The administration of the Bahr-el-Ghazal is entrusted to El Miralai R. M. Feilden Bey, as Governor, who has seen some twelve years' service in the Sudan Government; El Kaimakam Viscount Hawarden Bey, Senior Inspector; El Kaimakams P. M. Larken Bey and C. M. Northcote Bey, El Bimbashis R. S. Hart, R. G. C. Brock, L. S. Lloyd, C. Kennedy-Crauford-Stuart, D.S.O., and H. B. Watson, Second Inspectors. The majority of these officials are located at Wau, while others are settled at Tembura, Meridi, Raga and Rumbek.

SUDAN PRODUCE.

Official Reports of October Conditions.

We take the following from the monthly report (October, 1916) of the Commercial Intelligence Branch of the Central Economic Board, Sudan Government:—

Royalty Paying Articles—Exports.

Gum.—During October, 1916, 115,553 kilos of gum, valued at £3,841, were exported via Port Sudan. Of these, 67,172 kilos are hashab gum, valued at £2,970, and 48,381 kilos are talh gum, valued at £871.

Cotton.—The following reports have been received from the Berber province:—Cotton prospects are quite good, in spite of much early cotton having been swamped by the high flood. After allowing for losses from this cause, the area of American cotton on sakias is at least as great as last year, and, although there is a certain amount of boll worm about, sakia cotton is everywhere looking well. In the south end of Shendi Merkaz a good deal has been planted very late, as late cotton there did quite well last year.

The cotton on the native lands watered by the Sudan Plantations Syndicate at Zeidab is looking remarkably well. Picking has begun on that planted in June, and a good yield seems assured from both June and July sown cotton.

News from Tokar is very reassuring. Everything indicates a record crop, in spite of the shortage of seed, as the wastage of the same this year has been very small, only two or three seeds being planted in one hole this year as compared with a much greater number in previous years. The crop, taken as a whole, has this month progressed quite satisfactorily. In a few parts of the Delta a little cotton is already to be seen. The lateness of the sandstorm season this year has kept back cotton, but, given good rains, this may not matter.

Cultivators are putting more work into their land this year than last. This is due to two reasons: (1) good prices last year, and (2) smaller areas of land were allotted this year to lazy and inefficient cultivators. The price of labour has fallen from T£13½ to T£6 per day.

Miscellaneous.

Dura and Dukhn. The following reports have been received from the Blue Nile Province:—September.—The dura trade was more brisk than in August. Prices dropped slightly. October.—The price of dura has steadily risen instead of falling, or, at all events, keeping steady. This is due to heavy export demands and also the fact that the new crop has not yet been thrown into the market.

Kordofan Province.—The rains ended before the middle of the month. Almost everywhere the rains this year have been exceptionally good, and the grain crop is expected to be considerably in excess of the normal. Dura and dukhn have remained fairly steady at approximately T£64 to T£70 and T£64 to T£67 the ardeb of 300 rottles (135 kilos). There has been, however, no great quantity on the market.

Berber Province.—October.—Wad Hamid Basin: The Nile has held up too long to suit this basin, and at the end of the month there were still about 3,000 feddans under water. Much land that would normally be sown in September could not be sown until nearly the end of October, and much of this has been planted with dura.

The price of sakia dura was T£110 per ardeb of 380 rottles (171 kilos); red dura, T£110.

It is notified that owing to the further increase in the price of coal the temporary surtax on all rates for goods and animals carried on the Sudan railways will be raised from 10 per cent. to 20 per cent., with effect from January 1, 1917.

The coal stock preserved in Egypt for the Irrigation Department now amounts to about 200,000 tons, says the *Egyptian Gazette*. According to a native contemporary, the Ministry of Public Works, calculating the orders received by the Mechanical Department for coal from different parts of Egypt for agricultural purposes, has found that the total quantity of coal supplied by the Government to cultivators and landowners for this year does not exceed 10,000 tons.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

Holiday influences have prevailed throughout the market during the short week, and it is not possible to record any particular development in the situation. Raw cotton rates are rather firmer, and spinners and manufacturers have been difficult to deal with.

A further development in connection with the wages question has taken place, in that the operative spinners have decided to apply for an advance of 20 per cent. The demand will not be made to the employers until next week, and six weeks' notice will have to be given. With regard to the cardroom workers' application for an advance, the two sides have not been able to agree as to an arbitrator, and it looks as though the matter will have to be left in the hands of the Board of Trade.

No particular fresh news has come through relating to the Egyptian crop. The general demand in piece goods for Egypt has continued rather quieter. Certain buyers, however, find it necessary to purchase particular cloths from time to time, as according to advices from the other side clearances continue healthy.

Only a miscellaneous business has been reported in piece goods for India, chiefly in light makes. Comparatively few workable offers have been met with for China. The South American markets have not been at all active. Manufacturers of cloth continue to derive a considerable amount of strength from the contracts on the books, and there is no running after fresh orders.

American yarns for home consumption have not attracted very much attention, but prices remain very firm, and easy sellers are difficult to find. Only odd lots have been put through in shipping yarns.

Egyptian spinnings remain strong owing to the extensive engagements of producers, and full rates have had to be paid for anything wanted.

BRITISH TOBACCO.

Finding a Substitute for Turkish Leaf.

The stocks of Turkish tobacco held in this country are now getting low. Cigarette manufacturers say that they can go on moderately well for another three months, but at the end of that period there must be a limitation of the consumption.

After the war it is possible that British smokers will become less dependent on foreign countries for their tobacco than they have been in the past. Great possibilities of successful tobacco cultivation exist within the Empire, and these are likely to be extensively developed in the future. The Imperial Institute is doing useful work in encouraging experiments, in analysing samples of leaf sent to London, and in obtaining commercial opinion on the practical value of the tobacco.

Definite success has until now been confined to a few districts. Attempts are at present being made in Cyprus to produce latakia tobacco, which obtains its distinctive flavour by a secret curing process. Refugees from Asia Minor who have settled in the island during the war believe they have discovered in Cyprus the tree which yields the wood necessary for the process, and a good deal is hoped for from the experiments now being conducted. Good tobacco of the Turkish type is already grown in Cyprus.

In Uganda a good leaf of the Turkish variety can be grown, but the crop is always in danger from violent hail storms. Samples which have just arrived from Northern Nigeria suggest the possibility of producing there a good sun-dried tobacco.

It has been suggested that to encourage the cultivation of tobacco within the Empire a lower rate of duty should be imposed on Empire-grown material than upon the tobacco imported from other countries. The one objection to this would be that difficulty would arise in regard to the drawback.

In Nyasaland and Rhodesia at any rate a good start has been made, and these countries should eventually become great tobacco exporting areas.

PRODUCE REPORT.

LONDON, December 28.

Owing to the holidays, which apparently have kept many of the principal dealers away from the markets, and to the prevailing fog, no serious attempt was made at business generally this week; in fact some markets were hardly opened at all. In the dry fruit market the absence of light, owing to the fog, has considerably hampered the transaction of business, and only few sales, of not much importance, have taken place.

Currants.

There has been no demand, and only very small business was done at late rates.

Sultanas.

Some Australian and Afghan parcels were sold to country dealers at recent quotations, otherwise there has been no change in the apparent inactivity of the market. Prices, however, are well maintained.

Figs and Dates.

No sales were reported and no change in quotations.

Seeds.

Linseed opened steady, and only few transactions have taken place in spot and afloat parcels. Rapeseed is quiet for all positions. Cottonseed is firmer, but no sales were reported at closing time.

TREBIZOND FILBERTS.

Review of Five Years' Crops—This Year's Estimate.

Apropos the article in THE NEAR EAST last week in which the filbert oil industry of Trebizond was discussed and described, some figures are now available, with the assistance of which it is possible to venture on a short review of the crops of the district for the past five years.

In 1910-1911 the crop of filberts was smaller than in 1909-1910, showing a difference of 24,000,000 pounds. The total exports for the season were 107,113,300 pounds, to which 5 per cent. for local consumption should be added to show the total amount produced. Of these exports 48 per cent. went to Germany, 22 per cent. to Austria, 10 per cent. to France, 10 per cent. to Egypt, 4 per cent. to America, 3 per cent. to England, and 3 per cent. to other countries. The crop of the 1911-1912 season proved to be much smaller, the total being only 58,591,400 pounds. Prices were consequently much higher; they reached 30s. 10d. per 100 pounds, as compared with about 20s. 8d. in 1910-1911.

Three years before the landowners began to give scientific and systematic attention to the cultivation of the trees, instead of letting them grow wild. New groves were also planted and the soil more carefully treated. That their efforts were well rewarded is proved by the fact that in 1912-1913 the crop amounted to 74,475,400 pounds, and the quality was considered slightly better. In 1913-1914 the previously unheard of amount of 148,800,000 pounds was harvested. Excellent climatic conditions were partly responsible, but the additional care expended undoubtedly largely contributed in making such a result possible.

It is obvious that in a district occupied by two belligerent forces it is impossible to obtain official and comprehensive crop statistics. Still, though no figures are available for the many small villages comprised in the district (which usually yield abundant quantities of filberts), it has been found possible to estimate this year's crop for the immediate vicinity of Trebizond proper. This estimate is 4,340,000 pounds, as against 17,551,000 pounds in 1913 and 31,000,000 in 1914, an abnormal year. About 2,480,000 pounds were left on hand from last year's crop, making the total present stock 6,820,000 pounds, which is rapidly diminishing. The export of nuts is forbidden by the authorities. Small quantities are sold for eating purposes, but the bulk of the stock is either sold to local firms, which crush out the oil from the nuts, or is being held for higher prices.

NEWS FROM ALL SOURCES.

British telegraph money orders may, after January 1, be sent to Gibraltar.

The properties of R. and O. Lindemann, in liquidation, are advertised for sale in the *Egyptian Journal Official*.

A proclamation has been issued in Cairo prohibiting the storing of cotton or its disposal to anybody except residents without special permit.

The Anchor Line have taken more commodious offices at 16, Gracechurch Street, London, E.C., where, on and after January 1 all communications should be addressed.

Mr. Emmanuel A. Benachi, Mayor of Athens, who was so brutally treated by the Royalists, has been the senior member of the firm of Messrs. Davies, Benachi, and Co., Liverpool, for forty years.

Lord Milner, having accepted office in the Government, has resigned his seat on the directorate of the Bank of British West Africa, Limited. The Earl of Selborne has been elected a director of the bank, and succeeds Lord Milner as chairman.

An official decree prohibits the importation into France and Algeria of alcohol and liqueurs from abroad. The prohibition does not apply to alcohol imported by manufacturers of liqueurs, vinegar, chemical and pharmaceutical products, varnishes, and perfumery.

The Postmaster-General announces that parcels can now be accepted for transmission to Salonika (including the intermediate locality) and the islands of Crete, Thasos, Lemnos, Mitylene, Chios, Samos, Fourni, and Syra. Parcels cannot be accepted for transmission to any other part of Greece.

A special message to *The Times* from Jassy (Moldana), dated December 4, states that the important oil wells at Moreni, near Ploesti, worked by British companies, have been destroyed in order to prevent their falling into the hands of the Germans. The works of the American company, "Romana-Americana," the Dutch company, "Astra-Romana Sequestre," and the German company, "Steaua Romana," have also been destroyed.

The British Consul-General at Tunis (Mr. E. J. L. Berkeley, C.B.) reports that the value of imports of cotton goods into the Regency in 1915, although falling short of that in 1913, showed a marked increase as compared with 1914. Imports from the United Kingdom more than doubled when compared with 1914, while the value of imports from Italy also showed a substantial increase. The total value of imports of cotton goods from all countries in 1915 was £592,537, as compared with £450,727 in 1914, and £604,221 in 1913.

Campaign Against Locusts.

How the Invasion of Egypt in 1915 was Met and Defeated.

One of the most interesting reports issued by the Ministry of Agriculture of Egypt recently is that which deals with the great invasion of locusts in Egypt in 1915 and with the measures adopted to deal with the evil.

We are told that the cost of the campaign amounted to ££16,927, of which sum ££14,785 was actually spent on the destruction of flying locusts and locust eggs. The following are the conclusions set out in the report:—

The locusts in 1915 came both from the west and from the east, as they evidently did in 1914 also. Their arrival in the Nile Valley is dependent on weather conditions.

For Egyptian conditions the best method of destruction of hoppers is by driving them into small trenches and burying. Contact insecticides are useful, but not to the same extent.

It is decidedly useful to collect and destroy adult locusts. Fellahin willingly do so if paid one millieme per oke.

The use of internal poisons and of *Coccobacillus acridiorum* has been tried and found unsuitable in Egypt.

No locust swarms arrived at maturity in Egypt, and the damage done was generally very small. Where appreciable damage was recorded it was usually due to indifference or negligence on the part of the owner of the cultivation destroyed, or of the 'Omda of the village in question.

Government supervision is absolutely necessary; left to themselves the fellahin would not be able to cope with a locust invasion.

The locusts appeared in practically every part of Egypt, and the cotton crop of the Delta, although it was in great danger, was saved, with the exception of a few feddâns.

History of the Invasion.

In a brief history of the invasion, it is stated that the pests were first seen in Baharia Oasis in January; the report was, however, not received until February 4. In the Nile Valley the great invasion started on February 2, on which date great flights were observed at Wadi Natrun in the Fayûm, at Ashmûn, Nawa, Wasta, El Saff, 'Ayât, and Shebin el Qanâter. Thus it is probable that the first wave of invasion came simultaneously from east and west.

The locusts then remained for several days in the Fayûm; those which first appeared at Shebin el Qanâter wandered towards Ashmûn and Tûkh. From Wasta the swarms wandered along the Nile Valley, partly northwards (towards Cairo, where they were seen on February 5, disappearing from all places in the Delta by February 7), and partly southwards (reaching Mallâwi on February 3, Manfalût February 4, Abu Tig February 6, Tahta February 8, and Nag' Hamâdi on February 13). By February 13 Lower Egypt, the Fayûm, and most of Upper Egypt (except Beni Suef, Fashn, Assiût, and Nag' Hamâdi) were free from locusts. On February 14 new swarms began to appear in Lower Egypt along the western desert edge at Kôm Hamâda and in Ashmûn Markaz: on the 15th the Fayûm and Beni Suef reported a new invasion, and the area occupied by locusts in Lower Egypt extended from Kôm Hamâda through Menûf, Ashmûn, Cairo, and Giza Markaz.

The Second Wave.

On February 16 locusts were reported from Suez. Thus the second wave can be seen to have come from both east and west in the same way as the first. This second wave reached its height about the 17th, when, in addition to the whole of Menûfia, Benha, Tûkh, Giza, Fayûm, Sennûres, Beni Suef, Fashn, Manfalût, Abnûb, Assiût, Abu Tig, Girga, Baliaâna, Nag' Hamâdi, and Qena Markazes reported locusts. At this date also the Army Intelligence officers reported vast swarms in the Sinai Peninsula. By February 22, however, the Delta was again free, but

the Fayûm and Upper and Middle Egypt from Giza to Baliaâna were in many places still infested, and remained so in varying intensity until the end of the campaign.

On February 27 locusts appeared at Aswân and spread northwards in the following days and on the 28th they were reported from Salhia in Faqûs Markaz. Three days later they began to come in also from the west at Delingât; spreading during the following days into Kôm Hamâda, Alexandria (March 8), Tala (March 9), Abu Hommos. Various other districts were affected from time to time; but by June 19 Egypt was everywhere free.

Methods of Destruction.

The methods employed to destroy the pest form an interesting description. In Egypt there is practically no vegetation except where water has been brought on to the land by artificial irrigation, and there is no irrigated land which is not under very close cultivation. In consequence the only vegetation available for the locusts to feed on is that of the cultivated crops. Thus the methods that would have been the correct ones in pastoral countries such as South Africa or the Argentine cannot be applied here without great risk to the crops.

The choice of methods for the destruction was restricted to killing by mechanical means, or by the application of contact insecticides. Both of these methods were used with advantage. Mechanical methods were, however, more frequently employed, as they were cheaper and required no special apparatus.

At the beginning of the campaign various methods of destruction were tried, including poisoning with arsenate of soda and Paris green, infecting with *Coccobacillus acridiorum*, d'Herelle; spraying with cyllin, katakilla and paraffin emulsion, and driving the hoppers into trenches and burying. It immediately became obvious that the last named was the quickest, cheapest, and the safest method of destruction, and it was therefore adopted.

Experience showed that elaborate trenches were not necessary, if the swarms were dealt with when young enough. For the destruction of locusts in the first stage the trenches did not require to be more than twenty to thirty centimetres deep by about thirty centimetres broad and very often not more than one to two metres long.

Cyllin solution (two per cent.) was found to be very effective in killing the locusts in their first stage, as also was paraffin emulsion. At first these contact insecticides were applied by pneumatic spray-pumps. These were, however, soon abandoned in favour of ordinary watering cans, as they were too liable to go wrong when handled by unskilled labour; they were moreover unnecessarily troublesome to use. It was found that the fluid was applied in greater volume and quicker by the watering can. This method gave excellent results, economising labour to a very great extent, and not destroying the crops. Its disadvantage was the cost of the spray.

The poison method, which is so well adapted to South African conditions and which is becoming more and more the standard method of locust destruction in other parts of the world (e.g., South Russia, Baluchistan, Malay States, Sudan), is not suitable for Egyptian requirements. Sodium arsenate sprayed on vegetation kills all plants it comes in contact with. To be effective a fairly wide belt, say two metres wide, must be sprayed in the direction of advance of the locusts and the locusts must have arrived at a stage at which they are feeding.

In Egypt we tried to realise the ideal, and nearly everywhere succeeded, of killing the locusts before they had commenced to feed, by methods already described. In passing it may be mentioned that the Ministry of Agriculture had a stock of three tons of sodium arsenate for the purpose of locust destruction before the locusts appeared. It was not used because we were early convinced of the superior merits of the methods actually employed.

TRADE NOTES.

Restrictions.

It has been notified that the application of Baron Emile de Menasce for a licence to act as Agent in Egypt of the *Première Société Hongroise d'Assurances Générales* à Budapest has been refused as from November 30, 1916. Mr. C. D. Strolago, Alexandria, has been appointed, under Article 9 of the Proclamation of August 17, 1916, Manager of the Agency of the *Première Société Hongroise* in Egypt, under the control of the Controller of Enemy Insurance Companies in Egypt.

Liquidations.

Mr. C. C. Curwen, of Alexandria, has been appointed receiver of all the property and assets in Egypt of the Austrian Lloyd Steam Navigation Company, with instructions to liquidate the business of the company with as little delay as possible.

Mr. E. C. Widdows, Gresham House, Cairo, has been appointed receiver of the property and assets of the agency in Egypt of the *Société Anonyme des Fabriques Autrichiennes de Bonnets Turcs*, with instructions to liquidate the same.

The Public Custodian of enemy property in Egypt has been appointed receiver of all the property and assets in Egypt of Richard Dieterle, formerly of Alexandria, an enemy person within the meaning of the Proclamation of July 31, 1916, with instructions to liquidate the business, and to hold any surplus assets together with private property in accordance with the provisions of the above-mentioned Proclamation.

Licences.

The following persons have been granted licences to trade in Egypt, with the British Empire and with Allies of Great Britain:—Engel, Ivan, 18, Rue Sesostris, Alexandria; Gebeli, Kanaa, and Co., Okella el Lemoun, Alexandria. The following firms have been granted licences to trade without special restrictions, in place of the restricted licences granted them:—Palacci, Fils. Haym, and Co.; Van der Zee, W. F.; Electricity and Ice Supply Co., Ltd.

The licence granted to the agency in Egypt of the *Société Anonyme des Fabriques Autrichiennes de Bonnets Turcs* has been cancelled, and the liquidation of the business will be carried on by the receiver.

Greece: A Warning.

Mr. C. S. Butler, Secretary of the British Chamber of Commerce of Turkey and the Balkan States (Incorporated), Athens Branch, writes as follows to the *British Trade Journal*:—

"British manufacturers and exporters desiring to open up business with Greece should beware of the specious letters of certain so-called 'Export-Import-Commission' merchants who have lately been flooding the market from different parts of the Turkish Empire. Most of them have high-sounding titles, but few of them have even offices. Their tactics are to get into touch with one of the upper clerks at some bank, with whom they arrange for 'references,' and it is surprising how lax some Greek banks are in this respect. They next borrow a copy of a directory from some established office and send forth letters broadcast on paper with a high-flown business heading, applying for agencies, irrespective of the fact that the firms they address may be already represented in Greece. When the war is over these men will quietly disappear from Athens and from the ken of their dupes."

The Russian output of unbleached goods in 1900 made 11,703,000 poods in weight, rising to 17,052,000 poods in 1910, mostly for printing and fustian. Part is used for white things and fashion goods. There had been a great development in the production of moleskins, fustian and diagonals, which competed with woollens amongst the poorer elements of the population. Most Russian made cotton goods are consumed at home. There is as much imported as exported. Half the exports went to Persia, some to China and Finland. The population of the Empire had grown from 132,000,000 in 1900 to 164,000,000 in 1910, and the consumption of cottons per head had grown from 3.5 funts (1 funt equal to 0.9 lbs.) in 1900 to 4.1 funts in 1910. There is much room in Russia to cheapen the cost of production.

ENGINEERING NOTES.

Nitrogen as Fuel.

The American mining engineer who has come to England with his wonderful invention for using nitrogen as an energy-producer in place of coal at a fraction of the cost could not have chosen a more appropriate time than the present for putting forward his invention; for if it proves what he claims for it, apart from the obvious benefits which in various directions it will impart, it will change to a great extent the prevailing conditions in naval and aerial warfare. In an interview which a representative of the "Observer" had with the inventor, the latter pointed out that there are in the atmosphere nearly four thousand billion tons of nitrogen available for use in the new power, and unlike the use of hydro-carbon fuels, which are destroyed, his method of using nitro-power (as he terms it) converts the fuel back into its elemental state. The inventor claims that this new nitro-energy can be used for every purpose for which coal and crude oil are now used, even to smelting; and that with the apparatus he has invented one ton of nitro-energy is equivalent to thirteen hundred tons of coal, and it is safer than petrol. From its electricity can, according to his calculations, be made for a fiftieth of the present cost, and five or six generating stations, with trunk lines radiating to all parts of the country, will turn every wheel in the kingdom, light and heat the homes, and do the cooking.

Applied to War.

For war purposes the apparatus could be installed in any war vessel within the next three months. A submarine large enough to mount 6-inch guns could be driven twice round the world by this energy without refuelling. She could run submerged just so long as she could carry oxygen for the crew, and no bubbles would rise to the surface to betray her presence. No batteries are needed; and the space they occupy could be given to torpedoes. She could, moreover, be driven by turbine engines and attain a speed on the surface of thirty-five knots, the same as a destroyer. A battleship, could, he says, keep the seas for a year without a new supply of fuel. No smoke-stack would be required. Half a ton of nitro-energy on battleships, cargo boats, and liners would do the work of 600 tons of coal, and leave an immense space for war material in the one, and for commerce-carrying purposes in the others. Although the temperature he produces is, according to his statements, of over 8,000 degrees Fahr., that of the outside of the generators is the same as the surrounding atmosphere. The fireroom, therefore, instead of being the hottest place on board ship, would be one of the coolest. The action is all automatic, being governed by the engines. One or two men on a shift in a vessel would be sufficient to look after this automatic machinery.

For Aerial Navigation.

Aerial navigation between England and America would, the inventor asserts, become easy, and for present war purposes aeroplanes from this country could go to Berlin and back without having to descend for more fuel. Several scientists, he said, have seen his plans, and are well pleased with them. One has said to him: "You have discovered something between the present sources of energy and atomic energy." Another holding a very high position, he said, told him: "There is no need at all for you to come to scientists with your invention; all you want now is to get in touch with practical engineers to get the apparatus made." He declares that he could, if he wished, form a company in the City to work the invention; but that is not his purpose. "It is," he says, "an invention of such stupendous possibilities that I want to place it in the hands of the British Government." And the offer, according to reports, has been made, but it

is not known whether it has been accepted or declined.

What is Nitrogen?

The invention, as outlined by the inventor, is undoubtedly of great interest, although the apparent lack of enthusiasm on the part of the scientists (referred to by the inventor) allows a certain amount of scepticism. For, considering that nitrogen has been a long problem to many eminent scientists in the past, and is a base for scientific research at the present time, the submission of plans proving clearly the possibility of the inventor's claims would naturally have created an interest of higher degree than that displayed by the two scientists to whom the inventor submitted his plans. The advice he received from one of them to get in touch with practical engineers to get his apparatus made was very good; for it depends on that apparatus to prove if sufficient "nitro-energy" can practically be produced and utilised to the extent and purposes described by their inventor.

Nitrogen, or azote (Greek, αζωτο) is a gaseous element, without odour, taste, or colour. It constitutes about four-fifths of common air the other fifth being principally oxygen. It apparently serves to dilute the oxygen in the atmosphere and render it fit for us to breathe. In its pure state it is remarkable for its negative qualities; that is to say, for the difficulty with which it enters into combination with other matters. It is almost inert chemically, and seems to take no active share in the various processes of nature that go on around us; hence its Greek name of azote (privative, α, and ζω, life). Under great pressure and very low temperature it can be liquefied and crystallised. Nitrogen is not combustible, and does not support combustion. A lighted lamp or candle placed in a space filled with nitrogen is at once extinguished. These and other characteristics of nitrogen make more interesting the invention of the American mining engineer.

COMPANY REPORT.

Roumanian Consolidated Oil.

The report of the Roumanian Consolidated Oilfields, Ltd., for the year ended June 30 last shows a debit of £198,703, against which there is a balance to credit from previous years of £113,451, which reduces the net debit to £85,253. The production of crude oil during the year amounted to 60,701 tons. On June 30 the company held 15,556 tons of stock, of which 1,340 tons were crude oil, and the greater portion of the balance consisted of high-class benzines. If these products could have been delivered to purchasers the accounts would have shown a profit on the year's working corresponding with the results of the previous two years. It was, however, at that date, and, in fact, during the whole of the year under review, impossible to effect export deliveries, and in the light of the events which have now happened the directors do not see their way to place any figure whatever opposite to stocks, because they were stored in places which are now in possession of the enemy, and, if not destroyed by the Allies before their retreat, will inevitably be in the enemy's hands. With regard to the lands, all the title deeds have been safely removed to Russia. For the same reasons as above mentioned with reference to the stocks, no amounts have been carried out in the balance-sheet against plant, machinery, etc., materials and stores and furniture in Roumania.

The sale of £2,130 worth of American beans, upper leather £1,000, oleo oil £1,400, paper £1,200, pencils £200, and a large quantity of sheeting to various firms in Salonika, and of £3,000 worth of miscellaneous manufactures to the city's leading department store are among the trade results for the September quarter reported by the United States Consul, John E. Kehl, of that Greek port.

COMPANY NOTES.

Dividends, Payments, Etc.

City of Alexandria.—Notice is given that the tenth drawing in connection with the redemption of twenty-eight bonds of the municipal loan of January 1, 1902, took place at a public meeting held on December 2, 1916, at 11 a.m., at the offices of the municipality at Alexandria.

Egyptian Markets.—The first Five per Cent. Debenture Coupons No. 36 that fell due on December 1, 1916, are payable at the Anglo-Egyptian Bank, Limited, 27, Clement's Lane, London, E.C., at the face value, and at the branches of the Anglo-Egyptian Bank, Limited, at Cairo and Alexandria, at the current rate of exchange.

Egyptian Salt and Soda Company.—Coupon No. 29, due on December 31, 1916, will be paid on and after January 2, 1917, between the hours of 11 and 3, Saturdays excepted, by the National Bank of Egypt, 6 and 7, King William Street, London, E.C., where forms for listing can be obtained on application. A dividend of 12½ per cent. for the year ending August 31, 1916 (less Income-tax), will be paid on ordinary shares.

Coupons falling due on January 1, 1917, on the following Greek loans should be presented between the hours of 11 and 2 at the office of Messrs. C. J. Hambro and Sons, 70, Old Broad Street, London, E.C. Payment will be made as stated in each case:—

- 5 per cent. funding loan of 1893, 32 per cent. in gold of the face value.
- 4 per cent. monopoly loan of 1887, 43 per cent. in gold of the face value.
- 5 per cent. loans of 1881 and 1884, 32 per cent. in gold of the face value.
- 4 per cent. loan of 1902 (railways loan).

Struck Off.

The following company has been struck off the register of joint stock companies:—The Anglo-Servian Trading Company, Ltd.

Unless reason is shown within the next three months the following company will be struck off the register:—The Anglo-Roumanian Trading Company, Ltd.

Meetings, Etc.

Anglo-Roumanian Produce Co., Ltd.—To-day, at Revenue House, Poultry, London, E.C.

AMERICAN SHOE FACTORY IN GREECE.

Since the days when sandals were worn the production of foot covering in Greece has been in the hands of small cobblers. No village is too small to have its local boot-maker, and except in the largest cities imported machine-made shoes are never seen. Under this system, while the average shoe worn by the lower class is cheap and durable, footwear for use among the middle and upper classes is made to order and is expensive.

To profit by these conditions, as well as to build up a market for certain kinds of leather, in the production of which it is interested, a company has been formed in Athens for the building and operation of a shoe factory in which boots, shoes, slippers, etc., will be made by machinery in large quantities on American lasts, we learn from a United States Consular report dated October 20. According to the American installer of machinery for this factory, if no unforeseen obstacles develop, the factory will be in operation in a few weeks and by December 1 should be producing from 300 to 400 pairs of shoes per day. All the machinery of the factory has been brought from the United States. American lasts and certain kinds of American leather will be employed exclusively, and it is thought that, owing to the pronounced inclination of many Greeks for American goods the factory's chances for success are excellent.

ON 'CHANGE.

(By OUR CITY CORRESPONDENT.)

THROMORTON AVENUE, Thursday.

Owing to the holidays there is practically nothing to report this week.

Some little business has been done in Egyptian Unifeds round 78½. A few National Banks have changed hands at 13½, and Khedivial Mails have come to business round 30s. 6d.

In Greek stocks the market is also inactive. Transactions in the oil share market have been few and far between and small in character. On Wednesday there was a sharp rise in Roumanian Consolidated, which, after changing hands up to 10s. 6d., closed 1s. 3d. higher at 10s.

In Russian issues, North Caucasians were harder for choice, but Spies Petroleums continued at about 13s. 6d., and Ural Caspians were rather uncertain at 30s.

There was a bargain done in Anglo-Egyptian "B" at 11s.

MONEY MARKET.

LONDON, Thursday.

After the holidays, the market has looked for comfort rather than hard work, and on the whole there was not much to be excited about. Short loans have ranged from 4½ to 4 per cent. with weekly fixtures touching 5 and 5½ per cent. There was a steady tone in the discount market with rates unchanged. There was no change in the rate of exchange to Alexandria, the premier rate (piastres to the £1) of 97 7-18 standing firm.

SUEZ CANAL DUES.

The traffic receipts of the Suez Canal for December 22 and 23 amounted to 780,000 frs., as compared with 1,270,000 frs. for the corresponding days last year.

OIL OUTPUTS.

Anglo-Egyptian.—Gemsah, 15 tons and 198 tons; Hurghada, 1,298 tons and 1,518 tons; Baku Runian (December 16), 78,700 poods; Maikop Pipeline and Transport (December 9), 28,310 poods).

European Oilfields Corporation.—The corporation announces that the whole of its interests in Roumania, with the exception of some small royalties arising from plots leased to an American company, were satisfactorily disposed of before the German occupation.

TURKISH LOTTERY BONDS.

The following notice appeared in a recent issue of the *Journal Officiel* (Egypt):—

"With reference to the Proclamation of November 15, 1916, which requires claims against enemy Governments and enemy persons to be registered with the Public Custodian, the case of holders of Turkish Lottery Bonds requires special treatment owing to the fact that these bonds are frequently changing hands.

"The public is therefore requested to note that the declaration of Turkish Lottery Bonds should be made at a fixed date, viz., December 20. Owners whose bonds are deposited in banks need make no declaration, as arrangements have been made with the banks to give the information required on behalf of their customers.

"Any persons who have already made a declaration of Turkish Lottery Bonds, whether the bonds are in banks or in their own possession, need not make a further declaration on the above date of the 20th instant."

BANK OF EGYPT.

It is stated here that the news regarding the purchasing of the assets of the Bank of Egypt, referred to in the Press, is premature, says the *Mokattam* (Cairo). It is understood from reliable sources, however, that a group of financiers—European and Egyptian—had submitted an application to the authorities in September last making offers for purchasing the said bank, which was, however, rejected by the liquidator. It is stated that while the liquidator was considering the first application he received another one from a financial association organised in Cairo for the very purpose, but so far nothing is known as to the progress of negotiations between the parties.

NOTES OF THE WEEK.

The turn of the year is fraught with symptoms for those who are seeking to discern the signs of the times. Germany on the flood-tide of her conquest of Wallachia has suggested negotiations with a view to arranging peace terms. In all four countries of the Central Alliance great stress was laid on the possibility of epoch-making developments in the immediate future. There can be no doubt as to Germany's desire for peace or the indignation of the German people at the Allies' refusal to accept the peace bait. Meanwhile, the potato ration—potatoes are the staple food of the people—has been still further reduced, and the Government by means of the Auxiliary Service Law has obtained a stronger hold on the good behaviour of the proletariat. If the ostensible object of this new measure was to increase the output of munitions, it may be inferred that the successful campaign against Roumania has made a big hole in the reserves intended for use on the resumption of the Allied offensive in the West.

The Allied Governments have not only rejected the German offer; they have so improved the occasion by re-stating their case in plain and forceful language that it will be of interest to see whether the reply is allowed to be reprinted in full in the German Press. Perhaps not the least significant sign of the times is the extreme haste with which the British Government has summoned the Prime Ministers of the Overseas Dominions to attend the War Cabinet. The invitation was issued on Christmas Day, and in order to be in London before the end of February, the representatives of Australia and New Zealand must start by the middle of January. If their presence were likely to be required indefinitely, they might well regard the bare three weeks' notice as unduly short. This time, as the Allies' reply is careful to insist, Germany's so-called peace proposal was a sham one, "lacking all substance and precision . . . less an offer of peace than a war manoeuvre." Sooner or later Germany will have to be more precise and a more genuine peace offer will be made. The reply may also have to go into details, and it is natural that the British Government should wish to have the Dominion Prime Ministers associated with it before its draft terms are submitted to the approval of the Grand Alliance as a whole. The war, however, will not be won by words. German militarism can only be broken by superior mili-

tary strength, and this has yet to be brought to bear effectually in the different theatres of the war.

In a wireless message to the German Embassy at Washington the German Government claims to have discovered incongruity between the Allies' insistence on the right of nationalities and their avowed purpose to give Russia Constantinople and the Straits. There is, of course, no contradiction entailed. The right of nationalities implies that large communities or whole nations shall not be subjected against their will to alien and despotic domination, as is the case with the Armenians in Turkey, the Roumanians in Hungary, and the Slavs in Austria. It is not proposed to subject large bodies of Turks to Russian rule; but the Russian occupation of Constantinople is necessary not only to prevent the arbitrary closing of the Straits, but also to make sure that the Turco-German combination shall never again threaten the peace of Europe. The demarcation of frontiers may occasionally leave small bodies on the wrong side of the boundary line; but these will not be incorporated in the alien state without opportunity being given them to migrate. So will it be, we may be sure, in the case of Constantinople. Such Turks as may not relish the prospect of remaining on Russian soil will be able to withdraw to Turkey, which will be confined entirely to Asia. But if they elect to stay, their presence will constitute no real violation of the principle of nationality.

The battle-line in Roumania has now almost reached the Sereth positions, which, it is to be hoped, will mark the limit of the enemy's advance. Valuable service to the Russo-Roumanian cause has been rendered by the stand made against von Mackensen's forces on the left of our Allies' line. On the right wing, based on the Carpathians, von Falkenhayn has been more successful, and it is here that the defenders have had to yield most ground. The approach to Braila from the south is still held, but across the Danube in the Dobruja the Russian line has been gradually withdrawn within narrower limits guarding Macin, the bridgehead of the port on the left bank. It is clear that the enemy is intent on making further progress, if he possibly can; the granaries of Braila and Galatz would be sufficient incentive, even if political considerations did not constantly call for fresh military successes. Roumania thus becomes for the time being the pivot of the position on the eastern front. The struggle has largely devolved upon the Russians, and before long they ought to be in a position to assert their superiority.

There are many indications that in her fiery ordeal Roumania is "finding herself." In the brief session of Parliament which has now closed the country was shown to be united as never before. M. Bratiano has reconstituted his Cabinet, availing himself of the co-operation of M. Take Jonescu. He explained that he had also asked M. Marghiloman for his support, but to his regret the Conservative leader did not respond to his appeal. But even this abstention, which was probably dictated by personal reasons, for M. Marghiloman has expressed his agreement with the Government's policy of seeing the war through, detracts little if anything from the unanimity which the parties as a whole have shown in closing their ranks. Perhaps the most important feature of the session is the promise that was given of agrarian and electoral reforms. Roumania has been handicapped by a system of land tenure which fell far short of modern ideas. The need for reform had been emphasized by agrarian troubles, and was accepted by the Liberal party as a plank in its platform. In ordinary circumstances remedial measures would only have been introduced slowly. The present crisis has better attuned the spirit of the country to the requirements of the peasants, and the reforms, it is expected, will be of a far-reaching character. In addition to the agrarian question, there is the Jewish problem; but it does not loom so prominently, and we have seen no reference to it at the present time. We can but hope, however, that Roumania will have reason to be as well satisfied in this war with her Jewish as with her Christian subjects, and that out of the crisis will come a complete understanding which will lead to the removal of any grievance that may still remain.

On December 31 the Entente Powers and Italy presented to the Greek Government a second Note setting forth the guarantees and measures of reparation which they were constrained to demand for the attack on the Allied Marines by Greek troops in Athens on December 1. The guarantees comprised the removal of all Greek forces to the Peloponnese, with the exception of the minimum required for the maintenance of order and for the police, and the re-establishment of the Allied control of Greek public services. By way of reparation the Greek Government was called upon to release immediately all persons detained whether for political reasons or on charges of high treason, plotting, sedition, or similar offences, and to indemnify all who may have suffered unjustly in consequence of the events of the early days of December; to remove the command of the First Army Corps, or the General to whom responsibility attaches for the orders given on December 1; and to have the flags of Great Britain, France, Italy, and Russia formally saluted in a public square in Athens in the presence of the Minister of War and the assembled garrison.

When the events of December 1 and 2 are recalled—the treacherous attack on the Allied Marines and the orgy of pillage and outrage that followed in Athens and elsewhere—the Allies' demands cannot be regarded as too drastic. In the text of the Note their force is somewhat modified by the provision made for giving effect to them. Thus, no time limit is fixed for the removal of the troops to the Peloponnese, but the period for the execution of the military measures is to be "settled in common accord"; the form of the restoration of the various Allied controls is to be determined "in agreement with the Hellenic Government, in order to render them as little embarrassing as possible." Finally, under the head of reservations, the Protecting Powers pledge themselves not to permit armed forces of the Government of the National Defence to profit by the retirement of the Royal troops from Thessaly and Epirus to cross the neutral zone, but they inform the Greek Government that "they reserve to themselves full liberty of action in the event of the attitude of the Government of his Majesty the King subsequently giving them further subjects of complaint."

A feature of the Note is the omission to specify a time limit within which the Greek Government is required to signify its acceptance of the Allies' demands. As failure to comply would merely reproduce the situation as it was when Admiral du Fournet landed his detachments on December 1, and would impose upon the Allies the necessity of devising more successful means of coercion, it may have been politic to leave the question of time open. The object of the Entente is to safeguard the position of the Salonika force and to diminish the opportunities which official Greece may still have of furthering the cause of the Central Powers. It is necessary, however, that an equivocal situation should be terminated at once, and it is obvious that the period of grace allowed King Constantine cannot be indefinitely extended. The latter's first object will be to gain time, and he has shown clearly that he will leave nothing undone to achieve it. As every day is now of importance, the Greek Government's policy of bluff must be rigorously cut short. In these circumstances it would be well to let it be seen that the Allied Powers are by no means over-optimistic, and to make preparations for further recalcitrancy on Greece's part.

As a natural corollary to the recognition of M. Venizelos' Government of National Defence, a British diplomatic agent has been appointed at Salonika in the person of Lord Granville, and M. Gennadius, formerly Greek Minister in London, now represents M. Venizelos at the Court of St. James's. The British Minister accredited to the Athens Government has adopted Pindar's view that water is the best element in existing circumstances and has withdrawn to a man-of-war at the Piræus. Whether it was thought that by making his position amphibious it would become less ambiguous we have no means of knowing; but the Greek Press no longer has the opportunity of representing Sir Francis Elliot as a guest at the King's dinner-table, and so something has been gained. The anomaly of recognising both the Salonika and the Athens Government is not so serious as the delay in removing it. Greece at war with the Protecting Powers ought to be unthinkable; it would be, if King Constantine had not been encouraged to take himself so seriously. Unfortunately, the amount of ground that has now to be retraced is so great that the time taken throws purely temporary anomalies into strong relief. Meanwhile, the optimists will hope that the friendly relations officially existing between King Constantine and the Allied Ministers will ultimately acquire some reality from the sense of security now felt by each party—the German Field-Marshal behind his valiant troops, the Ministers behind the guns of the Allied Fleet. With the help of telescopes and megaphones even audiences might be held.

