for we do not want a repetition of last year's farce, when Bekir Sami Bey went back to Anatolia with peace in his pocket only to find himself (and consequently ourselves) repudiated by Angora. If it be true, as is so frequently stated, that the "reasonable" Turk no longer exists, drowned as he has been in the Nationalist and Islamic current, and that there is hence no essential difference between Angora and Constantinople, then the prospects of these two missions are hopeless from the beginning. They are cleft from us on the first rock of discussion: the security, both by land and sea, of our friends and of ourselves—a condition which the missions are either unwilling or unable to fulfil.

THE WEEK AT HOME

London, Monday Evening.

Exit Mr. Montagu.

The dismissal of Mr. Montagu, although unexpected at the moment, was popular. After the stupendous indiscretion of publishing a document involving questions of high policy without Cabinet approval, there was of course no option but for the Indian Secretary to stand not upon the order of his going but to go at once; nor would there, I think, be grave laments if Lord Reading were to discover that the climate of India did not suit him, and decide to follow his colleague into private life. The fact is that they have made a mess of things between them, and it would probably be better to make a clean start afresh.

There is astonishingly little sympathy for Mr. Montagu in his personal capacity. Politicians are puzzled that a man who has breathed the atmosphere of statecraft for fifteen years should make a mess of his career by so egregious a blunder, and a few suspicious souls are looking for an ulterior motive. But the Wee Frees hate Mr. Montagu as the man who deserted Asquith; the Forces hate him as the man who broke Dyer; the Coalition Liberals hate him as the man who broke their last hope of anything approaching equality in the Cabinet. Rarely has there been such unanimous cheering in the Commons as when Mr. Chamberlain announced that Mr. Montagu was no longer a member of the Government. The retiring Secretary did not make the usual explanatory statement to Parliament, but to his constituents—a mistake in tactics—and it was a bitter, acrid, and undignified speech.

One other aspect of this case must be touched on. There was notoriously no anti-Semitism in England until the war, and Jews obtained high places in the State without any ill-feeling. Since the war things have changed. I record as a fact, without being fully assured as to the reason, that a certain amount of anti-Semitism now exists, but there is also, what is not anti-Semitism at all, a very general conviction that it is not a good thing to have too many Jews in the Great Offices of State. It is undeniable that they have been attracted by the opportunity of power; they are not less ambitious than Christians, and Mr. Montagu always seemed to me to have a good deal of the vanity which is the chief constituent in the composition of Lord Haldane, who is, I believe, as good a Christian as a very good Scot and a rather bad philosopher can hope to be.

Criccieth or Canossa?

Mr. Lloyd George has gone off to the Welsh hills to think. There is little doubt that at the moment he is

both physically and mentally dejected. His Conservative colleagues in the Cabinet have given him assurance of their personal loyalty—which nobody ever doubted—but they have not been able to assure him of the loyalty of the Conservative party in the country. Nor can they in fact do so. The Die-Hards have their tails up at the moment, and the promotion of Sir Gordon Hewart to be L.C.J. and the dismissal of Mr. Montagu mean two more Liberals out of the Cabinet; they are therefore nearer the all-Conservative Government of their dreams. But the country as a whole has little use for the Die-Hards, who have no policy and little general following. They are strong on the party executives, but not outside those local organisations; yet they are certainly strong enough to make Mr. Lloyd George's position very difficult. They would like him to stop on for the present, but as the tool of the Conservatives and that is precisely what he cannot consent to do. On the other hand, the country does not desire an election yet—not for many months, and an election would not give a decisive majority to any party, for people have not yet made up their minds which way to vote. In these circumstances the average man wants the Cabinet to pull itself together, to patch up its differences, and to carry on for another year. He does not quite understand the commotion in high places, and sees no reason why Liberal and Tory should not continue to lie down together while we all think out our political allegiance afresh.

In any event, there are half-a-dozen by-elections pending, and the results of these will show us fairly accurately where we stand. They will probably show that the constituencies are as divided as the Government.

Engineers Idle.

The engineers were locked out on Saturday by the masters, all negotiations having failed. The dispute is not on a question of wages but of control of the "shops"—a matter of internal management; and the impression I got from reading the correspondence published by both sides is that the masters decided to force the issue when trade unions are weak and work is slack. It is unfortunate that it should occur at a time when we are beginning to turn the corner of industrial depression, and unhappily strikes in these days are protracted.

A Decline of Crime.

We may be bellicose, but at least we are not criminal in modern England. I have been reading an article by Sir Basil Thomson, the late Chief of Scotland Yard, in which he gives statistics showing that we are undeniably more virtuous, or less enterprising, than we were. There is almost a tone of regret in his article, a kind of hint that the hand of the policeman may eventually lose its cunning if this demoralising uprightness of the public continues. Yet I seem to have read of several murders lately, and there were four or five cases of large frauds tried last week. As these are still *sub judice*, however, I cannot comment on them.

The Week's Books.

Mr. Horace G. Hutchinson is a popular writer, but his latest book, "The Fortnightly Club," does not quite come up to expectations. It is a series of philosophical discussions between members of a club, who disagree rather violently with each other, and seem to take a good many opportunities of being needlessly rude. Their philosophy, like their tempers, appears to be rather hasty.

"Garden Wisdom," by Stephen Gwynn (Talbot Press), is a delightful book of essays—one of which is a noble tribute to Stephen Phillips, a poet who is at present unjustly disparaged, but who will some day come into his own. Mr. Gwynn's paper will help to revive interest in that tragical figure.

"The Big Four and Others of the Peace Conference" (Hutchinson), by Robert Lansing, is an indispensable war-book. Mr. Lansing is not a hero-worshipper: of his own chief he says that President Wilson's "positiveness of assertion not infrequently reminded one of a lecturer imparting knowledge to a class, and gave the impression that he felt that what he said left nothing

else to be said. He exhibited the traits of a philosopher rather than those of an advocate; he preferred to deal in generalities rather than with facts." The author regards the formidable Clemenceau as a very materialist kind of statesman, whose "tact and shrewdness," however, were too much for the philosopher-President from Washington. Mr. Lloyd George was "socially an attractive person," who exhibited alertness rather than depth, and was occasionally "shifty." He liked Orlando and the Italians, distrusted Venizelos, whom, rather surprisingly, he thought crafty and insincere; and of Paderewski he makes the astonishing statement that he "was a greater statesman than musician." (One would like to know Mr. Lansing's own qualifications as a critic of music.) He liked the Emir Faisal, and rates both Botha and Smuts high. Of the Treaty itself he says: "It would have been difficult to have obtained a better one, considering the numerous conflicting interests and the intemperate spirit of vengeance which then prevailed. The treaty has defects, many defects, but the wonder is that, in the circumstances, they are not more general and more glaring."

"Some Modern French Writers" (Horace Muirhead), by G. Turquet-Milnes, is a very interesting study in recent and contemporary French literature. One of the chief, and to me rather unexpected points of the book, is the marked influence which the author shows Bergson to have exerted on French writers and artists. The point is perhaps rather excessively emphasised.

Another book I have been reading is: "Eugenics and Other Evils" (Messrs. Cassell) by G. K. Chesterton. Evil, incidentally, is what Mr. Chesterton does not like; good is what he does like—the definition is as good as any out of the philosophical schools. Mr. Chesterton lays it down that sexual selection is "What Christians call falling in Love"; and he proceeds, "To be consistent, the Eugenists ought to put up statues to the men who deserted their loves because of bodily misfortunes, with inscriptions celebrating the good Eugénist who, on his fiancée falling off a bicycle, nobly refused to marry her; or to the young hero, who, on hearing of an uncle with erysipéis, magnanimously broke his word." I learn with astonishment that one of the evils from which England suffers, in Mr. Chesterton's view, is the fact that we have no popular press; "most readers would be mildly surprised if a newspaper leading article were written in the language of a navvy." Perhaps my colleague who writes the leaders in "The Near East" will oblige; I should like to hear the problem of Mesopotamian irrigation, for instance, described in the (adjectival) vernacular.

Old Etonians will be glad to read "Edmond Warre" (Murray) by C. R. L. Fletcher. The book is full of good stories—one which I shall cherish is the account of how, when Warre started the University Rifles Volunteers in 1859, one of the earliest of the truculent militarists who joined was "Private John Morley." One would never have suspected him of so near an approach to jingoism, and I regret to say that Lord Morley has omitted any reference to these episodes of his blood-thirsty youth in his autobiography. "Private John Morley" sounds almost as incongruous as "General John Bright," or the "Right Rev. F. E. Smith."

EGYPT.

Cairo, March 4.

A Red Letter Day.

Tuesday, February 28, 1922, will not fail to be a red letter day in the annals of Egyptian history, for it marks both the attainment of the national aspiration to be recognized as an independent nation and an important step forward along the path of self-government. The High Commissioner arrived in Alexandria early that morning, and after a magnificent reception all the way up to Cairo and in the capital itself, the same afternoon he handed to the Sultan the document containing the latest decision of the British Government on the Egyptian question, the text of which was simultaneously published in London.

The New Cabinet.

The next day the Sultan summoned H. E. Abdel Khalek Sarwat Pasha and invited him to form a Cabinet. Sarwat Pasha accepted the invitation in a letter in which he communicated his nominees for the various portfolios together with the political programme which the new Cabinet intended to carry out. A few hours later the Sultan signed the decree approving its constitution and the next morning the Cabinet took office.

The new Cabinet is composed as follows:—Abdel Khalek Sarwat Pasha, Premier and Minister of the Interior and of Foreign Affairs, Ismail Sedky Pasha, Minister of Finance, Ibrahim Fathy Pasha, Minister of War and Marine; Gaafar Wali Pasha, Minister of Wakfs; Mustapha Maher Pasha, Minister of Education; Mohammed Shukri Pasha, Minister of Agriculture; Mustapha Fathy Pasha, Minister of Justice; Hussein Wassef Pasha, Minister of Public Works; and Wassef Semeika Bey, Minister of Communications.

Sarwat Pasha was Minister of the Interior and Acting Prime Minister in the Adly Cabinet during Adly Pasha's absence in England. Sedky Pasha, Ibrahim Fathy Pasha and Gaafar Wali Pasha were also in the same Cabinet, Sedky Pasha being one of the members of the Egyptian Official Delegation. The first two retain their portfolios, but Gaafar Wali Pasha goes from the Ministry of Education to the Ministry of Wakfs. The five other Ministers attain Cabinet rank for the first time. Mustapha Maher Pasha was Director-General of the Wakfs Administration before it became a Ministry; Mohammed Shukri Pasha was formerly Under Secretary of State for Justice; Mustapha Fathy Pasha is Procureur General to the Native Court of Appeal; Hussein Wassef Pasha is an engineer and incidentally a brother of the late Nationalist leader, Mustapha Pasha Kemal; and Wassef Semeika Bey is Counsellor to the Native Court of Appeal. Pending the extension of the activities of the newly revived Ministry of Foreign Affairs, which was suppressed on the declaration of the Protectorate in December 1914, Sarwat Pasha will himself retain this portfolio.

The Cabinet's Programme.

The new Cabinet's political programme puts on record its approval of the attitude of the Official Delegation in its negotiations in London last year. It points out that it would have been impossible for the new Ministers to have accepted office so long as the principles guiding the British Government's Egyptian policy appeared to be those of the Memorandum of November last and the Explanatory Note which followed it, but that the High Commissioner's letter to the Sultan and the British Government's declaration to Parliament having completely changed the situation, the Ministers considered that satisfaction had been given to the national sentiment by the immediate declaration of independence of the country and by the fact that future negotiations will take place without restriction and without conditions.

The Cabinet intends immediately to draft a new Constitution based on the principle of ministerial respon-

sibility and designed to permit Parliament to control the policy and administration of the Government, while the revival of the Ministry of Foreign Affairs will prepare the way for diplomatic and consular representation abroad. The Cabinet concludes by accepting full responsibility for the administration of the country and by calling on the nation to assist it in this matter and towards the settlement of the reserved questions by remaining united and maintaining the public peace.

Its Reception.

Generally speaking, the new Cabinet has been well received. In all Egyptian circles where opinion counts for anything it is recognized that a very important step forward has been registered by the letter of the High Commissioner and that the hour has sounded for the Egyptians to show what they are made of. The very sympathetic and conciliatory tone of the letter has gone far to remove the irritation caused by what took place last November and December. It is recognized that Great Britain has made a generous gesture and that for the time being, in the peculiar circumstances in which both she and Egypt find themselves, the British Government cannot be expected to go any further; and it is realised that if they do not accept the new situation and unite to take the fullest advantage of the opportunity offered, they will forfeit all the foreign sympathy and moral support that they have rallied round the new Cabinet, which now has everything in its favour.

Trouble at Tanta.

There has been some trouble in Tanta and in Cairo caused by the Zaghloulist element, and the students everywhere are somewhat restless. The general atmosphere and the factors underlying the situation are, however, far different to-day from what they were nine months ago, and the decided and firm manner in which these incidents have been handled seems to have had the desired effect of showing the relatively small opposition that there is nothing to be gained by trying to create trouble.

Both the British and foreign communities appear to be well satisfied with the decision of the British Cabinet. It is clear to them that for the time being no change is being made in the position of the safeguards they have enjoyed, and they feel that the course now taken is an eminently sound one. There is, therefore, no opposition to the new arrangement from the side of the foreign communities. On the contrary they have during the past week given many proofs of the sympathy with which they regard the effort that is being made by the Egyptians to show themselves worthy of their new status and so to strengthen the administration of the country as to make it possible eventually to offer such guarantees as shall be acceptable to Great Britain.

ROUMANIA.

Bucharest, February 26.

King Alexander's Visit.

The elections are drawing near, and all the different parties are feverishly engaged in their electoral campaigns which, especially in the provinces, are not without the usual incidents of election times. Judging from the frequent absence from the capital of the majority of the Cabinet, it seems as if for the moment the sole object of the Government is to devote its entire energy to the electoral campaign. The Liberals are fighting hard to secure such a majority that they will not have to seek the collaboration of any one group of the Opposition. A failure at this election would mean a great blow to the Liberal party; and the leaders are determined to leave no stone unturned to come out on top.

King Alexander's Visit.

The visit of King Alexander of Yugoslavia to Bucharest, being an official one, was the occasion for elaborate preparations, and his reception and sojourn here were

the occasions of great pomp and ceremony. The hearty welcome and spontaneous cheers of the Roumanian people afforded ample proof that King Alexander has become very popular in this country. His personal deeds during the war and the fact that he is engaged to one of the Princesses of their very popular Royal family aroused in the hearts of the Roumanians a feeling of respect and affection for the Royal guest. Furthermore, his being this time accompanied by M. Pashitch has given this visit a double importance, and it is bound to have as a result a closer relationship between these two countries.

On his arrival (on February 20) at Bucharest station, King Alexander alighted amidst the cheers of the people and the playing of the Serbian National Anthem by a military band; and was warmly received by the entire Roumanian Royal family. Besides MM. Pashitch and Nintchich, his suite consisted of General Damianovitch, General Hagitch, Colonel Yifcovitch, MM. Yancovitch, Cristitch and Nastasievitch, and many others. There were also three Serbian pressmen. After the presentations of the members of the Cabinet and other high State dignitaries, the Mayor of Bucharest welcomed him heartily on behalf of the citizens and offered him the traditional bread and salt on a silver tray. The Royal party then left the station in two open carriages and, escorted by the Royal Horse Guards, proceeded, through beflagged and decorated streets, thronged with huge cheering crowds, to the Cathedral to attend a Te-Deum.

In the afternoon of the same day the religious betrothal took place in the chapel of the Cotroceni Palace in the presence of a very few guests. The service, which included the ceremony of the exchange of rings, was conducted by the Primate of the Roumanian Orthodox Church both in the Roumanian and Serbian languages. In honour of King Alexander several church usages were introduced which are habitual in Serbia on such occasions. Among these was the custom of tying the joined hands of the couple with a white silk handkerchief. The service ended with the customary blessing of the round loaf of bread, which was subsequently broken into pieces by the Primate and given first to the engaged pair and then to all the persons present. The flour for this bread had been sent by King Alexander from Serbia and was made into bread at the home of his fiancée, with a supplementary ornament of two pigeons facing each other, also made of bread.

On the same evening while a family dinner took place at the Palace, M. Pashitch and the other members of the suite were entertained by M. Bratianu to a gala dinner at the Foreign Office, on which occasion the two Premiers exchanged fitting toasts, emphasizing that the present union of the two dynasties seals the friendship which has existed for centuries between the two countries.

On the morning of the following day a reception took place in the Throne Room of the Royal Palace, particularly for the Diplomatic Corps, who presented their congratulations to the newly engaged couple as well as to the King and Queen of Roumania. The Royal party together with their guests then proceeded to a specially built stand on the Calea Victoriei facing the Royal Palace to attend a military review, arranged in honour of King Alexander. To pay his respects to the visitor, King Ferdinand paraded at the head of the troops, followed by General Margineanu, Commander of the 2nd Army Corps; but when the turn of the 9th "Mountaineers" Regiment came, King Alexander returned the compliment by placing himself at the head of this regiment, of which he had been appointed Honorary Commander on the previous day. His act called forth great cheering from the public.

The parade was followed by a luncheon "en famille" at the palace, a reception in the afternoon for the people's delegations from various parts of the country, and in the evening by a gala dinner, to which over 300 guests were invited. The day's festivities were completed with a musical recital at the Royal Palace.

MM. Pashitch and Nintchich left Bucharest by the Simplon on Thursday, while King Alexander spent the rest of the week until Saturday, when he left for Belgrade

with the Roumanian Royal family. In their company he attended an operatic performance, visited the Military Museum, his 9th "Mountaineers" Regiment, and also made calls on M. Bratianu, M. Take Jonescu, and on the Primate. On the latter he conferred the "Collier" of the Order of Karageorgevitch with Star. It is now reported that the wedding will take place at Belgrade on June 4.

Little Entente Conferences.

The presence of MM. Pashitch and Nintchich in Bucharest was the occasion for several conferences between those statesmen and MM. Bratianu and Duca. Besides discussing questions of a general order concerning these two countries in particular, they further examined the question of the participation of the Little Entente at the Genoa Conference. The Polish and Czecho-Slovak Ministers at Bucharest were also present at some of these meetings.

M. Pashitch, in an interview to a local press-agency, stated that these conversations have resulted in a complete understanding with reference to the questions which will be debated at the coming Genoa Conference. He further stated that the interests of the Little Entente States induce them to support one another, and that they will oppose a united front to the pretensions of Soviet Russia.

From semi-official circles it is reported that these interviews at Bucharest were chiefly *pourparlers* for a preliminary conference of the Little Entente States, which will shortly take place at Belgrade, because, as the Polish and Czecho-Slovak representatives at Bucharest had no special mandates from their respective Governments, no definite decisions could be taken. However, it is more or less an understood thing that the Little Entente States will take the stand that the Genoa Conference must have as a basis the existing peace treaties and that no question could be discussed in violation of the same. It has been specially noticed that the Roumanian and Yugoslav statesmen are in complete harmony on all questions that were discussed.

General News.

Prince Carol returned to Bucharest from Athens on Sunday, February 19, having broken his journey at Belgrade for a few hours to call on King Alexander. Princess Helen and her baby, however, will remain in Athens with the Greek Royal family for another month.

A slight earthquake was felt yesterday at Satu-Mare (Transylvania), but without causing any damage whatever.

As a result of the frontier rectification between Czecho-Slovakia and Roumania last year, seven Roumanian villages including Turnu-Mare were ceded to Roumania. Many of the young men of these villages who were serving with the Czecho-Slovak army, are now expected to return home to be incorporated in the Roumanian Army.

The local press reports that Count Karoly, the former President of the Hungarian Republic, has decided to sell his estates in Transylvania.

Six torpedo-boats arrived last week at Constantza apportioned to the Roumanian Navy by the Allies from the former Austro-Hungarian fleet. The Roumanian Navy further expects seven mine-dredgers from Italy. The training-ship 'Venus' presented by the British Government to Roumania, has also arrived, and is already used by the Roumanian Naval School.

The Roumanian Geographical Society has recently sent courteous requests to geographical societies abroad to use their influence so that Roumanian geographical names should be spelt in the Roumanian way. For instance, instead of "Bucuresti" or "Romania" foreigners invariably spell these two names as follows: Bucarest, Bukarest, Bucharest, etc., and Rumanien, Roumanie, Roumania, Rumania, etc. It is further asked that Roumania should no longer be falsely designated as a Balkan State, for by her soil, configuration, race, and State organisation, it has been proved long ago that she cannot belong to the Balkan Peninsula. Moreover, since possessing the new provinces Transyl-

vania, Bukovina, etc., she considers that she ranks among the Central European States.

GREECE.

Athens, March 1.

Kemal's Terms.

Mustapha Kemal's peace conditions have caused little surprise here. But the Satrap of Anatolia, who is still so successfully carrying on his wonderful game of bluff, is really moderate in his demands. Smyrna, Thrace, Constantinople, the Straits, an army, a navy, and a war indemnity are all he wants. "And why not Piræus and . . . Liverpool as well?" asks the *Nea Imera*. Europe ought to be thankful that Turkey did not win her war, as, had such a calamity happened the whole of the Balkan Peninsula would not have been enough to satisfy her enormous appetite. In setting forth his terms, however, Kemal shows that he is a firm believer in the maxim "ask for the maximum so that you may avoid the minimum." Meanwhile Spring is fast approaching and much activity is reported from the front. Kemal has proudly announced that it was now his turn to take the offensive and that this time he would definitely eject the impudent intruder from the land of his forefathers. The Greeks, however, who during the quiet winter months have had ample time to consolidate their positions, are of a totally different opinion. They fully realise that owing to the financial *impasse* and to the complete diplomatic isolation of the country an offensive would be at present out of the question; but they are determined that not an inch of the ground now in their hands will be given up to the Turk.

The 'Espoir.'

The Greco-French incident over the 'Espoir' of which I wrote in my letter last week, is not yet closed. Not only has the Greek Government refused to comply with the French demand immediately to release the vessel but, on the contrary, it has ordered the unloading

of the cargo, at the same time informing the French Chargé d'Affaires that Greece would be prepared to pay for the coal she intended to keep, but would in no circumstances allow it to reach Mustapha Kemal. This new decision was apparently arrived at by the Government following instructions received from the Prime Minister from London. M. de Marcilly has not yet replied.

A Protest of the Liberals.

During a conference which was held last Friday at the Liberal Club in Athens, the Liberal deputies decided to hand a memorandum to the President of the National Assembly protesting against the suspension of the meetings of the Assembly for nearly five months. It will be pointed out that the Prime Minister had not fulfilled his promises, and that he had also failed to act in conformity with the parliamentary customs of the country by prolonging for five months the inactivity of the National Assembly. After setting forth the conceptions and the opinions of the Liberal Party, the memorandum goes on to say that it is the Government's duty to enlighten without any reserve and at the earliest possible moment both the Assembly and the people as to the actual position of the nation's affairs, stating at the same time what steps it proposes to take to meet the present precarious situation. The protest is to be signed by all the Liberal deputies at present in Athens.

Prominent Liberals Arrested.

As a result of the publication in two Liberal journals of a manifesto by which a number of well known Venizelists, among whom were two deputies, expressed their personal views on the situation in general, the authors of the manifesto have been arrested and imprisoned. Their names are as follows:—M. Constantine Melas, and M. G. Villaras, both members for Epirus; M. Papanastasiou, ex-Minister of Communications; M. Papis, ex-vice-president of the Chamber; M. P. Carapanos and M. S. Theodoropoulos, ex-deputies; M. Theodore Petimezas, ex-professor of Athens University, and M. T. Stathopoulos, editor of the Liberal paper *Patris*. They have been charged with high treason and are also accused of having used disrespectful language towards the King and the Royal Family.

A Cafe Incident.

Last Friday, as a man was sitting at the Café Zacharatos in Constitution Square, reading the *Eleftheron Vema*, he was suddenly accosted by a person quite unknown to him who asked him why he was reading a Venizelist paper! Greatly surprised at the impertinent interference, he replied that he was free to read any paper he chose. Whereupon the unknown individual produced a revolver, but was promptly disarmed by the other people in the café who witnessed the scene, and was put out of the establishment after receiving a sound thrashing.

No Money from America.

The *Estia* is informed from a reliable source that M. Spyro Papafrango's mission has sadly failed, as the United States have definitely refused to allow Greece to draw the American share of the unused credits granted to M. Venizelos' Government in February, 1918. The *Ethnos* adds that M. Papafrango is now trying to obtain the permission of the United States Government for the establishment of a branch of the National Bank of Greece in New York.

General News.

The new Greek High Commissioner at Constantinople, M. Triantafyllakos has postponed his departure from Athens until the return of the Prime Minister.

The trial of the persons charged with the murder of Jean Dragoumis will commence in Athens on the 7th March (O.S.).

BULGARIA.

Sofia, March 3.

Abolition of Press Censorship.

The Press Censorship has been abolished with effect from Saturday the 4th inst. The action of the Government in restoring liberty to the newspapers will, it is hoped, be followed by a similar concession in regard to

the holding of public meetings. The semi-state of siege that has been in force since the War has outrun its utility, and the whole country desires a return to normal conditions. The Press Censorship has always been severe, and latterly particularly so. The result has been that many events, unimportant in themselves, but with a bearing on other matters, have been allowed to assume gigantic proportions on account of the Censor's refusing to permit their publication. The private letter and verbal methods of spreading news have resulted in a totally false impression being given of Bulgaria's actual situation. Now it is to be expected that for a short time there will be a veritable outburst of criticism on the part of certain papers, but this will soon die a natural death, and ordinary conditions will be resumed. The newspapers will become much more interesting, as instead of being able to cull all the news from one paper, it will be possible to get the different points of view on all questions of importance.

It is not quite clear what decided the Government to restore freedom of the Press, but in any case it is a measure that cannot but do them good.

Bulgarian Students Abroad.

Owing to the low value of the Lev in comparison with English, French, Italian and Swiss currencies, the great majority of Bulgarian students who finish their education abroad are being sent to Germany or Austria. The parents of these students cannot afford to pay the high cost of living that prevails in Paris or London, and are forced, many of them against their will, to send their sons and daughters to Berlin. The French and Italian Governments have both made small grants to enable a limited number of Bulgarians to study at Paris and Rome, but even these grants, owing to the constant fall in the value of the Lev, are becoming insufficient. It does not require much foresight to see that in a few years' time the youth of Bulgaria will be German-speaking, and to a certain extent permeated with German ideas. Even now the effect of cleverly disseminated German propaganda is beginning to show itself, the gospel that Germany was not responsible for the War being especially widely spread amongst foreign students. The only apparent remedy for this deplorable state of affairs, which, it should be remembered, applies to all countries where the exchange has collapsed, is a rise in the value of the Lev.

In Bulgaria the French are making valiant attempts to encourage the teaching and knowledge of their language, and up to the present they have met with a fair amount of success. During the past winter, French professors have been giving a regular course of lectures at the University. These lectures have been well attended, and have undoubtedly served a useful purpose. The British have, officially at any rate, made no effort to encourage the speaking of English; nor have they taken the slightest interest in Sofia University. Our attitude can, in fact, be summed up in the words of an Englishman who recently visited Sofia: "We have so many interests elsewhere, and anyway of what importance is Bulgaria?" Certainly we have other and more important interests than Bulgaria, and it is true that Bulgaria is to-day a second Montenegro, ranking very low in importance in European politics. Still, she may not always rank so low, and her geographical position alone entitles her to some consideration.

Germany's Growing Influence.

German influence is not very apparent to the average foreigner in Sofia. Germans are not too welcome at the social clubs or in the leading private houses. They keep in the background, and while in public often talk French. It is nevertheless true that 60 per cent. or more of the foreigners now visiting Sofia are Germans. They are mostly commercial men bent on regaining the markets that the eighteen months following the Armistice closed to them. Whether they will be successful depends solely on the Allies themselves; but at present Germany is making ground, slowly but steadily. Italy, Austria, and Czecho-Slovakia are her chief rivals, with France following close behind, and Great Britain a bad last. The Deutsche Bank has opened fine premises in the centre of the town, and almost all the German firms

that formerly dealt with Bulgaria have reopened their offices. Of literature and newspapers there is no lack, and here again, owing to the state of the exchanges, German papers enjoy a much greater sale than those of any other nationality.

In wireless press messages the Bulgarian Foreign Office keeps a careful check on the Germans, but from time to time the hand of the professional Berlin propagandist is clearly evident. Above all, the Germans try to make Bulgaria believe that England and France are on the very worst of terms and that it is only a question of time before the English will renounce the *Entente Cordiale*. Facts are so distorted as to make the reader believe that every Englishman desires a revision of the Treaty of Versailles, and a revision needless to say greatly in favour of Germany. This clever propaganda cannot fail to have an effect in the long run, and it behoves our authorities to devise a means of combating a particularly insidious form of "Hunnishness."

Sofia University Again.

The University and the Government are once more involved in a dispute. This time it is not the question of the alphabet that is at stake, but the reforms proposed by M. Omartchevsky, Minister of Education. On the ground of economy, M. Omartchevsky has suppressed the chairs of twenty professors. Among these professors are numbered the foremost intellects in Bulgaria, and the University has not been slow to take umbrage at the Minister's proposals. The students have held meetings of protest, which the police dispersed, while the Senate of the University decided to send a Note to each member of the Sobranie, drawing attention to the fact that the Minister of Education was interfering with the rights which the University has always enjoyed, and further that the economies, if carried out, will result in a material lowering of the standard of the University. In the event of the Sobranie's approving of M. Omartchevsky's reforms, it is probable that the University will go on strike, or in other words, close down. It is interesting to note that M. Miletitch, the Rector of the University, who played a leading part in the dispute over the alphabet, is himself among those who are due to be dismissed.

Departure of Military Commission.

With the departure yesterday morning of General de Fourtoun, the Military Commission has come to an end. The General, who was accompanied by several members of his Staff, had a numerous gathering to bid him goodbye, and great regret is expressed at his departure. Charged with a singularly disagreeable mission, General de Fourtoun carried out his task in an extremely tactful manner. His successor, Colonel D'Amarzet, has already arrived, and the Organ of Liquidation held its first meeting last week. The need of such an Organ was commented on in my last week's letter, and now it appears that the number of officers may be augmented instead of being decreased. In such circumstances, the whole matter becomes a farce; one Commission goes and another arrives.

ASIA MINOR.

Smyrna, February 24.

The band of *chetas* (Turkish *komitajis*) numbering 17, and operating between Baloukesser, Sindirdji and Aksar, have been adroitly captured by Greek gendarmes. Some months ago several were caught by the Greek gendarme Captain from Yenakeuy, and it was from the prisoners that the names of the entire band were discovered. Several are wealthy Turks from Yenakeuy, who had always been on good terms with the Greek authorities, having shown great zeal in protecting Christians from *cheta* raids. It appears, that they were, nevertheless, in touch with the Kemalists, and guided the operations of the *chetas*. The Smyrna Greek Military Courts passed sentence of death upon Hussein Oglou Emin aged 25, and Kirkagachil Zade Ali Bey, aged 27, both merchants; seven others, including the Kaimakam of Giordes, were sentenced to imprisonment for life; one to fifteen and one to seven years' imprisonment; while Bahaeeddin Suleiman, a policeman, was acquitted.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

INDIAN ARMY PENSIONS.

To the Editor of "The Near East."

Sir,—Owing to the distance which separates us, I have only just been "Huzoor's" letter, suggesting that I am "squealing before I am hurt" in asking that officers of the Indian Army should be allowed to retire on Proportionate Pensions.

It is all very well to write of the "great traditions of the Indian Army" from his club smoking room: anyone out here could tell "Huzoor" just exactly how the Indian Government is treating those "great traditions." Has he heard of regiments raised by the heroes of the Mutiny abolished by a stroke of the pen? Does he know how many Indian doctors are in medical charge of white men and women? Has he heard that there are Indian Commissioned officers living in most Messes? . . . I am not presuming to criticise the Government, composed as it is of worthy gentlemen of various complexions, one and all striving for the betterment of this great country, but to say that our conditions of service have not changed, is, Sir, ridiculous. What does "Huzoor" advise us to do, from his arm-chair? Wait till we are hurt, I presume, and then collect such crumbs of consolation as may fall from Mahatma Gandhi's table.

I am, etc.,
QUAT HAI.

BRITAIN'S EASTERN POLICY.

To the Editor of "The Near East."

Sir,—Indian Moslems have no ground of complaint at the well-merited chastisement dealt so far to the Turkish Government, nor have they any right to impose an Ottoman Khilafat on Islam as a whole.

The occupation of Constantinople and Thrace has saved their inhabitants much misery and want already, and the Young Turks having long ago repudiated the Quran even it seems strange that Indian should claim the Khilafat for the Turkish Sultan.

Nevertheless, without any Moslem prompting, Mr. Balfour was fully warned at the time of the Paris Conference, against adopting the policy, now found

wanting. That the British Government acted contrary to this expert opinion, is by no means surprising; for in Government business, so many claim experience and the right to advise. In this way mistakes are made, and in this particular case there was the eloquence of M. Venizelos in the balance in favour of Greece, and his plea, being by no means inimical to the Turks as a nation, probably decided the British Government to try the experiment he advocated.

The consequence is that, without fear or favour, the British Government, for some time past, has been considering the reversal of the old policy, on the ground of mere justice to the Turkish people, and the dictates of modern civilisation, away from the long standing religious and racial prejudice, of the contending parties.

How far the revised treaty will go, it is not for me to say, but while leaving the Mohammedans free to call whom they choose a Khalif, (at one time, Baghdad, Cairo, and Cordova, each had its own lawful Khalif!) it cannot reinstate the Turks at Mecca and Medina, which are Arab towns, nor admit that any special interest in Baghdad, belongs to them.

The heroism of Angora alone deserves our sympathetic regards, and inclines us to believe in a better future for the Turks, and a *worthier Islamic* rule than in the past.

I am, etc.,
A. SEFI.

BRITISH POLICY IN THE EAST.

Under the auspices of the National Constitutional Association, a meeting was held last week at Caxton Hall, the subject under discussion being "Our Policy in the East." Lord Amptill, who presided over a crowded meeting, said that these meetings were fulfilling a useful function. Their object was to hear the views of people with special knowledge. Colonel Cuthbert James had been in the Egyptian Administration for years, and Lord Raglan was just returned from Palestine and Syria, where he was a political officer. Their opinions were therefore those of men who thoroughly understood these matters. He proceeded to state that the intuitive judgment of the race in foreign affairs could not be exercised just now, and might be lost, and hence the value of meetings of that kind. He took it that their attitude was to hold what they had and not to clear out of places where the nation had a right to be. At present they had a number of conflicting pledges to face, as in Palestine, where we made promises which we should not have done to people who had no right to be there. The population of Palestine was 93 per cent. Arab, and we had promised to make it a national home for the Jews from all over the world. We had made no fewer than six conflicting promises, but he hoped that the fact that the Sèvres Treaty had not been ratified left a loophole for an honourable settlement.

He pointed to the probability of more fighting between the Greeks and the Turks when the snows melted, and suggested that we were holding too much in Mesopotamia.

Lieutenant-Colonel the Hon. Cuthbert James, M.P., said that the present conflict between Greece and Turkey looked like a renewal of the old war between the Crescent and Cross. He pointed out that the whole situation had become of the most complicated kind. We would have to be very patient, but very swift in arriving at a settlement. Matters were serious in Palestine and with the Arabs. In Egypt they had to deal with legacy after legacy dating from the revolt in 1882, which led to the occupation. He complained of the delay in making the Milner inquiry, the same course being followed in the case of Amritsar. Delay was fatal in these cases of disorder. He denied that the Marquess of Dufferin's pledge that the Egyptians would be given self-government when fit for it could be carried out, because the Egyptians were not fit for self-government. The Egyptians who would suffer most would be the fellaheen. He commended the Government for at last trusting the man on the spot in Viscount Allenby. The Government had given the latter a blank cheque—not a good thing—but it was better than having these matters handled by incompetent amateurs.

Lord Raglan said that the feature of the Middle East was the effort to set up a number of independent States which the Government were making. They were utterly reckless about community of interests or defensible frontiers. Mesopotamia had a hopeless frontier, and if our troops left it it would lapse into anarchy or fall again into the hands of the Turks, and large numbers of people would be glad to see the Turks back. In Syria they had had for thousands of years one country; now it had been turned into two. One of them was Palestine. Every unprejudiced person who had visited Palestine since the Armistice said that whether Zionism was right or wrong it was utterly impossible. He met only one Arab who approved of Zionism. He expressed a fear that as things were going Zionism would disappear in a sea of blood, which would be not only Jewish but British.

SOME EGYPTIAN JOTTINGS.

(From a Correspondent.)

Among the influences now at work that of the women of Egypt must not be overlooked. The wife of Zaghloul Pasha, who now enjoys the title of "Mother of the Egyptians," is busily engaged in promoting a movement which is quite a new feature in social life. A meeting held recently at the absent Pasha's house was attended by 800 "ladies of distinction" from all parts of the country. Patriotic speeches were made, and an oath (probably composed by the Sheikh Mohammed Shakir), was taken by all present to the following effect:—"We swear by Almighty God and all his Prophets that we are determined to boycott the aggressive English, and consider it unlawful to touch anything made by them. God's punishment will fall on those who break their vow. We pray to God that our beloved and honoured Zaghloul Pasha may soon be restored to us." At a second meeting it was decided to send a telegram to the Pasha expressing complete confidence in him, and a determination to resist the formation of a Ministry until his aims are fulfilled. All ladies present were urged, and undertook, to do all in their power to support the Nationalists' programme. The influence of women of the higher ranks in Egypt is very considerable, and as they are now pledged to a propaganda in all towns and villages, it will no doubt spread rapidly downwards, and help to keep alive the existing agitation with which the sensible and "moderate" party has to contend.

A new sign of the times in Cairo, described by the *Akhbar* (News), is the establishment of an "Eastern Union Association," the object of which is to promote unity among Oriental nations without distinction of religion or race. For the present it seeks to enrol members from Egypt, Syria, Turkey, and Persia (India is not mentioned). It will endeavour to spread true culture in the East, and to disseminate sound literature, and it will work for cohesion among all Oriental States and Communities with a view to resisting Western aggression. It should be rather exclusive, as members must be persons of good social standing, and of literary and linguistic attainments. A council has been formed and rules drawn up, and in part published. The President is the Sheikh-el-Bakri, who claims descent from the Prophet, and is the Nakib-el-Ashraf, or Chief of the Sherifs, and head of all the Dervish Orders of Egypt. The Vice-President is Prince Daoud, and the Secretary M. Zeki. The treasurer is a well-known Persian. There are two assistant secretaries. The council includes Ahmed Tewfik (a member of Adly Pasha's mission), Dr. M. Sabit, Nured-in Bey, and other notables.

In the past, movements like those now afoot have seldom been long-lived. At the outset there is a good deal of enthusiasm, and perhaps the collection of a fund; but they generally die away from indifference, and a lack of any sustaining vitality on the part of the majority of the members. Very little is said on the subject of a British garrison. A correspondent of the *Mokattam* asks whether that paper will advocate and support the establishment of a "League of Eastern Nations," as a counterpart to the "League of Nations" which is acting independently of the East. The Orient should do likewise. A writer in the *Akhbar* says that a British garrison is quite unnecessary: the geographical position of Egypt is such that it will for ever furnish an excuse for one. As long as there is a Suez Canal the British must pass through it, and must control the Canal, and therefore Egypt. But their ships must also pass through the British Channel; and as France is on one side of it they should similarly control and dominate France.

Afghanistan is sending for a body of teachers from the Azhar University of Cairo.

March 22 is now fixed as the date for the meeting of the Foreign Ministers of England, France and Italy in Paris to consider the Near East question.

MANDATES IN THE MIDDLE EAST.

Last week, at the Royal United Service Institution, Lieut.-Colonel F. W. Barron, R.A., of the General Staff at the War Office, lectured on the Mandates in the Middle East, with special reference to the defence of India. Major-General Sir W. S. Brancker presided.

Before the war, said the lecturer, the chief danger to India was supposed to be Russia. Now the dangers were different. Within the last two years there had been a large immigration of Jews of all tribes and colours into Palestine, including a large number of Russian Bolsheviks. The trouble between the Jews and the Arabs in Palestine looked like going on. The Arab imagined that we intended to drive him out of what had been his home for hundreds of years. Apparently, owing to our commitments, we could only carry on, indulging in the famous hope of Mr. Micawber. In Persia, where our influence used to be so strong, the British name was now mud. Why not come away from Palestine and Irak? The answer was that we had to remain in Palestine because of our promise of providing there a national home for the Jews, and to remain in Irak because of the mentality of the peoples of India. If we retired precipitately from Irak the whole of the East would say it was because we were driven out. As possible attackers of India, we could now wash out the Afghans, the Bolsheviks, and the Germans. There remained only the Turks, joining in a general attempt by Islam to drive us out of India. The remedy he suggested was that we should make friends with the Turks. There was a fair prospect in that event of the two countries becoming lands flowing with milk and honey.

Sir Michael O'Dwyer said that when we occupied Baghdad in 1917 extraordinary enthusiasm was shown by the Mohammedans of the Punjab, who said that as we had blocked the Turks and the Germans the frontier of India was secure. For political reasons he hoped we should remain in Palestine and Irak.

THE BRITISH SCHOOL OF ARCHAEOLOGY IN JERUSALEM.

A meeting of the British School of Archaeology in Jerusalem was held last week at King's College, Sir Frederick Kenyon presiding. The report stated that the programme for 1922 included exploration of sites in the Plain of Acre, with a view to discovery of further evidences of early civilisation in Palestine. Mr. D. G. Hogarth, Chairman of the Council, in moving its adoption, remarked on the scientific and political value of the work of the school, and expressed the hope—which there was reason for entertaining—that help would be given by the Secretary for the Colonies. Financial support was badly needed. The report was adopted.

Dr. John Garstang, the Director, referred with satisfaction to the facilities received from the Government, and described the central and local museums that had been established. A hundred and twenty packing cases, intended in other days for Constantinople, had been discovered in cellars, and 6,000 objects had been catalogued. Objects of local interest, which would lose half their value if removed, were being exhibited and preserved. The great Roman sculptures of the 1st and 2nd Centuries at Askalon, weighing in some cases as much as six or seven tons, would not be transported, but were now effectively arranged beside the wall of the old theatre. Early Hebrew mosaics, with inscriptions, found at Jericho, had, however, been placed in safe keeping in the Central Museum. He referred to various interesting ruins, monuments, and remains of early civilisation, and testified to the general progress of research in Palestine.

A MESHTROVITCH STATUE.

(By our former Belgrade Correspondent.)

Some time before the war the Belgrade Municipality arranged with Meshtrovitch, the famous sculptor, for a statue on the fountain on the Terazije. The eminent artist agreed upon a price of 200,000 dinars, and 20,000 were paid to him as earnest money, as is the custom. The Municipality have now asked M. Meshtrovitch to proceed with the work, but the sculptor has replied that when the contract was made the dinar was as good as the Swiss franc, and that to-day he requires the balance of 180,000 to be paid in Swiss francs. Whether the town authorities have accepted this view remains to be seen, but an obvious answer is ready to hand for them. When the contract was made, the dinar was equivalent to the Austrian krone, and so they should pay the balance of 180,000 in Austrian krone, and if the artist does not accept this, let him return the 20,000 dinars which he received, but at to-day's rate, that is, 300,000 dinars, which is the present equivalent of 20,000 Swiss francs.

Preliminary results of the General Election in Roumania show that in 211 of a total of 369 seats the Government has been returned with a large majority. The figures are—Liberals, 102; National Party (Transylvania), 16; Peasants' Party, 17; People's Party, 10; Socialists, 2; Nationalists, 4.

According to messages from Marseilles published in Paris on March 9, a ship left the port last week for Braila, where it was to take on board, in accordance with the French plan to aid the famine sufferers in Russia, 4,500 tons of wheat for Odessa.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

India and the Near East.

The *Morning Post* of March 9 is plain in its condemnation of the way in which the Government of India has recently attempted to influence the decisions to be made at the Near East Conference. Of the message and its publication it says:—

For we have the plain hint here that the unrest in India must be allayed by changes in the Imperial policy elsewhere. Such an attitude is something new in the history of the British Empire, and we venture to say that if it continues the British Empire will not last very long. The evacuation of Constantinople; the suzerainty of the Sultan over the Holy Places; and the restoration of Ottoman Thrace, including Adrianople and Smyrna—these are questions of high policy which ought to be decided not under compulsion but according to the merits of the case. For our own part we have always thought it good British policy to maintain the power and prestige of Turkey as far as possible, and we resisted, as far as we could, the tendencies which threw the Sultan into the hands of our enemies. But we must recognise things as they are. To leave the Sultan in Constantinople is reasonable and wise; the restoration of Ottoman Thrace, including Adrianople and Smyrna, does not appear to us practical. As for the suzerainty over the Holy Places, Jerusalem, which is a Holy Place of the Mohammedans as well as of the Christians, is now in the hands of Sir Herbert Samuel, and if Lord Reading and Mr. Montagu combine to relieve him of that responsibility we shall have to revise our opinion of the Jewish question. As for the Hedjaz, it is in the hands of our good friends the Arabs, who have a far more ancient and more valid title to be their keepers than any Turk. Indeed, we cannot conceive that the Indian Mohammedans should be so ignorant of their own religion as to drive out the present keepers of their Holy of Holies in order to restore a comparatively modern usurper like the Sultan. We have, indeed, some difficulty in believing that these demands are made in good faith, or by the Mohammedans of India. Why should they trouble about a Christian Power in Smyrna or Adrianople, when, as a matter of fact, there is a Christian Power in India itself? Their interest in the Holy Places is acute and legitimate; but as long as they have access to the tomb of the Prophet, and as long as it is secure also from profanation in the hands of its present august and orthodox keepers, we cannot see that they have any grievance. And we hope nobody in this country will be so foolish as to suppose that the secret of Indian unrest lies in these questions of the Near East. There is a bearing, we admit; but the bearing is not vital, and is rather a pretext than the true motive.

It proceeds to plead for a policy of the "firm hand" in India as elsewhere, and concludes:—

We have never seen any evidence that the British Government realise that their enemies in all parts of the world work upon a common plan and bear us an implacable enmity. Let us by all means follow a policy friendly to Turkey, for such a policy is, and has always been, in the British interests. But do not let us delude ourselves that we can placate or disarm our enemies by so doing. One grievance is as good as another, and as soon as one is removed another will be found. It was Kenya yesterday, to-day it is Asia Minor; to-morrow it will be North Africa. No, there are enemies who cannot be placated, but must be fought. They

only grow stronger with concessions, and derive encouragement from our repeated surrenders. We must either stand up to them or perish.

And the *Daily Telegraph* of the same date is scarcely less severe:—

It is not quite clear why the restoration of certain European territories should be of such grave moment to the inhabitants of India, the great majority of whom are not Mohammedans, and have never heard of Thrace; nor to those 250 millions of Hindus, Sikhs, and outcaste persons can it matter very much which of two Moslem potentates guards the tomb and birthplace of the Prophet. The Mohammedans, though a minority, are active, energetic, and militant, and the Indian Government is evidently alarmed at the growing proofs of their alienation from the British raj. Hence its urgent, and even piteous, appeal to the home Cabinet to placate them at all costs, even to the extent of reversing its whole Eastern policy and readjusting frontiers in Europe and Asia Minor which do not in the smallest degree affect the interests or security of India. The destiny of Adrianople and Smyrna is a pure question of sentiment, so far as Indian Mohammedans are concerned. It is, however, a sentiment that has been fiercely inflamed by agitation, so that many of the children of Islam in our Eastern Empire believe that deliberate injury has been inflicted upon the spiritual head of their religion, and are ready to avenge it by co-operating with those whom they have hitherto despised as infidels. The Indian Government feels that its difficulties would be lightened if we could come to an amicable understanding with the Turkish Power. In its eagerness to be relieved of one source of embarrassment it has committed itself to a declaration which travels far beyond the bounds of India, and challenges the entire policy which the Imperial Government has adopted in the Near and Middle East. That policy has been settled in Downing-street, in conjunction with Paris and Rome; it cannot be dictated from Delhi or Simla. If a legitimate revision of the Sèvres Treaty would assist us to restore good relations with Turkey—an object every British statesman is anxious to attain—the process may be attempted. But it must be considered on its merits, and with due regard to the international situation as a whole. We shall certainly not consent to hand back Greek Christians in Europe to Ottoman rule merely because that might pacify certain Khalifate fanatics in Indian towns, and—possibly—make life a trifle easier for some perplexed personages in Indian secretariats.

We confess that this remarkable document does not inspire us with profound confidence in the wisdom and firmness of the Indian Administration. It does not suggest that Lord Reading and his advisers are facing a most dangerous situation with the stern grasp of facts which the circumstances demand. They seem to be engaged on their favourite occupation of trying to overcome disaffection by concessions to one disaffected group or body of persons after another. The present Viceroy has already practised that expedient several times with very little success. His efforts at conciliating the Swaraj extremists, the Punjab revolutionists, the Ali brothers, and Gandhi himself have, in turn, failed. Revolutionists and rebels, especially in the East, are not disarmed by surrender; they are only confirmed in the belief that they are too formidable to be touched. We do not suppose that the modification or reversal of our whole Eastern policy would restore the loyalty of the unscrupulous agitators who have combined with their secular opponents to rouse the bigotry of Mussulman mobs and Moplah savages. It would be just another victory for the fomenters of disorder, and would only stimulate them to fresh efforts. Even if it did allay Mohammedan excitement, it would do nothing to dissipate the other and graver

troubles of India. The Islamic movement is not, and cannot be, the cause of the riots, outbreaks, and seditious manifestations in districts and among communities which are not Mohammedan.

Egypt.

A writer in the *Outlook* of March 4 believes that there is a serious danger that the success of Lord Allenby's visit to London may lull the public into complacency over the Egyptian question, but, he points out, the British Government was not asked to change its views about Egypt, only its methods.

There are four points on which we desired to be reassured before we abolished the Protectorate: (1) The security of our communications through the Suez Canal; (2) the danger that some other European Power may attempt to take our place when we withdraw; (3) the protection of foreign interests in Egypt and the protection of minorities; and (4) the Sudan. In the Treaty proposed by the British Government last December, and rejected by the Egyptian Delegation, definite guarantees were required from Egypt on those four points. Lord Allenby has pointed out that such guarantees, even if they could be obtained, would not be worth the paper they are written on. He has accordingly induced the British Government to abandon the idea of a Treaty, and, instead, to abolish the Protectorate forthwith, at the same time laying it down that these four subjects "are absolutely reserved to the discretion of His Majesty's Government until such time as it may be possible by free discussion and friendly accommodation on both sides to conclude agreements in regard thereto."

In other words, the Treaty has simply been postponed. In the meantime we grant Egypt her independence and declare a kind of Monroe Doctrine, to keep other people out. This change of method has enabled Sarwat Pasha to form an Egyptian Government, so that martial law may cease, and that is a considerable gain. But to represent it as a settlement of the Egyptian question is a dangerous mistake. Not one single point at issue between ourselves and the Egyptians has been settled. We agreed in principle to the abolition of the Protectorate months ago. On the most vital point of all—the possible interference of other European Powers—we are taking steps to guarantee ourselves, without any reference to Egypt: we are formally notifying the world that such interference will be regarded by us as an unfriendly act. Why a mere change of method, no doubt very sensible in itself, should be "featured" in the Press as though it amounted to a settlement of the Egyptian question passes my comprehension. It is a poor compliment to Lord Allenby.

The *New Statesman* of March 4, on the other hand, thinks that to see anything but a reversal of policy in the latest developments is a superficial reading of the affair. Tracing the recent history of Egyptian events, it comes to the "struggle" between Lord Allenby and certain members of the Cabinet:—

It is important to insist on the seriousness of this battle, not merely in order to expose the lack of vision and the bad faith of the British Government—for that needs no further exposure—but to emphasise the clear vision and the good faith of the High Commissioner and the Anglo-Egyptian officials. Lord Allenby is no longer to be regarded—if he ever was to be so regarded—as an impartial agent of a despotism seated in London. He has ranged himself on the side of Egyptian independence. His views have been moulded by the facts as he has seen them on the spot and not by Utopian ambitions conceived some thousands of miles away. He has no political axe to grind and his military reputation is too big for the puny strategists of the War Office to turn up their noses at. He is a formidable opponent and a formidable ally, and the part he chooses to play must be a factor of the first importance. Egyptians have realised what it means to have him on their

side, and we think that some of the more implacable critics in this country would do well to realise it too.

It outlines the present position, and proceeds optimistically:—

We do not see, then, how any honest man can refuse to find large grounds for hope. On the other hand, we shall not halloo till we are out of the wood, cheerful though we may be at the thought that Lord Curzon and Mr. Churchill have at length realised that it is a wood they are in in Egypt and not a kitchen garden of the British Empire. It would be idle to pretend that there are not grave practical difficulties ahead. We expect the new proposals to find a ready acceptance among a large number of Egyptians. We know, indeed, that they actually represent the demands of an important section of opinion—the moderate or conservative party of which Adly and Sarwat Pashas are the most prominent leaders. But what remains to be seen is the attitude of Zaghlul Pasha, and, supposing his attitude to be hostile, how large his following will be. If the Zaghlulists were wise men, we think they would welcome the opportunity they are offered. The Protectorate has gone and martial law will go; the Egyptian Government will be free to hold an election, and, should it for any reason hesitate, could clearly be compelled by the overwhelming force of popular opinion. If an election is held, what have the Zaghlulists to fear? They have claimed consistently to represent the views of the vast majority of the nation. Presumably, therefore, they may count on securing a vast majority of seats, and raw as they may be in the practice of democratic government, they can hardly fail to secure the independence of their country within those limits—that is to say, with those concessions to British interests—which Zaghlul himself has admitted. But we are not sure, unfortunately, that the Zaghlulists are as wise as they ought to be

That there are certain limitations which must for the present attach to the full sovereignty of Egypt is certain. We want them to be as few and as light as possible; we do not want them to remain for ever. Nor do we want them merely for our own peculiar interests; our reactionary Imperialists have prated far too much on the subject of our "vital communications," and Mr. Lloyd George, in his telegram to the Dominion Governments, has perhaps been unnecessarily emphatic in his warning to other Powers to keep their eyes off Egypt. But the warning is a not altogether useless reminder to some Egyptians and to some Englishmen who talk as though we had no concern in Egypt at all. For it is well to remember that other Powers have their eyes on Egypt, in the sense that they have large communities of their nationals there, for whose welfare they are tender—a good deal more tender, we think, than for the feelings of the native Egyptians. In a word, Egypt is an international problem, and the status and condition of Egypt are factors in the peace of the world. That does not mean that we, or anybody else, are entitled to treat Egypt as a pawn; but it does mean that the Egyptian people must accept, for the advantage of all as well as their own, the implications of their economic position and their political weakness. It means that, if we do not have special privileges in Egypt, some other Power will—at any rate until the day when the League of Nations has become a reality. It rests with Egypt to make her choice, and it is to be hoped that, in the words of Lord Allenby's note to the Sultan, reflection and not passion will guide her attitude.

Copies of the Russo-Persian Treaty of February, 1921, ratified and signed by the Persian Government and the Soviet authorities and sealed by the Shah prior to his departure for Europe, have been exchanged.

NEAR EAST BOOKSHELF.

THE SONG OF SONGS.

"THE SONG OF SONGS: Being a collection of Love Lyrics of Ancient Palestine. A new translation based on a revised text." By Morris Jastrow, Jr.; Ph.D. LL.D. (J. B. Lippincott Company. 12s. 6d. net.) 124

This book has a melancholy interest for us in that it is the last work of Professor Morris Jastrow; the "Foreword" is dated but five days before his death. It is written with all the fervour of a literary enthusiast who has been carried along by the charm and increasing interest of his theme. The author explains his point of view, and also the *raison d'être* of the book, in the "Foreword," in which he disposes of the Solomonic authorship as "a pure tradition," and also of "the totally misleading allegorical interpretation" (p. 10). "The Song of Songs," he tells us, must be taken "for that it is, a continuous ecstasy on the theme of sensual love," (p. 11). "For the songs are folk-songs. All the songs are expressions of folk emotions," and "we cannot speak of an author or of authors in connection with these songs, any more than there are specific authors to folk-tales and fairy-tales" (p. 11, 12). "The seriously minded but unimaginative Rabbis of the Talmudic Age were no longer able to appreciate the folk spirit," and so "they took refuge in an allegorical interpretation" (p. 15). The inclusion of "the Song of Songs in a sacred collection (*i.e.* the Bible) comes to reinforce the instinctive conviction of mankind that human love is sacred, even its passionate manifestation, when not perverted by a sophisticated self-analysis" (p. 16). An argument, skilfully as well as positively presented, which will be welcomed by those who have vainly tried to trace a sustained high religious ideal in the verses of the Song of Songs. Professor Jastrow dates the Songs somewhere "in the second half of the third century B.C. *i.e.*, after 250," and considers that the interpolation in the text of Greek and Persian words places one Song, at least, "five centuries after Solomon."

The controversy that has long waged around the Songs as to their authorship, date, character, and interpretation, occupies rather more than half the book. There is, however, no reference to the interesting fact that the descriptions of country correspond rather closely to the fertile, gracious district between Bethel and Hebron which a long tradition identifies with Solomon—his Sealed Fountain, his Pools, his Garden. No one who knows the region can read the Songs without these scenes arising in his mind in continuous illustration. Professor Jastrow ascribes the rise of the Solomonic tradition to the dominating influence of the Wise King upon the Hebrew imagination, and thence reflected in Hebrew literature. Solomon was "the *grand monarque* of Israel," and "the symbol of royalty," a tradition of greatness and magnificence which grew in proportion as the fortunes of the Kingdom of Israel dwindled and declined. But then arose the difficulty of ascribing to such an one as the Wise King the authorship of the most passionate love songs in the national literature, and so an allegorical interpretation must needs be sought. The Songs were made to typify "the relationship between Yahweh and Israel" (chap. ii, iii). The early Christian Church quite easily changed the meaning of the allegory into the expression of Christ's love for His Church (chap. iii), and, with very few exceptions, theologians ever since have adhered to this view. Bossuet in 1693 adopted the view of Origen that the Songs were composed by Solomon in honour of his marriage with Pharaoh's daughter; while scholars of such widely differing scope as Franz Delitzsch, Ewald, and Renan agreed in considering it as a drama—an interpretation which naturally entailed a good deal of adjustment and revision on their part.

All this portion of the book is extraordinarily interesting and well carried out; the man of letters is evident as well as the Biblical scholar. It is when we come to the translations of the Songs themselves that we are disappointed. Each has been retranslated and rearranged, with copious notes, but nowhere do they approach the smoothness, the grace and beauty of the

Old English version, as we have it in the Bible. Such lines as

Thou art as clarified oil,
Therefore do the virgins love thee:

and

The saffron of the plain am I, . . .
As the lily among thistles
So is my darling among maidens,

are poor poetry compared with the musical rhythm of the Authorised Version. And the reader will have a sense of real beauty being lost when such a verse as

"Awake, O North Wind, and come, thou South,
blow upon my garden that the spices thereof may
flow out. Let my Beloved come into his garden and
eat his pleasant fruits."

is replaced by these bald lines:

"Awake, northwind and come;
Southwind, blow upon my garden!
That my love may come
And eat its pleasant fruits."

To translate poetry with absolute verbal fidelity may be to sacrifice the living spirit to the dead letter.

It would be unfair to end on a note of criticism; and, indeed, we think this is the one point on which the book invites it. We are sure that its many readers, whether already familiar with Professor Jastrow's other work or not, will be amply repaid by the perusal of this book; and they will feel that his last work is fully worthy of his reputation both as a keen and painstaking Biblical scholar and as a skilful and well-read man of letters.

E. M. E. B.

A REPRINTED CLASSIC.

"MOGREB-EL-ACKSA: A Journey in Morocco." By R. B. Cunningham Graham. (London: Duckworth & Co. 18s. net).

Mr. Cunningham Graham's classic on Morocco was first published in 1898, and it is good, after all these years to have it reprinted. For it is something much more than a mere travel book; and though its historical value has been diminished by the unwelcome processes of time, its literary worth nothing can impair. We are, therefore, unreservedly grateful to Messrs. Duckworth for giving us once more this fine record of a fine man's journeyings.

It would be superfluous to attempt to review or to appreciate this reprint; we propose merely to remind readers of the distinguishing marks of the book. There are many things that make "Mogreb-el-Acksa" different from all other works of this kind. Let us quote from the author's inimitable preface:—

I fear I have no theory of empires, destiny of the Anglo-Saxon race, spread of the Christian faith, of trade extension, or of hinterlands; no nostrum, by means of which I hope to turn Arabs to Christians, reconcile Allah and Javre, remove the ancient lack of comprehension between East and West, mix oil and vinegar, or fix the rain-bow always in the sky so that the colour-blind may scan it at their leisure through the medium of a neutral-tinted glass; and generally I fear I write of things without a scrap of interest to right-thinking men; of humours, sayings, proverbs, traits of character; little of eating, drinking, or night alarms of vermin, as travellers will; but on the contrary, of lonely rides, desolate camping places, of ruined buildings seen in peculiar lights, of simple folk who pray to Allah seven times a day, and act as if they never prayed at all; in fact of things which to a traveller, his travels o'er, still conjure up the best part of all travel—its melancholy.

Easily in the lightsome beauty of such philosophy we follow him and his companions on their unsuccessful journey to Tarudant, feeling with him in his imprisonment by the Kaid of Kintafi, lingering with him over the slow loveliness of Marrakesh, in fact laughing, jiving, regretting, and fearing with him all the time. In other books may be found a greater display of learning, or a vider sense of adventure, but for the broad warmth of its sympathies, its keen perception of unusual beauty, the honest commonness of its judgments, and for the general tone of its magnificent humanity, "Mogreb-el-Acksa" remains unsurpassed.

PERSONAL AND GENERAL.**To-Day.**

March 16 (New Style).

March 3 (Old Style).

Ragab 17, 1340 A.H. of the Moslem Calendar.

Adar I, 16, 5681 of the Jewish Calendar.

The Persian Minister, accompanied by Fatollah Khan Noury (Secretary of Legation), has left town for Paris.

Lord Porchester, 11th Hussars, has arrived at 1, Seamore Place from Constantinople.

The Prince of Wales will arrive home from India on June 20. His Royal Highness will be unable to accept any public engagements until the autumn.

The Marquess Curzon, who has been recently confined to his room, and has been ordered by his doctor to take a complete rest, left for the country on March 10.

Dr. Jean Cantacuzène, professor at Bucharest University, has been selected as the representative of the Roumanian Government at the Health Conference of Warsaw on March 20.

At Buckingham Palace, on March 10, the Right Hon. E. S. Montagu, M.P., was received in audience by The King and delivered up the Seals of Office as Secretary of State for India.

The marriage arranged between Mr. Thomas Beaumont Hohler and Miss Cynthia Astell will take place at half past two o'clock on Thursday, the 30th inst., at St. George's Church, Hanover Square.

A marriage has been arranged, and will take place shortly at Mhow, Central India, between Major E. W. Chadwick, M.C., Royal Artillery, and Joan, only daughter of Colonel and Mrs. L. H. Abbott, Indian Army.

Lady Winifred Gore has arrived at Government House, Lahore, from Flag Staff House, Delhi, where she has been visiting the Commander-in-Chief and Lady Rawlinson.

The engagement is announced between Lieutenant Gordon D. Brown, R.N.R., F.R.G.S., second son of Lieutenant-Colonel Oscar Brown, D.S.O., of Tavistock, and Annie, only daughter of Mr. and Mrs. J. Heaton, of Ceylon.

The engagement is announced of Lieutenant-Commander Edward Hastings, O.B.E., R.N., only son of Admiral and Mrs. Hastings, of Bayford Hall, Herts, and Grisell Cochrane Baillie, only daughter of Lord and Lady Leamington.

Lieutenant-Colonel Sir George Olaf Roos-Keppel, G.C.I.E., K.C.S.I., of Whitehall Court, S.W., a member of the Council of the Secretary of State for India, and for some years Chief Commissioner of the North-West Provinces, who died on December 11, aged 55, left estate of the gross value of £20,282, with net personalty £16,425.

Izzet Pasha, the Turkish Foreign Minister now in London, motored on March 10 to Cambridge, where he was shown over the University by Professor Browne. Nabi Bey, a former Minister for Foreign Affairs and delegate of the Porte at the Peace Conference, arrived last week from Paris and has joined Izzet Pasha at the Ritz Hotel.

General Sir Charles Harington, the Commander-in-Chief of the Allied forces, left Constantinople on March 11 in the Orient Express for London at the invitation of Lord Curzon in order to advise the British Govern-

ment on the Turkish situation. It is stated that he will probably attend the conference of Foreign Ministers in Paris.

Prince and Princess Christopher of Greece gave a dinner party, followed by a dance, on March 7, at the Villa Kasbeck, Cannes, to celebrate the engagement of the Crown Prince of Denmark and Princess Olga of Greece, both of whom were present. Other guests included the Grand Duke and Grand Duchess Cyril, the Grand Duchess Anastasia, Princess Nicholas of Greece, Princess Elizabeth of Greece, the Infanta Beatrice, and Princess Xenia and Mr. W. Leeds.

His Excellency Sardar Abdul Hadi Khan, the newly-appointed Afghan Minister to the Court of St. James, will, we understand, present his letter of credence to the King at Buckingham Palace shortly. The personnel of the Legation is as follows:—Sayad Qasim Khan (Councillor), Aziz Rahman Khan (First Secretary), Ghulam Ghaus Khan (Second Secretary), and Mohammed Safdar Khan (interpreter). The Minister and the personnel of the Legation are staying at the Ritz Hotel. This is the first time Afghanistan has been represented in this country.

The Bulgarian Minister and Madame Stancioff entertained a large number of friends last Thursday at 51, Queen's Gate. Among those present were:—The Minister of the Netherlands and Madame Van Swinderen, the Italian Councillor and Madame Cora, the Italian Military Attaché and Madame Riggi, Prince Max Lobkovitz, Major and Mrs. Villiers-Stuart, Major Cumberbatch, Major Neate, Sir Edward and Lady Boyle, the Dowager Lady Boyle, Miss Buchanan, the Hungarian Minister and Madame de Hédry, Mr. Boyd, Madame and Mlle. Wolkoff, Captain Petroff, and other friends.

The Earl and Countess of Lytton, who lunched with the King and Queen at Buckingham Palace on March 8, and bade farewell to their Majesties prior to taking their departure for India, left Victoria the following afternoon *en route* to Bengal, where his lordship will take up his new duties as Governor of the Province. Mr. E. S. Montagu was present to bid farewell to them at the station, and thus performed practically his last official act as Secretary of State for India. Many personal friends of Lord and Lady Lytton were at Victoria to see them off and bid them "God-speed;" among the number were Lord Islington and Lady Islington. The travellers proceeded to Dover by the afternoon boat train, crossed to the Continent, and resumed their journey to Marseilles, there to embark for India.

The marriage was celebrated on March 7, at St. George's Church, Hanover Square, between Captain Henry Dane, Indian Army, younger son of Sir Louis and Lady Dane, and Victoria Alexandrina, daughter of General Sir Reginald and Lady Wingate, and a god-daughter of Queen Victoria. To witness the ceremony the Princess Royal, with Princess Maud, was present. The officiating clergy were Prebendary Thicknesse, and the Rev. P. F. Wigan, of Tewkesbury. Among those present were Lady Wingate, Sir Louis and Lady Dane, Major and Mrs. Dane, Mrs. Ronald Wingate, Mrs. Fleming, Colonel and Mrs. George Wingate, Colonel A. W. and Mrs. Wingate, Miss A. M. Wingate, Mrs. Greany and Miss Greany, Miss Wingate, Mrs. Elkin Mocatta, the Dowager Duchess of Roxburghe, the Countess of Stamford and Lady Jane Grey, Lord Blyth and the Hon. Mrs. Gerald Gold, Lady Frances Balfour, Lady Victoria Villiers and Miss Villiers, Lady John Joicey-Cecil, Colonel and Lady Edwina Lewin, Colonel and the Hon. Mrs. Acland, the Hon. Mrs. Stanley Jackson, the Hon. Mrs. Edward Lascelles, Colonel the Hon. Milo and Mrs. Talbot, the Hon. Mrs. Edmund Bevan, Mr. and the Hon. Mrs. Sydney Seymour, General Sir Charles and Lady

Alice Fergusson, General Sir Archibald and Lady Hunter, Major-General Sir Charles and Lady Parsons, General Sir Ronald and Lady Lane, Lady White, General Sir Josceline Wodehouse, Sir Vincent Corbett, Sir John Cockburn, Colonel Sir Francis and Lady Younghusband, Lady Alexander, Sir Edgar Bonham-Carter, Sir Sidney Low, Sir Arthur and Lady Whinney, Sir Henry and Lady McMahon, Lady Chetwode, Sir Bartle Frere and Miss Frere, Sir Herbert and Lady Read, Lady O'Dwyer, Sir Arbuthnot and Lady Lane and Mrs. Harold Chapple, Sir Hamilton and Lady Grant, Lady Palmer, General and Mrs. Saward, Miss Carnegie and Miss K. Carnegie, Mr. T. W. Gull-Acland, Mrs. Bertram Romilly, Mr. I. Vinogradoff, Colonel A. C. Yate, Miss M. Cochrane, Colonel and Mrs. Hans-Hamilton, Mr. and Mrs. O. Mocatta, Mr. and Mrs. Philip Napier, Mr. W. H. Bonham-Carter, and Dr. and Mrs. Acland.

The reception was held at the residence of Mrs. Elkin Mocatta in Great Cumberland Place.

CAIRO TO BAGHDAD.

Mr. Montague Bell's Arrival.

We have received telegrams both from Cairo and Baghdad announcing the safe arrival in the latter city of Mr. Montague Bell, Managing Director of THE NEAR EAST. Mr. Bell left Cairo on March 6, by air mail, and arrived in Baghdad on Saturday, March 11. He is the first Pressman to make the journey by this route.

A ROMANCE OF THE DESERT.

On March 9, at the Royal United Service Institution, Whitehall, Air-Commodore Brooke-Popham lectured before the Central Asian Society on the Cross-Desert Route from Cairo to Baghdad. He said there had existed from the most ancient times a caravan route from Damascus to Baghdad with wells at intervals along its course. But military aeroplanes could not be sent across territory that was not under the British mandate, so another almost waterless route was selected farther south, and a track made by a convoy of motor cars for the aeroplanes to follow. Such a track was necessary, because if an aeroplane had to descend in the desert it would be very difficult to find it unless it could be searched for along a definite line. In the course of his address the lecturer told the following story:—

"On the occasion that I crossed the desert to Baghdad there was quite a gathering at El Djid. There was the R.A.F. car convoy returning from the East, another car convoy which had been reconnoitring for a railway came down from the North, and there was my flight of three aeroplanes from the West. Three independent parties all meeting at this poor little well in the midst of the vast uncharted desert. The party from the North told me they had come across a sheikh who had been wounded two days before in the course of a raid made on him. They suggested that as he had been friendly to the R.A.F. convoy when it was working to Baghdad, it would be a good thing now to fly him to Baghdad for hospital treatment. This was referred by wireless to Sir Percy Cox in Baghdad; he agreed, and so we decided to do it. A couple of Ford cars were sent off to pick up the sheikh and take him to landing ground 4 A. About four hours later I started off with three machines, and just as we got over 4 A we saw two little black dots hurrying along over the desert, these being the two Ford cars with the wounded sheikh and a friend. We landed all right, put the sheikh into one of our machines and eventually got him to Baghdad in safety. What the sheikh thought of it I don't know. Poor man, he wasn't given a lot of chance to object. Hustled first into a Ford car, then into the strange looking contraption of wood and canvas, borne for hundreds of miles through the air, lifted into an ambulance and, before he knew what was actually occurring, lying on a bed in Baghdad hospital and being X-rayed. Somewhat alarming for a wild sort of child of nature who had probably never slept in a house in his life."

The sheikh recovered, and later events showed that the incident had not failed to produce a friendly feeling on the part of his tribe.

The British troops in Constantinople, hitherto styled "The British Army in Constantinople," are now to be officially designated "British Corps of Occupation, Constantinople." They are under the command of Major-General T. O. Marden.

The Calcutta University Budget estimate for 1921-22 has been adopted. It showed a deficit of £33,000, which the Vice-Chancellor ascribes partly to the defection of students and partly to the non-cooperation movement.

WHERE TO STAY IN THE EAST.

CAIRO.

THE CONTINENTAL-SAVOY

THE MOST UP-TO-DATE AND BEST SITUATED HOTEL IN CAIRO

Entirely Renewed. Overlooking Ezbekieh Gardens. Opera Square. Famous Terraces. 300 Rooms, 150 Bath-rooms. Cairo's Fashionable Grill-Room Restaurant. Daily Concerts. Weekly Dances. Open all the Year round

MENA HOUSE HOTEL,

At the Foot of the Pyramids. The Ideal Hotel out of Town

HELOUAN. HEALTH RESORT near CAIRO. Sulphur Baths & Thermal Establishment
GRAND HOTEL, HELOUAN. Strictly First Class.

THURSDAY, MARCH 16, 1922.

THE RETIREMENT OF MR. MONTAGU.

It is not yet possible to offer a considered opinion on the circumstances which have resulted in Mr. Montagu's enforced retirement from his office as Secretary of State for India. The official explanation published on Friday was rejected with scornful ridicule in his speech to his constituents on the following day ; we are writing before the issue of the rejoinders which that speech must inevitably call forth ; the strong feeling by which it was characterised warns us against accepting it as an impartial account of the case ; and experience of similar controversies in the past justifies the anticipation that the ultimate truth will be reached only when the secret memoirs of the day become the property of a later generation. Certain facts, however, stand out clearly. It is less than a month since Mr. Montagu's administration of India was formally challenged by a hostile resolution in the Commons. From that ordeal he emerged to all appearance triumphant, and it was generally agreed that this result was due mainly to the effective support accorded to him by the Prime Minister. It is the same Prime Minister who has now ordered his resignation : if a sacrifice had been intended, it could have been carried out as easily in February as in March ; and the inference appears to be justified that the cause must be sought in events occurring within the last few weeks. To pursue the topic further would carry us into the somewhat turbid stream of the internal relations subsisting between the discordant elements of the present coalition. We prefer to leave those waters to the quidnuncs of the daily Press, and to turn to questions less interesting, perhaps, but of more serious moment to India and the British Empire as a whole. We have to inquire first whether Mr. Montagu's departure from Whitehall indicates a radical change of policy in regard to India ; and, second, what effect it is likely to have on the course of events in that country.

On the first question we have at present only Mr. Montagu's assurance that no alteration in policy is involved, but there are good grounds for the conclusion that this assurance is justified. There is no doubt that public opinion in this country is uneasy regarding the situation in India, but there are no signs whatever that it has been decided to depart from the policy accepted nearly five years ago. It is not possible to speak so confidently of the Cabinet, for reversals of its policy have been somewhat numerous of late ; but they have been such as must be expected in the present anomalous state of politics ; and, as Mr. Montagu argued, a housing or an education, policy is a very different thing from a deliberate undertaking to change the course of Asiatic history. The name of the new Secretary of State has not yet been announced, and it would be idle to speculate on the proclivities of an unknown individual ; but if, as we hope will be the case, the office falls to a statesman distinguished for sound, British, common sense, we shall expect to see some alteration in methods, for which there is room, but nothing which could be described as a reversal of the policy of leading India by degrees along the road of which democratic self-government is the end. Several of our contemporaries anticipate that Lord Reading will follow Mr. Montagu into retirement. On that point also definite news has not yet reached us, but if the anticipation should prove to be correct, we should not regard the event as one of great significance from

the standpoint of policy. A change of Viceroy would be inconvenient at the present juncture, but it might be less injurious than the retention of office by a Viceroy who might feel uncertain of Cabinet support ; and in any case we see no reason to suppose that a fundamental change of policy is in sight.

The other question raised by the events we are discussing is their probable effect on thought, or rather feeling, in India ; and on this point it is necessary to attempt to strike a balance. Mr. Montagu's name counts for much more in India than in this country. He has won the reputation of being a staunch friend to Indian aspirations, and his presence in Whitehall has undoubtedly been an influence for good with that large mass of opinion which has for so long been wavering between moderation and extreme action. His departure will be read in some quarters as foreshadowing a change in policy, and, seeing that stability is the most immediate need, anything which tends to increase uncertainty is a thing to be regretted. A more definite result must be anticipated in the case of the Moslem population, whose sentiments regarding Turkey are now well known. It may be true that such sentiments have no valid foundation in religion or history, but nevertheless they constitute an important political fact. Altogether apart from the agitators who have exploited ignorance or sentimentality, there are many millions of Indians who genuinely, if mistakenly, believe that their spiritual leader, the Sultan of Turkey, has been outraged by the terms of the Treaty of Sèvres, that the British Government is primarily responsible for the outrage, and that Mr. Montagu has made a gallant though unsuccessful stand against it. So long as he remained at Whitehall, it was possible for these Moslems to hope that he would eventually succeed : his departure will go far to destroy that hope, the more so that it has taken place in circumstances which will certainly be represented as a definite defeat for the Crescent. It must not be assumed that in saying so much as this, we are giving our support either to the extreme Moslem claims, or to that modification of them which has been put forward as essential by the Government of India. That question is much too large to be dealt with incidentally, and we are not stating what Indian Moslems ought to think, but rather what they actually feel ; our point is that the Government's position in India will be weakened through the loss of some potential support, and through the confirmation of some hostility which already exists. On the other side of the balance sheet, it must be recognised that Mr. Montagu's departure will be viewed with relief by most Englishmen in India. He resents bitterly the charge that he has attacked the position of the Services, but here again we are dealing with feelings, not with their justification, and of the strength of this feeling there is unhappily no doubt. More important than this consideration is the fact that Mr. Montagu's presence at Whitehall has made for that lack of the sense of realities which has characterised the recent actions of Indian politicians in the mass. They are too apt just now to assume the benefits resulting from their inclusion in the Empire as their unquestioned right, and to overlook the conditions on which those benefits are available. Some of them have of late attempted to dictate their terms to Parliament, and there is no doubt that this attitude has been based very largely on confidence in Mr. Montagu's responsiveness to every popular demand. The interposition of a fairy godmother between Sovereign and subjects has served some useful purposes, but its indefinite prolongation has threatened serious dangers. If, as we hope, Mr. Montagu is succeeded by a statesman of the solid type, the effect in the long run will be to help Indian politicians to a juster view of their position in the Empire. They are perfectly justified in bringing their views and wishes before Parliament, but they need to realise that a frank acceptance of Parliament's decisions is the first condition for the attainment of their desires. The temporary injury to the Government, of which we have spoken, will be fully compensated if the change at Whitehall should conduce to early realisation of this fundamental fact.

THE BOBBERY PACK.

MEMORIES OF A BAGHDAD HUNT.

By "*Abu Nakhla*."

The Bobbery Pack hunted a country on the banks of the Tigris and Diyala rivers and not a thousand miles from the ancient capital of the Abbasid Khalifs. One of their favourite meets was within a few hundred yards of the tomb of the Sitta Zobeida, wife of Haroun er Rashid, and another near the twin shrines of the two Kadhims, Imams of the Shia faith. They have hunted lines past what the ignorant still suppose to be the last resting place of Joshua the son of Nun, and past the Mosque of Abu Hanifa, one of the four great orthodox lawgivers of Islam; and the field—to say nothing of the pack—have lunched on lamb roasted whole in the black tents of an Arab Sheikh, pitched beneath the shadow of a tower built by the Kassites some fifteen centuries before our era, when Babylon was still mighty.

Of more practical importance perhaps were the old Turkish trenches and the canals of all sorts and sizes, both wet and dry, which had to be negotiated somehow, and that without too much delay, if the rider was to keep with the "long dogs" who comprised the pack. We called them Persian Greyhounds by courtesy, but not all their pedigrees would stand too close a scrutiny. "Sam," a big, raking, rough-coated black and white dog with a beautifully feathered tail carried as a greyhound should, had lived too long among the fleshpots of the gilded Staff, and was all "eye-wash" and little work. "Iodine" got his name from the fact that he seldom returned from a hunt without at least one wound. He had the heart of a lion, and, although rather on the slow side, always went in the moment he arrived. He never could learn to tackle far enough forward, and eventually was killed by a jackal twice his own weight who tore his throat clean out. He was mourned by all, and was the only hound the pack ever lost in that way. The list is too long a one to go through, but "Rosie" must be mentioned—a hard worker, everybody's pet, and the mother of several good puppies. "Tiger," too, with the extra weight and power of jaw which he got from a fox-hound strain was useful at the kill.

In theory the pack hunted jackal, fox, and hare. In practice they had a regrettable tendency to hunt anything which would run, and there are stories of a blaspheming master, aided by an equally mellifluous whip, trying to turn the pack, who were heading at full stretch for the desert on the heels of a donkey, who was evidently set on making what might have proved to be a record point. And it may be added that eight couple of greyhounds, when they are really going over broken ground, take a good deal of getting round.

Cats were very apt to get chopped near Arab houses, and many a lizard has been run to ground after a fine burst of twenty yards. The greyhound is ever an optimist, and a fool at that, and never seemed able to realise that the odds were too heavily in favour of, say, a lark, for it to be worth the while of a full-grown hound wasting his energies in hunting him.

The writer is reminded of a certain General who hunted the great desert lizards of the Euphrates side by the simple process of running over them in a Ford car. Both he and his driver became so desperately keen for blood that they either did not see or ignored any minor obstacle that came between them and their quarry, and some of the turns executed when the lizard

kinked would have done credit to a winner of the Waterloo Cup, but were, when you were an unwilling passenger in the car, things to make a brave man quail.

This, however, is possibly contrary to good order and discipline, and certainly is a digression. There was one nerve-shattering day when hounds were drawing across newly irrigated crops and the going was so deep that a horse could only flounder through slowly. The inevitable irresponsible idiot halloed an imperfectly seen object moving in the barley, and away went hounds on the line of what proved to be a small Arab girl of some eight summers, who made wonderful travelling and gained the shelter of the family hut with a short length to spare. The pariah dog of Mesopotamia, though much smaller, bears a considerable resemblance to a jackal both in build and gait, and there was one occasion at least upon which a "pie" dog was mistaken on a distant view for a jackal and hunted in all good faith until he gained the Arab tents to which he belonged, and turned to bay supported by his fellow pies.

Probably the best hunts were those that started with a view at a long distance. When a jack is pushed up only a few hundred yards ahead of greyhounds he has not much chance, unless the pack is already tired with one or two long courses earlier in the day, or unless the ground is so broken or covered with camel-thorn that hounds cannot develop their full pace. But when the jack is viewed at perhaps half a mile and decides on some earth or date garden that he wishes to make, then you may look for anything up to four miles and fast enough to suit the greatest thruster.

You must gallop from the moment that the jack is viewed, and it is interesting to watch greyhounds being laid on at that pace. They will gallop alongside or behind a huntsman upon whom they know that they can rely to show them sport with their heads well up and obviously with perfect confidence that a quarry is afoot in front of them. Considering how close, compared with that of a man their view-point is to the ground, they will get a view at an astonishing distance, and although they hunt of course mute, there is never any doubt as to the exact moment when the first hound has done so. After that it is a question of pace *versus* staying power; if the jack can keep away from greyhounds for two miles it is a shade of odds in favour of his final safety, although it is probable that with time and careful breeding a pack could be collected with more staying power than the one we are speaking of. It is difficult, too, to get a greyhound pack to tackle a jackal when they are really tired at the end of a long burst, and the writer recollects seeing, when hunting with a very excellent pack who were for some time neighbours of the "Bobbery," the curious spectacle of an exhausted jack lying on the ground surrounded by an equally exhausted pack and a crowd of men and horses, all with bellows to mend.

Packs vary very much in their ability to pull down and kill a jackal, and may on occasion require some assistance; but novices may be warned not to interfere unless they have a loaded crop and, even then, to do so with caution. (If these words come to the eyes of the "Shark" he will look with pleasant memories at certain honourable scars).

Once and once only, as far as the writer is aware, did the Bobbery Pack hunt wolf. Two were viewed with a long start, and made off at a tremendous pace towards the Diyala river. Their pace indeed was the first clue that we had that we were not hunting jackal, and we were never quite sure of it until after the hunt, when we

ASK FOR

WHITE HORSE WHISKY

BY APPOINTMENT.

were told so by natives close to whom the wolves had passed. They made straight over the high embankment of the Baqubah railway which hid them from view for a time. As the leading man of the field topped the bank he saw the two about a quarter of a mile ahead and looking, as he thought, very large for jack; but wolf had never been reported in the neighbourhood. Just after this the two leading hounds closed with the second wolf and rolled him over, and the pack and quarry topped an old Turkish flood-bank together and were again lost to sight. Hounds were found at fault just beyond the bank in a depression, and the wolves were never seen again. It is probable that a jackal had thrown them off the line and then gone to ground.

The hare in Mesopotamia will sometimes give an exhibition of circles and figures of eight which require a polo pony to follow, and which have (for the hare) one inevitable and speedy end; but more often she takes a good and takes it very fast. She has, too, a disconcerting habit of going to ground.

One winter morning the pack was drawing out from the meet past a low range of hillocks which were honey-combed with old Turkish trenches and "funk-holes," which made them in places quite unridable. The pack, followed by the field, moved northward along the west side of the hills, while B was sent round the west side in case any jack should break that way. To B's right again, and crossing his front, was the Fellujah road which, as it so happened, had been giving B some trouble in his official capacity, owing to the activities of a gang of footpads whom he had been unable to lay by the heels.

However, it was not long before a glimpse of something moving in the trenches made B forget official worries, but, remembering the good old rule, he began religiously to count twenty before a halloo, and at the same time manoeuvred for a better sight. Before he got to "ten" he was able to enfilade a short length of trench, and was aware of three human figures, bent double and making all the pace they could southward or "back." B could not follow across the trenches—the odds in that warren were too much on the dismounted man—and he had no desire to turn his horse loose, so he had recourse to a series of halloos that would have shamed a banshee, trying the while to keep the three Arabs in sight. They, realising that the weird outcry produced by the Englishman meant that they had been seen, separated, and it became increasingly difficult to keep any idea of where in the labyrinth of trenches they had got to. B's horse, knowing full well that a halloo ought to mean a hunt, and furious at not being allowed to get ahead, abandoned the use of his front legs altogether and progressed magnificently but inconveniently on his hind ones only; and the field seemed as deaf as adders, and no man came over the sky-line to help the situation. At last when B had lost sight of two out of the three men, and when things were looking pretty desperate, three figures galloped tardily over the crest. It took a little time before they could be got to understand that we were out for business and not for pleasure, but the idea soaked in at last, and one of them galloped back to get the field to encircle the trenches. Meanwhile one of the Arabs slipped quietly from the south end of the trenches and got away with a good lead before the field could be informed what was happening. He was pulled down in the open after quite a nice little hunt. A second man broke quite close to where they had first been viewed, and gave no sport at all. The

third got clean away. Enough stolen goods were found in one of the trenches to make a good load for a second horse who was impressed for the purpose. Altogether quite a useful morning's hunt.

Coursing with "long dogs" may not be legitimate hunting but, if good fun, good fellowship, and happy memories are any test, it is very good sport. The field that followed the Bobbery Pack are scattered to the four quarters of the world whence war and chance brought them to the Land of the Two Rivers, but wherever they be where men ride to hounds, from the Pytchley to Peshawar—here is "good hunting!" If they never have worse than some of the gallops they had with the Bobbery Pack they will not do too badly.

SUDAN NOTES AND RECORDS.

The last number of the 1921 issue of *Sudan Notes and Records* has been delayed, but by the time that these lines are in print, copies will probably have reached this country. Among the contents are:—

1.—The religious confraternities of the Sudan.

An account of the Islamic tariqas and kindred organisations, by C. Willis, Esq., O.B.E., (Director of Intelligence Sudan Government).

2.—The Ruff.

A description of a well known bird which visits the Sudan and is a grain feeder, by J. E. M. Mellor, Esq.

3.—A description of certain taxes levied upon Nomads under the old Turkish Government, known as Zeka &c., by C. E. Lyall Esq., O.B.E. (Civil Secretary, Sudan Government)

4.—The Scholi and their neighbours; a description of a peculiar people living on the borders of the Sudan and Uganda, by Major Powell, R.A.M.C.

5.—Secret Societies.

A compilation from official sources on the most recent information in respect to a number of most pernicious and obscene organisations. The creeds and rites apparently resemble the worst forms of the West African Ju-ju and it is not improbable that they are either part of these societies or owe their origin to attempts to imitate them.

THE EXPLORATION OF THE SAHARA.

An expedition organised by Mr. Angus Buchanan left Liverpool on March 8 for Nigeria to explore certain areas in the Central Sahara. The party, which sailed from Liverpool for Lagos in the s.s. *Aba*, consists of Mr. Buchanan, Mr. Francis Rodd, son of Sir J. Rennell Rodd, formerly British Ambassador at Rome, and a cinema operator, Mr. Glover. Mr. Buchanan visited Air in the Central Sahara in 1920, and made a valuable collection of birds and animals. He has recently published a book on this journey. On the present expedition he will devote himself primarily to the natural history sections of science, and hopes to form a considerable collection of bird and animal specimens connecting the fauna of the north with those of Central Africa. Mr. Rodd is more especially interested in the historical side, and one particular point of interest arises in this connection, namely, the classical penetration and exploration of the Central Sahara from the Mediterranean. It is stated that Mr. Rodd will furnish the *Morning Post* with an account of the expedition's travel and achievements.

The expedition will land at Lagos and entrain forthwith for Kano, where about three weeks will be spent in collecting camels and personnel.

LORD KITCHENER MEMORIAL.

We understand that in the competition for the Memorial to Lord Kitchener the successful competitor is Mr. W. Reid Dick, A.R.A. The Memorial, it is stated, consists of a recumbent figure of Lord Kitchener, with figures of St. Michael and St. George and a Pieta, and it will be placed in a chapel at the base of the south-west tower at the entrance of St. Paul's Cathedral. The architecture was entrusted some time ago to the Cathedral architect, Mr. Mervyn Macartney, and Mr. Detmar Blow.

THE MIDDLE EAST.

MR. CHURCHILL'S STATEMENT.

In the House of Commons on March 9, Mr. Winston Churchill, Colonial Secretary, on a Supplementary Estimate of £1,737,600 for Middle Eastern services, made an explanatory statement of considerable interest. He had, he said, a fairly satisfactory tale to tell. There had been no going back upon the undertaking that he gave the House last June. On the contrary, the rate at which troops had been withdrawn from Irak had been accelerated, and consequently expenditure had been diminished. Let the Committee see the milestones on the road which had been travelled. When the war came to an end there was in Irak and Palestine an army of 175 battalions. The Estimates for 1920 showed that that army was being demobilised, and on April 1, 1919, the force had fallen to 99 battalions, and the cost was estimated at about £75,000,000. In 1920-21 a further reduction to 70 battalions, costing about £40,000,000, was shown in the Estimates; and, for the current year, 37 battalions costing £32,500,000. The policy announced by him to the House last year brought a saving of about £5,500,000 on the Estimates of 1921-22, and offered a prospect of a further reduction of nearly £18,000,000 on the Estimates of 1922-23. Last year he stated that he hoped the expense of Palestine and Irak might together be in the neighbourhood of £10,000,000 in the year 1922-23. If the anticipations of last year had been fulfilled to a very considerable extent up to the present moment, a real measure of credit should be extended to those skilful, sagacious officers on the spot on whom the whole labour and difficulty of carrying out this policy had rested, as well as to the group of highly skilled and experienced advisers who were gathered together to form the Middle East Department, and from whose united action their policy in Mesopotamia had been entirely derived.

The reduction of expense mainly took the form of a great diminution in the garrisons. The 48 battalions which were in Mesopotamia alone at the beginning of the year they decided to cut down at once to 23, and then he hoped to reach the figure of 12 by the end of this financial year. They had actually reached the figure of nine, and ultimately they contemplated dropping to six, and even to four.

These great reductions had been obtained by policy, by air power and by local forces. As these local forces came into being the British and Indian troops were being withdrawn to railhead. They had not got lots of small detachments of British or Indian troops scattered all over the country. Eight air squadrons were concentrated at Baghdad, and these constituted the principal agency by which the local levies all over the country were supported and the authority of the Arab Government was rendered effective. The military control and security of Mesopotamia would be placed in the coming year under the charge of an officer of the R.A.F. The air mail was now running with very fair regularity from Baghdad to Cairo, and the whole of the Government mail communications with Mesopotamia had been shortened by a month or six weeks.

Great Britain was not so much holding Mesopotamia as allowing the country to hold itself. They had endeavoured to set up a form of Government which could claim the support and respect of the inhabitants. The municipal elections, which, under the electoral law of Irak, were an essential preliminary to the elections for the National Assembly, were nearly concluded, and it was interesting to note that they had resulted in the return of moderate men in sympathy with the policy of his Majesty's Government. In many cases the Emirs appointed by the British Government were elected. That was the more remarkable in that we had practically no troops outside Baghdad.

He could not help feeling that we should be well advised to pursue the path of developing Arab institutions, and he could see no reason why we should not make progress in the near future. The total number of British officers and civilians killed in the whole of Mesopotamia and Turkestan during the whole of last year was only six, and seven were wounded. Three of these were killed and four wounded by air accidents. No one had been punished for treason of any sort, and there had been but one single deportation.

In the war, when we were fighting for two or three years on a great scale on the Euphrates and Tigris, we spent £200,000,000 or £250,000,000. The money spent in Irak since the war on the demobilisation of the troops and bringing them home and other matters certainly amounted to £125,000,000. The question to be settled was: Can it all absolutely be thrown away for nothing, just at the moment when it may well be that satisfactory results are at hand? He thought it possible that an expenditure of £8,000,000 this year in Irak and about £4,500,000 next year, and a considerably smaller sum the year after, if all went well, would suffice to carry us forward to the time when we might reasonably expect to secure some return both in trade and development of the valuable oil possibilities which abounded all over that area. If we could create a contented and tranquil native state, under a Government that it liked and supported, and through that Government secure the gradual beginning of economic development, at the same time continually reducing our responsibilities and burdens in regard to that country, we might, at the cost of two or three years of diminishing expenditure—£8,000,000, £4,500,000, £3,000,000, and £2,000,000 a

year—get into a position where we should not have thrown away the immense sums we had spent, but should have discharged the responsibility we undertook, and have not been put into the humiliating position of returning the mandates we had accepted.

Turning to Palestine, Mr. Churchill said that the expenditure on that country for 1921 was £8,000,000, the expenditure in the present year was approximately £4,000,000, and he was expecting to get through the coming year for about £2,000,000. That was not an absolutely unsatisfactory state of affairs. As to Palestine, he was not in the same position as he was in the treatment of the Irak question. In Palestine the Government were pledged to a policy absolutely right in itself, but which nevertheless did encounter, and must necessarily encounter, a great deal of suspicion and resentment on the part of the majority of the population. There had been a very quiet and peaceful year in Palestine. Broadly speaking the country had been tranquil, though he did not for a moment pretend that the feeling of irritation, suspicion, and disquietude had disappeared from the hearts of the Arab population. The Jewish immigration had been most strictly watched and controlled from the point of view of policy. Every effort had been made to secure only good citizens who would build up the country. Altogether about 9,000 immigrants had come in this year, and they brought with them the means of their own livelihood. The Zionist Association were spending nearly a million a year in the country.

He had been brought up against a very difficult situation. The Arab delegation which had been in this country, and other representatives with whom he had discussed the matter, had said, "If you are able to give a free Constitution to Irak, why cannot we have a similar free Constitution?" He had decided to go to the utmost length which was possible in giving them representative institutions, without falling into a position where he could not fulfil those pledges to which the Government were committed by the Zionist policy. The power to carry out those pledges must be retained in the hands of the Imperial Government, but he had most strongly urged the Arabs to take part in the new elective councils and to bring their critical faculties to bear on all questions connected with the Government. There was now a very wide franchise in Palestine. Of course there was a secondary election. Nearly everybody had a vote, but these voters elected 1,000 secondary electors, who in turn chose the Legislative Council, with certain nominated members. There would be an elected majority on the Council of Jews and Arabs.

With regard to Transjordan, the Emir Abdullah, brother of the Emir Faisal, had fulfilled the expectations reposed in him. Public security there was increasing every day. Only two raids had taken place since March, 1921, and both were suppressed at the outset. A year ago that country was in a state of complete anarchy and the French were complaining every day of the disturbance of their territory owing to the fact that all this territory was in a derelict condition. There had been no British troops there; the work had been done entirely by British officers raising local levies, by an Arab prince who displayed the insignia of his house, and by a few armoured cars and occasional small visitations by a few aeroplanes. The cost had been about £100,000—less than the price of a single battalion, which, if stationed there, would have been in a very dangerous position.

Regarding an item of £30,000 in the Estimate for the gendarmerie of Palestine, Mr. Churchill said that the original Estimate for Palestine was something over £3,000,000, and it was then intended that the country should be held by troops under the War Office in the ordinary way. But he proposed to the Cabinet that they should endeavour to effect further economy by using Indian troops and by having a force of white gendarmerie and by transferring the control of Palestine entirely to the Colonial Office, in the military as well as in the civil sense. The result had been that the Estimate had been reduced by £1,000,000 for the coming year. These gendarmes had been formed, to a very large extent out of constabulary and auxiliaries who had served in Ireland. The greatest case had been taken to obtain men of the very highest possible character.

With regard to the Arabian subsidy, it was again a question as to whether gold made a better weapon than steel. No doubt a greater measure of peace had been kept by these subsidies than would otherwise have been possible. He could not guarantee that the future would be unclouded or that no storms or misfortunes would arise. He could only say that he believed the course which the Government was pursuing was the best in the circumstances; that there was much more reason for thinking it would succeed this year than there was last year, and that the reasons which induced the House last year to adopt it, to-day presented themselves in a far more considerable measure.

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus. E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

Mr. Asquith criticised the expenditure in that part of the world. While hoping that the Colonial Secretary's expectation of reduced expenditure would be realised, he thought that Ministers were disposed—not in regard to Mesopotamia alone—to throw up their hands and to ring the joy-bells before they were quite out of the wood. The fulfilment of a number of hypothetical conditions in the sense which all desired was essential to a view of the future, which would enable them to accept, without fear of Supplementary Estimates next year, the Colonial Secretary's figure of £8,000,000. Progressive reductions year by year of the troops in Mesopotamia and of our expenditure there were illusory unless there could be brought about an absolute, agreed, permanent arrangement between Turkey and the other Powers. He did not wish to say anything which might embarrass the negotiations which he understood would shortly be going on in Paris, but after the remarkably grave and even formidable pronouncement which had appeared that day on the authority of the Indian Government after consultation with the Governors of the several Presidencies, it was of the utmost importance that no illusion should be allowed to exist as to British policy in the Middle East.

Mr. Ormsby-Gore thought they might congratulate themselves that the new policy in Mesopotamia had turned out better than a great many people anticipated. In his opinion the House ought to be told what the cost of the civil administration of Mesopotamia as a whole had been, and not merely the deficit, which appeared in the Estimate at over £1,000,000. They ought, also, to have some indication of what the policy of the Government was in Southern Arabia. Having regard to the religious quarrels and riots between Mohammedans, Jews and Christians in Jerusalem, the Force would have the most difficult and delicate duties to perform, and accordingly it was most essential that it should be of the highest possible character in the matter of discipline. As to the railway in Mesopotamia, he felt certain that so long as it was worked by the State it would never be made to pay.

THE BRITISH MOSLEM SOCIETY.

The Minister of Afghanistan paid an informal visit to the Moslem Mosque at Woking on March 12, when he received an address of welcome from the British Moslem Society. His Excellency Sardar Abdul Hadi Khan was received by Khaja Kamal-ud-Din, Imam of the Mosque, and among those present to welcome him were Lord Headley, President of the Society, Prince Faiz of Mahawadar, the Princes Sadiq and Aziz of Mangrol, and the President and members of the Palestine Arab Delegation. The address of welcome, which was read by Lord Headley, referred to the difficulties harassing Islam and the Khalifat to-day, and expressed the hope that they would be dispersed in the only manner acceptable to Moslems, and that the integrity of the Turkish Empire, with the Sultan as Khalif and Guardian of the Holy Places, might be fully established and maintained.

The Minister replied that it was a matter of deep satisfaction for him to know that their English brethren shared the political creed of the rest of the Islamic world. He was impressed to find that their hearts were throbbing with the same universal sentiment on the vital question of the Khalifat and its present defenders.

REVOLT IN ALBANIA.

The Rome correspondent of the *Morning Post* writes (March 12) :—"Albanian bands led by three Moslem Beys have seized Tirana without opposition and driven Ahmed Zagolli's Government to seek refuge at Elbassan. Information reaches me that Albania is in a difficult financial and political situation, the only real factor in that so-called parliamentary State being the number of armed retainers whom each chieftain can bring into the field." It must be remembered that news from Albania *via* Italy sometimes becomes a little confused, and it is to be hoped that affairs do not actually bear so anarchical an aspect as is suggested. A Reuter message, however, states that armed peasants have seized Durazzo, the Government officials having left on a steamer; and that in fighting between the Tirana Government troops and the rebels, Melek Frasherri, Commandant of the Government troops, was killed.

GENERAL MAUDE'S STATUE.

The bronze equestrian statue of the late Lieutenant-General Sir Stanley Maude, executed by Sir William Goscombe John, R.A., has now been completed, and is to be on view at the Burton Bronze Foundry, Thames Ditton, between the hours of 11.30 and 3.30 until Friday, March 17. The statue, which will shortly be sent to Baghdad for erection in front of the gates of the British Residency, has been subscribed for by all ranks of the Army which General Maude commanded in Mesopotamia at the time of his death. It is one-and-a-quarter life size, and will stand on an imposing pedestal and platform designed by Mr. E. P. Warren, F.S.A., F.R.I.B.A.

On March 6, M. Andreas Kavafakis, the Athens correspondent of the *Morning Post*, was assassinated in the Greek capital. He was proprietor of the Venizelist organ *Eleftheros Typos*.

THE NEW CONSTITUTION OF INDIA: RHODES LECTURE.

Sir Courtenay Ilbert not being fully recovered from his attack of influenza on March 8, the second Rhodes lecture was, like the first, read for him by his daughter, Mrs. Fisher. It dealt with the Provincial Governments of India. The provincial governments, Sir Courtenay Ilbert stated, were to a large extent emancipated from the tutelage under which they formerly existed. They had special subjects to deal with, special powers of raising revenue and they might borrow. In the position and functions of the present legislatures the new Constitution made drastic changes. The Legislative Council for every province was to consist of the members of the executive council and of members either elected or nominated. Of the members of each council not more than twenty per cent. were to be official members and at least seventy per cent. were to be elected members. The number of members in each council was much greater than that of the old legislative councils, even after these had been enlarged under Lord Morley's Act of 1909.

Owing to the powers of the Governor to act independently of or in defiance of his legislative council, the lecturer said, the general scheme of the Act was to give the legislative council large powers of control, both over finance and over general legislation; but at the same time to arm the executive government with the power of obtaining such money, and the passage of such laws, as were necessary for the proper administration of the province. In the case of money the annual appropriations were submitted to the votes of the council in the form of demands for grants. If the council refused assent to a demand relating to what was called a reserved subject, and the Governor certified that the expenditure was essential to the discharge of his responsibility for the subject of the expenditure, the Governor in Council had power to meet the expenditure notwithstanding the refusal. If the demand related to a transferred subject the assent of the council was required; but the Governor could nevertheless, in cases of emergency, authorise expenditure which was in his opinion necessary for the safety or tranquillity of the province, or for carrying on the administration of any department. Thus the Governor could provide funds for any unforeseen emergency, and also in the last resort prevent a transferred department from being temporarily closed down on account of refusal of supplies. Similar powers existed if the Council refused to pass a bill, which the Governor certified as being essential to the discharge of his responsibilities.

Mustapha Kemal Pasha has been re-elected President of the Angora Assembly.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the river Karun.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square.
E.C. 2.

Success of the Fair.

While it is too early to estimate the full results of the British Industries Fair the information at my disposal suggests that it has been very much more successful than was anticipated. All sections of the Fair have reported an encouraging number of enquiries, and several branches of industry have had a surprising number of orders. At the White City the section devoted to chemicals and pharmaceutical products did particularly well, while at Birmingham our representative found that the makers of power engines were notably satisfied with the results that had been achieved. In view of the prevailing conditions it is evident that the Fair has more than justified its existence, and the business done this time suggests very plainly what may be expected in more normal times.

A P. and O. Issue.

This week saw the P. and O. Company join the ranks of the numerous concerns that have of late been seeking fresh capital. The amount offered was £3,500,000 in Five and a Half per Cent. Debenture Stock at 96½ per Cent., and as was to be expected the investing public took the view that this was an opportunity not to be ignored, and within a few minutes of the lists being opened the issue was oversubscribed. The new stock ranks immediately after the Three and a Half per Cent. Debenture stock outstanding. It is stated that the proceeds of the issue are to be applied "more especially to the construction of new vessels, when prices come down to an economic figure, to replace those destroyed by enemy action during the war, and to build others to meet the growing requirements of the company's business."

The Ter Meulen Scheme.

After all it has been decided to proceed with the Ter Meulen Scheme for export credits. As I have pointed out in these columns the results so far achieved have not been encouraging, but the view is taken by the authorities responsible that before very long the countries the scheme was designed to help will be only too willing to take advantage of it. If good grounds exist for that belief, and I am informed that that is the case, then there is everything to be said for perseverance in regard to the scheme. My criticisms have been directed against the delay that there would be before the scheme could be brought into operation not against the scheme itself. However good a project may be—and the Ter Meulen Scheme is admittedly as good as anything that has been devised for solving the problem of the exchange—the world cannot afford to wait indefinitely for its adoption.

The Greek Loan Question.

For the present at any rate there would appear to be no prospect of the flotation of a Greek Loan in this country. But it would be premature to assume as some of our contemporaries have done that there has been a definite break in the negotiations. They have

not so far been successful, but the statement of M. Gounaris before the National Assembly at Athens shows that he is far from being dissatisfied with the results of his mission though it is impossible to follow him in his optimism as to the immediate outlook. Indeed the report that the Greek Government has decided to issue an internal loan suggests that a rapid conclusion to the negotiations is not anticipated. As soon as peace has been concluded with Turkey the position will be vitally different, and once that happens I assume that a London loan will shortly follow.

The Result of Taxation.

To-day an extraordinary meeting of the Mortgage Company of Egypt is to be held to sanction the transference of the control and management of the Company from London to Cairo. This development, which has been instigated by the Agricultural Bank of Egypt which holds the bulk of the Ordinary shares and 4,787 preferred shares of the Company, is the very natural consequence of the crushing burden of taxation which has to be borne in this country at the present time. There have been a number of similar instances since the war, and it is to be hoped that the growing tendency of companies to transfer their offices to other countries will not be lost upon the authorities who so far have shown no signs of realising the effect of the heavy taxation on business enterprise.

Protection for India.

One aspect of the Indian Budget on which I have not touched is its distinctly protectionist colouring. This, I venture to think, is an indication of things to come. The Fiscal Commission in the course of its tour over India lasting many months has heard a variety of opinions from the leaders of commerce in favour of a definite protectionist policy. There is so far no indication of the conclusions at which the Commission may have arrived, and it may be some time before we have the result of their deliberations, but the provisions of the Budget certainly lead to only one view. How far India would benefit from protection must remain to be seen.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

EGYPT.

Cairo, March 4.

Improved Financial Position.

The financial returns of the Egyptian Government for the nine months ending December show a decided improvement as compared with a year previously. Revenue has amounted to L.E.32,101,353 and expenditure to L.E.29,327,565, as against L.E.30,907,630 and L.E.31,872,950 respectively at the end of December, 1920. There is consequently a surplus of L.E.2,773,788 compared with a deficit of L.E.965,320 at that date.

As a matter of fact, however, although the net position is improved the **revenue situation** is not so satisfactory. Making allowance for the proceeds from sales of the cereal stocks held by the Supplies Department which amount to L.E.3,253,718 the revenue receipts are L.E.2,059,995 down compared with the 1920 nine months. Customs are down L.E.2,090,359, railways L.E.81,274, State Domains, L.E.205,924; Military Exemption Fees, L.E.116,380; Interest on Funds, L.E.1,505,451, and Sale of Land, L.E.534,156; while the following heads show increases, Tobacco Dues, L.E.621,147; Ghafir Cess, L.E.154,680; Cotton Tax, L.E.934,874; and Extraordinary Receipts, L.E.960,893.

On the expenditure side there is a gross reduction, but deducting the L.E.4,773,930 shown for cost of cereals purchased by the Supplies Department the net difference is L.E.7,319,315, mostly accounted for under the heading of Railways, which owing to decreases in coal and other purchases required are L.E.6,929,732 less than the previous year. There is a decrease of L.E.1,143,015 under high cost of living allowances and of L.E.98,678 under Survey, but an increase of L.E.259,184 under settlement of claims arising out of disorders. There is every reason to anticipate a fairly substantial surplus at the end of this month when the current financial year closes.

GREECE.

Athens, March 1.

Trade with the United States.

The value of goods imported into Greece from America from January 1 to November 30 amounted to 28,826,853 dollars as against 35,761,596 dollars during the equivalent period in 1920. The value of Greek goods exported to the United States from January 1 to November 30 amounted to 20,713,044 dollars, that of the same period in 1920 being 19,278,039 dollars. Whereas in November, 1920, Greece imported from America goods of a value of 4,057,750 dollars, the figures for November, 1921, were only 1,054,462 dollars. The decrease in the import trade during the last year is attributed to the high rate of the dollar, and it is anticipated that, unless exchange conditions become more normal in the near future, still fewer orders will be placed in the United States during the current year. Needless to say Germany, with her cheap mark, is once again obtaining a very firm footing on the Greek market.

ROUMANIA.

Bucharest, February 26.

The Grain Question.

During the past week alarming reports appeared in the local papers to the effect that the available stocks of wheat will not cover home needs until the new crop is available, and that owing to the fact that the autumn wheat sowings cover a considerably smaller area than in previous years, the dearth of wheat will continue after the coming wheat crop. The sowing of spring wheat, which is customary chiefly in Bessarabia and Moldavia, is not expected to fill up the gap. The home require-

ments of wheat are now estimated at about 1,500,000 tons, while it is estimated that in the best circumstances the production of the sown area may yield about half of this quantity.

The Government, although considering these reports as very exaggerated, has, nevertheless, decided to stop the export of all cereals until the authorities have checked the existing statistics of available grain stocks in the country. It is not surprising that exact figures are not easily obtainable, for, since the land has been divided up among the peasants, the number of grain stock-holders has also grown considerably, while in pre-war days grain stocks, especially wheat, were in the hands of a comparatively small number of big farmers or grain merchants, and therefore much easier to be checked. Furthermore, by reason of wheat being prohibited for export the price of wheat is now about half of that of barley, oats, and maize, although a much higher grade of grain. In consequence of this the farmers often prefer to feed the animals with wheat instead of other cereals which are free for export. Others are doing everything possible to keep their wheat stocks hidden, hoping one day to be able to export them at the present fantastic prices. For instance, Bulgarian wheat was recently sold at 60 to 65,000 lei per wagon f.o.b. Roumanian Danube ports, while the maximum price of wheat for home consumption is about 25,000 lei per wagon. Oats, barley, and maize have lately been sold at 41,000, 37,500 and 40,000 lei per wagon f.o.b. respectively.

INTEREST ON GREEK LOANS.

The Council of Foreign Bondholders has received information that the surplus of the revenues assigned to the service of the Greek debt in respect of the year 1921 will permit of the increase of the minimum rates of interest and sinking fund in 1922 by the following percentages of the original interest:—

	Interest.	Sinking fund.
Loans of Group I. . . .	42 %	24 %
Do. II. . . .	40 %	24 %
Do. III. . . .	40 %	26 %

With the addition of these percentages, the total interest payable in 1922 in respect of 1921 will be 3.40 % on the 4 % Monopoly Loan; 3.70 % on the 5 % Funding Loan; 3.60 % on the 5 % Loans of 1881, 1884 and 1890; 2.88 % on the 4 % Rentes.

The whole of the additional interest is payable on the April coupon in the case of the Funding Loan and Rentes, on the June coupon in the case of the Five per Cent. Loan of 1890, and on the July coupon in the case of the Monopoly loan and the Five per Cent. loans of 1881, 1884 and 1890. The following are the principal figures on which the above results are based:—The gross receipts in 1921 from the assigned revenues from which the plus-values are derived were 73,493,141 drachmae, as compared with the gross receipts in 1920 of 65,630,414 drachmae, showing an increase of 7,862,727 drachmae.

The receipts of the assigned revenues, after deduction of 18 per cent. of the plus-values for expenses, were 65,406,376 drachmae, and the amount fixed by the Law of Control being 28,900,000 drachmae, there was a plus-value of 36,566,376 drachmae, of which the bondholders are entitled to 60 per cent., namely, 21,939,825 drachmae, which realised by conversion 12,158,401.40 francs. As there was no addition to the plus-values of 1921 in respect of benefit from exchange, half the above sum, 6,079,200.70 francs, is available for interest, and the other half, 6,079,200.70 francs for sinking fund. Adding to the above amounts, in the case of interest, the interest saved on bonds amortised (namely, 1,847,478 francs), and in the case of sinking fund the balance brought forward from 1920 (60,550 francs), the following result is shown for 1921: Total amount available for increase of interest, 7,926,679 francs, total amount available for increase of sinking fund, 6,139,751 francs carrying forward balances of 122,275 francs and 86,461 francs respectively.

THE YUGOSLAV BUDGET.

By M. Burr.

Of all the young states that have arisen out of the war, or expanded beyond all recognition, the kingdom of the Serbs, Croats and Slovenes, generally known as Yugoslavia, has received the largest measure of abuse and contempt, owing to the intrigues of jealous neighbours. Yet, after advanced and industrialised Czecho-Slovakia, Yugoslav currency, low though it is, is better than that of Bulgaria, Roumania, Poland, and Austria, and her natural resources are greater, though her difficulties are more serious.

But she has made a determined attempt to put her house in order in spite of all obstacles, and soon the national assembly or *Skupština* will have an opportunity of discussing a detailed and complete statement of the national finances, with estimates of expenditure and revenue for the coming financial year. The Minister of Finance has made a heroic effort to equalise the two sides, and for the first time a balance is attained, though, as we shall see, on paper only.

The estimates of expenditure are as follows:—

	<i>Dinars.</i>	
Central Administration ..	598,487,881.	35
Minister of Justice ..	185,677,576.	90
Minister of Education ..	459,924,493.	30
Minister of Religions ..	81,619,291.	20
Minister of the Interior ..	38,054,647.	15
Minister of Public Health ..	185,603,764.	95
Minister of Foreign Affairs ..	34,312,197.	50
Minister of Finance ..	829,266,857.	90
Minister of War and Marine ..	1,489,356,657.	40
Minister of Public Works ..	273,095,216.	75
Minister of Communications ..	831,081,742.	60
Minister of Posts and Telegraphs ..	238,254,234.	65
Minister of Agriculture ..	114,156,187.	60
Minister of Mines and Forests ..	206,464,051.	
Minister of Commerce and Industry ..	40,688,995.	06
Minister of Social Policy ..	414,111,489.	85
Minister of Agrarian Reform ..	55,514,979.	10
Minister of the Const. Assembly ..	907,540.	60
Reserve credits ..	81,000,000.	
Total dinars	6,257,577,804.	86

In this statement, certain facts leap to the eye. It is easy to criticise the disproportionate amount claimed by the Minister of War, but we must remember that the tradition of Serbia is that her only defence is her own right arm, which she has vindicated over and over again: also that while she has a disarmed Bulgaria on the east, the machinations of the *komitadjis*, supported by the Kemalists, keep her in a constant state of anxiety, while Hungary, her secular enemy on the north, though perhaps to our eyes helpless, is restless, military, vindictive, and shut off by no natural frontier, while her former ally and jealous neighbour, Italy, is a constant source of anxiety, as recent incidents at Fiume remind us.

At the same time we should give credit where credit is due, and notice that the Ministry of Public Health calls for much more than that of the Interior, in spite of the numerous gibes at the policeocracy of M. Pribichevich, of the Communist plots, and underground and overground activities of the Mohammedan equivalents of Sinn Fein in Macedonia and of the Nikolists in Montenegro, that far greater sums are devoted to Education, and to Communications, the life-blood of the state, which require millions to bring them up to date, and to Posts and Telegraphs, and Agriculture in this yeoman state, and the big vote for Social Policy shows a genuine endeavour to cope with the numerous

social problems that are besetting this young country as well as the old organisms of the west.

And now let us turn to the estimates of revenue. These are as follows:—

	<i>Dinars.</i>	
Customs ..	417,310,000	
Excise ..	390,000,000	
Customs "aggio" ..	810,000,000	
Tax on turnover ..	400,000,000	
Coastal services ..	905,750	
War invalids tax ..	36,063,369	
State domains ..	61,656,369	
Provisional tax on property ..	597,112,984.	61
Extraordinary state supertax ..	400,000,000	
Sundry revenues ..	13,750,000	
Direct taxes ..	1,806,162,550	
State industries ..	1,292,302,523.	50
Other sources of revenue ..	29,311,877.	75
Total dinars	6,257,577,804.	86

Thus we have a perfectly balanced, but it must be admitted, utopian, budget, for many of the items call for investigation and comment. The first thing that strikes the eye is that while the estimates of expenditure are detailed down to fractions of a dinar, many of the revenue items are in exceedingly round figures. That is to say, they are highly theoretical, and probably, on both sides, the financial authorities have taken far too rosy a view.

A captious critic could easily find much with which to find fault, for destructive criticism is easy: an examination of details shows that in some departments the krone currency is still adhered to, that ordinary and extraordinary expenditure is badly divided, that some of the totals are as badly over-estimated as others are under-estimated, that duties are unequally allotted, and that a mass of vital detail, especially in connection with the services of posts, telegraphs, and railways, is not forthcoming.

It must be specially remembered that most of the estimates of expenditure are vitiated by the later fall of the dinar, which affects all payments due abroad, such as interest on foreign loans, purchases on state account, and so on, and also that as the dinar falls so the cost of living rises, so that extra allowances to officials must be increased proportionately. The dinar has fallen heavily since the budget was drafted, and this automatically increases the estimates of the Ministry of War. The estimates for maintaining 180,000 troops, officers and gendarmes, are based on the price of wheat, at 2½ dinars per kilo, but the price had risen by February to 4 dinars. The army was also involved in a heavy liability for purchases abroad, which naturally cost more as the dinar falls. It is, in fact, impossible to make estimates for the future with anything approaching accuracy, and the only thing to do is to provide for a large margin for contingencies. Certain other big outgoings are omitted, but will have to be met since they are already voted, such as the 100 million credit for agriculture, a loan of a similar amount to the municipality of Belgrade, and another of 360 millions to the army for food against the coming harvest: it is true that these are set off against some sort of security, but it would be better business to write them off at once. Anyhow, the disbursements have to be met.

(To be concluded).

Efforts are to be made by the Bulgarian Ministry of Agriculture to substitute modern agricultural methods for those now in use.

Among a number of suggestions put forward for the absorption of the entire power output of the Ceylon hydro-electric scheme is one for the use of electric energy in the manufacture of rubber goods.

A good deal of interest is being taken in Ceylon in the possibility of employing rubber in the manufacture of high-class paper, and the Government are to make certain paper making experiments.

British Industries Fair.

THE WHITE CITY.

(From Our Own Correspondent.)

Furniture.

The demand for furniture abroad in normal conditions gave an added interest to this section. The exhibits have developed since last year both in range and quality, and they offered a very clear insight into the potentialities of this typical British industry. Notable among the stands was that of Messrs. Beresford and Hicks, showing some choice examples of antique reproduction furniture. Messrs. B. Cohen and Sons, Ltd., had on view cabinet furniture, upholstery, and chairs, while another interesting stand was that of Messrs. Herman and Phillips, Ltd., at which were displayed artistic examples of acquired and decorated furniture.

A really excellent display of carpets was on view at the extensive stand of Jute Industries Ltd., who also exhibit some inviting rugs. Easy chairs, settees, etc., were shown *inter alia* by Messrs. Goodearl Bros., Ltd., and Messrs. Greaves and Thomas. These exhibits for workmanship and finish were equal to anything at the White City, and they would hold their own in any market overseas. Mirrors and overmantels were shown on an appreciable number of stands, one of them being that of Messrs. O. C. Hawkes, Ltd., and school furniture by Messrs. the Bennet Furnishing Co., Ltd. Messrs. John Heywood, Ltd., and by two firms to whom I have already referred, Messrs. Herman and Phillips, Ltd., and Messrs. the Shannon, Ltd.

Pottery and Glassware, etc.

In a sense I was disappointed with the exhibits of china and earthenware. The manufacture of these wares is peculiarly an English craft; indeed we have achieved something approaching a monopoly of it in certain lines, and one would think that in this section at any rate one would find all the enterprise that could be desired. But the absence of so many well-known firms, discouraged possibly by the trade depression, scarcely encouraged the idea.

Apart from its unrepresentative character I have nothing but praise for this section. On stand after stand exquisite examples of English craftsmanship were on view, and the exhibits left one in no doubt that in this branch of industry we are still progressing. It is heartening to be able to record that very good business was done in this section, and this fact will no doubt mean a great increase in the number of stands next year.

ADVERTISING IN "THE NEAR EAST" PAYS.

THE Near East reaches the markets of a score of different countries stretching from Morocco to India—markets in many cases covered by no other British Journal. It appeals to the business men of *all* classes and to the official, administrative and general public throughout THE NEAR AND MIDDLE EAST. It is an ideal medium for bringing buyers and sellers together.

Write for advertising rates to—
The Manager, The Near East, 1, Devonshire
Square, E.C.2.

A stand of particular interest was that of Messrs. W. Moorcroft Ltd., showing some choice pieces of the famous wares of this firm in yellows, red and blues. Notably among the exhibits were some exquisite vases, specially made for the exhibition. Other stands in the pottery and chinaware section that specially attracted my attention, were those of Messrs. Candy and Co., Ltd., Messrs. the Crown Dorset Art Pottery Co., Messrs. Alfred B. Jones and Sons, Messrs. Myott, Son, and Co., and Messrs. the Paragon China Co.

The glassware section contained a most comprehensive range of exhibits, including domestic and fancy glassware, illuminating glassware, lenses, and thermometers. One of the most interesting stands was that of Messrs. Stevens and Williams Ltd., showing among other things exquisite examples of cut-glass ware.

Chemicals, etc.

This section has greatly developed since last year, and made a very fine showing. It had the best situation in the building at the Shepherd's Bush entrance, a thoroughly deserved distinction as I think all will agree who saw the exhibits. The business done in this section by the way was excellent, and it is no exaggeration to say that the number of enquiries and orders came as a pleasing surprise to most of the firms represented. This success makes it certain that many more firms will be represented at the next exhibition.

Notable among the stands was that of Messrs. the British Dyestuffs Corporation Ltd., showing aniline dyestuffs, fine chemicals and drugs. Another stand of special interest was that of Messrs. the Marley Hill Chemical Co., Ltd., showing blast furnace and foundry coke, ammonia products, etc. Messrs. the United Alkali Co., Ltd., showed a great variety of chemicals; Messrs. W. J. Bush and Co. Ltd. had on view a range of synthetic fine chemicals; while Messrs. Burroughs Wellcome and Co. exhibited a number of their well-known products.

Foodstuffs.

A new feature of the exhibition this year, was the inclusion of a section dealing with foodstuffs, etc. The stands which attracted most attention was that of Messrs. Lipton, Ltd., who were showing an extensive range of their products. Messrs. Edward Sharp and Sons, Ltd. of toffee fame, were showing their superkreem toffee, etc. Confectionery and chocolate novelties were exhibited by Messrs. James Pascall Ltd., while Messrs. Meredith and Drew, Ltd., displayed biscuit and cakes. Another stand of more than passing interest was that of Messrs. "O.T." Ltd., who exhibited cordials and many other non-alcoholic beverages.

Toys, Games and Sports Goods.

The toy section was not up to the standard of last year, but it was all the same very interesting. The exhibitors included Messrs. G. W. Harper who showed teddy bears, Xmas crackers, and stockings. Messrs. Clarke, Nicholls and Coombs Ltd., had a large selection of Clarnico Xmas crackers and novelties; Messrs. Hobbies, Ltd., had a well arranged stand of fret saw outfits, treadle sawing machines and lathes. A large rag-house was the feature of the stand of Messrs. Dean and Son, Ltd., who are well known for their rag books, coloured toy books, stencil books, jig-saw puzzles, etc. Messrs. Harbutt's Plasticine Ltd., were showing many models in plasticine, and several sets of home modelling outfits.

In the sports goods section Messrs. Wm. Sykes, Ltd., were exhibiting cricket bats, billiard tables, footballs and tennis equipment. Messrs. F. H. Ayres, Ltd., were showing bowling equipment, gymnasium goods, and all requisites for tennis, cricket, football, hockey, etc., and billiards. Messrs. Folding Boats Ltd., had an interesting stand showing various sizes of folding boats. This firm supplied the late Sir Ernest Shackleton with several of their boats for the Quest.

Photographic Goods, etc.

A great advance has been made in connection with

photographic material, especially in the cinematograph industry. Messrs. W. Butcher and Sons, Ltd., exhibited cinema projectors and cameras, also dark room equipment, while close by Messrs. Jury's Imperial Pictures, Ltd., had on view a "Kalee-Indomitable" cinematograph projector, and a selection of studio arc lamps and equipment. Other stands of interest were those of Messrs. J. H. Dallmeyer, Ltd., Messrs. W. Vinten and Messrs. Ross, Ltd., of Clapham.

THE BIRMINGHAM FAIR.

It would be difficult to imagine a more striking contrast to the White City Exhibition than was presented by the fair at Castle Bromwich, Birmingham. In the former case one saw the finer and more personal adjuncts to civilisation; in the latter one found oneself in the realm of industrial endeavour in the most obvious sense of the word. And where could there be a more fitting setting for the fair than in the greatest industrial centre of England?

As I anticipated would be the case, there was much more activity at Birmingham than at the White City. One felt instinctively that business was being done, and that the fair would be a success. The fair on the day of my visit was literally thronged with visitors, and it is obvious that such a number of buyers would not go home after merely admiring the scenery! The impression of a crowd was heightened by the conditions under which the fair was held. There was not room and to spare as at the White City. On the contrary I do not suppose that the floor area was more than a third of that of the Shepherd's Bush Exhibition. It cannot be said that it made for comfort in seeing the stands, but I think it has been a help in promoting business.

That more trade should be done at Birmingham is obviously only logical as the exhibits there make a greater appeal in this period of reconstruction. They are, in brief, essential commodities, and by that I do not mean to infer that the other exhibits are not—very far from it, but that the Birmingham exhibits represent the commodities that must be replaced at the earliest possible moment by countries struggling to restore pre-war conditions.

In passing I might point out that a visit to Birmingham is no light order as anyone who has spent a day at the White City alone can well imagine. After the train journey there is the long bus ride to Castle Bromwich, an arduous day there, rendered more tedious by the serious shortcomings of the official catalogues, and then the return. It is not an experience that makes one desire to emulate Oliver Twist, at any rate not in the same week.

Why is it, incidentally, that official catalogues should so often be faulty? That of the White City is an excellent production; though even that lends itself to improvement, but that of the Birmingham fair gave literally the minimum of assistance.

This section of the fair, by the way, was not nearly so representative as the White City. It was very largely Birmingham, and while that presupposes its comprehensiveness Birmingham is only one of the many great industrial cities even though the first, and it is greatly to be regretted that other centres were not more adequately represented. It is to be presumed that the reason is to be found in the difficulty of sending heavy exhibits long distances. But if that be the case it is a poor outlook for this section of the fair when the reunion takes place at Wembley. Apart from this shortcoming I have nothing but praise for the fair. In every sense it was an improvement on its predecessor, the Engineering Section being particularly good. As for the quality it is enough to point out that the fair was held at Birmingham.

REVIEW OF EXHIBITS.

Power and lighting equipment for the engineering industry played a very prominent part in the exhibition; indeed it would not be going too far to say that they comprised 60 per cent. of the exhibits.

One of the most interesting stands in the exhibition was that of Messrs. Crossley Bros., Ltd., who were showing types of their crude oil engines. Their exhibits included a large gas engine and a baby engine of the same type, together with their cold starting crude oil engines. Messrs. Edward White were displaying machinery suitable for wireworkers. Their automatic machine will point or taper wires in various kinds of metal, and also cut three wires simultaneously from a coil. Their scouring and polishing barrels were attracting considerable attention, and should find a good market in Near Eastern countries. Messrs. Bell's United Asbestos Co., Ltd., were exhibiting their famous asbestos brake linings, asbestos cement building tiles, packing and joining materials, etc. Messrs. Hancock & Co. (Engineers), Ltd., had two extensive stands, showing on one stand their high temperature electric furnaces for hardening high-speed steel, etc., and at the other stand demonstrations of their coal gas welding plants were taking place. Their new "Rapid" oxy-coal gas cutter worked marvels in cutting through metals of various thicknesses, and it is claimed to be the only cutter which has cut such thick metals with coal gas. An interesting display of hammers, chisels, picks and gardening tools was being shown by Messrs. Wm. Hunt & Sons, the Brades, Ltd. Messrs. Tangyes, Ltd., were exhibiting their famous vertical crude and refined oil engines together with paraffin engines, gas producers, hydraulic machinery, etc., while close by one could have everything one desired in ladders from Messrs. H. C. Slingsby who had on view extension ladders, step-ladders, elevating trucks and platforms and numerous small railway porters' trolleys.

Messrs. W. & T. Avery, Ltd., the well known scale makers, had on view exhibits ranging from a small shop-counter scale to a large colliery machine, also liquid fuel weighers and platform weighing machines. Another firm of scale makers exhibiting were Messrs. George Salter & Co., Ltd., who were showing a large selection of spring balances for domestic and trade purposes, also sad irons, potato chip cutters, and various engineering goods such as locomotive balances, pressure gauges, valve springs, etc. Messrs. Petters, Ltd., of Yeovil, exhibited their oil engines in sizes varying from 1½ B.H.P. to 25 B.H.P. of the semi-portable and portable designs. Some electric generating plants were also on view. Electrical domestic apparatus was the chief feature of the interesting stand of the Metropolitan Vickers Electrical Co., Ltd. Their exhibits included "Cosmos" lamps, electroliers, etc., also everything that could be desired for the kitchen such as electric toasters, kettles, and cookers. Two stands were occupied by the Aerograph Co., Ltd., the pioneers of spray-painting, who were demonstrating the labour saving advantages gained by the method of applying paints and varnishes by spraying. A very artistic stand was presented by the Delta Metal Co., Ltd., who exhibited an extensive range of Delta bronze ware.

(The remainder of this article is unavoidably held over until next week).

Engineering Topics.

By Our Engineering Representative.

British Aviation Developments.

Considerably greater developments are being made in connection with aviation in England than is generally known. The fact that the 1,000 h.p. engine, so eagerly awaited, has at last materialised, and the further fact that bench tests have shown that it possesses a life very much in excess of any aero-engine yet designed, proves the development made in engine design. It is known that a great advance has been made in connection with the use of triple tractor screws whereby it is possible for them to exert any unequal pull, and there are hints as to new and more efficient wings and as to improvement in the design of both bodies and landing carriages.

For some reason the impression prevails that aviation if not actually dying, is at any rate in a far from virile condition. Nothing could be further from the truth. Subsidies are being granted to companies operating commercial aircraft by the Governments of France, Belgium, Roumania, Poland, Holland, and Germany, and several other States have made provision for such grants in their next year's budgets. The assistance given by the British authorities is well-known and need not be gone into here.

There is ground for supposing that the popular impression regarding the outlook for aviation has been derived from the United States. After a period of enthusiasm over aircraft it was found that American engines were not the equal of those of other countries, their designers were inexpert, their manufacturers inexperienced and their pilots and workmen unskilled. The enthusiasm died down, and the cessation of flamboyant news from U.S. sources as to aerial progress has undoubtedly had much to do with the general idea that aviation is practically moribund.

American Surprise.

United States' experts who have recently visited this country and the Continent have expressed their utter astonishment in finding aerial transport services in active operation. Greater amazement still is expressed at the discovery that travel by air is, in some cases, cheaper than the making of the same journey by rail. Prof. E. P. Warner, professor of aeronautics at the Mass. Institute of Technology states that during his visit to Europe in no case did he find the price of a ticket by air as much as double that of one by land or sea. He points out that the *Deutsche Luft Kursbuch*, the ABC Pathfinder of Germany, will take a passenger from Berlin to Munich for 1,575 marks (exchange rate, February 1). As the distance is 320 miles it would be interesting to work out the equivalent cost per mile in English currency.

So impressed were this authority and his companions that they are initiating a campaign in American newspapers with a view to stimulating interest in aerial navigation and inducing U.S. manufacturers to enter again the field of aircraft and aero-engine production. They are also urging the U.S. Government to grant a subsidy of at least 30 cents per aeroplane mile to companies undertaking to establish and maintain services between fixed points. They suggest an initial expenditure of one million dollars a year, to subsidise 3,300,000 aeroplane-miles, equal to the operation of one machine each way for 300 days in the year over a route of 5,550 miles, the distance from New York to San Francisco and back.

Pickling Castings.

Where trouble is experienced in removing sand from the inner parts of pistons or similar small castings it is often advisable to run them clean in a tumbling machine on account of the risk of breakage. Where the parts are extremely thin or have delicate projections it is by far the better course to pickle them, and wash and dry

them afterwards. Where it is only required to remove the sand and to leave the surface of the iron untouched, a pickle made of one part of strong hydrofluoric acid with eight parts of water should be used, and the parts washed after pickling with a carbonate of soda or washing soda solution.

Where the surface of the casting is to be cleaned up at the same time as the sand is removed, a pickle of one part of highly concentrated sulphuric acid to eight parts of water should be used, the acid being added to the water in mixing. This pickle attacks the surface of the iron, removing scale and loosening any adhering particles of sand, and when this solution is used the parts must be carefully watched to see that the action does not become too pronounced. The parts, after pickling, should be flushed with strong soda and water and well washed in warm water and dried in hot sawdust.

Hardening Small Tools.

It is generally a far from easy matter to harden and temper such small, slender tools as taps, broaches, reamers of small drills by reason of the risk of the steel twisting or warping during the operation, due to uneven heating. Several methods have been suggested and followed, but one of the most successful is to place the tool in a tubular casing with both ends sealed off. A mixture of charcoal and leather cuttings, two of the former to one of the latter, can be used with advantage as the carbonising material and this should be tightly packed round the tools. As soon as a sufficient number of tools have been sealed into the containing tubes these are placed in a furnace heated up to about 1,000 degrees Fahr, and as soon as the tools are in position, the heat is raised a further 470 degrees, and the tools are left in this heat bath for from two and a half to three hours, the length of time depending on the size of the tool. As soon as the hardening process is calculated to have continued long enough the whole tube is plunged into an oil bath and quenched in a verticle position. The best oil to use for the purpose is whale or linseed and it is found that this method of treatment gives the tips of the broaches a fairly soft and elastic centre well tempered to withstand the twisting strain to which the tool will be subjected in use, whilst the cutting edges or the teeth as the case may be will be tough and capable of dealing with the hardest of metals. This method is being adopted in mass production factories, but there is no reason why it should not be followed in the case of small quantities or even single tools.

HEAVY TONE PREVAILS.

(From Our Own Correspondent.)

London, Tuesday morning.

In view of the adverse developments during the past week it is not surprising that the markets should be rather on the heavy side. The remarkable thing is that they should have kept up so well despite the prevailing conditions, and the fact that they should have done so augurs well for what will happen once the atmosphere is fairly clear once more. Of the three chief factors that have influenced prices—the trouble on the Rand, the Indian position, and the labour situation—India seems to have had most effect, judging among other things by the movements of the Indian stocks. It cannot be said that in general the outlook for the markets is too cheerful, for there are other possibilities of unfavourable factors in the immediate future besides these that we have been experiencing during the past week. Still investors have the consolation of knowing that markets have remained almost unaffected during the vicissitudes of the past year, and they are well justified in assuming that whatever happens now can at the most have only a transient effect.

New Issues.

It is noteworthy that notwithstanding the general position the new issues have been meeting with their customary success. This week we had the P. and O. Debenture issue, which of course was immediately taken up, while to-day the lists are open for another French railway Loan, probably have actually been closed at the time that I am writing this, at least so I imagine judging by what I heard yesterday. A Greek Loan is definitely out of the question for the time being, not that the negotiations have actually come to an end, but because it is simply impossible in present conditions to arrange an accommodation on terms satisfactory to the Greeks. I see that M. Gounaris has been giving a fairly optimistic view of his visit, but the fact that an internal loan is to be raised speaks for itself. Incidentally there is no lack of money in Greece, and provided the Loan is adequately supported Greece ought to be able to raise quite enough to cover her immediate requirements. Later on, when the Turco-Greek war is over, the country will find the London market more accessible.

Gilt-Edged.

The feature in gilt-edged has been the decline in Indian stocks. Consols are $54\frac{1}{4}$, War Loan Fives are $96\frac{3}{8}$, a fall of $\frac{1}{8}$, while the Conversion Loan is $\frac{1}{2}$ up at $72\frac{1}{8}$. In Indian stocks the seven per cent. Loan is 2 down at 103, the $3\frac{1}{2}$ per cent. Loan at 59 is $2\frac{1}{2}$ down, while the three per cent. Loan at 50 has shed a similar amount.

A rather inactive tendency has prevailed in the foreign market. French War Loan Fives at $45\frac{1}{2}$ are $2\frac{3}{4}$ down.

German three per cents. are unchanged at $2\frac{1}{2}$, while Italian Rentes are $24\frac{1}{2}$. Russians have declined all round, while Brazilians have been offered. In Greek securities Monopolies are unchanged down at $31\frac{1}{2}$.

Industrials Quiet.

A very quiet tone has ruled in the Industrial section, the labour trouble naturally causing investors to adopt a cautious tone. Tobaccos have been firm. Bats at 67s. are 6d. up, while Imperial Tobaccos are 53s. 9d. Dunlops are again lower at 6s. 3d.

The Textile group has been steady. Coats are $\frac{3}{32}$ up at $2\frac{3}{8}$, while Courtaulds are unchanged at 37s. 9d. Iron, Coal, and Steel securities have been dull. Vickers are 3d. down at 8s. 6d., Armstrongs have shed 3d. at 13s., Guest Keens are 6d. down at 30s., while Lamberts are unchanged at $1,15\frac{1}{16}$.

Shipping securities have been rather dull. P. and O. are 2 down at 205, Cunards are unchanged at 18s. 9d., while Furness Withys are 3d. up at 26s. 6d.

Oils Variable.