The bombing by naval aircraft on two consecutive days (December 26 and 27) of Turkish camps at Galata on Gallipoli Peninsula and of the Chikaldir Bridge, east of Adana, revives hopes that means may yet be found of carrying the war into Turkish territory with greater success than hitherto. Coming immediately after the assumption of the offensive in the Sinai Peninsula, this bombardment suggests that a vigorous conduct of the war in the Eastern Mediterranean might react favourably on the course of the campaign in such widely distinct spheres as Roumania, Armenia, Mesopotamia, and the Hejaz. An isolated bombardment from the air will not be sufficient, even if the objective be attained, as was the case on December 27, when the bridge over the Jihun River, an important link in the Baghdad Railway, is reported to have been destroyed. Pressure on the enemy would have to be exercised simultaneously at a number of places, and a more formidable menace contrived than an air-raid. The Baghdad Railway, however, is a vulnerable spot in the Turkish armour, and in view of what the Turks have been able to achieve with the help of this line, it is to be regretted that opportunities were not sought more persistently to damage it before reinforcements enabled the enemy to hold the Russians in Armenia and the British force in Mesopotamia.

To no one will the attempt to engage Turkish attention elsewhere be more welcome at this moment than to the new King of the Hejaz. By this title the Grand Shereef of Mecca has notified his wish to be known, and Great Britain, France, and Italy have recognized his assumption of it. From this fact we may infer that the progress made by the Arab revolt in the Hejaz is regarded as satisfactory. There was always the risk of Arab levies, however great the enthusiasm by which they might be inspired, proving no match for Turkey's trained troops. But the campaign in the Hejaz appears to have been skilfully conducted; and although the Turks are still masters of Medina, the new King does not seem to doubt the complete success of his movement. This confidence implies that he is not only satisfied with the military progress made, but also with the support he has received in Arabia. There is, however, no reason why, in the face of a common enemy, the Allies should not afford him every assistance in their power by prosecuting their own attacks on the Turks with renewed vigour. The possibilities of the Sinai offensive are far from having been exhausted; the aircraft which reached Chikaldar Bridge can find other valuable objectives.

With the turn of the year Sir Henry McMahon has left Egypt and Sir Reginald Wingate becomes High Commissioner. The welcome accorded to the latter is a pleasing feature of Great Britain's relationship with Egypt, and is a tribute to the personal popularity of the Sirdar and former Governor-General of the Sudan. But it is equally gratifying to find that the services rendered to the country in a short period by the retiring High Commissioner had won spontaneous recognition among all sections of the people. Sir Henry McMahon had little time for the more obvious short cuts to popularity; the details of his stewardship required all his attention, and he set himself to carry out a difficult task with complete single-mindedness of purpose. In the short space of two years he placed Egypt under many obligations, and it was undoubtedly a genuine appreciation of his work that prompted the sincere expressions of regret which accompanied his departure. Egyptians are not likely to forget that it was under his aegis that the Mecca pilgrimage was resumed; the British element will recall his successful handling of the Mixed Courts incident last February and the excellent relations which he contrived to establish in many quarters where before there had been a tendency to friction.

Several letters have appeared recently in *The Times* on the subject of the provision of comforts for our forces in Mesopotamia. The correspondence was initiated by Lady Chelmsford, whose record of the splendid services of the women workers of India will have been read with great interest by every one who has been acquainted with the sufferings and discomforts of our troops in Irak Arabi. But in case the impression may be conveyed that the assistance which has been given from India is adequate, it is advisable to point out that the £10,000 per month in cash and kind which is being distributed by the "Indian Comforts for Troops Fund" only amounts to a very small sum per head of the troops now engaged on this front; and when from it is deducted the large proportion which is—quite rightly, as it is an Indian fund largely subscribed by Indians—allocated to the Indian troops, the balance remaining for the unfortunate British soldiers who are enduring the miseries of the ghastly climate of Lower Mesopotamia, cannot amount to more than a few pence per head per month. This is obviously not sufficient to purchase even a single ounce of tobacco, apart altogether from the numerous other "comforts"—such as preserved fruits and vegetables, beef tea, tonics, and many other things too numerous to mention—which, although outside the scope of ordinary military supplies, are essential to the health and life of Europeans in that region. It is, therefore, to be hoped that the knowledge of what the women war workers of India are doing will not cause any slackening of the efforts of the "Mesopotamia Comforts Fund" (for British troops) which has lately been started under the auspices of the War Office.

THE ARAB REVOLT.

(FROM A CORRESPONDENT.)

CAIRO, December 12.

The proclamation of the Grand Shereef of Mecca as King of the Arabs on October 30, 1916, is an event of great importance. It constitutes an outward symbol of the unity of the Arab tribes, and of their full approval and support of the anti-Young Turkish movement. The fact that, apart from the lesser chiefs, the Idrissi and Ibn Saoud have acknowledged the Shereef as King of the Arabs points to the complete unity of the Arabs in regard to this great national movement. In a letter addressed by the Imam Yehya to the Grand Shereef there is the proof of the existence of the friendliest relations between the two great chiefs of Arabia, and of the complete agreement of their views in regard to the Young Turks' Government and their Arabian policy. If the Imam has not so far effectively sided with the Shereef, this is said, by persons who are in a position to know the real facts, to be due to the traditional Arab magnanimity of the great chieftain of the Yemen, who, finding the Turkish garrison there absolutely at his mercy, did not wish to take advantage of that fact and to declare war on their Government, more especially as, after their last exemplary chastisement, the Young Turks have taken care not to give him the least cause for offence. It is typical of the Turks' character that, following the uprising of the Shereef, they have availed themselves of the right of the guest, which is held so sacred by the Arabs that a man respects the life of even his brother's murderer if the latter seeks refuge under his roof. But it is legitimate to suppose that the Imam cannot much longer dissociate himself from a movement that has for its aim the liberation of the Arab race and language and the protection of Islam.

Recent reports from Arabia state that the Young Turks are applying to the inhabitants of Medina and suburbs the same barbarous treatment that they have been and are still applying—but on a larger scale—to the inhabitants of Armenia, Syria, and the Irak. They have been hanging, crucifying, and committing every kind of atrocity on the innocent civil population of Medina and its suburbs. This reign of terror became so intolerable that many persons of Medina fled from the town at the risk of their lives to petition the Emir Faisal, in the name of his holy ancestor and of humanity, to save them from the unspeakable tyranny of the Turks. His Highness communicated the fact to his father, suggesting that the matter be submitted to public opinion in the civilized world. Subsequently the Ministry of Foreign Affairs of the Arabian Government addressed the following protest to the Allied and neutral Governments:—

In the name of humanity and justice, we protest to the Governments of the civilized world against the atrocities committed by the Turanian usurpers of the Unionist Committee and their followers, against their barbarous and savage treatment of the innocent women and children of the tribe of Al Awali, as well as their iniquitous deeds in Medina itself by hanging some and persecuting others. In this connection we desire to draw the attention of the civilized world to the great difference between the atrocities of the Turks and the humane and noble treatment which their prisoners received at our hands.

The commission of these atrocities served only to hasten and extend the movement of voluntary enlistment in the Shereef's army. The following order, issued by the Ministry of War, is interesting in that it illustrates the proud character of the Arabs and the tact and prudence which the Shereef's Government is displaying in applying the modern military system:—

Arab young men, fired by zeal, are pouring in large numbers to register themselves at the barracks as volunteers in the regular army. Some of these, however, are under the impression that certain menial services, incompatible with their rank and dignity, are required of them, wherefore the Ministry makes it known that the regular Arab army provides for all that is calculated to maintain integrity and personal dignity, and, to that end, has appointed the necessary servants for carrying out such services. It has, moreover, issued special instructions to the instructing officers not to give any orders calculated to cause offence to the privates in the course of instruction. On the other hand, the men have to observe the regulations and the duties attaching to this noble career, and, in a word, maintain the honour of the army.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, December 14.

Farewell Reception at the Residency.

The High Commissioner and Lady McMahon gave a farewell garden party at the Residency on Thursday last. It was exceedingly well attended, and it was noticeable that the Egyptian element, headed by T.H. Princes Ahmed Fuad and Kamel ed Din, was very much *en evidence*. This was the first occasion that the Residency had been thrown open for a public entertainment of this description since the Foreign Office acquired the extra strip of land to the south of the grounds. Part of this land has been laid out as an extension to the gardens, and the latter, always a feature remarked upon by visitors, presented on Thursday last a more than usually attractive picture, thanks to the horticultural improvements carried out.

On Tuesday evening H.E. Hussein Rushdi Pasha, the Prime Minister, gave a farewell banquet at the Mohammed Ali Club in honour of Sir Henry and Lady McMahon. The guests included the Ministers, General Sir Archibald Murray, the British Advisers, Lady Brunyate, Sir Milne and Lady Cheetham, and the chief members of the Palace, Residency, and Headquarter staffs. To-day the High Commissioner and Lady McMahon have proceeded to Alexandria in order to attend the reception which has been organised in their honour by the British Chamber of Commerce. It is understood that Sir Henry McMahon will not remain in Cairo until Sir Reginald Wingate arrives, but that he will proceed Home next week.

H.H. the Sultan.

As reported in last week's letter, H.H. the Sultan has proceeded for a trip up the Nile. He is accompanied by H.H. the Sultana and his daughters, and according to the latest telegrams had reached Minia. His Highness will not be back in Cairo for the 19th inst., his Accession Day, and, in fact, is not expected to return until after Christmas.

The Greek Community.

The Greek community in Egypt is very much perturbed at what has been going on in Athens. A solemn requiem service in memory of the Allied and Greek subjects who were killed during the recent events at Athens was celebrated on Sunday morning at the Orthodox Church of the Evangelismos at Alexandria, and at its conclusion violent speeches against the King and the Royalists were delivered by prominent members of the colony amidst the loud-voiced anathema of the massed congregation.

The local Hellenic colony, which has always shown pronounced Venizelist proclivities, has during the past fortnight become more pro-Venizelist than ever. The colony includes many members who are respected and trusted by the British authorities; but it also undoubtedly comprises a number of men, some of standing, who are Royalist to the backbone and who, under cloak of pro-Venizelist protestations, rendered necessary for their own safety and freedom by the circumstances of their residence in Egypt, still continue to work for the cause of the King and his German and Germanophile backers. Until the recent tragic events took place in Athens no one bothered much about this element, but now the situation has changed and there is a decided feeling, even amongst the true Venizelist Greeks, that these false friends, whose identity is no secret, should be driven out into the open, and should be forced to give practical demonstration of the sincerity of their protestations of sympathy with the Venizelist cause—their protestations have become markedly eager of late—by enrolling themselves in the Army of National Defence. It is even suggested that the Provisional Government at Salonika should decree a general levée of adherents of military age; and that those "Venizelists" coming within that category, who without satisfactory excuse do not respond to the call to arms, should be regarded as suspects, and dealt with accordingly by the Anglo-Egyptian authorities.

Certainly something ought to be done to rid us and the Greeks loyal to the Entente of the "snake in the grass" element that is now benefiting by the freedom and protection afforded in Egypt to the Hellenic community as a whole on account of its apparently unanimous support of the Allied cause.

The Upper Nile Projects.

I understand that work is proceeding apace in the Blue Nile irrigation scheme, but that for the present not much progress is being made with that on the White Nile. Sir Murdoch Macdonald, Under-Secretary of State for Public Works, has just returned from a flying visit to Khartoum, where he conferred with Sir Reginald Wingate. He will accompany Sir Ismail Sirri Pasha, the Minister for Public Works, when he proceeds to the Sudan on an inspection next month, and it is expected that a definite decision will then be taken as to which project is to be carried into execution first.

The Lena Ashwell Concert Party.

A most successful concert was given at the Opera House on Saturday evening by the Lena Ashwell Concert Party. It was quite a gala evening, and every seat in the house was taken, the audience including Sir Henry and Lady McMahon and General Sir Archibald Murray. The concert party has been working in Egypt for some weeks now, and has been indefatigable in giving entertainments to the troops in camp and in hospital. It started operations in Alexandria, then proceeded to Upper Egypt, and has now gone to the Canal zone after doing the round of the military stations and establishments in and outside Cairo. The men have thoroughly appreciated all that the concert party has done for them, and have given it a most enthusiastic reception on every occasion. The members fully deserved the support accorded to them by the Cairo community on Saturday, when they gave us one of the best entertainments we have had for some time past.

Death of a Great Missionary.

It was with the greatest regret that everyone heard of the death of Dr. Andrew Watson, which took place on Saturday last. Dr. Watson, who was the head of the American Mission in Egypt, was the oldest missionary in the country, and, it is believed, in all Africa. He came to Alexandria in 1861, and was eighty-three years of age when he died. During the fifty-five years he spent in Egypt he did yeoman work for the cause of Christianity and of education, and attained a unique place in the confidence not only of the European communities, but also of the Egyptian Moslems, who always came to him for advice and assistance, and never went empty away. Dr. Watson will be sorely missed, for he possessed qualities which are too often sadly lacking in those who carry out work to which he so successfully devoted his life.

In his Christmas lecture before the Royal Colonial Institute on Friday last Mr. Oliver Bainbridge said:—"Our old statesmen never dreamed of such a triumph as is exposed by the response from every corner of the Empire, and I confess to having been thrilled by this British fact more than by the greatest victories that were ever won. If the Greeks had known of such a story—if they had known of a countless multitude of men of every hue and creed, ruled, aided, educated, protected by a few thousand men of a dominant race—they would have founded an imposing myth upon it, and our students would now be learning the Hellenic symbolism in our colleges."

MONTENEGRO.

Any interested in the commercial and general development of this country, together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

"Major," c/o Messrs. Stilgoes, Solicitors,
24, Essex Street, Strand, W.C.

ATHENS LETTER.

(FROM OUR OWN CORRESPONDENT.)

ATHENS, November 26.

A Strained Situation.

The atmosphere here is surcharged with electricity, and the Royalist papers are impressing on their readers that we are on the eve of tragic events. The tone of the gutter Press, proclaiming with much emphasis that Admiral du Fournet will have to take the guns he wants over the corpses of Greek patriots, and other bombastic effusions of a like character, and the strong military patrols in the streets contribute to a general state of nervousness and tension, which resembles the critical days about this time last year when Lord Kitchener visited Athens. Admiral du Fournet's ultimatum is the topic of the day, and everybody is either speculating or prophesying what will happen when December 1 arrives.

In the meantime the anti-Venizelist officers in Athens are holding meetings and indulging in much tall talk, for which they are evidently much better fitted than for following their more practical and braver comrades who have risked so much in joining the anti-Bulgarian movement.

The state of affairs in Athens at the present time bears a striking resemblance to the situation in Constantinople after the Revolution. Here the Union and Progress party is the pro-German Palace camarilla, who are the real rulers—the puppet Cabinet just does as it is told.

Drifting Towards Anarchy.

Athens and those parts of Greece where anti-Venizelism still prevail are fast drifting towards complete anarchy. Discipline in the army has almost disappeared, and, in spite of the Government's promises, the Reservist Leagues are becoming as active as ever, and are doing just as they please; and they will continue their tactics as long as they receive encouragement from the royalist authorities. There has been further trouble at Larissa, where a band of reservists prevented the removal of war material to the South of Greece.

It is to be hoped that Admiral du Fournet's next measure will be the suppression of the gutter Press and the banishment of such men as Streit, Dusmanis, and Gounaris, the leaders of anti-Ententeism.

Deportation of the Diplomats.

The Ministers of the Central Powers with their staffs, numbering some eighty persons in all, quitted Athens very quietly on Wednesday, and proceeded to Kavalla by a steamer of the MacDowall Line, which was placed at their disposal, and was escorted by British destroyers. Admiral du Fournet would not grant the extension of time for which an application had been made. The American Legation has assumed the protection of Austrian, Turkish, and Bulgarian subjects in Greece, and the Dutch Legation those of Germany.

The Nationalist Movement.

Interference and obstruction in the Nationalist movement continue, and every attempt is made to impede its progress. The French Minister has again called the attention of the Government to the methods of persecution adopted towards the Venizelists, and to the fact that the authorities here had declined to recognise the passports and other documents delivered by the Provisional Government. The Public Prosecutor is looking into the question of the publication of the Military Orders respecting Roupel, and is examining witnesses. Meanwhile the editor of the *Patris* is kept in gaol.

In spite of this persecution, volunteers continue to leave for Salonika. Many of the Athens police have recently joined the Nationalists, and the last of the King's Cretan Guard proceeded a few days ago to the Annexe of the British Legation, and offered their services.

The sinking in Greek waters of the magnificent hospital ship *Britannic*, followed a few days later by a similar fate overtaking the *Braemar Castle*, are further additions to the long list of atrocious crimes which form one of the blackest chapters ever written in the history of nations, and will make the German name loathed for

many generations. It is a somewhat pathetic spectacle to see the Red Cross nurses from the *Britannic* in Athens, and much sympathy has been shown them. The ladies of the English colony promptly set to work to supply their wants and to provide them with some diversion, and the Boy Scouts have also been entertained and shown round Athens by Greek scouts speaking English.

The mails which left Athens on October 20 were seized by a German submarine, which stopped the Greek steamer *Eryssos* on her way to Naples.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, December 11.

Good Work of the New Archbishop.

A committee representing the town and district of Famagusta has approached the Primate with a view to obtaining aid for the town hospital, which is in great need of money and may, it is feared, be unable to continue its work. The Archbishop has taken the matter up, contributing to the fund himself, and inviting, by circular, his church committees to help in supporting an institution so greatly needed in the district. The Archbishop is also giving aid to many charitable and philanthropic institutions in the island.

Want of Rain.

Although some rain has fallen in parts of the northern districts, there is still the greatest need of it in the Mesaoria plain and most of the lower lands of Cyprus. Services are being held in the churches, and prayers offered up in all parts of the island for a change which will improve the prospects of agriculturists.

Misfortunes of Cypriot Emigrants.

Pitiful accounts are being received from several of the emigrants who have sought new homes in America and in Italy. They write that, so far from obtaining work, as they expected, they have been unable to find any suitable employment. In some cases they are in great distress. Their expenses are greater than their wages when they are working in the United States. Both there and in Italy many of them make a makeshift living as porters.

Execution at Papho.

The Papho villager, a Greek, who, being under sentence of death for the murder of a fellow-villager, a Turk named Ramadan Hajji Ramadan, petitioned the High Commissioner that he might be sent to fight for his country, suffered death by hanging on December 12.

NEW ROUMANIAN CABINET.

An undated Reuter's message from Jassy announces that the Roumanian Cabinet has been reconstituted as follows:—

Prime Minister and Minister for Foreign Affairs	M. BRATIANO
Minister for War	M. VINTILA
Minister of the Interior	M. CONSTANTINESCO
Minister of Justice	M. MICHELE CANTACUZENE
Minister of Public Works	M. JUSTIANO
Minister of Education	M. DUCA
Minister of Industry and Commerce	M. GRECIANO
Minister of Finance	M. ANTONESCO
Minister of Agriculture and Domains	M. MIRZESCU
Ministers without Portfolios:—MM. PHEREKYDE, TAKE JONESCU, COSTINESCO.	

The message adds that M. Mortzun, the retiring Minister of the Interior, has replaced M. Pherekyde as President of the Chamber of Deputies.

The Cairo correspondent of *The Times* telegraphs that the Egyptians appear to be greatly impressed by the success of our troops in the Sinai Peninsula and its possible consequences.

It is reported that General Brusiloff has left for the Roumanian Headquarters in order to confer with the King of Roumania and General Berthelot.

Sir F. Elliot, M. Guillemin, and Prince Demidoff, accompanied by the Secretary of the Ministry of Foreign Affairs, have visited several prominent Venizelists in prison, and have expressed to them their personal sympathy, says the *Morning Post's* Athens correspondent.

THE FIRST BRITISH GOVERNOR OF DARFUR.

APPOINTMENT OF EL LEWA KELLY.

It was quite in accordance with the traditions of sound statesmanship that Colonel P. J. V. Kelly, the brilliant officer commanding the Egyptian Cavalry, who conquered Darfur, should be given the appointment of first British Governor of the new Province, now forming the fifteenth political Department of the Anglo-Egyptian Sudan. Colonel Kelly for some time previous had been the O.C. cavalry and infantry under the Corps and Departmental Staff, and all who knew him in the Sudan recognized that he was bound to win military distinction sooner or later—and he has done so sooner. It was in March last that he left Nahud to punish the troublesome Ali Dinar, and to put an end, once and for all, to his long-endured defiance of Government authority. It is unnecessary to tell again of the completely successful occupation of the wells at Um Shanga and Jebel el Hella, near the boundary and actually in Darfur, of the masterly stroke delivered in securing control of the native water supplies, of the following-up of the advance by the battle which shattered the Sultan's forces, or of the comparatively simple occupation of El Fasher. Colonel Kelly's greatest achievement, perhaps, consisted in the fact that he took such excellent care of his troops—2,000, against 3,600 of the enemy—his losses being insignificant, while his success was pronounced. The Commanding Officer realized in every sense the meaning of the words "a victory is twice itself when the achiever brings home full numbers." The reward that he has earned by the bestowal of the Governorship over the people whom he had finally helped to redeem from slavery and persecution, is both merited and fitting.

After being ruled by a long line of sultans for close upon six hundred years, Darfur—of which the Province of Kordofan originally formed part—was conquered and annexed to Egypt in 1874, by the redoubtable slave-dealer Zubeir Pasha. This is the Darfur of to-day. Slatin Pasha was at that time in the service of the Egyptian Government, having charge of the different posts, and was made European Governor of Darfur. The flame of the Mahdi's rebellion reached his part of the country in 1882, and young Rudolf Slatin lost no time in meeting the enemy and defending his charge. Not only did he twice heavily defeat the insurgent Sheikh of the Rizeigat-Madibbo—at Injeleila, but, retiring upon El Fasher, he succeeded in reuniting the enemy from Um Shanga. It was early in the following year that Slatin received a message from Khartoum ordering him to nominate a local sultan as King of Darfur, and himself to retire on Dongola, via Kaja.

The brave Austrian did all that lay in his power to stem the tide of Mahdism that was gradually flowing towards and engulfing Darfur. Altogether he fought twenty-seven battles in various parts of the province, but by degrees his own troops—religious fanatics attracted by the new "religion"—fell away from him, and in the end he had to surrender to the Mahdi at Dara, in South Darfur, in December, 1883. It is a matter of history how Slatin became the bond slave, first, of the Mahdi and, later on, of his detestable successor the Khalifa, Abdullahi bin Sayd Mohammed, serving twelve long unforgettable years of hideous slavery in their clutches; and how he was rescued therefrom in 1895, only, however, after many failures, through the untiring efforts of his friends in Cairo, of whom General Sir Reginald—then Major—Wingate was one.

Soon after the Mahdi died, in June, 1885, a rebellion against his successor broke out in Darfur, and for years a bloody feud continued between the Khalifa and the Sheikh Madibbo. He was finally defeated, and, in accordance with the gentle methods adopted by the Khalifa towards his enemies, executed. One Zogal, who had been Dervish Emir of Darfur, having been deposed, was succeeded by Sultan Yussuf, who, likewise, soon met with a violent death. Rising after rising against the Khalifa continued to take place, the years 1888 and 1889 proving particularly bloody. This state of things continued right up to the defeat of the hated Abdullahi himself at the hands of the British.

It was believed that after all that the Darfurs had gone through a period of peace would have been welcome; but Ali Dinar, who had succeeded to the throne as the grandson

of the Sultan Mohammed El Fadl, soon developed the germs of rebellion and treachery, proving for many years a thorn in the side of the Government sitting at Khartoum. Numerous references to the political situation in Darfur, guarded, but unmistakably anxious, may be read in the Annual Reports of the Governor-General, and it must now be a source of intense relief to Colonel Stack, the new Administrator, that he can commence his duties free from the heavy shadow that Darfur had ever cast on the Palace occupant at Khartoum.

Colonel Kelly will find that, in the main, he has been called upon to rule over a very simple and peaceable people, relieved of the bane of Ali Dinar's influences, willing to submit to a just and considerate Government, and, at least, no more ungrateful than the majority of governed nations. The Fors are clean and industrious, if somewhat fanatical, and, in regard to their gradual improvement, may be expected to advance with rather more rapidity than other tribes of the Sudan. The annual tribute to the Sudan Government paid—or, rather, of late days, owed—by the Sultan Ali Dinar will not only probably be maintained, but, in course of time, added to; for under proper guidance, and with assistance, the economic resources of the province can be made to yield abundantly.

BOOK NOTES.

Our Cyprus Correspondent writes:—The new Archbishop, recognising the need of a good history of the Orthodox Greek Church of Cyprus, has decided to arrange for the publication, partly at his own expense and partly from the Archbishop's fund, of a translation of the excellent work of the late Revd. J. Hackett, D.D., Chaplain to the Forces (Methuen, 1901). This painstaking work is the best authority in English of the island church. It appears that a translation into Greek of the book has already been made by one Charilaos Papiannion, of the Pan-Cypriot *Gymnasium*, now resident in Athens. Arrangements are being made for its speedy appearance.

"Armenia and the Armenians" is the title of a small pamphlet written by the indefatigable Hon. Secretary of the Armenian Red Cross and Refugee Fund. It gives a sketch of Armenian history and contains an appeal for the Fund for which Miss Robinson works so devotedly. Copies may be obtained of the authoress (at 35a, Elsham Road, Kensington) at the price of one penny.

Messrs. Chapman and Hall are the publishers of "War Wanderings," by Mr. George Renwick. The author writes of what he has seen when acting as the *Daily Chronicle's* special correspondent in Egypt, Salonika, France and Belgium; and his views upon the future of the Balkans are very interesting and carefully weighed.

Much interesting material regarding the Gallipoli campaign will be found in Mr. Philip Schuler's "Australia in Arms." The book is full of stirring incidents and sound criticism. It is published by Fisher Unwin, at 12s. 6d. net.

Part 123 of "The Times History and Encyclopedia of the War" describes the British Advance to Ctesiphon, the siege of Kut, and other operations in Lower Mesopotamia. Part 124 describes the Russian campaign in the Caucasus in the winter of 1915 and the spring of 1916, and contains three maps and many interesting illustrations.

Messrs. Macmillan have just published "Ancient Egypt, 1916, Part IV," of which Professor Petrie is the Editor.

Mrs. St. Clair Stobart, whose name is familiar to readers of THE NEAR EAST, has written "The Flaming Sword in Serbia and Elsewhere," which Messrs. Hodder and Stoughton published last month, at 6s. net.

THE SCHOOL OF ORIENTAL STUDIES.

The School of Oriental Studies (London Institution, Finsbury Circus, E.C.) is to be formally opened by the King near the end of next month, but classes will begin on Thursday, January 18.

At the outset teaching will be provided in seven groups of languages, comprising twenty different tongues; but it is hoped at an early date to extend the scope of the school considerably (says *The Times*). Courses on the history, religion, and customs of Oriental and African countries will form a special feature in the curriculum.

The Senate of the University of London have assented to the transfer to the school of the teachers in the Oriental departments at University and King's Colleges, excluding certain subjects, such as Egyptology, Assyriology, and Hebrew. The Oriental staffs have accordingly been transferred to the school, but since the teaching at the colleges has been on a restricted scale additional appointments have been made.

In Group II. (the Near East) the director of the school, Dr. E. Denison Ross, C.I.E., will himself fill the chair of Persian, in association with Mr. C. E. Wilson and Mr. G. H. Darnall Khan. Classical Arabic will be taught by Dr. T. W. Arnold, C.I.E., and colloquial Baghdadi Arabic by Hajji Abdul Mejid Belshah.

NEAR EAST BOOKSHELF.

A GREAT CONCILIATOR.*

Hariot Marchioness of Dufferin and Ava was at her husband's side throughout his long official career. In the scanty leisure left her by a never-ceasing course of social duty and the care of a large family, she recorded her impressions of men and things in a journal. The entries made during Lord Dufferin's administration of India appeared many years ago in print; and the diarist has now published those relating to diplomatic life in Eastern Europe. Brilliant service as Governor-General of Canada from 1872 to 1878 had marked Lord Dufferin out for office more fraught with difficulties than the control of any British dependency. In February, 1878, he arrived at Petrograd as Ambassador to the Court of Russia. The Turkish war of 1877 had been chequered by many disasters, and when its goal was apparently reached, Great Britain had dashed the cup of conquest from Russia's lips. Extreme tension, therefore, prevailed between the two Empires, and an Ambassador of the ornamental type might well have fanned the flames of resentment into active hostility. Lord Dufferin was cast in another mould, and Sir Henry Lucy's recently-published reminiscences bear testimony to his "tact, patient industry, energy, and gay good humour that brightened every step he took." ("Nearing Jordan," p. 203). It needed such qualities, and many besides, to overcome prejudice which, from a Russian point of view, was quite intelligible. Lord Dufferin's success in gaining the confidence of Alexander II. and his Ministers makes one long for the presence of a larger Celtic element in our diplomatic corps. The alarming spread of Nihilism was an obstacle in his path, and political assassinations were of daily occurrence; and for the first time in Russian history the "Little Father's" sacred person became an object of attack. After two abortive attempts, one of which wrecked his apartments in the Winter Palace, the Tsar-Liberator was slain by an assassin's bomb. Throughout this trying period Lord and Lady Dufferin displayed a degree of fortitude which was worthy of the best traditions of our race. The "Journals" are something nobler than a catalogue of Court ceremonies, social functions, and pleasure trips. They record much strenuous work in the cause of charity, and here and there one lights upon an illuminating thought. At Moscow, for instance, the diarist felt "nearer history" than elsewhere, because, alone among great nations, Russia is dominated by the spirit of her historical past. The accession of Alexander III. increased Lord Dufferin's embarrassments. The terrible thought occurred to him that a holocaust of the royalties who flocked to Petrograd on that occasion was well within the bounds of possibility. Among the arrivals in March, 1881, were the Prince and Princess of Wales, for whose safety Queen Victoria held her Ambassador personally responsible! It must have been a relief for husband and wife to quit that cyclonic centre for a region of comparative calm.

Constantinople, which received Lord Dufferin as British representative two months later, was also suffering from the aftermath of war and incipient revolution. In June, 1881, the alleged murderers of Sultan Abdul Aziz were tried for high treason, and nine received sentence of death, Midhat Pasha included. Lord Dufferin was called out of church on the following Sunday to interview the convict's wife and niece:—

One was elderly, the other young and pretty. They both wore yashmaks (very thin ones), and the young one had a yellow silk dress, circular yellow cloak, a blue silk hat, with a diamond brooch in front, the whole being covered with white muslin, which was brought over the forehead and mouth as a yashmak.

We are not told the result of this feminine influence. Of course, Lord Dufferin was unable to interfere; but Midhat Pasha's sentence was commuted to one of banishment.

The distrustful and pusillanimous Sultan gave infinite trouble. Of his dilatoriness, caprices, and tergiversation there was no end, but, like everyone else, he succumbed to Lord Dufferin's personal charm. Poor Abdul Hamid must have been the victim of a bad education, followed by a degree of absolute power which he was ill qualified to wield; but the "Turkish Journals" show that he was capable of kindly impulse. They also prove that Lady Dufferin did not agree with Sir G. C. Lewis's famous dictum: "Life would be tolerable but for its amusements." The leader of society at Pera was also able to grasp the hidden meaning of things which are caviar to the general. After witnessing the *Namaz* in St. Sophia, she wrote:—

The sight of all these human beings in the attitude of profoundest humility was most striking, and, though dead silence prevailed, one seemed to feel "Lord have mercy upon us, miserable sinners," in the air. . . . People differ about it as a sight; some say there is nothing to see, that it is dull, etc. I think it one of the grandest things I ever saw, and, seated far above these people, I felt as if I were assisting at a dream, a sort of revelation, and not at a real church service.

In May, 1882, the Dufferins sought in a trip to Athens relief from the endless vexations of Constantinople. They found King George "extremely nice and pleasant"; at a small State dinner he "talked all the time, just like any other man"; resembled his sister, Queen Alexandra, but "screws up his eyes, and fails in that feature." A few days later the visitors shared a family repast at the Palace:—

The King met us at the door of her apartment and took us in to the Queen, who looked lovely in a square black dress and ruby ornaments. Then all the five children came in, and we went into the next room without taking arms. . . . Her boys are very big, and the eldest (now King of Greece) is said to be very clever. We had a merry dinner, and the servants only appeared when they were rung for.

In September of that year a more important episode finds record. Arabi Pasha's rebellion had brought the tangled affairs of Egypt to a crisis. Turkish claims to sovereignty and French "condominium" produced a deadlock which ended only when the vacillating British Government at last resolved to "grasp the nettle" firmly. The victory of Tel-el-Kebir placed British supremacy on a firm basis, and it remained only to regularise future relations with Turkey by a convention. On September 15, 1882, Lord Dufferin

was away for fourteen hours, eleven of them actually at the Palace. He declined to "argue with monarchs," and so sat in another room with about fifteen diplomatising men, who brought messages from the Sultan, argued with him, and held him by the coat-tails when he threatened to leave. The Convention was not signed, and our Government now think it too late. The Turks have made a dreadful mess of it; if they had gone to Egypt instead of us, how they would have improved their position! And now? Baker Pasha says that "No one but D. could have managed that affair; and, in spite of everything, the Turks like him."

Six weeks later he was instructed by telegram to inquire and report on the future administration of Egypt. In vain did Abdul Hamid declare that he would consider the Ambassador's acceptance of the mission as a personal offence. Lord Dufferin proved obdurate, and met with a cordial reception when he took leave of the harassed despot at Yildiz.

His stay in Egypt lasted till April, 1883, and was as fertile of solid achievement as any portion of his brilliant career. Lady Dufferin was disappointed with the winter climate; the human types encountered were less interesting than those presented by Constantinople; and the snobbery which prevailed in the European colony excited her mild amusement. After five months of strenuous labour, Lord Dufferin drew up a report on the government of Egypt which has since been the basis of our administration. Nay, on returning to Constantinople, his silver tongue persuaded Abdul Hamid to accept the inevitable compromise with fairly good grace. When in September, 1884, he exchanged diplomacy for rule as Viceroy of India, he left none but friends behind him in the Turkish capital.

These journals prove that the velvet glove is more efficacious than the iron hand. By way of contrast, I may quote an appreciation of Lord Stratford de Redcliffe uttered by an English interpreter who had served under him, and described him to Lady Dufferin as "that man who moved in the icy circle of his own pride, feared by everybody." After ruling Turkey despotically for a generation, the "Great Elchi" lit up the flames of an unjust and unnecessary war. Lord Dufferin has won more enduring fame as a Conciliator; and his widow's unpretending journals show that his success was in great measure due to her gentle influence.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE CONSULAR AND DIPLOMATIC SERVICE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Sir Harry Johnston's letter in last week's issue of your paper, following closely on my comments, is a welcome contribution to the campaign which has for its object the introduction of consular (and diplomatic) reforms. The more frequently writers of Sir Harry's repute keep the subject before the public, and the more determined the attitude of the Press in supporting both them and the claims of organised bodies—such as Chambers of Commerce, for instance—the sooner will our Government realise that something must be done if we are to "push ahead" and make use of all commercial openings that present themselves.

As to the nature of the reforms, we are, I believe, agreed that they must be radical; that the whole system by which we are represented abroad, diplomatically or otherwise, must be drastically overhauled. Further, I think we are agreed that the sooner the reforms are introduced the better. It is no use waiting until the war is over, and then beginning to patch up a faulty system, as though it were an old ship bound to continue plying as best it can until it falls to pieces. What we want—and by "we" I mean the nation at large—is the creation now, on modern lines, of a system that will be in sound working order by the time peace has been declared. Moreover, I am inclined to think that no opportunity for drastic action in the matter could be better than the present one. We have some practical business men in or about the Cabinet; we have a Premier who is neither afraid of nor adverse to reforms; and, finally, we have the great vested interests of the country, together with all minor industries and private individuals, unselfishly working together for the good of the whole community. Consequently, not only is immediate action necessary, as already pointed out, but it is advisable because opportune.

The question as to the nature of the reforms is one that I prefer to leave open. From Sir Harry Johnston's letter I gather that we differ on some points, but I am willing to concede that his scheme of reform, if carried out, would be a distinct improvement on the system as it now exists. Further it is not necessary to go at present. The essential problem now is to get the Government to agree: (1) that the present system is no longer seaworthy; and (2) that immediate steps must be taken to reform it on as generous a scale as circumstances permit and the volume of Imperial trade interests exacts.

Needless to say, no Government—and more particularly no British Government, with its gigantic tasks to fulfil—can be persuaded to move in any one particular matter unless sufficient outside pressure is brought to bear on it. Therefore, it is incumbent on us who realise that reforms are necessary and understand the magnitude of the issues at stake to leave no stone unturned to urge his Majesty's Government to give this subject their immediate and close attention. Moreover, the arrival in England a few weeks hence of the Dominion Premiers should be taken advantage of in order to bring this vital matter to their notice.—I am, etc.,

COMMENTATOR.

THE JEWS IN PALESTINE.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The article, "The Future of Palestine," by Estelle Blyth (second part), published in your last issue, contains a certain number of statements which, for the sake of justice, should not be allowed to remain unchallenged.

The author of the article in question asks: "What are the Jews doing to-day for Palestine?" and proceeds to answer her own question by stating that they have planted many fruitful colonies about the country, but that in the towns they are the chief moneylenders. The truth is as follows:—

There are about forty-five Jewish agricultural colonies in Palestine which, with the exception of two or three German settlements, are the only places in Palestine where one can see modern European and American methods of agriculture applied on an extensive scale. The value of this example

for the general regeneration of the country is obvious. 5,000 Arab labourers are to-day working in the colonies of Judea alone, and the more our settlements grow in number and area the greater will be the number of Arab labourers who will be able to find in them remunerative employment.

The Jews have planted all over the country millions of eucalyptus trees, which, through their great powers of absorption and evaporation, have brought health to many places that were formerly marshy and uninhabitable, and have thus done much to make the country in general more salubrious.

It is the Jews who have created the Jewish Agricultural Experiment Station at Zichron-Jacob and Atlit, which has done and is doing much valuable work in introducing and improving the cultivation of varieties of cereals and other plants which are not very exacting and have an ample power of resisting bad weather, disease, and various parasites.

It is the Jewish doctors of the Jewish colonies who are almost the only medical assistance available in the more out-of-the-way parts of the country, and they fight epidemics and other diseases amongst the Jews and non-Jews alike. The Jewish Health Bureau of Jerusalem has undertaken in a very efficient way the struggle against malaria and eye disease, and under the central direction of this institution the local doctors in certain Jewish colonies have initiated a systematic war against trachoma. The hospitals which the Jews have created all over Palestine are more numerous than those created by any European nation.

In various parts of the country the Jews have improved the existing roads and built new ones at their own expense.

Any impartial observer who has studied the life of the Jews in Palestine will admit that, contrary to what is said in the article in question, the Jews in all their activities there have shown themselves to be conscientious and skilful administrators. With limited means, and without any support from the local government—nay, often in the face of its frank ill-will—the Jews have succeeded within a generation in setting up a colonial organisation which for the country as a whole is a most powerful leaven of progress. It is a well known fact that the extraordinary economic progress of Jaffa corresponds almost exactly with the period when the Jews began to interest themselves more actively in Palestinian economy, and, above all, when the Zionist organisation, by founding the Anglo-Palestine Company, Ltd., a British bank, began its operations in the country. It would be too much to say that the credit for this great economic progress belongs exclusively to the Jews, but it is probable that they have been the most important factor.—I am, etc.,

S. FALKOWSKY,

Agricultural Engineer at Jaffa.

57, St. Gabriel's Road, Cricklewood, N.W.,
December 26, 1916.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—I, as a Jew and a Zionist, am a little disappointed that Miss Estelle Blyth is not more sympathetic to Zionist efforts, because it seems to me that it is possible to agree with her arguments in the main, to think Palestine should be placed under British rule and yet believe that a great spread of the Zionist agricultural colonies would be desirable. The spread of colonies of Jews possessed of local self-governing power may be the way in which the land may once become Jewish.

I do not consider Zionism the cure for every Jewish ill. I believe Miss Blyth might agree with me that a revival of religious feeling among the Jews is also needed. But surely the existence of a "spiritual centre" in Palestine would reinvigorate the Jews who still remained in England, Russia, or America. I mean by a "spiritual centre" a place where Jews would be Jews only, and not English, Russian, or American Jews; a place where Hebrew would be spoken, where the customs and products of the land would become distinctively Jewish. The revival of Hebrew as a spoken language in Palestine is a phenomenon which deserves attention as a proof that the Jews have still not lost all vitality as a nation, even if, as Miss Blyth correctly says, they are often "only a kindred." To me the question is, "What future worth having can they look forward to unless they become a nation again?"

I am, etc.,

ARTHUR LEWIS.

Hampstead Garden Suburb, N.W.,
December 29, 1916.

While the Germans are weeping hypocritically over the fate of humanity and the horrors of war, says an official Serbian statement, Bulgarian and German artillery bombards the open town of Monastir, occupied only by unarmed inhabitants. In three days eighteen persons, including nine children and three women, were killed by enemy shells. Five children were wounded.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the
Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)		Moslem.	Jewish.
1917. Jan. 5 6 7 8 9 10 11	1916. Dec. 23 24 25 26 27 28 29	Friday Saturday Sunday Monday Tuesday Wednesday Thursday	1335. Rebi I. 11 12 13 14 15 16 17	5677. Tebet. 11 12 13 14 15 16 17

To-day Princess Ileana of Roumania, third daughter of King Ferdinand and Queen Marie, is eight years old.

Monday next is the Queen of Italy's birthday. Her Majesty, who is the third daughter of King Nicholas of Montenegro, was born December 27, 1872 (o.s.), and was married in Rome on October 24, 1896.

Tuesday is the birthday of Princess Marie of Roumania, who was born in 1899 (o.s.), and is the second daughter of King Ferdinand and Queen Marie.

Sir Archibald Murray has telegraphed to King George: "In the name of the troops under my command, I respectfully beg to offer to your Majesty and her Majesty the expression of our loyalty and devotion, and the hope that the New Year will bring to your Majesties all happiness."

Sir Rennell Rodd, British Ambassador in Rome, had an audience of the King at Buckingham Palace last Friday.

Lord and Lady Oranmore will return to London from Castle MacGarrett on January 23.

Sir Henry and Lady McMahon have arrived in London from Egypt and are staying at 59, Pont Street.

General Sir Ian Hamilton left London for Dunblane last Saturday.

Sir Reginald Wingate, the new High Commissioner for Egypt, arrived at Cairo on December 27, when he was received by Zulficar Pasha, on behalf of the Sultan, General Sir Archibald Murray, Commander-in-Chief, and a representative body of British and Egyptians.

The *Sudan Times* of December 16 gives an interesting account of a tea party given by the Egyptian officers of the Khartoum district in honour of Sir Reginald Wingate, prior to the latter's departure for Egypt. The party took place at the Egyptian Officers' Club on December 12, and was largely attended. Lewa Mahmoud Pasha Hilmi, president of the club, and Kaimakam Faras Bey Abu Zeid, the senior Sudanese officer present, expressed the regret felt by themselves and their fellow-officers at having to say good-bye to the Sirdar, and the latter returned thanks in a very happily-worded speech in Arabic. A donation of £52 for the British Red Cross Society, and one of £25 in aid of the victims of the air raid in Cairo, were handed to Sir Reginald and Lady Wingate by Hilmi Pasha on behalf of the officers, and were suitably acknowledged by the Sirdar.

FLIGHT COMMANDER HANS ACWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

Princess Helen Soutzo, the wife of the Roumanian Military Attaché in Paris, arrived in London last week.

Madame Také Jonescu arrived in Petrograd from Corfu last week.

Lieutenant-General Lawrence has received another honour; from C.B. he has become K.C.B. His full title now is Lieutenant-General Sir Herbert Lawrence, K.C.B.

Sir Douglas Haig has telegraphed to General Sir Archibald Murray:—"Our heartiest congratulations to you and those under your command on your great success in the El Arish operations." Sir Archibald Murray replied:—"I and the troops under my command are most grateful for our big brothers' kind congratulations."

General Georgesco, of the Roumanian Army, who is specially attached to the British Headquarters Staff, returned to London with Mme. Georgesco on the last day of the old year.

Colonel Rudcano, of the Roumanian Army, arrived in London from Paris last week.

The *Egyptian Gazette* announces that Sir Armand Ruffer left Egypt on December 15, in order to assist M. Venizelos to organise the sanitary and hygienic section of the Nationalist Army.

The newly appointed Serbian Minister to Washington (M. Ljebomir Michailovitch) has left for America, accompanied by the First Secretary, M. Alexandre V. Georgevitch.

M. Pavle Karovitch, Secretary to the Serbian Legation in London, was recently confined to his room for two days by illness, but has now happily returned to his duties completely restored to health.

M. George Todorovitch, Secretary to the Serbian Legation, left London a few days since, and has now arrived at the Foreign Office at Corfu.

M. Levitch, Secretary-General of the Serbian Ministry of Finance, has been in Paris on a special mission, but has now returned to Corfu.

The Rev. Voyslav Yanitch, Chaplain to the King of Serbia, has, says the *Morning Post*, been granted permission to visit the Canadian Army at the Front, where there is a large number of Serbian soldiers fighting in the British ranks.

The marriage of Lord Curzon of Kedleston and Mrs. Grace Elvina Duggan, widow of Mr. Alfred Duggan, of Buenos Ayres, took place very quietly on Tuesday in the private chapel of Lambeth Palace. The wedding was originally arranged to take place at the end of last week at St. George's, Hanover Square, but was postponed. The Archbishop of Canterbury being prevented by illness from officiating, his place was taken by the Archbishop of York, an old friend of Lord Curzon. Only members of the two families were present, as it was desired that the wedding should be as quiet as possible. The Hon. Francis Curzon, brother of the bridegroom, was his best man. Later in the day Lord and Lady Curzon left for the country.

On December 6, at St. Saviour's Church, Suez, the marriage took place of Miss Hilda Maud White, only daughter of Mr. and Mrs. H. White, of Suez, and Mr. Alfred Nash Prosser, younger son of Mr. and Mrs. A. W. Prosser. Both families are well known in Egypt, the bride's father being an official of the Asiatic Petroleum Company, and the bridegroom's father a former superintendent of the Eastern Telegraph Company at Alexandria. Captain Franklin was the officiating clergyman.

To-morrow afternoon, at 2.30, the Central Islamic Society will hold a conversazione at the Hotel Cecil, in commemoration of the birth of the Prophet of Arabia. Mr. A. Yusuf Ali, I.C.S. (ret.), will preside, and there will be music of the East and of the West.

Mr. Augustus van Millingen, of Alexandria, has arrived in London for a short stay.

The *Neue Freie Presse* announces that the house where King Nicholas of Montenegro was born, near Cetinje, has been destroyed by fire.

Last Friday Mr. Fisher Unwin published "Charles Lister: Letters and Recollections, with a Memoir by His Father, Lord Ribblesdale." Mr. Lister, it will be remembered, was a Secretary to the British Legation at Constantinople, whither he was transferred from Rome in 1913; and had he lived he would undoubtedly have made his mark in the Diplomatic Service. But early in the war he responded to the call of his country, and, obtaining special leave for a year from the Foreign Office, returned to England in October, 1914. In the following February he sailed for Egypt with the R.N.D., and subsequently took part with the Hood Battalion in the Dardanelles campaign. On August 25 he was fatally wounded, and on August 28 he died on a hospital ship. The "Letters and Recollections" constitute a remarkable and inspiring record of a splendid life.

M. Caftanzoglou, who is to take M. Gennadius's place at the Greek Embassy, is well known in London, where he made a good many friends during his stay as Secretary of Legation and as Chargé d'Affaires, says the *Leicester Daily Post*. The Royal Government of Greece is now, of course, virtually unrepresented at the Court of St. James's, and it is unlikely that the old relations between the Foreign Office and the Greek Embassy will be precisely resumed, if only because the resignation of M. Gennadius has completed the diversion of Anglo-Greek affairs into another channel. But, though the new Minister's mission is not defined, he has the very distinct advantage of a thorough understanding of the ins and outs of diplomatic work in London.

The Rome correspondent of the *Morning Post*, in the course of a short article on Professor Lambros, the Greek Prime Minister, refers to the Professor's distinction as a scholar and his "life spent in historical research." After mentioning many of Professor Lambros's earlier works, the writer continues:—"He has been latterly engaged on an exhaustive work in several volumes (of which only the early part has appeared) on the rule of the Palaiologoi in the Peloponnese in the period preceding the Turkish Conquest. He has also translated—for he knows English well—two English works on mediæval and modern Greek history into modern Greek. His style is pleasing, and he is an indefatigable worker."

"Professor Lambros," the correspondent goes on to say, "has been twice Rector of the Athens University, holding that place for the second time on the occasion of the seventy-fifth anniversary of its foundation, which was celebrated in 1912. Both then and when he organized the Olympic Games in 1906 his power of organization was greatly praised by all who witnessed it, among whom was on both occasions the present writer. He is a good man of business as well as a scholar, and is possessed of plenty of tact, for, like Odysseus, he has seen many cities of men, and speaks several languages well. For that reason he was often sent abroad to represent Greece at international gatherings. Thus he came to Rome in 1911 to open the Byzantine section of the Exhibition, which he did in an admirable speech; and he was here on a semi-political mission (sent by M. Venizelos) in the spring of 1913. Indeed, he was in Rome when King Constantine ascended the throne, and gave the present writer a long interview for the *Morning Post* on the character of the late and the new King. For the University of Cambridge he has published in two volumes the results of his personal investigations among the manuscripts of Mount Athos. Indeed, he is well known to all learned circles of all lands, and is probably the greatest living Mediævalist. Although often urged by King George to enter politics, he always refused, preferring to study quietly in his house in the rue Mavrocordato or in his villa at Kephissia, or to travel abroad to make researches in foreign libraries. But, then, all Greeks are politicians!"

APPOINTMENTS, PROMOTIONS, ETC.

The Foreign Office on Monday issued the following:—"Earl Granville, G.C.V.O., Counsellor of his Majesty's Embassy at Paris, has been appointed the representative of his Majesty's Government to the Provisional Government of M. Venizelos at Salonika, with the title of Diplomatic Agent." Lord Granville is leaving immediately to assume his post.

Reuter's Agency announces that M. Gennadius received on Saturday an official notification of his appointment as Diplomatic Agent to Great Britain for the Provisional Government of M. Venizelos. The latter has telegraphed to M. Gennadius that in the decree of his nomination he has received the highest grade which it is possible to occupy in the Greek Service.

M. Gennadius was received at the Foreign Office by Mr. Balfour on Tuesday afternoon.

Dr. E. S. Crispin, who has been acting as Director of the Sudan Medical Department for some time, has now been finally appointed as Director with retrospective effect from July 1, 1916.

Under date of January 3, Reuter's Paris correspondent reports:—"The Government has appointed M. de Billy, Counsellor of the French Embassy in Rome, to be French Diplomatic Agent to the Greek Provisional Government.

M. Milan Miloyevitch, formerly Secretary to the Serbian Foreign Office, has been appointed Chargé d'Affaires of the Serbian Legation at The Hague.

It is stated that Judge Adlerkantz, the Swedish Judge of the Mixed Courts at Cairo, is to be appointed to a high position in the Ministry of Foreign Affairs at Stockholm, and will be leaving Egypt shortly, says the *Egyptian Gazette*. His successor will probably be Mr. Sjoborg, of the Mansourah Mixed Court.

The Anglo-Hellenic League has (according to Reuter's Agency) received intelligence that General Zymbrakakis, Minister of War, in the Greek Provisional Government at Salonika, having asked to be sent on active service, has been given the command of the new Army Corps. His place at the Ministry of War has been taken by General Comnenos-Miliotis, one of the most distinguished officers in the Greek Army. He is a descendant of the Byzantine house of Comnenos, and was educated at the French Cavalry School of Saumur.

M. Pechar has been appointed Second Secretary to the Serbian Legation in Washington.

The Governor-General of the Sudan has appointed Bimbashi H. Burges-Watson, Inspector of Kordofan Province, to be Magistrate of the First Class under the Code of Criminal Procedure.

Lieutenant C. Wright, Army Service Corps, has been attached to the Egyptian Army as a Special Service Officer, with the temporary rank of Bimbashi, and attached to the Department of Supplies.

Kaimakam E. H. Ross Bey, Sudan Government, has been struck off the strength of the Egyptian Army.

Kaimakam R. P. Lewis Bey, late Sudan Government, has been granted the Order of the Nile, 4th Class.

Bimbashi (temp. Kaimakam) J. J. B. Tapley, D.S.O., Sudan Government, has been promoted to the rank of Kaimakam.

ORIENTAL STUDIES.

THE SCHOOL OF ORIENTAL STUDIES, London Institution, Finsbury Circus, E.C., will be OPENED on 18th JANUARY, 1917. Courses will be held in the Principal Languages of the Near, Middle, and Far East, and of Africa. Courses will also be given on Oriental Religions and Customs.

Intending Students are invited to apply at once to be undersigned. E. DENISON ROSS, Director.

THE LATE DR. WATSON.

The funeral of the Rev. Andrew Watson, head of the American Mission in Egypt, whose death is reported by our Cairo Correspondent, took place on December 10 in Cairo. The service was held at the American Mission Church, Ezbekieh, and the following clergy officiated: The Right Rev. the Bishop in Jerusalem, Rev. J. Kruidenier, Rev. J. R. Alexander, Rev. J. G. Hunt, Rev. S. M. Zwemer, Rev. Shenuda Hanna, and Rev. Gubrial Michail. Among those present were: Sir Henry MacMahon, the High Commissioner; Mr. Paul Knabenshue, the Acting American Diplomatic Agent; Dr. D. Dunlop, Adviser to the Ministry of Education; Miralai Harvey Pasha, Officer Commanding Cairo City Police; and a large number of leading officials.

Dr. Watson was a Scot by birth, but went to America with his parents while still a boy, and was educated at Princeton and Pittsburgh Theological Seminary. The following are extracts from an obituary notice published in the *Egyptian Gazette* of December 12:—"To all the growth, development, expansion, and uplift of Egypt the American Mission has contributed largely, and Dr. Watson has always been among its leaders. His greatest work, of course, was as a missionary. On his arrival in Egypt there were only six members of the embryonic native Protestant Church. To-day there is a native Protestant community of 30,000 to 40,000 members, containing over 13,000 communicants. He helped to establish in 1864 the Mission Theological Seminary—the oldest school of Protestant theology in Egypt. In 1869 he was made the Professor of Systematic Theology, and since 1892 he has been the head of the school. Through his classroom have passed the pastors and preachers of the Egyptian Protestant Church—many of whom are men of power, and occupy positions of influence in the cities, towns, and villages of Egypt, from Alexandria to Aswan. The work he did in this school has been his great life work—it and its results are his abiding monument. . . . In 1890,

during a visit to America, he was chosen the Moderator of the General Assembly of the United Presbyterian Church—the highest Court of the home Church. In 1897 he published his 'History of the American Mission in Egypt,' a work that sets forth most vividly the conditions of the country and of mission life and work during the second half of the nineteenth century. He had a leading part in the organisation of the civil and political status and relations of the native Protestant communities in Egypt by which a Firman was obtained from the Sultan of Turkey recognising their official existence and their legal rights. He was the head of the committee sent as pioneers in establishing the American Mission in the Sudan in 1900. In 1910 he was a delegate to the World's Missionary Conference at Edinburgh.

"Dr. Watson's influence and activities extended beyond the bounds of the special work of his mission. He was a member for many years of the committee in control of the Deaconess' Hospital in Cairo. He was trusted by all. Servants brought their savings to him to invest for them. Heirs entrusted their small inheritances to his care to administer for them. And only a few weeks ago the Head of the City Police placed in his hands the administration of a sum of money to be applied to the needs of a dependent family. He was liberal and generous to the poor. No needy person was ever turned from his door without food or the means of getting food. He was a man simple, humble, faithful—he never shirked a duty and he never failed a friend."

Mr. Charles Levens, a Crimean veteran, who had acted as orderly to Florence Nightingale, died in the Kingston Victoria Hospital on Saturday as the result of an accident. He was going along Canbury Park Road in his self-propelling invalid chair on Thursday afternoon when a runaway horse came into collision with him and he was thrown into the roadway. He was eighty-five years old, and held the Crimean and Turkish medals.

OBITUARY.

Colonel John Stacpole, C.V.O., C.M.G., Army Service Corps, who had retired from the Service but had been temporarily re-employed, died suddenly on Saturday at Highfield, Southampton, following an operation. The second son of the late Thomas Stacpole, of Ballinahow, County Tipperary, he was born in 1847, entered the Army in 1874, and reached the rank of colonel in 1900, and, after serving on the Staff, retired in 1904. He took part in the Sudan Expedition of 1885 (Suakin), and was decorated with the medal with clasp and the bronze star. Colonel Stacpole was Embarkation Officer at Southampton during the Boer War, and was personally thanked by King Edward for the way in which he fulfilled the duties of that position. He was made a Commander of the Royal Victorian Order in 1901, and a year later a Companion of the Order of St. Michael and St. George.

We regret to learn that Mr. Frederick Francis Maling, late British Vice-Consul at Port Said, died in that town on November 3. Born in 1850, he was appointed Acting Vice-Consul at the Dardanelles in 1886, and in 1887 was nominated Vice-Consul at Port Said; and in 1889 he passed an examination and was appointed Vice-Consul in that town. He was Acting-Consul on very many occasions. In 1907 he retired on a pension.

Mrs. Elizabeth Kitchener, aunt of the late Earl Kitchener, has died at Newmarket, at the age of eighty-nine years. The late Peer often visited his uncle, a solicitor at Newmarket, in his younger days, and his aunt had a fund of anecdotes about him.

A Cork telegram announces the death on Wednesday night, at his residence, Clonty, of Surgeon-General Sir Edmond Townsend, K.C.B., aged 71. Sir Edmond served in the Abyssinian, Perak, Zulu, and Egyptian Wars, as well as in the North-West Frontier campaign in 1897-8. He was also with the First Division in the South African War. From 1902 to the date of his retirement he held the post of principal medical officer at Netley.

Colonel Ernest Grattan, who has died at the age of 73, joined the Army in 1871, and retired in 1898. He served in the Egyptian Expedition of 1882, and took part in the battle of Kassassin; and he had previously served in the Ashanti War (1873-4) and the Zulu campaign (1879).

Our Cyprus Correspondent writes:—"Limassol has suffered a loss by the death of one of the leading citizens, M. Agathocles Francoudes, who was greatly respected and liked by the British as well as by the entire Greek community. Mr. Francoudes practised for many years as an advocate in the courts. His upright and sympathetic character rendered him popular with all classes in his own town, and he was greatly esteemed by his many friends in the island."

Mr. Stratis, a Greek merchant of Zagazig, has received the news that his brother, who was in the service of the British Legation at Athens, was murdered by the Royalists during the massacres there at the beginning of last month.

The British Farmers' Red Cross Fund, which sent 20 ambulances to Salonika a short while ago, has received a letter from the British Red Cross Society regarding them. This letter reads as follows:—"I am sure it will be of interest to you to know that we are in receipt of a cablegram from our Commissioner in Salonika informing us that the 20 ambulances so kindly presented to these societies by the British Farmers' Fund, were handed over to the medical services of the Serbian Army in the presence of the Crown Prince of Serbia, General Tersitch, Minister of War, and General Boyovitch, Commander-in-Chief, and that his Royal Highness, the Crown Prince, expressed his appreciation in very glowing terms of the kind help rendered to the Serbian Army." Further help is still urgently wanted, and all offers of assistance will be gratefully received by the Secretary, Room 5, Tower Bridge Flour Mills, Shad Thames, Bermondsey, S.E.

EGYPTIAN HONOURS.

The *London Gazette* announces that the King has been pleased to grant the under-mentioned gentlemen authority to wear Decorations (as stated against their respective names) which have been conferred upon them by the Sultan of Egypt in recognition of services rendered:—

SECOND CLASS OF THE ORDER OF THE NILE.

George Gillett Hunter, Esq., C.M.G., Director-General of the Coastguard Administration in Egypt.
Rear-Admiral Henry Russell Robinson, Director-General of Ports and Lights, Ministry of Finance, Cairo.
Arthur King Lewis, Esq., C.M.G., Director-General of Customs, Alexandria.
Walter M. G. Bond, Esq., Vice-President, Native Court of Appeal, Cairo.
George Farquhar Morice, Esq., Director-General of Public Security, Ministry of the Interior, Cairo.
Miralai George Samuel Abercrombie Harvey, Esq., C.M.G., Commandant of Police, Cairo.
Lieutenant Charles Herbert Whittingham (Miralai Charles Herbert Whittingham, Esq.), Inspector-General of the Prison Department, Cairo.
Sidney Herbert Wells, Esq., Director-General, Department of Technical, Industrial, and Commercial Education, Cairo.

THIRD CLASS OF THE ORDER OF THE NILE.

Robert Holt, Esq., Principal, School of Engineering, Giza, Cairo.
Gilbert, John Elliot, Esq., Headmaster, Tewfikia Secondary School, Cairo.
Richard Aldred Brown, Esq., Inspector, Ministry of Education, Cairo.
Alfred Hubert Sharrman, Esq., Headmaster, Sadia Secondary School, Giza, Cairo.
William Chatterton Adams, Esq., Director, Bulak Technical School, Cairo.
William Hawkins Wilson, Esq., M.D., Professor, School of Medicine, Cairo.
Alfred Ernest Robinson, Esq., Inspector, Ministry of Education, Cairo.
William Charles Fletcher, Esq., Inspector of Industrial Schools, Cairo.
George Robb, Esq., Inspector, Ministry of Education, Cairo.
Richard Ratcliffe Smithard, Esq., Principal, Higher School of Commerce, Cairo.
Captain Alexander Wise, Chief Inspector of Mines, Ministry of the Interior, Cairo.
Alfred Ernest Branch, Esq., Veterinary Chief Inspector, Ministry of Interior, Cairo.
Herbert William Dudgeon, Esq., M.D., Director of the Lunatic Asylum, Khanka, near Cairo.
Albert William Hazel, Esq., Inspector, Ministry of the Interior, Cairo.
Arthur Ferguson MacCallan, Esq., M.D., Director of Ophthalmic Hospitals, Egypt.
Percy Glyn Savours Williams, Esq., M.D., Director of Section, Public Health Department, Cairo.
James Ferguson Lees, Esq., M.D., C.M., Medical Officer, Public Health Department, Cairo.
William Hastings, Esq., M.B., Director of Section, Public Health Department, Cairo.
Charles Todd, Esq., Director of Technical Institutes, Cairo.
Captain Alan Colquhoun Grant (Miralai Alan Colquhoun Grant, Esq.), Commandant, Suez Canal Police.
Kaimakam Thomas Wentworth Russell, Esq., Assistant Commandant, Cairo City Police.
Major Chudleigh Garvice, Assistant Commandant, Alexandria City Police.
John Hope Percival, Esq., Judge of the Native Court of Appeal, Cairo.
Thomas Bogie Hamilton, Esq., M.B., Medico-Legal Expert, Native Parquet, Cairo.
Leander Gaspard Roussin, Esq., Financial Secretary, Ministry of Finance, Cairo.
Arthur Thomas Loyd, Esq., Private Secretary to the Financial Adviser, Ministry of Finance, Cairo.
James Ireland Craig, Esq., Contoller, Statistical Department, Ministry of Finance, Cairo.
Edward Henry Goschen, Esq., Contoller, Secretariat, Ministry of Finance, Cairo.
John Alexander Tarrell, Esq., Chief In-

spector of Customs, Ministry of Finance, Cairo.

FOURTH CLASS OF THE ORDER OF THE NILE.

Archibald D. Macdonald, Esq., Sub-Director, Personnel and Equipment Department, Ministry of the Interior, Cairo.
Kaimakam Felix George Bonelli, Assistant Commandant, Suez Canal Police.
Bimbashi Arthur Robert Langdale Kelham, Inspector, Alexandria City Police.
Alexander Gordon Ingram, Esq., Inspector of Police, Alexandria City.
Bimbashi Henry George Archer, Assistant Commandant, Cairo City Police.
Edward Albert Moore, Esq., Suez Canal Police.
Felix Edmund Powell, Esq., Inspector, Ministry of the Interior, Cairo.
Alfred Henry Armstrong, Esq., Engineer, Main Drainage Ministry of the Interior, Cairo.
Philip Foster Daniell, Esq., Sub-Inspector, Ministry of Education, Cairo.
David Tweedie, Esq., Lecturer, School of Engineering, Giza, Cairo.
George Foster Smith, Esq., Lecturer, Sultan Training College for Schoolmasters, Cairo.
William Henry Stephens, Esq., Lecturer, Nasser Training College, Cairo.
Lieutenant-Commander Edward Harry Grogan, R.N. (Ret.), Chief Inspector of Marine, Ports, and Lighthouses Administration, Alexandria.
Aubrey Lovell Pryce Weedon, Esq., Inspector, Ministry of Finance, Cairo.
Alfred Lucas, Esq., Director, Government Analytical Laboratory, Cairo.
Harold Charles Jefferys, Esq., Chief Inspector, Domains Administration, Cairo.
Arthur Owen Williams, Esq., Local Director, General Post Office, Cairo.
Henry Harrington, Esq., Director, Post Office, Alexandria.
Kaimakam Francis Van Zeller, Esq., Director, Coast Guards Administration, Alexandria.
Kaimakam Gordon Morice, Assistant Director of Coast Guards, Ministry of Finance, Cairo.
Joseph William Gardner, Esq., Superintendent, Floating Plant, Ports, and Lighthouses Administration, Alexandria.
Robert Godfree Brunton, Esq., Director, Ministry of Justice, Cairo.

FIFTH CLASS OF THE ORDER OF THE NILE.

Henry Wilfred Skelly, Esq., Chief of Technical Service, Government Press, Boulak, Cairo.
Ely Augustus Roche, Esq., Chief de Bureau, Adviser's Office, Ministry of the Interior, Cairo.

Among the New Year Honours are the following, for the Egyptian Army:—
El Sagholaghassi (Adj.-Maj.) Mahmud Bahgat (Effendi), S.O. to Camel Corps.
El Sagholaghassi (Adj.-Maj.) Mahmud Hafez (Effendi), Staff.
El Sagholaghassi (Adj.-Maj.) Mohammed Hassan (Effendi), Military Works Dept.
El Sagholaghassi (Adj.-Maj.) Mohammed Niazi (Effendi), Cavalry.
El Yuzbashi (Capt.) Ali Islam (Effendi) Arty.
El Yuzbashi (Capt.) El Sayed Ferid (Effendi), Dept. of Stores.
El Yuzbashi (Capt.) Huss in Taher (Effendi), Arab Bn.
El Yuzbashi (Capt.) Mabruk Fiki (Effendi), Sudanese.
El Yuzbashi (Capt.) Mahmud Shukri (Effendi), Sudanese.
El Yuzbashi (Capt.) Musa Khouri Zakaria (Effendi), Med. Corps.
El Yuzbashi (Capt.) Nasralla El Burgi (Effendi), Med. Corps.
El Mulazim Awal (Lt.) Abdulla Adam Gabril (Effendi), Camel Corps.
El Mulazim Awal (Lt.) Ahmed Ibrahim (Effendi).
El Mulazim Awal (Lt.) Azab Selim (Effendi).
El Mulazim Awal (Lt.) Mohammed Talat (Effendi), Vet. Dept.
El Mulazim Awal (Lt.) Mohammed Yuzri (Effendi), Arty.
El Mulazim Awal (Lt.) Shaker Mansur El Rubi (Effendi).
El Mulazim Tah (Sec.-Lt.) Suleiman Omar (Effendi).
El Mulazim Tah (Sec.-Lt.) Zeki Ali Ghonaim (Effendi).

DOMESTIC ANNOUNCEMENTS

BIRTHS.

CASSAVETTI.—On Jan. 2, 1917, at 8, Eaton Terrace, to Demetrius John and Lilian Oswald Cassavetti—a son.

GARDNER.—On December 17, at Suez, the wife of Commander C. Gardner, R.I.M., of a son.

MARRIAGE.

PARMENTER—ELSWORTH.—On Dec. 16, at H.B.M.'s Consulate General, Alexandria, and afterwards quietly at All Saints' Church, Ramleh, by the Rev. H. Valentine, Godwin E. P. Parmenter, Chaplain, R.N., elder son of the late Rev. E. C. and Mrs. Parmenter, of Deerhurst Vicarage, Tewkesbury, Gloucestershire, and Bevington House, Belchamp, Otten, Essex, and Berenece, eldest daughter of Mr. J. F. and Mrs. Elsworth, of Bulkeley, Alexandria.

DEATH.

SINGLETON.—On Dec. 17, after a long illness, Charles Singleton, of 211, Brixton Road, and Duleek, Ireland, decorated Chevalier de Sauveteur and Member Diplôme D'Onore of the Accademia Bizantina, Constantinople, and at one time Vice-Consular Agent at Ziftah, Egypt.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL, Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURS CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troodos.

For Tickets and further Particulars, apply to

NAJEM HOURS & SONS, LIMASSOL, CYPRUS.

Proprietors of "The Army and Navy Stores." Branches—Polymedia, Troodos, Nikosia, Famagusta, Larnaca and Platres.

Head Office and Central Stores: LIMASSOL. All arrangements for Transport, &c., are made by the above Firm.

THE NEAR EAST.

Editorial and Publishing Offices:

DEVONSHIRE SQUARE, LONDON, E.C.

Telegrams: "EASTAPROX, AVE, LONDON." Telephone: No. 618 London Wall.

FRIDAY, JANUARY 5, 1917.

THE ALLIES AND THE NEW YEAR.

From the review of the course of events in the Near East during the past year which appeared in these pages last week the paradox emerged that, however difficult it might be to contemplate the details of the retrospect with satisfaction or self-complacency, the net result provided ample ground for confidence. To this end it was necessary to bring the whole course of the war into perspective, and not to be misled by over-emphasis of the developments in one theatre only. If we go farther and try to envisage the war as it appears to the two groups of belligerents, other reasons will be found for striking a confident note at this juncture. Two notable documents are now before the world, and no less significant than the actual language in which they are couched is the setting in which they were presented. The German offer to enter into peace negotiations was delivered with a flourish of trumpets and much stage manipulation. Public opinion in the countries of the Central Alliance had been raised on the tiptoe of expectation; vague references to coming events of great importance, and still greater desirability, had been carefully disseminated. There can be no question that peace is needed in Germany; the public voice has been raised far too unanimously to admit of any doubt on this point, and the Government has shown much ingenuity in encouraging the idea that peace is imminent. It may be that Germany's rulers really believed that they could achieve peace for the asking, or they may simply be content to live from hand to mouth, humouring the public bent in the hope of keeping the people quiet, and leaving the future, as far as popular exasperation may be concerned, to take care of itself. A third possibility is that they count on the Allies' refusal to discuss peace to supply the required stimulus to the German nation in order that it may steel itself to yet greater sacrifices. Now comes the reply of the Allies. However much the German back may ultimately be stiffened by it, the first feeling of those whose hearts and minds have been so set on peace, and who have been led to believe that peace was within reach, must be one of bitter disappointment, combined, possibly, with indignation against those who have misled them. If accounts of economic conditions in Germany be correct, the second feeling may well be one of despair. Discipline can be relied upon to prevent such feelings from exercising immediate influence on the enemy's powers of resistance: but of themselves they form a poor basis for enhanced military effort.

The keynote of the Allies' reply is given in a single sentence: "Fully conscious of the gravity of this moment, but equally conscious of its requirements, the Allied Governments, closely united to one another, and in perfect sympathy with their peoples, refuse to consider a proposal which is empty and insincere." For the rest, it was necessary to bring home to the Central Powers some conception of the abhorrence which their conduct of the war has roused among the Allies, and therefore the reply is a lengthy one. No one reading its measured terms, and appreciating how literally true it is that the Allied Governments and their peoples are in perfect sympathy in this determination to continue the struggle until they can exact retribution, reparation, and guarantees, can fail to contrast the feelings that these two documents will evoke in the belligerent

groups. On the one hand there was a public clamouring for peace, and being cajoled into the belief that it was coming; in the other group public opinion, as far as it required anything at the hands of the respective Governments, wanted only fresh assurances that the war was to be prosecuted with enhanced vigour. Nor is its confidence altogether devoid of material foundations. "The enemy's power has not yet been broken," writes the British Commander-in-Chief in France, "nor is it yet possible to form an estimate of the time the war may last before the objects for which the Allies are fighting have been attained. But the Somme battle has placed beyond doubt the ability of the Allies to gain those objects." In spite of the enemy's successes, the feeling is widespread, extending even to neutral States, that the future is with the Allies. The same feeling may even have succeeded in permeating into the enemy countries. From the "war map" Germany may derive what consolation she likes; she can draw none from the spirit of the peoples opposed to her. Even Roumania, who might conceivably have extracted favourable conditions of peace, if she had chosen to purchase respite from German conquests at the price of material indemnity, is at one in her resolve to fight on. Belgium, Serbia, and Montenegro no less have been proof against all efforts of seduction, and when these sorely stricken countries stand fast, there can be no question of the "will to win" of the greater Powers showing signs of weakening.

The Central Powers are not alone in attributing the Allies' resistance to mere obstinacy. President Wilson in the Note which he addressed to the belligerents discovered no point of difference in the objects for which the two groups were fighting, and as one group had already offered to negotiate, he invited the inference that in his opinion the Allies were perversely prolonging the struggle without sufficient cause. To those to whom moral considerations make no appeal, who can either perpetrate or look on unmoved at the perpetration of such outrages as have sullied the arms of the Central Alliance in Belgium and Armenia and on the high seas, the attitude of the Allies may well be incomprehensible. Others will have no difficulty in realizing that the spirit which actuates the countries of the Grand Alliance rises superior to thoughts of material aggrandisement. In the first place there is the firm conviction that the world under German-cum-Turkish domination is unthinkable. This thought alone would suffice to make them continue the struggle to the bitter end. But out of the stress of a fierce conflict has come the perception of greater potentialities in store than merely the curbing of the German lust of power. Freedom for the small nations is the first corollary, and both Serbia and Roumania know that the goal for which they are striving is worth all the suffering imposed upon them now. To the latter, indeed, apart from the delivery of kinsfolk under the Austro-Hungarian yoke, there is opened up the prospect of her own domestic anomalies being removed, of greater political and social freedom for all. The Great Powers, too, are realizing how constructive war's destruction may prove. As a result of the struggle the British Empire finds itself welded together as it had hardly dared before to imagine possible, and during the progress of the war it takes the first practical step towards organic unity, from which for one reason or another it had previously recoiled. For great-hearted Russia visions of a new era after the war are beginning to loom—visions, in themselves well worth fighting for, of the country freed from the benumbing influences that kept it shackled to the prison-wall of reaction. Every country in the Grand Alliance feels uplifted by its association in a cause at once worthy and ennobling, in which each is discovering some moral purpose that it can make more particularly its own. To such an inspiration Germany can only oppose false sentiments about her own freedom from aggression—words that win less credence each time they are uttered. Little wonder, therefore, that as the war drags on her people show signs of losing heart, while the Allies face the New Year in the confidence of a fresh accession of strength.

THE BALKANS.

By H. M. WALLIS.

I.—BEFORE THE FIRST SNOW-FALL.

An officer I know tells me that he landed at Suvla Bay in the last week of August, 1915, in such intolerable heat that he left his "British Warm" down on the beach and never saw it again. In the last week of the following November fell the Great Storm which nobody had anticipated, and for which no preparations had been made. Trenches filled, and men were drowned in them, whilst others, luckier, lay under the pitiless downpour in bottomless mud behind the weak shelter of the paradoss. Nobody had told our engineers that it ever rained in Jovès, so the trenches were made without drainage. As for the coming winter, were we not in the South—the land of the olive and myrtle? So men who had suffered from the heat now shivered in shorts and a flannel shirt until a night's frost did for them. Sentries fell back into the wet trenches dead, tumbling stiffly as a tree falls, frozen. One regiment near him lost fifty men in one night from cold. His legs to the knees were insensible to the remarks of a pin, it was a bad case of trench feet, but, more fortunate than many, he recovered from dysentery and frost-bite at Cairo.

For a travelling people it is surprising how little we English know of other people's climates. That of the Mediterranean seaboard, for instance, which is pretty much alike from Tunis to Salonika. Thus, the present writer has keen recollections of the pinching cold of a winter's morning along the Nile, and has been laid up by sudden chills taken before breakfast at Biskra and Algiers. At Nice he has seen indiarubber trees snapped by the weight of snow, and date-palms bent nearly double. The mistral came through the gap above Le Cannet like a sword, and all the country between the Alpes Maritimes and the actual coast range was reminiscent of the Dovrefjeld. Similarly, in North Africa one has found the train-service stopped for a week, all telegraph poles down, and fourteen natives and many mules dead in snowdrifts in the Aurès.

But the tourist is always assured that it is exceptional, never was like it before, and never will be again. This is what one heard told of the blizzard which cost us so dearly in the Crimea. These southern cold snaps are capricious, and soon over, but while they are on may ruin an ill-found army.

What, then, is the climate of Central Macedonia? As very few Englishmen have wintered there, may it please you to listen to the experiences of one who has.

The summers, which I have never seen, I believe are hot and long. Must be so, for rice and cotton ripen, and maize is a staple. The autumn last on into December, and are pleasant to live in; butterflies are on the wing; I recognised the Queen of Spain Fritillary and some kind of Tailed Blue. One could walk all day with enjoyment, the weather seemed set fair. Tortoises were burying themselves for the winter, and certain signs of cold farther north were readable to such as have the eye. A little cock merlin sitting upon a clod showed a migrant. The stork and swallow had gone and the grey crow had come. So had the northern bullfinch and certain tits, siskin and other birds which move South before the terrible cold of the central European winter. But crocus was out among the hills, the little pale puce thing, not the golden yellow; that we saw in the following spring.

Then, in one night, all changed. A brisk stinging sleet fell, driving before a north-east gale. The ground turned to stone, and all pools and standing water to cat ice. The larger rivers, such as the Maritza, paid

no heed to it. I doubt if they ever freeze. The shores of the Black Sea were frequented by more and more wild geese (white fronted), also merganser and three species of grebe. Sleeping in an unwarmed railway carriage was no longer possible.

January was far from gay. Snowfalls were followed by thaws, and the depth and slipperiness of the mud was a revelation. Then one realised what rail-communications mean to an army. In beastly weather, over cut-up tracks, it is hard to move guns, and almost impossible to keep an army fed. The wiry and docile little oxen of the Balkans do their best, but their best is never very good, and over broken-up roads is reduced to the half of the normal.

Impatiently the people of the country awaited the coming of their beloved winter. This was detestable either in town or country. In the streets rubber over-shoes were necessary, and all windows were double sashed, as in Russia. In the country you never knew for three miles on end what to be at. Here would be a stretch of snow-covered road impassable for wheels, there a mile or two from which the snow had drifted off to the fields, leaving a gritty surface impossible for sledge-runners.

Fall succeeded fall, and thaw followed, and military work came to a stand: and all other work out of doors. No wood could be hauled over such rotten surfaces.

With the coming of the real winter, its conditions, and the way they were faced, I hope to deal in a subsequent article.

THE VENIZELIST MOVEMENT: WORLD-WIDE SUPPORT.

Reuter's Agency learns that, although barely two months have passed since the formation of the Government of National Defence at Salonika, already a very large majority of the Greek people have pronounced categorically in favour of the definitely anti-German policy of M. Venizelos and against the treacherous German schemes of King Constantine.

Up to the end of the year the Provisional Government has received the unanimous confidence of the whole prefectorial district of Macedonia; of the Islands of Chios, Crete, Lesbos, Samos, Syra, Naxos, Andros, Keos, Kythnos, Imbros, Psara, Lemnos, Tenedos, and Santorin.

Secondly, of the Greek communities abroad the following, after full representative meetings, have officially notified the Provisional Government of their unanimous support: Paris, Marseilles, London, Liverpool, Manchester, Cardiff, Petrograd, Moscow, all the communities in Egypt and Cyprus; the colonies of Tunis and Sfax, Mequinez (Morocco), the Canary Islands, Antananarivo, Aden, Adis Abeba, Natal, Melbourne, Montreal, and New York.

Thirdly, the large Greek populations in Turkey and Bulgaria are notoriously devoted to the policy of M. Venizelos and are not likely to have much sympathy for a King who surrendered Macedonia to the Bulgarians and is prepared to give the Kaiser a free hand in Asia Minor. These "unredeemed" populations were represented by properly elected delegates at the Congress of Hellenic Communities which met in Paris a year ago, and was the first representative body of Greeks to express its want of confidence in King Constantine.

As for the population of Old Greece, it should be noted that it has sent to Salonika a continuous stream of volunteers to join the Army of National Defence. While at the elections of June, 1915—the last elections constitutionally held and the first elections at which the issue between M. Venizelos and the Royalist party was clearly defined—the Venizelist party secured no less than 120 out of a total of 180 seats. Moreover, the reign of terror organised throughout the provinces since the events of December 1 is in itself sufficient proof that King Constantine and the Germanised oligarchy at Athens are only too well aware that their policy is not supported by the country.

All these facts make it quite clear that the report that King Constantine has approximately half the country at his back is very far from the truth. Actually the immense majority of the Greek people is definitely favourable to the National Movement and to the cause of the Protecting Powers.