Oils have fluctuated a good deal during the past week, and yesterday a good deal of weakness was displayed in some directions. This is only a passing phase, and holders should not be discouraged thereby. Burmahs are $5\frac{3}{8}$, while Mexican Eagles are $3\frac{7}{8}$, the same as last week. In Trinidad issues Centrals are $3,3\frac{1}{16}$, $2,1\frac{1}{16}$, down, while Leaseholds are $1,3\frac{1}{16}$, a drop of $1\frac{1}{16}$.

Among Egyptians Anglo-Egyptian B are $1,9\frac{1}{16}$, while Oilfields of Egypt are 5s. 6d. In the Roumanian group Roumanian Consolidated are 10s. 3d. a rise of 2s., while Phoenix at 17s. 6d. show a gain of 3s. 6d. I recommended Phoenix some weeks ago when they stood round about 9s. They are expected to go to 25s. or thereabouts but all the same those who bought at 9s. would not be wrong in taking their profit. It is possible to be too greedy in these matters, and it is a sound precept always to leave something for the other person. Dacia Romanos are unchanged at $11\frac{1}{16}$, while Steaua Romanas are 6d. up at 12s. 3d.

Indian Banks Dull.

Among banking descriptions Indian banks showed a dull tendency. Chartered of India are $\frac{5}{16}$ down at 15, but National of India are $\frac{1}{4}$ up at $35\frac{1}{2}$. P. and O. Banking Corporations are $11\frac{3}{4}$, a decline of $\frac{3}{16}$, while Imperial of Persia are unchanged at $6\frac{1}{4}$.

In land securities Aboukirs are 6d. down at 23s. 6d., while Béhéras are 8. Delta Lands are unchanged at 8, Gharbieh Lands are $1,5\frac{1}{16}$, a decline of $1\frac{1}{16}$, while Sidi Salems are 1.

The capital of the Bohemian Union Bank is being increased from 120 million to 200 million crowns by the issue of 400,000 shares of the nominal value of 200 crowns.

The rubber road-paving experiments conducted in Colombo by the Ceylon Government and some private firms and estates have not been successful.

LONDON PRODUCE REPORT.

Sugar.—Home refined has been in moderate request at unchanged rates. Tate's cubes are slightly higher being 9d. up at 52s. 9d.; mineral water sugar has gained 1s. at 48s.; as also London granulated at 47s. 6d., while Lyle's granulated has risen 1s. 3d. at 47s. 9d. Export varieties have shown increases in all cases. West Indian crystallized is 1s. up at 42s., and Czecho-Slovakian has risen 1s. 3d. at 20s. 3d.

Coffee.—Prices are higher. Costa Rica has gained 10s. at 136s., while Indian has jumped 6s. at 112s. Nairobi is 2s. up at 112s., while Jamaica has been firm at 150s.

Tea.—The demand has been maintained for Indian tea, while rates are still advancing. Fine China tea is steady at 2s. 11½d. lb.; good Pekoe Souchong has gained ½d. at 4½d. lb.; while common Java has gained a like amount at 10d. lb.

Oilseeds.—A variable tendency has prevailed. Indian linseed is 6d. down at 19s. 6d., and La Plata at 19s. 3d., has shed 1s. Rapeseed has been firm with Toria the same at 16s. 10½d., and bold Ferozepore unchanged at 18s. 6d. Cottonseed has declined. Indian is 4½d. down at 9s. 6d., and Sakellarides has shed 1½d. at 12s. 6d., while Egyptian black has gained 3d. at 13s.

Oils.—Steadiness has prevailed. Linseed oil has dropped 1s. 3d. at 37s. 6d. Rape oil is quiet; the crude variety has been quoted at 46s., and refined at 48s. Cotton oil is higher with refined at 47s., a gain of 2s. Egyptian crude at 41s. is 3s. up, and deodorized has risen a similar amount at 52s. Turpentine has risen 3d. at 63s. 6d.

Oilcakes.—Linseed cake has come to business at 330s. ton. Cottonmeal cake is quoted at 310s. ton; and Arachis cake has been a firm feature at 220s. Palm kernal cake has been done at 160s.

OPIUM REPORT.

Messrs. Barker Bros., Smyrna, report as follows under date February 28:—

The sales this month on our market amount to 219 cases, of current qualities, extra druggists, and a small percentage of fine soft shipping and Yerli. The average piastre price paid for the above goods is Ps. 776 per oke which is equivalent to 2.82-00 lbs. and as regards the sterling price per lb. this depends on the exchange, which as it stands to-day at Ps. 750 per pound sterling is equal to 8s. 6d. per lb. first cost or 9s. 3d. c.i.f. port of destination. The exchange during the past month has fluctuated from Ps. 720 to Ps. 760 per pound sterling for cheque and dollars 0.68 to 0.64 for each Turkish paper pound. To day it is Ps. 750 for the former and 0.67 for the latter.

Our stock in first and second hands is about 1,340 cases of 160 lbs. per case.

The weather has been very propitious for sowing and the plants already sowed are doing well; but the acreage under cultivation is very small, owing to the disturbed state of the hinterland, and under best conditions we cannot expect a crop next summer of over 2,000 cases. Anyway the restriction of alkaloids and crude drug by the Powers has in a great measure lessened the consumption of opium, so this will compensate for the lower standard of production. Our market closes firm with an upward tendency, owing to the continual weekly demand.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ended February 25:—

Sultanas.—The total estimated arrivals to date total 168,790 bags, the sales are 163,290 bags, and the estimated stock unsold is 5,500 bags.

Markets.—The week's sales of sultanas amount to 100 tons mainly against orders received from the U.K. and from the Continent. Dealers having decided to lower their prices by 3s. to 4s. and exchange having slightly improved, business has

been stimulated, and it is probable that demand will broaden, gradually absorbing the remaining stocks available. The exchange for sterling has been steady throughout the week at 649-652.

CURRENT PRICES.

General Produce—Bacon: (Continental), 113s. 6d. cwt.; (Canadian), 120s. cwt.; (American), 117s. 6d. cwt.; butter (Danish), 170s. cwt.; (Australian), 118s. cwt.; (New Zealand), 125s. cwt.; cheese (Canadian), 96s. cwt.; (New Zealand), 91s. cwt.; lard 70s. cwt.; eggs (Danish), 22s. per 120; Styrian, 17s. per 120; chillies 162s. 6d. cwt.; cloves (Zanzibar), 1s. 4d. lb.; cocoa (Ceylon good to fine) 97s. 6d. cwt.; coffee (Costa Rica), 127s. 6d. cwt.; (East Indian), 132s. 6d. cwt.; (Central American), 105s. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 106s. 6d. cwt.; (Santos, superior), 63s. 6d. cwt.; ginger (washed Cochin), 55s. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 4d. lb.; (Muntok white), 8d. lb.; pimento, 24d. lb.; raisins (Valencias), 85s. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Amalias), 57s. cwt.; sugar (Tate's cubes), 51s. 6d. cwt.; (Lyle's granulated) 46s. 6d. cwt.; (Mauritius crystals), 43s. 7½d. cwt.; (West Indian crystallised), 41s. 6d. cwt.; (centrifugal), 13s. 9d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon No. 2), 14s. 1½d. cwt.; (bran Rangoon), £6 8s. 9d. ton; cinnamon (firsts), 11½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea (common to good common), 1s. 2d. lb.; (fine to finest), 2s. 7½d. lb.; Ceylon (common to good common), 1s. 2d. lb.; (medium to good), 1s. 6d. lb.; (fine to finest), 2s. 7½d. lb.; Java (common to good common), 10d. lb.; wheat (English white), 57s. qr.; barley (malting), 52s. 6d. qr.; barley (feeding), 38s. 6d. qr.; oats (English), 35s. qr.; oats (La Plata, ex-ship), 28s. qr.; maize (La Plata), 33s. 9d. qr.; flour, 49s.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulis), £35 ton; bismuth, 9s. lb.; copper (standard) £50 6s. 3d. ton; copper (electro), £65 10s. ton; gold bars, 93s. 6d. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 97s. 6d. ton; galvanised sheets (24 G), £15 15s. ton; lead (soft foreign), £20 15s. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 27s. 6d. unit; nickel, £175 ton; platinum, 360s. oz.; plumbago, £20 ton; quicksilver, £11 5s. ton; spelter (G.O.B.), £25 1s.; tin (standard), £143 8s. 9d. ton; wolfram, 10s. 6d. unit; zinc sheets, £35 ton; tin plates (20 by 14), 18s. 7½d. box; silver bars, 32-7/8d. oz.

Chemicals.—Acids: Boric, 61s. cwt.; oxalic, 7½d. lb.; citric, 1s. 10½d. lb.; tartaric, 1s. 3½d. lb.; ammonia (sulphate), £16 11s. 6d. ton; arsenic (white powdered), £40 5s. ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £13 15s. ton; borax crystals, 30s.; cream of tartar, 120s. cwt.; Potassium: Bichromate, 7½d. lb., chlorate 5d. lb.; caustic, £33 10s. ton, nitrate, £42 10s. ton; permanganate, 9d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 15s. ton.; Sodium: Crystals, 130s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 5½d. lb.; alkali (58 per cent.), £8 13s. 9d. ton; chlorate 3½d. lb.; caustic (70 per cent.), £23 ton; hypo-sulphite, £15 10s. ton; prussiate, 9½d. lb.; nitrate, £14 5s. ton; glycerine (crude, 80 per cent.), £80 ton; glycerine (industrial) (1200 per cent.), £110 ton; lemon oil 3s. 7d. lb.; quinine, 2s. 11½d. oz.; red lead, £34 ton; white lead, £37 15s. ton; white ground lead, £48 7s. 6d. ton; sulphate of copper, £27 5s. ton; sulphate of iron, 75s. ton.

Miscellaneous.—Cotton: (American), 10.18d. lb.; (Egyptian Sakel), 16.15d. lb.; Oilseeds: Linseed (La Plata), £21 ton; palm kernals, £19 2s. 6d. ton; castor seed (Bombay), £15 2s. 6d. ton; Oils: Linseed, £38 12s. 6d. ton; olive (Levant), £74 10s. ton; rape (crude), £51 ton; soya, £37 5s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 10s. ton; coconut (Ceylon), £41 12s. 6d. ton; cotton (crude), £37 ton; ground nut, £43 ton; Rubber: Plantation (No. 1 crepe), 8½d. lb.; smoked sheet, 8½d. lb.; fine hard para, 11d. lb.

Hides and Skins.—Ox and Heifer (first) 90 lbs. and up, 7½d. lb.; 80 to 89 lbs. 7½d. lb.; 70 to 79 lbs., 7½d. lb.; 60 to 69 lbs. 6½d. lb.; (second) 90 lbs. and up, 8d. lb.; 80 to 89 lbs. 6½d. lb.; 70 to 79 lbs., 6½d. lb. Cows (first), 60 lbs. and up, 4½d. lb.; (second), 60 lbs. and up 4½d. lb.; 50 lbs. and under, 4½d. lb.; Bulls (first) 5d. lb.; Kips (first), 6 1-8d. lb.; (second), 5d. lb.; Calcutta Market. Prices in rupees per 20 lb. Arsenic hides (cows) Agras, 13 to 15; Durbhangas, 8 to 10.8; Patnas, 6.8 to 8; Salted cows: 5 to 8. Arsenic hides (buffalo): 3.8 to 9. Skins: Calf, 8 to 10 per 20 lb.; goat, 230 to 265 per 100 pieces.

Coupons No. 13 and No. 4 of the Anglo-Egyptian Land Allotment Company's Ordinary and Founders' shares respectively are payable at the rate of exchange of 97½ piasres per pound sterling, less tax, at the Anglo-Egyptian Bank, 27, Clement's Lane, E.C.4.

The *Corriere della Sera* states that a big scheme for Italo-American commercial co-operation in the Near East is now under consideration. The United States would work entirely through Italy in the Near East and the Black Sea markets, Italy acting as agent.

ANGLO-PERSIAN OIL.**Capital for Construction of Tankers.**

In the House of Commons on March 10, on a motion to authorise the payment of £950,000 out of the Consolidated Fund for calls on share capital in the Anglo-Persian Oil Company (Limited), Mr. Hilton Young (Financial Secretary to the Treasury) stated that under Acts passed in 1914 and 1919 the Government purchased, for reasons of policy a controlling interest in the Anglo-Persian Oil Company for £4,250,000. Among the interests acquired were 1,000,000 £1 Ordinary shares, 1s. paid. Legislation was now required to enable the Government to fulfil their liability to pay up the uncalled capital upon these 1,000,000 shares. It was necessary to pay up this capital now because owing to the normal expansion and growth of this industrial undertaking, fresh capital was required for the construction of tank steamers for carrying oil. The Government's investment in this company had been highly profitable. In the year 1918-19 a dividend of 10 per cent. free of tax was paid on the Ordinary shares. In the following year the dividend was 20 per cent., less tax, and for the past year a dividend of 20 per cent., less tax, had been declared. The Bill would take power to raise this sum by borrowing, and it would impose on the Treasury an obligation to repay that money out of dividends as they were received. The Government's investments in the company were: 4,000,000 £1 Ordinary shares, fully paid; 1,000,000 Ordinary shares, 1s. paid; 1,000 £1 Eight per cent. Preference shares; and £199,000 Five per Cent. Debenture stock.

Colonel Wedgwood said that this investment had already been as satisfactory as the Suez Canal shares venture. He wanted to be assured, however, that with the recent increase of capital the Government had not lost their controlling interest in the company. As the Government controlled the majority of the shares, they should have a majority of the directors. They had only two out of a board of nine or ten.

Sir F. Banbury said that there were two directors on the board, and, although they were in a minority, they held exceptional powers, and could negative any proposition made by the other directors. He would make the Financial Secretary a present of a piece of sound financial advice. The shares were now bringing in a 20 per cent. dividend, and could now be sold at a good profit. His advice was to sell the shares.

Mr. Hilton Young said there was no question of policy involved in the resolution. The resolution must be taken as no indication of any intention on the part of the Government to take any further steps in the direction of Government investment in industry. It would be wrong to say the Anglo-Persian Company operated under the thumb and immediate control of the Treasury or any Government Department or Minister. The vital interests of the Government were secured by the representation of their directors on the board. The call to take up the shares was a legal liability. Failure to take up the shares by the Government would shatter the credit of the Company and destroy the value of its shares. It would be a most serious thing for the Government to refuse to act on the advice of the extremely able board of directors who had brought such success to the Company when they expressed the opinion that the company should apply for the uncalled share capital. The company's need for finance was greater than the capital that would be secured by the call on the shares. The existence of this uncalled liability had been a serious hindrance in the way of the company obtaining finance in the market in the ordinary way. The Government were not prepared to go against the advice of the company's experts.

Colonel Wedgwood—Have we still control of the voting power?

Mr. Hilton Young—Yes, full control.

The resolution was agreed to by 192 to 21.

Cotton & Cotton Goods.

MANCHESTER REPORT.

(From Our Own Correspondent.)

Manchester, Saturday.

The conditions prevailing throughout the market during the past week have shown some improvement. Prices have been firmer, and more interest has been displayed in Lancashire goods owing to there being a possibility of higher values in the near future. There is now less unemployment amongst the operatives. The statistical position of raw cotton is stronger than at the beginning of the year. Although in the distributing centres of the world there is more inclination to replenish stocks of Lancashire goods the political situation abroad is still very unsettled, especially with regard to India, and the fresh developments will no doubt have an unsettling effect on the trade. With regard to cloth the trade outlook for Egypt is rather uncertain, and business has been on a small scale. Miscellaneous orders have been put through for Constantinople. Egyptian yarn prices have been firmer, and although it is still difficult to improve the position of ordinary qualities in 60's twist more orders have been booked in fine combed numbers. Some encouraging transactions have resulted from the healthy piece goods demand for India. Buyers for China have operated on a restricted scale. Fancies have been sold for European markets. American yarns have been stiffer with rather a larger offtake. Demand has been about in bundles for India.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date March 8 :—

A well-sustained enquiry has been in evidence during the past week, and without showing any marked signs of broadening out a steady business has resulted, the week closing with a good tone and an all-round hardening of prices. The increased enquiry for low cotton, to which we have been recently drawing attention, assumed quite important dimensions a few days ago; in fact, it has formed quite a feature of the market here, and the bulk of the sales have been of this description. Prices paid varied from 3d. to about 7d. per lb., and a rise in the basis of $\frac{1}{4}$ d. to $\frac{3}{4}$ d. was quickly noticeable. This is a substantial rise for this class of cotton, as it is universally regarded as being outside the pale, and is not subject to the normal fluctuations of the spot prices. An interesting point in connection with the above is that instead of the demand coming from the Continent, as might have been expected, the majority of the cotton appeared to have been purchased on account of Lancashire spinners. Apart from this low cotton, a fair enquiry has again been experienced for Fully Good Fair Sakellaridis and thereabouts, but resulting business was of the hand-to-mouth variety, as usual. Rather more attention has been paid this week to Uppers; the best, and Strict Good Fair qualities being chiefly asked for. The selection here for these qualities is of a somewhat meagre description, and bona-fide purchasers have some difficulty in obtaining their cotton.

The small, but remarkably consistent offtake in Sudan cotton has continued, and this cotton is likely to attract a more and

more favourable opinion, particularly if the careful process of selection, which is bearing such good results at the present time, is adhered to. Much stress has been laid in the Egyptian press lately on (1) A coming scarcity of water, (2) The efforts of a supposedly powerful native clique to bolster up the Alexandria market by heavy purchases on a joint account. The first, at the present juncture, falls on deaf ears, as there would appear to be sufficient cotton available to last the season at current rates of consumption. Later on, and particularly should trade improve, this fact is likely to assume more significant proportions. The second, if successful, would, in the long run, prove detrimental to trade by creating a very false position, but we have reason to believe that their efforts are not likely to have serious results.

Manchester reports have been more cheerful latterly. The distrust aroused by the new Indian import duties has been somewhat allayed, and more business is reported with that country than for some time past. The so-called "minor outlets" have also been buying steadily. China, unfortunately, still withholds her support, but hopes are entertained that the exchange will move in her favour and induce her to come into the market again, for it is confidently expected that her requirements are still very large. C.i.f. business remains quiet. Total sales, 2,100 bales (includes 300 Sudan). Quotations are all raised 75 points. Fully Good Fair Sakellaridis 17.75d.

SALE OF LAND IN SOUTH AFRICA.

The attention of the High Commissioner for the Union of South Africa has been directed to the wording of certain advertisements issued by Companies relating to the sale of their land in South Africa. The High Commissioner is informed that it has been assumed that these advertisements are issued with the sanction and approval of the South African Government. The High Commissioner is anxious to give publicity to the fact that such advertisements are entirely unauthorised so far as he is concerned. The fullest possible information may be obtained at the High Commissioner's Office by intending settlers, but in no case will any particular land be recommended for sale.

SHIPPING INTELLIGENCE

HAIFA'S GROWING IMPORTANCE.

Shipowners and merchants interested in the trade of Palestine would do well (says *Syren and Shipping*) to keep a close watch upon Haifa. This port, situated as it is, on the Bay of Acre, is less of an open roadstead harbour than others on the Syrian coast, and enjoys shelter from all save north and north-westerly winds. There are prospects, too, of a big harbour being constructed at Haifa, a project which would present few engineering difficulties and would not, as such works go, be very expensive. In addition, the port has good rail connections, and can point to a big and growing trade with Damascus and Aleppo.

During the year ended March 31, 1921, the imports and exports of Palestine were valued at £5,216,633, the contributions from Great Britain being about £1,700,000. The great bulk of these exports were brought to the two ports of Haifa and Jaffa, the share of the former being valued at over two millions.

We learn from a correspondent there that the amount of business which has passed through the port, during the past nine months, has shewn a remarkable increase, and that the next official returns will establish Haifa in the first place among the ports of Palestine, especially as, from the point of view of the importing manufacturer, it is the principal entrepot of the country.

NEW B.I. STEAMER.

The steamer *Howra*, built by Messrs. Sir W. G. Armstrong, Whitworth and Co., Ltd., for the British India Steam Navigation Co., Ltd., was successfully launched from the Walker Shipyard of the firm on February 27. The following are the principal dimensions of the vessel:—Length between perpendiculars 411 ft. 6 ins.; breadth, moulded, 55 ft. 6 ins.; depth moulded to shelter deck 38 ft. 1½ ins. The vessel will be capable of carrying a deadweight of about 10,400 tons on a draft of 28 ft. 3 ins.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parenthesis:—

Anchor Line.—S.s. *Olympia* for Bombay (Liverpool, March 17); s.s. *Scindia* for Bombay (Liverpool, April 4).

Anchor Brocklebank Line.—S.s. *Mahanada* for Port Said, Colombo, Madras and Calcutta (London, March 21); s.s. *Mahsud* for Port Said, Colombo, Madras and Calcutta (London, April 8); s.s. *Imani* for Port Said, Colombo, Madras and Calcutta (London, April 25).

Bibby Line.—S.s. *Herefordshire* for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, March 20).

Byron Steamship Line. S.s. *Maid of Spetsai* for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, March 28).

Clan Line.—S.s. *Clan Ross* for Colombo, Madras and Calcutta (Birkenhead, March 23); s.s. *Clan Macvicar* for Bombay and Persian Gulf (Birkenhead, March 27).

Cunard Line.—S.s. *Pavia* for Gibraltar, Ceuta, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza and Sulina (Glasgow, March 28; Swansea, March 30; and Liverpool, April 1).

Ellerman's "City" Line.—S.s. *City of Christiania* for Calcutta (Birkenhead, March 27); s.s. *City of Poona* for Calcutta (Birkenhead, April 10).

Ellerman's "Hall" Line.—S.s. *City of Brisbane* for Bombay, Karachi and the Punjab (Liverpool, March 31).

Ellerman's Westcott and Lawrance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.s. *Gleniffer* for Port Said, Port Swettenham, Singapore, etc. (London, March 23); s.s. *Radnorshire* for Port Said, Port Swettenham, Singapore, etc. (London, April 13).

Harrison Line.—S.s. *Benefactor* for Calcutta (Liverpool, March 25); s.s. *Candidate* for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, April 20).

Henderson Line.—S.s. *Burma* for Port Said and Rangoon (Birkenhead, March 22); s.s. *Pegu* for Port Said and Rangoon (Birkenhead, April 5).

Holt Line.—S.s. *Deucalion* for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 23); s.s. *Eurylochus* for Port Said, Port Swettenham, Singapore, etc. (Glasgow, March 23).

Johnston Line.—S.s. *Peruvian* for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 25).

Moss Line.—S.s. *Karnak* for Gibraltar, Malta, Piraeus, Syra, Salonika and Constantinople (Liverpool, April 8).

Papayanni Line.—S.s. *Andalusian* for Tangiers, Malta and Alexandria (Liverpool, March 18).

P. and O. Line.—S.s. *Nankin* for Colombo, Madras, and Calcutta, (London, March 24); s.s. *Macedonia* for Bombay (London, March 24); s.s. *Morea* for Bombay (London, March 31); s.s. *Padua* for Colombo, Madras and Calcutta (London, April 7).

P. and O. British India Line.—S.s. *Mashobra* for Bombay and Karachi (London, March 24); s.s. *Margha* for Colombo, Madras and Calcutta (London, March 31); s.s. *Manela* for Bombay and Karachi (London, April 7); s.s. *Nuddea* for Colombo, Madras and Calcutta (London, April 15).

Prince Line.—S.s. *Syrian Prince* for Malta, Alexandria and Syria (London, March 18); s.s. *Scottish Prince* for Tunis, Malta, Alexandria and Syria (Manchester, March 25).

NEW COMPANIES.

Serbistan Steamship Co.

The Serbistan Steamship Co. has been registered as a private company with a capital of £100,000 in £1 shares. Objects:—To adopt an agreement with Frank C. Strick and Co., Ltd., and Gray Dawes and Co. to purchase, take in exchange or otherwise acquire and hold ships, boats and vessels, including boats equipped for salvage operations, etc. First directors: Wm. Langridge (director Anderson, Green and Co., Ltd.) and Alastair Cameron. Registered offices, 27, Leadenhall Street, E.C.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 6:—

Condition of Crops.—March 3. In Sind, standing crops profited by recent rains. Prospects in the rest of the Bombay Presidency good, but cotton deteriorated in Bombay Karnatak. In other provinces prospects unchanged. **Markets.**—March 2.—Bombay cotton market easy. Fine M.G. Oomras, Rs. 339 March, Rs. 355 May. Bombay cotton arrivals from September 1, 1921 to February 22, 1922 were 1,843,000 bales as compared with 1,008,000 bales in the same period of the last year. In Bombay imported piece-goods market there has been some demand from a consuming centre chiefly for bleached mulls and nainsooks, but at very reduced rates. No demand for prints, dyed goods and fancy style yet showing. March 4—Calcutta jute market steady. First Rs. 54 to Rs. 55 sellers, lightnings Rs. 44. March 6—Heavies firm. Liverpools Rs. 45. March 8, at which there are buyers but few sellers. Hessians very firm and rates are higher.

NOTES OF THE WEEK.

King Fuad of Egypt.

Sultan Fuad of Egypt has become King Fuad of Egypt, and we join respectfully in the congratulations which have been reaching his Majesty from all sides. Philosophers may declare that there is nothing in a title, but human nature will not accept that opinion, and in any case the Egyptians must realize that this change of title actually signifies for them a very great deal. It is unfortunate that the demonstrations attending the change should have been marred by some rioting in Cairo, which was of a sufficiently serious character to compel the police to fire upon the crowd. But the authorities declare that the disorders need not cause anxiety, being only the work of the riff-raff and persons wishing for an opportunity of looting. As the weight of moderate opinion begins to make itself more felt we may hope that such occurrences will become rarer and rarer, and that Egypt will settle down in earnest to show herself worthy of the independence she has so insistently claimed.

Turkish Missions in London.

There were until a day or two ago two Turkish Missions in London, one, headed by Izzet Pasha, representing the Constantinople Government, the other, led by Youssuf Kemal Bey, sent by the Angora National Assembly; but both were at pains to affirm that they had an identical purpose, "to defend our country's legitimate claims." Those claims, it was added, are to "a just and equitable peace;" and if that be their full extent there should be no difficulty about recognizing that they are strictly legitimate. Differences may, and almost certainly will, arise regarding what is just and equitable; but at this late hour it should not be impossible or even extremely difficult to compose those differences. The trouble will be to decide whether the Constantinople Mission or that from Angora is to be regarded as the better qualified, taking all things into consideration, to make terms and—most important—secure their recognition and honouring by Turkey. It would be of happy augury if the two Missions could officially become one; but if Constantinople messages are to be trusted, that is unlikely; for Kemal Pasha is reported to have made in the National Assembly a violent attack upon the Sultan's Government, and, especially, upon Izzet Pasha. We can only hope that this report has on its way to Constantinople passed at one stage or another through

hands unfriendly to a settlement with Turkey; otherwise the outlook is not encouraging.

After the Angora Treaty.

On another page of this issue will be found a description of the unhappy condition of Cilicia and Syria, consequent upon the triumph of Kemalism in those parts. The Angora Treaty was acclaimed by many Frenchmen and some Englishmen as a wise measure, designed, and in fact certain, to placate the Moslems. But events have proved them wrong indeed. In Cilicia we find the Kemalists respecting no one but themselves, arrogating to themselves the title of "conquerors of the conquerors of Germany," and generally making normal life impossible for foreigners. Two morals may be drawn from these facts:—1, that any settlement made with the Kemalists is useless unless it be made by the Allies acting in concert, and 2, that the path of compromise is, to the minds of the "dictators" of Angora, the path of self-humiliation. Those who believe in the virtue of Kemalist promises regarding such essentials as the protection of native Christians, or the rights of minorities, and who equally believe in the solid benefits which will arise from a granting of advanced Turkish claims, will not, we think, find their hopes strengthened by a perusal of this Cilician letter. The common assumption that the whole Kemalist game is a bluff, and that, if treated as they wish, Mustapha Kemal's supporters would behave in a thoroughly reasonable and decent way, is shown by events in Cilicia to be an idle one, in which it is folly to indulge. And we are glad to know, in view of the absolute necessity of concerted action by the Near East Conference (which was due to begin yesterday), that some influential Frenchmen are aware of this, and are not, as has been too hastily assumed, for flinging all things down to placate a temporarily powerful Turkey. We understand that M. Poincaré is by no means so convinced as was his predecessor of the wisdom of the Franklin-Bouillon arrangement, so that we have good hopes that a satisfactory agreement will be arranged between Great Britain and France, and, consequently, Italy.

No 'Scrap of Paper' for Italy.

The new Italian Minister for Foreign Affairs, Signor Schanzer, made a good beginning when in his first speech as Minister, he declared that Italy, having undertaken, by the Treaty of Rapallo, to respect the independence of Fiume, would abide by her undertaking. The Fascists may declare that the post must be either

Italian or Yugoslav, but the Foreign Minister recognizes that Italy's honour will not allow her to make a 'scrap of paper' of the Treaty of Rapallo. That will be noted with satisfaction in Yugoslavia, and will help still further to improve the relations between the two countries. Now, if Italy acts as firmly as Signor Schanzer spoke, we may hope soon to see the end of an intolerable situation.

The Rising in Albania

No one need be surprised at the rebellion in Albania, for, indeed, no one who knew the country could suppose that the Tirana Government would in the nature of things have a smooth and unchallenged course. The actual situation is by no means clear, but we should doubt very much whether all the hostile manifestations against the Government are part of a concerted plan. As is pointed out by our Albanian Correspondent this week, the country, like other parts of the Balkans, is one where persons count for more than principles, where the tribal instinct is still very strong, and where, we may add, internal strife is a habit that the granting of national independence can only with years assuage. The affair is serious no doubt, but not so damaging as to prejudice the future of Albania as an independent country. The population as a whole is behind the Government, even though big chieftains can always find considerable support; and the latest report is that Bairam Tsurri, who is said to have been sustained by Bulgarian bands, has been captured and hanged. These risings only show how strong the power of individuals and the consequent desire to resist a submergence into national unity yet are in Albania, but the decay of so mediaeval a condition of things is only a matter of time: to suppose it could be brought about in a day would be absurd.

The Greek Cabinet.

The internal condition of Greece's political affairs is very puzzling just now, and, frankly, we were surprised that M. Gounaris, after suffering a want-of-confidence vote, should have been asked again to form a Cabinet. The unexpected has happened, and it would appear from the latest news, that he is succeeding, though slowly, in collecting a Cabinet round him. We note with interest, remembering that the financial trouble is probably the most important of all M. Gounaris' difficulties, that the Ministry of Finance has been offered to M. Pepo Malach, a Greek Jew who has a big reputation in Athens. In the list so far announced of the new Cabinet there are some names that were in the previous Cabinet; and we imagine that this arrangement is a stop-gap until it is seen how things turn out at the Near East Conference. If it is there decided to recognise King Constantine, M. Gounaris will probably be confirmed in his power; but if not, it looks as if he will fall once more.

Expensive Commissions.

Lord Newton did good service when, some days ago, he called attention in the House of Lords to the excessive expenditure in connection with Inter-Allied Commissions in Central Europe, and the consequent effect upon the economic recovery of ex-enemy States and their ability to pay reparations. He had a very strong case and it is a pity that he spoiled it by exaggeration. Had he not done so, Lord Crawford would have had a more difficult task than he had in replying to the indictment. The fact is that these Commissions are a real scandal, not because the members are well paid (that is necessary if the right stamp of man is to be secured) but because they are usually far too big for the work they have to do.

If three or four Allies have to be represented on such a Commission, the resulting Commission is, roughly, three or four times as large as is really necessary. A further result is that much time is wasted in petty details and the Commission goes on existing long after it might have been wound up, running the ex-enemy country concerned into quite unnecessary expense and, to that extent, damaging the power to pay reparations. Unfortunately the principle of having each Ally watched by his fellow-Allies seems to have been accepted, and it is probably too late to go back on it now. But we would urge on the Conference of Ambassadors to review at frequent intervals the size of these Commissions and to insist on their being kept cut down to what is absolutely essential. Also, no Commission should be allowed to function for one day longer than is absolutely necessary. We prefer not to specify definite instances at present, but there is certainly more than one existing Commission in the Near East which might be cut down now, or very soon, to one representative of each Allied Power, with a clerk each, stationed in Paris or London.

The Removal of the Bulgarian Censorship.

It was with extreme pleasure that we learned recently that M. Stambolisky's Government have removed the Press Censorship in Bulgaria. No doubt their reasons for so long maintaining it were excellent, but the time for a more complete freedom of speech was manifestly ripe, and in any case the Government can by this measure only suffer in words what they possibly might have endured in action. In a country placed as Bulgaria is to-day, where there is inevitably a certain amount of both internal and external discontent, safety-valves are essential; firmness without discretion can easily be as disastrous a method of governing as the opposite method. We therefore wholeheartedly welcome this step, and congratulate its promoters; and we would further suggest the desirability of granting once more the liberty of free meeting, believing firmly as we do that what is driven underground must sooner or later erupt somewhere, but that which floats free is easily dissipated.

An Outrage in Bulgaria.

This week our Sofia Correspondent reports an outrage perpetrated by a discontented Bulgarian, presumed to be a Communist, on the American Legation at Sofia. The outrage was bad enough as it was, but we are glad indeed that it did not cause any loss of life. This method of ventilating one's grievances is a time-honoured one in the Balkans, and one the disuse of which is probably a matter of long years; and it is rather the grievance than the expression of it that is instructive to outsiders. The motive of the crime is supposed to lie in objection to the relief work which the Americans are carrying on on behalf of Russian refugees in Bulgaria, and it would therefore appear that the attempt was rather the outcome of one individual's fanaticism than a single incident in a general scheme. It is true that the danger of Communism in Bulgaria is by no means extinct, but this particular event has no obvious relation to that danger.

The End of the Prince's Tour.

The Prince of Wales left India on Friday, and the occasion was naturally taken for the publication of a large number of impressions of his tour and its results. In our judgment the most appropriate of these was the resolution passed by the Legislative Assembly, recording in simple words its appreciation of the visit undertaken

to enable the Prince to become acquainted with India, and India to be come acquainted with the Prince. That object has in fact been attained, and it is futile for individuals to express regret that other results which they may have hoped for have not followed. Regarding the part played by the Prince, it is sufficient to refer to the universal testimony that the longer his stay, the warmer was his welcome. As for India, there can be no doubt that the reputation of the country as a whole has suffered seriously throughout the Empire, owing in the first place to the activities of the revolutionary section, and in the second to the failure of the rest of the community to assert itself. That failure will have to be paid for in due course, but the price will depend largely on the extent to which the lesson proves to have been taken to heart, and the unpleasant features of the tour may even serve a useful purpose if they lead to a more real appreciation of the duties implied in citizenship of the new India, and the Empire.

The New Secretary of State.

At the beginning of last week a student of politics asked anxiously what would happen to India "with Gandhi in the lock-up and Montagu among the unemployed." The answer he received, which was "nothing particular," seemed hazardous at the moment, but it has so far proved to be correct. The interregnum at the India Office was, however, terminated last Saturday by the appointment of Viscount Peel to be Secretary of State, and the new Under-Secretary will probably have been chosen before these lines appear in print. Lord Peel has enjoyed little of the lime-light during the last few years, but he has a long record of sound administrative work, and his very name suggests the inheritance of those solid English qualities which in our view are most wanted just now in Whitehall. The course of party politics in this country suggests that his tenure of office may be short, and one is tempted to wish that the post were non-political, but we have not reached that stage yet, and, provided there is reasonable stability in India, we need not be seriously disquieted at the prospect of occasional alterations of Secretaries of State.

Mr. Gandhi's Arrest.

The most striking feature of the messages which have dealt with the arrest of Mr. Gandhi is the consensus that it has come to India as an anti-climax. His personal influence seemed to be waning, some of the most active brains behind him were no longer available, and there were already signs that the revolutionary movement might disintegrate into the numerous localised and discordant elements to which he had given the semblance of unity. It would be a grave error to regard this disintegration as a certainty, for so long as causes of discontent exist, temporary unification is always possible, but at the moment it looks as if a definite step had been taken towards what bureaucrats would call provincialisation. This would not of course mean that the trouble is at an end. In nearly every part of India the large numbers of men who hope to profit by disorder have been encouraged by the events of the last year or so, and disorder will come wherever the authorities allow; but some recent pronouncements have shown that the provincial Governors are not disposed to allow it, and the programme outlined in last Monday's statement regarding Oudh is the sort of thing to convince India that the time has come to settle down to ordinary life.

THE WEEK AT HOME

London, Monday Evening.

Potatoes and Wild Oats.

Mr. Lloyd George is sowing potatoes at Criccieth, while his colleagues and opponents are sowing wild oats in London and elsewhere. The Prime Minister will not be back in Downing Street until next week, and by that time he will have made up his mind whether he will remain in office or not. For it has come to that. The balance of the Coalition is upset; its Liberal element has shrunk and is likely to shrink still further, and its Conservative element goes on from strength to strength and from intolerance to intolerance. A meeting of Conservative members was held at the House last week which was to profess support of the Prime Minister and the Coalition; but it broke up without passing the resolution, and only one conclusion can be drawn—that the Conservative Party is sick of the Coalition, and tired of the Prime Minister.

Mr. Lloyd George, who is not and never will be a Conservative, is equally tired of his mutinous majority. It is believed that he would have stayed on to settle things at Geneva, but the great hopes of that Conference are diminishing; America will not come in at all, and France only comes in with reservations. It is suggested that the Conservatives would not mind his staying on as their nominal leader, obeying the policy which they choose to dictate; but that is an absurd idea. The Prime Minister will not be in anybody's pocket, nor will he sell himself to the fanatical Die-Hards. He is tired, too—he has been in office without a break since December, 1905—and would probably be glad of a real holiday; after which, with energies restored, he could enjoy himself in opposition for a space, eventually undertake a platform campaign, and hope for a return to Downing Street in a couple of years with more real power than he has at present.

In the meantime, according to the quidnuncs, a purely Conservative Government could carry on. Mr. Austen Chamberlain would be Prime Minister; Messrs. Fisher and Shortt, the two remaining Liberals, would resign, and make room for two Unionists; Mr. Winston Churchill, who is sometimes a Liberal and sometimes a Conservative, and mostly just Mr. Churchill, might be expected to remain. Such a Government would probably last out the year; it is doubtful whether it would last longer. The chief point in its favour is that it would avoid the necessity of a General Election, which the public do not want this year.

The weakness of contemporary Conservatism is that it has no policy, and that its anarchical element kills one leader after another—"Balfour must go," "Bonar Law must go," "Lloyd George must go"—is it probable that Mr. Chamberlain would give greater satisfaction in the long run? The "damn the consequences" element is still far too strong in Unionist circles, and while that is so, I doubt whether the country will believe in Conservatism as it did in the great days of Lord Salisbury. Superficially, events are playing into the hands of the Conservative Party; fundamentally I fancy they are more favourable to Liberalism and Labour. The North of England at least has no use for the kind of Conservatism which has been most in evidence lately, and no party which does not hold the North is secure at Westminster.

Personalities and Principles.

Political principles, however, are less important at the moment than personalities. Both Lord Derby and the Duke of Devonshire have refused the Indian Secretaryship, which pretty definitely indicates their opinion that they have no further use for the Coalition; *The Times* took the unusual and perhaps unwise step of congratulating them on their refusal. Lord Derby at least is a shrewd tactician who never worships the setting sun; the Duke is a man of considerable quiet ability with no great personal ambition; if he had thought that duty called him to serve he would undoubtedly have joined the Government, even though it was certain to fall within a week. The fact that two such different

men declined one of the great offices which has finally been accepted by Lord Peel, is eloquent of the present position.

These troubled waters should provide good fishing for the Independent Liberals, but they are still in vitriolic mood. Several of the Coalition Liberals would be glad to go back to the Wee Frees, if the thing could be done decently and unobtrusively; but Lord Gladstone, the party organiser of Mr. Asquith's little band, has announced that they must make a public confession of sin before they can be received back within the fold. That is enough to freeze any budding convert out, and Liberalism will never make its fortune as a narrow-minded sect with such extreme canons of orthodoxy—especially as it changed its own principles last year by incorporating some of the Labour Party's ideas on the sacred banner.

Altogether, home politics are likely to be engrossing enough during the next few months. Everybody is manoeuvring for position; everybody is making calculations in private, and professions in public; and the public is taking a fairly heavy discount off some of these professions.

A London Murder.

London has been horrified this week by the news of a ghastly outrage. Lady White, the widow of a well-known public man, who lived quietly in a West End hotel, was discovered early one morning in bed with grievous injuries to the head, which had been so battered by some heavy instrument that portions of the brain protruded. She died some hours later without regaining consciousness. There was no clue to the murderer, who took no valuable property—perhaps owing to being disturbed—and nobody saw him enter or leave the hotel, which is not one of the great caravanserais but a small select house where any stranger would be instantly noticed.

The Peel Case.

The case against Captain and Mrs. Peel for back-titling racing telegrams aroused great interest, as the parties were wealthy and socially prominent. Captain Peel pleaded guilty, and was sentenced to twelve months' imprisonment—a sentence that has been criticised as inadequate. Mrs. Peel was acquitted on the legal ground that a married woman is presumed to have acted under her husband's coercion—a very old principle of jurisprudence—but Mr. Justice Darling made it clear that, although the law compelled him to take this view, he did not believe it to be true in fact in the present case. As this couple were rich and well-connected, no stress of want or necessity compelled the crime. It is being suggested that the legal presumption of a wife's innocence should be abolished, as it is now obviously an anachronism.

The Ethics of Business.

A Conference is to be held next year at Birmingham, by representatives of all religious denominations, to discuss a question which is now being studied by various groups of enquirers—whether one can be a good Christian and a successful business man. The debate is to include the ethics of low wages, Stock Exchange speculation, and all manner of controversial points. The weakness of the programme, so far as I have seen it, seems at present to lie in the fact that no great business man has yet been prevailed on to state his opinion. Sermons on the sin of gambling are obviously ineffective since they are only heard by the converted.

The Week's Books.

The spring publishing season is being delayed owing to a strike among the packers and distributors at the publishing houses. In consequence, a number of new books that were announced for this month are being postponed; there is, however, no difficulty in getting works that have already been published. But that ferocious beast of prey, the reviewer, finds that he is in for a lean and hungry time, owing to the enforced economies of publishing.

One interesting little work that has run the blockade is "The Home Life of Swinburne" (Philpot), by Mrs. Clara Watts-Dunton. She describes how her husband weaned the great man from a tendency to too strong liquor: "On the occasion of each change to a drink less potent than its predecessor, some literary reason was assigned which would awaken desire to emulate some real or fictitious hero beloved by Swinburne. He gave up brandy because Tennyson drank port, and changed from port to burgundy because that was the tippie of Dumas' immortal musketeers. Then for an equally good reason he proceeded to claret, and finally, as it was Shakespeare's drink, to beer." Swinburne's favourite author was Dickens, with Thackeray, and Conan Doyle—at least the Sherlock Holmes stories—in places of high honour.

"Woodrow Wilson as I Knew Him" (Heinemann) by Joseph P. Tumulty, leaves the general impression on the reader that Mr. Tumulty was a greater man than the President, which is a little unfortunate, since the world is hardly likely to accept that verdict. But there are many interesting things in the book. He gives a reason for the President's hesitation in entering the War in the following quotation: "The thing that daunts me and holds me back is the aftermath of war, with all its tears and tragedies. I come from the South (the Southern States), and I know what war is, for I have seen its wreckage and terrible ruin. It is easy for me as President to declare war: I do not have to fight, and neither do the gentlemen who now clamour for it. It is some poor farmer's boy, or the son of some poor widow away off in some modest community, or perhaps the scion of a great family, who will have to do the fighting and the dying."

"Prime Ministers and Presidents (George H. Doran), by C. H. Sherrill, is another volume of personal sketches. One actual conversation between President Wilson and Mr. Hughes, the Prime Minister of Australia, will suffice. In connection with the New Guinea mandate, President Wilson thought it necessary to cross-examine the Commonwealth statesman as to the good intentions of Australia. "Would Australia agree to forbid the sale of arms to the natives?" "Yes," replied the suspected Australian. "And also the sale of alcohol?" "Yes, because alcohol is not good for cannibals." "And you would freely admit all missionaries?" "With pleasure, said Premier Hughes, "our reports show that those particular cannibals haven't been getting half enough to eat." As the cricketers say, the President retired hurt.

OCELLUS.

CRICKET IN JERUSALEM.

In a recent lecture on cricket at Rugby School, Captain P. F. Warner, speaking of his experiences of cricket said he had made a "duck" in Spain, scored 100 in Jersey, and in 1919 played beneath the shadow of the walls of Jerusalem. He told the sergeant-major who umpired for the latter match that he thought of giving up cricket. "Don't de a d—d fool, Sir, if I may say so," he replied; "I never saw so straight a bat between Dan and Beersheba, and I have been out here five years."

It was stated last week that owing to the large number of applications that have been received for the Palestine Gendarmerie recruiting is now closed. There were 400 vacancies for this country, and for these 2,000 applications were received.

EGYPT.

Cairo, March 11.

The Situation Improved.

The situation as far as can be gauged is steadily improving. There have been no troubles in the provinces, and the demonstrations which marked the early part of the week have subsided. If the Cabinet continues the same firm policy, there should be little fear of any further trouble. At the same time a good deal of criticism has been aroused by the appointments it made at its first Council meeting. While in certain cases the Cabinet appears to have gone out of its way to promote somewhat junior men, or men inexperienced in administrative work, nevertheless the introduction of new blood may not after all be such a bad thing; and time alone can show whether there is real ground for these criticisms, which one cannot help suspecting are to a great extent prompted by personal considerations. The appointments referred to are those made to Under-Secretaryships of Health, Communications and Agriculture. In the three last named administrations the posts were vacant, the Englishmen holding them having recently retired. In the Ministries of Finance and Public Works there are still English Under-Secretaries, and the new appointments are intended to be additional to the establishment pending arrangements for the retirement of the latter. Apart from the fact that the appointment of Egyptian Under-Secretaries in every Administration is the natural outcome of the decision to give Egyptians greater freedom in the administration of their country, this departure has been rendered necessary by the fact that the Cabinet is henceforward to be responsible to Parliament. It will obviously be impossible for Ministers to reply to all the questions concerning their administrations which will be raised in the new representative body, when it comes into existence, and they will have to be assisted, as in other countries, by Under-Secretaries, who in the circumstances must be Egyptians.

A corollary of the establishment of the principle of ministerial responsibility must be the curtailing of the control hitherto exercised by the British Advisers. The latter have hitherto "advised" the Ministers at the head of the Administrations to which they have been attached, and in pursuance of the principles laid down by Lord Granville in the early days of the Occupation Ministers have always had to follow the advice thus given them. Obviously under the new order of things this cannot continue; for Ministers cannot be expected to accept responsibility before a representative body for decisions which they have been compelled to take under pressure from Advisers who are not responsible for their actions to the same representative body.

From now onwards, therefore, the so-to-speak direct control hitherto exercised by the British Advisers must disappear, and Ministers will be free to carry on the administration of the country provided that what they do does not affect those interests the protection of which has been reserved for the absolute discretion of the British Government and in regard to which the views of the High Commissioner will have to prevail.

A first step in this direction was registered at the first Council meeting of the new Cabinet which was not attended by the Financial Adviser. Hitherto that official has always had a seat on the Council, and although theoretically he enjoyed no exclusive power he had acquired a predominating influence over the decisions of the Cabinet, not merely in financial matters and had become the interpreter of the views of the British Government on the Council of Ministers. From now onwards he will not sit with the Cabinet, but, while retaining all his advisory powers, he will still control the financial activities of the Government insofar as they affect the interests reserved for the absolute discretion

of the British Government.

The decision of Parliament ratifying the abolition of the Protectorate and the recognition of the independence of Egypt is anxiously awaited here, and until it is received the Egyptians generally refuse to believe that this important change has been decided upon. It is understood that as soon as the ratification by Parliament is notified to the Sultan he will announce the fact to his people in a rescript in which he will proclaim himself King of Egypt.

St. Andrew's Sale of Work.

A most successful sale of work organised by the Women's Guild of St. Andrew's Presbyterian Church was held this week at the Continental-Savoy Hotel. Lady Congreve, the wife of the G.O.C., performed the opening ceremony in a very happily worded little speech, and it is understood that the sale, which was exceedingly well attended, realised the sum of L.E. 300—a most welcome addition to the funds at the disposal of this Association which does an enormous amount of good work in the direction of assisting the various foreign and British missionaries and charitable institutions operating not only in this country but also abroad.

A Successful Flower-Show.

The Horticultural Society of Egypt held their annual flower-show this week in the Ezbekia Gardens. It was certainly the largest and most comprehensive exhibition of its kind seen in Egypt for many years, and the exhibits demonstrated what an advance horticulture has made out here. The opening ceremony was performed by Lady Allenby, who, ever since she came to Egypt, has materially helped the progress of the Society by the practical and active interest she has always taken in its work.

Moliere Tercentenary Fete.

The other evening the French community gave a great fete in honour of the tercentenary of Molière. It was a most successful and interesting evening and was thoroughly enjoyed by a large company including a considerable number of English residents and Egyptians. This is an example of the manner in which, by contrast with ourselves, the French do honour abroad to their famous men of letters, and it explains how, in spite of political changes and the extension of English instruction in the schools, France has managed to maintain her intellectual influence over the *Intelligenza* in this corner of the Mediterranean. It is surely about time that we did something to emulate our continental friends and give more prominence in countries like this to the literary and intellectual achievements of our nation. When, for example, will some one organise a Shakespeare festival?

Port Said, March 7.

"The" Wedding-Day.

The 28th was signalled here by a salute from the battery, and all the men-o'-war in port dressed ship to do honour to Princess Mary.

Mr. Ramsay MacDonald's Advice.

A few days ago Mr. Ramsay MacDonald was in Port Said, and the local Committee of the Delegation invited him to a tea and reception at the Casino Palace Hotel. There were various speeches in Arabic and English, and Mr. MacDonald was presented with a very fine lamp of eastern workmanship as a souvenir of his visit to Egypt. In reply Mr. MacDonald gave an excellent speech, and at the end acted the part of the candid friend, and in forceful and earnest words reminded the Egyptians that political assassination never yet helped any cause, and that it was ruining the Egyptian cause throughout the world.

Lucky Children.

Last week the Captain and Officers of H.M.S. 'Ceres,' gave a children's party, and the children were allowed to

bring escorts. The afternoon was literally "a howling success" for the howls of delight at the merry-go-round, and the aerial railway, and the shoot, and the cinema, and the diver's hand shake, and the conjuring tricks, were heard across the harbour. Altogether the escorts and the children had a most glorious time.

The weather has been extremely changeable, and several severe storms of thunder and lightning have been experienced the last few days.

ROUMANIA.

Bucharest, March 6.

The Elections for the Senate.

The general elections began on Wednesday, March 1, with those for the Senate in the Old Kingdom, Bukovina and Bessarabia. Out of a total of 116 seats, the Government secured 104, namely, 80 in the Old Kingdom, 16 in Bessarabia and 8 in Bukovina; while the 12 seats obtained by the Opposition consist of 8 in Bessarabia—won exclusively by the Tzarani— and 4 in the Old Kingdom, divided among the various groups of the Opposition. The elections for the Senate in Transylvania and the Banat will take place towards the end of this week, after the Chamber elections.

The above figures speak for themselves and it may be safely assumed that this success surpassed even the Government's expectations. The Opposition, however, in order to explain away their defeat, represent the Government's success as too sweeping to be honestly won and ascribe it to the use made of the administrative apparatus.

Judging from the total number of votes, the Tzarani made a fairly good second, followed by the coalesced groups of MM. Také Jonescu and Jorga, and then by General Averescu and M. Marghiloman's parties. The result, no doubt, forebodes for the Chamber elections, if not an equal success, at least a very satisfactory issue for the Government.

Overseas Club Dinner.

The Bucharest Group of the Overseas Club, which was formed only a few weeks ago, celebrated its inauguration by a dinner, which took place on Princess Mary's wedding day, at the Hotel Boulevard. Thanks to the efforts of the Organising Committee, consisting of Mrs. C. Hinscliff, Mr. L. A. Rutherford, Mr. H. A. Smith and Mr. J. Young, this first big venture of the Club was crowned with great success. The British Minister, Sir Herbert Dering, and Lady Dering were present as the Guests of Honour; and Lt.-Col. Duncan, the Military Attaché, and Mr. Millington Drake, First Secretary of the Legation (both members of the Overseas) were also guests. Mr. S. A. Guest made an excellent chairman and largely contributed to the delightful evening by his witty and pointed speeches.

The toast of "The King" was followed by the reading of a letter from Queen Marie of Roumania, who is British by birth and had graciously consented to be an honorary life member of the League. This letter runs as follows:—"As I have been made Honorary Life Member of the Overseas Club, I would like you all to feel that my thought is with you this evening when your Bucharest group meets for the first time. I wish you all good luck and happiness, and am so glad that the day you chose for your dinner is the wedding day of my dear young cousin Princess Mary, so dear to every English heart. Three cheers for Princess Mary and for the success and welfare of your Club all over the world.—Marie." Needless to say, the reading of this letter was greeted with enthusiastic applause and cheers, and the toast "The King and Queen of Roumania" was followed by a burst of renewed applause.

Greetings to Princess Mary.

The third toast was that of Princess Mary, proposed by Sir Herbert Dering, who had had the happy idea of sending a message of congratulation from the Legation, Consulate and the entire British Community, and timing it so that the reply arrived in time to be read at the Overseas' dinner. The Minister's speech most eloquently put into words the thoughts of all present,

which at that moment were centred on our beloved Princess, who, as Sir Herbert Dering rightly said, had so endeared herself to the hearts of the people during the war and after. Princess Mary's reply by telegram was read and listened to with intense interest, and for the moment everybody present felt himself in touch with the great event taking place in the "old country."

The toast to the Guests of Honour, included besides Sir Herbert and Lady Dering, a number of American and Roumanian friends, including Admiral Pantazzi, whose wife is an associate member of the Group and the authoress of a very interesting book on Roumania. Admiral Pantazzi replied to the toast in a very happy little speech in French. Mr E. Palmer, the American Consul in Bucharest, also replied.

Colonel Duncan, who proposed "The Overseas Club," put before us the ideals for which we stand in a most helpful and forcible way; and Mr. Millington Drake proposed thanks to the organising committee, and so another toast was drunk, and replied to by the Rev. Claude Hinscliff in the name of those concerned.

There were about one hundred persons present, and after the dinner the centre of the floor was cleared for dancing. The dinner itself was quite excellent, and the chef of the Hotel wrestled successfully with one culinary difficulty, namely "pancakes" in honour of the day—Shrove Tuesday. Two of the members—clever at mechanical and engineering work—made for this occasion and for future use an exact replica of the Overseas Badge, 3 feet in diameter.

General News.

The Crown Princess Helen of Roumania together with her baby boy, Prince Mihai, are expected to leave Athens for Bucharest on March 15.

The Roumanian Royal family journeyed on Saturday, March 4, to Curtea de Arges, the burial place of the late Sovereigns, to attend the annual requiem in memory of Queen Elizabeth—"Carmen Sylva."

The International Commission for the Delimitation of the Roumanian-Hungarian boundary arrived last week at Arad. The Commission is composed of representatives of Great Britain, France, Japan and Italy, besides the Roumanian and Hungarian delegates.

YUGOSLAVIA.

Belgrade, March 11.

Revival of the Fiume Incident.

Four days ago the *fascisti* whom official Italy now recognises and now disowns, were once more let loose; and the streets of Fiume are again the scene of terrible civil-war. The Independent Government of the Free State of Fiume has been expelled by them, in order to provide official Italy with an excuse to land the troops which she was compelled to remove from Fiume under the pressure of the Great Powers some months ago. To give the finishing touch to this tragi-comedy a telegram from Trieste states quite proudly that the *fascisti* after a "heavy fight" have stormed and taken two destroyers belonging to the Italian Navy. It takes very little to see how easy it would be for a mob armed with rifles to "storm and take" two warships operating on the high sea! An English daily newspaper reproduced the above, probably thinking it quite natural for men to swim out to sea, put up a heavy fight, and board a man-of-war. English newspapers are usually regarded here as the only ones that endeavour to publish nothing but the truth, and some anglophobe Belgrade papers have welcomed this rather sad misinformation as a chance to point out that even the biggest English papers are lending their columns to the unjust cause of Italy.

The Parliament at Belgrade had a very feverish sitting and all the Members without exception demanded a final settlement of Yugoslav relations with Italy. The Minister of Foreign Affairs outlined his position, stating that the Yugoslavs have protested, but his speech was so frequently interrupted that it was impossible to hear how he finished it. To one who knows this country it was very plain that the war-fever is unfortunately again setting in among the population. More reasonable

men are earnestly hoping that the Great Powers will intervene in time to prevent more serious consequences to this latest provocation. Only a few days ago everybody welcomed the change in the Italian Government, hoping that an end had been reached of all this trickery and provocation, but now this illusion has gone, to make room for the opinion that Italy may change her leaders but will always pursue the same policy.

Quadruple Entente Delegates in Belgrade.

The first series of meetings of the Quadruple Entente delegates is ended. A complete understanding as regards the future Genoa Conference discussions has been arrived at, and now everybody is calmly awaiting the fixing of the date of Genoa. Poland and Czechoslovakia made a friendly settlement of their border differences, and as a direct consequence Poland joined the Little Entente, which is now to be called the Quadruple Entente. Main points which they will discuss collectively in Genoa will be the economic reconstruction of Central Europe, the attitude towards Russia, and the settlement of liabilities which have to be borne by the States that used to form Austro-Hungary before 1914.

BULGARIA.

Sofia, March 11.

Greece and Bulgaria.

THE NEAR EAST in its number of March 2 mentioned that Bulgaria had not yet resumed diplomatic relations with Greece. This defect is soon to be remedied, M. Cuneff having received orders to proceed to Athens as Chargé d'Affaires. M. Cuneff, who was formerly chief liaison officer with General de Fourtoul, the President of the Military Commission, expects to leave Sofia towards the end of March. M. Kissef, the Minister elect, will not go to Athens for the present, as his services may be required for the Conference of Genoa, but it is probable that he will take up his new post without any further loss of time. In sending M. Cuneff to Athens the Bulgarian Government have done what they should have done long ago. The Greeks have been represented in Bulgaria by M. Panourias in the capacity of Chargé d'Affaires for over eighteen months, but at Athens the United States have looked after Bulgarian interests. It is very difficult to remain on good terms with another country when one has no Diplomatic representation in the country concerned. This is particularly true of two countries such as Greece and Bulgaria who have a common frontier and who have many outstanding differences to clear up.

Communism in Bulgaria.

A Press telegram received from Budapest last week stated that the Hungarian police had arrested a number of Communists, who were the chiefs of an organisation having its headquarters at Budapest and agents established at Sofia and other Balkan capitals. The trial of these Communists will test the truth of the above quoted telegram, but it would occasion no surprise to learn that a Communist organisation was at work in Bulgaria, under the very noses of the Government. In order to check Communist plots it is necessary to have a strong army and gendarmerie, neither of which Bulgaria possesses. Bulgarian Communists are for the most part not especially dangerous, but their foreign compatriots, who, owing to the ungaurded state of the frontiers, have full access to Bulgaria, are capable of stirring up trouble. This trouble, moreover, need not be confined to Communists; London papers often refer to Bulgaria as being used as a means of communication between Angora and Moscow, and even Angora and Berlin. This is very natural, as Bulgaria's geographical position is excellently adapted for forming a connecting link between Germany, Russia, and Turkey. In addition, a large strip of territory ungaurded by soldiers or gendarmerie offers many advantages to those people who dare not entrust their missives to the ordinary post.

Questions asked in the House of Lords last month show that there are some British politicians who realise

that Bulgaria, disarmed and defenceless, may become a centre of "Utopian unrest" instead of the "Utopian Paradise," planned by the Paris Peace Conference. Anyone, be he diplomat, soldier, or politician, has only to visit Bulgaria, study local conditions, and he will return convinced that the military terms of the Treaty of Neuilly are thoroughly unpractical. Besides being unpractical they are dangerous, as it is in no one's interests that the Communists should have all their own way in Bulgaria.

M. Stambolisky in the Provinces.

M. Stambolisky left Sofia ten days ago for the provinces, and conjecture is rife upon the meaning of his absence when many political matters claim his attention. It is said that the Prime Minister has visited M. Draghieff at Stara Zagora with the object of sounding the latter as to his willingness to enter the Cabinet. M. Draghieff, one of the founders of the Agrarian party, has lived quietly at Stara Zagora for the last two years; but he is still a certain force in the country, and some of the junior members of the Cabinet are thought to favour the idea of his return to active political life. Well informed circles are of the view that M. Draghieff will not return so long as the Cabinet continues its present internal policy, nor so long as certain Ministers retain their portfolios. Since the censorship was ended, rumours have been current to the effect that M. Draghieff, Minister of the Interior, had resigned, and that M. Oboff, Minister of Agriculture, would be called upon to resign. No confirmation is forthcoming of either of these rumours and it may be that they are due to the letting off of steam consequent on the withdrawal of the censorship.

Ministerial Problems.

It is, however, evident that the Cabinet has some thorny problems to solve. Chief amongst these is the Budget, which the most strenuous efforts of M. Tourlakoff have so far failed to balance. In addition there are the payment of Reparations for 1922, the dispute with Sofia University, which is approaching a climax, and the threatening attitude of the Clergy, who are annoyed at having their war bonuses reduced. Other and minor difficulties exist in plenty, and the lot of the Cabinet is certainly not an enviable one. That they will weather the storm, as they have weathered others, is not to be doubted, on account of the reluctance of the opposition parties to come to an understanding.

Mme. Karsavina.

Madame Tamara Karsavina, the famous Russian ballet dancer, will dance at the Free Theatre, Sofia, on Monday, March 20. All the proceeds of the performance will be given to the Russian refugees in Bulgaria.

A Bomb Outrage.

A bomb was thrown last night into the Chancellery of the American Legation. No one was in the room at the time and the explosion caused no material damage. The author of the outrage has not yet been caught although he was seen to run away by several persons who were in the street. No reasons can be as yet advanced for the outrage, but it is possible that it is the work of a Communist who disapproves of the relief work that the American Legation is carrying out here on behalf of the Russian refugees in Bulgaria.

Tennis in March.

Owing to the exceptionally fine weather it has been possible to begin the tennis season at Sofia.

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

GREECE.

Athens, March 10.

Murder of a well-known Journalist.

A highly respected Greek journalist, Andrew Kavafakis, Editor of the *Eleftheros Typos*, a Venizelist paper, has fallen a victim to the bitter political antagonism which has for so long divided Greece into two hostile camps. Readers of THE NEAR EAST probably remember that while walking in Stadium Street one evening last August, M. Kavafakis was attacked with walking sticks and slightly injured in the head and body. This time, however, the cowardly murderers had apparently made up their minds to rid themselves once for all of their man.

At about 9 p.m. on Monday last Andrew Kavafakis left the editorial offices of the *Eleftheros Typos* in Edward Law Street, and hiring a cab drove to his home situated in Troia Street in the suburb of Patissia. Reaching his house half an hour later, and having paid his cab fare, he was about to unlock the front door when six revolver shots were fired in quick succession from a dark "cul-de-sac" immediately opposite his house. Mortally wounded in the head and stomach, M. Kavafakis fell on the pavement unconscious. When medical aid arrived it was too late, as the victim was already dead.

The funeral took place on the following afternoon and was attended by thousands of people including all the prominent Liberals in Athens, and the editors and staffs of all the Athenian newspapers. At the conclusion of the funeral service, which was held at St. George's Church, speeches eulogizing the character and the patriotism of the deceased and stigmatizing his assassins, were delivered by General Dangelis, on behalf of the Liberal Party, and others.

Both sections of the Press are vehemently attacking the Government and particularly the Chief of Police, whom they accuse of complete inability to ensure public safety in the capital. As a sign of protest the editors of all the Athenian papers, with the exception of the *Stemma*, suspended their publication for 24 hours.

The murderers who, according to the cabman's statement were three, two of them being soldiers in uniform, have not so far been traced; one arrest has, however, been made.

The Prime Minister's Return.

After an absence of over four months Monsieur Gounaris has returned to Athens. On the morning following his return the Premier was received in audience by the King whom he put *au courant* with the actual position of the national questions, also with the results of his *démarches* in the various European capitals. In the afternoon of the same day a Council of Ministers,

held at the Prime Minister's private office, discussed the situation in general and decided to convoke the Constituent Assembly on the 10th inst. (to-night) when M. Gounaris will make important declarations and will ask for a vote of confidence.

Replying to the representatives of the Press, who asked him whether there was any truth in the rumour that the Government intended to resign, M. Gounaris said that these rumours were absurd, as he had never thought of resigning. He would retain the premiership as long as the National Assembly and the people continued their confidence in him. There was no doubt, added the Premier, that Greece was struggling against great difficulties, but the Government at present in power ought not to be blamed for that. Immediately after the conclusion of the Great War every one of the victorious nations took all necessary steps to ensure the complete disarmament of its nearest adversary. Unfortunately those who at the time were holding in their hands the destinies of the country had failed to obtain the application of such measures against Greece's direct enemy, Turkey. There should be sought the main cause of the present difficulties of Hellas, which the Government would do its utmost to overcome.

The Political Situation.

It was generally thought here that on his return from his prolonged sojourn abroad, M. Gounaris would, after giving a detailed account of his doings and enlightening the people on the real state of the national affairs, resign with his entire Cabinet without even going to the trouble of asking the National Assembly for a vote of confidence. No little surprise was therefore caused when the Premier immediately after his return made it perfectly clear that he had not the slightest intention of parting with the Premiership. That even some of his own followers in the Chamber had expected him to resign is proved by the fact that many of these have openly declared that they will unreservedly blackball their leader. These deputies about 26 in number, are all Members for Macedonia and are headed by M. Boussio. If to these are added the Mussulman, deputies of Macedonia and Thrace numbering 27, who will also in all probability vote against the Government, M. Gounaris' position would appear to be rather critical in view of the fact that not only the Liberals (85 votes) but the followers of M. Stratos (about 30 votes) and the Independents (20 votes) have declared most emphatically that they will not support the Government. Seeing that the total number of deputies actually in Athens is only 319, it would appear that if, as anticipated, the above 188 vote against the Gounaris Government, this is already doomed. Even if the Mussulman deputies (these as a rule change their mind at the very last moment) decide to afford their support to the Government, the latter would not obtain a majority and would be obliged to resign.

Miscellaneous News.

After spending four days in Athens, M. Stergiadis has returned to Smyrna. He was received in audience by the King and on the day of his departure called on the British and French Chargés d'Affaires.

The eight prominent Liberals who were arrested a fortnight ago for the publication of an article in the *Patris*, have been released.

The situation in Crete is still serious, collisions between the Government troops and the insurgents taking place almost daily. More reinforcements have been despatched to the island lately.

TURKEY.

Constantinople, March 14.

The Missions to Europe.

Although, according to official announcements, the sole object of the journey to Europe of the Commissioner for Foreign Affairs of the Angora Government, Yousouf Kemal Bey, is to enlighten public opinion with regard to the objects of Kemalist policy, the utmost indignation was aroused in Angora by the action of the Sublime Port in sending Izzet Pasha to assist the Angora envoy in that task. The acting Commissioner for Foreign

Affairs informed the Great National Assembly that in his opinion the Central Government was trying to carry out by trickery the object which the former Grand Vizier, Damad Ferid Pasha, failed to accomplish by the use of force, namely the destruction of the Angora Government. A telegram of warning was therefore sent to the Sublime Porte, and serious measures were threatened if the Imperial Government persisted in pursuing a line of conduct opposed to the sacrosanct policy of the representatives of the people. What reply the Sublime Porte sent to this missive is not known, but Mahmud Pasha Churuksulu suddenly discovered urgent business in Angora, where he has doubtless done his best to persuade the representatives of the people not to make fools of themselves. At all events, in the course of a subsequent sitting of the Great National Assembly, when certain deputies suggested that Izzet Pasha should be summoned before the Anatolian Tcheresvechaika, or Independent Tribunal, to answer a charge of High Treason against the Nation, the Acting Commissioner for Foreign Affairs explained that after all Izzet Pasha was not such a bad chap and there was no doubt whatever that he would support the Nation's Only Representative to the utmost of his ability. The Great National Assembly then expressed its satisfaction by according the Acting Foreign Commissioner a vote of confidence.

The precise objects of the two missions are still something of a mystery, for it is hardly likely that the two Foreign Ministers would undertake such an extensive and expensive journey merely to explain what has already been explained at length upon innumerable occasions. In view, however, of the forthcoming Conference of Allied Ministers in Paris, and of the Conference of Genoa, there can be no doubt that good reasons exist for the presence of the two envoys in Europe. The primary object of both missions is doubtless to secure the further isolation of Greece, for in spite of all advertisements to the contrary, the Kemalist army is certainly in a weaker position than it was twelve months ago. In the next place it is essential from the Turkish point of view that the Allies should be prevented, if possible, from coming to an agreement amongst themselves to enforce their own peace terms, or to cut the ground from beneath the feet of the Angora Government by coming to an understanding with Russia in regard to the Straits Question and the settlement of the eastern frontier of Turkey. It is not difficult to understand why the Imperial Government decided not to authorise Youssuf Kemal Bey to act in the name of the Sultan; for such a proceeding would put an end to the equivocal position of the Central Government, and render impossible any disavowal of the most fantastic claims of the Angora Government. Izzet Pasha's task, therefore, is to try to lay the dust which may be raised by Youssuf Kemal Bey.

The Greeks in Anatolia.

For some time past rumours have been current to the effect that even if the Athens Government were to consent to the evacuation of Anatolia, the Greek army would refuse to carry out orders to that effect, and would support an independent government to be proclaimed in Ionia. In other words, war between Turkey and Greece would be succeeded by a war between Kemalistan and Papoulasthan, for General Papoulas himself is said to be secretly at the head of the movement. On paper the idea may appear fantastic, but was not the Nationalist Movement at first regarded as fantastic, and were not the Nationalist forces scornfully described as a mere collection of brigand bands? Why should the Greeks, who have a considerable regular army in the field to give them a start, be unable to emulate the example of the Turks? It is true the Russians have been largely responsible for the continued existence of the Angora Government, but past history has shown that amongst the Greeks private effort may produce the most extraordinary results. Greece practically owes her independence and her existence to the private efforts of individual patriots, who have presented warships and universities to their country. The feeling against the withdrawal from Anatolia is growing constantly stronger,

and the severe measures taken by the Angora Government in the Black Sea coastal area have served to strengthen still further the determination of the Greeks to hold what they have won. The movement against the evacuation of Anatolia should not therefore be regarded merely as propaganda, or of no great seriousness. On the contrary, the Allies may find it far more difficult than is generally imagined to destroy the Frankenstein created by their own mistakes during the last three-and-a-half years.

ALBANIA.

Tirana, March 10.

Gathering Clouds.

There are grave signs of an acute crisis in Albania, a crisis that may prove fatal if its dimensions grow too big, but one that may also have a salutary influence on the country if the insurrectionary movement is crushed. The issue of the matter will be of the utmost importance to Albania, and will profoundly affect the political life of this young and inexperienced people.

To understand the nature of the tempest which threatens to shake Albania and its Government, it must be remembered that the country is still in what may be called a "patriarchal" condition, in which the personal factor is of immense importance, often, indeed, counting for more than principle: a movement has but to be led by an influential person, and it at once has to be reckoned with. Your readers will recall that in my letter dated January 29 and published in *THE NEAR EAST* of February 9, I mentioned certain signs of discontent at Scutari. At first not much attention was paid to the matter. Now this little insignificant movement of protestation, which manifested itself in the North, ran the risk of becoming more complicated and, by collaboration with other elements nearer Tirana, of spreading.

Towards the end of February the Government requested Dr. Tourtoulis and Mgr. Bumci—both members withdrawn from the High Council—to leave Albania immediately, so that their attitude might not give rise to comment and that they might not be accused of stirring up strife. The two men obeyed this order with good grace, and quietly took the exile's road. But all the time other and more important factors were entering into the game. It will be remembered that Hassan Prishtina, Mustapha Kruja, and Zia Dibra—all three accused of a *coup d'état* in last December—were to be brought before a Court of Justice. Hassan Prishtina is still in Albania; the other two have disappeared. To the activities of these two agitators must be added those of Bairam Tsurri, a chieftain from Yankova, of more than sixty-five years of age, an energetic man who up to the present has shown great patriotism and honesty. Unfortunately he is an enemy of Ahmed Zogolli, Minister of the Interior.

To these personal influences it is necessary still further to add another action of a political character: the discontent caused in the North-East of Albania by the decision of the Conference of Ambassadors at Paris on November 9 last, which was so prejudicial to the frontiers of Albania. To obtain an idea of the indignation aroused in the country by the diminution once more of Albanian territory, one must visit the region recently evacuated by the Serbs, the country along the Drin, completely ravaged by Serbian troops, and still groaning in its misery. This last factor explains to us why Elez Youssuf, chief of the Drin region, has taken part in the movement.

The Actual State of Affairs.

At the moment at which I write these lines the movement is developing and is very far from settling down. It is nevertheless a remarkable thing that the people have taken no part in the affair; on the contrary they are supporting the Government, and the Militia is faithful to the authorities. This gives grounds for hope that in a short time the Government will be able to stifle this insurrection, which, for the time being at least, appears to be very circumscribed, and has not been attended by any kind of outrage.

The Recognition of Albania.

The latest information at Tirana states that the Governments of Sofia and of Berne have officially recognised Albania *de jure*, and the early arrival of a Bulgarian representative is expected.

The Postal Service.

On March 1 Albania was admitted into the Postal Union, the formalities being carried through at Berne. Postal communications with Albania are still very uncertain, the only route at the moment being *via* Italy. A postal and telegraphic convention with Serbia and Greece has always been desired, and attempts have been made to arrive at an agreement. This may henceforward be made easier.

The Albanian Minister in London.

With the consent of the British Government, M. Mehmed Konitza has been nominated Albanian Minister Plenipotentiary in London. M. Konitza left Tirana this week, and should already have arrived in London. He is the first representative of Albania in London. The new Minister lived in London in 1912 and 1913, as Albanian delegate to the Conference after the Turko-Balkan War; moreover, he has further been in London from 1914-1919—the duration of the Great War—as delegate of the great Albanian federation Vatra of the United States of America. After the Armistice, at the assembly of the Congress of Durazzo in December 1919, he was made Minister of Foreign Affairs, a post that he also held at the Grand Assembly of Lushnia in January, 1920. From December, 1920, until his nomination to his present post, M. Konitza has remained in London as delegate of the Vatra. It is hoped that this appointment will still further cement the cordial relations between Great Britain and Albania.

Serbian Agents in Albania.

Serbia keeps two agents in Albania, one at Scutari and another at Koritza. The Government of Tirana has just notified these two agents that they can no longer be tolerated, if they cannot be nominated and officially accredited as consuls. An answer from M. Pashitch's Government is now awaited.

Albania and the Paris Conference.

The Conference of Ambassadors is not very urgent in its desire to do justice to the demands of Albania, and the procrastination characterising the solution of outstanding questions often places the Government of Tirana in a very difficult position.

A solution of three questions is awaited, namely: the evacuation of Scutari by Italian troops, the evacuation by the Greeks of the region South of Koritza, and lastly, the remission to Albania of the sum arising from the excess of receipts over expenses during the administration by the French of Koritza (1916-1920), a sum amounting to 1,200,000 francs which was handed over to the French Minister of Finance while awaiting a definite ruling on the fate of Koritza, a decision which was made on November 9 at the Conference of Ambassadors at Paris.

Two Commissions.

The Commission of Inquiry has left Albania for Geneva, where it will present to the League of Nations a detailed account of its operations. Before leaving Albania the Commission of Inquiry met the Frontier Commission which has just arrived at Scutari, and which will soon enter upon its duties in determining the frontier between Serbia and Albania.

As M. Yovanovitch, the Serbian Minister at Berne, had, on January 18, presented in the name of his Government a Note to the League of Nations, in which he set out grievances against the Albanian Government and particulars of events in the neutral zone and along the frontier, the League of Nations has charged this Commission to verify these complaints. The Commission has just ended its report and the League has published it, bearing the date February 22, 1922. In this report the complaints formulated by Serbia are denied and are challenged on all points.

IRAQ.

Baghdad, March 2.

The Political Situation.

Things are settling down in Iraq, very slowly it is true, but on the whole satisfactorily. There are, however, some disquieting signs which do not augur well, and which if not attended to very soon may lead to trouble. First and foremost comes the collection of the revenues. In most parts of the country the taxes are being paid without any trouble, but in most of the Muntafiq *liwa*, and in some parts of the Hillah *liwa* little or no revenue is being collected—and that in spite of the fact that these are among the biggest revenue producing districts of the country. It is very doubtful whether the money to pay now exists in these districts even if the tribesmen had any intention of paying. It certainly was there, but most of it has now been spent on the purchase of rifles; and it is not clear what steps Government will take to enforce the payment of its demands.

The situation is critical. Government has not at its disposal at the moment sufficient forces to coerce the tribesmen into paying, and at the same time any refusal to pay on a big scale will make the State's finances so precarious as to make it very difficult for the Government to carry on its work. At such a time the presence of a strong and capable Minister of the Interior is very necessary, and it is a pity that the present Minister, Haji Ramzi Bey does not show greater initiative in dealing with events.

Party Differences.

It is unfortunate, too, that, at such a time, when it is essential that party differences should be sunk in an attempt to place the national Government on a firm footing, a large number of officials show a distinct tendency to differentiate between those persons who rose in revolt in 1920, and those who did not, usually to the detriment of those who did not rise. It is natural perhaps, but none the less unfortunate that many of the new officials are of opinion that they are indebted to those who rose in 1920 for their appointments to their present posts, and feel it incumbent upon them to repay that debt in any way possible. This attitude is only creating a cleavage which did not actually exist to any appreciable extent before, and it is for Government and all its officials to see that the persons who did not rise in 1920 did not remain inactive through any lack of patriotic sentiment, but merely because they are the persons who will support Government *qua* Government in the interests of law and order; and the young Arab Government should be careful not to alienate the sympathies of this important section of the population. With all these unfavourable signs, however, the situation is certainly better than it was three months ago.

Chief of Police.

General Nuri Pasha Sa'id has been appointed Director General of Police.

ASIA MINOR.

Smyrna, March 7.

Yesterday the Greek Archbishop of Smyrna, Chrysostomos, was responsible for a slight perturbation in business circles. He announced that all Anatolian Greeks between the ages of 18 and 50 were called up to serve as volunteers in the Greek forces, and that one-fifth of Greek fortunes would be required for the upkeep of the volunteer force. This news seems to have induced many of the wealthy Greeks to reduce their deposits in the Greek banks, and there was, for a time, considerable danger of a "run" on all Greek banks. The Greek military authorities promptly issued a notice that the Bishop's action was unauthorised and that only the War Minister had the right to call up recruits for the army. The "run" on the banks ceased forthwith and to-day business is "as usual," *i.e.*, very bad indeed.

CYPRUS.*Nicosia, February 28.***The Legislative Council.**

The Chamber, with its diminished members, is to be opened on March 7. In addition to the Budget, thirteen draft laws will be submitted. They will include new, or amending bills, relating to the penal code, post office and customs, church properties, advocates, motors, shooting and the protection of wild birds. The Budget is framed for nine months only, as for the future the financial year is to date from January 1, instead of April 1. Estimated expenditure amounts to £402,093, including the following votes:—Police £66,715; prisons £12,680; Forest £59,550; Land Registry and Survey £33,567; Medical £24,246; Public Works £38,097; Education £22,902; Treasury £21,554; Secretariat £21,843; Post Office £13,931; Agriculture £12,928. It will be noticed that the Agricultural Department figures for a smaller sum than the Post Office, although agriculture is the life of the island.

Figures for the Quarter ended December 31 last show that the value of exports from Cyprus amounted to £331,679, an against £319,516 in 1920: and that of imports to £479,836, as against £405,101. The depression in trade continues, and the above figures show that the island is far from recovery to normal conditions of progress.

Letter from the Oecumenical Patriarch.

A letter of peace and greeting from the Patriarch Melétios at Constantinople, sent in accordance with established custom after a new enthronement, has been received by the Archbishop at Nicosia. It makes special allusion to the time he spent in Cyprus as Bishop of Kitium, and of the bonds which unite him with the island, its clergy, and Orthodox people, for whose welfare he prays. The Archbishop will lay the letter before the Holy Synod, in order that the terms of the reply may be considered. The Greek Church of Cyprus, like some of its sister independent churches, is adopting a cautious, wait-and-see, attitude, in view of the dispute between Greece and Constantinople over the Election, which has brought confusion into the ecclesiastic community. In Cyprus it is hoped that the chasm which at present divides the Orthodox Church into two parties will soon be bridged, and an understanding arrived at, although feeling at present runs high at Athens.

General News.

All the Russian refugees except those who propose to settle in the island, are warned to be prepared to leave the island about June for Serbia, between whose Government and the British an understanding has been come to as to settlement.

The grain (80,000 bushels) in the Nicosia stores has been sold to bakers at 5s. the bushel.

Amongst the institutions which have been adopted from the British Community are football, hockey, and other games. Both Greeks and Turks are now proficient players, and several good clubs exist. A number of both football and hockey matches have been played at Nicosia and other towns. A football club of Cypriots at Athens has been distinguishing itself; and its members have played a Greek team at Phalerum, in the presence of the King, the Royal Family, and a large concourse of spectators.

KEMALISM IN CILICIA.*Beyrout, February 24.***Idealism v. Sense.**

The Kemalist régime, judged by its application in Cilicia, seems to be the expression of a fierce nationalism which may have some admirable features, but has certainly also its ridiculous side. The fact is that the Kemalist policy has the virile ambition of maturity combined with the simplicity and impotence of childhood; and it is precisely the Kemalists' unconscious-

ness of this impotence that makes their proud efforts for complete independence appear so futile. This is reflected in their new Customs tariff. Foreign flour, for example, pays a duty of 140 per cent., and the avowed object of the impost is to protect and promote the cultivation of cereals in the country. The Young Turk legislator, filled with idealism but devoid of practical sense, seems oblivious of the hard fact that the war has sorely reduced agricultural labour, and that the few hands left available were, and are still, being enrolled for active military service.

The military spirit, indeed, dominates the Kemalist Government more than ever. Although the French before the evacuation loudly trumpeted their protection of minorities, and especially of Syrian subjects in Cilicia; yet, as soon as they left the country, the Kemalists openly declared their disregard of all foreign intervention (the abolition of the the Capitulations forms a vital condition of their published programme) and intimidated to the Syrians in Mersina that they, like all Turkish subjects, will be liable to military service. Those who are allowed to leave the country are clearly given to understand that they will not be allowed to return.

A measure of Spartan severity is the prohibition of the importation of alcohol and all alcoholic liquors. Another measure not less worthy of respect is the prohibitive taxation of all articles of luxury—a definition which comprises practically anything not of absolute necessity.

Postal Censorship.

Censorship is applied with almost savage severity. All letters by incoming mails are opened and delivered only after delays of varying lengths, and with both sides of the envelope torn. Letters of more than one page have little chance of delivery to the addressees; and the most distant allusion to political subjects renders correspondence liable to prompt suppression. The whole postal administration seems to be in a hopeless condition. These and other reasons may have decided the British Post Office to return to the senders letters addressed to Mersina. The captain of a British steamer is said to have been prevented lately from landing at that port.

Hardly 2,000 Christians are left in Mersina and the remainder of the population, some 10,000 souls, consists of Turks and a few Jews.

In Adana the population is said to be now not more than 40-45,000, with an insignificant Christian element. The total number of refugees that have left Cilicia since the evacuation is estimated at 120,000, including, of course, Greeks. Syria has absorbed about 20,000.

Syria Hard Hit.

Imports from Constantinople and other parts of Turkey outside the Kemalist rule are liable to the same duty as goods from foreign countries. The existence of customs barriers between Syria on the one hand, and Palestine and Mesopotamia, on the other, had already dealt a severe blow to Syrian traders, and now the putting up of this protectionist Customs barrier by the Kemalists has closed Cilicia and Southern Armenia to them, and proved the crowning blow to Syrian commerce. Beyrout, the centre of Syrian trade, is passing now through a financial crisis of the acutest kind. The rare phenomenon was witnessed the other day of the Banque de Syrie having transacted no business, no client having been seen at its counters. Important merchants are being hard put to it to find a couple of hundred pounds in cash.

As no development works have been undertaken in the country, French capital being shy of any investments in Syria, the immediate outlook is very gloomy indeed. The Customs statistics for the next few months will prove a faithful mirror of the situation.

It is interesting to mention in this connection that the Customs receipts for Beyrout, Tripoli, Latakia, Saida, Alexandretta, Aleppo and Damascus for the month of November, 1921, amounted to Frs. 7,000,585.68, while the receipts of the port of Beyrout alone for December last amounted to Frs. 4,900,181.24.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

WANTED—A MOSLEM CONFERENCE.

To the Editor of "The Near East."

Sir,—The notice of the British people has more than at any previous time been directed to the Turkish and Moslem question by the publication by the Indian Government of the amendments which it considers necessary to the Treaty of Sèvres to meet the desires of the Moslems of India.

The granting of the demand for the evacuation of Constantinople by the Allied forces, provided proper arrangements are made to safeguard the freedom of navigation in the Straits; appears undoubtedly to be an essential feature in any genuine attempt to revise the Treaty of Sèvres, while a solution of the Smyrna and Thracian questions might be found in the granting of local autonomy with Turkish Suzerainty over Smyrna and the city of Adrianople. This, whilst reasonably satisfying the demands of the Mussulmans of India would not be unduly unfair upon Greece, especially if territorial compensation were conceded to her elsewhere. The remaining question, that of the restoration of the suzerainty of the Sultan over the Holy Places of Islam is far more difficult to deal with, being a purely Moslem religious question, affecting in its wider aspects not only Turkish and Indian, but Arab and Persian Moslems, and one in which a non-Moslem Power is quite incompetent to intervene.

The Persian Mujtahids, the spiritual heads of Shiah Islam and the guardians of Kerbella, Nejef, Kazimain and Samara, which constitute the great Shiah Shrines of Irak, may be lacking in enthusiasm in their allegiance to any Sunni ruler, but a Prince of the House of Ali, such as King Faisal, must by the mere fact of the tradition of their faith appeal to them far more strongly than a sovereign who cannot claim descent from the Prophet, and against whom they revolted without hesitation in the course of the World War.

The intervention of the British Government in regard to the spiritual wardenship of Mecca and Medina, a subject, which might raise in an acute form the question of an Arab *versus* a Turkish Khalifate, is equally impossible, and would moreover constitute the severest affront to orthodox Moslems throughout the World. The question of the Moslem Holy Places concerns Mohammedans only, and can be discussed and brought to a satisfactory conclusion only by them.

Cairo, after the lapse of many centuries, is now about to become an independent kingdom once more. It possesses in El Azhar the greatest centre of Moslem ecclesiastical learning in the world, a centre from which Moslem divines from every nation in Islam are proud to take their degrees of Ulema.

The Government of Egypt could issue to the Governments of Turkey, the Hejaz and neighbouring States, Irak and Persia, invitations to a Conference of Spiritual and Temporal Moslem representatives both Sunni and Shiah, and including a delegation from India. This Conference should have as its aim the drawing up of a Treaty of Religious Peace for Islam, a complement to the Political Peace Treaty to be concluded in Paris.

A Conference of the kind here suggested would doubtless be faced by many difficulties, but, at the same time, it would seem to provide reasonable hope of a settlement, inasmuch as it would be in the hands of Moslems only, and therefore, if approved by them, be acceptable to all Indian Moslems too, with the exception of those who are using their Faith as a cloak for revolution in their own country.

I am, etc.,

ADOLF WALEY.

BRITAIN AND INDIA.

To the Editor of "The Near East."

Sir,—“F.H.S.” does me too much honour when he says I held up certain methods “as a model for statesmen of the present day.” My intention was not to offer methods, but to indicate a point of view, which I thought might interest your readers. On the question of fact raised by your correspondent, I must admit that I am not a specialist in modern revolutions, and cannot point to one “which has been engineered by the moneyed class;” but that proves nothing, except, perhaps, my ignorance. India, however, has created precedents before now, and the significant feature of the present movement is the amount of money which is being spent in its support. Does that fact indicate that increasing poverty is the initial cause? The late Mr. Tilak was not exactly penniless, but he was generally regarded as a revolutionary all the same. Some of the present-day leaders are known to be men of great wealth, and the amounts subscribed by Bombay in particular have been remarkable. The truth is that a programme of low wages and no super-tax, while it would not be a popular cry, appeals very strongly to men of the race of Jeshurun, and some of them have been putting money into a movement designed primarily to oust British ideas of democracy and disturb justice. If such a revolution should unfortunately take place, it will not be the work of a “penniless intelligentsia,” like that to which “F.H.S.” refers, but partly of the get-rich-quick clan, and partly of the high Tory party which in India says so little, but pulls so many strings.

I am, etc.,

OUTIS.

Y.W.C.A. WORK IN SMYRNA.

A correspondent sends us the following account of work amongst factory girls which is being carried on by the Y.W.C.A. in Smyrna:—A very interesting report has come in from Mademoiselle Theodora Isakidou, the Greek secretary of the old stone barn which houses the industrial work of the Association in Smyrna. All round this shed is a thickly populated district, depending chiefly for its livelihood on the carpet and tobacco factories. Originally the shed was intended for a rest room and club house for the girls, but actually it has become a real family meeting place, and not merely do grandmothers, granddaughters, and mothers come to it, but also some fathers and brothers as well. The girls sit outside or in, as the fancy takes them, and the great thing is that they are learning to sew and make their own dresses. The girls, after their day's work, try to come in time to wash and get ready for their classes. They are learning to study now, and show more interest in other things. They began arithmetic, and are learning the numbers from 1, 2, 3, up to a 100. They think it something great, and go out to their outside friends telling them all about how they are learning and how they enjoy coming. It is very encouraging to see their improvement, and one who knew them from the beginning can see the difference in their manners. They try to use better language, using new words in talking, and sometimes they get it right, and sometimes quite otherwise, but the great thing is that they persevere.

One of the factory girls, aged 14, made and finished her own dress and wore it home to show it to her mother. Without any organized publicity department, the whole neighbourhood heard immediately that Olympia had sewed her own dress, and she is now making one for her younger sister, which has encouraged other girls to bring their dresses to sew under the guidance of the secretary.

Members who live in far away towns where most people can, sew and read and write, can hardly imagine the picturesque confusion in the narrow street in the towns in the Near East, when a little Olympia goes running home, holds out the skirts of a new dress for all the neighbours to see, and is followed by a tail of small children, chanting “Olympia made that dress herself.” Or when perhaps some bigger Theodora amazes her family as they sit by the dim lamp, by actually counting up to twenty-five, “just like a schoolmaster or the foreman in her factory.” No wonder the neighbours come to hear her do it.

THE MYSTERY OF THE ORIENT. IV.*

By Edouard Driault.

(Continued).

As we have seen a composite Poland re-arise, we have seen born from a Moldo-Wallachian Union a Roumanian Kingdom, which the Great War has resolved into a composite Roumania. We have seen the birth of a little Serbia, at first timidly autonomous, and the Great War founding a vigorous nation in the form of the Triune Kingdom of the Croats, Serbs and Slovenes. We have seen the birth of a Bulgaria to which the supremacy of the Balkans appeared at one time to be reserved. Perhaps some day we shall tell here the history of these young nations. It has great dramatic beauty and exceptional moral value. It is full of promise, but to such we can merely point.

It is, however, of Greece to-day that we have to treat, and even so, we only wish to study in this year's lectures the story of the glorious insurrection of which she celebrates the centenary to-day under trials similar to those of her first years of liberty. And, after all, there is no finer spectacle in history than that of the persistence of the Greek nation under Turkish servitude, than that of its resurrection a hundred years ago, the phoenix issuing from the flames, than that indeed of the Hellenic Renaissance. The historian will be allowed to take no account here of contemporary passions and prejudices, but to consider only the historic truth, to write history and not politics or political economy. This is easy when one is sustained by arguments of secular solidity.

The Greeks style their insurrection of March 25, 1821, the *Evangelismos* "the good news." Nothing more just. The French Revolution and Napoleon had awakened throughout Europe the aspirations of nationalities. The congress of Vienna and the Holy Alliance thought to stifle these for ever and to re-establish the pretended rights of dynastic authority.

The independence of Greece was the first triumph of the principle of nationality, the first application to the history of peoples of the doctrines of the French Revolution. It was thus that it was accepted by the most generous minds of the day, not only by Lord Byron and Chateaubriand, but by Victor Hugo, Canning, Laffitte, Armand Carrel, Edgar Guinet, and Michelet; it was for this that the Greece of that day excited unceasingly the grand anger of Metternich, the Chancellor of the Holy Alliance.

Who anyway to-day desires to resume the role of Metternich? An idle wish at best, for it would be an historical anomaly. Greece, liberated amid massacres, pursued her course amid the rivalries of the Great Powers, who were solicitous only of their individual interests and jealous to secure for themselves the best portions of a marvellous heritage. She grew all the same, as grew, moreover, Serbia and Roumania. Edmond About, who was none too courteous to the Greeks, announced to them, however, in 1862, "The glorious day, and near, when all the Greeks of Europe would re-vindicate their independence and rush towards unity. . . . on the ruins of Turkey," he cried, "a great Greek nation will arise, as the great Italian nation rose from the ruins of clerical despotism. . . . What is necessary to achieve this revolution, already fashioned in the heart? . . . Ask nothing of the foreigner. . . . Beware of European diplomacy; it is to it that you owe thirty years of feebleness and impotence. Expect nothing but from yourselves. . . ." We will re-peruse one day the whole of this letter of the author of the "Roi des Montagnes": it is very eloquent. Perhaps also we shall sketch later the evolution of the "Grand Idea," its wings suddenly spread across the azure over all the lands of the Greek race to emancipate them from a yoke ever and ever more intolerable. We shall tell how, amid the complications of politics—in its very essence—heavy footed, and vowed to contradictory interests Greece, none the less, by force of circumstances and of

her right, became possessed of the Ionian Islands, of Thessaly, of Crete, of Macedonia and of Thrace.

And the Great War has had the same conclusions in the Orient as elsewhere. And the treaty of Sèvres is of the same nature as the Treaty of Saint Germain: the latter has put "finished" to the Hapsburg monarchy which was an organisation of domination over Czechoslovaks, the Poles of Galicia, the Roumanians of Transylvania, the Yugoslavs of Croatia and Bosnia. The former put "finished" to the Ottoman Empire which was an organisation of domination over the Greeks of Europe and Asia Minor. Both cessations are ordained by the irresistible evolution of revolutionary right, of the right of peoples to dispose of themselves.

(To be continued).

TOPICS IN PARLIAMENT.

(Egypt (Zaghoul Pasha).—Iraq: Geographical Limits; Administration (Cost).—Indian Army Officer Pensioners.—(Wednesday 1st March.)

SALONIKA WAR MEMORIAL.

The scheme for the erection of the Battle Exploits Memorial at Salonika has now taken definite shape. The funds were subscribed by the Army when in Macedonia and the sum available is about £4,000. The memorial is to be erected at Colonial Hill, looking out on Lake Doiran and in close proximity to one of the largest cemeteries where many of those who gave their lives in the final attack on the Doiran position in September, 1918, are buried. This was the attack which so greatly assisted in giving the *coup de grace* to the Bulgarian army. The memorial is to take the form of a massive pylon about 40 feet high, built of local material. Near the base on each side will be inserted a marble panel with the dedicatory inscription on one side in English and on the other side in Greek. At each end of the memorial will be a panel giving a list of the formations. At the four corners of the memorial, some distance from it, will be four piers into the sides of which are sunk marble panels giving the names of the missing. These piers will form the memorial to the missing, and are being carried out at the expense of the Imperial War Graves Commission.

General Sir George F. Milne, who commanded the British Salonika Force from late in 1915 to the end of the war, appointed Major-General Sir William Rycroft as his deputy to deal with the matter, and he has for some months been in close touch with the Imperial War Graves Commission regarding the arrangement of the details. The memorial has been designed by Sir Robert Lorimer, A.R.A., R.S.A., Architect to the Commission for Italy, Macedonia and Egypt.

Afghanistan having instituted a Legation in Rome, the Italian Cabinet has appointed the Marquis di Paterno Minister Plenipotentiary in Kabul.

* Earlier portions of the paper appeared in "The Near East" of December 29, January 12, and February 23.

MUSICAL NOTES.

ON GRAMOPHONE RECORDS

The following comments on "His Master's Voice" records published in February were unavoidably held over from my last Notes:—

It is very pleasing to be able to set down such remarkable improvement in the reproduction of the *timbre* of the pianoforte as is manifested in the record made by Lamond of Liszt's "Ronde des lutins in F sharp minor." This is easily, so far as my knowledge goes, the best pianoforte record yet produced, and it is worth mentioning that it is not only in the more glassy resonances of the instrument that the improvement in the reproduction of tone is noticed. To add that it is brilliantly played would be superfluous. I am sorry to say that I do not like Lamond's playing of the second movement of Beethoven's Sonata No. 10 in F which is on the reverse side of the Liszt; it is academic and ponderous. Lamond's rugged, magisterial style suits the later Beethoven, but in the earlier works we do need more delicacy. Still, the record is very well worth getting for the Liszt, which is a sheer joy.

It was, as the world knows, largely through his records that Heifetz achieved his fame, and that excellence is sustained in No. 1 of Sarasate's "Gypsy Airs." This is a magnificent record, with the tone of the fiddle coming through beautifully clear and true. The piece with its contrast of broad *cantilena* and brilliant, florid passages, is just the thing in which Heifetz excels, for nothing is technically impossible to him, and that sculptured calm which in bigger works makes him fall short of greatness in these superficial pieces actually makes his mastery over his instrument more apparent than ever.

Caruso comes with a most intriguing Neapolitan song, Gioe's "T' m' Arricordo e Napule," singing it with irresistible verve and abandon. And Battistini makes a record of Carrissimi's "Vittoria, Vittoria," delighting in its opportunities for contrast, and exulting in the pure Italian passion.

Among the more serious records published in March there is perhaps none so notable as the completion on two discs of Elgar's "Enigma Variations." All the fourteen parts of this magnificent work have now been recorded, and in reproducing them "His Master's Voice" Company have done nothing better. There is in the last three Variations, as there was in the preceding ones, a most remarkable fidelity in detail; in fact the instrumental characterisation is marvellous. But not only in the balance of sonorities are these records a triumph: the expression of Elgar's conducting is revealed in an astonishingly illuminating way. It is comforting indeed to have this masterpiece in complete form, and those wishing to understand the renaissance of modern British music cannot do as well as to acquire the whole set. I ought to add that on the reverse side of the last section of Variation XIV. is recorded "The Sanguine Fan," a little-known ballet work of Elgar: it is distinctive of the composer, especially in the leaping delicacy of the higher strings against the held themes of the wood-wind, but it is scarcely a notable work.

Miss Isolde Menges will certainly increase her reputation by means of a record which bears Debussy's valse "La plus que lente" and the "Fugue in A-major" of Tartini-Kreisler. The first makes a very effective violin piece, and is played here with fine tone and beautifully supple phrasing; but the second is altogether a much more satisfying affair, being done with admirable steadiness of rhythm and mastery in such things as double-stopping and the execution of wide chords.

The choice of one of Mendelssohn's "Songs Without Words" (the "Cradle Song") was hardly worthy of

Mischa Elman, but the record is bound to be popular. The fine broad tone and the clear, flowing stream of melody are in themselves sufficient to secure that.

The Catterall Quartett have again made a most enjoyable record, this time out of the *andante* movement from Schumann's Quartet in F (Op. 41, No. 2), and the *scherzo* from Tchaikovsky's Quartet (Op. 22). The Schumann has moments of exquisite loveliness, and is treated with a very warm tenderness, though here and there is a slight lacking in grace and in discipline (particularly in the lower strings). Tchaikovsky's unwarranted gift of melody is very evident in this *scherzo*; but his construction is on the whole weak. His work is here played with intriguing *rubato*, and the viola especially puts in some notable work.

Two pianoforte records are issued in the last batch: Cortot in two Chopin Studies in G flat major (Op. 10, No. 5, and Op. 25, No. 9), and Mark Hambourg in the Fugue in D major and the Prelude in D major of Bach as arranged by d'Albert. Cortot records are always a delight, though the *timbre* of his instrument has been caught less in the first study than in the second. There are unequal resonances in the first which hinder the realisation of its unity. But no one can resist the steely flexibility of Cortot's rhythm, and his *staccato* touch in the second study, a marvel in actuality, is well reproduced. In the Bach works the *timbre* is more closely approximated to the real thing, though a nearer approach has been achieved. The Fugue is played with all Hambourg's characteristic impulsiveness—one imagines that he played it for reproduction much too fast; but the Prelude is better, though the rich fullness of the ending is partly lost.

A Love Song Recital.

We have begun to regard Mr. John Coates' recitals at Chelsea as sources of fortnightly recreation and refreshment; they are each in fact an artistic mission, a vitalising human experience. What he sings (so long as it be good) does not greatly matter, for the intimacy and certainty of his appeal are constant. His last recital was made up wholly, except for two Purcell encores, of modern English love-songs, and but for two or three lapses it was one of sustained and stimulating merit. If there was nothing to equal the sculptured beauty of Denis Browne's "To Gratiana dancing and singing," a memorable work that was sung by Mr. Coates with wonderful reserve and command, there were many songs that completely succeeded in their aim: Ernest Farrar's "And wilt thou say me Nay," for instance, or Julius Harrison's "To Chloe," or Parry's "At the hour the long day ends" (the second-best song on the programme, this), or Walter Whittaker's "Diaphenia." There were, on the other hand, a few songs that only Mr. Coates may sing and yet live: Coleridge-Taylor's "Eleanore," the warm slush of which was monstrously well obscured by the singer, or Cyril Scott's "And so I made a villanelle," a pretty but meaningless pattern in sounds, or Havergal Brian's "Love is a merry game." Why Mr. Coates sings these songs only he himself and his consummate conspirator, Mr. Berkeley Mason, know: we can only change the while our admiration into wonder. And by the end of the first verse of the next song this of course is all melted into forgiveness!

ANDANTE.

RUSSIAN SELF-TAUGHT

(In Russian and Roman Characters).

By J. MARSHALL, M.A.

NEAR EAST BOOKSHELF.

AN ENCYCLOPEDIA OF RELIGIONS.

"An Encyclopaedia of Religions." By Maurice A. Canney. (London: Routledge and Sons, 25s.)

The writer of this Encyclopedia in his Preface explains his purpose as being "to present in a volume of moderate size information about most of the ancient and modern religions, ethnic and historical." The difficulty of compression must have been enormous. Some articles (those on 'Islam' and 'Muhammedanism') will strike many as inadequate when compared with those devoted to some obscure sects. The author however explains that he—with very sound reason—has concentrated on information which is not easily obtainable and is brief on subjects when the ordinary encyclopedias provide long articles. Many headings here will not be found at all in other general encyclopedias. How many of the readers of THE NEAR EAST know anything of the Rogerians, the Rheinbergers, the Theophilanthropists, the Fufufuze Sects and the Hysistarians? When we come to the 'gods,' there must be hundreds of them about whom most of us are ignorant. We can find all about them here—the god E and the God M., and the god Ea and the god Ma, Parmeshwar and Parjanya, Eevil and Eir. A handy volume which explains these mysteries will be useful to many.

More certainly of use are many of the articles on Biblical subjects. There is a short and up-to-date account of each of the books of the Bible, its authorship, date, and its contents, which will prove useful to those who have neither time nor opportunity for further study. Articles on such subjects as the "Higher Criticism" and "Inspiration" are written in no narrow or party spirit and should be useful to any inquiring layman. As might be expected in a dictionary emanating from the University of Manchester, considerable prominence is given to the views of Professor Elliot Smith upon Egyptian subjects. The writings of Professor J. A. Frazer are also freely drawn on for folklore studies.

When we come to the ramification of the Sects of Protestantism some of the Articles seem a little inadequate. Perhaps it is because the Encyclopedia is written with an eye to America—where such works are loved—that so much attention is given to Quimbyism and its off-shoot 'Christian Science.' Quimby and Mrs. Eddy themselves receive an amount of notice here out of all proportion to their importance. Compare for example the articles upon them with those on such well known Christian bodies as the Baptists, Plymouth Brethren, and the Salvation Army. In the same way a comparatively long article, nearly three columns, is devoted to the teaching of William Whiston (1667-1752), who here appears as an eccentric clergyman interested in many things from "Promoting Primitive Christianity" to the finding of latitude and longitude "by the dipping needle." He is chiefly—and worthily—remembered to-day as the translator of the 'Works of Josephus.' But many men have greater claims for notice here as religious leaders.

With respect to the religions of the Near East there are many articles of interest. Those on Babism and Bahaism, which might have been with advantage made one continuous story, give an adequate account of the rise of that increasingly influential sect, the leader of which, Abdul Baha died recently in Akka, Palestine, in universal respect and honour. The Bahais claim a very much larger following than the 'one million' mentioned here. The Isma'iliyyeh and the Nuseiriyeh sects of Syria here receive more adequate treatment than that given to the more important, though equally interesting, Druzes. Indeed the present existence of those interesting people is here ignored altogether! The same may be said of the little sect of the Hoffmannites, who founded the 'Temple' colonies in Palestine.

Taken as a whole this volume of nearly 400 closely printed pages provides a veritable mine of carefully selected, useful, and often almost inaccessible, information on all kinds of religions and religious customs. The

writer is absolutely fair and unbiassed in his views; he seeks no kind of propaganda and his words will be equally appreciated by people of all schools of thought

EARLY MOGUL ART.

INDIAN DRAWINGS: Twelve Mogul Paintings of the School of Hum-ayun (16th century) illustrating the Romance of Amir Hamzan. Text by C. Stanley Clarke. (London: H.M. Stationery Office, 5s.)

Like King Arthur and Charlemagne, Amir Hamzah, the warrior uncle and contemporary of Mohammed, has passed in to a hero of romance with many adventures ascribed to him which have no historical basis. We have it on the authority of Mr. Stanley Clarke that the book in which these tales were set down by a hitherto unidentified author is "devoid of genius" and that it "compares unfavourably with other surviving specimens of Arabian and Persian literature." This did not, however, prevent it from being much read in the 16th century and later. In the early years of Akbar's reign, about 1556, it was lavishly illustrated by an artist or group of artists at that monarch's court. This was a particularly interesting period of Mogul art. The artists of the time had not yet freed themselves from Chinese traditions and the naturalistic treatment which distinguished their successors when once the art of painting had become an Indian art was still wanting. Rocks, water and clouds, specially the last, were still treated largely in the Chinese conventional style and the colours used were strictly confined to "a few extraordinarily good body-colours of remarkable quality and durability." It is to this and to lucky chance that we owe the existence of part of this great work at the present day, for some 200 out of the original 1,400 drawings still survive, though mostly sadly mutilated. Some were actually found pasted on the lattices of Kashmir windows to keep out the cold and wet of winter, while others had been mutilated by pious owners who were shocked to find representations of the human face in them and had piously smudged out these unlawful impieties. But what is left, after all these vicissitudes, is most precious. Not only are these drawings valuable as representing early Mogul art, but they contain details of great beauty. It is not surprising to learn that the lovely designs of trees and flowering plants which many of them show fascinated William Morris, and indeed the result of his study of them is evident to any one having the slightest acquaintance with his designs. We wish that it had been possible to reproduce some, at least, in colour. But good colour reproduction is still very expensive. For the small sum of five shillings we are presented with twelve large plates worthily produced by photography and accompanied by a well-printed text by Mr. Stanley Clarke which gives all the explanation necessary without obtruding the learning which has made the writing of it possible. We are grateful and hope for more.

The Portfolio is published by H.M. Stationery Office, and is to be had at Imperial House, Kingsway.

PERSONAL AND GENERAL.**To-Day.**

March 23, (New Style).

March 10 (Old Style).

Ragab 24, 1340 A.H. of the Moslem Calendar.

Adar 23, 5681 of the Jewish Calendar.

Mr. Edwin Freshfield left London last week for Smyrna

M. Maskens, the newly-appointed Belgian Minister at Sofia, has arrived in Brussels from London.

Lord and Lady Milner arrived in Port Said on March 15 on their way to Palestine.

M. Boeresco, Roumanian Minister-Plenipotentiary, left London on Monday for Paris.

A recent Cairo telegram states that there is a great improvement in the condition of Sir Herbert Samuel, the High Commissioner for Palestine.

Viscount Gough, M.C., Irish Guards, has left London for Mesopotamia on military duty, and will be absent for some time.

M. Jan Masaryk, Counsellor of the Czecho-Slovak Legation, returned to London last week from Prague, where he has been on a visit to his father, the President of the Republic.

The engagement is announced between Dudley Cautley, eldest son of the late Sir Dudley Stewart-Smith, K.C., Vice-Chancellor of the Duchy of Lancaster, and Lady Stewart-Smith, of 37, Holland Villas Road, London, and Phillis Hewling, eldest daughter of the late Mr. Hewling Luson, C.S.I., I.C.S., and Mrs. Luson, of Endcliffe, Weston-super-Mare.

It is stated by the Alexandria Correspondent of the *Morning Post* that General Haddad Pasha arrived there last week *en route* for London on a special mission from King Faisal.

Whatever their politics, all his old friends in Egypt and the Sudan will congratulate Sir Murdoch MacDonald on his election, in the Coalition-Liberal interest, as Member of Parliament for Inverness.

To celebrate the Persian New Year, M. Davood Khan, the Persian Minister, was at home to his friends and the Persian colony in London on Tuesday, March 21, at the Persian Legation, 47, Bramham Gardens, S.W.5.

A marriage has been arranged between Captain M. H. Cox, M.C., R.A.S.C., and Phyllis Mary, only daughter of Brigadier-General C. W. Compton, C.B., C.M.G. (late Somerset Light Infantry), and Mrs. Compton of Somerset House, Zeitoun, Egypt.

The Greek Chargé d'Affaires and Mme. Rangabé entertained at dinner on March 16, in the Legation the Czecho-Slovak Minister and Mme. Mastny, the Belgian Military Attaché and Mme. Maton, Mr. and Mrs. Yony, M. Yannopoulos, and the personnel of the Legation.

Under the auspices of the Anglo-Hellenic League a public lecture will be given at University College, Gower Street, on March 28, 5.30 p.m., by Mr. R. Carline. The lecture, which is to be illustrated by lantern slides, is on "Byzantine Art in Italy and the East," and the chair will be taken by the Hon. W. Pember Reeves.

M. Jarvoslav Cisar, of the Czecho-Slovak Legation, will deliver a lecture to-day, at 5.45 p.m., at the City of London College, White Street, Moorfields, E.C.2. His subject, "The Economic Conditions of Czecho-Slovakia," will be given with lantern illustrations, and the chair will be taken by Sir Charles Wakefield, Bart., C.B.E.

The engagement is announced between Rex Trevor Jones, M.C., P.W.D., India, captain, I.A.R.O., elder son of Mr. and Mrs. Trevor Jones, Chatsworth Square, Carlisle, and Edith Aileen, youngest daughter of Mr. W. Theodore Carr, C.B.E., M.P., and Mrs. Carr, Greystead, Carlisle.

Sir William Veno, who left England six weeks ago for a tour around the Mediterranean, has during the last three weeks been confined to his room at an hotel in Cairo by a serious illness. His doctor will not allow him to make the homeward journey until the end of the present month.

Marshal Izzet Pasha, accompanied by Edhem Bey, Haidar Bey, and Madri Bey, has left London for Paris. They were seen off by Reshid Pasha, Chefik Bey, Chevky Pasha, Oskan Effendi, Captain Dixon Johnson, and Captain Griffin. Marshal Izzet Pasha paid a visit to the Marquis Curzon on Saturday.

The Shah of Persia, accompanied by Prince Sare-ek-Ahmed and M. Moissolmolk, the staff secretary, arrived in Paris on March 18. He was welcomed at the Gare de Lyons by M. De Fouquieres, representing the President and by the Persian Minister in Paris. The Shah's visit is said to be purely private, and to have no political significance.

Our Port Said Correspondent writes:—Mr. A. J. Tweedie, the late Manager of the Port Said and Suez Coal Company has retired after nearly forty years' connection with the place. He and Mrs. Tweedie were deservedly popular in the town, Mr. Tweedie being a founder and prominent member of the Sporting Club, which owes much to his untiring work in connection with it. They will be much missed by a large circle of friends.

KING FUAD.

The Sultan of Egypt was informed on March 15 of the Imperial Government's proclamation of Egypt's independence. On the following day Field-Marshal Viscount Allenby called at the Abdin Palace, and addressed King Fuad as "Your Majesty." The new Kingdom was saluted afterwards by 101 guns at Cairo, Alexandria, Port Said, Assuan, and Khartoum, where a Royal rescript was read by the authorities. The following telegrams have been exchanged between King George and the King of Egypt:—

King George to King Fuad:—

"I offer to your Majesty my sincere congratulations on this auspicious occasion and my earnest hope that your country will long continue to enjoy the fruits of independence under your Majesty's rule."

King Fuad to King George:—

"I am very touched by your Majesty's congratulations and wishes. I have the firm conviction that the new era will see the consolidation of the friendly relations and perfect entente which have always been my heart's desire to see established between Great Britain and Egypt. I assure your Majesty of my indefectible friendship, to which I join my warmest wishes for your happiness and prosperity."

Lord Curzon and Abdel Khalek Pasha Sarwat, the Egyptian Minister, who is also Minister for Foreign Affairs, likewise exchanged congratulatory messages.

IN HONOUR OF IZZET PASHA.**A Brilliant Reception.**

By an Occasional Correspondent.

The reception given on the evening of March 15 by Reshid Pasha (the unofficial Representative of the Constantinople Government in England and the Ottoman Delegate to the Peace Conference) and Madame Reshid Pasha, in honour of His Highness Izzet Pasha

and his Delegation who came to London to explain the Turkish cause to the British Government, was one of the most brilliant social and political functions of the present year. Moreover, in spite of the necessity for an arrangement at very short notice, it constituted an opening of the doors of the Turkish Headquarters and an informal reception of the West by the East in a style not only unknown during and since the war, but also for many years prior to the outbreak of the world conflagration.

Reshid Pasha and his distinguished looking and elegant Italian wife, the latter attired in black satin and jet, received some hundred friends at the head of the grand staircase which forms a marked feature of 69, Portland Place. Thence the guests passed into the suite of reception rooms, magnificently furnished in the style of the Louis Seize period, and exquisitely decorated for the occasion with scarlet tulips. Here were assembled representatives of British diplomacy, of politics and of literature; here were to be seen Moslem ladies; and here were collected little clusters of distinguished men and women, met together apparently to support a cause which has now become vital to the interests of the British Empire. Thus, indeed, the nature of the company was so comprehensive that one noticed such well-known personages as the Rt. Hon. Ameer Ali and Mrs. Ameer Ali, the latter wearing her dazzling diamond necklace and corsage, Mrs. Rosita Forbes in a wonderful dress of black and yellow, M. and Mme. Ispahani, and the Rt. Hon. Alexander Carlisle, who rose from the very bottom of Messrs. Harland & Wolff's shipping yard to the position of General Manager and Chairman of the Managing Directors of the firm.

Later in the evening the company proceeded to the State dining room, where refreshments were served by countless gorgeous retainers, whose powdered heads, red and gold liveries and silk stockings added splendour to the scene. Here, too, the party was joined by further distinguished guests, whose many engagements had prevented their earlier arrival. Thus one saw the Earl of Hardwicke, Lord Lamington, Major-General Lord Edward Gleichen, Sir Henry and Lady Bax-Ironside, Sir Edward Denison Ross, and last but far from least, Major-General Sir Charles Townshend and Commander the Hon. J. M. Kenworthy, who had managed to tear themselves away from the House of Commons in spite of the important debate there in progress upon the subject of the now famous Montagu incident.

The success of such a reception, which was entirely unofficial and which was attended almost exclusively by British and Turkish people, would in any case have been assured by the kindly informality of the venerable host and by the charms of his consort and her British daughter-in-law, Madame Chefik Bey, who wore a handsome gown of tulle and silver. But there was something more than this, for whilst Izzet Pasha himself chatted first with one person and then with another, Reshid Pasha and Madame Reshid Pasha, assisted by Chefky Pasha and by Chefik Bey Muftyzadé, and many of the guests, moved here and there in such a manner that all and sundry had soon become acquainted. And then, whereas some of the British guests wore decorations, thereby apparently mistaking the unofficial nature of the entertainment, others, notably the gallant defender of Kut and Lord Edward Gleichen, besides all the Turks, demonstrated their tact and nicety of feeling by the non-display of any outward signs of distinction—signs distinctly incorrect considering the delicate situation still existing between the British Empire and Turkey.

Among those who accepted invitations were, besides those mentioned above:—The Earl and Countess of Bessborough, Lord Oranmore and Browne, Lady Lamington, the Hon. Ronald C. Lindsay, Sir George Armstrong, Sir John Rees, Dr. Nihad Reshad, and Rechid Sadi Bey, M. and Mme. Ispahani, Edhem Bey, Haider Bey, Kadri Bey, and Captain Robbins, Captain Dixon Johnson, Mr. H. H. Slade, Mr. and Mrs. R. G. Vansittart, and Mr. Leland Buxton.

OBITUARY.

Lady Block, wife of Sir Adam Block, British representative on the Financial Commission of Control in Turkey, died in Constantinople on March 11. She was Louisa Constance, eldest daughter of the late Robert Cumberbatch, British Consul at Smyrna, and she married Sir Adam in 1885. She leaves a son and a daughter.

A Reuter's Cairo telegram says that the death is announced there of Ali Pasha Charwi, who had played an active part in Egyptian politics in recent years. He was a member of the original delegation which waited on Sir Reginald Wingate, the then High Commissioner, after the Armistice. He seceded from the "Wafd"—the Zaghloulist organisation—when Adly Pasha became Premier, and subsequently held aloof from political discussion.

Our Port Said correspondent writes:—The death is announced of Watson Bey, who was Superintendent of the Port Said section of the Egyptian State Railways. He has filled the post since the Egyptian Government took over the Canal Company's steam tramway, and altered the gauge to coincide with that in the rest of Egypt. He will be much missed as he was very popular among all classes of the community.

We much regret to announce the death of M. Kristo Stamatoff, which took place on March 12 at Sofia. M. Stamatoff was a journalist and besides assisting Mr. J. D. Bouchier, the former correspondent of *The Times*, he had previously acted as correspondent for that journal; and he was for some time the Sofia correspondent of *The Near East*. He was born at Kalofer, and was 56 years old. He had been an invalid for many years and his death followed after a long and severe illness.

THURSDAY, MARCH 23, 1922.

EGYPT IN THE COMMONS.

In the House of Commons last week, a vote on account of the Civil Services and Revenue Departments afforded opportunity to Captain Wedgwood Benn to initiate a discussion on the Government's policy in Egypt and the position there to-day. The debate thus begun lasted several hours, and many members on both sides of the House contributed to it; but upon the whole, it must be acknowledged, it was rather a disappointment for those who hoped to see this important question adequately discussed. A few speakers made useful contributions, in the form of helpful suggestion or of constructive criticism, but others seemed to be inspired chiefly, if not only, by the desire to score off their political opponents. The Leader of the House was, in fact, justified in saying at the beginning of his reply on behalf of the Government, that their policy as set forth in their Declaration had not been seriously called in question by any of the speakers: there had been criticism, but no challenge of the kind the Government had expected. Indeed, a perusal of the Official Report may almost make the reader wonder whether such a debate was worth while, and whether the House of Commons, like so many other institutions and individuals is still suffering from a state of "nerviness" brought on by the War. One of the speakers reminded his audience of a saying of General Gordon's, that "the British Empire has been built up by its soldiers and sailors, and may be mined by its politicians." We do not make the mistake of including Egypt within the British Empire, but Great Britain still has extremely important interests in Egypt, and it is not to be doubted that those interests will be harmed to a certain extent by some of the things that were said on this occasion at Westminster. The Egyptian may be not very quick at grasping an abstract idea, but he understands personalities, and personalities were indulged in by some of the speakers in a way to rejoice the heart of the Zaghoulouist propagandists if of nobody else. Moreover, a good many things more serious by far than any personalities were said which would better have been left unsaid—things which may or may not be viewed in their proper perspective on the banks of the Thames, but will almost certainly be viewed quite out of perspective on the banks of the Nile, where the art of political chiaroscuro is less advanced.

Our admiration of the Egyptian policy followed since the Armistice by His Majesty's Government is by no means unqualified, as our readers are well aware. We recognise that blunders—and bad blunders—have been made, some of which might easily have been avoided; and we agree with Mr. Austen Chamberlain that it is doubtless good that he and his colleagues should receive "kindly chastisement from friends" upon occasion for their mistakes; for it is by seeing our past errors clearly, and keeping them before us, that we may best avoid repeating them. But we feel also that when Mr. Chamberlain indicated politely that on this occasion there "had been a good deal of criticism" he did not overstate the case. There was, in fact, a marked disposition to saddle the Government not only with its own faults and shortcomings but with those of others; and to this must, unfortunately, be added a readiness in certain quarters "to assume"—to quote the Leader of the House again—"that anyone who differed from the British Government or British representatives abroad must necessarily be in the right, and

that their own country must equally necessarily be in the wrong." The pose is an old one of course, but at the present time and in connection with Egypt it is deplorable. Some of the loose talk about our past relations with the Egyptians was so obviously foolish that it could do little harm here, but it may, and probably will, do harm in Alexandria, Tanta and elsewhere in Egypt. Thus, one speaker showed his ignorance of recent history by speaking of the Egyptians being "supposed to have been protected" by us, and of the "misgovernment by Britain for the last 40 years"; and though another member of the same party declared that "it is quite true that we have done well by Egypt during the last 40 years," it is to be feared that the words of the former, not of the latter, speaker will be most quoted in Egypt. Indeed, must not a Member who, after a three weeks' visit to Egypt, declares that the children of the fellahen "have by nature wonderful artistic and scientific powers" be better worth quoting than one who has not the genius requisite to make such a discovery? Unfortunately, this type of orator forgets or is unaware that Great Britain rescued Egypt from bankruptcy—to say nothing of Turkish oppression—and that she has vastly improved the lot of the Fellah in many ways besides giving him greatly improved irrigation.

Happily the discussion, if it did rather frequently sink to a very low level, was enlivened by some excellent speeches, and undoubtedly served a useful purpose in clearing the air to some extent. The Government may have left certain points still to be explained, but at least it has been made clear that a new era of goodwill on both sides has begun; and it is to the good to have had it stated once again that there is now complete agreement in regard to future action on the part of H. M. Government on the one hand and of Lord Allenby and the principal British Advisers on the other hand. The Egyptian Government also and Lord Allenby are working in harmony, and the outlook to-day, if not perfectly clear, is at all events much brighter than it has been for many a long day past. We hope and believe that all the parties concerned are in real earnest about bringing the present plan to a successful issue. Crying over spilt milk will do no more good in this case than in any other; and it is to be hoped that in the next debate upon Egyptian policy and affairs the criticism offered will be constructive rather than destructive. After all, the British Government has a duty towards the Empire and the Sudan as well as towards the Egyptians and the foreign communities in Egypt; and it is remarkable that a few Members of Parliament seem constantly to forget the fact, and to be inclined to regard themselves almost as members of a particular Egyptian party. That attitude was deprecated by Lord E. Percy, whose view we share. We share also his opinion that the only possible line that the House can take in regard to the Egyptian Government is to accept it as for the time being representing the Egyptian people and as entitled to our help in the very difficult task that lies before them. Finally, we regret extremely the appeals and demands scattered so thickly through the debate for the release of Zaghoulou Pasha and his return to Egypt. The outline of the Pasha's career given by Mr. Chamberlain, though far from complete, should have sufficed to silence criticism of his deportation. If any genuine doubt remained after that, it must have been removed by Mr. Loyd's declaration that Zaghoulou's "return at the moment would be the signal for an outburst of the greatest and most ghastly nature," and that it would "wreck Egyptian independence." That is the opinion not of a three-weeks' visitor to Egypt, but of one who has served in the country for some time and has real knowledge of its people and of the man of whom he spoke. If and when it is safe to allow Zaghoulou to return, he will doubtless be allowed to do so. Till then let him stay where he is. In this matter the British people and the British Government trust Lord Allenby, and Members of the House of Commons will be well advised to do so too.

THE "ZADRUGA" THE FAMILY COMMUNE OF THE SERBS.

By Malcolm Burr, M.A., D.Sc., Formerly Our Belgrade Correspondent.

One of the most striking characteristics of the Slavs in general, and of the Serbs in particular, is their aptitude for cooperation. The *mir*, or village commune, the *artels* or workmen's guilds, and the co-operative societies of Russia are familiar instances, but the development of the same spirit among the Serbs has attracted less attention. An English writer (G. M. Trevelyan, "Serbia Revisited," *The Contemporary Review*, March 1915) has truly said that the Serbian peasant understands the principle of mutual aid better perhaps than the inhabitants of Central and Western Europe who, knowing nothing about him, affect to think themselves so much his superior.

This spirit of mutual aid is best seen in the *zadruga*, that is, the perfect organisation of the family as the social unit. It is dying under the contact of modern conditions, but there are still districts in the remoter parts of the western Balkans where it still lingers on, the last survivor of the ancient social organisation which their ancestors brought from the Carpathians when they overran the Balkan Peninsula towards the end of the VIth Century. The development of the empire of the Nemanichi from the XIIth to the XIVth Centuries, with its fiscal system based upon the Byzantine model, discouraged the *zadruga*, and the Ottoman invasion gave it its death blow in the greater part of their dominions. For the Turk introduced the exact opposite of the *zadruga*, the *chiflik*, a purely feudal organisation, where the Christian peasants became *rayas* and *kmets*, that is, serfs and villeins, the chattels of the *bey* or *spahi* that is, of the Mohammedan overlord, condemned to a life of virtual slavery. The one-roomed hovels of the *chifji*, with no trace of adornment or cleanliness, to be seen to-day so plentifully in Macedonia, are the best evidence of the toilsome and miserable life of these wretched *rayas*, whose strength and energy were entirely exhausted by working for a bare animal existence under the lash of their landowner. With the departure of the Turk, this degrading system is fast disappearing from the Balkans, but the farm-buildings, with the observation tower or *chardak*, where the Bey watched over the work of his labourers, are still a familiar sight in the greater part of Serbian and Greek Macedonia, in the valley of the Maritsa, and in Thessaly.

But the system of *chiflik*, dependent upon a vigorous military occupation, did not reach the north-west. A line drawn roughly in a north-eastern direction from Ljesh (Alessio) in northern Albania past Nish to the Danube marks the boundary. Beyond this, the difficult nature of the densely wooded and mountainous country and the less docile disposition of the more turbulent Dinaric Serbs made a complete subjugation more difficult, and the natives reverted to their ancient system of *zadruga*, which was for them the ideal organisation for mutual defence and aid among a primitive and democratic people. They extended across this boundary line to the south and east in the more difficult country, and their southernmost boundary runs from Valona, east of Bitolj (Monastir), northwards to the east of Sofia and to the Danube.

The weakness of the central administration was content to leave the population of these remote and inaccessible regions in a state of relative autonomy, so that they reverted instinctively to the system of their ancestors. As S. Cvijich points out, marriage by capture became common, the fount of folklore was renewed, the blood feud reappeared, and the system of the *zadruga* was revived and developed.

The land, being free, was held in common, in the neighbourhood of the house. This was generally situated on a slope, surrounded by a large courtyard, with a vegetable garden, the whole encircled by a *plot* or stockade. Outside this, for purposes of defence and seclusion, was a portion of the primeval forest, the *gaj*

or *zabran*; in front, the inevitable plum orchard; while farther away, and usually lower down the valleys, were the other meadows and fields of the community. Here lived the members of the *zadruga*, all blood relations, brothers and cousins with their wives. The oldest or wisest would be elected head of the family, or *stareshina*, who was selected not for military prowess, but for experience and wisdom, and his word was implicitly obeyed. The land and property did not belong to any individual, but collectively to the unit, though any member who wished to detach himself and emigrate, as was frequently the case, always knew what was his fair share, and took it with him. The *zadruga* formed a complete social unit. As a unit it paid taxes, bore the costs of marriage, baptism, burial and education of the children, and was responsible for the delinquencies of any of its members. Often enough, one individual would learn a special craft, such as blacksmith, carpenter or cooper, but his earnings or products did not become his personal property, but that of the *zadruga*. Others would specialise in branches of the local industries as pig-breeding, fruit-farming or agriculture.

Division of labour was directed by the *stareshina*, according to the capacity of each member, subject to general consent. The men would attend to the heavy work in the fields, while the aged and children would be given lighter tasks: the women would devote themselves to weaving and embroidery, while the young girls would spend years in preparing their trousseaux. The members of a prosperous *zadruga* lived well, in considerable comfort, with plenty of leisure, in an almost self-supporting community. It could scarcely be regarded as a primitive organisation: it was a highly developed patriarchal system, ideally adapted for the circumstances of the times and country. It was only rendered possible by the high moral sense of its members. The unwritten code of ethics was known to all, and implicitly obeyed. Members were strongly bound together by the bonds of common interest and affection; the sense of solidarity was extremely warm; chastity was absolute. Women were revered and respected. The innumerable songs, which were the solace of their evenings, speak delicately of love and never of passion; maternal affection was the only love that the women would sing of, and the bond of brotherhood was sacred. It was in the *zadrugas* of the Dinaric country that there grew up the system of *pobratimstvo* or blood-brotherhood, and it was the *zadrugas* that gave the strength and respect to the relationship of *kumstvo*, or god-parentage.

The practice of mutual aid was invariable, in all circumstances. A widow left with children would be helped in every way by the male members, especially in the heavy work in the fields: it was customary to combine resources, especially during ploughing and in harvest time.

Some *zadrugas* were very numerous and powerful, with fifty, sixty, a hundred or even more members. This was a benefit, since the Turks taxed houses and regarded the *zadruga* as a single family, with one house, and, moreover, a household with twenty or more stalwart male members was very capable of making itself respected, even by Turkish tax-collectors. The system also favoured military organisation, and the constant rising in the Dinaric countries against the Turkish régime, and the Wars of Liberation (1804-1815) were certainly facilitated by the existence of the *zadrugas*.

A large *zadruga* would contain a dozen or more buildings inside its palisade. The chief is the *kuca* or house, usually of wood, with common hall, and a *vajat* or bedroom for each married couple: there would be one or more *mlekari*, or dairy-houses, a big barn (*ambar*) for the corn, and one or more *kosh* or drying-sheds for maize, two or three stills for making *shlivovitsa*, the inevitable plum-brandy of the Serbs, a *kachara* or brandy cellar, a *pushnitsa* or drying-chamber for the plums, a *suvotnik* or cart-shed, *naslonitse*, or stables for the oxen and possibly horses, and a bakehouse. In the centre of the yard, under the shade of a large tree, usually a lime, there would be a huge table, where the entire com-

munity would take its meals in fine weather. Often enough there would be a *gostinska kuca*, or guest-room; for the sense of hospitality was very highly developed among the Serbs. When a young couple were married, they would construct a new *vajat* or bedchamber, either attached to the main house, or separately, usually a single room, with no provision for a fire.

When a *zadruga* became unwieldy from its size, it would often split into two, and the younger members would find a second *zadruga* in the neighbourhood. In this case it was customary to leave one piece of land indivisible, called the *stozher*. The further dissolution of a *zadruga* led to the formation of *djemats* or hamlets, each with its piece of common land or *zajednitsa*, which was probably a former *stozher*.

It is in the Dinaric country, that is the north-western part of the Balkan Peninsula that the system was most highly developed, but similarity of conditions or the extensive emigrations of families led to the spread of the *zadruga* outside the Dinaric area. They survive to-day in parts of northern Albania, and extend even into the Yugoslav districts north of the Danube and Save; they are scarcely extinct in western Bulgaria, and still flourish in the Kossovo and Metohia districts. Among the real Bulgarians, however, the system is unknown, as it is among the Greeks, Vlahs, and Turks, to whom the system is utterly foreign. *Zadrugas* can hardly exist where the influence of the Byzantine civilisation still lingers.

But the *zadruga* is disappearing in contact with the conditions of modern civilisation; its *raison d'être* has vanished, but the tradition survives among the Serbs and affects their character even in the modern towns. The spirit of mutual aid is still strong and appears in the numerous co-operative trading and mutual benefit societies which are so characteristic in Yugoslavia to-day to which the term *zadruga* is almost exclusively applied in modern parlance. The system has played its part: it has kept alive the seed of nationality and of patriotism, the lively tradition of the prowess of the ancient heroes of the race; it has constantly fostered hatred of the Turkish oppressors and prepared the day for liberation; and it played an important part in that unequalled conflict a century ago which led to the first step in the liberation of the people, and achievement of the national ideal, unity.

NEW ARCHDEACON IN PALESTINE.

The Rev. Percival Stacy Waddy, Canon Residentiary of St. George's Collegiate Church, Jerusalem, has just been appointed Archdeacon of the Church of England in Palestine by the Bishop in Jerusalem. The new Archdeacon took his degree at Balliol, Oxford, and, after holding a curacy for three years in Bethnal Green, went to Australia, being successively at Newcastle Cathedral, incumbent of Stockton, Chaplain to the Bishop of Newcastle, and Headmaster of King's School, Paramatta, Sydney (1907-16). In 1916 he went to Egypt with the A.I.F. and became Senior Chaplain to the Australian Forces operating in Palestine. In 1918 he accepted Bishop MacInnes' invitation to be a Canon of St. George's, with special oversight of the educational work of the Bishop's Mission, acting as Principal at the English College for native men in Jerusalem, the only institution of college standing in the City. The Archdeacon belongs to the family of famous cricketers and has made and kept a host of friends. Archdeacon Waddy will be on furlough in England during April and May, and it has been arranged that he should speak in various centres on the Holy Land. He is speaking at various schools, including Eton, Rugby and Cheltenham, and will spend several days at Oxford and Cambridge early in May, when he hopes to put before men a short service scheme, by which those who have just taken their degrees can spend two or three years in Jerusalem before settling to their life work. The men who go out on this system are asked to teach in the

boys' schools and Men's College and especially to throw themselves into the games and out of school life of those institutions.

THE INDIAN CIVIL SERVICE.

On Wednesday was concluded the series of three Rhodes lectures on the new constitution of India which have been given at University College, London. As on the previous occasion, Sir Courtenay Ilbert was not himself able to attend, and the lecture was read for him by his daughter, Mrs. Fisher. It dealt with the changes made by the Act of 1919 in the Central Government of India, by enlarging legislative bodies and setting up new ones, putting such authorities on a mainly electoral basis, while greatly extending their powers, especially in fiscal matters, and relaxing the control of the Home Government over them.

Speaking of the effect on English members of the Indian Civil Service, Sir Courtenay Ilbert said it had been his fortune to hover on the borders of two great services, the English Civil Service, and the Indian Civil Service. He was old enough to remember the introduction of the competitive system for admission into the Indian Civil Service and the plentiful crop of gloomy predictions and prognostications which it had brought forward. Afterwards, when in India, among his colleagues and intimate friends had been some men who had been brought out by John Company, and others who had come later as "competition wallahs." He had been inspired with feelings of affection and admiration by members of both classes. At the present moment he took a more hopeful view of the position of English officials in India than prevailed in some quarters. A period of transition from one system of Government to another was always difficult, but the present difficulties were such as his countrymen had usually had the courage and capacity to surmount. The old régime was doomed; the element of force would remain but would, it was to be hoped, be kept as much as possible in the background. There would be more scope for Government by personal influence and persuasion. But had Englishmen as a rule shown themselves wanting in the qualities required for that form of Government? Might not its exercise be more attractive to them than the life of a bureaucrat?

THE MOUNT EVEREST EXPEDITION.

The preparations for this year's Mount Everest Expedition are now complete. The nine members who have left England for India are:—

Brigadier-General the Hon. C. G. Bruce, C.B., chief of the expedition.

Lieutenant-Colonel E. L. Strutt, C.B.E., D.S.O., second in command.

Mr. G. L. Mallory, who led the climbing party in 1921.

Mr. George Finch, of the Imperial College of Science.

Major E. F. Norton, D.S.O., R.F.A.

Mr. T. Howard Somervell, F.R.C.S., of University College Hospital.

Dr. A. M. Wakefield, of Megantic, Quebec Province.

Dr. T. G. Longstaff, surgeon and naturalist.

Captain J. B. L. Noel, M.G.C., photographer officer.

The party will be joined in India, the *Geographical Journal* published by the Royal Geographical Society states, by Captain Geoffrey Bruce, 5th Gurkhas, and by Captain C. J. Mossir, 3rd Q.A.O. Gurkhas. The 12th place was to have been filled by an artist, but to the great disappointment of the committee it was not possible to find one, among those whose methods seemed appropriate, who could undertake the journey. Of the 11 members of the expedition named above six are soldiers—three of the Gurkhas, one of the Royal Scots, one Royal Field Artillery, and one Machine Gun Corps, formerly of the East Yorkshire Regiment. Three members of the party are of Cambridge University—Mr. Mallory, of Magdalene, Sr. Somervell, of Caius, and Dr. Wakefield, of Trinity; two are of Oxford University—Colonel Strutt and Dr. Longstaff, both of Christ Church; three are surgeons, two are naturalists, several are expert photographers, one at least is a painter, and all are distinguished mountaineers. It is, in fact, a very strong party, of which much is expected.

The climbing equipment includes an oxygen apparatus specially devised for the occasion. The photographic outfit is very complete, including three cinematograph cameras, of which one is equipped with a battery of lenses up to 20in. focal length; two panoramic cameras, of which one rotates through the complete circle; four cameras for glass plates, including one 7½in. by 5in., all fitted with telephoto lenses; one stereoscopic camera, and five Kodaks, besides a variety of private cameras belonging to different members of the party. The dark-room equipment includes all that is required for developing cinematograph films in the field.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

The Near East.