Members of the Hellenic colony at Marseilles have adopted a resolution declaring King Constantine unworthy to be the head of the Greek nation and requesting the protecting Powers to recognize the Venizelos Government.

KING OF SPAIN.

TANGIER TO TEHERAN.

A long time ago I referred to a newspaper wrapper addressed by a German firm in Constantinople to a firm in Salonika, which town was, according to the direction, in Bulgaria. I wonder whether that note ever found its way to Frankfort. Almost am I inclined to suspect that it did, and that it roused the wrath of a certain "Prof. F.K." At any rate, the *Frankfurter Zeitung* has received and published (on December 9) a communication which certainly looks like an attempt to go one better. If such it be, it is a rather belated effort; but the Teuton is a slow thinker, is he not?

The Frankfort journal heads its paragraph "Asquith und Bukarest," and allows its correspondent to tell his story, and to comment upon it in the most ponderous style of Teutonic professorial wit. But, I observe, it does not vouch for his trustworthiness. The Professor leads off with the observation that "Bukarest" and "Asquith" fell on the same day, and the reflection that the two names will be handed down to posterity together. He then proceeds to tell, in sesquipedalian words, how one of the best-known leaders of the German colony in Bucharest had in the spring of 1914 addressed a letter to Mr. Asquith, and how he, in due course, received a reply. The envelope, says the Professor, bore the following address:—

DR. N. N.

BUCAREST.
TURKEY.

THE PRIME MINISTER.

Of course, he is horrified by such a display of ignorance on the part of the "First Minister" of England; and he declares that if he had not actually been allowed to hold the envelope in his own professorial hand he would "this Anachronism hardly possible have conceived"—the "doubting Thomas"! Mr. Asquith's secretary then comes in for an awful wiggling. He had apparently his geography before the Berlin Congress learned, and a decidedly Turcophile pen had used—perhaps one of those old-world goose quills which are so popular in England! Possibly the war has improved the knowledge of the Balkans of the Secretary—and also of his Master. But our (the Germans') Turkish brothers will doubtless rejoice greatly when, in the house of our (the Germans' again) countryman they come across this relic of the fallen Prime Minister. It is all very, very pretty; and it may all be true, of course. But, in view of his own frankly expressed opinion, "Prof. F. K." will pardon me if I feel slightly sceptical about his story.

Now, my "Salonika-Bulgaria" wrapper is still in my own keeping, with the Stamboul postmark and the Turkish stamp intact. And as it was despatched on a German-edited, German-managed, German-financed paper, it seems to show that ignorance of Balkanic geography is not confined strictly to the secretaries of British Prime Ministers; that even Teutonic organisers sometimes nod!

The *Basrah Times* celebrated the second anniversary of its birth on November 29—having made its first appearance, as it reminds its readers, within a week of the British occupation of the port—and it marked the occasion in a manner which shows extraordinary ingenuity on the part of the editor and his staff. This was nothing less than the provision of a "rectilinear diagram of the Roumanian situation," which was "offered with apologies for inaccuracies inseparable from rectangular representation with only the normal resources of a printing press," and the hope that it might "be of interest to the mapless." The apologies, it seems to me, are quite uncalled for, and the hope is bound to be realised. I have examined the diagram carefully, and I am full of admiration for the skill with which it has been set up. To draw such a thing would probably take only a few minutes; but to set it in type must have been a heart-breaking piece of work, surely!

I only wish I could reproduce the map here; but the printers of THE NEAR EAST would undoubtedly desire my blood if I asked to have it set by hand. Besides, the B.T. might sue me for infringement of copyright. It may, however, give you an idea of the ingenuity and patience displayed in the work, if I say that the principal towns are indicated (apparently) by small "o"s; the mountains and rivers by various "rules," as the printers call them—that is, lines of varying thickness; and the passes by square brackets. It sounds simple, doesn't it? But it is not nearly so simple as it sounds, I can assure you. The crown-

ing glory of the "map" is that it really does give quite a good idea of the field covered, in which respect it will bear comparison with other much more ambitious efforts.

I do not remember whether I have ever referred in these notes to the "House of Friendship," which is to be erected in Constantinople for the German-Turkish Association. At all events, such a building is to be added to the rapidly accumulating evidence of Germany's grip on Turkey, and the Kaiser has, of course, shown keen interest in the project. Indeed—according to *Der Tag* of December 2—he has undertaken to provide the funds for the erection of the building in honour of his birthday. A short time ago, in connection with the visit of a Committee of the Association to Berlin, Ismail Jenani Bey, Grand Master of Ceremonies to the Sultan of Turkey, sent to the Kaiser a telegram of homage. Hajji Wilhelm naturally replied in his very best telegraphic style. He was, he said, delighted to learn of the completion of the competition between German architects for the honour of designing the building; and he offered to his Excellency and his co-workers on the Committee his Imperial congratulations on the success that had attended their efforts to press forward with this highly-significant piece of evidence of the German-Turkish brotherhood in arms and joint *kultur*-work. So now we have it on the Imperial one's authority that the Turks really are the Germans' co-workers in the cause of *Kultur*. The Constantinople Commission is so pleased with the recognition of this fact that (*Der Tag* learns) it has resolved to push on its preparations, so that the foundation stone of the House of Friendship may be laid on the Kaiser's birthday, January 27.

CORSAIR.

"MODERN GREECE."

In a short article with the above title, *Irish Life* (Dec. 22) mentions an agitation in Germany, which, as it well says, should set at rest any doubts, if such ever existed, that the Germans are totally lacking in humour. The agitation is directed against "no less a person than Demosthenes, and it is demanded, with bitter denunciation, that the reading of Demosthenes should be forbidden in any German school or University. The amusing argument used is that the thunders of Demosthenes against Philip, the military tyrant of Macedon, can be applied, *nomine mutando*, against Wilhelm, the military tyrant of Prussia."

On this our contemporary comments:—

It is no doubt quite true, but no one but a German would meet the case by the outcry, "Demosthenes must be suppressed." Demosthenes will survive the latest absurdity of German pedantry; but, alas! the fierce and free democracy which he "wielded at will" seems gone never to return. It is not easy to blame those in the free countries who try to find excuses and who tolerate much from Greece. It is not easy to forget what civilisation owes to Greece. But the Greeks, at least of the main land, are no longer the Greeks of Pericles or Epaminondas. Centuries of slavery and a large admixture of barbarian blood have left them only with a double portion of the shifty cunning of the slave as their heritage from the intellect of the past. In the Isles, it is true, they have preserved a purer blood. And Crete and the Cyclades and Sporades are showing it by taking their stand, as their ancestors would have done, with Venice and the cause of Freedom.

THE PRESS ON THE NEAR EAST.

The Recognition of M. Venizelos.

In a leading article ("Another Note to King Constantine") *The Times* (January 2) remarks:—

The appointment of Lord Granville as the representative of King George to the Provisional Government at Salonika, with the title of a "diplomatic agent," shows that they utterly repudiate the "Royalist" contention as to the quality of the conduct of M. Venizelos. The erudite mediaeval student, Professor Lambros, and the pro-German camarilla at Court, denounce as a traitor the statesman who saved Greece and the dynasty, and who framed and carried the Constitution they daily violate; but the protecting Powers recognise in him the faithful servant of the Crown, freely chosen and re-chosen by the Greek people to conduct their affairs in accordance with the fundamental principles of all responsible government. M. Gennadius, long the Greek Minister here, will henceforth represent the Provisional Government in London, so that there will be a regular interchange of views between it and the British Government through authorised channels.

"A Promise of Grace."

The *Morning Post* on Tuesday published a leading article, "The Recognition of Venizelos." Referring to the demands contained in the latest Note of the Allies to Greece, it remarks that "to read them helps us to realise that a new spirit has come over the negotiations since the humiliating and disgraceful events of the 1st and 2nd December":—

Viscount Grey and his colleagues have . . . given place to better men, and the result is already seen in the more vigorous handling of the Greek question. How far the new policy will succeed must depend largely on the forces at the disposal of the Allies and the ability of their local representatives. On neither point would it be wise to dilate in the Press at the present moment.

The article concludes as follows:—

It is too late now to say that King Constantine was treated at the beginning with a folly which almost forced upon him his subsequent course of action. These questions of responsibility are obscure and remote. The practical question is that we must support our friends and weaken our enemies in Greece: however they may have become our enemies does not much matter. We must safeguard our position and the position of our troops. As we pointed out at the time, it was radically unsound to throw forward an Army through a country uncertain, unsecured, and possibly hostile. First to send an army into the interior and then to subjugate the base is an inversion of sound strategy, which was almost bound to have disastrous consequences. These consequences it is the design of the new policy to remove or avert. The task is still difficult; but there are signs that adequate means are to be used and that a true conception of the problem at last underlies the policy of the Allies. We cannot yet call this a crowning mercy; but we may at least describe it as a promise of grace.

The Agrarian Problem in Roumania.

In a leading article, "Reform in Roumania," the *Manchester Guardian* (Dec. 30) expresses the hope that Roumania may get "some compensation for her military disasters in a serious attempt to reform the defects of her political and social system." The writer refers to King Ferdinand's Speech from the Throne on December 22, and its allusion to agrarian and electoral reforms. He then adds:—

The bulk of the population of Roumania are peasants, and the Roumanian Constitution practically excludes them from any political power. No man may vote for the Senate unless he has an income from property of at least £32 a year; and things are so managed that the peasants' vote for the Chamber of Deputies counts for nothing. In practice the landlords control the political machine. The economic position of the Roumanian peasant also leaves much to be desired. Serbia and Bulgaria are peasant proprietor States; Roumania is a country of great landowners. Serfdom lasted in Roumania down to 1864, three years after it was abolished even in Russia. . . . Agrarian discontent runs very deep in Roumania, and in 1907 there was a peasants' rising. Since then some improvement has been made, and in 1914 M. Bratianu, the present Premier, promised political and agrarian reforms. The execution of them was delayed owing to the war, and it is M. Bratianu's pledge which the King reaffirms. It will be noticed, however, that the reforms are again postponed till after the war. The reasons for this course are obvious, but there are weighty arguments on the other side. . . . And this war has taught us all that good intentions are not enough. Time is of the essence of the contract.

"Nationalities"—and Civilisation.

In a vigorous article entitled "The Right of Nationalities," the *Westminster Gazette* takes up a point raised in the "wireless" sent by the German Government to the German Embassy in Washington apropos of the Allies' reply to the German "Peace Note." One paragraph in this "wireless," says the *West-*

minster Gazette, "enables us to anticipate one line of argument which will be adopted by the Central Powers. 'It may be pointed out,' they say, 'as especially remarkable that the Note mentions the right of nationalities, in spite of the fact that one of the avowed purposes of the Entente is the conquest of Constantinople and the Straits.'" To which the *W.G.* replies:—

It is quite true, and let us have no hawing about it. We do not push the doctrine of nationality so far as to make it a cloak for the corrupt and blood-stained tyranny of the Turk. There is a limit to what the civilised world can stand from a race or nation which has perpetually abused its sovereignty to inflict massacre on its own citizens and disturb the peace of its neighbours. Any crystallisation of the *status quo* which gave Europe in general no remedy against such a régime as that of the Turks would be a calamity to the world.

At the time of the Turkish Revolution, the article goes on to say, we were ready to give the Young Turks a chance to set their house in order:—

Once more, if Germany had thrown her influence on to the side of Turkish reform, instead of using the situation to promote conflict between the Balkan States and her European neighbours, the Turkish Empire might have been rehabilitated. But the history of the subsequent years, culminating in the cold-blooded massacres of Armenians during the present war, has proved the Turk to be incurable and incorrigible. The Americans have full information about what has happened in Armenia since the beginning of this war, and if they need more they have only to ask their own missionaries and emissaries in Turkey and the Near East. The condonation of these crimes by the Central Powers is one of the blackest incidents of the war, and it shows a rare assurance on their part that they should put the claim of the Turk on the same level as that of the little nationalities which they have themselves violated and destroyed. Regard for nationality requires us not to confirm the Turkish tyranny but to release from it the races that are in its grasp, and we can find no better guarantee for the accomplishment of this purpose than the control by Russia of Constantinople and the Straits.

Turning to the case of Greece, the *Westminster Gazette* observes that "we need not feel the slightest shame" in regard to the measures which we are compelled to take to clear up the situation in that country:—

In these measures no question arises about the future status or independence of the Greek nation. We would gladly, as we have again and again assured the Greek Government, see its boundaries enlarged, and we have gone to the utmost limits of forbearance rather than seem to exert pressure to force it into the war on our side. The Greek Government has still the fullest liberty to stand out; the only liberty we seek to restrain is that of plotting with the enemy against us and taking secret steps to imperil our force at Salonika.

The article concludes:—

Neither the case of Turkey nor the case of Greece, then, prevents us from saying with a clear conscience that we regard the guarding of nationalities as one of the main purposes of this war. This does not mean that we hold nationalities, big or small, to possess an inherent right of oppressing their subjects or disturbing the peace of their neighbours. There can be no satisfactory reconstruction of Europe which does not in some way provide us a remedy against the abuse of their position, big or small, and even in extreme cases enable us to make an end of such a tyranny as the Turk has maintained in his Empire. We notice that Maximilian Harden is advising his countrymen to turn their thoughts to these larger questions, in default of an immediate means of ending the war. He could hardly give better advice, if it is meant sincerely. We are much more likely to get a lasting peace, when the time comes, if men's minds are made up about the essentials of an orderly civilisation in Europe than if we regard the problem as merely one of territorial readjustments.

Map-Drafting in the Near East.

The *Spectator*, in an article entitled "The Allied Terms," urges that "the oppressed South Slavs, not only of Serbia, but of Bosnia-Herzegovina, Dalmatia, Croatia, and the other provinces peopled by the Southern Slavs, must be erected into a Jugo-Slav kingdom. Unless such an independent nation is founded, there can be no security for peace. In the same way, and for the same reasons, Bohemia must become an independent State, while the Polish provinces of Austria must be added to the new sub-kingdom of Poland. Next, the Roumanians of Transylvania must be allowed to join their fellow Roumanians in the Roumanian Kingdom." The writer reminds us however—and the reminder is not uncalled for—that, though the German and the Magyar must not be allowed to oppress the Slav any longer, "we must resolutely refuse the temptation to reverse the process and let those nationalities be oppressed in turn." As to Turkey, she

"must be treated as drastically as Austria in order to attain security":—

The world must no longer be at the mercy of the Ottoman clan entrenched in Europe. As long as that band of select barbarians holds Constantinople and the entrances to the Black Sea, there can be no security for peace. Therefore Constantinople and the Straits must be given to the Power most deeply interested in the Black Sea—Russia—free passage in time of peace being guaranteed by the new and Christian Emperor of Byzantium. The process of freeing nationalities from oppression must be applied organically to the Turkish Empire. The Armenians, or what remains of the race whose agonised calls for help and mercy have been heard even through the din of the present war, will probably have to be placed under the tutelage of Russia. They could not stand alone among the Kurds. The Arabs must be freed from Ottoman control and left to their natural function of guarding the Holy Places of the Moslem faith; while care must be taken that Syria, Asia Minor, and Mesopotamia shall obtain under external protection that tranquillity which they deserve, but which has never been theirs since the appearance of the Ottoman Turk among them. But to say that the Empire of the Horde must pass away is not to say that no Moslem State except Arabia is to remain to mark where Turkey once stood. In carrying out their policy of security in regard to Turkey the Allies will not only be willing but anxious to create such a State or States, where and when it shall prove possible. The Allies want not to injure but to strengthen and improve all the best elements in the Moslem world.

Germany's Disillusioning.

Writing in the *Pall Mall Gazette* (Dec. 28) Mr. H. C. Bywater, who has just returned from a two months' visit to the United States, describes the change that has come over the feeling in that country in regard to the war. "Early last summer," he says, "on the occasion of a previous visit, it was noticeable that most thoughtful Americans considered the war to be rapidly approaching the stage when a deadlock would become inevitable. In other words, they believed the struggle would end in a draw. To-day it is rare to find a thoughtful American who doubts that the Allies will achieve a sweeping victory." And he adds:—

This change of view is the more striking in that the past six months have witnessed a spectacular Teuton triumph in the Balkans, besides a recrudescence of the submarine war on commerce which is admittedly of a more serious character than the earlier phases of U-boat piracy. Nevertheless, American confidence in the ultimate victory of the Allies rises steadily higher and higher, possibly because there are certain facts, the significance of which can be seen in truer perspective three thousand miles away than here at home.

This point is enforced by an illustration which bears upon the situation in the Near East. Mr. Bywater writes:—

As early as December 8 private advices were received in New York from Berlin to the effect that the bulk of the wheat in Roumania had been destroyed or rendered unfit for use before the invading armies entered the country. This is a positive disaster for the Germans, who had confidently reckoned on securing a large haul of cereals from their latest victim, while the German papers had been pointing out that the real value of the operations in Roumania lay in the immense deposits of corn and oil which would be sufficient to tide over the German shortage in these commodities for months to come.

Taking all things together, all the informants agree that the present situation in Germany is "incomparably worse than the German Press admits, and that during the first three months, for the first time during the war, the food problem has become really acute."

Turk, German, and Briton.

Writing on the "Unification of Turkey," in *Land and Water* (Dec. 21), Sir William Ramsay expresses the opinion that the strength of the Turkish Empire available at the present moment is distinctly greater than it was at the beginning of the war:—

The two greatest weaknesses in the nation, as distinct from the Government, were the low standard of education, making it difficult to turn the peasantry into soldiers adequate to the performance of the duties of modern war, and the many lines of cleavage between the great variety of Moslem races which people the country.

German influence has done much to eradicate these weaknesses, and the war has helped the process greatly. Sir William does not share the exaggerated opinion of the Turk's honesty that many travellers hold.

But take one thing with another the Turks who were educated for a few years in industrial occupations constituted a class of men who possessed the dignity and aristocratic tone which Islam seems usually to carry with it, and combined this with a quite fair amount of usefulness and an extraordinary amount of faithfulness in obeying instructions. Similar results were produced by training in the Army under European officers. This I had noticed both in old men who had come in contact with British officers, and in young men who had been drilled by German-trained Turks or by Germans. This process has been going on on a greatly increased scale for the last two years; and even in peace it used to produce very noteworthy effects. Moreover, the divisions and dislikes and jealousies which separate so many of the Moslem tribes and races in Anatolia from one another were not so deep-seated as to last through the experiences of these two years. Training and drill side by side in the army have undoubtedly done much to obliterate such feelings. . . . I do not doubt for a moment that an immensely larger area of recruiting has been available during the last two years than ever was attempted in the history of Turkey since the Turks were conquering their Empire, when every man was a soldier.

The writer goes on to contrast the German's love of work with the Briton's devotion to athletics, and the effect of these things upon the Turk:—

The Germans are not beloved; on the contrary, I have never heard any person speak with such bitterness of the Germans as do the Turks and the native population generally. But the Germans rule by fear, which is enhanced by real respect for their effectiveness and devotion to work. The contrast between the intense spirit of work with the zealous application to duty which characterises apparently all Germans who come to Turkey, on the one hand, and the devotion to amusements during a large part of the day—amusements indeed of quite healthy and athletic character—which characterises the British residents and officials, on the other hand, has been noticed very much by the Turks, and has produced a strong effect upon them.

As an illustration of the effects thus brought about, Sir William cites the case of a Pasha who was thinking of sending one of his sons to this country to be educated:—

This Pasha was called to Constantinople to occupy the highest official position in the Empire. After some experience there, he abandoned his intention of sending his son to be educated in England, and stated the reason quite plainly. He saw that all the Germans were working hard for certain big ends from morning to night, and that they were all co-ordinating their labour for certain well-defined purposes, while the English were occupying their time for the most part in lawn-tennis and shooting, and very few of the officials seemed to take any interest in the affairs, or the people, or the language of Turkey. He said that he did not want his son to grow up a good lawn-tennis player, but a hard worker, and he would therefore not send him to Britain for education.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

What will the railway map of the Suez Canal zone be like when the war is over? For an idea of the colossal engineering works carried out by us in Egypt during the past year I commend my readers to Mr. Massey's article published last week. Even so, it only gives us an outline of what we have done. "Railways and roads," he writes, "were required equally for defence and attack. We have many of them from the Mediterranean to the Gulf of Suez. There are Decauville railways, lines of metre gauge, and a remarkable railway of standard gauge. Running over it to-day are London and South-Western Railway engines with loads as heavy as they have hauled between Southampton Docks and Nine Elms. Without cessation night and day, week in, week out, they move on a journey out and home of 200 miles."

In August, we read, Romani was a railroad, and since then "track-laying has progressed at an average rate of a kilometre a day." Again, pressure on the standard-gauge line has been extremely heavy, but now "as its mileage increases, a metre-gauge line relieves it," and carries all the supplies Romani and the district west of it require. Thus, Romani of the past, the unimportant village of Romani, seems to blossom forth as a junction of the future. Something after the nature of Clapham, I suppose. It is wonderful, and yet we know so little of the transformed Canal zone. Its desert stretches may be rice-fields ere long. Already a permanent trunk road links up Ismailia with Port Said on the western side of the Canal, enabling motorists to proceed without difficulty to Cairo. So much we are allowed to know to-day. But I will guarantee that the "bag of surprises" in store for us after the war will completely eclipse these momentary glances.

The article on Russo-Persian trade from the pen of M. Shaton, a Russian economist, which appeared in *The Times* Russian section on Saturday, is an instructive summary of commercial relations between the two countries. According to the authority in question, it is, in the first place, necessary "once and for all and quite categorically" to decree "that the region of Russia's export activity in Persia can be, and in fact is, only the northern portion of the country." This is a statement, coming as it does from a Russian source, with which I entirely agree. Then, again, in the same article, mention is made of the extraordinary increase of German and Austrian trade in northern Persia, particularly Azerbaijan, during the decade preceding the great war. The increase was one of over 300 per cent., and when some years ago Russia permitted the transit by mail of parcels from abroad to Persia it seems that the Teutons were the only people wise enough to take advantage of the new order, with results favourable to themselves. As a matter of fact, Berlin was decidedly keen on improving her trade connections with Persia, and fully realized more so than we have ever done, that it was a market worth working for, more particularly for what it would bring in future years. Therefore, in 1911, by virtue of the Potsdam Agreement, they ingeniously

obtained from Russia a pledge that she would build within two years a railway line from Khamikin to Hamadan. This, naturally, would only have favoured German interests, by bringing Hamadan and northern Persia within rail distance of Baghdad, without opening a corresponding market for Russian trade. The same old tricks, it will be seen, that have ever characterised German methods.

Passing from his review of the past to the future, M. Shaton thinks that Russian merchants will have to "wake up" if they wish to increase their trade with northern Persia. As for Persian exports to Russia, they are bound to increase if only for the following reason: "The production of raw cotton in Persia is developing very rapidly, and almost in its entirety (96 per cent.) is sent to Russia. The quantity of raw cotton imported by Russia from Persia constitutes only 7 to 8 per cent. of the total quantity imported; but if we take into consideration the growth of the tilled area and the circumstance that experiments with crops of American cotton have proved successful in Persia," it must be recognised that the import of Persian raw cotton into Russia "has a bright future." This will, of course, necessitate increased Russian exports to Persia.

Egypt is a prominent subject in all the annual reviews of the Lancashire cotton trade which I have seen. During 1916 numerous Near Eastern outlets for trade have continued to be adversely affected by the war, but from Egypt there has been a large and increasing demand for textile fabrics. From another reliable source I hear that merchants in Alexandria and Cairo have given to their agents in this country particular (and standing) instructions to secure cloths, as the demand in Egypt has been healthy, with an all-round favourable financial situation. Manchester friends tell me, too, that all kinds of goods made from Egyptian yarns are extremely popular, and, as the market reports indicate, have been advanced in price to an extraordinarily high level. As a matter of interest, following on Professor Todd's interesting articles on the subject, the review in the *Yorkshire Observer* of the year's operations in the Egyptian cotton market in Manchester, printed elsewhere in this issue, will attract attention.

Nothing appears to have been done in the matter of handling the Egyptian cotton crop which, before the war, was in the hands of the Huns. My readers will recall that I have discussed this matter on previous occasions, and expressed the fear that the business would fall into non-British control. It is difficult to understand what is at the bottom of the British unwillingness to grapple with this serious question; but I am informed that nothing has yet been done, and that the existing firms in Alexandria are unable to handle the business. What is the result? The crop is passing into the hands of small dealers, foreign as well as Egyptian, and, to quote another source (*The Times*), "it is not too much to say that the position is now very serious." I quite agree with the paper that "something must be done before next autumn to put the matter on a proper basis, though it seems evident that so long as such questions as these have to be handled from the Foreign

Office there is little hope of a speedy and satisfactory solution."

An old friend of the readers of *THE NEAR EAST*, Mr. Percy F. Martin, has come out in defence of that much-abused functionary, the British Consul. In the December issue of *The Times Trade Supplement*, Mr. Samuel Instone, whose right to deal with the subject is undeniable, in a very trenchant letter assumed that the failure of our Consular system arises wholly from the inefficiency of the officers employed. Mr. Martin makes a very spirited rejoinder to this: "If your correspondent" (Mr. Martin writes) "knows anything from practical experience he must assuredly admit that the undenied, and undeniable, 'inefficiency' of the Consular system arises almost entirely from the severe, and, in many instances, quite preposterous restrictions imposed upon British Consuls by Downing Street, and not from the fact that the Consuls are, as your correspondent alleges, 'wholly lacking the business training and experience.'"

Then, to show "how extravagant and ill-founded are Mr. Instone's strictures on the Consular body," is given a list of names that are certainly instances of greatness. Among these are Sir Claude Malet, Sir Lionel Carden, and "the greatest pro-Consul of the age, the present Earl of Cromer, at one time in his great career, Consul-General in Egypt." I could add other names to the list, but, at the same time, there is little doubt that some of our Consular officers abroad are not all that British interests demand that they should be. Curiously enough, in the same issue of the *Trade Supplement* a number of prominent British manufacturers and merchants give their views on the same subject, and while, generally speaking, they are agreed that all the fault does not lie on the shoulders of the personnel of the Service, which, by the way, Lord Joicey declares is "starved," there is more than a tendency towards the view that there is some individual responsibility for the present state of affairs.

For example, Mr. Basil E. Peto, M.P., Chairman of the Parliamentary Committee of the Imperial Merchant Service Guild, makes a somewhat serious charge. "With but few exceptions our Consuls," he writes, "whether aliens or of British nationality, have been hopelessly out of touch with ships and shipping, and as representatives of this country they have been useless. Captains of British merchant vessels frequently report that they fail to get the support and assistance abroad that they are undoubtedly entitled to, and are received in a manner both inconsiderate and unsympathetic, as if work in connection with British shipping were a troublesome and ungrateful task. This, no doubt, arises from the fact that these Consular positions are so frequently unpaid, and the Consuls depend for their remuneration on a business from which they can get fees. The daily hours of business are often absurdly short; frequently Consuls locate their offices in most inconvenient places at a considerable distance from the port itself, the office being, in fact, the Consul's residence." It will be seen that there is much to be said from more than one point of view.

COMMENTATOR.

Cotton and Textile Notes.

Lancashire Weekly Report—Egyptian Cotton Operations in 1916.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

The market has not shown much life this week, and at the time of writing buyers and sellers have scarcely got into their stride again after the recent holidays. The outlook is rather uncertain, and spinners and manufacturers derive their strength from the contracts on the books rather than from the amount of business being secured at the present time. There is a tendency at the moment for engagements to run down.

Wages questions continue to demand a good deal of attention. To-day (Wednesday) the arbitration court appointed by the Board of Trade, consisting of Mr. W. Mackenzie, K.C. (chairman), Sir T. Ratcliffe Ellis, and Mr. J. R. Clynes, M.P., have sat at the Manchester Town Hall to deal with the 'cardroom workers' dispute. A definite application has now been made by the Operative Spinners' Amalgamation for a rise in wages of 20 per cent. Six months' notice has been given, so no change in list rates can take place until the middle of February.

The movements in raw cotton futures have been rather irregular, and many authorities cannot account for the ups and downs which are taking place. The demand in piece goods for Egypt continues quieter. A sorting-up business has been done, but shippers are less disposed to place large lines for distant delivery. Certain kinds of sized shirtings were bought extensively a few weeks ago, and deliveries are now being made against contracts.

General advices from India are healthy but fresh buying has been rather limited. Only odd lots have been mentioned for China. The South American markets continue to give less support than a little time ago. The engagements of cloth manufacturers are getting rather more irregular. Most producers of fancies, however, have still extensive order lists.

A rather slow feeling has prevailed in American and Egyptian yarns. Now and again spinners are found who are not quite so independent as a month ago. The turn-over all round has been unimportant.

REVIEW OF 1916.

The Egyptian cotton market has passed through a very exciting time, with fluctuations and speculative dealings during the last few months of 1916 being very prominent. At the beginning of January fully good fair brown Egyptian cotton in Liverpool was at 10.35d. At the end of March the quotation was 10.74d., and by the end of June the price had advanced to 11.65d. Since then a striking upward movement has shown itself. On September 30 the rate was 14.10d., but by the end of October the price had advanced to 17.25d., and on December 8 the quotation was 20.80d.

The Egyptian crop for last season turned out to be much as was expected, and amounted to 4,726,518 cantars, against 6,463,726 cantars in the previous year. The prospects early this season for the new crop were bright, and there was some talk of an output of 7,500,000 cantars. The growth, however, has passed through a very unsatisfactory period, and it is not now expected that the output will reach 6,000,000 cantars. An increasing demand has been experienced for long staple cotton, and gambling in the article has been very pronounced. The Liverpool Cotton Association has passed regulations to restrict

dealings, but so far the new rules do not seem to have had any very great effect upon the situation, and at the time of writing wild fluctuations in prices continue to take place.

Averages Compared.

The following table gives the crops of American and Egyptian cotton, with average prices for the past ten seasons:—

Season.	AMERICAN.		EGYPTIAN.	
	Crop. Bales.	Average price. Middling. d.	Crop. Cantars.	Avg. price. F.G.F. brown. d.
1906-7	13,551,000	6.38	6,919,783	10 1/2
1907-8	11,582,000	6.19	7,224,669	8 13-16
1908-9	13,829,000	5.50	6,755,812	8 7-16
1909-10	10,651,000	7.86	4,986,715	15 1/2
1910-11	12,132,000	7.84	7,573,597	10 1/2
1911-12	16,138,000	6.09	7,424,000	9 9-16
1912-13	14,167,115	6.76	7,532,920	9.79
1913-14	15,610,000	7.27	7,684,172	9.45
1914-15	15,067,000	5.22	6,463,726	7.34
1915-16	12,953,000	7.51	4,726,518	10.42

Cotton and Yarn Prices.

The following is a list of cotton and yarn quotations for the past twelve months:—

1916.	F.G.F. Brown Egyptian Cotton.		Yarn 60's Twist.

Spinnings.

There were indications towards the close of 1915 of a steady improvement in the position of Egyptian spinnings, and the more satisfactory state of affairs has been maintained during the past year. A large and increasing demand has come through, whilst the curtailment of production has been greater in this section than in the American department. Producers of fine twofolds have done particularly well. Recently some falling off in business has shown itself, owing to the extraordinary position of the Egyptian cotton market, but numerous producers have very extensive engagements and are not at all anxious for fresh orders. Big profits have been made by some firms, and it is of interest to note that the Fine Spinners' Combine has increased its interim dividend on the ordinary shares.

STORING COTTON IN EGYPT.

The General Officer Commanding-in-Chief in Egypt has issued a proclamation in accordance with which measures will be taken to prevent the accumulation of cotton in Egypt, in view of the fact that it might eventually be shipped for the account of persons having enemy interests. By this proclamation, the storage of cotton in the name or at the disposal of persons other than persons resident in Egypt, is prohibited except under licence. Any person causing cotton to be stored in the name of a non-resident must declare the same within three days to the licensing officer.

EXPORT OF SUDAN COTTON SEED.

By a proclamation published in the Sudan Government Gazette, His Excellency the Governor-General prohibits the export of cotton seed from the Sudan, except to Egypt or the United Kingdom of Great Britain and Ireland, except with the permission of an officer appointed in that behalf.

OIL IN ALGERIA.

Expert Report on Constantine Field.

The directors of the Constantine Oilfields, Ltd., announce that arrangements have been concluded with an influential financial group to provide the necessary funds required to develop five plots of land situate at Tliouanet, in the Province of Oran, Algeria, of which the company secured a lease in June, 1914. The directors state that it has been arranged that the Constantine Oilfields shall transfer the lease and the benefit of certain applications for licences relating to other land in the same district, which have been made on behalf of the company, in return for half-profits after there has been repaid to the persons providing the funds a sum equal to the amount for which they have made themselves responsible.

Prior to the conclusion of the above arrangements, the financial group referred to instructed Captain A. A. Carlier—a French oil engineer of repute—to make an independent report on the properties to them. This was entirely satisfactory. A copy of the report has been furnished to the directors, and the following are extracts therefrom:—

"Your leases are situated only about 800 metres from three oil-producing wells. . . .

"The total daily production of these wells is about 20 to 24 tons, sold on the spot at 215 fr. per ton. The Tliouanet district, upon which precisely your leases are situated, has of late attracted considerable attention from prospectors, capitalists, and even from the public bodies of the Algerian Government. On May 30 last His Excellency the Governor-General for Algeria paid a surprise visit to the three wells already mentioned in order to have the wells pumped out in his presence. It is reported officially that a good flow of oil came out for hours. Geologically speaking, your leases are absolutely in the same oil-bearing belt of country. I am perfectly satisfied to strike oil on your leases between 90 to 110 metres in depth, which level would correspond to the depth where oil has been met on your neighbour's leases.

"Summing up all the above considerations, I have full confidence in the undertaking under consideration. I can cheerfully recommend to you to go ahead during the coming wet season, as abundance of water available to inject in the boreholes will greatly facilitate prompt and efficacious operation."

The directors add that these arrangements have no relation to the bituminous deposits at St. Arnaud, for the development of which the Constantine Oilfields was originally formed. Operations at St. Arnaud were suspended at the outbreak of the war, but negotiations are now proceeding with the same financial group above referred to for the resumption of the exploitation of these deposits.

A "DANUBE CANAL" PROJECT.

An "American Scandinavian" has given to the Stockholm correspondent of the Exchange Telegraph Co. an account of a recent journey in Germany. Germany, he says, is preparing to build a Rhine-Danube ship canal, which is an indispensable feature of the Berlin-Baghdad scheme, and will lead to German warships entering the Black Sea. A link is the Neckar ship canal, which is already sanctioned. Such plans have received fresh support from the successes in Roumania. In Berlin has been started a private syndicate, backed by banking interests, for prospecting for profitable engineering enterprises in Turkey and Asia.

AN EGYPTIAN ROBBERY.**The Mystery of the Mail Bags.**

A Cairo correspondent, whose message has been delayed in transmission, writes as follows:—

The disappearance of a mailbag which included a registered letter containing £E5,000 in bank notes has been a nine days' wonder for the Egyptian public. Stated briefly, the facts are as follows. The night train for Alexandria left Cairo at 11.30 p.m. on November 14. On arrival at Tanta, thirteen mail bags for Tanta town and Mansura were removed from the postal van, where they had been in charge of three employees. A receipt for the full number of bags was given by the clerk from the Tanta Post Office, but when the mail for Mansura was transferred to the Damietta train, which left at 5.30 a.m. the following day, one bag for Mansura was missing. The robbery was immediately reported to the proper authorities, and five arrests have been made; but at the time of writing, neither the bag nor its contents have been recovered.

An interesting point is that, with insight almost prophetic, the postal authorities had very recently made strong representations to the leading banking institutions concerning the potentialities for crime envisaged by the practice, to which the banks are addicted, of forwarding heavy remittances in the shape of bank notes in ordinary registered letters by the night trains. The banks do not insure the contents of the letters with the Post Office, but with outside companies at very low rates. Thus, in a three-cornered arrangement of this kind the banks undeniably have the best of the bargain; for they stand to lose practically nothing. Moreover, the insurance companies, gambling mildly upon the enviable reputation for security achieved by the Egyptian postal service after long years of administrative effort, are able to give them the benefit of exceptionally low premiums for this class of risk. The insurance company risks the loss of the total sum despatched by the banks less the regulation indemnity of £2 per article payable by the Post Office, and less the amounts received in premiums during the years in which no claim has been made. The loss to the Post Office, however unimportant intrinsically, is incalculably greater than that of either of the other parties interested, as the repetition of a robbery of this kind might conceivably have the effect of shaking public confidence in the integrity of an important Government Department, a very serious affair. It is hoped, therefore, that means will be devised by which the postal administration will assume responsibility for the full remittances despatched by the banks on terms which will be acceptable to both, thus eliminating third parties from participation in the transaction.

EGYPTIAN WHEAT.

Reuten recently cabled to the Egyptian papers, stating that there was a desire in this country that wheat should be imported from Egypt and the Sudan. Much interest was aroused by the cable, and a representative of the *Egyptian Gazette* interviewed Mr. Gerald Dudgeon, Consulting Agriculturist to the Ministry of Agriculture, on the subject.

Mr. Dudgeon said:—"Although I am not in a position to state what action the Egyptian Government intends to take with reference to the export of wheat, it is extremely unlikely that any restrictions will be put upon the cultivation of cotton, for the reason that it does not appear that the wheat area in Egypt can be so increased as to permit of export."

It is reported from Constantinople that a large timber mill has been opened which will undertake the manufacture of furniture and certain agricultural implements. It will give employment to 1,200 workpeople, and is situated in Adabazar, Asia Minor. The Germans made quite a function of the opening of the mill, and proclaimed it as "a step forward in the industrial life of Turkey and a testimony to the industrial power of the country."

EGYPT'S FLOURISHING FINANCES.**"Bumper" Year Expected.**

(FROM OUR OWN CORRESPONDENT.)

CAIRO, December 12.

To judge by the statement of accounts for October, published last evening, Egypt is in for a bumper financial year, far in excess of expectations. During the month revenue amounted to £E2,880,356, as against £E2,242,730 in October, 1915, whilst expenditure was £E1,702,573, as against £E1,527,741. Thus on the month's working there is an excess of revenue of £E1,177,783, as compared with one of £E714,983 a year ago. The position for the seven months is, in these circumstances, most satisfactory.

The total revenue amounts to £E11,197,064, or £E1,810,311 more than at the end of the corresponding period of 1915, and the expenditure to £E9,819,567, or £E887,411 more than what it was on the 31st October last year. As a result there is a surplus of receipts over outgoings of no less than £E1,377,497, compared with one of only £E454,597 at the same date a year ago. It is interesting to note that the revenue collected during the seven months is 67 per cent. and the expenditure incurred 59 per cent. of the total estimated for the whole financial year, and that whilst the former is 4 per cent. above, the latter is 1 per cent. below the respective proportions at the same date last year.

Some of the Increases.

Compared with the figures at the end of October, 1915, Direct Taxes are up by £E363,081, Customs by £E551,060, Tobacco Dues by £E156,920, Legal Fees by £E25,338 (Native Court receipts are, however, down by £E28,087), Railway Receipts by £E676,445—equivalent to over 33 per cent. of last year's figure—Post Office by £E18,439, Investment of Funds by £E16,300, and Sale of Land by £E18,692. The only important decrease was, as might be expected, in Port Dues, which have fallen off by £E23,053, or 25 per cent. of last year's figure.

Extraordinary Receipts, it may be noted, are already in excess of the estimate for the whole year, as also are Assay Dues—this latter is an indication that the fellaheen are well-off, as the dues come entirely from the stamping of gold ornaments—whilst Rent of Land is within measurable distance of the budget figure. All the other items are well in advance of the proper proportion for the seven months.

Costly Irrigation.

The increase in expenditure during the month was mainly in irrigation, which took £E80,785, or £E7,269 more; Railways, which spent £E325,712, or £E150,234 more; and the War Office, which took £E87,883, or £E7,602 more. The other departments mostly had very minor increases.

SUDAN PRODUCE REPORT.

A recent report states that the first arrivals of the new gum crop on the market of El-Obeid have fetched a higher price than usual at the opening of the gum season. The opening price at El-Obeid was 143 piastres per kantar (which corresponds to 185 p.t. at Khartoum), while the opening price last year was 135 p.t. at El-Obeid. The senna market, after having dropped to 170 p.t. per kantar during the last month, has again commenced to rise, the price having now reached 320 p.t. per kantar. In view of the great interest that has been taken this year in the cultivation of senna, whereas in the past only the wild senna was depended upon, the rise of prices is rather phenomenal. The prices of dura are still high in spite of the appearance of the new crop on the market. Price per ardeb is now 112 p.t., while at the same time last year it was 62 p.t. White Simsim from Singa is being sold at 222 p.t. per ardeb. Last year's price was 130 p.t. Red Simsim is 215 p.t. in comparison with 150 p.t. last year.

TRADE NOTES.**Liquidation.**

Mr. W. H. Perkins, 19, Sharia Boulac, Cairo, has been appointed Receiver of the property and assets in Egypt of Otto Lehrenkrauss, Sharia Kasr el Nil, Cairo, with instructions to liquidate the same.

Sale of Enemy Property.

It is notified in the *Egyptian Journal Officiel* that offers will be received up to January 15, 1917, for the purchase of the undermentioned property of Antoine Lebau (in liquidation) at Alexandria, to be sold in one or two lots at purchaser's option:—(1) An Ice Factory situated at Ruelle Cumbo, between Nos. 108 and 110, Rue du Prince Abdel Moneim, comprising the building, machinery and plant and the land upon which it is erected. (2) A plot of land with two buildings erected thereon, occupied as dwellings and shops, situated at Nos. 102 and 104, Rue du Prince Abdel Moneim. Offers should be sent in writing to the Receiver, Mr. A. J. Lowe, 5, Rue Adib, together with a deposit in cash of ten per cent. of the amount offered.

EASTERN PERSIA.

The British Consul at Khorassan reports that there are promising openings for British trade in Eastern Persia, and that these have not been injured by the war, except that the parcel post from the United Kingdom is irregular. That from Germany and Austria-Hungary is entirely suspended. Had greater attention, he says, been paid to the Quetta-Nushki trade route, British trade would have suffered less than it has, for had this route been improved in proportion to its deserts it would have secured the whole of the carrying trade in British and Indian goods to Eastern Persia and in Indian goods (especially tea) to Russia. The extension from Nushki to the Persian boundary, for which material has been stored for a long time at the former place, would have shortened the journey by at least twenty days. The want of a trustworthy forwarding agency is still much felt.

ALGERIAN WOOL.

Not much change has taken place in the state of the Algerian wool market; the prices of wool remain firm without any rise, despite the sharp increase in the price of sheepskins. So far no fleeces are being offered at sales, but the offerings of waste are numerous, and 600 bales have been sold to Marseilles firms at fairly reasonable prices. A good deal of interest has been awakened here, as the General Government now proposes to open a wool-washing establishment at Maison Carée, an industrial centre situated on the Algiers-Oran Railway, close to the Harrach river, the waters of which are, it is reported, highly suitable for washing wool. All stocks will have to be sent to Maison Carée. The stocks of sheep in Algeria continue in splendid condition. Many stock owners have now decided not to shear their sheep, preferring to sell them in full wool rather than risk the fleeces being requisitioned.—*Textile Mercury*.

DELICIOUS COFFEE.

**RED
WHITE
& BLUE**

For Breakfast & after Dinner.

Wholesale, of Hanson's, London, E.C.4.

PRODUCE REPORT.

LONDON, January 4.

Currants.

The serious political situation and the strict blockade in Greece caused considerable consternation in the market there, whilst here the possibility of a shortage of supplies was fully anticipated. It is hoped now that a prompt acceptance of the Allies' recent demands by the Greek Government will soon relieve this unsatisfactory position. There has been only a moderate activity in the market this past week, with business done at late rates. Considerable interest is shown in some shipments of Australian currants, which are now due, and which will, undoubtedly, influence in some way the market.

Sultanas.

There has been only a small demand, with few transactions of little importance. It appears that the quality of the new Afghanistan sultanas, of recent arrivals, is somewhat disappointing.

Figs and Dates.

No business of importance was done, and the prices remain unchanged for Spanish figs at 50s. to 55s., and Greek afloat at 57s. to 59s., whilst Egyptian dates are quoted at 33s. to 36s., and Persian at 32s. to 33s.

Seeds.

Linseed has been inactive this week, London-Calcutta spot and afloat quoted at 103s.;

Jan.-Feb. 104s. Bombay ordinary Jan.-Feb. 106s., with little doing. Rapeseed is quiet. Toria-Hull Jan.-Feb. offered at 92s., and Ferozepore Dec.-Jan. 90s. Cottonseed has been rather dull. Egyptian to London, Sakelarides quality, loading, £19 7s. 6d. per ton. Lentils are in better demand at 38s. per 100 lbs. Mustard seed 28s. to 36s. per cwt.

Oils.

Linseed oil has been dull, with very little doing for spot pipes at £50 10s., and barrels ditto at £51 10s. landed terms. Rape oil is very firm at closing; ordinary brown naked spot £54. English refined barrels, £57 to £59. Cotton oil is quiet; crude spot pipes is quoted at £52 10s., refined pale remains nominal, and barrels sweet at £59 to £60, as to make. Olive oil is in good demand at late rates.

Oil Cakes.

Cotton Cakes.—Egyptians are in moderate demand, with business done at £16 to £16 10s. per ton ex quay, whilst quotations for arrivals are £15 17s. 6d. per ton ex ship. English made cotton cakes are unchanged at £16 2s. 6d. to £16 7s. 6d. per ton ex mill. Linseed cakes meet with only a very small demand, which may well be attributed to the high prices asked. Best London made are quoted at £19 to £19 10s. per ton, whilst prime American in bags is offered at £18 5s. to £18 10s. ex warehouse.

THE WORLD'S WHEAT CROP.

The production of wheat for the current season is estimated at 79,682,000 cwts. in Australia, 41,461,000 cwts. in Argentina, 114,977,000 cwts. in France, and 342,805,000 cwts. in the United States (winter and spring together). The French barley crop is estimated at 16,888,000 cwts. Oats are expected to produce 9,603,000 cwts. in Argentina, 81,256,000 in France, and 357,716,000 cwts. in the United States. The yield of rye in France is put at 17,945,000 cwts., and in the United States at 23,692,000 cwts. The production of maize in the United States is estimated at 1,291,623,000 cwts. The total production of wheat in Canada, United States, British India, European Russia, United Kingdom, France, Spain, Italy, Norway, Denmark, Netherlands, Roumania, Switzerland, Japan, Egypt, and Tunis is given at 1,327,523,000 cwts., and of rye in Canada, United States, European Russia, France, Spain, Ireland, Italy, Norway, Denmark, Switzerland, and the Netherlands at 494,473,000 cwts. The total production of barley in the same countries as for wheat, with the omission of India, is estimated at 439,485,000 cwts., and of oats in the same countries as barley, with the exception of Egypt, at 902,313,000 cwts., while the production of maize in Canada, United States, European Russia, Italy, Switzerland, and Japan is given at 1,372,248,000 cwts.

CONTRACTORS TO GOVERNMENT.

ALEXANDRIA PRIZE COURT.**Judgment for Damages against the Crown.**

His Honour Judge Grain has given judgment in the Alexandria Prize Court in the case in which the Chartered Bank of India, Australia and China, The Mercantile Bank of India, Ltd., The Eastern Pacific Trading Co., Ltd., The Pacific Trading Co., Ltd., and Messrs. Boustead and Co. sued Captain F. D. Gilpin Brown, R.N. (H.M.S. "Black Prince"), Lieutenant E. H. Grogan, R.N., and H.M. Procurator in Egypt and General Officer Commanding the Troops in Egypt, for £31,400 for damage done to copra by a fire, which took place at the Custom House at Alexandria, where the copra had been stored, after being discharged from the steamship Sudmark.

The action was brought against Captain Gilpin Brown as captor of the Sudmark, Lieutenant Grogan, who at the time was acting as detaining officer on behalf of the Crown, as agent of the captor, and also as having had the custody of the Sudmark, and the General Officer Commanding as being partly responsible for the discharging of the ship.

Grounds of Action.

The grounds of action were alleged to be:—That the vessel was improperly discharged before handing over to the Prize Court.

Failure to insure after discharge.

Failure of due care in discharging, storage, and supervision of cargo; in particular.

(a) Allowed the said cargo or parts thereof to become wetted by the rain on the quays.

(b) Cargo stored into the bags in contact with iron sides of sheds.

(c) Failed to provide proper ventilation.

(d) Failed to exercise due or any supervision to guard against incendiarism or other possible causes of fire.

In giving judgment, his Honour said, after reciting the history of the case, the questions which he had to consider were whether the defendants were liable by reason of:—

(a) The goods being discharged from the ship before handing over to the Marshal of the Prize Court or his substitutes.

(b) Failure to insure after the goods had been landed.

(c) Failure to take sufficient care in unloading and storing the goods.

"The plaintiffs have practically admitted that they have not made out their case as regards the failure to take sufficient care in unloading and storage (the judge proceeded), and I find on the evidence before me that every care that was possible was taken, in both the discharging and storage. The questions which remain are whether the defendants have rendered themselves liable for the damage which has occurred, by discharging this cargo before the ships had been handed over to the Marshal of the Prize Court, and without any order from a Prize Court; and the question of insurance."

The Finding.

His Honour then discussed certain decisions bearing upon the case and the points at issue. Proceeding he said:—"It is suggested by the defendants in their pleadings that there was reasonable cause for this discharging of the 'Sudmark.' On the grounds that 'the military desired to requisition the barley in the ship and that immediate discharge was necessary in order to comply.' Lieutenant Grogan states the same thing in his affidavit and also states that the master of the Sudmark was pressing him to unload as the cargo was perishable. He also states that the 'Customs had forbidden the export of certain goods and it was desirable to discharge the cargo . . . in order to ascertain if any such articles were on board.' I must admit that I do not follow the last reason, because there was no question of exporting any of the cargo of the Sudmark and as regards this particular cargo there appears to be no reason why the cargo should not have remained on the ship indefinitely. The desire of the military to requisition was not a good reason or any reason at all to unload."

"The suggestion of unloading did not in any way come from the military, in fact the military were in no hurry at all, because they do not appear to have taken over the goods

till on or about October 6, 1914. The master of the Sudmark certainly does say in his correspondence that the cargo is liable to deterioration, and asks that it may be discharged and sold, but does not go so far as to say it is perishable on account of liability to take fire, or that there is any danger to the ship and the rest of the cargo, by allowing the copra to remain on board.

"On these facts I feel bound to come to the conclusion that there was no reasonable cause for the unloading of this ship, but that the detaining officer, without any improper motives and through honest mistake, discharged the ship contrary to the law as stated in sec. 16 of the Naval Prize Act 1864. I am also of opinion that the damage is not too remote. Having come to this conclusion there is no need to go into the question of insurance. On this finding I must give judgment in favour of the plaintiffs for the damages claimed and costs against the defendants Captain F. D. Gilpin Brown, R.N., and Lieutenant E. H. Grogan, R.N., as representing the captors. As regards H.M. Procurator he was in no way responsible for what occurred and was not even in existence at the time, therefore I cannot hold him in any way liable; and as regards the General Officer Commanding the Troops in Egypt I am of opinion that he has in no way made himself liable for what occurred, as he has nothing to do with the discharging beyond asking what procedure he should adopt in order to obtain certain goods."

BALKAN NOTES.**Serbian River Craft Stolen by Austrians.**

The Hungarian paper, *Magyar Hirlap*, of November 10, reports the following incident:—"We learn from Novi Sad that a Serbian river steamer and Serbian lighters have been towed past. The steamer is named the *Macva* and used to ply as a passenger vessel between Belgrade and Radujevac, and the lighters at one time carried Serbian corn. In the beginning they were sunk by our artillery. They have now been refloated, and another Serbian steamer, the *Beograd*, is towing them into the docks at Budapest, where they will undergo repairs, be repainted, and where their last connection with the Serbs will cease." The boats referred to are not State property, but private property. They belong to the "Srpsko Brodarsko Drustvo" (Serbian Ship Co.).

Bucharest: "Business as Usual."

The Budapest correspondent of the *Morning Post*, whose regular despatches are a source of wonder to us all, describes the entry of the Germans into the Roumanian capital. As will be seen, the attitude of the traders there is "business as usual."

In an hour (he writes) after the entry of the troops, placards, ready printed in the Roumanian and German languages, warning the inhabitants against the commission of hostile acts or excesses, were posted on the walls of the city, and an hour later others were exhibited which called on the people to deliver up all arms and ammunition. Another strange feature of the entry of the Austrians, Germans, and Bulgarians into Bucharest, according to Field-Marshal Mackensen, was that when the forces passed through the streets the people crowded the pavements and looked on with as much equanimity as if they had been at a cinema show. They were silent and interested, but showed no fear or alarm, and all of them, women and children as well as men, tried to be of service to the troops, handing them water and bread when requested to do so. Very few shops were closed, and many of the shopkeepers did quite a good trade, selling to the soldiers articles they badly needed, and accepting Austrian German, and even Bulgarian money as if they had been in the habit of doing so all their lives.

NEWS FROM ALL SOURCES.

The Kaid of the village of Maatkas, in Tiziuz (Algeria), is visiting the French war factories, where over 20,000 Mussulmans are employed. He brought to M. Poincaré from the Kabyles a tribute of their devotion to France and their pledge to contribute in every way to the defence of French soil.

An American Consular report states that a notable feature of the 1915 shipping returns of Egypt was the appearance for the first time of the American flag on merchant vessels. Fourteen American steamers, of a net registered tonnage of 40,042 tons, entered Alexandria in 1915. The Coastwise Transportation Company, of Boston, owned most of these, though they were chartered to the Consolidation Coal Company, which is running a regular service between the States and Egypt.

The engineers of the famous Roumanian oil wells (says *The Times*) told Mme. Louisa Taylor, who for some years was engaged in educational work at Craiova, in Roumania, and has just reached England after an adventurous journey lasting over a month, that they had so dealt with them that the enemy would not be able to use them for two years. She was also told that the Germans got 300,000 wagonloads of grain and hundreds of thousands of cattle.

The British Consul-General at Tangier (Mr. H. E. White, C.M.G.) reports that the Resident-General of the French Zone of Morocco has issued an Order appointing a Commission to study the question of colonisation and to suggest the best means of encouraging the settlement of colonists who will develop the agricultural riches of that region. It appears from the local press that steps are being taken by the Director-General of Agriculture for the grant of Maghzen (i.e. State) land in small lots for the purpose of market gardening and in larger tracts for general agricultural purposes. An agricultural irrigation service has been formed for the purpose of scheduling the hydraulic resources of the country and at the same time of aiding colonists with technical advice on the irrigation of their lands.

LIGHT RAILWAY PROBLEMS.

People in Egypt who have been interested in the development of light railways will recall how great was the dependence placed upon German firms for stock and all kinds of material. Decauville, one of the foremost of these, has been compulsorily wound up, recently, as an enemy firm, and in connection therewith Mr. H. Hamel Smith, editor of *Tropical Life*, writes to the *Engineer* as follows:—

"It has always been a matter of wonder and regret to me during my thirty years' work in connection with the development of the Tropics, especially within the Empire, that no firm in England or within the United Kingdom has specialised in the fitting up of portable railway as Koppel in Germany and Decauville have done. Other Continental firms have also made fair progress with this far-reaching and remunerative industry, but I have yet to learn of an English firm that has even shown a reasonable amount of interest in this branch of the iron, steel, and railroad industries. And yet there has been a big demand for so convenient a method for transporting goods and produce on estates and across country to feed the heavier railways, as anyone will agree who has visited tropical estates, and there should be, and will be, a much greater demand for light railways in the future. Knowing this, I call attention to this opening for increased British trade after the war, especially as those who start with the lightest of portable lines can, if they wish, soon secure large contracts for a much heavier class of work covering a wide-spread area."

As a matter of fact, Mr. Smith is needlessly alarmed, for a new company (Light Railways, Limited) has been formed to deal with the export of light railway materials, and its special object is to supplant the German in Eastern and Colonial centres.

ENGINEERING NOTES.

Cargo Boat Equipment.

Mr. D. B. Morison has some interesting notes on "Cargo Boat Engines" in the *Morning Post*. He writes:—

"There is at the moment a national demand that the shortage in cargo-carrying vessels shall be overtaken in the quickest time possible. In the matter of engines the position is acute, as many hulls are at present hung up awaiting machinery. Emergency measures are, therefore, imperative to meet the immediate demands, and if those measures are such as will provide for the exceptional requirements of the future there will be a permanent gain for the industry as a whole. In 1913 about 125 cargo boats, each having a carrying capacity of from 3,000 to 9,000 tons, and a speed of from 9 to 11 knots, were built on the North-East Coast alone. The engines supplied by various firms were all of the triple and quadruple expansion reciprocating types, the material and workmanship being generally recognised as 'good.' The design, and, therefore, the efficiency, has been governed by tradition, sentiment, and a competitive desire, especially in dull times, to please everybody. It may be taken for granted that steam turbines are destined to play an important part in marine engine development in the future, but at present, and for many years, there will be a considerable demand for multiple expansion reciprocating engines using the least possible quantity of coal. Let us, therefore, review the position from the standpoint of reciprocating engines only, and the effect of standardisation on output, cost, and efficiency.

Special Machinery.

"Those who have during the war been

engaged on the manufacture of machinery for special purposes—i.e., machinery which they have not hitherto made—realise that the marvellous response by engineers to the demands of the Government has been rendered possible by standardisation of design and manufacture in bulk. I would advise those who are sceptical as to the effect on output of manufacture in bulk to peruse the pages of the recently published 'Eclipse or Empire?' They will then realise to the full the steps that are absolutely imperative if we are to maintain our industrial position in the future. Reduced cost is the corollary of increased production by standardisation, and needs no comment. With regard to efficiency, I would refer again to the proposition of the cargo boat engines. Suppose these 125 sets of engines were manufactured by, say, a dozen firms. If the designs of the various firms are critically examined, features of excellence or the reverse will undoubtedly be found in each, and if the aggregation of good features be embodied in one standard design the efficiency of the product will be increased, and less coal will be required to carry a given cargo. Such standardisation must not, however, be accepted as final, or the ultimate effect will be ruin, as it is an axiom that progressive manufacturers demand intelligent progressive standardisation by a combination of broad-minded manufacturers. In the matter of efficiency and minimum coal consumption obviously the first essential is combination by effective collective effort in design. In the matter of rapidity of output and minimum cost of production the combination should be on lines that would enable specific details to be manufactured in bulk at a cost quite impossible by the methods now prevailing. Suppose, for example, any one firm of builders were called upon to manufacture, say, engine fittings and the like for several other firms. They could not respond at any-

thing like a cost of production now possible without creating a new department having a new outfit—lock, stock, and barrel. Such a development must perforce come ultimately, so why not 'do it now,' meet the emergency, and secure the benefits?

"Mind Dimensions."

"Without reflecting in any way on the average 'mind dimensions' of an average builder of cargo boat engines, it is certain that any proposal for collecting the above-mentioned good features would have been impossible before the war without the aid of, say, an Act of Parliament. But, taking advantage, apparently, of the possible broadening effects of the war, the council of the North-East Coast Institution of Engineers and Shipbuilders have with commendable courage and confident anticipation tackled the problem in the following interesting manner:—The council have called upon a committee of members to draft in the rough a guidance specification for the manufacture of reciprocating engines for cargo boats. This draft will be revised by the council and submitted to, and discussed by, the members in general meeting. The members will, therefore, collaborate in the production of the specification, and as the membership includes all the builders on the coast, together with a large number of highly experienced superintendents and consultants, all of whom will unquestionably give of their best, the ultimate specification may be accepted in advance as representing the highest state of the art now available. Each issue of the specification will hold good for one year only, and at the end of each year the members in general meeting will be invited to collaborate in bringing it up to date. Engine builders and shipowners will, therefore, be able continuously to avail themselves of the collective experience of this highly progressive body of engineers.

ON 'CHANGE.

(By Our City Correspondent.)

Thursday.

Although business is still very restricted, there has been some revival in activity this week, and the tone of the market has been quite good.

Agricultural Banks, which had fallen to about 5, have since been done at 5 1-16 and 5 1/2 for a few hundred shares, and look a hard market at the close. The encashments are understood to be very satisfactory, and an increased dividend is confidently anticipated.

National Banks have changed hands in a small way round 13 1/2 to 13 3/4, Alexandria Waters are wanted at about 12, but there are no sellers. Beheras are a quarter up at £7 on some inquiries to average by holders at much higher prices. It is rumoured that the company has recently effected some substantial sales of land at satisfactory prices.

Delta Light Railways are wanted at about 5 1/2. Salts have changed hands in a small way at about 21s. ex. div. Khedivial Mails have been in renewed demand, several hundreds changing hands at 30s. 6d. cum. div., and since then a few hundred more have been done at the higher price of 28s. 6d. ex. div. In Union Foncières a few hundred shares were done yesterday at 1 3-16.

In Greek stocks there have been again no transactions, and prices, where altered, have been nominally lowered to the extent of the dividends deducted. There is no pressure to sell, but, on the other hand, there is practically no demand in view of the continuation of the blockade.

Oil shares began and ended in a dull market, an exception being the firmness of North Caucasian, which closed on Wednesday night at 25s. 6d. Roumanians eased to 8s. 10 1/2d.

THE MONEY MARKET.

LONDON, Thursday.

No great change has occurred in the money market since we wrote last. Money has been in ample supply, at rates which have fluctuated over a restricted range of value, and at the close was to be obtained at a general rate of 4 1/2 per cent.

On Wednesday night the bank rate stood at 6 per cent., as compared with 5 per cent. a year ago. Banker's deposit rates were 4 per cent., the deposit rates at the discount houses were 4 1/2 per cent. at call, and 4 3/4 per cent. at notice.

Exchange on Cairo on January 2 was 97 7-16 p., and was unchanged on Wednesday.

There was no alteration in the cash price of bar silver, which was again fixed at 36 1/2d. per ounce. The market was steady with less business.

COMPANY NOTES.

Dividends, Payments, Etc.

The National Bank of Egypt announces that Coupon No. 25 of the Agricultural Bank of Egypt 4 per cent. Cumulative preferred Shares, due January 1, will be paid at its offices in Cairo, Alexandria, and London (6 and 7, King William Street, E.C.)

The National Bank of Egypt announces that Coupon No. 30 of the City of Alexandria 4 per cent. Loan, due January 1, will be paid at 6 and 7, King William Street, E.C.

The dividend declared by the Alexandria and Ramleh Railway Co., Ltd., of 6s. per share, was payable on December 30, 1916, and each succeeding day at the company's offices, 17, Boulevard de Ramleh, Alexandria.

Meetings, Etc.

The ordinary general meeting of the Credit Foncier Egyptien will be held at Cairo on January 22.

Oil Outputs.

The following outputs of oil companies are reported:—

Spies, 3,470 tons; Ural Caspian, 2,659 tons; Baku Russian, 79,100 poods; British Maikop, 37 and 24 tons; European, 84,000 poods; Russian Petroleum, 55,500 poods.

GREEK DEBT.

The Council of Foreign Bondholders has issued the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to October 31, 1916 (New Style: January 14 to November 13, 1916):—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross Receipts, Oct., 1916	3,394,264	2,019,000
Do. do. do. 1915	2,907,481	2,224,000
Estimated Receipts for 10 months (Law of Control)	24,083,333	8,916,666
Actual do. do. 1916	30,015,870	23,175,000
Do. do. do. 1915	30,166,449	20,215,887
Difference between estimated and actual receipts for 10 months	1916 + 5,932,537	+14,258,333
	1915 + 6,083,116	+11,299,220

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold from both Naxos emery and the Piræus Customs are converted into drachmas at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

The enemy continues to advance in Roumania. All Wallachia has now been lost, and it seems problematical whether the Sereth River will serve to protect Moldavia from a similar fate. Galatz, at one end of the new Russo-Roumanian line, is already exposed to gunfire from the right bank of the Dobruja, and part of the Sereth position, which followed a tributary, the Putna, in a north-westerly direction towards Oitoz Pass, has been abandoned. The Germans are credited with the ambition to invade Bessarabia, in the hope of conducting the Bulgarians as far as Odessa, so that the world may see what rewards they have to offer to those who follow their standards. It is a grandiose scheme, but it would be rash to conclude that the enemy has not still sufficient reserves to make the attempt. Whether it can succeed at this stage of the war is another matter. Political considerations compel Germany to press forward wherever there is a chance of being able to record a victory, however Pyrrhic in its relation to the war as a whole. For all practical purposes, the Russian line now stretches from Riga to Reni and the mouths of the Danube, and the Germans have found the point of least resistance. They can, therefore, be relied upon to make the most of their present advantage, and may think it worth while to concentrate all their reserve strength at the southern end of the eastern line.

It is hard to believe that the enemy will continue to find the execution of this plan as easy as he has found the first part. He has been fortunate in having the advance in Roumania synchronize with a period of inaction on every other front, due to weather conditions. This state of affairs will pass before very long, and he will no longer be able to devote his main efforts and his surplus resources to a single theatre. By resuming the offensive in the region of Riga the Russians are showing that they have not entirely lost the initiative; but the Allies will not allow their expectations to be raised until a simultaneous offensive can be launched on all fronts. It is of the best possible augury that the Roumanians have so completely identified themselves with the Allied cause that they can bear their present misfortunes with comparative equanimity, without in any way losing their confidence in the ultimate triumph of the Allied arms. The withdrawal of the greater part of the Roumanian army for reorganization shows that long-sighted views prevail. Now that so much of Roumanian territory is in the enemy's hands, it matters little

whether another sixteenth or eighth is also lost, provided he does not take with it the stores of grain and oil which were the main objective in this campaign. It is of more importance that the Roumanian army should be in a position to play a decisive part when the Allies' chief effort is being made, and when it is essential that the Germans, by being driven out of the conquered lands, should be deprived of the fruits of the industry of the inhabitants during their occupation.

Three Notes have been necessary to bring home to the Greek Government that the Allies are in earnest in requiring reparation for the outrage of December 1 and adequate guarantees for Greece's good behaviour in the future. The first Note was presented on December 14, and demanded the removal of all Greek forces from Thessaly and the stoppage of the movement of troops and war material to the north. A time limit of twenty-four hours was fixed within which Greece had to notify her acceptance of the Allies' demands in full; failure to comply with the demands was to be regarded as a hostile act. The Greek Government gave the required assurances, and a beginning was made with the transfer of troops from Thessaly. On December 31 a second Note followed, setting forth a series of demands dealing with the military guarantees required by the Allies and the acts of reparation to be made for the attack on the Allies' landing detachments on December 1. To this Note no time limit was fixed, and it was not until January 6 that the Greek Government took any action in the matter. A memorandum on that day was handed to the Allied Ministers, which merely embodied a number of objections to the Allied demands, and pointed out the necessity for greater protection of Old Greece against the Government of National Defence at Salonika. In the meantime, however, a railway bridge in Thessaly had been blown up in order to hinder the transfer of the army, and there was some reason to suspect that, if any troops were being sent to the Peloponnese, a substantial proportion of them were finding their way back again to Attica.

The attitude of the Greek Government, the action of the Reservists, who appear to dictate its policy, and the provocative language of the Greek Press clearly showed that official Greece was entirely committed to the Germans, and was only waiting for an opportunity to throw in her lot with the Central Alliance. In view of the events of December 1 it was evident that the Greek army was not impressed by the military strength, actual or potential, of the Allies, and might at any

moment start hostilities. The Allied Conference at Rome had enabled the Entente Powers and Italy to come to a closer understanding with regard to Greece. Accordingly, no time was lost in presenting a fresh Note to the Greek Government, which did little more than repair the omission in the second Note by fixing a time limit of forty-eight hours within which it was required to notify its compliance, without reservation, with the previous demands of the Allies. At the moment of writing the nature of the Greek reply has not been made public; but it is announced that the Allies' terms have been accepted in principle. As the Central Powers are not in sufficient strength in Macedonia to break through the Allied line, and the Greek army is not in a state to carry on hostilities for any length of time unsupported, it was to be expected that the Greek Government would once more express its readiness to comply with the Allies' demands.

The situation requires that immediate and complete effect should be given to all the measures required by the Allies as guarantees for Greece's satisfactory behaviour. For this reason, as the episodes that have followed the acceptance of the first Note show, it will not be enough, in the event of the Greek Government giving the necessary assurances, to leave the carrying out of the various stipulations merely to Greek officials, whether military or civil. The presence of a number of Allied officials in various parts of the country will be required, as well as at Athens, where they will be in control of the public services. It is to be hoped that no qualms of sentiment will allow the Allies' determination to deal once and for all time with the Greek nuisance to be weakened. If firmness is shown now and continued until Greece has been rendered absolutely incapable of mischief in any shape or form, then the outward show of force can be relaxed all the sooner. But for the next few weeks it seems essential that the Allies should abandon the fiction of Greece being a friendly country, and should deal with her, within the limits indicated by the successive Notes, as an enemy.

When the immediate menace of the Greek situation has been removed, we hope the Allied Governments will publish a record of the events leading up to the attack on Admiral du Fournet's forces. The nature of the communications that passed between King Constantine and the numerous representatives of the Allies who have visited him, including Lord Kitchener, General Pau, General Castelnau, and M. Denys Cochin, should be disclosed, in order that it may be seen whether there was the least ground for supposing that the King was sincere in his profession of neutrality. Finally, there should be a full report of the outrages committed during the early days of December, whether on Allied subjects or on Venizelists. It must not be overlooked that Germany will seek to make capital in neutral countries out of the events in Greece. An official statement by the Allies will have served a useful purpose, if it only prevents President Wilson from embodying in his next Note a friendly comparison between the action of the Allies in Greece and that of the Germans in Belgium.

Reports from several fronts tell of enforced inaction as the result of mud and bad weather. The former is the greater deterrent, for it continues when weather conditions admit of flying. From the Macedonian front little has been reported for some time in regard to operations on land. But in the air there has been a further raid on Turkey's lines of communication, this time on the railway bridge over the Maritza River at Kuleli Burgas. This bridge was first attacked on December 14, when a great weight of bombs was dropped, and, according to the official statement, extensive damage was believed to have been done. On January 4 it seems to have been possible to gauge the results of the raid more accurately. One span of the bridge is reported to have been completely wrecked by the bombs of a squadron of British naval aeroplanes. Success breeds success, and with improving weather conditions air raids should become more frequent and more effective.

The Grand Shereef of Mecca is now known by a more ordinary title, but his visit to the Allied squadron at Jeddah will have lost none of its picturesqueness because he had to be welcomed as King of the Hejaz. On the French cruiser the commander struck the right note in greeting him as the greatest of Arab princes, for it is in that capacity, which reflects his personal attainments as much as his prominent position in the Moslem world, that we may expect him to make good. Events are apt to develop slowly in Arabia; but so far there has been nothing to show that the movement for Arab independence is not progressing satisfactorily. The cessation of Turkish reports regarding events in the Hejaz is a sign that the authorities at Constantinople find their pre-occupations elsewhere more pressing, and are content to let the people have an opportunity of forgetting the blow dealt by the Arabs to Ottoman prestige.

The lessons of *Kultur* are being well learned in the vassal States of the Central Alliance. It is quite in the Hohenzollern vein that the Sultan of Turkey issues a proclamation to the army, which, it must be remembered, includes the troops who have executed the Government's orders in Armenia. The soldiers are informed, and will be doubtless gratified to learn, that it was "with a humanitarian object" that proposals had been made with a view to opening peace negotiations. As the enemy States rejected the offer, Turkey is constrained to leave to them "the moral and material responsibility for fresh bloodshed and the ruin of homes"—a reference is here intended, it may be, to Armenia. For the rest, the proclamation is advisedly in general terms. The soldiers are heartened by being informed that they have "brilliantly enhanced the venerated name of Ottomanism." As Arabia must be left out of the picture, we are left to infer that the milieu of the enhanced veneration is Bulgaria and, perhaps, Athens.

It is too early to gauge the real significance of the Ministerial changes that have taken place in Austria-Hungary; but it is difficult to believe that they have anything to do with window-dressing for the benefit of the Entente Powers. Magyar opinion is under no illusions in regard to the appointment of Count Czernin as Foreign Minister. It is recalled that not many years ago he published his views on certain political questions in pamphlet form. Among other things, he declared that the national character of the Hungarian State was a fiction, that Hungarian rule merely signified the tyrannical oppression of non-Magyar peoples. It was the government of a minority, and ought to be replaced by an effective equality finding expression in universal suffrage and a special grouping of the different nationalities. Count Czernin was even prepared to see his views translated into practice by absolutist means, as there was little chance of their being realized by constitutional methods. The Magyars took exception to his appointment to Bucharest, particularly as he was bound to be sympathetic towards the grievances of the Transylvanian Roumans. They like him still less as Foreign Minister at this stage. The resignation of Dr. Sylvester, the President of the Reichsrath, who was a strong advocate of the "Central Europe" idea, which entailed the complete economic subjection of Austria-Hungary to Germany, points to a distinct rift in the Austro-German lute. No doubt when the psychological moment comes an attempt will be made to turn these events to good use in any dealings with the Allies; but there can be little to fear in any such palpable machinations.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, a 16-17, Devonshire Square, London, E.C.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, December 21.

The Sultan's Accession Anniversary.

Tuesday was the second anniversary of the accession of Sultan Hussein I., and the day was, as usual, celebrated as a Government holiday. Salutes were fired by the various batteries, and the public buildings were all decorated. Owing to the absence of his Highness in Upper Egypt, no receptions of any description were held at Abdin, where, however, a very large number of officials and notables signed in the book. In the evening the Prime Minister, Hussein Rushdi Pasha—on whom, by the way, the Sultan has bestowed the Grand Cordon of the Mohammed Ali Order in recognition of his eminent services to him and his people—gave an official banquet at the Continental Hotel, his guests including T.H. Princes Ahmed Fuad, Kamel-ed-Dine, Aly Haidar, and Omar Toussoun, Sir Henry and Lady McMahon, the Ministers, the Diplomatic Corps, General Sir Archibald Murray, the British Advisers, the Under-Secretaries of State, and the higher Government and other officials. The wives of the European officials were also included in the list of guests.

H.H. the Sultan spent his accession day quietly at Assuan, where he was the recipient of innumerable congratulatory telegrams. Hussein I.'s second year of reign has been even more satisfactory for himself and his country than the opening one. Politically the country has remained completely at rest; the attempts on his life which marked 1915 have not been repeated this year; he has entirely won over the small element which looked upon him with suspicious eyes because of his nomination to the Sultanate created by the British Government; and he is perhaps to-day more generally popular with his people than he was as plain Prince Hussein Kamel Pasha, uncle of the then reigning Khedive. The prosperity which began to make itself felt after the first shock of the war had worn off has continued unabated during the past twelvemonth, and, not only are the State finances more flourishing than they were prior to the outbreak of hostilities, but the people, having received record prices for their cotton and other crops, are unusually well off, and are in consequence inordinately contented with their lot and with the new régime, which has, in their eyes, been responsible to a great extent for this improvement in their material condition. Finally, the operations on the various frontiers have been uniformly successful; the territory occupied since November, 1914, by hostile bodies has been systematically cleared, and the three Crescents and Stars will soon float over all the area recognized as belonging to the Egyptian Sultanate, whilst in the Sudan the year has been marked by the reconquest and the inclusion within the Condominium of Darfur, the last of the original Sudan provinces to remain outside the fold. Under these circumstances Sultan Hussein has every reason to feel satisfied at the result of his two years' reign and at the auspices under which he enters upon the third, and he may rest assured that the congratulations which his people showered upon him on this occasion were sincere, for they realise that he has been no inconsiderable factor in bringing about the peace and—since peace ever spells prosperity—also the prosperity amid which they are now living.

The Greek Colony.

The Congress of the Greek Communities of Egypt and the Sudan held a second meeting in Alexandria last Sunday. The meeting, which was fully representative, passed unanimous resolutions declaring that King Constantine had forfeited the throne, and consigning him to the execration of Hellenism, disavowing his authority and that of his representatives in Egypt, begging the National Government at Salonika—whom it alone recognised as representing Greece—to take immediate steps to protect Hellenic interests in Egypt, and appealing to the Powers to recognize that Government, and especially to Great Britain to recognize its representatives here and

elsewhere. Copies of the resolutions were sent to Salonika and to the Protecting Powers.

War Economy in Egypt.

The question of war economy, which has been raised and is being so energetically pursued at home with regard to the importation of luxuries and the consumption of foodstuffs and other necessities of life, as well as the local substitutes that may be used for articles of foreign origin, is just as important—perhaps even more so—to us in Egypt, where we import so largely for our daily needs. It would, indeed, be well if one and all out here, Egyptians as well as Europeans, took the matter seriously to heart and rigidly overhauled their personal and domestic requirements to see in what manner they could reduce their purchases of "foreign" articles. There are certain imported commodities which are usually in great demand, but which could be easily replaced by articles of local manufacture or production; there are many articles for which, it is true, no local substitutes can be found, but of which we all could undoubtedly use less if we tried; there are, again, articles with which at a pinch we could dispense. I am quite aware that what are luxuries in Europe are very often necessities in the East, and that in this respect we Europeans cannot be put on the same footing as the people at home, but nevertheless many feel that a good deal more could be done in the matter of economy, whilst there are unfortunately indications that the opulent situation of the Egyptian masses and of the commercial element is tending to an extravagant demand for foreign wares and products which the present state of affairs far from justifies. Egypt has derived, and is still deriving, great material benefits from the war—on every side one sees unmistakable signs of this—and it certainly has not felt its adverse effects excepting in the matter of the general rise in the cost of living—even then only in a measure that does not approach what other countries and other nations are feeling. It is surely, in these circumstances, the least that can be asked of the inhabitants that, even though, thanks to the fortunate chance of this country's geographical situation, many of them may have been put in a position to afford the high prices entailed by the rise in the cost of production and the scarcity of freight, they should do all they can to assist the Powers who are fighting for their cause by reducing to the very minimum their demands for articles of foreign manufacture or production. The economy made by each individual might not be great, but taken in the aggregate it is bound to tell, and if all joined forces and persevered in their self-denial, the result would be that not only would they themselves very probably be in pocket at the end of the year or have made some economy to meet the great rise in price of many of their absolute necessities, but they would also have combined to reduce the call made for shipping to this country, which could be more usefully used for the transport of more essential articles and of

munitions of war or the raw materials required for them. To all who have studied the statistics there appears no doubt that, given the continuation of submarine warfare on both neutral and Allied shipping on its present scale, the time is fast approaching when it will become necessary to limit to absolute necessities the space available for shipments to the various dependencies; and if the dwellers in Egypt do not reduce betimes their demands for foreign wares and products, it is quite conceivable that the Egyptian Government may be called upon to limit the import of each commodity to the quantity imported in, say, 1913, or even to part thereof, allowance, of course, being made for imports made for account of the Army, which would be substantiated by certificates issued by the military authorities. The two Commissions formed last autumn for the study of the agricultural and industrial situation in so far as foreign imports are concerned must by now have collected a considerable amount of data on the subject, and they could assist in this question by issuing circulars to the public emphasising the great necessity for the exercise of economy wherever imported articles are concerned, and pointing out available substitutes.

EGYPT'S FIRST POSTMASTER-GENERAL.

(FROM OUR ALEXANDRIA CORRESPONDENT.)

I was recently shown a handsome copper medallion commemorative of Muzzi Bey, the first Postmaster-General of Egypt, to whom a replica in gold was presented by the postal staff on the occasion of his retirement in 1876. This specimen was unearthed in the vicinity of the harbour and sold to a postal employee, who generously consigned it to H.E. Borton Pasha for inclusion in the Postal Museum. Muzzi Bey, who held office from 1865-1876, was an Italian who had obtained a concession for working the postal service, which he eventually disposed of to the Egyptian Government, being thereupon nominated Postmaster-General. I am indebted to Commendatore Fux Bey, compatriot and youthful subordinate of Muzzi, now living in well-earned retirement in Ramleh, for the following anecdotes of his whilom chief.

Ismail Pasha, then Khedive of Egypt and father of our Sultan Hussein, having heard that Muzzi was recovering but slowly from a severe attack of jaundice, sent for him to the Palace and, struck by his altered appearance, suggested that he should take a holiday trip up the Nile, generously placing his own yacht at his disposal for the journey. Muzzi, not unmindful of his immediate subordinates, and with a lively sense of his own dignity, selected a small retinue from among them to bear him company and departed with great *éclat*. After a protracted joy-glide up and down the river he was again sent for by the Khedive, who was so pleased with the result of his experiment and with Muzzi's capacity for recuperation that he forthwith presented him with £E2,000 in order that the question of ways and means should not be accountable for a relapse!

Muzzi Bey was very jealous of the privileges of office, which comprised free travel over the entire railway system. The official responsible for the railways at that time viewed free travel with disfavour, and decided to cancel all passes, including that of the Postmaster-General. The day arrived when Muzzi had occasion to travel from Alexandria to Cairo, and, on being requested to produce his ticket, he explained that trifles such as railway tickets were not dreamt of in his philosophy; that, while he had not the remotest intention of paying for one on this occasion, he would inevitably journey up to Cairo by that particular train! The official was obdurate, whereupon the redoubtable Italian, stalking up to the postal van, ordered the travelling postal employee to produce his way-bill. Striking out the employee's name therefrom, he substituted his own and travelled up to Cairo in charge of the mails, leaving his subordinate behind on the platform.

Muzzi enjoyed a salary of £E2,000 a year, which was, of course, worth much more in those days than it would be at the present time. It was his custom, however, to warm both hands at the fire of life, and he spent money lavishly in the process. With unlimited credit at disposal for service purposes, unhampered by the exigencies of a budget, that unpicturesque product of modern postal administration, it may be accounted unto him for righteousness that when the time came for his retirement from Government service he returned to Italy as a poor man.