The *Round Table* contains in an article entitled "The Near East" a very useful history of the more recent events in the Near East. It traces the steps by which the Nationalists of Turkey "have secured support, not only from enemies of the Allies, but from among the Allies themselves who framed the Treaty of Sèvres." After sketching the growth of French jealousy at Britain's influence in the East, it comes back to the policy adopted by the Allies in creating a Greater Greece, incidentally discussing the situation of Bulgaria:—

The German-Turko Alliance which so greatly prolonged the war, and by cutting off Allied access to the Black Sea had such disastrous consequences for Russia and Roumania, was only made possible by the German-Bulgarian Alliance. By her position across all land routes between Central Europe and Constantinople Bulgaria exercised an influence upon the course of the war altogether disproportionate to her importance and military strength. She entered the war deliberately, urged by hope of military revenge upon her neighbours and the prospect of great territorial aggrandisement at their expense. The intense nationalism of the Bulgarian people, their ambition, their steadfastness in pursuit of national aims, their patience and industry, their sober intelligence, their aptitude in military organisation, their stoutness in arms, their high birth rate, all mark them out as a race with a future either of much good or of much evil. Bulgaria had proved a most dangerous enemy to her neighbours as well as to the Entente. It was necessary to impose some curb upon her, to reduce her relative power in the Balkans without penalising her vindictively. In view of what had happened, of what might happen again, it was out of the question that an enemy so virile and dangerous should be left with easy opportunities for future territorial expansion, in areas to which she had no predominating ethnical claims. As a result of the war it was clear that both Roumania and Serbia would be greatly increased in area and population. They, then, could look after themselves. For Greece, the question of expansion was not so simple. Territory in Asia Minor and in Eastern Thrace were the only main possibilities. It was deemed essential to end Turkish rule in Europe, and to secure the Dardanelles against the possibility of again being closed in war. Some warden, therefore, had to be found for Turkish or Eastern Thrace, and ethnical and political considerations indicated Greece. But Greece could not hope to maintain herself in Eastern Thrace if it were separated from Greece itself by Bulgarian Thrace. A Greater Greece being regarded as a necessity on various grounds it could only be obtained by giving her Eastern and Western Thrace, the latter at the expense of Bulgaria, and by adding territory in Asia. By this apportionment Greece, like Roumania and Serbia, would more than double her pre-war population, a rough balance between these countries would thus be maintained; and Bulgaria, from being the most powerful Balkan State would, though only slightly diminished in population, become by much the weakest. To these considerations, as much as anything else, M. Venizelos owed his success in obtaining territory for Greece at the hands of the Supreme Council.

Dropping a few outspoken words on the Greek occupation of Smyrna, it chronicles the development of the Nationalist movement in Turkey, the Greek Offensive,

and the causes that led up to the Treaty of Angora. Of this Treaty it says:—

But the conclusion of the Agreement between France and the Nationalists involves that the use of Allied force will not be behind the negotiations. Nationalists know well enough that unless the Allies act together compulsion cannot be applied in Asia Minor; they know that the Agreement of Angora means that the Allies cannot apply force; they will therefore be able to stand out for the widest revision of the Treaty of Sèvres. Nationalist Turkey is, for all practical purposes, already the Turkish State, and sooner or later, will be in Governmental control in Constantinople. France, by securing Nationalist friendship, thus fortifies her influence on the Straits and in the capital in opposition to British influence which at present is dominant there. France has, also, a strong internal reason for gaining and retaining Nationalist and Islamic support. Northern Africa—Tunis, Algeria, Morocco—she regards, not as territorial possessions but as an integral part of France, as a southward extension of France itself. To the Moslem population of these regions she looks to make good the numerical inadequacy of her population in Europe. In the new French army now being created one-third of its total strength in war and peace is to be drawn from the Moslems of North Africa; and of the strength in garrison in European France again one-third is to be formed of these Moslem troops. France cannot afford in these circumstances, it is said, to estrange the Moslem one-third of her population which provides a corresponding proportion of her armed strength.

Still further, France has ever regarded with disfavour the creation of the Greater Greece formed by the addition of territory in Asia Minor and in Eastern Thrace. By the conclusion of the Treaty of Angora she has in fact been able to deal a fatal blow at Greater Greece. There are, however, certain possibilities not altogether favourable to the realisation of Nationalist ambitions in Thrace. Military operations against Greece in Thrace by the Nationalists would not be easy; it would be a different matter from the defence of their Anatolian highlands; it would require long preparation and large accumulations of munitions and stores. It is doubtful if the Nationalists could turn the Greeks out of Thrace by force of arms, except in the course of years. And, further, a Turko-Greek struggle in Thrace might well involve the intervention of other Balkan States, to the great advantage of Greece. An Allied or European agreement with Russia, too, would speedily change the outlook of the Turkish State and provide it with some of the preoccupations which existed before the war.

But whatever the situation may be in the future, the fact remains that at the present time, by supporting the Nationalists as she has done, and gaining their good will, France has secured for herself a position in Turkey comparable only with that held by Germany in 1914.

From this it proceeds to a statesmanlike conclusion:— "Notwithstanding changing circumstances, there are certain root principles which still hold good. It is true that our aims are necessarily limited by our capacity and facts cannot be ignored, but for all that no mere opportunist policy will permanently restore peace. It is not to-day and it never was merely a matter, to use the words of a famous British statesman, of putting our money on the right horse." It produces as instances which we must disinterestedly consider, the question of Christian minorities in the Near East, equity in deciding the future of the Greek inhabitants of Smyrna, and, the question of Europe.

An attempt at this time of day to re-open boundary questions would be tantamount to sending the fiery cross round the Balkans. After all, too, the Greeks were our Allies in the Great War. But, apart from this, it long ago became an ac-

cepted rule of European policy that gound lost by the Turk on this continent was lost to him for ever. In such matters as these we should be slow, indeed to depart from the wisdom of our fathers.

INDIA AND TURKEY.

In the *Manchester Guardian* of March 11, Professor A. J. Toynbee discusses the telegram recently sent by the Viceroy of India setting out the claims of Indian Moslems. He points out the differences between the Turkish and Indian points of view, characterising the first as political, the second as religious:—

It is worth comparing the Turkish with the Indian point of view. The Turkish National Pact, which represents the demand not of a few extremists or adventurers but of the solid mass of the Turkish nation, also claims Thrace and Asia Minor on the ground mentioned by Mr. Lloyd George himself—namely, that they are predominantly Turkish in race and ought therefore, presumably, to be left to Turkey on the principle of self-determination. Had they read Mr. Lloyd George's words like the Indians and framed their programme in accordance with them? This is perhaps an open question, for the principle of nationality is at the base of the whole present Turkish programme, and its application in these two provinces was a fact which must have struck more people than the British Prime Minister. Also the Turks had recovered possession of both provinces for themselves—of Thrace in 1913 during the second Balkan war, and of North Eastern Anatolia (the Armenian provinces temporarily occupied by the Russians) when the Russian front broke down in 1918. On the other hand, the Turks in the text of their National Pact, formally agree to the separation from Turkey of the provinces inhabited by Arab majorities as far north as the Armistice line agreed upon at the end of the European war. This is a real point of difference between the Turkish and the Indian Moslem view, and the difference is shown most clearly in regard to the Holy Places. It is true that both parties demand the restoration of Adrianople, but while the Indian Moslems value Adrianople as a Moslem holy city, the Turks want it because they consider that it is the chief fortress the possession of which is essential for the protection of Constantinople on the European side. With regard to the Arab countries, the Turks are frankly indifferent, especially with regard to Hijaz, which contains Mecca and Medina, the holiest cities of all. Their former suzerainty over the Hijaz cost them money in the shape of subsidies (now paid by the British Government) to the Sherif Hussein, and much anxiety owing to their responsibility for the pilgrim traffic. They are not particularly keen to shoulder these burdens again for the empty honour of suzerainty.

In fact, the Turks have no use for nominal suzerainty over provinces which other people really control and exploit. They have had disillusioning experience of this system already, and the solution suggested by the Indian Moslems for the Arab provinces therefore does not appeal to them. In fact, Arab and other Moslem countries formerly subject to Turkey are more useful to her now that they are separated from her than when they were under her rule. The Turks spent much blood and treasure in trying to hold the Hijaz, the Yemen, Tripoli, and Albania. Now the blood and treasure is spent by the British, Italians, Greeks, Jugoslavs, and others, while the sympathies of the Moslem Indians have turned towards Turkey now that they no longer suffer from her. The case of Egypt is even more striking. When Egypt was independent, in the earlier part of the nineteenth century, she was Turkey's most formidable rival and invaded Asia Minor to within a hundred miles or so of Constantinople. But after the Armistice, when Turkey was being compelled at the Peace Conference to renounce the last vestiges of nominal

suzerainty over Egypt, the Egyptians were rising against the British and destroying the Turkish pledge.

He touches on one other matter in the telegram:—

And there is another aspect of the Viceroy's proposal about the Holy Places. He speaks not of the suzerainty of Turkey but of the suzerainty of the Sultan, and this has a serious bearing upon burning questions of Turkish internal politics. The Sultan's wish for autocratic authority and the National Assembly's determination to establish Constitutional Government, on however oligarchic a franchise cannot easily be reconciled, and in this struggle for power the religious authority possessed by the Sultan as Caliph of other Moslems besides his own nation is a formidable addition to his power. This proposal, therefore, cannot be very palatable to the Turkish national leaders, however difficult it may be for them to say so openly.

Finally, he sums up thus:—

In the National Pact, a purely Turkish settlement of the Turkish case, the Holy Places did not figure, still less the suzerainty of the Sultan over the "Island of Arabia." On the other hand, the Capitulations, which neither the Viceroy nor the Khalifate Committee mention, take a very important place. The Capitulations may not affect the religious prestige of the Sultan and may be of very little political inconvenience to him, but they are humiliating as well as inconvenient to the Turkish public. With this exception, however, the Viceroy's terms certainly represent the substance of the Turkish claims; and the reservations he makes about the minorities and the Straits are both questions on which the Turks are open to discussion and compromise.

THE EUPHRATES & TIGRIS STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the river Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K. Continent and India.

NOTES AND NEWS.

Devonshire Square,
E.C. 2.

The B.I.F.

Further information fully justifies the view that this year's fair, considering the attendant circumstances, has been a great success. There was a very marked increase in the volume of business as compared with the previous year, and the fact that over 50,000 buyers were present shows plainly how firmly this institution has become established. As I anticipated the foreign contingent did not include many Near Eastern representatives among its ranks on account of the adverse exchanges, but next time it may be expected that there will be a change in this respect. A feature of the fair of special interest was the number of orders obtained by exhibitors from firms with whom they got in touch at the 1921 fair without business resulting. That should encourage the business community, if anything will, and bring to the next fair a host of firms who hitherto have held aloof.

The Genoa Conference.

The position with regard to Genoa tends to become more and more obscure. There is no certainty that the conference will now take place, though on this point we have the usual official assurances that matters are too far advanced for its abandonment to be practicable, but if it is held it is far from clear that it can serve any useful purpose. The idea of the conference was excellent provided its aims were to be limited, but when it came about that its main *raison d'être* was to be the re-establishment of commercial relations with Russia it was doomed to failure even if that pair of comedians, Messrs. Lenin and Trotsky, had managed to keep quiet instead of every other week or so, explaining to the world in general the precise use that Soviet Russia meant to make of the opportunity afforded by the conference.

The Future.

Outside Russia once the real meaning of the conference was understood there has been no enthusiasm at all for Genoa. America would not hear of participating, France's attitude towards it has been one of hostility throughout, and as a result of developments here during the past few weeks it is difficult to see how Mr. Lloyd George could go to the conference with any confidence. The fact is, as (if I may be allowed to recall it) I pointed out some weeks ago, the Powers have been trying to deal with the economic crisis and the collapsed exchanges in entirely the wrong way. The restoration of relations with Russia is emphatically the question for separate negotiations. The first and most essential step towards world recovery is to deal with the position in Europe and the Near East. A settlement of the Turco-Greek problem and the improvisation of measures calculated to overcome the obstacle to trade with South Eastern and Central Europe is the greatest and best contribution that the Powers can make at the moment to the development of stabilisation. Once conditions in Europe are definitely on the up grade a settlement with Russia would follow as a matter of course.

North Persia Oil Deal.

I dealt recently with the difficult position that arose in regard to the North Persian oilfields as a result of the attitude taken up by the Persian Government in regard to concessions acquired by the Anglo-Persian Oil Company, and pointed out that that concern was in touch with the Standard Oil Company on the question at issue. An agreement between these companies in regard to the development of these important oilfields would obviously be fraught with immense consequences, and this, it appears, has now been brought about as a result of the negotiations between Sir John Cadman, representing the Anglo-Persian Company, and Mr. A. C. Bedford, on behalf of the American concern, as a message from the Teheran Correspondent of the *Pioneer* states that the Persian Government has received £200,000 from Washington against future oil royalties voted by the Mejliss at the beginning of January. The fact that the Persian Government, as indicated by a later message, has since been trying to cancel the agreement in no way affects the issue.

New Egyptian Company.

Taking into consideration the extremely disturbed conditions in Egypt during the past year the results obtained by the New Egyptian Company can only be regarded as fairly satisfactory. The net profits have fallen from £182,000 to £67,711, the reduction being accounted for by the decreased profits on sales of lands, which only totalled £39,100 as compared with £171,200. The dividend proposed is 16.2-3 per cent. tax free as against 20 per cent. tax free.

Eastern Bank's Continued Progress.

The very satisfactory report that has been forthcoming from the Eastern Bank for the past year shows that the progress of this institution has been more than maintained. The net profits which amounted to £102,600 for 1919, and £121,400 for 1920 now stand at £144,200, or an increase of £22,800, while the dividend is raised from 8s. per share to 9s.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

ROUMANIA.

Bucharest, March 6.

Internal Loan for the State Railways.

It is now announced in regard to the Government's scheme of commercialising the Railways, Post Office, and the State Navigation Service, that the first step towards an autonomous administration of the railways will be the contracting of a loan of 600 million lei with the local banks. This amount is desired to cover only the most urgent needs of this administration, for, in order to cover the whole amount of the debts in the country and abroad, more than one milliard lei would be required. Out of the proceeds of this loan it is intended to pay in the first place for the 176 locomotives ordered in Germany, which are now ready for delivery pending payment. The wish to pay off this account immediately is due to the desire to take advantage of the present rate of the mark. In this order the price of a locomotive is fixed at 2½ millions marks, representing to-day about 1½ million lei, whereas the present value of a locomotive is about four million lei. With the remainder of the loan it is intended to pay the patient home suppliers of coal, oil, sleepers, etc., and to purchase the necessary material for the railway workshops.

Miscellaneous.

M. L. Wenger, the delegate of the French Government, who at the same time is acting also on behalf of the British Government, has arrived in Bucharest to discuss with a Roumanian Committee, headed by Dr. Mrazec, the General Secretary of the Ministry of Industry and Commerce, the question of establishing the damages due to Roumania by the Allies for the damage done to the oil industry during the retreat of 1916.

A few days ago, Mr. Owen, a member of the American Senate, arrived in Bucharest. The purpose of his visit is to enquire into the financial situation of this country. For this purpose he is now in touch with the big banks of Bucharest, who have pointed out to him the necessity of an external loan to enable the Roumanian State to consolidate its floating debt abroad.

Beginning from February 25 the railway traffic with Bulgaria has been resumed, and for this purpose a special train for passengers and goods has been organised to run daily from Constantza to Novo Batievo via Bazargic.

With reference to the prohibition of the import of luxury goods, orders have now been given to the various frontier custom-houses not to allow the importation of luxury goods even for personal use, however small the quantity might be.

BULGARIA.

Sofia, March 2.

Bulgarian money sequestrated in England.

It is announced that any Bulgarian who has lived in England and whose sequestrated money or property does not exceed the value of £5,000 is now free to receive this amount. Those persons who have not lived in England and whose sequestrated money or property does not exceed £200 are also free to receive it.

Sofia, March 11.

Unsuccessful Loan Negotiations.

It is reported that the negotiations which were being conducted for the conclusion of a £5,000,000 external loan, have been temporarily broken off. The difficulty of obtaining adequate guarantees is understood to be the main drawback to the granting of the loan. This is much to be regretted as a foreign loan would have gone a long way to raise the somewhat depressed financial atmosphere of Bulgaria.

Reparations.

Both the Foreign and local Press have stated that Bulgaria will be called upon to pay a substantial amount in reparations during 1922. The exact amount varies according to the newspaper, but the sum of ten million gold francs, equal to approximately three hundred million levas at the present rate of exchange, is freely mentioned.

It is known that the sum of thirty million levas is due to be paid by the Government to the Inter-Allied Commission in the event of the former concluding a contract for the printing of new bank notes with a foreign firm whose offer was thirty million levas higher than other competitors but whose superior quality of notes was considered to be worth the difference in price.

The report that France and Bulgaria will shortly conclude a commercial treaty is denied.

TURKEY.

Constantinople, March 14.

The Commercial Situation.

So far as legitimate business is concerned the commercial situation in Turkey may be described as utterly stagnant. During the month of January the value of the imports for Constantinople alone amounted to £T.5,202,714, and of the exports to £T.2,317,318, leaving an adverse balance of nearly £T.3,000,000. The United States headed the list of imports chiefly owing to the large proportion of flour and other foodstuffs, which have always been regularly supplied by that country, but Great Britain came next with 15 per cent. Italy third with 10 per cent., and France fourth with 9 per cent. of the total value. Exports consisted chiefly of fruits, tobacco, vegetables and silk, of which the principal purchasers were France, £T.317,000; Holland, £T.315,000; Great Britain, £T.239,000; the Caucasus, £T.212,000; Syria, £T.191,000; Austria, £T.145,000; Egypt, £T.138,000; Italy, £T.136,000; and America, £T.131,000.

The Black Sea Trade.

Commerce between the capital and the Turkish ports of the Black Sea is practically at a standstill, with the sole exception of the coal trade with the Heraklea area. With the exception of the big shipping companies such as the Lloyd Triestino, Paquet, Servizi Maritimi, the steamship services between Constantinople and the Turkish Black Sea ports have been either very much cut down or altogether suppressed, and very few ships that do touch the Black Sea ports return with cargoes. This is due to the sufficient reason that there is practically nothing to export, for although there are certain stocks available in the interior all the means of transport have been requisitioned for the army, and it is consequently

Oakey's WELLINGTON SILVERSMITH'S SOAP, for Cleaning and Polishing Silver, Electro Plate, &c. Tablets, 6d

Glass Paper, Emery Cloth, Black Lead Packers,
WELLINGTON MILLS, WESTMINSTER BRIDGE ROAD, LONDON, S.E.1

very difficult to bring the materials to the coast. Most of the exports from the Anatolian ports of the Black Sea consist of foodstuffs purchased for the account of the Soviet Government of Moscow in accordance with special arrangements concluded with the Angora Government.

With Batoum, on the other hand, a certain resumption of business is reported, and goods are being sent to Persia through that port. Unfortunately, the despatch of goods from Batoum to the interior of the Caucasus is slow and difficult, with the result that the depots are stated to be gorged with all kinds of merchandise. There is naturally a slump in prices.

Americans in Anatolia.

The local press has recently been displaying considerable interest in the doings of certain American commercial agents in Anatolia, and rumour credits the Standard Oil Company, and other important American concerns with extensive designs upon the natural wealth of Anatolia. Mr. Gillespie, the Commercial Representative of the United States Government, recently made a journey to Angora for the purpose of ascertaining the possibilities of the situation, and the Angora Government is considering a scheme of railway development submitted by Mr. MacDowell, a representative of the Foundation Company of New York. This project is said to be also supported by the National City Bank of New York, one of the directors of which, Mr. Vanderlip, was in Constantinople last year. The following is a translation of an article on the subject from the Turkish newspaper, *Tefhid-Efkiar* :—

"The representative of the American Foundation Company, Mr. MacDowell, proposes to undertake the construction of railways without requiring kilometric guarantees. . . . Such a proposal would never be made to a feeble government with an uncertain future. The Angora Government is following with the closest attention foreign rivalries concerning railway construction and the exploitation of mines connected therewith. The line which will connect Samsoun with the Persian frontier is of the utmost importance, whilst the line which will link up the port of Yemourtalik, with the Persian frontier will successfully rival the Baghdad Railway, and in a very short space of time will adversely affect the railways of Mesopotamia. It is known that the one object of European peace is the partition of oil fields. The proposals of the American Company concerning the exploitation of the mines (oil) situated on either side of the railway from Yemurtalik to the Persian frontier, clearly indicates that America intends to compete with another country which holds 75 per cent of the titles to the world's oil fields. The objective of the railways from Samsoun to the Persian frontier is the virgin oil fields of Erzeroum, which are sufficiently rich to supply the entire world. In addition to America, Russia is also displaying considerable interest in the matter of railways. The new Russian Embassy in Angora includes amongst its personnel a number of

geologists and economists, who are studying the resources of the country with a view to the participation of Russian capital in Anatolian enterprises and to compete with Americans and Europeans."

For those who have time to read between the lines, the above paragraph will be of considerable interest.

GREECE.

Athens, March 10.

Production of Cotton.

It is estimated that the production of Greek cotton during the current agricultural year will attain the following figures :—Province of Salonika :—1,950,000 okes ; Province of Phthiotis and Phokis :—1,300,000 okes ; Province of Attica and Boeotia :—2,300,000 okes ; Province of Larissa :—12,000 okes ; Cyclades Islands :—12,350 okes.

MESOPOTAMIA.

Baghdad, March 2.

Prices and Wages Falling.

Prices have fallen very heavily during the past few months, and wages are now beginning to follow the fall of commodity prices though skilled labour, especially in the building trade is still able to demand very high wages owing to the lack of skilled workmen to do the work now being put in hand. In all the towns of the country new buildings are being erected in the place of the old ramshackle buildings which have served as dwellings hitherto. Trade, however, is at a standstill, and money is very scarce.

The Port of Busreh.

It has now been decided that the port of Busreh is to remain in government hands for the present at any rate.

THE COLONISATION OF PALESTINE.

Sentiment v. Sense.

To the Editor of "The Near East."

Sir,—It would appear that while a variety of suggestions as to the ultimate fate of Palestine have been made there is one which has not until now received proper consideration, namely the selection of the type of colonist best suited to the country.

The unsuitability of the Jewish emigrants now pouring into Palestine is being brought home to us very forcibly, and it would not militate against the necessity of economy now being advocated if the country could be peopled by the British settler. It could be done without any expense from the British Government beyond perhaps a small settlement grant to approved applicants.

The Jewish colonists in Palestine before the war had reached a very fair standard of efficiency in agriculture, and were not prone to concern themselves in affairs outside their own boundaries. A lot could be learned from them in running a model village; they wanted no interference from the outside world, and although they suffered greatly from periodical attacks by nomadic Arab tribes they always managed to hold their own. Moreover the country, although under Turkish rule, was on the whole peaceful, for the Turk was placid in his administration, and, provided the taxes were paid, did not unduly interfere in their private pursuits. Their neighbours in the German colonies scattered over the country were if anything even more steady and industrious, and it is to them also that we owed the large volume of trade in fruit. Two cases in point may be mentioned—the German colony of Wilhelma and the Jewish colony of Mulebbis, or Petah Tikwah.

The type of Jewish emigrant or "Haluzin" as he calls himself, at the present time, I venture to say, is totally unsuitable as a colonist in the fair land of Palestine; for it is a wonderful country and immensely rich agriculturally. Figs, oranges, melons, dates, and grapes grow in abundance. The applicants who have passed through my hands are in nine cases out of ten totally ignorant of agriculture, their occupations vary from rag pickers to pedlars, they have not the elements of cleanliness or self-respect, and although they are similar to the pre-war colonists in that they wear their hair long, that feature constitutes their sole resemblance. I protested at the type of candidate at the time and was assured that they were eminently suitable. Few, however, in proportion were sped on their way by my office rejoicing. Undoubtedly it will be a bad day for Palestine when the country is completely colonised by such as these. The supervision of these people was efficiently carried out at first, for no intending settler was allowed even to apply for facilities until he had first obtained the sanction of the local Zionist organisation. This wise precaution, however, seems now to have been relaxed with the inevitable result. The Arab is another important element and can only be managed by firmness allied to justice. Until co-ordination between Jew, Arab, Turk and German is achieved there will be no improvement.

The Arab can be managed. In his heart he would prefer to be governed by the British or at least to have the country colonised by the British rather than the Jews. It has been said that the Arab is untrustworthy and that he is unfit to have any say in the Government of Palestine. These statements are quite inaccurate. The Arab has a great respect, even reverence, for firmness and strength. He may face both ways on occasions but he knows when it would be unwise to do so. He should work well with the British settler whom he has met before in uniform.

One has only to recall the achievements of Colonel Lawrence's Arab brigades during the war to realise what can be done with a fearless policy, fairness, and complete frankness. True, the Arab takes to fighting

as a duck to water, for like the Turk he is a fighter from the cradle to the grave; all that is needed is to direct his activities in the right direction. As a policeman he would be decidedly effective and of infinitely more use than a few Jews armed with borrowed rifles.

Another point to remember when allotting Palestine is that whatever happens the Turkish element cannot be eliminated. The Turk is a much maligned gentleman. I use the word "gentleman" advisedly, for it will be found sooner or later that we have taken Palestine from him merely to import the backwash of the Jewish race. If any preference were given it should be to the Turk; he at least is not a hypocrite, and has more sense of the sanctity of the given word than any Jewish "haluzin."

When it is realised that the Moslems outnumber the Jews by some ten to one, and the former hate the latter, it may safely be assumed that the more the ratios approach each other the more the Moslems will hate the Jews. The fact of the matter is that we have to choose between ruining the country on a sentimental idiosyncrasy, or running it so as to become one of our greatest triumphs of colonisation, and to show some result for the many British bones scattered over the land.

The Government seem to have been very cleverly hoodwinked by Jews in high places and to have consequently ignored the only practical view, and if their sentimental view is persisted in, so far from the country justifying in any way the hopes it inspired when our troops "freed" it, Palestine will degenerate into a glorified Salonika, and no amount of gendarmerie or bribery of Arab Chiefs will in any way leave it invulnerable against dissension from within or molestation from without. The Arab emphatically is a bigger factor in the destiny of Palestine than the Jew is or ever will be.

Yours, etc.,
W. ROSEN

(formerly Clerk and A. V.-C. to H.B.M.
Consulate-General, Frankfurt-am-Main).

INDIAN LAC, TURPENTINE AND ROSIN.

A new volume in the series of Reports of the Indian Trade Enquiry conducted at the Imperial Institute has just been published by Mr. John Murray. This contains the reports on lac, turpentine and rosin made by the Special Committee on Gums, Resins and Essential Oils, of which Sir Harvey Adamson, K.C.S.I., was Chairman.

About 94 per cent. of the world's supplies of lac (shellac, etc.) comes from India, the rest from Indo-China and Siam. Although India thus has a practical monopoly of the trade the state of the industry in India is not altogether satisfactory. The Special Committee make various recommendations for improving the present conditions of the industry, for placing the manufacture on a thoroughly efficient basis, and safeguarding the interests of India and the Empire.

Although India possesses large areas of pine forests from which turpentine and rosin could be obtained, the country has not hitherto figured among the large producers of these materials, and is still dependent to some extent on foreign countries for its own requirements. The Special Committee consider that every effort should be made to increase the Indian output and recommendations are made with this end in view. The last section of the publication gives interesting particulars relating to the production of turpentine oil and rosin in India and the characters of the products obtained from the different Indian pines.

The traffic receipts of the Smyrna-Aidin Railway for the week ended March 4 amounted to £6,060.

The transfer books of the Mercantile Bank of India are closed until April 5.

It is reported authoritatively in London that the Czechoslovakian Government has agreed to the Bill in connection with the £10,000,000 British loan to Czechoslovakia.

The Bondholders' Report.

The report of the Corporation of Foreign Bondholders for 1921, which has just been issued, begins with a reference to the world-wide depression during the past year, and it is pointed out that "in view of the remarkable falling off in trade, which followed the revival of 1919-20, and the extraordinary fluctuations in exchange, it is perhaps a matter for congratulation that the catalogue of States in default has not been materially increased." We give the following extracts from the report dealing with the Near East countries:—

Bulgaria.

Amongst the countries which supported the Central Powers in the late War, Bulgaria, after protracted negotiations, has made arrangements for the resumption of payments on its external debt, which, while they entail considerable sacrifices on the bondholders, especially in the case of drawn bonds, may probably be regarded as the best possible under the difficult circumstances in which Bulgaria is placed in consequence of the heavy depreciation in the national currency. It is only fair to the Bulgarian representatives to say that they appeared sincerely desirous to maintain the honour and credit of their country.

Turkey.

In 1919-20 the gross receipts from the revenues assigned to the service of the Unified Debt and Lots Turcs amounted to £T.11,782,953 (paper), against £T.6,830,303 in 1918-19, the increase being due principally to the temporary revival of trade after the Armistice and to the rise in the value of articles subject to taxation. After deducting from this £T.11,782,953 expenditure to the amount of £T.4,016,114 and the annuity for the Unified and the Lots Turcs (£T.2,157,375) the balance of £T. 5,609,463 was carried to a special reserve account with the Treasury, to cover loss of exchange on coupons in arrear payable in foreign countries. For 1920-21 the gross receipts are estimated at £T.10,930,379, and for the first six months of the current year (March to August, 1921) at £T.3,376,931. The decrease is due to political troubles in Anatolia and to the war between Greece and Turkey. Sir Adam Block in his recently published Special Report, draws attention to the urgent necessity of increasing the duties on spirits. Owing to the opposition of the United States Government, the proposals of the Turkish Government, which, if carried into effect, would probably increase the spirits revenue by some £T.3,000,000 per annum, have not been acted upon.

During the past year the coupons of the Unified Debt due March, 1915, to March, 1920, inclusive, have been deposited with the Syndicates representing nationals of the Allied Powers, and a payment of 1s. 3d. per unitary coupon of 8s. has been made by the Debt Council out of funds in their hands outside Turkey. Certificates have been issued to the holders of these coupons in respect of their claim to repayment at pre-war rates of the funds collected on the bondholders' behalf during the war and deposited in German banks. The deposit of coupons made with this object was closed on 30th September, 1921, and the bondholders' claims are now in the hands of the Clearing Offices established under the provisions of the Treaty of Versailles, and should in due course come before the Mixed Arbitrators Tribunals constituted under the Treaty.

In the present state of Turkey, and until the Treaty of Sèvres or some other arrangement has been put into force, there can be little or no improvement in the situation. Bondholders should always bear in mind that a considerable portion of the Turkish Empire as it stood before the war has been dismembered from Turkey, and the Powers who have taken over these parts are responsible for their proportionate share of the Turkish Debt. Up to the present, so far as the Council are aware no payment has been made by these Powers on account

of the revenues assigned to the Debt and collected by them in the territories they have taken over.

After prolonged negotiations an arrangement has been made between the Debt Council and the Tobacco Régie Company with regard to the bondholders' share of the profits. The new arrangement is regarded as far superior to the provisional agreement in force during the war, and should result in a large increase of revenue for the bondholders. For the current year the bondholders' share of the receipts is estimated at nearly £T.3,000,000, as against about £T.2,000,000 which would have been obtained on the old basis. It is understood that an arrangement has been entered into between the Turkish Government and the representatives of the French holders of the loans outside the Decree of Mouharrem for the transfer to France of the funds in hand for the service of these loans, and for the distribution of the proceeds by way of a payment in French francs on account of the coupons due December, 1914, to May, 1920, a certificate of claim being given for payment of the balance on the same basis.

Greece.

The total gross receipts in 1920 applicable to the service of the old gold loans, amounted to 123,662,708 dr., against 100,844,948 dr. in 1919, and out of these the receipts from the Monopolies and the Stamp and Tobacco Duties, from which the plus-values are derived, were 65,630,414 dr. and 50,468,063 dr. respectively. With the addition of the portions of the receipts from the Monopolies, etc., which are not applicable to the plus-values (viz., 37,809,743 dr.), together with the customs receipts of the ports of Corfu, Patras, Laurium and Volo (viz., 15,805,445 dr.), which are an additional contingent security of the old gold loans, and those of the ports of Salonika and Kavala (viz., 32,533,200 dr.), on which the five per cent. loan of 1914 has a first charge, the total gross receipts of the year amounted to 209,811,097 dr., against 158,039,887 dr. in 1919. Including balances from the previous year the net amount available for increase of interest and sinking fund in 1921 was 24,497,688 fr., against 20,792,020 fr. in the previous year, and out of this sum, as stated in the Council's last report, the full interest on all the old gold loans was paid for the second year in succession, and the ordinary sinking funds on the three groups of loans were increased by 28, 28 and 26 per cent. of the original interest respectively.

In 1921 the gross receipts for the service of the old gold loans were 149,185,640 dr. and the proportion applicable to the plus-values was 73,493,141 dr. With the additional receipts from the Monopolies and other sources mentioned above, the total gross receipts in 1921 were 259,192,277 dr. The sums available in 1921 should permit of the payment in 1922 of 42, 40 and 40 per cent. respectively to the three groups by way of additional interest, and of 24, 24 and 26 per cent. by way of additional sinking fund.

In view of the uncertain political outlook, any forecast as to the future is difficult. It is, however, satisfactory to note that in 1921 the receipts assigned to the plus-values showed an increase of 7,862,727 dr. as compared with the corresponding period of the previous year; receipts from Customs were also satisfactory, and in spite of the increased tariff duties, the depreciation of the drachma, the lack of exchange and other difficulties, the actual imports have not diminished.

'BALKAN' NATIONAL INSURANCE COMPANY

FOUNDED 1895

Capital paid up	5,000,000
Total reserves as per December 31st, 1920	53,200,000
Premium Income during 1920	28,300,000
Amounts insured of Life branch exceed	150,000,000
Branches maintained: Fire, Life, Marine, Casualty and Re-insurance of all branches.	

HEAD OFFICE: SOFIA, BULGARIA.

THE BIRMINGHAM FAIR.

(FROM OUR OWN CORRESPONDENT.)
(Conclusion).

Miscellaneous Exhibits.

In what might be called the miscellaneous section, a very interesting range of exhibits was on view. The most notable firm exhibiting was the B.S.A. Company who had an extensive stand showing their well-known cycles, motor-cycles and accessories, also equipment for aero engines. A section of this stand was devoted to hammerless shot guns, sporting guns and rifles, targets and target-holders, and equipment connected with firearms. Before passing from this class of exhibits I must not forget to mention those well known gun and cartridge manufacturers, Messrs. Webley and Scott, Ltd., and Nobel Industries, Ltd. The first mentioned showed an excellent range of double-barrelled guns and rifles, and revolvers of all descriptions, while the last named were showing a large selection of their well-known "Eley" "Kynoch" and "Nobel" brands of sporting ammunition and miscellaneous goods such as clay "pigeons," air gun slugs, wadding and percussion caps.

Two stands which seemed to me of particular interest were those of Messrs. Craven and Speeding Bros., and Messrs. J. & E. Wright, Ltd., containing exhibits of hemp, manilla, and cotton ropes, all classes of ropes for engineering, shipping and mining, and various grades of hemp, cotton and jute twines. The exhibits of Messrs. J. H. Tucker & Co., Ltd., were nothing if not interesting. One could spend hours admiring the excellent examples of the firm's products. An extensive range of electric lighting and power accessories, fusegear, and switchboards were on view, including their latest moderate priced switchboards, which are specially designed for use with modern small private plants, using low voltage metal filament lamps on the latest wiring systems. Other new features are their ironclad switches and switches with fuses combined. Improvements have been made in the contacts which are now far superior to the contacts usually fitted. In the combined switches and fuses interchangeable and removable adapters are provided to facilitate wiring, which may either have one central hole for bunched cables, or separate holes for each pole, tapped for conduit or bushed for paper insulated cable, with recessed bodies for sealing the cable ends.

A very excellent selection of tumbler switches were exhibited, together with coupled switches, blocks and baseboards. The artistic design of the switches was all that could be desired, and the enterprise of Messrs. Tucker was very much in evidence.

The Chatwood Safe Co., Ltd. showed various sizes of their safes from a mammoth to a small office safe. Another specially interesting stand was that of Messrs. The Austin Motor Co., Ltd., who were showing a self-contained automatic house lighting plant, and two automatic dynamos with self-contained switchgear.

Messrs. May and Padmore Ltd. were exhibiting all kinds of brassfoundry for cabinet makers, builders, etc., and motor car accessories, hot brass pressings for engineering trades, also electrical cooking appliances.

Messrs. J. Nichols & Son, Ltd., had on view all kinds of wire articles from wire bird-cages to wire mattresses, firescreens, etc., while metallic bedsteads in brass and iron, electric light pendants and brackets, brass hearth furniture and a wide range of furnishing brassfoundry were to be seen at the stand of Messrs. Evered & Co., Ltd. Messrs. A. Edmonds & Co., Ltd., were exhibiting a large display of shop fittings and equipment including counters, display stands, wood and metal stands, typists desks and show cases, etc.; while the exhibits of the Chad Valley Co., Ltd., included featherweight telescopic motorized luggage trunks made in waterproof fibre, and attaché cases, luncheon and picnic cases, rugs and driving gauntlets, and various articles for domestic use.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Bulgaria.

Suction Dredger, etc.—The Ministry of Railways, Posts and Telegraphs of the Bulgarian Government is calling for tenders for:—(a) one suction dredger, (b) one salvage tug, (c) two barges. June 1 (D.O.T.)

Egypt.

52,000 yards Tarlatan White.—The Egyptian War Department invite tenders for 52,000 yards Tarlatan white. Particulars can be obtained from the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. April 4.

Twill.—The Egyptian War Department invite tenders for the supply of twill for cavalry shirts. Tenders must be sent to the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1, by April 3.

Woolen Cloth, Light Blue for Uniforms, about 28 oz.—The Egyptian War Department invite tenders for the supply of woolen cloth, light blue, for uniforms, about 28 oz.

Particulars can be obtained from the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. April 4.

Canvas, Cotton, Waterproofed, Chocolate Colour.—The Egyptian War Department invite tenders for the supply of canvas cotton, waterproofed, chocolate colour. Tenders must be sent to the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1, by April 3.

Canvas, Cotton, White.—The Egyptian War Department invite tenders for the supply of canvas, cotton, white. Tenders must be sent to the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1, by April 4.

Webbing.—The Egyptian War Department invite tenders for the supply of webbing. Tenders must be sent to the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1, by March 30.

Canvas (Various).—The Egyptian War Department invite tenders for the supply of canvas (various). Tenders must be sent to the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1, by April 4.

Calico.—The Egyptian War Department invite tenders for the supply of calico cotton. Tenders must be sent to the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1, by April 5.

Malta.

Conveyance of Mails.—Sealed tenders will be received at the Treasury, Valetta, Malta, up to 10.30 a.m. Thursday, April 27, 1922, for the conveyance of mails between Malta and Syracuse or between Malta and Reggio, at the option of the tenderer, for a period of three years, three times weekly.

Tenderers will give the following particulars:—(a) Days of the week and hours of proposed arrivals and departures at Malta and at the above mentioned ports; (b) Gross and net tonnage of steamers, which should be classed A.1 at Lloyd's, or have a certificate of the Bureau Veritas and should not be of a lower tonnage than 600 tons net; (c) Speed of the steamer, which should be of a minimum of 12 knots; (d) Passenger and other accommodation. Accommodation for not less than forty first-class and for thirty second-class passengers should be provided; (e) Amount of annual subsidy required; (f) date of commencement of service.

Copies of conditions of contract and forms of tender may be obtained on application at the Treasury, Valetta, Malta, or to the Crown Agents for the Colonies, 4, Millbank, Westminster, London, S.W.1.

The Sudan.

General Stationery.—The Sudan Government, Khartoum, Sudan, invite tenders from well-established firms of general stationers for the supply of stationery required by the Government. Samples and specifications can be seen and conditions and form of tender obtained on application to the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1.

Paper and Envelopes.—The Sudan Government, Khartoum, Sudan, invite tenders from well-established firms of paper-makers and envelope manufacturers for the supply of paper and envelopes required by the Government. Specifications, conditions and forms of tender can be obtained on application to the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1.

Yugoslavia.

Oil.—Tenders are invited by the Serbian Minister of Communications, for the supply of:—390,750 kgs. oil for greasing locomotives and railway wagons for summer use; 465,750 kgs. oil for greasing locomotives and railway wagons for winter use; 400,000 kgs. oil for cylinders worked by steam (surfeited); 200,000 kgs. oil for cylinders worked by steam (over-heated); 120,000 kgs. colza; 150,000 kgs. naphtha; 5,000 kgs. oil for cylinders of Diesel motors; 300,000 kgs. refined petroleum. Tenders must be in Belgrade by 10 o'clock on April 11, bearing the inscription "Offre de par l'adjudicataire X Y." Further details can be obtained from the Banque Franco-Serbe 30, Coleman Street, E.C.2.

Engineering Topics.

By Our Engineering Representative.

The Light Car Vogue.

The question as to whether this is or is not transient is discussed at some length by Capt. de Normanville, in the *Motor Owner*, and I am not at all sure that I agree with the conclusions at which he arrives. He considers that the pre-eminence of the light car is a vogue actuated not by desire or taste but impelled by circumstance.

He asks: Why does one spend money on the purchase of a motor-car? It may be as a business asset or as a health-giving amusement. More generally it is a combination of the two. Having got that motor car, what does it do? In bald finality, it moves you from one place to another. It renders a species of service for personal locomotion at a speed which is not remarkably variant on an average and at a cost which is variant. Those are the essential characteristics of the proposition. You may be moved from place to place in one of several different detail methods; but the result is the same—you can get from one place to another in a roughly equal time irrespective of the type of car used.

It is not, therefore, our desires which have changed in regard to motoring. The apparent similarity of choice in purchase is not natural—it is forced. Large numbers of the people who are now buying small cars would under more normal circumstances, buy large cars. It is the force of financial stringency which is responsible for a considerable section of the army of small car purchasers which is so pronounced a vogue at the present.

But after all, what else could it be? One naturally buys the best article one can get for the money one has to spend. One does not buy a more expensive article than one wants unless its advantages are pronounced enough to warrant the additional expenditure. If one buys a fountain pen one buys a good quality article that will write well and do all that is required. No one goes of his own initiative to buy one that is gold cased and jewelled in eight holes unless as a present or a bribe to a rich aunt. One wants a good pen, just as one wants a good car. And if the light car, at a lower price than the big model, will take you as quickly anywhere you want to go, and at a lower fuel cost and will give you during the ride all the comfort you require, you will buy that car, just as Kipling's sailor bought a ham, and see life! If on the other hand you want quality and refinement and luxury you will very properly buy a Napier or a Rolls-Royce or a Sheffield Simplicox or a Vauxhall or a Lanchester. And you'll feel all the better for having bought it, but you won't travel any faster and you won't travel any cheaper and so far as the car is concerned you won't travel much further. Most people buy light cars because they are just the kind of car they want.

A Tyre Plaster.

Incidentally I do not think I have ever really wished for a burst tyre, but I have been tempted since I received a specimen of a new plaster which Brown Bros. are offering at a remarkably low price. As far as I can see the thing is an admirable production; at any rate I always intend to carry one and should recommend all readers to do the same. It is ready for immediate application and all that has to be done is to wash the inner surface of the burst cover with petrol and allow it to dry. The prepared coating of the plaster, which is covered with a removable protection of linen, is also damped with petrol or benzol and pressed in place so as well to overlap the burst and the tyre is then ready for pumping up. There is no waiting for it to dry or vulcanising required and the flaps which stick out over the edge need not be tucked in or folded down; they just want cutting away, or trimming off. If one likes, the patch can be vulcanised at a later date but it is really not necessary. This plaster is peculiarly suitable for the repair of burst cord tyres as the thick coating of semi-cured rubber works its way into the worn cords and builds up the damaged portion in a most satisfactory manner. There is a further point which may be men-

tioned and that is that the heat generated during running tends to make the plaster adhere more firmly to the cover, actually tending to vulcanise plaster and cover together. The plaster is thus admirably suited for use in warm or hot climates.

Open-Hearth Furnace Efficiency.

One of the most important improvements in connection with open-hearth furnace design has been in connection with water ports. Hitherto there has been considerable difficulty in keeping both the dry and the water ports of open-hearth furnaces in proper condition and original shape. With dry ports the bricks are unable to withstand the heat for long, and eventually they melt and drop out of the port arches on the floor of the flue obstructing the port and deflecting the gas on to the roof which naturally becomes badly burned. To an extent these troubles are overcome by the use of water-cooled ports, but so far these have not proved all that has been desirable, the chief defect being that a deposit forms inside the port where the greatest variation of temperature occurs and rapidly builds itself into a solid mass of scale which is difficult to remove.

The improved design of port has been in experimental use for upwards of two years, and has been successful in every way. In a furnace charging 160,000 lb. of metal with a 14 per cent. limestone burden, ports of the new type, 29 inches only in length are making the heats in anything from 8 to 10 hours and in view of this success ports of the improved design are to be fitted to even larger furnaces.

The port is a hollow, water-cooled flue, tubular in shape and is 60 per cent. lighter in construction than any other water-cooled design of port yet introduced. It is to be made in two types, the one being designed for suspension, independently of the brickwork, by means of water-cooled pipes, and the other being made for building in the brickwork which thus serves as a support. The port extends from the gas uptake into the air port, but does not pass straight across the air uptakes. As a result of this arrangement the rising and pre-heated air passes directly in front of the gas port and mixes at once with the issuing gas. This has the effect of increasing efficiency to a marked degree as the mixture is ready for immediate ignition, which naturally causes the flame to be at its maximum intensity when it reaches the charge. The gas port itself is of small dimensions and has a minimum of exposed surface. It consequently has little effect on the temperatures of either the incoming or outgoing waste gas. As a matter of fact the incoming flame from this type of port is even hotter than that from a dry port.

Fine Light Car Performances.

Quite a number of records went by the board recently at Brooklands. The "A.C." started its competition season in good style in the Essex Motor Club's One-day Winter Trial when, for engines not exceeding 1,500 cc., the four-cylinder 11.8 h.p. A.C., owned and driven by Mr. Kaye Don, was first in Class 11. In Class 12 the A.C., this time a 15.7-h.p. model, driven by Mr. Brown-sort, was second. The trial was of a competitive nature, four tests in all being incorporated. These were re-starting, acceleration on a hill, general reliability and ease of starting and flexibility, which are all very important things from a user's point of view. This success was followed up by a 4-cylinder A.C. running round Brooklands under the driving of Kaye Don and gathering in the 10 laps, 50 miles, 100 miles and one-hour records, all in class A. Just over a week later a 4-cylinder A.C. sports model with a practically standard pattern of engine, was entered in Class A. and six more records were taken. These were the half-mile standing start, in the amazing speed of over 55 mph., the one kilometre standing start, at 59½ mph., and the one mile standing start, at 65.4 mph. The same distances were then run off with a flying start, and the speeds were respectively 87.2, 87.57 and 84.61 mph., these speeds setting up records also.

Stock and Share Markets.

GILT-EDGED DULL.

Phoenix Oil Strong.

(From Our Own Correspondent.)

London, Tuesday morning

Generally speaking the week has been rather a dull one for the markets. Political developments have naturally had a cramping effect on business, while the industrial position is not such as to inspire cheerfulness with regard to the trade outlook. The prompt success of General Smuts' measures on the Rand and the improved outlook in India were bull factors but they naturally failed to counterbalance the effect of the situation at home. Ireland seems to be going from bad to worse, but we have become so accustomed to disturbances in that country that whatever happens there has scarcely any effect.

New Issues.

Like its predecessor the Midi and Orleans Loan proved a great success, and dealings opened yesterday at $\frac{3}{4}$ premium which was good enough to induce some of the temporary holders to unload. There is no news of any further issues of outstanding interest. A Greek loan is definitely out of court for the present, while it would appear that the negotiations for a Bulgarian loan have also failed to result in a settlement. It is to be hoped that the pourparlers will continue for a Bulgarian loan would do much to promote British trade interests in that country. I am inclined to think that it will probably materialise as soon as the exchange shows definite signs of improvement.

Gilt-Edged.

Gilt-edged have been rather a dull spot with the exception of Indian securities which have firmed up somewhat. Consols at 54.5-8 are 1-8 down, War Loan Fives are 96.5-32 a decline of 7-32, while the Conversion Loan at 72.5-16 is 3-16 up. In Indian stocks the Seven per Cent. Loan at 105 $\frac{1}{2}$ is 2 $\frac{1}{2}$ up, the 3 $\frac{1}{2}$ per cent. Loan at 60 is 1 up, while the three per cent. Loan is 2 $\frac{1}{2}$ up at 52 $\frac{1}{2}$.

The foreign market has been uninteresting. French War Loan Fives are $\frac{1}{2}$ down at 45, while German three per cent. are 1-8 down at 2.3-8 on the depreciation in the exchange. Italian Rentes are 1 down at 23 $\frac{1}{2}$. Russians are featureless. China bonds have been offered, with the Five per cents. of 1896 down to 90 $\frac{1}{2}$, while the 4 $\frac{1}{2}$ per cents. of 1898 are 74. Brazilians have been rather a bright spot, the 4 per cent. 1889 Loan being 55 $\frac{1}{2}$, while the 1914 Funding Loan is 72. In Greek securities Monopolies are a point up at 32 $\frac{1}{2}$.

Industrial Featureless.

The labour position to say nothing of other features has had the effect of bringing about a dull tone in many sections of the Industrial group. Business has been on a very restricted scale, and in the majority of cases price changes have been in the downward direction. Tobaccos have been steady. Bats are 3d. up at 67s. 3d., while Imperial Tobaccos have gained 3d. at 54s. Dunlops are unchanged at 6s. 3d.

The Textile group has been fairly firm. Coats are 2.25-32xd., while Courtaulds are 36s. 6d.xd. Iron, Coal, and Steel securities have been on the dull side. Vickers are unchanged at 8s. 6d., Armstrongs are 13s. 6d., Guest Keens are 30s., while Lamberts are 1.3-8 xd.

In shipping securities P. and O. Deferred are 298, a decline of 13. Cunards are 9d. down at 18s., while Furness Withys are 1s. up at 27s. 6d.

Oils Variable.

Oils have varied a good deal during the week, and in general the tendency has been towards dullness, though here and there firm spots have been in evidence. For the present it would appear that investors are avoiding this market, but it is as certain as anything can be that the set-back is purely a temporary one. Burmahs are 5 $\frac{1}{2}$, a rise of 1-8, while Mexican Eagles are 3 $\frac{1}{2}$, a decline

of 1-8. In Trinidad issues Centrals are 3.1-8, a decline of 1-16, while Leaseholds are 1.1-8, also a decline of 1-16.

Among Egyptians Anglo-Egyptian B are 1.9-16, the same as last week, while Oilfields of Egypt are 6d. down at 5s. In the Roumanian group Roumanian Consolidated are 9d. up at 11s., while Phoenix, continuing their rise are 18s. 9d., at which they show a gain of 1s. 3d. on the week. As I pointed out last week they are expected to go still higher, but of the two above mentioned Roumanian Consolidated in my opinion now represent the best value, and should be good for a considerable rise during the year. Dacia Romanos are unchanged at 11-16, while Steaua Romanas are 6d. down at 11s. 9d.

GERMANY AND THE GREEK MARKET

Position of Workers in Greece.

An occasional correspondent sends us the following notes on economic conditions in Greece at the present time.

Very strict laws have been made in Greece to prevent money leaving the country and no bank can or will give a cheque for sterling or gold, for however small the amount, and for drachmae only up to 2,000 at a time with all kinds of formalities to go through. At Xmas I wanted to send my son in England £15. It was utterly impossible to get a cheque from any bank, and eventually it had to be sent in an indirect way by giving the equivalent in drachmae to a traveller who wrote his banker in England to send over the £15. Of course all commerce is handicapped. But here is where Germany comes in. For 2,000 drachmae in that country at the present rate of exchange many things can be obtained, and besides the German firms are eager for trade and easily give credit. The result is that the market is flooded with German and Austrian wares. And so Germany is laying the foundation in the Near East for future trade. Of course for the moment they export very inferior articles, but they have a finish which makes them look good, and for the hundreds who want solid British goods, the thousands are content with the cheaper article.

A Fallacy.

It is a mistake to think a country with a depreciated rate of exchange is poor; the nation is, but the country and individuals are rich, for all work. Germany, being so to say a self-productive country, has enough for her wants and to spare, and exports at very low prices. Greece having almost everything to import, naturally at this difficult moment turns to the cheapest seller. For instance an article costing 4 marks in Germany is sold for 8 marks to Greece; by the time the shopman receives it, it will cost him 16 drachmae and he sells it again at 40 drachmae. See what a profit all round! If the shopman is honest he will say it is German, but how much deception goes on especially in the drapery line, where many stuffs are passed off as British to the uninstructed buyer!! Of course in time the bad wear of the article appears, but by then Germany will be able to put better goods on the market and so retain all the trade in her hands.

This is an age of levelling of classes, a socialistic movement. The sufferers are the upper classes whose incomes do not increase with the rise of exchange. The workers get fourfold and more pay. A labourer in Greece used to get five drachmae a day, was able to live on three and put by two; now he gets 25 drachmae, spends 10 and puts by 15. He feels a millionaire; his wants are few, for the Greeks are a very sober living people, content with bread, olives, cheese, oil and wine, for they say bread, oil and wine is the strength of man.

ROUMANIA'S ECONOMIC RECOVERY.

The Transport Problem.

In the course of a recent lecture at Cambridge on Roumania, M. Grégoire Michaelescu, Commercial Attaché to the Roumanian Legation in London, discussed the economic situation of the country.

In order to give an idea of the country's wealth a few facts, he said, were necessary. Before her political position in Europe was established, Roumania supplied with cereals, timber, sheep and skins, the Turks, Genovezians, Venetians, Spaniards, and even English. Through the war of independence in 1877 Roumania began her political existence. Her independence was recognised by the Treaty of Berlin, and it was the Germans who first realised and appreciated the wealth of the country. Their sentiments, however, were not on the side of Germany so much as that of France where they sent their youth to be educated, but Germany succeeded in establishing an important *débouché* of exchange of products between the capitals. To illustrate better one of the effects of German influence they might compare the commercial results between 1880 and 1910. In 1880 the total sum of goods imported into Roumania from Germany amounted to seven million lei while that from France came to 35 million lei. In 1910 the amount from Germany had risen to 138 million lei, while that from France had fallen to 25 million lei.

From the earliest times Germany's policy was to master Roumania both politically and economically, firstly because she considered Roumania as a link between Western Europe and other Continents; and secondly it was an important economic centre. The Danube was highly appreciated by Germany as a most important, and the shortest, way to Baghdad and India—her dream.

As regards further developments certain facts might be interesting. In 1920, when they had a mobilised army of about a million men, and an area of about 14½ million hectares or nearly 36 million acres (44 per cent. of the workable surface of the country) had been cultivated and they obtained a medium harvest out of which they exported 100,000 truck loads of cereals and flour. In 1921 practically double this area was cultivated, and the harvest was satisfactory, and they hoped that in normal times they would be in a position to export more than 600,000 truck loads of cereals alone. In 1921 the export of cereals amounted to 1,500,000 tons.

In 1914 Roumania was classified as the fourth among the oil producing countries with 1,800,000 tons out of the 54,000,000 tons produced in the whole world. The most important oil products exported by Roumania were benzine, lamp oil, and lubricating oil, of which 233,000 tons were sent to the United Kingdom alone. The quantity exported in 1921 was 300,000 tons. In old Roumania and the annexed territories the amount of coal (lignite) produced last year was 2½ million tons, a sufficiently large quantity in comparison with the needs of the country, but they would still need large quantities of coal and especially of furnace coke for their factories.

Roumania had another very important source of wealth, and that was the "natural gas" called "gas methane." In 1912 four factories only used 210,000,000 cubic metres of that gas, the equivalent of caloric horse power of 5,200 tons of fuel oil. Large quantities of fish could be obtained from the lakes in Southern Bessarabia from the Delta and various places scattered all over the country. Roumania possessed enormous quantities of purest salt: the Government had the monopoly of its exploitation and 40 per cent. was exported in 1920, especially in the Balkan countries. They also had veins of gold and silver as a telluric ore out of which 30 to 60 grains of gold was extracted per ton. They possessed exploitations of zinc, lead, copper, but not in very large quantities, because of the old-fashioned system of exploitation. The reserve of pyrites they had was estimated at an average of 5 million tons. Manganese, chromate, aluminium and quicksilver were also exploited.

Roumania being an agricultural country had bred from the earliest time cattle, horses, pigs, sheep, goats, and poultry in great number. The area covered by forests in Roumania was a little over 7,000,000 hectares, classified as follows:—

	Hectares.	Acres.	Per cent.
Resinous	2,106,000 ..	5,203,926 ..	30
Beech	3,500,000 ..	8,648,500 ..	50
Oak and others .. .	1,400,000 ..	3,459,400 ..	20

The timber obtained was as a rule of very good quality. The wood industry was classified as the third source of Roumania's wealth.

Inadequate means of transport had impeded the progress of industrial and commercial activities. The Government, however, was endeavouring to improve the railways, and was still buying engines, while passenger carriages and locomotives had been sent for repair where guarantees for their speedy return could be obtained. The repairing workshops were working at full pressure in order to execute necessary work. The Government had not hesitated to do all in its power to restore normal conditions, but the work could not be done as quickly as desired because not only was the length of the necessary railway line greater than it was, but there was shortage of material and the workshops were not equipped with rolling stock and up-to-date machinery.

Before the war in 1914 Roumania had 3,700 kilometres (about 2,000 miles) of railway lines on which 932 locomotives, moving 1,652 passenger and 24,138 goods carriages, were running. In 1922 she had 11,768 kilometres (over 7,000 miles) of railway lines, 1,376 locomotives, and 6,433 passenger and 104,000 goods carriages. Unfortunately only half these vehicles were working as the remainder required immediate attention.

When the German army was finally forced to retire from the country they left it completely devastated. There were no cattle and no horses. Vans, engines, railway carriages, and even printing machinery, which had been supplied by German manufacturers, had been taken away. In a word, all the Germans could get hold of, including works of art and valuable household appointments, were carried away and anything of value that was not portable was destroyed. That was why only half the number of railway locomotives and carriages were in use to-day and why bad conditions of transport still existed.

LARGE SPRING SOWINGS IN ROUMANIA.

(From Our Own Correspondent.)

Bucharest, March 6.

Thanks to the propitious weather which has lately set in the spring sowing is in full swing throughout the country. A very large area will be sown with spring wheat, rye, barley, oats, and maize, and the farmers as well as the authorities are vigorously engaged in making up for the deficiency in the autumn sowings, which owing to the protracted drought last autumn, could not be carried out to the normal extent.

PROMISING EGYPTIAN CROP OUTLOOK.

The following particulars of crop conditions in Egypt in February are given in the current Bulletin of the Ministry of Agriculture:—

Wheat.—The weather was on the whole favourable and the water supply was ample, except in some localities in Giza Province. Ears have formed in early-sown fields, while the late-sown crop is in flower. Watering and manuring were carried out during the month. Smut, rust, eel-worm, and aphid were reported from several provinces, but the damage caused was very slight.

Barley.—The crop is growing well and the early-sown crop is approaching maturity. Aphid was reported from Girga Province and rust was seen in Beheira and Daqahliya, but the attack was slight. The condition of the crop is very little below the average.

Beans.—The weather was, on the whole, favourable during February, except in Sharqiya and Qalyubiya, where winds destroyed many of the flowers, and in Beheira Province where rain caused slight damage. Pods have formed in early-sown fields. Attacks of broom-rage ("Halook") and rust have caused no serious damage. The crop is slightly below the average.

Helba.—The crop was still being cut green and pod-formation was general in early-sown fields. In the basins, the plants were in flower. The condition of the crop is normal.

Onions.—Owing to the high prices now prevailing part of the crop was harvested before it had time to ripen. The plants were being transplanted in some provinces and fassing and watering were going on. Areas under this crop seem to be larger than last year. Its condition is fairly satisfactory.

Lentils.—The crop was in flower and pods were forming in early-sown fields. The growth of the crop is satisfactory and its condition is normal.

Bersim.—The growth of the crop was slightly retarded by the cold weather which prevailed in January and February. The second cut was general and the third was being taken in several provinces. Most of the areas under temporary bersim were ploughed up for cotton. The condition of the crop on the whole is a little below the average.

Cotton.—The preparation of land, though retarded by rain in some localities, is well in advance of last year. Ploughing and ridging were in full swing and sowing has commenced.

Sugar Cane.—Cutting for factories was continued. It is expected that the factories will continue to work later than usual owing to the large quantity of cane they have to deal with. The attack of mealy-bug was particularly marked in Minya, Assut, and Girga Provinces. In last month's Bulletin, the crop was expected to be above the average, but the prospects have now been modified by the attack of mealy-bug, and the crop will in all probability turn out to be normal.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ended March 4:—

Sultanas.—The total estimated arrivals to date amount to 168,890 bags, the sales are 163,390 bags, and the estimated stock unsold is about 5,500 bags.

Markets.—The sultana market is steady with a firm undertone. Prices show no change. There was renewed demand for black raisins for New York and about 120 tons have been bought for prompt shipment against sales effected at 7½c and 8c per lb. C. I. F. New York. The stock has been almost exhausted, but

some fresh arrivals are expected towards the end of the month from Cyprus. The exchanges are steadier at 659 to 665.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 111s. 6d. cwt.; (Canadian, 110s. cwt.; (American), 107s. 6d. cwt.; butter (Danish), 169s. cwt.; (Australian), 121s. cwt. (New Zealand), 132s. cwt.; cheese (Canadian), 96s. cwt.; (New Zealand), 88s. cwt.; lard 76s. 6d. cwt.; eggs (Danish), 18s. per 120; Styrian, 14s. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 4d. lb.; cocoa (Ceylon good to fine), 97s. 6d. cwt.; coffee (Costa Rica), 127s. 6d. cwt.; (East Indian), 133s. 6d. cwt.; (Central American), 104s. cwt.; (Jamaica), 68s. 9d. cwt.; (Mocha longberry), 106s. 6d. cwt.; (Santos, superior), 65s. cwt.; ginger (washed Cochin), 55s. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 4d. lb.; (Muntok white), 8d. lb.; pimento, 2½d. lb.; raisins (Valencias), 83s. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Vostizza) 70s. cwt.; (Amalias), 57s. cwt.; sugar (Tate's cubes), 52s. 3d. cwt.; (Lyle's granulated), 47s. 7½d. cwt.; (Mauritius crystals), 43s. 10½d. cwt.; (West Indian crystallised), 42s. 6d. cwt.; (centrifugal), 14s. 5d. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon) No. 2, 14s. 1½d. cwt.; (bran Rangoon), 66 8s. 9d. ton; cinnamon firsts, 11½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea (common to good common), 1s. 2½d. lb.; (medium to good), 1s. 6½d. lb.; (fine to finest), 2s. 7½d. lb.; Ceylon (common to good common), 1s. 2½d. lb.; (medium to good), 1s. 6d. lb.; (fine to finest), 2s. 7½d. lb.; (Java common to good common), 10½d. lb.; wheat (English white), 56s. 6d. qr.; wheat (Australian), 63s. 7½d. qr.; barley (malting), 56s. qr.; barley (feeding), 39s. qr.; oats (English), 33s. qr.; oats (La Plata), ex-ship, 27s. 6d. qr.; maize (La Plata), 44s. 6d. qr.; flour, 50s.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £35 ton; bismuth, 9s. lb.; copper (standard) £60 6s. 3d. Regulus), £35 ton; bismuth, 9s. lb.; copper (standard) £60 6s. 3d. ton; copper (electro), £67 10s. ton; gold bars, 95s. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 92s. 6d. ton; galvanised sheets (24 G), £16 5s. ton; lead (soft foreign), £20 13s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 27s. 6d. unit; nickel, £175 ton; platinum, 360s. oz.; plumbago, £20 ton; quicksilver, £11 3s. 9d. ton; spelter (G.O.B.), £25 10s.; tin (standard), £145 2s. 6d. ton; wolfram, 10s. 6d. unit; zinc sheets, £35 10s. ton; tin plates (20 by 14), 18s. 7½d. box; silver bars, 33½d. oz.

Chemicals.—Acids: Boric, 61s. cwt.; oxalic, 7½d. lb.; citric, 1s. 10½d. lb.; tartaric, 1s. 3½d. lb.; ammonia (sulphate), £16 11s. 6d. ton; arsenic (white powdered), £36 ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £13 ton; borax crystals, 30s.; cream of tartar, 118s. 9d. cwt.; Potassium: Bichromate, 7½d. lb.; chlorate 4½d. lb.; caustic, £33 10s. ton, nitrate £41 10s. ton; permanganate, 8d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 130s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 5½d. lb.; alkali (58 per cent.), £8 13s. 9d. ton; chlorate 3½d. lb.; caustic (70 per cent.), £23 ton; hypo-sulphite, £15 10s. ton; prussiate, 9½d. lb.; nitrate, £14 13s. 9d. ton, glycerine (crude 80 per cent.), £80 ton; glycerine (industrial) (1260 per cent.), £110 ton; lemon oil, 3s. 8½d. lb.; quinine, 2s. 11d. oz.; red lead, £34 ton; white lead, £37 15s. ton; white ground lead, £48 7s. 6d. ton; sulphate of copper, £27 5s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first) 90 lbs. and up, 7½d. lb.; 80 to 89 lbs. 7½d. lb.; 70 to 79 lbs., 7½d. lb.; 60 to 69 lbs., 6½d. lb.; 50 lbs. and under 6½d. lb.; (second) 90 lbs. and up, 6½d. lb.; 80 to 89 lbs. 6½d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 5½d. lb.; 59 lbs. and under, 4½d. lb.; Cows (first), 60 lbs. and up, 6½d. lb.; (second), 60 lbs. and up, 4½d. lb.; 59 lbs. and under, 4½d. lb.; Bulls (first), 4½d. lb.; Kips (first), 5d. lb.; (second), 4½d. lb.; Calcutta Market. Prices in rupees per 20 lb. Arsenic hides (cows) Agras, 9 to 14.8; Durbhangas, 8 to 10.8; Patnas, 6 to 7.8; Salted cows: 4.8 to 8. Arsenic hides (buffalo) 3.8 to 6 to 7.8. Skins: Calf, 8 to 10 per 20 lb.; goat, 230 to 265 per 100 pieces.

Miscellaneous.—Cotton: (American), 10.81d. lb.; (Egyptian Sakel), 16.95d. lb.; Oilseeds: Linseed (La Plata), £19 15s. ton; palm kernels, £18 13s. 9d. ton; castor seed (Bombay), £15 7s. 6d. ton; Oils: Linseed, £37 7s. 6d. ton; olive (Levant), £77 10s. ton; rape (crude), £51 ton; soya, £37 5s. ton; petroleum, 1s 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 10s. ton; coconut (Ceylon), £41 5s. ton; cotton (crude), £39 10s. ton; ground nut, £43 ton; Rubber: Plantation (No. 1 crepe), 8d. lb.; smoked sheet, 8d. lb.; fine hard para, 11d. lb.

This year's nut crop of Asia Minor (says Reuter's Trebizond Correspondent in a message dated March 3), which consists principally of filberts, has just been harvested and shipped from this port. The crop is the best for eight years, and exports to America will approach very nearly to the pre-war standard.

Owing to pressure on our space the London Produce Report is unavoidably held over this week.

CZECHO-SLOVAK TREATIES.

The preliminary negotiations concerning the revision of the Czecho-Slovak commercial treaty with France resulted in an agreement on all the outstanding questions, and the draft will now be submitted, both in Czecho-Slovakia and France, to the respective official and industrial bodies who will draw up the wording of the final amendments.

On their return journey from Paris, the Czecho-Slovak delegates discussed with M. Jaspar, the Belgian Foreign Secretary, the question of a commercial agreement between the two countries, and it is hoped that a satisfactory arrangement will be reached in about a month's time. In addition to this, it is stated that the treaty with Greece will be signed in the near future. In this connection it is not without interest to note how the trade between the countries concerned has developed. Thus, in 1920, the Czecho-Slovak exports to France attained a value of 2,373 million crowns (sugar, timber, glass, paper, machinery, etc.); to Belgium 134 crowns; to Greece 22 million crowns.

NEW EGYPTIAN COMPANY.

For the year 1921 the profits amounted to £67,711, and the carry forward was £101,328, making the total, £169,039. A dividend is proposed of 16 2.3 per cent. The net income from the estates amounts to £19,712 as compared with £18,362 in the previous year. The area sold aggregates 457 feddans, against 2,015 feddans sold in 1920. In Upper Egypt 69 feddans of land sold reached an average price of £103 7s. 3d. per feddan, compared with £143 4s. in the previous year. In Lower Egypt 219 feddans of land were sold at an average price of £163 3s. 2d. per feddan compared with £218 16s. per feddan. Meeting, Alexandria, Egypt, April 5, at 4.

THE AUSTRO-HUNGARIAN BANK.

The Commission dealing with the liquidation of the Austro-Hungarian Bank has just completed its work. Agreements have been reached on the fundamental principles involved, but their application will occupy until the autumn. The amount allotted to Czecho-Slovakia from the gold exchequer is about 50 million crowns in gold, and of this share, after deducting an allowance for the premises of the Austro-Hungarian Bank taken over on Czecho-Slovak territory, 40 million crowns in gold (not 30 millions, as was reported in several papers) will be paid in cash.

Immediately before the war the gold exchequer of the Austro-Hungarian Bank represented a sum of 2,290,007,000 crowns in gold, 90 per cent. of which, however, was absorbed by the war. When in accordance with the terms of the St. Germain Peace Treaty, steps were taken to distribute the remainder of the gold exchequer among the Succession States, it amounted to only 243 million crowns in gold. Of this sum, the obligations of the Austro-Hungarian Bank to Switzerland and Holland, 23 millions in all, had to be paid, so that the actual amount left for distribution was only 220 million crowns in gold.

SHIPPING INTELLIGENCE

PORT SAID NOTES.

(From Our Own Correspondent.)

Port Said, March 7.

Shipping has been fairly constant here, and several new ships have passed through on their maiden voyage. The Swedish man-o'-war Fylgia has been in port for a few days on her way home from the Far East. The Italian cruiser San Giusto with troops for Eritrea has passed through lately. The fine large suction dredger, Sir George Lloyd, which was built in Glasgow for the Bombay Port Trust, left here two days ago, and her unusual appearance excited much interest.

RIVER CRAFT FOR BELGRADE.

An important Belgrade bank is considering the purchase of certain additional river craft required for the transportation of timber, and is anxious to know at what price the following could be obtained, payment being made in three years time:—Tug boats of 180 to 100 h.p. to burn coal, draught 1.20 metres. Motor barges 400 to 500 tons to use crude oil, draught 1.20 metres. Dumb barges 500 to 700 tons, draught 1.20 metres. Several of each type of vessel would be ordered if the terms of payment were satisfactory. Further particulars can be obtained from the Department of Overseas Trade.

DANUBE NO LONGER ICE-BOUND.

(From Our Own Correspondent.)

Bucharest, March 6.

The recent sudden change to warm weather is fast breaking up the ice on the Danube, and the loosened ice-floes are running down the river with great violence, thereby endangering some of the vessels which were ice-bound on the river. It is expected that by March 15 the Danube will be free of ice and navigation resumed.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parenthesis:—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, April 4).

Anchor Brocklebank Line.—S.s. Mahsud for Port Said, Colombo, Madras and Calcutta (London, April 8); s.s. Imani for Port Said, Colombo, Madras and Calcutta (London, April 25).

Bibby Line.—S.s. Herefordshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, March 29); s.s. Gloucestershire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, April 12).

Byron Steamship Line.—S.s. Maid of Spetsai for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, Braila, Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, March 28).

ANCHOR LINE

First-Class Passengers only.

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar & Egypt

LARGE STEAMSHIPS. UPPER DECK CABINS.

FITTED WITH ELECTRIC FANS.

RECOGNISED BY INDIAN GOVERNMENT.

PASSENGER SAILING DATES—

SCINDIA, APRIL 6.

CASTALIA, APRIL 21.

MASSALIA, MAY 5

ELYSIA, MAY 19.

CIRCASSIA, JUNE 22.

OLYMPIA, JULY 5

Anchor Line (Henderson Brothers), Ltd.

16, Gracechurch Street London, E.C.3.

Clan Line.—S.s. Clan Macvicar for Bombay and Persian Gulf (Birkenhead, March 27); s.s. Clan Malcolm for Colombo, Madras and Calcutta (Birkenhead, March 31).

Cunard Line.—S.s. Pavia for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Odessa, Novorossisk, Poti, and Batoum (Glasgow, March 28; Swansea, March 30; and Liverpool, April 1).

Ellerman's "City" Line.—S.s. City of Christiania for Calcutta (Birkenhead, March 27); s.s. City of Poona for Calcutta (Birkenhead, April 10).

Ellerman's "Hall" Line.—S.s. City of Brisbane for Bombay, Karachi and the Punjab (Liverpool, March 31).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

Glen Line.—S.s. Radnorshire for Port Said, Port Swettenham, Singapore etc. (London, April 13).

Harrison Line.—S.s. Benefactor for Calcutta (Liverpool, March 25); s.s. Candidate for Port Said, Port Sudan, Aden, Mombasa, etc. (Birkenhead, April 20).

Henderson Line.—S.s. Jalavihar for Port Said and Rangoon (Birkenhead, April 5).

Holt Line.—S.s. Achilles for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 6).

Johnston Line.—S.s. Peruvian for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, March 25); s.s. Diomore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 15); s.s. Aviemore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 29).

Moss Line.—S.s. Karnak for Gibraltar, Malta, Piraeus, Syra, Smyrna, Salonika and Constantinople (Liverpool, April 8).

P. and O. Line.—S.s. Nankin for Colombo, Madras, and Calcutta (London, March 24); s.s. Macedonia for Bombay (London, March 24); s.s. Morea for Bombay (London, March 31); s.s. Padua for Colombo, Madras and Calcutta (London, April 7); s.s. Delta for Bombay (London, April 7).

P. and O. British India Line.—S.s. Mashobra for Bombay and Karachi (London, March 24); s.s. Margha for Colombo, Madras and Calcutta (London, March 31); s.s. Manela for Bombay and Karachi (London, April 7); s.s. Nuddea for Colombo, Madras and Calcutta (London, April 15); s.s. Madura for Bombay and Karachi (London, April 21).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria and Syria (Manchester, March 25).

PHOENIX OIL AND TRANSPORT.

The progress report for February states that the crude oil production amounts to 928 tons and throughput of refinery, 2,864 tons. For several days operations were suspended owing to the introduction of improvements, which now allow the refinery to treat large quantities of crude oil. Position of the 12 new wells in drilling:—No. 5 at Moreni Stavro struck oil, sand, and has made several hard flows. Dams are being prepared for regular production, and plugs are being cleaned; No. 4, Moreni Bana, inserting casing; No. 1, Moreni Tuicani, erecting boilers; No. 2 preparing site; No. 5, Baicoi, down to 1,601 ft. No. 1, at Chiciura down 1,618 ft.; No. 2, in the same field, is being changed to the rotary system; and No. 3 is 764 ft. down. In the Runcu field Nos. 1 and 2 are down 1,820 ft. and 368 ft. respectively, while another well is being rigged up. No. 10, Arbanasi, is down to 1,379 ft.

The Czecho-Slovak Banking Union, Berlin, is raising its capital from 50 to 75 million marks. A considerable portion of the new shares will be taken over by the Deutsche Orientbank. The Czecho-Slovak Banking Union was founded in 1920 by three Prague banks, for the purpose of facilitating business transactions between Germany and Czecho-Slovakia.

The Bohemia Bank, Prague, is increasing its capital from 25 to 35 million crowns.

Cotton & Cotton Goods.

"FOREIGN MATTER" IN EGYPTIAN COTTON.

(By Our Manchester Correspondent.)

From time to time Lancashire cotton mills using cotton have had occasion to complain of "foreign matter" such as jute, string, canvas, etc., being found in bales of Egyptian cotton and the serious trouble that this has occasioned at the mill to managers and operatives. This malpractice seems to have been indulged in on a fairly liberal scale within recent months, for a number of Lancashire mills have made complaints to the Manchester Cotton Association in regard to the finding of "foreign matter" in the bales and have also sent samples on to the Association. As a result the President of the Manchester Cotton Association Mr. F. A. Tomlinson, has again addressed a letter on this subject to the Alexandria General Produce Association, strongly deprecating this practice and urging that most drastic steps be taken by the authorities to prevent "foreign matter" getting into the bales. The President also emphasised the damaging effect that this has upon the yarn and the dissatisfaction caused to the workpeople. A reply has now been received from Mr. C. J. Choremi, the President of the Alexandria General Produce Association, dated February 9, which reads as follows:—

"We have received several parcels from you containing foreign matter, found in the bales of Egyptian cotton. We have not failed to draw the attention of our members to the trouble caused by this, and have asked them to take every precaution to avoid same occurring again. We have also drawn the attention of the Baling Companies to this, asking them to take the necessary care. It appears from inquiries made, that the foreign matter in question was in the cotton when it arrived at Alexandria, from the time of gathering and after storage in the ginneries in the interior. The trade exporters are doing everything possible to make a search, and to avoid this strange matter here, where they are able to exercise more control than in the ginneries. Unfortunately in a great number of ginneries, the trading members of our Association are unable to exercise any control. Nevertheless, we often send circulars to the proprietors of all the Egyptian mills to take up the grievances of the spinners, and to ask them in their own interest and in the interest of the country in general to do their utmost to avoid a repetition of these faults."

MANCHESTER MARKET.

(From Our Own Correspondent.)

Manchester, Friday.

It is pleasing to be able to record that the market during the past week has shown improvement, and the general opinion amongst traders is that it should not be very long before we witness a period of greater activity. The cloth enquiry tends to broaden, and more business all round has been done. No special news has come through with reference to the next American cotton crop. There is a big movement on foot in the States to keep the acreage down to that of last year, and if the farmers do as they are told by the American Cotton Association then there will probably be a shortage of the staple next year. A favourable feature has been the proclamation of a Sovereign State in Egypt, and it is to be hoped that the conditions prevailing in that outlet will now become more settled. It cannot be said that any big cloth business has been done with the outlets of the Near East. Most traders are afraid to commit themselves to any lines of weight for the Levant and Constantinople on account of the financial position out there. A variety of fabrics have been sold in small lots for Egypt. Quotations for Egyptian yarns have ruled steady but the turnover has not been anything to boast about. Messrs. Coats of Paisley have been in the market for their special qualities. The best of the outlets with regard to cloth has certainly been India, and some substantial transactions in light cloths and shirtings have been registered. The drop in the value of silver has adversely affected demand for China, but some steady buying has been recorded. Shippers to South America have operated rather more freely. Spinners of American counts have reported rather a better week, but business is still far from satisfactory. The effect of the larger cloth demand has not yet been felt to any great extent in the yarn section.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date March 15:—

The market during the past week has displayed more steadiness than we have witnessed for a considerable period. The enquiry during the first three days was brisk and sales were good, although we believe that the very low qualities were again responsible for the major portion. There has been some competition for this low cotton, but after the initial rise referred to in our last report buyers have not been disposed to bid up, and, as we write, the demand appears to have fallen off temporarily and the basis, if anything, is losing ground again.

Apart from the above, the enquiry has shown little change; that is to say, Sakellaridis, "pass" to 100 points on, has been chiefly in request, with Uppers, Good Fair to Good, as a poor second. Brown pillion and white have again been comparatively neglected. The usual steady off-take in Sudan cotton has continued, and with regard to the last-named there are indications that the Tokar crop this season is going to be of a higher standard, generally speaking, than that to which we have been accustomed in the last few years. If these indications bear fruit, the value of the large stock of indifferent Tokar which is held here would be seriously impaired. There is no apparent change in the volume of c.i.f. business transacted. Spinners have not yet recovered sufficient confidence to induce them to fill up their requirements for any distance ahead, and apart from this the discount at which Liverpool still stands, as compared with Alexandria, is not conducive to this class of business. However, if trade continues to improve, and there is no doubt that an improvement really has taken place, a change for the better is bound to spread to the c.i.f. department in time.

The special Manchester reports have really been quite exhilarating of late, but reports received from private sources have not always backed them up; in other words, the business going through is still of a very patchy description. Nevertheless, the improvement is coming from the right quarter, and has not been brought about fictitiously by some unhealthy paroxysm in the futures market. At the moment political news, and the uncertainty attendant upon the various labour disputes, which are at present taking place both at home and abroad, are having a somewhat depressing influence here, but taking a broad view, we are of the opinion that the prospects of more trade are still quite hopeful. On the 10th inst., the stock of Egyptian cotton in Liverpool showed a welcome decrease of some 6,000 bales. Spinners' takings show a slow but steady increase. Estimated sales 3,200 bales (including 300 bales Sudan).

EGYPTIAN MARKET POSITION.

The Commercial Co. of Egypt in its report dated March 10 states:—The improved tone of the market may be attributed principally to the steadiness of the New York market, to the increased daily spot sales of Egyptian cotton in Liverpool and to the better feeling prevailing on our market in consequence of the new Ministry's promises to keep up cotton prices. The actual business put through abroad has probably not been larger than in previous weeks but more enquiries have come in, which have impressed the market favourably. It is supposed that the greater part of the bearish position which was created early in February has now been liquidated and the market, therefore, is now in a much sounder situation. The statistical position is slightly better although arrivals from up-country continue rather large; but the accumulation of stocks here and in Liverpool and America is very heavy, and there is no doubt that for the time being the weight of these stocks will act as a check to any exaggerated bullish movement. In consequence of information acquired by visits to the ginning centres and to most of the villages in the interior, we feel compelled to raise our estimate of 4,600,000 kantars as the total arrivals from the Interior, to something very little short of 5,000,000 kantars, although our previous estimate of 4,600,000 kantars surpassed all other published estimates.

The Coburg Mining and Smelting Works, one of the principal Czecho-Slovak iron concerns is increasing its capital from 50 to 75 million crowns, by issuing 90,000 shares at 200 crowns each.

NOTES OF THE WEEK.

The Near East Conference.

On March 22 the long due meeting of the Allied Foreign Ministers took place at Paris, and, though it must be admitted that probably no Conference was ever held which contained more inherent difficulties, progress has undoubtedly been made. A real desire to see all sides of the various questions involved and a determination to sacrifice something for the sake of interests larger than those purely national, have very gratifyingly been made manifest. Speaking broadly, and therefore loosely, it would have seemed that the respective interests of Great Britain, of France, and of Italy clashed almost hopelessly in the Near East; it is with genuine relief, therefore, that we see Lord Curzon, M. Poincaré, and Signor Schanzer each willing to yield something in the cause of final peace, and we cannot but deplore the petty and futile attacks that sections of the Press of all three countries are making on their partners. First it is Great Britain who alone desires and who alone will benefit by this Conference; then it is Italy who, by selfish insistence on economic advantages, will block all attempts at reconciliation; and sometimes it is France who with her unyielding Turcophilism makes any compromise impossible! All this, we repeat, is idle journalists' talk, and is quite inconsiderable.

Lord Curzon's Proposal.

The proposal made by Lord Curzon for a three months' armistice between the Greeks and Turks was an excellent step. In any case, it opens up a practicable avenue for discussion of the terms of the Greeks' evacuation of Asia Minor, though up to the present Angora has not agreed to it. In fact it was an essential preliminary to negotiation, and we cannot imagine that either section of the Turks will prove themselves so bankrupt in statesmanship as to refuse it. They must now recognise, from the very fact of the sending of the proposal, that the Allies are finally discountenancing the Anatolian War, and that the issue of a prolonged Turk *versus* Greek struggle could scarcely be to their lasting gain. Greece is to be congratulated on her prompt acceptance of the proposal: she has achieved a notable victory of sense over sentiment.

An Armenian Diaspora.

Although nothing has been definitely decided by this Conference, there is at least one thing which is tolerably certain, and that is the abandonment of the dream of an

Armenian Republic. This disappointment of hopes tenaciously and courageously held will be very widely regretted. It may be that all guarantees that the Turks care to make for the protection of Christians within Anatolia are useless,—the Conference at any rate seems to have held that view—but to suppose that a proud nation like the Armenians will be content with no material home and but a nominal protection of their existence by the League of Nations imputes to them either a child-like faith in unrealities or a surprising faith in an institution which has yet to demonstrate its full power. A curiously sad history, these last few years of the Armenian people. It was Russia who first protected them and perhaps fired them with ambition; it is through Bolshevik Russia that their dreams are now so rudely dispelled; and yet it may well be that restored Russia will once more restore the remnant of Armenians.

The Conference Proposals.

Up to the time of writing nothing but unofficial summaries of the Conference proposals are available. We shall therefore be unable to deal fully with the matter until next week. In brief, however, it is possible to state that the Allied Ministers have made a really serious and whole-hearted effort to secure justice and stability in the Near East. They have determined "to re-establish the Turkish nation and the Turkish power in conditions allowing them to resume an independent existence while preserving Constantinople as their capital. They also desire to assure the Musulmans the most just régime and to maintain the secular and religious authority of the Sultan of Turkey." This restoration of Turkish sovereignty was of course an inevitable step; but equally inevitable was the Conference's decision to compensate the Greeks; and to ensure a mutual confidence between the two warring nations "the Allied Ministers have considered measures of protection and security for Musulman and Christian minorities in Europe in Asia." Into the details of this arrangement we do not propose now to enter, because obviously the whole thing depends on whether Angora accepts the armistice proposals. If Mustapha Kemal is wise he will accept, for the Allies are not likely to offer him more generous terms than those now adumbrated.

Yugoslavia and Austria.

The Belgrade correspondent of the *Journal des Débats* recently wrote an instructive article on the policy of

rapprochement between Yugoslavia and Austria now tentatively being pursued in Serbia. To us this policy seems not only inevitable but sensible and generally desirable. The black relations which now exist between Yugoslavia and Italy, Bulgaria, and Hungary, make it almost certain that Yugoslavia will make absolutely safe her position to the North. With Italy her friendship is far from being increased by the recent events in Dalmatia and particularly in Fiume, though we sincerely believe that the new Italian Cabinet intends to cultivate better relations with S.H.S.; in Bulgaria the party of M. Stambolisky is the only one which seems to be genuinely bent upon a *rapprochement* with Serbia; and as for Hungary, who will apparently never become reconciled to her lot, she is a constant source of anxiety to Yugoslavia. But it is not only on political grounds that a policy of good-will towards Austria can be justified: Yugoslavia's economic position, precarious enough in all conscience, really demands it. Almost all her exports are transported *via* Austria; general trade facilities and a stabilisation of the exchanges in the two countries are therefore essential. No doubt there will be opposition to this policy, particularly from the Croat Separatists, who are now more than ever busy against Belgrade; but we little fear that the common-sense view of the affair will soon prevail. It was, we believe, part of M. Také Jonescu's policy to include Austria in his *bloc* of Central European States; and if the time is perhaps not ripe for the public announcement of the fulfilment of his scheme, we anticipate that it will shortly become an actual, if not also a nominal, fact.

The Anglo-Egyptian C.S.

When dealing last week with the House of Commons' debate on Egyptian affairs we were unable to touch on one point of considerable interest. In the course of an admirable maiden speech, Mr. Loyd mentioned his old comrades in the Anglo-Egyptian Civil Service, who, he declared, would be grateful for the kind references made in the course of the debate to the work they are doing. He spoke of the loneliness of some of these officials and of their sensitiveness to criticism that cannot be called fair; and in view of a great deal that has been said and written of late, it is certainly refreshing to find this point of view put forward by an authority. In many of the desperate attempts that have been made to represent that whatever is wrong with Egypt is due solely and wholly to Great Britain, the British official has come in for a great deal of ill-informed criticism and has been represented as seeking nothing in Egypt but his own profit. That there may be here and there officials of that type we would not deny, but to suggest that they are representative of the Service as a whole is a gross perversion of facts. The overwhelming majority of them deserve well of Egypt and they are entitled to expect at least fair play from their countrymen at home. We believe, with Mr. Loyd, that those among them who, in view of the changes now being made, feel that they must now retire, will be treated in a right and proper way by the Egyptian Government, and we believe that they will carry with them the gratitude of the Egyptian people.

A Broken Reed.

Reports received after we had gone to press last week show that not only was the rioting in Cairo and in Alexandria on March 20 serious enough in itself to cause uneasiness but that it proved that the Egyptian troops cannot be trusted to deal with such manifestations.

Instead of endeavouring to check the rioters, the soldiers in Cairo cheered them, and in other ways showed their sympathies to be with the mob rather than with its victims; and finally they had to be withdrawn and replaced by native police. The latter once more behaved admirably, and a handful of them, according to *The Times* Cairo correspondent, sufficed "in every case to disperse the crowds which some scores of Egyptian infantry were powerless or unwilling to attack." A similar state of things, it will be remembered, occurred in the rioting at Alexandria last May; and it is difficult to avoid the conclusion that the extremist propaganda has been highly successful among King Fuad's troops. How far the officers have encouraged the spirit shown we are unable to say; but a Board of Enquiry has been appointed to investigate the incidents of the 20th inst., and it may be able to throw some light on the general tone of the Army. In the meantime we may note that the situation on the occasion referred to was saved by prompt action on the part of the Police Commandant, Russell Pasha, who happens fortunately to be British.

The Bombers' Ambitions.

The trial of the five Egyptians accused of conspiring together to kill Sarwat Pasha by means of bombs and firearms was concluded last week. The case against one of the students had been withdrawn, and the Court acquitted another, but the three remaining prisoners were found guilty. It is to be hoped that the sentence awarded will be sufficiently severe to act as a real deterrent to this class of crime; for now more than ever must Egypt be freed from the terror of political assassination. The trial revealed that there is in existence an Egyptian "Society for National Defence," which demands amongst other things, the repatriation of Zaghoul Pasha, the release of certain convicted conspirators, and an inquiry by a court composed of foreigners and Egyptians into the case of prisoners sentenced in connexion with the Alexandria riots of last year. In a word this precious "Society," the members of which believe in spreading their views by means of bombs and revolvers, wishes for an 'inquiry' into every decision which does not meet with its own august approval; and we may conclude that the 'inquiries' would continue until the Society did get its own way. But that is not its only aim. It demands, first and foremost, "the complete independence of the entire valley of the Nile from the source to the mouth of that river." Whether the 'entire valley' would thereafter be placed under the administration of the Society for National Defence the cables do not, unfortunately, inform us. Ambitions such as these will hardly help Egypt's cause in the sight of the world.

King Faisal's Envoy.

General Haddad Pasha, who won such golden opinions in London last year, is returning here on a special mission from King Faisal to the British Government. The nature of that mission is not stated. It may be concerned with what may be called a question of border policy, but it would not be surprising if he comes to ask that rather more freedom of action in internal affairs be accorded to King Faisal. The latter is said to feel that his authority is too shadowy and his power of making, or terminating, appointments too restricted to enable him to cope with the known difficulties of his position. So far he has had few opportunities of impressing upon his subjects outside Baghdad and Basrah that he is a king, with kingly powers as understood by

the Arabs. The men of the desert, and, especially, the sheikhs of some of the larger tribes, are said to be strongly suspicious of British policy; and it becomes clearer every week that while the idea of a Treaty is not unpopular, the same certainly cannot be said regarding the idea of the Mandate.

'Iraqian Problems.

It is easy for us to say that 'Iraq cannot have it both ways: that if she looks to Great Britain for financial assistance and for protection against the Turk, or other outside influences, she must be content to accept British guidance for a while. Looking at the problem from a distance, we are able to see clearly very that with such a small population, and such a small proportion of it available for forming an army, the country cannot expect to stand alone yet; and that the attempt to do so would surely prove disastrous. But the Arab of 'Iraq does not see things that way, and it simply is not in his nature to do so. Moreover the citizens of, say Baghdad and Mosul, take a very different view of the situation from the desert Arab; while the citizens of Basrah are believed to have a view entirely their own. The task of getting the machine to run quite smoothly is likely to prove both delicate and difficult, and to call for extreme tact and firmness in London as well as in Baghdad. The danger appears to be that all the tact may be found at one end of the wire, so to say, and all the firmness at the other.

The Indian Budget.

The Indian Legislative Assembly has at any rate set a good example to the Mother of Parliaments, for the infant has disposed of its Budget before the parent has begun to think seriously about hers. The modifications which have been made are less than some critics had expected; some votes have been reduced, some increases in taxation have been refused, and the anticipated deficit is substantially larger than was originally proposed. In its final form the Budget would appal the great Anglo-Indian financiers of the past, but for almost the first serious effort of a new legislature, it strikes us as not altogether bad. The effect of criticism is apparent in the change of official front on the question of economy. The Retrenchment Committee, refused a few weeks ago, is now to be appointed, and it may assist the departments to live down to the reduced grants, or even effect further economies, but in order to do so it will have to work with a scalpel rather than an axe, and we do not expect any sensational results from its efforts, unless it should be successful in demonstrating that a change in military policy is both feasible and desirable.

Parties in India.

The most striking feature of the Budget discussions has been the marked advance made towards sorting out individual legislators into parties, or at least groups. Correspondents in India, influenced no doubt by memories of the old Council, speak of the Democrats confronting the Government, with the Nationals holding the balance, but it is inevitable that as time goes on Nationals and Democrats will come to stand face to face. It is the fashion in some circles to abuse the party-system, but in practice the abuse is usually directed to the other party's address, and experience has amply demonstrated the need for men to agree to work together if they want to get anything done. In India the most immediate advantage will probably be some curtailment of debates. At present the detailed reports are quite unreadable, because so many individuals feel impelled

to say just what has been said several times before: it should now be possible for half-a-dozen speakers to handle a topic which would otherwise attract a score, and the economy, once realised, is almost certain to perpetuate itself. A few bores there must be, for bores are the salt of legislatures, but, to speak frankly, the proportion at Delhi is at present unduly high.

A New Angle of Vision?

In the circumstances we are inclined to regret the vigour of the castigation administered last Friday by *The Times* to the whole political world of India, while its threat of a re-examination of the problem from a new angle of vision strikes us as particularly unfortunate at a time when steadiness of purpose is the thing most needed. It is perfectly true that the Legislative Assembly falls far below the standard of the House of Commons and that some of the provincial Councils, particularly Bengal and Bihar, have been making eccentric displays of a kind to which parallels can be found only in the worst of the American state legislatures; but it is only fair to remember that the duration of these bodies must still be counted in months rather than years, and the question is of the progress made rather than the distance from the ultimate goal. In our view the duty of critics just now is not to seek out a new angle of vision, a phrase which we hoped had been decently buried long ago, but rather to urge the need for maintaining a just perspective in attempting to estimate the initial results of an unexampled experiment.

THE WEEK AT HOME.

London, Monday Evening.

The Return of the Prodigal.

Mr. Lloyd George has decided not to resign. A week ago it seemed quite possible that he would go, and that a purely Conservative Government would be formed to carry on until a General Election, after which anything might happen. But Criccieth is said to have done wonders for the Prime Minister's health, and he will return in a few days like a giant refreshed, and ready for the fray once more. He has great hopes of the Genoa Conference, but before he goes he intends to assert his position in Parliament.

The Government is to move what amounts to a vote of confidence in itself in the Commons, to test the strength of the Conservative revolt. The Die-Hards will of course be against it, as well as a certain number of Conservatives

who do not like what Lord Northcliffe calls "shaking hands with murder," whether of the Irish or the Russian variety. But the bulk of the party will probably vote in the "aye" lobby, and the Government will carry on, and Mr. Lloyd George will pack his portmanteau for Genoa.

The Issue Postponed.

The differences in the Coalition have therefore been patched up for the present, and superficially at least all is well. But in actual fact nothing is changed. The mutineers have failed this time; there is no doubt whatever that they will try again at the first auspicious moment. Peace may last for three months, or even longer, but there will be a quiet attempt to get the Liberals out of the Government, and to give the Cabinet a still more Conservative cast.

The Tories still cherish the delusion that they can hold Mr. Lloyd George as a sort of figure-head who will do their bidding, or that alternatively, as the lawyers say, they could get a majority at a general election; and they are pointing to the result of the Chertsey by-election, where a Conservative beat the Liberal, General Gough (of Fifth Army fame) in confirmation of this diagnosis.

I believe this to be a profound delusion. Chertsey is a villa constituency, of the "vineries and pineries" type, which is naturally Conservative; it certainly does not represent the general opinion of the country. But the chief thing the country wants at the moment is to avoid a General Election altogether. It is suggested that one may come in May, after the Budget and Genoa. That may suit the politicians, who can appeal to business men with a shilling off the income-tax and to Labour with a "friend-with-Bolshevism" cry; but it would be far better for the present Parliament to continue till the end of the year. There may be dissatisfaction with the Coalition at Westminster, but it is not generally unpopular among the people.

Ireland.

The situation in Ireland seems to be getting worse. There have been several diabolical murders during the week, and these not in one spot but in many places—Belfast, as usual, having the bad pre-eminence. The condition of the whole island is not far removed from anarchy, and neither of its Governments seems to have the power of protecting life and property. There is more talk of a civil war between North and South, and the difficulties between the Provisional Sinn Féin Government and the out-and-out Republicans under De Valera do not decrease. It is a bleak and unhappy prospect.

Prosecutions.

The courts are very busy just now: the Hooley trial lasted all last week, and is not yet over; and Mr. Bottomley is again in the police courts and the papers. Fresh charges are being preferred against him in the matter of the Victory Bond Club; the evidence is of course mainly financial, and largely consists of details of payments into and withdrawals of large sums from various banks. The case will occupy considerable time, and it is evidently only just beginning.

I hear, too, that an attempt is being made to reopen the case of Archdeacon Wakeford, which made a considerable noise a year ago, on the plea of fresh evidence, but I do not know with what success.

Sport.

The Football Cup contests are now in full swing, and London is disappointed that Tottenham Hotspur, its favourite team, is out of the final. Popular enthusiasm seems greater than ever, and even the more aristocratic Rugger has attracted bigger crowds than usual this last winter. But it has struck me that we have heard rather less than usual about the Boatrace, which is to be rowed next Saturday. The prospects for the coming cricket season are good; it will be entirely a domestic year, with interest centred in the county matches, and no Australian or other team visiting us. The programme will therefore be less crowded, and this is not wholly a bad thing.

Posts and Telephones.

A committee reported last week in favour of cheaper telephones, and Mr. Kellaway, the Postmaster-General stated that he hopes to restore the Sunday collection at the earliest possible moment. This last will be a great benefit both to the country districts and to the traders who do a mail order business. The abolition of the Sunday post a year ago has not been a success. It has meant that practically no correspondence has been received by business houses on a Monday until too late to attend to it, and also that Tuesday has been hopelessly congested with letters and orders. Cheaper postage would also be a boon—particularly a reduction of the absurd three-halfpenny postcard rate—but that seems likely to be deferred.

It would be a good thing, too, if the Post Office would arrange to simplify its foreign regulations, and reduce its charges. Quite recently I had occasion to send a book to Rome: I had to fill up two forms in French and English, with two declarations that it was a book, a whole book, and nothing but a book. I had to pay half-a-crown for its carriage. It took a month to get to Italy! And the recipient wrote me that he too had to make a declaration that it was a book—which was obvious from the shape of the parcel—and to pay duty on it. He remarked that the duty was levied on a scale that might have been suitable for a rare champagne, but seemed rather excessive for mere printed matter. This kind of thing must kill trade.

The Week's Books.

"After the War" (Constable), by Colonel Repington, is a second series of the famous diaries. It does not contain so much personal gossip as its predecessors, but is an account of travels on the Continent, through almost every country of Europe, and interviews with leading statesmen and politicians, from M. Berthelet to King Constantine. It strikes me as being particularly full and valuable for the Succession States.

"The Second Year of the League" (Hutchinson), by H. W. V. Temperley, is an account of the work done by the League of Nations by a discriminating admirer. Mr. Temperley on the whole maps out a better case for the League than some of its wilder propagandists, whose claims are obviously excessive.

The third and fourth volumes of "Mr. Punch's History of Modern England" (Cassell) are, to use the old phrase, "amusing as well as instructive." They cover the aesthetic craze of the eighties, the new woman period, and the transformation of Mr. Punch himself from an extreme Radical into a benevolent Tory.

"The History of Education" (Constable), by Edwood P. Cubberley, strikes me as being an education in itself; it is, in fact, an American cyclopaedia on evolution from ancient Greece to Mr. Fisher. I know so little of the subject that it is not for me to criticise, but it is unfortunate that the first reference which I attempted to make discovered an omission. Mr. Cubberley has nothing to say concerning that most celebrated of all schoolmasters, Mr. Squeers, and Dotheboys Hall.

OCELLUS.

The following battalions have left the United Kingdom to relieve troops who have completed their tour of service in—
• India:—1st Batt. Royal Fusiliers; 1st Batt. Cheshire Regiment; 2nd Batt. Oxfordshire and Buckinghamshire Light Infantry; 2nd Batt. King's Own Yorkshire Light Infantry; 1st Batt. Duke of Cornwall's Light Infantry.

ROUMANIA.

Bucharest, March 14.

Political.

The elections for the Chamber are now practically over, with the exception of a few second pollings in Transylvania, the latter fact proving that the contest was especially keen in that province. The results of the elections show that the Government has had a bigger victory than it actually needed, having secured more than two-thirds of the seats in the Chamber and almost all those in the Senate. The Opposition, however, is raising a hue and cry about the way the elections were carried out, and accusing the Government of illegal proceedings at the poll. The two stongest Opposition parties, the Tzaranists and the Transylvanian National Party, are even threatening non-attendance at the Parliamentary sittings. M. Maniu, the Transylvanian Leader, has already addressed to the King a protest in the name of his party. He complains about the alleged abuses committed at the poll, and declares that his party will not recognize the legality or moral authority of the new Parliament, especially as it has the very important task of modifying the Constitution of the country, in consequence of and in accordance with its aggrandisement.

Leaving aside any question of the way in which the elections were carried out, it may be interesting to see what can be deduced from the present polling. In the first place, the Tzaranists have proved to be the strongest party in the Opposition, their vote having increased considerably since the last elections; and provided the party is well led and can attract into its ranks a larger number of urban voters, it promises to be one of the leading factors in the very near future.

Gen. Averescu's party has still a certain number of supporters in the rural districts, but in the towns and especially in Bucharest it has lost ground very seriously if we compare its present position with the overwhelming majority of votes it obtained at the last elections two years ago. The "one-man" parties like those of MM. Marghiloman, Také Jonescu and Jorga are on the wane, and if it were not for the personalities of their leaders, these parties would be very near extinction.

As to the Socialists, who two years ago by their fairly large number in Parliament represented a growing force, they can this time boast only a single representative in the Chamber, namely a Social-Democrat from Bukovina. This is due partly to the blow dealt them by the last Government in imprisoning their leaders and implicating them in the Communists' trial now in progress, and partly to the splitting up of the party into various groups. Judging by the number of votes they obtained in the Old Kingdom, it is surprising that the Communist Section is three times stronger than the Social-Democrat group. In general, the Socialist element has suffered a great diminution, losing a good deal of its influence even among the lower classes.

In Transylvania, the National Party still represents the bulk of the population of this particular province. While the Bukovinians have given their unanimous vote to the Government, the Bessarabians have shown a more fighting spirit by returning a comparatively large number of the Opposition candidates.

The main lesson of the present general elections is, however, that the people of this country are still very inclined to support "the powers that be," having so willingly voted for the party that was called to power by the King. It may be added that despite the discontent of the Opposition and the imputations cast upon the Liberals, public opinion will nevertheless support the present Government, provided it carries out the promised energetic measure so urgently needed for the country's return to more normal conditions in all branches of activity.

Little Entente at Belgrade.

In connection with the pourparlers which have recently taken place, the Roumanian Government issued the following *communiqué*: "The Governments of Poland, Czecho-Slovakia, Yugoslavia and Roumania are in full agreement with regard to the united attitude to be adopted at the Genoa Conference. Desirous of securing in Europe a normal political and economic life, the above-named Governments have recognized the necessity of the following achievements: (1) To abide by the programme established at Cannes by the representatives of the Allied Powers for the Genoa Conference at the debates of which must be excluded the same points that were discarded at the Cannes Conference. (2) The urgency of a meeting of experts at Belgrade to determine the mutual economic standpoint to be upheld at the Conference. (3) The obligation to reconcile the facilities accorded to transport and international exchanges, avoiding any difference of treatment among themselves. (4) The right of all Allied States to participate at the discussions and decisions on the questions concerning their interests."

The Roumanian Delegates at the Belgrade pourparlers consisted of MM. Oscar Kiriacescu, Papiniu, Caracostea, and Colonel Dimitrescu, who will also figure among the Delegation appointed for Genoa.

General News.

M. and Mme. Také Jonescu left Bucharest last week for abroad. They will go first to Italy, and will be absent from this country for several months.

M. Carl Einer de Wirsén, the new Swedish Minister at Bucharest, presented his letters of Credence to King Ferdinand in the presence of M. Duca, the Minister for Foreign Affairs, on Sunday, March 12.

In view of the heavy losses sustained by Roumania owing to the war, the Government has approached the Reparations Commission in Paris to allot to Roumania as early as possible her pro-rata of gold from the 300 million marks paid recently by Germany.

YUGOSLAVIA.

Belgrade, March 23.

Coalition Hardship.

Coalition Governments seem to be having a very hard time in every country, and the prestige of the Yugoslav Coalition now in power is badly shaken, and sinking more than fast. The present Government is going through a series of crises and is being kept together only by all sorts of political manoeuvres and concessions—which the Premier, M. Pashitch, is distributing freely. The Premier is hopeful of keeping the coalition boat afloat until after the Royal wedding, but after that it looks as if nothing on earth could help it to escape its natural death.

Two days ago the situation was so tight that a fall of the Cabinet was considered a matter of hours. The difference of opinions was created and became more pointed on the questions of a settlement of the Yugoslav liabilities abroad and of the new electoral law. The Democrats are of opinion that all, even post-war payments should be deferred for a long period and that the State should guarantee them; while the Radicals, who seem to be better aware of the not very easy financial situation of the State, are not at all inclined to strain it more, and hold the view that the merchants—who by the way made incredible profits before the slump in the exchange—should be left to themselves to fix up their liabilities in the best possible way. If the Coalition resigns, it means the forming of a Government *ad interim* and going straight to the elections. The Radicals profess to be more than willing to go to the elections, but their leader, M. Pashitch, does not want to plunge

the country into political fever and agitation, just at the time of the Royal wedding.

The latest report is that the differences have been smoothed over by suspending both discussions, *i.e.* regarding the settlement of mercantile liabilities abroad and the new electoral law.

Raditch in Croatia is continuing his insane propaganda in favour of sending Croatian *bloc* delegates to the Genoa Conference independently of the official Yugoslav delegation. His agents are making a collection to raise funds to cover the expenses of this latest adventure, and are reported to be taking from peasants poultry, grain etc., where they fail to obtain ready cash.

Royal Wedding Preparations.

The date of the marriage ceremony is now definitely fixed for June 1. The future Queen's mother, Queen Marie, is coming to Belgrade early in May to arrange various ceremonial affairs connected with her daughter's marriage.

The preparations are already in full swing and a special committee composed of some 42 ladies and gentlemen has taken charge of it. Belgrade will assume a quite unwonted appearance. The main streets especially will be transformed and decorated with triumphal arches and a floral tower and archway. Some points in the town are so sadly lacking in beauty—to put it mildly—that it will most certainly require all the skill and wit of the Russian artists who have been specially engaged to do the work of a badly-needed camouflage. The bridal pair will spend their honeymoon in Dubrovnik (Ragusa), in a very ancient palace of the mediaeval rulers of Dalmatia. For all these expenses a temporary credit of one and half million dinars has been granted by the Ministry of Finance. The old and the new Royal Palace, both of which have been sadly looted and damaged, have again been restored, but of this I shall speak in my next letter.

GREECE.

Athens, March 18.

The Government's Collapse.

My prediction last week to the effect that the Gounaris Cabinet would fail to obtain a majority in the House, and would therefore be obliged to resign, proved true. I shall not attempt to give THE NEAR EAST readers a translation or even a *résumé* of the Premier's declarations in Parliament last Saturday. His long speech, which was more than once interrupted by difficult questions and uncomplimentary remarks made by his political opponents, threw absolutely no light on the situation. He spoke of M. Briand and the convention of Angora; he mentioned once or twice Lord Curzon and the British Government; and after announcing that Great Britain had authorised the conclusion of a loan of £15,000,000 and that negotiations therewith were progressing satisfactorily, he concluded by saying that although the Government's task was a very difficult one and certain mistakes had unavoidably been made, it had done its best to solve the national problems, and he therefore felt convinced that the National Assembly would bestow its confidence upon himself and his Ministers, thus enabling them to continue the struggle.

Addressing the House immediately afterwards, M. Stratos accused M. Gounaris of unconditionally accepting Allied mediation; and then the leader of the Macedonian deputies, M. Boussios, spoke in extremely bitter terms against the manner in which the interior administration of the country had been conducted since M. Gounaris had come to power. M. Boussios added that even the Prime Minister himself had told him in private that the country was in a state of decomposition. Finally General Danglis, on behalf of the Liberal party, stated that the recent record of M. Gounaris and his colleagues did not inspire any confidence for the future, and that the Liberal Party had decided to vote against the Government.

It was after 1 o'clock a.m. when the result of the balloting was announced. Out of 331 deputies present

(including the 13 Ministers, who were not entitled to vote), 155 voted in favour of and 162 against the Government. One Member abstained. M. Gounaris then addressing the President of the Chamber requested him to adjourn the meetings of the National Assembly pending the solution of the ministerial crisis.

The Ministerial Crisis.

On the following morning the President of the Council tendered the resignation of the Cabinet to the King. M. Gounaris pointed out to His Majesty that in order to arrive at a quick solution of the crisis, it would be necessary to consult the President of the National Assembly, who was the only person qualified to give him information as to the exact strength of each of the various parties, and to enlighten him on the parliamentary situation in general. M. Lomverdos was received in audience by the King in the same afternoon, and after a second call of M. Gounaris at the Palace, His Majesty received at his (M. Gounaris') suggestion, the Party leaders, M. Stratos, M. Boussios, and M. Calogero-poulos. Despite the fact that the Liberals constitute the second strongest Party in the Chamber, their leader General Danglis was not asked to the Palace along with the others. In a letter sent by him on the following morning, M. Gounaris attempted to explain to General Danglis the reasons for which he had not suggested to the King that he too should be asked to give his opinion; this deliberate omission, however, which is strictly against parliamentary rules and customs was much commented upon and caused a very bad impression.

The three leaders informed the King that they would in no circumstances tolerate the re-constitution of a Government which they had only just forced to resign, and added that they would be willing to form a Coalition Cabinet, which, they thought, would be supported by many of the deputies who had on the previous day voted in favour of M. Gounaris. On Sunday afternoon the leader of the Reformists, M. Stratos, was entrusted with the formation of the new Government; upon hearing, however, a few hours later that M. Gounaris' Party would not support him, he declined the mandate. The Premiership was then offered to M. Boussios, but he too, after a long consultation with his political friends, and after being told by M. Gounaris that he (M. Gounaris) did not intend to support any other Government, declined the offer.

Everything came off exactly as M. Gounaris had planned that it should, and as there was nobody else left, M. Gounaris has once again become the Prime Minister of Greece. His first idea was to form a Coalition Government, from which the Liberals would be excluded; having failed, however, in this, owing to the refusal of the Stratist and the Macedonian deputies to co-operate with him, the Premier formed his new Cabinet from exclusively Gounarist elements as follows:

Prime Minister and Minister of Justice	M. D. Gounaris.
Foreign Affairs & Marine	M. G. Baltazzis.
Minister of War	M. N. Theotokis.
Minister for Home Affairs	Admiral Goudas.
Minister of Finance and Food Supplies	M. P. Protopapadakis.
Minister of Education	M. C. Polygenis.
Minister of Agriculture	M. A. Argyros.
Minister of National Economy	M. Luke K. Roufos.
Minister of Ways and Communications	General X. Stratigos.
Minister of Public Assistance	M. Mark Theodoridis.

The question now is: will the new Government be able to stand on its two legs, and if so for how long? The answer to this will be given at to-night's sitting of the National Assembly when a vote of confidence will again be asked for. It is almost certain that the Liberals and Stratists will again vote against the Government, and if their example is followed by the Macedonians and the Independents, to whom would be added a number of dissatisfied Gounarist deputies whose dreams of being

included in the list of Ministers were dashed to the ground, a new ministerial crisis will unavoidably follow, the only remedy being the dissolution of the Chamber and the holding of new elections.

An Arrest.

An individual called Mastrantoni has been arrested and charged with the murder of Andrew Kavafakis, the Editor of the *Eleftheros Typos*. The accused has confessed his guilt and added that he had no accomplices. This, however, entirely contradicts the statements made by the cabman and other witnesses, who maintain that the murderers were three and not one. Mastrantoni, who, according to the police, is a drunkard and an opium smoker, said that he had greatly suffered under the Venizelist régime, and, being under the impression that the articles published in the *Eleftheros Typos* aimed at the re-establishment of that régime, killed Kavafakis.

Miscellaneous News.

The transatlantic steamer 'Empire de France' has arrived from New York with 779 American tourists on board.

The Greek Legation at Berlin reports that a number of German professors have formed a Greco-German league with a view to developing the commercial and scientific relations between the two countries. The league has its headquarters at Hamburg and branches in Munich, Frankfurt, Leipzig and other towns.

Another boat, Italian this time, has been captured and escorted to the naval arsenal. The Italian Minister in Athens has made energetic protests to the Greek Government and demanded the immediate release of the ship.

BULGARIA.

Sofia, March 21.

The Bomb Outrage.

A brief reference was made in my last week's letter to the bomb that was thrown at the American Legation. The bomb, which was small and egg-shaped, was thrown from the street into the Chancery on Saturday evening, the 11th. The damage done was immaterial, but the identity of the thrower remains a mystery. Opinions are divided as to the reasons actuating the outrage: first, there is the view that the Communist party in Bulgaria resented the fact that Mr. Wilson, the Minister, distributed money to loyalist Russian refugees; secondly, that the Communists were copying their French and Portuguese brethren, who committed similar outrages against American diplomatists on account of the two Italian Socialists who had been condemned to death in the United States; while the third opinion is that the bomb was thrown by a foreign agent provocateur. In connection with the last opinion, the American Minister has issued a *communiqué* denying that he personally thought it was a foreigner who threw the bomb, whilst in any case there is absolutely no evidence to prove the truth of this assertion. The first theory rests only on suspicion, but the second is backed by the fact that two days ago Mr. Wilson received an anonymous letter informing him that if the two Italian Socialists were put to death, another attempt would be made against his life. In the meantime the Bulgarian Government has taken steps to repair the damage, and has provided Mr. Wilson with a guard for the Legation.

Russians in Bulgaria.

Many thousand Russians—exactly how many no one knows—are now in Bulgaria. Although their lot is not to be compared with that of the starving thousands in Constantinople, there are in Sofia a considerable number without work, who roam the streets, and who constitute an element of danger. Owing to the activity of the League of Nations, Russian children have also been able to find a temporary home in Bulgaria, the better class peasants having offered to receive them into their families. If it were not for the natural reluctance of the parents to part with their children, many more in addition to those already here, would have come. The Bulgarian Government has shown itself exceedingly generous in its treatment of Russian refugees; barracks, schools and other buildings having been given over for their accommodation, whilst a sum of two million levas

was recently voted by the Sobranie for the maintenance of the children. When one considers the heavy financial calls on Bulgaria, this generosity is all the more worthy of praise.

The Military "Organ" of Liquidation.

The news is now confirmed that the chief of the Allied Organ of Liquidation, has applied for more officers to assist him in the carrying out of his task. Furthermore it appears that the "Organ" is insisting that the Government shall draft several new laws relative to the disbandment of the Army. One of these provides for the abolition of all military training in Schools. If this law is passed, one is tempted to ask who will ensure its execution.

The aim of the "Organ" appears to be to start on a new revision of the military clauses of the Treaty of Neuilly. Its name, however, signifies that it is here to finish off certain matters of routine that had not been completed when the Commission closed down. If the "Organ" is to begin the work of the Commission, only under a different name and with a different chief, it implies that the Allies were not satisfied with the work of the Commission. This being so, the sooner the facts are known, the better for all concerned, as the spectacle of a group of Allied officers, starting out on a work that is likely to last for several years, is not consistent with the declarations of the former Chiefs of the Military Commission, who said that the military clauses of the Treaty of Neuilly has been fulfilled.

Lord Newton and the Inter-Allied Commission.

The speech made by Lord Newton in the House of Lords, in which *inter alia* he referred to the I.A. Commission at Sofia, calls for remark. No one will disagree with Lord Newton when he says that Missions are costly, and should be reduced as far as possible. The Inter-Allied Commission in Bulgaria, is, however, entrusted with the definite task of extracting the war indemnity. This task can only be performed by a Commission, or by the respective Legations of countries concerned. Assuming that the Allies decided to confide the work to the Legations, the Legation staffs would have to be considerably increased, whilst diplomatic relations would surely clash with the work of extracting money from a country with whom one is on friendly terms.

As regards the specific charges which Lord Newton levels against the Commission, it is possible to contradict some of them flatly. For example, the Commission, numbering forty persons, did arrive in a special train, but the cost of this train did not work out above the cost of forty tickets on the Simplon express, *plus* the heavy luggage charges which office material and personal baggage would have come to.

Government v. University.

The Government's proposal to dismiss twenty University professors has led to a conflict which may easily have quite serious consequences. Starting with the question of the alphabet, and continuing on through other stages, the present situation is that the University has become the point round which the Opposition parties are attacking the Government.

Politics have taken the place of education, and the Opposition are exploiting the situation. The University students have held several meetings of protest, culminating in a well organised and largely attended demonstration which took place on Friday, the 17th. The Police tried to break up this demonstration, but M. Daskaloff, the Minister of the Interior, appeared on the scene, and judged it wiser to allow the students to hold their meeting.

Some time ago a group of leading citizens formed themselves into a society which goes by the name of "Narodin Zgovor." This society is also holding a series of meetings with the object of arousing public opinion regarding the action of the Government *vis-à-vis* the University and similar bodies. The "Narodin Zgovor" has as its aim the bringing together of the Opposition parties and has itself no political ambitions. The feeling in Sofia is all for the University, and it is thought that in the long run the Government will be forced to yield.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be written as briefly as possible and must be written on one side of the paper.

GREAT BRITAIN AND THE NEAR EAST

To the Editor of "The Near East."

Sir,—As one who has just returned from the Near and Middle East, after spending over nine years in those regions and coming into contact with most of the nationalities inhabiting them, I can only be amazed at the ill-informed and biased views which are pressed upon our Government as reasons for the modification of the Sèvres Treaty.

Instead of urging what is based upon correct principle, regardless of momentary expediency and ancient prejudices and rivalries, special pleading based upon wrong data seems perhaps more apparent in dealing with these Moslem-Turk-Armenian-Greek arguments than with most other current political problems of the day. In the first place, one well known speaker recently alluded to the blind partisanship of persons in England for the Christian as against the Mohammedan. It seems to me, however, that on the contrary, there is in England and there always has been some extraordinary tender feeling invariably displayed for the Turk as opposed to the Eastern Christian Nationalities generally. Many English people appear to take it as a matter of course that you will at once agree with them as to the Turk being a manly, honest fellow and that the Eastern Christian is a miserable creature who thoroughly deserves to be massacred.

Few will deny that the simple Turk is in the main a very honest and good fellow, though not "enlightened" as one member of Parliament ludicrously described him. But on the other hand no one can pretend that the rule of the Turk has been anything but incompetent and incapable, and certainly no one ought to pretend that the Ottoman Christian subjects have not every ground for wishing at any rate to be freed from this rule. And the British Empire is, after all, mainly a Christian Empire, and may it not be expected at least to show sympathy with fellow Christians?

Apart from the question of the undoubted appalling massacres from time to time, the Turks and some other Moslems as well have been certainly noted for their contemptuous treatment of their subject Christians. Now that the latter, after years of struggling have some chance of getting their own back, why not uphold our co-religionists in their wish for freedom and to be able to live in conformity with civilised and rational ideas of Government? The Greeks have proved that they are capable of governing in accordance with modern ideas and the Armenian community are equally capable if given a chance.

Reverse the position and who is it that the Moslems would uphold if they had the world's destiny in their hands? Would they uphold their own co-religionists or those whom they are pleased to term 'dogs' and 'rayahs'? I have even heard the massacres of Armenians described as legitimate because the latter took up arms against their lawful rulers the Turks, and either joined the Russians or served the French in Cilicia. Is, then, joining the Entente deserving of massacre to wives

and families and is it people of the Entente who should formulate such a proposition?

Now as regards the more vital political aspect and the matter of upholding the Khalifat and the so-called susceptibilities of our Indian fellow subjects. It seems to me that our Indian Moslems (if this agitation can be really said to be genuine) nevertheless need educating in this matter. Apart from the fact that our Indian Moslems generally have not the faintest idea of what life under the Turkish régime actually means, what is said to be put forward on their behalf shows incorrect guidance from a spiritual point of view. First, who is it who is upholding the Khalifat at Constantinople? Why, the British and their Allies and not Kemal and his Nationalists, who from a proper Moslem standpoint must be regarded as infidels. The British Government has supported the Khalifat in every way whilst Kemal and his men are busy undermining it. He has already classed the Sultan of Turkey as a "heretic," and has said that he is out to destroy the Sultanate.

The British Government throughout every portion of the Empire is extraordinarily solicitous in its consideration for its Mohammedan subjects in the most minute points touching the religious aspect, but it is here asked to support an avowed enemy for no legitimate Moslem religious purpose. A British spokesman for India affirmed the other day that as touching the Sultan of Turkey, every Mohammedan in the world was proud of the latter's position. Apart from this being disputable from the Shiah aspect, the Wahabis, who are the purest of all Mohammedan elements, would laugh such a statement out of court. I have personally spent a considerable time amongst my friends the Wahabis, and to hear their opinion of the Turkish "Moslem" would be indeed an eye-opener to some of our excessive partisans.

Whilst we are for one thing supporting the Wahabi element in its own particular sphere, it is idle to pretend that we are anti-Moslems; and this our Indians should be told.

One word more regarding Smyrna in especial. This is just as much a Greek as a Turkish "port" and while it may, perhaps, for various reasons be more advantageous for the Greeks now to relinquish it, one cannot help realising which Government would make for progress and civilisation. Even the continued presence of the maligned King Constantine does not alter that fact. And were the real true history of Salonika in 1915-16 to be revealed, many Englishmen would not have been ashamed to act in many respects as he did.

I am, etc.,

F. Cunliffe-Owen,

Lt.-Colonel.

CYPRIOI LITERATURE.

To the Editor of "The Near East."

Sir,—Cyprus is not well known in Europe; still less Cypriot literature. Mr. Simo Menardos, the Mediaeval and Modern Greek Lecturer at Oxford, is probably the sole known representative of Cypriot intellectual life there. Nevertheless the soil of the Island which once gave birth to the fairest of goddesses, to the Cyclic poet Stassinus and to the originator of Stoic philosophy, and which claims Homer as its offspring, is not yet entirely barren. Various circumstances have for a long time arrested its intellectual progress; but when—thanks to the British Occupation,—the atmosphere became favourable, literature began once more to flourish.

An unprecedented event took place in this Island in January last. This was the celebration of the tenth anniversary of the first issue of *Mastigion*, a satirical newspaper in rhyme, edited by Yannis Perdios, a native Greek poet.

Mr. Perdios and his work are not unknown to the English Press. The late Max Ohne Hals von Richter has spoken of both in eulogistic terms in a leading English review—*The Fortnightly*, if I mistake not. In singing their praises he went so far as to compare *Mastigion* to the far-famed *Punch*. Although such

comparison is undoubtedly exaggerated, there can be no doubt that *Mastigion*, coming straight from the depths of the poet's heart, is an earnest attempt at social purification.

Pure and sincere-hearted Yannis Perdios allowed no social vice to pass before him without castigating it in the pages of his *Mastigion* (literally, "a Whip"). His object was twofold; either to cause vice to disappear, or to lay it open to the disgust of all pure-minded individuals. Unlike the humorous poets, George Souris and Theodore Orfanides, in this respect, Perdios reminds us more of Barthélemy and Alexander Soutsos. The resemblance to the latter is all the greater, as patriotism is the main chord in the lyre of both.

Although well acquainted with the new aspirations of human thought, Perdios may be said to be one of the best representatives of the body of patriotic poets—so numerous in modern Greek literature—who gathered round the brother Paraschos.

His poetry is mainly patriotic, in spite of the truth contained in his own verses.

"L' héroïsme philanthropique
Doit posséder un plus haut rang
Que l'autre, le patriotique,
Dont les lauriers sont pleins de sang."

Yannis Perdios writes equally well in French and in Greek. His poems are nearly all published in the two small volumes of "Cypriot Muse." Besides "Cypriot Muse" and *Mastigion*, he has published poems, soliloquies and dialogues for recitation in schools.

Many of his Greek poems have been translated into French by M. René Delaporte and M. Jacques Desmeules. Some have been set to music and are sung locally. Two are the School songs of Nicosia "Pankypriou" Gymnasium and of Larnaca Commercial Lyceum respectively. Another is the song of the "Omios" Guild of Greek students in Beyrout. The latter arose out of a competition in which such eminent poets as the late G. Souris and Aristomenes Provelengios took part.

Besides Max G. von Richter, other writers in Europe have mentioned Yannis Perdios. René Delaporte in *Luth Français* (1907); Louis Jaillou in *Feu Follet* (1907); another one in *La Tribune de Genève* (1907); René Martin of Paris in *Luth Français* (1909); Mrs. Richter in her book "Cyprus" (1913 or 1914); Jacques Desmeules in *Gazette de Lausanne* (1920).

"PROTECTORATE TO ANNEXATION."

(From a Correspondent.)

Zaghloul papers being muzzled, extremist views cannot find a voice in the Egyptian Press. Perhaps Sheikh Mohammed Shakir expresses the average opinion of the many Nationalists who advocate rejection of the terms now offered. In a recent article in the *Mokattam*, headed "From Protectorate to Annexation," he asserts that acceptance would simply mean that Egyptians agree to annexation in the place of a protectorate. They may well, he says, be astounded and perplexed over the contradictions contained in the latest proposals. Britain, while announcing that the Protectorate is at an end, and Egypt a sovereign State, reserves the right of defending her against foreign aggression. This and other reservations, plainly speaking, would give more

right to interfere under the new dispensation, than under a protectorate. But the contradictions will not really surprise those who have followed the history of the Egyptian problem. It was said a few weeks ago that no Egyptian minister would accept or sign the agreement then proposed, for the simple reason that the Egyptian nation would not sanction it. The only way out of the crisis was to elect a National Assembly as soon as possible. In England it is held that there is no need whatever for a British Protectorate. There need be no apprehension. It is only a question of establishing a new relationship. England will simply exercise the rights over Egypt which Turkey lost in 1914.

So, then, the whole amounts to this. Britain takes the place of Turkey, and Egyptians become British, instead of Turkish, subjects. In order to please Egyptians, Lord Allenby, it is true, says in his letter to the Sultan (now King Fuad) that the abolition of martial law may take the place even before an Indemnity Bill is passed: and as for the election of a Parliament, to which Ministers will be responsible, that is left "to your Highness' discretion, and to the Egyptians." But in reality Egypt gains nothing. It is practically annexed, and will be under Britain instead of Turkey. We have striven to abolish the Protectorate, but have become British subjects. The case is as that described by the poet Mutanébi, who said:—

If one ill by another you would cure
The last will be more grievous to endure.
*Iza istafaila min dain bidain,
Faaktalu ma aalaka ma shafaka.*

By Allah! I never imagined that Great Britain would treat Egyptians in this way, while she can see what the East and Eastern people are doing. It would have been better for her to wait, and to think twice before devouring the property of a sick man, whose teeth, however, can still grip the vitals of his enemy. Never did we dream that the policy of Britain would mean annexation to the British Empire. In 1914 England said that the rights which Turkey enjoyed had ceased to exist. Then we heard no more openly regarding British policy. It remained hidden: only martial law was proclaimed. Let us be patient until Allah carries out His will. In the circumstances it is well to repeat of a nation what has been said of an individual:—

A man may think his nature lies concealed,
Yet will the hidden always be revealed

MUSICAL NOTES.

THE EIGHTEENTH CENTURY

"A Musical Tour through the Land of the Past."
By Romain Rolland. (London: Kegan Paul. 10s. 6d.)

For those who would go a-travelling into either the highways or the byways of musical history, there is no guide more reliable or more charming than M. Romain Rolland. M. Rolland is an extraordinarily versatile man, excelling in many things, but it is curious how clear and free from other matter he keeps his writings on Music. His "Musicians of the Past," which was devoted to the big composers, has become a classic; and this book, which describes historical tendencies and explores little-known roads, will also attain high rank.

There is running in and out of it the conviction that it is only the work of the small man of Music that makes possible the *magna opera* which are for all time: in particular and for instance, he believes that the advent of men like Mozart, Haydn, and Beethoven was no miracle but the "logical conclusion of a whole century of genius." It is a conviction which he tests with much nice learning and with very scholarly discrimination, but despite all my burden of ignorance I cannot accept it, for it seems to me that the coming of real, indisputable genius is always a fluke. But one freely though discontentedly admits that nearly all the arguments—the soil in which to grow, the tradition in which to steep, and so on—are on the other side.

This is by the way, however. The main thing is to welcome these delightful glimpses into the past which M. Rolland has provided for us; he draws the curtains, as it were (that is, he discovers to us the contemporary authorities), and lets us look as human beings into this old Eighteenth Century which we had supposed so stiff, so "classical," so formal. Thus we learn that even at the beginning of this Century, and even in Germany, the excessive praise lavished on Italian executive musicians was condemned—we learn this by means of a *précis* of a novel by the versatile Kuhnau (no one, incidentally, who has heard Cortot play a sonata by this composer will ever think again of Kuhnau but highly). So we are given a human and most telling picture of Handel—Handel whom we had thought that nobody since Samuel Butler (except Arthur Balfour) could possibly revere; we see him as a seer like Goethe, regarding his life from a great height, retiring from his life to his art. Similarly we are shown the little men of the time, who were big enough in their day, the Telemanns, the Metastasios, and so forth, who experimented, invented and generally cleared the ground until such good time might come when the supreme genius should arrive. But it is not only men that M. Rolland describes; we are given the clearest conceptions of the general musical life, the institutions, and the forces that promoted and fashioned the growth of a love of Music. This "Musical Tour" will in fact appeal to many who, though they do not call themselves musicians, yet love the curious byways of the history of art.

This book is not only very good, it is important. And that is why I wish to call attention to a serious mistake occurring in the chapter called "An English Amateur," namely Pepys. M. Rolland ransacks the "Diary" very penetratingly, but when he says: "it possesses a real historical interest in that it is a barometer of English musical taste about the year 1660; that is, at the beginning of the golden age of English music," he forgets that the really golden age of our music was when its supremacy in Europe was unquestioned, that is, at the time of our Madrigalists and of our Lutenists. But this is the only blemish that I have found in this most pleasant volume, which literally sparkles with hitherto obscured and now illuminated facts.

The Return of Gerhardt.

Elena Gerhardt has returned to London. The fact alone will raise a thrill to all those who heard her before the War, and her actual singing at the Queen's Hall last week raised a good deal more than that. I personally

can think of no words with which to describe the sheer perfection of her work at its best. No conceivable instrument is capable of such beauty as is her voice; a Kreisler, a Busoni, a Casals cannot move us more absolutely.

Sculpture has often been called "frozen music," and if the converse can in any way be conceived one may have in some measure a conception of the art of Gerhardt. Hundreds of times you may have heard most of the songs she sang, and yet now you went with her voice as if journeying in a new world. It was no originality in interpretation, no intensity of expression, but simply sheer vocal perfection—perfection in tone, rhythm and colour—that caught the mind, the soul and the memory. In the singing of *lieder* there not only is not, but there cannot be, anyone to equal her.

Not that everything she did was excellent; far from it. It made one despair of English audiences that they should encore two such trite, unworthy, and in fact vile things as E. C. Sharp's "Japanese Death Song" and E. G. Wolff's "Fairy Tales"—two "appealing" productions that one supposes Mme. Gerhardt sailed with from those awful States—and this after Beethoven's "Adelaide" had been done so gloriously, so exquisitely as to make one catch one's breath at its final beauties, and after his "Vom Tod" had been sung so that its chilling philosophy became a magic enthrallment. And again, Gerhardt's voice should not be forced, as it was, in an attempt to sing "Die Ehre Gottes aus der Natur": this is a man's song, for the counterparts of Gerhardt—Chaliapine, for example.

I wish to say here, and not at the end, where such things are dutifully done, that Gerhardt's success was sustained with most sympathetic constancy by Paula Hegner, an accompanist of rare and very noteworthy merit. She showed not only complete understanding of the singer, but individual and quite distinctive art.

The habit of decrying Brahms and his songs is one in which every body, if he write long enough, indulges; yet how absurd it is! Here was Gerhardt singing them as naturally as they were written, and the conquest was as natural as it was easy. It was not the loveliness of her rhythm, the sad curve of her voice that made "Auf dem Kirchhofe" seem one of the world's great songs; and it was not something peculiar but an absolute quality that informed "Im Stiller Nacht" so that its chiselled beauty was graven for ever in our memories. For these two songs alone it was worth forgoing years to hear Gerhardt; and it seemed ingratitude, though explicable enough, to ask her for more than her printed programme said she would sing. Though of course one remained to the end, and so heard "Vergeblisches Ständchen," "Der Schmied," and Strauss's "Morgen".

Gerhardt is giving her last recital in London to-day—a Schubert programme.

THE SUDAN.

"The Sudan in Evolution": A Study of the Economic, Financial and Administrative Conditions of the Anglo Egyptian Sudan. By Percy F. Martin, F.R.G.S. (Constable & Co., 1921. London. 42s. net).

The Anglo-Egyptian Sudan has continued its existence for twenty-three years, and it has been the scene of a very remarkable transformation of a people rebellious and oppressed into a contented and prosperous population full of promise and opportunity. To the man in the street the Sudan recalls vague recollections of Gordon and his tragic end, and with greater precision the tedious expeditions up the Nile that finally led to the battle of Omdurman and brought Lord Kitchener into prominence as a great military leader. Since then except for occasional brief press notices of happenings in places too remote to bear much meaning the Sudan has "carried on" unnoticed, and only recent matters, such as the need of cotton growing and the pretensions of some Egyptian politicians, have brought it into notice. Sportsmen and travellers have written books about it, but its moral and material progress has remained unrecorded except in the official phrases of the Blue Books that every year included its report. Now, however, when the Sudan is beginning to take a place among the growing possibilities of the world, a book of reference describing its history, its people and its material possibilities is a growing need. Such a book Mr. Martin has endeavoured to supply.

Mr. Martin first visited the Sudan in 1907-8, but he could do no more than outline his project at the time, and it was not till 1913 that he took a protracted tour throughout the Sudan, and he had intended to publish in the autumn of 1914. The outbreak of the war prevented this, but he was able to make some additions to his work and bring it up to date for publication in 1921.

A study of the contents is impressive; after a chapter on the general physical characteristics of the Sudan and the definition of the sphere of his work he passes to a historical note on the Turkish invasion of the Sudan, the rise of the Mahdi, and the breakdown of his rule and the battle of Omdurman.

After a brief description of the administrative service and a tribute to some of the great names who have served in the Sudan he allots a chapter or more to each of the departments of the Sudan Government. A few short chapters on varied subjects, such as ethnology and archaeology lead to the most important part of the book, the economic study of agriculture, irrigation and commerce with reference to the Gezira irrigation scheme.

These follow three chapters on travel, its difficulties and discomforts and how some of them may be palliated or avoided, and the remainder of the book consists of a description of each province in turn. The appendices give some figures of taxation, some ordinances likely to be important to travellers, and a note on the Government Railways; the population of Khartoum and native weights and measures with their equivalent in European standards. There is a fairly adequate index and a map on the scale of 1/3,000,000.

Although the sub-title of the work gives promise of a complete work of reference on the Sudan, the table of contents indicates a tendency to degenerate into a tourists' handbook. The letterpress, unfortunately, more than confirms this.

When an authority like Mr. Martin writes it is natural to concentrate primarily on his examination of the financial and economic conditions under consideration. Finance, trade, customs, taxation all have their place, but there seems to be a certain meagreness of facts which makes the result rather thin and unsatisfactory.

In a serious work of nearly 600 pages Finance is dismissed in some twenty. The gist of these is that Egypt had incurred up to the end of 1912 an expenditure of £E.3,761,035 on the Sudan, and as Mr. Martin very

justly observes this expenditure has rendered secure to Egypt the water that is her very life-blood. This is a point on which a good deal more stress might be laid. To those who recall the early financial struggles of the Sudan it would probably not seem in any way cynical to suggest that the expenditure had been incurred not with the idea of bettering the Sudan (that easy appeal to the softer sentiments), but for the purpose of securing a revenue which depended chiefly on the success of cultivation in Egypt, and it was necessary first of all to secure the frontiers and secondly to establish such a state of peace in the Sudan as would enable the waters of the Nile to be exploited—for Egypt. The question of debt may then assume a somewhat different complexion, and indeed an actuarial examination of what Egypt owed to the Sudan for the unrestricted use of the waters that flow into it would be an interesting and impressive calculation. In the chapter on Irrigation, pp. 319 foll., Mr. Martin indicates the great value that irrigation works in the Sudan can be to Egypt, and since these matters have been very much before the public recently, it may not be altogether inept to suggest that there may be a point of view that has been lost sight of in the prospective of latitudes that have to be crossed before the Sudan can be reached.

In the chapter on trade (pp. 268 foll.) from a good deal of extraneous matter it appears that there is a market for agricultural implements, small machines, etc., in the Sudan, and this is indeed justified by the work that has been done recently by the Associated British Manufacturers. Mr. Martin takes a gloomy view of the prospects of cotton goods, though the facts seem to be against him. He adverts to the trade in sesame and ground-nuts and refers very briefly to the banks in the country. He has a good deal to say about gum, and considerable space is allotted to minerals, though the information to be derived is rather sparse.

The next chapter on private companies gives a brief description of the Sudan Plantations Syndicate, and a considerable reference to Suddite, Ltd., now dead. The former company is flourishing and is very deeply concerned in the Gezira Irrigation Scheme. It has now quite an appreciable proportion of the land ultimately to be irrigated under the scheme actually in cultivation by means of pumps, and it provides not only a most important educational influence in the economic welfare of the scheme, but is a successful commercial investment of a kind that should prove very encouraging to sound firms.

The chapter on Irrigation (pp. 304 foll.) is fortunate in including a description of the Gezira Irrigation Scheme written by Mr. Martin and previously published in *The Times*.

As stated above, the book contains a brief note on each department and on each province. These contain a great deal of matter and, in some cases, of opinion, but the work is marred by constant small inaccuracies, either of fact or of print, which must seriously reduce the value of the book as a work of reference. Without attempting to correct every error it should suffice to give examples of the kind of inaccuracy referred to.

For instance, the final paragraph on page 127 refers to various places Yeirab, Tei, and Libago. There is a village and district known as Yei, and Libogo is a township on the Congo side of the border, and presumably reference is made to them. In the Chapter on Police (pp. 150 foll.) the writer has not grasped the system of administration. Throughout the country the police are under the Governors and District Commissioners, and they administer the police, through the Mamurs and Sub-Mamurs. It is usual for the Sub-Mamur to be the man who is directly in charge of police. The Director of Stores and Prisons deals with all kit and equipment of police, and for this purpose is called Director of Police, and has under him the necessary staff. In some of the larger towns, such as Khartoum and Port-Sudan, it has been found convenient to put the police under one or more Superintendent instead

of the Sub-Mamur, as police work in these towns requires specialization, and the sub-Mamur is already fully occupied in other matters. The chapter ends with a misprint "innua" for "emma," a glaring instance of careless proof reading or inaccurate record.

Inasmuch as the Sudan is little known and this book gives to anyone who has no knowledge of the country a general impression of it, it has a certain value; but it is very much to be regretted that so considerable a compilation should be brought down to the level of journalistic hackwork by the inclusion of obvious padding, of personal opinion on matters not germane to the subject and by inaccuracies and mis-spellings, and a very great deal of revision and correction will be necessary before it can be looked upon as the standard work on the Sudan.