An interesting trait in his character was his passion for music, in the pursuit of which he recruited four musicians from his staff whereby to provide himself with chamber music for the beguilement of his leisure hours.

And it happened in Egypt but forty-odd years ago!

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, December 18.

Record of Excavations.

An interesting report has been published in English by the curator of the Cyprus Museum, Mr. Menelaos Markides, describing the excavations for antiquities carried out on the island in 1914 and 1915. These include operations at Lambousa, Lapethos, and Kyrenia, on the north coast; at Katydhata and Louroujina, at Evdhimon (Arsinoe), in the Limassol district; and Ktima (Papho). The ruins at Lambousa cover a considerable area, in which the remains of many public and other buildings can be traced. They are situated on the coast north of Karavas (Kyrenia district). Louroujina lies about 3 miles south-west of Dáli (Idalion), which was sacred to Aphrodite. It has yielded many objects to excavators before the British occupation, and has been a happy hunting ground for villagers in illicit diggings. Some of the excavations were due to the interest taken in the Cyprus Museum and its undertakings by Sir Hamilton Goold-Adams. They have yielded some good results, and have added considerably to the excellent collection now housed in the enlarged Cyprus Museum at Nicosia. Translations and notes regarding various inscriptions found on stones and marble relics are given, and the work has been very carefully carried out by Mr. Markides.

The Court of Administration.

A *Mejlis Idaré*, or Court of Administration, is still maintained in Cyprus. Each district has one of these councils, under the presidency of the Commissioner. These courts have been shorn of many of their duties and powers under British administration. They deal with the fixing of certain prices for tithes, etc., forage rates for mounted police, the issuing of certificates under which licences are obtained for the sale of intoxicating liquors, the issue of warrants for compulsory collection of taxes when overdue, and a variety of other matters. At Nicosia there is a Central Court, to which appeals are made either by the people or the Government. It consists of the High Commissioner, the Chief Kádi, the Mufti, the Greek Archbishop, the Chief Secretary, the Receiver-General, the Evkaf Agent, and four elected native members—two Mohammedan and two non-Mohammedan. These last-mentioned sit for two years. In the biennial elections the people choose four persons of the two communities respectively, and of these the High Commissioner appoints two out of each group. The election of native members of the Central Court has just taken place at Nicosia.

General Condition of Population.

There is still some hope that sufficient rain will come in time to save the agricultural situation. There is now urgent need of it in many parts. The native Press, which is often inclined to depict the state of the island in ultra-dismal colours, represents the agricultural classes as being in a state of great distress. The prosperity described in official reports is, it reports, only nominal, not real, the bulk of the people now paying five times what they did for necessary articles of food. The island revenue is maintained at a comparatively high level, because the Government tithe grain is sold at high prices; but this does not show a healthy or prosperous state, but the reverse. The only persons who benefit are certain merchants and some of the well-to-do farmers. The greater number are driven, as of old, into the clutches of grasping usurers. It is argued by some that Government should not only control prices, but should compel bakers to make bread of mixed wheat and barley meal. Municipalities might establish bakeries for making such bread, which is quite as nourishing as that made from wheaten flour alone, especially as many Cypriots use barley meal alone for their bread.

The Czech National Alliance in Great Britain has opened an office in Piccadilly Circus for the distribution of literature explaining the problem of the Czechs and their aspiration for independence of Austria, and also why they have the cause of the Allies at heart. In the office is a roll of honour of the Czechs serving in the British Army.

SYRIA AND THE LEBANON.

(FROM A CORRESPONDENT.)

CAIRO, December 26.

A Syrian refugee who managed to leave the country only a few weeks ago has communicated to *Al Mokattam* a mass of interesting information about Syria and the Lebanon, from which I send a few extracts. It will be seen that the information given about certain villages on the higher hills in the northern part of the Mountain is of a rather cheering character, and contrasts strikingly with that relating to the other much less fortunate parts. The villages that seem to have suffered most are those lying on the northern coast and on the lower hills in the middle of the district of Kesrawan, all of which used to get their main supplies of foodstuffs from Junieh, the chief Lebanese port, whose coastal trade was completely paralysed by the blockade. This informant estimates the total number of deaths, caused directly by hunger and indirectly by diseases brought about by want of nutrition, at not less than 100,000. In support of this estimate, which he does not consider open to the charge of exaggeration, he argues that the chief means of support of the Lebanese—especially of these parts—were before the war the remittances received from relatives who had emigrated and the oil and silk crops. The remittances were, at least at the beginning, stopped, and the oil stock was not long in being requisitioned by the Turkish Government; while the silk crop was left for some time untouched, until, late afterwards, Swiss merchants, acting for their own account and that of German and Austrian firms, started buying it up. To cap all this the Turkish Government finally drew the cordon round the Mountain with the criminal intention of achieving the starvation of the Lebanese. Then whole villages and hamlets were utterly depopulated, while others lost half, and others, less unfortunate, one quarter of their population.

But the inhabitants of the higher mountains—powerful and independent men, who have always upheld the proud traditions of their race—resolved not to die the weak death of the hunger-stricken. When the Turkish Government set about disarming the people in the southern and middle part of the Mountain they asked two of the higher officers of the Lebanese gendarmerie to prevail upon them to give up their arms. The officers, however, begged Jemal Pasha to relieve them of this duty, and explained to him the futility of such a mission. They suggested, however, that a man from his part should be sent to sound them, when he would have occasion to see how far they were right in their assumption. Jemal Pasha then sent for an officer of the Tripoli garrison, and deputed him to treat with the people of the village of Zgharta. He was to endeavour, first, to induce its leaders to give up their arms, by means of fair promises of generous recompense and privileged treatment at the hands of the Turkish Government; and, if they should persist in their refusal, to threaten them with dire consequences. The officer, however, knowing the proverbial intractability of the people of the village, preferred to go first to the village of Bsharri. He had barely finished explaining the object of his mission to the leading chieftain when the latter, calling one of his servants, ordered him to take the officer down to the stables. When the officer was led back, the chieftain said, "The man who attempts even an encroachment on the threshold of those stables which you have just seen shall not return safe, and the arms that the Government wants to take away from us we shall not part with of our own accord. Let them send those who would try to take them away from us by force, and then we shall settle accounts." He then advised the officer to return at once to Tripoli, as otherwise his life would be in danger.

On the way, some of the people of the village met the officer, and proved to him, by somewhat forcible means, what they meant to do to those whom the Government might be sending to remove their arms. On his return he explained to Jemal Pasha the futility of attempting to disarm the people, and that wisdom dictated they should be left unmolested, unless the Government were prepared to send a large punitive expedition to subdue them in their almost impregnable mountain fastnesses. Jemal Pasha concluded that the cutting off of all channels of supplies from the Lebanon would prove an efficacious and inexpensive means of forcing the people into submission, but the latter were not long in forming armed bands, recruited from different villages, who descended on the plains of the Bekaa, and carried away the wheat by force of arms. Then the people of Zgharta cut off the water supply of the town of Tripoli, which at once aroused uproarious protests on the part of the inhabitants, and finally compelled the commandant to parley for peace and propose to the people of the village a fixed supply of wheat and flour. The latter agreed, but, knowing what little faith is to be placed in Turkish promises, they sent down armed bands to Tripoli, and, under cover of night, forcibly opened the stores and carried away large quantities of flour and wheat, which they distributed among themselves and their neighbours.

This set Jemal Pasha aflame with anger; but some high Lebanese functionaries who, sacrificing national dignity and honour on the altar of personal interests, had abetted the criminal acts of this dictator, and have since been his satellites, tried to appease his wrath and convince him of the loyalty of these highlanders, who were pushed to this extremity by the instinct of self-preservation, but who, once their hunger appeased, would not fail to relapse into peaceful life. Jemal finally agreed to allow them their requirements of flour and wheat from Tripoli, the Bekaa, and Akkar, at the lowest prices, and they have since been paying from 7-8 piastres the rotle of flour at Tripoli, whereas the inhabitants of Beyrout were paying 32 piastres, and that for flour which is adulterated.

Famine in certain districts of the Lebanon, such as Shouf and Metn, where the Druse element prevails, has been less rampant than in other parts; and yet thousands of people there have perished of hunger. During seven months the people of Beyrout are said to have been supplied with flour which is repellent to the appetite; and yet the kind of flour supplied to the Lebanese was still worse. Many Lebanese are said to have been suffering from a disease akin to dropsy, which proves fatal, and this made the people believe that the Government was actually selling them poisoned flour.

FAMINE IN TURKEY.

According to the Paris correspondent of the *Daily Chronicle*, a neutral who has reached Zurich after passing several years in Constantinople gives details of present conditions in the Turkish capital.

Austria, he says, lacks many things, but Turkey lacks everything. When people say the Viennese are dying of hunger they are speaking figuratively. But of Constantinople it is the literal and sinister truth.

"For several weeks we had bread in Constantinople which smelt of petroleum. It was made with wheat abandoned by the British troops at Gallipoli. By drenching this wheat with petroleum the British expected to render it useless.

"The Bosphorus fisheries have long been abandoned, owing to mines and to the commandeering of all the boats. Sugar costs over 13s. a kilogram, and coffee 14s.

"Since last spring householders have been unable to obtain coal. Cooking is done with charcoal, which is very rare, or with petroleum, which costs £4 for a 2½-gallon can.

"The Russian Fleet periodically bombards the sole coaling station, thus rendering operations practically impossible. Perhaps public opinion in England and France does not thoroughly realise the task accomplished by the Russians in the Black Sea, particularly since the capture of Trebizond. They have destroyed or paralysed the Turkish navy, destroyed the merchant fleet, and effected an almost absolute blockade of the Bosphorus.

"Scarcely anything remains of the Turkish navy. The cruiser *Medjidieh* was sunk off the Bulgarian coast, the *Torgout Reis* has been anchored in the Golden Horn irreparably damaged, the *Goeben* is still immobilised, and the German engineers have not succeeded in repairing her. Apart from a few torpedo-boats and submarines, the only warship the Turks still use is the *Nidilli*, formerly the *Breslau*. But the Russian fleet keeps such good watch that she rarely ventures beyond the Bosphorus passes. Of the 250 merchant vessels in the Golden Horn at the beginning of the war, all except half-a-dozen have been sunk by the Russians in the Black Sea, or by British or French submarines in the Sea of Marmora."

THE PRISONERS FROM BAGHDAD.

All the British civilians and ladies who were removed by the Turks from Baghdad are in Constantinople, and apparently are being well treated. They are not interned, but are allowed to move about the city. A letter was received in London from one of them on Wednesday. News has reached London from Baghdad that the American Consul there died of typhoid in November.

Some persons who succeeded in getting away from Baghdad report (says Reuter's Agency) that there were a number of Germans in the place, which was quiet. Money and food were very scarce. The authorities were busily engaged in constructing roads, and had demolished a number of British houses. One new thoroughfare had been cut right through the gardens of the British Residency.

URUMIA NOTES.

(FROM A CORRESPONDENT.)

URUMIA, November 21.

A Notable Visit.

The Grand Duke Boris Vladimirovitch of Russia visited Urumia on November 17 and stayed three days. It was for the first time in its history that Urumia welcomed a member of the Russian Royal Family; and for some days before his Highness's arrival the city was occupied with preparations to give him a fitting reception. By order of the authorities every shop in the bazaars was decorated, and all the streets and the most important places in the city were adorned with fine Persian rugs and other Oriental decorations, which would present to a European visitor a curious sight. Several arches were erected in different parts of the city representing various societies and bodies of the people, such as the Board of Aldermen, the Police, the Syrian Committee, etc. But the most elaborate of these structures was erected by the Governor of the city, Ehtemad-ed-Dowleh.

While the Grand Duke's visit was a purely military affair, it was, at the same time, regarded by the citizens as a high honour. On his way from the Lake to the city, a distance of twelve miles, the visitor was greeted by crowds lining both sides of the roads.

Its Humorous Side.

The humorous side of his reception cannot be overlooked. The masses were expecting his entry to be something like that of a Persian prince. They were all ready to make their bows to the ground on his arrival, and many were standing with knife open in hand, ready to kill a sheep as a "sacrifice" to him. But to their vast disappointment many found that he had passed them in the most unpretentious fashion, and unobserved. While his motor-car passed through the streets, and while he saluted the crowds, many did not recognise him; and only some little time after he had gone by was it possible to convince them that the Prince had actually passed.

On the morning of November 18 the Grand Duke reviewed the cavalry regiments in a wide field below the Russian Consulate; and this was the greatest military parade that Urumia has ever seen in all its history. It is reported that he complimented the officers and men upon their condition, their fine physique, and their admirable drill.

During his short stay he was given a banquet by the officers of the Staff, and was entertained at luncheon at the Consulate and by the Governor.

Benefit of Russian Troops' Presence.

The continued presence of the Russian troops in Urumia and the steady Russian advance to the South have produced a feeling of security and quietness among the people of the city. The mountains on the Turkish border are cleared of Kurds, who for centuries had been a curse to the people of Urumia; the Christian population is anticipating a peaceful winter; and it is generally believed that the doom of the Turks and Kurds is sealed.

Escaped Prisoners.

A few days ago some Syrian soldiers under the Russian command near the city of Bashkala arrested five men whom they regarded as suspicious characters. After a while they were found to be British soldiers who had escaped from the prisoners taken at Kut-el-Amarah. The men were sent over to Urumia, and are under military examination. They are all from the East, and they tell interesting stories of their captivity and escape.

Mr. Alfred T. Davies, chairman of the British Prisoners of War Book Scheme (Educational), in a letter to the Press, says: "In view of the widespread anxiety that prevails in regard to the delivery of parcels consigned to British prisoners of war in Turkey it will, I am sure, be a matter of interest to many of your readers to learn that we have to-day received word that a parcel of books sent from here on August 30 last to an officer of the Royal West Kent Regiment (Kut Garrison), interned at Castamouni, in Asia Minor, safely reached its destination and has been duly acknowledged by its recipient in a letter dated November 20."

IDEALS OF THE VENIZELOS ARMY.

In the course of a paper on "Venizelos and his Fellow-Countrymen," read to the general meeting of the Classical Association, held at Leeds University, on Saturday last, Professor P. N. Ure said that the whole of M. Venizelos's career, with its absolute refusal to accept the deadly doctrine that national and political morality need not obey the laws of individual morality, was from first to last a direct challenge to Prussianism.

No doubt the Prussian doctrine had been challenged from time to time during the last fifty years, but those who had done so had seldom been quite beyond the suspicion of a sentimental pacifism and a failure to recognise disagreeable realities, and had consequently only helped to mark the false antithesis between the idealist and man of action.

What the world wanted in order to overthrow the false doctrine propagated by modern Prussia was an idealist without illusions. That was what Crete had given us, and it behaved us to make full use of the gift. M. Venizelos was a whole-hearted believer in the Entente, but he believed no less in his fellow countrymen. We could not be pro-Venizelists and anti-Greek. Venizelists regarded themselves as representing the true Greece, and they knew the country better than we did. English visitors to Greece had been mainly sailors, traders or tourists, and had not generally seen much of the best elements of the population, the splendid peasantry, and the large, well-educated professional class.

Greeks of the twentieth century were still in many ways the heirs of their predecessors of a classical age. Whether or not there was much racial continuity, there was certainly a racial parallelism. We must not expect them to go along at one stodgy level like ourselves. They were more inclined than we were to alternate between heights and depths. Between 1910 and 1914 nearly the whole nation rose to the heights. Since then a section had sunk lamentably low, but that was how things happened in the days of Themistocles and Pericles. A sympathetic attitude on our part would do much with so responsive a people as the Greeks to prevent such lapses, or, when they had happened, to hasten the cure.

Mr. Alexander Pallis, a Greek, of Sefton Park, Liverpool, expressed his gratitude to Professor Ure for his sympathetic reference to M. Venizelos. It would, he said, afford that statesman great comfort to learn that such a paper had been read at that gathering, and that his attitude met with the approval of the Classical Association. Some time ago several French savants sent a message to Venizelos wishing him success in his patriotic work, and he suggested the Association should send a similar message.

Viscount Bryce said they were grateful to their friend for the suggestion he had made. He did not think he was wrong in assuming that that suggestion would meet with general assent. As a rule the Association kept clear of anything of a political character, domestic or foreign, but there were exceptional circumstances existing now which he believed would justify their expressing their opinion.

It was decided that Viscount Bryce should despatch a telegram to Venizelos expressing admiration for his character, the profound confidence they felt in his conscientiousness and patriotism, and hearty wishes for his success in the course which he was following.

A military officer suggested that the Elgin marbles should be restored to Greece.

Viscount Bryce: I do not think Parliament is likely to address itself to this question at the present moment.

THE NOTORIOUS SCHENCK.

Readers of THE NEAR EAST have heard so much of the notorious Baron Schenck that they will doubtless be interested in the following pen picture of him. It is given by Mr. Hugh Martin in an article entitled "The Master Hun in Athens," which was published in the *Sheffield Independent* (December 27):—

At dinner he used to fascinate me. I had never seen even a German imbibe his soup with quite such noisy signs of gusto. The heavy jowl not more than three inches from the plate, the scalp of the bullet head becoming visibly pinker beneath its quarter-inch crop of bristly mouse-coloured hair. He had a square face, with eyes set rather far apart, and a paunchy body into which he used to pour (after smelling it daintily) glass after glass of a very choice Greek white wine known as "Les Fleurs de la Reine," for it was grown in the private vineyards of the Kaiser's sister. There was a charming appropriateness about these daily libations, for the friendship existing between the Queen and the Baron was a matter of common knowledge; though, to speak the truth, there were incidents in the Baron's past life, known to both friends and enemies, that could not be talked about in polite society. But he had the entrée of the Palace at all hours of the day, and often drank coffee with her Majesty in the afternoon.

ARCHÆOLOGICAL NOTES.

RECORDS FROM ANCIENT MESOPOTAMIA.

Although, owing to war conditions, no explorations are being carried out in Mesopotamia, the publication of cuneiform literature, either of the Babylonians, the Elamites, or the Assyrians, is still going forward, there being ample new material available in European and United States museums to last for several years to come. Our French allies still produce their *Revue d'Assyriologie* with praiseworthy regularity, and welcome heartily to its columns essays by Professor Stephen Langdon, the well-known Oxford Assyriologist.

It is now nearly half a century since we commenced recovering Assurbannipal's great tablet library at Nineveh, which was supposed to have been his one great literary storehouse. But the Germans, who for some years have been obtaining cuneiform tablets from ancient Assur, have evidently come across a second library created by the same monarch, just as at Nippur a third collection of his was unearthed. Probably each temple possessed a library, and as the shrines acted as law courts and record offices for all deeds and documents that had been substantiated by an oath asseverated in their deity's edifice, each had a vast quantity of duplicate business and legal records. But the three cities mentioned were furnished with the special kind of antiquarian, and historical, collection which Assurbannipal appears to have been the first royal ruler to inaugurate. His aim was to make fresh copies of very ancient tablets containing the primitive myths, theogonies, annals of the kings, and accounts of war and conquests, public works, and so forth; and, as these were often in two different languages, to provide, for their elucidation, dictionaries and syllabaries and grammars.

Herr Erich Ebeling has recently been publishing many of the religious texts discovered by the Germans at Assur, and they have as colophons to several of the tablets the statement that their contents "were excerpted (from old tablets) for the Assur collection." One, however, is a new piece of literature; for it gives a prayer of Assurbannipal himself, who speaks of himself merely as "son of his god."

Not only did the king employ numerous scribes to rewrite the old literature that was being lost because of the decay, from age, of the tablets upon which they were written, but so interested was he in literary matters that, as Dr. Theophilus Pinches showed some time ago, he apparently took a pride in absolutely writing himself some of the tablets provided by him for the study of future generations. We have tablets which assert this fact as follows:—"I have written on tablets compared and explained, and placed in the collection of Ezidu, Nebo's temple within Nineveh"; or, "Assurbannipal the Great King, according to the tablets and records of the copies of Sumer and Akkad, this tablet I have written and made clear in the assembly of the experts and placed in my palace for consultation. Whoever destroys my written name, may Nebo, scribe of destiny, destroy his name."

The king's object in establishing duplicate copies of very important texts in various cities was that in case of the destruction of the library by foes, fire or floods, specimens of the ancient literature should still remain extant.

The fragments of the Assur collection already edited by Ebeling are particularly important, because they restore to us several of the missing parts of most interesting texts which we had partly recovered from Nineveh. Among these is a portion of the second tablet of the "Creation Epic," giving us the missing lines 92 to 101 of the story, excepting one or two words at the commencement of each line. Another famous myth, that of the "Descent of Ishtar to Hades," is also made quite complete in a part previously wanting; and many lines that were obscure, because partly obliterated, are now made clear. A series of tables containing what is called the "Epic of Niniḫ" and many very ancient hymns and incantations,

forming part of primitive temple rituals, are now enlarged and explained. In the Nineveh Assurbannipal library there was a vast series of priestly incantation texts known as the "Shurpu" tablets. Many portions of duplicates of these have turned up at Assur, and will be of assistance in enabling us to complete the edition of this work. Another curious text, of which we previously possessed parts of two recensions, is a ritual for the sacrifice of a bull.

The office of a scribe was a very honourable one in ancient Babylonia, if he were connected with the State record office, or—what was equally valued—that of one of the temples; and doubtless an author who composed religious writings and historical annals was a personage of importance. Thus, we have accounts of two scribes who became princes, or petty kings, in Babylonia. One of these was Lugal-usum-gal, of Telloh, who discloses his original status in a dedication to Naran Sin; the other was a king of Uruk, named Anam, whom Père Scheil, in recently publishing a tablet which proves he was once a scribe, calls "L'Archiviste-roi Anam."

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

A PLEA FOR SERBIANS AND ARMENIANS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The terrible distress in the Near East is beyond exaggeration. Serbia became a second Belgium at the hands of the enemy invaders; Armenia almost blotted out by the cruel Turk. Thousands have been killed, a far greater number deported to the deserts without food or shelter. A small portion—about 250,000—escaped over the frontier into Russia and Persia.

We would make an earnest plea for both of these suffering peoples. The victorious Serbian Army may reconquer the country, but we must feed the women and children. The Armenians have suffered most appalling agonies, but we must help the remnant, and prevent misery and starvation passing the bounds of endurance, and in the coming spring we must repatriate them under Russian protection.

The British and American Consuls act as our agents, taking an active part in the relief work. Our distributors are missionaries who have been associated with this society for many years. There is, therefore, no deduction for distribution expenses or workers' salaries, nor is there any office rent or staff to pay at this end.

The smallest donation will be gratefully acknowledged by

Yours faithfully,

(Rev.) S. W. GENTLE-CAKETT.

Secretary, Bible Lands Missions' Aid Society.

358, Strand, W.C.,

January 5, 1917.

THE "THE ENCYCLOPÆDIA OF ISLAM."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In December, 1911, you published a letter from me with reference to "The Encyclopædia of Islam," which was to have been issued in forty-five parts, and I complained that the first ten parts took forty-one months to produce, at which rate of "progress" the last part would be published in fifteen years.

The twentieth number was issued to subscribers in May, 1914, since when, in the language of the great war, "Napoo!"

As I paid a cash subscription of £6 15s. in advance, I have been expecting to receive some statement from the London agents, but I am still without any information.

I think that the British branch of the "International Association of the Academies," who published the encyclopædia under their patronage, should issue some statement as to whether subscriptions are in the hands of the enemy or banked in London.

Further information about this publication will be interesting.—Yours, etc.,

AS-SABUR ("The Patient").

London, January 7.

THE JEWS IN PALESTINE.—We regret that, owing to a printer's error, the name of the writer of the letter on the above subject, which appeared in our issue of last week, was given as Falkowski instead of Tokowsky.

MONTENEGRO.

Any interested in the commercial and general development of this country together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

"Major," c/o Messrs. Stilgoes, Solicitors,
24, Essex Street, Strand, W.C.

TANGIER TO TEHERAN.

It has not the same importance as "Trade After the War," but a question which seems to exercise some minds is that of "Tino After the War." The fact is that a good many more people than those labelled Phil-Hellenes are interested in Greece, generally on account of their having been there, if only for a few days. That reminds me; I wonder why more of the thousands who in normal times winter in Egypt do not make a point of going out or coming home by way of Greece. To say that it is well worth the while is too banal. Strictly speaking, any educated person ought to consider it his or her duty to make a point of paying a visit to Greece when they are, more or less, in the neighbourhood. After all, there was never anything in the Palace at Athens to make them look at it; but if they should do so hereafter, they will at least be able to say: "That's where So-and-so lived."

But to get back to Tino—much as I hate the word; but really he has only himself to blame for it. In one of those numerous Press interviews he made a point of giving at an earlier stage of the war the King of the Hellenes reminded us of the pleasure he derived from spending his holidays in England. That chapter, presumably, is closed, and Eastbourne will have to look about for another "tame" Royal Family for its very own. I have forgotten to find out whether Tino's son is still at school at St. X's. For his own sake one will hope not, as the average British schoolboy is not invariably a diplomatist, though essentially patriotic. The tragedy of it all is that the Greek Royal Family were genuinely "English" in their tastes. A friend of mine who knows his Greece well was recalling a few days ago the period when Tino and his brothers infinitely preferred informal gatherings at the British Legation in Athens to the stiff functions that awaited them elsewhere. Those were days when games—so-called parlour games—were rather the rage, and the whole length of the present King might be seen stretched out on the floor playing "Brother, where art thou?" blindfolded.

I have no suggestion to offer regarding the solution of the problem of "Tino After the War"; but if ever Tino has an impartial biographer, I hope he will make a point of tracing carefully the workings of German influence. In the halcyon days to which I have referred a delightfully casual "freak" (to indulge in undiplomatic language) of unbounded hospitality presided at the British Legation. Was it part of Germany's intrigue, I wonder, to take advantage of changes in our diplomatic service to wean Tino from his Anglophil tendencies by insisting upon the German Legation at Athens taking a leaf out of the British book? My friend's knowledge of the inner history of Athens fails him for the subsequent period. But I can bear witness to the fact that Germany's representatives abroad are by no means always dull and pompous. At one place, which must be nameless, Herr and Frau "Representative" did much to add to the gaiety of the community. For instance, it was not at all "official" when the male Germans were celebrating something or other with a dinner, for Frau "Representative" to summon their wives to a rival function, and privately insist upon every one of her guests appearing in male costume—her husband's, to wit. It had been arranged that the husbands were to call for their wives at the end of the evening, and the secret was actually kept until they did so.

Talking of officials. In common with most travellers, I have had a varied experience of them. Some linger in the memory, others fade completely away until the pages of an old diary are being turned over again. I should like to see a hostel attached to our Foreign and Colonial Offices, in which all our future representatives abroad would have to spend a certain time until they could be certified as sufficiently human and normal for their posts. Some would pass through quickly enough. If such a scheme had been in vogue one excellent official would never have dreamed of arming himself with visiting cards which bore only the three words, "The Chief Justice." One such card, I remember, lost its way on board one of his Majesty's ships in harbour. A few days later the Chief Justice had a card left upon him bearing an eloquent legend: "The Midshipman."

Whether Snotty's hint had the desired effect history does not relate. A similar experiment, however, was to my knowledge successful elsewhere. As everyone knows, clubs abroad are apt to play a slightly different rôle from what they play at home. Roughly speaking, they are divided into two classes—some you belong to because you have to, others because you can't help it. Any element of compulsion, however, ceases before it comes to inscribing their names on visiting cards for home consumption. This subtle feature was once overlooked by someone of my acquaintance, who thought it obligatory to publish a small club directory on his cards. His return to grace was effected by flooding his rooms with a number of others bearing references to night clubs and toilet clubs, as well as to those enumerated on his list.

What admirable material the old Greek dramatists could have derived for their plays from the current history of Turkey! They revelled in situations in which their characters were at cross-purposes, while the audiences, knowing the facts of the case, had their interest maintained at the highest pitch to see how the misunderstandings would be straightened out. Think of Greece throwing herself into the arms of a German-Bulgar-Turkish Alliance! The mere idea must go far to reconcile Turkish Ministers for much that they have to put up with these days. I am reminded of the saying of a Salonika official in the unregenerate days of Abdul Hamid, who explained to me that Turkey possessed several valuable industries. On my asking for enlightenment, he said that there were at least three; they were Greek, Serbian, and Bulgarian propaganda, from all of which Turkey derived considerable revenue. Times have changed, but the old antagonists are there. A perusal of the German Press throws a little light on the situation in Turkey. The interview is very much to the fore, and it is invariably written up with consummate *naïveté*. Picture to yourself Talaat Bey finally run to earth by the German lady journalist. "'Bujurun,' say the attendants. 'Bitte,' says Excellency Talaat. (For he is also learning German, and for some time has carried a small dictionary in his breast-pocket, in order that he may study it when he has time.)" I translate from *Der Tag*. But what interests me most are the casual references in all these interviews to the German watch-dogs who are on guard in the Turkish Ministries. We have heard about them before, of course; but how sharp is the watch kept may be inferred from the fact that, even during a conversation with a correspondent, the German "assessor" is present. As a rule he does not enter into the interview, but is generally presented to us as a fellow-occupant of the Minister's room. I trust that Talaat's guardian is human enough to enjoy with him the prospect of Greece putting her head into the Turco-German noose

CORSAIR.

THE PROPHET'S TOMB IN DANGER.

"A. S." writes: The Paris Arabic journal, *Al Moutakbel*, in a recent issue, publishes a leading article, signed by Sheikh Ali Elghayati, raising the above cry, based on a telegram from Medina to the Constantinople Press, announcing the arrival, on November 27, of the Turkish Commission and its departure on December 2, with all the precious treasures which Moslem piety had for thirteen centuries accumulated, as an expression of its devotion, on the Tomb of Mohammed. Two members of the Commission are German. Fortunately, this devout Moslem cry is not an important one as regards the future of Medina, although it must be a great shock to his feelings to see Germans in the prohibited sanctuary of Islam; but, what is more, he is anxious concerning the Tomb, and what those enemies of the Arabs might do to it. Meanwhile, it seems that the treasures carried away so far from the tomb include a rare gem of enormous value and two massive gold lamps, which, with other valuable objects, are being offered to German bankers as security for fresh loans!

THE KING OF THE HEJAZ.

Al Kibla, the official organ of the Government of the Hejaz, published in Cairo, gives details of the visit of the King of the Hejaz to Allied warships at Jeddah. On this occasion the commander of the French cruiser said: "It is a great honour for this cruiser to receive the greatest of Arab Princes, especially as its history gives it a right to this honour, for it was on board this cruiser that the Franco-Russian alliance was signed."

His Majesty replied: "I am happy to visit the brave and heroic Allies who have proved their virtues to the world and who merit all respect and honour." The journal adds:—

"The King then visited the British cruisers, manifesting his satisfaction at everything he saw. On observing some Indian sailors he addressed them in Arabic, giving them words of counsel."

NEAR EAST BOOKSHELF.

RACE SUPPRESSION.*

The Right Hon. Mr. W. F. Bailey has written, in his book on "The Slavs of the War Zone," a work of beauty, unique in its word-pictures of people and places in the Middle East. A flavour of old-worldism, of feudal times lingering in the twentieth century, permeates the volume; archaic manners and customs, snatches of romantic history and legendary lore, of striving peoples and wandering nomads, of lords and lasses, runs through it like a filigree lode of silver in a bed of quartz. Many of the scenes, be it remembered, are placed in that region of Europe where human vampires, such as Dracula of gruesome memory, still haunt the grim ruins of lonely castles and appear on winter nights to terrify the ignorant rustics. With such a wealth of romance and types of people to draw from it is no wonder that Mr. Bailey, a picturesque writer, should have introduced us to scenes of intense dramatic interest. Moreover, the natural features of the lands lying between the Drin and the Dniester are so beautiful, so varied, at times so chaotic in their magnificence, as in the Carpathians, so desolate in their nakedness, as in the Carso region, that they offer a generous background of many colours to the painter of gorgeous scenes. Then, finally, but not least, there is the intense charm of music—so rich, so varied, so eloquent in the Middle East as to confound the senses and play havoc with passions. Poles, Hungarians, Bohemians, Serbs, and the wonderful Zigeuner gypsies—are they not Nature's instrumentalists, and is not their music peerless? And yet each has a peculiar rhythm, intonation, and mystic depth—or call it passion—of its own which induces the author to deny the accuracy of the well-known platitude that music is a universal language. It is as varied as speech, and as the brilliant coloured costumes of the Southern Slavs. Pictures of guslars and minstrels, of untaught violinists maddening a holiday crowd, of wonderful sounds emerging at night from the darkness or from squalid slum dwellings in the great cities, are among the most memorable mosaics in a structure of fascinating splendour.

But we are not only concerned here with the decorative element of a highly interesting book. When studying some Gothic or Byzantine cathedral, the surface ornament is certainly a distinctive feature of the whole structure, but underlying it, and primarily essential, is the fabric itself. So it is with "The Slavs of the War Zone." Beneath the picturesque garb of description lies a deeper note—one of oppressed and partially suppressed people, of Teuton-terrorized Slavs, of political injustice and moral cruelty. It is a sad note—a low, plaintive cry for racial freedom, for liberation from the Austro-German and Hungarian yoke. So intense is this cry, so long-drawn its echo, sounding away to the north and the south of the Danube, that, willy-nilly, we are made to forget the beauty of pastorals and idylls, and to see only the sufferings of Jugo-Slavs, Poles, Bohemians, and Czechs, downtrodden and tortured by a Prussia that has neither conscience, soul, nor honour. Tragedy is unmasked and stalks through the pages of the book, barefooted and in rags, from Galicia to Herzegovina. It is a sad, sad story, written in the minor key. Its climax, surely, is reached when, in the Great War, Slavs are forced to march in the van of German armies against the Russians and be shot at by their kith and kin who are coming to free them from their cruel masters. Look at any map (unfortunately, the publishers of the book under review have not thought it necessary to include a map) and follow the boundaries of Slavdom, excluding Russia, in Central Europe. North of the Danube lie the lands of the Poles, Ruthenes, Czechs, and Slovaks; to the south the territories occupied by the Slovenes, the Croats, and the Serbs. The two groups, Northern and Southern, are separated from each other by a belt of land under Teuton-Magyar control, represented by the dominant peoples of Austria-Hungary. Of Teutons there are twelve millions in the Hapsburg Empire, and ten million Magyars; together, they have been able to rule over, subject and persecute twenty-three million Slavs! It is truly astonishing how such a state of affairs could have been brought about, but, even more wonderful how, having been created, it could have lasted until to-day. The reason can only be found in the practical application of the *divide et impera* policy which the Hapsburg statesmen have relentlessly pursued with perfectly surprising results. How they managed to pit Slav against Slav is admirably related by Mr. Bailey. We see, for instance, how, to counteract the power of the Poles in Western Galicia, the brother Slavs of Eastern Galicia, who are Russians in all but name, were provided by Vienna with a new name and nationality, namely, Ruthenes or Little Russians.

Their language and their literature are Russian. In religion they stand between Catholic Poland and "Orthodox" Russia. They belong to the Uniate Greek Church, acknowledging the authority of the Pope, while adhering to the ritual, discipline and

doctrine of the Orthodox Russian Church. . . . The Austrian Government also tried to give them a language of their own, with Latin characters to take the place of Cyrillic, a new phonetic spelling, new words collected from all quarters, and new grammatical forms. . . . There are four millions of these Ruthenes in the Austrian Empire.

Western Galicia is the Austrian Poland, properly speaking. Its people are about five millions strong, and, by pampering the Ruthenes at their expense, the Austrian Government successfully checked their power and influence. Further to the west, and neighbours of the Poles, are the Czechs, "a Slav people whom the spirit of John Huss still influences."

Of recent years, as in centuries gone by, they have exhibited a courage, a determination, and a persistent nationalism that have won for them a position of remarkable power in the Austrian Empire. A couple of generations ago they were of small account in the Parliament of Vienna. Their language, which had almost ceased to be written, was gradually revived during the last century. Now it is ousting German all over Bohemia.

Two-thirds of the population are Slavs (Czechs), and one-third German, while over 95 per cent. belong to the Roman Catholic Church. But, how the Germans are hated in Bohemia! The war has proved it; the refusal of the Czechs to fight their Russian kinsmen, the turning of Czech guns on Teuton regiments, revolution—alas, unsuccessful, with the dire results already known to the world at large. But the Czech's revenge, like that of the Pole, is bound to come. And it will be sinister.

The Slovaks, the fourth people of the Northern group of Slavs, are akin to the Czechs, but in a somewhat lower social grade. They inhabit Moravia and North-Western Hungary, where they seem to have lived ever since the fifth century.

During all these years they have been a subject people—ruled in succession by the Arabs, the Franks, and finally by the Magyars, who down to recent times have tried in every way to destroy their nationality, even the use of their language being forbidden in their churches and in their schools. . . . In population they number about two and a-half millions, and their language may be classified as a variety of the Czech. In religion, like their neighbours in Bohemia, they are 95 per cent. Catholic.

Of the various subjugated Slav peoples they are the most enslaved. They have been robbed of their liberty, and every effort they have made to regain it has been ruthlessly crushed. There is no right of assembly; State spies abound, and political intrigue poisons everything. "It is one of the saddest lands in Europe. . . . Over its valleys and mountains and forests has descended the shadow of the slave-driver, and despair lies heavy on the hearts of its people."

Not less interesting than the Slavs of the Northern group are those of the Southern. The Serb, his history and misfortunes are too well known to need comment here. On the contrary, little is known of the Slovenes, about one and a-quarter million in number, who dwell in Styria, Carinthia, Carniola, and portions of Istria—that is, in the vicinity of the Austrian Adriatic; they are neighbours of the Croats, who, racially, are one with the Serbs, but who are distinguished from them partly by religion, partly by language. "For literature, indeed, the languages are identical, but the Croats adopt the Latin alphabet while the Serbs use Cyrillic characters." Of the two and a-half million Croats, four-fifths belong to the Catholic Church and the majority of the remainder to the Orthodox Church of Serbia. Akin to them are the Bosnians of Bosnia and Herzegovina, a people belonging to the Serbo-Croatian branch of the Slavonic race. Their religion varies—about one-third are Moslems and two-thirds Christians, the latter being again subdivided into three-fifths Orthodox Greek and two-fifths Roman Catholic. Their interest in the war has been great: Is not Serajevo the "City of the Great War," and does not the Slav of the South hate the Teuton and the Magyar with a more fiery, passionate hatred than does his brother of the North—supposing that to be possible? And who does not remember the infamous Agram Trial, now historic, by means of which the Teutons and Magyars sought to destroy Croatian nationalism and to introduce a wholesale persecution of Croatian patriots? If ever the truth of the origin of this war be known, it will be found to have been caused by the desire on the part of Teutons—both German and Austrian—and Magyars to enslave even more ruthlessly than hitherto the Slavs of the South and to throw the cursed yoke of Prussian Kultur on the shoulders of Serbia, the only free Yugo-Slav State in Central Europe. This they will never succeed in doing. Such has always been the reviewer's opinion, but, after reading Mr. Bailey's account of the Slavs of the War Zone, he is more than ever convinced that not only will Serbia remain free, but that, so latent and powerful is the anti-German, anti-Magyar spirit of the Slav inhabitants of the Hapsburg Empire, that, sooner or later, with or without our help—and let it be with our help!—they also will throw off the chains that bind them to Vienna and Berlin.

The *Sudan Times* of December 20 publishes the text of two farewell Orders issued by H.E. General Sir Reginald Wingate on the occasion of his departure from Khartoum to take up the post of High Commissioner in Cairo. In one his Excellency places on record his "sincere appreciation of the loyal and efficient support I have received in the past seventeen years from the officers and officials of all ranks and classes in the Sudan Government." The greatest testimony to the excellence of their work, he says, is the present state of the Sudan, and the measure of their achievement is the contrast between the conditions of the country in 1900 and in 1916. Sir Reginald concludes by expressing his gratitude for the able and patriotic services rendered by the notables, religious and secular, the native magistrates, nazirs, omdas, and sheikhs, the members of the municipalities and representatives of the commercial and other communities. "Their contribution to the present satisfactory state of the Sudan has been a very notable and significant one; and it is a great pleasure and privilege to me to feel that, in leaving Khartoum, I shall not sever my connection with them, nor with the Sudanese people, whose welfare is, and will continue to be, my close and personal concern."

In the second Order, addressed to the officers, non-commissioned officers, and men of the Egyptian Army, and to the officials of the War Department, the Sirdar, after referring to the fact that "the spirit of the Army which assisted to overthrow the Dervish hordes in 1898 is still active," says he is glad to feel that his transfer to Cairo does not involve a sudden termination of his connection with the officers, non-commissioned officers, and men, nor can it, he adds, "affect in any way my deep regard and concern for all that pertains to their welfare and the good of the Army."

Before leaving Khartoum Sir Reginald Wingate received the following message from Sultan Hussein:—

My dear Sir Reginald Wingate,—At this moment, when you are about to relinquish the active command of the Egyptian Army and the work of Governor-General of the Sudan, I consider it to be my duty to express, as much in my own name as that of the country, our gratitude for the distinguished services you have rendered to Egypt. It is thanks to you that the Egyptian Army has been able to reach its present pitch of perfection, and also that the Sudan has not only been definitely pacified, but that in addition to this, its old frontiers have been restored to it, by the recent conquest of Darfur. Such things are worthy of our appreciation. And therefore it pleases me to show it publicly, by conferring on you the Grand Cordon of Mohammed Ali.

Sir Henry and Lady McMahon were entertained at luncheon at the Royal Automobile Club on Monday by the Hon. Arthur Stanley, chairman of the Joint War Committee of the British Red Cross Society and the Order of St. John, to welcome them on their return and to thank them for the help they have given to the joint societies in Egypt. The guests included Adeline Duchess of Bedford, the Marchioness of Ormonde, Georgiana

Countess of Dudley, the Countess of Gosford, and Sir Robert Hudson.

Lord and Lady Granville have left Paris for Salonika.

The appointment of Lord Granville, who goes as British Diplomatic Agent to Salonika, recalls the fact that his father, the late Lord Granville, twice held office as Minister for Foreign Affairs. The first time he went to the Foreign Office was in July, 1870, shortly before the outbreak of the Franco-German War, and it is on record that Mr. Hammond, the able and experienced Under-Secretary of his predecessor, told Lord Granville unofficially that he "had never known so great a lull in foreign affairs, and that he was not aware of any important question that would have to be dealt with."

Sir Francis Elliot, the British Minister in Athens, has left Greece temporarily, on purely private business unconnected in any way with the political situation.

We understand that most of the members of the British colony in Athens, who left Greece as a consequence of the recent "events," are expected to arrive in London this morning.

A despatch from an Athens correspondent states that Mr. Duckworth, a British subject, has been missing since December 3. If, says the London correspondent of the *Manchester Guardian*, this refers to Mr. Egerton Duckworth, who has been many years a resident in Athens, his disappearance must have excited remark and elicited inquiry, for he had a large number of friends and acquaintances. His house was a few yards from the British Legation. A linguist of rare accomplishment, he was as familiar with the Greek language as with Athens, and was highly esteemed by all who knew him. He could have had no personal enemies, and if he has met with foul play the motive must have been political. If the matter has not been taken up already by the proper authorities it should be investigated. Mr. Duckworth is a Lancashire man, and his relatives live at Southport.

M. Gennadius, Diplomatic Agent for the Greek Provisional Government, was among the callers at the Foreign Office on Monday.

The Serbian Minister and Madame Yovanovitch entertained the members of the Serbian colony at luncheon at the Legation in Queen's Gate on Sunday, on the occasion of the Orthodox Christmas Day.

Mme. Take Jonescu, the wife of M. Take Jonescu, Roumanian Minister without portfolio, has arrived in London from Jassy. She is staying at the Ritz Hotel, but is confined to her room by illness, and is unable to see her friends.

Mme. Paraschivesco, wife of General Paraschivesco, of the War Ministry of Roumania, has left London for Paris.

According to the *Matin*, M. Guillemin, French Minister at Athens, on Monday flew over the harbour of Salamis and the Piræus in a seaplane, piloted by a sub-lieutenant.

"It is not often that a Bishop gets mentioned in despatches, but I notice," (says a writer in the *Daily Mail*) "the name of Bishop Gwynne, the Deputy Chaplain-General, in Sir Douglas Haig's despatch. Dr. Gwynne, who was appointed to the Bishopric of Khartoum in 1908, is a 'whole-hogger' so far as this war is concerned. 'We are out to win, to fight for victory,' was his message to the Church of England troops on the second anniversary of war."

At the Russian Church in Welbeck Street, Marylebone, on Sunday, which was the Russian Christmas Day, a special service was held in the morning. The Very Rev. Eugene Smirnov, Priest to the Russian Embassy, assisted by two Serbian priests, officiated. After the liturgy of Pasil the Great, a *Te Deum* was sung by the choir. Among the large congregation were the Grand Duchess George of Russia, accompanied by her two daughters, the personnel of the Russian

Embassy, and the Staff of the Consulate, including a number of Russian officers. There were also present thirty Serbian boys, who are being educated in this country.

A special service was also held at the Greek Church of St. Sophia, in Moscow Road, Bayswater. The Great Archimandrite, the Very Rev. Dr. Pagonis, officiated, and was assisted by the Archimandrite, the Rev. Agathangelos Moschovakis. Among the large Hellenic congregation were M. Jean Gennadius, the diplomatic representative of the Greek Provisional Government, Madame Gennadius, M. Stavridi, the Greek Consul-General, Madame Stavridi, the Staff of the Consulate, Sir Lucas Ralli, and M. P. Ralli.

At the Liverpool Greek Church on Sunday there was a special service of thanksgiving for the action taken by the Allied Powers in extending their protection to the Greek nation and in recognising the new National Government led by M. Venizelos. Prayers were offered for the safety of M. Venizelos and the success of his Ministry, while the customary petitions for King Constantine were, in accordance with the desire of the Greek community in Liverpool, omitted from the ordinary church service. The large congregation included M. Malandrinou, who recently resigned his position as Greek Consul in Liverpool.

Major Procter, who in civil life is the manager of the Manchester branch of the I.O.B., has been recently mentioned in despatches. He is at present in England recovering from injuries received in France, when a shell struck the parapet of the trench in which he was, and he was completely buried in the earth. At one time it was thought that he might lose his sight, but happily that danger is past.

On December 16, at the church of St. Michael and All Angels, Bedford Park, W., the marriage took place of Second Lieutenant Ronald Wilson Broatch, London Scottish, son of Mr. and Mrs. Broatch, of Port Said, Egypt, and Dorothy Frances May Clarkson, eldest daughter of Mr. and Mrs. H. W. Clarkson, of Bedford Park, W., and Heacham, Norfolk.

Sheikh Fuad El Khatib, formerly Professor at Gordon College, who now occupies an important post in the new kingdom of Arabia, arrived at Khartoum lately on a short visit to the Sudan. Sheikh Fuad is Director of Foreign Affairs in the Ministry of Foreign Affairs in Mecca; and since the absence of Sherif Abdulla, the son of the Grand Sherif, he has been acting Foreign Minister.

The Dardanelles Commission held a further sitting at the House of Lords on Wednesday, when Major-General Sir S. von Donop and other officers were examined. Lord Cromer is unable to attend owing to influenza. Sir John Maxwell appeared before the Commission on Friday last.

The Right Hon. Sir H. Mortimer Durand will take the chair at a meeting of the Central Asian Society on Wednesday next, when Mr. N. Kato will read a paper on "Japan's Part in the War."

APPOINTMENTS, PROMOTIONS, ETC.

Sir Walter Beaupré Townley, K.C.M.G., has been appointed successor to Sir Alan Johnstone as British Minister at the Hague. Sir Walter has been British Minister at Teheran since 1912. He was born in 1863. After he had served as Third Secretary of the Embassy in Paris he was transferred to Teheran in 1889, and returned to Paris in 1892. In 1894 he went for a while to Bucharest, and then returned again to Paris. After that he was appointed to Lisbon (1897), Berlin (1898), Rome (1900), Peking (1901), Constantinople (1903), and Washington (1906). In 1906 he was appointed Minister to the Argentine Republic and the Republic of Paraguay, and in 1910 he went to Bucharest and remained there until 1912, when he went to Teheran.

The Anglo-Hellenic League has informed Reuter's Agency that the Greek Provisional Government at Salonika has published a decree appointing Mr. Basil Malandriros Consul-General at Liverpool, Mr. George Tombazis Consul at Glasgow, Mr. Leonard Macarthy Consul at Newcastle, and Mr. Casdaglis Consul at Manchester. All these gentlemen resigned, after the events of December 1, the Consular appointments they formerly held under King Constantine's Government.

The *Echo de Paris* states that, contrary to certain reports which have appeared, it is not M. Diomedes, but M. Romanos, who will be the representative of the Venizelist Government in Paris. M. Diomedes is only entrusted with a special political mission to Paris and London.

Ismaïl Khan Fanzaneh, the newly-appointed Persian Minister in Rome, has left Teheran for Italy.

Our Cyprus Correspondent states that Mr. Antrobus, of the Survey Department, who has done good work for the Land Registry Office, is leaving the Government service, and is returning to England.

El Lewa W. S. R. May Pasha, Sudan Government, having retired from service in the Sudan, is no longer on the strength of the Egyptian Army.

Lieut. W. J. Smith, Dorset Regiment, has been attached to the Egyptian Army as a Special Service Officer, with the temporary rank of Bimbashi, and attached to the Transport for duty.

Captain T. G. N. Bardwell, East Riding of Yorkshire Yeomanry, has been attached to the Egyptian Army as a Special Service officer, with the temporary rank of Bimbashi, and his services are placed at the disposal of the Sudan Government.

The following appointments are announced: El Kaim, S. E. H. Giles Bey, Staff Officer Transport, to be General Staff Officer, 2nd grade, and A. Q. M. G.

El Bimb. (temporary) E. D. M. Heriot-Hill, Transport to be Staff Officer Transport.

El Bimb. (temporary Kaim.) S. E. H. Giles, Staff Officer Transport, has been promoted to the rank of Kaimakam.

The King of Roumania has conferred on M. Porumbaro, late Minister for Foreign Affairs and now President of the Senate, the Grand Cross of the Star of Roumania. M. Contzescu, Counsellor of Legation in the Ministry of Foreign Affairs, has been promoted to be a Minister Plenipotentiary.

M. Radoslavoff, the Bulgarian Prime Minister, has received from King Ferdinand the Grand Cross of the Order of St. Alexander, together with an autograph letter.

OBITUARY.

Captain Alfred Huntriss Arnold, West Yorkshire Regiment, died at Lady Wimborne's Convalescent Hospital, Templeton House, Roehampton, on December 30, of wounds received in March, 1915. He was 24 years of age and was educated at Uppingham. He joined the West Yorkshires at Malta, and for over a year served under Lieutenant-Colonel Philips at Skutari, Albania, when the Powers stationed an International Force there after the evacuation of the town by the Montenegrins. On the outbreak of the present war he returned to Malta, and came to England in September. With his battalion Lieutenant Arnold took his full share of trench fighting all through the first winter's campaign, and was gazetted temporary captain before Christmas, 1914.

FLIGHT COMMANDER HANS ACWORTH BUSK, R.N., missing in the Dardanelles since January 6, 1916.—Any definite information that might be obtained through relatives or prisoners of war in Turkey concerning the fate of this officer would be gratefully received by his mother, Mrs. Busk, 6, Wadham Gardens, Regent's Park, N.W.

THE LATE DR. BOWEN.

AN APPRECIATION.

A correspondent writes:—The notice, in the last number of *THE NEAR EAST*, of the death of the distinguished missionary, the Rev. Andrew Watson, of Cairo, reminds one afresh of that other great loss the Christian workers' field has suffered in the death of the Rev. Marcellus Bowen, D.D., at Vevey, on the 3rd October last. *THE NEAR EAST* contained a brief, sympathetic notice of Dr. Bowen shortly after the news of his death reached this country, but surely a further word will be prized by the great number of friends throughout Turkey and Egypt who held Dr. Bowen in deep and affectionate esteem. In Switzerland, where his death occurred so suddenly from a stroke of paralysis, he and Mrs. Bowen, in their temporary sojourn there, had drawn around themselves a circle of friends, cultured and international in character, that hastened to express sympathy and to show every mark of recognition that would have followed had he died in his own country or in the city of his especial labours. The memorial service for Dr. Bowen, held at the American Church in Geneva, on Sunday morning, October 8, and which was so largely attended, testified to the goodness and great-natured character of the man and to the instant appeal he always made to the hearts of all those with whom he came in contact.

He was singularly well fitted for his chosen life-work. With no biographical data at hand one can only outline generally that he was born in the State of Ohio, about 70 years ago, with the study of the law a tradition in his family and with that profession chosen for him should his tastes lead him that way. He was a graduate of Yale University and then entered a Theological Seminary, as religious study made an appeal to him stronger than that of the study of the law. He was early fitted for his life-work, early married to Miss Flora Stearns, a brilliant, talented girl of kindred tastes, and after a few years of work in the ministry in the city of New Haven, they both came to Turkey (to Smyrna first, as one remembers), to be thereafter a continuous inspiration to all who came in contact with them—native, foreigner, fellow-countrymen alike. Dr. Bowen's last and longest service for the peoples of the Near East, which covers a period of many years, was accomplished through his appointment as head of the American Bible House, in Stamboul. This work gave him free scope for the use of his talents in many different ways; while he still remained a preacher of more than usual spiritual uplift and appeal, and with a knowledge of the Turkish and other languages that brought him in close contact and sympathy with the people of the country, his work also took him to the various mission stations throughout the Ottoman Empire, and often to Egypt—even to the regions of the Upper Nile.

This is but the briefest outline of the life of one whose years of service were crowded with stirring incident and events. We should not close without some word of reference at least to the notable home life of Dr. and Mrs. Bowen at Constantinople, to their unceasing hospitality—hospitality to the traveller within their midst, to the returning missionaries from the far Interior, to their generous participation in all philanthropic work, and to their uplifting influence on the social and intellectual life of the community. Their home was a cultivated centre where all nationalities met and kindly intercourse was encouraged and where the reception was as gracious and comprehensive as was that memorable view from their windows over city, strait, and all the surrounding country.

Long will he be mourned, long will they both be missed from that city on the Bosphorus where both have worked and both have given so freely of their best for all peoples, and through days shadowed by wars and revolutions as well as through days of unclouded Eastern sunshine and peace.

On Sunday, the Serbian Christmas Day, every man in the Serbian Army received a packet of cigarettes as a Christmas gift from the British who worked in Serbia. The latter organised a fund for this purpose, and ordered the cigarettes direct from Salonika.

DOMESTIC ANNOUNCEMENTS.

DEATHS.

SEMPLÉ.—Previously reported missing, now reported killed in action on June 29, 1916, Second Lieutenant William David Semple, King's Royal Rifle Corps, eldest son of Colonel Sir David Semple, Director-General, Public Health Department, Egypt, and of Lady Semple, Woburn Sands, Bucks, aged 21.

WRIGHT.—On December 24, while on active service abroad, Captain Henry Somerset Wright, Manchester Regiment, attached Egyptian Army, eldest son of Mr. and Mrs. Wright, of the Mardyke House, Cork, and Fern Hill, Clonakilty, and dearly-loved husband of May Wright, 26, Gledhow Gardens, S.W.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismaïl.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

FRIDAY, JANUARY 12, 1917.

THE ALLIES AND GREECE.

The Allies are at last getting down to bedrock in Greece. For a long time—too long a time in the opinion of many—they have been content to probe the muddy waters that overlaid it with a peculiarly non-sensitive instrument, and there were moments when they seemed to have lost their bearings entirely. We cannot pretend to know whether it was the case or not. But now that a strong pole has been directed straight to the bottom, it is perhaps fair to the Allied Governments to suggest that they have had cogent reasons for persistently delaying to adopt the obvious course. What those reasons were has not been disclosed to an expectant public, and, possibly, never will be. For the moment we may console ourselves with the reflection that the policy of vacillation appears to be at an end. It is evidently more than a coincidence that the ultimatum, with a time limit, sent to the Greek Government followed close upon the Allied Conference at Rome. That Conference, according to a semi-official statement, "once more recorded the complete agreement of the Allies on the various questions discussed." As it would certainly have been a monstrous thing if such complete agreement had not existed, there will be a tendency to lay more stress on the concluding statement that "it was decided to carry out a still closer co-ordination of their efforts." Failure to co-ordinate all the Allies' efforts, whether military or political, has been at the root of most of their troubles during the last thirty months. It was, for instance, open to misinterpretation to find the Italian Minister still remaining in Athens when the British, French, and Russian Ministers considered it necessary to live on board the Allied Fleet at the Piræus. The Italian Government quite correctly associated itself with the diplomatic steps taken by the Entente Powers; but the palpable hiatus in the co-ordination of the Allies' efforts would encourage the Greek Government and Germany to believe that they might still use to their advantage any past lack of sympathy that there may have been between Italy and M. Venizelos. If the Rome Conference dealt with the Greek question at all, we may hope that the outcome of its deliberations has been that all the previous obstacles in the way of doing the obvious thing in Greece have now been removed, and that the ultimatum is the first fruit of the new order.

The new Note addressed to the Athens Government will not necessarily solve the Greek problem. What it sets out to do, in requiring an answer within forty-eight hours, is to determine the relations between official Greece and the Allies. With a forbearance which appears more magnanimous than politic the latter have allowed this point to remain unsettled since December 1. Until that date the Greek Government claimed to be neutral. Its interpretation of the attitude was open to challenge, and from time to time the Entente Powers had to ask for assurances on the subject. These became more and more unsatisfactory until on December 1 Greek troops, specifically mobilized and posted in commanding positions for the purpose, opened fire on Allied landing detachments approaching Athens. This overt act of hostility, which resulted in a number of casualties to the Allied force, was followed by a series of outrages

perpetrated on Allied subjects in Greece and unequivocal language on the part of King Constantine's Ministers, if not of the King himself, extolling the action of the army in attacking what were termed the country's "enemies." The personal injury done to British subjects and others would of itself have justified an immediate declaration of war; the more so, as it has been followed by the most reckless and provocative language in the Greek Press, of which only so-called "royalist" papers are allowed to be published. Refraining from extreme measures, the Allies addressed two Notes to the Greek Government, on December 14 and December 31, in which they indicated the steps they required Greece to take in order to regularise her position and to make reparation for the events of the first two days of December. The Greek Government professed its readiness to comply with the terms of the first Note; but in regard to the second, without undertaking or refusing to fulfil the Allies' demands, it is understood to have handed in a series of statements pointing out certain difficulties in complying with some of those demands. These proceedings can only be judged in relation to the specific actions and attitude of official Greece. Some steps, it is believed, have been taken to give effect to the request for the transfer of Greek troops from Thessaly to the Peloponnese; but for the rest there has been no attempt on the part of the Greek Government to make amends or to deal honourably with the Allies. In these circumstances no other course was open to the Allied Governments than to insist upon immediate compliance with the terms of their former Notes.

It is well at this stage to recall the outstanding features of the position in Greece. At no time since the war began has King Constantine shown himself at all partial to the Allies; even the opportunity of joining them against the Turks was refused when such a step might have implied no actual hostility to Germany. On the other hand, there is the definite action of Greece in repudiating her alliance with Serbia, which, without placing King Constantine's moral rectitude too high, we may believe would not have been taken, unless he had felt certain that, whatever might come of the repudiation, the Central Powers would see him through. The occupation of Salonika by the Allies made King Constantine definitely antagonistic to their cause. He may be able to plead justification for this attitude; the point is susceptible of argument. What cannot be justified is any attempt to scheme against the safety of the Allied troops while maintaining the mask of neutrality. To what extent the King and his Ministers were more open in their hostility than the Allies have chosen to admit we do not know. When King Constantine early in October, at the very beginning of von Falkenhayn's offensive in the Carpathians, announced that in three weeks Roumania would be overwhelmed after the manner of Serbia, it entailed no straining of his words to infer that he was speaking with first-hand knowledge from German sources and with manifest approval of Germany's cause. It was just at this time that the Allies began to insist upon guarantees for Greece's neutrality, by the demand, first, for the surrender of the navy and then for the control of the public services. As is realized now, the demands were enforced too deliberately. King Constantine had time to rally the army and a part of public opinion to his side, and the Allies' task was rendered far more difficult. There is no longer any reason to doubt that King Constantine and the section of the Greek army which still follows him would readily throw in their lot with the Central Powers against the Allies, if the former could give them practical assistance. The only place where such assistance could be afforded is in Macedonia, and the Allies have to decide upon the possibility of the enemy approaching Greek territory near enough to give King Constantine's troops the support they are counting upon. If the Allied Governments live up to the assurance definitely given by Mr. Lloyd George that they would "run no risks," then on the expiry of the ultimatum Greece, whatever the tenour of her reply, must be regarded as an enemy country, until such time as the unmistakable risks now being run have been eliminated.

THE CENTRAL BALKANS.

By H. M. Wallis.

II.—MIDWINTER.

After some weeks of perfectly detestable weather, in which outdoor work of any kind, and even locomotion, is almost impossible, the weather takes up, and a couple of months of hard frost follows. This is what the people of the country long for; they enjoy it. For those who understand the conditions, and are adequately fed and clothed, it is delightful; for those who are not it may be deadly.

There may be anything from six inches to a foot of snow, which is not soft and clinging, as is ours at home, but as dry as powder, and squeaks beneath the heel like the chirrup of a bird. The air is usually still. The sun rises without a cloud, rides all day in intense brilliance—very trying to the eyes—is quite capable of skinning one's nose and ears, and sets in cloudless glory at night. Then out rush the stars in a deep violet vault of sky, and down goes the mercury to zero.

For a strong man, well clothed and well fed, this is the healthiest climate possible. It is almost as exhilarating as the Engadine. One can walk all day without an overcoat. But, if a wind gets up and the snow begins to move, mind what you are doing. Also it is not well to be out after dark even in a village. Wolves, the tawny-coated monsters of the Balkans, are still very much to the fore. Even by day, and along a highway, one may find a huge brown beast loping slowly behind one, or using the carriage in which one is travelling as a stalking-horse whereby to get within pounce of a flock of travelling goats. The villagers warn one against this beast, and furnish their sheep dogs with savagely spiked collars. Even within five miles of Sofia and electric light standards wolves have chased a law-abiding citizen to his very porch, and he within a few yards of a tram terminus!

The natives never take liberties with these months of hard weather. They dress for it. The women, whose summer working-dress is a single garment, the long flax smock spun and woven by their own hands, now betake them to stockings and hide sandals, also to heavy cloth pelisses, and to *cosaques* of sheep-skin with the wool worn inside. In especially hard weather two of these *cosaques* are worn, one over another, also a head-wrap of woollen crochet-work. The men wear their heaviest coats lined with fleeces, and in the case of the Vladh shepherds, whose calling keeps them late and far afield, a hooded cloak of a material like the skin of a bear for thickness and depth of pile. I know not how it is woven, nor where; it shoots the heaviest rain, and when peace returns should be a popular material for motor-coats. I have seen nothing like it elsewhere.

Fuel is always a difficulty in the settled parts of the Balkans. There is very little in Bulgaria; the Turk during his last years of mastership, say 1865-1880, cut and sold everything he could get to market, and there has not been time, nor money, to repair damages. Tsar Ferdinand did as much as one energetic and far-sighted man could, but it takes more than one man or one generation to reafforest a depleted countryside.

Except white poplar and willow along the courses of rivers, Thrace is miserably bare. I saw them bringing wood for the army before Adrianople from Kostanetz far to the north and by an indirect route. I only heard of two coal mines in Bulgaria. One was of brown coal, dusty stuff, and affording the minimum of heat. The other was similar to Welsh, but lies wide of any line of rails. It is English owned, and working was just beginning when this war broke out.

Of the central-southern Balkan, the Peren range, there is no precise information available. It is a mountain ridge, well wooded, but totally unexplored. Lord Rothschild has little or no information as to its

natural history, and tells me nothing is known. Tsar Ferdinand, who is a great naturalist, asked leave of the Sultan in happier times to be permitted to visit and collect plants. He was refused on the ground that his safety could not be guaranteed. There is wolf and bear there, and hyaena is reported, and may be there. There are no decent roads that I could hear of.

This mountain mass is to the south-south-east of Mount Rilo, a *massif* of some 10,000 ft. in height, never free from snow. This and the radiant glens of its system form a serious barrier to an army advancing upon Sofia from the south.

A glance at the map will show that the mountain systems of the Balkan run east and west, and sink to their lowest as they approach the Black Sea. The farther west one goes the loftier and rugged they appear. Neither are they crossed by passes in the usual sense of the word, nor for the most part do they show peaks, but run for enormous distances in almost level-topped hogs'-backs. These have to be crossed somehow. The well-remembered Shipka is such a "pass"; it held up a Russian army for long, and was eventually the ruin of the Turkish force opposed to it.

The steep sides of these east-and-west extending ranges are seamed by glens cut in the limestone by small, swift trout-streams. The Chepino, the Kostanetz Glen, and the railway route from Sofia to Kustendil are such. All three are extremely tortuous, narrow, and steep, overhung by enormous cliffs around which one saw eagles wheeling. It needs no saying that, regarded as military approaches to the capital of Bulgaria, they leave something to be desired.

If we had taken the Dardanelles, and Constantinople had fallen, we could have turned both the Rhodopes and the Balkans by their Black Sea approaches, and—done various other things.

These mountains, though less imposing to the eye than the Alps or the Pyrenees, are formidable works of nature. The chamois is fairly common among them, and anyone can draw his own conclusions from the fact, for the chamois is not found in easy country. Even in summer these ranges would not be negotiated at the first rush, and in winter, with from one to two feet of snow in the passes, they would be less easy. For, roundly speaking, they produce nothing in the way of food. The resources of the Balkans are all in the rich river-bottoms, such as the valleys of the Maritza and Vardar, and the farther you go the poorer the country, until one comes out upon the plateaux around Sofia, approximately fifteen hundred feet above sea-level, where there are normally plenty of food-stuffs and cattle. But the winter temperature of Sofia is low. Roses will not grow there unscreened.

The best wheat land lies between the Rhodope and the Balkan, around Stara Zagora. This is called "the granary of Bulgaria." Incidentally, one may mention that whilst barley is a favourite crop, oats are much less common, and are a modern innovation introduced by the Russians since 1879. Maize is general, its straw makes good roofing for huts.

Mr. BERNARD SHAW says:

"The New Witness" employs more specific literary talent to the square inch than most of our journals could enlist even if they liked literary talent (which they mostly don't!)"

Mr. G. K. CHESTERTON contributes each week an article on current events, under the title: "AT THE SIGN OF THE WORLD'S END."

Mr. HILAIRE BELLOC writes special articles on matters of public import connected with the national crisis.

Mr. ERNEST NEWMAN, our Musical Critic, writes weekly.

M. ERNEST DIMNET, whose articles on French politics have attracted so much attention, will continue his series, entitled "France at War."

Mr. RAYMOND RADCLIFFE, the City Editor of THE NEW WITNESS, replies to any queries accompanied by a coupon.

Mr. HERBERT VIVIAN, our Special Correspondent on the Italian front, contributes a series of striking articles from Italy.

DRAMA: THE NEW WITNESS follows closely all dramatic performances.

LITERATURE: All books worth reading are reviewed by distinguished literary critics.

AN ENGLISHWOMAN'S ADVENTURES IN ROUMANIA.

Miss Louisa Taylor, daughter of Dr. Michael H. Taylor, Coroner for the Kingston Division of Surrey, who for some years has been engaged in educational work at Craiova, in Roumania, has just reached home after an adventurous journey lasting over a month.

When the war broke out Miss Taylor was assured that there was no danger of the Germans ever reaching Craiova, and so she remained in the town. But, fortunately as it turned out, she decided to be prepared for an emergency by keeping in her possession enough money to bring her home. As educational work was at a standstill owing to the war, she joined the Red Cross staff, and was nursing when the Germans entered Craiova on November 20. On reaching the hospital that day she was advised by the medical superintendent to leave at once, without even going back to her lodgings for a change of clothing, because the Germans had issued a proclamation that the inhabitants were to make an immediate return of all British subjects living in their houses. By the medical superintendent's advice she walked along the railway for about nine miles, till she found a train, which took her twenty miles on the way to Bucharest. A friendly wagoner gave her a "lift" across the country to a station, where she found a crowded train waiting, and where she came up also with the retreating Roumanian Army. The train and the Army proceeded side by side for five or six days, at the end of which time they reached Bucharest. During the journey the train was bombed by the enemy and was under shell fire almost the whole of the way. Arrived at Bucharest, she found that the Roumanian authorities and the Consuls had left for Jassy. On her second day with the troops she received one piece of bread, and once a day afterwards was given a similar ration. She pushed on by train to Galatz, where the British Consul advised her to make her way to Odessa via Reni. At Odessa the British Consul introduced her to an English family, who hospitably entertained her for four days while her papers for the journey home were being prepared. She then took train to Petrograd, and thence back to England.

The engineers of the famous Roumanian oil wells told Miss Taylor that they had so dealt with them that the enemy would not be able to use them for two years. She was also told that the Germans got 300,000 wagonloads of grain and hundreds of thousands of cattle.

ROUMANIAN RELIEF FUND.

The Committee of the National Roumanian Relief Fund met in Edinburgh on Tuesday, the Earl of Rosebery presiding. The financial statement made by Sir George Anderson (Bank of Scotland, Edinburgh), treasurer, showed that the fund amounted to over £22,000. Mr. John Samuel, on behalf of the fund raised by the Lord Provost of Glasgow, reported that over £9,000 had been subscribed in addition. It was resolved to communicate with the Roumanian Minister with reference to the provision of relief for Roumania.

"ARMENIAN SUNDAY."

The Archbishop of Canterbury, writing to the Rev. Harold Buxton, hon. secretary of the Armenian Refugees (Lord Mayor's) Fund, says: "In view of the appalling sufferings which the Armenian and the Assyrian Christians are still enduring in such a degree as to call for the sympathy and aid of every Christian man and woman, I desire to express my approval of the renewal, during the coming spring, of the effort which was made last year to raise money in our churches and elsewhere for the alleviation of that dire distress. In many churches arrangements are already being made for collections on their behalf on Sunday, February 4, and I venture to hope on that, or one of the succeeding Sundays, there may be a widespread effort to alleviate distresses which are literally unspeakable. The money should be sent to the Secretary of the Armenian Refugees (Lord Mayor's) Fund, 95, Victoria Street, London, S.W."

Cardinal Bourne has signified his approval of this proposal, and it is hoped that it will be largely adopted throughout the Free Churches of Great Britain.

LOST MAILS FOR THE EGYPTIAN ARMY.

The correspondence other than parcels addressed to the Egyptian Expeditionary Force which reached the Army Letter Office, London, for despatch from December 18 to 25, both days inclusive, has been lost at sea through enemy action. Compensation is not granted by the Post Office for losses due to the acts of the King's enemies; but remittances in certain forms can be replaced, as to which information can be obtained on application to the office of posting.

THE WORLD-FAMOUS
YAGHOURT

MANOLI-CORBETTI,
22, Great Chapel Street, Oxford Street.
Also **LEVANT PRODUCE:**
Tomato Paste, Black Olives, Locoums, Halwa,
Bamias, &c.
Recommended by Mrs. Frank Barker.

CONVERSAZIONE OF CENTRAL ISLAMIC SOCIETY.

Last Saturday the Central Islamic Society commemorated the birth of Mohammed by a conversazione at the Hotel Cecil, Strand, W.C. There was a musical programme, which was contributed to by artists from both East and West. Mr. Yusuf Ali presided, and amongst those who were present were Princess Sophia Dhuleep Singh, Princess Ourousoff, Prince Abdul Karin Khan, Count de Borch, Viscomte de Potiers, Dr. Taymour, Dr. Tallarico, Sayed El Bakry, Sheikh Kidwai, Fahy Pasha, and Easda Bey.

During the evening Mr. Marmaduke Pickthall delivered an address, in the course of which he said that the Prophet Mohammed was an historical character, of good family, but poor. He married a wealthy widow, Khadija, and travelled to Syria and further with trains of camels bearing merchandize. There he encountered Jews and Christians more enlightened than those of Mecca. He pondered much on the subject of religion, and inquired especially about the faith of Abraham, whom the Meccans, though idolators, claimed as their ancestor and the founder of their temple. He early came to perceive that the Eternal Majesty is one and undefinable in human terms, and that the attempt so to define God as an individual or group of individuals furnished the opportunity for priests and rabbis to practise extortion on the people by representing themselves as the guardians of the spiritual life which should be free to all. At the age of forty he had a vision calling him to be a prophet. He suffered twelve years of persecution in his native city and then fled to Medina. He established a little kingdom and army, and, in the ten years remaining to him of life, succeeded in reforming all Arabia. He destroyed idolatry, raised women from a position of the utmost degradation to one of honour and assured position, established strict laws for war, and made universal brotherhood a principle of fact and common law.

AN EXPOSITION OF ZOROASTRIANISM.

Last Tuesday Mr. Herbert Baynes read a paper before the Royal Asiatic Society entitled "The Messianic Hope and the Zoroastrian Prophecy." He said that in the sixth century before Christ the problem before Zoroaster was how in a faith at bottom wholly monotheistic to account for evil. His solution was that inherent in the Supreme Being there were two opposing forces, good and bad. These forces he called Ahura Masda and Angra Mainju, or, as we are wont to call them, Ormuzd and Ahriman. Of these the evil was thought to be the weaker, and Zoroaster did not hesitate to teach that in the fullness of time a saviour would arise born of a virgin, with a halo of divine glory to bring peace and establish righteousness on earth.

Proceeding to expound his subject more fully Mr. Baynes quoted Professor Deussen, to the effect that in endless time and boundless space, separated from each other by vast distances, two great realms existed—those of beginningless light and beginningless darkness. Truth, light, and life were the attributes of the one; death, darkness, and falsehood of the other. Everything good in the earth was the creation of Ahura Masda—the corn-bearing earth, rivers, seas, metals, and trees—whilst winter, drought, illness, beasts of prey, reptiles, and vermin were brought into creation by Angra Mainju. The whole history of the world consisted in a conflict of these two principles. It covered a period of fifteen thousand years from the first creation to the end. Zoroaster's teachings included the resurrection and the day of judgment. He taught that man's fate after death depended upon the life he lived, and that the evil principle would be finally completely destroyed by the good one.

An interesting discussion followed.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galimani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepherd's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacamatli and Company, 12, Rue Sesostris; Librairie Calabotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francaise, Rue Sabri Pasha, and Vañades and Co.

ATHENS. Librairie Th. Vañades.

BUCHAREST. No. 1, Strada Academiei, and Socco and Company, Calea Victoria.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

THE PRESS ON THE NEAR EAST.

Experiences in Albania.

"My Albanian Winter" is a fascinating article contributed to the January *Blackwood* by "Officier de Liaison." The writer was one of a party of British officers who landed at Medua in November, 1915, for the purpose of making arrangements "for the feeding and supplying of the Serbian Army, which it was then hoped would be able to maintain itself through the winter on the Serbian side of the Albanian Alps." But, he adds, "the news which we received on our arrival made it clear that there was no chance of this being done, and that the army itself would soon be upon us in Scutari." Such proved to be the case.

Towards the end of November the Serbians began to arrive. The retreat of an army can never be a satisfactory operation for the troops taking part in it, and its effects are not less demoralizing because it is described as "strategic" or "plan-mässig," or "in consolidation of our positions." From the point when baggage has to be abandoned selfishness begins and discipline declines, and in proportion as the conditions approach those of the natural struggle for existence the process is accelerated. No retreating army can keep its morale. The Serbians in this retreat had come about as near exhaustion as an army can get. The column to which my servant Milivoj (of whom more later) belonged had no rations issued for the last six days before they reached Scutari. For weeks after he would pick up any stray piece of food he saw lying about, not because he was hungry, but from the same sort of instinct that makes some people save the string off parcels—"Never know when that may come in useful."

The arrival of the Crown Prince with his brilliant bodyguard "impressed the Scutarenes," and it is interesting to read of the arrival of Admiral Troubridge and Colonel Phillips, "hoarse, hungry, bearded, and bootless." In December Admiral Troubridge took over the command of the port of Medua, at the request of the Serbian General Staff, and, we read:—

There was a pleasant incident when the Admiral rode into Medua at the head of the Naval Brigade, in their patched and ragged uniforms, mounted on the shaggy mountain ponies with which they had made the passage of the Albanian Alps. The Serbian officer commanding had collected some sixty Serbians, not less ragged than the Naval Brigade, given them each an extra piece of bread, and lined them up on either side of the road as a Guard of Honour. When the Admiral saw them he stopped in surprise, reined in his horse, and saluted them with the words: "Pazame Bog junaci!" ("God be with you heroes!") When a Serbian General reviews troops in peace time, it is the custom for him to greet them with the words, "Pazame Bog vojnici!" ("God be with you, soldiers!") In war, or as a special compliment, "Vojnici" (soldiers) becomes "Junaci" (heroes). It was a long time since these men had stood on a parade-ground or heard this greeting. It brought back Serbia to them, and made them forget their sufferings.

A curious light on the "collecting of information" is contained in the following passage:—

I slept that night at the Franciscan Convent at Alessio, where I bade a warm farewell to the Frate in charge of the guest-room, who had been a good friend to our party, though I regret to say he used to pass all he could learn about our doings through a certain channel to the Austrians. He was not, however, fitted by calling for espionage; and we soon found from certain countermeasures which we took that his information was extremely misleading. I am afraid that the things which we told him were not all of them true.

The writer praises highly the loyal support given by Essad Pasha to the Allies. He writes:—

Essad is the head of a well-known Albanian family, who had established his power during the last few years over Central and Southern Albania. We were very much impressed by the length of his arm and the prestige of his name in the interior of Albania. In Durazzo his power was naturally overshadowed by the Italians, who were there in some force at the time. But in the *Hinterland* it was quite another story. We carried no recommendations from Essad, and were not accompanied by his gendarmes. Everyone knew that the Austrians were advancing from the north (and many believed the Bulgars were also advancing from the east). The days when Essad's hand would still be able to reach the disobedient were numbered: and in point of fact he took ship for Italy only a day or two later. Nevertheless, we found his gendarmerie actively carrying out his last orders. We saw two arrests made. And the mere knowledge that the Pasha was the friend of the Allies was sufficient to secure us and our hated Serbian servants a safe passage all along our road. And this though everywhere we heard the word "Komita" whispered, and several times we passed little knots of men with rifles going up into the mountains to join the Bulgar "Komitajis." If at the end of the war Essad were to land at Durazzo without a piastre in his pocket or a retainer at his back, it is the writer's belief that his arrival would at once constitute a political event of the first magnitude. Such is the prestige of his name and the terror of his record.

Any attempts which may be made—by either side—at the end of this war to set up a non-national government in Albania are likely to make shipwreck, if this factor is left out of consideration.

The article tempts us to quote further from it, but in fairness to the writer we resist the temptation, advising our readers not on any account to miss this excellent item in the always admirable *Blackwood*.

The War in the East.

The *Nation* concludes an article in which it sums up the effect of the eastern campaign upon the war as a whole up to the end of last year:—

A considerable success at Kut would largely restore our prestige, and it would rise still higher if the British troops advanced into Palestine. It is certain that both these developments will be attempted, and to check them the Germans must weaken the European theatre of war. It is here that the fate of the Allies will be decided. The East, in fact, both near and far, is still a subsidiary stage. Nothing has happened to make it less so than it was in the beginning. It is idle to conceive our prestige is finally bound up with operations in Palestine and Mesopotamia. Two-thirds of the German forces lie in the West, and the fact that Germany is declaring the Somme battle ended must not blind us to its obvious effects. Without it we should have had no offer to negotiate; and whatever were the hopes that surrounded its inception they were seen to be misplaced when once it was realized that only a small area could be drawn into the conflict. When we have enough material to double or treble the length of front involved, the issue will be decided. But this must not lead us to depreciate the rôle of the armies that are fighting towards Bagdad and Beersheba. They fit into their place as parts of an intricate whole.

The Greek Imbroglio.

Dr. E. J. Dillon, writing in the *Daily Telegraph* (January 8), prefaces his article on the above subject with the remark that "Nowhere have the failings of Entente statesmanship come out in more startling relief than in its dealings with Greece."

We quote this writer's opinion of the forces which led King Constantine to adopt a pro-German policy in the face of treaties which bound him to the Entente:—

Incapable of chivalrous emotion, the ruler of the Hellenes is swayed by a feeling of mysterious awe towards the person of the Kaiser. Him he regards as the living embodiment of military force, the only ideal that calls forth his veneration. And towards the Kaiser he looks up for direction in all the tribulations of life as naturally as "the sunflower turns to her god." This hero-worship, childlike in its unreasoning instinctiveness, is the mainspring of Constantine's international dealings. Shrewd and practical enough to desire for himself, his dynasty, and his country the protection of the masters of the Continent, he is firmly persuaded that the Germans, under Wilhelm's lead, will emerge from the smoke of battle the arbiters of Europe's fate. And he and his people have the enviable privilege of being their devoted clients. That would seem to have been the guiding motive of Constantine's foreign policy, not merely since yesterday, but long before the war—from the historic September day over three years ago on which he proposed a toast to the Kaiser and the German army, and ascribed his own recent victories to the principles inculcated by the invincible warriors of Prussia.

German Peace.

The *Outlook* (January 6) deals in a straightforward and thoroughly reasonable way with the question of what a German Peace would mean. In the course of a leading article the paper shows that Germany's main objective was the opening up of direct land communication with Turkey. This objective at least has been gained.