ANCIENT TEXTILES:

"Victoria and Albert Museum, Department of Textiles: Catalogue of Textiles from Burying-grounds in Egypt. Vol. 1. Graeco-Roman Period." By A. F. Kendrick (London: H.M. Stationery Office. 5s. net)

It is probable that the Graeco-Roman period in Egyptian history makes less appeal to the average Nile tourist than do the earlier periods of unmixed, or comparatively unmixed, Egyptian culture; but to the student at least it is as full of interest as, and no less important than, the best of the purely Egyptian days. As this catalogue of textiles illustrates very clearly, life beside the Nile in Graeco-Roman times was in many respects very similar to life in Rome or Constantinople, and assuredly the art there was influenced far more by the art of the metropolis than by that of Egypt, whether of its own time or of the old dynasties. Comparison of a painted portrait from one of the later cemeteries with the carved or painted work of earlier days, for instance, will show at once what a difference there was both in the aim and in the execution of the artists of the two periods.

It is to Egypt that we look to provide us with the greater part of the material for studying some of the arts of other peoples as well as of its own. Thus, Mr. Kendrick informs us in the useful General Introduction which he contributes to this Catalogue that: "there remains hardly a vestige of the actual stuffs from any site beyond the limits of Egypt." The explanation of this fact lies, of course, in the splendid climate and in the custom of placing cemeteries in the dry desert, the land subject to inundation being too valuable to use for that purpose. Anyone who has been present at excavations at an ancient cemetery on the edge of the desert will know how wonderfully preserved are even delicate objects in such conditions. Those who have had no such opportunities of obtaining evidence of the kind on the spot will find it in plenty in this interesting volume.

The Catalogue has evidently been compiled with great care. The illustrations are well chosen and well reproduced; and the Introduction and Notes are both practical and useful. Naturally its chief use is to serve students at the Museum itself; but it is so well done that it will be studied with pleasure and profit by others who may be unable to visit the Museum. It would be omitting to give credit where credit is surely due if we failed to add that the printing and paper are both excellent. We recommend all our readers who are interested in Egyptology to study the book for themselves. (Copies can be obtained from H.M. Stationery Office, Imperial House, Kingsway, W.C.2.)

THE ANGLO-EGYPTIAN UNION.

The first meeting of the Anglo-Egyptian Union was held on March 23 at the Society of Arts, Adelphi, W.C., Sir Henry McMahon presiding.

The Chairman moved the following resolution:—"That the meeting of the Anglo-Egyptian Union founded to promote friendly relations between Great Britain and Egypt, welcomes the recent declaration of His Majesty's Government, as an earnest of their desire to reach a satisfactory settlement of outstanding questions in consonance both with Egyptian aspirations and the interests of Great Britain, and conveys to Lord Allenby the assurance of its warmest support." (Applause.) In doing so he said that the Anglo-Egyptian Union dated its origin from that black hour a few months ago when all hope of a satisfactory settlement of the Egyptian question appeared to be at an end, when Lord Milner's mission had come to naught, and Adly Pasha had returned dispirited to Egypt. At that time in England the utterances of public men had indicated the prevalence of an appalling ignorance of the relative position of the two countries. Even a leading statesman was reported to have thought that Egypt was a long established British possession, and that Egyptian Nationalists were but rebellious British subjects; while in Egypt there was an ever-decreasing faith in our friendship and good intentions, and all recollection of the past good services of England were being lost in the heat of nationalist agitation. The Society had been founded to encourage the moderate party in Egypt, to educate people here as to the facts of the case, and to produce the atmosphere necessary for the consideration of a proper and lasting settlement. Since its formation, Lord Allenby had come to England, and taken back to Egypt a settlement which at the moment was in the course of coming into effect. The Society welcomed the settlement as opening once more the door to the adjustment of the mutual needs of the two countries; and its work would not come to an end with the establishment of cordial relations between them. Egypt had many problems to solve—of health, education, agriculture, irrigation and many others; not to mention the problems of scientific research in which she had already done much more valuable work than was commonly supposed—and in all these problems a non-official association such as the Anglo-Egyptian Union could often be a more valuable means of communication of needs and requirements than any State or Government agency could afford.

Dealing then with the position of Egypt during the war, the Chairman said that at the outbreak of war that country was a Turkish protectorate. When Turkey joined our enemies the position in Egypt became anomalous and had to be regularised; and the declaration of a British protectorate had been a wise step and as much in the interests of Egyptians as in our own. Whatever may have been the change in Egyptian opinion since the war he could, from personal knowledge, vouch for the fact that, except for a few pro-Turk and pro-German agitators, Egypt not only gave a favourable acceptance to the Protectorate, but did everything in her power to assist Great Britain and her Allies in the prosecution of the war. She gave, not only material assistance, but kindly sympathy also.

Sir Rennell Rodd said that he had never seen any reason to modify his opinion formed at the time, that the conclusions arrived at by the special mission were sound. They proposed an arrangement which was equitable, inasmuch as it involved the fulfilment of our undertakings towards Egypt, and advantages to ourselves, inasmuch as it assured us an establishment permanently in a friendly Egypt on imperial lines of communication. But apparently those recommendations had been too drastic for immediate acceptance by public opinion here, which had come to think of Egypt as incorporated in the elastic circle of the British Empire—a view which had never been accepted in Egypt, and never could be acceptable there.

Dr. D. G. Hogarth traced the growth since 1882 of that deep distrust now evident in the attitude of Egypt with regard to our intentions and our present position in the country. He said he would like to see some arrangement now come to by which we had a clear situation, something logical and legal. It was vital to the British Empire that we should have a *piéd à terre* in Egypt, and from that a right of re-entry. Would it not be possible to have some portion of Egypt territory near the seaboard and canal leased to us, in which we should have an actual claim! The rest of Egypt could be left to be run by its own people so long as the condition of the country did not become a crying scandal. We should thus get rid of the atmosphere of make-believe, makeshifts and unavowed restrictions which caused so much danger and difficulty.

Lord Meston spoke of the influence of the Egyptian situation on the Indian Mohammedan community. He said we should not be turned aside from the path we hoped to pursue by the fear of its increasing our difficulties in India; the way we could best serve the cause of Indian Mohammedans was by strict justice towards Islamic communities, and the observances of obligations. He believed that if justice and generosity were shown a chord would be touched in the heart of every Indian Mohammedan.

Mr. R. C. Hawkin said it was essential there should be formed a body of men to express the view that Lord Milner's policy was right. It was to be hoped there would be an early calling together of a Legislative Assembly—a body elected in the way suggested by Lord Cromer might speak on behalf of Egypt. Once elected, we should have no hesitation in accepting their representative men to negotiate outstanding points affecting British interests. The resolution was carried unanimously.

Sir Valentine Chirol moved a vote of thanks to the Chairman, and this having been accorded, the proceedings terminated.

PERSONAL AND GENERAL.**To-Day.**

March 30 (New Style).

March 17 (Old Style).

Shaban 1, 1340 A.H. of the Moslem Calendar.

Nisan 1, 5682 of the Jewish Calendar.

King Fuad has given £6,000 to the poor of Cairo.

Moussa Kazim Pahsa, President of the Palestine Arab Delegation, has left for Paris.

Sir Thomas and Lady Bennett have returned from India to 38, Hans Place, S.W.

M. Vladimir Milanovitch, Secretary at the Yugoslav Legation, is back in town from Paris.

The University of Athens has decided to confer the degree of doctor *honoris causa* upon Dr. Georg Brandes.

The Earl of Ronaldshay was accorded an ovation on March 23 on his final departure from Calcutta.

M. Nicolas Vladesco, who was Secretary at the Roumanian Legation, has now left London for France.

The Afghan Minister has taken 25, Knightsbridge, as the Legation.

Major-General Sir John Davidson arrived at Marseilles last week from Bombay, on his way to London.

Sir Louis Kershaw has returned from India and resumed his duties at the India Office.

Prince Ghika, the retiring Roumanian Minister to France, and Princess Ghika, left Paris on Sunday for Bucharest.

According to information received by the Serbian Legation, the marriage of King Alexander and Princess Marie of Roumania will take place on June 1.

M. Pashitch, the Prime Minister, and the Minister for Foreign Affairs, Finance, and Public Worship will represent Yugoslavia at Genoa.

The Shah of Persia visited President Millerand last week and was received at the Elysée with military honours.

Commander Jean Bouboulis, Naval Attaché to the Greek Legation, and Madame Bouboulis left London last week for Paris.

Lord and Lady Allenby left Cairo on March 21 for Khartoum and the Sudan, where the High Commissioner will spend a month on his annual tour of inspection.

The Sirdar, Sir Lee Stack, who is Governor-General of the Sudan, left for London last week in order to discuss the final arrangements for the Sudan Loan.

According to arrangement, the King was on Tuesday to receive the Roumanian, Afghan, and Yugoslav Ministers, for the presentation of their Letters of Credence.

The engagement is announced of Brigadier-General F. C. Nisbet, D.S.O. (late of The Gloucestershire Regiment), and Helen Agnes, daughter of the late John MacFarlane, Indian Civil Service, of Invermay, Wimbledon.

The Rev. W. D. Monro, Assistant Master at Winchester College, has written a play on the introduction of Christianity into Armenia and Georgia in the Third Century. It will be produced at Winchester on three successive days in June next.

King Fuad has conferred the Grand Cordon of the Mohamed Ali Order on Sarwat Pasha, the Egyptian Premier, and the Grand Cordon of the Order of the Nile on five others. The Grand Cordon of the Kamel Order is conferred upon Zeinab Hanem, the wife of Adly Pasha.

The King has granted to Mr. Sydney Armitage Armitage-Smith, C.B., licence and authority to wear the Grand Cordon of the Order of the Lion and the Sun, conferred upon him by the Shah of Persia in recognition of valuable services rendered by him as Financial Adviser to the Persian Government.

The engagement is announced of C. H. O. D. Burrell, M.C., 2nd Battalion, Leicestershire Regiment, Staff Captain, Delhi Brigade Area, third son of Mr. and Mrs. T. H. Burrell, of Liverpool, and Dorothy, youngest daughter of the late Mr. W. E. Adie, of Derby, and Mrs. Adie, of Buxton.

A marriage has been arranged and will shortly take place between Major Rowland P. S. Elderton, late A.S.C., Assistant Financial Secretary, Sudan Government, youngest and only surviving son of the late Major-General Arthur Elderton, and of Mrs. Elderton, 10, Cornwall Mansions, Kensington Court, W., and Gladys Maud, only daughter of Mrs. and Mrs. M. W. Hervey, East Bilney Hall, Dereham, Norfolk.

A marriage has taken place in London, by licence, between Francis Evelyn Massy-Dawson, Captain R.N. (retired), D.S.O., Commander of the Crown of Roumania, Chevalier of the Legion of Honour, and Officer of St. Stanislas, eldest son of the late Francis Staunton Massy-Dawson, of Merrion Square and Herbert Street, Dublin, and Ebie, widow of Captain Herbert Algernon Adam, R.N., C.B.E., Commander of the Crown of Italy, of The Chillies House, Crowborough, and elder daughter of Lieutenant-Commander S. James Johnstone Bey, R.N. (retired).

THE PERSIA SOCIETY.

The programme of the Persia Society, 74, Grosvenor Street, W.1., includes lectures by Major W. L. Meade on Khuzistan and Fars, by Sir Percy Sykes on Cyrus the Great, by Dr. Donald Carr on Reminiscences of 28 years in Persia, and by Professor E. G. Browne, Sir Thomas Arnold, Sir Wolsley Haig and Mr. Victor Mallet on subjects to be announced later. Particulars regarding membership may be obtained from the Honorary Secretary.

ROYAL GEOGRAPHICAL SOCIETY.

At the meeting of the Royal Geographical Society last week the president announced that the King had been pleased to approve the award of the Royal medal as follows:—

The Founder's Medal.—To Lieut.-Colonel C. K. Howard Bury, D.S.O., for his distinguished services in command of the Mount Everest expedition of 1921.

The following awards have been made by the Council:

The Victoria Medal.—To Mr. J. F. Baddeley for his great work on the historical geography of Central Asia.

The Back Grant.—To Khan Bahadur Sher Jang for his surveys on the Indian frontier and in adjacent countries.

The Gill Memorial.—To Mr. A. A. R. Boyce for his triangulations in the Sudan.

EGYPT AND SUDAN HONOURS.

The King has given orders for the following promotions in, and appointments to, the Order of the British Empire (Civil Division) for services in connexion with Egypt and the Sudan:—

K.B.E.

Maurice Sheldon Amos, Judicial Adviser to the Egyptian Government.

George Beeton Alderson, formerly a leading member of the British community at Alexandria. A generous supporter of the Victoria College and many other British institutions.

C.B.E.

J. F. Lees, M.D., C.M., Director-General of Public Health; A. C. McBarnet, O.B.E., Judge of the Native Court of Appeal; H. W. Molesworth, Assistant Under-Secretary of State, Ministry of Public Works, Cairo; R. S. Patterson, Civil Adviser to the Egyptian Ministry of Education; R. Rolo, O.B.E.

O.B.E.

G. C. Delaney, Reuters' Agent in Egypt; W. Gillman, General Manager to Messrs. Thomas Cook and Son (Egypt), for valuable services to H.M. Forces; A. Jackson, Stevedoring Contractor at Alexandria, for valuable services to H.M. Forces; W. M. Logan, M.B.E., Director of Stores, Egyptian State Railways; H. Mason, M.B.E., of the Egyptian Ministry of Agriculture (late Major, R.A.V.C.).

M.B.E.

Miss M. B. James, for services to the Arab Bureau, Cairo; Raoul Biancardi, of the Egyptian Ministry of Finance; Sub-Inspector Hakim Said Hassan, of the Indian Police.

APPOINTMENTS AND PROMOTIONS.

M. Franche has been appointed Chancellor to the Roumanian Legation.

The King approved the appointment of Major George Croker Bayly (Commissioner of Nicosia) to be a member of the Executive Council of the Island of Cyprus.

M. Michel B. Boeresco has been appointed Roumanian Roumanian Envoy Extraordinary and Minister Plenipotentiary to Berne.

Viscount Peel has appointed Mr. S. K. Brown, of the India Office, to be his Principal Private Secretary, and Mr. R. T. Peel of the India Office, to be his Assistant Private Secretary.

At a meeting of the Senate of the University of London last week, Dr. R. W. Seton-Watson, D.Litt. (Oxford), D.Phil. (Prague and Zagreb), was appointed as from April 1 to the University Chair of Central European History, tenable at King's College.

Earl Winterton, M.P., Parliamentary Under-Secretary of State for India, has appointed Viscount Ednam, M.P., M.C., to be his Parliamentary Private Secretary (unpaid) and Mr. J. G. Laithwaite of the India Office to be his Private Secretary.

OBITUARY.

The death occurred last week of Mr. William Beauchamp Heard, of His Majesty's Levant Consular Service. Mr. Heard, who was in his forty-fifth year, was appointed a Student Interpreter in the Levant in 1900. His varied experiences included service at the headquarters of the Central European Expeditionary Force. He was subsequently appointed Commercial Commissioner in Bulgaria, and his latest appointment—"to be His Majesty's Consul in the Delta of the Nile, the Province of Galioubieh, Dakahlieh, Menoufieh, and the Charkieh, and the whole of Upper Egypt, the 22nd parallel of North Latitude, excluding the maritime portion of the Mudiria of Kenh, to reside at Cairo"—was gazetted but a few weeks ago.

THE PERSIAN NEW YEAR.

The Persian Minister was at home on March 21 at the Persian Legation, 47, Biamham Gardens, to celebrate the Persian New Year. A selection of orchestral music was played during the afternoon, and the large attendance included among many others:—Prince Anowshiravan, Mirza Salour, Lord and Lady Lamington, Baron de Nordwall, Brigadier-General Sir Percy Sykes, Lieutenant-Colonel Sir Arnold Wilson, Sir Vincent Caillard, Constance Lady Boyle, Sir Hugh Barnes, Sir Charles Greenway, Sir Harry and Lady Foster, Begum Shansha, Mme. Ispahani, Mirza Mohammed-Ali Khan, Counsellor of the Legation; Mr. F. Khan Noury, Colonel Bousquet des Champs, Mlle. Bousquet des Champs, Mrs. Nicholas Treinn, Mr. E. J. Heinz, Persian Consul at Cardiff; M. Darab Khan, Mme. Rostamdji,

the Rev. Arthur Browning, Mr. and Mrs. Caesar Hawkins, Mirza Reza Khan Hariri, Colonel E. Mossberg Swedish Military Attaché; Mr. B. W. Stainton, Colonel Stokes, Professor and Mrs. Browne, M. Kassim Ghassemzade Kassimoff, and Professor G. Hagopian.

The many members of the Persian Colony present included M. Kassim Zadeh, M. Tabriz, and M. Sifollah Khan.

NEWS IN BRIEF.

According to a message received from the Greek Legation, an official telegram has been issued from Angora stating that provisional estimates passed by the National Assembly at Angora involve the suppression of the tobacco *regie* as from March 1.

Gandhi's arrest was celebrated in Calcutta by a bonfire of foreign cloth at the conclusion of a public meeting, held under the auspices of the Burra-Bazar Congress Committee.

Anzac Day (April 25) is to be observed as a general holiday in Australia.

BABYLONIAN RELICS.

Dr. H. R. Hall, in a lecture before the Egypt Exploration Society on "The British Museum Excavations in Babylonia, 1919," at Burlington House recently, described some work that he had undertaken in Mesopotamia at the end of the war, while our forces were in occupation. At Shahrin and elsewhere he found temples, towers, houses, streets, and tablets of about the time of Nebuchadnezzar. Some of the most interesting finds occurred at Tel el Obeid, where the relics included copper animals with golden horns, the copper filled with a core of bitumen.

Where to stay in the East.

CAIRO.

THE CONTINENTAL-SAVOY

THE MOST UP-TO-DATE AND BEST SITUATED HOTEL IN CAIRO.

NEW PHASES OF THE INDIAN LAND QUESTION.

We referred on more than one occasion last year to the opening stages of the campaign designed to improve the position of the tenant-farmers of Oudh. The results so far attained have been disappointing. The great landholders found no worthy leader, and, being assured of a temporary majority in the local legislature, insisted successfully on the maintenance of their privileged ascendancy. Some concessions indeed were made, but the tenants' substantial demands are still unsatisfied; the continuance of a vigorous agitation seems now to be assured; and the probabilities are that, after the next election, the landholders will be forced to surrender much more than would have sufficed to bring about an amicable and desirable adjustment. We do not propose to deal with the highly technical details over which the discussions have ranged, for the Oudh agrarian system stands by itself, and even now we question whether its fundamental features have been grasped by many of the politicians who took part in the recent debates. Our object is rather to direct attention to a fact of much wider significance. Not merely in Oudh, but throughout India as a whole, the land question is forcing itself to the front; economists and politicians alike are beginning to ask whether the existing system is as stable as it looks; and, underlying the confident polemics of the champions on both sides, there is increasing uncertainty whether institutions based on the theories of the nineteenth century will continue to meet the requirements of the new India which has sprung so quickly into existence. Among those requirements, the most obvious and pressing is the need for a large increase in the national income, and, while much may be hoped for from development of the country's mineral wealth, accompanied by the establishment of many new industries, there is now general recognition of the fact that the land must remain the principal national asset; wheat and rice, fibres and oilseeds, must continue to form the main items in the stream of wealth by which India lives; and the country as a whole cannot afford to tolerate any avoidable inefficiency in the production of these commodities.

Now, there is a large amount of inefficiency at the present day. It is true that in recent years the administration has done much for the improvement of agriculture; it is no less true that it can do much more; but these efforts may be largely sterilised by indolence, apathy, or lack of skill on the part of the cultivators, and the problem which is now forcing itself to the front is how to ensure that the land shall be in the hands of the men who will make it yield the most. It is by this criterion that the existing systems of tenure must in future be judged. The common feature of these systems is the favour shown to the man in possession, whether he be a rent-paying tenant, or a peasant holding directly from the State. The conditions prevailing in the last century, and notably the rapid growth of competition for land, made it necessary to secure the peasants against arbitrary displacement, and the measure adopted with this object included the recognition of hereditary rights: it is round the question of these rights that discussion in the near future is likely to range, and in our opinion it is desirable that the question should be faced at once, for the drawbacks inherent in the hereditary system are becoming more and more prominent. For one thing there is the certainty of

progressive *morcellement*; a holding is constantly split up among several heirs, and, from being a unit capable of economic management, becomes a number of fragments from which the holders can barely derive a living. This certainty again is the principal obstacle to the realisation of a national policy of consolidation of holdings, the great organic reform on which nearly all future agricultural progress must depend. The need for consolidation has won widespread recognition in the last few years, but no reply has yet been found to the objection that the effort will be wasted if the new compact holdings are promptly to undergo a fresh fragmentation, reproducing in the course of a few years the evils which it is desired to eliminate. Apart from *morcellement*, there remains the uncertainty of succession. An incompetent son often succeeds a competent father; and, while he is exhausting the capital inherited, the land is badly tilled, and the national income is so far reduced. All the time there are competent men ready and eager to take over the land, whether neighbours whose success justifies an extension of their enterprises, or labourers with the grit and skill to rise to a higher position; on the one hand the land is wasted by neglect or incompetence, on the other ability is wasted for lack of opportunity. In this connection it must be remembered that in India the drift to the towns is only just beginning; the man who is denied an opportunity of rising still usually remains on the land, but the movement is bound to develop with the growth of industries, and as the attractions of alternative forms of employment increase, the tendency will be to drive enterprise off the land, and leave it in possession of men who are fit for nothing else. It is true that the agricultural population can be reduced with advantage to the country as a whole, but it would be a disaster for India if the reduction were to be effected in such a way as to diminish the efficiency of those who stay; the land can spare many hands, but it needs a corresponding improvement in the supply of brains and energy.

In the national interest then a strong case can be made out for a reconsideration of the hereditary system as applied to Indian land-tenures. Its application gave security indeed at a time when security was the most immediate need, but its continuance makes at the most for stagnation, and may well lead to eventual impoverishment. To say this, however, is not to pronounce a final verdict. Adequate security of tenure for the individual is, and must remain, the first condition precedent of successful agriculture, and the advocates of any change must be prepared to show that their proposals comply with this requirement. The hereditary principle has struck its roots deep in the soil of India, and it is significant that the recent struggle in Oudh centred on the attempt to extend its range; before it can safely be discarded, or even restricted in its operation, some adequate substitute must be forthcoming, and it is from this standpoint that the subject should be approached by the statesmen and administrators of the present day. The question is by no means ripe for legislation, but its serious consideration is overdue. Nearly a decade has been given to the elaboration of political machinery, and for the time being the larger economic problems of the country have necessarily received inadequate attention; but during these years India has not been standing still, and there is not much time left for serious study before the call to action may come. The questions to be answered are as intricate as they are important. The whole future of the country requires that the land should be in the hands of the men who can use it to the best advantage: the incompetent must be speedily and automatically eliminated; and the promotion of the exceptionally competent must be assured. Can these conditions be reconciled with the maintenance of the hereditary system in any form? If not, what practical alternative can be suggested, which shall provide the necessary freedom without sacrificing the still more necessary security? That to our mind is the problem which now requires consideration. The nineteenth century gave stability to Indian agriculture; to-day the need is for a system which shall combine stability with the necessary elasticity.

THE WELL CLEANERS.

A Morning in Koweit.

By *Baduiyah*.

It was last Friday morning, I was just finishing breakfast; my Baduin factotum had gone off for the day, after performing her light tasks; the cry: "Jilba no!—Jali—ib!" rang out at our crossroads. I knew the well needed clearing out, for that morning my bath was scanty and slightly turbid, but alas I had also experienced several encounters with the local sharks who "sweep" wells, and so I was apprehensive. Dare I? Yes—why not tackle the little adventure, for the first time, alone. Snatching up an Arab cloak, on opening the gate I encountered a pack of schoolboys: "Call back those well-scrapers," I insinuated with an engaging smile. Off darted one boy; then the whole pack yelled to the men in chorus until they turned towards us, when the youngsters promptly swarmed

A Schoolmaster of Koweit.

round my gate. At another time I might have let them in, but not just then. To my relief in the circumstances—and one may add to my pride in my local friends—no breath of "Backsheesh" was discernible, and the lads withdrew, as the blind well-cleaner was led in by his small son, and followed by a grey-haired old man, who was not blind.

So far so good: on previous occasions when my well had been cleaned, both men were blind, which was risky. They said they would inspect the well before committing themselves to an estimate, thereby meaning that they would be assured that the water was sweet and the well not exhaling dangerous gases,—a condition of affairs which causes several deaths in the town nearly every year, and is duly dreaded. So I drew up a bucket of water for them. Each man solemnly smelt and tasted it,—yes, it was fresh and clean. Now for the fray! The blind man manoeuvred to persuade me to name the first sum. I fenced, laying the onus upon them. The old man, throughout our negotiations, remained silent, evidently enjoying the situation. Apparently my accent struck the sightless one for he hesitated in the middle of a sentence. "But—what is your creed?"

"I am of the People of the Book," I replied.

"The Jews and Nazarenes!" His lip curled, and he gazed upwards piously. Instantly I was on my dignity, and the older man looked apologetic.

"Truly," I deliberately explained, "the Books of the Jews and Nazarenes came by Jewish prophets, who were their guardians, but not their owners, the Books are for the whole world, and the Table* says: 'Ye stand upon nothing until ye establish the Law and the Gospel.' Now as for me I observe them, but I see not that ye do so."

Our friend looked the tiniest bit nonplussed, and hastily plunged into a list of local celebrities whose wells he had cleaned at the price of Rs. 2.† In his list was the name of my neighbour who, I felt quite sure, had not paid that sum.

"I will do your work at the price they paid. Ask them," he wound up triumphantly.

"It shall be even as you say," I replied, "let us go and ask our friend the Mullah."

"But first agree to my price," he insisted dictatorially.

"Nay, ask me not to change your judgment, we will ask the Mullah."

A Street in Koweit.

"So be it," he agreed, and we all moved to the gate. But instead of passing out the little party settled themselves squatting down just inside, saying, "You go." I saw nothing for it but to acquiesce, so slipped in to my neighbour's compound and enquired of the Mullah's wife what they had paid.

"No one has cleaned our well for years," was her illuminating reply. "The Mullah's son sees to that, a friend helps him to clean it when necessary."

I hastened back, dangerously inclined to be annoyed. "Oh," said the professional, unperturbed: "I referred to another Mullah of the same name who lives at the other end of the town!"

I turned to the old man quite gravely: "Perchance old age will comprehend and justify me: listen! A

* Quran, chapter V.

† The price my Arab friends pay for clearing sand or mud sediment from a well such as mine is 8 to 12 annas.

ASK FOR

WHITE HORSE WHISKY

BY APPOINTMENT.

stranger coming to your town and paying more than current prices, demoralizes your market. I would not bear that guilt."

At this moment the post boy called with a mail; as I turned it out of the bag, he valiantly upheld my cause. He is probably Persian, an Arab would hardly have done so. But the mail was my undoing, or, if you will, it saved the situation. I stood back and announced pompously:

"The postman now witnesses that I have protested against spoiling your market, if you persist in an exorbitant price, the blame is upon you, not me. I seek not a rupee, but honourable dealing."

Loud were the protestations that all sin of our transaction should rest for ever on the blind man's shoulders—so I relented.

"But where is your rope?" I asked. (I knew it is usual for well cleaners to carry their own).

"We will sit here outside and the boy will fetch rope and bucket—we have all."

So I closed the door and went to my mail. Hardly had I sat down before: "Bang—bang—bang," at the door, although at the first knock I shouted: "All right!" They were back.

A Coffee-House Koweit.

"Oh! we borrowed a rope from a house quite near, but will use your bucket."

Now my bucket is useless for such work, being far too large, so off I went to borrow one from the Mullah's house. The baby was fractious, so I rocked her while 'Mrs. Mullah' went for their bucket. When a sister of some nine summers appeared, I went round to the well. The rope was firmly fixed at both ends. Each of us tackled one end and we had a race to see who would undo their end first. Mrs. Mullah won, and off I went with the bucket.

The cleaning passed off without incident, the old man filling the bucket at the bottom of the well, the blind man drawing it up, and the boy emptying it a few yards from the well. I peeped at them once or twice, otherwise buried myself in the mail. Just over half-an-hour after they had started work the lad called me to inspect, and the blind man triumphantly splashed the bucket up and down to show how deep the water had become. The old man, who had only just scrambled into his shirt, said the water was half way up his thigh in depth.

"Now for breakfast," said the blind man in a matter-of-course tone.

"Ask for some dates," the old man said to him under his breath.

"No, we'll have breakfast," was the low rejoinder. I slipped indoors for the padlock, meaning to close the outer gate as I returned the bucket. Seeing me go, someone said in a delighted voice: "She's going to get it for us!" When they saw me appear cloaked and veiled there was some consternation, but to the Badu's denunciations—for the blind man proved to be of the hawk-like Baduin—the old man replied

soothingly, "Well, she's given us Rs. 2." I edged them towards the gate, unfortunately forgetting to give the laddie a few sweets; he had behaved well and worked well.

The Badu was still grizzling about breakfast, and just before crossing the threshold made another appeal for it, to which I demurely replied:

"Would you have me lay this bucket about your head? For I suppose that I might do so were you not blind."

The mischievous delight on the face of the kindly old man I shall not soon forget. But the master-shark delayed not to retire.

And so ended a little incident of life in the Middle East. But I fear that these small happenings are too insignificant to deserve the interest of busy people in London.*

(The photographs from which our illustrations are prepared are by the Rev. E. Calverley, Koweit)

* Arabs often designate the country of the Inglis "London."

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

Egypt and Zaghloul Pasha.

The *New Statesman* of March 18 has a note upon the recent debate in the Commons upon Egypt, and after remarking that the opposition was directed not to the principles of the Government's policy, but mainly to the personality and position of Zaghloul Pasha, it says:—

The partisans of Zaghlul are, of course, right in protesting against ignorant and spiteful attempts to vilify him, and they are entitled to hold the opinion that until he is recalled from exile no genuine step forward can be taken in the freeing of Egypt. We do not hold that opinion ourselves. We believe that the effort will be made by Lord Allenby and the Egyptians with whom he is working, and that there is a good prospect of success. If they are convinced that the prospect of success will be spoilt by the return of Zaghloul, we may regret it; but we are not prepared, on present evidence, to question either their good faith or their judgment. A national leader, as we know well enough from contemporary history in other parts of the world, can in certain circumstances be a national danger. The next step, now that the Protectorate has been abolished and the Sultan has been proclaimed King of Egypt, is the holding of an election, which, as has been unequivocally stated, will be free from the trammels of martial law. After that, there will remain the all-important business of negotiating the Treaty of Alliance that is to settle the "reserved matters." In these negotiations, with, or without Zaghlul—and we hope that by that time it will be with Zaghlul—the Zaghlulist party will evidently play a dominant part, if its strength is so overwhelming as it is claimed to be.

Britain and the Near East.

The *Saturday Review* of March 18 says that the heart of the business of the Near East Conference at Paris is "to constitute, or reconstitute, a definitive Turkey," and continues:—

Very nearly everybody agrees that the Sèvres Treaty must be revised. Reports are current that fighting has broken out again between the Greeks and the Turks, and a prompt settlement is urgently necessary. In this connexion we note that Mr. Montagu, in his now famous speech, said that he had never been able to understand from what motive the Prime Minister's pro-Greek policy was dictated. "I do not believe it is in the interests of the Greeks," averred Mr. Montagu; "I do not

know in whose interests it is. . . . Well, I suppose one day we shall understand the motive." Apart altogether from the innuendo these words unmistakably convey (and the name of Sir Basil Zaharoff was not so much as mentioned), we would simply say this: For our part we are sick and tired of a pro-Greek or a pro-Turk policy; what, in our view is required is that, while being fair to others, the policy of this country should in this, as in other things, be a pro-British policy. It is high time that this was said, nor do we believe that in the view of the world Britain loses by a frank statement to this effect, but immeasurably gains.

The Times of March 22, in an article entitled "The Near East Conference," words its concluding paragraph thus:—

The great unrest in the Middle East is the problem with which the Allied Governments now have to deal firmly and wisely in Paris. Instead of the vivid impression of Lord Allenby's triumphal advance, the Allies have as assets now a small garrison at Constantinople, a Greek Army in Asia Minor that has become less a protection than an embarrassment, and whatever wealth and moral influence they may still possess after all these exhausting and spendthrift years. The Allies were imposingly united at the moment of the Armistice. They have been in sharp conflict since over this very Near East question. It is imperative that they should be united now, when at last they appear seriously to be attempting to make peace. A great part of their task will consist in trying to find a way out of the tangle of their own errors and their own divisions. Our own Government, who have done so much by their futile and incomprehensible policy to wreck the position of Great Britain in the Near and Middle East, have in the impending Conference a heavy debt to repay to the people of this country. We cannot approve of the separate action taken by the French in concluding the Franklin-Bouillon Agreement with the Angora Government, and so creating the impression of disunity among the Allies; but the long persistence of our Government in their error of encouraging excessive Greek ambitions is largely responsible for the present grave situation. Fortunately it appears to be recognized now that the Greeks must evacuate Anatolia, and it is to be hoped that in Paris such provision will be made as to secure the evacuation's being carried out systematically in an orderly manner under Allied supervision with a gradual re-establishment of Turkish administration, and with a firm avoidance of any danger of vindictive destruction by the retreating Army. On the other hand, the nature of the obligations of the Allies to Greece and the effects of the withdrawal from Anatolia on the Greek political situation must be very carefully taken into account. All possible guarantees must be secured for the protection of the Christian minorities, though it must be admitted frankly that the only real guarantee lies in the conclusion of a fair and satisfactory peace. The attitude of Mustapha Kemal to the Sultan-Caliph must be made clear in the interest of civil peace in Turkey and of those Mahomedans throughout the world who recognize the Sultan as their religious head. We do not place excessive hopes on the Paris Conference, but the people of this country will be gravely dissatisfied if Lord Curzon does not return with the draft of very definite agreed proposals that can be regarded as the basis of a real Allied peace with a united Turkey.

The New Statesman of March 18 attempts to deal in radical fashion with "The Problem of the Near East." It begins by saying, quite categorically, that the Treaty of Sèvres must be modified out of all recognition. It then sketches the steps by means of which we have, so it says, lost all our friends except the Greeks, and bluntly proceeds:—

In all the circumstances, we can see but one policy open to us, which is to put the Treaty of Sèvres in the waste-paper basket and make a new one. What the full Turkish demands will be is not yet certain. It is probable that they will be exaggerated, and we do not suggest that everything that Mustafa Kemal asks ought to be granted. But the main points on which concessions must be made are clear enough. In the first place, the Greeks must evacuate Asia. They never had any right in the hinterland of Smyrna, and any notion that may once have existed that they might fairly hold the town and the port, is now dispelled. They have perpetrated massacres which have shown that they have no objection when it suits them, to descending to the Turkish level, and which have made it impossible to hope for any acceptance of their rule by the Turks. And they have not even proved that they can govern well. They are entitled to all the proper guarantees for their protection, and no more than that. If the friends of Greece in this country think it hard that she should be dispossessed of Smyrna without compensation, let us compensate her by dispossessing ourselves of Cyprus. It is eighty per cent. Greek, and we have singularly little moral right there. And its restoration to Greece would result, incidentally, in the restoration of Rhodes also, since Italy has pledged herself, with frank cynicism, to hand over Rhodes when we evacuate Constantinople. It is absurd to pretend that in no other way can we make the neutralisation of the Straits effective. It is reasonable to insist on a commission of control—on which Turkey herself, however, ought certainly to be represented—and on naval and military guarantees. But it is not reasonable to demand that foreign garrisons shall sit permanently in Constantinople and that foreign warships shall cover the city with their guns from the Bosphorus.

Thirdly, there is Thrace. This is the most difficult question of all. The Turks show no sign of abating their claim to the whole of Thrace, including the "Holy City" of Adrianople. The Bulgarians, on their side, have been very badly used. The Treaty of Neuilly purports to give Bulgaria access to the Aegean through Western Thrace. But, in fact, the clause is a dead letter, and Bulgarian commerce is paralysed by the attitude which the Greeks have adopted. The occupation of the whole of Thrace by Greece is not only a rankling sore both to Turks and Bulgarians, but it is a grave danger to the peace of the Near East. We do not believe this occupation can be maintained indefinitely, and the sooner it is ended the better will it be for all concerned.

And it concludes with a consideration of other claims less difficult of adjustment:—

The Indian demand for the restoration of the Sultan's suzerainty over all the Holy Places we do not believe the Turks will take very seriously; they are concerned with more real things. On the other hand, they will insist, and rightly, on the withdrawal of the heavy hand of the Allies in respect of some of the political and financial controls created by the Treaty of Sèvres. And we on our part, shall rightly insist on the most effective guarantees for the protection of racial and religious minorities in the territories that come under Turkish rule, and equally in those that come under Greek rule. The greatest of all these minorities is Armenia, and we shall continue to hope that the promises of European and American statesmen will be redeemed by the establishment of Armenian autonomy. Finally, we would repeat what we have said many times in these columns, that a settlement of the Near East requires an honest and concerted policy on the part of the Powers. If the long rivalry of France and Britain in the Mediterranean is to continue, it will mean ceaseless strife between the Turks and Greeks. We, exhausted by the war, can only pursue our

quarrel by using them as our pawns; they have not the resources to pursue their own without our help. And strife between Turks and Greeks, with the Western Powers behind them, will clearly not be confined to the Near East and the Middle East; before many years are passed it will involve all Europe in another conflagration. The French and ourselves, with our sham co-operation, have done great mischief; we must undo it with a real co-operation.

The Arabs of Irak.

The current *Asiatic Review* contains, among other interesting articles, "An Interview with the King Faisal of Irak," by Captain A. H. Roberts, an ex-Political Officer in that country. The writer gives us what is in fact a good deal more than an interview. Like most others who have met the Emir, he is a warm admirer of the King, who, he bears witness, makes friends wherever he goes and has an astonishing gift for saying the right thing in the right place and at the right time. But, interesting as we find this part of the article, it is its concluding portion, in which Captain Roberts gives us his own views on the Arabs, which strikes us as the most valuable upon the whole. He tells us that "what we should now avoid at all costs is a further change of policy," and continues:—

The Arab cannot think by nature in the abstract; he is a child in that respect, and people who have dealings with him must be mindful of that fact if they wish to gain his confidence. Speeches and promises do not move him. He bases his judgment purely upon acts. We have now an opportunity of regaining his lost confidence in us. We had the complete confidence of the Arabs of Mesopotamia up to the date of the Armistice. If we had then done what we are now doing, that is, set up a government in accordance with our declared principle of self-determination, compatible with the economical condition of the country, and giving full play to national aspirations, there would, perhaps, not have been a revolution in Irak.

We alienated the Arabs of the river area by not giving to those Irakians who were qualified by past experience, and entitled by the positions they had held in the former administration of the country, to hold important posts, a place in our administration; and, in many cases, raising men who had held inferior posts, or none, in the Turkish Administration to positions of confidence and trust... There were many men in Mesopotamia who had held important offices under the Turkish Administration and were well fitted and disposed to work for us. These men saw their places being filled by an ever-increasing number of young officers, among whom were men, who, although picked for their good qualities, lacked administrative experience, knowledge of the language, people and country... When the revolution broke out there were no Arabs in the administration occupying positions that would qualify them to proffer advice. It was the men who might have occupied such positions who fomented the troubles and eventually brought about the revolution which cost us such an enormous amount in lives, money and prestige.

The wells of speech lie deep down in the heart. Sympathy alone will attract confidence. You cannot know a people until you know that people's language. To learn it is to acquire a new soul, for it is to see all things from a different viewpoint, and the more different the language the more different the point of view.

All our administrators should always remember the above in their dealings with eastern races. The Arab in particular is quick to respond to sympathy and confidence, especially from Englishmen in whom he has learnt to trust. On the other hand he is quick to recognise the man who is out to outwit him, and will either retire completely, or use flattery and deceit to gain his ends, according to his individual temperament. That is the type

of man we have to deal with in Mesopotamia. It will take much to regain his trust in us, but it can be done by supporting the present Irak State as we have promised.

THE IMPERIAL WAR GRAVES COMMISSION.

The annual report of the Imperial War Graves Commission, just published, states that its work is further advanced in Italy than in any other theatre of war, and there will be some 19 main cemeteries, constructional work on which, it is hoped, will be completed this month. In Egypt the work of concentrating isolated graves has been completed, except in the Western Desert and in the Sudan. It is proposed to erect a general memorial to the members of the Egyptian Labour Corps and the Camel Transport Corps. Palestine will have eight main cemeteries, Macedonia 10, Gallipoli and the Aegean 38, containing about 16,000 known graves. There are also some 20,000 soldiers with no known graves in this area, and the method of commemorating them is under consideration. Over 7,000 graves have been located and identified in Mesopotamia.

PALESTINE IMMIGRATION.

It is announced by the Colonial Office that the number of Jewish immigrants who entered Palestine during the month of January was 869, comprising 519 men, 217 women, and 133 children. Immigration is still restricted to the following seven categories:—

1. Members of professions who intend to follow their callings;
2. Persons who have definite prospects of employment with specified employers or enterprises;
3. Persons of religious occupation (including the class of Jews who have gone to Palestine in recent years from religious motives), who can show that they will have means of maintenance in Palestine;
4. Wives, children, and other persons wholly dependent on residents in Palestine;
5. Residents returning from abroad;
6. Persons of independent means;
7. Travellers whose stay will not exceed three months.

All applications from intending immigrants falling within the first four categories must now be referred to the Palestine Government for decision. The Palestine Government in dealing with every application of the kind will have special regard to the opportunities for employment prevailing at the time it is made.

NOTES AND NEWS.

Devonshire Square.
E.C. 2.

The British Trade Corporation.

Among the company reports that have been issued within the last few days are two which are of special interest in view of the negotiations now in progress with regard to a Near Eastern settlement. Both in different ways serve to emphasise how urgent the need is for the treatment of outstanding questions on sane lines which will permit the resumption of normal commercial activities in that important region. The first is that of the British Trade Corporation, which from the outset of its brief career, has confined its activities mainly to the Near East. For its first four years small but increasing profits were earned, but for the last year there was a deficit as the result of the necessity for writing down holdings and making provision for bad debts of about £200,000. The trade depression alone would have made the year a poor one, but on actual dealings a fair profit was recorded, and this unfortunate result is to be attributed to local conditions in the Near East.

Effect of Unsettled Conditions.

It is worth while to examine in a little detail the corporation's position in that region. A number of branches have been established in various regions. control of the National Bank of Turkey was acquired, and the corporation further took part in the creation of the South Russian Banking Agency which was designed to promote trade with South Russia. Under normal circumstances this organisation should have gone far to enable the corporation to realise the purpose for which it was formed, but conditions in the Near East, particularly in Asia Minor, in which the corporation is specially interested through its subsidiaries, have been such as to make it a matter of absolute impossibility to reap the fruits of commercial enterprise however well-directed. It has been a case of trade endeavour handicapped by politics. Once there is a satisfactory settlement, and it is possible once more for commerce to pursue an even tenour in Asia Minor it is obvious that there are great possibilities before the Corporation. How soon they will be realised will depend on what has been accomplished at Paris and how it is received at Angora.

The Smyrna-Aidin Railway.

The other report, that of the Smyrna-Aidin Railway, gives what may be termed a local view of the consequences of the position in Asia Minor. During the period covered only about one half of the company's system was worked, the remainder still being in the hands of the Turkish Nationalists. Political and military conditions have greatly interfered with the working of the line, and it is further pointed out in the report that no revival of agriculture or trade, on which, of course the future prosperity of the line depends, can be expected until the future Government of the country is more clearly defined. "The continued failure to reach a settlement in the Near East" the directors state

"is paralysing British trade with Turkey in general, and represents annual losses of many millions of pounds. The effects of this failure upon the railway, which is far the most important British enterprise in Asia Minor, are disastrous."

Conditions in Syria.

Encouraging reports are being received regarding the state of affairs in Syria. Transport is now much improved, the railways being again in working order, while motor services are established between most towns not served by the railway. The reconstruction of the ports has been proceeding satisfactorily, while the development of the economic machinery of the country has contributed greatly to commercial progress. In this connection special reference must be made to the Banque de Syrie which is proving a very important medium in the commercial life of the country.

An Instance of British Apathy.

A very timely plea is made by Mr. Mattheeff in a letter which appears on page 433 for the promotion of the knowledge of the English language in the Near East. As he very justly points out language is an invaluable link in the relations of nations, and the strengthening of this link between us and the Near Eastern countries is bound to have an important influence on trade relations. But as in regard to other things this country has hitherto shown a striking apathy in this matter in marked contrast to the policy of our competitors such as Germany, who before the war was untiring in fostering German institutions, and France and Italy, whose activities since the war in this direction have been most pronounced. This country, further, has not merely held aloof from such enterprise, but has actually failed to support institutions such as the English Speaking League formed by Bulgarians in Sofia in 1911, whose considerable library of English books, is due mainly to American support! It is to be hoped that henceforward a very different policy will be pursued otherwise British interest in the Near East will be bound to suffer.

REPORTS FROM OUR OWN CORRESPONDENTS.

ROUMANIA.

Bucharest, March 14.

Projected Reductions in Expenditure.

The favourable result of the elections has given the Government greater authority in starting its programme for the reduction of the State's expenditure. M. Vintila Bratianu, the Minister of Finance, who is determined to emulate the "Geddes Axe," has taken under his own control the adjustment of the budgets of the different Departments.

He is determined not only to do away with sinecures of all kinds, but will reduce the number of State officials to the possible minimum, by abolishing some of the Departments and curtailing others. He further intends cutting down the expenditure on material by postponing for next year the major part of the construction work that was intended for this year.

Non-Paraffinous Crude Oil.

A local newspaper announced the other day that on March 6 a fountain well erupted on the northern hill of Stavropoleos-Moreni—belonging to the "Unirea" Co. (Phoenix Oil and Transport Co.)—and that at a depth of 950 metres there were very violent flows of 90 to 100 car loads in a few hours. This event has aroused great interest in geological and oil circles here.

The principal characteristic of this well is that it was drilled down to 950 metres after having passed the usual stratum of paraffinous crude oil, which is generally exploited now in all the wells in Moreni, and that at this depth a very strong stratum of non-paraffinous crude oil has been found.

The theoretical consequences of this practical case are incalculable; they strengthen from the geological point of view one of the two theories which are actually considered in reference to the origin of the crude oil.

The first theory, sustained by Prof. Mrazec, asserts that the oil is of organic origin, his theory being thus limited to certain well-determined geological strata. The second theory, sustained by Prof. Popescu-Voitesti, gives the oil an inorganic and thus more profound origin. According to this latter theory, the deeper the well drilled, larger and more intense anticlines will be found and thus the more certain is it that stronger strata of crude oil will be found. If for example we take the classical petrol region of Bustenari, where all the wells are being exploited at a comparatively small depth, it should be enough to deepen below the salt strata to find in all probability eruptive strata. At small depths Bustenari did not give any flowing wells; at greater depths fountain wells would be very probable. According to M. Popescu-Voitesti's theory it would result

that in regions where the wells are exhausted or even flooded, immense reserves of the precious combustible are to be found deeper.

Miscellaneous.

Following the recent thaw, the water level of the Danube has risen considerably, occasioning overflows at different points of the river and more especially at Harshova where the population sustained losses of property.

The Ministry of Finance has decided to pay off the Treasury Bonds not exceeding 10,000 lei. Those of larger amounts will be renewed with the interest due.

With the view to reducing the cost of living the Government has decided to use the 176 locomotives expected shortly from Germany exclusively for the transport of cattle, cereals, vegetables and other commodities from the home centres of production to the centres of consumption in the country.

The Ministry of Agriculture has approved the export of oil-seed cakes on condition that the respective exporters supply the farmers' syndicate with the home-consumption quota.

ASIA MINOR.

Smyrna, March 15.

Greece and Smyrna's Trade.

The delegates of the Associated Chambers of Commerce have addressed a petition to all the Consuls in Smyrna pointing out that the Greek authorities having recently commandeered small stocks of goods, orders for sugar, rice, leather, cotton sheetings, etc., have ceased because traders fear that all stocks will shortly be seized for the army. Under these circumstances, and to avoid a complete stoppage of trade, the delegates asked the Consuls to obtain an assurance from the Greek authorities that goods arriving for foreign merchants would not be molested. Failing this the delegates urged the following procedure:—

1. That the kind of goods to be commandeered should be announced.
2. That the value of the goods commandeered should be fixed by two surveyors, one appointed by the Greek authorities and one by the Chamber of Commerce or Consul of the owners' nationality.
3. In case the said surveyors cannot agree a referee, to be appointed by the surveyors, to decide.
4. Payment of the value of goods commandeered to be made before delivery is effected.

In view of the immediate necessity of measures which will induce traders to resume importing goods, the Consuls were also urged to act promptly in this matter.

GREECE.

Athens, March 18.

Customs Receipts.

The receipts of the Piraeus Customs during February last (O.S.) amounted to 11,276,578.75 drs. Compared with the receipts during the corresponding period last year there is an increase this year of 5,897,051.90 drs.

MESOPOTAMIA.

Baghdad, March 2.

Crops Promising.

The winter crops look like being very good. Thanks to the heavy early rains a very large area has been sown and more recent rains have almost assured a heavy yield. It is expected that there will be a considerable surplus of wheat and barley available for export this year and obtainable at prices which will make export profitable.

"A PLEA FOR THE D.O.T."

To the Editor of "The Near East."

Sir, I have read your article "A Plea for the D.O.T." in your issue of March 2 with interest. That it should be necessary to defend the Department does not surprise me in the least, for England, as the result of her commercial success, has always shown herself singularly indifferent to any indirect means for the extension of trade. The attitude taken up with regard to the spreading of the English language abroad is a case in point.

There is no doubt that the English language is more widely spoken than any other European language in the world, but there are parts of the world in which the knowledge of English is backward, coming far after that of French. The Near East is a case in point. You will meet in the Near East with numerous French schools, French book stores, and many people reading and speaking French, with a considerable knowledge of the French people, and very naturally entertaining much sympathy for France.

Language is a very important link in the relations of men and nations. The strengthening of this link must contribute to the development of other links such as those of trade. France has worked hard and laboriously for the spread of her language in the Near East. Her agents' duties have ever been directed to that end. All over the Near East wherever there is a French Consul there is an *Alliance Française*, which is supported and in whose prosperity an unceasing interest is taken.

England to my knowledge has taken no special or even passing interest in the promotion of the knowledge of the English language in the countries in this region. Many times I have heard regrets expressed that the ignorance of the English language was a great hindrance to business with England. It cannot be otherwise. Of course the remedy for this is apparent, but it is hard to persuade the stubborn British official, abroad or at home, to accept a new aspect of the situation.

Here is a case in which I have personally taken much trouble and interest, and have done a good deal to interest Englishmen. In Sofia there are French schools, and an Italian school has been opened since the war. A flourishing *Alliance Française* exists, also an Italo-Bulgarian alliance, promoted and supported by the French and Italian officials of the respective legations.

Nothing of the kind has been attempted by British officialdom, nor has it shown any interest in such an attempt made by others. English speaking Bulgarians in Sofia formed an English Speaking League in 1911 with a constitution legalised by the competent authority. Last year it had a membership of 180. The League has collected a library of over a thousand volumes thanks largely to American sympathisers. Under the particularly difficult conditions ruling in the country at present the League meets with little encouragement, and its development is very doubtful because of the lack of sufficient support such as similar French and Italian institutions receive.

The methods of the French and Italians in such matters certainly differ from those of the English, but surely a more substantial recognition of an institution, organised and ready to hand, with the objects of promoting the spread of the English language, and of bringing its members into closer relation with everything that is English ought not to be denied it. This institution has under great difficulties succeeded in keeping up the evening courses in English. Those who, one would think, should have taken an interest in the success of these classes as well as in the institution generally are remarkably indifferent towards it!

The D.O.T. is fortunately not to be suppressed, but you should be searching for means to supplement its activities. I have pointed out one such way—the encouragement of all institutions which work for the spread of the English language. They should be

created where they do not exist, and certainly should be supported where they do.

Yours, etc.,

P. M. Mattheeff.

Sofia, March 15.

THE COLONISATION OF PALESTINE.

To the Editor of "The Near East."

Sir, Your correspondent, Mr. Rosen, shows himself lamentably ignorant of history and of present-day facts. Under the rule of his "much maligned gentleman" Palestine went to rack and ruin, and no finer example could be afforded of how a country should *not* be governed than Palestine under the Turk. The only oasis in the desert created by Turkish misgovernment were the Jewish agricultural settlements established by exactly the same elements as those whom your correspondent politely describes as the "backwash of the Jewish race." These settlements are now being multiplied in all parts of the country by the Haluzim, the sturdy pioneers who have emerged from the Hell of Eastern Europe, into the—to them—Heaven of sunny Palestine.

The following extract from a letter from Captain W. Stanley Shaw, a British officer, which recently appeared in the *New York Herald* gives a true picture of the achievements of the "backwash of the Jewish race."

"Up to about thirty-five years ago, Palestine was a graveyard, a desert, over which the silence of centuries hung like a pall. Now that under the hand of the Jew the desert is beginning to blossom like the rose, along come all sorts of people, Arabs, natives, and so on, with all sorts of grievances. What have the Arabs, Turks, natives, etc., done for Palestine during the past five hundred years? Nothing at all. Now that the Jews are causing dead bones to live and are producing the finest fruit and vegetables in the world, up come these people with their most preposterous and ridiculous grievances. The thing is absurd. I am not a Jew, nor do I hold any brief for the Jews, but right is right."

Mr. Isaac Snowman, the well-known artist, thus describes a group of Haluzim who have been hard at work constructing the roads and avenues which will form the main arteries of the new city of Tiberias.

"It is truly inspiring to watch these young people at work. Men of education and refinement are doing navvy's labour with a zest and a joy wonderful to behold. Young girls, wearing huge bonnets to protect them from the intense rays of the sun, sit astride, each on her heap of stones, and, hammer in hand, they break these into small splinters for use on the surface of the new roads. Other girls and women cook, or attend to the various domestic requirements of the huge camp of workers. Not one but is buoyed up by sentiments of deepest patriotism. They are building up their land. It is a picturesque and romantic life which they lead. They work hard; but after the day's

work is done they assemble in the big hut which forms the common dining room, where entertainments are organised among themselves, dances not being infrequent. Hebrew is the language spoken by all, almost without exception. The earnings of the workers go into a common purse, from which the expenses of the community are defrayed."

Your correspondent professes to believe that "the Arab emphatically is a bigger factor in the destiny of Palestine than the Jew is or ever will be." What have the Arabs done so far for Palestine? Where are the Arab schools and colleges? Where are the Arab agricultural colonies? What have the Arabs done for sanitation, for art, for music? The Jews are spending £100,000 a year on their own schools and pay taxes towards the upkeep of the government schools for the Arabs, which the latter have not provided for themselves. They have a technical college, a high school, a school of art, a school of music, agricultural experimental stations, hospitals, nursing units; they have done valuable work in draining marshy country, in reforestation.

Your correspondent thinks that the Arab as a policeman "would be decidedly effective and of infinitely more use than a few Jews armed with borrowed rifles." He is evidently unaware of the disgraceful behaviour of the Arab police during the last disturbances at Jaffa, which was so strongly condemned by the Haycraft Commission. "A few Jews armed with borrowed rifles" successfully ward off unprovoked attacks on the Jewish colonies. It will be to the enthusiasm of the Jewish race that Palestine will owe its regeneration.

Mr. Rosen prophesies that the more Jews that enter Palestine, the more the Moslems will hate them. I hope, and believe, that your correspondent will prove as false in his prophesies as he is incorrect in his facts. The Jews are bending every effort to arrive at an understanding with the Arabs. Mr. Ramsay MacDonald who has just returned from Palestine bears testimony to the success of these efforts and to his belief in the possibility of Jewish and Arab co-operation for the regeneration of Palestine.

Maurice Myers,
London Editor, *Palestine Weekly*.

THE TER MEULEN SCHEME AND GENOA.

(From a Correspondent.)

It is not unnatural that considerable disappointment should be felt at the lack of success that has so far attended the efforts made to bring the Ter Meulen scheme of export credits into operation. From the first it has been admitted on all sides that the scheme affords a really practical method of overcoming the obstacle to trade caused by the collapsed exchanges. The difficulty has been to persuade the countries the scheme is designed to benefit to make the allocations of revenues necessary for an issue of bonds. They one and all need help to put them on their feet and restore their earning power. The reconstruction of ports, railways, and roads is a *sine qua non* for the establishment of normal conditions. This work cannot be accomplished without a large expenditure, and as the countries cannot find all the money they require at home they must look to outside sources for it.

They have been trying to obtain accommodation abroad by various means during the last few years, but not with any great measure of success of late. Until however, all means available have been exhausted they will not have recourse to the Ter Meulen scheme. That time is now close at hand, for countries are no longer willing to take Treasury Bonds in payment. Countries like Canada, for instance, have stocked thousands of bonds and will not touch them again. The position now is that unless and until the lender knows that the dividends on his loan will be paid out to him he will advance no more money. The difficulty of obtaining assistance is not lessened by the fact that in some Near Eastern Countries it is possible that a change of Government may vitally affect existing arrangements. There could be no chance of this if there were someone above the parties which is what has happened in Austria as the result of the adoption of the Ter Meulen scheme. In Austria Liberals, Socialists and Catholics and other parties were all engaged in fighting each other. A pledge was obtained from all parties, so that if one party disappeared the position would be the same, thus paving the way for reforms. What has been done in Austria could be done in all the countries concerned.

When the countries realise that enterprise is fostered not only for their immediate welfare but for their great and lasting good, enabling them to export and to take part in the distribution of international wealth they will not be so averse to the scheme. Another factor that has had a delaying influence has been the impression that America would be willing to come forward with assistance. It has now been made clear that American money will not be lent to Europe unless there is a specific guarantee such as the Ter Meulen bonds. America by her attitude has closed the last door, and has helped to bring about the realisation that there is now a circle outside which the countries cannot get until they are prepared to allocate certain revenues and give specific guarantees. Once a settlement of outstanding political questions is arrived at things are likely to move, and it would seem extremely probable that not the least important result of the Genoa Conference will be the adoption of the scheme by one or more countries of South Eastern Europe. It only needs a lead then all the countries will follow.

A message from Angora states that a postal aeroplane has flown from Adalia to Angora, and that it is proposed to organise a regular service between the two towns.

Engineering Topics.

By Our Engineering Representative.

Wolseley Coming of Age.

Few motor cars have so long and interesting a history as the Wolseley. Their story is practically synonymous with that of British motoring, and the fact that the Wolseley Company has just celebrated its 21st birthday marks a real motoring anniversary. When in February, 1901, the great Vickers firm founded a separate branch under the title of the Wolseley Tool and Motor Car Co., Ltd., to manufacture Wolseley cars, they very wisely entered an industry which ultimately showed tremendous growth during the ensuing years.

In those early days much courage was required to embark at all in the infant industry, hampered as it was on every side by prejudice and legal restriction. But although the original factory at Adderley Park was comparatively small, if measured by present-day standards, its founders were possessed of unbounded enthusiasm, and have played a leading part in the developments which have placed the British motor industry in the front rank of the world's trade.

Early Experience.

Wolseley experience, of course, goes much further back than 1901, for the first Wolseley car was built in 1895, whilst in 1900, in the historic R.A.C. 1000 Miles Reliability Trial, a Wolseley carried off the first prize in the Voiturette class—a very early indication of the part this car was to play in motoring development. During its earlier years, when it was necessary to arouse interest and dispel prejudice, the company played a somewhat prominent part in races and competitions, winning many successes including the Ajakham Challenge Cup in the Poona Reliability Trials in India in 1905. But as the demand for cars increased, it was realised that what the public wanted first and foremost, was a vehicle that should be thoroughly reliable, and to this particular point the company began to give its undivided attention. Their solution of the problem was immediate and complete, and the company's products rapidly attained a reputation for reliability which has proved their greatest passport to popularity.

Coachwork Detail.

Another question which early engaged the Wolseley designers was that of motor coachwork. Most of the older coachbuilders failed altogether to grasp the possibilities of the new vehicle, as witness the illustrations of the "carriages" fitted to many of the earlier chassis. Very grotesque they looked, and very draughty and uncomfortable they undoubtedly were. It was evident that to attain the desired end the complete vehicle must be designed as a whole, engineers and carriage designers working together to one end. By their steady co-operation the complete cars were evolved which were the forerunners of modern cars, built throughout in one factory under one supervision, and with all parts designed in proper relation to each other. The reputation of Wolseley coachwork, both in design and finish, began to rival that of Wolseley chassis, and to-day over 90 per cent. of Wolseley cars for use in the United Kingdom are turned out complete and ready for the road. But improved coachwork, though of great importance in the popularisation of the motor car, was not nearly so vital a factor as progress in chassis design, and in this latter respect the Wolseley record is a very striking one. Research and experiment were sedulously fostered, and the Wolseley shops originated many of the improvements and devices which to-day are recognised standard practice. Wolseley design was invariably well to the forefront, and every year saw further innovations in design, a steady increase in the number of cars turned out, and expansion after expansion of the factories. By 1914, the factory space had grown from 3½ acres to nearly 30 acres, employing 4,500 men.

A Fine Record.

The part the Wolseley Company played in the war is too well-known to need recapitulation, but it may be

noted that its achievements in aero engines, and in the production of certain delicate and important naval mechanism had their due effect on the design of the present day Wolseley cars. After the war it was realised that new conditions had arisen, necessitating a still further advance in motor design. Owing to the rise in values, the production of high-grade cars at a moderate cost could only be achieved by scientific organisation on a large scale, taking every advantage of the most modern methods. It was also necessary to produce a more economical vehicle, of which the running costs should be reduced to a minimum. Three entirely new models were introduced to cover the entire motoring field from 10 h.p. upwards, and this range was afterwards completed by the introduction of a small 7 h.p. These new cars were carefully and scientifically designed and manufactured so as to produce vehicles of remarkable efficiency, giving a phenomenal performance on the road with a low running cost. The works at Adderley Park were remodelled and extended, and a large new factory was acquired at Ward End, giving a total factory space of nearly 100 acres. The new policy met with an entire and immediate success, and the production of Wolseley cars during the past two years has totally eclipsed everything formerly accomplished by the company.

The Next Light Car Race.

With regard to the lines on which the next light car will be run, it has been suggested by Mr. H. P. MacConnell who was responsible for the last contest, that there should be three classes, *i.e.*, one for the standard cycle cars of from 1,000 to 1,100 cubic centimetres; a second for standard light cars of 1,500 c.c., and an open class of 1,500 c.c. The first two classes should be for standard stock cars and the third class, run on a different day, should be of a purely sporting character. "I realise," says Mr. MacConnell, "only too well the difficulty of defining standard stock cars but in my opinion it is not an insuperable difficulty. Cars could not be entered in this race that would not conform to the following simple regulations. A number of standard production units could be sealed. By units I mean base chamber, crank shaft, cylinders, gear box housing and back-axle housing. The standard diameter of valves and the lift of the same should be verified, but in any other respect the maker should be allowed a free hand to make whatever modifications he wished, such as dispensing with the differential, using whatever gear ratio he pleased, fitting whatever springs or shock absorber devices he thought advisable. This would encourage him to make his vehicle as reliable as possible and to learn whatever lessons he could from a 250-mile event."

Non-Ferrous Metals.

The work of the British Non-Ferrous Metals Research Association is not only extensive but has already proved of exceptional value and so far as can be judged even more interesting and essential research work is to be undertaken this year. For example the whole theory and practice of brass casting will probably be reviewed and the question of the effect of various impurities on copper will be gone into thoroughly. The subject of metal furnishing, grinding and polishing will also be dealt with and extensive data as to methods of jointing metals are being collected. The value of the electric furnace for melting non-ferrous metals is also to receive full attention. Possibly the most valuable of the work to be done will be the dealing with corrosion and the effects of all kinds of fluids on such metals will be ascertained as far as possible. Already interesting and valuable results have been obtained for a study of tarnishing and loss of reflective power which are the first stages of corrosion, and the final conclusions of the Association will be awaited with more than usual interest.

Compulsory labour in Bulgaria during 1921 has resulted in a profit of £700,000 to the State.

Stock and Share Markets.

MARKETS GENERALLY FIRM.

(From Our Own Correspondent.)

London, Tuesday morning.

A much better tone has been in evidence during the past week, and yesterday something approaching buoyancy developed. The improved political situation has been a bull point for the markets, while favourable anticipations of the Budget and the expectation that we shall soon see a further reduction of the Bank Rate have also had a considerable influence. Adverse factors, it need scarcely be said, are not lacking, but they have not had any appreciable effect, possibly because during the past few years people have become so accustomed to threatened dangers that did not materialise.

Bulgaria's Need for a Loan.

Apropos of my remarks last week with regard to the failure of the Bulgarian Loan negotiations I have just received some interesting particulars of the general position in the country from a correspondent who emphasises the point that Bulgaria simply must obtain foreign capital to carry out the programme of reconstruction. Very rightly Bulgaria is concentrating on the question of transport, and during the coming year it is hoped to finish the construction of the railway lines and to obtain the necessary rolling stock. But if this is to be done my correspondent points out that Bulgaria "must have credit, and must look for money abroad." As I have already said I trust the negotiations for a loan will be persisted in since assistance of this nature given by this country would have the very best effect on our relations with Bulgaria.

Gilt-Edged Firm.

Gilt-edged are closing on a very firm note. Consols at 55.7-8 show a gain of $1\frac{1}{2}$, War Loan Fives are 131-32 up at 98.1-8, while the Conversion Loan at 73 $\frac{1}{2}$ has gained 15-16. Indian stocks have shared in the general recovery. The Seven per cent. Loan is $\frac{1}{4}$ up at 105 $\frac{1}{2}$, the 3 $\frac{1}{2}$ per cent. Loan has gained $\frac{1}{2}$ at 60 $\frac{1}{2}$, while the 3 per cent. Loan is $\frac{1}{4}$ up at 52 $\frac{1}{2}$.

There has been considerably greater activity in the foreign market, but a variable tone has prevailed, and in a number of cases shares are slightly down. French War Loan Fives have shed $\frac{1}{2}$ at 44 $\frac{1}{2}$, while German three per cents. are 3-16 down at 2.3-16. Italian Rentes are unchanged at 23 $\frac{1}{2}$. Russians have been ignored. There has been some realisation in Chinese securities, but prices in general are above the previous levels. The Five per cents. of 1896 are $\frac{1}{2}$ up at 91 $\frac{1}{2}$, while the 4 $\frac{1}{2}$ per cents. of 1898 are $\frac{1}{2}$ up at 74. Brazilians have been dull, with the 4 per cent. 1889 Loan $\frac{1}{2}$ down at 55, while the 1914 Funding Loan has shed a point at 71.

Industrials Steady.

Despite the labour situation decidedly cheerful conditions have obtained in the Industrial group, though business as usual has been confined to a few specialities.

Tobaccos have displayed strength, Bats being 2s. 9d. up at 70, while Imperial Tobaccos are 1s. up at 55s. Dunlops are 3d. up at 6s. 6d.

Textiles have been firm with Coats at 2.13-16, and Courtaulds at 37s. xd. Iron, Coal and Steel securities have been steady. Vickers are 9d. up at 9s. 3d., Armstrongs are 1s. up at 13s. 6d., Guest Keens are unchanged at 30s., while Lamberts are 1.7-8xd.

In Shipping securities P. and O. Deferred are unchanged at 298. Cunards are the same at 18s., while Furness Withys are unchanged at 27s. 6d.

Oils Dull.

Business has been on a small scale in the Oil market, and changes of prices have been limited. At the present time the investor is evidently determined to leave the market alone until the outlook is decidedly clearer. Burmahs are unchanged at 5 $\frac{1}{2}$. Anglo-Persian Ord are 13-16 premium. Mexican Eagles are the same at 3 $\frac{1}{2}$. In Trinidad issues Centrals are $\frac{1}{4}$ up at 3.7-8, while Leaseholds are 1.9-32, a rise of 5-32.

Among Egyptians Anglo-Egyptian B are 1.9-16, the same as last week, while Oilfields of Egypt are 6d. up at 5s. 6d. In the Roumanian group Roumanian Consolidated are 9d. down at 10s. 3d., while Phoenix are 3d. down at 18s. 6d. and have been somewhat lower. This share, as I have pointed out, is expected to go higher, and the latest news of the position of the company is very favourable. Dacia Romanos are 11-16 the same as before while Steaua Romanas are 1s. 3d. down at 10s. 6d.

Banks Firm.

Eastern Banks have been a firm spot during the week. National of India are 37, while Chartered of India are 16. National of Egypt have firmed up to 19.5-8.

SHIPPING INTELLIGENCE

DEVELOPMENT OF MERSINA.

A French company is busy with work to improve the shipping facilities in Mersina (says the *Journal of Commerce*) which should greatly help the trade revival of the port. The Angloa Government having examined the proposition of the Groenland Company of Paris in connection with the improvements to be made to the port of Mersina has accepted it. The company, which has a capital of 30 million francs, has undertaken to construct an entrance to the port, a breakwater 1,200 metres in length, a discharging quay for boats up to 15,000 tons, another quay for the loading of vessels, together with broad-gauge and decauville railways, Custom house buildings, an office for the captain of the port, and a railway station.

SHIPPING AT THE PIRAEUS.

(From Our Own Correspondent)

Athens, March 18.

There were 387 arrivals of various steamers in the port of Piraeus during February (O.S.) of the following nationalities:—Greek 290, Italian 35, British 30, French 7, German 6, American 5, Dutch 4, Norwegian 3, Swedish 2, Russian 2, Spanish 1, Belgian 1, Bulgarian 1. The number of sailing vessels which entered the port during the same month was 532, of which 513 were Greek, 17 Italian, 1 Yugoslavian, and 1 British.

NEW STEAMSHIP SERVICE TO ODESSA.

The Trieste Lloyd Line has decided to inaugurate a new passenger service from Trieste to Odessa. The service is being opened by the s.s. *Carniola* (5,723 tons) and the ports of call will include Brindisi, Piraeus, and Constantinople.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parenthesis:—

Anchor Line.—S.s. *Scindia* for Bombay (Liverpool, April 6); s.s. *Castalia* for Bombay (Liverpool, April 21).

Anchor Brocklebank Line.—S.s. *Mahsud* for Port Said, Colombo, Madras, and Calcutta (London, April 8); s.s. *Imani* for Port Said, Colombo, Madras and Calcutta (London, April 25); s.s. *Mandador* for Port Said, Colombo, Madras and Calcutta (London, May 9).

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 20:—Condition of Crops.—March 17—rain very much wanted in East Bengal for jute sowings. Otherwise prospects in other provinces are unchanged. Markets.—March 16—Bombay cotton market steady. Fine M.G. Oomras, Rs. 369 March, Rs. 380 May. Bombay cotton arrivals from September 1, 1921, to March 10, 1922, were 2,009,000 bales as compared with 1,359,000 bales during the same period of the last year. Fair demand in Bombay imported piece-goods market with healthy under-current of enquiry. March 17—Calcutta jute market very strong. Firsts Rs. 60 to Rs. 61, buyers; Lightnings Rs. 50. March 18—Gunnies quiet and rates easier. Shellac.—March 20—steady. T.N. Rs. 175 spot. March 17—special Straits quality rice Rs. 470. No change in bank rates.

FRENCH-CZECHO-SLOVAK CHAMBER OF COMMERCE IN PARIS.

A French-Czecho-Slovak Chamber of Commerce was created at Paris in 1915. After the war the efforts of the interested persons were directed towards the establishment of this institution on a broader basis, and they also aimed at securing its recognition by the Czecho-Slovak and French Governments, in order that they might widen the scope of its activities. These endeavours have met with success, and the general meeting of the new institution took place at Paris on February 27. M. Andre Lebon, former Minister of Trade and President of the Federation of French Industrialists, was elected President, the vice-presidents being M. J. Godet, industrialist and member of the executive of the French Chamber of Commerce at Paris, and M. F. Hlavacek, director of the Paris branch of the "Bohemia" Czecho-Slovak Foreign Bank.

During January last Tunis exported 244,880 tons of iron, of which 134,240 tons were sent to Holland and 110,640 tons to England.

LONDON PRODUCE REPORT.

Advance in Sugar.

Sugar.—Home refined has been in moderate demand at revised rates. Tate's cubes at 53s. 9d.; mineral water sugar at 49s.; London granulated at 48s. 6d., and Lyle's granulated at 48s. 9d., have all advanced 1s. A slight advance has been noticeable in export descriptions, West Indian crystallized having risen 1s. at 43s., and Czecho-Slovakian 1s. 1½d. at 21s. 4½d. Cane sugar quotations are:—March, 15s. 6d.; April, 15s. 6d.; May, 15s. 6d.; August, 15s.; and September, 15s. White sugar quotations are:—March, 20s.; April, 19s. 7½d.; May, 19s. 3d.; August, 19s. 4½d.; and September, 19s. 4½d.

Coffee.—Prices have advanced. Costa Rica is 1s. up at 137s., while Indian has gained 8s. at 120s. Nairobi has risen 6s. to 118s., while Jamaica at 150s. has remained firm. The futures market has been unsteady. Quotations are:—March, 55s.; May, 54s.; July, 55s.; September, 55s. 6d.; and December, 55s. 9d.

Rice.—The market has been quiet but prices have been firm. American rice has been in excellent request, but prices for future shipments are likely to advance during the week.

Dessicated Coconut.—At the commencement of the week the demand was extremely brisk, but towards the end buying practically ceased. Prices are firmer.

Green Fruit.—Supplies of oranges are still plentiful, while the demand has been good. Very little supplies are afloat. Shipments of lemons have been on a large scale, but prices have been steady. There is a shortage of selected bold fruit. Supplies of Valencia onions are small and higher prices are being asked. The first consignments of Australian and Tasmanian apples have now reached England, and are in sound condition.

Oilseeds.—Unsteadiness has prevailed. Indian linseed has risen 3d. to 19s. 9d., and La Plata at 19s. 4½d., has gained 1½d. Rapeseed is higher with Toria 1½d. up at 17s., and bold Ferozepore 2d. up at 18s. 8d. Cottonseed is lower. Indian has shed 1½d. at 9s. 4½d., while Egyptian is 9d. lower at 12s. 3d. Sakellarides is firm at 12s. 6d.

Oils.—The tone has been steady. Linseed oil is unchanged at 37s. 6d. Rape oil has shed 2s. in both cases, the crude variety now being 44s., and refined 46s. Cotton oil has advanced with refined 2s. up at 49s. and deodorized a like amount up at 54s. Egyptian crude is steady at 41s.

Oilcakes.—Linseed cake has advanced 10s. to 340s. ton, as also cottonmeal cake at 320s. ton. Arachis cake has shed 20s. at 200s. ton, while palm kernal cake has been a firm feature at 160s. ton.

ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date March 11:—

Sultanas.—The estimated arrivals to date amount to 169,070 bags, the sales are 163,570 bags, and the stock unsold is estimated to amount to 5,500 bags.

Markets.—The sultana market continues steady at no change in prices. Somewhat improved exchange rates current during the past week however reduces sterling quotations 1s. to 2s. The total sales for the week amount to about 2,000 boxes as against 8,000 the preceding week. Black raisins are again in strong demand for both Marseilles and the States, and prices have marked a sharp advance of about 12 per cent. since the beginning of the month.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 112s. 6d. cwt.; (Canadian), 107s. 6d. cwt.; (American), 102s. 6d. cwt.; butter (Danish); 184s. cwt.; (Australian), 130s. cwt.; (New Zealand), 147s. cwt. cheese (Canadian), 97s. cwt.; (New Zealand), 88s. cwt.; lard 70s. 6d. cwt.; eggs (Danish), 18s. per 120; Styrian, 13s. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 2d. lb.; cocoa (Ceylon good to fine), 95s. cwt.; coffee (Costa Rica), 130s. cwt.; (East Indian), 133s. 6d. cwt.; (Central American), 102s. 6d. cwt.; (Jamaica), 68s. 9d. cwt.; (Mocha longberry), 106s. 6d. cwt.; (Santos, superior), 65s. cwt.; ginger (washed Cochin), 52s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 4d. lb.; (Muntok white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 57s. 6d. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Vostizza), 70s. cwt. Further details can be obtained from the Banque Franco-Serbe 39, Coleman Street, E.C.2.

FINANCE AND COMMERCE IN THE NEAR EAST.

The following extracts are taken from the March issue of the monthly circular of the Imperial Ottoman Bank :—

Ottoman Finance.

During the month of February the Ottoman Treasury has received the ordinary revenues, derived, as in previous months, from customs, the vilayet of Stamboul, and sundry other sources.

There have also been the following extraordinary revenues :—1. The payment by the Tobacco Régie of the balance due to the Government of their share in the receipts of the seventh year in accordance with the Agreement of the 13th February, 1922. This amounted to £T. 254,073.31, after repayment of the advance of £T. 1,200,000 made by the Imperial Ottoman Bank in June last. 2. The payment by the Administration of the Ottoman Public Debt of the balance, amounting to £T. 300,000 of the advance of £T. 1,000,000, granted on the 31st December last on the Government's share in the Tobacco Régie profits during the eighth and following years.

During the month the Sales Commissions paid to the Malié (Treasury) a sum of £T. 50,000 on account of the advance of 1,200,000 consented by the Ottoman Public Debt; payments from this source total £T. 137,000 at the end of February. The revenues of the month were used, as usual, to meet urgent needs and to pay priority salaries.

The Ministry of Finance, on the occasion of the new financial year, prepared a provisional budget for a period of six months; the new budget has already been submitted to the Cabinet for examination. It includes a number of measures for the increase of revenues and the reduction of expenses in general. New laws for the increase of receipts are being considered; others, the "taxe de luxe" for instance, are already in force; the latter levies a tax of 10 per cent. on entertainments (theatres, cinemas, dancing halls, etc.). The bonus granted to Government Officials owing to the increased cost of living is to be reduced by 20 per cent. and it is proposed that Cabinet Ministers be authorised to grant leave to members of their staffs, varying from six months to two years. During this time officials, whilst receiving the whole of their basic salaries, would only be allowed 50 per cent. of their supplementary emoluments. By the adoption of these measures the Ministry of Finance hopes to be able to balance the budget.

Markets.

Constantinople.—The market remains stagnant. Transactions are even more restricted than last month. Small exports of tobacco; arrivals of sugar, coffee and flour have shown a little increase.

Tobacco.—Arrivals from the interior and from Russia: 311,000 kilogs.; exports 525,000 kgs., as against 201,000 kgs. during the preceding month. Stocks available 5,500,000 kilogs. made up of Turkish tobaccos, 4,000,000 kilogs., and of Russian tobaccos 1,500,000 kilogs. Average prices lower: Piastres 48 to P. 160 per kilog. according to quality.

COTTON INDEX HIGHER.

Hopeful Trade Position.

Taking the quotation ruling on July 31, 1914, as a basis of 100 the index number for the current general average of raw cotton, yarn and cloth prices is given by Mr. Frederick W. Tattersall, of Manchester, in his Cotton Trade Circular published last week, as 178, a rise of 7 points compared with a month ago. In the middle of January the figure was 191.

American cotton now stands at 165, an increase of 9 points on the month, and Egyptian cotton also has advanced 9 points to 215. The upward movement in yarn quotations is reflected in the figures of 179 for American qualities and 166 for Egyptian, which are advances of 7 points and 6 points respectively. Prices for cloth have been dearer only to the extent of 2 points at 165.

The tendency of prices to move in favour of sellers during the past month is an indication of the slowly improving state of affairs in the largest manufacturing industry in the United Kingdom, and the belief is spreading that trade will continue to develop.

MANCHESTER MARKET.

From Our Own Correspondent.

Manchester, Saturday.

Although the general conditions prevailing throughout the market during the past week have been rather quieter than was the case some ten days ago the tone has continued firm. A favourable feature has been the steadiness displayed in raw cotton circles. Manufacturers are now presenting a stiffer front to customers, and more machinery is gradually being started especially in the Blackburn and Burnley districts. With regard to the cloth demand for Egypt it has not been on very encouraging lines, but the trade position out there is stated to be improving slowly. Remittances have come to hand much better from the Levant and Constantinople. Quotations for Egyptian yarns on the week are higher, and the turnover has been quite moderate. The bulk of the piece goods inquiry has been for India, and some encouraging transactions have been put through for Calcutta. Shippers to China are slow in raising rates, and no revival of activity is anticipated until the exchange value of the tael get higher. Fancies have again been in request for the Continent and South America. Buyers for the home trade have operated on rather freer lines. American yarn quotations have continued firm, but the turnover has not been as large as was the case a week ago. Bundles have been sold for India, and business has been done in cops for Holland. The wages question in the cotton trade has been discussed by the employers, and as the notices of a reduction have been sent out by the masters it is generally anticipated on the Manchester Royal Exchange that the cut will be in the neighbourhood of 70 per cent. off list rates which means a drop of 5s. 9d. in the £ on present wages. Taking the market as a whole the prospects are rather bright, and manufacturers and spinners hold the opinion that we have definitely turned the corner towards a period of greater activity.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date March 22 :—

Business during the past week has been of a steady description, Nothing of a startling nature has occurred, and sales even show a distinct decrease on the previous week's total, which, however, is easily accounted for by the falling off in the enquiry for Scarto and kindred qualities. The tone here has improved, chiefly owing to the better reports received from Manchester, and there is a tendency for prices to harden all round.

The bulk of the enquiry has centred around Sakellaridis Fair to Fully Good Fair, and there still appears to be a very fair selection to choose from in these qualities. Tokar and Sudan have been in improved request, and are responsible for quite a good turnover. Other growths have been practically neglected. C.i.f. business during the last few days has shown a slight improvement.

Manchester reports have again been consistently good. India has been buying fairly freely during the week, chiefly on Calcutta account, and latterly China has also increased her quota. Prices are hardening, and bids from the East show some improvement, although the spinner or manufacturer who will admit that he has made a profit on any transaction has still to be found. However, stocks are moving at last, and that is the first step towards a healthier state of affairs throughout the whole trade. Liverpool is doing all it can to assist matters by keeping steady; and we can only hope that nothing untoward will occur to interrupt the flow of trade.

We do not look for any soaring upwards in the price of raw cotton—there is too much of the commodity available, and it will take a long time, even with good trade, to absorb existing stocks. Arrivals in Alexandria still continue to be greater than was expected, and, in this connection, it is interesting to note that our friends, the Commercial Co. of Egypt, have now raised their previous total crop estimate of 4,600,000 kantars to close on 5,000,000 kantars, and this in face of the fact that their original estimate was the highest one published. From the same source we hear that fears of a water shortage during the summer months is causing considerable anxiety in Egypt. It is still early, however, to speculate on the possible result of this until we see what the next few months will bring forth in the way of trade demand. Total sales, 2,200 bales (includes 400 bales Sudan). Quotations remain unchanged. Fully Good Fair Sakellaridis 18.25d.

MANCHESTER COTTON TRADE REVIEW.

We give below the cotton trade review of the Imperial Ottoman Bank for the week ended March 25 :—

General. The tone of this market during the past week has maintained the improvement recently notified. The better conditions of the last few weeks have given much needed relief to a fairly large number of spinners and manufacturers. The financial stringency is still an all-important factor with most firms, but money is said to be coming in a little more freely from some quarters, and in this respect the situation may be said to be gradually easing; nevertheless it is to be feared that there are many failures of respected and old established firms still to come. The employers met yesterday to consider the question of a reduction in the operatives' wages and are said to have reached a decision as to the extent thereof which they will propose; this figure has not yet been published, but estimates conform generally to something round about a 25 per cent. reduction on present wages.

Yarn. This market has been fairly strong throughout the week and the tendency is for prices to harden. There are fewer urgent sellers on the market and spinners have reduced stocks. The latter are tired of working at a loss and are making determined efforts to improve their position; many offers being refused on these grounds.

Cloth. This section also has shared in the general improvement and the week ends with a firm tone, particularly as regards all makes of cloth for India, from which the demand has been fairly substantial. Orders from China, which showed a slackening at the early part of the week, have again come into prominence; the Near East unfortunately remains practically idle apart from a few orders for shirtings, sheetings and miscellaneous dyed goods. The Continent is again making demand and certain lines are moving more freely.

Raw Cotton. This market has shown a remarkable steadiness during the past week in spite of the increased "spot" demand due to greater activity in Manchester. The quotation for American has not fluctuated more than 6 points on any day during the week. Closing prices are as follows :—American Fully Middling 11.01, last week 11.00; Egyptian Fully Good Fair 18.00, last week 18.25.

BALKAN' NATIONAL INSURANCE COMPANY.

FOUNDED 1895

Capital paid up	5,000,000
Total reserves as per December 31st, 1920	53,200,000
Premium Income during 1920	28,300,000
Amounts insured of Life branch exceed	150,000,000

Branches maintained: Fire, Life, Marine, Casualty and Re-insurance of all branches.

HEAD OFFICE: SOFIA, BULGARIA.

Company Notes and Reports.

CHARTERED BANK OF INDIA, AUSTRALIA, AND CHINA.

The report of the Chartered Bank of India, Australia, and China states that the accounts show a net profit, after providing for all bad and doubtful debts, of £997,669 15s. 5d. inclusive of £209,601 9s. 11d. brought forward from the previous year. The interim dividend at the rate of fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £787,669 15s. 5d. and the directors propose to pay a final dividend at the rate of fourteen per cent. per annum, together with a bonus of six shillings and three pence per share, making twenty and-a-quarter per cent. per annum for the whole year, free of income tax; to add £100,000 to the reserve fund which will then stand at £3,700,000; to add £25,000 to the officers' superannuation fund; to write off premises account £50,000, and to carry forward the balance of £215,169 15s. 5d. Meeting, 38, Bishopsgate, E.C., April 5 at 2.

SMYRNA-AIDIN RAILWAY.

The report of the council of administration of the Ottoman Railway from Smyrna to Aidin for the half-year to December 31 last states that the earnings of the railway for the period amounted to £241,829, of which military traffic produced £51,948. The expenditure was £134,443, showing a net profit of £107,386. The mileage worked was 193 miles, about one-half of the company's entire system, the same as at the period of the last report, the remainder of the railway still being in the possession of the Turkish Nationalists. The working of the restricted portion of the line is still much interfered with by the political and military state of affairs, nor can any revival in agriculture or trade be expected until the future government of the country is more clearly defined.

The continued failure to reach a settlement in the Near East is paralysing British trade with Turkey in general, and represents annual losses of many millions of pounds. The effects of this failure upon the railway, which is far the most important British enterprise in Asia Minor, are disastrous. It is earnestly to be hoped that during the impending Near Eastern Conference a final settlement will be arrived at. With the conclusion of peace and just recognition of the company's audited claims for reparation, the company should eventually make a good recovery. It will be seen from the auditors' certificate that a revaluation of the stores has been found necessary, and will be taken in hand during the current half-year, and any modification of the figures that may be found necessary will be made in the next half-year's accounts.

The general manager, in the course of his report, states gross receipts, £241,829, compare with £334,414 in the corresponding period of 1920, and with £282,140 in the December half of 1913. Working expenses, £134,722, against £205,510 in 1920 and £102,856 in the December half of 1913.

The auditors' certificate states: We have examined the accounts with the books and vouchers in London, and the audited accounts from Smyrna. Owing to the manner in which the stores have been dealt with in the Smyrna books in regard to the value of the Turkish piastre, in which there have been wide fluctuations during 1921, it has been found necessary to have a revaluation of the stores, which will be made in April next. Subject to such reduction in the value of the stores as may be found necessary as a result of this revaluation, and to the company's claim against the Turkish Government, in our opinion the accounts show the true and correct financial position of the company.

Meeting, Winchester House, March 31, noon.

NATIONAL BANK OF EGYPT.

The report of the National Bank of Egypt for the year ended December 31 states that the gross profit for the year, after providing for depreciation on the bank's buildings and furniture for rebate of discount and for bad and doubtful debts, amounts to £991,829 10s. 10d. After deducting from this sum: for directors' fees £11,000 13s. 4d., for current expenses £421,607 6s. 2d. (£433,273 10s. 6d.) there remains £558,556 4d. In conformity with Article 49 of the bank's statutes a dividend of 4 per cent. is payable on the share capital, £120,000. After this statutory distribution there remains £438,556 4d. Adding to

this the balance brought forward from last year, £172,354 2s. 1d., the amount available is £610,920 2s. 5d. The directors consider it prudent to allocate to special reserve for contingencies a sum of £100,000, which leaves £510,920 2s. 5d. From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital which will absorb £330,000, and leave a balance to be carried forward of £180,920 2s. 5d. The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s. per share. An interim dividend of eight shillings having been paid on September 5, 1921, the balance remaining to be distributed will be £1 2s. per share.

BRITISH TRADE CORPORATION.

The report of the directors of the British Trade Corporation for the year ended December 31, states that the figures relating to the branches have been made up to the previous September 30. The proprietors will remember that reference was made at the last meeting to the investments of the corporation in subsidiary companies, and the impossibility of placing value thereon. Since that date it has been demonstrated that values should be written down, and also that provision should be made for losses in connection with the closing of the corporation's Batoum branch, and for other bad debts, and the result is that a debit balance is shown upon the profit and loss account of £193,075.

The difficulties referred to last year in obtaining payment for goods shipped abroad by clients have been accentuated during the past year, and it is to be feared that some of the loans and advances made will be difficult to realise, and may be subject to loss. Having regard to this fact and the statement made by the auditors in their certificate, the directors recommend that the existing capital be written down by an adequate amount, and that there be created an issue of "A" shares to take the place of the capital so displaced. The "A" shares will be preferential, and when issued will be offered to the shareholders. Resolutions to give effect to both these operations will be submitted to the proprietors in due course. The writing down is subject to the obtaining of a supplemental charter, for which application has been made. The effect of the reduction will be to wipe off the debit balance upon the profit and loss account now shown, and to reduce the figures appearing under the heading of bills discounted, loans, advances, and sundry debtors, and provide reserves against other assets.

The auditors' report states: "Assets and liabilities of branches have been incorporated in balance-sheet as at September 30 last. No provision has been made for any loss which may have accrued at date of balance-sheet in connection with certain assets, and we are unable to form an opinion as to what reserve may be necessary. As stated however by the directors in their report, adequate provision in this respect is proposed to be made by means of a writing down of share capital."

MYSORE GOLD.

The report of the Mysore Gold Mining Company for 1921 states that the tonnage dealt with was 726,518 tons, producing 130,024 oz. of fine gold, a decrease of 37,245 tons and 26,734 oz. The average yield per ton was 8.4 dwts. and per ton of sand and slime 1.7 dwts, against 9 dwts and 1.9 dwt respectively. The sum realised for gold and sales of silver, less royalty and refining charges, was £648,762. The total income was £672,547 and working costs £464,747, leaving a profit of £207,800. Including £4,114 brought in, and £1,116 for dividends on the Kolar Mines Power Station shares, the total profit was £213,030. Dividends totalling 2s. 6d. per share for one year, equal to 25 per cent., further remuneration to directors and managers, income-tax, amounts written off machinery and plant and East Beterasawmy block, etc., absorbed £104,192, leaving £17,338 carried forward, subject to corporation tax, royalty and percentage on dividend. Liquid assets at December 31, including reserve and other investments, and after deducting liabilities, totalled £508,003. Meeting, Cannon Street Hotel, April 6, 12.30 p.m.

There is a considerable demand in India for sanitary and plumbing fixtures, especially in the larger cities like Bombay, Ahmedabad, and Nagpur.

NOTES OF THE WEEK.

The Situation in Greece.

These are extremely difficult and delicate days for Greece, and one can, unless he be a hopeless partisan, but wish her well in the sacrificial times to come. Naturally, those whose first consideration is the stability of Europe hope that she will accept *in toto* the Allies' proposals, but while it is easy from this distance to say how she ought to behave, it is not too comforting a task, perhaps, to reflect how one would oneself behave in similar circumstances to the Greeks'. We were reminded a few days ago, when the King refused to consult General Danglis, the Liberal, about the formation of a Cabinet, how bitter the feud still was between Constantinist and Venizelist, but now it is stated that the greater part of Greece is one in common despair at the Allies' proposals. Whether there will be determined resistance in Anatolia to the Turkish re-conquest we do not know—we await a statement of the case by the man who chiefly matters to the Anafolian Greeks—the Patriarch of Constantinople; but perhaps the return of M. Venizelos to Europe at the present moment is not without significance, for there are more impossible things than a restoration to Greece of Venizelism, a restoration by the unredeemed and the island Greeks to save the Hellenic idea. For there is no doubt that, round whomsoever it centre, the idea of Hellenism is the permanent thought or 'dream of the Greeks, and it is precisely that idea that is now in danger of being outraged.

The Little Entente and the Proposals.

From the information that we can gather it would appear that the Balkans and Roumania are equally against certain of the Allies' proposals to Turkey. We need scarcely mention the unanimous Greek disapproval of the proposed handing back to the Turks of the Smyrna enclave, but Roumania and Serbia alike have grievances of their own. It may be that these grievances, are, compared with the boon to be gained by a cessation of the Greco-Turkish strife, unimportant, but they are genuinely held by parties closely interested in the settlement, and they should at all events be considered in the event of a rejection of the Allies' terms by Angora. Roumania, as also the Balkan countries, cannot be expected to look favourably on the increase in Turkey's armed forces, nor can she but fear the results of the setting up of a common Turkish-Bulgarian frontier. In

these two objections it is quite possible that the Little Entente (certainly Serbia) would support her; but she has in addition an unique interest in the whole question of the Straits. To her there is, besides the necessity of the freedom of the Straits, that of the Bosphorus also. If the Russians, about whose attitude towards these terms we know nothing for certain—though it is as important as that of any party—chose with the Turks to close the Bosphorus, Roumania would inevitably be isolated. It is not a pleasant possibility to entertain. But any conceivable arrangement is dependent upon the duration of present alliances, and we think that between Bulgaria and Turkey a frail one, and that between Russia and Turkey frailer still.

Education and Politics.

An indiscriminating mixture of religion with politics has always been a distinguishing feature of the Balkans and of neighbouring countries, and recently we have seen in those parts lamentable efforts similarly to mix education with politics. Not only in Greece, where the nicest literary points are sometimes combated on political grounds, but also in Bulgaria have the capital seats of learning been subject and subordinate to political influence. And now we learn from Constantinople that the same degrading sight may be witnessed in the Turkish capital. At the University of Stamboul Riza Tewfik Bey was lecturing on the origins of Turkish literature when he was howled down by Kemalist students, who objected on patriotic grounds to his statement that traces of Persian inspiration were evident in some of the early Turkish poets! Nor were these students content with howling down the lecturer; steeped in and fired with the Nationalist spirit they forthwith drew up a memorandum demanding the proscription of their political opponents. In any other than the serious times of the present such an incident would be amusing; as it is, it is a tragic example of the stubborn stupidity of the classes upon whose reasonableness the peace of the world now depends.

English and French Eastern Methods.

The air is full at the moment of rumours that France intends to usurp, or perhaps merely by force of circumstances to succeed to, Great Britain's supreme influence in the East, and particularly in the world of Islam. We know well enough the traditional liberal policy that our country pursues towards Eastern races, and it is instructive to contrast with this the centralising, conservative policy that France appears to think most beneficial. No better examples of the two policies could be found

than Egypt and Morocco, where fundamentally opposed conceptions have produced equally efficient results. On the whole, however, it must be admitted that the sterner policy of France is the more immediately successful, and it will be interesting to watch the progress of their conduct in Syria, where, so it is stated, it is meeting with considerable opposition. In the drawing up of the Constitution for the State of Lebanon they have not failed to reserve the final decision in the hands of the High Commissioner: General Gouraud is to be every whit as great a dictator as General Lyautey in Morocco. Whether Syria will follow Egypt's example, and agitate for more power to itself is uncertain, for France has a quick and ready way of quelling such disturbing influences.

The Situation in Egypt.

In regard to Egypt just now "no news is good news." The Sarwat Cabinet appears to be going about its business methodically, and the country is quiet. Last week, at a banquet in honour of King Fuad's birthday, Sarwat Pasha made a rather remarkable speech. Egypt, he told his hearers, had emerged victorious from a political battle, winning objective advantages, without any engagement limiting her future action; she had not accepted the conditions attached by the British to her independence, and there would be a great difference between the guarantees demanded and those retained by Great Britain. As the oration appeared to have something of the character of an electioneering speech, it may not be necessary to examine these phrases too closely; but they can hardly fail to cause surprise. Sarwat Pasha has certainly a difficult task before him, as the reception of this particular speech demonstrates. For certain references by him to the value of opposition have given rise to a good deal of pointed comment by a section of the Cairo Press; and a tendency is manifesting itself to demand that the elaboration of the Constitution shall not be concluded until Parliament has been elected and given a chance to make its views known. It appears, however, that the Moderates are nevertheless making headway in the country, while the Extremists have lost another prominent member in Ali Bey Maher.

A Gallipoli Canal?

In a letter to the *Morning Post* a retired officer of the Royal Engineers gives some particulars of a scheme proposed by him to Lord Kitchener at the time of the Gallipoli campaign, for the cutting of a canal from the Gulf of Saros to the Sea of Marmara. As he remarks, the existence of such a canal would greatly help towards a solution of the question of the administration of the Dardanelles. Lord Kitchener, the writer states, was greatly interested in the proposal, and regretted that it had not gone before him before he advised the evacuation of Gallipoli; and the Admiralty regarded the scheme as practicable and feasible. Moreover, he was actually able to provide Lord Kitchener with an undertaking from a leading firm of contractors to execute the work in two months if the necessary protection could be afforded during construction. The cost of the canal he estimates at £2,000,000. The advantages of such a scheme are obvious, and it is most probable that they have been considered by the Allies in connection with their Paris proposals. In these days the physical difficulties may be ignored, and the real obstacles in the way of constructing such a canal would be, of course political considerations. But political, like physical,

difficulties can be overcome, and it would be interesting to have the scheme discussed, and to see who supported and who opposed it.

India in Parliament.

The House of Commons devoted a portion of last week to Indian affairs, first in the course of a miscellaneous debate on the Consolidated Fund Bill, and then on a formal resolution authorising further sterling loans for railway equipment. Lord Winterton, the new Under-Secretary, made a satisfactory début, but the bowling he had to meet was not of a very high class. Lancashire talked of cotton-duties, and Labour showed itself anxious for Indian custom; everything that was said on these topics had been said frequently before, and the official answers were necessarily of the familiar type; but it is well to take note of the formal announcement that the recent change in personnel at Whitehall has involved no change in the Indian policy of the Government. We trust that this declaration will allay the nervousness which was produced in Indian political circles by the news of Mr. Montagu's retirement; advices by the last mail show that the immediate effect was greater than the cable suggested, and Lord Winterton's unqualified statement that the policy laid down in 1919 will be carried out in the spirit and the letter ought to serve as a tonic to the spirits of those who feared that their efforts for the success of the Reforms were about to be thrown away.

The Viceroy's Council.

One of the first acts of the India Office under its new chief was to issue a list of appointments, some of which have been considerably delayed. The confirmation of Mr. Innes as Commerce Member of the Viceroy's Council did not come as a surprise, for he had been acting successfully in the post for several months, and there were no very obvious competitors. Sir William Vincent's appointment to the Council in Whitehall as soon as his Indian service terminates is in accordance with the declared policy of keeping that body up-to-date, for, after five years' charge of the home department, and a term as leader of the Legislative Assembly, he will be able to tell his colleagues anything they want to know. Interest now centres on the choice of Sir William's successor. The Home Member is, next to the Viceroy, the most important wheel in the administrative machine and it has been said that he can do more harm than anyone in India, though there are perhaps two or three appointments which offer greater chances of doing good. India cannot afford many mistakes at the present juncture, and we hope the authorities will on this occasion play for safety.

The New Governor of Bihar.

The long delay in appointing a successor to Lord Sinha as Governor of Bihar and Orissa has been taken in this country to indicate that the post was being hawked about among the junior ranks of the peerage, and if there be any foundation for that suggestion, we are not surprised that the effort should have failed. Properly speaking, the charge is not a province, but only a congeries of sample districts; there is no common tradition, and as yet there are few signs of any community of feeling, while the Legislative Council has so far been a rather grotesque institution. The choice of Sir Henry Wheeler, now Member of the Bengal Council, to fill the vacancy strikes us as a happy one. At present it is a thankless post, but Bengal has given him small thanks

for his admirable work there, and if he can build up a province out of the very raw materials now placed at his disposal, his work will deserve cordial recognition, and may even secure it.

THE WEEK AT HOME.

London, Monday Evening.

Genoa and Westminster.

Mr. Lloyd George is making his great speech in the House this afternoon on the vote of confidence in himself. It is being boomed and denounced in advance in the daily Press; I have no doubt that it will be a success—of a kind. But only, as Einstein would say, of a relative kind; the path of light—if one may so call the Prime Minister—has again been deflected by gravitation in the shape of the Conservative Party.

The original resolution has been modified, or as the unkind would say, watered down in the Cabinet discussions of the last few days; the Conservatives would not stand it as originally drafted. From the fact that Mr. Lloyd George has accepted these modifications it is clear that he is entirely set on his Genoa policy. His admirers say that he believes in the reconstruction of Europe even at the cost of party advantage at home; his detractors declare that he is ambitious enough to think that he can make terms with Russia and Germany, that he has an insane or perverted desire to meet Lenin, and that he will make party capital out of his success in the end when he comes home, and use the Conference as the winning card at a General Election in May.

All this, of course, is pure speculation; and since I am the only journalist in London who is not in the full secrets of Mr. Lloyd George's conscience and calculations, I cannot give any decided opinion. I can only say that to all appearance he prefers the chance of a real agreement in Europe to the certainty of party strife at home. He may fail at Genoa; it is unlikely that his success will be complete. But I doubt if either success or failure there will make very much difference to party prospects in the constituencies. The fact is that public opinion is not at the moment deeply exercised over foreign affairs, and I am not altogether inclined to blame it. We are denounced for merely shrugging our shoulders over Russia; but what else can the average man do? The Paris negotiations over the Near East excited no general interest; and for the rest, foreign affairs remain a kaleidoscopic mystery. England is at present more interested in domestic and economic problems, and wages and prices; and with two million unemployed and money tight everywhere and a re-emergence of the strike feeling, there is something to be said for this "parish pump" attitude of mind.

By-Elections and Finance.

The Government lost the by-election at Leicester, consequent on Sir Gordon Hewart becoming Lord Chief Justice. It has been represented as a great victory for Labour, but in fact Leicester had been a Labour seat for years, until 1918, and it has now merely reverted to its old allegiance. The really interesting fact about the election was that the Independent Liberal candidate was again at the bottom of the poll. The "Wee Frees" have plenty of money, and they are seeking carpet-bag candidates from the Temple and elsewhere for the General Election; but neither cash nor carpet-bags can secure them votes in the present position.

It is thought by some people that the forthcoming Budget, which may knock a shilling off the income-tax, will do good to the Government prospects. It is quite true that the financial year ends with a surplus—a surprising recovery after the depression of the coal strike, the failure of the Excess Profits Duty, and the stagnation in trade. But the outlook for next year is not particularly hopeful.

E.P.D. has now vanished. Income-tax (which has been paid in many cases this year by an overdraft on the bank) will not yield so much next year, under the three years' system. The Corporation Profits Tax has

only produced half the anticipated amount, and some part of the surplus is due to the rise in gilt-edged securities, which is in turn merely due to the stagnation of industry.

There is no room for unqualified optimism in the Treasury position. A reduction of the Income Tax would probably be a good thing, because we are at present rather overtaxed, and any reduction would help a little towards a general revival. But the situation would still remain an anxious one. And the idea that the voter will roll up to support the Government because the income-tax is only five and not six shillings in the pound grossly overrates the gratitude of the ordinary man towards his rulers. He takes any reduction of taxation as less than his proper deserts, and votes, or does not vote, according to his inclinations.

The New Irish Agreement.

The best news of the week is undoubtedly that an agreement has been concluded between the two Irish Governments to cease belabouring each other. At the invitation of Mr. Churchill, whose influence in politics is growing steadily and quietly, Sir James Craig and Messrs. Griffiths and Collins met at the Colonial Office, and an honourable accommodation was arranged between Belfast and Dublin. This does not, of course, necessarily mean that their followers will consent to agree, or to refrain from throwing bombs at one another; but at any rate it is something considerable that the two Governments in Ireland should no longer bite their thumbs at each other.

It must not be imagined, however, that the future is settled for good and all by this pact; indeed, there are some who interpret it as an indication of the real weakness of the Irish Provisional Government. These pessimists suggest that Messrs. Griffiths and Collins were the more ready to come to terms with Ulster because they are increasingly conscious of their own weakness. There are still far too many outrages in the South; the Provisional Government has little real power to suppress murder or arson, which still continue, and pure terrorism like the destruction of the *Freeman's Journal* offices in the capital for daring to criticise the Republicans is an indication of moral weakness on one side and physical weakness on the other.

De Valera remains as a sphinx in the background, neither approving nor condemning these outrages; which must be accepted as meaning that he approves. He has, of course, a good many devoted followers, but it is doubtful whether he has a majority of Irish opinion behind him. But in Ireland moral courage is not conspicuous in politics; even the Roman Church, which is in favour of the Treaty, has havered about it, lest it should offend the Republicans.

The Engineering Stoppage.

The lockout of engineers continues, and the negotiations give no indication of an early settlement. The discussions between the parties have been published in part, but they are not too easy to follow; the general impression is that the men are quite as reasonable in their attitude as the masters.

Judges and Politics.

An interesting debate took place in the House of Lords last week. The Lord Chancellor criticised his old friend, Lord Carson, for his political utterances since he became a Lord of Appeal, and pointed out that he had broken the unwritten law which prevents a judge from intervening in politics. Lord Carson retorted by saying that he preferred his honour to his interest, which was not exactly the point; he was nearer the mark in pointing out the anomaly—the recognised anomaly—of the highest judicial officer, the Lord Chancellor, being an active party politician. Lord Birkenhead frankly admitted this, but at the same time stated that this is a traditional anomaly, whereas Lord Carson has broken a tradition.

The sense of the House and the country was on the whole with the Lord Chancellor, and it is probable that the time will come when the Chancellor himself will become increasingly a judicial rather than a political

personage. The double duties of the existing post are in fact too heavy even for the present holder, who is an extraordinarily vigorous young man of fifty; it is notorious that some older Lord Chancellors in the past have simply not discharged their duties punctually—although they have drawn their salaries promptly—with the result of grave embarrassment and delays in judicial work. Lord Birkenhead cannot be reproached on that score, but he has found the strain too great, and was compelled last week to apply for a month's leave of absence, in order to restore his eyes, which have suffered from overwork.

Cambridge Wins Easily.

I do not know whether the usual crowds saw the boatrace; there was an icy tweak in the east wind that was discouraging, and when it began to snow after lunch I decided that the club fire was better for my digestion than Barnes Bridge. Oxford lost her never very great chance of winning when one of her men strained himself at practice during the week; but the crew put up a good fight, and spurted occasionally, but Cambridge got home by four and a half lengths. The time—19 minutes, 27 seconds—was quite good, and opinion seemed unanimous that it was a better race than the actual result suggests; but from the frozen noses of the spectators who assured me that I had missed what was well worth seeing, I am not sorry that I preferred the less courageous part.

M. Coué and the Dean.

Fashionable London, which always loves a new craze, went mad last week over the visit of M. Coué, a French professor of the celebrated psychological school of Nancy. Auto-suggestion is his theme, and he advocates that everybody who is suffering from some real or imaginary complaint should say every morning before they get up: "Everyday, in every respect, I am getting better and better and better." If this is said twenty times in succession every morning—the numbers can be counted by a sort of rosary—it will result in an improvement, according to M. Coué; but he denies that he can work miracles—a power that has been seriously claimed for him by some of the more fervent believers. Perhaps that is the most curious aspect of the whole business; it shows that superstition is still not very far below the surface even among educated people, and that most of us still prefer the marvellous or supernatural explanation to the rational.

Dean Inge, who has just had a bout with Mr. G. K. Chesterton on eugenics—in which both parties thoroughly enjoyed themselves over the tuberculosis of John Keats—has vigorously attacked M. Coué, whose appearance he ascribed to the same father of lies that produced Bolshevism, Christian Science, and other evils. This is rather hard measure for the little Frenchman, although it seems to have annoyed that foolish and obscure sect, the Christian Scientists, beyond measure. But all's fair in love and war, and most things are fair in controversy. The Dean has never used such sulphurous language towards his opponents as I recently heard used about him by a High Church padre. It is true that this was in private conversation, but it gave one an inkling of what volcanic fires may still lurk beneath the Cassock.

The Loom of Youth.

The industrial depression, combined with the cuts in the Army, Navy, and Civil Service, has again brought

up the old vexed question—"What shall we do with our sons?"—and *The Times* has been publishing letters from schoolmasters, heads of colleges, eminent bachelors, and even from unfortunate parents, on the subject. Everybody seems to agree that the professions are overcrowded; a barrister informs me that not one in twenty of his kind is making a living; a Harley Street specialist told me the other day that surgical fees have dropped badly, and that the most eminent surgeons are now glad to remove one's appendix almost for a mere song; while as to the Church, its prospects are worse than either law or medicine. An editor, too, assures me that the quantity of young fellows trying to enter journalism is only equalled by the bad quality of the wares they are trying to sell; the schools of journalism turn these folk out by the hundred, and the tables of editors groan under the plentitude of manuscripts, not one in a hundred of which can be used.

But the big business houses do not want recruits at the moment any more than the professions; they are full up with ex-Service men, who rightly and properly have precedence. The exceptional boy, of course, is all right; the boy with influence can generally find a niche somewhere; but the mere ordinary boy is in for a bad time for the next year or two, until things revive.

The only comfort—if it is a comfort—is that the outlook for girls is even worse. Apart from domestic service, where the demand is greater than the supply, and teaching, where women have things pretty much their own way, the prospects are hopeless. Two or three women have been called to the bar, but one or two barristers with whom I have discussed the subject, and men with no suspicion of sex-antagonism, inform me that there is not much prospect of many women barristers making their way. The Church, of course, is barred to the more religious sex; while as for medicine, only a few will survive in this field. "The average man," said a busy medico to me the other day, "will not go to a woman doctor on any terms, nor does she expect him to do so; and the average woman would sooner trust a man than a woman. The first consideration automatically reduces their chances fifty per cent; the second probably some thirty per cent. It is unjust, for women doctors are quite good, but one cannot fight the prejudices of the lay public."

The Week's Books.

Those who wish to know "what to do with our sons" will not discover much encouragement to take up politics as a profession from "The Prime Ministers of Britain 1721-1921" (Murray) by the Hon. Clive Bigham. Nowhere is the competition to get to the top more keen and merciless; out of many thousand members of Parliament only 36 have become Prime Ministers in two centuries. From a statistical examination of the careers of past heads of the Government, Mr. Bigham concludes that the average Prime Minister is born heir to a peerage, educated at Eton and Oxford, enters the House at 25, marries at 29, and obtains his first appointment at 32. At 48 he enters the House of Lords, at 50 becomes Prime Minister, and dies at 70. But this calculation is weighted with the burden of the aristocratic traditions of the eighteenth and early nineteenth centuries. Mr. Lloyd George was born heir to nothing, was educated at a national school, and has never been in the House of Lords.

"Edward Carpenter: The Man and His Message" (Jonathan Cape) by Tom Swan, is an appreciation of the well-known writer whose reputation is growing with the years, with many quotations. As an introduction to Carpenter's teaching, it is very well done.

Lovers of Anatole France will be grateful for another volume—"On Life and Letters"—in the fine English translation which Mr. John Lane has been publishing for some years. The vogue of the great French ironist continues to increase in England.

The author of "Sonia" has published a new novel—"The Confession of a Well-Meaning Woman" (Cassell). I have not read it, but the reviewers seem agreed that Mr. McKenna's hand has not lost its cunning.

EGYPT.

Cairo, March 18.

The Sultan Becomes King.

The event of the week has been the proclamation of Sultan Fuad as King of Egypt, following on the ratification by Parliament of the proposals transmitted to him by the Cabinet. His Highness (or rather His Majesty as he must henceforward be styled) made the announcement to his people in a rescript addressed to H.E. Abdel Khaled Pasha Sarwat, the Prime Minister; and the proclamation was read publicly throughout the country and celebrated by salutes of a hundred and one guns fired at Cairo, Alexandria, Port Said and Aswan, and at Khartoum. Yesterday King Fuad attended the Friday prayer at the Mohamed Aly Mosque, thus following the example of previous sovereigns of Egypt on the first Friday following their accession or any great national event, and this morning he held a review of the Egyptian Army, at which the troops acclaimed him King of Egypt. Next Monday there will be a great reception at the Abdin Palace, and the day will be kept as a public holiday throughout the country.

The foreign Diplomatic and Consular Corps have now been officially advised by the Residency and the Egyptian Government that Egypt is independent and a Sovereign State. They will no doubt wait for confirmation from their respective Governments, but from now onwards their relations with the Egyptian Government will be directly with the Egyptian Ministry of Foreign Affairs, and not through the Residency as has been the case since December, 1914.

It is difficult at this short interval to gauge public opinion in regard to the change. There have been hostile demonstrations, mainly in Cairo, and in each case directly attributable to incitement of the mob by Zaghloulist and Khedivist agents; but beyond these there has been no outward expression of opinion. The fact that the Sultan would take the title of King had been known for some time. Considerable surprise has, however, been expressed everywhere that the moment chosen for this should not have been when the new Constitution, by which His Highness would divest himself of certain of his prerogatives, was promulgated. There may, of course, be some very good reason for making the proclamation now, and not waiting until the new Constitution is ready.

Another attempt on an Englishman.

Another attempted assassination of an Englishman took place this week, McIntosh Bey, Locomotive Works Manager of the Egyptian State Railways, being shot through the shoulder as he was walking to his house from the station at Zeitoun. McIntosh Bey had received a threatening letter a few days before this attempt, telling him that unless he retired at once he would be shot. He was, therefore, prepared in a way, and carried his revolver handy, but he was shot in the shoulder before he was able to fire; and owing to the wound, which fortunately has not proved very serious, his three shots missed his assailants—who as usual were two men in *galabeas*—and they made good their escape.

The fact that several of the Englishmen attacked recently have belonged to the Railways, where they have under their orders large numbers of men who have to be very firmly handled, has been adduced by certain people as proof that the motive for the attacks on Englishmen which have been so repeatedly chronicled during the past few weeks is personal and not political. It must, however, not be overlooked that the majority of the workers in the Railway workshops are a very rough element recruited from the lowest social stratum. Temperamentally they constitute far easier material than the purely student class to manipulate for political purposes and the perpetration of acts of violence. Quickly worked up to the required pitch, and ordered

to shoot an Englishman, it would be only natural that they would select as their victims men whose daily habits are known to them and whom they could more easily entrap rather than go out in the streets and wait for some stray Englishman to pass. Combining this with the facts that the other Englishmen who have been attacked have not been connected with the Railways and that it has been impossible to discover the existence of any personal grudge against them, it is clear that all these attacks have had a purely political object; and the opinion is gaining ground that the Wafd is not only responsible for the daily troubles which are occurring in Cairo, but is also behind the organisation carrying out these cowardly attacks.

The Anglo-American Hospital.

Information reached here this week that the British Red Cross had offered a contribution of L.E. 50,000 to the fund which had been opened for the erection of a British Hospital in Cairo. This hospital, it may be remembered, was to take the place of the existing Anglo-American Hospital which had been found to be inadequate for the needs of the rapidly growing British community. Latterly, owing to the change in the political situation, which foreshadows if not a reduction at any rate little further increase in the British community, it was decided to abandon the scheme for a new hospital and to concentrate on extending and improving the Anglo-American Hospital, to enable it to meet the possible future requirements of the Anglo-Saxon community. It is much to be hoped, therefore, that the offer which the British Red Cross has made to the British Hospital scheme will hold good for the new project. Apart from the fact that the maintenance of a properly run British hospital is essential to British prestige in Egypt, where France, Austria and Italy all have their own institutions, the Anglo-American Hospital rendered invaluable assistance to the Army during the War, often at loss to itself; and this grant would be in the nature of a recognition of the services rendered to the Allied cause not only by that institution but also by the Anglo-Saxon community for which its existence is vital.

The Sudan Irrigation Works.

Next week Sir Lee Stack, Governor-General of the Sudan, leaves for London, in order to discuss the question of the loan for the Sudan development works. I understand that as a result of further enquiries made recently on the spot all the circles interested in the financing of the Sudan are now satisfied that the projects are sound, not only from the technical but also from the financial and economic point of view. It only remains for the lines along which the work shall from now onwards be executed to be decided, and as soon as this is settled it is expected that the necessary money will be provided for completing the Blue Nile works which have temporarily been slowed down. Sir Lee Stack will deal with the broad lines of the loan in London, but Sir Edgar Bernard, the Financial Secretary, who will follow him shortly, will settle all the details; and we can confidently expect a satisfactory conclusion in this respect during the coming summer.

Cairo, March 5.

Monday was a gala day in Cairo in honour of Egyptian Independence. It was a general holiday, all business houses were closed, and most shops were shut. The King held a reception in the morning, which attracted one of the largest attendances recorded of late years. The scene in and round Abdin Palace throughout the morning was a very brilliant one. Large deputations came up from the provinces, and an interesting feature was the spontaneous manner in which after the reception the provincial notables proceeded straight to Adly Pasha's house in order to thank him for the part he had played in bringing about the change in status. These

notables also visited Sarwat Pasha, who made them speeches in which he called upon them not necessarily to support him personally but to support the policy he represented, which he considered was in the interest of the whole country.

In the afternoon Her Majesty the Queen held a reception for the Diplomatic Corps and the ladies of the European colonies, and in the evening the city was profusely lit up, the most striking illuminations being those at Abdin Palace, the Station, and the Royal Opera House.

It is a matter of much regret that on an occasion of such national importance one should have to record unpleasant incidents which occurred during the morning. It was well-known that the Wafd would try to create trouble, and precautions were accordingly taken to protect the route to and from the Palace. The objects of the attention of the mob, who were led by agents of the Wafd, were the provincial notables, whom they attacked as they came from the Palace, in the same manner as they attacked those who went to greet Adly Pasha on his return from London last December.

The Police and the Egyptian Cavalry did exceedingly good work, but the Egyptian Infantry behaved in a most deplorable manner, fraternising with the crowds and standing by unmoved, and even applauding, when the notables, many of them old men, were attacked in their carriages as they passed.

All this took place within sight of the Hotels, where the balconies were crowded with tourists, and the impression made on them was a most unfortunate one. To the credit of the Cabinet it should be added that as soon as the facts became known it took immediate action. An Egyptian Army Court of Enquiry was constituted, and has started work; and the Cabinet is determined to inflict exemplary punishment on the officers and men concerned.

The New Budget.

In addition to the statistical details which are discussed on another page, the new Budget shows one or two features which are indicative of the new régime. The resuscitation of the Foreign Affairs Portfolio has naturally entailed an increase in the Foreign Affairs budget, while a separate account has been opened for the offices of the Financial and Judicial Advisers, whose budgets have hitherto been included in departmental estimates, but whose offices are now detached from the Central Administration and will henceforward be entirely separate. The most important feature is, however, the absence of the signature of the Financial Adviser from among the members of the Finance Committee, whose explanatory note accompanies the budget statement. The retirement of the Financial Adviser from that Committee is a corollary of his abstention from attendance at the Council of Ministers and of his resuming the purely advisory duties with which his post was originally invested.

Generally speaking, the financial situation as revealed by the new Budget and by the figures so far published for the year which closes on the 31st instant, appears to have undergone vast improvement. It is anticipated that the surplus which will replace the anticipated deficit for 1921-1922 will not be less than two-and-half millions, which means that at the opening of the new financial year the Government will have at its disposal a reserve of not less than six millions, which will certainly stand it in good stead in dealing with the problems confronting it.

This return to a satisfactory state of things financially has been effected by adherence to a policy of strict economy and of steady expansion of the revenue resources of the country. The Egyptian Government will do well to adhere to this policy for some time to come, otherwise it will not be able to meet the many heavy calls for capital expenditure on development work that are pending, nor the demand for credits in connection with the extension of the existing, and the creation of new, services rendered necessary by the new status which the country has acquired.

The Bomb Conspiracy.

The conspiracy trial, which has been before a British Military Court for over a fortnight, was concluded yesterday. In this case five men, *i.e.*, four students and one ex-servant of the Wafd El Masri (Egyptian Delegation) were accused of conspiracy in that, as members of a society having assassination amongst its objects, they conspired with each other and with a certain doctor, who is still missing, to kill by means of bombs and firearms His Excellency Abdel Khalek Sarwat Pasha, the Prime Minister, and Selim Effendi Zalki, the Head of the Secret Police. It may be remembered that about two months ago two attaché cases containing six bombs were discovered in this connection.

The prosecution produced evidence of the existence of a "Society for the National Defence" which proposed to obtain by all possible means the satisfaction of its demands. These demands included the complete independence of the whole Nile Valley from source to mouth, the repatriation of Zaghloul Pasha and his companions from the Seychelles, the release of Abdel Rahman Fahmy Bey and others who were sentenced in the famous "Vengeance Society" case, and the establishment of an international court consisting of Egyptians and foreigners to enquire into the case of those people who were sentenced in connection with the Alexandria riots.

The Society was organised into a number of committees, one to destroy by arson and other violent means all English and Government properties, one to shoot prominent Egyptians and British soldiers and officials as a revenge for Egyptians killed during recent events, one for obtaining bombs and arms from abroad, and others for boycotting British trade and organising strikes.

There were over thirty witnesses, the most important of whom was an informer who had been a member of the Society and had been chosen to carry out the assassination of the Prime Minister, and who gave previous information to the authorities and enabled them to track down the conspiracy. The case against one of the students was withdrawn during the trial, and yesterday the Court acquitted another student and, calling for evidence as to character on behalf of the other two students and the servant of the Wafd, intimated thereby that it had found them guilty. The sentences will be promulgated in the course of next week as soon as the Commander-in-Chief has examined the papers.

Port Said, March 20.

Last week the P. and O. s.s. 'Naldera' arrived here on her way out to Australia. Among the passengers who disembarked at Port Said were Lord and Lady Milner who are on their way up to Palestine for a pleasure trip. Lord and Lady Lytton were also on board, the former of whom is going out to India as Governor of Bengal.

As evidence of the increasing tranquillity of Trans-Jordania it may be noted that Mr. Forder has just passed through here on his way to Amman, where he will open a new branch of the Anglo-Egyptian Bank.

The news of Egypt's Independence was received here without any violent demonstrations of joy. People ate and smoked, and cabmen continued to lash their horses at ten to fifteen second intervals in the same old way as when they were ground down under the galling slavery of the British Protectorate. Perhaps some of the more thoughtful Egyptians may realize that, after all, the English Inspector who came round at uncertain intervals, and asked uncomfortable and awkward questions of officials, was of some use in keeping things moderately correct, and that the blessed word Independence, which appears to bring such comfort to so many Egyptians, is not always the "open sesame" to all the delights of Paradise.

The chief item of interest in the town, which may or may not have any connection with Independence is that the Post Office clock has started again and appears to show the correct time. It is thought that possibly the Railway Administration will not like to be behind the

Post Office authorities, and will get the Station clock going too, for both have been out of action for some years.

GREECE.

Athens, March 25.

How the Government was Saved.

Although the Gounaris Government succeeded in obtaining the support of 164 out of the 303 deputies who were present at the sitting of the National Assembly last Saturday, it has certainly no reason to congratulate itself on its Pyrrhic victory. It was the extreme seriousness of the exterior situation alone that saved M. Gounaris from a second collapse. All the anti-Venizelist groups which, with the assistance of the eight-five Liberal deputies, had, a week previously, forced the Government to resign, declared that a new ministerial crisis at a time when the fate of the entire nation was discussed by the three Allied Powers, would be disastrous. Instead therefore of blackballing the new Government, they unanimously decided to abstain from voting, while the Mussulman deputies forming part of the group of Independent anti-Venizelists, did not even appear at the sitting of the Chamber. A second crisis was thus averted, but anyone can see that the life of the new Cabinet will be very short.

The Armistice Terms.

The Allied Note with regard to the conclusion of an armistice on the Asia Minor front was handed to the Greek Government by the Allied representatives on Thursday morning. Shortly afterwards the Minister of War, M. Theotokis, proceeded to the Royal Palace and acquainted His Majesty with the armistice conditions set forth by the Allies. At 4 o'clock in the afternoon a Council of Ministers was held, at which it was decided to invite the Greek Commander-in-Chief in Asia Minor to come to Athens. On General Papoulas' arrival a second Council of Ministers will be held in his presence and the nature of Greece's reply will then be

definitely decided upon. As the General is expected in Athens to-day, it is quite possible that the reply will be handed to the Allied Representative before tomorrow evening. It is generally believed here that this will be in the affirmative; at the same time, however, it is anticipated that the Greek High Command will propose a slight modification of the second article of the Allied conditions. Meanwhile rumours are current here to the effect that Mustapha Kemal has rejected the armistice terms.

Turkish Officers set Free.

At the request of the Hellenic Red Cross Society the Government has authorised the release of all Turkish Sanitary Officers taken prisoners by the Greeks since the commencement of operations in Asia Minor. Twenty-six of them have already left for Constantinople. Prior to their departure the liberated Turkish Officers were received by the Administrative Council of the Hellenic Red Cross. They then visited the Evangelismos and Syggros hospitals, also the Acropolis and other places of interest in the city. In the afternoon they were entertained to tea by their Greek colleagues.

M. George Brandes.

The well-known Danish critic and Professor of Philosophy, M. George Brandes, who is spending a few weeks in Athens, was yesterday proclaimed *doctor honoris causa* of Athens University. The ceremony took place in the large reception room of the University in the presence of the Crown Prince, Prince Nicolas, the Minister of Education, M. Polygenis, the Professors of Athens University, and many students.

Miscellaneous News.

General Danglis has been elected "Director" of the Liberal Party. Despite M. Venizelos' declaration to the effect that he has irrevocably decided to retire altogether from politics, his adherents still consider him their chief.

The Italian steamer 'Abazzia,' which was captured last week by a Greek destroyer and conveyed to Salamis, has been released and is leaving to-day for Mersina. It appears that the Greek Government was forced to comply with the demands of the Italian Government, the latter threatening to send a fleet to the Piræus. Though undoubtedly contraband of war, the cargo has been returned to the Italians. There were also a number of Kemalist officers on board the 'Abazzia' who have been allowed to continue their journey.

The French steamer 'Espoir' was released last week. The coal was confiscated, but Greece has agreed to indemnify France.

ALBANIA.

Tirana, March 22.

The General Position.

As I write these lines, peace has come back to the little capital of Albania, to this town of Tirana, now so pleasant with its gardens, its verdure, and its trees in blossom. With Nature so beautiful and harmonious one asks oneself with astonishment whether it is true that this place has been the theatre of a drama, the scene of tragic fighting. Apart from five burned houses, the *débris* of which is still smouldering, there is nothing to indicate the passage of the storm. Now, after three days of death, life has returned. Everybody is going about his own affairs, looking with curiosity at the holes in the walls made by rifle bullets.

Is this a real and deep peace, or does the fire yet lurk in the embers? The near future will answer that question, though evil things are foretold for this country, in which passions are so easily loosed and fired.

The Facts of the Situation.

My readers are acquainted already—by my letter of March 10—with the personages in the drama which has been played in Albania. First of all, there is Bairam Tsurri, chieftain of Yakova, a kindly old warrior. As I told you in my last letter, this man lacks nothing in intelligence or in good sense, and he was perhaps sincere when he placed himself at the head of a movement the aim of which was the forcing of new legislative elections and the convocation of a Constituent Assembly. Bairam

Tsuri acted thus in the belief that he was fulfilling the unanimous desire of the people. But as soon as the inhabitants of Scutari notified him that they did not share his opinions, Bairam renounced his enterprise and remained peaceful in the North. He went no farther than this, and all that the European Press has published concerning him is false.

But besides Bairam Tsuri there are two other chiefs, Halid Lleshi and Elez Youssuf.

Halid Lleshi is reputed the agent of Serbia, as he was the agent of Essad Pasha. Lleshi is an officer in the Serbian Reserve, and his supporters are recruited in Yugoslav territory. With two hundred men he marched, on March 6, from the banks of the Drin on Elbasan, but he encountered two companies in a skirmish which took place thirteen kilometres north-east of the town of Elbasan. Halid Lleshi was defeated and pursued as far as the frontier, which he crossed, seeking refuge in Serbian territory. (This is the explanation of the Serbian telegraphic *communiqués* announcing the violation of the neutral zone: in reality they meant the refuge accorded by the Serbian authorities to the rebels). According to the custom of the country, Halid Lleshi was exiled to the interior of Albania.

On the other hand, while Halid Lleshi and his band were defeated, there appeared on the scene Elez Youssuf, chief of the mountains of Dibra, supported by three hundred men. On March 7 this force met a small Company in the plain of Kroya. The commander of the Albanian gendarmerie, Major Melez Frasheri, was twice wounded, finally falling dead on the field of battle, and his soldiers were routed in face of the superior numbers of the rebels. On the following day Elez Youssuf and his men fortified themselves in a quarter of Tirana. The capital was depleted of its troops, who had been sent to Elbasan and to Kroya. However, Ahmed Zogolli, Minister of the Interior, and Spiro Koleka, Minister of Public Works, organised a plan of defence, while the President of the Council and two of the Ministers retired to Elbasan. It is therefore an exaggeration to say that the Government quitted the capital.

The fight in Tirana itself lasted fifteen hours; meanwhile reinforcements were coming to the assistance of the Government. On both sides there were killed, five houses were burned, and more blood would have been shed but for the wisdom and the moderation shown by Mr. Eyres, the British Minister. Thanks to his personal and friendly action Elez Youssuf asked pardon of the Albanian authorities, made his submission, surrendered his arms, and withdrew, promising never again to meddle in politics. This submission avoided much spilling of blood both in Tirana and in the country. To judge by the appearance and the talk of Elez Youssuf, one would have said that he was a sincere man who had acted under a wild impulse, thinking to render service to his country, and it should be emphasized that this chief comes from the regions devastated by the Serbian Army in 1920 and in 1921.

However, even with Halid Lleshi and Elez Youssuf both out of the way, the danger was not yet over.

Events at Durazzo.

There remained another source of trouble in Albania, namely Durazzo and the small town of Shiak, between Durazzo and Tirana. While the Government was engaged at Tirana, Hamid Toptani and Omer Shiaku were endeavouring to make themselves masters of these two towns. These two men had both been implicated in the Essadist movement of June 1920, for which they were arrested and imprisoned in the fortress of Argyrocastro, where they remained for a year and whence they gained their liberty only owing to the general amnesty. It seems that their lesson had been of no use to them, and they dreamed of revenging themselves upon the Government. However, their resources were feeble, for Ahmed Zogolli entered Shiak and Durazzo without striking a blow and without meeting any resistance. Hamid Toptani, Omer Shiaku, and twelve of their supporters betook themselves on an Italian vessel, to seek refuge in Italy.

This was the last episode in the nightmare which failed to overthrow Albania. The Government remained victorious, and so saved the national and nationalist idea, and, too, the idea of political independence.

The Attitude of the Country.

This movement has caused much perturbation. The Government was within an inch of being overthrown, and the success was due to several factors, first of which was the loyalty shown by the troops, both soldiers and gendarmes, then the courage of the officers, and finally the loyalty of the Albanian towns—Scutari, Elbasan, and so on—and that of the inhabitants of the country—(Malissors, Puka and so forth).

It is worthy of note that the conduct of Mirdita was blameless, and its inhabitants not only took no part against the Government; they rather adopted a frankly loyal attitude.

Without ranging myself wholly on their side I will mention that the optimists think that this affair will have a salutary effect and will consolidate peace; they believe that the letting of blood will have done good.

The Guilty Punished.

A Council of War has been constituted and a state of siege proclaimed. Several men have been arrested and sent to the fortress of Argyrocastro, and the principal rebels have been condemned to death and executed at Durazzo.

Italian Journals and Some Rumours.

The *Idea Nazionale* of Rome, the *Gazette di Puglia* of Bari, as well as other Italian journals have openly declared that in the last troubles of Albania Italian influence has been at work: if the movement had succeeded and the Government had been overthrown, Italian policy would have achieved a victory in Albania.

On the other hand there is a rumour that M. Perigoni, the Consular Agent for Italy at Scutari, said that Italy has in this movement played her last card.

The British Minister.

Since his arrival in this country a year ago, first as Consul, then as Minister Plenipotentiary of Great Britain, Mr. Eyres has won the hearts of all Albanians by his courtesy and integrity. The firm attitude and wise counsels which he adopted in the recent events have very considerably enhanced his popularity.

The Reply of Yugoslavia.

An official despatch from the Serbian Minister for Foreign Affairs, addressed to the Albanian Foreign Minister, states that the Government of Yugoslavia has just decided to recognize officially *de jure* the Government of Albania and that diplomatic relations between the two countries will shortly be resumed. This news has created a very good impression at Tirana.

ROUMANIA.

Bucharest, March 24.

The Political Situation.

In view of the threatening attitude of the Opposition, the new Parliament, which is to be opened on Monday, March 27, does not appear to have a very good chance of entering upon an era of peaceful activity. The different parties of the Opposition, who acted more or less independently during the elections, now, exasperated by the alleged illegalities committed by the Administration at the poll are impelled by force of circumstances towards concerted action. The Transylvanians and the Tzaraniists—on the strength of their comparative success, despite the alleged obstacles at the elections—are the leading spirits of the Opposition. They have proclaimed that they do not acknowledge the legitimacy of the present Parliament, owing to its doubtful origin, and that much less do they credit it with the character of a "Constituante" intended to modify the Constitution of the country. The Opposition's future tactics are not yet clearly defined. Its leaders, however, have intimated that as soon as they have made their protests during the first sittings of Parliament, when the mandates will be validated, they will withdraw in a body and abstain from any further parliamentary activity; and after this they will not rest until they bring about

the dissolution of the present Parliament, to be followed by fresh elections, held under a neutral Government.

The Government, although feigning to be sure of its ground—thanks to its compact majority—cannot but feel somewhat uneasy at the stand taken by the entire Opposition; and in order to mitigate this hostile feeling, will probably show itself generous in allowing the annulment of a certain number of elections of its own party, thereby giving rise to a corresponding number of by-elections, at which the Opposition may succeed. The Government may further try to smoothe over matters by making concessions to the Transylvanians in order to gain their collaboration. In this connexion it is generally felt that the chances of such collaboration are very slight unless a radical change takes place in the leadership of the Liberal party. It is further rumoured that the Government will resort to one other means of bridging the present difficult situation, by making the first session a very short one, closing it shortly before the Easter holidays, and adjourning until the autumn. Into this first short session of about two weeks the Government intends to crowd—besides the validations and the debate on the King's Speech—the voting of a provisional budget and the House Rent Bill, as well as the ratification of a few Treaties which cannot be delayed any longer.

First Japanese Minister to Bucharest.

Viscount Nischi, the first Minister in Roumania for Japan, arrived in Bucharest on March 12, accompanied by the personnel of the new Legation. On March 19, His Excellency presented his Letters of Credence to the King. On this occasion he also, on behalf of the Mikado, handed the Grand Cordon of the Supreme Order of the Chrysanthemum to the King and the Grand Cordon of the Japanese Crown to the Queen.

The new Japanese Minister was previously attached to the Legations of Berlin, Vienna, The Hague and Berne, and when the War broke out he was Counsellor to the Japanese Legation in Vienna, from which post he was transferred to Siam as Minister Plenipotentiary.

General News.

The Coronation festivities, which were fixed to take place on May 10, have been postponed to August 14, as the preparatory work in connection with these festivities cannot be completed in time.

General Cristescu, the Chief of the Roumanian General Staff, has issued an order by which by April 1 all men of the 1919 and 1920 class should be demobilized.

On Sunday, March 19, M. Skrzynski, the Polish Minister to Bucharest was received in audience by King Ferdinand, when the Order of the White Eagle was presented to the Sovereign by M. Skrzynski on behalf of M. Pilsudski, the President of the Polish Republic.

The Queen of Roumania has offered the Academy of Moral Science and Politics of Paris her new volume in French entitled "La Roumanie." M. Millerand, the President of the French Republic, was present when M. Raphael George Lewy presented the volume on behalf of Queen Marie. This book will figure in the place of honour at the Archives of the Academy as a sign of the ties that bind France and Roumania.

The first step in the demilitarisation of the Railways has been taken by abolishing the Military Commandants at all stations except those in Bessarabia.

BULGARIA.

Sofia, March 27.

Cabinet Misunderstandings.

The week has been full of political thrills culminating in a rather stupid practical joke. On the 22nd instant at the Sobranye, MM. Tourlakoff and Omartchevsky, Ministers of Finance and Education respectively, after having engaged in a short conversation with M. Stambolisky, took hurried leave of the Prime Minister, and later on in the day it was stated that these two Ministers had tendered their resignations. It seemed that M. Stambolisky wished to yield on certain points in connection with the dispute that has arisen between the Government and Sofia University, but that his colleagues said they

would not be parties to any concession. The following day the split had somewhat widened, and it was ascertained that the Cabinet was divided up into two groups each consisting of five Ministers, one group for and the other against concession. Next day, however, it was announced that the misunderstandings had been all removed. It appears that M. Stambolisky, after having seen the King, decided to allow MM. Tourlakoff and Omartchevsky to have their own way regarding the University dispute. On Friday the 24th MM. Theodoroff and Kostourkoff, leaders of the Obedinist and Radical parties, received telephone messages, purporting to emanate from the Royal Palace, stating that King Boris wanted to see them. The two gentlemen in question duly went to the Palace, only to find that the whole matter was a hoax and that the King had never sent for them. The Government Press made much fun of the incident, and a stranger arriving in Sofia at the end of last week, were he to have read the *Pobeda* or the *Zenledelsko Zname* would have imagined that the Government had resigned, and been succeeded by a Theodoroff-Kostourkoff Cabinet. The identity of the person who telephoned to MM. Theodoroff and Kostourkoff is not known, but it is surmised that he was an adherent of the Government.

The Near East Conference.

Telgrams from Paris state that the Allies have taken certain decisions relative to the Greek evacuation of Asia Minor and Eastern Thrace. So far there is no mention of Western Thrace. If the Conference at present being held at Paris breaks up without considering the question of Western Thrace, and without making any provision for granting Bulgaria an effective outlet to the Aegean, a great wrong will have been done. Bulgaria has not been allowed to state her case, and she is feeling sore regarding the way her claims have been ignored. The right of Bulgaria to have a free outlet to the Aegean has been stated so many times in these columns that it is not worth while repeating, but it should be realised that every day that passes without a just settlement being arrived at, makes a future settlement more difficult and makes Bulgaria doubt more and more the good faith of the Allies. The only clause of the Treaty of Neuilly which is favourable to Bulgaria is No. 48, i.e., that which deals with the economic outlet. This Clause the Allies have disregarded, whilst insisting that the other clauses, unfavourable to Bulgaria are carried out.

Prince Borghese's Declaration.

Prince Borghese, the Italian delegate on the Inter-Allied Commission, who is President for 1922, made the following declarations in the course of an interview which he granted to Miss Nelia Pavlova, correspondent of the Rome newspaper *Epoca*:—"I am in favour of a *rapprochement* between Italy and Bulgaria and having spent three years in Sofia can testify to two admirable traits of the Bulgarian character, namely love of work and sobriety. Nevertheless I feel bound to say that as regards Article 121 of the Treaty of Neuilly (this Article refers to the payment by Bulgaria of a 2½ milliard gold francs war indemnity), Bulgaria has up to the present and in spite of the time being overdue, done nothing to pay the money she owes. Bulgaria pleads an economic and financial crisis as an excuse for not paying. There are three ways of surmounting this crisis, first by reducing expenses, secondly by increasing production, and thirdly by securing the confidence of the Great Powers. As to Bulgaria's access to the Aegean Sea, I am in sympathy with Bulgarian hopes in this direction, but do not think it possible for her to obtain this access, without the support of the Allies. This support will only be forthcoming if it is proved that Bulgaria is really determined honestly to meet her Treaty obligations."

The declarations of Prince Borghese have been widely and for the most part unfavourably commented on in the Bulgarian Press, but it must be remembered that Italy is especially interested in the payment of reparations by Bulgaria, as the Italians are due to receive a considerably higher percentage than the other Great Powers.

Wrangel's Army.

General Wrangel is expected to arrive in Sofia from Belgrade tomorrow. The General is coming on a visit of inspection to the 17,000 men of his former Army who are now scattered over Bulgaria. Recently the question of Wrangel's Army has been receiving a certain amount of attention, largely owing to the attacks that the local Communists have levelled against it. The Communists declare that Wrangel's Army will be used as a tool by the Bourgeois parties with which to overthrow the Agrarian Government. By saying this the Communists hope to discredit Wrangel's Army, and at the same time draw closer themselves to the Agrarians.

Madame Karsavina.

The performance given by Madame Tamara Karsavina, the famous Russian ballerina, at the Free Theatre last week was an unqualified success. Madame Karsavina requested that the entire proceeds, less expenses, should be given to a fund that has as its object the maintenance of Russian refugee children in Bulgaria.

The substantial sum of 150,000 levas, which is nominally £6,000 but to-day only £230, was realized. This sum will assist very materially in maintaining the unfortunate refugees. The Free Theatre was crowded to the doors, many people being unable to gain admittance. Among the audience were to be noted Princess Eudoxie, the King's suite, several Ministers, the entire Corps Diplomatique, and almost all the notabilities of Sofia. The Programme, which was divided into two parts, consisted solely of dancing, and Madame Karsavina danced nine numbers, the majority of which were encored once or more times. Her rendering of Percy Grainger's "Shepherds Hey" was especially effective, whilst a Bulgarian "Mazurka" drew forth rounds on rounds of applause. The performance is considered to have been the greatest artistic success ever seen in Sofia.

A False Rumour.

A Press tleegram emanating from Vienna which stated that the Agrarian Government had been overthrown by the Bulgarian Military Party is absolutely false. It is thought that this telegram originated from sources hostile to Bulgaria.

IRAQ.

Baghdad, March 17.

Electoral Preparations.

Politically things have been remarkably quiet during the past fortnight, and but for one or two straws which show which way the wind is blowing one might easily believe that all parties were indulging in a complete holiday. There are, however, stray indications which show that preparations are on foot on a considerable scale for the elections to the National Assembly, which are expected to take place in the near future. The local vernacular papers declare that the electoral law is to be published in a day or two, and fill their columns with elementary treatises on the duties and responsibilities attaching to citizens of an independent state.

Tribesmen and Townsmen.

The publication of the electoral law has been long declared, owing, it is said, to its having to be made to conform to some of the clauses of the treaty which is to be concluded between Great Britain and Iraq. The delay has not, however, been altogether disadvantageous. It is only very recently that the tribal leaders have come to realise that they are very closely concerned with the result of the elections, and have begun to draw together with a view to forming a definite tribal party which shall receive the election of its own candidates and form a tribal *bloc* in the Assembly, able to voice tribal opinion in all matters which concern their interests. If they succeed a great step in the advancement of the country will have been made. One of the chief complaints made against the existing Government is that it is effendi-ridden and that the great majority of the officials are persons who are completely out of sympathy with the tribesmen and quite unable to appreciate their point of view. The formation of the tribal party will be a great

benefit to the country if it results in securing a hearing for the tribal point of view.

A 'National Party.'

On the other hand it is announced that a party is being formed to be called the National Party of Iraq. No programme has yet been published nor have the names of the leaders of the party been divulged. If, however, it is true—and rumour has it so—that the leaders of the party are Ja'afar Abu Timman and Maulud Pasha it may be expected to favour a policy with an extremist orientation.

Military College Dinner.

On Monday evening a dinner was given by the instructional staff of the Iraq Military College to celebrate the end of the term. The dinner was attended by H.R. the King, H.E. the High Commissioner, and the Commander-in-Chief of the British forces in Iraq, together with the Ministers and other prominent officials.

Raid by the Akhwan.

A disturbing event of the past week has been the attack of the Akhwan under Faisal Al Dawish on Iraq tribesmen near Nasiriyah. Details are not to hand but the newly-formed desert camel corps appears to have sustained heavy losses. More details shall be given in my next letter.

CYPRUS.

Nicosia, March 14.

The Patriarchate.

The Holy Synod is now in session. Amongst the principal agenda is the question of a reply to the letter received from the Oecumenical Patriarch, Melétios IV. The Synod has decided that a telegram shall be despatched to the Patriarch of Alexandria, asking whether his Church would be willing, in common with that of Cyprus, to propose their joint mediation as regards the differences which now divide the Churches of Greece and Constantinople, respecting the disputed validity of the election. The Cyprus Synod will await a reply before further considering the matter.

"Imaginary Prosperity."

The *Phone tes Kyprou*, in a recent article states that the Island Government, by some peculiar psychological process, speaks of island prosperity, regardless of the fact that the real state of things loudly proclaims the reverse. There is no foundation for any such view or statement. If instead of a surplus there is in reality a deficit, this is met by stringent economies in directions where they are quite unjustifiable, e.g. in the Public Works Department, which with an inadequate vote cannot even maintain in order the public roads. Clearly the great excess of imports over exports during the last year shows that the life blood of Cyprus is being exhausted instead of being replenished. Such is now the deplorable condition of an island which possesses scarcely any industries, and lives by agriculture. For the year ended December 31 last, there is an excess of £591,421, of imports over exports. With such a balance of its accounts, to say that the islands is prosperous is mere irony.

A Call to Patriotism.

The Greek Community and Press are downhearted over the latest news regarding the Near East Question. The papers call upon Cypriots to make every sacrifice towards the cause for which Hellenism is now to undergo fresh trials. Since Cyprus is not allowed to send volunteers to shed their blood in Asia Minor, Greeks must contribute all they can in money, in spite of the depression from which the island is suffering.

Miscellaneous News.

Mr. C. Luke is on a short visit to the island from Jerusalem. He has visited the Greek Archbishop.

A farewell dinner has been given by the English and Greek Clubs to Major Bayley, Commissioner of Nicosia, who is leaving Cyprus, and whose departure will be much regretted.

There are still fresh cases of small-pox, which was imported from Asia Minor, especially in the Carpass district.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST. Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper.

"CALIPH" AND "KHALIFA," "CALIPHATE" AND "KHALIFAT."

To the Editor of "The Near East."

Sir,—I think that the time has come for a protest against an abuse which has become prevalent—the practice of substituting transliterations from the Arabic for well known English words.

Surely "Caliph" and "Caliphate" are now standard English words, the meaning of which is understood by those who know anything of the history of Islam, and, whatever may have been thought of them when they were first employed, they are now hallowed by time and use.

Arabic abounds in pitfalls for the ignorant and unwary, and those who are unacquainted with the language but are not unwilling to acquire a cheap reputation for scholarship by the employment of words of unusual form and appearance are apt to flounder in these pitfalls. We see *Khalif*, on the measure, so to speak, of Caliph, *Khalifat* on that of Caliphate, used to signify these two words, but *Khalif* means, not Caliph, but a "road or valley between mountains," and *Khalifat* does not mean Caliphate, but does mean Caliph.

Those who understand these matters may, of course, if they choose, use *Khalifa* for Caliph and *Khalifat* for Caliphate, though their use is unnecessary, pedantic and repellent; but such, if they are consistent, will substitute *aljabr* for algebra, *alkuhl* for alcohol, *makhzan* for magazine, and *albarquq* for apricot.

I am, etc.,

WOLSELEY HAIG.

GREAT BRITAIN AND GREECE.

To the Editor of "The Near East."

Sir,—As one who is also acquainted with Turkish affairs, etc., having travelled and lived in this part of the sphere, I was glad, like many others who happen to know the Near East to read the just views of your correspondent, Mr. Butler (Athens), in your issue of the 2nd inst., supporting the Hellenic people of the Ottoman Empire. I would like to amplify Mr. Butler's communications by stating the following facts: the most important responsible positions and situations not only in Greek, but in European, banks and institutions in Turkey are filled by Greeks. Moreover, it is really worth while mentioning that Britishers, Americans, Frenchmen and all other Europeans living in Turkey, enter into matrimonial alliances with Hellenic ladies and by no means with Turks.

Greek architects have built every house standing, large and small, and the Greek merchants and shippers of Smyrna and Constantinople, etc., are well known for their good qualities, not only in England, but all over the world, who have large interests in Great Britain, America, France and elsewhere. So when trading generally speaking with Turkey, we really trade with the Greek merchants, who are far wealthier and more reliable than the rest.

One has only to come out here, or to look in the Foreign Directory of Commerce of Messrs. Kelly's, London, to find how largely the Greek element prevails—commercially, socially, intellectually, scientifically and otherwise, so our interests are with the Greeks of the Orient and by no means with the Turks.

I am, etc.

P. I. NICOLS.

Smyrna, Greece.
March 20.

GEOGRAPHICAL NAMES.

To the Editor of "The Near East."

Sir,—It will be within the recollection of your readers that a Permanent (Official) Committee on Geographical Names was, at the request of the Admiralty, formed three years ago with the object of laying down the proper spelling of foreign place-names, and thus standardising for English-speaking nations the spelling of many thousands of names which would otherwise be spelt in a bewildering variety of ways.

This Committee, formed under the Presidency of the Royal Geographical Society, has already, besides much other excellent work, laid down the correct spelling of several thousand names. Its labours are, however, now threatened with immediate extinction by the withdrawal of the Treasury grant on which it has hitherto subsisted.

Much yet remains to be done; and it is suggested that it would be a matter of great regret if this work, now in full swing, should be brought to an abrupt conclusion for want of funds. May I therefore urgently appeal to your readers to help us with subscriptions for this valuable object? Contributions (annual if possible—for we wish to raise at least £500 a year) may be sent direct to the Committee at the above address.

I am, etc.

FRANCIS YOUNGHUSBAND.

Royal Geographical Society,
Kensington Gdns.,
London, S.W.7.

March 25.

ENGLISH IN LIUBLIANA.

Our Liubliana Correspondent writes:—"The Yugoslav Society for the Study of English" held its Inaugural Meeting on Wednesday, March 8, in the Great Hall of the State Gymnasium here. There is a widespread interest in this country for English literature, learning and science, and the formation of this Society, the first of its kind in Yugoslavia, is therefore very welcome. This meeting was public and largely attended. At the end of the proceedings most of those present applied for membership. A Committee was duly elected and a General Meeting was held, followed by a Committee Meeting, at which administrative details were discussed.

Members of the Committee:—Chairman: Dr. Gustav Gregorin (late of the Yugoslav Committee); Vice-Chairman: Dr. F. Skaberne (of the Board of Education); Treasurer: M. D. F. Andritchevitch (of the Adriatic Bank); Librarian: Mrs. Punta; Slovene Secretary: M. Vladimir I. Vidmar (P.O. Savings Bank); English Secretary: Miss F. Copeland (English Lecturer at the University of Liubliana); Curator: Mr. F. Miklautchitch (Zadrzna Gospodarska Zveza).

The objects of the Society are the study of English language, literature and culture, the fostering and furthering of friendly and mutually helpful relations between the Yugoslav and English speaking worlds and first and foremost the foundation of a good English Library. Not the smallest of the tasks the Society has set itself is the compilation and publication of dictionaries, grammars and other aids to the study of English. The programme is ambitious but perfectly practical, and it should appeal to a very wide public among English speaking people.

EARLY GREEK VASES.

Under the auspices of the Society for the Promotion of Hellenic Studies, a students' meeting was held recently at the Art Workers' Guild, Queen's Square. An address was given by Mr. E. J. Forsdyke on "The Decorative Art of Early Greek Vases." The lecturer showed a number of lantern-slides illustrating the Society's pottery, and in describing it directed special attention to the Minoan art, of which specimens had been obtained from Crete. This went back to the Bronze Age, and exemplified the developments of pottery from the original shape of a gourd, cut in half or in the form of the entire fruit. The incisions which represent the earliest decoration arose from the cracking of the skin of the gourd, and were filled in with white chalk.

TOWARDS A NEW TREATY.

The Allies' Proposals for the Near East.

The following is the text of decisions reached by the Allied Foreign Ministers in Paris last week, and communicated to the Governments at Constantinople, Athens, and Angora :—

Guiding Principles.

The Foreign Ministers of the Allied Powers of France, Great Britain, and Italy, having during five days in succession discussed every aspect of the situation in the Near East, having consulted at each stage the military and financial experts who were summoned for the purpose, and having further enjoyed the advantage of communicating beforehand with the representatives both of Turkey and of Greece, have unanimously agreed to the following propositions which they put forward as the most equitable solution that it is in their power to offer of the Near Eastern problem.

The principles which they have throughout borne in mind and which are the basis of their proposals have been :—

(1) They desire to re-establish peace between the conflicting armies of Turkey and Greece, and to deal fairly with both parties and to impose upon neither conditions of discomfiture or defeat.

(2) They desire to re-establish the Turkish nation and the Turkish dominion in the areas which may fairly be regarded as their own, with the historical and renowned capital of Constantinople as the centre, and with such powers as may enable them to renew a vigorous and independent national existence.

(3) They desire to secure full and fair treatment to the followers of the creed of Islam, and to maintain the secular and religious authority of the Sultan of Turkey.

(4) They desire to compensate the Greek nation for the great sacrifices which they accepted during the war in the cause of the Allies, and to leave them free scope for their national and economic progress in the future.

(5) They desire to enable both peoples in regions where they are contiguous or where their populations are intermingled to live in future in conditions of mutual confidence and self-respect.

(6) They desire to provide for the protection and security of the various minorities, whether Moslem or Christian, or of other races and creeds, who, whether in Europe or Asia, find themselves placed in the midst of larger political or ethnic aggregations.

(7) They desire to prevent the recurrence of armed conflict between the Turkish nation and the European Powers with whom it was recently at war.

(8) They desire, above all, in the solution which they propose, not to be suspected of partiality for the one side or the other, but with firm hands to hold the scales even between the two.

Proposed Armistice.

With these ends in view the first object of the Allied Powers has been to bring about a suspension of hostilities between the confronting armies in Asia Minor in order to enable the counsels of peace and the prospects of an amicable settlement to prevail. They have therefore proposed the conclusion of an armistice to the Governments of Turkey and Greece, subject to conditions which are scrupulously fair to both parties and which were defined by the military authorities under the presidency of Marshal Foch.

The Hellenic Government has already signified its acceptance of this proposal. The decision of Turkey is awaited.

The proposal of an armistice has been made with the avowed intention of assuring the peaceful evacuation of Asia Minor by the Greek forces and the restitution of Turkish sovereignty over the whole of that region. The arrangements for this evacuation, as the first step in the general settlement which is now proposed, have simultaneously been elaborated by the military authorities under Marshal Foch and are capable of being put into execution without delay. It is calculated that the period required for a complete and peaceful withdrawal of the Greek forces will be somewhat over four months.

It will be observed that in the event of these proposals being accepted by both parties the recovery of Anatolia by the Turks, which is believed to be their principal national aspiration, will have been attained without any further sacrifice of treasure or life. Correspondingly the retirement of the Greek troops will be effected with honour.

Should this operation be successfully accomplished, the Turkish sovereignty in Asia will exist unimpaired from the Mediterranean to the Straits and the Black Sea and from the borders of Trans-Caucasia, Persia, and Mesopotamia to the shores of the Aegean.

Question of Minorities.

Accepting the imperative necessity, which is the result both of historical and geographical causes, for the protection of the minorities of alien race or religion who are found in some cases in large numbers both in the *vilayets* of Turkey and in the European possession of Greece, the Powers have proposed a series of provisions for their full and adequate security without distinction of race or creed in both areas. These provisions will be based both upon the stipulations contained in existing treaties or draft treaties and in the secular or religious law of the countries concerned. Furthermore, the Powers have decided to invite the League of Nations to collaborate in this object by the appointment of special Commissioners to superintend the execution of these provisions in the areas and for the communities who are principally concerned.

The case of the Armenians has called for special consideration by reason both of the undertakings entered into by the Allied Powers in the course of the war and of the cruel sufferings of that people. Accordingly the aid of the League of Nations is authorized over and above the protection accorded by the

minority provision to which reference has already been made, in order to obtain for the Armenians the satisfaction of their traditional aspirations for a national home.

The Straits.

The interests of peace and the safety of the future demand that Europe shall never again be exposed to the perils and sacrifices which were imposed upon her in 1914 and the succeeding years by the forcible closure of the Dardanelles. The countless lives that were there poured out, the stupendous efforts that were entailed, must not have been expended in vain. The Turks will be readmitted to the Asiatic shore of the Dardanelles under conditions which will provide for the existence of a broad demilitarized zone in order to obviate the possibility of any hostile military preparations in that quarter. But an Allied force must be placed, and must remain in occupation of the Gallipoli Peninsula in order to safeguard the free and unimpeded entrance to the Straits. This also will be a demilitarized zone. The Allied garrison will consist of a force sufficient to secure the entrance to the Dardanelles.

The navigation of the Straits will be placed as already proposed under the control of an International Commission under a Turkish President, on which it is hoped as time passes, that all the principal States who are interested in the commerce or navigation of the Straits will be represented.

The demilitarized zone will be identical with the existing Sanjak of Chanak. No further demilitarization is proposed on the southern shores of the Marmora with the exception of the Peninsula of Artaki. On the Asiatic shores of the Bosphorus the demilitarized zone will be identical with the existing neutral zone. The Islands of Lemnos, Imbros, Tenedos, Samothrace, and Mitylene outside the Dardanelles and all the islands in the Marmora will equally be demilitarized.

Eastern Thrace.

Passing to the European shore of the Dardanelles and the Marmora, the three Ministers have been confronted with the difficult and anxious problem of the future of Eastern Thrace. On the one hand, they were unable, for the reasons which have already been stated, to accept a solution which would place the Gallipoli Peninsula once more in the hands of Turkey. On the other hand, they were met by the complaint that some at any rate of the lines of frontier that have hitherto been proposed between the European possessions of Turkey, to the North and West of Constantinople, and the areas in Eastern Thrace in the occupation of the Greeks, offered insufficient protection to the Turkish capital, which might find itself exposed in the future either to the military menace of invasion or to the invidious propinquity of a neighbour with whom it had recently been at war.

Such dangers, it was obvious, would be most effectively removed (a) by the removal to a sufficient distance from Constantinople of the projected frontier ; (b) by the effective neutralization of the areas outside this line. Furthermore, the Ministers were confronted by the incontestable facts of the existing situation. Whether the attribution of Eastern Thrace to the Greeks by the unratified Treaty of Sèvres be or be not held to constitute a valid title, the Greek forces are in effective occupation, and the Greek Government is engaged in administering that area, which moreover contains and has long contained a considerable and, in certain parts, a preponderant Greek population.

In these circumstances the Ministers were unable to assume the responsibility of requiring from Greece not merely the complete evacuation of Anatolia, to which it must be remembered in passing that Greece was invited in 1917 by the Powers, but the complete evacuation of Eastern Thrace in addition.

Accordingly, bearing in mind the importance of the strategic considerations before referred to, which may be summed up in the *desideratum* of reasonable security for the capital and the State of Turkey in Europe, the Foreign Ministers of the Powers invited the Military authorities to assist them with their expert advice. These authorities recommended the drawing up of a line which will run from the neighbourhood of Ganos on the Marmora in a northerly and north-easterly direction to a point on the Bulgarian frontier in the western part of the Istranja Mountains. This frontier will leave Rodosto, a Greek town, to the Turks. It will keep Baba Eske and Kirk Kilisse on the Greek side of the Turco-Greek frontier. The safety of the frontier is assured by the topographical features of the country and will be further confirmed by the demilitarization of almost the entire area of Eastern Thrace, both on the Greek and the Turkish sides of the frontier. Thus the Greeks will not be able to threaten Constantinople and the Turks will not be in a position to attack the Greeks.

The periodical inspection of these and the other demilitarized zones will be undertaken by Allied officers attached to the Allied forces on the Gallipoli Peninsula, the area of whose occupation will be extended eastwards to Rodosto.

Adrianople and Smyrna.

It has been considered whether any special provision should be made for the town of Adrianople, which it has been found impossible to sever from the surrounding territories of Eastern Thrace. Smyrna, which will revert to Turkey, and Adrianople, which will be retained by the Greeks, are in a somewhat analogous position. The Powers will be quite willing to enter into friendly communication with the Turkish and Greek Governments, with a view to the conclusion of a friendly agreement upon conditions which will guarantee a full and fair share to the non-Turkish and the non-Greek elements in the populations in the administration of the two cities, and will further safeguard the religious buildings and institutions of Adrianople.

The three Ministers are not so vain as to suppose that this solution of the Thracian problem will be warmly accepted by either party. The problem admits of no such easy solution. They can only commend it to the public opinion of the world as the proposition which seems to them to be most consistent alike with justice and with the facts of the case.

Constantinople.

Passing to Constantinople, the three Governments desire to confirm their previously expressed willingness to withdraw altogether the threat that was made at the time of the Treaty of Sèvres to revoke at some future date the retrocession of the capital to the Turks. They confirm the restoration of that city to the full authority of the Government of the Sultan; and they are further willing to engage that the Allied forces, by whom it is at present occupied shall be altogether withdrawn after the ratification of the treaty of peace.

The Turkish Government will be invited to garrison the city with a larger force than was contemplated in the Treaty of Sèvres. There remain questions of the future armed forces of the Turkish State, the financial independence which it will enjoy, and the suggested modification or surrender of the capitulatory rights which are enjoyed by foreigners.

Concerning the armed forces of Turkey, the Allied Powers are unable to depart from the principles which it has been found necessary to enforce in the Treaties that have been concluded with all the other States recently at war, or to admit the continuance of the system of conscription. They will, however, be prepared to consider with the Turkish Government in an amicable spirit the determination of the period in which the voluntary system of recruiting must be established in that country.

As to the numerical strength of the Turkish forces, it is proposed to allow a very appreciable augmentation of the figures which were contained in the Treaty of Sèvres or were afterwards suggested in London in 1921. The forces now officially proposed are: *Gendarmerie*, 45,000; Regular Army, 40,000, or a grand total of 85,000 men—a total which is very markedly in excess of the 50,000 designated in the Treaty of Sèvres.

Should the Turkish Government desire the assistance of foreign officers for the organization of the above-named force of *gendarmerie*—a measure which will probably be found to conduce greatly to its efficiency—the Powers will be ready to place themselves at the disposal of the Turkish Government.

Financial Proposals.

With regard to finance. The financial clauses of the Treaty of Sèvres shall be modified in such a way as to abandon the proposed Financial Commission, while reconciling the principle of Turkish sovereignty with the protection of the Allied economic interests and with the Commission of Control necessary to ensure the payment of the Turkish pre-war debts to the Allies and the war indemnity fixed at a sum which Turkey can be reasonably expected to pay. The pre-war Debt Commission shall be maintained and the special Allied Liquidation Commission shall be set up for the above purpose.

In respect to the existing capitulatory system, the three Ministers are anxious to accord to Turkey the largest measure of economic independence consistent with the due protection of the interests of the nationals of their respective countries. For this purpose they are prepared to set up at Constantinople within three months from the coming into force of the treaty of peace a Commission composed of representatives of Great Britain, France, Italy, and Japan, and of Turkey, to prepare, with the assistance of technical experts representing the other capitulatory Powers, proposals for the revision of the capitulatory régime in fiscal matters.

These proposals shall provide for fiscal equality between foreign and Turkish subjects, while safeguarding the former against excessive taxation and abuses in collection, and for any necessary modifications of the Customs taxes, with the consent of the Powers concerned.

Capitulations.

As regards the capitulations in judicial matters, the Allied Powers repeat their former offer to set up within the same period a similar Commission to prepare a scheme of judicial reform to replace the capitulatory system, which will continue provisionally pending the introduction of the proposed scheme. This Commission, on which Turkey will be represented, will be at liberty to recommend either a mixed or a unified judicial system.

Such, in broad outlines, are the main features of the settlement which the Ministers of the three Great Powers, acting on behalf of their Governments have decided unanimously to recommend. These proposals are now submitted preliminarily to the judgment of the two parties who are directly involved, and to, secondarily and in a not inferior degree, that of the civilized world.

Nor is it necessary to add that the peoples or the Governments by whom they were deliberately rejected, if such a misfortune were to occur, will assume very grave responsibility before the public opinion of mankind—namely, the responsibility of resuming a struggle which has already wrought sufficient havoc among the peoples of two continents and the renewal of which can only bring further ruin and destruction in its train, besides leading to a permanent embitterment between the races and creeds of the Near East.

THE BAKHTIARI COUNTRY AND PEOPLE.

Speaking at Burlington House before the Persia Society, on March 13, Mr. Sydney Armitage-Smith gave an account of the Bakhtiari people, and of the road which runs across their country to the oilfields. This road he described as little more than a track for much of the way. When the sides of the ravine become too precipitous for a mule the traveller descends into the river bed which runs at the bottom. There he zigzags along until the road becomes practicable again. Of the rulers of the country, the Khans, the lecturer said these were few in number, but they were rich and united, and knew what they wanted; thus they had great political importance in Persia. The Bakhtiari country was organised on a patriarchal and feudal basis. The ownership of land, jurisdiction and military service were closely connected, as they were in this country in the middle ages. The Khans were supreme in all matters of military command; they settled tribal disputes and dispensed justice. The word of a khan was absolute law. The inhabitants of the country might be divided into three classes: the Khans, their immediate retainers, whom they kept about them for fighting and to maintain their dignity, and the peasants. Amongst the last named it was interesting to find a large number of Christian Armenians; these lived happily in their own villages. When Mr. Armitage-Smith visited these villages he was received with joy as a fellow Christian, and the church bells were rung.

FRENCH SUPPORT FOR ZIONISM.

The Zionist Organisation Central Office states that recently President Millerand received Dr. Weizmann who was accompanied by Dr. Bernard (brother of M. Bernard Lazare) representing French Zionists. President Millerand re-affirmed the favourable attitude of the French Government towards the Jewish National Home. He asked for assurances as to the attitude of Zionism towards the Holy Places. Dr. Weizmann solemnly declared that Zionists had no other desire than to leave this question to be settled by the Powers. They would be only too glad to contribute to such a settlement in their feeble measure. President Millerand intimated that he would view favourably the participation of French Jewry in the reconstruction of Palestine.

MEMORIAL TO DR. ELSIE INGLIS.

A memorial tablet to the late Dr. Elsie Inglis, of the Scottish Women's Hospital was unveiled in St. Giles' Cathedral, Edinburgh last week, by Dr. Mary Scharlieb. The memorial is cut out of a single block of delicate rose-tinted stone of hard close grain, quarried in France, and bears the following inscription: "To the beloved and honoured memory of Elsie Maud Inglis, surgeon and philanthropist founder in 1914 of the Scottish Women's Hospitals, for service with the Allies in France, Serbia, and Russia. Born 1864; died on active service, 1917. Mors Janua Vitae."

A SUSPICIOUS CROAT.

A correspondent writes:—In their political fervour, the Croats sometimes expose themselves to criticism, but one does not expect a Zagreb newspaper to make a blunder through ignorance of its own language. There is a children's paper entitled *Nash List* ("Our Paper"), published in Belgrade by the Ministry of Education, and one would hardly think the most jaundiced of the parish-pump class could find material for his bile in such an innocent publication. But in the December number, in one of the stories, there occurred the word "mrda." Now in ordinary Serb, this means to move, to budge: in Vuk's and Ivekovich's dictionaries the meaning is given as "to work clumsily." But in Zagreb slang, it has another meaning, which is offensive to polite ears. Our precious journalist characteristically knew only the latter meaning and called upon all good Croats to boycott the children's newspaper, as guilty of Serbians' swinishness. An apt comment crops up at once in the mind in three languages, "Puris omnia pura," "Wie der Schwein ist, so denkt er," and "Honi soit qui mal y pense."

TOPICS IN PARLIAMENT.

The subject headings given are those of the Official Report.

Anglo-Persian Oil Company.—Georgia.—(Thursday, 23rd March.)

Serbian Youths (Education Grant).—(Friday, 24th March.)

Palestine (Draft Mandate).—Greece and Turkey.—Egypt.—Persia (British Advances).—India: Civil Servants (Retirement); Seditious Speeches (Prisoners' Treatment).—Greece (Foreign Loans).—Consolidated Fund (No. 2) Bill: Foreign Affairs; India.—(Monday, 27th March.)

India: Bhagalpur Exhibition (Swaraj Flag); Burma Constitution; Anti-Boycott Bill (Burma); Cinema Films (Censorship); Indian subjects (Kenya); Army (Pension Rules); Ordnance Department (Pay); Civil Service Pensions; Wireless Service.—Palestine (Official Language); Jews and Arabs.—Iraq.—(Tuesday, 28th March.)

MUSICAL NOTES.

BELA BARTOK.

Perhaps there is no composer so essentially interesting to readers of THE NEAR EAST, as Bela Bartok, the Hungarian. In England we have heard much of him, of his researches into such things as Arab and Magyar folk-music, of his founding a school in Hungary which derives its motive power from traditional music; we know well his arrangements of Roumanian folk-songs and dances; but of his more important works very few have as yet been performed. Our appetites were, therefore, keen to hear him when he gave a concert, mostly of his own works, last week at the Eolian Hall.

Quite frankly, Bartok is not a composer who immediately and closely holds you. There are in his music all sorts of very important things—an extraordinarily sharp sense of rhythm, a feeling for harmonic effect at once subtle and cold, a rigidity of line that excludes all padding or exaggeration, and so on—but these, though you recognize them at once, are not of themselves sufficient to enthrall you; and it was these things, rather than the strain of genius which bound them and made them one, that one noticed first and remembered last. Here was immense talent, you said, a real, inventive mind seizing and setting fire to conceptions that had lain for centuries in his race's soul; and there must be, you thought, genius behind it all. But for the discovery of this genius one must surely hear this music again, and again, and, perhaps, fifty times.

Certainly Bartok has considerable personality, as much because as in spite of his evident concentration upon and inspiration from the rhythms and tonal peculiarities of his race. But it seems as if the fire which was kindled from the first contact of himself with the folk-music of his country and of surrounding countries has lost the intense leaping flame which characterised his early works; for his later works have a strange dryness, a calculated hardness that savours of mathematics. It is as if the hearth of fiery coals had become a smooth electric stove: the human element seems absent. This difference was noticeable even between Op. 14, a Suite for Pianoforte, and Op. 20, a set of Eight Improvisations on Hungarian Folk-Tunes; for whereas the first were fresh, pulsating and very individual, the second were imitative, full of the composer's own *clichés*. To go back even further, in showing how zestful Bartok's earlier works were, one need mention only the "Burlesque" and "Roumanian Dance," both from Op. 8 that he played, which are both full of ingenious charm.

However, the most important work of the evening was the Sonata for Violin and Pianoforte (Op. 21), which Miss Jelly d'Aranji played with the composer. Miss d'Aranji of course played magnificently—as she very often does—in a work that appealed very intimately to her own musical sensibilities, so that this performance, was, I suppose, as good as we are ever likely to get. The Sonata is in three movements: (1) "Allegro appassionata," of which I made nothing at all, discovering no unity or even bond between the two instruments, (2) "Adagio," in which were *cantilena* phrases of exquisite beauty for the violin with harsh interjectory stuff for the pianoforte. This, incidentally, was the movement from which you knew for certain that there was something large in the composer's mind, but could not quite seize it,—and (3) "Allegro vivace," a very lively movement in folk-pattern, with exultantly over-running rhythms and cunning joinery. At the same time you felt, as in many of Bartok's arrangements for the pianoforte, that these stirring folk rhythms are not really reproducible except on stringed instruments. On a pianoforte, or better still, on a player-piano, you can get the superficial rhythmic effects, but not the colour.

Whether Bartok is the great artist who has fashioned to his own uses the pliable material of his folk, or whether he is the inventive explorer and discoverer on

whose labours the genius will build I do not yet know, but his importance to the present generation of musicians is undoubted. I hope some day, with completer knowledge and more decided judgment, to return to him.

M. Mischa Elman.

There are a few great fiddlers known to all the world, and M. Mischa Elman is one of them. There is nothing on the technical side that he cannot do, and he plays easily and with equal facility on all the emotions. He is especially a master in the art of *rubato* and of light and shade. But with all this excellence in detail, this wealth of command, he is not, I think, a supreme artist, though without doubt he is a supreme miniaturist. At his recital last week at the Queen's Hall his big works were Bach's "Partita in E minor for Violin and Clavier," the Kreutzer Sonata, and Vieuxtemps' fifth Concerto. The Bach was romanticized—even the glorious *adagio*—and though there were an infinite number of things to admire in it (and one or two little slips to wonder at) it was a technical, rather than an artistic triumph. In the Kreutzer Sonata, again, in which M. Mischa Elman had the assistance of his very capable sister, Mlle. Liza Elman, there was not an ideal balance, and though he informed it with a fine restraint and individuality, we did not, as Mr. Ernest Newman so often and so excellently says, hear the last bar in the first. The Vieuxtemps was M. Elman's triumph; here his technical abilities won a sheer triumph, and though the Concerto is poor enough music (and though it sounded poor enough as transcribed for the pianoforte) one cannot do violence to it, and the fiddler could with impunity, and in fact with glory, be a law unto himself. But it was in a group of small pieces at the end that M. Elman caught both the fancy and the imagination. His tone in a Nocturne of Grieg arranged by himself was a dream: his harmonics a marvel. Similarly his rhythm was a delight in the "Passepied" from Delibes' "Le Roi S'amuse," as it was in Beethoven's "Country Dance," which he played as an encore. In such things, M. Elman is indeed unsurpassable, so keen is his verve, so irresistible his impulse.

ANDANTE.

AN APPEAL FOR ENGLISH BOOKS.

The desirability of doing everything possible to encourage the study of the English language in the Balkans—as elsewhere—needs no demonstration. One way of helping on the good work is by providing English books for such bodies as the English Speaking League of Sofia. A year ago we inserted an appeal for books for presentations to the League, and we venture now to remind our readers that any volumes they can spare for the purpose may be sent to us for forwarding to Sofia.

THE AERIAL ORIENT EXPRESS.

The dream of an "Aerial Orient Express," ascending from London and travelling, by stages, at 100 miles an hour, to the Eastern boundary of Europe, is now to be realised. The timetable and fares for this Orient air express were received in London by the Lepaerial Travel Bureau recently, and the airway was to be opened on April 1. The route followed is *via* Paris, Strasbourg, Prague, Vienna, and Bucharest to Constantinople. During the summer months a business man in a hurry will be able to step on board an air express at the London Air Station and arrive in Constantinople, after a flight of almost 2,000 miles, forty hours later, a compared with the train time of four and half days. The actual flying time along this great transcontinental airway will be only 24½ hours, the remaining time being spent for meals and sleep. The through air fare from London is £37 16s., which is roughly, 4½d. per mile flown, a figure which compares favourably with the rail fare by Wagon Lit. Travellers by the Orient air express can book to any town along the route.

SCHOOL OF ORIENTAL STUDIES.

London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

NEAR EAST BOOKSHELF.

ALBANIA.

"L'ALBANIE EN 1921." By Justin Godart. Preface by D'Estournelles de Constant. (Paris: 1922. Les Presses universitaires de France, Boulevard Saint-Michel, 49.)

M. D'Estournelles de Constant on the request of the Carnegie Trust in 1913 undertook the organisation of the Commission which was sent to the Balkans with the object of making an impartial enquiry into the various charges of atrocities made against each other by the Balkan States after the conclusion of hostilities. M. Justin Godart represented France on this Commission, whose admirably impartial report is well known. It was not possible, however, for the Commission to cover the whole of the ground before the outbreak of the world war, so that when peace had come again M. D'Estournelles de Constant expressed a desire to the Carnegie Trust that someone should be sent to Albania to make a report on the situation there supplementary to the former report. M. Justin Godart was invited to undertake the task. He accordingly visited Albania during the summer of last year, and the present book is a record of his impressions.

No one who wishes to be thoroughly conversant with Albanian affairs to-day can afford to neglect this very admirable volume. The cultivated Frenchman with no axe to grind, who travels abroad in the pursuit of knowledge and impressions is invariably the most delightful of companions. M. Justin Godart is the last of a distinguished line of such travellers in Albania—from Jacques de Lavardin, who lived at the beginning of the 17th Century, to Ami Boué and G. J. Jaray—whose writings never fail to please because they are the fruit of acute observation lucidly expressed. The present volume is a perfect mine of information and, what is more, precise and accurate information. The chapters include a review of the past and present history of Albania, of the conspiracies, in which the Great Powers played their full part, to partition the country, of the relations existing between Albania on the one hand and Italy, Yugoslavia, Greece and the League of Nations on the other, of the country's present institutions, revenue, resources and prospects, and lastly a description of the conditions existing in the districts not included in the Albanian State but which possess a predominant Albanian population. The writer visited nearly every town of importance, so that much of his information is local; which adds interest and relief to the general information given. A phenomenal number of names are mentioned which suggests that the Author was anxious to do something in the way of repaying the generous hospitality of his many hosts; but the result is the more useful to anyone either wishing to visit Albania or to follow with intelligence the internal politics of the country where personalities having local influence play so important a part. Yet with all these names and statistics M. Godart contrives to maintain the reader's interest throughout, which represents a very laudable achievement. A preface by M. D'Estournelles de Constant, a number of sketch maps and characteristic photographs, and a good map of the whole country complete the volume.

I have not been able to detect any errors of importance in the mass of facts which M. Godart has recorded. If the book has any defect it is because it reacts on the reader as somewhat superficial. The Albanian stands out in it rather in European clothes than in his national costume.

Now, a visit to Albania makes one very soon realise how poor is so called "modern civilisation." Deprived of the mechanical comforts and pastimes to be found in more advanced countries, one realises how very easy it is to get on without them, and that the difference between Albania and the rest of Europe is largely due to the absence and presence of these superficial advantages. In most respects Albania shares the rest of Europe's emptiness. M. Godart's book makes one realise this and very little more. I agree with him that Albania has it in her to maintain her independence, to develop

in due time her resources, to grow even rich and be able to afford all the mechanical advantages of modern life elsewhere. All these things are necessary to her. The building up of material progress is a worthy task and may even be a romantic one too. But in the amazing contrasts between the 20th century pagan and mediaeval aspects of Albanian life, is there anything that gives promise that out of Albania may come something having a little of the richness of antiquity? I sometimes think there is, but no hint of it is given in this book. Unencumbered by the shackles which the rest of Europe has forged in the course of its strenuous political and economic evolution, Albania might find itself able to take a short cut to the richer life towards which we all hope at least Europe is again tending. There are certainly many aspects of life in Albania, dead elsewhere, which have something of the old virtue in them and might be adapted to modern conditions.

J. S. B.

THE GOVERNMENT OF INDIA.

"THE GOVERNMENT OF INDIA." By Sir Courtenay Ilbert. (Oxford: Clarendon Press. 10s. 6d. net.)

This slim volume contains a reprint, revised and brought up to date, of the Historical Introduction to a work of the same name, which was last issued in 1915. It is a brief and admirably clear survey of parliamentary legislation relative to India, and its impartiality will make it welcome to all serious students. The account of the legislation establishing the new Constitution is the best we have seen. Extreme partisans will doubtless complain that there are no clear-cut judgments which can be quoted with effect on the platform, but for ourselves we are quite satisfied with the concluding sentence: "Some ten years hence, when the Statutory Commission has reported, it will be easier to say where, how and why the experiment has succeeded or failed. In the meantime our watchword should be patience, sympathy and hope."

"THE INDIAN ANTIQUARY."

We referred recently to the completion of the fiftieth annual volume of this indispensable periodical. The issues for December and January, which have now reached us, show that there is no break in continuity, and certainly no falling off in point of quality. Most of the articles in these numbers are of interest mainly to specialists, but everyone can understand, and nearly everyone will enjoy, the accounts printed by Mr. William Foster of Sivaji's raid on Surat in 1664, and of the action taken on that occasion by that "most worthy, discreet, courageous person," Sir George Oxenden, the President of the Council of English merchants. One of these accounts describes incidentally the method of cutting off men's hands, a practice in some favour of Sivaji: a blunt knife was used to lay bare the bone, which was then broken by main force, the victim was then forced to run about till he fainted, "and the blood stops." That blunt knife is eloquent of the old India.

FRENCH SELF-TAUGHT, GRAMMAR WITH KEY

By J. LAFITTE, B. es L., Principal French Master, City of London School.

For learning the Language by the Natural Method. It contains Classified Vocabularies, Travelling by Rail, Road, and Sea, Cycling, Motoring, Post, Telegraph, &c. Commercial, Naval and Military Terms, &c., Conversations, so arranged that they may be learned AT A GLANCE, with ENGLISH PHONETIC PRONUNCIATION, Tables of Money with Illustration of Coinage, &c.

A course of simple and practical lessons in the Grammar and construction of the French language, progressively arranged and fully illustrated with model sentences; useful exercises throughout, and an Alphabetical Vocabulary.

Crown 8vo., 316 pp. Green Cloth, 6s. net. Postage 4d. extra.

Sold by all BOOKSELLERS. Write for Prospectus & Catalogue No. 25, post free. London: E. MARLBOROUGH & Co., 51, Old Bailey, E.C.

PERSONAL AND GENERAL.**To-Day.**

April 6 (New Style).

March 24 (Old Style).

Shaban 8, 1340 A.H. of the Moslem Calendar.

Nisan 8, 5682 of the Jewish Calendar.

Sir George Buchanan has returned from India.

Mrs. Alex Tweedie has returned to London.

Viscount and Viscountess Goschen are expected in town from Egypt this week.

Major Bentinck, Coldstream Guards, has left England for Mesopotamia, and expects to be away some time.

Viscount and Viscountess Milner will return to London towards the end of this month from Palestine.

Lieutenant-Colonel Vivian Gabriel has arrived at Claridge's Hotel from Thrace and Anatolia.

Sir Byron and Lady Peters have arrived at the Grand Pump Room Hotel, Bath, from India.

M. Antonesco, the Roumanian Minister in Paris, presented his credentials to M. Millerand last week.

Voussough ed-Dowleh, ex-Persian Premier, arrived in London last week from Paris.

Sadikh es-Saltaneh, Persian Minister in Madrid, arrived in London last week from Spain.

Mrs. Lloyd Baxendale has returned to Greenham Lodge, Newbury, from Ceylon.

Mehmed Bey Konitza, the new Albanian Minister, is residing temporarily at 17, Collingham Gardens, S. Kensington.

Viscount Chelmsford has succeeded the Earl of Lytton as chairman of the State Children's Association.

At the Holborn Restaurant last Tuesday the Coalition Liberals of the National Liberal Club gave a dinner to Sir Murdoch Macdonald.

M. and Madame Venizelos are now on their way back to London. They are expected to reach here by the end of this month.

M. Stancioff, Bulgarian Minister in London, leaves London this week for Genoa, to attend the Conference as member of the Bulgarian Delegation.

Commander John Bouboulis, Naval Attaché to the Greek Legation, and Mme. Bouboulis returned to London last week from visiting Paris.

The Bishop of Madras (Dr. Whitehead) is resigning and expects to leave India soon after Easter. He has held his present post since 1899.

Madame Ghika, wife of Captain Matila Costiesco Ghika, Secretary to the Roumanian Legation in Madrid arrived in London last week from Spain on a visit.

M. Jevrem Taditch, the newly-appointed Counsellor to the Legation of the Kingdom of Serbs, Croats, and Slovenes, has arrived in London and taken up his duties.

M. Stefanovitch, Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes, left London last week for Belgrade and will be absent six weeks.

Earl Reading and Lord Rawlinson, the Commander-in-Chief, left Calcutta last week for a short tour of the North-West Frontier.

Princess Nicholas of Greece, with her daughter, Princess Olga, and the latter's *fiancé*, the Crown Prince of Denmark, arrived at Athens last week.

Lieut.-General Sir Charles Harington, who has lately been taking part in the Near East Conference in Paris, left on Sunday in order to resume his duties as Commander-in-Chief of the British Corps in Constantinople.

A marriage has been arranged, and will take place on April 1, in Madras, between Geraldine Helen, daughter of Major-General G. G. Gifford, C.S.I., I.M.S., and Mrs. Gifford, of Madras, and Colin R. White, M.C., son of Mr. and Mrs. White, 66, Belsize Park Gardens.

Under the auspices of the Central Asian Society, Mr. Robert Williams yesterday delivered a lecture, at the Royal Society's Lecture Room, Burlington House, Piccadilly, on "The Cape to Cairo Railway, from the Point of View of African Development."

Mlle. Nadejda Stancioff, daughter of the Bulgarian Minister in London, has been summoned to Genoa by the Bulgarian Prime Minister, M. Stambolisky, to attend the Conference as his private secretary and interpreter. Mlle. Stancioff left London on Tuesday.

The King has granted to Miralai H. G. Fuller Archer Bey, O.B.E., Commandant of the Suez Canal Police, Port Said, licence and authority to wear the Insignia of the Third Class of the Order of the Nile, conferred upon him in recognition of valuable services rendered.

The engagement is announced of Lieutenant-Colonel Sir Albert Stern, K.B.E., C.M.G., of Savoy Court, and Helen, elder daughter of the late Sir Frederick Orr-Lewis, Bt., and of Maud Lady Orr-Lewis, of the Villa Valetta, Cannes, and sister of Sir Duncan Orr-Lewis, Bt., of Whitewebbs Park, Enfield.

The engagement is announced between Thomas Farquharson Ker Howard, R.F.A., only son of Mr. W. H. F. Howard, O.B.E. (late P.W.D., Government of India), and Mrs. Howard, and Anne Cunningham, second daughter of the late Mr. Charles Cunningham Scott and of Mrs. Scott, of Halkhill, Largs, Ayrshire.

Sir Herbert Samuel, High Commissioner for Palestine, who has now quite recovered in health, is expected to reach England at the end of April for a period of leave. During the time that he is in this country Sir Herbert Samuel will take the opportunity to discuss with Mr. Churchill outstanding questions regarding the administration of Palestine.

The marriage was solemnized at St. Paul's Cathedral, Calcutta, on March 7, of Mr. Henry Birkmyre, elder son of Sir Archibald Birkmyre, Bt., C.B.E., and Lady Birkmyre, to Doris Gertrude, elder daughter of Colonel Austen Smith, I.M.S., C.I.E., M.L.C., Inspector-General of Civil Hospitals with the Government of Bihar and Orissa, and Mrs. Austen Smith.

Colonel Douglas Capitaneano, Military Attaché at the Roumanian Legation, last week entertained to luncheon at the Cavalry Club M. Titulesco, the Roumanian Minister, Sir Oswyn Murray, Permanent Secretary at the Admiralty, and Lady Murray, Commander T. W. Thompson, who leaves shortly to reorganise the Roumanian Navy, and Mrs. Thompson.

The Bulgarian Minister and Madame Stancioff gave a dinner-party, followed by an informal reception at 51, Queens Gate last Thursday. The guests included Lord and Lady Newton and the Hon. Hilda Legh, the Hungarian Chargé d'Affaires, the Italian Military Attaché and Madame Riggi, Major Neate, Lady Boyle, Lord Denbigh, Major Villiers-Stuart, Lady Constance Boyle, Monsieur Doreff, Captain Petroff, and M. Angheloff, of the Bulgarian Legation.

A Reuter message, dated Calcutta, March 28, states: Lord Lytton, the new Governor of Bengal, and his family arrived here to day. They were given a cordial reception by the large crowds, mostly Indians, who lined the streets as they drove in state from Howrah Station to Government House. There they were welcomed by Sir Henry Wheeler, the new Governor of Bihar and Orissa, who has been Acting Governor of Bengal since the departure of Lord Ronaldshay. Lord Lytton entered the Throne Room, where he took the oath of allegiance.

The marriage took place on March 30, at St. George's Hanover Square, of Mr. Thomas Beaumont Hohler, C.B., C.M.G., of Fawkham Manor, Kent, British Minister to Hungary, and son of the late Mr. H. B. Hohler, and Miss Cynthia Astell, daughter of the late Mr. William Astell, of Woodbury Hall, Sandy, and Lady De L'Isle and Dudley, of Penshurst Place, Kent. Prebendary Thicknesse officiated, assisted by the Rev. Michael Horsfall, vicar of Ingleby Greenhow, Yorkshire.

After a reception held at 34, Belgrave Square, the bride and bridegroom left for Italy. Amongst those invited were:—Lady De L'Isle and Dudley, Mrs. Arthur Hohler (sister of the bride); the Brazilian Ambassador and Mme. da Gama, the Hungarian Chargé d'Affaires and Mme. de Hedry, M. G. de Ruttksey, Counsellor to the Hungarian Legation; Prince and Princess Belowsselsky, the Marchioness of Normanby, the Marchioness of Sligo, the Countess of Dundonald, Earl and Countess Stanhope, Viscount and Viscountess Hardinge, the Hon. Ruby and the Hon. Sybil Hardinge, Viscount and Viscountess Gort; Eleanor Viscountess Gort, Lord Ellenborough, Lady Monk Bretton, Lady Carew, Lady Newton, and the Hon. Hilda Legh, Lady Moya Campbell, Mr. and Lady Kathleen Rollo, Major Sir John and Lady Ethel Baird, Sir Maurice and Lady de Bunsen, Sir James and Lady Enid Williams-Drummond, Lady Spring Rice, Lady Macdonald, Lady Cory, the Misses Astell, Mr. J. Astell, Colonel the Hon. Jeffrey and Mrs. Vereker, the Hon. Mrs. Foley Vereker and Miss Muriel Vereker, Mrs. H. B. Hohler, Mrs. Henry Hohler, Mrs. Edwin Hohler, Mr. and Mrs. Cazalet and Miss Cazalet, Mr. and Mrs. Glasgow and Miss Glasgow, Mr. Douglas Ainslie, the Hon. Henry Law, Mr. Anthony Wingfield, Colonel the Hon. Algernon Sidney and the Hon. William and Mrs. Sidney.

APPOINTMENTS.

Viscount Peel has appointed the Earl of Stamford to be his Parliamentary Private Secretary (unpaid).

Abdul Wahab Khan, son of the Afghan Foreign Minister, has been attached to the Legation here as Secretary.

Mr. Arthur Rowland Knapp, C.S.I., has been appointed a member of the Executive Council of the Governor of Madras, in succession to Sir Lionel Davidson, K.C.S.I.

The King has been pleased to approve the appointment of Sir Henry Wheeler to be Governor of Bihar and Orissa, in the vacancy created by the resignation of Lord Sinha. His Majesty has also been pleased to approve the confirmation of Mr. Charles Alexander Innes in the office of Member of the Viceroy's Executive Council, in succession to Sir Thomas Holland. The Secretary of State for India has appointed Sir W. Vincent to be a Member of the Council of India in the vacancy

caused by the death of Sir G. Roos-Keppel. With the Secretary of State's concurrence, the Viceroy has asked Sir W. Vincent to continue his services as Home Member of the Viceroy's Executive Council during the summer before joining the Council of India.

JERUSALEM AND THE Y.W.C.A.

(From a Correspondent.)

Miss Grace Saunders, the indefatigable Y.W.C.A. secretary, after her tour through Bulgaria, Roumania, and Greece, is in charge of the work in Egypt and Palestine. Miss Margerison, who has served the Association with such selfless devotion for so many years, was obliged to resign on account of ill-health, and Miss Saunders is temporarily taking up her duties. One of the greatest interests for the moment of the Council for Egypt and Palestine is the new house which it is hoped to open in Jerusalem, and which it is expected will be the joint gift of all the Associations throughout the world. The sum of money required is not very large—only £6000—so it will be possible for many small personal gifts to make up the amount. Miss Saunders writes of increasing membership, and the success of the various activities. Those interested in the work in Jerusalem are invited to write for a free illustrated booklet to the World's Y.W.C.A. Office, 34, Baker Street, London, W.1.

In view of the prevalent unemployment, the Legislative Assembly of Malta has requested the Governor to secure preference for Malta dockyard for the building or repair of ships.

Greece has agreed to pay compensation in the case of the steamer *Espoir*, detained by her naval blockade, and to abstain from searching French ships in the future. The Italian steamer *Abbazia* has been released from detention in the Piraeus.

PARIS AND THE NEAR EAST.

On another page will be found the text of the *communiqué* issued last week by the Foreign Ministers of France, Italy and Great Britain after their detailed discussion of the situation in the Near East. We should have liked to see included in it some recognition of the correct attitude observed since the war by Bulgaria, and some hint, at least, that her good conduct is to reap a reward of the character which she desires—a satisfactory outlet on the Aegean. Failing that, an impression may get abroad that it is only those who make themselves troublesome to the Allies who are likely to receive consideration. Possibly, however, the omission is due to the fact that the most urgent problem is to assure peace between the Greeks and the Turks, and that not until that is accomplished will the Allies be able to consider other, less pressing phases of the Near Eastern Question. Apart from this point, the *communiqué* appears to us as satisfactory as could be expected. It would not be difficult to criticise several of the proposals. In fact, several of them have already come in for criticism already, some by Philhellenes, others by Turcophiles, and more by "phobes" of one side or the other. But if we desire to be just, we have to bear in mind that while we may see one set of difficulties very clearly the three Allied Foreign Ministers, probably seeing them no less clearly, possibly saw also others which may be hidden from us, but may outweigh those we see. Moreover, the Ministers undoubtedly had to take into account some factors which while not strictly Near Eastern in character, yet affect profoundly the problem of the Near East. Speaking last Thursday in the House of Lords on the subject of this Paris Conference, Lord Curzon said quite frankly that the main object for which he went to it was to secure the unanimous decision of the three Great Powers on the questions discussed. In view of all that has taken place since the Armistice, it was not at all certain that unanimity would, or could, be reached, but that very desirable purpose has been achieved; and we feel that Lord Curzon was fully justified when he said that the proposals appear to have been generally approved by public opinion in this and other countries, and to be regarded as, on the whole, an equitable solution of a most difficult problem.

The sincerity of this effort after peace is hardly questioned in any quarter; even Angora recognizes that "this time the Entente has shown itself comparatively sincere." It does not follow, however, that it will finally be crowned with success; although we all hope that it will be. Officially Greece gave evidence of her readiness to do what she could by her prompt acceptance of the armistice proposal, but the publication of the three Ministers' *communiqué* has by no means been received with unmixed favour by the Greek people; and even if M. Gounaris persuades the Chamber of Deputies to approve the scheme outlined, the people may decline to follow the lead given. Our Constantinople correspondent reported quite lately rumours that the Greek army in Anatolia might borrow a leaf out of its opponent's book and, led by its present officers, insist on fighting on; and, extravagant though it sounds, the rumour may turn out to be well founded. The attitude of the Turks, too, is no more certain than that of the Greeks. Constantinople appears to be tolerably satisfied with the terms offered, but Angora professes to be very far from approving them. Adrianople and Thrace are

the stumbling blocks that the Kemalists make most fuss about; but the famous National Pact bogey makes a fleeting appearance now and then; and it is tolerably certain that Angora keeps a nervous eye on Moscow, wondering whether the whip will crack, and when. The Soviet Government, despite its preoccupations in other directions, is sure to have a good deal to say, directly or indirectly, on the subject of any agreement between Turkey and the "capitalistic Western Powers"; while Roumania is reported to view the suggested arrangement of the Straits difficulty with disfavour and to be disposed to take a strong line on the matter. Finally—and most unsatisfactory of all—there is a tendency in certain French circles to regard, or affect to regard, the proposals as a triumph for Great Britain rather than for the cause of peace, and to suggest that the measures preferred for the control of the Straits would mean British domination. The adoption of such an attitude is not only deplorable, but indicates an extraordinary lack of faith in the opinion of the French experts; for Lord Curzon has stated explicitly that in arriving at the decisions regarding the Straits the Conference was guided by the "unanimous advice" of the naval and military advisers. One of the most satisfactory things about the proposals, in fact, is that they are based on the advice of the experts who have studied them on the spot.

If we were to accept half the protests and grumbles called forth by the proposals at their face value we might lose all hope of any settlement. But we decline to do anything of the kind. The Turks, even the Kemalist Turks, have surely not so far lost their old-time gift of bargaining as to be blind to the chances now offered them; and they will be well advised to pay heed to Lord Curzon's warning against embarking on a protracted process of haggling. Let them reflect that, if the proposed scheme does not give them all they desired, it does surely give them all they could have hoped for, if not more than they could reasonably have hoped for, a short time ago. With the Greeks, the case is different. They are called upon to make sacrifices, which they can see only too clearly, while the compensation they are to receive is not definitely stated; and they are at present hardly in the mood to realize how great a blessing to them will be the cessation of war, with its drain on their manhood. Nevertheless, the wisdom they have shown in the matter of the armistice proposal encourages the hope that their political sagacity will enable them to see and follow the safer and better path. In that case they will undoubtedly deserve well of their Allies, and the compensation awarded to them is bound to be on a generous scale. As for any third parties, who may think themselves aggrieved or their safety endangered by the Paris proposals, they may rest assured that any representations they may make will be most carefully and sympathetically considered; for the Allies desire above all things to make a lasting settlement; and that will not be done if any just reason for complaint is afforded to a third State. On the other hand fanciful or factitious claims are likely to receive short shrift, for, to quote Lord Curzon again, "the civilized world is sick of this continuance of war, and longs . . . to settle down to normal conditions of tranquillity and peace." We believe that that statement is well within the mark, and that the world is so sick of the Turco-Greek situation that, if the parties to the quarrel refuse to see reason, it would be prepared to back the three Great Powers in any measures they may deem it necessary to take to put an end to the business. The proposals made may be open to modification in some minor respects, but any attempt at "protracted haggling" should be firmly suppressed, and the three Great Powers should not hesitate to take whatever steps may be necessary to bring about a settlement. They may be war-weary, but they are not too war-weary for that, now that they are united in purpose.

THE NAME OF "BULGAR."

By Our Former Belgrade Correspondent.

Strange are the vicissitudes of some words: strangest of all, perhaps, have been those of the name of Bulgar, which, at different times, has raised so much passion.

It is well known that the nucleus of the people were Tatars from the basin of the lower Volga, where their ancient home retained its name of Great, or Black Bulgary, until the XVth Century. They migrated along the shores of the Black Sea, past the mouths of the Danube and finally settled on the steppe-lands of the eastern Balkans, which resembled the vast plains of their home. Here they were reinforced by the kindred Pechenegs, Kumans and Tatars of the Horde, but by intermarriage and general contact, became eventually assimilated with the Slavs whom they found in their new home, accepting their religion and language, but retaining their name of Bulgar. A vigorous, military, disciplined race, they asserted themselves in Balkan history, spreading an ephemeral empire far beyond their natural boundaries, to be eventually crushed by the Turks, whom they resembled in many respects.

The Ottoman conquest of the Balkans reacted very differently upon Bulgars and Serbs. Kosovo inspired the latter with a vigorous sense of nationality, which the distance from Constantinople, and the wooded and mountainous nature of their country, encouraged. The Bulgars, on the other hand, were completely crushed. The reasons were partly the innate sense of obedience in their Turanian blood, and partly their proximity to Stamboul, and the open nature of their country, which enabled the Turks to maintain an efficient occupation more easily than in the forests of Serbia or the rocky fastnesses of the West. The consequence was that it was the steppes of the platform of the lower Danube which became the home of the crushing *chiflik* system of Ottoman feudalism, which reduced the patient Bulgar to the status of *rayah*, just as it did the Slavs of the centre and of Macedonia. The name of Bulgar soon lost all national sense and became synonymous with *rayah*, which was the true meaning of the word in the mouths of Turks and Greeks. A Russian traveller in the XVIIth Century refers to the *kmets* of even distant Bosnia as Bulgars, and the Mohammedan Serbs of Bosnia, Herzegovina and the sandjak of Novibazar used it in no other sense. We find it in the eastern districts under the true form *Blgar*, but in the centre south and west, it is softened into *Bugar*, which is the form in modern Serbian.

It passed to signify anything that is simple, coarse, and heavy: in Macedonia, the poorest labourers are referred to as *asti bugari*, real Bulgars, and *bugarska rabota*, Bulgar work, means a heavy toll. "To talk like a Bulgar" means simply and plainly, as the common peasants speak. Cvijich records that near Salonika, the verb *izbugariti se*, applied to corn, means to be spoilt, and *pobugariti se* means to rot: during the war, in the vernacular press in Salonika, *izbugarena* meant devastated, and *bugarka* is an inferior kind of wheat. One of the old peasant songs quoted by Cvijich relates:—

*junak svlachi svilu i kadifu
pa ponese budak na ramenu
i oblachi bugarske haljine
uchini se golema sirota,*

which may be translated literally:—

The hero doffed silk and velvet,
and took an adze upon his shoulder,
and donned rough clothes,
and made up as a very poor man,

where *bugarske haljine* means coarse, rough clothing. And in the "Wedding of Tsar Dushan," a warrior who has disguised himself in "Bulgar clothes" is not admitted to the inn. *Bugaraska kopanja*, is the coarsest kind of wooden goblet.

As far away as Dalmatia and in Croatia, the simplest kind of songs are termed *bugarstije*, Bulgar songs, and we find the same thing in the Ragusan epic "Osman,"

of Gundulitch, in the XVIIth Century. And even as far away as Zagorje in northern Croatia, unceasing rain is described as *bugar*, while in the Bocche di Cattaro, the natives apply the name *bugar* to the least valuable of their animals.

A similar fate befel the word *Vlah*, or Wallach, a Roumanian or Aromoun, which is a corruption of the Teutonic root for stranger which we find in *Welsh*. In Turkish, a Vlah was not necessarily a Roumanian, but a Christian shepherd, and the term was applied indiscriminately to Serbs as well as true Vlahs, and in this sense we often find it in place-names in Serbia to-day. In Serb and in Croat it has gained a derogatory sense, but Bulgar has gone much farther.

The Armenian colonists round Plovdiv brought the Patarene heresy from their uplands in Asia Minor, and gave birth to the curious sect of the Bogomiles. In time, persecution scattered those remnants who did not turn to Islam, and so Bulgar heretics spread over Europe. They passed into Italy, and thence gave rise to the Albigeois, and so their name passed into the French *bougre*, which originally meant a heretic. It has now lost its mediaeval significance, and ceased to be even a term of contempt or abuse, and is dependent upon its adjective for its effect: thus, while a Frenchman would object to being called a *sale bougre*, he would not mind being referred to as *un bon bougre*. In English it brought over its mediaeval significance from France, and meant simply a heretic, and in this sense is employed by early ecclesiastical writers, who apply it to the "Pope of Rome." In the bitterness of religious conflict, it has gradually lost its specific meaning and become offensive. Doubtless it will pass through the same phase as the French form, for undoubtedly in certain circles it simply means "fellow," with no opprobrious sense, and will very probably one day, like many a slang word, find a resting place in the respectable vocabulary of the country.

But with the awakening of the sense of nationality in Bulgaria, which we may date from the granting in 1870 of the Exarchate by Turkey, in order to sow dissension between Bulgars and Serbs, it has re-assumed its long-lost ethnical meaning, and consequently it made easy the work of the propagandists of Sofia in Macedonia, where the natives were accustomed to the word, as meaning a mere peasant, and it shocked them as an ethnic designation as little as did the name of *Boer* appear undesirable to the Dutch of South Africa. It is strange indeed that a philological curiosity should have such far-reaching political effect.

BRITAIN AND EGYPT.

Egyptian Press Views.

As far as the Egyptian Press can do so, it indicates that Egyptians in general, while welcoming independence—respecting which much perplexity, misunderstanding and suspicion nevertheless exist—are solidly opposed to the reservations as nullifying “complete independence;” and hold that real power will remain in the hands of Lord Allenby. Mohammed Shakir, who has a considerable following, continues his comments on the situation in the *Mokattam*. The British Government, he says, has proclaimed that it is for Egypt to respond to the offer made, and “it is hoped she will justly appreciate the good intentions of Britain, and that reflection, not passion, will guide her attitude.” We have to thank Britain for her good advice, which we hope all responsible Egyptians will follow. Well, for ourselves, on full reflection we say that Egyptians must reject the new terms as they did those of Lord Curzon and Lord Allenby. Egypt claims complete independence from the sources of the Nile to its mouths, and freedom from all interference, internal or external, by any Power whatsoever, at whatever cost, and by whatever methods. It is not wise to rejoice over what is merely illusory. Lord Allenby brings what is merely equivalent to a title bestowed by a King upon one of his subjects. The King of England is usurping from the Sultan-Khalifah, without justification, but with the approval of the European Powers, the rights which he possessed by virtue of conquest. Our advice to the Egyptian people is to send representatives to the Conference of Powers who alone are able to decide regarding the relations between East and West, and who have preached complete independence for all countries, in order to establish peace in the world. Before this can be realized the domination of strong nations over weak must come to an end. Liberty and equality must be established without distinction of race or colour.

It is quite premature and illogical to suppose that Egypt is now a sovereign State, or to rejoice over the new title given to Sultan Fuad, and the firing of guns. The so-called independence is obviously quite incompatible with the four reservations. We advise our Government to avoid the danger and responsibility of yielding. Should it bind itself to agreements as proposed, let it clearly understand that it represents, not the will of the Egyptian people, but only that of a few individuals; and in the end it is for the Egyptian nation to decide. Egypt moreover must entirely refuse to accept as legal, or to sanction, the enactments passed during the period of martial law. These relate to the Budget, the continuance for five years of the Mixed Tribunals, and other important matters affecting foreigners in Egypt, passed during the time when no Ministers would accept office, and British Under-Secretaries of State were acting as Ministers. England's object is to obtain legal fixity for these before a National Assembly comes into being.

The *Ahram* of March 17 expresses views much to the same effect. A letter is published from the “Egyptian Democratic Party” to the Egyptian Premier. This party would, it says, have expressed its attitude sooner had it been able to understand what was the driving power behind the late rapid decisions. Mr. Lloyd George has stated that any agreement is exclusively a matter between England and Egypt. “While we accept that Egypt is now a Sovereign State, we entirely deny that any of the reservations are acceptable or valid. Egypt desires to be precisely on the same friendly terms with the other Powers as she will be with England, and it is the duty of the Egyptian Government to notify all the Powers accordingly.”

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks advisable to state that the quotation from and article does not necessarily imply that the views expressed are shared by “The Near East.” On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

The Independence of Egypt.

The *Daily Telegraph* of March 17 begins an enthusiastic article thus:—

One of the most creditable chapters in the history of the British peoples has been brought to a close by the declaration of the Independence of Egypt. Mistakes have been made in the long years since we set foot in the land of the Pharaohs, for it is human to err; but we confront the world to-day with a record of administrative, civilising and educational work in this once-harried and disordered portion of the world which finds its fitting climax in the proclamation which has now been issued by the Sultan, who becomes King of Egypt. We have good reason to be proud of what we have done in face of many and conflicting difficulties. We have brought order out of chaos, financial equilibrium out of a state of bankruptcy, and have conferred on the fellahen a new charter of freedom. We entered Egypt when it had been for almost four centuries a vassal State of the Turkish Empire, subject to the authority of local rulers, who exercised within its frontiers practically despotic powers, so long as they paid the annual tribute to the Porte and did nothing to offend the will of the supreme master, seated in Constantinople, of Egypt's destiny. The Proclamation of Independence revives memories which were wearing dim.

It outlines the troubled history of Egypt in the latter half of the nineteenth century, speculates on Egypt's possible future, and concludes:—

But this land of ancient repute and new aspirations is free of oppression and misrule as in past centuries it never hoped to be free. The Protectorate has been denounced and the new measure of independence granted, not by the British Government as an arbitrary act, but by the British peoples, expressing themselves through the Prime Ministers' Conference last summer, and more recently through the House of Commons. The foundations have been laid of a new and, as we hope, a happy relationship between the British Empire and this new State. What the future destiny of the country may be depends on the chosen and responsible leaders of Egyptian public opinion. The reins of government under the new Monarchy have been confided to their hands. They receive from us a territory which, under British influence, has been transformed in the course of years from a place of desolation and suffering into a domain which, enjoying a large measure of material prosperity, holds a fair promise. It is unnecessary to do more than recall in the briefest words the distinguished part which Lord Allenby, the British High Commissioner, has had in the later stages of this evolution, which has added a new State to the constellation of the nations of the world. The future of Egypt, as any reader of the news from day to day must realise, is not unclouded, but freedom, under ordered government, is the solvent of many troubles. From every part of the British Empire, where the course of recent events has been watched with lively and sympathetic interest, the sentences of hope of the Marquis Curzon's recent despatch will find an echo. He remarked that “his Majesty's Government are convinced that the people of Egypt will show themselves worthy of the independence which they have now secured, and will prove by their use of it that the confidence reposed in them has not been misplaced.” Egypt, with its long and fascinating history dating back beyond all human records, emerges on the world's state as a Sovereign State

with the good wishes of every friend of liberal civilisation and King Fuad I. will be universally felicitated on the assumption of his new dignity.

Turkey and Greece.

The *Westminster Gazette* of March 28 is not hopeful of any lasting results from the Near East Conference, thinking that the proposals therein set down for "saving the face" of Greece are bad statesmanship. It reproaches both Mr. Lloyd George and Lord Curzon, and concludes:—

The prospects are not very bright. The Angora Government is reported to be unwilling to agree to an armistice; and certainly there is no very obvious reason why it should. That is the central difficulty of the problem. The Turks, in this war which Mr. Lloyd George has so unwisely provoked, are substantially the victors. If they were prudent they would perhaps accept the great concessions which they are now offered. But when have victors, even Western victors, been prudent? Why should the Turks surrender their claims to Adrianople, which is a Turkish city? Why should they consent to the Greeks holding not only Gallipoli but a tongue of land which, reaching to the Black Sea, will cut them off from their Bulgarian neighbours? And why should the Bulgarians be denied access to the Aegean Sea? To these questions there are no easy answers, unless the Allies are prepared—as at present they certainly are not—to employ military force on the spot. That being so, there is no reasonable alternative to the policy of attempting to draft a settlement on the simple basis of racial and economic justice. We have made a great mistake, and we must climb down. To climb down only two-thirds of the way, as Lord Curzon seems to have done, is merely foolish. We thus get the worst of both worlds; we lose prestige without securing peace. That is the danger of the policy which has just been promulgated from Paris; it is likely to settle nothing, even in the improbable event of its being accepted, for the moment, by the Angora Government. In the Near East, more plainly than anywhere else, we must cut our losses; and that is just what our present Government seems incapable of doing. No Government can ever rectify its own mistakes. It is indispensable that we should have a new broom.

The Near East Proposals.

The *Morning Post* is, by no means optimistic over the Conference. In its issue of March 28 it says of the terms of the settlement that they

obviously constitute a compromise which seeks to balance the evacuation of Anatolia by Greece by an adjustment of the Thracian frontier line which, while giving a certain freedom to Constantinople, leaves to Greece territorial advantages, including the retention of Adrianople, which, it is believed, may make less galling to Hellenic pride the loss of Smyrna and the Anatolian hinterland. Thrace is the real crux of the problem, and in that connection there are two considerations which cannot be neglected. In the first place, Greece, as we pointed out yesterday, is in possession of Thrace, and those who are determined to dispute that possession must be sure that they have at their disposal the requisite forces to carry out their will. In the second place, the proposed compromise gives a certain amount of

territorial contiguity to Turkey and Bulgaria, and it is quite clear that if that contiguity were increased both Roumania and Jugo-Slavia, with armies on the spot, might feel constrained to take drastic action. Therefore the dread possibility of another Balkan outbreak cannot be disregarded by the statesmen of the Allies. Will this settlement which is open to many criticisms, but which has one merit, that it wipes out the foolish iniquity of Mr. Lloyd George's proposal to break up Turkey as an Asiatic Power, be accepted by the parties concerned? It is from that point of view we advise caution. The Kemalists may refuse. We have much sympathy with the claims of Angora, and we have always pleaded their cause. Therefore we again remind its rulers that their decision must be regulated not only by the military situation but by the undoubted fact that if Turkey is again bled white by a renewal of hostilities the one Power which will gain is Bolshevik Russia, which is the enemy of Christian and Moslem alike and the sworn foe of peace and reconciliation. Most important of all, failure to reach a settlement will be a blow to the Entente, and will have serious consequences not only at Angora but at Genoa, and may make itself felt not only on the shores of the Aegean but on the banks of the Rhine. It is not so much Thrace or Anatolia as the Entente which is at stake in these delicate negotiations. It is not yet firmly established that a complete agreement, which will inevitably lead to a durable settlement, has yet been reached. But if there is to be peace in Europe as well as in Anatolia such an agreement is an urgent necessity.

INTERESTING STAMPS.

The *Times* of March 13 states:—The present tendency is to make stamp designs characteristic of the lands on their origin, and to this end the once universal portrait or armorial device is gradually giving place to local types and views illustrative of topography, manners and customs. Archaeological subjects introduce a novel element into the designs of the latest postage stamps of Armenia, certain values of which bear reproductions of curious sculptures and bas-reliefs unearthed from the ruins of Ani, while the five roubles stamp presents a general view of the site of the ancient Armenian capital, founded by Ashat II. and destroyed by earthquake in 1319. A panoramic view of Mount Ararat, the traditional resting place of the Ark, appears on the 500 roubles value of the same series, printed in purple. An Armenian soldier and a fisherman on the shores of Lake Van form the subjects of the vignettes on the 50 roubles red and 1,000 roubles blue-green respectively. The remaining denominations are decorated with the Soviet emblem of a crossed hammer and sickle. All the stamps are very crudely printed at Erivan by lithography, and issued imperforate. From the near by Transcaucasian State of Georgia comes a new 100 roubles stamp, lithographed in brown, with a figure of St. George, and inscribed in native characters.

It is understood that designs for an issue of national postage stamps by the Arab Government of Irak have been approved.

THE CAUCASUS PEASANTRY.

The representative of the American Near East Relief Organisation at Tiflis has sent a telegram, dated March 7, depicting a terrible state of things in the Caucasus, where starvation, overcrowding in towns, severe weather, and attacks of wolves in the country are causing great distress. The telegram says:—"The snow is now six to nine feet deep in the Eastern districts, where the villagers have been terrified during the past fortnight by incursions of wolves. Two soldiers on outpost duty near Darachichak were eaten by wolves after a desperate fight. Near Alexandropol five peasants lost their lives when a band of wolves attacked the village."

THE CARAVANSERAI.

*Think, in this batter'd Caravanserai
Whose Doorways are alternate Night and Day,
How Sultan after Sultan with his pomp
Abode his Hour or two and went his way.*

—OMAR KHAYYAM—

There are many methods of trying to get at the truth, and one is constantly hearing of ways that would hardly suggest themselves to the ordinary person in England, but then was not Solomon a Near Eastern potentate? A certain landlady living in Egypt, left her house to reside for several days in another town; she commanded the *boab* (hall porter) to watch, and to be sure to turn off the tenants' water at 9 p.m. However, the *boab* was a peace-loving man. On the return of the landlady, she accused him of allowing the tenants to have water all night. Naturally he stoutly maintained that he had shut it off punctually at 9 p.m. After much altercation, the landlady said she *knew* he had not done it, because she had had no complaints from the tenants on her return. Even a divorce court judge might get tips from the Egyptian landlady as to sifting grains of truth.

A friend who has been reading "A Song of Araby," which was reviewed in THE NEAR EAST not long ago, tells me that he found the descriptions of 'Iraq of the pre-war period particularly good. "But," he said, "there was a mistake in one place, in the chapter describing Eliot's escape from the Turks at Basrah, in which the author writes about the Persian Bank as being at a particular spot, when it was not at that period in existence there." This is just one of those pardonable slips that really do no harm, since they pass undetected by readers who don't know; while to those who *do* know the discovery of them affords, very often, real pleasure. Very different, to my mind, was a bad "break" made by a writer in describing his experiences at Kut during the siege—in, I think, *Blackwood*. Writing of the gallant attempt to run the "Jumna" through with provisions for the besieged garrison, he mentioned listening with much emotion to the beat of her paddles. The "Jumna" was the first—and I believe the last—boat on the Tigris to be fitted with screws in tunnels; so that whatever the imaginative gentleman may have heard it was *not* the beat of her paddles!

I cull the following from a paper published somewhere in the Near East:—"S.S. Caronia of 24,000 tons left New York on January 28 with 350 persons: she is due at Haifa on February 22 where she will visit Nazareth and Tiberius, and then come on to Jerusalem by car." We always knew our motor manufacturers and shipbuilders were clever people, but I think that the designer of this car should at least have an O.B.E. Perhaps, however, it is an American car, probably a ——— but no, no advertisements allowed in this column! Also the geography of Palestine seems to have altered a bit quite recently, but perhaps is was one of the Conferences did it.

When THE NEAR EAST, at Christmas, published the grim little play "A Turkish Night," it was criticized by one of its readers, who thought that the main incident of the play—the killing of the bandit, Kara Youssuf, by his mother, who failed to recognize him, was "too far-fetched for anything." As a matter of fact, I do not think that opinion would hold water, if we take into account all the circumstances of the play. But in any case the story is quite put in the shade by one told recently in the *Westminster Gazette*. In the latter tale, which is true, a Yugoslav peasant returning from America to his native village, with a small fortune which he had

made, kept his identity secret at first, meaning to give his family a joyful surprise. But the sight of the money he displayed so freely whetted the appetite of his wife and brother-in-law, who, still ignorant that he was their relative, murdered him while he slept. The following day a friend, to whom he had confided his intentions, came to the house, and the trick was revealed. Thereupon the wife and her brother, stricken let us hope by remorse rather than fear, drowned themselves.

The exciting events which have been taking place in Egypt during the past three months have been responsible for a good many "howlers" of one kind and another. Our London daily, I remember, came out just before Christmas with a very large type heading "Warships 'Hurried to Cairo,'" which leads us to hope that the Navy may yet find its way across the Armenian mountains to the help of the oppressed. Another London daily, which used to be better-informed, announced a little later that: "Four Cairo journalists—namely, the *Mukattam*, the *Mahroussa el Akhbar*, the *Ni zam* and the *Alexandria journal el Ommah*—have been suspended." The *Mokattam* and the other journals have no doubt often been "suspended" on book stalls, but one wonders whether the *journalists* were hanged on lamp-posts, or how! And then we had lately one of the Labour M.P.'s talking in Parliament about "the fellaheen" when he meant "the Fella" —not, perhaps a "singular" mistake after only three weeks in Egypt; and at least not so bad as Mr. Lloyd George's error in thinking that "fellaheen" were just insects.

NOTES AND NEWS.

Devonshire Square.
E.C. 2.

The Egyptian Budget.

The new Egyptian Budget, which is dealt with by our Cairo Correspondent on page 467, illustrates the great improvement that has taken place in the country's financial position during the past twelve months as a result of a regime of rigid economy. Last year the Budget provided for a deficit of £E,1,981,000, and it was generally thought that this total would be greatly exceeded. Actually, owing to the prudent policy of the Administration, there is a surplus of about £E2,500,000. This year's Budget provides for receipts of £E33,630,000, and expenditure of £E31,440,000, leaving a surplus of £E2,190,000. Our Correspondent points out that if this is realised the reserve will amount to about £E6,200,000, but it would seem that the estimates are rather on the cautious side, and any general improvement of trade would make a great difference to the position.

Egypt's Strong Economic Position.

In the course of his speech at the recent meeting of the National Bank of Egypt at Cairo the Governor of the Bank referred to the material change in the commercial position of the country during the past year. For the previous four years Egypt enjoyed favourable trade balances in some instances of a considerable character, but for the past twelve months there was an adverse balance of about 34 millions. This development the Governor remarked need occasion no alarm "as the country had accumulated large reserves of profit, the greater part of which still exist, and the general financial position of the country is undoubtedly sound." The Governor also emphasised the soundness of Egypt's currency system. As a result of the change in the trade position the figures for the note issue at the end of last year showed a fall of 30 millions in two years, the totals being 37 millions as compared with 67 millions. This reduction has had no effect upon the exchange owing to the mechanism by which the note issue is regulated. "If our currency system were not sound" the Governor pointed out "it would not have been possible to meet the demand for redemption of notes. . . without any difficulty whatever and without any effect on exchange."

Another Sudan Loan.

Turning to the Sudan the Governor pointed out that the trade statistics clearly showed that it had shared to the full the prevailing depression. In 1921 there was a decline of almost £E3,000,000 in the value of the Sudan's exports, while imports also declined though not nearly so extensively, this being due to the importation of material for irrigation works. In this connection the Governor stated that the Loan of £6,380,000 raised by the Sudan Government under a guarantee of interest by the British Government would not be sufficient, and that negotiations are in progress for a further loan. The result of the completion of the work will be that an area of 300,000 feddans will be available for cultivation in the

Gezira, the utilisation of which "cannot fail to give a considerable impetus to trade from which the whole country will benefit."

Lancashire and India.

Lancashire's case as regards Indian import duties on cotton was presented at the India Office last week by a deputation of Lancashire members of Parliament and others. Stress was laid on the point that the deputation was united on the necessity, as far as practicable, of absolute free trade between this country and India, and a number of extremely pertinent arguments were advanced against the duties to answer which satisfactorily is not likely to be an easy matter. But it is one thing to make out an adequate case against what is admittedly nothing more nor less than protection against Lancashire, and quite another to obtain any amelioration of the position. It has to be recognised that conditions in India are now vitally changed, and it is difficult in the circumstances to see any reasonable ground for confidence that Lancashire will obtain what she desires.

Handicaps to Trade.

It is not only in regard to India that Lancashire is faced with an unpromising position. We quote elsewhere an article in a contemporary giving the views of a merchant at Constantinople in regard to the shrinkage of British trade with that centre. He points out that in the past Lancashire has had no need to advertise owing to the number of native houses that had been long established in Manchester. But in recent years conditions have been adverse to their maintenance, and in the connection reference is made to the high wages insisted on by the the British workmen, and to the cost of transport and other things, the result of which is that British goods cannot compete with foreign products. It is, of course, an inevitable corollary that this should be so. Whether the loss of trade will bring about an improvement of conditions must remain to be seen. It cannot be said that up to the present labour has shown any overwhelming sense of realising the facts of the position.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

GREECE.

Athens, March 25.

Requisitioning of Goods.

The manner in which the Government is carrying out the requisitioning of goods imported from abroad is causing much discontent among Athens and Piraeus commercial circles. Hitherto the Government held adjudications for all its requirements, and the orders were given as a rule to the lowest bidder, who was obliged by the terms of the contract to deliver the goods within a stipulated period. During the last few months, however, it was noticed that the number of bidders at these adjudications gradually decreased, until one day none appeared. This was due to the fact that the Government having already placed many orders for various commodities was unable, owing to the shortage of funds, to pay for them, and this naturally frightened the adjudicators away. The Government, however, being in urgent need of army commodities, decided to exercise the rights of a country in a state of war by requisitioning all goods, such as khaki cloth, coal, and so forth, also foodstuffs immediately on their arrival at the Piraeus and Salonika. But not only has the Government so far, not paid any of the importers for the value of their requisitioned goods, but even the price to be paid has not been fixed! Meanwhile the shippers of the merchandise abroad are pressing the merchants here for payment, and the latter are thus placed in a very difficult position as the Government being extremely hard up has notified them that it is unable to effect any payments at present. The Piraeus Chamber of Commerce has now taken the matter up with the Government, but one cannot see what good this can do as long as the public treasury is empty and no money is forthcoming. Many importers in Athens and Piraeus have cancelled any orders which they had already placed abroad. The value of goods requisitioned by the Government amounts to many million drachmae.

Agricultural Production in Samos.

According to information supplied by the Ministry of Agriculture the production in the island of Samos during 1921 was as follows:—Barley, 18,050 okes; wheat, 55,740 okes; potatoes, 73,100 okes; grapes, 31,600 okes; figs, 91,800 okes; must, 176,100 okes; raisins, 164,680 okes; pears, 37,100 okes.

Higher Custom Duties.

A Bill has been passed by the National Assembly by which all custom duties paid in gold will, in future, be collected in paper money, the value of the drachmae being calculated on the day's rate of the pound sterling as fixed by the Consortium of Banks. This also applies to all demurrage charges and municipal taxes. By the application of this new law the duty on all imported goods is increased by 60 per cent.

ROUMANIA.

Bucharest, March 24.

Question of War Compensation.

The Roumanian Foreign Office is making fresh representations to the late enemy States, who according to the Peace Treaties are obliged to return what they have taken from this country during the time of occupation. Bulgaria, who, by the Treaty of Neuilly, has to return a number of cattle and sheep, has so far only returned a very small quantity of sheep. Hungary in compliance with the Trianon Treaty has to deliver to Roumania cattle as war compensation, but is objecting to this, stating that the Roumanians during the occupation of Hungary in 1919 took much more material than was due to them.

Trade Market.

Despite the "Easter season" being on now local merchants are still complaining of trade depression.

This is chiefly due to the consumers holding aloof, not so much for the reason that they are now convinced that at least until the summer no reduction of prices can be expected, but mainly for the reason that they are not in a financial position to buy. The facts are that during the last two or three months living expenses have doubled, whilst the income of the bulk of the population has remained stationary, so that the average individual is unable to satisfy some of his essential needs. On the other hand there is an equal if not growing demand as compared with former years for the articles consumed by the wealthy class, whose income grows with the depreciation of the leu. Therefore, in the shops containing luxury articles, such as silks, etc., trade is very satisfactory although prices rise almost weekly. To give an example, while the merchants of cotton piece goods find very few buyers even at prices of 32 to 35 lei per metre, those with silks at 400 to 500 lei per metre have not sufficient stocks to satisfy the demand.

In other words, although existing stocks are gradually being depleted, local importers have no inducement to replenish their stocks from abroad, especially at the present rate of exchange, and prefer to order small parcels of articles that find a ready market, even by the Simplon Express service despite the very high transport rate. Others prefer to supply themselves with small quantities from factories in the country, even though prices are not lower than those prevailing abroad.

Miscellaneous.

The submarine cable between Constantza and Constantinople, which has been out of repair for over three months, has now been completely re-established, so that telegraphic and telephonic communications between these two centres are now resumed. This work was executed by Roumanian and Turkish working parties under French supervision.

The Ministry of Finance has now ordered the printing of duplicates of all State, district and town obligations that were sent to Moscow during the war. As the duplicates are issued the originals will be officially cancelled.

At the Railway Conference held recently at Vienna it was decided that, beginning from May 1, the Orient Express fare between Vienna and Bucharest shall be reduced by 30 per cent. It was further decided that from that date direct tickets shall be issued from Bucharest and Arad to Paris and other towns beyond Vienna.

From Bessarabia it is reported that owing to the rising of the Dniester several villages on both sides of this river are almost flooded out.

According to the latest bulletin of the Ministry of Agriculture, the autumn sowings are progressing very satisfactorily. Rapeseed is in excellent condition, but comparatively little of it has been sown. Spring sowings are now in full swing.

CYPRUS.

Cyprus, March 14.

Exports and Imports.

Figures for the calendar year 1921 show that exports amounted in value to £920,867 as against £1,200,650 in the proceeding year, and imports to £1,512,288, as against £2,073,584. The principal exports were—Carobs, £305,480; wines, £82,299; spirits, £14,346; raisins, £42,517; potatoes, £62,759; asbestos, £30,360; sheep, £24,926; mules, £20,945; cattle, £19,157; asses, £16,431; cereals, £17,132; oranges and lemons, £16,346; pomegranates, £27,088; cotton goods, £13,613. The chief imports were cotton goods, £254,002; petroleum, £77,556; tobacco, £70,546; flour and wheat, £94,758; sugar, £69,251; rice, £24,274; leather and skins, £69,064; drugs, £17,478; machinery and appliances, £38,405; cigarette papers, £12,901; iron, £9,535; coal, £15,355.

EGYPT'S BUDGET FOR 1922-1923.

Substantial Surplus Expected.

(From Our Own Correspondent.)

Cairo, March 25.

The Council of Ministers passed the Budget for the new financial year this morning. The receipts are estimated at L.E.33,630,000 and the expenditure at L.E.31,440,000, leaving an anticipated surplus of L.E.2,190,000 which will be added to the reserve. This compares as follows with the budget for the preceding year:—Receipts, L.E.36,701,000; expenditure, L.E.38,682,000; deficit to be debited to the reserve L.E.1,981,000.

The Finance Committee's note points out that the 1921-1922 budget included on the revenue side an item of L.E.4,123,000, representing the proceeds of sales of cereals and on the expenditure side an item of L.E., 4,709,000 representing the cost of purchase of cereals. In the current budget the amounts figuring on either side under this heading are L.E.162,000, and L.E.75,000 respectively. There is therefore a net increase in what may be called recurring revenue of L.E.890,000, and a decrease in recurring expenditure of L.E.2,608,000.

The year which ends on the 31st instant far from closing with the anticipated deficit will produce a surplus of approximately L.E.2,500,000, so that if the forecast for the coming year is realised the reserve a year hence should amount to L.E.6,200,000. This, as the Finance Committee points out, has only been brought about by the adoption of a policy of economy directed at re-establishing a strong reserve and by endeavouring to expand the general resources of the country; and the establishment of this new reserve should enable the Government to meet the first calls in connection with the development work which it must undertake in the near future.

Under receipts the chief items are:—Direct taxes, L.E.5,550,000—a slight improvement; customs, L.E.9,764,000—an increase of L.E.1,595,000, owing on the one hand to an underestimate of import dues even when allowance is made for the contraction of foreign trade in 1921 and on the other to an increase of L.E.490,000 from the excise duty recently established on alcohol; judicial fees, L.E.2,123,000—an increase of L.E.343,000, due to a large extent to the recent raising of transfer fees; railways, L.E.7,400,000—an increase of L.E.294,000 (this total is L.E.500,000 less than the total receipts for the current year, but it has been considered prudent to make allowance for the decrease in third class passengers to be expected as a result of the economic state of the country and for the reduction in the quantity of cotton transported; State Domains, L.E.913,000—an increase of L.E.113,000; military exemption fees, L.E.300,000—an increase of L.E.100,000 owing to the raising of the tariff; Ghaffir cess L.E.1,461,000; interest on funds, L.E.1,061,000—a decrease of L.E.1,194,000, due to the contraction in the note issue which is now down to 37 millions as against 40½ millions at the end of 1920 and 67 millions at the end of 1921; miscellaneous receipts, L.E.1,133,000—an increase of L.E.122,000 due partly to the proceeds of the sale of oil received as royalty; cotton tax L.E.1,150,000—a decrease of L.E.850,000, due to the reduction in the cotton crop and the contemplated reduction in the incidence of the tax on the lower grades of the cotton; extraordinary receipts, L.E.676,000—an increase of L.E.150,000 resulting from the sale of the balance of cotton purchased by the Government last year.

Under expenditure there is a reduction of L.E.205,000 in the King's civil list due to the termination of the repairs to his yacht. The Ministry of Finance Central Administration credit shows a reduction of L.E.298,042, owing partly to the completion of the purchase of Koubbah Palace. The Survey receives L.E.398,525;

the State Domains, L.E.416,018; the Customs' L.E.261,875; the Frontier Districts Administration' L.E.252,600; while a new item, Petroleum Office, appears with L.E.176,000, of which L.E.100,000 is destined for petroleum research and L.E.76,000 for the completion of Suez refinery. Public Instruction receives a small increase making a total credit of L.E.1,169,040; and the Ministry of the Interior, L.E.121,748 less, or a total of L.E.794,864 due partly to reduction in the cost of material and rations. Public Health has a slight increase to L.E.758,935, while the Prisons receive L.E.368,642 or L.E.96,506 less, due to reduction in the cost of material and rations. The Ministry of Justice, in which are included the Mixed, Native and Religious Courts has a total credit of L.E.1,280,420 which is slightly higher than the previous year. Under Public Works the Irrigation Department with L.E.2,278,763 receives L.E.149,170 less; the new works for which L.E.673,180 are provided are Abukir Drainage, L.E.75,000, survey work on the Upper Nile, L.E.42,000, work in connection with Gebel Aulia reservoir L.E.200,000 and for urgent work in Upper and Lower Egypt, L.E.60,000.

The State Buildings receive L.E.425,166, the new works including the construction of a primary school at Zagazig, and the reconditioning of the Hospital at Luxor given to the Government by Messrs. Cook and Son. The Mechanical Service credit is L.E.299,716; in this connection considerable economies are expected from the installation of oil consuming machines or the conversion of existing machines for the Helwan water supply, the Giza and Gezira pumps and the Port Said light-house. Cairo Municipal Service receives L.E.396,277; the Main Drainage, L.E.235,969 and the Ministry of Agriculture, L.E.359,499, a slight increase over the previous year permitting an extension of its activities. Railways figure for L.E.3,376,467 or L.E.1,501,028 less than the preceding year; this is due to economies on coal and maintenance expenses. The credit for Telegraphs is L.E.246,304, for Telephones, L.E.285,878; for the Post Office, L.E.522,401; and for Ports and Lights, L.E.690,646; in connection with the latter L.E.250,000 are for improvements in Suez Port and L.E.83,000 for other improvements in Alexandria. Main Roads and Bridges receives L.E.359,190; or L.E.181,758 more than the preceding year. A sum of L.E.153,000 is allotted to further work on Embaba Bridge. The Provincial Administrative Services receive L.E.731,388; the police L.E.986,976, and Ghaffirs, L.E.1,527,006. The War Office has a slight increase to L.E.1,889,835; pensions and indemnities credit is increased by L.E.255,060 to L.E.1,066,810, due partly to the regularisation of the position of temporary employees and partly to the payment of indemnities etc., to the Egyptian Auxiliary Corps. The Public Debt Service takes L.E.4,616,168, a slight increase due to the increased commission charged by the Banks on the payment of the coupons.

There is a decrease of L.E.650,000 in the indemnities for the increased cost of living paid to the Service which now amounts to L.E.2,500,000. This reduction is due to a decrease in the scale forecast for next June. A sum of L.E.900,000 is inserted for the settlement of riot claims in connection with the 1919 and 1921 troubles in respect of which L.E.864,000 has so far been paid. Finally a sum of L.E.500,000 has been inserted in the Budget to meet the arrears to the Civil Service in connection with the regrading which is now being carried out. The note points out that it will only be possible to meet a portion of the total arrears due and incidentally it draws attention to the fact that whereas in 1913 when there was no high cost of living allowance the total salaries amounted to L.E.5,360,000 out of a budget of L.E.16,130,000, to-day in a budget of L.E.33,630,000 the service costs L.E.13,186,000.

STAMPS:—A collection of Foreign, Colonial and New-Europe Stamps, numbering 4,750, in good condition, Used and Unused, in Gibbons Improved Album, price £10. or near offer. Box L.W.H., The Near East, 1, Devonshire Square, London, E.C. 2.

THE YUGOSLAV BUDGET*.

By M. Burr.

(Concluded).

The state monopolies are a substantial business, but here again obsolete accountancy, according to Belin, and delay in unifying the system throughout the country makes it very difficult to form an accurate idea of the situation. The tobacco monopoly certainly shews a big profit as also petroleum, but in the latter case private competition is permitted subject to a tax, and it is very difficult to arrive at the correct figures. A profit of 552 millions is shewn by Belin, but admittedly on inadequate information.

Finally, direct taxation is over-estimated, as the difficulties and costs of collection are not taken into account. This should be the mainstay of the budget, but the government shirks the responsibility of increasing it to a proper proportion of the revenue for fear of alienating the powerful peasant vote. Yugoslavia is a yeoman state, and the peasants are to-day undoubtedly in an extremely prosperous condition, in spite of the fall of the currency and the rise of the cost of living. They could easily bear a much greater burden of direct taxation.

To resume, expenditure is heavily under-estimated, and many sources of revenue overestimated, but several sources of income are not made full use of: direct taxation especially and the "agio" on import duties are capable of great expansion, and the latter has the advantage of automatically counteracting the depreciation of the currency: the financial position of the country certainly leaves much to be desired, but is far from desperate, and there is no need to take the pessimistic and hypercritical view which is at once so easy and so fashionable. As Belin remarks, with a little energy and skill the budget should be really balanced in a relatively short time. For as to the natural wealth and great resources of the country there can be no room for doubt.

But the solid fact remains that the war credits amount to a quarter of the total expenditure, and that this is heavily increased by the fall of the dinar: moreover, it is unproductive expenditure. The only remedy is to reduce the strength of the army. That sounds, at this distance, an easy matter, but those who live on the banks of the Danube hesitate to bear the responsibility of a policy of reduction. Still, the burden is so great that a certain saving could surely be effected under this head. The interest on war debts is a very serious matter. Over two milliards of francs are due to France, and there is a heavy obligation to ourselves. The payment of the interest alone is bound heavily to affect the rate of the dinar, while Serbs may well ask what is to be their fate on this head, and cannot they count on at least some restitution from Germany?

The total outgoings for the year will therefore probably be nearer 8 milliards than six-and-a-quarter, if not more. The economy movement may effect some reductions, especially in the army of officials, who are a very expensive luxury, and vigorous steps have already begun to be taken in this direction.

Now let us examine the revenue side. Here again we find the same optimism, but of course on the other side. Dr. Kumanudi, the Minister of Finance, bases great hopes on the extraordinary property tax, not to exceed two per cent., to be applied once, and to provide nearly 600 millions. Here he is surely an over-optimist, for the tax will cost an enormous sum to collect, and much time will be taken in creating the necessary organisation. Only a small proportion could be collected during the current year, and the ultimate net results will probably be very disappointing. The Ministry counts, however, upon it to pay off the debt to the National Bank.

Under the heading of Customs, 300 millions is anticipated from the import duty, and 100 from the export duty. But the latter is necessarily the sport of passing conditions, and consequently fluctuates: a big change in the rate of the dinar would react sharply on the

export duties, and if by chance there were a strong recovery, this source of revenue would have to be largely reduced or even abolished. As a matter of fact, in September last this duty produced 16 millions, and if that rate were maintained it would give about 200 millions, so in any case the estimated figure is wrong.

An interesting item, and a very substantial one, is the "agio" on customs duties, which is entered separately. The "agio" is the ratio of gold to paper: the tariff is expressed in gold currency, but payment made in paper at a premium fixed periodically by the Minister of Finance: the latest rate was 500 per cent., that is, six paper dinars to be paid for every gold dinar of tariff: this source of revenue gave in September no less than 49,661,000 dinars, or about 600 millions per annum: but the rate then was only 300 per cent. If the "agio" were at a rate proportionate to the present figure of the dinar it would be about 1,200 per cent., and the income therefrom correspondingly greater. This is a very interesting item since it compensates for the fall in the dinar, and would automatically disappear if the dinar returned to par. If the customs were rigorously exacted and smuggling absolutely stamped out and the rate of the "agio" raised, we should have here an immense source of revenue, which the Minister has very greatly under-estimated. And the more the dinar falls, the greater the "agio."

The revenue from excise is also apparently under-estimated, and is capable of considerable expansion. The month of November gave 36 millions on this head, which is 430 per annum, yet only 390 is provided. The country imported 1,700 truckloads of sugar in the first six months of 1921, equivalent to 3,400 per annum: deducting the domestic production of 2,600 from the total consumption of about 10,000 truckloads, we have a revenue of about 240 millions on sugar alone, leaving only 150 millions from wine, spirits and alcohol: this could be greatly expanded, if the politicians had the courage: but it would arouse considerable opposition from the peasants, especially of Serbia, and no political party dare inflict it.

The tax on turnover is over-estimated at 400 millions: this provoked a storm of opposition from influential interested parties, and is sure to be largely evaded. It is capable, if wisely applied, of bringing in large revenue. In Germany it produced 21 milliards of marks, and in Czecho-Slovakia two milliards of krone.

The revenue from state investments calls for very detailed examination and particulars are not easy to obtain. It would appear, however, that in spite of the recently increased tariffs, the railways, except in the western districts, where traffic is heavier, are run at a heavy loss, and the posts and telegraphs certainly are: I. Belin, in a reasoned criticism of the state finances in a recent number of the *Nova Europa* shows that the methods of accountancy are obsolete, that no profit and loss account is kept, that no provision is made for depreciation and that a heavy deficit is inevitable.

Engineering Topics.

By Our Engineering Representative.

Electric Power Supply.

The huge scheme for improving the organisation for the supply of electricity to a large portion of the busiest industrial districts in the North of England seems to have the support of electrical manufacturers generally, all of whom no doubt trust it will result in an improved market for their products or fairly large orders for plant.

The scheme as it stands will involve the expenditure of some thirteen million pounds during the next ten years, a capital outlay which some consider will be between one and two millions less than the electric supply companies themselves would have to spend were they to continue in their present non-co-operative methods. It may seem a little curious that all large schemes involving the immediate expenditure of vast, almost unthinkable sums of money are invariably going to save millions some time in the future—if memory serves even the scheme of the Severn barrage was going in some way or other to show a profit, though possibly only on paper. The daily expenditure on the war, which was mentioned to us at least every week during the latter stages of the struggle, seems to have induced a sort of hypnosis on many in authority, which prevents them from recognising the value or even the existence of any sum under four or five hundred thousand pounds, and men who in 1913 would have slaved day and night to save shareholders a few hundreds now recommend, with a casual wave of the hand, the expenditure of as many or more millions. What is needed now is a little sane retrenchment and a devoting of our efforts towards the re-establishment of foreign trade relations. Schemes such as this 13-million reorganisation may well be left until we are rich enough to pay for them. I see one engineer's paper says that the new project should be put in hand at once and emphasises "the heartening effect it would have on the trade of the country if it could be commenced forthwith." In comment, all I can say is that if it will hearten British engineering to get to work and take money out of one pocket to put, as wages, into another, British engineering is far more easily cheered up than one would have thought possible.

The New "Ten."

By way of proof as to the exceptional qualities of the post-war Wolseleys, it was decided to test on Brooklands track a standard Ten with such modifications only as were required for racing purposes. This was done, and on November 24 last fifteen Brooklands records were captured in one afternoon, an average speed of 82 m.p.h. being maintained continuously for a period of over 5 hours—truly an epoch-making performance. First in its class in 1900, and breaking all records in 1921, it is not surprising that Wolseley is a household word throughout the civilised world. Public appreciation has set the seal of approval on the present-day Wolseleys,

and every indication points to an even greater increase in the demand for what are at the same time the oldest, and the newest, British cars.

Foreign Touring.

Arrangements have now been made whereby the Automobile Association will, if requested, accept a uniform cash deposit of one hundred pounds and an approved bankers' indemnity for the balance of the duty required for cars proceeding abroad. It will be remembered that in 1919 the Automobile Association inaugurated, as an experiment, the system of accepting bankers' guarantees in lieu of the cash deposits previously required to meet the demands of foreign Customs in respect of cars going from Great Britain to tour on the Continent. The experiment proved more than merely disappointing. It involved the A.A. Touring Department in such serious disputes with foreign Customs authorities that in the case of one otherwise friendly country all touring facilities were on the point of being withdrawn from A.A. members. The Association was therefore compelled in April last year to suspend completely the acceptance of bankers' guarantees.

All this trouble was caused by a number of members who—perhaps because they were relieved of the need to deposit actual cash—either forgot or ignored their obligation to get their triptyques or Carnets de Passage en Douanes properly visad at the various ports of exit or frontiers. It needs little imagination to appreciate the chaos, the waste of time, labour and money, which such non-observance of the regulations entailed. It is the fact that a large number of cases, already over a year old, are still unsettled as between the foreign Customs, various bankers and the A.A. Touring Department. It is unfortunately also the fact that the hitherto unavoidable reversion to the system of cash deposits has caused inconvenience to the majority of touring members and perhaps may have impelled some of them to abandon their projected tours.

This difficult situation has given the A.A. executive grave concern and after much study of the problem it is pleasing to be able to announce the foregoing modification, which it is hoped will be deemed an equitable way of preventing carelessness and loss on the part of the heedless member without penalising the great majority. The figure of £100 will, it is hoped, be sufficiently substantial to ensure members taking ordinary precautions concerning the due discharge of their obligations which, as stated above, in a surprising number of cases were entirely ignored. It should be clearly understood also that the amount of £100 can only be accepted in cash, and securities of any description cannot be accepted in place of either the guarantee or the deposit. The banks whose guarantees will be accepted are limited to the clearing banks and their branches.

GILT-EDGED FIRM.

The Rise in Roumanian Oils.

(From Our Own Correspondent.)

London, Tuesday morning.

Once again it has been a fairly good week for investment stocks. In a number of directions there has been considerable activity, and further advances are to be recorded. The continuance of the buoyancy is to be attributed to the improvement—for the moment at any rate—in the general position, and to the prospect of various favourable developments in the immediate future. A lower Bank Rate is confidently expected, while as the Budget day comes nearer the belief grows that there will be a reduction in the income tax. It is curious that conditions in Ireland and even the Genoa Conference should have little or no influence on the markets at the present.

Loans.

There have been a few new issues during the past week, but none of any outstanding interest, and it does not seem likely that any are to be anticipated for some time to come. In a month or two, when more settled conditions will probably prevail, it is possible that there will be developments with regard to some Balkan Loans. Outside that region several interesting issues are on the tapis, notably one for India, and a further Sudan Loan.

Gilt-Edged.

Buoyancy has continued to mark the Gilt-Edged market and in most cases shares are higher on balance. Consols are 5-8 up at 56½, War Loan Fives at 99.5-16 are 1.3-16 up, while the Conversion Loan at 73.15-16 has gained 11-16. Indian stocks are also harder. The Seven per Cent. Loan is 3½ up at 109, the 3½ per cent. Loan at 63½ has gained 2½, while the 3 per cent. Loan is 1½ up at 53½.

A much firmer tone has been in evidence in the market for foreign securities. French War Loan Fives are 44½, the same as before, while German three per cents. are 1-8 harder at 2.5-16. Italian Rentes are the same at 23½. Mexican issues have been in considerable demand, the four per cents. of 1904 going up to 59. Chinese bonds have been strong, and rates are harder. The Five per cents. of 1896 are 1½ up at 93, while the 4½ per cents. of 1898 are 2½ up at 76½. Brazilian stocks improved the 4 per cent. 1889 Loan being 53xd, while Chilean issues have also been in request. Turkish Loans have been hard, while Greek securities have shown an improving tendency with Monopolies at 35½.

Industrials Improving.

A better tone has prevailed in the Industrial group, and though as usual business has been on the restricted side there has been a fair amount of activity in certain directions. Tobacco shares after being buoyant are

closing on rather a dull note as the result of profit taking, but are still well above the previous week's levels.

Textiles have been firm with Coats at 2.15-16, a gain of 1-8, and Courtaulds at 37s. 3d. Iron, Coal and Steel securities have inclined to harden. Vickers are 3d. up at 9s. 6d., Armstrongs have gained 1s. 6d. at 15s., Guest Keens are 3d. up at 30s. 3d., while Lamberts at 2½ are 5-8 up.

Shipping Securities have been rather firmer. P. and O. Deferred are unchanged at 27s. Cunards are 9d. up at 18s. 9d.

The Rise in Phoenix.

A very variable tendency has prevailed in the Oil market during the week. The chief interest has been in the Roumanian section where Phoenix have again gone ahead, closing at 26s. 9d., a gain of no less than 8s. 3d. I only hope that some of my readers bought them when I advised a purchase when they were under 10s. Burmahs are 5.3-8, a rise of 1-8, while Anglo-Persian Ord are 4. Mexican Eagles are 3.9-32, a decline of 15-32. In Trinidad issues Centrals are ¾ lower at 3.1-8, while Leaseholds at 1.5-16 are 1-32 up.

Among Egyptians, Anglo-Egyptian B are 1½, at which they are 1-16 lower, while Oilfields of Egypt are 6d. down at 5s. The sensational rise in Phoenix naturally had the effect of drawing attention to other shares in the Roumanian group, and advances have taken place. Roumanian Consolidated are 13s. 9d., a gain of 3s. 6d. I regard this share as representing at the moment the best value in the group, and a purchase at the present time should show a good profit. Dacia Romanos are unchanged at 11-16, but Steaua Romana at 13s. are 2s. 6d. higher.

Near East Markets.

LONDON PRODUCE REPORT.

Smaller Shipments of Oranges.

Sugar.—Home refined has been in steady request at unchanged rates. Tate's cubes at 53s. 9d.; mineral water sugar at 49s.; London granulated at 48s. 6d.; and Lyle's granulated at 48s. 9d.; are all unchanged. There is no change in export varieties. West Indian crystallized is firm at 43s., and Czecho-Slovakian at 21s. 4½d. Cane sugar quotations are:—April, 14s. 6d.; May, 14s. 3d.; August, 14s. 9d.; and September, 14s. 6d. White sugar quotations are:—April, 19s. 6d.; May, 19s. 6d.; August, 19s. 9d.; and September, 19s. 9d.

Coffee.—A further advance has been noticeable this week. Costa Rica has gained 7s. at 144s., while Indian at 122s. is, 2s. up. Nairobi and Jamaica have remained firm at 118s. and 150s. respectively. The futures market has been quieter. Quotations are:—May, 54s. 3d.; July, 55s. 6d.; September, 56s. and December, 56s.

Dessicated Coconut.—The position has been easier, and a good demand has been maintained. There is a very small supply of this commodity at the London wharves, and it is said that unless larger shipments arrive an acute shortage is inevitable.

Green Fruit.—Prices for oranges have advanced rapidly during the past few days, while shipments are smaller. Merchants are holding their supplies back in anticipation of a large demand at Easter. Large quantities of Messina lemons have just arrived, but quality and condition is poor and quotations are excessive. Apples have been in excellent request at firm rates.

Oilseeds.—A dull tendency has been in evidence. Indian linseed has shed 3d. to 19s. 3d., and La Plata has dropped 1s. 1½d. to 18s. 3d. Rapeseed is higher with Toria 6d. up at 17s. 6d., and bold Ferozepore, 2d. up at 18s. 10d. Cottonseed is lower with Indian, 7½d. down at 8s. 9d., and Egyptian at 11s. 6d. is 9d. lower. Sakellarides has shed 1s. 4½d. at 11s. 1½d.

Oils.—The tone has been variable. Linseed oil has shed eighteenpence at 36s. Rape oil has risen, the crude variety being 1s. up at 45s., and refined 2s. at 48s. Cotton oil has declined 1s. in all cases. Refined is now at 48s.; deodorized at 53s., and Egyptian crude at 40s.

Oilcakes.—Linseed cake at 340s. ton has been firm, as also cottonmeal cake at 320s. ton. Arachis cake has been steady at 200s. ton, while palm kernal has remained unchanged at 160s. ton.

ASIA MINOR FRUIT REPORT.

Messrs C J Giraud and Co, Smyrna, report as follows under date March 31:—

Our last report was dated November 1 and has since been supplemented by weekly market summaries. We now set forth in condensed form, a review of the position over the period November 1, 1921, to date.

Sultanas.—In our preceding report the estimate of the sultana crop was put down at about 33,000 tons. The figures now at our disposal, as given in detail below, would indicate, in the light of our to-day's knowledge, that the crop will prove short of that figure by about 1,600 tons, or say will reach up to only about 31,400 tons as against 33,000 then estimated.

The statistical position is as follows, our figures being based on the returns of the Tithes Department and on shipments actually effected:—Total sales on the Smyrna market, 23,024 tons; total sales Carabournou Sultanas, 388 tons; total sales on the Vourla market, 6,388 tons; total 29,800 tons. Estimated stock remaining at Smyrna, Magnesia, Alaschier, Axar, Nymphio and Vourla, 1,600 tons; total 31,400 tons.

Shipments since opening of the season to this date have been as follows:—To the United Kingdom: London, 583,200 bales; Liverpool 431,740 bales; Outports, 106,740 bales, total 1,121,680 bales, equal to about 14,380 tons. To the Continent: United States, Canada, Australia, etc., 15,410 bales, 29,800 tons. Estimated

stock remaining in the country at date available for shipment, 1,600 tons; total 31,400 tons.

To the shipments made to the United Kingdom must be added about 15,000 boxes representing re-exports of Smyrna sultanas from the States to London and Outports, effected during the period under review; also several thousand boxes from Holland. Market values since November 1 last have steadily continued their upward tendency, reaching in the course of March the highest point touched during the season. This is partly attributable to the good consumptive demand in the U.K. which exceeded expectations in view of the general trade depression in that country. How this re-acted on market values is reflected in the fact that whereas shipments this season to the U.K. total 14,380 tons as against 7,950 last year, the price average has been much in the neighbourhood of the preceding season's. Since the turn of the year, however, the advance in prices has been considerably more rapid in Smyrna than on consuming markets.

In the U.K. values generally have been ruling 5s. to 10s. below Smyrna parities and with the exception possibly of the Continent where markets were lightened of their stocks by re-exports to the U.K., shipments from Smyrna since the turn of the year have been negligible.

The position, as it now presents itself, is that, with Smyrna stocks reduced to about 1,600 tons, stocks on consuming markets light and not more than are needed to meet demand until new fruit becomes available some fine months hence, there is no reason to anticipate any decline from the present level of values. Moreover, there is likely to be no carry-over of old fruit into next season. Little can be said at so early a date as to the coming season's crop prospects beyond remarking that atmospheric conditions generally have been normal with an abundant winter rainfall which may be regarded as favourable to agriculture. Much will depend on the spring rains. Exchange fluctuations have continued to be the chief of merchants' difficulties in computing the cost values in foreign equivalents on offers open even for immediate reply. The general tendency since December last has been for a gradual improvement in the value of Turkish currency and from about Ps. 900 to the sterling pound, the highest point touched, the exchange rate during the past month has averaged about Ps. 650 to the pound sterling.

Figs. Total arrivals to date amount to about 18,800 tons. No figs remain over in the Interior of the country and thus this figure may be taken as representing the extent of the yield.

Since November exports have consisted mainly of bags Natural, the States drawing the bulk of these. The stock in Smyrna is about 450 tons, all of which however, is earmarked for shipment to Egypt. Shipments this season have been distributed approximately as under: To the United Kingdom: London, 9,055 sk/cs, 35,527 B/s, 161,685 bags; Liverpool, 5,586 Sk/Cs, 12,404 B/s, 84,731 bags; Outports, 576 Sk/Cs., 2,255 B/s, 39,063 bags; equal to 6,500 tons. To the United States and Canada, 25,175 Sk/ton cases, 35,602 boxes, 24,566 bags; equal to 8,700 net tons. To the Continent, Australia, etc., estimated shipments about 3,150 tons. This brings up the total shipments to date to 18,350 net tons. Estimated stocks Smyrna and Interior, 450 tons. Estimated result to yield, say 18,800 tons.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated March 27:—Markets:—March 23—Bombay cotton market firm. Fine M.G. Oomras Rs. 380 March, Rs. 390 May. Bombay cotton arrivals from September 1, 1921, to March 17, 1922, were 2,085,000 bales as compared with 1,473,000 bales during the same period of the last year. Bombay imported piece-goods market steady and clearance of several styles very satisfactory. Demand exists mostly in whites and to a small extent in greys, but prints show no sign of improvement. Prices not advancing as stockholders are apparently endeavouring to clear. Indian mills prices are hardening slightly. March 25—Jute and Hessians quiet and steady. Heavies steady but dull. March 24—Special Straits quality Rice Rs. 485.

No change in Bank Rates.

CURRENT PRICES:

General Produce.—Bacon: (Continental), 116s. 6d. cwt.; (Canadian), 105s. cwt.; (American), 97s. 6d. cwt.; butter (Danish), 193s. cwt.; (Australian), 155s. cwt.; (New Zealand), 170s. cwt.; cheese (Canadian), 97s. cwt.; (New Zealand), 92s. cwt.; lard, 88s. cwt.; eggs (Danish) 14s. 9d. per 120; Styrian, 10s. 9d. per 120; chillies, 160s. cwt.; cloves (Zanzibar), 1s. 2d. lb.; cocoa (Ceylon good to fine), 92s. 6d. cwt.; coffee (Costa Rica), 129s. cwt.; (East Indian), 133s. 6d. cwt.; (Central American), 104s. cwt.; (Jamaica), 68s. 9d. cwt.; (Mocha longberry), 106s. 6d. cwt.; (Santos, superior), 67s. cwt.; ginger (washed Cochín), 52s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 3½d. lb.; (Muntok white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 75s. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Vostizza), 68s. 6d. cwt.; (Amalias) 57s. cwt.; sugar (Tate's cubes), 53s. 3d. cwt.; (Lyle's granulated), 48s. 7½d. cwt.; (Mauritius crystals), 45s. 1½d. cwt.; (West Indian crystallised), 43s. 1½d. cwt.; (centrifugal), 15s. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon No. 2), 14s. 3d. cwt.; (bran Rangoon), £6 8s. 9d. ton; cinnamon (firsts), 11½d. lb.; mace (fair Singapore), 1s. 5d. lb.; tea (common to good common) 1s. 2½d. lb.; (medium to good), 1s. 6½d. lb.; (fine to finest), 2s. 7½d. lb.; Ceylon (common to good common), 1s. 2½d. lb.; (medium to good), 1s. 6½d. lb.; (fine to finest), 2s. 7½d. lb.; Java (common to good common), 10½d. lb.; wheat (English white), 54s. 6d. qr.; wheat (Australian), 60s. 3d. qr.; barley (malting), 50s. qr.; barley (feeding), 36s. 6d. qr.; oats (English), 33s. 6d. qr.; oats (La Plata), ex-ship, 25s. 3d. qr.; maize (La Plata), 41s. 6d. qr.; flour, 48s. 6d. sack.

Metals.—Aluminium, £122 10s. ton; antimony (English Regulus), £30 15s. ton; bismuth, 9s. lb.; copper (standard), £57 13s. 9d. ton; copper (electro), £65 5s. ton; gold bars, 94s. 10d. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 97s. 6d. ton; galvanised sheets (24 G), £16 5s. ton; lead (soft foreign), £21 3s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 27s. 6d. unit; nickel, £175 ton; platinum, 360s. oz.; plumbago, £14 5s. ton; quicksilver, £10 13s. 9d. ton; spelter (G.O.B.), £25 8s. 9d.; tin (standard), £144 8s. 9d. ton; wolfram 10s. 3d. unit; zinc sheets, £35 10s. ton; tin plates (20 by 14), 19s. 1½d. box; silver bars, 33½d. oz.

Chemicals.—Acids: Boric, 61s. cwt.; oxalic, 8½d. lb.; citric, 1s. 1½d. lb.; tartaric, 1s. 3½d. lb.; ammonia (sulphate), £16 11s. 6d. ton; arsenic (white powdered), £36 10s. ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £12 15s. ton; borax crystals, 30s. cwt.; cream of tartar, 119s. 6d. cwt.; Potassium: Bichromate, 7½d. lb.; chlorate, 4½d. lb.; caustic, £33 10s. ton; nitrate £41 10s. ton; permanganate, 8½d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals, 130s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 5½d. lb.; alkali (58 per cent.), £8 13s. 9d. ton; chlorate 3½d. lb.; caustic (70 per cent.), £23 ton; hypo sulphite, £15 10s. ton; prussiate, 9½d. lb.; nitrate, £14 17s. 6d. ton; glycerine (crude 80 per cent.), £75 ton; glycerine (industrial 1260 per cent.) £100 ton; lemon oil, 3s. 8½d. lb.; quinine, 2s. 10d. oz.; red lead, £34 ton; white lead, £37 15s. ton; white ground lead, £48 7s. 6d. ton; sulphate of copper, £27 5s. ton; sulphate of iron, 75s. ton.

Hides and Skins.—Ox and Heifer (first) 90 lbs. and up, 7.5-8d. lb.; 80 to 89 lbs., 7.5-8d. lb.; 70 to 79 lbs., 7½d. lb.; 60 to 69 lbs., 6.7-8d. lb.; 50 lbs. and under, 6½d. lb.; (second) 90 lbs. and up 6.5-8d. lb.; 80 to 89 lbs. 6.3-8d. lb.; 70 to 79 lbs., 6½d. lb.; 60 to 69 lbs., 5.7-8d. lb.; 50 lbs. and under, 4½d. lb.; Cows (first), 60 lbs. and up, 6½d. lb.; (second), 60 lbs. and up, 4.5-8d. lb.; 59 lbs. and under, 4½d. lb.; Bulls (first), 4.3-8d. lb.; Kips (first) 4½d. lb.; (second), 4.1-8d. lb.; Calcutta Market. Prices in rupees per 20 lb. Arsenic hides (cows): Agras, 9 to 14; Dur-bhangas, 8 to 10; Patnas, 6 to 7. Salted cows: 3.8 to 7. Arsenic hides (buffalo): 4 to 9. Skins: Calf, 8 to 10 per 20 lb.; goat, 230 to 265 per 100 pieces.

Miscellaneous.—Cotton: (American), 10.95d. lb.; (Egyptian Sakel), 17.05d. lb.; Oilseeds: Linseed (La Plata), £19 2s. 6d. ton; palm kernels, £18 16s. 3d. ton; castor seed (Bombay),

£16 12s. 6d. ton; Oils: Linseed, £37 2s. 6d. ton; olive (Levant) £77 ton; rape (crude), £47 ton; soya, £37 ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), 70s. ton; coconut (Ceylon), £40 12s. 6d. ton; cotton (crude), £41 ton; ground nut, £44 ton; Rubber: Plantation (No. 1 crepe), 8d. lb.; smoked sheet, 8d. lb.; fine hard Para, 11d. lb.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

Egypt.

Puggaree (Khaki and White).—The Egyptian War Department invite tenders for the supply of puggaree, khaki and white. Tenders must reach the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1., by April 17, and will remain open for seven days.

Soap (Palm Oil and Soft).—The Egyptian War Department invite tenders for the supply of palm oil and soft soap. Particulars can be obtained from the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. April 20.

Rope.—The Egyptian War Department invite tenders for the supply of manilla and Italian hemp rope. Particulars can be obtained from the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. April 20.

Jerseys and Socks.—The Egyptian War Department invite tenders for the supply of jerseys and socks. Particulars may be obtained from and samples seen at the office of the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. April 19.

Boots, Ankle, with Laces.—The Egyptian War Department invite tenders for the supply of boots, ankle, with laces. Particulars can be obtained from the Inspecting Engineer, Egyptian and Sudan Governments, Queen Anne's Chambers, London, S.W.1. April 21.

Yugoslavia.

Salt.—Tenders are invited by the Direction des Monopoles de l'Etat, for the supply of:—25,000 tons salt in blocks, size between 20 and 40 kilos. The Direction will not allow more than 2 per cent to be in powder. The contractor must guarantee that the composition of the salt contains nothing injurious to health, that it can be used as table salt, must be white, must contain 98 per cent. sodium chloride. April 20. Tenders are also invited for the supply of:—18,000 sea salt in jute sacks, must contain 98 per cent. sodium chloride and a maximum of 4 per cent. water. April 22. Further particulars of the above can be obtained on application to the Banque Franco-Serbe.

India.

Paints.—The Burma Railways Company, Limited, invite tenders for the supply of 12 tons, 4½ cwts. paints. Tenders enclosed in sealed envelopes and endorsed "tender for paints," must be delivered at the company's offices 199, Gresham House, Old Broad Street, London, E.C.2, not later than 12 noon on Monday, April 10

TRANSFER OF FOREIGN MONEY IN ROUMANIA.

The Board of Trade have been informed by the Roumanian Commercial Attaché in this country that the only object of the steps recently taken in Roumania with regard to the transfer of money or funds from that country is to stop speculation in Roumanian currency. If the applicant for permission to transfer his money abroad can prove that the sum to be so transferred is actually in connection with a commercial transaction, the Official Commission make no difficulties whatever. At the same time British firms are informed that all deposits with Roumanian banks can be transferred to special accounts according to the instructions given to the respective bankers if those sums have the same object.

ALEXANDRIA EXCHANGE.

Supplied by G. L. Mortera, Alexandria and Cairo.

Prices on March 17 were as follows:—Agricultural Bank of Egypt, £4 15-16; Alexandria Water Co., Ltd., £7, 15-16; Anglo-American Nile Steam, £2 27-32; Associated Cotton Ginners, £15-16; Banque d'Orient, Fr. 61½; Behera Ord., £E. 8, ½; Brasseries d'Egypte, Fr. 61; Building Lands of Egypt, £29-32; Cassi di Sconto Priv., Fr. 125; Comptoir Fin et Com. d'Egypte; £5-8; Consolidated Lands, Pt. 5½; Credit Foncier Fondateur, Fr. 870; Credit Foncier Act, Fr. 651; Credit Foncier 1886 Oblig, Fr. 251; Eaux du Caire, Capital, Fr. 83; Eaux du Caire Jouissance, Fr. 113; Egypt and Levant, S.S. Ord, 31s. 9d.; Egyptian Delta Light Railways, £4½; Filature National d'Egypt, £9½; Immeubles d'Egypte Soc. an des., £6 1-16; Khedivial Mail S.S. Ord., 100s.; Khedivial Mail S.S. Co. Pref., £3½; Kom Ombo Ste an de Wadi, £4½; Kom Ombo Ste an Fondateur, £34½; Land Bank of Egypt, Parts de Fond., £40; Lots Turc., £28½; Menzaleh Canal Navigation PT 248; Nungovich Hotels, £7; Ramleh Railways, £2 9-16; Urbaines et Rurales, £3 3-16; Union Fonciere Fond, £13-16.

Lancashire and Indian Duties.

COTTON TRADE PROTEST.

A deputation of Lancashire members of Parliament and others representing the cotton trade was received at the India Office on March 29 by Viscount Peel, the Secretary of State for India, Earl Winterton, the Parliamentary Under-Secretary, and Sir William Duke, Permanent Under-Secretary. Lord Peel, after welcoming the deputation, was compelled to leave to attend a Cabinet meeting, and Earl Winterton replied on his behalf. Sir John Randles, M.P., headed the deputation, whose other members were, Sir Henry Norman, M.P., Mr. Dan Irving, M.P., Mr. Robinson Graham, M.P., Mr. Alfred Davies, M.P., Mr. R. J. Davies, M.P., Mr. W. Greenwood, M.P., General Archibald Hunter, M.P., Mr. F. W. Mallalieu, M.P., Captain C. Ainsworth, M.P., Sir John Rutherford, M.P., Sir W. Edge, M.P., Sir Ryland D. Adkins, M.P., Colonel Joseph Hall, M.P., Mr. J. E. Sutton, M.P., Captain D. H. Hacking, M.P., Mr. De F. Pennefather, M.P., Commander F. N. Astbury, M.P., Mr. Ben Tillett, M.P., Colonel G. Dalrymple White, M.P., Mr. Harold Briggs, M.P., Sir William Barton, M.P., Captain J. H. Thorpe, M.P., Mr. T. Shaw, M.P., Mr. Fildes, M.P., and the secretaries of the Lancashire Committee, Mr. Waddington, M.P., and Mr. W. H. Sugden, M.P.

Sir John Randles said that they thought that it was within the province of the Department, in view of all the circumstances of the case and the great importance to the industrial community which was represented there that day, to hold somewhat of a balance between conflicting interests. If, for instance, the Bombay cotton manufacturer put undue pressure on the Government of India, they looked to the Secretary for India to rectify that undue pressure, and to see that there should be a balance held as between Lancashire, if they liked to call it so, or between the United Kingdom and that great Empire. As far as Lancashire was concerned they wanted to do what was best for the interests of the whole and not of a section. If they seemed sometimes to be pushing Lancashire unduly they thought that it was within the Secretary of State's province to check their undue pressure; but on the other hand if it was thought that, say Bombay was exerting undue pressure, again there should be an influence which would check the Bombay manufacturers in relation to this question of duties. With regard to the policy itself, he did not think they wanted to arraign the policy of the Government. With regard to the Fiscal question they wanted to have a fair show. When those Fiscal enquiries were being held in India they wanted to be assured that the case for the whole Empire would be put as well as the case for the cotton manufacturers of India. They wanted in fact, nothing more or less than fair play as between the respective parts of the Empire.

Mr. Waddington said that so far as the general policy of the Lancashire members was concerned they had no policy in connection either with protection, or preference, or tariffs, so far as they came within the political region. They represented all sections of opinion in Lancashire. The membership of that Committee was extended to the whole of the Lancashire members, whatever views they might hold on particular questions, and while they had never expressed, as a committee, any views on the subject of Imperial Preference, nor had they expressed any views on the subject of free trade, what they were united upon was the necessity, as far as practicable, of absolute free trade between this country and India. Mr. Montagu's policy under the Government of India Act they considered had exceeded really the terms of the Act and had thereby created a false position among certain people in the House of Commons and in the country, and an equally false position in India. Under the Act there was no suggestion of granting Fiscal autonomy. They suggested that Fiscal policy was a very large matter of policy, and that it involved so many interests, both for the welfare of India and of the rest of the Empire, that there could not, and ought not to be, with the limited self-government which had been extended to India, any real Fiscal autonomy in India. With regard to the rules which were made under Section 33, as they knew there were two sets of rules. The first set, if they were made, dealt with the central subjects, and the next set dealt with the transferred subjects. Now under the transferred subjects certain rules had been made, and whilst those subjects had been deliberately transferred to the Government in India, yet they had by these rules established the right of Parliament to interfere when matters involving any dispute between this

country or any other part of the Empire and India were at stake. If they had made those rules in connection with the transferred subjects, giving the positive right of this Government to interfere, how much more power had they to interfere in the central subjects about which they had not made the rules?

It had been suggested that if the duty of 11 per cent. on Customs was reduced to 6 per cent., and the Excise Duty was increased from 3½ per cent. to 6 per cent., they would then get as much revenue as they were getting from the 11 per cent. and from the 3½ per cent. They would by that means reduce the price of cotton goods in India by 5 per cent. enabling more goods to be produced both in that country and in India, producing greater employment in both countries and the masses of the people being able to have more clothing. Also, it was a fair criticism that the Government of India were administering India in the best interests of the people, judged solely by its Budgets. He looked at the particulars as given by Mr. Montagu on last year's Budget, and noticed the revenue from intoxicants. He desired to say in that connection that he was not using those figures as any *teetotal* argument, because the Lancashire members were not all *teetotalers*—he assured them that he was not a *teetotaler* himself. He just mentioned it because, whatever might be their views on temperance or otherwise, they did like to have some relationship between the articles on which taxes were imposed. Now in India the imposition of taxation on intoxicants amounted to 27,000,000 rupees. On cotton manufactures, that was imported cotton goods only, not including Excise, the taxation was 59,000,000 rupees. He thought there was reasonable room for suggesting to the Government of India that they had a means, by looking at the Duties upon wines, spirits and beer, of obtaining revenue which would at least be as easily paid as in the other case, and if they reduced it in the case of cotton goods they would certainly make it easier for those cotton goods to be bought by the masses of the people.

Mr. Shaw said they were told that this tax was necessitated by Indian public opinion. Their reply was that they did not believe a word of it. They believed that the vast mass of the people in India under normal circumstances required their cotton goods as cheaply as they could get them. They were probably the poorest civilised people in the world needing the cheapest of goods, and they did not believe that the vast majority of Indian people demanded those taxes in the way they were imposed. They did not believe the argument that the vast majority of the Indian people had any interest at all in a protective duty against Lancashire cotton goods. What reason was there for imposing a protective duty? Was it because India needed a protective duty to build up her industry? At the very time they were placed before the *fait accompli*, he thought the average profits of Indian cotton firms were 90 per cent. So that it could not be argued that India needed that protection because without it she could not make her industry pay. What the Lancashire workers said was this, "We do not want any preference over India; all we want is equality. If 10 per cent. is put on our goods then we claim that 10 per cent. should be put on the goods produced in India." They claimed that Indian industry in cotton was profitable enough without having an added protective duty. They also claimed that the method of imposing the tax was such as to impose a very considerable burden on a finished piece of Lancashire cloth that entered India, and it was very much open to doubt as to whether the protective duty in actual fact did not amount to much more than the difference in the percentage. They had a right to ask the Government, in response for services rendered to the country, that at any rate Government should use all its efforts, either by friendly representation or by any better method to see that this burden was taken from the Lancashire cotton trade.

Sir William Barton said that he wanted to represent what he believed to be the true Indian view. He quite recognised that there was scarcely a politician in India who was not a Protectionist. He had not met one—and he had met a great many—who did not strongly desire protective duties for India. But he had some personal experience of India and of the intense poverty of the people of the country. They lived in a state of poverty unknown in this country at any time or under any conditions, and had no reason to believe, and he had never

heard any observations that would lead him to think, that the ryot in India knew anything about this taxation. If he did know about it, and if he knew what had been admitted so fully to-day by Mr. Waddington that it must of necessity increase the price of his clothing, he felt sure, that, so far from it being a popular tax, it would be an intensely unpopular tax.

Earl Winterton said that of course the ultimate financial responsibility under the Government of India Act rested with the Secretary of State, but he thought it would be generally admitted that the Government of India must have wide latitude in deciding the steps to be taken in particular instances. If he wanted to put them in a dilemma he would say to them that their arguments were really arguments against ever granting Fiscal autonomy to India; therefore they were arguments against advance along the path to self-government which had been referred to by the late Secretary of State and others. If they accepted his argument, real, complete self-government must always be based on Fiscal autonomy. He would only venture to say, with all respect, that sooner or later, when that question came to be the subject of public controversy and public debate, not perhaps in this Parliament but in a future Parliament when the advance was again made, then Parliament would have to make up its mind when the question was most emphatically brought up of the cotton interest of Lancashire, whether it was prepared to say that it would grant complete Fiscal autonomy to India or not. He admitted that the question did not arise at the moment. He agreed that there should be the closest co-operation between the Government of this country and India in these matters, and that the views of their great industry might be represented very clearly to the Government of India. As a result of the action taken in the Legislative Assembly, both the Customs Duty and the Excise Duty were in the same position as they were last year. The cotton duties would now be 4 per cent. below the general tariff.

Asked to deal with the point raised about splitting the difference between Customs and Excise, Earl Winterton said he could make no sort of promise or statement as to alterations of the duty in the Budget next year; he could only put their representations before the Secretary of State. He was afraid there would be little hope of getting the Secretary of State to make an announcement on the subject at the present time. After all, he would obviously have to consult the Government of India. No one suggested that he should lay down the policy here. But he would ask him to give, and he was sure he would give, every

attention to those representations. He added that he thought it would be very useful if those questions were raised in the House of Commons and they had an opportunity of having a further debate on the subject when it could be explained more in detail.

COMPANY NOTES AND REPORTS.

Mercantile Bank of India.

The profits for 1921, after providing for bad and doubtful debts, and including £127,638 brought in, amount to £390,671. An interim dividend of 8 per cent. less tax, on "A," "B," and "C" shares was paid in September last, absorbing £84,000. To reserve £50,000 (making it £1,150,000); to officers' pension fund. £15,000; written off premises, £20,000 final dividend on "A." "B," and "C" shares of 8 per cent., less tax, making 16 per cent, for year; forward £137,671.

National Bank of India.

The report of the National Bank of India for the year ended December 31 states that the net profits for the year, after providing for all bad and doubtful debts, amount to £555,063 15s. 8d., and adding £149,031 17s. brought forward, the available total is £704,095 12s. 8d. An *ad interim* dividend at the rate of 20 per cent. per annum, free of income tax, was paid on September 20 last, amounting to £200,000. The directors now recommend a further dividend at the same rate, and an addition of £100,000 to the reserve fund, raising it to £2,600,000. They propose to write £20,000 off house property account and to add £20,000 to the officers' pension fund, leaving a balance of £164,095 12s. 8d. to be carried forward.

UNITED STATES LOAN TO CZECHO-SLOVAKIA

According to *Narodni Listy* an American financial group having interests in the United States railways is disposed to grant Czecho-Slovakia a considerable loan for carrying out work in connection with the railways there. The chief condition upon which this credit would be granted is that the Czecho-Slovak State railways should be administered separately as a commercial undertaking, the proposed loan being in the form of a mortgage grant for which the financial group in question would have priority rights.

EXECUTOR AND TRUSTEE DUTIES UNDERTAKEN.

Company Meeting.

NATIONAL BANK OF EGYPT.

Commercial and Financial Conditions in Egypt and the Sudan.

The Twenty-Second Annual General Meeting of the shareholders in the National Bank of Egypt was held on March 21 at the head office of the bank in Cairo, Mr. B. Hornsby, C.B.E. (the Governor), presiding.

The Governor, in the course of his speech, said:—Gentlemen, We have the honour to submit to you the balance sheet and profit and loss account for the year 1921. The gross profit for the year is £991,829, from which expenses amounting to £433,273 fall to be deducted, leaving an available balance of £558,556. We propose to place a sum of £100,000 to the special reserve, to pay a dividend of 15 per cent., requiring £150,000, and to increase the carry forward by £8,000 bringing it up to £180,000.

Our gross profit of £991,829, as mentioned, compares with £1,269,000 for the year 1920, thus showing a marked decrease. This decrease is fully accounted for by the general conditions of trade and finance which prevailed during the year, and also by the shrinkage in the figures of our balance sheet, the probability of which I foreshadowed last year. On the other hand, we have not been obliged to set aside anything for depreciation on the value of our securities, so that the net result of the year's working is roughly the same as in 1920.

Our balance sheet shows a decrease, as compared with 1920, of about 8 millions. Public deposits have fallen by about six million pounds, of which some three millions is due to the final liquidation of the accounts of the Cotton Control Commission, the balance being probably accounted for by the favourable opportunities of investment which have presented themselves to our customers, and also by the gradual dispersal of funds accumulated during the war.

I am happy to state that the movement recently organized against the National Bank as being a foreign institution—which we are not—has had little effect. We have a valuable *clientèle* among the Egyptians, with whom we always have maintained the most cordial relations, and we believe that our friends appreciate the valuable services which the bank has at all times and in various circumstances rendered to the country.

Value of Securities.

Our holding of securities is less than a year ago, and reflects naturally the decrease in the amount of deposits. For the first time for many years it has not been necessary to draw on our profits to provide for depreciation in securities. A considerable rise in value set in towards the end of the year, and has since continued, so that, thanks to past provisions, we have the satisfaction of knowing that to-day our securities stand in our books at a figure much less than their value at present market prices. It is true that this satisfaction is somewhat tempered by the knowledge that the rise in prices is in great measure due to the abundance of money set free for investment by the depressed state of trade and commerce throughout the world.

Our advances on the whole show an increase, due chiefly to the fact that we have a larger sum outstanding on merchandise, chiefly cotton.

You will notice at the foot of our balance sheet there has appeared during the last few years a remark to the effect that a substantial sum—roughly £560,000—under the heading of "Bankers' Accounts," stands to our credit with banks in Austria and Germany. These banks are large and respectable institutions, who acted as our correspondents, and with whom we had considerable balances at the outbreak of war. We had hoped that during the past year we should have obtained a decision regarding our claim to be paid these sums at the pre-war rate of exchange. Unfortunately, such has not been the case. We have taken the best legal opinion, and we are assured that our claim is well founded, but it seems probable that we shall be obliged to have recourse to justice to obtain what we believe to be our rights. In the meantime we have taken all possible measures to protect your interests, and I should like to add that your directors have not failed, during the past few years of exceptional prosperity, to provide against the possibility, however remote, of an unfavourable issue.

Note Issue.

The figures of the note issue provide as usual an interesting commentary on the course of the country's trade. The year began with the issue standing at about 40½ millions, from which figure it shrank, almost without interruption, till the end of August, when it touched about 30½ millions; from this point the autumn demand for currency for moving the cotton crop brought it up again by the early days of October to just under 40 millions. The activity in the Cotton trade proving only to be temporary, the increase was not maintained and at December 31 it stood at 37 millions. The latter figure compares with 40½ millions at the end of 1920, and 67 millions at the end of 1919, the comparison showing a striking fall of 30 millions in two years.

I explained last year the mechanism by which the issue was regulated. I will confine myself this year to saying that, thanks to this mechanism, the country has enjoyed during and since the war a stable rate of exchange, which to-day is everywhere recognised as an extremely important element in commerce.

I saw it stated recently that our notes are guaranteed by the British Government. This is not the case; the fact is that, by agreement with the Egyptian Government, the issue is covered

by the deposit of British Treasury bills, chosen because they represent practically cash in the country with which the larger part of Egypt's foreign trade is conducted.

If our currency system were not sound it would not have been possible to meet the demand for redemption of notes which, as I have stated, has amounted to 30 millions over the past two years, without any difficulty whatever, and without any effect on exchange. Moreover, the interest on the British Treasury bills, held in the note issue, has provided an important source of revenue to the Egyptian Government.

Imports and Exports.

The following figures, showing the totals of imports and exports for the past five years (the year is taken from September to August) reveal the very important change in the commercial situation of the country which the last financial year brought about. During the four preceding years the balance of trade was strongly in favour of Egypt, whereas in the past 12 months the imports exceeded the exports (including re-exports) by some 34 millions, subject to some adjustment for invisible exports and imports, which would probably slightly reduce this balance. But these figures need cause no alarm, as the country had accumulated large reserves of profit, the greater part of which still exists, and the general financial situation of the country is undoubtedly sound.

		Imports.		Exports.
1916-17	 L.E.	30,095,371	L.E.	44,587,950
1917-18	 "	47,285,226	"	48,019,952
1918-19	 "	44,334,720	"	48,829,951
1919-20	 "	87,577,985	"	113,461,806
1920-21	 "	71,725,677	"	37,690,260

Cotton.

The high prices which cotton reached in 1920 unfortunately gave rise to the impression that Egyptian cotton was so indispensable that there was no limit either to demand or to price. It is therefore natural that the fall in prices and the restricted demand should cause great discouragement to the cultivator.

Moreover, the flat rate tax of PT.35 per kantar, introduced when prices were at a considerably higher level, presses to-day with undue severity on the cotton grower, more particularly with regard to the lower qualities. In addition to this, railway rates have been doubled since 1914, and it is to be hoped that, despite the large revenue which accrues to the Government from these two sources, some relief may be looked for in the near future.

There is one object to which the attention of cotton cultivators could profitably be turned. I refer to the serious question of the poor return in cotton which land has given in recent years. It is disappointing that so little progress should so far have been made in combating the various insect pests which every year destroy a large quantity of cotton, and a continuous effort on the part of the landowner could not fail to do good.

The import trade has inevitably suffered from the decreased purchasing power of consumers, due to the lower prices obtaining for the country's products. Importers have also been hardly hit through having on hand large stocks ordered before the general fall in prices, which can now be disposed of only slowly and generally with heavy loss. Unpleasant as these proceedings are for those concerned, the market is getting back to a more healthy and normal condition.

The Sudan.

The Sudan has shared to the full the prevailing depression in trade, as the following table of imports and exports during the last five years clearly shows:—

		Imports.		Exports.		Total
		L.E.		L.E.		£E.
1917		3,102,117	..	3,729,181	..	6,831,924
1918		4,024,582	..	4,210,384	..	8,234,966
1919		4,805,745	..	3,029,569	..	7,835,314
1920		7,006,865	..	5,075,971	..	12,082,836
1921		5,806,070	..	2,318,533	..	8,124,603

Exports show a marked decline of nearly three millions, and are the lowest of any years of the period. There has been no falling off in the country's production, the reduction is entirely due to the lessened demand and to reduced prices. This is obvious from the fact that, whereas in 1920 the exports of cotton were about 88,000 kantars, valued at £1,600,000, in 1921 the quantity exported was about 110,000 kantars, valued only at £380,000.

Imports, though lower than those of the two previous years, are still high in comparison with exports. This is due to the importation of material for the irrigation works which are in progress.

To carry out these works the Sudan Government has raised a loan of £6,380,000, the interest of which is guaranteed by the British Government. This sum will not be sufficient, and negotiations are in course with the object of raising a further loan. When the work is completed an area of 300,000 feddans will be available for cultivation in the Gezira, of which one-third will be put under cotton. The cultivation of this large area cannot fail to give a considerable impetus to trade, from which the whole country will benefit.

The directors who retire by rotation this year are the Hon. A. Mills and Mr. Léon Suarès, who submit themselves for re-election.

In conclusion, the directors wish to express their thanks to the sub-governor, the managers, and the staff for their services during the past year.

SUPPLIES AND PRICES IN THE
NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Nicosia, March 14.

The Cyprus Government has just published its Customs returns for the year ended December 31. The total value of imports amounted to £1,512,288 as compared with £2,073,584 in 1920, or a diminution of £561,296. The total value of exports amounted to £920,867 as compared with £1,200,659 in 1920, or a diminution in value of £279,792. The quantities remained in 1921 at about the 1920 level, the above diminution being almost entirely due to the fall in prices. The prospects for the coming cereal crops remain good, abundant rain having fallen during February. On the other hand business in general remains stagnant.

Constantinople, March 25.

The market is very weak. Imports are practically limited to foodstuffs. Some transactions in opium have increased the exports.

The market in textiles is inactive. Sales are limited, and prices are somewhat below those in centres of origin, merchants being compelled to make sacrifices in order to realise.

Panderna, March 13.

The report for February states :—The strong rains of late have affected the new crop, especially that situated in the plains. The lands being flooded, it is very difficult for agriculturists to increase the sowings, and it is estimated that this year's crop will be from 20 to 25 per cent. below that of the previous year.

The following are further extracts taken from the March issue of the monthly circular of the Imperial Ottoman Bank :—

Cyprus.—Recent abundant rains warrant favourable expectations for the next crop of cereals. So far as locust beans are concerned, however, it is estimated that the total crop will only amount to half the previous one. The olive crop also promises to be very inferior to last year's.

The Government experiences difficulty in disposing locally of the stocks of cereals which were collected as tithes, owing to the very low prices now ruling in the island. It is reported that steps have been taken for the disposal abroad (mainly in Egypt) of these stocks, at prices more advantageous than those which could be obtained locally.

LANCASHIRE'S DECREASING TRADE WITH TURKEY

[The current issue of the Journal of the British Chamber of Commerce of Turkey and the Balkans contains some interesting comments by a native merchant in regard to the shrinkage of British trade with Constantinople. The correspondent states that the shrinkage is deep-rooted, and points out that without the necessity of advertising Lancashire had a valuable asset in the shape of native houses established in Manchester, some of which have been in existence for more than half a century. To the present day many of the larger native firms still have their buying houses there, but for the past few years, that is since the war, conditions have been most unfavourable for their maintenance, owing to the British workman insisting upon war-time wages, while the cost of transport, packing, dyeing, finishing bleaching, printing, is so high that there is little or no possibility of competing with the produce of other countries in this market. Unless the home country wakes up to the realities of the situation, the correspondent is convinced that we are bound to see even worse returns yet.

The correspondent goes on to refer to American competition : " You will remember I raised the alarm last year in referring to the enormous quantities of grey sheetings imported from the United States, and I am certain this is the article which swells the amount of the import returns from America. The goods sell without advertisement owing to their cheapness, I might say at dumping prices which Lancashire cannot touch." He expresses the fear that the old supremacy of Lancashire is being reduced to a position of inferiority. The sale of prints, a purely British line, is diminishing in the country, and is being replaced he points out, by Italian fancy woven goods and cotton dress materials mixed with artificial silk or striped silk. Italian printed flannelettes are being sold at much lower prices to the detriment of British prints, over and above the fancy articles already mentioned.

Dyeing prices, the correspondent continues, are high in England. " Lately some cuts have been made, but I hope to see more reasonable figures. I know one Italian manufacturer who is selling 15,000 pieces of 40 yards each of one black article alone to Turkey yearly. I tried to replace this article in Manchester, but could not come within 15 to 20 per cent. of the price and burned my fingers before leaving it alone. I have on a previous occasion stated that grey T cloths or shirtings have been ousted by American sheetings, and are little imported nowadays. This line used to represent a fair portion of British cotton imports to this country."

MANCHESTER MARKET.

(From Our Own Correspondent.)

Manchester, Friday.

The healthier feeling in the market has been maintained during the past week. Actual business, however, has been rather irregular. Many spinners and manufacturers have now obtained some relief, but when attempts are made to secure better prices their progress is blocked. A steady trade has occurred in Egyptian yarns for home consumption, and fine counts have also been sold for India and Germany. It is realized that the Egyptian cotton crop will turn out to be much larger than the official estimate of 3,300,000 kantars, and some people are expecting a yield of nearly 5,000,000 kantars. Lancashire users of Egyptian cotton have purchased fair lots. Odd sales have occurred in grey shirtings and printing cloths for Egypt and the Levant, but for the Near East as a whole trade has not been important. A large inquiry has been about for India and some well known makers of grey shirtings have sold freely. Further buying has also occurred in dhooties, mulls and jaconets. Operations for China have not been much in evidence. Prices in American yarns have tended to harden with a fairly healthy undercurrent of demand. Yarns for India have been rather quieter. It is expected that an amicable settlement of the operatives wages question will be arranged.

LIVERPOOL REPORT.

† Messrs. Reynolds & Gibson report as follows under date March 29 :—Our market has been somewhat disturbed this week

by the unexpected break in Alexandria caused by heavy crop movements, together with rumours that, after all, the Egyptian Government was not going to accord that support to the market which many speculators had confidently expected. Nevertheless, whilst causing a temporary easing of prices, a substantial business has been done, and the week closes with a good tone and a partial recovery. The bulk of the enquiry has been for Sakellaridis 14.00d. to 18.00d. Uppers, Brown and White cotton have also been asked for occasionally, and a fair business has been done in Sudan cotton. It is difficult these days to trace actual business in many cases. A spinner comes and looks through the market and picks out one or two lots that suit him, all the while, perhaps, expecting to hear from Manchester that he has sold some yarn. If he fails to sell his yarn he merely makes a note of the cotton he has chosen and goes away. A week later, he may sell his yarn and then he telephones through and if the cotton is still available he buys the cotton. So that under present circumstances the daily estimate of sales may bear but little relation to the actual enquiry on that particular day. There seems to be plenty of cotton available to meet the demand, and more than ever it is the lowest offer which gets the business.

There still exists a spasmodic enquiry for Afrita and Scarto cotton, but this class of business has now returned once more to what are practically normal conditions. C.i.f. business has been quiet, though at the beginning of the week the slight improvement referred to in our last report was maintained. Manchester reports continue to make good reading. The business with India shows signs of broadening, and the tone keeps steady whilst prices are hardening. The decision of the employers to ask for a 75 per cent. reduction on war increase on wages seems to have come rather as a shock to the spinning community at large, and it would certainly be most regrettable if a big wages war was allowed to break out just at the present juncture, when the wheels of trade were commencing to revolve. There seems however, little doubt but that both sides realise that the cost of production must be reduced, if trade is to revive, and the opinion prevailing in Manchester is that an amicable compromise will be effected on the lines of a 45 per cent. or 50 per cent. reduction on current rates. Speaking generally, we regard the situation as hopeful, and, barring any upheaval in the labour world, we see no reason why the steadier and improved conditions in trade, which we have recently experienced, should not continue. Total sales, 3,500 bales (including 600 Sudan). Quotations of Sakellaridis are reduced ½d. per lb., whilst those of Brown and Upper are 50 points lower, with the exception of Fully Good Fair and above, which are 75 points lower for both qualities. Fully Good Fair Sakellaridis to-day 18.00d.

EGYPTIAN MARKET.

The Commercial Co. of Egypt, in their report for the week ended March 17, state :—

The steadiness of our market may be attributed to the increased spot sales of Egyptian cotton in Liverpool, indicating a better demand in Lancashire, and the lack of any pressure on the market from the part of local holders of spot cotton, the latter being due to the repeated assurances of the Ministers of the Government that it will support prices in case of a break. There has been little new business from abroad, and to this fact is due the falling off in the week's exports. Speculative interest is mainly on the bull side, but is comparatively small.

The spot market has been moderately active this week, and sales for the 5 days amount to about 7,000 bales of which we estimate 5,200 bales Sakellaridis, 1,600 bales Uppers and 200 bales Brown, etc. Arrivals continue on a fair scale, but exports are less than last week and the stock shows a small increase.

The weather has been practically normal during the last week: Sowing in the Southern districts of the Delta will be completed in the course of next week: As regards the Northern districts, a considerable delay is noted on account of heavy rains at the beginning of the month; sowing and preparation of land are late by about 15 days. In Upper Egypt the reports show about normal conditions. The land already sown shows normal germination; resowing will be necessary but not on a larger scale than normally.

SHIPPING INTELLIGENCE

THE REBUILDING OF SALONIKA.

The present position with regard to schemes for the re-building of the area in Salonika devastated by fire during the war is that this area has been divided into sites which are already being put up for auction, so that when the financial side of the scheme can be adjusted actual building may take place.

In connection with these schemes H.M. Consul-General at Salonika has been approached by a Constructional Engineer in Salonika, who desires to be placed in communication with the United Kingdom firms dealing in building materials from whom he could obtain quotations for the undermentioned requirements. The enquirer requests that where possible a catalogue and illustrated price list should be sent by any firm communicating with him, and the prices quoted should be c i f Salonika.

(1) Girders. For construction of frame and roofing. (2) Roofing. Must be light and strong. Corrugated asbestos cement sheeting is apparently required to resist local climatic conditions. (3) Cellar Lights. With frames complete. Estimated quantity required twenty sets size 2 metres by 1 metre. (4) Window Frames. Metal. Required for high level. Fifty per centum must open. To be hung in centre or at top. (5) Wire Grills. Quantity about 56 sets, size 3 metres by 2 metres. (6) Shutters. Iron, for shop fronts. Type closing upon themselves by flowing from right to left or vice versa. Quantity required about 88 sets size 3½ metres high by 3 metres wide. (7) Central Heating. For a dwelling-house of 12 rooms, 5 on ground-floor and 7 on first floor.

The name and address of the engineer referred to may be obtained by any United Kingdom manufacturers and exporters interested, on application to the Department of Overseas Trade.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parenthesis:—

Anchor Line.—S.s. Scindia for Bombay (Liverpool, April 6); s.s. Castalia for Bombay (Liverpool, April 2).

Anchor Brocklebank Line.—S.s. Mahsud for Port Said, Colombo, Madras, and Calcutta (London, April 8); s.s. Mathura for Calcutta (Birkenhead, April 12); s.s. Imani for Port Said, Colombo, Madras and Calcutta (London, April 25); s.s. Macarda for Calcutta (Birkenhead, April 29); s.s. Mandasor for Port Said, Colombo, Madras and Calcutta (London, May 9).

Bibby Line.—S.s. Gloucestershire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, April 12); s.s. Oxfordshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, April 26).

Clan Line.—S.s. Clan Macphee for Colombo, Madras and Calcutta (Birkenhead, April 6); s.s. Clan Sinclair for Bombay and Persian Gulf (Birkenhead, April 7); s.s. Clan Ronald for Colombo, Madras and Calcutta (Birkenhead, April 20).

Cunard Line.—S.s. Tyria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Odessa, Novorossisk, Poti, and Batoum (Glasgow, April 21); s.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, etc. (Liverpool, April 27, and Swansea, May 2).

Ellerman Line.—S.s. Gulf of Suez for Genoa, Leghorn and Naples (Liverpool, April 6); s.s. Gerano for Gibraltar, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, May 6).

Ellerman's "City" Line.—S.s. City of Poona for Calcutta (Birkenhead, April 10); s.s. City of Shanghai for Calcutta (Glasgow, April 10, and Birkenhead, April 20); s.s. Walton Hall for Bombay and Karachi (Glasgow, April 10, and Birkenhead, April 22).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.s. Radnorshire for Port Said, Port Swettenham, Singapore, etc. (London, April 13); s.s. Glenavy for Port Said, Port Swettenham, Singapore, etc. (London, May 4); s.s. Glenluce for Port Said, Port Swettenham, Singapore, etc. (London, May 18); s.s. Glenbeg for Port Said, Port Swettenham, Singapore, etc. (London, June 1).

Harrison Line.—S.s. Governor for Calcutta (Liverpool, April 11); s.s. Navigator for Port Said, Port Sudan, Aden, Mombassa, etc. (Birkenhead, April 20); s.s. Colonial for Calcutta (Liverpool, May 4).

Henderson Line.—S.s. Pegu for Port Said and Rangoon (Birkenhead, April 10).

Holt Line.—S.s. Cyclops for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 20); s.s. Eurypylos for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 20).

Johnston Line.—S.s. Dromore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 15); s.s. Avimore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, April 29).

Moss Line.—S.s. Karnak for Gibraltar, Malta, Piraeus, Syra, Smyrna, Salonika and Constantinople (Liverpool, April 8).

Papayanni Line.—S.s. Serbino for Algiers, Malta and Alexandria (Liverpool, April 8); s.s. Cressado for Algiers, Malta, Syra, Smyrna and Constantinople (Liverpool, April 15).

P. and O. Line.—S.s. Padua for Colombo, Madras and Calcutta (London, April 7); s.s. Delta for Bombay (London, April 7); s.s. Kaiser-I-Hind for Bombay (London, April 21); s.s. China for Bombay (London, April 28); s.s. Nagoya for Colombo, Madras, and Calcutta (London, May 5).

P. and O. British India Line.—S.s. Manela for Bombay and Karachi (London, April 7); s.s. Malda for Colombo, Madras and Calcutta (London, April 13); s.s. Madura for Bombay and Karachi (London, April 21); s.s. Nuddea for Colombo, Madras and Calcutta (London, April 29); s.s. Chindwara for Bombay and Karachi (London, May 5).

Prince Line.—S.s. Highland Prince for Tunis, Malta and Alexandria (Manchester, April 11); s.s. Merchant Prince for Tunis, Malta, Alexandria and Syrian Coast (Manchester, April 21); s.s. Algerian Prince for Malta, Alexandria and Syrian Coast (London, April 21).

THE AGRICULTURAL BANK OF EGYPT.

Notice is Hereby Given that the Nineteenth Ordinary General Meeting of the Agricultural Bank of Egypt will be held at the Head Office of the Bank in Cairo, on Thursday, the 27th April, 1922, at 4 o'clock p.m. for the purpose, among other things, of:—

- Receiving the Directors' Report;
 - Receiving the Auditors' Report;
 - Approving the Accounts for the period ended 31st January, 1922;
 - Declaration of Dividends;
 - Election of Directors;
 - Election of Auditors and fixing their remuneration.
- And the transaction of the general business of the Ordinary General Meeting.

Every Shareholder holding a minimum of Five Shares has the right to attend the General Meeting, provided the Shares are deposited at least five days before the day of the Meeting (the last day for depositing the Shares in London is the 15th April, 1922), when Cards of Admission and Proxy Forms will be handed to them at one of the following places:—

- In Egypt—At the National Bank of Egypt, Cairo.
- At the National Bank of Egypt, Alexandria.
- In London—At the National Bank of Egypt,

6 & 7, King William Street, E.C.4.
B. HORNSBY, President.

Cairo, 23rd March, 1922.

NOTES OF THE WEEK.

Turkey's Conditional Acceptance.

As we had hoped, Turkey has accepted, conditionally, the first step in the scheme for peace in the Near East. But we must receive the news of her acceptance with caution and reserved welcome, for her reply is but an acceptance of the Armistice Note of the Allies. Provided that the Greeks immediately withdraw from Asia Minor, she will discuss the proposals for peace, but until the evacuation is accomplished we are not to know what she thinks of the Allies' unanimous scheme. This, we think, is scarcely good enough, for the reason that the Allies would have meanwhile to set such store by Kemal's good faith. With the Greek Army out of its strong position on Eski-Shehir—Kutahia—Afion Karahissar, the safety of all non-Turks would be problematical, to say the least. It is true that Allied commissioners would supervise the evacuation, but the means at their disposal would be chiefly moral. What we want at once is a reply by the Turks to the proposed terms of peace, not the manifestation of a De Valera-like attitude insisting first and above all things on the departure of their adversary.

Turkey and Russia.

It may be that this narrowing down of the matter by the Angora Government to the Armistice issue is the genuine desire of the Turks, but to us it looks as if the astute hand of the Bolsheviks were behind it all. Playing for time is of course the oldest of all games in the East, and if it so happen that Russia comes to be recognised at Genoa she will then have much stronger cards to play when the time for the making of the Near East peace arrives. Russia, the real Russia, has paramount interest in the Near East, interests which it were folly to neglect; and we imagine that Bolshevik Russia is no less keen than was her predecessor in the question of the Straits. The Bolsheviks have long been indulging a strong power in the East, and lately, through Turkey, they have attempted to turn their attention Westwards, and not without success. How they helped Turkey in her hour of extremity the world knows well enough; and now, at what may well be the climax of their career, Turkey is to help them. In other words, though the hand which defies the Greeks be the hand of the Turk, the voice which replies to the Allies is the voice of the Bolshevik.

The Transition in Anatolia.

We by no means wish to pour cold water on the hopes of those informed optimists who believe that peace in

the Near East is really in sight, but it is easy to minimise the enormous difficulties that have yet to be overcome. Already things are happening in Anatolia which give but the gloomiest prospects for the immediate future, unless indeed Allied officers of control can take absolute charge of the evacuation. We hear, for instance, on the indisputable authority of Professor Toynbee, of abominable outrages by the Greeks near Aidin, and from the American Near East Relief Fund on the other hand, of horrors perpetrated by the Kemalists. If these things are to continue, all talk of real peace seems fanciful. Further, there is the certain fact of the Smyrna Defence Committee, which has set its teeth firmly against evacuation unless freedom from Turkish administration, police, and soldiery is assured the Greeks, Armenians, Jews, and non-Turkish Moslems of the Smyrna zone. It is obvious that officers of control are needed urgently and abundantly.

The Fate of the Armenians.

We commented recently upon the sad fate to which the Ministers at Paris felt compelled to relegate the Armenians—and we were certain that it was facts temporarily insuperable, and facts alone, that stood in their way when they made so ungenerous a provision for the future of the Armenian people. Fortunately we are in a position to know the exact position of England and France in this matter. A letter written by Lord Curzon to Senator Luzzatti, the octogenarian ex-Premier of Italy, and dated March 18 (and published in the *Daily Telegraph*), foreshadows the regret and impotence which were later to be manifested at the Paris Conference. Lord Curzon affirms that "in the controversies of long past years over the Armenian question Britain has deliberately and with her eyes open sacrificed her material interests in Turkey to her ideals. To-day the sentiments of my country remain substantially the same, but facts have changed to this extent, that, hard pressed as all countries now are, aggressive action on behalf of ideals is not to be contemplated." In other words, Great Britain still knows right from wrong, but owing to temporary fatigue (universally shared however), must for the moment allow an injustice to be committed. And we believe that Lord Curzon did at the Conference make a valiant effort for the triumph of justice over expediency. The French view we obtain from a meeting of the Commission of Foreign Affairs on April 5 which, after approving of the Angora Agreement, resolved:—"The Committee expresses the hope that re-adjustment of the agreement in the general

peace will confirm the French point of view as to the protection of minorities and the constitution of a national home for Armenians within the limits laid down by the Allied Powers." Our hopes for the re-cession to the Armenians of a corner of that soil which was once Armenia are therefore not yet dead.

Difficulties in Palestine.

To those who hoped that matters in Palestine were settling down quietly the report of the recent meeting at Safed between Sir Wyndham Deedes, Civil Secretary to the Palestine Administration, and a deputation representing the Moslem, Christian, and Jewish communities, will have come as unpleasant news. If we are to credit the telegraphic accounts of it which have appeared in various newspapers, several and serious differences in points of view between governors and governed revealed themselves. There was made, for instance, the statement (though we can scarcely believe it), that "the policy of the Palestine Government had satisfied the Arabs;" which of course was promptly controverted by the deputation, who pointed out that if Zionism had satisfied the Arabs the arming by the Government of the Jews was a wasted measure. This interview is stated to have resulted in an embitterment of feeling among the Arabs, and if adequately reported, it seems to us proof not only of the moderation with which the anti-Zionists in Palestine invest their feelings, but also of the width and the permanent character of the opposition to our present policy in Palestine. In fact, if things do get better without far-reaching changes in the nature of the administration of the country, there will be no one more surprised than ourselves. We may add here a note of puzzlement at the remark which Sir Wyndham Deedes is reported to have made at this meeting—that England regarded fifteen million Jews as subjects, in spirit, of Palestine. If there is any relevant significance in this assertion we fail to see it: can it mean that the Jew is to be the subject of two countries at once, materially subject to the land in which he resides and spiritually subject to Palestine? The concept of dual allegiance is a myth, and, moreover, among all but the most civilized people, spiritual values attaching to an alien race are wont to be disregarded, and if such peoples adopt the English policy towards Jews, we fear the latter are destined to further unmerited misfortune.

The Sudan's Requirements.

The letter from our Khartoum Correspondent which will be found on another page will be read with particular interest just now because it throws some light on questions discussed last week in Parliament in connection with the Government of the Sudan Loan (Amendment) Bill. The desirability of finding, or creating, fresh cotton-growing areas to which Lancashire may hopefully look for supplies of raw material is generally recognized, and the Sudan certainly appears to be one of the most promising fields, if not the most promising, at the time. The right soil is there, the water is there—and in plenty, without endangering Egypt's supply at all—and all that is required to turn the natural advantages to account is the necessary financial backing. As our Khartoum Correspondent writes, it is unthinkable that the Blue Nile Scheme should not be carried through; and the delays caused by the effects of the war—as the Financial Secretary to the Treasury made clear in the

House of Commons—are intensely regrettable. The subject is too large to be dealt with in the compass of a note or two, and we must leave discussion of it for another day, but we earnestly hope that the British Parliament, while insisting, of course, on proper security, will deal generously with the Sudan in regard to any proposals for development put forward. Any money advanced for that purpose would be well invested.

Its Future.

In the debate in the Commons on the Bill referred to, one or two Members expressed a not unnatural anxiety about Great Britain's guaranteeing any loans to the Sudan if there should be any chance of her losing control over the country. In reply Mr. Shortt, while declining to commit himself to any definite statement, made it clear that the position of the Sudan in the future is to be substantially the same as at the present time. This is not unsatisfactory in view of the present anxiety to avoid hurting Egyptian susceptibilities, just now super-sensitive perhaps. For in effect the Sudan is now a separate political unit, with a Government of its own, controlled by British officials at Khartoum; and, as we have remarked before, the progress it has made in the past twenty years is the best justification of the existing régime. It is to be hoped, therefore, that no attempt will be made to introduce changes in obedience to agitation from outside. And we would add that any attempt at propaganda introduced from outside should be firmly dealt with by the authorities. For the rest, anyone who feels at all nervous about the many millions of British capital already invested in developing the Sudan will find comfort in recalling Mr. Lloyd George's declaration on the subject made in the House of Commons on February 28 last. We regard the Sudan as a first-class field for investment.

The Egyptian Constitution.

The Egyptian Cabinet is to be congratulated on a useful piece of work done. It has been subjected to a good deal of criticism by its opponents because it was supposed to be set upon elaborating a constitution entirely by itself; but it has now shown such criticisms to have been confounded, by inviting the collaboration of a number of representative Egyptians in this very important work. It was represented by the Extremists that invitations to serve on such work would meet with a cool reception by good patriots, but as a matter of fact Adly Pasha has secured the co-operation of several ex-ministers and other prominent men, apparently without any difficulty. Thirty-two leading Egyptians have agreed to collaborate with the Cabinet, and though the ultra-Zaghoulites may deny the fact, there can be little doubt that the Constitution elaborated by their united efforts should be representative of the desires and ideals of the best-informed Egyptian opinion. This preliminary success should strengthen the position of the Sarwat Ministry, and, by freeing it from some of its superfluous worries, render it better able to devote its energies to further solid work.

Indian Affairs.

If there be any truth in the adage that no news is good news, last week must be regarded as a happy week for India, for it was marked by the absence of any cablegrams of a disquieting nature. This silence is the more noteworthy, in that we are now nearly in the middle of a period which competent judges in India have spoken of as likely to be the most anxious for the last sixty years, while Lord Meston has warned us in the

current number of the *Asiatic Review* that outbreaks of violence may occur at any time. Too much stress must not be laid on the apparent tranquillity, for the North, which now, as always, is the part of India which matters, is at the moment busy in getting in the harvest, and peasants do not usually leave their business till the season's produce is safely housed; but at the same time we believe it is correct to say that we have reached a point where each week of quiet represents a lasting gain. The steady pressure of the ordinary law is again being exerted throughout the districts which have given most anxiety, and all past experience suggests that its effect is likely to be cumulative.

Centres of Anxiety.

While it is true that almost the whole population has been affected by the temporary weakening of the forces which make for order, it is possible at any given moment to point to a few definite areas where the risk is exceptionally great. When the last mail left India, the two main centres of anxiety were the central Punjab and the West of Oudh, and the forces at work in those areas present a remarkable contrast. In the Punjab the Akali movement, as it is called, among the Sikhs is openly revolutionary; there is talk of a Punjab kingdom, armed bands move in military formation; and, so far as we can discern, there is no suggestion of any grievances which could be alleged as justifying agitation. Its real danger lies in the fact that the Sikh community as a whole has for some time past been very uneasy; it might be set ablaze by the temporary success of the Akali movement, but the same result might follow from drastic methods of repression. So far as can be judged at this distance, Sir Edward Maclagan, who just now occupies the most difficult position in India, is steering a prudent course between these perplexities, and there appears to be some justification for the hope that the worst of the danger is now over.

Aims and Methods.

In Oudh, on the other hand, the declared aims, though not the methods, of the Aika movement make a strong appeal to Englishmen. In form this movement is an attempt on the part of some of the humble castes to resist illegal oppression at the hands of their social superiors. They have been grievously oppressed for many centuries, perhaps ever since the Aryan invaders first entered the country: English attempts to protect them have met with very imperfect success; and one's first thought is to wish them God speed. Unfortunately the movement seems to be directed by some very shady politicians who are using real grievances as tools for their illegitimate purposes; the criminal classes have rallied to the call; and the methods of action are such as must alienate any sympathy which the ostensible objects might arouse. The latest news indicates that the Government of the United Provinces had the movement well in hand, and we have little doubt that in its present form it will shortly collapse, but we trust the upper classes of Oudh will take the warning seriously to heart. The people will no longer stand the oppression to which their forefathers submitted, and if the old methods are not changed, it is as certain as anything can be that in one way or another the oppressors will be deprived of the position they have so long abused.

THE WEEK AT HOME.

London, Monday Evening.

A Confession of Faith.

The Government obtained its vote of confidence in itself without the least difficulty last week. Mr. Lloyd George was not in good form—he never is when there is no real opposition—and his speech was flat and dull. But the mere existence of a confession of faith is, according to ecclesiastical historians, an infallible indication of the presence of heresy; and the same rule seems to hold good in politics. If there had been no doubters in the camp, there would have been no need for a formal profession of confidence.

The Die-Hards had their evening out, as somebody rudely dubbed it, a day or two later. It was a dispiriting performance. They were led by Sir W. Joynson-Hicks, who is a capable solicitor, and an ornament of the Low Church party, but hardly a great political force; but even he seemed a Triton among the minnows when one looked at his followers. Mr. Austen Chamberlain had no difficulty in disposing of them all in half-an-hour; the next day they held a lunch to celebrate their principles.

Genoa.

Meanwhile Mr. Lloyd George is off to Genoa. His press explains that this time he is really going to do the trick; the Opposition version is that this time he is going to trick us again. The general public attitude is rather sceptical. With America entirely out, and France only half in, it does not quite see what the Conference can settle. Only the optimists believe that the reparations question will be finally disposed of; and it is not only the pessimists who doubt the possibility of a satisfactory deal with Russia. The Conservatives still look with gloomy apprehension at any "recognition" of the Bolsheviks; Labour is officially friendly, and Liberalism, as usual, enunciates platitudes on the subject which may mean anything or nothing.

The proof of the pudding, however, will be in the eating; in other words, everybody will wait for the Prime Minister's return before making up his mind what to say. And Parliament is taking a fortnight's holiday, while on its resumption it will be engaged on the Budget, which is to be introduced on 1 May; the betting is therefore slightly against a May election. But at the moment everything is uncertain, and the air is full of rumours, most of which are improbable on the face of things.

Ireland.

The fact that half-a-million gallons of whisky have been poured down the Dublin drains by desperadoes is sufficient evidence that things are far from normal in Ireland; the police were prevented from interfering by

force. Some very pessimistic advices have been received from the South during the past few days, complaining of the feebleness of the Provisional Government and the fanaticism of the De Valera faction; everything seems to portend a storm, and this despite the agreement between North and South concluded a few days ago. There is no security anywhere in the country, and consequently industry continues to languish.

The Fall of Labour.

The Borough Council Elections have just been held in England. They do not appear to excite very much interest, but everywhere the results were the same; Labour lost seats in every direction. "Poplar finance" has been the ruin of the Labour party in local government.

The County Hall.

The new London County Hall, which the King is to open some time during the summer, is one of the most beautiful in London; indeed, there are some who say that now it is practically completed, it quite outshines the Houses of Parliament across the water, the Victorian Gothic of which buildings is now becoming unfashionable. The interior of the County Hall is quite different from the original plan; but the exterior, which was criticised severely when the first sketch was published some years ago, has more than justified the architect.

Housing and Costs.

There has been rather a pother in the press once more over the housing question. It is admitted that the price of building is falling rapidly, and this has justified Sir Alfred Mond's decision to suspend the housing programme of the Government. That programme was excellent in itself, but both capital and labour took advantage of it to rush up prices; immediately the policy was abandoned, prices began to fall. But partisan opponents of the Government are still criticising it for the shortage of houses, and recently Sir Alfred Mond was unwise enough to make a joke, remarking that newly-married people ought to be so happy that they should not mind living in one or two rooms—a jest that reduced the *Daily News* to an apoplexy of indignation. But Sir Alfred's real crime was not that he ventured to joke, but that he is a Coalition Liberal.

A Lady's Dress Allowance.

How many dresses is a Countess entitled to? A fashionable dressmaker sued Lord Cathcart for several frocks, supplied to his wife's order; he refused to pay, on the grounds that she had exceeded her allowance and was hopelessly extravagant; it appeared from the evidence that she had spent £1,500 in ten days, which was pretty good going even for these times. The case was so important the judge gave a long, considered ruling, which will probably become a legal classic. Judgment was given for Lord Cathcart, and dressmakers will perhaps be more cautious in supplying dresses in future. Or else they will raise prices a little in order to recoup themselves for an increased risk of bad debts.

This case, following on Mr. Justice Darling's recent ruling as to the coercion of a married woman by her husband in the Peel case, suggests that a definite alteration in the law of husband and wife is due. But changes in this department of the law are never accomplished without great difficulty and delay, and a good deal of opposition.

Other Legal Cases.

Apart from this question of a wife's dress allowance, the papers have been full of other legal cases. A Welsh solicitor is being tried by Mr. Justice Darling for the murder of his wife, and the medical evidence is being followed with intense interest; the Hooley trial has—at last come to an end at the Old Bailey; and Mr. Bottomley is engaged in explaining his conduct of the Victory Bond Club at Bow Street. The latter case is now a maze of financial figures, which I at least, have given up any attempt to follow.

The attempt to reopen the Wakeford case, to which I referred a couple of weeks ago, has failed. A largely signed appeal has been presented to the Home Secretary to enquire into the fresh evidence which it is alleged can now be produced, but Mr. Shortt has refused. This unhappy case will presumably now be forgotten.

The End of Hooley.

With the conviction of E. T. Hooley, and sentence of three years' penal servitude, the career of that remarkable and unscrupulous financier may be presumed to be at an end—for he is well on in the sixties, and will be in sight of the seventies before he is released. Hooley came into prominence in 1895 as a company promoter (he was the forerunner of the modern amalgamator and merger) and for some years he lived expansively on these flotations; one feature was common to all—over-capitalisation of stock. With the inevitable fall in values, Hooley's importance waned, and he was down and out as a City magnate when the new star, Whitaker Wright, appeared on the horizon. Although technically a bankrupt, Hooley lived luxuriously in the Midlands; but some ten years ago he was convicted and imprisoned for swindling a young fool out of his inheritance; apparently prison taught him nothing of the need for reform. In the present case the procedure was more complicated.

This kind of shark is well out of the way. Hooley had obviously no moral responsibility; his portrait and that of the evil type to which he belongs, has been well drawn by Mr. H. G. Wells in "Tono-Bungay."

A few years back, at the height of his glory, he gave a service of gold plate to St. Paul's Cathedral, but this was eventually returned by the Dean and Chapter; they felt that the maxim "non olet" was not quite adequate. I remember some ribald wit designated the gift "the Hooley Communion."

The Week's Books.

The second volume of Lord George Hamilton's "Reminiscences and Reflections" (Murray) covers the twenty years from 1886 to 1906. It is even more interesting than the first volume and contains allusions to most of the best-known men of the time. There is a short character-sketch of the ex-German Kaiser, who was at first an "unnoticeable young man except for his curt and brusque manners," and who became eventually a personage with whom "it was pose, pose, pose all day long, until there was not a particle of sincerity, truth or reliability left in his whole composition, but he still retained a certain ability." Even in those rather early days "Lord Salisbury told me that he looked upon him as the most dangerous enemy we had in Europe. He also added that he had never met a man with such a double tongue."

Those who are interested in questions of literary style may be interested in "The Problem of Style" (Milford) by Mr. J. Middleton Murry. It is a painstaking study that was first delivered in the form of lectures at Oxford University; Mr. Murry is one of the younger school of critics, but he is perhaps more famous as the husband of one of the most successful novelists of the day.

OCELLUS.

Wolves have raided the village of Pietroem, in Roumania, and killed five children. The peasants, armed only with clubs and pitchforks, sought to drive the wolves off, but in the conflict six peasants were killed and 38 bitten, while the wolves had only one killed.

EGYPT.

Cairo, April 1.

Sarwat Pasha's Speech.

Last Sunday was another Government holiday in honour of the twenty-fourth Birthday of King Fuad. Owing to its proximity to the Independence Day ceremonies no reception was held; but large numbers of Egyptians and Europeans went to the Palace to sign the book. The Prime Minister, Sarwat Pasha, took the opportunity of a banquet given at the Continental-Savoy in honour of the day to deliver a great political speech in which, after paying a tribute to King Fuad and Adly and Rushdi Pashas for the share they had taken in bringing about the recent change in the status of Egypt, he dealt with the present situation and the great possibilities which the future holds out. While declaring that he welcomed honest opposition, he affirmed it as his determination to combat any opposition which was based on purely personal considerations. It was a fine fighting speech, and has created a great impression in favour of the present Cabinet, which has every prospect of being able to carry through its programme provided its actions reflect the firmness and determination which Sarwat Pasha has declared would characterise his administration.

The Weakening of Zaghloulism.

One of the latest developments in the political situation, indicative of the way the wind is blowing, has been the complete secession of Aly Bey Maher from the Wafd El Masri. Aly Bey was one of the "four" who came back with the Milner Memorandum in 1920, and he seceded a first time from the delegation last summer, when he found that Zaghloul would not listen to reason. On the failure of the London conversations and the publication of the Curzon Note in December last he joined up again. He now declares that he considers the British declaration to be a great step along the road towards an entente with England safeguarding Egyptian aspirations, which he has always desired to see, and he therefore has resigned from the Wafd because it insists on opposing the new Government. There is now nobody of any importance in the Zaghloul camp, and the Wafd is to-day run entirely by people who politically do not count for anything.

The Kufra Expedition.

An interesting lecture was given last week by Ahmed Bey Hassanein, the young Egyptian who with Mrs. Rosita Forbes made last year the journey to the oasis of Kufra about which so much has appeared in the Home press. Hassanein Bey gave many new facts about the journey, which have not yet been made public. He paid great tribute to the courage and endurance of the lady who shared the expedition with him, but although at no time did he make any reference to his own personal share in overcoming the many difficulties and obstacles which confronted them, it is perfectly clear that without the advantage of the personality, initiative, energy and pluck of a man like himself the expedition could never possibly have won through.

The Mixed Courts.

The Counsellors and Judges of the Mixed Courts have sent in an application to the Egyptian Government for a general increase in their salaries. It appears that since the creation of these Courts no improvement has taken place in the scale of their pay. Under the original arrangement the Counsellors and Judges received annually in addition to their salaries one-fifth of a year's pay as compensation for pension. Recently they were admitted to the application of the Pension Law, their bonus was of course knocked off, but like all other civil servants they had to contribute 5 per cent. to the Pension Fund, so that in many cases the Judges are receiving less than their predecessors in 1876. In view of the fact

that the Mixed Courts recently consented to an increase in the transfer fees which will bring in about L.E. 50,000 per annum, there should be no difficulty on the part of the Egyptian Government in meeting this very just claim, the extra cost of which will not be more than L.E. 20,000.

Death of a Trusted Sudan Official.

All Anglo-Sudanese officials and those who during the past few years have worked in connection with Arabian affairs will learn with the deepest regret of the sudden death of Naum Bey Shoucair, which occurred on Sunday last. Born in the Lebanon, in 1865, Naum Bey was educated at the American University, Beyrout, where he graduated as B.A. At an early age he began his acquaintance with the Sudan, being attached to the Expeditionary Force for the relief of General Gordon. In 1889 he joined the editorial staff of the *Mokattam* but re-joined the Egyptian Army in 1890 and worked in the Intelligence Department with Sir Reginald Wingate. In 1900 he was transferred to the Sudan Intelligence Department and became Director of the Historical Section, a post which he held at the time of his death.

Naum Bey was an author and poet of considerable distinction. Among his publications were a "History of the Sudan" and a "History of Sinai," and at the time of his death he had nearly completed the "History of Arabia." He was a recognised authority on Arabian and Sudan affairs, and his knowledge of the Sinai was of the greatest value to the British Military authorities during the great war. For his services he received the M.B.E., but this was regarded by all who knew him as a wholly inadequate recognition of his work. The large gathering of mourners at his funeral, including high representatives of the British, Egyptian and Sudan

CAIRO STATION.

Governments, the Arab Agent and prominent members of all the communities, testified to the high personal esteem in which Naum Bey Shoucair was held.

The State Telephones.

It is a remarkable fact that amongst the public utility services the telephones show little sign of efficiency and give constant cause for complaint. In fact, since its transfer to the Government from the private company which directed it so well, the telephone system appears to be going from bad to worse and the Administration might well take a leaf out of the book of the two services to which it is affiliated, *viz.*, the Railways and the Telegraphs, which together with the Post Office are run by what is practically an Egyptian staff and continually arouse the admiration of visitors by the efficient manner in which their services are conducted.

SUDAN.

Khartoum, March 20.

The Political Situation.

On Thursday the 16th inst., a salute of 101 guns was fired at noon in honour of the assumption of royalty by Sultan Fuad of Egypt. A large Egyptian flag was flown from the centre flagpole of the Palace for three days, a review of the troops was held on the morning of the 18th, and to-day, the 20th, has been appointed a general holiday. With the exception of that shown by the Egyptian officers there has been very little interest displayed, and the Sudan pursues the even tenour of its way.

Now that the status of Egypt has been defined we are all anxious that the status of the Sudan should be made clear. The country must have money for development, but in present circumstances there are no guarantees to offer to would-be investors. For the future prosperity of the Sudan it is essential that the administration should come directly under the Imperial Government, and that Egyptian influence and control should be terminated. As a Crown Colony the Sudan could offer ample security for much needed loans for interior development. To the resident in this country it is a source of continual wonder that the Imperial Government should have expended money at the rate of some four million pounds per annum on an insignificant piece of territory such as Palestine and have ignored the potential resources of over one million square miles of land which is coveted by every Great Power in Europe. Palestine could be comfortably lost in any of the smaller Sudan provinces, and the money expended in a country about one-sixth of the area of England could have been far better employed in the Sudan.

The Blue Nile Dam.

The Government have terminated the contract for the construction of the Makwar Dam with Messrs. Alessandrini & Perry, who are now handing over to the engineer in charge. Only work of vital importance is now being done, pending the result of the Government's efforts to raise sufficient money to complete the scheme. The probabilities are that the contract will now be put out to tender, and it is to be hoped that one of the big firms will offer immediately. It is unthinkable that the scheme should not be carried through, and the present hold-up for lack of funds will not only put back the completion of the work by a year but will add appreciably to the cost. After each flood, thousands of tons of silt are deposited on the work that has already been done, and before any further progress can be made this has to be removed. The colossal nature of the work and the difficulties to be surmounted can only be appreciated by an expert or by an actual visitor to the site of the Dam, which will be capable of supplying enough water to irrigate the greater part of the Ghezireh, resulting in a comparatively arid waste being converted into a district as fertile as, if not more fertile than, the Delta. There is little doubt that had the Sudan Government advertised the effects of the scheme sufficiently the money would have been forthcoming; but it is easy to see their point of view, that the project was self-evidently sound. It is difficult to realise the gross geographical ignorance of the folk at home, who imagine

that the weary Sudan official can run down to Cairo for a week-end, and that a trip from Suez to Port Sudan is equivalent to a journey from Putney Bridge to Kew. This is possibly due to the fact that the outside world has hitherto had to depend upon spoon-fed journalism for any knowledge of the country or its inhabitants. A great deal of the present financial trouble is due to the unscrupulous way in which the Dam was made use of in the political campaign in Egypt, by stating that it was being constructed in order to cut Egypt's water off in the future. There is ample water for both Egypt and the Sudan, and the ardent Nationalists would do well to recognise that there is far greater danger of a Continental Power obtaining control of Lake Tsana and cutting off the Blue Nile at its source than of their country being starved to the advantage of the Sudan.

YUGOSLAVIA.

Belgrade, March 31.

The Political Situation.

The present situation in Parliament is full of electricity, and the Coalition seems to be in danger. Radicals are blamed for obstinately wanting to break up the present Cabinet. M. Protitch, who is leading a small number of Conservative Radicals, is again flirting with Raditch, whom he still hopes to bring to reason and eventually to have in collaboration with the Radicals. More than half the Radicals are dead against this double-faced game, but the Executive Committee of the Radical party are silent as the Sphinx. M. Protitch is not working with the main body, and he has not yet been expelled from the party. Nominally (and perhaps in reality too) he is a "wild man," but it is still a puzzle to all those who are not behind the scenes what political colour he will take for the elections.

For a quite long time M. Protitch refused to give his oath to the King, and only under the direct pressure of the Speaker, who threatened to cancel his mandate, did he consent to swear loyalty. Having done so he abstained from going to the Skupshtina; but when his parliamentary allowances became doubtful, he readily went to the House—yet only to stir up trouble there. Undoubtedly M. Protitch is a man who deserves much gratitude from his country for the good he has done to it, but unfortunately his behaviour during the last year has been, if not altogether reprehensible, unintelligible to the plain man. And it should be recollected that, although M. Protitch's patriotism during the Balkan and Great Wars was unquestionable, he was an open enemy to any Coalition as soon as the war-danger was over.

Fiume Incidents.

M. Zanella, President of the Free State of Fiume, has addressed a Memorandum to the Premier, M. Pashitch, thanking him for his hospitality, and at the same time explaining why he and the majority of the Fiume Council Members had to cross the border. The *Fascisti*, who are now the sole masters of the town, are said to be forcibly compelling the rest of the Council members to vote for the union with Italy, but luckily more than half of the members are absent, and no decision is considered valid unless more than half the members have voted for or against it. Two days ago four *fascisti* crossed the border near St. Aune's bridge, but as they had no papers and were found in possession of firearms, Yugoslav frontier guards arrested them and took them to St. Aune. The *Fascisti* in Fiume protested, and by way of reprisals raided the premises of some Yugoslav Banks, demanding from the cashiers the keys of the safes, which, however, they were disgusted to find were empty.

The Earthquake.

Immediately after noon, on the 24th inst., Belgrade was shaken by a very strong earthquake, which came on in a series of increasing waves. At 1.28 p.m. the rocking of the earth was so strong that the panic-stricken population fled out into the open. The displacement was 1,200 microns vertically and 820 microns horizontally (two microns = 1 M-M). Walls started cracking and the chimneys came down on some of the

weaker houses. The inhabitants were most frightened by a loud underground rumble, which was followed by a series of weaker waves.

To-day the Observatory issued a warning to all the inhabitants of Belgrade district to get clear of high buildings as soon as they noticed some uneasiness among the animals. It is very interesting to note that horses were very nervous, and some broke loose just before the earthquake came on. The needles at the Observatory are not quite steady to-day, but the shocks are so weak that they cannot be noticed by human beings. The centre of the shock is Mount Avala, about 25 km. from Belgrade, which still bears some signs of an old volcano, and these latest disturbances are largely attributed to the settling down of the subterranean layers of volcanic ground.

Relations with Albania.

According to the latest reports from the Foreign Office in Belgrade, Albania is now recognized as an independent State. The Serbian Consular agents will shortly be replaced by a Minister in Tirana, and normal relations between the two countries will be resumed immediately. Postal and telegraphic services are also established.

General News.

King Alexander has been making a shooting tour, starting in Shumadia district and the Government's estate "Bolje" in Banat. During this tour he was attacked by a wild boar, but three well aimed shots provided safety for himself and his party.

During the recent ploughing season many accidents occurred on the old battle-fields. Near the river Drin, a big shell exploded, killing on the spot two men, a boy, and the team of horses.

On a side line, which was damaged during the War and had since been unused, the trial trains were blown off the track by a shell buried in the bed of the line.

While the Old Royal Palace was undergoing some repairs, a 305 m-m. shell was discovered in the founda-

tions. After some difficulty the shell was removed and safely thrown into the Danube.

ROUMANIA.

Bucharest, March 31.

Opening of Parliament.

The new Parliament was opened with the usual ceremonial on Monday, March 27. The King, accompanied by the Queen and the Crown Prince, after attending divine service at the Primate's Cathedral proceeded in state to the Chamber, and read the Opening Speech for the first Session of the Third Parliament of Greater Roumania.

After expressing his pleasure in finding himself "in the midst of the National Assembly, whose mission is to give, on sincere, sound and democratic basis, the constitutional foundation expected by the united Greater Roumania," his Majesty continued:

"With great satisfaction I bring to your notice the betrothal of my beloved daughter, Princess Marie, to His Majesty, Alexander the King of the Serbs, Croats and Slovenes. This union will surely draw even closer the traditional bonds of friendship which have existed for centuries with our neighbours. True to our alliances, we have friendly relations also with the other Powers. Roumania, desirous of work and peace, will support at the coming Conference of Genoa those resolutions which without affecting the independence of the States, can contribute to this economic rehabilitation of Europe on the basis of existing Treaties. We hope that the accord which we have concluded to this effect with Poland, Czecho-Slovakia and Yugoslavia will facilitate the work of solidarity, by which this Conference may ease and strengthen the international situation."

His Majesty went on to say that it was incumbent on the National Assembly to insure the consolidation of national unity, achieved with such great sacrifices during the War. The present session would be too short to carry out such a task; but it was necessary to make a beginning, so that it might be accomplished by autumn. For this purpose it would be necessary to start forming various Parliamentary Committees, which together with the Government shall study the elaboration of the Constitution, administrative and fiscal reform, Church and School reforms, labour legislation, the reorganisation and co-ordination of public services, and other important social and economic problems.

"In this session," the King continued, "you will have to give your foremost attention to the financial situation. The real budget for Greater Roumania cannot be drafted now, for it entails first, the modification of the Fiscal Law voted last year and a systematic reorganization of Public Services throughout the country. For the moment, my Government will ask you, in compliance with the Constitution, to prolong the last Budget with the necessary rectifications—in order to complement the indispensable needs of the State Services—and with the reductions which it will be possible to carry out at present. At the same time, the different Departments will draft out their respective budgets within the limits proposed to Parliament, so that it will be possible to introduce in the course of the fiscal year—with the assistance of the Budgetary Committee—the necessary modifications with a view to establish as soon as possible a regulated Budget."

"The Government will give its close attention to the continuance of the application of agrarian reform in the Old Kingdom, and will immediately begin its execution in Transylvania and Bukovina also, so that the peasants of these provinces shall without delay come into their rights under this law."

The speech ended with a reference to the needs of the Army, "the steadfast shield of Roumania's rights." It was heartily applauded by those present, consisting of the Deputies and Senators of the Liberal Party and of the representatives of the minorities. The entire Opposition, in accordance with its previously announced intention, was conspicuous by its absence. The Diplomatic Corps was well represented.

Political Situation.

The Opposition, however, made its appearance in Parliament at the next sitting, when the debates on the validity of the seats began, in order to bring proofs of the abuses alleged to have been committed at the elections. On this occasion a leader of each group of the Opposition read in turn a declaration of protest, the gist of which was that they refuse to acknowledge the legality of the present Parliament, and that they will consider as null and void any enactments made by it.

Despite these protests, the future attitude and tactics of the Opposition are not yet clearly defined. These parties are more or less waiting to see what decision will be taken at the Congress of the Transylvanian National Party, which will be held at Alba Julia shortly after the Easter holidays. It may be mentioned, however, that M. Také Jonescu's group, and to a certain extent that of M. Jorga, although condemning the origin of this Parliament, do not incline towards such drastic action as abstention from Parliament, but consider their presence necessary in order to combat and control the Government's activity.

The response to the Opposition's protests was undertaken by the Premier himself, who, while refuting the allegations with regard to the elections, appealed to the patriotic sentiments of the members of the Opposition to work with the present Parliament towards the economic rehabilitation of the country. In conclusion, M. Bratianu made it clear that should the Opposition refuse to co-operate, the Government—with the support of its compact majority—is determined to carry out its task alone, and he reminded his hearers of a precedent, which took place in similar circumstances in 1877 and nevertheless proved beneficial to the country.

Roumanian Delegates for Genoa.

It is now almost certain that Roumania will be represented at Genoa Conference by M. I. C. Bratianu, the Prime Minister, assisted by a committee of 18 experts among whom are M. Oscar Kiriacescu, Director of the Banca Nationala, M. Eftimiu Antonescu, M. N. Stefanescu, Bank Director, M. Gh. Popescu, from the Ministry of Communications, M. S. Rosenthal, a leading barrister, M. Alexander Buescu, Director of the Customs Department, Colonel Ianca Dumitrescu, M. N. Flondor, M. Alexander Lapadatu, three journalists, and others. This delegation will leave Bucharest for Genoa on April 5.

General News.

General G. Mardarescu has been appointed Minister of War, which Department has hitherto been under M. I. C. Bratianu. The latter will henceforth remain President of the Council without portfolio.

The Roumanian Ministry for Foreign Affairs has sent a *communiqué* to the Press abroad, formally refuting the rumours of any aggressive intentions on the part of Roumania against Soviet Russia, and has also denied that this country is supporting or tolerating on her territory anti-Soviet preparations by Petliura. On the other hand, the Roumanian Government declares that it will prevent by all means any action which could be considered as directed against Russia.

BULGARIA.

Sofia, April 3.

Turkey and Bulgaria.

The proposals made by the Allies with a view to settling the Graeco-Turk conflict are not regarded by Bulgarians as likely to establish a lasting peace in the Near East. It is admitted that justice has been done in Asia Minor, and the vexed question of the Straits may be settled for the time being, but the situation in Thrace is likely to give rise to trouble for some considerable time to come. The proposed Graeco-Turkish frontier in Eastern Thrace is to run in a north to north-easterly direction from Ganos on the Sea of Marmora to a point in the Istranja Mountains on the Bulgarian frontier. Bulgaria and Turkey will thus possess a common frontier only along a few miles of mountainous ground stretching inland from Vasiliko on the Black Sea. It appears that the

French point of view which favoured giving Turkey the old "Maritsa" frontier, was overruled by the other Powers, on the ground that it would be dangerous for Bulgaria and Turkey to have a common frontier. The Little Entente are known to view with distrust any signs of Bulgarian-Turkish friendship, and it may well be that their representations were instrumental in influencing the Allies in coming to their present decision.

The determination of the Allies to prevent Bulgaria and Turkey from becoming neighbours is on the face of it perfectly natural, as both nations are discontented with their lot, and are likely to find many points in common. However, even if Turks and Greeks accept the mediation of the Allies, and Eastern Thrace is divided up on the lines mentioned above, it requires only a glance at the map to see the very unenviable position the Greeks will be placed in in Eastern Thrace. The territory left to Greece in Eastern Thrace will be forty miles broad at its widest point. On the East there will be the Turks, always on the look out for frontier incidents and always eager to regain Adrianople. On the West there will be the Bulgarians, thoroughly discontented on account of the Allies having disregarded their claims to Western Thrace, and only too willing to lend a hand to the Turk against the common foe—Greece. Hardly a situation which will conduce to Near Eastern Peace!

Youssuf Kemal Bey's Declarations.

Youssuf Kemal Bey, the Angora Foreign Minister and joint author with M. Franklin-Bouillon of the famous Angora agreement, spent twenty four hours at Sofia at the beginning of last week. Youssuf Bey was on his way from Paris to Angora and stopped at Sofia owing to the inability of all his delegation to travel by the same Orient Express. Youssuf received the leading Bulgarian journalists, and while saying that he could not definitely state the attitude of the Angora National Assembly towards the Allies proposals, he let it be understood that it was improbable that Angora would accept the Allies proposals relative to Thrace. He spoke with warmth regarding Turkish—Bulgarian relations, saying that they were good and that there was no reason why they should not become better. Bulgaria and Turkey had similar aims he declared and "The setting up of an autonomous régime in Western and Eastern Thrace, or the giving of Western Thrace to Bulgaria, would provide certain closer points of contact." The Angora Foreign Minister also referred to the European countries, which he preferred to leave unnamed, who were opposed to Bulgaria and Turkey having a common frontier.

Youssuf Kemal Bey had informal conversations with one or two Bulgarians, but his visit being of a purely informal character was not marked by any official reception. He left Sofia for Burgas on the evening of the 29th, embarking there on a French destroyer en route for Ineboli.

The Genoa Conference.

MM. Stambolisky and Turlakoff, accompanied by financial and economic advisers, are due to leave for Genoa on Wednesday, April 5. The Prime Minister in the course of a recent interview said that he was not going to Genoa with any great feeling of optimism as to the results likely to be obtained. He regards the question of Bulgaria's reparation payments and the economic outlet to the Aegean Sea as being two matters of paramount importance in so far as Bulgaria's economic situation is concerned. These two matters, touching as they do the Treaty of Neuilly, will not be discussed at the Conference, and M. Stambolisky is of opinion that in these circumstances Bulgaria's participation at the Conference cannot be fraught with any real benefit. The Government extended an invitation to the Opposition parties to send representatives to Genoa, but with the exception of the Communists the offer has been declined.

Sofia University Closed.

The long drawn out struggle between the Government and Sofia University has at last reached a climax. At a plenary session held on April 1. The Senate of the University decided to close the University until further

notice. The main reason leading to the closure of the University is the refusal of the Government to reinstate the twenty Professors dismissed on grounds of economy. The action of the Senate recalls the conflict that took place between the Government and Sofia University in 1907. On this occasion the University was closed for six months, and the Government attempted to set up another University by means of enlisting the services of foreign Professors. The attempt did not succeed, and during the course of the conflict M. Pecheff, Minister of Education, was assassinated. Furthermore, in the end the Cabinet resigned, largely owing to the odium they had incurred by their attitude upon the University question. The consequences to-day are not likely to be so serious, as the University has not so much power as formerly. The number of students has considerably diminished, while the average peasant will not be directly affected by the closing of the University. Nevertheless the affair is bound to have a certain effect on the political situation, and cannot fail to embarrass the Government.

The Belgian Minister.

M. Van der Heyde, the retiring Belgian Minister to Bulgaria was received in audience by King Boris last week, on which occasion his Majesty presented His Excellency with the Order of St. Alexander, First Class. M. Maskens, the new Belgian Minister arrived in Sofia on April 2.

TURKEY.

Constantinople, March 26.

The Armistice Proposal.

The Allied proposal relating to an armistice between the belligerents in Asia Minor has not been received here with any very great optimism. Nationalist opinion is frankly hostile on account of the omission of any reference to Thrace, while Government circles are of the opinion that the period of three months is too long. So far as the armistice is concerned, the opinion of the Central Government cannot count for much, and acceptance or rejection of the proposal rests entirely with the Angora Government. The Kemalists have committed many tactical diplomatic mistakes during the last two years, but they are not likely to commit such a crude blunder as to reject the Allied offer without further discussion. On the other hand, unless the Angora Government modifies the policy which has been proclaimed without variation for the last two years, there is no hope of the proposal being accepted as it stands. It is possible that the Allied representatives only intended the proposals to be a basis for discussion, for there is no reason to believe that the Angora leaders have any intention of changing their oft-proclaimed policy. It is probable that the reply which Youssuf Kemal Bey will take back to Paris will make acceptance of the offer conditional upon solid guarantees on the part of the Allies that the evacuation by the Greek armies of both Ionia and Thrace will commence immediately after the signing of the armistice. There will probably be other conditions also, but this condition is almost certain to be advanced. It is also to be expected that the provisional occupation of certain areas by the Allies will be required to be of a very limited period, even if it be accepted at all. The outlook cannot, therefore, be regarded as very hopeful, and the outpourings of the Anatolian press are by no means calculated to weaken the feeling of pessimism. The offer is openly condemned in the official "Anatolian Agency" of Angora as a British manoeuvre with the object of giving the Greeks time to make further preparations whilst the *moral* of the Turks is deteriorating through inaction. False accounts are being published of secret British offers for the conclusion of an alliance between Great Britain and Turkey, and whatever impression Youssuf Kemal Bey may have succeeded in making in London and Paris, it is useless to try to disguise the existence of a most unfavourable atmosphere in Angora. For it must be remembered that the Anatolian press is bound hand and foot, and is the completely passive instrument of the Angora Government.

The Real Issue.

The anxiety of the Allies to prevent the further shedding of blood in Anatolia can be readily understood, but had the Conference not been postponed so long, it would not have been necessary to make this the first point to be considered. In other respects, it is unfortunate that the Allies should have touched upon the territorial side of the problem at the outset; for although the frontier question is of very great importance, the whole problem has extended far beyond the conflict regarding the colour of the flag that is to fly over the government buildings in Smyrna and Adrianople. The Young Turks, who to-day call themselves Nationalists, long ago began to understand the difference between ancient and modern political and international values, and they have their own ideas as to what constitutes "independence."

However important the territorial question may be, this is the vital point at issue, and the Angora leaders have proclaimed in unmistakable language, upon innumerable occasions, that whatever may be the limits of the Turkey of the future, that Turkey shall enjoy "independence" as conceived by the Young Turk Nationalists. If anything, greater emphasis has always been laid upon this point than upon the territorial issue, and it is precisely in this connection that the views of the Angora Government appear to be irreconcilable with Allied interests. It is also precisely in this connection that the Soviet Government has exerted the greatest influence, and has encouraged the Angora Government to adopt a more uncompromising policy in regard to political and economic matters than in regard to territorial questions.

Those who have read and understood all that is implied in the National Pact, the terms of which have already been published in *THE NEAR EAST*, should realise that the Nationalist view of "independence" comprises the complete and unconditional abolition of the Capitulations, together with the complementary juridical powers of Patriarchates which are part of the Ottoman Legal Code; the absolute rejection of any kind of financial control or restrictions in regard to the Army or Navy or safeguards concerning the administration of justice; and the retrospective recognition of the Angora Government as the legal government of Turkey.

Both Turkish and Greek propaganda have helped to obscure the real issue by dwelling almost entirely upon the territorial side of the problem, and the European press appears to have been led thereby into the completely false belief that the withdrawal of the Hellenic armies from Smyrna or Thrace would *ipso facto* put an end to the conflict.

An Autonomous Ionia.

For some time past there have been rumours concerning a movement amongst the Greek population of Smyrna with the support of part of the Greek army, including, it is said, General Papoulas, for the proclamation of the independence of Western Anatolia under the nominal suzerainty of the Sultan. Nothing is more untrustworthy than rumour, particularly in this part of the world, but there is nevertheless reason to believe that on this occasion rumour is not without some considerable foundation, and it is by no means impossible that the Allies may find the ground cut from beneath them before the Angora Government can return a reply to the armistice proposal. How far the Athens Government may be involved in the movement is doubtful, for such a policy would certainly be highly dangerous to the present régime in Greece. On the other hand, if the movement is really as serious as the Venizelist party in Constantinople maintains, it is not easy to see what the Athens Government could do to smother it.

SCHOOL OF ORIENTAL STUDIES

London Institution, Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

BRITAIN AND EGYPT.

Some Eastern Views.

In the *Ahram* the Democratic Party, objecting to the British reservations, says that foreign interests are safeguarded by Treaties and the Capitulations. Egypt now has the right to negotiate directly with foreign Powers. She must join in the League of Nations, and it is for the League, not Britain, to protect them. As to Security of Communications, this is also a matter for the League of Nations. There can be no interference with communications to the prejudice of England, as the neutrality of the Suez Canal is guaranteed by treaties of long ago. With regard to the Sudan, England interfered with it in 1899 without right. The Sudan belongs to Egypt, and as for money invested by Britain in public works, etc., Egypt can come to terms with her. Egypt is prepared to treat with England as a friendly Power, after clear proof of good will given, by the immediate abolition of martial law, the release of all exiles and political prisoners, and self-government without any interference whatsoever.

The *Mokattam* speaks in rather a different tone. A writer argues that no apprehension need be caused by the proposed claim of Britain to protect Egypt from foreign aggression. Supposing that some other Power were to attack Egypt, what could she do with an army of 8,000 men, dependent on Europe for all ammunitions?

As regards security of communications, why should there be any objection to British proposals? The presence of troops in the towns is, it is true, humiliating; but if Egypt shows friendliness to Britain, they will probably be withdrawn all the sooner, especially as this will be to the interest of the heavily burdened British taxpayer. As for Egypt joining the League of Nations, this would furnish no guarantee against aggression any more than in the case of Belgium, Tripoli, or parts of Turkey. As regards protection of minorities and foreigners, satisfactory arrangements can be made with England and other nations.

The *Akhbar* (March 19) says that the English must think the Egyptians are very simple people, if they suppose they are deceived by the outward show and firing of salutes, by the King's telegram to King Fuad, and Lord Curzon's to Sarwat Pasha. The Egyptians understand perfectly well that they are not yet independent; and if they keep quiet now, it is because it is their interest to do so. The announcement should have been made not by Lord Allenby, but by the British Government. Egypt is suspicious because promises have not been carried out. The fact that Lord Allenby retains the title of High Commissioner is not compatible

with independence. The Egyptian Government should act independently of him.

A congratulatory telegram has been received from the "Liberal Party" in Tunis, expressing their joy and gratification on the attainment by Egyptians of national aspirations, and of what they have long hoped for for themselves. The *Akhbar* warmly thanks them for the communication, but adds that they must not conclude that Egyptians are yet independent.

A correspondent of the *Akhbar* at Constantinople describes a great gathering at Angora, at the Afghan Embassy, to celebrate the independence of Afghanistan; at which speeches were made. The Afghan Ambassador said that his country had attained its independence under the present Ameer, Aman-ullah Khan. He rejoiced that all Eastern nations were striving to obtain the same status. The new light shone out first from Afghanistan, as its source. The union of his country with independent Turkey would never come to an end. Mustapha Kemal, who spoke next, said that tyrants were keeping some people in chains, but a few here and there dared to oppose them. The Ameer who now ruled in Afghanistan had fulfilled the promise which he made that he would always keep his sword drawn until he had carried out his pledges. The Turkish nation was closely united with Afghanistan by ties of many kinds.

The Russian Ambassador compared Afghanistan to a lion which defends Asia from the South, and said that the independence of Afghanistan was of great value for the East. The celebration was significant, not only in connection with the freedom of Afghanistan, but with that of all Eastern nations who will not cease fighting for their rights, and when they obtain their independence they will unite by treaties to oppose Western aggression. A representative from Bokhara spoke to the same effect. The Afghan Ambassador thanked all the speakers, and in conclusion, addressing Mustapha Kemal, said: "I wish you all success in the present war against Greece."

The meeting ended after midnight, and all present prayed that there might be another celebration, at which there would be more representatives of Eastern and Moslem nations.

FOR MOSLEM REFUGEES.

The Lord Mayor of London, Sir John Baddeley, writes from The Mansion House:—I have received a personal appeal from General Sir Charles Harington, Commander-in-Chief of the Allied Forces of Occupation in Constantinople, and from Sir Adam Block, President of the Ottoman Public Debt in Constantinople, on behalf of the destitute Moslem refugees at present in that city. They number some 60,000, and are, for the most part, women, children, and old men, who have fled to the capital from their ruined villages on or behind the Marmora littoral, and from Thrace. These people are absolutely destitute, and the Turkish relief societies and the Turkish Government are unable adequately to support them.

Little attention hitherto has been given to these unfortunate people, 25,000 of whom are in the greatest misery. The women and children, and a few old men, are herded together, five families in a small room, lying on mud floors or in stables with roofs open to the rain and snow, their only food being a small ration of bread scarcely enough to keep body and soul together. With out assistance, many of them will never return to their homes. A small committee has been formed in Constantinople, which has managed to raise locally some £3,000, and appeals to India and elsewhere are expected to bring in perhaps a similar amount. The committee has been at work since December, and is to-day feeding some 5,000 refugees, but unless further funds are available this relief will have to cease.

Sir Charles Harington and Sir Adam Block when they called upon me a day or two ago stated that the French charitable institutions are already affording generous assistance, and they desire to appeal, through me, to the British public for subscriptions, in order that the British Committee in Constantinople may continue to carry on its good work for some time to come. Little is needed here to accomplish much in Constantinople; £10 will provide food for 25 people for a month. I feel sure that the traditional generosity of the British public, which has been so conspicuously exhibited in the past, will not be withheld from this pitiable appeal, which is so warmly supported by the British Community in Constantinople through their leading representatives.

Contributions may be sent to the National Bank of Turkey, 50, Cornhill, E.C.3., or to the Imperial Ottoman Bank in Constantinople, to the credit of the British Committee for Relief of Moslem Refugees, Constantinople.

CORRESPONDENCE.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be written as briefly as possible and must be written on one side of the paper.

THE CALIPHATE QUESTION.

To the Editor of The Near East.

Sir,—What is the Caliphate question? The British voter, in whose mind the title is vaguely associated with "The Arabian Nights," begins uneasily to enquire; with a disturbing consciousness that the destiny of the British Empire in the East may depend upon the answer. He is told that 250 million Moslems—100 millions being British subjects—resent the policy of the Government towards Muhammad VI, Sultan of Turkey and head of their Religion. It is also said that the question is for Islam alone, and no concern of ours; but, since the Mussulmans have now used it as a lever to force a cleavage in the affairs of Europe, Great Britain, greatest of Mohammedan Powers, cannot play the Gallio.

What are the facts, historical and existing, as to the headship of Islam?

A great Mohammedan, the late Sir Syed Ahmed Khan of Aligarh, repudiated the claim of the Osmanli Sultan to veneration as "Caliph," as being unauthentic and of comparatively modern origin. That title was assumed by consecutive successors of Mohammed as head of the Islamic Faith and Empire, by the first four on nomination, and by the remainder as hereditary. Its authenticity practically ended on the death of Radi the Poet-Caliph in A.D. 940, though it lingered for some three centuries longer in the effete Abbaside dynasty, and was not finally extinguished until the Mongolian capture of Baghdad in 1258. The Turkish Sultan Selim afterwards wrested an apocryphal succession to it from a degenerate descendant of the Prophet during his Egyptian conquest in 1517.

This arbitrary assumption of the Caliphate was, until the nineteenth century, practically ignored by the non-Turkish Moslems; certainly by the unorthodox Persian Shi'is, the Indian Babis and Behais, the Senussi of North Africa, the Barbary Moors, and the Wahabi Arabs of Nejd; and only a grudging acceptance was accorded by the Meccan Sherifs, for reasons connected with this custodianship of the Holy Places: even the Sultan himself signed treaties only as "Emperor of the Ottomans."

The astute brain, however, of Abdul Hamid, who succeeded to the Turkish throne in 1876, saw in a revival of pretension to the Caliphate a means of promoting his ambitions for the Turkish hegemony of Islam, and of consolidating against the encroachments of Western influence all the reactionary elements of the Moslem world. He consequently conceived the policy of Pan-Islamism, which he pursued in subtle conjunction with that of exploiting the mutual jealousy of the European Powers that had existed since the Crimean war. Fortified by the Turkish success in the Greek War of 1897—the first Mohammedan victory over Europeans for two centuries—he was encouraged later by the action of the Kaiser, who, failing to find an outlet for his Imperial *Wanderlust* elsewhere, discovered in Pan-Islamism an instrument for German expansion Eastward, and during his flamboyant Syrian progress identified Germany with the Pan-Islamic policy. In 1905 the Sultan was still further strengthened by the dynamic effect on all orientals of the Japanese victories over Russia.

After the revolution of 1908 the Young Turks, resenting Western aggression in Tripoli and the Balkans, re-organized Pan-Islamism on frankly anti-European lines, but still in paradoxical co-operation with Germany; and on the outbreak of the Great War in 1914 induced their puppet-Caliph to proclaim, in Turko-Teutonic interests, a Holy War against the Infidel.

Non-Turkish Moslems—excepting extremists like Mohammed, elder of the Ali brothers, who was interned as

a pro-German throughout the war—refused to play the German game, and, with the help of Mohammedan troops and the Arab nation, the British defeated "the Caliph's" forces in 1918.

Since the war, however, owing to the economic depression felt throughout the East, to the exhaustion of the Allies, and to vacillating British policy, the extremists have been able to seize on and magnify the factitious Caliphate question as a convenient method of uniting all the elements of anti-western discontent in the East, with effective assistance from the wide-spread and decivilizing organisation of the Bolsheviks, who perceive herein a practicable compensation for their failure in Europe. The "All-Indian Moslem League," permeated from Angora and Stamboul by their sinister intrigues, has entered into an unnatural alliance with the misinformed mass of Hindus who follow the rebel Mahatma Gandhi, and last December hoisted the Bolshevik "Jolly Roger" with a declaration advocating an Indian republic. Their propaganda, which includes the Caliphate agitation, aims at arousing the old militant spirit of Mohammedanism for the disruption of our Eastern Empire. It strikes the ever-responsive chord of religious fanaticism, and unsheathes "the Sword of Islam," the use of which against the Infidel is enjoined by the Koran itself on every Moslem. The horrors of the premature Mopliah rebellion indicated how deeply masses of uninstructed Mohammedans have been already imbued with disaffection.

Such, then, is the Caliphate agitation, which, bred of German-fomented Bolshevism out of barbaric Moslem reaction, has recently resulted in the presentation to the Western Powers, through the Indian Government, of what is practically an Islamic Ultimatum; threatening—unless European Policy be shaped according to its dictates—the Revolt of an insurgent East against a distracted and exhausted West.

The words of that sagacious Western observer Colonel House were indeed prophetic when he warned the Supreme Council in 1919 that—"the Danger of tomorrow for the Victorious Powers will be a possible coalition against them of everything living East of the Rhine as far as the shores of the Pacific."

I am, etc.,

C. P. HAWKES,

March 31st.

Lieut.-Colonel.

GREAT BRITAIN AND GREECE.

To the Editor of "The Near East."

Sir,—In his letter of March 20, Mr. Nicols displays a strong pro-Greek bias and a remarkable weakness in grammar.

His letter, however, is not without interest, in that it provides a good example of Greek propaganda as practised in the Levant. I refer to the address at the foot of his letter, viz.:—"Smyrna, Greece"; yet the writer must be fully aware that Smyrna is in Turkey. I remember a somewhat similar instance of this mentality. About two years ago the local Greeks in Constantinople distributed post-cards of the Mosque of Santa Sophia with a cross on the top of the dome.

It is propaganda of this kind that does so much to irritate Moslem opinion in the Near East, and that one calling himself British should stoop to such pettiness is indeed deplorable.

I am, etc.

O. H. MATTHEWS.

Mr. FREDERICK ROSE . . . PIRÆUS.

CAPE TO CAIRO: THE RAILWAY AND AFRICAN DEVELOPMENT.

Speaking before a meeting of the Central Asian Society held at Burlington House on April 5, Mr. Robert Williams said that in twelve years' time would be seen the completion of the through railway route from Cairo to the Cape, and that only four years would elapse before the Continent was crossed from East to West by a railway from Beira to Benguela. The economic and material changes which would be brought about by railway development in Africa were of a far-reaching character. Africa contained the last and greatest of the world's reserves of raw materials and was a vast reservoir of most magnificent labour. The African native was naturally cheerful, peaceable, imitative and not devoid of ability. He had the heart of a child, was affectionate and had a keen sense of humour. He had unbounded respect for white men of high character. He was a gigantic force for good or evil. The wise or unwise administration by Europeans of their African dominions must have far-reaching influences on the whole world; the black man had begun to think politically and he would long need the guidance of the white. Egypt had been granted the right to manage her own affairs; and the success or failure of the experiment would constitute an extremely valuable object lesson in dealing with future claims on the part of other African peoples. Our duty was to guide and not hurry these along the road to self-determination. A step that should be promptly taken was one towards a federation of British Africa from the Cape to the Nile, with railway connection all the way, so as to co-ordinate as far as possible one policy towards the black races, and establish principles to guide us in meeting any demand for self-determination in the future. It was conceivable that at the end of the present century we should have the United States of Africa under one flag.

In the discussion that followed, Colonel A. C. Yate (Honorary Secretary of the Society) read a letter from Sir Reginald Wingate stating that the last quarter of a century had seen such progress in the Sudan—where the revenue had risen from £8,000 in 1900 to £5,000,000 in 1920—that we need not question the accuracy of Mr. Williams' forecasts as to the future of the African continent.

Sir Frederick Lugard said he endorsed most heartily the lecturer's view both as to the African's ability, and of the limitations which for many a generation would preclude the possibility of his being able to stand alone in industrial and political development. The solution of the colour problem lay in complete uniformity in ideals, absolute equality in the paths of knowledge and culture, equal opportunity for those who strove, equal admiration for those who achieved, in matters social and racial a separate path, each pursuing his own inherited traditions, race purity and race pride; equality in things spiritual, agreed divergence in the physical and material.

Sir Edgar Bonham-Carter said that what was being now done with regard to Egypt could not in any way be regarded as a precedent for the future in the more southerly parts of the Continent.

Sir Lee Stack (Governor of the Sudan) said that the greatest link that remained to be forged in the Cape to Cairo railway was through the Sudan; and if the indications of mineral wealth in the southern part of that country materialised then the inducement to build a railway would be a very great one. Our administration in Africa would be successful if we sought to develop the country in the interests of the natives, not to exploit the native in the interests of ourselves.

Mr. Donald Mellor, speaking of what had been already done in the way of developing communications in Africa, said that it was now possible, travelling by railway and steamboat, to go by a properly printed time-table from Stanleyville on the Congo, to Cape Town in twenty-six days, and to make the journey in the other direction in twenty days.

IRISH GUARDS FOR CONSTANTINOPLE.

The 1st Battalion of the Irish Guards, which has been ordered abroad to Constantinople to relieve two native battalions, is expected to leave this country about the 27th inst., sailing in the *Huntsgreen*. The battalion will proceed under the command of Colonel the Hon. H. R. L. G. Alexander, D.S.O. It is understood that this particular battalion has been selected to go to Constantinople because it stands at the top of the roster for foreign service.

THE ANGLICAN CHURCH IN INDIA.

At the request of the Bishops in India, the Church at home has, with the approval of the Pimato, promised to send a mission of spiritual help, which will be in India from November 1 this year until March of next year. Three pioneers, the Rev. David Jenks, the Rev. G. C. Lunt, and the Rev. E. Courtenay West went out last autumn to make plans in consultation with the Indian Bishops, and they will return with their report at Easter. The mission will include at least twenty-four clergymen, with six women missionaries. They will address themselves to the English-speaking members of the Church in India, without distinction of race. These comprise the military, Government employees, persons engaged on the railways, and members of large commercial and industrial communities. It is estimated that £5,000 or £6,000 will be needed, and subscriptions should be sent to the Indian Church Aid Association, Church House, Westminster.

EXPLORATION IN PALESTINE.

The Jewish Palestine Exploration Society has recently been formed for the purpose of supplementing the activity conducted by the other Exploration Societies in the Holy Land. It has already accomplished a good deal of valuable work, including the clearing of the site of the ancient synagogue of Hamata, where numerous Jewish objects used in worship and other objects of art have been found; the exposure of parts of the ancient wall of the Sanctuary which date from the time of the Herodians; the discovery of the antique Judæo-Hellenic Cemetery of the second and third centuries, with the tomb of the members of the Synedion or Council of Tiberias; and the discovery of the foundation of the Acropolis of the Kings Herod Antipas and Herod Agrippa II., and of Berenice. Among the works awaiting completion are the excavation of the buildings adjoining the synagogue of Hamata, the discovery of the remainder of the Judæo-Hellenic cemetery, and the excavation of the site of the Acropolis of Tiberias. The Society has secured a concession of the ground surrounding the monument known as the Pyramid or Obelisk of Absalom on the Mount of Olives, and proposes to carry out excavations on this site in the course of the summer. It has also been authorised to carry out soundings near the source of the Siloa in the vicinity of the ruins of the Wall of Nehemiah.

Dr. N. Slousch, the Director of the Society, has just arrived in England in its interest and has brought a letter of introduction from the High Commissioner to Sir Frederick Kenyon. He states that local committees in aid of the Society have already been formed not only in Palestine, but also in Egypt and France, and he is anxious that similar committees should be formed in England, America, and elsewhere. It is hoped to raise £3,000 in this country. Sir Alfred Mond, Bart., M.P., is acting as Treasurer *pro tem*.

At Messrs. Sotheby's on April 7, the camp bed used by Byron at Missolonghi was bought officially by the Greek Minister, to be placed in the Museum at Athens. The price was £54.

THE JEWISH PROBLEM.

THE JEWS. By Hilaire Belloc. (London: Constable. 9s. net).

There is no publicist in England to-day whose intellectual influence is so wide as that of Mr. Belloc, or whose political views are of such urgent importance. He both stands and moves for something very definite, and his consistency is as amazing as his energy. Now his attitude towards the question of the Jews was well (but not well enough) known before the publication of this, his latest book; even those who had not read his works had remembered his words at the time of the Marconi case—when he said that the problem of the Jews was one of the world's problems—though they might have thought that his attitude was far more extreme and less reasoned than it is. Those who foolishly called him an anti-Semite will naturally now expect a book of passionate declamation, of magnificent affirmation, and perhaps of reckless assertion.

They will find here nothing of the kind.

Mr. Belloc has pursued in "The Jews" that same impersonal line of Latin logic which informed his "Servile State"—a great and irrefutable work. He has deliberately avoided personalities, entertaining by-paths, individual prejudices, concentrating his power to the one logical end—the solution of the Jewish problem. It is a method of convincing deadliness.

With much of this book, which is intended mainly for Western readers, we cannot deal in this journal. For example, to expatiate upon a denial of the existence of a Jewish problem would be a waste of time to readers of *THE NEAR EAST*, as it would be to enumerate the general and special causes of friction which Mr. Belloc assigns to the Jew and to the nation which feels the friction. Any reader with an historical sense as well as any student of the Near East knows well the recurrent manifestations of that permanent antagonism between Jewry and Christendom and Islam; he knows how the sense of superiority in the one is resented and reciprocated in the other; he knows the story of the miseries caused by non-Jew upon Jew and by Jew upon non-Jew. He knows, in short, that the problem of the Jew is as vital as it is puzzling.

Now, says Mr. Belloc, there have in the past been two ways of attempting to solve the question; elimination and segregation. Elimination may be by destruction—an abominable way and a failure—by excretion—which means exile and is also a failure, and by absorption—which though superficially attractive and possible has failed throughout the past. Of this last method we may incidentally note that, though it is favoured by many Western Europeans, it is repudiated by many of the best Jews. Segregation may take two forms, the first hostile to or careless of the alien body, the second, which the author calls *Recognition*, friendly to it and careful of its good. It is this second kind of segregation that is Mr. Belloc's solution, that is recognition on both sides of a separate Jewish nationality.

An analysis of the various issues that have in the past befogged the problem in Western Europe it is not in our province to make; nor can we outline the causes which have led up to the intensity of feeling now obtaining, in greater or less degree, in so many parts of the world. But we wish to make it clear that Mr. Belloc is no fond anti-Semite who nurses a sterile grievance, no fearful believer in a world-wide Jewish conspiracy, no pro-pounder, but on the contrary a denier, of the ridiculous statement that the Jew is an inferior being, especially that he is guilty of cowardice, of avarice, and of treason. His exposition of the Jewish character is in fact as generous and as just as may be found in any representative work.

We may take three intimate examples of places where the increasing urgency of a solution of this problem is apparent—Poland, Roumania, and Palestine. In the first two countries the rights of "minorities," that is, of Jews, have been protected in the Peace Treaties, but this can only be an imperfect and impermanent protec-

tion. Further, that the policy of absorption will be pursued in the two countries, which, unlike some of the Western countries, recognise the separate character of the Jews, is most improbable. In any case the near future will prove this. To the Zionist experiment in Palestine is devoted a whole chapter, which, however, is concerned only with one point—whether it will tend to increase or to relax the strain created by the presence of the Jew in the midst of a non-Jewish world. Mr. Belloc thinks very decidedly that it will increase it: "it will inevitably emphasize the separation, the individual and alien character of the whole." He considers specifically the position of the many Jews outside Palestine: "if they try under the new conditions to maintain the old fiction that the Jew is at the same time a Jew and yet not a Jew, that he can be at the same time a Jew and an Englishman, or a Jew and a Russian, or a Jew and an Italian, they will be trying to maintain it under conditions quite other than those of the past, and under conditions where the falsehood will break down in practice." Again, he says of the experiment itself, of the construction and maintenance by England of a Jewish State for the Jews: "It is the building of a pyramid upwards from its apex. It is an experiment in the most unstable of unstable equilibriums." It is, in short, a disastrous step, which makes even more prominent and full the fear of "that wretched sequence of ill-use, persecution, reaction, which has marked so many centuries."

"The Jews" is a most timely book, clear, thoughtful, judicial. There are in it many things that we should like to have quoted: the author's description of the Jew's position in Islam, for instance, or his definition of an anti-Semite, or the last paragraph of his book, of which the last line is "But for my part, I say, 'Peace be to Israel.'" It is a real book, dealing with realities. And though some, and many perhaps in this country, will think Mr. Belloc's fears "odd and exaggerated," it is the truth that the perils he postulates are thinly and moderately drawn. Truth, as he says, will always prevail over fiction; let us give up cant, and while there is yet time take his warning to recognize, to respect, and to make friends with the Jew. For there are few questions to which a wrong judgment, either warped or repressed, more often attempts to supply an answer. So sincere a plea for truth and for light as this book contains deserves the widest publicity.

THE KORAN.

THE KORAN: Translated into English from the original Arabic. By George Sale. With Explanatory Notes from the most approved Commentators and Sale's Preliminary Discourse. With an Introduction by Sir Edward Denison Ross, C.I.E. Ph.D., etc. (London: Frederick Warne & Co., 10s. 6d. net).

Whatever we may think about the teachings of Mohammed we are bound to admit that having regard to its inception and production, The Koran is a wonderful book; and though its language and the thoughts it expresses are so vastly different from our own, we must be dull indeed if we fail to recognize their worth and in many cases their beauty, even when presented to us in translation. In the interesting Introduction which he writes for the present edition, Sir Denison Ross says: "Through all the vicissitudes of thirteen hundred years the Koran has remained the sacred book of all the Turks and Persians and of nearly a quarter of the population of India." And he adds, very justly: "Surely such a book as this deserves to be widely read in the West, more especially in these days when space and time have been almost annihilated by modern invention, and when public interest embraces the whole world." At the present time, with an Arab renaissance promising, if not actually begun, and with Indian Moslems coming so much to the fore in world politics, these words come with added weight. Messrs. Warne and Co. have done well, therefore, to provide this well printed and attractive edition of the great work, which should surely find a

large public. Some of the English editions with which we are acquainted have failed lamentably in regard to type and printing: this one is excellent, and nothing better could be desired by any reasonable person.

The Introduction by Sir Denison Ross is short, but very useful. We are glad to have the opinion of such an authority that Sale's "Preliminary Discourse still remains the best Introduction in any European language to the study of the religion promulgated by the Prophet of Arabia." On the other hand, it is disturbing to find that Sir Denison Ross has been "forced to the conclusion that with the exception of Al-Baidhawi, Sale's sources were all consulted at second-hand," and that "his work as it stands gives a misleading estimate of his original researches, and that his tribute to Marracci falls far short of his actual indebtedness." Nor does the editor accept the statement made by Voltaire, in his "Dictionnaire Philosophique," that Sale spent more than twenty years among the Arabs; and the particulars given show that the statement must have been incorrect, unless the twenty years were the first, or nearly so, in Sale's life. But his translation and his Preliminary Discourse remain, and will remain a fine monument to his memory, and we are glad to have them in their present form.

BOOKS RECEIVED

"The Veneerings." By Sir Harry Johnston. (London: Chatto & Windus. 8s. 6d. net.)

"Translations of Eastern Poetry and Prose." By Reynold A. Nicholson. (Cambridge: University Press. 8s. 6d. net.)

"A History of the Arabs in the Sudan, and some account of the people who preceded them and of the Tribes inhabiting Darfur." By H. A. Macmichael. 2 volumes. (London: Cambridge, University Press. £4 10s. net.)

"L'Aventure Kémaliste." (Paris: L'Edition Universelle.)

"The Ballads of Marko Kraljevic." Translated by D. H. Low. (London: Cambridge University Press. 15s. net.)

MUSICAL NOTES.

ON GRAMAPHONE RECORDS.

The Galli-Curci record which the British public is becoming accustomed almost monthly to expect, is this time made from a Chopin waltz; the song is called "Messagero Amoroso," and serves but one purpose, that of displaying Galli-Curci's technique, which is as wonderful as ever. Her scale work is extraordinary in its facile evenness, and she has a marvellous *staccato*, but one could have wished to hear her in something of more moment.

I find no excellence in Mario's "Santa Lucia bentana," which is sung by the Italian tenor, Beniamino Gigli. Its melody is undistinguished, and its poverty is further emphasized by the too abundant use the singer makes of contracted *tempi*, of slurred attack, and of Italian tenors' *clichés* generally.

Peter Dawson, whose artistry has been considerably spoiled by the singing of ballads, is, however, a model of clarity in two songs:—"The Pauper's Drive" and "The Smuggler's Song." They are admirably distinct, and though neither contains any originality, they are made stirring enough by this Australian singer. Incidentally, it may be pointed out that he loses a little in effect by an over-prominence of consonantal attack and an impurity of vowels.

Where I ought to place two songs that Miss Violet Essex has recorded I don't quite know. "I'll be with you in Apple-Blossom Time" is the worst kind of music-hall ditty, with a wholly superfluous chorus, and not a thing in it that is not obvious: "Grannie," on the other hand, which was written by the late J. W. Tate, is a much better kind of ditty, with that homely tunefulness that makes so soft the hearts of our sentimental music-hall audiences.

Jack Buchanan is, I believe, a supreme revue artist: certainly he shows his worth in two songs from "A to Z"—"My Alco Holiday" and "And her Mother came too." These are alike excellent examples of the songs of modern revue, tuneful and "tricky," and with a fresh oldness about them.

The Gresham Singers are an extremely popular male voice quartet, and there are few "effects" which they are not capable of bringing off. But their art is essentially that of the music-hall. Thus their singing of the sixteenth century madrigal "Matona, lovely Maiden" (by Lassus) is, I think, thoroughly bad. They have not the madrigal spirit, the sense of inevitable and consistent unity; they make it rather a series of exploited "points." On the other side of this record will be found a proof of how the art of part-writing declined from the sixteenth and seventeenth centuries, for here, with all its hackneyed harmonies, is Stainer's "Cupid, look about thee." This, incidentally, demonstrates how good the discipline of the Gresham singers is.

There is a still long road to travel in the recording of choral works, and though the magnificent Sheffield Choir (or rather part of it) under Dr. Coward sings well enough in "Lift up your heads, O ye Gates," "And the Glory of the Lord" from "The Messiah," the physical conditions were all against a satisfactory reproduction. For instance, the presence of the piano-forte is an insuperable obstacle, one which jars all the time; and the altos have come through unaccountably weak.

Fox Trots are recorded in excellent numbers. One grows very fond (if one does not hear him too often) of Mr. Paul Whiteman and his Ambassadors Orchestra. He has the alertest ear for sonorities, and there is uncommon skill in his percussion and brass. "Sweet Lady," for example, is played with a very keen sense of the relative importance of the various instruments, and the way in which the strings are kept in the background is masterly. "Say it with Music" is another of his triumphs, this time over poor material. "South Sea Isles," again has a poor melody, but this fact is compensated for by the intrigues of the rhythm and the catchy tricks of the middle part. But where he simply runs riot is in a syncopated orgy called "Everybody Step," where there is also most interesting instrumental exploitation, the bassoon in particular performing noble work. And he reaches his height in "Canadian Capers," which I heartily recommend to everybody. It is truly excellent fun, and the short drones of the wind instruments are genuinely amusing.

Good as Paul Whiteman's band is, it does not, however surpass the Benson Orchestra of Chicago. There are all its slickness and freshness in "It must be someone like you," and though it misses distinction in "Just Like a Rainbow," it maintains its reputation in "Bimini Bay," in which, by the way, the pianist proves himself to be the backbone of this orchestra.

Other records which may appeal to some are "Mon Homme" and "Linger a Little Longer" by De Groot and his Orchestra, though for myself I find them dull, soon wearying of the overdone *rubato*; "Mimi" and "Rosy Cheeks" by the All-Star Trio, which will attract the simple dancers as having good "go"; "Why, Dear," by Joseph C. Smith's Orchestra, which to me seems a poor tune, with very turgid orchestration; and "Dapper Dan," by the Club Royal Orchestra, which is scored with great ingenuity and played with excellent verve.

Finally, there are one or two records which I wish to mention chiefly for the benefit of lonely oversea readers. They are the sort of thing which we loved to hear during the War, not because they were music, or because they stirred anything worth stirring in us, but simply because they kept us cheerful. And I suppose that people in places like Mesopotamia, or Palestine, or the Sudan, sometimes get that feeling. In any case, here is Will Strong singing "My Sunny Tennessee," "I've got the Blues for my Kentucky Home," "Linger a Little Longer," and "You'll want me before I want you"—all the oldest nonsense, of course, and all interfered with by wholly superfluous female choruses—but good enough tunes all the same to whistle absent-mindedly when one's mind isn't full of Arabs and other pre-occupations. (Into this category I ought to put Jack Buchanan's songs, mentioned above.) And the two orchestral selections from "The Fun of the Fayre" are quite cheering.

ANDANTE.

PERSONAL AND GENERAL.**To-day.**

April 13 (New Style).
 March 31 (Old Style).
 Shaban 15, 1340 A.H. of the Moslem Calendar.
 Nisan 15, 5682 of the Jewish Calendar.

King Alexander of Yugoslavia is in bed with a cold.

Sir Alexander McRobert, Bart, has arrived in England per s.s. "China."

It is stated that the King of Egypt is likely to visit London and other parts of Europe during the summer.

Mr. Robert Vansittart is confined to his bed with a severe attack of influenza.

Tewfik Nessim Pasha, the ex-Premier, has been appointed private secretary to King Fuad of Egypt.

Marshal Izzet Pasha, the Turkish Foreign Minister, has returned to Constantinople.

Lord Manners, who has been in Egypt, is now in the Riviera on his way home.

Princess Bassaraba of Brancovan has given birth to a son at Bucharest.

The Queen of Roumania has arrived at Athens on a visit to her daughter, the Crown Princess Elizabeth, who is ill.

M. Vladimir Milanovitch, Secretary at the Yugoslav Legation, has gone to Belgrade to take up a position in the Foreign Office.

M. D. Ciotori, the Roumanian representative at the League of Nations, has left town to act as an expert to the Roumanian delegation at Genoa.

Lord and Lady Montagu of Beaulieu will arrive in London at the end of this week from Bombay, and will leave shortly afterwards for Beaulieu.

The Afghanistan Legation, at 25, Knightsbridge, was officially opened on April 7, the guests being received by the Counsellor, Sayed Kasim Khan, who afterwards hoisted the Afghanistani flag in the front of the building.

At the London International Chess Tournament India is to be represented by Mr. V. K. Khadilkar, of Sangli, Bombay, who has several times been champion of the Dependency.

Major C. Stefanescu Draganesti, Assistant Military Attaché at the Roumanian Legation, and A.D.C. to Prince Nicolas of Roumania, left London on Sunday for Bucharest.

Reshid Pasha and Madame Reshid Pasha gave a Thé Dansant at Portland Place, on April 4, which was largely attended by the members of the Diplomatic Corps.

The India Office announces that Mr. Dadiba Merwanjee Dalal, C.I.E., member of the Council of India, will join the British Delegation to the Genoa Conference as India's representative.

The engagement is announced of Brevet Lieutenant-Colonel Sir Arnold T. Wilson, K.C.I.E., C.S.I., C.M.G., D.S.O., son of Canon and Mrs. Wilson, of Worcester, and Rose, widow of Robin Carver and daughter of the late C. H. Ashton and Mrs. Ashton, of Ellesmere.

Brigadier-General F. C. Nisbet, D.S.O. (formerly of the Gloucestershire Regiment) is engaged to be married to Miss Helen Agnes MacFarlan, daughter of the late John MacFarlan, Indian Civil Service, of Ivermay, Wimbledon.

Field-Marshal Sir William Robertson expects to return to England from India at the end of the month. The marriage of Miss Robertson and Lieutenant Lockett Agnew, R.N., will probably take place in the middle of May.

It is announced that M. Nintchich, the Yugoslav Foreign Minister, left Belgrade for Genoa on April 6. The Bulgarian delegation, headed by M. Stambolisky, the Premier, and M. Tourlakoff, Finance Minister, left Sofia on the same day.

Prince Nicolas of Roumania was the guest on April 6 at luncheon in the Ritz, of M. Titulesco, the Roumanian Minister in London. Captain Hansell and the personnel of the Legation were also invited. His Royal Highness left on the following day with M. Djuvara, for Paris, whence he will travel to Bucharest with M. Boeresco.

The engagement is announced between Brevet Major Hugh Poynton Radley, M.C., Indian Army, eldest son of Mr. and Mrs. Henry Radley, of Poynton, Wimbledon, and of Ulley, Yorkshire, and Ilma, daughter of Colonel Healey, C.M.G., and the late Mrs. Healey, of 95, Elm Park Gardens, S.W.

The King's Indian Orderly Officers for this year will be Hon. Lieutenant Joseph, Bahadur, 2nd Queen Victoria's Own Sappers and Miners; Subadar-Major Nanjap Bahadur, 64th Pioneers; Subadar-Major Vishram Rao Chowan, 116th Mahrattas; the Hon. Lieutenant Krishna Bhose, Bahadur, 128th Pioneers. They are due to arrive at 49, St. George's Road, Pimlico, S.W.1, on the 14th inst. The British Officer-in-Charge will be Major W. G. Strover, 50th Kumaon Rifles.

The Grand Duchess Marie of Russia, M. A. Rizo Rangabé, the Greek Chargé d'Affaires, and Mme. Rangabé, M. M. G. Yanopoulos, Commander John Bouboulis, Colonel P. V. Vlassis, and many other Greek officers, as well as a large number of members of the Greek colony in London, were present at the Greek Church, Moscow Road, Bayswater, at noon last Sunday, when a Te Deum was sung in commemoration of the anniversary of Greek Independence Day. The Great Archimandrite, Dr. Pagonis, officiated, assisted by the Archimandrite, the Rev. R. Basdekas.

Mr. Bertram B. Benas has been elected President of the Literary and Philosophical Society of Liverpool, the oldest learned Society in the city. Mr Benas, who is an active exponent of the Jewish National Movement, has been a frequent contributor to the literature of Zionism and one of his papers to the Society, "Zionism—the Jewish National Movement" has been reprinted from the published proceedings and issued as a booklet. It is dedicated to Lord Rothschild, who is a life member of the Society. Mr. Benas' father, the late Mr. B. L. Benas, J.P., who held the presidential office thirty-two years ago, visited Palestine and the Near East in 1885 in company with the late Chief Rabbi, Dr. Hermann Adler, and contributed a valuable report on the Jewish Resettlement to the Anglo-Jewish Association, extracts from which are reprinted in Sokolow's "History of Zionism."

THE PERSIA SOCIETY.

President: Lord Lamington, G.G.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia,

Subscription £1 per annum. Further particulars may be obtained of the Honorary Secretary, 74, Grosvenor St., W.1,

MADRAS FREEMASONRY.

The Duke of Connaught, as Grand Master, has appointed Mr. A. G. G. Campbell as District Grand Master of Madras in succession to Mr. L. E. Buckley. Mr. Campbell, who entered the Indian Civil Service in 1895, after a distinguished career at Cambridge, has been closely connected with Madras Freemasonry for many years, having held the office of Senior District Grand Warden, and he is at present the President of the District Board of General Purposes.

A BISHOP IN THE NEAR EAST.

In an address delivered recently in his Church of St. Anne and St. Agnes, Gresham Street, Bishop Bury spoke of his recent visit to Constantinople. He was invited to tea with the Crown Prince and shown over the Sultan's palace. He was particularly struck with the altered attitude of the Turks towards the British people. They were deeply chagrined, he said, at the part they were induced to take during the war, and were now desirous of re-establishing once more the good relations with British, American, and French nations. As far as he could hear while in Constantinople, the French had exercised their mandate in Syria in a manner beyond all praise.

THE RICHARD CORFIELD MEMORIAL.

The memorial to Richard Corfield, of Somaliland, was unveiled recently at Marlborough College by the Countess Bathurst. It was in 1913 that Corfield performed his glorious service against the Mad Mullah. The memorial is in the form of a bronze bust combined with a truncated obelisk of Portland stone. The bust gives the personal note and the obelisk gives a symbolic representation of power and endurance. On the two sides of the base are panels, sculptured in low relief, representing the work of the Camel Corps, and in the rear is a bronze panel giving in English and Arabic the names of those members of the Corps who died in action with Richard Corfield.

THE ENGLISH-SPEAKING LEAGUE IN SOFIA.

We are informed that the English-speaking League in Sofia is making great progress. Under the presidency of Lady Colvin the League has taken a great step forward. A ball which it recently gave at the Military Club was not only a brilliant social success but also resulted in a net profit for the League of over 27,000 levas.

THE DANUBE NAVAL BRIGADE.

An encounter on the Danube between British vessels and six Bolshevik Hungarian ships was described in the Prize Court on March 29 when the President made an order for the payment of prize bounty amounting to £2,175 to Captain Vernon Harry Stuart Haggard, and the officers and naval ratings acting under his command in the Danube Naval Brigade. In his affidavit Captain Haggard set forth that on June 26, 1919, he was commanding the brigade operating on the Danube. One of the motor launches patrolling the demarcation line sighted six armed enemy ships going down stream from Budapest. The launch opened fire on them and closed on Baja, where the British squadron was lying. The squadron immediately proceeded up river and engaged the enemy ships, which, seeing that their destruction was inevitable, surrendered. They were boarded and the crews disarmed. With the exception of two of the enemy found dead all the others were taken prisoners and subsequently handed over to the Serbians. In addition to the crews, there were armed men on board, the total number being 435.

THE INDIAN HIGH COMMISSIONER.

With effect from April 1, says *The Times*, Sir William Meyer, the High Commissioner for India, took over further branches of the "agency" work hitherto carried on by the Secretary of State in Council. They thus pass to the direct control of the Government of India, instead of that of a member of his Majesty's Government in Whitehall. When in conformity with the principles of the Reform scheme, the office of High Commissioner was constituted on October 20, 1920, there was transferred to Sir William Meyer, the work of the Stores Department and the Indian Students Department, together with the supervision of the work of the Indian Trade Commissioner in the City. Arrangements are being made at the offices for the provision before long of a reading-room and a reference library where all Indian Government publications will be available, as well as the fitting up of a show-room of Indian art products. These rooms will be panelled, floored, and furnished with artistic Indian timbers, and they will thus serve as a standing advertisement for what is a developing Indian export trade. Each room will, to speak generally, exhibit the possibilities in these directions of a particular timber—e.g.—paduk, laurel-wood, silver grey, and koko.

A message from Bombay announces that the Bombay to Poona reliability trials and hill-climbing contest resulted in three Rolls-Royce cars finishing first, second and third. The fastest time was made by a Rolls-Royce landaulette, which ran up the Ghauts in 11 minutes. It covered the whole distance of 108 miles on a petrol consumption of six gallons, equal to 18 m.p.g.

NEWS IN BRIEF.

Adly Bey Maher has announced his secession from the Zagh-loulit "Wafd" in Cairo.

As from April 1 the postage on letters for 'Iraq (Mesopotamia) will be 3d. for the first ounce instead of 2d.

Unusually heavy rains have filled all but one of the historic reservoirs at Aden.

Aluminium coins of low denomination are to be introduced in Bulgaria.

Mgr. Aelen, Archbishop of Madras, has arrived in Holland and is staying at Roosendaal, near Breda.

Yugoslavia has appealed to France and Great Britain to assist in the restoration of law and order in Fiume.

The Soviet Ukrainian Executive on March 23, ratified the Angora-Ukrainian Treaty already ratified by the Angora Assembly on March 16.

At a general meeting of the Pan-Hellenic Committee of Undeemed Greeks at Athens it was decided to call a mass meeting for Sunday to protest against the Allies' peace proposals.

All international troops are to be withdrawn from Albania, as the Conference of Ambassadors has decided to put an end to the international occupation.

Our Smyrna Correspondent writes (March 15):—H.M.S. Ajax has left Smyrna for Rhodes and Cyprus; H.M.S. Tumult for Constantinople and Malta. H.M.S. Trinidad remains in Smyrna as guard ship.

It is reported from Belgrade that 47 members of the Fiume Constituent Assembly have held a meeting at Kraljevitza (Portoré), in Yugoslav territory, where they will continue to meet during the present deadlock.

Greece has agreed to abstain from searching Italian ships, and the difficulties which arose out of the recent seizure of Italian vessels by the Greek blockading forces off the Anatolian coast have now been settled.

Where to stay in the East.

THURSDAY, APRIL 13, 1922.

GREAT BRITAIN AND THE ARABS.

In the palmy days of Baghdad, the days of El Mansour or of Haroun er-Rashid, the fall of a Minister was apt to be a very serious thing for the Minister himself and to make a great stir, not only in the capital city of 'Iraq and in such other centres as Basrah, Kufa, or Kerbellah, but throughout the Moslem world. It was the subject of discussion in every bazaar, and on such an occasion as the execution of Ja'fer and the accompanying degradation and massacre of the Barmecides it caused not only excitement but grief among most of the Caliph's subjects. The average citizen of, say, Basrah or Mosul probably felt, however, that though such happenings might affect him indirectly, they were not for him to meddle with, or even to express his opinion on too freely. Then Baghdad and 'Iraq fell on evil times, and for some centuries they were ruled by aliens whose only thought was how best to exploit them for their own advantage; and though they were interested enough in the rise or fall of the Vali of Baghdad or the Vali of Basrah, the Arabs, whether of town or country, cared little or nothing about any of the Sultan's Ministers in far away Stamboul, and if they ever gave them a thought at all, it was only to curse them. The advent to power of the Young Turks put a rather different complexion on affairs. 'Iraq returned its representatives to the Turkish parliament, and the inhabitants of the cities at any rate began to take some interest in politics, and to discuss them in the coffee-shops and the bazaars. And to-day, while the finishing touches are being put to the preparations for the establishing of its own first Parliament under the restored Arab rule, 'Iraq already has a Cabinet of its own; and five members of that Cabinet have just given it the novel sensation of a 'Cabinet crisis' of its own as well. What effect the event has had upon the people of 'Iraq we have not yet been told, but it has aroused sufficient interest in this country to give rise to a question in Parliament. Mr. Churchill, who replied, stated that the resignations had been brought about by a divergence of views on the Army Estimates, "and in particular on the question of the steps to be taken to guard against the raids on the southern border of 'Iraq, which have, however, already been satisfactorily dealt with by the Royal Air Force." The rest of his reply was evidently designed to keep the House in good humour over a somewhat touchy subject; and to judge by the way in which it was punctuated by laughter, it accomplished that purpose satisfactorily.

Now, 'Iraq, or Mesopotamia, has so often been used as a stick with which to beat the Government that it is easy to understand the desire of the Secretary for the Colonies to avoid saying more than he had to on the subject. Moreover, enjoying his references to the "non-party or Coalition basis" on which the Baghdad Government is based, with its resultant advantages, we are not inclined to quarrel with his method of gliding off from a dangerous point; although we seem to remember his rebuking another Member quite recently for "an exhibition of levity" in connection with the same topic. But, frankly, we should have been very glad if he had been able and willing to make a fuller statement. According to reports which reach us the situation in 'Iraq to-day is not all that could be desired, although it is not, on the other hand, nearly so bad as those who wish to see us

come out of the country at once would like us to believe. We are told that King Faisal feels that he enjoys but a pale shadow of power, and is restless in consequence; that the Tribesmen dread the curtailment of tribal authority, and resent the taxation imposed on them for innovations which they fail to regard as improvements; and that Kerbellah and Nejef are once more indulging in intrigue to a dangerous extent. The future of the Railways is said to be giving rise to anxiety, and the finances of the country are reported to be in no cheerful condition. Indeed, Mr. Churchill admitted, if smilingly, that "the Chancellor of the Exchequer . . . included among those who have resigned . . . was known to be anxious about his Budget;" and it is not difficult to understand the anxiety. Then, too, the prophets of evil tell us that the inclusion of a slice of Kurdish territory in the 'Iraqian State, although with a special status, is bound ere long to lead to serious trouble; while the reports of a concentration of Kemalist forces on the northern frontier is another source of uneasiness. Finally, the possibility of another wave sweeping up from the South, from the Desert which still retains some of its power to awe and terrify, cannot be ignored. The Akhwan raid in the Nasiriyah district the other day is a reminder of this last possibility, and the fact that it led up to the resignation of five of King Faisal's Ministers indicates that the trouble was real, and likely, it is to be feared, to recur.

Some of these rumours and reports, we believe, have nothing more substantial about them than those mirages with which the traveller in Mesopotamia and Arabia is familiar. Others, though resting on a foundation of fact, have been greatly exaggerated. Yet we should have been glad if Mr. Churchill had seen his way to make a further statement on the situation; and we earnestly hope that the long delay in promulgating the electoral law and in giving 'Iraq its first Parliament will be terminated as early as possible. If it is due to the preparation, or consideration of the Treaty which is to settle our relations with King Faisal, let the Treaty be hurried on; for the continued procrastination in fulfilling the promises made in 1920 is undoubtedly injuring our reputation throughout 'Iraq, if not throughout the East. The raid at Nasiriyah may have been "satisfactorily dealt with by the Royal Air Force"—although we observe that the statement has been received with incredulity at Basrah—but it was a disquieting incident. We have great faith in the honour and good intentions of the Sultan of Nejd, and we have no difficulty in accepting assurances he has given regarding this raid, but we fear that it may indicate that his followers are becoming reckless and to some extent getting out of hand; and if that be so, it must be largely attributed to the delays in settling up affairs in the Arab world. Inasmuch as King Hussein of the Hejaz still refuses to sign the Treaty of Sèvres, in spite of all the representations made to him, it can hardly be said that our relations with him are all that could be desired. What is our attitude towards the Idrissi of Asir, and his towards us? How does British prestige stand in Lahej to-day? And what of Transjordan and the Emir Abdullah? All these questions affect, and are affected by, our position and our policy in Mesopotamia; and accordingly they must be studied by the Middle East Department as correlated. That necessarily complicates the problem of our attitude towards Baghdad; but even so, sufficient time has surely been allowed for its determination. THE NEAR EAST cannot be accused of desiring to hamper the British Government's policy in any way; and it has consistently urged the desirability of fostering good relations with, and between, the Arabs. But those relations do not seem to be improving, and the delays to which we have alluded tend to make them worse. If we are to help the Arabs, and above all if we are to continue paying subsidies in one form or another to many of their rulers, we are entitled to insist that they keep the peace among themselves. We should like to see the Conference at Koweit held soon, and we should like to see our pledges of 1920 redeemed.

MORE THOUGHTS ON BULGARIA IN 1922.

By "C.S.-W."

I find that I unwittingly did some injustice to the new Bulgarian Review *L'Opinion Libre* in my last article. This valuable periodical is, I am now informed, published in Bulgarian as well as in French. I am glad to know that its objects are therefore quite as much constructive as propagandist. Its propaganda side has, as I have already said, been well done, but the constructive side is of infinitely greater importance, and it is agreeable to realise how much the recent decision of the Bulgarian Government to restore the freedom of the Press must necessarily add to the usefulness of its activities in this direction. In their constructional work the directors of the Review have the best wishes of all who desire Balkan peace. Their task will require much thinking, much courage and much patriotism. What I mean by "patriotism" is not to be confounded with the constant cry of "My country right or wrong" to which we have grown so wearily accustomed and which resolutely refuses to take a true perspective of things as they are. Bulgaria is not and has not been, any more than other countries, free from faults and mistakes. The true patriot will not fear to face these mistakes, to acknowledge them and to make them clear to those whose duty it is to avoid them in future, *i.e.*, to those who direct the government of the country, which means after all the whole Bulgarian people. Bulgaria's political education has not lasted much more than forty years and it is not to be wondered if most of her statesmen are still children in political matters. If this is true of the men at the head of affairs, how much more true is it of the people as a whole? It is, therefore, all to the good that thinking men who have made a serious study of such matters should set to work to instruct their fellow-citizens, and very important that this instruction should be on sound lines unhampered by the official censor. Work of this kind will, in the long run, prove to be the most useful propaganda.

The news of the abolition of the censorship gives cause for congratulation to all concerned. One would like to know whether it has been abolished in its entirety and whether the freedom of the Press is a reality. It is to be hoped that this is the case and that two bites have not been taken at a cherry which should have been swallowed more than a year ago. It is everything in a country like Bulgaria, where nearly every one can and does read, that there should be an unimpeded and healthy circulation of ideas, political and otherwise. Arbitrary interference with this circulation has already done very great harm and not least to the Government enforcing it. Free discussion of matters of all kinds is essential for the formation of a useful public opinion and it has been a mistake to perpetuate an evil which was necessary only during the dangerous months succeeding the end of the war. If any form of censorship, avowed or not, still remains, it is to be hoped that it will go at once. Far better to suffer a little from foolish remarks about neighbouring States than to stifle the birth and expression of ideas and so to suffocate the nation both spiritually and politically.

Bulgaria, as is well known, has been making efforts to raise a foreign loan which is badly wanted. Various specious proposals have been placed before her Government, and from what one hears, it would appear that she has had more than once to thank the unwelcome Inter-allied Commission for saving her from being let into a bad bargain. I have already said that most of the Bulgarian statesmen are still in their political childhood.

It seems to have been a fixed idea with them that any foreign loan contracted by them must carry a low rate of interest. Now, though there is money in London, Paris and elsewhere available for loan to Bulgaria, provided that good security is given, it is quite certain that, rightly or wrongly, such money will not be forthcoming, as long as present ideas about the Balkans prevail, at a low rate of interest. If, therefore, a low rate of interest is quoted, this is done because the lender has made sure that conditions or concessions more or less skilfully concealed in the loan agreement free him from all anxiety as to the actual return to himself. It is, of course, far cheaper in the end to pay even a high rate of interest on a perfectly straightforward loan than to carry vague and unpredictable responsibilities which are certain to be very costly. But it wants a grown-up man to see this, and not all the Bulgarian statesmen are politically grown-up. I gather that the Interallied Commission is not likely to prove obdurate about releasing the necessary security for such a loan, but that it rightly demands that the Government shall have nothing to do with a loan which involves anything in the way of concealed or indirect benefit to its organisers. In doing so it is acting in the interest, not only of reparations but also of Bulgaria. When such proposals are being made it is good to know that the pens of the experienced business men of Bulgaria are once more free to criticise and to point out objections which are clear enough to the practised eye but which the layman, even if he is a member of the Government, is apt to pass by without suspicion.

It is greatly to be desired that a satisfactory loan should be arranged as soon as possible, though the size of it would have to depend on the terms demanded. Not only does Bulgaria want a considerable extension of her railway system, but her existing railways require much money to be spent on them before they can be considered economically efficient or even capable of doing, however inefficiently and uneconomically, the work which they are there to do. Inefficiency spells unnecessary expenditure; unnecessary expenditure spells low net income and inadequate return on capital. This again means that money cannot be had on easy terms and so the vicious circle is complete. Bulgaria has one very valuable asset in the person of M. Karakachoff, the Director-General of Railways. Not only is he one of the ablest men in the Balkans, but he is the *rara avis* of his profession in that he is not only an engineer of great skill and experience, but at the same time a first-rate organiser and administrator. He has done marvels with the means at his disposal. These means are lamentably few, and the difficulties before him have been enormously increased by the obligation to transfer much of the already too scanty locomotive and rolling stock to Yugoslavia and Roumania by way of reparation. With a moderate supply of money he could turn the corner and a little more would enable him to build up a good service running on economic lines and giving the State a fair return on its outlay. I should like to see every encouragement given to potential lenders to study the Bulgarian railway question on the spot. Such persons would soon enough realise what a field there is for expenditure likely to be productive almost at once and certain to yield a good return in the near future. Bulgaria for instance, is full of natural riches so far hardly touched. But what is the use of a rich copper mine or of a coal-field if transport facilities to and from the site are wholly wanting and cannot be supplied?

This, however, is a subject which might easily run to far more space than THE NEAR EAST is likely to wish to

ASK FOR

WHITE HORSE WHISKY

BY APPOINTMENT.

devote to it. So I leave it for the present and pass on to another question of the greatest importance and urgency to the interests of Bulgaria and indeed of the Balkans generally, which moreover directly concerns ourselves. In the course of the peace agreements the Allies definitely promised that Bulgaria, while losing Western Thrace, was to retain access to the Aegean Sea. Bulgaria is still waiting for the execution of this promise. The Allies have been busy, and properly so, in insisting on the fulfilment by Bulgaria of the obligations incurred by her to the Allies in the Peace Treaty. But so far not a word has been heard about performing the one obligation which they undertook to carry out in her favour. Quite apart from the extremely bad political effects of this inaction, the hanging up of this (to Bulgaria) very important question is having highly injurious practical effects. At present all Bulgarian exports and imports (except those in which the Central European States are concerned) have to travel *via* the circuitous route of the Dardanelles, through the mine-infested waters of the Black Sea and through the inadequately equipped ports of Varna and Bourgas. They have to be carried to and from these ports by lines of railway inadequate for any large movement of goods and the cost of carriage, by land and sea, is quite unnecessarily high and is gravely hampering commerce of all kinds between Bulgaria on the one hand and Western Europe and America on the other. Bulgaria is in a cleft stick. If she believed, as she does not, that the Allies would go back on their solemn promise, she could set to work and make the best of a thoroughly bad job by increasing the efficiency of her Black Sea ports and of her railways to them. But, granted that the promise is to be fulfilled, it would be a great mistake to spend money urgently wanted to utilise that promise on works which may well wait till the countries round the Black Sea are more settled. In the meantime she can do nothing. She cannot even make plans, for she does not know what form the Aegean outlet promised to her will take. This outlet is urgently necessary if Bulgaria is to be allowed to develop at all, and expenditure on it would be almost immediately productive. Of all countries likely to gain advantage from the settlement of the question England probably stands to gain most, and surely it is time that she set to work to get her Allies together and to get a definite and early decision. Turkey and Greece have never ceased to give cause for anxiety since the Treaty of Sèvres was signed. Bulgaria has quietly set to work to carry out the conditions of the Treaty of Neuilly. Is it any wonder that the Bulgarians, being human, begin to wonder whether their interests have been best served by their country's scrupulously correct behaviour? After all news circulates. They have heard of Ireland, Egypt and India. Turkey and Greece are their neighbours. They, like us, have heard much recently of the arrangements come to regarding Turkish and Greek interests in Thrace. Is it to be wondered at that they are painfully surprised to find no mention in these arrangements of Bulgarian interests regarding which they hold the pledged word of the Allies?

CHARTING THE TIGRIS.

Under the auspices of the Royal Geographical Society last week Lieutenant-Commander A. S. Elwell-Sutton lectured on surveying work done by a naval gun-boat on the Tigris above Baghdad in 1918. The gunboat journeyed up the river to Tekrit, some 150 miles above Baghdad, and her crew charted the river with some accuracy between Samarra and Tekrit. Describing the difficulties of navigating the shallows, the Commander said that in some places there was little more than three feet of water, the nominal draught of the vessel. A portion of the crew clothed in sun helmets, were sent ahead on foot, and it was possible to tell by the amount of their anatomy showing above water where the deepest channels lay, and the course was directed accordingly. Remains of ancient dams said to have been constructed by Nimrud were constantly encountered. Natives on the Tigris had a peculiar method of catching fish. They laid down a ground-bait of lumps of dough with a small quantity of opium. The fish swallowed that, and becoming stupefied, floated about with their white bellies uppermost. Arabs went in pursuit of them on blown-out sheepskins, which they manoeuvred with their feet, whilst the hands were free to hold the landing-net.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

One View of Paris.

The *Spectator* of April 1 in an article called "The Near East" begins by saying that in the Paris Conference "Lord Curzon was fighting with one hand tied behind his back." After the Angora Treaty the Treaty of Sèvres was done for, and "the only question that remained was how much could be saved from the wreck." It proceeds:—

For our part we have never lost the traditional British feeling that when the Turks have been dislodged from a territory where they have been guilty of persecutions and where they have no right of possession by virtue of racial preponderance, they should not be allowed to return. Although we hoped that this common British feeling might somehow be respected in spite of the Angora Treaty, we have sadly to record that Lord Curzon has been unable to prevent a considerable part of Thrace going back to Turkey. Again, we must express our dissatisfaction with the proposals for securing the safety of the Armenians and with the arrangements for preserving the neutrality of the Dardanelles.

It is something that France and Britain have been able to agree at all, for some people thought the gulf between them too wide to be bridged. Of course, identity of policy is indispensable if any terms whatever are to be imposed upon Turkey. Everybody knows that for generations the one strong diplomatic suit of the Turks was to play off one Power against another. For that reason the old Concert of Europe became a sort of ridicule. Although the very name of the Concert of Europe has disappeared, the Turks ever since the Armistice have been playing the old game with fewer cards. They have been setting off Britain against France and Italy. It was obvious, then, that the Near East could never be quieted unless the European Powers spoke with one voice, and that is why Lord Curzon had to make the sacrifices necessary to produce one voice. We much regret, however, that the sacrifices are as great as they are, and we can only hope that there may yet be an opportunity to reduce them when the new proposals are put into the form of a Treaty after discussion at Constantinople or elsewhere.

It then considers the proposals in regard to Asia Minor and Thrace, and concludes:—

We need not go into the question of Turkish reparations, and we come now to the question of the Straits. Here there has been what we can only regard as an unnecessary weakening of the Treaty of Sèvres. The Straits are, of course, to be neutralized, but the doubt arises whether the neutralization will be satisfactory. The southern shore of the Straits will be in possession of Turkey. It is true that it is to be "demilitarized," but we fear that the Turks will find it easy enough to bring mobile artillery into action there. The neutrality of the Straits will, in theory, be guaranteed by an inter-Allied Commission under a Turkish President, and further, there will be Allied troops in Gallipoli, on the northern shore of the Straits, as over-seers of the Greeks, but these things are not enough. The only satisfactory principle for ensuring the freedom of such a waterway as the Dardanelles is that the owners of the water should also be the owners of both shores.

We cannot end without remarking that the comparatively quiet circumstances in which the representative of France, Italy and Britain met in Paris were greatly to be preferred to the rampaging publicity with which diplomacy has been conducted

for the past three years. We have no doubt that Lord Curzon did all that he could in a cool and effective way. The pity is that he was tied partly by promises which the French had already made to the Turks and partly by the policy of the Government, who assume that Moslem opinion in India has to be appeased. It would be useless to go into this Indian question again, and we shall content ourselves with saying that to do what we hold to be justice, irrespective of the demands of racial or religious sections, is the only safe principle for the British Empire. It is a mistake to suppose that by our present policy we are really making things easier in India. A comparatively few people have worked up specious political arguments, but the feeling, or rather, we might say, the ignorance or the indifference, of most Moslem Indians remains as it was. It should never be forgotten that in the Crimea we carried on an arduous and expensive war in the interests of Turkey and that it was immediately followed by the Indian Mutiny.

"An Advance to Sanity."

The *New Statesman* of April 1 thinks that "the new terms proposed to Turkey and Greece by the Allied Powers mark a considerable advance on the road to sanity," and proceeds to consider specifically the questions of Turkey in Europe and of Bulgaria :—

The hope of an immediate settlement in the Near East seems to depend in the main on whether the Turks will accept the proposed Thracian frontier. The chances are, we think, that they will not. There is no moral argument against them if they refuse. We have simply acted on the principle of *Vae Victis* in confiscating Turkish territory (after proclaiming incidentally, that we had no such intention). The question, therefore, is one of force. If the Turks think they are strong enough they will try to recover their property. How far are we prepared to go in resisting them? Shall we support the Greeks in another conflict? Or are Allied troops to be mobilised for the task? These are matters which, no doubt, Lord Curzon and Mr. Lloyd George and Sir Basil Zaharoff have considered; we hope that the British taxpayer will not presently have to consider them. For the rest, we do not see any clear sign of a *permanent* settlement. It is something, indeed, that the pseudo-Crusader attitude towards the "infidel Turk" is becoming less fashionable in this country, and that the French and ourselves have reached an agreed policy. But we fear the agreement does not go very deep as yet. Behind the Turks and the Greeks there are other troubles—the Arab question, for example, and the French jealousy of British power. And on the other side of the Straits there are the Balkans, where no sane man has ever looked for tranquillity. Bulgaria has hardly been thought of since the war; but Bulgaria is not the least important of the Balkan nations, and she will inevitably play her part again before many years are past. Whether that part will be a tranquillising one or a mischievous one remains to be seen. But it is worth a European statesman's while to try to get Bulgaria on the side of the angels, and a small but useful beginning might be made by ensuring her the proper access to the sea that the Treaty gives her and the Greeks refuse her.

The Little Entente.

To the *Nation and Athenaeum* of April 1, Miss Dorothy Thompson contributes the first of two articles upon "The Rise of the Little Entente." It begins by stating that Mr. Benesh, the Czecho-Slovak Prime Minister, stands with Lloyd George and Lenin, "heads and shoulders above the ranks of contemporary European statesmen." It outlines the differences between the Little Entente and the Great Powers, and sketches Mr. Benesh's programme thus :—"To win a Great Power as an ally; to weld together the non-Russian Slavs; to make Czecho-Slovakia the dominating Power in a federation of Balkan and East European States." After stating that, temporarily at least, Mr. Benesh is making headway in all directions, the writer considers Italian policy in Central South-East Europe, which policy, she says, was :

First, to wean Roumania away from the bad company of her Slav allies; to strengthen Hungary, and break down the animosity between that country and Roumania; and with these two fortified nations to make a wall between the northern and the southern Slavs. Six months ago the odds seemed to be working in favour of the Italian policy. It was the Italian policy which prevented Oedenburg (West Hungary) from being handed over to Austria in conformity with the provisions of the Treaty of Trianon, and so preserved that valuable passage-way between Czecho-Slovakia and Jugo-Slavia to the Magyars. Later (at the time of the *Karl Putsch*), Italy's hand might have been seen in the aloof attitude adopted by Roumania, who, while her allies mobilized against Hungary on two fronts, remained completely reticent.

Italy's policy has been plain. She never for a moment loses sight of "the Pan-Slav menace," sure to obtain, in her mind, as soon as Russia "comes back." She is practically at war with Jugo-Slavia, who grows more and more aggressive in Albania and along the Adriatic coast. The signing of the Treaty of Lana; the military agreement between Greece and Jugo-Slavia; the Conference at Bucharest, including Poland, have all been slaps in the face of the Italian policy, and unquestionably account in large measure for the Governmental crisis in Rome. The Little Entente therefore, seems to have inherited and assumed the burdens and animosities of the old Austro-Hungarian Empire, and in the first diplomatic battle with Italy, Italy has lost. With the demission of the Marquis della Torretta as Minister of Foreign Affairs, it may be taken that Italy has relinquished for the time being, through necessity, her anti-Little Entente policy.

With the addition of Poland, Greece, and Austria as allies, the Little Entente is the strongest military Power in Europe. Jugo-Slavia alone has a hundred thousand more troops than France, if the French black troops be eliminated from the count. The Little Entente as an alliance commands more than a million and three-quarter soldiers. Siding with France, she completes the line of French influence in East Europe straight down from Poland to Macedonia. She is a powerful support for French policy—and a powerful enemy of one country, Hungary.

The Future of Adrianople.

In the *Morning Post* of April 7 its Constantinople correspondent writes on Adrianople. He describes its picturesqueness, the racial animosities which centre round it, and he speculates on its future:—

The claim to Eastern Thrace is a difficult one to decide, for there are two bases of discussion, as is usual with territorial claims—(1) historical, (2) present occupation and inhabitation. The historical argument is always unsatisfactory. Does conquest and occupation for a number of years constitute an historical claim? How many years' occupation entitle the conqueror to lord it over the conquered—who will, presumably, have the counter-claims of previous occupation, be they based on conquest or gradual penetration. Here in Thrace, for instance, the Greeks will claim historical precedence in claims based on the Macedonian and Byzantine conquests. The Bulgarians will plead that neither Alexander nor Constantine was a Greek, and will base their claims on the Bulgarian occupation by gradual penetration in the Middle Ages. The Turks will claim right by conquest since the fall of Constantinople till the present day.

As regards present occupation, until 1913 the Bulgars were by a long way in the majority. But after the Balkan War the Turks, under Enver Pasha's influence, took the drastic measure of turning every Bulgar out of Eastern Thrace. Two hundred thousand of them in all were turned out at three hours' notice, and sent over the Bulgarian border, where they are at present as refugees on the Bulgarian Government's hands. The Greeks followed suit by "persuading" 60,000 more to leave Western Thrace and return to Bulgaria.

The rights and wrongs of these drastic strokes may be open to discussion. Turk and Greek could both plead historical precedents in all countries of the world, including England and America, and could quote analogous procedure in Ireland at the present moment. But the Thracian question may be said to be simplified by one factor. There are now no Bulgars in Eastern Thrace. That, however, is unfortunate for Thrace. The Bulgarian is eminently the worker of the soil. The Turks sent 76,000 colonists to replace them in 1913, but that is not enough to restore agriculture in Thrace, and many of the colonists perished during the war. The Greeks are trying to import colonies of Greeks from Asia Minor, the Black Sea coast, and the Caucasus. But the Greek is pre-eminently the "Petit commercant." Few of these colonists will take to the land; they will mostly congregate in the towns.

Meanwhile, the greater part of Thrace is a desert. The valley of the Maritza, which as a fruit-growing district alone should be able to beat the Okanagan Valley in Canada, is only half cultivated, and that poorly. One wonders when these people will see that, instead of being naturally antagonistic they are, in fact, complementary. Turk and Bulgar make excellent neighbours in Bulgaria: they both till the soil, and the Greek buys and sells the produce. Perhaps some day they will realise that, together with the fact that, in the eyes of the world, their quarrels and racial jealousy are infantile and absurd. The United States, for example, are faced with the same problem on a far greater scale—only the Americans realised long ago how impossible existence would be under the circumstances, and therefore, have refused to submit to it.

NOTES AND NEWS.

Devonshire Square.
E.C. 2.

Greece's Forced Loan.

The failure for the time being of the negotiations for a Greek Loan in this country meant, as I pointed out recently, that Greece would have to rely on its resources and it was assumed that an internal loan would be raised. For some obscure reasons this obvious course—obvious because while Greece as a nation is in financial straits Greeks individually are well able to supply the required funds—has not been followed, and recourse has been made to the extraordinary expedient of a forced loan to cover the Budget deficit. This loan is to be raised through the medium of the notes of the Banque Nationale, which are to be cut in half, one half being left to circulate while the other half will represent a seven cent bearer bond of the loan. According to the last balance sheet the notes of the Banque Nationale amounted to 2,433,638,011 drachmae, and as the amount of the forced loan has been fixed at a milliard and a half drachmae it is obvious that this total would not give the required results. A Bill has, however, been introduced authorising the issue of new notes to the value of 550,000,000 drachmae thus bringing the note issue to roughly the requisite total.

Its Effect.

Explaining the adoption of this expedient the Greek Finance Minister stated that the issue of new bank notes would have resulted in the depreciation of the drachmae to 200 or 250 to sterling, while with the course followed Greek currency would lose nothing of its value. With the first part of this statement I am in full agreement, but it is very open to doubt whether the forced loan will not have in the long run at least as adverse consequences. I have not the space at my disposal on this occasion to enter into the position of Greece's finances at length, and must content myself with pointing out that the effect of the loan is to undermine that part of the Greek currency which is least depreciated.

Rupee Exchange.

At the meeting of the National Bank of India the deputy chairman, Mr. Robert Williamson, dealt in the course of a very interesting speech with the exchange question. He pointed out that while the Government had given effect, on paper, to the Currency Commission's recommendation of a 2s. rupee it had never come into operation, and he urged its replacement by the 16d. rupee. The statutory rate, he stated, had proved a real hindrance to trade "Indian merchants having frequently made use of it as an excuse for delay in taking delivery of goods which had arrived at their destination in fulfilment of contracts previously entered into, which, in their view, might well be ignored until a purchase of exchange at the Government rate of 2s. could be effected." Mr. Williamson's views on the exchange entirely agree with what I have said in these columns on many occasions. It is generally recognised now that a very grave mistake was made in altering the parity of the

rupee, and common sense would suggest that the only sound course would now be *revocare gradus*.

Outlook for Indian Trade.

Mr. Williamson does not take a promising view of the general outlook, though he stated that he had noticed a slight improvement in the finance aspect, and hoped for some further expansion in that direction. He commented also on last year's favourable monsoon, and pointed out that very abundant crops had been secured. In his opinion the prevailing unrest is in some degree due to unsatisfactory economic conditions, and he hopes for "a very marked change for the better to follow on the marketing of these large crops."

Conditions in Eastern Markets.

Sir Montagu Turner at the meeting of the Chartered Bank pointed out that the past year had been one of great difficulties for those trading with the East. Two principal causes, he remarked, had hindered the absorption of old accumulated stocks in India—political agitation, and the maintenance of the rupee at a low level. "The inflexible law of supply and demand, the control on the export of rice and wheat, and the absence of European demand for other Indian commodities resulted in an adverse balance of trade to India, and rendered a high rate of exchange absolutely out of the question." Sir Montagu pointed out that the new rate of exchange had been a blessing to the tea industry and had rendered business possible in other lines of produce. As regards the outlook he takes the view that provided the Government act consistently with firmness and justice there is no reason to view the situation with undue apprehension.

The P. and O. Dividend.

The declaration by the Peninsular and Oriental Steam Navigation Company of the same interim dividend as a year ago is of considerable interest from the light it throws on the effects of present conditions in the shipping industry. Evidently despite the depression the leading companies are holding their own if they are doing nothing more.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

ROUMANIA.

Bucharest March 31.

Recall of Commercial Attaches.

For reasons of economy, besides the temporary closing down of the legations in Portugal, Holland, Spain, Norway, Finland, Japan, and Egypt, the Roumanian Government has decided to recall on April 1 a large number of her Commercial Attachés from abroad. Only the Commercial Attachés at Paris, London, Hamburg, Vienna, Prague, Athens and Budapest will be kept in office.

The New Budget.

M. V. Bratianu, the Minister of Finance, has drafted a temporary Budget showing revenue and expenditure balanced at 10½ milliard lei. M. Bratianu intends to introduce it into Parliament in the course of the next few days, when he is expected to give a detailed survey of the general financial situation of the country.

New Import and Export Regulations.

The Government is now drawing up new import and export regulations, which, however, will not come into force until ratified by Parliament. According to the proposals only raw materials and articles of the first necessity which cannot be produced in the country may be imported. The import of luxury articles will be strictly forbidden, thereby abolishing the present system of special taxes for such articles.

The position with regard to exports will be practically the same as before. The list of exportable goods, however, will be definitely fixed, but increased as much as possible. Those articles which are needed for home consumption and are not produced in sufficient quantities for export will be placed on the list of prohibited exports. Until the new regulations are voted by Parliament, the State will make use of the old system but with such modifications as are considered necessary.

Export Taxes in Gold.

The Ministry of Finance has issued an order to the different Custom-Houses at the frontier that, beginning from April 1, all export taxes for grain and its by-products, leguminous produce, petrol and timber shall be collected either in gold currency or in the currency of the country where the goods are exported to. The parities of these foreign currencies have been fixed by taking the rate of exchange of the dollar as the gold standard, and are subject to alteration every month according to fluctuations in the rates of exchange. Naturally, for exports to countries with a depreciated currency, such as Germany, Austria, Poland, Hungary, Russia and Bulgaria, the taxes will be levied either in gold, or in any one of the dear currencies or in lei at a rate equal to the gold standard. The object of this

measure is to enable the State to obtain foreign currencies which it requires for payments abroad.

Miscellaneous.

As almost all commercial conventions between Roumania and other countries will lapse during the month of April, imported goods from these countries will be subject to the general duty tariff. It is not possible to renew these conventions owing to the fluctuations in the value of the goods as well as in the rates of exchange.

It is reported from Braila that last week several boatloads of maize left for Odessa to be distributed by the International Relief Society among the famished population of Russia.

The Compensations' Department at the Ministry of Finance, in making out a statement of compensation due to the Roumanian State in connection with the evacuation to Moscow of the Roumanian Treasury, jewellery and other valuables, has estimated its total value at 7½ milliard lei.

An international conference will be held on April 1 at Bucharest for the purpose of regulating different questions concerning the Danube navigation. This conference will be attended by the representatives of Great Britain, France, Italy, Germany, Roumania, Austria, Yugoslavia, Czecho-Slovakia, Hungary and Bulgaria, and will be presided over by M. George Popescu the Secretary General of the Ministry of Communications.

It has been decided to amalgamate the two Ministries of Agriculture and Domains into one under M. Al. Constantinescu.

MESOPOTAMIA.

Baghdad, March 17.

Cheaper Oil for Cultivators.

A good deal of interest has been evinced of late in the price of oil in and around Baghdad, and especially in that of the particular grade of kerosine known as *galyan* which is used by the cultivators as fuel for their pump engines. The capricious nature of the rainfall in southern Iraq makes cultivation without irrigation a very speculative proposition, and for some twenty to twenty-five miles north and south of Baghdad there are to be found large numbers of pumps worked by oil engines which act as a supplement to rain in the case of the winter crops and as the sole source of irrigation in the case of the summer crops. During the war when with a big garrison in the country there was a big demand for garden and other agricultural produce, and prices were high the cultivators made big profits, but with the departure of a large part of the garrison, coupled with the big fall in prices which has taken place in almost all countries during the past few months, cultivators are finding it very difficult to make both ends meet, and they have clamoured for a reduction in the price of oil which is one of the principal factors in their cost of production. After several conferences between the Director of Agriculture, the Minister of Commerce and representatives of the Anglo Persian Oil Company in which the present situation was thoroughly thrashed out the Anglo-Persian Oil Company has made a big reduction in the price of the particular oil used by the cultivators, and it is hoped that they will now be in a position to earn a reasonable reward for their labours in spite of the low prices now obtaining for their products.

Bumper Harvest Expected.

Heavy rain a day or two ago has made the harvesting of a bumper crop of wheat and barley almost a certainty and prices of grain continue to fall.

Commercial Correspondence.

BRITISH TRADERS AND THE NEAR EAST.

To the Editor of "The Near East."

Sir,—I am writing to draw attention to the deplorable way in which British trade interests in the Near East have been, and are being, neglected, in the hope that I may be able to impress upon our traders through your columns the absolute necessity for cultivating the Near Eastern markets. The idea prevalent among a section of British traders that when enquiries reach them from the Near East they should be turned down indiscriminately simply because they come from that part of the world is a hopelessly mistaken view, and one which is doing very great harm to British interests. A very large business can be done with the Near East with absolute safety, especially if it is done through the medium of local British firms of which there are so many.

I would urge British firms desirous of extending and developing their businesses with centres like Constantinople and Smyrna to make arrangements with British firms to represent them. With the advent of more settled conditions in the near future, to which it is happily possible now to look forward with confidence, a rapid improvement of trade is to be anticipated, and, of course, a much enlarged scope for Great Britain in the Near East, since British manufactures are always given the preference if possible. But if we are to take advantage of the opportunity there must be an end of the proverbial shyness of the Near East, and also of entering the market by the only practical method which I have indicated.

Yours, etc.

Trader.

London, April 7.

"THE COLONIZATION OF PALESTINE."

To the Editor of "The Near East."

Sir,—I should be glad if you would again allow me to encroach upon your space to say a few words in answer to the somewhat fiery letter of your correspondent Mr. Myers. While his facts are, in the main, correct, I would like to draw his attention to the fact that he has entirely missed the point I wished to emphasize.

I have the very greatest admiration for the type of Jew to which he refers, namely the original pioneer, who settled in Palestine thirty years or so before the war and developed the country in such a creditable manner. My point was that the right type of Jew, in the main, is not being sent to Palestine. I have seen many intending candidates of which too many were doubtful characters, chiefly from the slums of the big cities of Poland. He will, I feel sure, agree that such people would not improve the country.

Moreover, I have spent four years in Palestine and know what type of Jew is there at the present time.

Of the Jaffa riots I am well aware, and have taken that incident into consideration. The right type of Jew, of which there is a large proportion in the country, undoubtedly lived up to the traditions of his forefathers, but I do not think that the Jew whom I met in Europe would acquit himself in like manner under such circumstances.

If Mr. Myers will carefully read my letter again he will observe that I stated that Palestine owes its prosperity to the pre-war Jewish colonist. I have no doubt that a large proportion of the "haluzim" of to-day are of the right type, and if the bad characters are prevented from spoiling the reputation of the rest, the country will become a real credit to those who are and have been instrumental in its development.

In my letter I urged co-ordination between Jew and Moslem. Mr. Myers will, I feel sure, concede that the Arab must always play an important part in the destiny of Palestine; he may not have done much for the country but he has, nevertheless, a right to live there.

I agree that the Turk also has not exerted himself in developing the country and I did not suggest that he should continue to be allowed to "mismanage" it. What I did say was that he cannot be overlooked in the scheme of things. When a country is conquered it is usual for the conquerors to continue to allow the defeated to live there. The mere fact that the Turk placed no obstacle in the way of the Jews in their foundation of settlements only shows his national characteristic manner. He always prefers others to do the work for him.

In common with many who view the situation from London, Mr. Myers only sees one side of the question.

Yours, etc.,

WILFRED ROSEN,
Late H.B.M. Consulate General,
Frankfurt-am-Main.

London, April 1.

RADIUM MONOPOLY IN CZECHO-SLOVAKIA.

The Czecho-Slovakian Government will shortly submit to the National Assembly a Bill, in accordance with which the State reserves to itself the exclusive right of exploiting the radio-active resources of Czecho-Slovakia. The Bill applies not only to the ores which have already been monopolised, but in a general way, to all those which contain radio-active elements. The State itself will take charge of production, or else will entrust it to private concerns which will undertake to dispose of the manufactured products to the State. The radium produced at Jachymov in Czecho-Slovakia is the purest in the world. It contains very little mesothorium which disappears in less than six years. The mines at Jachymov produced 1.1 grammes of radium in 1919, 2.2 grammes in 1920, and 3.2 grammes in 1921, so that at present Czecho-Slovakia possesses six grammes of radium. The purpose of the monopolisation is to utilise the radium for scientific research and medical uses.

BROADENING OF BUSINESS.

War Loan over 100.

(From Our Own Correspondent.)

London, Tuesday morning.

It has been another excellent week for the markets; in fact business has been brighter than for many months. This time it has not been merely a case of buoyancy in Gilt-edged; there has also been a very welcome broadening of business in which Oils, Industrials, and even Rubbers have shared. The factors responsible for this development are those to which I have already referred—expectations of a reduction in the income-tax and a lower Bank rate, and the hope that things generally are beginning to settle down.

Czecho-Slovak Loan Success.

The Czecho-Slovak Loan of £2,800,000 in Eight per cent. sterling bonds, which made its appearance last week, was a most conspicuous success, the lists being closed early in the morning of the opening day Czecho-Slovakia, it may be pointed out, has been able to obtain this accommodation because of the general position in the country. It has been made abundantly evident that those in charge of the destinies of Czecho-Slovakia are concentrating on reconstruction on sound lines, and this has naturally inspired confidence abroad. It is an object lesson for countries who have been trying to obtain loans here in the last few months without success. Another loan for Czecho-Slovakia is on the tapis, this being one for the city of Prague, negotiations for which, it is understood, are now in progress. The result of the failure of the Greek Loan negotiations is to be seen in the forced loan which the authorities have introduced. According to the telegrams this expedient has proved wonderfully popular with the Greeks, but it cannot be said that it has gained any eulogiums in financial circles in this country.

Gilt-Edged Buoyant.

Gilt-Edged have continued their upward movement. Consols are $1\frac{1}{2}$ up at 58 $\frac{1}{2}$, War Loan Fives are now 101, a gain of 1.11-16, while the Conversion Loan at 74.5-8 shows a gain of 11-16. I expect to see the Conversion Loan go still higher. Indian stocks have been very strong, and substantial advances are to be recorded. The Seven per cent. Loan at 111 is 2 up, the 3 $\frac{1}{2}$ per cent. Loan is $1\frac{1}{2}$ up at 64 $\frac{1}{2}$, while the 3 per cent. Loan at 55 $\frac{1}{2}$ shows a rise of 2.

By contrast with other markets a rather inactive tone has ruled in foreign descriptions, though here and there stocks are the turn higher. French War Loan Fives are $\frac{1}{2}$ up at 45, while German three per cents. are 3-16 up at 2 $\frac{1}{2}$. Italian Rentes are unchanged at 23 $\frac{1}{2}$. Mexican securities have again been in some request, with the Four per cents. of 1904 3 up at 62. Dealings have commenced in the new Czecho-Slovak bonds which are closing at a premium of $\frac{1}{2}$.

Industrials Better.

After weeks of restricted business considerably more activity

was in evidence in the Industrial group, and a very cheerful tone has prevailed with prices moving upwards.

Textiles have been in fair request with Coats at 3.1-32, a rise of 3-32, while Courtaulds are 1s. 6d. up at 38s. 9d. Iron and Steel securities have continued in good demand. Vickers are 2s. 6d. up at 12s., Armstrongs have gained 1s. 6d. at 16s. 6d., while Guest Keens are 1s. 9d. up at 32s.

A firm tone has prevailed in shipping securities with P. and O. Deferred a feature at 315s., an advance of 18 on the week. By a printer's error I was made to give the price of the share last week at 27s. My attention was drawn to the matter by a humorous correspondent who informed me that he was a firm buyer of them at that price. Cunards are 20s. 3d., a rise of 1s. 6d.

Oils Firm.

Business in Oils has widened considerably during the past week, and all round the market prices have reached higher levels. Burmahs have been in some request, and at 5.27-32 show a gain of 15-32. Anglo-Persian Ord have been a strong spot and close 7-16 up at 4.7-16. Mexican Eagles, after being considerably higher, close at 3.11-32 a gain of 1-16.

Among Egyptians, Anglo-Egyptian B are 1.11-16, a rise of 3-16, while Oilfields of Egypt are 3d. down at 4s. 9d. Roumanians have again been a firm spot. Phoenix at 27s. 9d., a price something like 3s. below the best touched during the week, are 1s. up. Steaua Romanas are 14s. 3d., a rise of 1s. 3d., Dacia Romanos are unchanged at 11-16, while Roumanian Consolidated are 14s. 6d., a gain of 9d.

ANSWERS TO CORRESPONDENTS.

Inquiries on financial subjects are invited from our readers, and will be answered in this column.

V. Lack of space prevents us from publishing the usual lists of stock and share prices at present, but it is hoped to resume their publication later on. The price of Buckingham and Carnatic Cotton Mill Co. Ord was Rs. 175 on March 8.

Engineering Topics.

By Our Engineering Representative.

Victaulic Pipe Joints.

I recently had my attention drawn to the Victaulic pipe joints, made by the Victory Pipe Joint Co., Ltd., and so struck was I with the claims made that I took the earliest possible opportunity of examining the matter for myself in order to form an independent judgment.

Every engineer is aware of the merits of the "U" washer, the most simple hydraulic sealing device yet made, which is used in hydraulic pumps and other machinery, and which has the property of self-tightening. In other words, the greater the pressure applied the greater is the washer's resistance to leakage, up to the limits of its mechanical strength and the strength of its surroundings. The Victaulic pipe joints, under the Hele-Shaw and Tribe system, embody the self-sealing effect of the U-washer without its few shortcomings. It is remarkable in making a perfect seal against any pressure from zero upwards and also against a vacuum. Moreover, it is naturally flexible, and makes provision for either expansion or contraction, and further, is neat, easily applied, readily removable, and does not necessitate expensive machinery, screwing, or special designing of the ends of the pipes with which it is used.

The Victaulic flexible leak-proof ring is surrounded by a retaining shell. The ring has two inturned conical lips which grip tightly on the pipes and as the actual pipes do not meet with an absolutely sealed effect the gas or fluid gains access to the inner portion of the ring and forces the lips on to the surface of the pipe itself. In action it is consequently subjected to compression only, and is never in tension. As the pressure rises this compression increases; it is impossible for tension to be exerted upon it and for rupture to occur. The principle therefore is that the determining factors as to the strength of the joint are the strength of the outer shell and the pipe itself.

A Leak-proof Joint.

I have seen joints of this description subjected to a pressure of many tons to the square inch without the slightest trace of leakage being detectable. The inturned lips exercise an initial grip on the pipe as they are placed in position, and the joint is consequently leakproof at zero as well as when under pressure. There is a further feature which space forbids describing in detail, which gives rise to a perfect self-intensive sealing action at negative pressure and the joint is consequently perfect against a vacuum.

The flexible leak-proof ring permits the introduction of a small clearance between the housing and the pipe so as to give a slight angular flexibility. Pipes with the usual type of joint are generally so rigid that the bolts, bolt holes, or joints will break if the pipe is subjected to any bending strain, as when buried in ground that subsequently subsides, or when heavy vibration is met with. In the case of concrete pipes, with their strong rigid grouted joints this is especially evident; in the event of a subsidence the concrete pipe, which is actually weaker than its joint, fails by cracking. The Victaulic joint has sufficient "give" in it to prevent this, and even should the ground subside to a considerable extent the joint yields sufficiently to prevent damage to the pipe without impairing its leak-proof properties.

From this it will be seen that the new pipe joint, with its flexibility, alters the entire outlook on the concrete pipe system. Moreover, it presents a ready means of

"breaking" a joint for cleaning purposes, the replacement of a section, or the installing of a junction piece with far less cost or work than is necessary in the case of ordinary jointing. This feature in itself appeals to me considerably as I happen to know that a very large number of readers of *The Near East* are more than usually interested just now in the subject of concrete pipes.

Its Flexibility.

The flexibility of the joint, as I have said, also allows for expansion or contraction and each individual length of pipe is free to expand separately. As every engineer knows, with ordinary methods it is necessary to fit an expansion joint at regular intervals, otherwise trouble invariably results. The shortcomings of such a system may be seen in many an existing pipe line in the Balkans where, in certain situations, the pipe expands and increases in length appreciably during the day and contracts and shrinks during the cold of the night. With a pipe line fitted with the joints under review each individual pipe length in a hillside installation is only anchored at mid-length. It forms a separate unit, and is free to expand at both ends, each joint permitting expansion without any movement whatever at the point of anchorage. A further point, which many of my readers abroad will appreciate at its proper value, is that pipes for use with these pipe joints are free from flanges or even screw threads, and are accepted for freight and customs duty as raw material. Moreover they may be stacked into a relatively small space and where, as is usual, several sizes are needed they may be packed one inside the other, which again results in an appreciable saving in freightage costs.

"The Record-breaking A.C."

I have just received a letter from Mr. S. F. Edge in which he says:—"It is with great pleasure and some pride that I write to tell you that for the third week in succession the amazing A.C. Light Car has gone to Brooklands on the day appointed in advance and annexed the records it was asked to do without miss or falter. You know as well as I do, it is not easy to do this on one occasion but to do it three times in three weeks is an unheard of record. The same Sports model of standard chassis and engine type was employed of exactly the same lines as the public buy from the company in the form of Sports, Two Seaters, Coupes or Four Seaters. As usual, Mr. Kaye Don was kind enough to drive for me, and in this latter case he was assisted after the two hours by J. A. Joyce, as Mr. Don was suffering from a nasty motor cycle accident sustained the day before, but he still insisted on driving as he had arranged. It is the A.C. spirit to do things on the day arranged for and in the manner promised that has brought these successes."

As a matter of fact the A.C. has been doing some very remarkable things lately and I shall watch future developments, as will, no doubt, my readers also, with more than usual interest.

A New Switch.

The need for a quick make and break switch for domestic lighting work was not so pressing before the advent of the metal filament and gas filled lamps. Now, however, such a switch, is a necessity, and I note that one has just been brought out regarding which I hope to have more to say in the near future.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet with the Books in London and the certified Returns from the Branches. We have obtained all the information and explanations we have required. In our opinion such Balance Sheet is full and fair, containing the particulars required by the Regulations of the Company, and is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

Company Meetings.

NATIONAL BANK OF INDIA.

Trade Outlook in the East.

The Exchange Position.

The ordinary General Meeting of shareholders of the National Bank of India, Limited, was held on April 4 at the Wesleyan Hall, Bishopsgate.

Mr. Robert Williamson (deputy-chairman) presided.

The General Manager (Mr. C. Nicoll) having read the notice convening the meeting and the report of the auditors, the chairman said:—Ladies and gentlemen, I presume that, as usual, the report may be taken as read.

I much regret that owing to long-continued indifferent health, making it difficult for him to move about either easily or with comfort, our chairman is obliged to be an absentee, and, I need not say, a very unwilling one, from to-day's annual meeting of shareholders. I would like, however, to tell you that he still takes a very keen interest in the affairs of the bank and its welfare, and is quite fit to do so. The telegrams received and dispatched from and to all our branch offices are sent to him every day, so that he is informed of all that is going on, and his advice is at all times at our disposal. We would be greatly delighted to see him in the bank again, and we look forward to having this pleasure by and by.

You will miss to-day our late general manager, Mr. Henry Chalmers, who since June 8, 1920, was also a member of the board, and to our deep regret died in a nursing home in Aberdeen on August 31 last year. He was taking his usual summer holiday during the last days of which he was seized with illness, necessitating a surgical operation—without, unfortunately saving his life. Mr. Chalmers had been connected with the bank for 44 years, for 16 of which he held the important position of manager of our office in Bombay, where his work for us was markedly successful. The last 19 years had been spent at the head office here, first as London manager, and since January 1, 1914, as general manager, both of them positions of great responsibility, and as the chairman has often told you, these burdensome duties were at all times well and ably handled by him.

A suitable expression of sympathy was sent to his widow and family by the directors, and, consequent upon his death, we have made the following appointments:—Mr. Charles Nicoll, who has successfully filled the post of London manager for nearly eight years past, was promoted to the post of general manager, and Mr. J. Y. Munro to that of London manager, whilst Mr. W. J. K. Hegarty, who was manager in Calcutta, has been made an inspector of branches, but is meantime retained in London. These gentlemen are well known to us, have been in the bank's employment since the days of their youth, are experts in business of the type carried on by us, and we feel that our affairs have been entrusted to competent hands in all respects.

Eastern Markets.

When I was addressing you 12 months ago I spoke of Eastern markets being overloaded with supplies of goods of a very miscellaneous character, also of stocks of produce from India and East Africa—skins, hides, cotton, etc.—stored in this country and in America waiting demand from consumers, and I expressed the opinion that the liquidation of these operations would call for the exercise of much patience and require considerable time before it was brought to a close. I am glad to tell you that satisfactory progress has been made in this work and that any losses to us connected with it have been fully provided for.

To-day it will not be out of place for me to refer briefly to some of the figures in the accounts which are in your hands, and in doing so I would draw your special attention to the fact that in view of the lower rate of exchange now ruling we have considered it advisable to revert to our practice of converting all rupee assets and liabilities at an exchange of 1s. 4d. per rupee. Those rupee assets and liabilities appearing in the previous balance-sheet of 1920 were taken at the statutory rate of 2s. per rupee, and this fact must be borne in mind when making a comparison between the figures of 1921 and 1920. The difference of 8d. per rupee pretty well explains the disparity between certain items, and I may say that taking 1920 figures on the same basis as that adopted for 1921 there is really very little difference between them.

The Accounts.

Touching briefly on the principal items, our cash balance of £6,236,423 can easily be augmented from our holding of securities, which total £5,000,000, many of which are short dated, and I may also mention in this connexion that we have a large holding of Indian and Home Treasury short-dated bills, so that a considerable proportion of our assets is in a very liquid form. Our securities, you will be pleased to hear, stand in our books at a figure materially below their present market value.

House property, as I explained last year, is an increasing item at present, but we are pursuing the policy of many years' standing, and are again proposing an appropriation from profits of £20,000 towards the reduction of the cost of same.

As regards bills of exchange and discounts, loans, etc., there is a reduction due to liquidation of outstandings on the other side and to the restriction in exports and imports, which has been a notable feature in the business of the last 12 months. For the same reason, acceptances on behalf of customers show a marked decline.

Turning to the other side of the balance sheet, the only item—and that an important one—which calls for comment is that of current, fixed deposits, and other accounts, and there I am glad to be able to say that an actual comparison on a 1s. 4d. basis shows that the figure of £34,295,599 is within about £400,000 of the figure for 1920, a feature which altogether I look upon with satisfaction.

The final results of the year's business show a profit of £555,063. 15s. 8d. after making provision for all bad and doubtful debts, to which there falls to be added £149,031 17s. brought forward from our last accounts, making a total of £704,095 12s. 8d. No half-yearly statement was issued to you in 1921—that practice is now at an end—but on September 20 last we paid an ad interim dividend of £1 5s. per share, or 20 per cent. per annum free of income tax, which absorbed £200,000. The directors now recommend payment of a final dividend at the same rate, and an addition of £100,000 to the reserve fund, raising it to £2,600,000. They also propose to write £20,000 off house property account and to add £20,000 to the officers' pension fund, leaving a balance of £164,095 12s. 8d. to be carried forward.

I venture to suggest that the results which we have been able to place before you, considering the adverse conditions with which we had to contend, are most satisfactory and encouraging and I feel confident that you also will so look upon them.

Currency and Exchange.

I commented at some length at our last annual meeting on matters of currency and exchange. As regards East Africa, which is also a sufferer from acute depression in trade, a great change has taken place within the last 12 months. The rupee has been demonetized in the colonies of Kenya, Tanganyika, and Uganda, and the coins have already been returned to India. The silver florin—the successor of the rupee—has also been put aside, and the currency is now the "shilling"—a coin applicable to these colonies only. These changes have been made on the authority of the Secretary of State for the Colonies and his advisers, and nothing need be said on the subject. It remains to be seen what effect they will have on the prosperity of the colonies concerned.

As to India, it is sufficient to point out that the statutory rupee remains at 2s. with Rs. 10 the equivalent of the £ sterling. This was a part of the scheme of currency reform, the adoption of which was recommended by the Committee appointed to examine and report on the subject, and although the Government gave effect to it, on paper, perhaps fortunately it has never come into operation and might well now be replaced by the 16d. rupee, with which we were familiar for so many years, and which, moreover, is the basis which the Government have themselves adopted in framing their Budget for the current year.

The statutory rate has, indeed, proved a real hindrance to trade, Indian merchants having frequently made use of it as an excuse for delay in taking delivery of goods which had arrived at their destination in fulfilment of contracts previously entered into, which, in their view, might well be ignored until a purchase of exchange at the Government rate of 2s. could be effected.

Free from Government interference, the sterling value of the rupee is left to find its own level, and to-day's T.T. quotation is 1s. 3.3-16d.; a year ago it was 1s. 3½d.

Rupee Fluctuations.

Fluctuations in rates of exchange, also in prices of silver, have been much less violent than in 1920, and the market price appears to be settling down again to near 1s. 4d.

Exchange.		Silver, per oz.	
Highest.	Lowest.	Highest.	Lowest.
1920.. 2s. 10d.	Feb. 11.. 1s. 4½d.	Dec. 10	
1921.. 1s. 6½d.	Jan. 8.. 1s. 2½d.	March 5	
1922.. 1s. 3 15-16d.	Jan. 3	—	
1920.. 89½	Feb. 11	38½	Dec. 10
1921.. 43½	Sept. 27	30½	March 5
1922.. 35½	Jan. 9	—	

With the Indian mints still closed to the coinage of silver to the public it is strange that the country should continue to import this metal so extensively as is being done, and this, too, in spite of a large trade balance adverse to India.

The figures for 1919 and the last two years compare thus:—

April 1, 1919—March 31, 1920 (12 months), Rs. 88,00,00,000 in favour of India.

April 1, 1920—March 31, 1921 (12 months), Rs. 50,00,00,000 against India.

April 1, 1921—Feb. 28, 1922 (10 months), Rs. 34,00,00,000 against India.

It is clear, I think, that the imports of silver—the figures of which are as follows—are not being paid for by exports of goods, and presumably must be increasing India's indebtedness to Europe, chiefly to this country:—

April 1, 1920—March 31, 1921 (12 months), in value Rs. 11 crores.

April 1, 1921—Dec. 31, 1921 (9 months), in value Rs. 11½ crores.

and, deducting Rs. 6½ crores exported, the excess in imports is Rs. 15½ crores.

In the same period the imports of gold were of the value of Rs. 32 crores, and of the exports Rs. 37½ crores, the bulk going to America and Japan, an excess in exports of Rs. 5½ crores.

(Continued on page 509).

DIRECTORS' REPORT.

Presented at the Sixty-eighth Ordinary General Meeting, 5th April, 1922.

The Directors have now to submit to the Shareholders the Balance-Sheet and Profit and Loss Account of the Bank for the year ended 31st December last.

These show a net profit, after providing for all bad and doubtful debts, of £997,669 15s. 5d., inclusive of £209,601 9s. 11d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £787,669 15s. 5d., and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum, together with a Bonus of Six shillings and three pence per share, making Twenty and a quarter per cent. per annum for the whole year, free of Income Tax; to add £100,000 to the Reserve Fund, which will then stand at £3,700,000; to add £25,000 to the Officers' Superannuation Fund; to write off Premises Account, £50,000, and to carry forward the balance of £215,169 15s. 5d.

Mr. W. Foot Mitchell, Sir Montagu Cornish Turner, and Mr. Lewis Alexander Wallace, the Directors who now retire by rotation present themselves for re-election.

The Auditors, Mr. David Charles Wilson, F.C.A., and Mr. Henry Croughton Knight Stileman, F.C.A., again tender their services.

The Dividend and Bonus will be payable on and after Wednesday, the 12th April.

By Order of the Court, A. S. HEWETT, Secretary.

Outlook for Current Year.

On this occasion I am not able to describe our outlook for the current year as bright. So far as we have gone we have no reason to complain, but competition is keen and is more felt when the volume of business offering in the different markets is somewhat restricted, as has been the case in past months. Quite recently I have noticed a slight improvement in the finance aspect, both in imports and exports, and I hope for some further expansion in this direction. The balance of trade figures for February are only about Rs.60 lakhs adverse to India, compared with Rs.7 crores in January, and appear to be mainly due to a large falling off in imports. Last year's monsoon was particularly favourable in India, and very abundant crops of wheat, seeds, and cotton have been secured. From a cultivated area estimated at 29,000,000 acres in wheat a bumper yield may reasonably be expected, and after replenishing exhausted stocks in the country a fair supply should be available for export. In Burma, too, the rice crop is good, and shipments are now being made.

As you all know there is considerable unrest and discontent amongst the Indian population in widely separated districts, probably political in origin, but perhaps in some degree due to unsatisfactory economic conditions, extending over a considerable period of time, and I hope for a very marked change for the better to follow on the marketing of these large crops. This implies, of course, that buyers will be forthcoming, and that, again, is largely contingent on something like a settlement of the many difficult problems with which Europe is afflicted—all a legacy bequeathed to us by the Great War—but slow though it is, progress is being made in this direction, and I am not without hope that the troubles now surrounding trade conditions may gradually pass away.

Letters and telegrams to the bank say little or nothing of this unrest and nothing of the political movements in India, but in any case it is not in my province to discuss with you or comment upon matters of that type. Such knowledge of them as I possess is derived mainly from a perusal of our daily newspapers, which are available to you all.

Before bringing my remarks to a close I wish on behalf of the directors to give expression to our appreciation of the good services rendered to the bank throughout the past year under difficult circumstances by our staff both at home and abroad.

I beg to propose:—"That the report of the directors and statement of accounts for the year ended December 31, 1921, be received and adopted, and that a dividend for the six months to December 31, 1921, at the rate of 20 per cent. per annum be paid on the shares of the company registered at this date, the same to be payable, free of income-tax, on and after April 5, 1922."

Mr. Robert Miller seconded the resolution, which was carried unanimously.

The retiring directors (Sir John P. Hewett, C.C.S.I., K.B.E., C.I.E., Sir Charles C. McLeod, and Mr. J. A. Toomey) were unanimously re-elected, and the auditors (Messrs. Cooper Brothers and Co. and Messrs. W. A. Browne and Co.) were reappointed.

Vote of Thanks to the Directors.

Mr. A. W. Martin.—Ladies and gentlemen, I beg to propose:—"That a very hearty vote of thanks be given to the chairman and directors for the care and prudence exercised in conducting the affairs of the bank during the past year." I do not think there can be anyone in this room who knows the condition of things existing in commercial affairs, especially in the East, who cannot feel what a deep debt of gratitude we owe to the gentlemen we see before us. We have heard from the chairman the difficulties the directors have had to meet, and we have heard how they have overcome them, and I think that we here must all feel that we owe to these gentlemen a very great debt of gratitude for the manner in which during these very difficult times they have helped and steered the bank to great success.

Mr. J. J. Moore—I have much pleasure in seconding that resolution.

Mr. F. Tomkinson.—Mr. Chairman, I rise to support the resolution which has just been proposed, because, knowing something of India, I do feel that the shareholders of this bank are indebted to the directors and desire to show the great appreciation which is expressed in the resolution. The strenuous times which have prevailed for years past, especially during the war, and in no small degree since peace was declared, have meant that business has been conducted under considerable difficulties. I was very pleased to hear the chairman make a comment on the prospects for the ensuing year. He said that the crop prospects were good, and I do think that if there should be a favourable crop a great deal of the discontent to which he referred and which we all so much regret may be removed. I want heartily to support the resolution, because I feel that we are greatly indebted to the board and also to the managers, not only here, but also in India, where they are working under conditions which are very unpleasant.

The Chairman.—Ladies and gentlemen, on behalf of the board I desire simply to return your thanks. We will continue to do our best for you all, and I hope that if we are spared to assemble here next year we shall be able still to show you a fairly good state of affairs.

A vote of thanks to the staff, proposed by Mr. J. Irwin-Davis and seconded by Mr. James Sheriff and carried unanimously, was briefly acknowledged by the general manager, and the proceedings terminated.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA.

Conditions in Eastern Markets.

The Sixty-eighth Ordinary General Meeting of the shareholders of the Chartered Bank of India, Australia and China was held on April 5 on the bank's premises, 38, Bishopsgate, E.C.

Sir Montagu C. Turner (the chairman) presided.

The Chief Manager (Mr. W. E. Preston) read the notice convening the meeting.

The Chairman said:—Gentlemen,—Before dealing with the ordinary business of the meeting, I feel it would be only right to refer to the death, in October last, of our former chairman, Mr. John Howard Gwyther. He first entered the service of the bank in 1805, and was on the court of directors from 1887 to 1904, being chairman for the last eight years of that period. Mr. Gwyther was held in high esteem in the City of London as a banker of wide experience, sound judgment, and of the highest integrity. The bank owes much to Mr. Gwyther's sound, prudent, and able management.

The report of the auditors was then read by the Chief Manager.

The Chairman, continuing, said:—In moving the adoption of the report and balance sheet, I think I am justified in saying that, considering the conditions of trade and commerce which prevailed in 1921, the results disclosed therein may be considered as satisfactory. We have been able to make good use of the increased resources at our disposal consequent on the increase of the bank's capital; we show a moderate profit on our operations, and we give shareholders a reasonable return on their investment. At the same time we can assure them that all possible contingencies have been amply provided for.

Position in India.

The year 1921 has been one of considerable anxiety, of hope deferred, of frequent disappointment, and of unavoidable losses to most of those trading with the East. In India the absorption of accumulated stocks which might reasonably have been anticipated has been hindered by two principal causes. Political agitation, with unfair pressure on innocent traders, has at many points been exercised to prevent consumption of British goods—an agitation which should never have been permitted to assume the proportion it attained. The second adverse factor has been the maintenance of the rupee at a low level.

The inflexible law of supply and demand, the control on the export of rice and wheat, and the absence of European demand for other Indian commodities resulted in an adverse balance of trade to India and rendered a high rate of exchange absolutely out of the question. But this has not been an unmixed evil. A low rate of exchange, a rupee about 1s. 4d., has been a real blessing to the great tea industry of India and Ceylon, and has rendered business possible in other lines of produce. India has had a very favourable south-west monsoon, good winter rains in the United Provinces and the Punjab, and granted a return to normal peace conditions with a good south-west monsoon this year, we may look forward to greatly improved trade conditions in the autumn.

As regards the position in India generally, I am disposed to take the view that, provided the Government of India act consistently with firmness and justice—as I believe they will—there is no reason to view the situation with undue apprehension.

Aftermath of the War.

In all parts of the world, East and West, even in England itself, we have a widespread spirit of restlessness and discontent. There is a craving for change, a desire to attain what is in many cases unattainable, and a tendency to oppose all existing form of government. This is an aftermath of the Great War, and only time, with universal peace and good will, can bring about the contentment and good-fellowship which should prevail between nations and between the component parts of those nations. This is especially applicable to India, and I look forward with confidence to the time when we can say that the people of India are showing that spirit of loyalty, comradeship, and good will which should exist between all members of the British Empire. But to effect this we must have consistency in policy and firmness in administration. I do not deny that there are troubles at some points, serious troubles, in India, but they are partly agrarian, and can be dealt with by a just and firm Government. The conclusion of a peace with Turkey on liberal lines, as recently outlined by Lord Curzon, will also help to alleviate the present strain.

Tea Industry's Recovery.

In China the offtake of imported goods has also been interfered with by extremely unsettled conditions in the interior of the country, and by the comparative low rate of exchange. Serious losses have resulted, but the position has improved of late, and stocks are moving off gradually. Some time must elapse, however, before the position of the import markets, either in India or China, can be regarded with equanimity. It is satisfactory to note that the tea industry has wonderfully recovered from the position of adversity which overshadowed that most important asset in the trade of India and Ceylon.

Rubber, I regret to say, is still in a very unhealthy condition, and a return to paying prices has not yet been accomplished. Tin as a commodity has depreciated in value, and with the failure of these two principal sources of prosperity the financial position of the Federated Malay States and the Straits has suffered acutely.

Summarizing the position of the Eastern markets generally, we may say that, while export markets mainly show very little life, import markets have improved to the extent that accumu-

lated stocks are being gradually worked off, but it would be absolute folly on the part of shippers on this side to pour in fresh supplies which are not needed. The motto for all of us should be "slow and sure" until the dark clouds of depression have disappeared, and the purchasing power of consumers has attained more nearly to normal levels.

The Balance Sheet.

Turning to the figures in the balance-sheet, I think we may congratulate ourselves that, in spite of the heavy decline in the world's demand for raw produce and resultant reduced volume of our Eastern and Far Eastern export trades, our total figures only show a fall of just over £9,000,000 as compared with the corresponding figures for the previous 12 months—viz, from £70,932,744 15s. 10d. at the end of 1920 to £61,767,780 18s. 8d. at the close of 1921, particularly having in view the very considerable fall in Eastern and Far Eastern sterling exchanges which has taken place during that period.

Our total cash and bullion in hand at the close of the year, which amounted to £7,138,300 1s. 4d., represented a ratio of 27 per cent. as compared with our current account liabilities, standing at £26,301,204 12s. 2d., whilst, in addition, we held Government securities to the value of £9,432,796 8s. 8d., as against £3,081,090 10s. 7d. on December 31, 1920, and our policy in thus employing our surplus fund has, by course of events, been fully justified. Above and beyond this, our holdings of bills of exchange, including Treasury Bills, amounted to £16,422,953 10s. 10d., so that our liquid position was most satisfactory. Our bills discounted and loans outstanding, at £22,426,953 10s. 10d., as against our total assets, showed a reduction of about 4 per cent. as compared with the same period of last year—viz., from 40 to 36 per cent.

Our fixed deposits, standing at £16,648,153 3s. 9d., as against £16,628,534 17s. 4d. as at December 30, 1920, show a slight increase, which, in view even of the fall in exchanges, is exceedingly gratifying.

Dividend and Bonus.

As regards the report, it will be seen that the directors recommend the payment of a final dividend at the rate of 14 per cent. per annum, together with a bonus of 6s. 3d. per share, making, with the interim dividend, 20½ per cent. per annum, free of income tax, to add £100,000 to the reserve, £25,000 to the officers' superannuation fund, to write off premises account £50,000, and to carry forward £215,169 15s. 5d.

■ We must all congratulate Mr. Preston and his colleagues, Mr. Bruce and Mr. Miller, on the results obtained. We thank them, and every member of the staff at home and abroad, for their loyal and devoted services to the bank.

■ With these remarks, I move, "That the report now presented, together with the balance-sheet and profit and loss account, be approved and adopted," and I will ask Lord George Hamilton to second it.

The Right Hon. Lord George Hamilton, G.C.S.I., seconded the resolution.

A Shareholder's Congratulations.

Mr. Frederick Tomkinson asked whether the British Government securities held to such a large extent by the bank were valued as at December 31 last, or at the lower price at which they were purchased, because in the latter case, that would mean the existence of a very large reserve for which there was nothing shown in the accounts. He added that he wished to express the appreciation which, he felt sure, those who were present must have for the lucid, clear, and very helpful speech which Sir Montagu Turner had delivered to the meeting. It was a great help to them in enabling shareholders to understand the position, and in throwing some light on the work of the bank, which had been so successfully carried on during a very difficult and a very strenuous year. He was sure they all felt deeply grateful to the management and staff, both here and abroad, for what they had been able to do. There was one comment he would like to make. The chairman had touched on the political position, and in that he (the speaker) thought the chairman was quite right. Quite recently he heard a chairman say it was not his mission as chairman of a bank, to make any reference to politics at all. In so far as politics were outside the bank's business, he quite agreed with that, but he was entirely with Sir Montagu, when the welfare of the people and the trade of the country, both of which were intermixed, were dependent on politics, and he thought the chairman was quite right in expressing the hope that firm government would be maintained in India for the good of that great Dependency. The agitators had certainly been somewhat less active since Gandhi's seclusion.

The Chairman, in reply, said that the Government securities appearing in the balance-sheet had been taken at the market price on December 31 last. The only criticism he had had was on a post-card received that morning from a lady, who suggested that the March dividend—he presumed by that she meant the dividend they were about to distribute—should be paid in March. Considering the accounts of the bank had to come right from the North of China, from Japan, Java, Manila, and America, shareholders would understand that it was impossible to expedite the receipt of those accounts more than was done at the present time. The meeting was called, and the dividend paid at the earliest possible moment. Another suggestion was that the interim dividend should be increased. He presumed that the lady shareholder forgot that they paid the same dividend in this half-year as in the first half-year, but in the second half-year the shareholders also received a bonus. They would quite understand that the bonus question could not be decided in the middle of the year, when they had only worked out six months of the full period. The lady very gratefully went on to say

that all connected with the bank deserved the highest praise for the very excellent results shown.

The motion was then put to the meeting and carried unanimously.

On the proposition of the Chairman, seconded by Mr. Thomas Cuthbertson, it was unanimously resolved:—"That a dividend at the rate of 14 per cent. per annum for the half-year ended December 31 last, together with a bonus of 6s. 3d. per share, both free of income-tax, be now declared, payable on and after the 12th inst."

Sir Duncan Carmichael proposed the re-election of the retiring directors (Mr. W. Foot Mitchell, Sir Montagu Cornish Turner, and Mr. Lewis Alexander Wallace).

This was seconded by Mr. J. M. G. Proffit, and carried unanimously.

On the motion of Mr. H. B. Henley, seconded by Mr. W. F. Green, the auditors (Mr. D. C. Wilson, F.C.A., and Mr. H. C. K. Stileman, F.C.A.) were unanimously re-appointed.

A vote of thanks to the directors and staff, proposed by Mr. R. Fergusson Banks and seconded by Mr. Tomkinson, was unanimously accorded, and after a brief acknowledgment by the chairman the proceedings terminated.

SUDAN LOANS.

On the motion for the second reading of the Government of the Sudan Loan (Amendment) Bill on April 5.

Mr. Hilton Young, Financial Secretary to the Treasury, said the Bill did not involve the raising, even by the Sudan Government, of any fresh money, but merely the reallocation of certain moneys which had been already raised. In the past they had passed several Acts authorizing the guarantee of interest on loans to the Sudan Government. In the last Act, in 1919, they guaranteed the interest on a loan of £6,000,000. Of that amount £4,900,000 was allocated to the Gezireh, or Blue Nile, dam scheme, £700,000 to the extension of the Sudan Railway, and £400,000 to the Tokar Railway scheme. The scheme of finance had been somewhat altered by events. The requirements of the Tokar scheme had been met by building a light railway, which had been financed entirely out of the revenues of the Sudan. In consequence, the £400,000 allocated by the 1919 Act was no longer required for that purpose. The funds originally provided for the Gezireh dam scheme, however, had turned out to be inadequate, principally in consequence of the war, and the increased cost of labour and material. The only purpose of the Bill was to reallocate the £400,000 in question to the urgent necessities of the Gezireh dam scheme. Large questions of policy were still involved in the completion of the Blue Nile scheme, both from the engineering and the financial point of view, but the present Bill in no way prejudiced the decisions yet to be taken.

Replying to the points raised, Mr. Hilton Young said, that the scheme was full of the greatest commercial promise for the cotton industry. A vast area could be brought under cotton production by means of hydraulic works. Many big private commercial enterprises had already risked large sums. There had been disappointments, which had made it necessary to conduct a very close and searching inquiry into the whole future of the scheme. A report had recently been obtained on the commercial, financial, and engineering prospects of the scheme and as to what was to be done in the future. That report had been received during the last few days, but it would be premature to make a statement at present.

The second reading was agreed to.

The Royal Exchange Assurance recommends a dividend of 9 per cent., making 16 per cent., less tax for 1921.

The Traffic receipts of the Smyrna-Aidin Railway for the week ended March 25 amounted to £7,388.

The Minister of Finance has ordered that henceforth all goods imported into Czecho-Slovakia must be paid for in the currency of the country of origin. This order will not affect British merchants who have always insisted upon payment in sterling. It will however affect German and Austrian exporters.

LEGAL NOTICES.

MILTIADES JOHN COSMETTO, deceased,

Pursuant to the Statute 22nd and 23rd Victoria, Chapter 35, intituled "An Act to further amend the Law of Property, and to relieve Trustees."

Notice is Hereby Given that all creditors and other persons having any debt, claims or demands against the Estate of Miltiades John Cosmetto, late of No. 15 St. Mary Axe, in the City of London, Company Director (who died intestate on the 17th day of February, 1922, and Administration of whose estate was granted to Annie Cosmetto of No. 27, Cecil Road, Muswell Hill, in the County of London, widow of the said deceased the Administratrix by the principal Registry of the Probate Division of His Majesty's High Court of Justice, on the 23rd day of March, 1922), are hereby required to send particulars in writing of their debts, claims or demands to us, the undersigned, as Solicitors to the said Administratrix, on or before the 18th day of May, 1922. And Notice is Hereby Given, that at the expiration of that time the said Administratrix will proceed to distribute the Assets of the said Testator among the parties entitled thereto, having regard only to the debts, claims and demands of which she shall then have had notice; and that she will not be liable for the Assets or any part thereof so distributed to any person or persons of whose debt, claim, or demand she shall not then have had notice.

Dated this 6th day of April, 1922.

STIBBARD, GIBSON & CO.,

21, Leadenhall, Street, London, E.C.3;

Solicitors to the said Administratrix.

Near East Markets.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

London, Monday Evening.

Sugar.—Home refined has been in good request at unchanged rates. Tate's cubes at 53s. 9d.; mineral water sugar at 49s.; London granulated at 48s. 6d.; and Lyle's granulated at 48s. 9d.; show no change. Steadiness has prevailed in export descriptions. West Indian crystallized is firm at 43s., Czecho-Slovakian is steady at 21s. 4½d., and white Mauritius is unchanged at 44s. Cane sugar quotations are:—April, 15s. 6d.; May, 15s., August, 15s. 3d.; and September, 15s. 3d. White sugar quotations are:—April, 20s. 3d.; May, 20s. 3d.; August, 20s. 4½d.; September, 20s. 4½d.; and October-December, 19s. 1½d.

Coffee.—A variable tone has been prevalent during the week. Costa Rica has gained 2s. 6d. at 146s. 6d., while Indian has shed 2s. at 120s. Nairobi has lost 7s. at 111s., while Jamaica has been firm at 150s. The futures market has been firm. Quotations are:—May, 56s.; July, 57s.; September, 57s. 9d.; and December, 57s. 3d.

Dessicated Coconut.—The demand is smaller than last week, and stocks are still low.

Rice.—A steady demand has been noticeable, and has been exceptionally large for the American Java variety. One or two small shipments of Italian rice of good quality have arrived during the week.

Green Fruit.—Arrivals of oranges have improved slightly, while prices have risen considerably, in view of the large demand for Easter. Messina lemons, for the reason stated last week, have gone further out of favour, and there has been an increased demand for Naples. Large supplies of Australian and Tasmanian apples are expected shortly, at prices much below those of last year. Large quantities of Egyptian onions are still arriving and quotations are high.

Oilseeds.—A brighter tone has been in evidence. Indian linseed has gained 4½d. at 19s. 7½d., and La Plata at 19s. is 9d. up. Rapeseed is lower with Toria 1s. down at 16s. 6d., and bold Ferozepore 4d. down at 18s. 6d. Cottonseed has been variable. Indian has dropped 3d. at 18s. 6d., and Sakellaridis has shed 1½d. at 11s., while Egyptian black at 11s. 6d. has remained firm.

Oils.—Prices are unsteady. Linseed oil has risen 6d. at 36s. 6d. Rape oil is lower with the crude variety, 1s. down at 44s., and refined 2s. down at 46s. There has been no change in prices for cotton oil. Refined is 48s., deodorized 53s., and Egyptian crude 40s.

Oilcakes.—Linseed cake is 20s. down at 320s. ton, and cotton-meal cake has shed a like amount at 300s. ton. Coconut cake has been steady at 180s. ton as also Arachis cake at 200s. ton.

DRIED FRUIT REPORT.

Messrs. J. C. Houghton & Co., Liverpool, report as follows under date April 4:—

Currents.—The firm tone of the market has been well maintained, but the amount of enquiry from the country is insufficient to stimulate buyers into activity. In the early weeks of the period under review samples of Zante fruit were obtainable from the cargo of s.s. Grodno, and these were quickly disposed of, from 58s. to 62s. Later the trade centred mostly round the lower and medium grades, and of these qualities very little is offering, the market being now almost cleared. The sales reported were, Pyrgos 56s., Amalias 57s. to 58s., Patras and Gulf ordinary 60s. to 61s., Zante 58s. to 62s., Vostizza ordinary 61s. to 63s., Vostizza good 68s. to 70s., and Vostizza fine 72s. to 75s. The s.s. Gulf of Suez has arrived with about 100 tons for the market, and s.s. Tyria is due about April 8. Quotations are:—Pyrgos 56s., Amalias and Patras 60s. to 62s.; Zante 58s. to 63s.; Gulf 60s. to 63s.; Panariti 65s. to 68s.; Vostizza 62s. to 75s.

Valencia Raisins.—Retail sales were effected with difficulty from 44s. to 70s. the trade taking very little interest in the article.

Sultanas.—Demand has been most disappointing. The statistical position is undoubtedly strong, and we fail to see how the requirements of the trade for the next five months are to be satisfied if the demand is anything like normal. It would appear inevitable that prices must go considerably higher than those ruling at present. Sales are 120s. to 125s. for fair to good. Coloured varieties 130s. to 137s., and fine up to 142s. 6d., Greeks 112s. to 122s., Afghan reds 92s., yellow 112s. to 115s., Californian soda and oil bleached varieties 105s. to 113s. ex quay.

Figs.—Smyrna bags of naturals move slowly at 62s. for prima, and 60s. for genuine qualities.

CURRENT PRICES.

General Produce.—Bacon: (Continental), 110s. 6d. cwt.; (Canadian), 105s. cwt.; (American), 97s. 6d. cwt.; butter (Danish), 193s. cwt.; (Australian), 155s. cwt.; (New Zealand), 170s. cwt.; cheese (Canadian), 97s. cwt.; (New Zealand), 92s. cwt.; lard, 98s. cwt.; eggs (Danish), 16s. 9d. per 120; Styrian, 12s. 9d. per 120; chillies, 160s. cwt.; cloves (Zanzibar), 1s. 2d. lb.; cocoa (Ceylon good to fine), 92s. 6d. cwt.; coffee (Costa Rica), 129s. cwt.; (East Indian), 133s. 6d. cwt.; (Central American), 104s. cwt.; (Jamaica), 68s. 9d. cwt.; (Mocha longberry), 106s. 6d. cwt.; (Santos, superior), 67s. cwt.; ginger (washed Cochín), 52s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore Black), 3½d. lb.; (Muntok white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 75s. cwt.; sultanas (Smyrna), 121s. cwt.; currants (Vostizza), 68s. 6d. cwt.; (Amalias), 57s. cwt.; sugar (Tate's cubes), 53s. 3d. cwt.; (Lyle's granulated), 48s. 7½d. cwt.; (Mauritius crystals), 45s. 1½d. cwt.; (West Indian crystallised), 43s. 1½d. cwt.; (centrifugal), 15s. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon No. 2), 14s. 3d. cwt.; (bran Rangoon), 46 8s. 9d. ton; cinnamon (firsts), 11½d. lb.; mace (fair Singapore), 1s. 5d. lb.; tea (common to good common), 1s. 2½d. lb.; (medium to good), 1s. 6½d. lb.; (fine to finest), 2s. 7½d. lb.; Ceylon (common to good common), 1s. 2½d. lb.; (medium to good), 1s. 6½d. lb.; (fine to finest), 2s. 7½d. lb.; Java (common to good common), 10½d. lb.; wheat (English white), 54s. 6d. qr.; wheat (Australian), 60s. 3d. qr.; barley (malting), 50s. qr.; barley (feeding), 36s. 6d. qr.; oats (English) 33s. 6d. qr.; oats (La Plata), ex-ship, 25s. 3d. qr.; maize (La Plata), 41s. 6d. qr.; flour, 48s. 6d. sack.

Metals.—Aluminium, £122 10s. ton; Antimony (English Regulis), £30 15s. ton; bismuth, 9s. lb.; copper (standard), £57 13s. 9d. ton; copper (electro), £65 5s. ton; gold bars, 94s. 10d. oz.; iron (No. 3 Cleveland), 90s. ton; hematite (mixed number), 97s. 6d. ton; galvanised sheets (24 G), £16 5s. ton; lead (soft foreign), £21 3s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 27s. 6d. unit; nickel, £175 ton; platinum, 360s. oz.; plumbago, £16 ton; quicksilver, £10 13s. 9d. ton; spelter (G.O.B.), £25 8s. 9d.; tin (standard), £144 8s. 9d. ton; wolfram, 10s. 3d. unit; zinc sheets, £35 10s. ton; tin plates (20 by 14), 19s. 1½d. box; silver bars, 33½d. oz.

Applications for Terms invited.

THE PALESTINE MARKET.

The following extracts are taken from the March report of the Imperial Ottoman Bank on Palestine :—

Imports and Exports.

£75,199 worth of German goods were imported during February *via* Haifa, of which £12,500 worth represented wood and machinery. The general imports during December amounted to £438,201, with Great Britain and Egypt leading (£145,409 and £61,447 respectively). The exports during the same month are valued at £58,004, of which £26,251 went to Great Britain, Egypt's figures being £24,043.

The principal imports are cotton fabrics, clothing, cigarettes, iron and steel manufactures, petroleum, rice, beer, sugar, fish salted, oranges, soap, wine, and lentils.

The Orange Crop.

It is anticipated that the total orange crop for the season 1921,22 will amount to 1,000,000 cases, of which 400,000 cases will go to Great Britain, 400,000 to Egypt, the balance being for local consumption, and supplies to Syria and Trans-Jordan. Prices for the present season commencing November, 1921, were 13s. per case, rising to 19s. by the beginning of February, while during the season 1920,21 the prices averaged 18s. per case, rising eventually to 25s.

Agricultural Prospects.

Prospects of increased areas of cultivation particularly of summer crops are widely entertained. A considerable increase in the output of broad beans and sesame is forecasted.

In spite of the initial unfavourable weather conditions there has been a gratifying advance in tobacco growing in Acre Sub-District where about 4,975 kgs. worth about £3,000 were harvested.

The Cereal Situation.

Cereal merchants and millers are experiencing the results of the general fall in world prices for cereals, and consequently find themselves with considerable stocks on their hands, which they have no alternative but to dispose of at a loss.

On the other hand considerable quantities of foreign flour, principally from Australia, have been arriving, and are disposed of at prices lower than the home-grown variety. The effect of this has at once been felt by a drop in the price of bread and consequently a reduction in the cost of living which is estimated to be at least 175 per cent. above pre-war.

It is hoped that the reduction in the cost of living will cause a corresponding reduction in the price of labour, and thus enable the next harvest to be grown at a cost considerably less than that obtained for the present harvest. The effect of this will be to make it impossible for imported flour (especially from countries like Australia where the cost of labour is high and freights to this country are heavy) to compete with the home grown variety.

MANCHESTER REPORT.

(From Our Own Correspondent.)

Manchester, Friday.

Although the market during the past week has not been so active quite a large inquiry has been dealt with, and the resultant business is not to be despised. There is a feeling that our leading customers have not yet satisfied their wants. Numerous spinners and manufacturers have obtained relief, and owing to higher prices being insisted upon there has been rather a pause in operations. In view of the experience of merchants during the past twelve months a policy of caution is not unnatural. The wages question is yet to be settled, and traders would welcome a quick fixing of wage rates for a further period. With regard to cloth not much support has been given by the Near Eastern outlets. Advices from Egypt have not been very favourable, and remittances are not coming to hand in a satisfactory manner. Minor transactions have been booked in a variety of fabrics for the Levant and Constantinople. With regard to Egyptian yarns no general flow of orders has been experienced, but at the same time prices have continued firmer. There has been plenty of cloth inquiry about for India, and some transactions have been put through for the several outlets of our Dependency. Buyers for China have only operated within narrow limits. American yarns have continued firm in quotation, and a large part of the demand has had to be turned down owing to the smallness of the offers. In shipping the turnover has not been quite so large as last week.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date April 5:—

Trade during the past week has proceeded steadily, but on somewhat quieter lines than before. The tendency on the whole has been for prices to ease slightly here, although, in contradistinction, merchants in Alexandria have shown a marked desire to stiffen prices from that quarter, and this in face of the still heavy receipts which are daily noted there.

The bulk of the enquiry has again been for Sakellaridis, Fully Fair to Strict Fully Good Fair, and prices paid have ranged generally between 13.50d. to 17.00d. There seems at the moment an inclination amongst spinners to experiment more freely with the lower grades, the necessity of discovering a "mixing" which will enable them to turn out yarn at a profit (or at any rate) without loss driving them to do so.

No spinner can afford, these times, to continue to pay fancy prices for a running mark of cotton, no matter how well the particular mark may have suited his requirements in the past. Shareholders are becoming very critical nowadays, and our experience is that spinners are taking far more trouble than ever before to really see what is offering, for themselves. Their views are broadening out and, as we mentioned above, necessity is driving them into hitherto untrodden paths in search of the wherewithal which will enable them to spin at a profit, instead of merely accumulating stock.

A small enquiry has been noticeable for Uppers—Fully Good and a moderate business has taken place at prices which vary between $\frac{1}{4}$ d and $\frac{1}{4}$ d off the official quotations. Sudan is still moving quietly. Brown and White cottons have been neglected, as well as the finer grades of Sakellaridis, for which there has been practically no enquiry this week at all. Manchester reports, while not speaking of any marked broadening in trade, continue to make hopeful reading. The tone keeps very good and prices continue to harden, but Egyptian yarns appear to be lagging somewhat at the moment. Unfortunately, the talk of wage reductions in the trade here has led many foreign merchants to anticipate matters by bidding under current rates, in the hope that manufacturers will "take a view" and meet them in advance. This sort of thing seems to be rather unsettling business at the moment at the Manchester end, but in spite of it it is refreshing to read in one report that some spinners and manufacturers are now beginning to see what is described as a "fractional profit" on their turnover. A meeting between employers and employed is being held as we write, and the latest news is to the effect that the wages reduction question is being discussed in a friendly spirit, which

seems to augur well for the future. The engineering dispute has also taken a turn for the better, and there is no doubt that if this dispute could be satisfactorily settled, a healthier tone would speedily become apparent in almost all trade circles.

The average weekly deliveries to spinners in Great Britain still hovers just below the 6,000 bale mark, and this is by no means an unsatisfactory figure, considering the times we are passing through. We look to the future with confidence, although we can see no immediate prospect of any sharp upward movement in the market, owing to the large stocks of cotton still available. Total sales estimated 1,900 bales (includes 200 Sudan). Quotations of Sakel are reduced $\frac{1}{4}$ d. per lb., as also are the quotations of Good, Fine, and Extra Fine Uppers; remainder unchanged. Fully Good Fair Sakellaridis to-day 17 $\frac{1}{4}$ d.

LANCASHIRE COTTON SPINNING.

Comparative Dividends.

During the past few days the stocktaking results to the end of February of thirty Lancashire cotton spinning companies have been announced. The mills have an aggregate paid up ordinary share capital of £4,066,047 and a total spindleage of 2,661,146. Seventeen concerns have had to pass the dividend, but the remainder made distributions ranging from 5 to 25 per cent. per annum absorbing a sum of £51,522.

Of the twenty-one companies whose reports cover the quarter ended February 28th and which possess a paid up ordinary share capital of £2,633,547 and control 1,925,462 spindles, twelve could not make any payment, but three declared a dividend at the rate of 5 per cent., two 10 per cent., one 12 $\frac{1}{2}$ per cent., two 20 per cent., and one 25 per cent. per annum, accounting for £26,689. The average dividend per company is 5.36 per cent., the same as for the previous three months for the same firms, and for the quarters ended August, May and February, 1921, the averages were 5.83, 7.98 and 11.11 per cent. per annum, respectively.

The accounts for nine of the mills relate to six months trading, and the directors of five of them have been unable to recommend a dividend. Two companies, however, paid 5 per cent. and two others 15 per cent., the average being 4.44 compared with 5 per cent. six months since, and 7.54 per cent. a year ago. These nine firms own 735,684 spindles, the total capital is £1,432,500, and the amount required for the above dividends £24,833.

THE INDIAN MARKET FOR PERFUMERY.

H.M. Senior Trade Commissioner in India has written to the Department of Overseas Trade regarding the demand for perfumery and essences in that country as follows:—

"The principal perfumes for which there is a demand in India are the leading British manufactures, such as otto of roses, white rose, lavender water, etc., and there is also a good demand for French perfumery among the European population; but the latter perfumes, such as eau-de-Cologne, etc., are on sale in London at a much cheaper price than procurable in India. There is a fair demand for Japanese perfumery from the higher-class Indian and Eurasian population in India.

"I have made local enquiries regarding the principal sources of supply of essences, and it appears that practically the whole demand is met by the United Kingdom and that there is a ready sale for well-known British brands, while there is also a certain demand for French flavouring essences which are used in the preparation of icing and confectionery; but these essences are imported direct by the leading confectioners and are not on sale in this market. The consensus of local opinion points to the fact that both perfumes and essences of British origin meet with practically no competition from other countries."

The Palestine Crafts and Industries Exhibition, which is being held at the Citadel, Jerusalem, was opened by the High Commissioner on April 4. The exhibition which will be open till April 30, has been organised in order to maintain and assist local crafts, and contains products of the industries carried on by hand in every district in Palestine.

H.M. Representative at Athens reports by telegraph that an amendment to the Tariff Law submitted to the Greek Legislature provides that, as from March 21, the Greek Customs duties are to be levied in gold drachmae, parity being based on the value of the pound sterling as fixed from time to time by the Consortium. Municipal (Octroi) dues, which are levied in addition to the Customs duties and which were not affected by the measure introduced into the Greek Chamber on July 22, last, will now be calculated on the same basis as the ordinary Customs duties.

SHIPPING INTELLIGENCE.

P. AND O. DIVIDEND.

The directors of the Peninsular and Oriental Steam Navigation Co. announce a dividend at the rate of 5 per cent. per annum on the preferred stock, less tax, and an interim dividend at the rate of 12 per cent. per annum on the deferred stock, free of tax, for the half-year ended March 31 last. Warrants will be posted May 18. A year ago the distribution on the deferred stock was at the same rate.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parenthesis :—

Anchor Line.—S.s. Castalia for Bombay (Liverpool, April 21) ; s.s. Massilia for Bombay (Liverpool, May 5).

Anchor Brocklebank Line.—S.s. Imani for Port Said, Colombo, Madras and Calcutta (London, April 25) ; s.s. Macharda for Calcutta (Birkenhead, April 29) ; s.s. Mandasor for Port Said, Colombo, Madras and Calcutta (London, May 9) ; s.s. Magdapur for Calcutta (Birkenhead, May 13).

Bibby Line.—S.s. Lancashire for Rangoon (London, April 19) ; s.s. Oxfordshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, April 26).

Byron Steamship Line.—S.s. Maid of Athens for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz and Braila (Liverpool, April 15).

Clan Line.—S.s. Clan Ronald for Colombo, Madras and Calcutta (Birkenhead, April 20).

Cunard Line.—S.s. Tyria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Odessa, Novorossisk, Poti, and Batoum (Glasgow, April 21) ; s.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, etc. (Liverpool, April 27, and Swansea, May 2).

Ellerman Line.—S.s. Egyptian for Gibraltar, Melilla, Malta and Alexandria (Liverpool, April 19) ; s.s. Gerano for Gibraltar, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, May 6).

Ellerman's "City" Line.—S.s. Walton Hall for Bombay and Karachi (Birkenhead, April 21) ; s.s. City of Shanghai for Calcutta (Birkenhead, April 25) ; s.s. City of Agra for Calcutta (Birkenhead, May 9).

Ellerman's "Hall" Line.—S.s. Merton Hall for Bombay, Karachi and the Punjab (Liverpool, May 1).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.s. Glenavy for Port Said, Port Swettenham, Singapore, etc. (London, May 4) ; s.s. Glenluce for Port Said, Port Swettenham, Singapore, etc. (London, May 18) ; s.s. Glenbeg for Port Said, Port Swettenham, Singapore, etc. (London, June 1).

Harrison Line.—S.s. Navigator for Port Said, Port Sudan, Aden, Mombassa, etc. (Birkenhead, April 20) ; s.s. Colonial for Calcutta (Liverpool, May 4).

Henderson Line.—S.s. Pegu for Port Said and Rangoon (Birkenhead, April 19) ; s.s. Martaban for Port Said and Rangoon (Birkenhead, May 3).

Holt Line.—S.s. Cyclops for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 20) ; s.s. Eurypylos for Port Said, Port Swettenham, Singapore, etc. (Glasgow, April 20) ; s.s. Athens for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, April 20) ; s.s. Demodocus for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 26) ; s.s. Phemius for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 26).

Johnston Line.—S.s. Dromore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, April 15) ; s.s. Avimore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, April 29).

Papayanni Line.—S.s. Cressado for Algiers, Malta, Syra, Smyrna and Constantinople (Liverpool, April 15).

P. and O. Line.—S.s. Kaiser-I-Hind for Bombay (London, April 21) ; s.s. China for Bombay (London, April 28) ; s.s. Nagoya for Colombo, Madras, and Calcutta (London, May 5) ; s.s. Caledonia for Bombay (London, May 5) ; s.s. Soudan for Bombay (London, May 6).

P. and O. British India Line.—S.s. Madura for Bombay and Karachi (London, April 21) ; s.s. Nuddea for Colombo, Madras and Calcutta (London, April 29) ; s.s. Chindwara for Bombay and Karachi (London, May 5) ; s.s. Nardana for Colombo, Madras and Calcutta (London, May 13).

Prince Line.—S.s. Merchant Prince for Tunis, Malta, Alexandria and Syrian Coast (Manchester, April 21) ; s.s. Algerian Prince for Malta, Alexandria and Syrian Coast (London, April 21).

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated April 3 :—

Condition of Crops.—March 31—In Bengal, rain urgently required for sowings. In the Punjab, wheat and gram continue good on the whole, but shortage of rain for the last two months has detracted from the expected yield. In Bihar and Orissa later reports show damage to wheat, and premature heat reduces the estimate of the average out-turn for that Province to 110 per cent. of normal as compared with 115 per cent. reported in the second wheat forecast, 1921-22, published on March 13, 1922. (The normal out-turn, taking the average of the last five years, is 476,000 tons or 5.1 per cent. of the average out-turn of the whole of India, including the Native States. The average percentage of the area under wheat in Bihar and Orissa is 3.9 per cent. of the total area in India under wheat.) Prospects in other provinces are unchanged.

Markets.—March 30—Bombay cotton market steady. Fine M.G. Oomras, Rs. 396 May, Rs. 410 July. Bombay cotton arrivals from September 1, 1921, to March 24, 1922, were 2,107,000 bales as compared with 1,563,000 bales during the same period of the last year. In Bombay imported piece-goods market, general demands have somewhat fallen off, but rupee rates remain steady. The Bombay Native Piece-goods Merchants' Association had under consideration a proposal to re-establish the boycott of foreign piece-goods under penalty of Rs. 100 per bale for violation of the boycott, but the Association has rejected this proposal. April 1—Calcutta Jute and gunny markets firm but quiet. Hessians very firm. March 28—Demands continue for spot T.N. shellac, of which offerings are poor. Closing prices T.N. Rs. 197 spot, at which there are buyers ; Rs. 188 April and Rs. 182 May, at which there are sellers. March 31—Special Straits quality rice, Rs. 495.

Railway Strike.—Strikers on East Indian Railway are returning in coal districts. *Coal.*—Export of coal from India is prohibited except on Government account or under permit from the Collector of Customs for bunkering steamers. *Duty on Cotton Yarn.*—The import duty is 5 per cent. *ad valorem* with effect from March 1, 1922. Formerly it was free. No change in bank rates.

ANCHOR LINE

First-Class Passengers only.

LIVERPOOL TO BOMBAY.

KARACHI via Bombay calling at Gibraltar & Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

FITTED WITH ELECTRIC FANS.

RECOGNISED BY INDIAN GOVERNMENT.

PASSENGER SAILING DATES—

CASTALIA, APRIL 21.	CIRCASSIA, JUNE 22.

NOTES OF THE WEEK.

Angora and the Armistice.

The incidence of the Easter holidays makes it necessary that these notes should be written earlier than usual, and at the same time, by dislocating to some extent the mail and telegraphic services, leaves us with little or no late news on several important points. Thus, at the time of writing we do not know definitely whether France, Italy and Great Britain have replied to the counter-proposal put forward by the Angora Government. The three Allies, have, however, allowed it to be known that their view is that the Angora suggestion is unacceptable, and that they are in complete agreement on the attitude to be adopted by them in the matter. The latter point at any rate is all to the good ; and unless Angora is much more unsophisticated than we take it to be, it is will hardly be surprised by this reply to its own " first price." The parties are manoeuvring for position, but we hope the process will not be long drawn out.

The "Minorities."

The proposals for the Greek withdrawal from Asia Minor have given rise to much anxiety amongst the friends both of the Greeks and of the Turks, who fear that the very suggestion has been enough to imperil the safety of non-combatants on both sides. Unfortunately we cannot think the fears ungrounded ; on the contrary, as we have indicated already, they seem to us to be only too well grounded. In passing, we cannot but deplore the extraordinary state of mind exhibited by certain Members of Parliament who show the utmost readiness to believe everything bad about one side, no matter whence the reports may come, and at the same time refuse to believe reports discreditable to their protégés even when they rest upon the evidence of men who know far more of the subject than the emotional gentlemen who appear to be ever ready to condemn wholesale all who venture to profess a different religion from their own. Some of the questions asked in Parliament by one particular Member, in connection with these armistice proposals, have shown a bias and a spirit of fanaticism not unworthy of one of the late Mahdi's warriors.

A Suggestion.

Fortunately other Members of Parliament and many of the public take a wider view of the subject ; and there seems to be a very general desire that steps should be taken as quickly as possible to minimize the evils likely to accompany the changes expected. The Under-

Secretary for Foreign Affairs gave an assurance the other day that every measure will be taken to meet eventualities. That is, necessarily, a vague promise, but we hope it will not be forgotten. In the meantime it seems to us that both the Greeks and the Kemalists would enormously strengthen their moral position if they invited either the League of Nations or else some neutral nations to appoint forthwith " special Commissioners " of the kind contemplated in the Paris proposals, to bear witness that they—the combatants—are observing the rules of civilised warfare. Such a suggestion we hope will give no offence. It is intended merely as a proposal for putting an end to rumours and insinuations which must be at least as offensive to every decent Greek and Turk as they are distressing to neutrals.

The Fiume Question.

Yugoslav and Italian representatives met last week to endeavour to settle finally the problem of Fiume and certain minor difficulties connected with the Treaty of Rapallo. The discussions, conducted by M. Nintchitch, the Foreign Minister, on behalf of Yugoslavia, and Signor Contarini on behalf of Italy, are reported to have been marked by a reasonable tone on both sides ; and such good progress was made in the early days that some of the Italian papers already regard the question as settled. The Yugoslavs are not quite so optimistic, though they appear to anticipate a complete settlement of the question this time. According to one report, it is probable that the administration of Fiume will be entrusted to a mixed Commission of Italians and Yugoslavs ; but the ownership of Baross remains to be settled, and details, such as the water supply of Zara, afford material for a good deal of discussion yet. The great thing is that both sides are showing good will in the matter.

The Egyptian Constitution.

The first sitting of the Commission formed to frame the Constitution of Egypt was held in Cairo on April 11, when Sarwat Pasha took the opportunity of putting forward the Government's views on the subject, and of replying to criticisms of its handling of the question. Briefly, he contended that Egypt should not be bound by precedents set by other countries, but by her own requirements and by precedents established in Egypt itself. He observed, very justly, that the submission of the Constitution to the National Assembly would probably lead up to agitation that would be injurious to the country ; and that it was essential for Egypt to

get forward with the negotiations regarding the reserved subjects without any disturbance of the public order. The Commission afterwards began its labours by discussing the definition of Egyptian nationality—a difficult subject always. A satisfactory beginning has thus been made with an undertaking which seemed likely at one time to be long delayed by the tactics of the extremists ; and the Cabinet and its supporters are entitled to congratulate themselves on having faced and overcome yet one more lion in the path that leads to true progress.

The Turco-Bulgarian Frontier.

Our Sofia Correspondent in the letter from him which we published last week gave us the Bulgarian view of the Allies' proposals for a Near Eastern settlement, or for the first step towards such a settlement, and in doing so he naturally referred to the question of a Turco-Bulgarian frontier. We must confess that we are unable to share the alarm felt in some quarters about letting the two countries mentioned have a common frontier. Unless we are to assume that Turkey and Bulgaria are always to be united against the Entente, or against the other nations of the Balkans, it seems to us that such an arrangement would possess at least some compensations for, say, Greece. But without pursuing that line of argument, it is permissible to point out that under the proposals now made, Turkey and Bulgaria are actually to be given a common frontier though a very restricted one ; and that being so, the danger—if any there be—of giving them a longer one alarms us less than ever. In any case, if the Allies are to redeem their pledges regarding an outlet on the Aegean for Bulgaria, that problem is obviously bound up with this other of the common frontier, and it would be wise to consider them together.

Democracy in Teheran.

A message despatched from Teheran on April 11, by Reuter's correspondent, reports that a strong agitation is on foot there against Reza Khan, the War Minister, who is also described by the message as "Military Dictator." Whether the latter title has been formally awarded to, or assumed by, the energetic Minister in question we do not know. It is true that we have seen no announcement regarding it, but news from Persia is so rare nowadays that that is nothing to go by. In any case, it has been clear for some time that Reza Khan was in fact a military dictator, and the designation is therefore a quite natural one. The most significant thing about the message referred to is the indication it gives of the source of the agitation. It is, it seems, His Excellency the representative in Teheran of the Soviet Government who disapproves of Reza Khan, and his disapprobation is due to the anti-Bolshevist sympathies of the War Minister. But may not a Minister in his own country express his views and opinions ? It looks as if the Bolshevik bully thinks he may not—when they happen to be anti-Bolshevist. A choice collection of Democrats is apparently at the Russian Legation, and some fifty of Reza Khan's cossacks have taken refuge at a shrine some little distance from Teheran. The inner significance of the latter piece of news is not clear to us, but the former merely illustrates the truth of the old proverb about birds of a feather.

Enver and the Bolsheviks.

Enver Pasha can have very few friends in this country to-day, but if the latest news regarding him be true, many people here will wish him success in his latest adventure. For, according to Afghan reports, he is at

the head of an anti-Bolshevist movement in Bokhara, and has gained some success. The tribes of Eastern Bokhara are said to have rallied to him—as might be expected after their experience of Bolshevism—and further assistance is reaching him from Ferghana ; and Doshambek, the headquarters of the Bolsheviks, is reported to have been captured by him. Refugees from Bokhara are flocking into Afghanistan, and they give depressing accounts of the state of their country. The Afghan view of the matter, if the Kabul press may be trusted, is that the Bolsheviks have themselves to blame for the business, because they have been interfering in the affairs of Bokhara, whose independence they had professed to recognize. Some pleasing possibilities attach to the situation, but it would be unwise to build any high hopes on it.

British Clubs in the Near East.

The average Briton may not be a very sociable person, but, when he is abroad at any rate, he usually shows a club-able spirit. Our Correspondents in Constantinople and in Baghdad this week report manifestations of this spirit. In the former city the British community is endeavouring to bring to fruition a long-discussed project for the foundation of an all-British club ; in Baghdad the plan is to establish an Anglo-Irakian—or, should we say, Irako-British ?—Club. Both proposals have much to recommend them, and we hope that both will go forward to triumphant success. The British community in Constantinople has long been a very important one, but its position differs little if at all from that of other leading European communities. It is quite numerous enough to support a club that shall be a credit to itself and, besides being a social centre, serve both directly and indirectly, to enhance British prestige in a way which only those with experience of such things can understand. The club proposed for Baghdad would, if run on wise lines, serve other interests, no less important. It could be made an important factor in helping Briton and Arab to understand one another better, and might serve to remove certain war-time impressions not quite favourable to the British reputation, and to make the British status approximate more closely to what it was at the close of the last century.

English High School, Constantinople.

In connection with the above subject we may refer to the position of the English High School for Boys at Constantinople. Ever since it was opened this admirable institution has done splendid work, not only in giving facilities for a good education on English lines to a considerable number of pupils, but by helping to spread British ideals and a knowledge of the English language. These things mean, in their turn, that the School has, both directly and indirectly, been instrumental in furthering British commercial, and even political interests in Turkey and the Near East. At the present time every bit of help in this direction is certainly required, if Great Britain is to hold her own against her active and enterprising rivals, and it is therefore very unfortunate that the School's activities are hampered rather seriously by financial difficulties.

"Come Over and Help Us."

The school was hard hit by the war, when it was, of course, closed ; it is now wrestling, like every other institution and every individual in Constantinople, with the calamitous state of affairs brought about by the depreciated exchange ; and it has had the grievous

misfortune to have its boarding house burnt down in one of Constantinople's famous fires. The school has a claim against the Ottoman Government for material damages suffered in the War, but it is problematical when, and how, it will be met; and the British Government unaccountably makes it no annual grant at present. In view of what the Governments of other countries have done and are doing for similar institutions of their own nationality, it is much to be desired that our own Government would put into practice the professions made about helping British institutions of this kind abroad. Even a small annual grant would be a godsend to the school, and assistance in collecting its claim against the Ottoman Government might surely be given. It is in such cases as this that the "penny wise, pound foolish" policy is most to be deprecated. The British in Constantinople founded and have liberally helped the school. Now an opportunity offers to others who care for British interests in Turkey, to show their interest in practical fashion.

THE WEEK AT HOME.

London, Monday Evening.

The Holiday.

Easter has proved a disappointment. Violent gales, blizzards, snow and hail, and a bitter east wind have made holiday-makers at the seaside long for their own firesides. There was a great exodus from London, but I imagine most of the folk will be glad enough to get back. When April is nice it is very, very nice, but when it is nasty it is horrid.

Genoa.

Every editor in London seems to have gone to Genoa, but they do not appear to have achieved much for their pains; at any rate the reports they have transmitted home are singularly unimpressive, and evoke no enthusiasm. There is an impression here that the Bolsheviks are making most of the running, with the Germans awaiting their opportunity to score a trick or two as occasion offers; Mr. Lloyd George does not seem to have done any spell-binding yet, and there is a plentiful lack of belief in the good results of the Conference. The idea that the European nations shall impose a self-denying ordinance on themselves against war for the next ten years has fallen very flat; after all, the real guarantee against war for the next ten years is that we all had more than enough of it in the last ten years. Idealistic friends assure us that that is a most unworthy and materialistic view of human nature, but I am afraid it is justified. The only country in Europe where war has any votaries to-day is Ireland, which was the only country that had no real war experience in 14-18; and as Ireland cannot get anyone else to fight with her, even England having gone on strike, she is considering a civil war on her own.

Ireland.

It is impossible to follow every move in the tangled game between De Valera and Michael Collins. The theory is that the former is being supplanted by still more extreme politicians of his own kidney; they seem able to prevent free speech, the freedom of the Press, and ordinary railway travelling. This, of course, is anarchy pure and simple. The Provisional Government is full of words, but it seems to have little power to translate them into action. Its authority has again been flouted even in Dublin, where some official buildings have been seized by Republican soldiers.

Parliament.

Westminster is undergoing its usual spring-cleaning, and members are scattered far and wide. Home politics are dead for the rest of the month, and will not revive until Sir Robert Horne introduces the Budget on the first of May. It was rather significant that one of the last questions answered in the House showed that a large amount of income-tax was still unpaid. The banks

have financed a good deal by overdrafts, but I suppose they have some customers who cannot get credit even to pay the tax-collector.

Improving Trade.

However, there is general agreement that trade is at last really improving. The lowering of the bank rate last week will help, and a great deal of the capital which we have exported lately to the colonies will come back sooner or later in the shape of orders for goods. This, and not Russia, is our real hope for the future. Meanwhile, gilt-edged stocks still boom, and War Loan (1917 brand) is now above par. All this is good for the Government and, what is more important, good for our tempers.

The Armstrong Poisoning Case.

The poison trial at Hereford came to an end last Thursday in the conviction of Herbert Armstrong, a well-known Welsh solicitor, for the murder of his wife a year earlier. The defence put forward was one of suicide, but this was impossible; the dead woman was physically incapable of getting at the arsenic during the time at which the fatal dose must have been taken, and, moreover, it was given in evidence that within six hours of her death, Mrs. Armstrong had expressed a strong desire to get well, as "she had everything to live for—husband and children." All the time the husband was slowly poisoning the poor lady. It was a peculiarly heartless case, as the husband kept up an appearance of affection for his wife, and that alone is likely to forbid any of the usual public sympathy for a man about to be hanged. There is to be an appeal on a point of law, but there is another charge of attempted murder—this time on a fellow solicitor in the same town—hanging over Armstrong.

General admiration is expressed for the very able way in which the judge, Sir Charles Darling, handled a very difficult case. It was the first experience of Sir Ernest Pollock, the new Attorney-General, of a prosecution for murder, and I am assured by those who were present in court that he was more affected by the death sentence than the prisoner himself.

A Journalistic Revolution.

An extraordinary change seems to be coming over Fleet Street. There was a time when newspapers existed to sell news and views; now they exhort you to buy them in order to insure yourself. One promises you a thousand pounds if you are killed in a railway accident, another sends you four pounds a week if you tumble downstairs, a third compensates you if the clothes-horse in the kitchen catches fire, and a fourth genially promises something on account if the housemaid has a fit or the cook breaks her neck. (None of them, by the way, insure you against the cook giving a month's notice—I suppose that would bankrupt even the *Daily Mail*.)

I do not quite like the new fashion. It gives me an uncomfortable feeling that I am worth more dead than alive, as I take in a lot of papers; but perhaps that is mere personal prejudice. But I rather doubt whether this gruesome form of body-snatching will be good business in the long-run.

The Early Bird.

Some ridiculous person has been suggesting that we all start work too late, and advocating the opening of banks, shops, and exchanges at eight o'clock, or some such ungodly hour; and from the amount of discussion it has led to, the proposal seems to be taken seriously in quarters which should know better. But I doubt if the early bird would catch the worm. I remember once, torn between hatred of Christmas crowds and the duty of buying Christmas presents, I made herculean efforts and walked into Selfridge's at half-past nine on Christmas Eve; I had the shop to myself, and a charming young lady assured me I should always be safe from the crowd before 10.30. Alas! not even for her could I abandon the habit of a lifetime, and break-fast before ten. But that experience rather indicates that if banks and other places opened at dawn, they would find nothing to do. In the tropics it is different,

but the fact is that in England at least, the beauty of the sunrise is much exaggerated, and most of us don't want to see it. The average man who gets up early is a bad-tempered brute, who revenges himself on society for his own folly.

The Week's Books.

"Einstein and the Universe" (T. Fisher Unwin), by Charles Nordmann, astronomer to the Paris Observatory, is really an exposition of Einstein without tears—in other words, without mathematics. It is brilliantly written, and it does good service in claiming credit for M. Poincaré for his share in the concept of relativity, while it admits that some of the criticisms passed by M. Painlevé are formidable objections.

"Poland Reborn" (Chapman and Hall), by Roy Devereux, is a quite excellent account of post-war Poland written by an observer on the spot. Now that the flood of Polish propaganda has rather died down, an impartial account of the most promising of the Succession States is very welcome. There are a few pictures.

"How to be Useful and Happy from Sixty to Ninety," by Dr. A. L. Smith (John Lane), is a book whose title alone attracts one. The recipe includes abstention from tobacco, alcohol, tea, and coffee, rising at six and bed at ten, no worry, plenty of boiled mutton and no pork; keep thin and work hard till you drop, and above all, take care of your colon. It is rather a drastic programme. But I remember a dreadful story of a reporter who was sent down to the country to interview a hale and hearty centenarian, and in reply to the inevitable question of how he did it, Methusaleh answered that he drank whisky at every meal, never took a bath, and made his wife do all the work. He had used up three wives in the process, but it was understood that he contemplated life with a certain satisfaction, although he probably did not even know he had a colon. In the interests of public morals, this story was suppressed at the time, but I present it to Dr. Smith for his next edition.

Two novels may be mentioned. In "The Veneerings" (Chatto and Windus), Sir Harry Johnston continues the story of "Our Mutual Friend" in the next generation; a daring experiment that is not wholly successful, but is not without interest; while in "The Red House Mystery" (Methuen), Mr. A. A. Milne tries his hand at a detective story. My own private opinion is that there is no such thing as a bad detective story, but Mr. Milne's comes very near the top-notch in that high art. He is an astonishing man. His plays are good; even his jokes in *Punch* are good; and now he has measured himself against the best of all types of fiction, and succeeded, I take my hat off to him. May he write many more!

"The Changing Year" (Hodder and Stoughton), by Anthony Collett, is a nature book by one of the most charming writers of the younger school. Mr. Collett is one of those happy people who seem to have eyes in the back of their heads when he takes his walks abroad, and his touch is unaffected and true.

RARE INDIAN COINS.

The British Museum has acquired the collection of coins made during the last 15 or 20 years in India by Mr. R. B. Whitehead, I.C.S. Mr. Whitehead, who enjoyed exceptional opportunities of collecting in the Punjab, amassed a remarkable series of coins dating from the period of the Greek kings, successors of Alexander the Great, in Bactria and North-West India, down to modern times.

The coins of the Greek kings are almost the only extant record of the history of the period, and provide not only the name: but portraits, often of considerable artistic value, of a number of rulers from the third century B.C. onwards, says *The Times*. Many of the pieces now acquired are excessively rare, and the Museum series of these coins, already incomparably rich, will be increased by over 400 specimens. Even larger is the accession, amounting to nearly 2,500 pieces, of coins of the Mahomedan period. Mr. Whitehead had, in the course of his collecting, absorbed the famous collection of Moghul coins made by Dr. Taylor, and reckoned in itself one of the finest in India. He had also been allowed the unprecedented privilege of purchasing a large selection from the coins in the Treasury of one of the minor Indian States—the bulk of the treasure being derived from the loot of Delhi by Nadir Shah and Ahmad Shah Durrani. The result is a remarkable collection of over 400 coins of the early Afghans and of Nadir Shah, including many pieces which, by the mint-names recorded on them, provide the sole record of Nadir Shah's conquests of Indian cities. The historical importance of such a series as this, where other records are so scanty, can hardly be over-estimated.

NEWS IN BRIEF.

The Everest Expedition left Phari for Khimbajong on April 8.

The Swedish Government has recognised Albania, states a message from Stockholm.

A Reuter's message from Bombay, dated April 11, says:—Dr. Mahmud, the Secretary of the Central Caliphate Committee, has been sentenced to six months' simple imprisonment.

Sixty-five Maltese emigrants, all of the agricultural farming class, left Malta on April 11 for Australia. This is the sixth batch of Maltese emigrants who have left for Australia this year.

On April 10 a private meeting was held at the British Consulate in Alexandria to consider the question of the future of British officials in Egypt.

Sanction has been given by the Government of India for the return to British Guiana of 116 East Indians repatriated from that colony and 160 from other colonies.

The new Egyptian flag will be green with a white crescent and three white stars. The Royal Emblem will be the same, with a crown added.

In a wireless message received in Colombo from the Renown the Prince of Wales regrets that it is impossible for him to make any official engagements during the short time the Renown will touch at Colombo on the return journey from Japan.

It is understood that the recently defeated Malta Government has accepted the conditions of the Labour Party for the formation of a coalition for one year only. Two portfolios will be given to Labourites.

The sentences in the recent Egyptian conspiracy case were promulgated last week. The clerk employed in Zaghloul Pasha's house was given two years' hard labour, and the other two prisoners two years and three years respectively.

The Albanian Government sent a telegram last week to the League of Nations at Geneva requesting that the Commission of Inquiry may be allowed to continue its work until conditions are more settled.

A telegram was received in Paris from Tunis on April 13 stating that the French authorities had expelled the manager of a Communist newspaper entitled *Le Cri du Peuple*, which they state has been fomenting Communist agitation among the natives.

Zionism was debated before the Anglo-French Society at Scala House last week. Mr. A. Beverley Baxter took the chair. Mr. Myers, Editor of the *Palestine Weekly*, and Captain Aaronsohn were the principal speakers for the Zionists, while for the other side Mr. Shibly Jamal and Mrs. Rosita Forbes led.

The committee of the London Moslem League has forwarded to Lord Curzon a letter drawing his attention to the recent reports of massacres of Turks by the Greeks in Anatolia, and urging that "immediate steps be taken to expedite the Greek evacuation" under the supervision of Allied officers.

THE NEAR AND MIDDLE EAST.

From Our Own Correspondents.

GREECE.

Athens, April 2.

The Allied Peace Proposals.

Although the Greeks—even the most optimistic—were well aware that the Allied peace terms would be pretty stiff, and that sooner or later the Hellenic Army would have to evacuate Ionia, not for a moment did they give a serious thought to the possibility of Smyrna being restored to the Turks and of having to part with an important portion of Thrace. M. Gounaris, who, it now transpires, had a very good idea as to what the Allied proposals would be, continuously fed the people with promises and assured everybody that all was going well. The stringent press censorship exercised proved a valuable ally to the Prime Minister in that respect. No anxiety was, therefore, felt. Everyone firmly believed that Smyrna would become autonomous for a period of five years, at the end of which its fate would be definitely decided by a plebiscite. They did not worry in the least about Thrace, and though much satisfaction was expressed at Mr. Montagu's resignation, that gentleman's efforts in favour of the restoration of Eastern Thrace, with Adrianople, to the Turks were never taken seriously. The Greek people were looking forward to an honourable peace, content that they had done their duty, and glad to know that, thanks to their struggles, their unredeemed brothers had at last secured their freedom. "Why should we worry?" I was asked only a month ago by a Greek Army captain who had been serving on the Asia Minor front from the very first day of the Greek landing. "Will not Smyrna be ours in five years' time?"

And then the bombshell exploded. When on Wednesday morning the papers published the Allied peace proposals people wondered whether they were dreaming. They would not, could not, realise that Smyrna was lost to them for ever and that even a big slice of Thrace was to be given back to their hereditary foe. But their surprise soon gave way to indignation. "Are the Powers joking, or have they taken leave of their senses?" asks the *Embros* in a leading article. Even Great Britain, who up to Tuesday was "the only true friend of Hellenism," is now the object of many uncomplimentary remarks. Lord Curzon is bitterly attacked for giving in so easily to his French and Italian colleagues; and the terms are generally considered as constituting a serious diplomatic defeat of Great Britain. But the target upon which the bulk of the attack is concentrated is naturally M. Gounaris. With the exception of three newspapers, one of which is the Premier's organ, the entire Athens Press (the capital boasts of over twenty-five daily papers) holds the Prime Minister responsible for the fresh misfortunes that have befallen the country. He is accused of utter incapacity and lack of patriotism, and is invited to resign immediately. The next few days will show whether the Premier has taken any notice of these outbursts of public indignation.

The Government Scores Again.

Thanks to the unexpected support of some of the Mussulman Members, and the exit from the Chamber of the eighty-seven Liberal deputies, the Government scored another victory at last night's sitting of the Constituent Assembly, securing 163 votes out of 226.

The Prime Minister, challenged by the leader of the Reformists, M. Stratos, declined to say whether there was any truth in the statement alleged to have been made by Lord Curzon to the effect that M. Gounaris had accepted without any reserve whatsoever the Allied mediation. After M. Emmanouilidis, speaking on behalf of the Thracian deputies, had protested against the proposed re-adjustment in favour of Turkey of the boundaries in Thrace, and declared that no power on earth would be able to wrest even the smallest portion of that country from Mother Greece, the Director of the Liberal Party, General Danglis, violently attacked the Prime Minister, and stated that he alone was responsible for the humiliating peace terms proposed to Greece. In conclusion, the General implored the Assembly to place the country's interests above all party dissensions, and overthrow the Government which had handled the national affairs in so incompetent a manner. M. Gounaris immediately retorted that it was the Liberals, and particularly those living abroad, who by their anti-patriotic actions were endeavouring to neutralize the national efforts of the Government. Whereupon General Danglis and his 86 followers left the Chamber before the vote of confidence was taken. It is generally thought that unless the Premier offers an apology for the accusation made against the Liberals the latter will henceforth abstain from the sittings of the Assembly.

General News.

The Crown Prince of Denmark, who is engaged to be married to Prince Nicolas's daughter, Princess Olga, arrived in Athens last Tuesday. He was received at the station by the entire Royal Family. During his stay in the Greek capital His Highness will be the guest of his prospective father-in-law.

Prince Andrew and his wife Princess Alice are leaving for Corfu to-morrow.

Sir Frederick Halliday, Chief of the British Police Mission to Greece, has left for Corfu.

The situation in Crete has somewhat improved lately. The deportation of the families of deserters adopted three months ago is still in force and has proved very effective.

YUGOSLAVIA.

*Belgrade, April 8.***The Week in Parliament.**

Parliament had a busy time last week, discussing the King's Civil List. The usual amount of bitterness was displayed by the members on the Left when the Speaker read the new Bill fixing the King's "apanage" at 18 million dinars, with 6 million French francs for expenses when travelling abroad. The present allowance, which is only 1,200,000 gold dinars, was fixed about 35 years ago, and is, of course, altogether inadequate. The Bill was returned for a change in the wording of the second paragraph; and now, after the alteration, the Royal allowance will be, dating from January 1, 1922, 18 million dinars, and the 6 millions will be covered in the currency of the country in which the King intends to travel, or has travelled. This change was made under the pretext that the taxpayer must not lose faith in the national currency.

A striking example of the demagoguery now constantly practised by members of the Left, was afforded a few minutes later, when the Bill authorising the increase of Members' allowances was read and submitted for discussion. Members of the Right and the Centre kept very quiet, but the Left was very truculent and noisy, its members saying that the Government was not attempting to fight the high cost of living, but simply protecting itself, leaving the rest of the Nation to struggle on. A Bosniac member proposed that since the members are of different financial standing the increase should be granted only to those who voted "For." The effect was great, and seemed very soothing to the overheated nerves of the Opposition. It is interesting to note that only a few Democrats and Radicals voted "against" while the rest carried the Bill through with an absolute majority.

Russian Refugees.

There has been much discussion lately regarding the harmful pro-German propaganda now indulged in by the Monarchist party of the Russian refugees in Yugoslavia. *Politika* (the official paper), in a series of articles, made some striking disclosures concerning the subterranean workings of the Monarchists, and went as far as to accuse them of circulating the false rumours that the money subscribed by the public in order to help starving Russia is not going to those dying of hunger, but to the Red Army. A *démenti* was handed in and printed, but it was received somewhat sceptically, as M. Paleologue, its author, confined himself simply to denying the statements, without attempting to prove that they were unfounded. The *Politika* repeated the charges, and warned M. Paleologue that its information came from official documents.

Russians are treated here as unfortunate brothers, and given every right that a born Yugoslav has, but it is very unlikely that the Government would tolerate much longer any pro-German action. The Serbs owe very much to Russia, and they readily recognize the fact; but they would not remain friendly, or even tolerant, much longer if Russia were to become a German colony.

The Old and the New Palaces.

The first time during the Great War when Belgrade was captured, in November, 1914, the Royal Palaces were the first objects of plunder and looting most skillfully conducted by German and Austrian troops. Everything of value was promptly removed: pictures, carpets, silverware, furniture; and even Icons from the Royal Chapel disappeared with the enemy, who had to retire after 11 days' occupation. After the disaster in 1915, the Germans did still more damage to the Royal Houses. The New Palace was turned into billets for Italian and Russian prisoners-of-war, both of whom, with the least possible regard to cleanliness, helped the Germans greatly in completing the destruction of the place. The Old Palace was first occupied by a Uhlan Regiment, but afterwards it was "promoted" to the Officers' Mess. A Hun colonel, a lover of antiquities, admired a very ancient mosaic flooring in the hall, and promptly had it taken to his home in Bavaria! Luckily

his address became known, and the flooring was restored after the peace. Most of the things are still missing, but after very strenuous work both Palaces are now almost ready to receive the new Queen and the King, who are expected to be in residence there about next July.

Visit of the Roumanian Queen.

Almost unexpectedly, the visit of the Roumanian Queen took place last week, instead of early in May, as had been predicted in semi-official circles. The Royal visitor met with a very hearty welcome from all Belgrade. The town was gaily decorated with Roumanian and Serbian flags, and the streets, lined with troops, were crowded with cheerful onlookers.

The Queen was met at the station by King Alexander and the high Officials, and on the same evening a gala ball was given by the King in her honour. On Monday and Tuesday Queen Marie toured the country, and on Thursday, upon receiving news from Athens that the Princess Royal was ill, her Majesty left for Athens.

General News.

The King, who had to attend to various engagements during last week which was very cold, is now confined to his rooms, with a slight attack of influenza.

The Yugoslav Delegation to the Genoa Conference, numbering in all 12 persons, left Belgrade on the 6th instant. The Premier, M. Pashitch, is still detained here, but as soon as his engagements allow him, he will join the Delegates at Genoa.

IRAQ.*Baghdad, March 31.***The Akhwan Raid.**

Further details have now been made known regarding the activities of the Akhwan in the neighbourhood of Nasiriyah. The raiders, under Faisal ad-Dawish, first fell upon the tribesmen at and around the wells of Abu Shar, some distance south of Nasiriyah, and captured all the sheep and camels they found there. From there they proceeded to Shagrah, another oasis, and attacked the newly raised camel corps, inflicting heavy casualties upon it. As soon as information regarding the raid reached Baghdad aeroplanes were sent out to discover where the raiders were, but were heavily fired on, with the result that on the following day bombing operations were carried out, and heavy casualties are said to have been inflicted; and the raiders moved away farther south.

Since then the raiders have returned again and attacked the tribesmen in the area between Tel el-Lahm and Zubeir and carried off considerable booty. Nuri Pasha Said, Director-General of Police, has since gone to Nasiriyah to make inquiries regarding the occurrence and to discuss with local authorities the best manner of dealing with the raiders; and it is to be assumed that Government will make what arrangements it can to meet the situation. The strength of Government in the Nasiriyah division is not very great, and but little revenue has been collected there; and unless something is done to protect the tribesmen who are subjects of this country from raiders from outside, the existing tendency to refuse payment of revenue can but be strengthened.

An Improving Outlook.

The proposals made at the Near East Conference regarding the cessation of hostilities in Anatolia and the terms of peace on which a new peace treaty with Turkey is to be based have created a distinctly easier feeling here. In the first place it has done much to remove the fear of an attack by the Kemalists on the Mosul division—a fear which had of late been very much in people's minds. In Mosul town itself people appeared to have very little doubt that an attack would be made, but these fears are now removed to a considerable extent. Mosul has much to gain from a return of peace conditions to those parts, even apart from the question of invasion. Economically Mosul is much more closely connected with the Jazirah and Anatolia than with Baghdad and Iraq, though the connection with Baghdad

has been considerably strengthened since Mosul has been cut off from her northern markets. Trade in the town is at present completely stagnant, and heavy stocks are being carried by most of the principal merchants. It is known, however, that towns like Nisibin, Mardin, Diarbekr and Saïrt are badly in need of merchandise of all kinds, and it may be safely assumed that with the conclusion of peace with Turkey, provided neither the Government of 'Iraq nor the Government of Turkey places artificial obstacles in the way of a resumption of trade, Mosul will soon regain to a large extent her former connections.

The Electoral Law.

The local papers are again showing considerable uneasiness at the delay in the conclusion of the much-advertised treaty between Great Britain and 'Iraq and at the delay in the publication of the electoral law and in the holding of the elections for the National Assembly. People may well be annoyed at the delay in the publication of the electoral law, for for over a year its publication in the near future has been promised; and there are still no indications that it is any nearer publication now than it was a year ago.

General Haldane's Departure.

Lieut.-General Sir Aylmer Haldane left Baghdad on Tuesday, having made over command of the British Forces in 'Iraq to Lieut-General Sir Theodore Fraser. General Haldane has commanded the troops in 'Iraq through a difficult period, which includes the disturbance of 1920 and the establishment of the Arab Government. His successor is well known in the country and has for the past two years commanded the 18th division at Mosul.

The welcome announcement has been made that Baghdad Municipality has succeeded in raising a loan from the banks to enable it to proceed with the paving of New Street. This is one of the city's most crying needs, and the news that the work is to be put in hand at once has been received with genuine satisfaction.

An Anglo-Iraqi club is being formed in Baghdad where members of the British and Iraqi communities will be able to meet. Such a club is badly needed here and it is hoped that it will serve to draw the two communities closer together. Its institution is largely due to the energy of Raouf Chadirchi.

A serious murder occurred in Baghdad on the right bank last Saturday night, when Mr. Tuckett, of the Military Works Services, was shot in his house by armed burglars. The police are investigating the case and one man has already been arrested. These burglaries by armed men on the right bank are causing considerable uneasiness both among British and among local communities. It is only a few weeks since burglars entered the house of a prominent member of the British commercial community and one of the party stood over the lady of the house with a revolver while the remainder made off with anything they fancied. It is hoped that it will be found possible to take effective measures to put a stop to these occurrences.

TURKEY.

Constantinople, March 26.

A British Club.

In the midst of political and commercial crises, the British colony in Constantinople is at last endeavouring to realise a scheme which has been discussed ever since the Armistice, namely, the formation of a British Club. The scheme for which the support of the British Colony was requested some weeks ago was somewhat ambitious perhaps, but by no means beyond the strength of the Colony. It was proposed to issue 500 shares of £10 each, but of the 236 British subjects approached, only 43 promised to subscribe. These 43, however, were prepared to raise £2,000, and it is inconceivable that the total required cannot be subscribed by the rest of the Colony. The position has been reconsidered and a fresh appeal is to be made in a more systematic manner, which it is to be hoped will produce the required result. The Club will be residential as well as social, and will

provide all the amusements and conveniences enjoyed before the War by the German colony through the Teutonia Club, which was far more than a mere social asset for the Germans.

The organising committee has put forward a very sound scheme, which, if it materialises, should be of great value to British commercial and political interests. All the promoters are well-known business men, who are endeavouring to carry out a plan founded upon innumerable proposals and suggestions discussed during the last three years, and even before the Armistice. The scheme is not, therefore, the arbitrary conception of a small unrepresentative body, but the consensus of suggestions from all sides. Amongst certain newcomers there is a tendency to decry the scheme on the grounds that the club will be "Levantine," and that it is the sole work of a small number of interested people. The first objection is beneath contempt, and nothing could be further from the truth than the second. The Club will be British in every respect, and will exist solely for the furtherance of British interests.

ROUMANIA.

Bucharest, April 7.

In Parliament.

Practically the whole of last week in Parliament was taken up in debating the validations of the seats, which, with the exception of two or three cases, were voted in favour of the Government's partisans. The Opposition realized that their protests on the way the elections were carried out were fruitless; and in keeping with their previous declarations, the three principal parties of the Opposition—the Tzaraniists, the Transylvanian National Party, and General Averescu's party—began their abstention from attending the parliamentary sittings on the day after the validations were over. As I mentioned in my last letter, the future attitude of these parties will be decided at the Congress of Alba Julia, which will be held shortly after the Easter holidays. The groups of MM. Jorga and Také Jonescu have not withdrawn from Parliament, but have decided to attend the sittings, though in a more or less passive manner.

The Government and its strong parliamentary majority, quite unworried by the Opposition's conduct, are pressing on with their programme of rushing through the two Houses the various urgent Bills intended for the present short session. During the latter part of the week the following ratifications of treaties were passed unanimously through both the Senate and the Chamber: the Treaty of Bessarabia's Union with Roumania, which was agreed between the Allied Powers on October 28, 1920; the definite Statute of the Danube Navigation; and the Commercial Treaty between Poland and Roumania.

The Government has further introduced the House Rent Bill in the Senate and the 1922-23 Budget in the Chamber.

General News.

M. M. Pherekide has been elected President of the Senate and M. M. Orleanu-Galatz President of the Chamber. The Vice-Presidents for the two Houses have been chosen so as to represent the various provinces of the country.

The Roumanian Delegation for the Genoa Conference headed by M. I. C. Bratianu, the Prime Minister, left Bucharest for Genoa on Wednesday the 5th. During the Premier's absence from the country, the Presidency of the Council will be held *ad interim* by General Vaitoianu, the Minister of the Interior.

According to a report from Temeshvar, the Council of Ministers has agreed to the proposal of M. Cosma, Minister of Public Works, and a native of the Banat, to invite the British Government to open a British Consulate also in Temeshvar. Similar invitations will be addressed to Austria, Hungary and Yugoslavia.

The Roumanian Minister of Education has made a request to the competent authorities, through the Roumanian Legation in London, that students who have

matriculated at Roumanian schools, should be admitted to Oxford University.

Queen Marie of Roumania, accompanied by Mme. Mavriody, Lady-in-Waiting, M. Antitch, the Serbian Minister, and M. Mishu, Minister of the Royal Court, left Bucharest for Belgrade on April 2. Her visit to the Serbian Sovereign is in connection with the preparations for the forthcoming royal wedding.

It has since been reported from Belgrade, however, that the Queen of Roumania has in the meantime left Belgrade for Athens, having been informed that her elder daughter, Princess Elisabeth of Greece, is seriously ill with an attack of typhoid fever which she contracted whilst with her husband on the Asia Minor front.

ASIA MINOR.

Smyrna, March 28.

Last evening an Italian shoemaker named Ventura had a quarrel with a Greek soldier about flying a kite. The Italian became so exasperated that he finally attacked the Greek soldier with a knife and stabbed him in the abdomen, whereupon other Greek soldiers rushed to the assistance of their comrade and beat the Italian so severely that he is said to be, like his victim, in a dying condition.

April 4.

The Asia Minor Greeks' Committee is soliciting subscriptions for funds to organize the defence of the Greek zone should the Allies decide to cede this zone to the Kemalists. M. Sterghiades, the Greek High Commissioner, has not so far given his patronage to this movement, and until he does so, it is not likely to reach the sphere of practical politics. In the meantime the Greek civilians in the towns and villages in the environs of Smyrna are being armed and drilled.

On Sunday last the monument erected by the Italian Colony to the memory of their Glorious Dead was disfigured and desecrated by Greek soldiers. They also attempted to damage the French monument. Both the Italian and French Consuls have protested vehemently against these outrages, and M. Sterghiades has promised to find the culprits and have them drastically punished.

THE "TABRIZ COUP."

From an Occasional Correspondent.

Teheran, February 8.

A few days ago news reached here of fresh trouble at Tabriz. A force of Gendarmes numbering, according to most accounts, quite 2,000 men, and headed by a Major Lahouty Khan marched into the town from a small place called Sherif Khaneh, near Lake Urumia, and attacked the garrison. After some fighting, reported to have been quite serious, the Gendarmes were victorious, the garrison was overcome, the Government Offices were seized and occupied, and His Excellency the Governor was arrested.

The cause of the attack is not yet clear, but it may probably be sought in the antecedents of Lahouty Khan. He was dismissed from the Gendarmerie some years ago, and during the war took sides with the Germans, with whom he is even reported to have served. Latterly he has been in Constantinople, where he has been editing the *Pars*—a Franco-Persian journal, but just before the Kavam es-Sultaneh resigned office, he left Constantinople for Azerbaijan and by hook or by crook contrived to get himself reinstated in the Gendarmerie with the rank of Major. He appears to have made use of his authority and official position to make the raid on Tabriz now reported.

As your readers are well aware, no doubt, Azerbaijan has been in a disturbed state for a long time. During the war Russia had considerable forces there, and as a result the Turks stirred up the Kurds in the western districts, who conducted a kind of guerilla warfare against the Russians. The latter thereupon armed the

Assyrians and Armenians, and fighting went on merrily, with victory now on one side and now on the other. In the long run, however, the Christians appear to have suffered most, and the majority of them were eventually compelled to fly to Mesopotamia, where they were looked after by the British authorities.

Recently another Kurd chieftain, Ismail Agha Semitgou, egged on no doubt by the Turks, has been making fresh trouble. He attacked and fought Persian government troops, and a considerable force of gendarmes had to be despatched to Azerbaijan to deal with him.

In addition to this fighting, dangers and difficulties were created by too active politicians and apostles of Pan-Turanianism. The latter creed made a strong appeal to some of the more advanced elements in Tabriz, whilst the Azerbaijan republic across the border was thoroughly imbued with it. Propagandists from Baku were busy in Tabriz, and their activities were only terminated by the appearance on the scene of the Bolsheviks. Out of the confusion thus created there arose an agitation for the creation of an independent Tabriz—independent, that is to say, both of Persia and of Turkey, but what relations it was proposed to maintain with the neighbouring republic I am not in a position to state. The Progressives, who were responsible for this movement, rechristened Azerbaijan "Azadistan" (Land of Liberty). Their leader, who appears to have been a Pan-Turanian of advanced views, was a certain Khiabani. What might have come of the movement it is impossible to say, but, as your readers will remember, the Azerbaijan republic was overthrown by the Bolsheviks; and this fact, coupled with the Kurdish leader, Semitgou's activities, put an end to the Tabriz Progressives' dream of an independent Azadistan. Last year Mukbar-es-Sultaneh was sent to Tabriz as Governor, and at once took active steps to "deal with" the Progressives in quite oriental fashion. Their leader was killed; and the movement terminated abruptly. The Governor next turned its attention to Semitgou, the Kurd, but he was hampered by having insufficient forces at his disposal, and it must be added, insufficient funds, and his efforts were not very successful. The Progressives, therefore, began to take heart again, and when Lahouty Khan appeared in their neighbourhood they entered into relations with him; and appear to have planned the coup which has just been successfully brought off, which, it must be added, was made all the easier by the rivalry between the Gendarmerie and the Cossacks. Now that things have reached such a pass the Government in all probability will be forced to take strenuous action, and the Progressives and their allies are likely to have only a short lease of power. At the same time the Government, like the Governor, is short of money, and it is finding it difficult to send a sufficient force to deal with the trouble. Nevertheless the rebels are not likely to have a very long period of success.

Owing to the refusal of the Government to reinstate the dismissed professors, the Senate of Sofia University has decided to close the University till further notice.

Ten Greeks, who last year tried to embark at Cherbourg for America on the Olympic and Lapland, armed with false papers furnished by a Piraeus agency, have been condemned by the Cherbourg Correctional Tribunal to pay a fine of £60 each.

A message from the "Moslem and Christian Committee, Haifa" declares that "the Moslems and Christians of Palestine refuse every Constitution and scheme based on the Balfour Declaration."

The Association of Industrialists of the Banat have protested to the Roumanian Ministry of Industry against the free importation of such articles as can be manufactured in the country at reasonable prices.

With a view to decreasing the amount of notes in circulation the Czecho-Slovak Government proposes to make it obligatory upon merchants and others to accept bills of exchange at six months for all sums payable above 5,000 crowns.

PRESS ON THE NEAR EAST.

In consequence of queries, the Editor thinks it advisable to state that the quotation from any article does not necessarily imply that the views expressed are shared by "The Near East." On the contrary, an attempt is made to include as far as is possible in the available space all sides of the various questions discussed.

Our Task in Palestine.

On April 10 *The Times* published the eighth and last of the series of articles, "Some Truths About Palestine," by Mr. Philip Graves, its correspondent in the Near East. Referring to the series in a leading article, it says: "Our readers, we believe, will agree that Mr. Graves has adopted in his careful inquiry an absolutely independent attitude, and that he has laid bare the heart of the problem which the British taxpayer, hitherto not very carefully consulted upon the matter, has been called upon to face in a country renowned, familiar, but comparatively unknown." The verdict will be supported by everyone who has read the articles, which constitute a most valuable study of a complex question. It would be difficult to give an adequate idea of their worth by quotation in the limits of space here available; but certain passages from the concluding article may be given, because they afford a very clear impression of the causes of much of the present unrest in Palestine. Mr. Graves says at once and quite frankly: "The cause of our present difficulties in Palestine is not the Balfour Declaration, but the interpretation thereof." The interpretation put upon the principal passage by the British Government differs *in toto* from that adopted by the Zionist Organisation and its executive in Palestine. But that organisation and its executive have been recognized by the British Government as an adviser and co-operator with the Administration of Palestine in matters affecting the establishment of the national home for the Jews. But—

The leaders of the Zionist Organization have not realized that, by the Balfour Declaration, and under the terms of the draft mandate, the conquering Power has committed itself to a very delicate and quite unprecedented political experiment—namely, the partial colonization of conquered country with settlers belonging neither to the conquering nor the conquered race, in such a manner as not to injure the political and other rights of the native population.

Their interpretation of the Balfour Declaration and some of the activities of the Zionist Commission have given the Arabs the impression that they are working for an early Jewish domination over Palestine. Hence the growth of what is really a national movement among the Arabs.

The delay in the granting of the mandate has encouraged this movement, for the Arab leaders naturally hope to improve their position by anti-Zionist agitation, which they suppose may result in a modification of the terms of the mandate, or, if these are not modified, will still enable them to make better terms for themselves with the Zionists.

The Arab Government cannot, says Mr. Graves, be truthfully described as anti-British or pro-Turkish. Complete tranquillity cannot be obtained in Palestine, but the present tension would be greatly loosened "if the Mandate were granted, and if the Zionist Commission were abolished and a Jewish Agency more representative of Jewry as a whole than of the extremest Zionists substituted for it. It cannot be said that the Zionist Commission, or the Zionist Organization behind it, are at present 'appropriate' public bodies for the purpose of advising and assisting the Government of Palestine."

After glancing at various Jewish parties, or groups—the "religious Conservatives," the Marxian Jews, the "business-like American Zionists"—Mr. Graves continues:

The Zionist Organization must broaden its basis; Zionists must ease the task of the Mandatory Power, without which they are impotent; they must cease to advocate Jewish predominance; they must

follow the example of individual Palestinian Jews, such as the merchants of Tell Aviv or Mr. Kalvarisky, Baron Edmond de Rothschild's representative in Palestine, and prove to the Arab that they desire to cooperate with him in the commercial and cultural development of Palestine.

And the Zionist Commission must go, and some other Jewish Agency take its place, on the understanding that it must refrain from political activities. Otherwise, even if the Mandate be granted to-morrow the Mandatory Power will have endless friction with the Arabs of Palestine and the Zionists themselves.

The British Empire can honourably work for the realization of the hope of the great philosopher of Jewish Nationalism, Achad Ha-am (Asher Ginzberg), who now lives in the Tell Aviv suburb of Jaffa, and exercises a potent influence in Jewry, that Palestine will be "a national spiritual centre of Judaism, to which all Jews will turn with affection, and which will bind all Jews together; a centre of study and learning, of language and literature, of bodily work and spiritual purification; a true miniature of the people of Israel as it ought to be, so that every Hebrew in the Dispersion will think it a privilege to behold just once the 'centre of Judaism,' and when he returns home will say: 'If you wish to see the genuine type of a Jew, whether it be a Rabbi or a scholar or a writer, a farmer or an artist, or a business man, then go to Palestine and you will see it.'"

But it cannot honourably support a policy hostile to Arab rights and favourable to Zionist political domination over an Arab majority. The Arabs, in turn, must realise that it is only through cooperation with moderate Zionism that they can hope to see Palestine prosper economically and culturally. Only Jewish capital is likely to enter Palestine in any abundance, and though the country may become prosperous it will never be an Egypt. Without Jewish interest in the Holy Land, without Jewish aid, can they hope to play any worthy part in the modern world?

Some of the Arab fears are, in Mr. Graves' opinion, as baseless as the hopes of the extreme Zionists. They are a healthy race, with a rate of increase of at least 14 per 1,000 annually.

And do they realise what it would cost the Zionists to import and settle 50,000 families, or 200,000 souls, on the land in Palestine? At present, assuming that the country could receive and feed them, which it cannot, it would cost £60,000,000, and even then the Jewish population would be less than half as numerous as the Arab.

Meanwhile the British Government must find a way out of the present situation. We have decided, sooner or later, to withdraw our forces from Egypt into the Canal zone, and we need a better hinterland for these forces than the arid waste of the Sinai. Should our troops, who will guard the most vital point on all our Imperial line of communications, be attacked, either from Egypt or by some Mediterranean enemy, they will need to have a land behind them, not a sandhill. But it must be a quiet land, a military and moral asset, not a liability. By supporting moderate Zionism, we shall gain the one; by supporting political Zionism, we shall be saddled with the other. Our course in Palestine is surely clear.

The Situation in India.

The present situation in India is dealt with from two different points of view, by Lord Meston and Sir Henry Craik, in the April *Asiatic Review*. The former begins his review of the situation by remarking that in their study of the subject the British public are doubly handicapped—by the existing events which are now chasing each other through domestic politics, and by the inadequate service of information of what is really happening in India; and he is of opinion that “we stand badly in need of a dispassionate review of the position from inside knowledge.” After sketching in broad outline the position as he sees it, Lord Meston glances at some of the remedies suggested, and gently rebukes those who put them forward. He then proceeds:—

The true remedy for the present ferment lies not in drastic change, but in patience and a consistent policy on the part both of His Majesty's Government and of the Viceroy and his councillors on the spot. Their first and most urgent duty is the prevention of disorders; and for this task the local authorities must have adequate force available. Its disposition may be safely left to them; all that we can do from this end is to resist any weakening of the British garrison on grounds of economy or otherwise. Sixpence off the income-tax would be a poor compensation for civil war in India. But next to armed force, which no one wishes to see employed, the chief insurance against disturbance of the peace is a steady enforcement of the ordinary law. If seditious meetings and the activities of Mr. Gandhi's “volunteers” are prohibited, the prohibition should be absolute and effective. Once the Government is seen to be in earnest, the sober-minded will soon rally to its support, and the pleasurable excitement of defying the law will steadily wane.

Then will come the harder task, the slow reconstruction of the position which Mr. Gandhi has endeavoured to destroy. His assaults were delivered not only at our scheme of political progress, but through it at our whole mission in India. “India for the Indians” is no new war-cry; there was a well-known revolutionary orator of Lord Minto's time who used to tour Bengal with a banner which bore the sole device “EXPULSION.” But simple patriotism has never been its inner meaning; and if we believe that we have anything of value to leave with India when we finally depart, we must now mobilize and strengthen that section of Indian thought which accepts our ideals of civilization and does not find the words of all wisdom in

the Vedas. To this end we must resolutely pursue our policy of training India in the use of free institutions, and obliterating all colour distinctions which lower the self-respect of Indians. In this way only can the spirit of co-operation replace the fever of racial bitterness.

If there is to be co-operation, however, Englishmen and Indians must each have their allotted share in the work. This is the keynote of the Act of 1919, and the sooner we get back to it the better. Irrksome though the system of dyarchy may be to the impatient or the ambitious, it preserves the balance of duties during the march towards full self-government.

He next refers to the dangers of short cuts, or what Sir Valentine Chirol describes as “skipping dyarchy,” and quotes from the Report of Lord Selborne's Committee, and later, from a letter to *The Times* (of December 23, 1920) by Mr. Bhupendra Nath Basu. The article then concludes as follows:—

Instead of confining themselves to the great administrative and social reforms which lie within their own jurisdiction, the Councils have in several instances been tempted to show themselves—in Mr. Basu's phrase—irresistible, and to assert control over matters outside their sphere. Nothing but confusion and friction can result. Among the merits of the new Constitution, elasticity is not the least, and it would be foolish to imagine that improvements in machinery and procedure will not be devised long before the first decennial stage is complete. But the main principles are the only rails on which the new Constitution can run: abandon them, and a smash is inevitable. If this is recognized when India returns to her senses and the bogey of non-co-operation is laid, her progress will become possible. Conflicts over jurisdiction where the law is clear can end only in the break-down of the Constitution, and a break-down means victory for reaction. Now reaction has two barrels: one is the creed that democratic institutions are unsuited to India, and that she must return to paternal government; the other is the belief that Western civilization is unsuited to India, and that she must get back to her own archaic past. A shot from either barrel is death to all that Englishmen have been trying to do for India in the last 150 years.

“Britain's Responsibility in India.”

Sir Henry Craik's article is entitled as above. It opens with an expression of regret that “Parliamentary debates upon India have become perfunctory and ineffective in recent years. The abolition of the East India Company and that of the Board of Control have led to a gradually dwindling interest in India, and few electors give any thought to the dangers which the changes lately carried out there involve.” The writer then remarks:

Whatever may have been the origin of our Indian Empire, and whatever may be thought of the means by which it was extended and buttressed, there can be no doubt whatever that her rulers came more and more to realize their moral responsibility, and to carry out their vast administrative work in a spirit worthy of the highest traditions of our country, and with all the instinctive genius for dealing with subject races which is inherent in the best type of our countrymen. Whatever may have been the ir-

regularities of the earlier generations of "Nabobs"—and we now know quite enough to discount the fables which served the purposes of Sheridan, Fox, and Burke, and gave colour to their unscrupulous and ill-informed tirades—yet it is indisputable that long generations of Indian administrators have since carried on a thankless and laborious task in a spirit of unselfish desire to do the best for their charge, and in the discharge of that task had adhered rigidly to the loftiest standard of official rectitude. The taint of selfishness and of self-seeking if it ever existed, had been wiped out. They gave themselves body and soul to their work. Health, family ties, home ambitions—all these have often to be sacrificed. But they found their consolation in the intense interest of their work, in the call it made upon their sense of responsibility, and in the respect and cordiality which they earned in the hearts of those for whose welfare they were labouring. He has known but little, or has formed a very superficial estimate of the Indian administrator, who cannot recall a long line of men who shaped their lives on these ideals. They, by their joint efforts, built up a monument of administration of which the world has never seen the equal.

But it was only natural that those who had the good of India at heart should pass on to new schemes for her advance along the road of self-government. We had to give them some measure of freedom and independence, and, provided due safeguards were taken, those who cared most for the various races of India were not only tolerant of, but zealous in any such attempt. Unfortunately, our national defects of imagination betrayed us then, as they have often betrayed us, into singular errors. We could conceive of no advancement except on Western models; the fetish of representative government was something which, to our minds, formed the very foundation of all political philosophy, and the essential condition of freedom, contentment, or even intelligence.

Sir Henry evidently does not share the view thus expressed, and in any case he thinks that the "schemes of reform were seldom consistent," owing to the short tenure of office by those responsible for them. So we pass on to the Montagu scheme, of which the author is no admirer, to say the least. Of "diarchy" he writes that "it had every practical effect that is likely to appear where pedantic self-complacency takes the place of experience and patient labour." Nor does he approve the way in which the Bill "giving statutory force to the whimsical conception of diarchy, germinated in the pedantic brain of an inexperienced theorist," was passed through Parliament. The whole scheme, he declares again—

is the work of pedantic theorists, who are as lacking in imagination as they are in practical experience, or in that patient and laborious effort which experience would prescribe. They have invented one of those specious paradoxes which delight the shallow brain—that efficient government may be an evil, and that freedom (or what poses as such) is well purchased even at the cost of inefficiency. Sayings like that are schoolboy tags, unworthy of thinking men. The scheme could not work; and if the truth were fairly allowed to be known, it is already proved to be bankrupt of all practical statesmanship. The so-called safeguards are parting like ropes of sand. You have launched a feeble bark, constructed by pedantry, and smiled upon by those who "gave and rub the elbow at the news of hurly-burly innovation," and it has already experienced many forebodings of shipwreck. We have a representative system which, in its utmost extension, could only comprise less than 5 per cent. of the population, and which is a game of hazard even amongst that petty handful out of the millions for whose welfare we are responsible. The frail vessel has to pursue its way amidst all the storms of racial and religious hatreds, and amongst the

hidden rocks of anarchy and disorder of which the uncharted sea is full.

The article then touches briefly upon the changed prospects of the I.C.S., and concludes:—

The dangers of this experiment, so rashly undertaken, so insufficiently considered, and so carelessly put into operation, are undoubted. To retrace our steps in a course of that sort is beyond human power. We must only look forward and trust that those in whose hands the government of India now rests will awake to the responsibility which rests upon this nation for the peace of India. We may be thankful that some of them have recently adopted a tone which shows that, partially at least, they realize the danger. Even Lord Meston recognizes that all is not so absolutely well as once he tried to make us believe, and that the forebodings which he discounted in 1919 show signs of being realized in the near future. Above all, let us hope that the wise words of warning which the Prime Minister felt compelled to utter during the debate on the Address may carry weight with those who were invited to ponder them. Let us trust that India's present rulers may rise to the level of their own words, will show themselves stern and unbending in repressing anarchy. If not, it is not they only who will have to bear the full force of national indignation, but they will have exposed our country to the everlasting shame of having failed in the mighty task which it was her chief pride to have discharged so nobly in the past.

KALA JAGAHS.

By "Acorn."

In the vernacular of India, *kala jagah* merely means "a dark place." But in course of time the term has come to bear a more special significance. It does not mean any dark place, but a particular dark place which is a feature of Indian dances. It is a secluded sitting-out place, and takes the shape of screened-off nooks in verandahs, or in tents, for the purposes of a solitude *à deux*. It is part of the arrangements of a dance, like the supper or the slippery floor or the band; and a dance without *kala jagahs* suggests a something wanting as in a vegetarian dinner or temperance champagne.

Even a State Ball is not innocent of *kala jagahs*, and *kala jagahs* have not always been innocent of Viceroys. There was a Viceroy once who—but let there be no scandal about Queen Elizabeth. Still there may be no harm in mentioning that Lord William Beresford, when he was Military Secretary and at the height of his impudence, once strolled into a *kala jagah* tent in a dance interval with the remark, "Ladies and Gentlemen, I am about to light a cigarette," and as he blew out the match he added, "As you were." His thoughtfulness on this occasion added to his popularity. And most of us have heard of the two subalterns who, having made themselves *pardah nashin* in a *kala jagah*, kissed the backs of their hands violently whenever they heard the sound of passers-by. From the suppressed mirth inside the tent, it appeared that the boys were greatly tickled with their performance, and it deceived no one but themselves. Indeed, it was quite an item of that particular dance to visit the tent and listen to the subalterns' osculations. But however all that may be, the *kala jagah* is, so to speak, the spice of a dance, the certain indefinable something which relieves it of dull, stale and profitless routine, and to a girl the atmosphere of it induces a not unpleasurable dread like the atmosphere of a Mess where she is led to believe that the most awful orgies are perpetrated.

And beyond all that again, the words *kala jagah* are so inseparably connected with the sights and scents and sounds of Indian dances that they are merged in a maze of recollections. The ghosts of dear, dead days seem to rise and beckon one, the stalwart men in uniforms, the pretty women like so many daintily plumaged birds, the once famous string band of Calcutta, the regimental music, the polished floor like a mirror, the freshness and sparkle of it all after the long, long Indian day. In anticipation we begin to hum our favourite valse; of course it will be played, and it must be danced with—well, never mind. The last time the evening was positively spoilt because the stout major with the cherry-brandy face and policeman's feet claimed it, and we are determined that the disaster shall not occur again. So we plan the campaign, and by the evening have arrived at a perfect programme, nice boys, good dancers, with a few elderly men here and there, as a foil, to add to importance and prestige.

But where was I? Oh, yes; of my first *kala jagah* I have a vivid remembrance. It was not only my first *kala jagah*, it was my first real dance, and to a girl her first dance is an event which is supreme. You, Mr. Editor, will not, I daresay, understand that, but you must try to understand. You may possibly think it an event of no more importance than your first cigar which made you feel so ill. But though my first dance was also upsetting, there is no other comparison. A girl's first dance is, I say, an event, a boy's first tobacco is a vice and it serves him right. It was my first dance, I had been awaked from a siesta for tea, at tea my mother

and I were discussing preparations, and then she coughed.

I knew that cough, it was not so much a cough as a signal, a sort of red danger light, and then she said, "Dear, your father and I think that we would not like you to go into those *kala jagahs*, and sit out there after a dance."

"Why, Mother? what are they?"

"Silly places—where you are likely to catch—'hem—a chill."

"Oh all right, Mums, I'd much rather stay in the lovely ball-room and watch the people. It will be such fun."

"That's right, dear—because your father would be really annoyed if you caught a nasty cold."

With that warning I enter the ball-room in full blaze, pretty frocks, lovely music, perfect floor, and for a time all went well. My first partner suggests a cool place after a helter-skelter valse. I plump for seats in the room opposite the band where we can see all the people passing. "Right O," says the boy, and so for a few more dances; and then I find that in the intervals the room is emptier and emptier, and the air warmer and warmer, so that when a more elderly boy (hereinafter called the E.B.) votes for an exodus, I hear a weak voice, which I can scarcely recognise as my own, murmur, "But where can we go?"

"Oh, out there, where there are the Chinese lanterns and things."

Chinese lanterns sounded nice, and it was nice, it was fairy-land, little tents decorated with gay flags and Indian fabrics and foliage and palms. It was quiet, it was cool, and then there was a thrilling sense of mystery. The E.B. peeps into various tents to be repulsed with grunts and giggles, but eventually he secures a vacant tent, dimly, very dimly, lighted, in fact it was very soon almost dark. "That's the artfulness of these things," says the E.B., "the candles are set to a time fuse, when anyone comes in they go out." Mother was right, I felt too cold to move.

"Jolly here," continued the E.B., "isn't it? I say, we did have a ripping dance. Has anyone told you how perfectly sweet you are?" Continued silence on my part. "Oh, I say, I thought you were going to be nice. What shall we talk about? Shall I tell you all about myself?"

I clutched at that as at a straw. In an almost inaudible voice I said, "Yes, oh yes, tell me about yourself," hoping fervently that he would not dwell too particularly on his lurid past.

"Then give me your hand." I seemed to feel a big gloved paw looming in the darkness, and warded it off with my fan. He closed on the fan. "Little hand," he said.

That was so like a man. A gloved woman is as deft as with her bare fingers, a gloved man has lost his sensory nerves. I notice in England that a man can't take money out of his pocket without taking his gloves off. Put gloves on a man and he does not know a woman's hand from a broomstick. However, the E.B. eventually discovered his mistake, and securing possession of the fan he made play with it so violently that he snapped it in the middle. I felt inclined to cry. It was not an ordinary fan, it was a very beautiful fan, a special present for my first dance, a something to keep in after days to recall "The Land of Heart's Desire." The imbecile had broken it, and with the fracture, as by the touch of a magic wand, fairyland had disappeared. The *kala jagahs* were hateful, they were cold and dismal, their decorations were tawdry, and never was a sound more sweet than the first squeak of the violins in the distance telling that the next valse had begun. I wanted to be back in the ball-room, to dance again, to forget an episode which was gone and done with—done with? Not quite, for leaning against the column facing the entrance, and looking as if he were carved out of ice, was—my Father.

Mother was right, I caught a—chill.

NEAR EAST BOOKSHELF.

THE MESSAGE OF THE EAST.

"CREATIVE UNITY." By Rabindranath Tagore. (London : Macmillan, 7s. 6d. net.)

In this collection of essays the celebrated Bengali poet states his opinion that in its understanding of spiritual learning the East has a great message for the West, which it has not yet had the chance of delivering. In the last, longest and most important paper, "An Eastern University," he gives us his views on the unsuitability of European education for the Eastern mind. "Our educated community is not a cultured community, but a community of qualified candidates." . . . "Mind when long deprived of its natural food of truth and freedom of growth, develops an unnatural craving for success; and our students have fallen victims to the mania for success in examinations. Success consists in obtaining the largest number of marks with the strictest economy of knowledge. It is a deliberate cultivation of disloyalty to truth, of intellectual dishonesty, of a foolish imposition by which the mind is encouraged to rob itself."

He puts forward his project for the founding of a University where the lore and culture of all parts of the East—"the Vedic, the Puranic, the Buddhist, the Jain, the Islamic, the Sikh and the Zoroastrian—the Chinese, Japanese and Tibetan will also have to be added"—shall be expounded and which will be sought by Western students, so that they may gain something in exchange for the gift of scientific knowledge, which seems in his opinion to be the only gift of any value which the West has to offer to the East. He naturally has a high ideal of the function of education: it "is to enable us to realise that to live as a man is great, requiring profound philosophy for its ideal, poetry for its expression and heroism for its conduct."

The essay which next to this possesses most interest is that on the religion of the Bauls, a mendicant tribe in India, in which the author finds the same spirit as that contained in the Buddhist teaching. He grows very eloquent over the impression that was made on him by the depth of the spiritual life of these illiterate people, their recognition of the doctrine of the fulfilment of love through sacrifice, their realisation of the infinite in the personality of the individual, and their expression through some of their songs of the need of God for the devotion of man.

"What hast thou come to beg from the beggar,
O King of Kings?

How long will you keep him waiting, O wretch,
who has waited for you for ages in silence and stillness?"

Tagore is filled with dismay at the materialism of the modern age and apparently feels that the motive of the Western world is entirely to gain money and power, and that in its ruthless efforts to fulfil this desire it completely ignores the philosophy of the East, where man is still able to contemplate nature in calm of soul and to feel himself a necessary part in the harmony of the universe. There is an essay full of deep feeling and dignified beauty on the forest hermitages of ancient India, especially as described in the dramas of the great poet Kalidasa. The papers which contain quotations from English poets and which try to define poetry are not so happy. It seems unnecessary to quote some lines of Keats' and then to make the remark: "In this there is a suggestion that truth reveals itself in beauty."

The impression left by this volume is that it is the utterance of a cry of protest against the overwhelming, by the onrush of material greed, of man's sense of unity with all created things and with it his power of creating beauty.

THE SERBS' HERO.

"THE BALLADS OF MARKO KRALJEVICH." Translated by D. H. Low. (Cambridge University Press, 1922. Price 15s.)

Marko Kraljević is the very embodiment of the character of the Dinaric Serbs, and especially of those

of the Shumadia. There is not a single Serb, says Vuk Karadjich, who does not know his name. We may go further, and maintain that scarcely a day passes in the life of a Serbian peasant on which he does not mention the name of Marko, for his tales, like Shakespeare, are "so full of quotations." When a horse strains to pull his heavy load up a bad hill, his owner, with pride, cries out: "In the name of God, he pulls like Marko Kraljević!" When the Serbs beat the Turks at Kumanovo and Bitolj in 1913, and the troops saw Markov Grad at Prilep, Marko's old citadel, they were persuaded that their old hero had arisen from his sleep to help them, and in 1918, were convinced that it was Marko's prowess and strength which was helping to send the Bulgars and Schwabs headlong.

Marko holds a unique place among national heroes. He is not idealised; he is no paragon of virtue; even his military prowess is marred at times by failing nerve; he is associated with no great battle, with no decisive victory or defeat; even his patriotism is questioned, superficially perhaps, but he is constantly depicted as being on friendly terms with the Turks, and even in the service of the Sultan. The secret of his popularity is his humanity. In him the Serb sees a mirror of himself. He is intensely human, with all the passions and appetites of the ordinary man: he is tempestuous and quick to fly into a passion, when he performs acts of sheer brutality; he is not quixotic, but often savage, as when he smashes the teeth of the wife of Philip the Magyar, and cuts off the arm of Roxana the Proud. He is, too, an egregious wine-bibber, a prodigious drinker, quaffing red wine out of twelve-oke goblets: but after all, we all feel respect, and many envy, for the man who can drink everybody else under the table. His physical strength, of course, is tremendous and is constantly insisted on in the tales. He is a simple-minded, great, rollicking Hercules, but endowed with the characteristic Dinaric qualities of high sense of justice, indignation at the wrongs of the oppressed, tender towards the weak and to animals, and a model of filial piety, with a strong vein of humour. He is a hero, not a semi-deified saint, but a very human, very strong *man*, and a thorough Serb. When he drinks wine in Ramazan, to defy the Sultan's order, and what is more, makes the *hojas* and the *hajjis* drink with him, it is from *inat*, that peculiar Serbian characteristic, which might be translated as "pure cussedness."

Mr. Low's translation is very welcome, when Serbia has begun to play so much more prominent a part on the stage of European politics. It is now more necessary than ever to understand the Serbian temperament. Mr. Low quite rightly says, there is no key to the soul of Serbia like a wise and sympathetic study of the ballads of Marko Kraljević.

The historical part of the book, with a critical account of the introduction of the Serbian oral literature, and of this cycle in particular, to European readers, is valuable and interesting, but the bibliography at the end does not seem quite full enough. The translator has overlooked a short article on "The mediaeval Literature of the Serbs" in the *Oxford and Cambridge Review* of 1911, containing a short essay on Marko Kraljević; though he cannot be blamed for the statement that the cycle, as a whole, has never been trans-

HINDUSTANI SELF-TAUGHT and GRAMMAR.

By CAPTAIN C. A. THIMM.

Hindustani Text Revised by J. F. BLUMHARDT, M.A., M.R.A.S.

Revised by SHAMS-UL-ULAMA SAYYID ALI BILGRAMI, M.A.
(Cantab.)

Containing Alphabet and Pronunciation Vocabularies, Idiomatic Phrases and Dialogues; Travel Talk, Military and Commercial Terms, Money, Weights, Measures. A Simplified Grammar; Alphabet, Rules of Grammar and Parts of Speech and Exercises. The Vernacular, Hindustani Penmanship, Phrases, English and Hindustani Dictionary of Everyday Words.
Cr. 8vo. 232 p.p. Red Cloth, 7s 6d. net. Postage, 4d. extra.
Sold by all BOOKSELLERS. Write for Prospectus and Catalogue No. 25.
London: E. MARLBOROUGH & Co., 51, Old Bailey, E.C.

lated into English, for a complete and annotated translation made nearly twenty years ago, was never published; but the omission of Dozon's "L'Épopée serbe" is unfortunate.

The translation itself is excellent and well balanced between the Scylla of "fine writing" and the Charybdis of baldness; and it is sufficiently literal to retain something of the atmosphere of the original. There is plenty of unnecessary reduplication in the footnotes, some of which might with advantage have been more comprehensive, while others call for friendly criticism. On p. 9, for instance, *dorat* would be better translated as a bay horse rather than brown. On p. 29, the "cage" in which the maid grew up was probably only the oriental women's quarters, with a grid over the windows. On p. 57, *Njemadia* does not mean the "barren land," but the land of the *Njem-tsi*, the Dumb Folk, that is, non-intelligible, the "Barbaroi," or Germans: the incident occurs in Croatia, where most people are bilingual. On p. 124 the word "*kesedjia*" is derived from *kesa*, a purse: the ordinary Serbian word for pickpocket is not *kesedjia* but *kesarosh*, from *kesa* a purse, while *kesedjia* is surely from another Turkish word meaning "to cut," and should be translated cut-throat. Again in the footnote on p. 9, *chilash* is described as short for *Jabuchilo*, the winged horse: if this is so, there is a pun, for *chilash* is the ordinary word for a roan. In the footnote on p. 1, *zhezhenozlato* means literally "roasted gold" and implies a reference to the cleansing power of fire and the purity of the gold. *White bread* (p. 84) is a luxury for special occasions, which adds point to the story. *Djemo Brdjanin* (p. 135) is translated as *Djemo the Mountaineer*: more probably it should be "*Djemo of the Brda*," that is, the country between *Rashka* and *Montenegro*. On p. 155, *vaistina* reads a servant's name: it is really Old Slavonic, and means "in truth." *Prezime* (p. 180) is a surname, *ime* is the Christian name, while *nadinak* is a nickname. The reference to dry cornel wood (p. 127) would be more vivid to the English reader if it were explained that wood of the *dren* is exceedingly hard and dense, so that the peasants use it for helves for axes and picks. A footnote, too, would be an improvement on p. 177, to explain that "*Vilindir*" or *Hilendar* is the Serbian monastery, foundation of St. Sava, in the monkish republic of the Holy Mountain or Mt. Athos, and that the old tradition of the *Nemanichi* dynasty is carried on there unbrokenly even to-day. Where *Vuk Brankovich* is branded once more as the traitor of *Kosovo* (p. xxvii), it seems a pity not to refer to the other point of view and his able defence by *Kovachevich*. "*Pola pije*," (p. xxix) is an oversight for "*polu*."

The reader to whom the subject is unfamiliar will probably be most struck with the naive humanity of the hero, and the blending of ancient tales of magic, fairies, with flying and speaking horses, with the invention of firearms, and the quaint character of the sultans. Here we may well quote Dozon:—"Nul, en vérité, n'a connu de sultans aussi debonnaire, et dans cette invention des chanteurs, il est permis, ce semble, de voir une sorte de dédommage naïf que le peuple, subjugué, mais encore frémissant, accordait à son amour-propre." But the reader who knows the Balkans cannot fail to be struck by the *oneness* of the country concerned. Here the Balkans are not divided into a number of petty States: the Serbs saw the land as one, their own heritage. Our hero is not from what we call Serbia to-day, but from *Prilep*, and he travelled freely to *Kostur*, *Timok*, *Prizren*, *Kosovo*, *Ohrid* (*Ochrida*), *Kachanik*, *Skadar*, the *Durmitor*, *Belgrade* and the *Danube*—all was the inheritance of the *Nemanichi*; and *Macedonia* was not divided from Serbia. He crossed the *Save* to *Croatia*, to *Karlovat* and *Varazhdin*, but there was not at home. His memory has crossed too, carried by the numerous Serbian immigrants, and there is a mountain in *Croatia* called after him, from a fanciful resemblance in form to a giant's face. His fame echoes even in *Bulgaria*, but *Marko* belonged to the south: he knew Turkish, as most southern Serbs do to-day, and was perfectly at his ease in *Constantinople*, but his home was *Prilep*. He is the favourite of all Serbia's rich *valhalla*.

PERSONAL AND GENERAL.

To-day.

April 20 (New Style).

April 7 (Old Style).

Shaban 22, 1340 A.H. of the Moslem Calendar.

Nisan 22, 5682 of the Jewish Calendar.

M. Radu T. Djuvara, First Secretary to the Roumanian Legation, has returned to London from France.

Mr. Reginald and Lady Margaret Loder have returned to Maidwell Hall, Northampton, from shooting in the Sudan.

Colonel W. D. Waghorn, President of the Railway Board, is leaving India on leave this month. Mr. E. A. S. Bell is carrying on his duties during his absence.

M. Venizelos, who arrived at Washington last week, said that the report that he is returning to Greece to take part in political life is false.

The King of Egypt has conferred the title of Bey upon Mr. Hasib Stephan, Chief Clerk, Dongola Province, Sudan.

The Rev. Geoffrey Browne arrived at Khartoum on March 27. He is joining the Church of England Clergy in the Sudan.

The Minister of the Kingdom of Serbs, Croats, and Slovenes, M. Michel Gavrilovitch, has also been accredited to the Hague.

The Greek Government has sent a message of thanks to Mr. T. P. O'Connor, M.P., for his support in Parliament and in the Press of the Greek cause.

The Earl of Ronaldshay, late Governor of Bengal, who arrived last week by the mail steamer from Bombay, made no stay in London but proceeded immediately to the family seat in Yorkshire.

Bishop Geyer, Vicar Apostolic in the Sudan of the Roman Catholic Church, left Khartoum on March 26 for Egypt, whence he purposed going on to Europe for the summer.

The Council of the Lord Kitchener National Memorial Fund last week announced a preliminary list of thirty Kitchener scholarships awarded to sons of officers and men of his Majesty's Forces.

It is officially announced that the King has been graciously pleased to approve that the dignity of an Earldom of the United Kingdom be conferred upon the Right Hon. Sir Arthur James Balfour, K.G., O.M.

Lady Rawlinson is reported by *The Times* Simla correspondent to be proceeding to England this month.

The engagement is announced of Michael, son of H. E. Sullivan (late Madras Police) and Mrs. Sullivan, The Nook, Broadstairs, and Maude, second daughter of Colonel O. H. Oakes (late Worcestershire Regiment) and Mrs. Oakes, of Nowton Court, Bury St. Edmunds.

M. A. Rizo Rangabé, Greek Chargé d'Affaires, and Mme. Rangabé, left London on the 12th instant for Genoa. M. Rangabé having been summoned by M. Gounaris. In his absence M. M. G. Yanopoulos is in charge of the Legation.

The engagement is announced between Herbert Crawford Laurie, younger son of Henry Montagu Laurie, I.C.S. (retired), barrister-at-law, and Mrs. Laurie, Kenbank, Dalry, Kirkcudbrightshire, and Elizabeth, daughter of A. Leslie Wright of Butterley Hall, Derby.

Lord and Lady Oranmore and Browne have left London for a visit to Austria and Bavaria. They will return to London early in May, when Lady Oranmore and Browne will give a dance for her daughter, the Hon. Kathleen Browne.

A Bombay telegram announces:—Mr. Justice Jamshed B. Kanga has succeeded Sir Thomas Strangman as permanent Advocate-General (Bombay). It is worthy of note that Mr. Justice Kanga, who is the first Indian to hold this position, has not been called to the English Bar.

King Constantine was taken ill last week his indisposition being accompanied by vomiting. A telegram dated April 13 stated:—There is a slight improvement in the condition of the Crown Princess of Greece to-day. She is suffering from typhoid fever. Queen Marie of Roumania is constantly at her daughter's bedside.

The Czech Society of Great Britain proposes to give a dinner on May 18 at the Criterion Restaurant. Lieut.-Col. Sir Samuel Hoare, Bt., M.P., will preside, and Lord Robert Cecil and the Czecho-Slovak Minister will speak. Tickets (12s. 6d.) can be obtained from Mrs. B. Tufnell, Room 289, Kensington Palace Mansions, London, W.8.

The engagement is announced between Captain Lionel George Gray, 18th and 19th K.G.O. Lancers, Delhi, third son of Mr. and Mrs. Charles Octavius Gray of Calcutta and Marie Louise, youngest daughter of the late Charles Trotter Thompson and Mrs. Thompson, of 2116, Spruce Street, Philadelphia, U.S.A.

Under the auspices of the East India Association, at the Caxton Hall, Westminster, on Monday, April 24, at 3.30 p.m., Mr. K. N. Sitaram will read a paper, "Some Aspects of Indian Architecture, chiefly Hinduistic." The chair will be taken by Mr. F. W. Thomas, Librarian of the India Office, and the paper will be illustrated with lantern slides.

Lord Lamington will give away his daughter, the Hon. Grisell Cochrane-Baillie, at her marriage to Lieutenant-Commander Edward Hastings, R.N., which will take place in the chapel at Lamington, Lanarkshire, on April 26. The three bridesmaids will be the Hon. Edith Smith, daughter of Viscount and Viscountess Hambleden, Miss Riette Neilson, and Miss Lillias Baird. The Dowager Countess De La Warr will lend her residence, Easter Duddingston, Mid Lothian, for the honeymoon.

At the School of Oriental Studies (London Institution) Finsbury Circus, on April 26, at 5.30 p.m., in connection with the Ahad Ha-am lectureship in Modern Hebrew, a Public Lecture will be given on "Modern Hebrew" by Mr. Leon Simon, author of "Studies in Jewish Nationalism" and Translator of Ahad Ha-am's Essays from the Hebrew. Mr. James de Rothschild will be in the Chair, supported by Mr. Norman MacLean (Lecturer in Hebrew and Aramaic at Cambridge University). Admission will be free.

OBITUARY.

General Sir George Richards Greaves, G.C.B., K.C.M.G. died at Netherwood, Pembrokeshire, on April 11 in his 91st year. He entered the Army in 1849, as an ensign in the 70th Regiment, which was in the Punjab at the time of the Eusofzai Expedition in 1858; and he served on the Staff under Sir Sydney Cotton, and was mentioned in despatches and awarded the medal with clasp. After distinguished service in the New Zealand War of 1863-66, he took part in the Ashanti Expedition of 1873-74 as

Chief of the Staff, and was present at the capture of Koomasi, as well as several other engagements. Sir Garnet Wolseley in dispatches referred to his zeal and ability. In 1878 he was appointed Chief Secretary and Commissioner at Cyprus, and in 1879 he was appointed Adjutant-General in India. He received the K.C.M.G. in 1881, and was promoted to the rank of Major-General in the following year. He was Chief of Staff to Sir Gerald Graham, in the Sudan Campaign of 1885, when Lord Wolseley mentioned him again in dispatches in very complimentary terms. He was made a K.C.B., and was awarded the medal with clasp and the Khedive's Star. In 1886 he was given command of a division in India, and four years later was Commander-in-Chief at Bombay, which post he resigned in 1893. He retired in 1896 with the rank of General and with the G.C.B., and was two years later made Colonel of the East Surrey Regiment.

Mr. Arthur Bacot, F.E.S., died at Cairo on April 12, from typhus, which he contracted while carrying out research work on behalf of the Egyptian Government. He was well known for his researches into the conveyance of plague by rats.

THURSDAY, APRIL 20, 1922.

INDIA'S FINANCIAL FUTURE

The immediate financial outlook in India is unquestionably gloomy. The budget discussions which have recently been occupying the central and provincial legislatures have been illuminated by no cheerful ray. The most important provinces have exhausted their accumulated balances, and, under the influence of the demoralising financial system of the past, have looked hungrily for aid to the Central Government, which is not in a position to pay its own way, still less to afford help to others. Nor can this inability be attributed to lack of effort. Heavy additional taxation was imposed a year ago, in the hope of balancing the central accounts, but that hope was disappointed, and the year closed with a large realised deficit. The administration proposed to renew its effort for the year which has now begun, but the legislature has refused a considerable proportion of the extra revenue which was asked for, and has decided to face the future with the prospect of another large deficit, tempered only by the aspiration that it may be possible to effect substantial reductions in expenditure. No one familiar with the position in India will expect any great result from this measure, because there has been very little real extravagance in the past, while the continuous rise in the standard of living, in itself a desirable development, means that increased wages and salaries in the lower grades will quickly counterbalance any savings which may be found possible in other charges. Some legislators indeed profess to believe that large military economies can be effected, but no one who has studied the recent speeches of Lord Rawlinson, the Commander-in-Chief, will share their apparent confidence; to cut down insurance premia is the worst of all forms of economy, and while India is a "danger area," the premia must remain unpleasantly high. Some of the provinces are attempting to increase their revenue within the limited field available under the existing constitution, but a glance at the expedients under trial, which consist mainly of taxes on such luxuries as betting, litigation, and picture-houses, suffices to show the difficulties of their position; and the conclusion appears to be unavoidable that for practical purposes the limits of remunerative taxation have been reached. The country can be restored to solvency by a great recovery in trade, a recovery which is on the horizon, but as yet can scarcely be said to have dawned; but even when temporary equilibrium has been attained, there will remain almost incalculable demands for new expenditure on developments which have been long postponed. For many years to come the needs of education, sanitation, and other neglected activities will absorb every additional rupee which the Administration can find, and the true lesson to be drawn from the difficulties of the moment is that the resources of the country must be permanently and progressively increased.

Happily for India, such an increase in resources is well within the bounds of possibility, but its attainment will call for steady effort on the part both of the Administration and of the leaders of the people. The primary duty of the Administration at this juncture is to concentrate all the available energy on the development of the great national estate which it holds in trust for the community. First to restore, and then largely to increase, the earning-power of the railways; to turn to the most profitable use, whether for power or for irrigation, every available supply of water; to realise the

almost incalculable possibilities of the State forests; to take boldly the full share of the unearned increment of the land, which by the ancient institutions of the country is reserved for communal purposes; these are definite and straightforward lines of policy, leading directly to the goal in view. The task is undoubtedly rendered more difficult by the present financial situation, for, however the facts may be obscured by the devices of shamefaced accountancy, the broad truth remains that borrowed money used for current expenses cannot also be used for development, while recurring deficits must lower credit, and consequently must increase the cost of loans even for productive purposes. The difficulty however must be faced, and its existence should serve to emphasise the call to increased effort. It is perhaps inevitable that the governing and spending departments, whether central or provincial, should of late have overshadowed those whose mission is to earn: the time has now come when the balance should be effectively redressed, when the portfolios of agriculture, industries, and commerce should claim a largely increased share of public attention, and the country should be given the full advantage of its unsurpassed technical services. Earning, rather than taxing, should now be the watchword of every Indian administration.

The Administration, however, cannot restore the situation without assistance from the leaders of the people. The greatest need of all is the application of national brains and capital in increasing measure to productive work. To say this is not, as some Indian critics think, to preach a doctrine of crude materialism. When we urge the paramount importance of increasing the national income, we do so on the definite ground that by this course alone can national aspirations be realised. Educated Indians differ in opinion on many important topics, but the great majority are agreed in desiring to see their country strong and healthy, learned and wise. Such desires invite the sympathy of the world at large, but to realise them requires expenditure on a scale which the national income at present cannot bear; and the most ardent idealist can accept with enthusiasm the gospel of hard work when the object is not to satisfy the material desires of individuals, but to give the people as a whole the chance of rising to a higher plane of life. We recognise that India has made distinct progress in this direction during the last two decades. A long step has been taken, but it is only a step, and there is a real danger in the premature self-satisfaction now so noticeable in Indian political circles. The thing, they say, has been done: the new productive era has already been attained; peasants, weavers, and miners can now be left to themselves; and men of talent can devote themselves with clear consciences to the battles of words which possess such fascination for them. No greater mistake could be made. A start is much, but it is not everything, and the goal is still distant. Continued and persistent effort is now needed. It is true that some long-dormant capital has of late been mobilised for productive purposes, but it is a trifle compared either to the needs or to the resources of the country. It is true also that a few of the best intellects in India have been devoted to industrial pursuits, but the number must be multiplied a hundred-fold. Individuals have done something, but strenuous leadership is now wanted to move the nation as a whole, and to captivate the imagination of all classes, but especially of the rising generation. The times call for a higher standard of citizenship than has hitherto prevailed. No Indian is a good citizen who buries his resources in the ground, or expends them in useless jewellery, however attractive its possession may be. Again, no Indian is a good citizen who allows young brains capable of productive work to be devoted merely to the deadening routine of public administration. Such doctrines as these should now be propagated in each of the numerous centres of intellectual activity. For India, to-day is indeed "the day of the chattel," and the country will be best served by the men who set to work deliberately to increase the national income, looking chiefly not to the personal reward, but to the contribution they may make to the realisation of their national ideals.

THE SAMARITANS.

By Estelle Blyth.

"There be two manner of nations which my heart abhorreth, and the third is no nation: They that sit upon the mountain of Samaria, and they that dwell among the Philistines, and that foolish people that dwell in Sichem."

These, the words of "the son of Sirach of Jerusalem, who out of his heart poured forth wisdom," are typical of the enmity of the Jews towards the Samaritans; an enmity so intense that it led them to class the Samaritans with the Philistines, the age-long enemies of Israel. Pride, tradition, and the inability of the Jew to forgive, are forces that have erected an impassable barrier between the Jews and that sad dying remnant of a people who are also of the seed of Abraham. To this day "the Jews have no dealings with the Samaritans," while the Samaritans, on their part, offer a set defiance to the brethren who disown them, and to the world in which they are but a name. Of all Eastern peoples there is hardly one so marvellously consistent, so unbending in character, so blindly and passionately conservative, as the Samaritans. The Jews of the dispersion have intermarried with the Gentiles to such an extent that the blood in their veins is no longer purely Jewish; they have assimilated the characteristics, even the features of the peoples amongst whom they have settled. The Russian Jews are perfectly different from the Spanish or German Jews; but the Samaritans remain absolutely Semitic in every way, and they are dying out because they will not allow intermarriage with Gentiles.

According to their own traditions, the Samaritans are of the Tribe of Joseph, descended through Ephraim and Manasseh. Others among the Tribes of Israel at one time adhered to them, but fell away during the centuries, and the little handful of people now known as Samaritans are of the House of Joseph alone, excepting the High Priest's family, which is of the House of Levi. The sanctity of Mount Gerizim, the home of the Samaritans, is as old as the story of Israel, and we shall find that its history is inextricably entwined with that of the people. Here Abraham encamped, and "built an altar unto the Lord in the place of Sichem." Near-by Jacob bought his field, and erected an altar, "and called it El-elohe-Israel." When the Israelites entered Canaan, the High Priest Eleazer, who was Aaron's son and successor, erected the tabernacle of the wilderness in Mount Gerizim, dwelling himself near-by that he might serve it. Moses commanded the Israelites, when they should be passed over Jordan, to set up the stones of the Law "in Mount Ebal, . . . and there shalt thou build an altar to the Lord thy God"; and after that the blessings were to be pronounced from Mount Gerizim, and the curses from Ebal. The Samaritans say that the altar was to be set up on Gerizim, which name should here be read instead of Ebal, and that Gerizim was always intended as the Sanctuary of God and not Zion, which the Jews only chose after the split. We shall refer to this point again. Joshua held his final Assembly of the People in Shechem, and in Shechem he wrote the book of the Law, and took a great stone and set it up "under an oak that was by the sanctuary of the Lord." The bones of Joseph were buried here, in Jacob's Field, which became the inheritance of the Tribe of Joseph, and Eleazer also was buried in the portion of this inheritance. The Tabernacle remained in Mount Gerizim for six generations of the priesthood, the Samaritans claiming that the priesthood was secured and confined to the family of Eleazer, the son of Aaron, as a reward for the pious zeal of Phinehas, who slew the Midianitish woman and her lover, and thus stayed the plague in Israel.

In the sixth generation after Eleazer, Baasha, being then the High Priest, set Eli over the sacrifices and tithes. Eli was of the family of Ithamar, a brother of Eleazer, but not in the direct line of the priesthood. Aza succeeded his father, Baasha, in office, but he was younger than Eli, whose pride was thus offended. It now came to pass that the Gentiles (the outer peoples

who knew not the Lord), sought to compass the downfall of Israel by subtilty. They fraternized with the Israelites, with whom they probably already had trading relations; they intermarried with them, and turned their hearts to the worship of the heathen gods—for very easily and very often were the Jews turned aside after strange altars. They even went to the length of sending into the lands of the Tribes sorcerers and wizards exceedingly cunning, who by their black arts corrupted many, even amongst the priests. Forsaking the true worship on Mount Gerizim, the perverts crowded to the high places and altars of the gods of the Gentiles; "and the Lord delivered them into the hands of the Philistines forty years." While the people were thus miserably enslaved in soul and body, the priesthood was severed by a terrible feud. Eli, being older than Aza the High Priest, refused to serve him any longer; he gathered about him a little band of friends and relatives and malcontents who, when the inevitable split came (after Aza had rebuked him for carelessness over the Meal Offering), clave to Eli, and followed him to Shiloh. The Tribe of Joseph remained faithful to Aza and the lineal priesthood, but many out of Judah and Benjamin went after Eli. At Shiloh Eli made an ark and overlaid it with gold, and therein he set copies of the Law, written by the hand of Ithmar, the younger son of Aaron, and proclaimed that it was all done by the direct commandment of God.

This is the Samaritan account of their severance from the other Tribes: thenceforward their narrative turns aside from that of the Old Testament, which follows the story of Eli and the priesthood that derived from him, though it tells us nothing of Eli's descent and early years, as it does in the case of Samuel.

Not long after the severance between the Tribes, Aza went into the temple on Mount Gerizim on the morning of the second day, and found it filled with a terrible darkness, blacker than night. Each day he entered in, only to find the awful blackness nothing diminished, and by the fifth day even the walls of the temple were hidden from his sight. Sorrowful and afraid, Aza left the temple, knowing well that it was a sign of Divine wrath, and as he emerged into the sunlight he saw a great cavern, which never before had been there. God made known to Aza that He had created the cave as a hiding place for the High Priest's vestments, the Holy Vessels, and the Ark of the Covenant, wherein they might be safe from the unhallowed hands of the enemies of His Sanctuary. So soon, then, as Aza had placed everything in the cave, it closed; and the next day, all sign of it had vanished.

The Samaritans place the severance of Israel in the year of the Creation, 3055. From this point they trace the history of the other Tribes fairly accurately, though their bias appears in such statements as that Eli instructed Samuel in sorcery, to which they ascribe the misery of Saul, he being completely in the hands of Samuel. They also state that David was withheld from building the temple at Jerusalem, not by reason of his penitence for a life of bloodshed, but because Yare, the High Priest, forbade him to build a temple elsewhere than in Mount Gerizim. David, being equally afraid to disregard the voice of the High Priest, or to displease his people by openly acknowledging the supremacy of Gerizim, relinquished the desire of his life, and laid it as a charge upon Solomon, his son. Solomon's heart was turned aside after many strange women (that is, of outlandish or Gentile nationality), and he built the temple at Jerusalem without fear, not scorning the aid of those dark spirits whom he could summon and bend to his will through the secrets of wizardry transmitted by Eli to Samuel. In their mountain fastnesses, the Tribe of Joseph still followed faithfully the Law as Moses delivered it; and all the glories of Solomon's temple failed to bring them to worship at Jerusalem.

The Samaritan tale hereafter becomes somewhat confused and uncertain, and we will turn back to pick up the links of the Bible narrative, to which it only occasionally adheres.

It was at Shechem that Rehoboam, at a great Assembly of the People, uttered the rough and churlish threat which caused Israel to forsake the House of David. Jeroboam also dwelt there for a time. Omri bought the fair hill of Samaria for two talents of silver, and built there a city which he named after Shemer (from whom he had purchased it), Shomron, meaning the Hill of the Outlook, or of the Watch. The Aramaic rendering, Shamrayin, easily passed into the Greek word, Samaria. The Jews call the Samaritans the Shomronim, the people of Shomron; but the Samaritans have a prouder name for themselves—Shomerem, the Keepers (*i.e.*, of the Law) or, more often simply Israel.

The city of Omri's building remained the capital of the Northern Kingdom throughout the troublous years that followed, until B.C. 722, when Sargon, King of Assyria, captured it after three years' vigorous siege. The whole province was enslaved with it, and Sargon carried into activity it is said, over twenty-seven thousand souls of all ages. In their place he set "men from Babylon and from Cuthah, and from Ava, and from Hamath, and from Sepharvaim," to occupy the cities so tragically emptied, and to restore the wasted land of Samaria. The Bible account of this harsh and imperious action is graphic in the extreme. A visitation of "lions among them, which slew some of them," caused severe searching of heart in the ranks of the settlers. It would be interesting to know whether the lions of the Bible were really such, or the fierce black panthers and leopards which are still seen in parts of Palestine, and are called lions by the people. Whatever the beast that preyed upon them, the Assyrians regarded it as a punishment of the "God of the land" upon strangers who did not worship Him, and in answer to their petition, Sargon recalled from captivity a priest of Israel, whom he charged to teach them the new religion. Nevertheless, the people still followed their own gods, secretly, each man in the shelter of his house.

The Jews aver that from this enforced settlement arose a mixed race of partly pagan blood, whose descendants are the Samaritans of to-day; hence they have done well in hating and shunning them throughout the centuries, even until now. The Samaritans, on the other hand, state that they returned to Samaria after an exile of seventy years, and were exiled again, after one year only, for a hundred and thirty-one years, following the capture of Jerusalem by Nebuchadnezzar. They also claim that it was the representations of their High Priest and the princes of the Tribe of Joseph which induced Cyrus, King of Persia, to permit their return to Palestine. There was a terrible famine for seven years in the Holy Land, and Cyrus sent for the leaders of Israel to enquire of them what means could be taken to restore that fruitful land. The leaders seized the opportunity to expound to him the promises and threats of God, written in the Law of Moses, and the heart of Cyrus was moved to deal uprightly with these mourning and afflicted exiles. He gave orders for their repatriation, and for the rebuilding of the temple—the Bible says, at Jerusalem; the Samaritans, on Mount Gerizim. The Jews desired to return to Jerusalem and to rebuild the temple on Zion, the place chosen by David and Solomon; the Tribe of Joseph contested this, and the strife was sharp between them. The Samaritans say that Cyrus sided with the House of Joseph, and they returned to Samaria under the leadership of Sanballat the Horonite (*i.e.*, of Beth-Horon), and rebuilt their temple on Mount Gerizim. All the fittings and appointments of it were fashioned in exact accordance with the Law of Moses, and when it was dedicated, and a hundred oxen offered

upon the altar, God caused the rain to fall upon the land and made it fruitful once more.

We return to the Bible story here. The Samaritans (Ezra calls them "the adversaries of Judah"), offered to help the Jews to rebuild their temple at Jerusalem, but the Jew's rough answer, "Ye have nothing to do with us, to build an house unto the Lord our God!" angered them, and greatly embittered the feud. In return the Samaritans "troubled them in building," and succeeded in persuading Artaxerxes to stop their work. The breach was widened beyond all hope of healing when Nehemiah "chased" from his presence the grandson of Eliashib the High Priest and son-in-law of Sanballat the Horonite, because he had married a strange wife.

Great bitterness vexes the minds of the Samaritans hereafter, and they do not hesitate to accuse Esther of practising sorceries upon Artaxerxes that he might permit the building of the temple at Jerusalem to be resumed. The Samaritans say that as they had the five books of the Torah, and the Jews knew this, and knew also that the feud prevented them from ever gaining access to the only source of their joint religion—therefore Ezra the Scribe set himself to reconstruct the Law from chronicles and legends, and wrote it in a book in the language of the Assyrians, the Jews of the exile having no great fluency in their own tongue. They say further, that Ezra's copy of the Law, being so compiled, is necessarily very imperfect, and that his bitterness against the Samaritans caused him to interpolate deliberate untruths concerning this much-aggrieved people. He called them Gentiles, and accused them of worshipping a dove (Ashimé), and of meaning *that* when, in their services, they pronounce the name "Sh'meh," by which the Samaritans indicate the unutterable Name of God. The charge is a tremendous one, for it strikes at the very root of the Jewish religion, and, in fact, denies its veracity. In their eyes, Ezra's action was responsible for the final and perpetual exile of the Jews from the land they loved, yet repeatedly brought to misery and ruin—I say a perpetual exile, for that little land can never support the Jewish population of the world, if they desire to return as a whole, even if the people of the land who are the descendants of the Canaanites, conquered by Joshua but never exterminated, could be completely dispossessed of their ancient birthright.

Once only did the Samaritans and the Jews come together again—during the Roman Conquest, when the common peril flung them into a brief and futile alliance. Entrenched on Mount Gerizim, the Samaritans offered a desperate resistance to the disciplined army of Caesar, and the merest handful of them survived defeat. Caesar Augustus bestowed the ruins of Samaria upon Herod, who rebuilt the city and fortified it, calling it Sebaste, the Greek rendering of Caesar's name. It is said that St. John the Baptist may have suffered here, where Herod often held high festival with his "lords and chief estates of Galilee," whereas to Machaerus (generally named as the place of martyrdom), which is east of the Dead Sea, he only repaired in sickness for the Baths near-by.

There are not many references to the Samaritans in the Gospels, but our Lord chose them as the text of some of His most beautiful lessons. He made a Samaritan, an outcast, His example of unquestioning charity, as opposed to the paltriness of Priest and Levite who professed so much and did so little; while by the words, "The hour cometh, and now is, when ye shall neither in this mountain, nor yet at Jerusalem, worship the Father," He sought to raise the worship of Samaritans and Jews, who both clung so fiercely to a site, a tradition, a letter whence the spirit had long since fled. In the Crucifixion the Samaritans could have borne no part, for the rigid observance of their own Passover rites kept them far from Jerusalem, and from what they considered the heretical practices of the Jews.

As we study the much-tangled history of the Samaritans we find different place-names figuring therein over

SCHOOL OF ORIENTAL STUDIES.

London Institution Finchbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

and over again—Sichem, Shechem, Samaria, Sebaste, Nablus. How are these worked into the pattern?

Sichem, or Shechem, now called Nablus, is one of the world's most ancient cities. The name signifies the Ridge, or Neck (*i.e.*, of a pass); it lies cradled in the rich folds of the valley that divides Mount Gerizim from Mount Ebal. Abraham and Jacob, each in his day, rested here. Joshua appointed it as one of the Cities of Refuge. Abimelech ruled it for three years, until "an evil spirit" of dissension divided him from the men of Shechem. At Shechem the Tribes finally revolted from the House of David, after Rehoboam's folly; and Jeroboam, his successor, built, or fortified, it. We have seen already how Omri transferred his royal dwelling-place from Shechem to Samaria (the modern Sebaste), which name gradually came to cover the whole Province. After their return from exile, the Samaritans rebuilt their temple on Mount Gerizim, recapturing thereby something of Shechem's old proud eminence; but John Hyrcanus destroyed the temple (B.C. 129), and it was never restored, though the site has been jealously preserved by tradition. In A.D. 67, Vespasian conquered the Province, and rebuilt Shechem, calling it Flavia Neapolis, whence came the modern name of Nablus, there being no *p* in Arabic. Early in the Christian era it became an important Bishopric, but the Samaritans do not seem to have got on much better with the Christians than they did with the Jews; in the year 529 they rushed the Christian Quarter, and killed a number of the inhabitants. Justinian proceeded against them with the utmost severity, even closing their synagogues. Numbers of the Samaritans fled to Persia, where it is said, they settled and in time embraced Islam as the price of their safety; a few of those who remained at Nablus became Christians, but the majority, as one would expect from their history, remained firmly rooted in the faith for which they had already suffered so much.

Under the Christian Kings Nablus became a place of considerable importance, and Baldwin II. (following in the track of the Old Testament history), held a Council here in 1120, to discuss the grave question of a general reform in the morals of the Kingdom, then entering on its twenty-first year.* The Bishop of Shechem was suffragan to the Archbishop of Caesarea. The Knights Hospitallers in 1179 founded a hospice at Nablus, which was inhabited by lepers as late as 1890, and possibly later. In 1201 the city crumbled into ruins in a terrific earthquake. On the whole the Samaritans enjoyed more liberty and consideration under the Christian Kings than under any other rule. The Crusaders would hardly tolerate the Jews anywhere, hating them as the murderers of Christ, and the feud existing between the Jews and the Samaritans may have disposed them to regard the latter with a more lenient eye.

The Samaritan settlers in the cities of Palestine often outnumbered the Jewish. Rabbi Benjamin of Tudela, a learned Jew of Spain, who travelled extensively in the Near East from 1160 to 1173, found Caesarea "inhabited by about ten Jews and two hundred Cutheans. The latter are the Samaritan Jews, commonly called Samaritans." "No Jews live here," (at Sebaste) nor at "Nablus, the ancient Shechem." At Ascalon he found about "two hundred rabbanite Jews, and about "three thousand Jews, also two hundred Caraites (a Jewish sect), and about four hundred Samaritans"; the two latter were on friendly terms, but not to the extent of intermarriage. When the Kharezmians, a fierce Persian tribe, overran Palestine in 1244, the Samaritans suffered no less than the other inhabitants; numbers of them fell in offering a futile resistance, and numbers more were carried captive as far as Damascus. Here they seem to have been abandoned by the Kharezmians, and the Samaritan residents helped them as much as they could; but only a very few survived to return later on to their ruined homes at Shechem.

(To be continued).

* "By the reformation of morals in 1120 A.D., appears to have been understood the regular payment of tithes." (Conder, "Latin Kingdom of Jerusalem," pp. 196-7.)

THE MOHAMMEDANS OF YUGOSLAVIA.

THE RELIGIOUS ORGANISATION OF THE YUGOSLAV MOSLEMS.

By Our Zagreb Correspondent.

The following is the outline of the religious organisation of the Yugoslav Mohammedans, as drafted in consultation between the Macedonian contingent, who are Ottomans and Albanians, and the Serbian Moslems of Bosnia and Herzegovina.

Vakuf properties have all the privileges as provided in the Bosnian statute: the administrative units are the *dzhemat*, which is the local unit, the *srez* or arrondissement, and the central. State aid is proportionate to the actual needs. A minimum of 200 Mohammedan houses constitutes a *dzhemat* or *jemat*. The *srez* corresponds to the administrative unit of that name, while the central office for the entire kingdom is at Belgrade, with a branch at Serayevo and another at Skoplye. At the head of the organisation is the Nayibul Halifa: shariat courts are at the head of each *srez*, and at the heads of the *jemats* State *imams* divided into three categories according to the size of the *jemat*: these are paid as State functionaries and have their own pension fund. They are appointed by the Minister of Religions on the recommendation of the Niyabet and Vakuf Committee. Their duties in their *jemat* correspond to those of the Christian parish priest, including also the care of the vakufs in the *jemat* as directed by the Vakuf committee of the *srez*.

The shariat judges in each *srez* where there is a Moslem population have the same functions as the *kadis* of Bosnia, and are also chairmen of the vakuf committees of the *srez*. Beyond the chief shariat court at Serajevo there is established a similar one at Skoplye and another at Belgrade.

Muftis are selected by the Niyabet Halifa from his council, who chooses two candidates, of whom the Minister of Religions appoints one. These are senior officials and have a high rate of pay. The chief is the Nayibul Halifa, for whom the Sheriat Senate proposes a choice of three names to the Minister of Religions: the one selected by the Minister is appointed by the King.

The Niyabet is assisted by four *muleshars*, who are experts on education, shariat, civil and religious law; these are appointed by the Minister on the recommendation of the Sheriat Senate and form the *Nayibul Mojliss*. None of these functionaries may be dismissed from his post without proof of fault or as provided by the law.

The Sheriat Senate consists of the Nayibul Halifa muftis of Serayevo and Skoplye, the three senior Sheriat judges and the oldest ex-Minister of Mohammedan religion with the Minister of Religions or his deputy, together with one deputy for every 50,000 Mohammedan electors. These deputies must form at least two-thirds of the total number of the Senate, and are elected for three years. The Senate is convoked before the close of the financial year, and sits alternately at Serayevo and Skoplye; the costs are born by the Central Vakuf Fund.

The Sheriat Senate has the right to elect the Nayibul Halifa, proposing three candidates to the Minister, to elect two candidates for the *muleshars*, the president of the Vakuf Central at Skoplye and Serayevo, to pass the budget and accounts of the Vakuf Centrals in Serayevo and Skoplye, to approve the work of the Niyabet, to decide on questions touching Mohammedan education.

Y.W.C.A. WORK IN CONSTANTINOPLE. (From a Correspondent.)

A correspondent sends me the following account of Y.W.C.A. work in that inferno of human misery and baleful intrigues, namely Constantinople:—"The newspapers in every country have been full of the distress in Constantinople caused by the refugees of many nations who have thronged there. Particularly pitiful has been the plight of the Russians, who have been unable to leave Constantinople because of passport difficulties, and who in the present state of trade depression, and also through lack of training of the proper sort have been unable to obtain work. This congestion of refugees and would-be emigrants is one of the problems of the moment, so the Y.W.C.A. appointed Miss Ruth Larned to investigate conditions and to make one of the chain of Secretaries who will be serving migrants all round the world. In Constantinople the form of help offered to all travellers, no matter what their destination, is as follows.

"First, educational propaganda work, specially making known the disastrous effects of selling property, and breaking up homes or farms or businesses, before the would-be emigrants can be sure of a welcome or even admittance to the country which they hope to go to: and also providing information about the different routes and the inevitable difficulties which at present migrants have to face.

"Secondly, help in making the necessary preparations for emigration, such as the securing of proper passports and the necessary visas, the buying of tickets and the securing of accommodation, and also, what is equally important, the getting into touch with relations or friends who have gone ahead, or with special societies or people who will help the emigrant when they reach their destination.

"Thirdly, special advice for young girls or children travelling alone, for people needing medical help, and for those who have been rejected on medical or other grounds before they sailed, or deported after they have arrived. All these forms of service are undertaken in co-operation with the Governments, and the steamship or other companies concerned, as well as the social agencies which try to mitigate the hardships of migration. This comprehensive plan tackles the problem from its beginning to its end, and should result not merely in making emigration easier, but in stopping unsuitable migrants, and in building up good citizenship at both ends of the migration trail.

"It may be added that there are many bypaths of service in migration work if one looks at it as a whole, and there are many local Associations in big towns and ports, who if they tried, could get into touch with girls going abroad, and with the many foreign girls to be found in any great city. Many of these are cut off from ordinary life just because they are foreign, and they are also cut off from contributing to a common life their special gifts of foreign art and music. Here is a chance for Association members to make international friendships in their own towns."

THE CHURCH IN INDIA.

An appeal has been issued by the Committee of the Mission of Help to India, signed by Lord Crewe, Lord Curzon, Lord Chelmsford, Sir Arthur Lawley, General Sir Charles Monro, General Sir Claud Jacob, Sir Henry Proctor, the Bishop of Stepney, and Canon Hicks, on behalf of the mission which it is proposed to send out in the ensuing winter months for work among English Church people (military and civil) in India. The missionaries will number, it is hoped, at least 24 clergy (among them the Bishop of Peterborough, the Dean of Manchester, and Father Waggett), and six women. "At no time" (they write) "have the stress and difficulty of their life been greater than at the present. In the words of the Archbishop of Canterbury, 'the stimulating and strengthening of the Church's life is obviously a matter which belongs not to India only, but to the well-being of the Empire as a whole.' We ask all who know and value the moral and spiritual forces of Christianity and the supreme secret of character and efficiency to rally to the support of the mission. The Indian dioceses will bear the expenses of the missionaries in India, but the committee at home has made itself responsible for the very heavy cost of passages, outfit, etc. It is estimated that this will amount to at least £5,000. Arrangements must be made with the missionaries and passages booked at once. We therefore ask for immediate and substantial help. Contributions may be sent to Mr. P. R. Wilson, hon. treasurer to the committee, or to Mr. H. P. K. Skipton, hon. assistant secretary, in both cases care of Indian Church Aid Association, Church House, Westminster."

GALLIPOLI GRAVES.

A party of relatives and friends of officers and men who fell in Gallipoli is being organised to visit the graves there. The pilgrimage will last about 34 days, and July 1 is the approximate date when the party will sail.

Those desirous of making the pilgrimage—the cost will be from £60-£100 each—should communicate with the War Graves Department, Church Army Headquarters, Marble Arch, W.1.

THE JEWISH NATIONAL HOME.

A Reuter message sent off from Washington on April 12 reports:—"Senator Lodge introduced a resolution in the Senate to-day endorsing the project for the creation of a Jewish National Home in Palestine in accordance with the Balfour Declaration.

THE BALFOUR DECLARATION.

The *Palestine Weekly* prints the text of a speech by Lord Milner in reply to representations made to him by the Moslem-Christian Association of Palestine, whom he received at Jaffa. Lord Milner said:—

"I am very happy to see all your members who are here present to welcome me, but, unintentionally, you have put me in a very difficult position, because at present I am not a political man but simply a tourist who has left politics. If I speak to you, I want you to take my words as those of a friend, because I am a friend of the Arabs. When I was a member of the British Cabinet I was one of the greatest supporters of the idea of friendship and good relations between Arabs and Englishmen.

You mention the Balfour Declaration. I was one of the members of the Government which gave the promise, and I am responsible for it, together with all my colleagues in the Cabinet. I find here many people who think that the Balfour Declaration gives the country to the Jews. They forget the second condition of the Declaration, which protects the Arabs' rights. It is not conceivable that we should give the house of somebody to somebody else! The Moslems have here a fatherland. So have the Christians. Then, why not the Jews as well?

You ask for justice, and I think that the Government is trying its hardest to be just with everybody. You must not be misled by extremist demands from the Jews, who ask for things which the British Government would never think of giving—if it is to act according to its own promise and not on the interpretations given to this promise by others.

TOPICS IN PARLIAMENT.

The subject headings given are those of the official report.

Peace Treaties: Gallipoli.—Egypt (Martial Law).—India: Government Officials (Steamship Fares); Army Officers (Pensions).—Near East.—Greek Loan.—Bombay Municipality Loan.—Black Sea Ports.—(Thursday, 6th April.)

Peace Treaties: Turkey; Gallipoli.—Georgia.—Fiume.—Turkey and Greece.—Egypt.—Surplus Army Officers, India.—(Monday, 10th April.)

British Army: Camelry Corps.—India: Non-Co-operation Movement; Sedition, Bombay; Pensions (Insurance); Punjab Rebellion (Treatment of Officers); British Army Officers (Surplus).—Cotton Pests.—Turkey and Greece.—India: Burma Constitution; Maulana Hassan Ahmed; Political Offenders (Treatment); Afghanistan (Treaty).—(Tuesday, 11th April.)

NOTES AND NEWS.

Devonshire Square.
E.C. 2.

Genoa and Afterwards.

It cannot be said that the commercial and industrial community here is following events at Genoa with any special degree of interest. As a matter of fact the business world is decidedly sceptical as to the probable results of the conference, and this attitude is likely to be strengthened by the report that Genoa is to be the prelude to further conferences. This scepticism arises from the fact that there must be a very great degree of uncertainty in regard to all negotiations with Russia. Unfortunately the fate of the reconstruction of Europe hinges to a very large extent on the relations of the world with Russia, and as the world cannot remain indefinitely with trade and commerce in a state of suspense an attempt obviously had to be made to restore Russia to the body politic at the earliest possible moment. That is the justification of the Conference.

Results of a Successful Issue.

Granted that the Conference is successful it cannot be too strongly emphasised that we stand to gain nothing directly from the re-opening of relations with Russia. As a result of the Bolshevik regime not only is there nothing that that country can export but the transport system and conditions generally are such that it is estimated that ten years must elapse before Russia will again be an important market. The real benefit will arise from the general restoration of confidence in Central and South Eastern European countries which will be able henceforward to devote their attention undividedly to the work of reconstruction the fruits of which should quickly be seen in developing trade and improving exchanges. I am presupposing, of course, that concurrently a settlement will have been arrived at between Turkey and Greece, for if that struggle were to continue it would be hopeless to look for any rapid results in the Near East as the result of an agreement with Russia.

Revival of Trade.

It is fortunately possible to record the fact that irrespective of conferences and meetings British trade is beginning to show distinct signs of reviving. Encouraging reports are forthcoming from some of the principal industries, notably cotton and steel, while there has been a marked development of the coal export trade. As our manufacturers are now in certain cases able to hold their own as regards foreign contracts, and as most of the centres overseas are very short of supplies and cannot stay out of the market much longer it is possible to view the future with a much greater degree of confidence than would have been possible a few months ago. If only no adverse factors present themselves and if the authorities realise the necessity of encouraging trade through the Budget then the next few months ought to see comparatively satisfactory conditions obtaining in commerce and industry. To look for a "boom" would be absurd at present, but a gradual broadening of trade

preparing the way for the "boom" that will certainly come may reasonably be anticipated.

Near Eastern Loans.

It is disappointing that so far none of the attempts to float a Near Eastern Loan here should have materialised. Various reasons are responsible for the failure of the negotiations, not the least of them being the belief on the part of some of the would-be borrowers that they ought to be able to obtain better accommodation. Of course present conditions in the Near East render the raising of loans on a normal basis quite out of the question; but once it becomes clear that things are really moving as regards reconstruction then difficulties as regards the provision of finance would at once disappear.

The Standard Oil Co. in Palestine.

An interesting development in regard to oil has been the decision of Great Britain to grant exploring rights in Palestine to the Standard Oil Company. It may be hoped that America will see in this action definite proof of the desire of Great Britain to give equal opportunities to other countries in regard to the development of oil-fields. The exploration work of the Standard Oil Company in Palestine, it may be added, will be followed with special interest since the prospects in that country as regards oil are so far uncertain.

Aboukir Company's Set-back.

The report of the Aboukir Company, which has just been issued, reflects the unfavourable economic conditions that prevailed in Egypt in 1921. As a result of the depreciation in the price of cotton the demand for land ceased for the time being, and no sales took place during the year. The effect of this has been that while there was a profit of over £85,000 on land sales in 1920 the accounts are this time credited with only £23,992 under this heading, while the total profit for the year amounted to £27,296 as compared with £42,500. An interim dividend of 6 per cent. was paid, and a final dividend of 3 per cent. is proposed making 9 per cent. for the year as compared with 16 per cent. for the previous period.

REPORTS FROM OUR OWN CORRESPONDENTS.

GREECE.

Athens, April 2.

Cigarette Industry.

Considerable progress has been effected in the Greek cigarette industry during the last few years. According to statistics of the last three years, the yearly production of tobacco in Greece amounts to approximately 25-30 million kilograms, of which only 5 million are consumed locally the remainder being exported abroad. Of the 5 million kilos consumed in Greece, nearly 4 millions are made into cigarettes.

Cigarette making machines were for the first time introduced into Greece a year or so before the war. To-day there are over 1,000 such machines in the country producing 100-130 thousand cigarettes *per diem*. Up to 1918 the export of ready-made cigarettes had not attained much importance; during 1919 and 1920, however, marked progress was made in that direction as will be seen by the table below.

Year.	Quantity in kilos.	Value in Drachmae.
1912	1,599	12,490
1913	806	6,300
1914	297	2,320
1915	2,858	33,645
1916	7,661	119,700
1917	—	—
1918	114	1,001
1919	326,445	6,449,050
1920	220,991	3,334,518

During 1919 and 1920 very large quantities of cigarettes were exported to Turkey, Bulgaria and Holland. A new Greek cigarette company with a capital of 10,000,000 drachmae is about to be formed. The company intends spending 2,000,000 drachmae on advertising.

YUGOSLAVIA.

Zagreb, April 8.

Importation of Luxuries forbidden.

In spite of the agreement arrived at between the Succession States not to impose prohibition on any imports or exports, the Minister of Finance has issued a decree absolutely forbidding the importation of a long list of so-called "luxury articles." The object, of course, is to discourage the demand for foreign currency for payment of such goods, and, incidentally, to encourage domestic manufactures. The decree will be vigorously enforced.

Time will show whether it is wise or practical. One minor objection is that it makes the country uncomfortable to live in, for a good many "luxuries" are by now become necessities to many. But a more serious objection is the incentive that it gives to smuggling, which varies inversely with the demand for the articles. During the last prohibition, which was not in force for long, all forbidden goods were really to be had by those who knew how, when and where, at a price. There is danger, too, that foreign producers may reply with reprisals.

It would probably have been better to put on a very high import duty, which would have had a similar effect and brought more revenue to the exchequer. It is probable that a short experience will show that the decree must be amended, and very likely withdrawn again.

Prohibition of Arbitrage.

Alarmed at the constant fall of the dinar, the Minister of Finance finally decided on heroic measures, and prohibited all dealing in foreign exchange except through the National Bank. Whether this desperate and highly artificial expedient will do any real good is very doubtful.

It will cause a great deal of inconvenience to travellers and traders and will probably be successfully evaded by a certain number of determined people. But it will attain at least a substantial part of its object if it prevents the wild speculation in exchange which has been raging in most of eastern and central Europe, but especially in Yugoslavia and above all in Zagreb. Here it had become the chief business of most of the banks, and enabled them to make handsome profits even after paying the heavy impositions to which they were subject. For the business of arbitrage had long since been extended beyond its legitimate sphere, and had degenerated into a mere gamble, with frequent rigging of the market. Dinars were thrown on the market in Trieste, Prague and especially Vienna, millions at a time. Liubiana, with its close connection with Vienna, was especially addicted to this game, and the turnover had run into hundreds of millions of krone, of which probably considerably less than ten per cent. was for the requirements of genuine traders. Belin considers that of dealings in dollars, only one per cent. was for the trifling amount of imports which come from America and the rest nothing but a gamble. As the Yugoslav currency was already in a feeble condition owing chiefly to the small quantity of export business, the effect of this flinging of millions of dinars upon the foreign markets was fatal, and if it can be reduced or absolutely stopped, the poor dinar will have a better chance. One effect of the prohibition will be to restrict the business of the banks to their more legitimate, and productive, sphere: this will affect their dividends, certainly, for the moment, but should be of great benefit in the long run. But it remains to be seen whether the prohibition can be successfully executed, and how long it will remain in force.

BULGARIA.

Sofia, April 3.

Reparation Payments.

It is now possible to form an approximate idea of the Reparation Commission's demands on Bulgaria. The Commission have submitted to the Bulgarian Government a proposal whereby the latter will pay during 1922, 10 million gold francs, and during 1923, 20 million gold francs. On January 1, 1924, the whole situation is to be reviewed afresh. Thirty million gold francs are equal to about 900 million paper levas at the present rate of exchange. In return for the concession the Commission are making, for according to the financial clauses of the Treaty of Neuilly, Bulgaria should pay 2½ milliard gold francs spread over a period of 37 years, they are demanding certain guarantees from the Bulgarian Government.

Great secrecy has been preserved as to the exact nature of these guarantees, but it is believed that they comprise the partial control of customs, a more detailed statement of all sources of revenue, and general supervision of all financial matters. The Government were acquainted last week with the Commission's proposals, and have been asked to give a reply as soon as possible. As both the Prime Minister and the Minister of Finance leave for Genoa in two days' time it is obvious that some considerable time must elapse before a reply is given. It is known that the Government has offered to inscribe in the Budget the sum demanded by the Commission, but it is also known that the Government is extremely unwilling to agree to the guarantees. In the absence of definite knowledge of these guarantees, it is impossible to discuss the ability or non-ability of the Government to agree to them.

There is a large demand in India for electric passenger and freight elevators, and all kinds of electrical machinery and appliances, for soapmaking plants, textile machinery, corrugated iron sheets, steel furniture, workshop tools, galvanized buckets, screws and nails.

Engineering Topics.

By Our Engineering Representative.

Donkey Spark Plugs.

A new introduction to the motor world is a double spark plug which, by placing two sparks in series in a single plug, is claimed to give certain advantages which it is doubtful whether it possesses in practice. The current from the magneto is led down a central electrode and sparks across to an inner point coupled to a second point from which the spark jumps to the outer sheath. Probably in practice the spark jumps straight across from the centre electrode to the outer shell—there is no accounting for what sparks do when in a highly compressed medium like air and petrol gas when the piston is about at the top of its stroke. There is one good point about it, however; should one gap be oiled or sooted up, the other gap will be free to carry the spark so there should not be so much trouble as often occurs from that cause.

Motor Ships.

A glance at the financial columns of any paper will show how disastrous a year 1921 was for many commercial undertakings. It was a year of marked depression in the shipping and shipbuilding industries, but in this connection some remarkable facts have been brought out by the *Motor Ship* indicating the superiority of the internal-combustioned engined vessel over the steamer. One would like, by the way, to hear the frank opinions of the latter regarding the modesty of the former! However, it appears that the East Asiatic Co., the largest motor-ship owning concern in the world, whose fleet of 22 large ships, apart from a couple of smaller craft, is composed wholly of oil-engined vessels, was able to pay a dividend of 20 per cent. as a result of last year's working. We are not told specifically that the dividend was due to the cheapness and efficiency of the oil engined vessels; it is quite open to any one to assume that had steam engines been used the returns would have been even greater! That is the worst of *ex parte* statements; one never knows where one is. But the *Motor Ship* says that "this is undoubtedly largely due to the economical operations of the internal-combustioned engine," and as I personally have a good deal of faith in the motor ship I am quite prepared to accept that view.

Vacuum Cleaners.

It is interesting to note that the new White Star liner *Homeric*, is equipped with "Little Glutton" vacuum cleaners, which are a new and successful introduction. I am collecting data regarding electric vacuum cleaners for the purpose of setting out the salient points of each in these columns in the near future, and shall be glad if makers will send along all information they can give in order that I may incorporate the principal points in my article, with due acknowledgments.

Empire Airships.

From every point of view it is to be hoped that the Government will not reject the scheme for an Imperial airship service which has recently been put forward, and which has, so far as its capital is concerned, the strong support of the Vickers and the Shell groups together with other financiers. There is a general feeling in aviation circles that official support may not be forthcoming; for some reason airships are not looked upon with undue favour in military circles, and there would appear to be some reflection of this in other quarters.

It is, however, not easy to see why any objection to airships, based chiefly on their bulk and their consequent suitability as a target for quick firing guns, should be allowed to weigh where commercial services are concerned. There is no question as to the proposed service costing the country any large sum; indeed, under no circumstances would any demand be made on the Treasury until next year, and even then the most that would have to be paid would be well under £100,000. The Indian and Australian Governments respectively

would also pay £40,000 at most, and this obligation would merely take the form of guaranteeing dividends and interest for ten years.

As to public support, seeing that the return would be a guaranteed 6 per cent. tax free, there is little doubt as to that being forthcoming. The capital is placed at £4,000,000, but there would be no necessity to call up that amount at first, and should the scheme prove the success that appears certain it would be only a short time before this was looked upon as being one of the soundest commercial investments provided it were managed with that conspicuous skill and ability which one instinctively associates with the names of Vickers and Shell.

Minerals in Flotation.

Flotation engineers are now paying considerably greater attention to the actual size of mineral particles in flotation, a factor which has hitherto been deemed worthy of but little attention. Engineers who have not specialised in flotation work have wondered at this but have assured themselves that the matter was unimportant or otherwise some regard would have been paid to it. Everyone familiar with the older gravity methods of concentration will understand, as has just been pointed out in an official report, the advantages accruing from close classification of the feed to the concentration. However, it is not logical to assume that classification of feed for flotation will be equally profitable. The following analysis should be of value: The factors controlling the size of a mineral particle that can be floated are: (1) the degrees of oil-mineral, oil-water and air-water absorption which determine the force with which the particle is held to the bubble; (2) the shape of the particle; (3) its specific gravity; (4) the cleanness of its surface, which influences the degree of absorption; and (5) the swirl of the pulp.

Maximum flotation efficiency is obtained by treating the largest particle that can be floated by its first attachment to a bubble or a number of bubbles. When the mineral particle is of such size that it is dropped and caught many times by the rising bubbles before it is entangled in the froth and finally removed for the machine, finer grinding would result in greater recovery and higher efficiency. As Prof. A. W. Fahrenwald pointed out recently, the size of bubble is important. The more numerous and finer are the bubbles, the more efficient will be the flotation. There is no doubt that a good many bubbles actually engage each particle before it is finally floated to the surface of the pulp. For two floatable minerals of equal, or nearly equal specific gravities, it appears that water classification would give a product more adaptable to differential flotation than if two minerals were composed of widely different specific gravities. Water classification of particles of unlike specific gravities would give products consisting of large-light and small-heavy particles. The small-heavy minerals would be greater specific surface and consequently greater total flotative-intensity which would, however, be largely counterbalanced by the greater weight of the small particles.

A New Engine.

I hear that a new engine of the four cylinder type is to be placed on the market very shortly. It will be made in two sizes, one of 6-7 and the other of 9-10 horse-power, the bore of the four cylinders being 55 millimetres. The engine will have a detachable head, and the cylinders will be cast *en bloc* with the crank case. Overhead valves, operated by a ball-bearing cam shaft will be fitted and an interesting feature is that one inlet but two exhaust valves will be fitted to each cylinder. The connecting rod big-ends will have roller bearings and the ignition will be by battery and coil instead of by the usual magneto. The engine will sell at a moderate price and is intended for use in the customer's own chassis, and for export. It appears to be just the thing to suit a number of our friends in the Near East.

Stock and Share Markets.

INCREASED ACTIVITY.

Broadening of Business.

(From Our Own Correspondent.)

London, Thursday night.

The attenuated week and the approach of the holiday season have had no influence on the course of the markets and instead of the dullness customary at this period of the year a very strong tone has been in evidence particularly in Gilt-edged descriptions. The further reduction of the Bank Rate to 4 per cent., which I forecasted, was, of course, a bull point for all markets. Obviously we cannot look for the indefinite continuance of the conditions that have ruled during the past few weeks. Gilt-edged, for instance, with some exceptions, are quite high enough; indeed in my opinion the rise has been overdone in certain directions. In other markets, however, the advance has so far been small, and whether it is to develop will depend on economic conditions generally, and on whether the Government adopts a courageous Budget policy. Indications have not been wanting in the last few days that the intention of reducing the income-tax which was so freely mooted early in the year no longer obtains. For more reasons than one the Government will make a great mistake if they fail to remove some part of the burden which is now restricting business enterprise.

Many New Issues Expected.

At the present time the markets generally are decidedly short of stock, but this deficiency should shortly be remedied since as the result of the favourable financial conditions it is understood that a large number of new issues will shortly be forthcoming. They are not likely to include any issues for the Near East, though negotiations are again in progress for Balkan loans, and there seems to be a fair prospect of one for Roumania in the near future. In this case the proposal is to allocate to the loan the unexploited oil lands of Roumania which would revert automatically to the State with the termination of the loan.

Gilt-Edged Strong.

As recorded above Gilt-edged have again improved. Consols are a point up at 59½, and the Conversion Loan at 76 shows a gain of 1.3-8. War Loan Fives eased off a little on realisation, and close 5-8 lower at 100.3-8. Indian stocks have been firm. The Seven per cent. loan is unchanged at 111, the 3½ per cent. loan is the same at 64½, while the 3 per cent. loan is ½ up at 55½.

A rather variable tone has been in evidence in the foreign market, and in some cases dullness has developed. French War Loan Fives are 1½ up at 46½, while German three per cents. are 1-16 up at 2.9-16. Italian Rentes are 24½. Brazilians have been very dull, this being

attributable to the rumours of a new loan. Argentine securities have been firm, and Chilians were also on the up-grade. Chinese have been a good market, while Russian bonds have been in some request.

Industrials Active.

An active tone has ruled in the Industrial group, and business was on a fairly large scale up to the commencement of the holidays. Tobaccos have been in good request, and close at improved rates. Bats are 77s. 6d., while Imperial Tobaccos are 59s. 6d. Dunlops are 8s. Textiles have been a good spot with Coats 3-32 up at 3.1-8, while Courtaulds at 43s. are 4s. 3d. up. Iron and Steel securities have been strong. Vickers at 12s. 6d. show a gain of 6d., Armstrongs are 9d. up at 17s. 3d., while Guest Keens are 6d. up at 32s. 6d.

Shipping securities have been distinctly good with P. and O. Deferred 5 up at 320. Owing to a printer's error this price was given incorrectly last week, a fact to which my attention was drawn by a correspondent. Cunards have been in some demand, and are 1s. 9d. up at 22s., while Furness Withys have also advanced, and close at 29s. 6d.

Oils Strong.

An excellent tone has prevailed in the Oil market, and business has been done on a most encouraging scale. Burmahs have been a steady feature, and at 5.29-32 show a gain of 1-16. Anglo-Persian Oil have advanced smartly to 4.15-16, a rise of ½. Mexican Eagles are 3.15-32 at which they are 1-8 up. Trinidad issues have been in favour with Centrals at 3.3-16.

Among Egyptians, Anglo-Egyptian B are 1-16 up at 1½, while Oilfields of Egypt are 7-32. Roumanians have been variable. Phoenix close at 28s. 6d., a rise of 9d. Steaua Romanas are 13s. 9d., a decline of 6d., Dacia Romanos are unchanged at 11-16, while Roumanian Consolidated are 3d. up at 14s. 9d.

Near East Markets.

LONDON PRODUCE REPORT.

(From Our Own Correspondent.)

London, Monday Evening.

Sugar.—Home refined has been in moderate demand at unchanged rates. Tate's cubes and mineral water sugar show no change at 53s. 9d. and 49s. respectively; London granulated is steady at 48s. 6d., while Lyle's granulated has been quiet at 48s. 9d. Firm prices have been maintained in export descriptions. West Indian crystallized is unaltered at 43s., Czecho-Slovakian is the same at 21s. 4½d., as also white Mauritius at 44s. Cane sugar quotations are:—April, 15s. 6d.; May, 15s.; August, 15s.; and September, 15s. White sugar quotations are:—April, 20s. 3d.; May, 20s. 3d.; August, 20s. 6d.; September, 20s. 1½d.; and October-December, 19s. 9d.

Coffee.—A variable tone has been in evidence. Costa Rica is now 118s., and Indian 120s. Nairobi is 1s. down at 110s. The futures market has been firm. Quotations are:—May, 56s. 6d.; July, 57s. 9d.; September, 57s. 9d.; and December, 58s. 3d.

Dessicated Coconut.—The position is much the same as last week, and prices have advanced a little.

Rice.—The demand has decreased owing to the holidays, and quotations have been steady.

Green Fruit.—There has been no improvement in the position with regard to oranges. Owing to the bad condition of Messina lemons and the large supplies now on the market prices have declined considerably, while good fruit has been in strong request at high rates. Australian and Tasmanian apples have sold rapidly, the demand being greater than the supply. Large quantities of Egyptian onions have arrived during the past few days the condition of which is exceedingly poor. The demand is also weak.

Oilseeds.—The tone has been good. Indian linseed has advanced 1½d. at 19s. 9d., while La Plata at 19s. has been firm. Rapeseed is brighter with Toria 6d. up at 17s. and bold Ferozepore 2d. up at 18s. 8d. Cottonseed has been firm in all cases. Indian is the same at 18s. 6d., Sakellaridis at 11s., and Egyptian black at 11s. 6d.

Oils.—Prices are higher. Linseed oil has gained 1s. 6d. at 38s. Rape oil has been unsteady with the crude variety 1s. down at 43s. and refined unchanged at 46s. Cotton oil has remained unaltered in all cases. Refined is 48s., Egyptian crude, 40s., and deodorized 53s.

Oilcakes.—Linseed cake has declined a further 10s. at 310s. ton and cotton-meal cake has shed a similar amount at 290s. ton. Coconut cake has shed 1s. at 170s. ton while cottonseed cake has also dropped 1s. at 190s. ton.

EGYPTIAN CROPS.

The following particulars of the crop conditions in Egypt are given in the Bulletin of the Egyptian Ministry of Agriculture for March:—

Wheat.—Weather was, on the whole, favourable and water supply ample. Rust and smut have been reported from several provinces, but damage done is negligible. The crop is doing well and is approaching maturity. Harvesting is expected to begin in Qena and Aswan provinces by the middle of April.

Barley.—Harvesting early-sown crop has begun in Girga, Qena and Aswan provinces. In the other provinces the crop is approaching maturity. Rust and smut have been noticed in several provinces, but have caused no serious damage to the crop. The yield is expected to be slightly above the average.

Beans.—Damage caused by rust and broom-rape (halouk) is slight. Harvesting has begun in Upper Egypt, elsewhere the crop is approaching maturity and harvesting is expected to be general in April.

Helba.—Harvesting is in progress in Upper Egypt and the new crop has appeared in the markets. The yield is an average one.

Onions.—Harvesting is in progress. The yield is expected to be below the average, owing to the fact that many cultivators harvested the crop before reaching maturity as a consequence of the advantageous prices that prevailed.

Lentils.—The hot weather that prevailed towards the end of February adversely affected the crop in Qena and Aswan provinces. Harvesting and threshing are in progress. The yield is a little below the average.

Bersim.—The cold changeable weather has retarded the growth of the crop in some districts. On the whole the crop is free from pests and its condition is satisfactory.

Cotton.—Weather was, on the whole, favourable, though it was somewhat changeable and rainy at the beginning of the month, causing resowing in some places in Lower Egypt. Water supply was sufficient except at the tails of a few canals. Ploughing, ridging, watering and sowing are in progress. The early-sown crop is germinating satisfactorily.

AGRICULTURAL CONDITIONS IN IRAQ.

The following extracts are taken from the Agricultural Bulletin of Iraq for the month ended February 15:—

The month was exceptionally mild and an unusual shortage of rainfall this month was recorded in Lower Iraq. In Upper Iraq rainfall has been fairly continuous. The growth of all vegetation has been rapid, and most of the desert is covered with herbage. Wheat and barley, both irrigated and unirrigated have continued to grow at an unusually fast rate owing to the mildness of the weather.

Irrigation.

The Director of Irrigation reports a general demand for water. Much work has been done by the tribes in repairing and maintaining flood bunds on the banks of the rivers. This work is of primary importance owing to the extensive sowing of winter cereals which necessitates every precaution being taken to secure the safety of the crops. The Yusufiyah Canal was re-opened during the month. Further constructional work on the Butera Regulator has been postponed until the next low water season. Foundations have been completed for the combined regulator at the head of the Yusufiyah. Contour survey work is progressing favourably. Silt clearance is in progress on the DIALA Canals.

Early in February the Tigris and Euphrates were in flood for a few days. This facilitated the irrigation by flood inundation of large areas sown with cereals. The unusually large areas sown both to irrigated and unirrigated wheat and barley promises excellent crops. Winter vegetables are abundant, and prices have in many cases fallen so low as to render vegetable cultivation unprofitable, especially by lift irrigation. Prices of turnips and radish near Baghdad are so low as to render the marketing of these unprofitable, except where grown very close to the town. The threshing of rice in the DIALA area was delayed by the frequent rains of December. It is reported that a part of the rice crop in this area has materially depreciated in value owing to damage on the threshing floor by rain. Digging of liquorice root continues in the Kut area. Picking of citrus fruits on the DIALA is being delayed in the hope that prices will rise later.

Fodder Supply and Condition of Stock.

Green fodder is everywhere plentiful. The condition of stock in general is exceptionally good. The Director of Veterinary Services reports that rinderpest amongst cattle continues to be prevalent. Four hundred and ninety seven head are reported to have died from this disease and fifty diseased animals were treated with success. Altogether 2,057 animals were inoculated during the month. One hundred and sixty sheep died at different places from a disease which is under investigation.

Experimental Farms and Research.

The wheat crop on all farms promises well. Land is being prepared for experimental work with cotton. The flax crop at Kut sown in the autumn has made an excellent crop, that at Baquba sown in the early winter is more backward. The data of sowing test with bersim (Egyptian clover) are giving valuable results. Arrangements are in train to grow a relatively small number of trees of numerous imported varieties. In addition a few acres of poplars have been planted as an experiment on a quasi-commercial scale. There has been a large and unexpected demand for these seedlings both from Government Departments and from land owners.

There is a strong demand for cotton seed. The demand from the DIALA area alone exceeds the available supply. A system of rationing will have to be adopted in distributing the seed which is sufficient to sow about 2,000 acres. Bulk distribution of seed is being confined to the DIALA, Saklawiyah and Yusufiyah tracts. Arrangements are in hand for silk demonstration work at Baquba, Qarnabat and one other site on the DIALA. A considerable

amount of interest is already being evinced in this work by the local cultivators who were engaged in the industry before the war.

Some fifty tons of machinery for the use of the Mosul Farms, Limited, have arrived in the country. Another interesting development in estate cultivation is the importation of Egyptian labourers by an enterprising land owner near Basrah. Date gardens have been selected in the Basrah Liwa for purposes of experiment with artificial manures supplied free of charge by a local firm.

The recent heavy fall in prices of most agricultural produce has rendered irrigation by pump a precarious undertaking. Numerous petitions have been received asking that the price of kerosine might be reduced and improved facilities rendered for delivering the oil at more convenient sites. The local agents for the Anglo-Persian Oil Company have this matter under consideration and they have proffered all possible assistance. An early reduction in the price of oil and a river service for delivery at convenient sites are anticipated in the near future.

OPIUM MARKET REPORT.

Messrs. Barker Bros., Smyrna, report as follows under date March 31:—

We have to report again a very active month on our opium market resulting in an advance of fully 120 piastres per oke on all grades. The quantity of the drug which changed hands is about 207 cases which is equivalent to 12,420 okes, or 34,776 lbs.

The average sterling prices to-day per lb. are as follows:—Extra Druggists 10s. 6d. per lb. c.i.f.; Soft Shipping Yerli 11s. 6d. per lb. c.i.f.; Lower grades 9s. 6d. per lb. c.i.f.

The above figures are based on an exchange of Ps. 600 per 20s. cheque on London, and the tendency fully justifies our predicting higher figures, as stocks everywhere are depleting, without any hopes of getting adequate supplies from the growing districts to fill up the gap. Besides this, we have passed a very unprecedented 6 weeks of dry weather, which at this season of the year is not in any way conducive to good results as regards the coming crop which at its best, a few weeks back, did not show it would reach the low figure of 2,000 cases.

The vigorous campaign in England and the States against illicit use of the drug has stopped to a great measure the export from here, Constantinople and Salonika, but what about the overland transportation of the article through Siberia, and other Asiatic States? We have been apprised of late that a lot of opium is sold now in our growing districts to dealers who sell to others further east and so on, until it finds itself eventually in China, Manchuria, and other Far Eastern markets. This channel for opium consumption will further develop when hostilities cease in this country and we shall not be at all surprised to see one day that this narcotic, will become a "rara avis" and worth its weight in gold, as far as America and Europe are concerned. The exchange to-day is Ps. 600 per 20s. and 0.67, $\frac{1}{4}$ dollars per Turkish pound. The arrivals are 1,220 cases against 1,245 at same date last year, and our stock in first and second hands is now 1,215.

INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated April 10:—Condition of Crops.—During the fortnight ending April 8 there was no rainfall in the tea districts of Mysore and Coorg, nor in Madras. April 1.—Local rain in Assam, where prospects of tea improving. Rain fallen in parts of Bengal likely to improve jute sowings considerably. Crop prospects in other provinces are unchanged.

Markets.—April 5.—Bombay cotton market steady. Fine M.G. Oomras Rs. 403 May, Rs. 419 July. Bombay cotton arrivals from September 1, 1921, to March 31, 1922, were 2,248,000 bales as compared with 1,621,000 bales during the same period of the last year. Bombay imported piece-goods market active, though turnover was on decreased scale owing to the falling off to some extent in general wholesale demands. Local rates affected chiefly in bleached mulls. White fancy and fancy prints sold well, but greys moving slowly. Prints and fancy, particularly for Madras and Malabar consumption, show little life. April 8.—Calcutta jute market very strong and rates advanced. April deliveries—Rs. 62 Firsts and Rs. 52 Lightnings. Immediate deliveries—Rs. 61 Firsts, at which there are buyers.

Hessian steady at higher rates and business mostly confined to near-at-hand positions. Heavies quiet but steady. April 4.—Market very active with strong demands for spot T.N. shellac, offering of which is limited. Closing prices—T.N. Rs. 204, at which there are buyers. April 7.—Special Straits quality rice, Rs. 409. No change in bank rates.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)

Bulgaria.

Concessions for Working State Forests.—The Bulgarian Government are prepared to grant concessions for the working of the State forests in the Vassiliko and Malka-Tirnov districts (Bulgaria). Particulars may be obtained from the Ministry of Agriculture, Sofia, or the British Chamber of Commerce, in that city.

Machine Tools.—The Direction Générale des Chemins de Fer, Bulgares, Sofia, invites tenders for machine tools and equipment. Tenders must be accompanied by drawings, catalogues, and detailed specifications giving particulars of the quality of the materials to be used in the construction of the machines, method of working same, horse power necessary and all other relevant information in connection with the machines offered. A deposit of 1 per cent. of the estimate price must be made as a guarantee, this sum to be increased to 5 per cent. by the firm securing the contract. The price of the various machines must be stated separately, and not quoted in a lump sum for the whole contract, and also all accessories must be included. Local representation is essential. (D.O.T.) April 27.

Egypt.

Type Metal.—The Egyptian Government Press are inviting tenders for the supply of type metal required for the year 1922. The metal required is:—(1) 20,000 kilos of monotype to be made of the purest guaranteed metals, and with the following proportions:—Lead 63, antimony 20, tin 17; to be packed in strong barrels containing 250 kilos. (2) 3,500 kilos of refined soft lead, virgin metal, in pigs of 50 kilos. Tenders on the proper forms, and accompanied by a provisional deposit of two per cent. of the total value of the offer, addressed to the Superintendent, Government Press, Bulaq, Cairo, will be received up to noon on May 20. (D.O.T.)

Boots.—Tenders are invited by the Financial Secretary, Egyptian Army, War Office, Cairo, for the supply of 44,814 pairs of boots, ankle (cavalry and infantry), with laces. May 1.

EASTERN TELEGRAPH COMPANY.

The Directors announce that, owing to unavoidable delays in obtaining necessary returns from foreign stations and administrations, it will be impossible to issue audited accounts and balance-sheet for the year to December 21, in time to allow of the annual general meeting being held in May; but the directors will convene the meeting as soon as full accounts can be submitted. They have decided to pay on May 15 next a final dividend for 1921 of 2½ per cent., free of tax, on the ordinary stock, making 10 per cent., free of tax, for the year, the same as for the previous year, and the usual distribution at the rate of 3½ per cent. per annum, less tax, on the preference stock for the first quarter of 1922 will be paid on that date. Interest on 4 per cent. mortgage debenture stock for the half-year to April 29 will be paid by warrant on May 1.

COMMERCIAL BREVITIES.

The directors of the Egyptian Delta Land and Investment Company recommend no dividend for 1921.

The transfer books of the 5½ per cent. preference shares of the Anchor Line, Ltd., will be closed until April 29.

The ordinary share transfer books of the Cunard Steamship Co., Ltd., will be closed until April 26.

A decree has been published in Athens prohibiting the transfer out of the country of notes issued by the National Bank.

It is announced that a number of American capitalists are intending to build three large mills in Bulgaria for the manufacture of all kinds of paper.

The traffic receipts of the Egyptian Delta Light Railways for the week ended March 20 amounted to £E.9,612; total for year £E.376,835. For the corresponding period of last year receipts amounted to £E.8,725, total for year £E.472,594.

The export from India of bajra, barley gram, lentils, maize, pulse, wheat, and flour made from any of these, is permitted to the following destinations:—Persian Gulf ports, Ceylon, Jeddah, Mauritius, Mekran coast, East Africa, Seychelles, Portuguese India, Aden, Straits Settlements and Labuan, Siam, Perim, Hong Kong, South Africa, Australia, New Zealand, Fiji Islands, British West Indies, and British Guiana. Formerly the export to all destinations was prohibited.

Cotton & Cotton Goods.

MANCHESTER MARKET.

(From Our Own Correspondent.)

Manchester, Thursday.

Although the tone of the market during the past week has ruled firm only a quiet trade has been done. This has been due to holiday influences and also to the uncertainty with regard to the wages question. The deadlock between the masters and the operatives is not treated very seriously in business quarters, and there is every probability of further conferences being arranged next week. The masters themselves are eager for a quick settlement, and now that trade shows signs of improving after a period of eighteen months depression it would be foolish if the whole of the machinery in the industry was stopped. With regard to cloth not very much inquiry has been about for outlets of the Near East. Buyers, generally speaking, are in no hurry to commit themselves to any lines of importance. Some moderate transactions have been put through for the Levant and Constantinople. Users of Egyptian yarns have only purchased sparingly but prices have been well held. The bulk of the cloth demand has again been for India, and some fairly encouraging transactions have been booked for Calcutta in light cloths and shirtings. The political situation in China is still very disturbing, which is naturally affecting the position of buyers and sales have not been of any importance. Home trade buying has been patchy. American yarn quotations have ruled steady.

LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date April 12 :—

Even allowing for the fact that the official sales include a large percentage of Sudan cotton, the turnover for the past week can be described as quite satisfactory. Whilst trade reports indicate a rather less volume of business in yarns than we have latterly been accustomed to, no doubt the proximity of the holidays can be blamed more or less for the shrinkage. Negotiations *re* the wages reduction are proceeding on smooth lines, and, generally, little apprehension is felt by spinners as to an amicable outcome. The enquiry continues to be almost exclusively for Sakel, grading from Fully Fair to barely Fully Good Fair, and several large concerns appear to be running almost entirely on cotton grading about the former quality. The better classes are somewhat neglected, as also are Uppers and Brown. With this market continuing to be much the more attractive for consumers to cover in, only a limited interest has been shown in c.i.f. cottons. Continental spinners appear to be waking up to this fact, and there are signs of more business being sent from this source than hitherto. A large line of Tokar cotton has been put through, approximately 1,500 bales, we understand, at a price somewhere in the neighbourhood of 11.00d, hence the large total of Sudan in the sales referred to above. In our issue of the 22nd ulto. we inadvertently mentioned that our friends, the Commercial Co. of Egypt, had raised their crop estimate to 5,000,000 kantars. In lieu of "crop estimate" we should have written "total arrivals for the season," i.e., crop about 3,750,000 and carry-over in the interior from last season, 1,250,000. Total sales for the week amount to 4,000 bales (including 1,500 Sudan), against 1,900 bales (including 200 bales Sudan) last week. Quotations are reduced 25 points. Fully Good Fair Sakellaris 17.50d.

THE EGYPTIAN MARKET.

The Commercial Co. of Egypt, in their report for the week ended March 31, state :—

There is again very little to report this week. The market in general has been fairly steady and this can be attributed to a great extent to the good figures of the daily spot sales of Egyptian cotton in Liverpool; the demand from abroad for forward delivery has been rather limited. Speculative dealings are negligible just at present, and this causes the market to be rather narrow and lacking in activity.

So far all official Government assurances for the support of cotton prices have been rather vague and we do not think that the Government would be disposed to buy at the present level of prices. The heavy actual supplies and the poor state of trade all over the world do not warrant, for the time being, much higher prices; furthermore, the cost of producing cotton has

considerably decreased, so the growers have not very serious grounds for complaint at present, although they suffered considerably last year.

The reports of the new crop are more or less normal but all point to a delay in sowing in the important districts. The prospects of water supply during the summer months are not good. With regard to the acreage it appears that the restrictions laid down have been respected, that is to say it will be about the same as last year or perhaps slightly superior.

COTTON PESTS.

In the House of Commons on April 11, last, Mr. Doyle asked the Secretary of State for the Colonies, in view of the serious loss in the raw cotton crops in America, Egypt, and elsewhere by insect pests, what help had been rendered by the Colonial Office to growers in various parts of the British Empire to counteract the ravages of such pests; what steps were being taken to materially assist the growth of raw cotton in the Australian Commonwealth and other parts of the Empire; and if he would give the sums spent during the past 12 months for this purpose?

Mr. Churchill: I am glad to say that most of the Colonies and Protectorates have escaped the worst ravages of the pests which have done harm in America and Egypt. All imported cotton seed is carefully examined, and insect pests have up to date been kept in check by the efforts of the various Colonial Agricultural Departments. The need for strengthening these Departments, especially on the entomological side, has been appreciated and met to the fullest extent possible, compatible with due economy in administration. The efforts made by His Majesty's Government to foster the production of cotton within the Empire have recently culminated in the gift of £978,215 to the funds of the Empire Cotton Growing Corporation upon certain conditions. When these conditions are fulfilled, the corporation will undertake active measures to promote the cultivation of cotton in the Empire, but I am quite unable to say to what extent its operations will apply to any particular territory.

BULGARIAN BONDS AND COUPONS.

The Bulgarian Government announces that it is prepared to pay to French, British and Belgian bondholders the coupon No. 30 of the Bulgarian Four-and-a-Half per Cent. 1907 loan, maturing on February 1, 1922, at French francs 11.25 each, and the bonds drawn for redemption on that date at French francs 500 each. Holders of bonds which have been in British ownership since August 1, 1914, who are desirous of availing themselves of the offer thus made by the Bulgarian Government, should present the above-mentioned coupons and drawn bonds (to which all coupons due after the date of redemption must remain attached) for payment at the counting-house of Messrs. Stern Bros., 6, Angel Court, E.C.2., between the hours of 11 a.m. and 2 p.m. (Saturdays excepted).

The Czecho-Slovak Government have decided to remove all restrictions on the sale of sugar, but at the same time to increase the tax.

Roumanian export duties on goods going to countries with high rates of exchange are to be paid in future in gold or cheques in foreign money.

At the present time Malta offers a promising market for women's silk hosiery, men's cotton hosiery, cotton shirts, light and heavy cotton and woollen underwear, raincoats, aluminium kitchenware, &c.

It is reported that a company has been formed in Berlin, with a capital of 30 million marks, with the object principally of exploiting the coal mines in the Dragoman region, near the Serbo-Bulgarian frontier.

'BALKAN' NATIONAL INSURANCE COMPANY.

HEAD OFFICE: SOFIA, BULGARIA.

SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Constantinople, April 3.

Sugar.—A firm tendency has prevailed. Some arrivals during the week have caused prices to give way a little, but they are maintained at the close as a result of the high prices ruling in centres of production. The arrivals of the week amount to 132 wagons from various countries. Quotations per ton in transit :—Dutch cubes £27, Belgian £26-26½, Java crystallised £23, American £22, Dutch £23.

Rice.—The market is firm owing to the lack of arrivals.

Oils and Butter.—The position is unchanged.

Flour.—The exports for Russia have assumed some importance during recent weeks, and are imparting considerable activity to this commodity on this market. The market is firm, especially with regard to second qualities which are those sought by Russia. The arrivals amount to 140,000 sacks. Part of that will be dispatched to Russia.

A further report of the same date gives detailed particulars of the movements of shipping at Constantinople. The arrivals of the week with ports of departure have been as follows :—

Rotterdam, Antwerp and Amsterdam.—S.S. Oberpresident Delbruck, s.s. Hector, s.s. Orestis with general merchandise, in particular 400 tons of sugar and various other foodstuffs of the first necessity of the approximate value of £100,000.

America.—S.S. Jacona, s.s. Gafney, s.s. Themistocle with more than 120,000 sacks of flour, and various other products such as sugar, coffee, oils, vegetables and butter of the approximate value of 5,600,000 dollars.

Great Britain.—S.S. Hillouse, s.s. Maid of Delos with 4,400 tons of coal and other material of the approximate value of £10,000

France (Marseilles).—S.S. Andros, s.s. Pierre Loti, s.s. H. Fraissinet with large quantities of fodder, and foodstuffs of little importance.

Italy.—S.S. Bormida, s.s. Palacky, s.s. City of Algiers with cotton goods, ironmongery, and various other commodities of little importance.

Egypt and the Syrian Coast.—Five ships with 4,000 cases of oranges and lemons, 3,000 crates fresh vegetables, 130 tons rice, 30 tons sugar, 35 tons tea, 40 tons potatoes, and 40 tons sesame.

Roumania.—Various vessels. 470 tons oats, 800 tons maize, 780 tons barley, 150 tons oil, 100 tons mineral oil, and 850 cattle.

Bulgaria.—230 tons wheat, 600 cattle, 1,000 cases eggs.

The greater part of the arrivals of flour have been dispatched to the Russian Black Sea ports. So the stock actually existing here would not be more than 150-200,000 sacks, or enough for local consumption for about one month. As regards exports there is nothing of importance to be recorded except for some consignments of tobacco.

KIRGHISKY STEPPES: A FIELD FOR COMMERCIAL ENTERPRISE.

(By a Correspondent.)

It was at Petrograd in the spring of 1915 that the writer made the acquaintance of a Russian official who was commissioned by his Government to visit the steppes inhabited by the Kirghises in order to report upon the fertility, resources and suitability of the region for the breeding of horses, cattle and sheep, also if possible to establish factories for dairy produce. He invited me to accompany him, an offer which I gladly accepted.

The steppes are to be found where the Volga enters the Caspian sea, and stretch away to the North-East of Turkestan. Their area is very often of enormous extent, and provides food for a large number of domestic animals. The Kirghises are a nomadic people, Mohammedans and Buddhists. During the summer they live on the steppes, and when the winter approaches they migrate to their villages. The air of the steppes is very invigorating, and is remarkably beneficial for those people who suffer from consumption, and sanatoriums are established in different parts. The grass grows very high and is exceedingly nutritious, and provides hay of excellent quality, while on some of the steppes enormous crops of wheat are raised, and have formed a profitable export. The soil of the steppes is well suited for the cultivation of lucern (American kinds), and there is no doubt that the quantity that could be raised would be unlimited. A good business was also done before the war in the export of honey, the steppes being well adapted for this industry owing to the luxuriance of flowers. Vast herds of horses roam about the steppes, and the breeding of camels, cattle and sheep is largely carried on, and this would prove a profitable commercial enterprise if carried out skilfully.

In 1918 two Russian engineers went to Berlin with special permission, and laid before the German Government plans for the survey of the Kirghisky steppes with a view to examining their resources and suitability for commercial enterprise. At the same time a plan was also presented referring to the Golodnaja Steppe (Hungary Steppe) in Turkestan, but owing to the prevailing conditions the projects were left in abeyance.

LIBRARY OF THE ROYAL COLONIAL INSTITUTE

One of the most important libraries in London is that of the Royal Colonial Institute, situated in Northumberland Avenue. The report for the year 1921 indicates that steady progress has been made. The library now contains over 150,000 volumes and pamphlets relating exclusively to the Overseas Dominions, Colonies and India, and to problems of colonisation and administration generally. Whilst intended primarily for use of the Fellows of the Institute it is nevertheless extensively used by students and other enquirers; and the Librarian points out that the Council is pursuing the wise and liberal policy of admitting *bona fide* students to its use. Thus all Rhodes scholars are made Honorary Fellows, while Overseas teachers residing in the United Kingdom are made free of the library during their stay, a privilege which is also freely accorded to university and other students making special enquiries. It will thus be seen what an important function the library is performing by facilitating research upon Overseas matters in the centre of the Empire. It is pointed out in the report that students were admitted from such diverse countries as Australia, South Africa, Uganda, Canada, India, and other parts of the Empire, as well as from Texas, Japan, Norway, Belgium, and other foreign lands; and it may be remarked that all of these students were engaged upon some important work of research.

The library is divided into several broad main sections, such as the Parliamentary library containing all the official publications issued Overseas, Parliamentary Debates, Departmental Reports, and material of that nature; the Law Library containing the Statutes and Law Reports of the Overseas Empire; and a very important agricultural and trade section. All the chief commercial products are catalogued upon cards in order to facilitate rapid reference. Although it may justly be claimed that this library performs a unique function in supplying in-

formation and aiding research, which it is enabled to do out of its unrivalled resources, that is only one of the activities of the Royal Colonial Institute of which the library is a part. During recent years great progress has been made in enlarging the scope of the work of the Institute and a feature that should specially appeal to Overseas residents is the attention that is now devoted to giving information upon commercial and industrial matters. Neither the library nor the Royal Colonial Institute itself receive any financial support from the Imperial or Overseas Governments, but they all recognise the value of the work that is being done by supplying their official publications and reports.

THE PRAGUE SAMPLES FAIR.

The Prague Samples Fair, which was held between March 12 and 19, was attended by numerous purchasers from Holland, Scandinavia, France, England, Switzerland, America and Australia, and in certain branches of industry a great deal of business was transacted. This applies in particular to the textile industry, the prices in which were reduced by 20 to 30 per cent. and trade was particularly brisk in the case of linen goods, materials for spring fashions and materials for linings. As regards glassware, there was a great demand for articles of daily use, and the same is true of porcelain goods. Probably the largest amount of business was transacted in the metal and machinery industries, and electro-motors, dynamos, as well as agricultural requisites and utensils of all kinds, were disposed of in large quantities.

The sale of foodstuffs was also considerable, and in particular liqueurs, marmalade and chocolate of well-known varieties were much sought after. Among other branches in which the sales were large may be mentioned surgical instruments which were disposed of extensively to overseas countries. Towards the close of the fair, paper goods and office accessories found numerous customers, while smokers' requisites and musical instruments were largely purchased. The number of exhibitors in the various branches comprised:—building trades 49, metal industry 510, electro-technical, mechanical and optical goods 87, timber industry 76, textile industry 257, clothing industry 139, fancy goods and allied industries 129, leather industry 129, glass, porcelain and artistic pottery 130, glass industry 70, artistic goods 85, chemical goods and hygienic appliances 70, foodstuffs and agricultural products 124, musical instruments 32, paper, writing and drawing requisites, school and office accessories 121, jewellery, gold and silver ware, watches and clocks 21, miscellaneous 34.

PAYMENT OF OTTOMAN DEBT ARREARS.

It is announced that British holders of certain Ottoman loans are given the option of a settlement of the arrears due on unpaid coupons and drawn bonds for the period from December 1914, to May, 1920.

The terms offered by the Ottoman Government are those agreed to on behalf of the French owners by the French Committee of Bondholders—i.e., a certificate representing the full amount in francs will be delivered in exchange for the overdue coupons and drawn bonds, and, at the same time, a payment in francs will be made on account, and the certificate marked to that effect. The payment made on each loan is in proportion to the funds actually collected for such loan. Payment to British holders would be in francs converted into sterling at the rate of exchange ruling on the day when the certificates are received in London.

The Department of Overseas Trade have received an enquiry from Roumania for prices and all information regarding spinning machinery, suitable for a small cotton-spinning mill of 400-500 h.p. (steam) the erection of which is under consideration. The mill would be four storeys high, each floor 160 by 45 feet, with transmission on each storey. The enquirer is also desirous of obtaining information regarding weaving machinery, both for cotton and wool. Further particulars may be obtained from the Department of Overseas Trade, 35, Old Street, S.W.1.

THE NEW EGYPTIAN COMPANY, LIMITED.

NOTICE TO HOLDERS OF SHARE WARRANTS TO BEARER.

Dividend of 2s. 6d. per share (16 2/3 per cent.) less Income Tax at 6s. in the £.

Notice is hereby given that Coupon No. 11 will be paid on and after the 10th day of April, 1922, at the rate of 2s. 6d. per share less Income Tax at 6s. in the £. Coupons should be left at the National Bank of Egypt, Ltd., 6 and 7, King William Street, London, E.C., to permit of three clear days for examination.

By Order of the Board.

THOMAS DAY, Secretary in London.
Pinners Hall, Austin Friars, E.C. 6th April, 1922.

Forms for depositing Coupons may be obtained at the National Bank of Egypt, Ltd.

SHIPPING INTELLIGENCE.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parenthesis:—

Anchor Line.—S.s. Masilia for Bombay (Liverpool, May 5).

Anchor Broeklebank Line.—S.s. Imani for Port Said, Colombo, Madras and Calcutta (London, April 25); s.s. Macharda for Calcutta (Birkenhead, April 29); s.s. Mandasor for Port Said, Colombo, Madras and Calcutta (London, May 9); s.s. Magdapur for Calcutta (Birkenhead, May 13).

Bibby Line.—S.s. Oxfordshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, April 26); s.s. Lancashire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, May 10).

Clan Line.—S.s. Clan MacNaughton for Bombay and Persian Gulf (Birkenhead, April 27); s.s. Clan Morrison for Colombo, Madras and Calcutta (Birkenhead, May 4).

Cunard Line.—S.s. Tyria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Odessa, Novorossisk, Poti and Batoum (Liverpool, April 22); s.s. Phrygia for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, etc. (Liverpool, April 27, and Swansea, May 2).

Ellerman Line.—S.s. Gerano for Gibraltar, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, May 6); a steamer will sail from Liverpool on May 18 for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Ancona, Venice and Trieste.

Ellerman's "City" Line.—S.s. City of Shanghai for Calcutta (Birkenhead, April 25); s.s. City of Agra for Calcutta (Birkenhead, May 9).

Ellerman's "Hall" Line.—S.s. Merton Hall for Bombay, Karachi and the Punjab (Liverpool, May 1).

Ellerman's Westcott and Laurance Line.—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

Glen Line.—S.s. Glenberg for Port Said, Port Swettenham, Singapore, etc. (London, May 4); s.s. Glenluce for Port Said, Port Swettenham, Singapore, etc. (London, May 18); s.s. Glenshane for Port Said, Port Swettenham, Singapore, etc. (London, June 1).

Harrison Line.—S.s. Dictator for Calcutta (Liverpool, April 29); s.s. Defender for Calcutta (Liverpool, May 13).

Henderson Line.—S.s. Martaban for Port Said and Rangoon (Birkenhead, May 3).

Holt Line.—S.s. Demodocus for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 26); s.s. Phemius for Port Said, Port Swettenham, Singapore, etc. (Swansea, April 26); s.s. Cyclops for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, April 27); s.s. Calchas for Port Said, Port Swettenham, Singapore, etc. (Glasgow, May 4).

Johnston Line.—S.s. Aviemore for Piraeus, Syra, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz and Braila (Liverpool, April 29).

Moss Line.—S.s. Hatasu for Gibraltar, Algiers, Malta and Alexandria (accepting cargo for Moroccan, Algerian, Cyprus and Syrian coast ports), (Liverpool, April 27).

P. and O. Line.—S.s. China for Bombay (London, April 28); s.s. Nagoya for Colombo, Madras and Calcutta (London, May 5); s.s. Caledonia for Bombay (London, May 5); s.s. Soudan for Bombay (London, May 6); s.s. Nore for Colombo, Madras and Calcutta (London, May 19).

P. and O. British India Line.—S.s. Madura for Bombay and Karachi (London, April 21); s.s. Nuddea for Colombo, Madras, and Calcutta (London, April 29); s.s. Chindwara for Bombay and Karachi (London, May 5); s.s. Nardana for Colombo, Madras and Calcutta (London, May 13).

Prince Line.—S.s. Merchant Prince for Tunis, Malta, Alexandria and Syrian Coast (Manchester, April 21); s.s. Algerian Prince for Malta, Alexandria and Syrian Coast (London, April 21).

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of Gold. (See *Journal Officiel* of 30th October, 1916).

1155 boats (1,045,274 tons) entered the port of Salonika during 1921.

There is no restrictions on the export of early potatoes from Algeria to foreign countries.

In 1921 over 6,000 acres of ground were tilled in French Morocco, by motor-ploughs against 4,500 acres in 1920.

The free export of barley from Czecho-Slovakia is now permitted.

The approximate gross fields production of the Steaua Romana, Bucharest, for the month of March was 18,300 tons.

NOTES OF THE WEEK.

The Greco-Turkish Position.

On the surface very little appears to have happened recently in the attainment of peace in Anatolia, but that is all the more reason for believing that big decisions are now being taken. Allied answers to the counter-proposals of Constantinople and Angora have been made, differing in no respect but in the assurance given to Constantinople, and couched in courteous terms, on the demilitarisation of Thrace. This is not insignificant, for it shows that the wishes of the Sublime Porte are of more account than some people had thought them, and if it is certain that Constantinople is to remain the capital of Turkey, it may well be that the Allies will treat the present directors of Anatolia with less respect than the legal rulers of Turkey. For the rest, the Italian Government has withdrawn its troops from the Meander Valley, and the Greeks have taken over from them, meeting with but feeble resistance. General Papoulas has issued to his Army in Asia Minor a warning that "an armistice does not really mean peace," appealing to them to remain faithful to the Greek flag, and grimly foreshadowing future events in saying that they are "destined to be the sole protector" of their countrymen in Asia Minor. The General concluded his proclamation by referring to his troops as "the liberators of Asia Minor"—a phrase hardly suggestive of an admission of defeat. It is not an easy problem, this of Smyrna and its hinterland.

A Disaster at Monastir.

A terrible disaster is reported from Monastir, where the entire population has been driven from home as the result of a tremendous explosion of war material, followed by a great fire. The death-roll was at first reported to run into hundreds, although it is obviously too early for the exact figures to have been ascertained; and the destruction of property has been very extensive. The town has been used as a centre for collecting and storing war material, formerly belonging to the Allied Salonika Army and the German and Austrian forces; and it is known that some 400 truck loads of live shells had been gathered there, the greater part high explosives. At noon on April 19 an explosion took place at one of the principal dumps, and in an incredibly short space of time the town appears to have suffered damage by 'shell fire' such as can hardly have been excelled in intensity during the war. Fires broke out in all directions, and churches, barracks and private houses

were soon in ruins. The military and police on the spot are reported to have shown coolness and courage in the emergency, and the Belgrade Government has acted promptly in despatching aid of various kinds to the scene. Unfortunately, the latest reports that we have seen hint that the explosion may not have been the result of pure accident; but no indication is afforded of the quarter to which suspicion is directed.

Bulgaria and Reparations.

At the end of February M. Tourlakoff, Finance Minister of Bulgaria, made a very long speech before the Sobranie, introducing his budget for the year 1922-1923. Most of it was taken up with criticisms of his predecessors, criticisms of the Interallied Commission, accounts of the mineral wealth of the kingdom so far untouched, and laments about the financial state of affairs in the country. He altogether omitted any kind of reference to the details of the proposed expenditure for the year. He did, however, in our opinion, make out an unanswerable case for a real moratorium as far as demands for reparations are concerned, to last for long enough to enable the country to find its feet. It is absolutely essential that any money available should be spent on the country itself for the next few years if anything is to be eventually found for reparations. Too great hurry in collecting reparations can only defeat its own ends. It is, therefore, with disappointment that we learn that immediate demands, greatly reduced it is true, are being made on this account. The consequences, if this decision is upheld, can only be disastrous both to Bulgaria and to the expectant recipients of the reparation money.

The Commission's Difficulties.

What drove the Commission to this decision is, however, clear enough. As remarked above, the expenditure side of the budget is given without comment, and what we see of it in the highly condensed form in which it is presented does not impress us with any conviction of its wisdom. Bulgaria cannot have it both ways. With its acknowledged burden of reparation on its shoulders, it simply cannot afford to spend money as if it were a perfectly free agent. If it objects to the Commission helping it in framing its Budget, it cannot complain that the reply is to demand something for reparation by way of putting a brake on expenditure which is not absolutely essential. It is most unfortunate that a chauvinist spirit seems to be abroad in the country at the present moment. The Commission is to have no say in the budget, it is not even to have any say as to how collections are to be

made. It is notorious that the Pernik Mines are wastefully managed and that the value of a great asset is thus largely lost. The Customs duties are the work of amateurs and the methods of their collection are such as to poison trade at its source. Surely the Government should welcome help in putting these things right. But it resents all such offers as insults to its sovereignty and seems to expect a perfectly free hand in all respects, quite regardless of the serious burden it had to undertake as a result of its interference in the great world war. We cannot believe that a big man like M. Stambolisky will allow himself to be mastered by such a foolish attitude. We also refuse to believe that the demand for immediate reparation will be insisted on if the Bulgarian Government abandon their present untenable position. Before leaving this matter, we should like to express our gratification at the news that the material reparations, in the way of cattle etc., to be given to the neighbouring countries have been practically completed. This is not a little matter, but the neighbours have so far said nothing about it.

The Situation in Syria.

The trouble in Syria at which we recently hinted has now been confirmed, and, too, our forecast of the way in which the French authorities would handle it. But so strict has been the French censorship that we have practically no trustworthy details of the various local insurrections, nor can one be clear upon either the motives of the rebels or the probabilities of the situation. There is talk, vague enough and not wholly credible, of Maronite disgust with France, of Faisalian instigation among the Moslems, of unity among the desert tribes, and so forth; all these, it is true, may play their part, but first of all causes of discontent in Syria, we should place the commercial state of the country. Political dreams of independence, and Moslem irritation at what is considered priority of the Lebanon, have alike fired the populace to act against the Government, but it is rather the fact that the Cilician outlets to the trade of the Syrian hinterland have by the Angora Treaty been closed that has caused common dissatisfaction. Most of the Franco-Arab trade has now to be passed through Syrian ports, and so has devolved upon the French the temporarily unpleasant task of unifying economically the Christian Lebanon with the Damascus and Aleppo Provinces.

The Alleged Cause of the Outbreak.

This unsatisfactory financial state has long been known to Frenchmen themselves, who indeed have made little attempt to conceal it. Now as political grievances out of economic grievances very easily grow, it needed but a pretext for the Syrians to rise against the Mandatory Power. This pretext appears in part to have been supplied by the presence in Syria of Dr. Crane, the President of the American Mission which in 1919 made the not very astonishing discovery that the Syrians would prefer of any one in the world as Mandatory Power the Americans. It is interesting therefore to note that in the second of the two Syrian telegrams from Cairo which we publish elsewhere in this issue the economic situation is given capital place. We can scarcely doubt that when normal trade conditions reappear in Syria—as they are bound to do shortly—these manifestations will die down. In any case the immediate outbreak has been very promptly suppressed by the French authorities, who have adopted that frankly fearless policy towards the disaffected that

characterises their colonial administration. Whether this is to be the end of the trouble it is difficult to say; certainly there will be attempts on the one side, notably in Cairo, to exaggerate and to continue the agitation, and on the other side to minimise it. For ourselves we discount alike the talk by the French of Faisalian intrigues, the rumours of the Emir Abdullah's impotence in Trans-Jordania, and the supposition of a Holy War by Moslems upon the French Mandate. The Syrian Mandate will be one of the most difficult to administer, but, like that for Mesopotamia, it is at least sane and straightforward, and not a heap of contradictions, as that of Palestine. And what an impartial witness on the spot thinks of the potentialities of the Mandate will be found by a perusal of the letter, printed in our "Correspondence" pages, from Mr. Daniel Oliver.

Extremists in Egypt.

The Zaghloulists in Egypt have been keeping comparatively quiet of late, but they have been working hard, if unostentatiously, to undermine the position of the Adly Cabinet. Apart from their constant holding up of Zaghloul Pasha as a martyr, they declare that the present Government has allowed itself to be fobbed off with a shadow instead of the substance of independence; and they further accuse the Cabinet of nepotism. What appeal, if any, the last charge will make to the average Egyptian remains to be seen; but the first, in spite of all the evidence to the contrary, is reported to find some acceptance among the masses, and the "martyrdom" of Zaghloul is still a strong weapon in the agitators' armoury. Lately the Zaghloulists prepared to inaugurate their election campaign in the provinces with a mass meeting at Tanta. The local authorities, fearful of a repetition of the kind of disturbance for which Tanta has acquired such a reputation, took their courage in their hands, however, and prohibited the meeting; and the Cabinet is reported to have decided to prohibit all public meetings in the provinces at present, in the interests of public security. This step has, of course, called forth protests, but it is noticeable that they are not very vigorous.

Egyptian Dynasty and Constitution.

Meanwhile King Fuad and the Egyptian Cabinet have been quietly proceeding with the work of shaping the newly accorded independence of Egypt. The former has issued a Rescript fixing the order of succession, and the latter, through the lately formed Commission, has made progress with the framing of the Constitution. King Fuad's Rescript confirms the principle of primogeniture; it declares the Throne hereditary in the family of Mohammed Ali; excludes the ex-Khedive, Abbas Hilmi; fixes 18 years as the age at which a King attains his majority; makes arrangements for the appointment of Regents when necessary; and decrees that no prince who is not a Moslem, and the son of Moslem parents, may reign. The reception accorded to these and other provisions of the Rescript by the Egyptians, is favourable and it is found especially satisfactory that Parliament is to have an active share in regard to certain points—such as the Regency—which have hitherto been guarded as prerogatives of the reigning prince. The deliberations of the Constitution sub-commission are secret, but it is understood that it has been decided in principle that there are to be two Houses, a Senate and a Chamber of Deputies, the former to be entirely nominated, the latter to have one Deputy for every 75,000 inhabitants.

Indian Affairs.

A superficial observer might say that India is slipping back into the old ways, when the passing of the budget marked the close of the short political season, and the country settled down to the quiet of the hot weather, with nothing to talk about except the prospect of the rains. Such a view would find some justification in the small items of news which have of late reached this country, but we take it that, if there is little talk, there is a good deal of quiet thinking. Most of the really dangerous firebrands are for the time being in seclusion, and among those extremists who have not themselves broken the law, there are signs of a revulsion in favour of constitutional methods, which may possibly result in their transformation from a disloyal conspiracy to a vigorous opposition within the various legislative bodies. If that result should be reached, we may say that the first lesson in the school of democracy will have been learned, but it would be a great mistake to suppose that the old tranquillity would follow. Politics would be and in interest to the spectator, but would become more and more arduous to the participants; and when the legislatures at last face the religious cleavages among the people, we shall witness the crucial test of the new Constitution.

The Punjab.

It is largely this element of religion which has of late brought about a dangerous position in the Punjab. There have, of course, been many cross-currents there as elsewhere, but the central fact has been the growth of a conviction among the Sikhs that the Administration has become hostile to their religious interests. There have been absolutely no grounds for such a view, but, judged by Indian standards, the Sikhs are as a community rather stupid, and their well-known tenacity makes it exceedingly hard to eradicate an idea which has once got into their heads. The latest news seems to indicate a definite improvement in the local situation, in so far that the actual revolutionary movement has been effectively checked by the employment of ordinary administrative methods, and, as time goes on, we may hope to see a diminution of the more widespread anxiety from which that movement drew its strength; but such a revulsion of feeling cannot be expected to take place quickly, and it may be some time yet before the community pulls its full weight in the constitutional boat.

Lord Ronaldshay.

Lord Ronaldshay's departure from India passed almost unnoticed in this country, but his admission to the Privy Council has been made the occasion of a certain amount of recognition of the services he has rendered to the Empire during his term of office in Bengal. Many who looked back on the troubled history of that part of India must have felt great anxiety as to the effect on such a quick-witted and excitable population of a large draught of the new wine of democracy, and as a matter of fact the provincial Council has occasionally shown distinct signs of, shall we say, elevation, but Lord Ronaldshay's presence in Calcutta has had a most important steadying effect, and his admirable relations with practically all sections of the people have given his efforts an exceptional amount of weight. He has throughout played the game and given the new Constitution an absolutely fair chance of working, and in Bengal at least his services are not likely to be forgotten.

THE WEEK AT HOME.*London, Monday Evening.***Genoa.**

At one moment last week it looked as though the Genoa Conference would break up in disorder and a renewal of ill-feeling. So far it has escaped that fate, but the idea that it would achieve anything of substantive value has been practically abandoned. Mr. Garvin has indeed sung its praises in lyric despatches, but the Russo-German Treaty remains.

There is no moral turpitude in making a treaty; Russia and Germany are both sovereign powers, and if they choose to conclude an agreement, even one with secret military clauses, nobody can stop them. It is not that which has convinced the public that no good thing can come out of Genoa; it is the feeling that Europe is again divided into two camps, Russia and Germany on the one side, the Allied Powers on the other. The treaty still stands, and all the notes and exchanges and documents and interviews and despatches cannot disguise the fact. It is a rude disappointment for Mr. Lloyd George, who had conceived great hopes of the Conference; it was in a peculiar sense his conference, in which he hoped to achieve the reunion of Europe. If he should fail, as it now seems almost certain he must fail in that heroic enterprise, the consequences both for Europe and himself may be serious. His enemies at home do not want the Conference to succeed, and it looks as though they will have little difficulty in persuading a disillusioned public that it has failed.

Its Reactions in England.

It would be a mistake to say that the British public were ever enthusiastic over Genoa, or rather what it stood for. They would like to see peace and prosperity in Europe, of course. But they have no belief in the possibility of a United States of Europe, and the three years since the Armistice have made them very doubtful of the prospects of a cessation of international jealousies. The result is that they are withdrawing attention from European affairs. The newspapers, of course, still instruct them on foreign politics, but the desire to intervene diminishes after each conference. Mr. Lloyd George's vision of England leading the new Europe into the paths of peace attracted people for a moment, but if Europe refuses to be so led, there are after all a good many other things that we can occupy ourselves with.

The Overseas Interest.

The City is only mildly interested in Genoa, and the City activities have lately been a reliable guide to the trend of national thought. Borrowers are again appearing in Lombard Street, and prospectuses come out almost every day. I have just been reading a book condemning

the British investor's ignorance of Poland; but the capitalist is not quite so dense as he is made out to be. He sees that Europe is in a state of instability, and he congratulates himself that he had not sunk so much money in Russia as France; and until Europe settles down, he prefers lending money to British colonies for public works rather than to European States to finance aggressive attacks on each other. Australian and New Zealand loans have been over-subscribed within an hour or two of being offered; and that for two reasons. The capital is safe, and the money will be used to finance British trade with the borrower. If and when any European State can satisfy the investor that it is ready to do business on the same basis, it will have very much the same reception.

The situation in Europe, particularly in the Succession States, is so complete that the ordinary man in the street can hardly be expected to follow it; he does not know the difference between a Yugoslav and a Czechoslovak, and is ready to swear (with some hesitation) that they are both God's creatures. Professed students of foreign affairs, like Colonel Repington, are doing their best to enlighten the public, but like the unbelievers in the Gospels, it waits for a sign, and is rather doubtful of miracles happening in these days. And meanwhile it knows more about Australia than Austria.

One of these days we shall rediscover Europe. Ten years ago our ignorance of the Balkans cost us dear, but we have slipped back into the old paths again, and are busy with schemes of emigration at the other end of the earth, while the Continent again becomes a *terra incognita*.

In another few days we shall know the worst that Sir Robert Horne can do to us. Waiting for the Budget in these times is very much like waiting in Harley Street for sentence of death at the hands of the specialist; we hope for the best, but we are certain that we shall be strictly dieted, and forbidden any expensive pleasures. But even to reduce the income-tax to a mere five shillings in the pound will cost the Chancellor of the Exchequer fifty millions; to reduce beer by a penny a pint will cost about thirty millions. A reduction in the tea and sugar duties is so improbable that nobody has troubled to calculate what that would cost the Treasury.

One idea that is being discussed is a capitalisation of the Pensions Account. At present war pensions are heavy, but the amount falls year by year; in twenty-five years' time that particular vote will have shrunk to very small dimensions. If by some capital operation the amount were equalised over the next thirty years we should gain immediate relief at the cost of posterity, but to do so involves borrowing, and orthodox finance rather shakes its head at fresh borrowing. There is also a surplus of a few millions in the Post Office vote. We had hoped it would be applied to cheaper postage, but it seems likely to be impounded by a hard-pressed Chancellor. Our one consolation is that, bad as the position may be, it is at least better than that of our neighbours. The French and German Budgets, to say nothing of the Polish, are a study in financial nightmare.

Drury Lane.

The new Drury Lane was reopened last week. The whole of the interior has been reconstructed, and it makes a very noble house. The play is the usual sort

of thing—the "Decameron Nights," as it is called, is an episodic affair, trivial as drama, but offering the inevitable spectacle. The place was crowded, and everything is understood to have been successful. The British theatre is in such a bad way that it no longer aspires to have any artistic significance, so one need not say anything about that side of the matter in the new old Drury.

Women's Sports.

The medicoes and other judicious and learned people are apparently becoming anxious about the future of our young women. At any rate, they are going to hold a private enquiry as to the effect of sports and games on their physique. It is suggested that girls' schools rather overdo hockey and other somewhat masculine pastimes: there are even girl's football and cricket clubs. I have not yet heard of a lady boxer, but one never knows. The young damsels themselves laugh at the suggestion that these strenuous exercises do them harm, and say that in any event it is better for them than being tight-laced like their grandmothers. But that does not alter the fact that a woman's strength is not equal to that of a man, and that what is moderate exercise for him is violent exercise for her.

Wireless for All.

The newspapers have been full this week of the prospects for wireless telephony, and some of the more fertile imaginations of Fleet Street have predicted the coming of a day when anybody will be able to speak to you in your own study from fifty miles away. When the evil time arrives that my creditors can get at me as easily as that, I shall emigrate to the South Sea Islands. My own particular thanks would go out to the inventor who can equip me with a silencer that shall automatically shut out taxi-hoots, club snores, babies' shrieks, and other menaces to one's peace. One wants to hear less, rather than more; the excess of noise in our big cities is one of the chief causes of modern nerves.

House and Land Sales.

The auction market seems to be busier than ever. Houses and estates continue to change hands—but at pretty stiff prices, except in the case of large properties which are a white elephant; even profiteers fight shy of them. In London a great many sales are due to rebuilding schemes; one-time residential districts are being turned into office blocks, and the population is being driven further out, all of which puts a greater strain on the suburban and underground railways. These, however, are issuing more capital for enlargement, so that they can cope with the increasing crowds.

The London Season.

In spite of hard times, and the notorious fact that "there is no money about," I hear that the West End dressmakers are doing well, and they prognosticate a better season than last year, which was ruined by the coal strike. Princess Mary's residence as a hostess in London will add gaiety and life to the summer, which is expected to be unusually brilliant.

The Week's Books.

"A Short History of British Expansion" (Macmillan) by James A. Williamson, is an account of British Imperialism from the Norman Conquest to the present time. It is not an original work, but a thoroughly competent digest of the available materials. The subject, of course, is an enormous one, but the author's sense of perspective is sound. The worst of this kind of book is that in these hectic days it wants a page added every month to keep it up to date.

I may add a brief reference to a book of absorbing interest to naturalists—"The Naturalisation of Animals and Plants in New Zealand" (Cambridge University Press) by the Hon. George M. Thomson. It is a scientific work full of curious surprises. The greenfinch, for instance, has flourished in New Zealand, the linnet, a kind of cousin of the greenfinch, has not; the Atlantic salmon has failed, the quinnat salmon has succeeded in establishing itself. Why? It is a more insoluble puzzle than the absence of Jews from Scotland.

EGYPT.

Cairo, April 8.

The New Constitution.

The Cabinet has not been deterred by the opposition which has been worked up by interested parties from putting into execution the political programme which it laid down for itself when it took up office, and this past week the appointment was announced of a Commission to which has been entrusted the elaboration of a new Organic Law embodying a radical reform in the constitution of the country and of a new electoral law for the two-Chamber Parliament which will be part of the constitutional changes contemplated. Every effort has been made to make the commission as representative as possible of the various currents of political thought, and albeit the "Wafd El Masri" and certain other notables have declined the invitation extended to them, the Commission may truthfully be regarded as representing all the better elements that count for anything in the country.

Its Chairman is Hussein Rushdi Pasha, the former Prime Minister, who so ably carried on during the war and is considered to be a most brilliant jurisconsult and one of the ablest exponents of constitutional and international law and legal draughtsmen the country possesses. With him are several ex-Ministers, dignitaries of the Moslem and Coptic Churches, members of the Native and Mehkemeh Sharieh Bars, delegates of the Legislative Assembly, representatives of the Coptic, Jewish and Bedwin communities, and a number of prominent notables. The Commission has for all practical purposes been given an entirely free hand. The only condition which has been made is that its proposals shall be in accordance with the most modern constitutional ideas and shall be based on the principle of ministerial responsibility.

Combining the absence of any directions from the Cabinet with the representative and independent nature of its members, it seems scarcely likely that, as the Opposition are sedulously trying to insinuate, the Commission will merely deliberate for the sake of form and will submit proposals which will give effect to the Cabinet's alleged intention of endowing the country with a constitution which in reality will give the people no greater control over policy than they possess to-day. The more one considers the question, and the more one takes into consideration the various influences at work, the more convinced must one become that the wisest course was the one which the Cabinet has adopted, *i.e.*, the appointing of a Commission to elaborate the new constitution instead of leaving its drafting, as the extremist element wishes, to the tender mercies of a Constituent Assembly.

Egypt's Flag.

It has virtually been decided to change the Egyptian flag, presumably as a further outward and visible sign of the alteration in the political status of the country. At the present moment the Egyptian flag comprises three white crescents and three white stars on a red background. This was formerly the private standard of the reigning family. On the declaration of the Protectorate it was substituted for the star and crescent on a red background which up to then had been the Egyptian standard and which was only distinguishable from the Turkish flag by the fact that the Egyptian star had five instead of six points. The new Egyptian flag will be a white crescent and three white stars on a green background with a crown superimposed for the Royal standard. The choice of green as the national colour is particularly appropriate, seeing that Egypt is an agricultural country and that green is not only the colour associated with Islam but that it was the colour of the standard of the Fatimite Caliphs who created Cairo.

Death of Prominent Missionary.

The American community in general and the cause of education in particular have just suffered a great loss in the death of Dr. John Giffen, which occurred last Tuesday. Dr. Giffen who was 76 years of age came to Egypt exactly 47 years ago. Throughout his residence he was one of the strongest bulwarks of the American Mission, which has done such invaluable educational work in this country, and he had gained a position in the affection and the esteem of the Anglo-Saxon and Egyptian communities which without exaggeration was unique.

At his funeral the Cabinet was represented by Ibrahim Pasha Fathy, and the composition of the concourse which followed his remains to the cemetery was eloquent of the position which Dr. Giffen held in this country. It was, however, noticed that none of the ex-Ministers of Education attended, nor did the Civil Authorities send the Police escort which is usually delegated for the funerals of important persons. Considering Dr. Giffen's position this is much to be regretted, and although no doubt it was an oversight it has given rise to much comment in European circles.

"The Mikado."

The heartiest congratulations are due to those responsible for the production of "The Mikado" which took place last week in aid of the Society for the Prevention of Cruelty to Animals and Waifs and Strays. Where everyone performed so well it is exceedingly difficult fairly to apportion individual praise, but his colleagues themselves will, I think, agree that the outstanding feature was the Ko-Ko of Major Leslie, who gave a most finished performance and revealed talent which if his present career ever fails him should assure him a prominent place on the professional stage. CAIRO STATION.

Mrs. Dabell and Mrs. Palmer Hall as the three little maids made a very dainty trio, of whom Mrs. Palmer Hall seemed certainly the most at home. Remembering Mrs. Thielman's most recent success on the concert platform one was somewhat disappointed with her as Katisha. Obviously the Opera stage is too great a tax on her singing, though it certainly gave her an opportunity for revealing her histrionic talent. Mr. Greaves as the Mikado was excellent both in voice and in acting. Mr. Hayes, who is an old friend in Gilbert and Sullivan, was in splendid voice and in the dress which suited him admirably, made a most attractive Nankipoo. Mr. Trimman as Pooch-Bah appeared rightly to feel the weight of his many responsibilities and gave a characteristic rendering of his part, while the chorus and concerted work showed how strenuously the performers had rehearsed and how fortunate the management had been in securing the services of Mr. Louis Cowan and Col. Sullivan, who had been responsible for the production and musical direction respectively. No one knows better than your Correspondent how exceedingly difficult it is in a place like Cairo not so much to collect fifty or sixty members of the community for such undertakings as to keep them together well under discipline during the long period necessitated by rehearsals. The successful result of this latest venture on the part of the British community is therefore in the circumstances a personal triumph for everyone concerned.

Reuter's Agent Honoured.

The latest appointments to the British Empire Order include that of Mr. G. C. Delany, Reuter's Agent in Egypt. With characteristic modesty Mr. Delany deleted his name from the cabled list which he published here ten days ago and left us to learn the news from the London papers to hand this week. The honour which has now been bestowed on him is a well-merited though belated recognition of his services to the Empire during and since the war, and has given very great pleasure to his colleagues and friends, who have long admired the ability and impartiality with which he has directed his Agency, particularly during the varying phases of the past four very trying and critical years.

Cairo, April 15.

The Bomb Case Sentences.

The sentences in the Sarwat bomb case were promulgated this week: Two years' hard labour for two of the accused and three years' hard labour for the third. These sentences, without exaggeration, have aroused the greatest astonishment amongst Egyptians as also amongst British residents. The men convicted were accused of conspiracy in that they were members of a secret society having among its objects assassination, and that in furtherance thereof they conspired together to kill the Prime Minister and another official by bombing and revolvers. Having been found guilty of these very serious offences there could on the face of it not be any question of extenuating circumstances, and considering the precedent set up in previous conspiracy and bombing cases and in view of the fact that the Egyptian Courts could give up to penal servitude for life, and certainly in a case like this would have awarded at least fifteen years, the leniency shown by the Military Court is quite inexplicable.

The Political Situation.

There is little change in the political situation. The criticism of the Cabinet in respect of its action regarding the new Constitution continues in the Opposition press, but it has been somewhat disarmed by the appointment of the Commission entrusted with the elaboration of the new Organic and Electoral Laws, the composition of which is generally admitted to be not only representative but also a guarantee that the real interests of the country will be safeguarded. Sarwat Pasha took the opportunity of the opening sitting of the Commission to deliver a speech in which he replied to his critics and appeared to prove very conclusively not merely that they are wrong in claiming that no Constitution can ever be valid if it has not been framed by a Constituent Assembly, but that on the contrary, in advising the King to make

the grant of a Constitution direct from himself, he has acted strictly in accord with precedent in Egypt, where all governmental reforms have emanated from the sovereign. His speech seems to have made an excellent impression.

At the same time there is still a good deal of criticism with regard to the general work of the Cabinet and particularly the appointments that it continues to make. There is no doubt that the Opposition has gained considerably during the past three weeks, and the Cabinet will have to walk very warily and act very firmly if it wants to come off victorious at the elections. The latter, I gather from conversations I have had with members of the Commission, are unlikely to take place before the new year, so that the new Parliament will not meet until next March at the earliest.

A State University for Cairo.

The Commission established in 1917 by the Council of Ministers for the purpose of studying the question of a State University has now issued its report. It is a very voluminous but highly interesting document, and it is unfortunate that the space at my disposal will not permit of an exhaustive review. Briefly, the Commission considers that there is a crying need for the provision of liberal education of a higher level than is at present provided, and recommends the establishment at the earliest possible moment of a State University in Cairo with seven Faculties.

Each of the existing Higher Schools of Medicine, Law, Agriculture, Engineering, Commerce is to be transformed into a Faculty, and two new Faculties of Arts and Science are to be created. Departments of Education, Oriental Studies and Archaeology are to be included in the Faculty of Arts, and in this connection it is interesting to note that the Commission lays stress on the point that owing to its environment, historic associations, and geographical situation, Egypt should be the seat of a flourishing school of Oriental studies, and should provide training for students in Archaeology, in which the country offers possibly a richer opportunity for inquiry than any other country in the world.

The Commission, having regard to the fact that the preliminary general education of the students who enter them is at present insufficient to enable them to follow with profit the professional courses, recommends that the Faculties of Arts and Science should provide intermediate courses of two years in Arts and Science, which would cover all the teaching of the preliminary Arts and Science subjects necessary for other Faculties and would also be regarded as part of a four years' course for Ordinary and Honours Degrees in Arts and Science so as to concentrate the teaching of all the preliminary Science and Arts subjects required for the various Faculties, instead of having them taught in several different places as they are at present, with a wasteful multiplication of staffs and laboratories.

The question of the medium to be employed in teaching in the University found the Commission somewhat divided, and the minority, consisting of the Egyptian members, presented a separate report. On certain points, however, unanimity was arrived at. Briefly, they are the following:—In principle Arabic should be the medium of instruction from the beginning; subjects which will suffer greatly in efficiency if they are taught in Arabic at the opening of the University may be taught in a foreign language for a limited period; immediate steps should be taken to train Egyptian teachers of proved capacity for work in the University; a Translation and Publication Bureau should be formed for the preparation of works in Arabic suitable for University text-books and for the settlement of technical terminology for use in the teaching of Mathematics and Science throughout the country; every student of the University must select one foreign language as his principal foreign language, and this language must be studied through the medium of the language itself.

Of the great need for such an institution there can be no doubt, and the Commission has done most valuable work in the investigations it has made, and in collecting the data which it has put on record. It appears, how-

ever, quite possible that some of its recommendations will have to undergo modification before they are put into operation, as I have heard various criticisms of the details, which appear to be well-founded.

It is not known as yet what view the Government takes of the recommendations made, but from the fact that the Ministry of Finance has opened a credit for the preliminary work in connection with the creation of a University it may fairly be assumed that the adoption of the scheme will enter into the realm of practical politics in the very near future.

'IRAQ (MESOPOTAMIA.)

Baghdad, April 7.

A Week of Excitement.

This has been a week of excitement, crises and disasters in Baghdad. The excitement has been caused by the Akhwan and their raids on 'Iraq, mention of which was made in previous letters. A good deal of excitement was caused when the news of the raids first reached Baghdad, but it had begun to die down after a commission had been sent to Nasiriyah under the presidency of Nuri Pasha Said to enquire into the raids and the amount of damage which had been done and to consider what measures must be taken to meet the menace. On his return Nuri Pasha was interviewed by the representatives of the local vernacular papers, and is reported to have given the most alarming story; that these raids were no ordinary raids but were the beginning of an organised attack on 'Iraq by Ibn Saoud, the Wahabi Sultan of Nejd, and that the raiders had murdered women and children in cold blood, or had left them in the desert to die of hunger and thirst. This gave the vernacular papers every excuse they needed to start a series of alarmist articles about the Akhwan menace and to call on Government to take immediate steps to meet force with force. During the past week articles have appeared pointing out the need of an enormous national army to defend 'Iraq from Akhwan aggression and urging that the 'Iraq army be immediately expanded. One paper went so far as to suggest that the country only wanted three things: an army, education, and agriculture, and that all the revenues of the country should be spent on these three things alone and that everything else should go to the wall.

The Ulema Take a Hand.

Baghdad has, as a result of all this, become thoroughly alarmed; and a day or two ago a meeting of the *ulema* was held at which the position of the Akhwan was discussed, and as a result a *Fetva* was issued declaring that it was the duty of all good Mohammedans to take up arms against the Akhwan, whose position was likened to that of the Kharajites against whom Ali ibn Abu Talib waged war. Nor is that all; the Shiah *ulema* have also entered the arena, and Sheikh Mahdi al Khalisi of Kadhimain has addressed a letter to all the spiritual and temporal sheikhs inviting them to meet at Kerbella on Shaban 10 (April 8) to discuss the steps which must be taken to meet the Akhwan menace. This entry of the Shiah *ulema* and this holding of meetings at Kerbella is a disquieting factor which is causing men of moderate views some anxiety. The Shiah *ulema* have always been prominent in organising movements against Government, no matter what Government has been in power, and Kerbella has too often been the place where their nefarious schemes were worked out; and there are many who fear that the present meeting may produce only the same results as many similar meetings held in the past.

Sir Percy Cox Acts.

Meanwhile the publication of the correspondence which has passed between the British High Commissioner in Baghdad and Ibn Saoud has done much to dispel the alarm which the raids had caused. In reply to Sir Percy Cox's remonstrance Ibn Saoud declared that the first he had heard of the raids was the information contained in Sir Percy Cox's telegram, but promised to make careful enquiries and to take such action as would prevent a recurrence of the incidents. No reply was given, however, to Baghdad's demand that the

property looted in the raid should be restored and that compensation should be given to the relations of the persons killed during the raids. In reply Sir Percy has wired to Ibn Saoud saying that in the urgent circumstances existing it is of vital importance that a temporary boundary be laid down to divide 'Iraq from Nejd, without prejudice to any more permanent boundary which may be decided on later when representatives of the two countries meet at Mohammerah. Sir Percy Cox has therefore laid down a boundary line which the two sides are requested to accept for the present; and both sides are being called on to withdraw their adherents behind the boundary line and to warn them that they will in future cross it only at their own risk. Finally, Ibn Saoud is called on to withdraw Faizal ad Daweish and the other leaders of the raids to Riyadh and to keep them there for the present.

Ministerial Crisis.

So much for the excitement, we come now to the crises. These came partly as a result of the excitement over the Akhwan. No official version of what happened has yet been published, but it is generally believed that King Faisal tried to get the Council of Ministers to increase the army vote in view of the Akhwan raid; this some of the Ministers objected to and Faisal replied that if they would not do as he wished they had better resign. The result was that the Ministers of Interior, Justice, Public Health, of Communications and Works, Commerce and Finance resigned at once; and with the exception of that of the Minister of Finance the resignations were accepted. The action of the Ministers in refusing to submit to the King's dictation has met with general approval, and the King is being very severely criticised for his action. It will be remembered that at the time of his accession Faisal made much of his intention to set up a constitutional democratic government, and it is considered that his recent behaviour ill accords with his declared intentions.

New Ministers have been appointed to the vacant portfolios; Taufiq Beg al Khalidi, until now Muhafidh of Baghdad, to the Interior, Ja'afar Abu Timman to Commerce, Subih Bey to Communications and Works, while the Ministry of Health has been abolished and a Mudirate of Public Health is to take its place. Taufiq Beg was the member for Baghdad in the Turkish Parliament and is a man of moderate views. He has recently done well as Muhafidh of Baghdad, and his appointment is generally approved. Ja'afar Abu Timman is a prominent Baghdad merchant and holds extreme views. He was one of the leaders of the disturbances of 1920. Subih Bey has been away from 'Iraq for some ten years and returned only a few days ago, and his appointment may therefore be regarded very much as an experiment.

Two Disasters.

There remain the disasters to mention. Both of these occurred early on Sunday morning, and the Maude Bridge played a prominent part in both. First of all a barge got adrift and floated down on to the bridge, causing considerable damage. Fortunately it was possible to secure the barge before it carried the bridge away altogether. In the morning a tug came to try to pull the barge off but got jammed between the barge and the bridge and sank. The bridge will be out of use for a week or ten days, and meanwhile all traffic has to use the Kotah Bridge, which is not really equal to the strain, and cross river traffic is being seriously dislocated.

The other disaster happened to a motor launch which was taking seven irrigation officers home in the early morning and ran into one of the hausers holding the Maude Bridge in place and upset. Three of the officers on board, Major Showers, Mr. Gowan-Smith, and Mr. Klinger, were drowned, the other four managing to reach the shore. The accident is the more tragic in that Major Showers and Mr. Klinger were about to leave the country, the former on leave and the latter returning home on expiration of his contract.

"A Flying Visit."

On Saturday King Faisal and his staff together with the High Commissioner and his staff visited Ramadi by air, returning the same day. The party travelled in

one of the big Vickers Vernon troop carrying aeroplanes. In this connection may be mentioned what we hope was unconscious humour in the *Baghdad Times* which headed one of its columns in big letters 'King in the Air,' and another column in the same page 'Cabinet crisis, five Ministers Resign.'

PALESTINE.

Jerusalem, April 9.

The Nebi Musa Pilgrimage.

To-day marks the second anniversary of the outbreak of the Arabs against the Jews in April of 1920. It was the entrance of the men of Hebron into Jerusalem preparatory to their pilgrimage to Nebi Musa that started the disorders, and both last year and this year this entry of the Hebronites was the moment which the Public Security authorities had most reason to fear. Last year there was no disturbance beyond rushing the cordon of Hindu troops, while to-day there has been no trouble of any kind. The Hebronites, several thousand in number, came in this morning at half-past ten, entered the Old City by the Jaffa Gate and so through to the Haram Area. The entire place bristled with precautions: practically all the shops along the route, Jewish and non-Jewish alike, were shut; at the Jaffa Gate were mounted gendarmerie, Hindu troops and an armoured car. The usual speeches were made by the Moslem Leaders, but there seem to have been no provocative cries by the crowds: "Long live Palestine," "Long live the Grand Mufti," "Long live the Moslem-Christian Association," were about all that could be heard.

The main body of pilgrims left two days ago. In the usual way the Jerusalem Town Council organised an official "send-off," with the High Commissioner, the Governor of Jerusalem and the various community representatives present—including the chief Zionist officials and editors of the local Jewish Press. The Sheikh of the Mosque chanted extracts from the Koran, the Grand Mufti blessed all comers, Mr. Storrs made speeches in Arabic on his own behalf and for the High Commissioner, there were calls for cheers for King George, the High Commissioner, Governor Storrs, and the procession of flags was despatched in peace. There may be further nervous moments when the pilgrims return next week, but the general impression is that the obvious precautions taken will check the attempts of would-be agitators.

Zionism and Palestine.

Cabled reports are coming through of *The Times* articles on Zionism and Palestine. Mr. Philip Graves, the Near East correspondent of *The Times*, has been out here now many weeks, most conscientiously going to and fro and up and down the country, cheerfully submitting to talks from everybody with a point of view. The reports we have seen so far are very brief, but they give the impression that Mr. Graves has got a real grasp of the conditions of things and is able to see them in a better perspective than was Lord Northcliffe during his visit to Palestine some two months ago. He seems also to have gauged aright the childish ineptitude that has marked the Zionist Commission in so many of its actions. One stands aghast, again and again, that a people like the Jews, proverbially so astute, should have so mismanaged the greatest opportunity that has ever been put into their hands during the course of their whole history. There is still ample time for them to make good these mistakes, and we hope that, for the good of Palestine, they will be able to do so. But the general impression that tends to be left on the minds of the Gentile onlookers is that the Jew cannot, after all, be the smart fellow he was always supposed to be.

Lord Milner's Visit.

Lord Milner has been putting in some weeks here very thinly disguised as a tourist. He insisted that he was a mere tourist, but nobody thought fit to believe him—not that much importance should be attached to this popular attitude: it is the current local vice to interpret every innocent act or remark in terms of the highest politics. Lord Milner has been "doing" the country fairly thoroughly, receiving public welcomes, making

grateful but perfectly mild replies, and having the deepest political significance read into his most simple statements. One local Arab paper announces that Lord Milner is to take over the thorny duties of High Commissioner when Sir Herbert Samuel leaves next week! But that is the Eastern mind working along its usual familiar lines: the mental process of the Eastern is normally restricted to analogy: Sir Herbert paid an informal visit to Palestine in the Spring of 1920, and was installed High Commissioner the following June; add to this the further fact that the present High Commissioner is to put in the next few months in England, and precedents are curiously numerous of the Palestine official taking English leave and finding that such leave is an immediate prelude to dismissal!

Villages' Miniature War.

Zionism is not the only cause of trouble in the country. We translate the following from the vernacular press:

"The results of the quarrel which broke out between the two Arab villages near Hebron, Dura and Dariya, are: on the side of Dura, nine (mostly youths) killed and forty to forty-five wounded; on the side of Dariya, seven killed and twenty-five wounded, some dangerously. The quarrel broke out on account of mutual hatred and various disputes about pasture-lands and cattle-lifting. The men of Dariya employed two machine-guns left by the Turks, and also made use of trenches—a full-dress military defence—officered by young men who had learned the business in the war. They collected large quantities of ammunition from the neighbourhood and made good use of it in their "war." The men of Dura, who launched the attack, were not so well armed, but succeeded in driving their enemies almost back to their own village Dariya. Some of the Hebron notables and Sheikhs of Beersheba and neighbourhood are trying to make peace and arrange an armistice; the Government has also sent police and three armoured cars and put in prison twenty notables of the two villages."

GREECE.

Athens, April 8.

Independence Day.

The Greek National Fête in commemoration of the War of Independence (March 25, 1821) was celebrated yesterday as usual. The religious service at the Cathedral was conducted by the Metropolitan of Athens in the presence of the King, the Queen and the Royal Family, the Members of the Cabinet, the Roumanian Ambassador, the Foreign Missions to Greece, and many high dignitaries and Members of Parliament; the Crown Prince of Denmark was also present. After the service the King and the Princes proceeded to the University where the customary ceremony was held. The streets were beflagged and all public buildings and banks were illuminated in the evening.

The Genoa Conference.

The Greek delegation, consisting of M. Gounaris, the Minister of National Economy, M. Luke K. Roufos, and M. Mallah, a deputy from Salonika, left for Genoa by the s.s. "Naxos" early yesterday morning. The staff of the delegation is made up of twelve experts, secretaries, and others. The Constituent Assembly has adjourned until the week after Easter.

General News.

Queen Marie of Roumania arrived here from Bucharest yesterday afternoon, for the purpose of seeing her daughter, Princess Elisabeth, who has been indisposed since the beginning of last week. The Princess' medical attendants report that her condition is improving.

The Ministries of Public Assistance and Agriculture have decided to establish a College of Agriculture at Serres for the training of war-orphans.

The pound sterling was to-day bought at 150 drachmae. The Consortium rate is still 98, but it is expected that this too will go up when the Exchange and the Banks are re-opened on Monday.

The Greek Government has conferred upon the Crown Prince of Denmark the Grand Cross of St. George. His

Royal Highness is leaving for Italy early tomorrow morning.

Of the 10 persons charged with the murder of M. Jean Dragounis, 5 were sentenced to penal servitude, 2 to twenty years' imprisonment, 1 to two months' imprisonment and a fine of 300 drachmae, and 2 were acquitted.

Athens, April 10.

Greece and Albania.

A meeting between Greek and Albanian Government officials took place a few days ago on Greek territory, near Florina, with a view to discussing various outstanding questions and particularly those with regard to Korytsa. The Greek delegates demanded that Albania should: (1) authorise the return to Korytsa of the Greek refugees who had emigrated to Epirus when Southern Albania (or Northern Epirus as the Greeks usually call it) was taken over by Albania; (2) restore the Greek schools and churches of Korytsa to the Greek community of that town, and (3) discontinue to enrol the Greek male population in the Albanian Army.

The Albanian representatives readily agreed to the return to their homes of the Greek refugees, but refused to discuss the other questions without previously consulting their Government. The conversation was held in a very friendly manner, and before taking their leave the Albanians informed the Greek Prefect of Florina, M. Calamaras, that the Albanian Government was very anxious that Greece should officially recognize the State of Albania by appointing without delay a Minister at Tirana. M. Calamaras, who is now in Athens, has already seen M. Baltazzi, and it is to be hoped that the *pourparlers* will be renewed on his return to Florina, and that they will eventually lead to an understanding and the establishment of friendly relations between the two neighbouring States. A telegram received yesterday from Genoa says that the Albanian delegate there has had a long talk with the Greek Premier.

The Peace Proposals.

The British, French and Italian Ministers in Athens called yesterday on the Minister for Foreign Affairs, M. Baltazzi, in order to remind him that their respective Governments would be glad to have an early reply to their recent peace proposals to Greece. The Allied representatives added that the reply of both the Constantinople and the Angora Governments had already been received.

M. Baltazzi pointed out that the slight delay in replying to the Allied Note was due to the hurried departure of M. Gounaris for the Genoa Conference; he promised, however, to communicate with the Premier on the subject. A long cable was dispatched to Genoa by the Greek Government last night, and official circles here are of the opinion that the Greek Prime Minister will be obliged to return to Athens before the Conference has completed its work. In any case it is thought that Greece's reply will be handed in within the next week.

General News.

Mr. and Mrs. H. T. Montague Bell arrived in Athens from Egypt last Friday and are leaving for London by the Orient Express to-morrow. Mr. Montague Bell was received in audience by King Constantine.

The Grand Duchess of Hesse, sister of Queen Sophie of Greece, has arrived in Athens accompanied by her two children.

Princess Elizabeth, whose condition had caused some anxiety during the week, is now better. The Crown Prince of Roumania, who is the Princess's brother, is expected here tomorrow.

The new Minister of Czechoslovakia has presented his Letters of Credence to King Constantine.

A well organised Turkish attack on Satran about 30 kilometres N.W. of Afion Karahissar, was repulsed by the Greeks after much hard fighting. There has been much activity on the Asia Minor front lately.

ALBANIA.

Tirana, April 12.

After the Rebellion.

The number of those condemned to death and executed as a consequence of the troubles of last month now amounts to nine. Six others have been condemned to death *in contumaciam* by the Court Martial. The total of deaths in the fighting which took place at Elbasan (between the Gendarmerie and the followers of Halid Lleshi), in the plain (between Kroya and Tirana), and in the capital itself is reported as 60 rebels and 20 soldiers. There are now under arrest and awaiting judgment 142, of whom the greater number seem likely to be condemned. There are also about a dozen people who have sought refuge in Italy in order to avoid justice overtaking them.

The funeral of Meleg Frasheri, the Commandant of Gendarmerie who was killed in the fighting on the plain between Kroya and Tirana, assumed the character of a national ceremony. The body, which had been embalmed and guarded in a village near Kroya, was interred at Tirana on March 23. The ceremony was very impressive. The members of the Government and of the High Council, the religious leaders, the corps of officers and a crowd of over 3,000 people—Moslems as well as Christians—bore witness to the respect for the brave officer who gave his life for his country. It was the first funeral of such an imposing character seen in Albania.

Political Cloudlets.

I reported in my previous letter that calm had been restored, and nothing fresh has occurred to change the situation. Nevertheless, it would be unwise to be too optimistic at present. There are certain factors which may yet produce trouble in the country: Bairam Tsur, Mustapha Kroya, Halid Lleshi and Hassan Prishtina have not yet been captured, nor have they made their submission. There are, therefore, still some clouds in the sky; and there may be another storm.

Two members of the High Council, namely Omer Urioni, who acted as President, and Antoine Pistulli, have resigned, for reasons which are not quite clear.

Piræus

FURNESS (Hellas) LTD

**General Ship & Freight
Brokers, Coal Importers,
Stevedores & Clearing
Agents.**

Goods forwarded to all Greek Coast-
wise Ports, dutied and delivered to
any address in Piræus or Athens,
or stored in Private Warehouse.

APPOINTED AGENTS FOR:—

**Furness Line
Johnston Line from U.K. and Cont.
Prince Line from U.S.A.
Ocean Salvage Co., Limited.**

APPLY TO:—

**FURNESS (HELLAS) LIMITED,
Spyraki Building,
Piræus.**

Cables: "Furness."

Tele: 43 Piræus.

Moreover, Fan Noli, who had accepted the portfolio of Foreign Affairs, has also handed in his resignation. These defections are calculated to weaken the position of the Government.

Albania's Foreign Relations.

The new Albanian Minister in London, H. E. Mehmed Bey Konitza, is reported to have presented his Letters of Credence on March 28. At present he is the only Albanian representative abroad with the rank of Minister.

Finland and Luxembourg have officially announced that they recognize *de jure* the Government of Albania. This brings up to 12 the number of States that have thus far accorded such recognition, the others being: Great Britain, France, Italy, Japan (the four States of the Conference of Ambassadors), Belgium, Switzerland, Bulgaria, Austria, Roumania, and Yugoslavia. As to foreign official representatives in Albania, Mr. Eyres the British Minister, remains unique; for Italy's representatives, Minister and consuls, have as yet no official character, and France has not yet sent her Minister to Tirana.

An Autocephalous Church.

There have been by-elections at Scutari, Argyrokastro and Kortcha, to replace the deputies who have abandoned their seats in consequence of appointment to various posts. There were two seats to fill at Kortcha and one at each of the other places. At Kortcha the Christian deputy obtained a unanimous vote. He made the independence of the Albanian Orthodox Church the principal feature of his programme—that is to say the creation of an autocephalous Church; and the Albanian Christians have thus confirmed their will to constitute themselves a community independent of the Greek Patriarchate. By-elections are still to be held for the prefectures of Drin, Hershan, Durazzo and Himara.

A New Journal.