Let us define once more that objective. It should have been familiar to British students of foreign policy for the last thirty years; it should have presented a danger-signal to our statesmen, to whom has been entrusted the safety of the Empire. They preferred to wear their party blinkers and to concentrate their energies upon so-called "social reform." All the time it should have been apparent to any intelligent observer what direction German *Weltpolitik* was taking. There was little attempt to disguise the aim: learned professors and military fire-eaters alike expounded the gorgeous destiny of the Teuton. The wooing of Turkey was a preliminary move, but it was not done clandestinely. Our loss of influence at the Porte was no sudden event, sprung upon an unsuspecting Foreign Office. To paraphrase the late Lord Salisbury's saying, British diplomacy elected to back the other horse—the Balkan peoples who could not keep faith with one another even in their struggle for independence.

The paper recounts the various "incidents" which led to war, and concludes:—

Can we believe that these facts were only coincidences? Or is it not a saner view that Germany has attained the object for which she set out to cripple France before settling accounts with the only other great military Power which could stand by the small Slav peoples? But for the certainty that France would fulfil her pledge to her Ally there is at least the probability that the offensive would have been confined to Eastern Europe. Fortunately, as will be proved in the end, for all the Entente

Powers, German arrogance felt equal to the double operation, and expected to be able to use her fleet in expediting the task. Had she had the run of the sea there can be little doubt that she would have succeeded. The British Navy saved Europe. Nevertheless, we hold that Germany has temporarily achieved her original and less ambitious design. As she can do no more, she is naturally ready to make peace on her own terms.

Lord Kitchener in Bethlehem.

The Quarterly Statement of the *Palestine Exploration Fund* (January) contains a remarkably interesting article on "Christmas in Bethlehem," from the pen of the late Lord Kitchener, written when he was a lieutenant. The article in question was found, with another, among some reports and other papers of the late Field-Marshal, in his own handwriting and over his signature. Our quotation is from the latter portion of the article:—

At 9.50 p.m. we went to the Latin chapel, where there was already a crowd of natives. At 10 o'clock the service commenced; the Patriarch, in splendid vestments and with mitre and crozier, was seated on a throne to the left, while numerous priests went through the ritual of the Roman Church.

The crowd was by this time so dense that it was hard to keep one's place, and the noise of scuffling and fighting for places was such that nothing could be heard of the service. Turkish soldiers with fixed bayonets were placed at intervals down the church, and one could not help remembering that a few years ago, on a similar occasion, a frightful amount of blood was shed in this place. . . . A measured tapping announced the approach of the French Consul, and the six kavasses appeared shortly, hitting the ground with their sticks to warn people

to get out of the way. After a good deal of squeezing they managed to reach the chair prepared for the Consul; he was in uniform, wearing several orders, and was accompanied by his staff. The kavasses formed a ring round the Consul, and by a good deal of pushing we managed to get the ladies into this charmed circle. The atmosphere of the small vault without any ventilation was most oppressive, and the turmoil going on gave one no peace. I saw several men faint and be carried out.

At midnight the "Gloria in Excelsis" was very beautifully sung, a centre candle was lighted on the altar, and the wax image of a child was displayed. At 2 a.m. a procession was formed of all the priests bearing candles and, lastly, the Patriarch carrying the wax figure. Close behind him came the French Consul and his staff, carrying candles, and guarded by his kavasses. The procession wound its way through the cloisters into the great basilica, and down the steps into the Grotto, which was almost entirely filled by the priests. Here the Gospel was read, and the image was wrapped in swaddling clothes and laid in the Manger. The procession then reformed and returned to the church, where, after some more ceremonies, the Patriarch was unrobed, and said Mass himself in ordinary priest's vestments.

We left while this was going on, as it was 4 a.m., and rode back to Jerusalem with the dawn, not sorry to be out of the stifling atmosphere and in the fresh morning air. That Christmas morning ride to Jerusalem with all its associations, and after the night we had gone through, is one of my cherished remembrances of the Holy Land.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Business is crying aloud for the enterprising in Egypt, I hear. The Chamber of Commerce (6, Rue de l'Ancienne Bourse, Alexandria) has a good deal of interest to say to British firms who handle, or who are prepared to handle, rice, coffee, sugar, spices, etc. Before the war the produce was practically monopolised by two Hun firms, whose turnover in 1913 approximated £2,000,000. These firms are now in liquidation, and if this valuable trade is to be retained in British hands there is no time to be lost. Egypt is able to afford easy facilities for trade, and British firms of repute may be sure of a firm welcome.

After all their boasting of the loot which they intended to extract from unfortunate Roumania, the Germans are now giving way to uncontrolled rage because our Allies have left their oilfields bare and unworkable. In the early days of the German advance the *Berliner Lokalanzeiger* assured its readers that the oil-well machinery had only been damaged at isolated points. An officer on the German General Staff dispels this illusion, however. "The destruction in the oil region is so terrible and wild," he says, "that it surpasses everything that so far has happened. Whatever could be ruined has been ruined." Excellent for the moment, though it is regretted very sincerely, of course, that so serious a step has been necessary. However, the cost of restoration will be part of the reparation to be exacted when peace comes.

One German paper, at least, has been impelled to speak the truth about the limited character of the supplies which the Hun armies have secured. "Nothing," the *Kölnische Volkszeitung* wrote recently, "could be more misleading than to estimate too optimistically the economic effect of the capture of Wallachia on our food problem. On paper, the figures relating to the grain supplies which Roumania possessed on July 1, 1916 (1,600,000 tons), with those for this year's harvest (4,400,000 tons), might easily lead one to be optimistic. These figures certainly bear forcible testimony, especially in their general indications, to the fertility of the enemy territory taken by us, but it is another question whether we can thereby arrive at an immediate conclusion respecting the future of our corn supplies during the war. As yet we do not know what part—for it can only be a part!—of the July stock referred to still remains, and how much of it has fallen or will fall into our hands. But as concerns the present harvest it is at the same time to be remembered that so far we have captured only a portion—albeit the richest—of Roumania, that no inconsiderable part of the harvest will be destroyed by the Roumanians and—especially—by the Russians, and that the Roumanian Army has surely consumed a great quantity, representing a considerable deduction from the original estimate of the stock. All these are uncertain factors which make all attempt at calculation on the basis of former stocks and resources simply theoretical. Only when we know what we actually hold in the way of grain stores in Roumania can

a safe judgment be formed concerning the economic significance of this item in our corn provision."

This is frankness with a vengeance, and we know that the frankness is warranted by the facts. Since the stories of the fabulous booty found in the Roumanian towns were published a change has come over the spirit of the Hun, who has discovered that he loves peace and seeks after righteousness. Austria has become extremely restive since she secured so great an addition to her food supply, while Bulgaria and Turkey are positively rejoicing in the sacrifices which they continue to make in the cause of Kultur. As I have said before, we all sympathise with Roumania, and mourn with her the desolation of her fair countrysides; but the full strength of the German hordes has been detracted from by the removal or destruction of available supplies of fuel and grain, and the Allies are under a debt to the country and people for acquiescing in a sacrifice which was none the less bitter because it was so necessary.

The Central Powers are keen, apparently, on advertising the "loan" which the "Turkish Senate has authorised the Ottoman Government to negotiate" with the German Government. The latest news of the transaction reaches us via Vienna, which places the figure at £T38,78,400. It is stated further that the "loan" has been followed by a Turkish issue of bank notes to the extent of £T35,000,000. We shall find probably that the loan is merely a scrap of paper, and has been "put through" to warrant the Turks in further inflating their paper currency; another view is that Germany is merely securing some of her claims on her Moslem ally. Another "item of news"—to quote the Vienna correspondent—is that the commercial treaties which were concluded some time ago between Germany and Turkey have now been ratified.

I observe that, for whatever it may be worth, the Germans continue to advertise elaborate schemes for propaganda work and export organisation. Among the latest is the "Institute for Economic Intercourse with Bulgaria," formed by the most powerful manufacturing and agricultural associations in Germany, and under the patronage of the King of Bulgaria. Its object, says the *Economist*, is to stimulate and develop intercourse between Bulgaria and the Central Powers, by applying to this purpose "all the best available intelligence and every technical and organisatory device." With this association has now been combined the "German-Bulgarian Society," and one of the first activities of the joint societies will be the publication of a German newspaper in Sofia.

Another proposal is in the hands of the "German-Balkan Society," which is about to publish a special commercial handbook in German, Bulgarian, and Turkish. The "German Levant Association," founded in March of the present year, has already been very active. It has its own organ, the *German Levant Gazette*, and does its chief work in obtaining export permits and arranging credits. Its sphere of activities covers the whole of the Near East. Even Persia has its own society, the "German Persian Economic Association,"

which in its prospectus writes as follows: "On the conclusion of peace, Persia, with its great natural resources, will certainly be of great importance to the German import and export trade, and, in order to prepare for this period, it has been determined to start immediately on necessary preliminary work." There is little doubt, too, that the money forces in Germany are moving at the back of these schemes. The Deutsche Bank is to open a branch in Sofia. The Discontogesellschaft, Bleichröder, and the Norddeutsche Bank are already represented in Bulgaria through their possession of the Creditna Banka, a concern with a capital of six million lev. There may be a good deal of smoke in all this. It will be well to realise, however, that there is some fire as well.

The Cairo correspondent of THE NEAR EAST, in his letter published to-day, makes clear the situation in Egypt regarding the growing of wheat. He points out with perfect truth that the cereal output in the country is entirely subordinated to the production of cotton. If the voice of our Lancashire friends is one of truth Egyptian cotton is wanted very badly indeed by the textile industry of the United Kingdom, and I dare say there would be an outcry if the acreage under the staple were reduced.

It will be argued, of course, that just now wheat is more important to Britain than cotton: that the need for food-stuffs in increasing quantities is so great that little else matters. Well, that is a point of view which cannot be ignored; further, there is little doubt that, physically, Egypt can grow cereals almost to any extent. But who shall decide between the two? Who will find the way to induce the native agriculturist of the country to make the change, if, indeed, a way can be found? What a pity it is that people at home will not keep away from matters of which they know little. "Every cobbler to his own last" is a motto which can be commended to a great many people in England who pose as authorities on subjects of which, actually, they are blissfully ignorant.

The directors and shareholders of the Anglo-Persian Oil Company are to be congratulated upon the excellent showing made by the concern for the last year. Conditions in Persia are very precarious—they always have been: they always will be until Persians can be induced to come more in line with reasonable methods and abandon their prejudices. The war has made matters a great deal worse, and the dislocation and muddle which have ensued will require much adjustment before we can get back even to the unsatisfactory state of 1913 and early 1914. However, an improvement is indicated, and I judge from the tone of the chairman's speech that the outlook is more promising than it was a year ago.

Wheat Production in Egypt.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, December 16.

On December 4 Reuter's telegrams contained the following message from London:—"In the House of Commons Lord Robert Cecil announced that the Imperial Government was communicating with the Egyptian and Sudanese Governments in regard to the possibility of increasing the wheat supplies available for export to Great Britain. The question, he added, would be examined with the utmost care and expedition."

Taken as it stands, this message does not appear to contain anything startling, for it would seem to be the most natural thing in the world for Great Britain, in view of the threatened shortage in the world's cereal supply, to address herself for assistance to those of her dependencies that are agricultural countries. Those out here, however, who happen to be aware of the local condition of things, received the message, in so far as it concerned this country, with somewhat of a shock, for, though Egypt, an agricultural country *par excellence*, may in the good old days have enjoyed world renown as a granary, nevertheless to-day her cereal output is entirely subordinated, so to speak, to her production of cotton. She has, in fact, never posed nor attempted to pose in modern times as a cereal-exporting country; on the contrary, she has with but one exception annually imported a large quantity of flour.

In this connection it may be of interest if I give some particulars of the manner in which the agricultural area of Egypt is divided up. The table at foot shows this, and at the same time gives details of the development which has gone on of recent years.

Restricted Area.

With regard to this table, it should be explained that the extent of the cultivable area of Egypt is restricted by the amount of water available every year. As everyone who has read the reports of the Ministry of Public Works will remember, the main pre-occupation of the irrigation officials is to provide water for the enormous area which has come under cultivation during recent years. So great has been the extension of cultivation, and so large is the area that is cultivated more than once every year, that, even with the development which irrigation has undergone in certain years, there is still shortage of water, and basin-land is exempted from part or all taxation because it has not been covered by the flood. From this it follows that no extension of the present cultivable area can take place until further water facilities are provided.

Egypt produces the following cereal and food crops:—Wheat, maize (with which is included millet), barley, beans, and lentils. The available supply of wheat, which, according to the telegram quoted, is the cereal wanted by the Home Government, could be increased by extending either the wheat or the maize area. The former is out of the question for the current agricultural year—at any rate, on any useful scale—as the wheat-sowing season is over. The extension of the maize area might render more wheat available, because an increase in the maize crop would tend to lower the price by comparison with wheat, and so would incline that portion of the popu-

lation, which only eats wheat when it is relatively cheap, to take maize instead. But, unfortunately, owing to climatic conditions, every increase in the proportion of the area put under cereals must be accompanied by a corresponding decrease in the cotton area. A few words of explanation of the agricultural system followed in this country will assist in making this clear to your readers.

The Seasons.

There are three main agricultural seasons in Egypt—viz., the Sefi, or summer, from March to October, when cotton is cultivated in both Upper and Lower Egypt, sugar-cane and a small amount of maize in Upper Egypt and rice in the Delta; the Nili, or flood, from mid-July to November, when maize is sown in certain parts of Upper Egypt and all over Lower Egypt, with the exception of a small area in the extreme north, where rice is grown (as this season comes within the Sefi one, it follows that the land cultivated is that which has not already been taken up by the summer crops); and the Shitwi, or winter, from November to June, when wheat and barley are grown in Upper and Lower Egypt, and beans in Upper Egypt.

The normal rotation in Egypt is a two-year one—viz., wheat, barley, or beans; maize; bersim; cotton, sugar-cane, or rice; wheat, barley, or beans; and so on. The main season for maize being the Nili, it follows that, if its cultivation is to be extended, a corresponding portion of the area which would in the ordinary way be given up to cotton has to be sacrificed, whilst the extension of the wheat area would entail a similar interruption of the normal rotation, for, apart from the weakening which the soil would undergo from the cultivation of cotton after wheat, there is the fact that the latter does not ripen until a date which is long after the proper time for sowing cotton.

Under these circumstances, therefore, it is out of the question for Egypt to increase her production of cereals on any appreciable scale without seriously interfering with and reducing her cotton production, and it is for Great Britain, who takes the lion's share of the cotton crop, to say whether or not it is advisable for this country to sacrifice her cotton area and devote all the available land to cereals in order to be able to supply the Home country with some of the foodstuffs the latter appears to want.

Cotton or Wheat?

Supposing, however, that the British Government's decision was in the former sense, it would be extremely difficult to give effect to its wishes, for with cotton commanding prices which are double what they were before the war it is not likely that the fellah, from public-spirited motives or prompted by foresight, will put more than he can help of his land under what he sees is at present a less remunerative crop. He may not grow more cotton this year, but it is asking too much of him to expect that under the circumstances he will of his own accord grow less.

The only way in which a decrease in the cotton area to the benefit of that under cereals can be brought about is either to offer the fellah for his cereals a price which will make the production of the latter as remunerative as cotton or to restrict the cotton area by law. The first alternative is entirely dependent on the Home Government; the second, although there is a very recent pre-

cedent, which, as it happened, had no bad results, would, under present conditions, be a highly undesirable step to adopt, and would, it is to be feared, give rise to dissatisfaction, especially if it were taken for the main purpose of providing cereal exports.

Even granted, however, that the objections to the introduction of legislation for the restriction of the cotton and the increase of the cereal area could be overcome, or that the fellah could be induced, either of his own free will or by the offer of special prices, to put more of his land under cereals, it is very much to be feared that the result would be of little use to the Empire. This should be clear from the following table, which gives the cereal imports and exports of the country during the past seventeen years:—

TABLE showing the quantities of Wheat, Beans, Maize, Rice, and Flour imported and exported into and from Egypt annually from 1900 to end of October, 1916.

Cereal Imports.

This table shows that Egypt has been in the habit, as already pointed out in the opening paragraphs of this article, of annually importing cereals (mostly in the form of flour), and that with the solitary exception of the period 1915-16, she, for all practical purposes, never exported any. The figures also show another important fact, which I consider entirely knocks on the head any idea of Egypt being able to assist Great Britain with wheat exports. This is the fact that the only period in which Egypt exported cereals in any quantity—that is to say, the period in which she produced sufficient for her own needs and those of the British Army quartered on her, and had a surplus after those needs were satisfied—was the one which, as the first table shows, coincided with and followed on the year in which the cotton area was restricted, and a consequent extension in that under cereals and other food crops took place. The quantity of wheat and maize which it was possible to export between January 1, 1915, and the end of October, 1916, was, however, only about 220,000 tons, or, approximately, 120,000 tons, in the agricultural year.

This, it may be noted, was as a result of a decrease of 569,266 faddans or about one-third in the cotton area. Now, even 220,000 tons of wheat is not going to afford much alleviation to the corn situation at home, and since, I presume, no one would dream of asking that during the rest of the war Egypt should stop cotton cultivation—which would be the only sure means of producing a surplus of any assistance to the home supplies—it should, I think, be perfectly obvious that the sole sane course to adopt would be to leave the country alone, in so far as concerns export of cereals. Indeed, when one considers that Great Britain and the Allies took 75 per cent. of the total cotton crop last year—90 per cent. of the cotton exports during September and October this year—and that Egyptian cotton is generally admitted to be most valuable—in fact, the only satisfactory cotton available—for the most important munitions of war, there can be no doubt that it is in the interests of the Allies that Egypt should be encouraged by every means possible to continue her cotton cultivation as before, even if that entails the risk that she may eventually have to be helped with some of the cereals which other parts

* Part of the cultivated area produces two crops annually, which explains the difference between these two columns. † Diminution due to large area of Sharaki.

of the Empire may send for home consumption.

Official Steps.

In view of the present condition of the world's cereal market and shipping—a condition which will not improve as the war progresses—it is perfectly clear, however, that Egypt can expect little or no assistance from outside, and that she ought to take immediate steps to provide for her own requirements. As a matter of fact, efforts are being made by the local authorities to devise some means in this year of abundant water supply for increasing the production of cereals—at any rate, so that the people may have sufficient for their own needs. We shall know in a short time what it has been found possible to do. It may, however, be necessary to restrict somewhat the cotton area to attain this end, but as the sole object of this interference with the liberties of the large farmer element will be to render Egypt self-supporting, and to remove the danger of famine or serious shortage with which this country will be menaced owing to the impossibility of bringing in the usual cereal imports during the rest of the war, such a measure would be fully justified, and should be accepted by the people without a murmur, albeit, if taken merely to produce a surplus for export to Great Britain or other parts of the Empire, it would not be received with favour.

It is just possible that the real intention of the Home Government was not that Egypt should provide wheat for export to Great Britain, but that she should produce sufficient cereals for her own requirements, and also for the British forces quartered on her, thus doing away with the necessity of sending wheat across the seas to this country, as in the past. We have, however, not been vouchsafed any explanation of the statement made in the House, and we can only deduce that the foregoing may be what was intended. At any rate, to provide for her people and for the army, which is defending her from invasion, is the utmost that Egypt could do or ought to be expected to do.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

NICOSIA, December 18.

Work in the copper mine at Skouriótissa proceeds, under the direction of two Americans. The company is now carrying out some prospecting work in the vicinity of Athiénou, which lies immediately to the south of Golgoi, formerly one of the principal seats of the cult of Aphrodite.

Excavations have been carried out here at various times, and since the British occupation. Athiénou is the village *par excellence* of muleteers, an admirable class in Cyprus, whose business has been seriously affected by carriage and motor traffic and by the railway. The prospecting work is under the direction of Mr. K. Solomonides, secretary of the company.

The Chilean Nitrate Committee announce the nitrate of soda statistics for December as follows:—"Europe (including Egypt).—Exported from Chile to Europe (including Egypt), December, 163,469 tons. Owing to the impossibility of obtaining the information hitherto given, we intend to discontinue for the present the issue of this circular."

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

WEDNESDAY.

There has continued a lack of activity in most quarters of the market, and many traders find it rather hard to account for the decidedly small demand which is being experienced at the present time. The slackening off in the turnover occurred just before the Christmas holidays, chiefly owing to the slump in raw cotton rates which was taking place. Since then there has been a reaction in prices, but buyers of yarn and cloth have not been stimulated to place orders on a freer scale. For some reason or other our customers lack confidence, and undoubtedly there is much uncertainty as to the future level of values. Wages questions have been prominent this week. On Tuesday a further sitting at the Manchester Town Hall of the Court of Arbitration appointed by the Board of Trade was held to deal with the cardroom operatives' dispute. It is understood that the award of the arbitrators will be given at an early date. On Wednesday afternoon a joint meeting took place between the Master Spinners' Federation and the Operative Spinners' Amalgamation to deal with the application of the latter body for a rise in wages of 20 per cent. After discussion, it was decided to adjourn until Friday, January 19. The all-round inquiry in piece goods for Egypt continues much smaller than a little time ago. Shipments last month to that outlet amounted to 28,000,000 yards, and the exports during January are expected to be very heavy. Fresh buying, however, for the time being is in abeyance. No real increase in the business offering for India can be recorded. Some miscellaneous sales have occurred in printing and finishing cloths, but practically nothing has been done in grey shirtings. Most China shippers continue to adopt a waiting policy. The South American outlets have not been at all active. Most manufacturers of cloth have still healthy engagements, but there is a little concern in some quarters at the recent paucity of demand. American yarns for home use have been purchased sparingly from day to day. The prices now ruling, especially in wefts, are nothing like so remunerative as a month ago. Certain qualities are getting more plentiful, and stocks are beginning to back up at the mills. Only scattered sales have been put through in export bundles, but a little more inquiry has been mentioned in 40's mule for India. Rather more irregularity has shown itself in Egyptian yarn quotations, and trade has been of a restricted character.

Produce Report will be found on page 261.

TRADE NOTES.

Openings.

A commission agent who has been established in business in Cairo for a long time, desires to get into touch with United Kingdom manufacturers of shoe laces, braces, garters, towels, and eye drop tubes.

Tenders are invited by the Egyptian State Railways and Telegraphs Administration for the supply and delivery of winter clothing (uniforms and overcoats) for the season 1917-18. A copy of the specification, conditions and form of tender may be obtained on payment of 100 millièmes (about 2s.) from the office of the Administration's Inspecting

Engineer in London, Sir A. Webb, K.C.M.G., Queen Anne's Chambers, Broadway, Westminster, S.W., where also standard samples may be inspected. Sealed tenders, on the proper forms, will be received by the General Manager, Egyptian State Railways Administration, Cairo, up to 10 a.m. on January 25. Samples of the materials it is proposed to use should be submitted to the Superintendent of Stores, Saptieh, Cairo, by January 11.

With reference to the approaching completion of the plans of the Tangier-Fez Railway, the British Consul-General at Tangier reports that tenders will be received by "M. le Président de la Commission Générale des Aljudications et des Marchés," Dar-en-Niaba, Tangier, up to 11 a.m. on March 1, for the construction of the Bab Tisra section of the French part of the above-mentioned railway. This contract comprises the construction of a length of about 20 kilometres (about 12½ miles) from the station of Petit-Jean to a spot situated to the right of Sidi Ahmed Mserredj. The estimated value of the contract is placed at 4,200,000 francs (about £168,000 at par rate of exchange), and a provisional deposit of 50,000 francs (about £2,000) is required to qualify any tender. The contractor must elect legal domicile in Morocco and at least forty days before the time for the receipt of tenders, must forward certificates of competency to the "Direction Générale des Travaux Publics," Rabat. The cahier des charges may be consulted at the office of the "Commission Générale" above-mentioned or at the office of the Tangier-Fez Railway Company, 41, Avenue de l'Opéra, Paris. [In reference to the foregoing it should be borne in mind that the exportation of certain kinds of railway material to Morocco is prohibited.]

A British manufacturers' agent, at present in London, desires to obtain the representation for the Algerian market of United Kingdom manufacturers of woollens, tweeds, etc., silk and cotton linings, and hats, caps and helmets. Communications in this connection should be addressed to the Secretary, Statistical and Information Department, London Chamber of Commerce, 97, Cannon Street, E.C.

To be Wound Up.

The following firm is to be wound up:—Van Minden and Co., 86, Leadenhall Street, London, E.C., importers of tinfoil and liquorice. Controller: G. Bostock, 21, Ironmonger Lane, London, E.C.

Liquidations.

Liquidation has been ordered of the following firms:—Richard Dietterle, of Alexandria (Receiver: the Public Custodian of enemy property); Alexandre Safaromskijo, Cairo (Receiver: the Public Custodian of Enemy property); Orenstein and Koppel, of Cairo (Receiver: Mr. F. H. Russell, Gresham House, Cairo).

Notice of sale has been given in the Egyptian *Journal Officiel* of the debts on open account or represented by bills, etc., of the following enemy liquidations:—Austro Orientalisch, H.A.G.; Hugo Hackh; Stross Brothers; Rudolf Kirchmayer and Co.; Continental Caoutchouc and Gutta Percha Co.; Société Anonyme d'Electricité Ganz; Orenstein and Koppel-Arthur Koppel, Limited; Colloid Wolfram Lamp Co. (B. Lifschitz, liquidator); Kortenhans and Hammerstein (H. Ziegler and C. Lucianovitch, liquidators); Seeger Brothers and Cotton Export Co. (A. Cortessi, liquidator).

ENGINEERING NOTES.

Concrete Afloat.

Reference has been made in these columns to the use of reinforced concrete in floating structures, and the following notes, extracted from a recent issue of *The Engineer*, will be of interest. "In some quarters," says our contemporary, "there is a tendency to think that there is a novelty in the use of this material for such a purpose. This, however, is not the case. For a good many years now reinforced concrete has been employed in the construction of the hulls of barges, etc., as well as of caissons for dock building and similar work. Such caissons are built on shore, launched in very much the same manner as are ordinary ships, towed into the positions which it is desired they shall occupy, and then sunk by filling their hollow insides with a sufficient weight of material. For example, there were the caissons used in the construction of a jetty some 320ft. long at Alexandria. The bodies of these caissons were about 64ft. long, and just over 26ft. wide from side to side, though the width at the top was increased to 29ft. 6in. by a cantilever on each side. Two of these caissons were 17ft. 9in. deep, and the other three just under 23ft. deep. The larger sized caissons actually weighed about 400 tons, and drew about 6ft. 6in. of water. When sunk and filled, however, they weighed as much as 2,500 tons. These caissons were built on shore, launched, towed into position, and then sunk.

"Batterie des Maures."

"Another example is afforded by a large caisson of reinforced concrete which, when sunk in position in the bay of Hyères, formed what is known as the "Batterie des Maures," which Messrs. Schneider use for the purpose of testing torpedoes. This caisson measured rather more than 50ft. high, and was 77ft. long by 45ft. wide at the base, and 65ft. long and 35ft. wide at the top. The outer walls were 6in. thick, and the inner walls which divided the structure up into cells were 4in. thick. It also was built on shore, launched, towed out into the bay, and sunk on a bed which had previously been levelled.

"Still another example is that of Kobe Harbour, where an extensive scheme of improvement was commenced in 1907. There, reinforced concrete caissons of the cellular type, and measuring roughly 119ft. long, 35ft. 6in. on a special staging erected on piles, the latter being arranged in lines with intervals between them sufficient to permit of the pontoons of the floating dock—which were projected from the latter very much like the fingers of the hand, or the teeth of a coarse comb—being made to enter the lanes of water between the rows of piles. In this way, on increasing the buoyancy of the floating dock, the caisson could be lifted, and on the pontoons being withdrawn from between the lines of piles the caisson was withdrawn also. Then, on again decreasing the buoyancy of the floating dock, the caisson became water-borne, and could be towed into position by tugs.

Back to 1849.

"Such reinforced concrete structures, however, though they had to float, were not intended to float continuously; but reinforced concrete has, as we have already said, been for a long time now employed for building the hulls of barges, pontoons, etc. In an interesting article which appeared some years back in our contemporary *Ferro Concrete*, reference was made to numerous examples of reinforced concrete being used for the building of hulls of boats, barges, pontoons, etc. It appears that one of the earliest instances of this method of construction was afforded by a small rowing boat which was built in 1849 by

a Monsieur Lambot, of Miraval, in France. This little craft, which was not quite 10ft. long, was first fashioned in skeleton by means of a network of iron wires over which was applied a shell of strong hydraulic lime mortar just under 2in. thick. The boat was used for pleasure purposes on a private lake, and was in service as lately as the beginning of 1913. Possibly it is still in existence. Attention may also be drawn to quite a number of boats, barges, etc., built in Germany, France, Italy, and Canada. A barge built by Messrs. Grancher and Singlar, of Lozère, in France, is described as being 50ft. long and 13ft. wide with a total depth of 3ft. 4in., and as being much cheaper to build than if steel or wood had been used for the hull. Italy had in service at the end of 1912 as many as 20 barges and 60 pontoons made of reinforced concrete—the latter being used principally for floating bridges. A reinforced concrete barge built in Canada measured 80ft. long, 24ft. wide, and 7ft. deep. Barges of the same material were also built for use on the Panama Canal.

A Huge Pontoon.

"Curiously enough, although at the time it was launched we had very few examples of reinforced concrete boats or barges in this country, the largest pontoon which had up till then been constructed was designed by Messrs. L. G. Mouchel and Partners, and built for the Manchester Ship Canal in 1912. This pontoon is 100ft. long, 28ft. wide, 8ft. 6in. deep to the main deck, and 13ft. deep from the upper deck to the keel. It draws about 5ft. 6in. of water when fully loaded, and it acts as a movable pumping plant which is shifted from place to place as may be desired, and which is used for pumping material dredged from the canal on to any low-lying land near the banks which it may have been decided to raise. The material, as it is dredged from the canal, is loaded into barges, which are then moored alongside the pontoon. The necessary pumping and other machinery, which consists of a compound vertical steam engine and condenser, three centrifugal pumps, and three steam winches, with the necessary auxiliaries, weighing altogether 43 tons, is installed on the upper deck of the pontoon. The hull is sub-divided into several water-tight compartments. The shell of the hull is 3in. thick, except beneath the coal bunkers, the capacity of which is 40 tons, and the boiler, which weighs 58 tons, where it is increased to 4in. The interior bulkheads and the main deck are also 3in. thick, while the upper deck is 4in. thick. The materials used in the construction were cement, sand, and washed Penmaenmawr granite broken to $\frac{3}{4}$ in. gauge, and steel reinforcements. Even the bollards, which are used for mooring and towing purposes, were, says *Ferro Concrete*, made of reinforced concrete."

Moroccan Harbours.

The British Consul-General at Tangier (Mr. H. E. White, C.M.G.) has furnished, in a report of recent date, the following particulars, based on a recent official announcement, regarding the present position of the harbour works at the various ports of the French Zone of Morocco:—"The works at Casablanca are being pushed forward, but, deeper water having now been reached, progress on the extension of the great mole is comparatively slow, only 24 metres having been accomplished in September last. Of the total length of 1,900 metres to be built, only 564 metres have so far been completed. Other works, viz.: the construction of subsidiary quays and jetties for facilitating the loading and discharging of cargo at this port are being carried on at the same time. The company holding a concession for the port of Fadala has continued the work of jetty construction and dredging, and quays and terre-pleins are in course of construction at Rabat and Salee. At Kenitra a quay 250 metres long is being built, whilst an attempt is being made to

clear the bar at the mouth of the Sebu river by dredging. Should this prove successful, the importance of Kenitra will be greatly increased, as it is at present severely handicapped by the bar, which in winter is frequently impassable for weeks at a time. At Mazagan and Mogador small harbours for the use of lighters are being constructed. At Saffi some warehouses for the Customs Administration have now been completed; the only work at present in hand is the construction of a terre-plein, a definite decision in regard to the work to be undertaken at the port not having yet been reached. Agadir is not yet opened to commerce, but as vessels occasionally have to visit the port for the conveyance of military stores, etc., a pier has been built

ROUMANIAN 'OIL' WELLS.

A Roumanian report to the Munich *Neueste Nachrichten* says that the value of the destroyed works on the surface of the oil wells is estimated at 200 million francs (£8,000,000), and there is also the loss of production and the cost of repairing the works underground, which cannot yet be estimated. All the wooden towers over the boreholes have been rendered unserviceable, but the iron towers of American firms could not be blown up for lack of time. All the engine-houses are down, all the cranes and machinery have been smashed, and all the oil tanks were set on fire, but only a few exploded. The underground machinery cannot be used for weeks. Everything was destroyed that could be destroyed, and the destruction was performed not only in workmanlike manner, but with considerable skill.

RUSSIAN SILK.

Silk culture in Russia has developed so poorly that even Transcaucasia and Turkestan, where the industry has existed for a long time, produced scarcely 1½ per cent. of the total quantity of the world's production in silk per annum—viz., 400,000 poods of crude cocoons, or, perhaps, a little less, wrote the *Financier* recently. True, the Russian Government has turned its attention to the silk business in these districts, and we may hope for better results.

In Europe the business of cultivating silkworms has declined, not so much because of the increased value of labour, but rather from the insufficiency of fresh food. The silkworm is exceedingly sensitive, and is subject to diseases and suffers from cold. They are feeding them to some extent with scorzonera there, but it is purely experimental with this vegetable; but for me the question has been positively decided. The scorzonera is an excellent food for the silkworm, making it quite possible to extend this profitable production of silk through all Russia.

Silk cultivation in Russia is necessary. It is a powerful aid to national industry. Silk may be used where wool is scarce, and wool is now, as everyone knows, an article of primary necessity, and it can be easily replaced by silk textile. It is advantageous, at the same time, to remember that the Germans, foreseeing in the future the possibility of an economic war with the Powers of the Alliance, which would put them in a series of difficulties in the production of silk by the German factories, even now, during the war, have referred to the necessity of the earliest possible development of silk cultivation throughout Germany by means of feeding the worms on scorzonera leaves. If the German agriculturists have already proceeded to the establishment everywhere of the silk industry, why not work on that hint in wide Russia, which is a country of agricultural economy, in the first place?

SULZER BROTHERS, WINTERTHUR, SWITZERLAND
Steam Engines of all sizes, especially Uniflow Engines, Boilers and Superheaters. Sulzer Diesel Oil Engines from 20 to 6,000 B.H.P. Pumps of various systems, particularly Sulzer's high and low lift Centrifugal Pumps. Fans of all kinds. Steam and hot water heating. Ice and Refrigerating Machinery (Linde system).

RESTRICTED TRADE.

Further List of Banned Firms in Egypt.

The following additions to and removals from the list of firms and persons not resident in enemy territory, with whom trading has been prohibited, are contained in a proclamation by the Commander-in-Chief in Egypt, published in the *Journal Officiel* of December 18, 1916:—

Additions to List.

ARGENTINA AND URUGUAY.

Aachen and München Insurance Company, Calle Cangallo 319, Buenos Aires, Argentina; Agence Stigler, Montevideo, Uruguay; Arnold, H., Buenos Aires, Argentina.

Barbagelata, Buenos Aires, Argentina; Bernard Hermanos, Calle Cangallo 315, Buenos Aires, Argentina; Bonino, José A., Calle Rincon, 456 Montevideo, Uruguay; Brito, Enrique, Rondeau 2126, Montevideo, Uruguay; Buddensieg, Juan, Calle Cangallo, 845, Buenos Aires, Argentina; Bustamante, Miguel, Buenos Aires, Argentina.

Callejas, J., Buenos Aires, Argentina; Cattaneo, Constantino, Buenos Aires, Argentina; Cevini, Luis, Buenos Aires, Argentina.

Defesche, Juan, Calle Moreno 508, Buenos Aires, Argentina.

Fuhrmann, H., and Company, Herrera, 2260-2300; Paseo Colon, 1102-1128; Calle Maipu 39 and Calle Peru 1132, Buenos Aires, Argentina.

Horn and Company, San Martin 201, Buenos Aires, Argentina; Hosmann, Julio, Buenos Aires, Argentina.

Melber, Leon (of Boker and Company), Calle Alaina 261, Buenos Aires, Argentina; Mey, Hugo, Buenos Aires, Argentina; Meyer, D., and Company, Calle Cangallo 499, Bahia Blanca, Argentina.

Padros, Simon, and Company, Tres Esquinas 676, Buenos Aires, Argentina; Panzera, Remaldo, Buenos Aires, Argentina; Puig, Alberto, and Company, Argentina.

Robert, Pusterla and Company, Calle Belgrano; Calle Peru 401, Buenos Aires; and Calle Urquiza 1099, Rosario, Argentina.

Schlieff, Georg, Montevideo, Uruguay.

Ures, Alfredo, Montevideo, Uruguay.

BOLIVIA.

Fuss, Alfredo (of Hirschmann and Company), La Paz.

Joerges and Company, Calle Oruro, Potosi.

Krüger, R., and Company, Cochabamba.

"La Mariposa," La Paz.

BRAZIL.

Beck, Ernesto, and Company, Florianopolis; Buschmann, C., Rua, Theophilo Ottoni 76, Rio de Janeiro.

Cardoso, Victor Mattos, Para; Casa Lemcke, Rua Libero Badaro 104, Sao Paulo; Chaves, J. P., Santos; Coelho, José Ignacio, Rua da Constituicao, 44, Rio de Janeiro; Companhia Graphica Rio Grandense, Porto Alegre; Companhia Industrial de Ribeirao Pires, Sao Bernardo; Companhia Nacional de Café, Rua 15 de Novembro, Santos.

Day (John) Bromberg and Company, Marechal Floriano 51; Vigario José Ignacio 19 and 21 and Rua val Patria 24, Porto Alegre; Dais, José Esteves, Para; Drechsler, Max, and Company, Rua do Bon Jesus 20, Pernambuco.

Fonseca, Vaz and Company, Rua Sao Pedro 63, Rio de Janeiro; Friedrichs, Werner, Rua Quinze Novembro, Para.

Haering, Fritz, Rio de Janeiro.

Laves de Moraes, José, Sao Paulo; Leal, Anthanasio, Sao Francisco do Sul; Leite de Fonseca, A., Rua Sao Bento 5, Rio de Janeiro; Lemcke, Henrique, Rua Libero Badaro 25, Sao Paulo.

Martins, Manoel, and Company, Rio de Janeiro; Marx, W. (alias Henrique Oliveira and Company, alias "Norbert Hertz," alias D. Tyne O'Day, alias "Mins Missen"), Rua da Alfandega 102, Rio de Janeiro; Mattheis and Company, Rua General Camara 69-71, Rio de Janeiro; Melcher, Conrado, and Company, Rua Sao Bento 40, Sao Paulo; "Mins Missen" (see W. Marx).

"Norbert Hertz" (see W. Marx); Nosack and Company, Rua Frei Gaspar 22, Santos.

O'Day, D. Tyne (see W. Marx), Oliva, J., Sao Paulo; Oliveira, Eduardo, Santos; Oliveira, Henrique, and Company (see W. Marx).

Ribeiro, Trajano (Jordan Gerken and Company), Sao Francisco do Sul.

Schmidt, Trost and Company, Rua Santo Antonio 5, Santos; Rua Alvares Penteado, and Caixa, 153, Sao Paulo; Silva (Da), Domingos and Company, Rua Sao Bento 28a, Sao Paulo.

Trinks, Peter, and Company, Rua de Santo 38, Santos.

Vaz, José, Rua Sao Pedro 65, Rio de Janeiro; Voelcker, Luis, and Company, Porto Alegre.

Warnecke, Hermann, and Company, Rua Direita 9, Sao Paulo; Werner, Hilpert and Company, Rua da Alfandega 99-101, 104, and 108, Rio de Janeiro; Woebecke, Gustav, Porto Alegre.

CHILE.

Alvarez, José Reinaldo, Coquimbo.

Blackadder, Guillermo, Iquique; Bonder, Victor, Concepcion.

Chaparra, Luis A., Iquique; Garrasco, Justiniano (Timmermann and Company), Valparaiso and Santiago.

Lillo, Guillermo, Antofagasta; Lopez Loayza, Alfredo, Iquique.

Plesch, Julio B., Arana 281, Concepcion.

Vega, Luis S., Iquique.

COLOMBIA.

Botica Alemana.

Dissel (van), Rode and Company, Cucuta.

Gieseken, Ludwig, and Company, Barranquilla.

Illers, Juan D., Barranquilla.

Matos, Vicente, Barranquilla.

Nobmann and Company, Barranquilla.

Strauss, Georg, and Company, Barranquilla.

Willson Cook, W., Cucuta.

DENMARK.

Zachariou, John, Rethymo, Crete; Zachariou, Peter, and Son, Rethymo, Crete; Zirini Brothers (John, Basil and George Zirini), Xanthi.

(To be continued.)

REEF GOLD IN TURKESTAN.

Interesting Discussion of Recent Investigations.

The question of the discovery of gold within the limits of Turkestan has been frequently considered, and was circumstantially set out not long ago by Mr. V. M. Vebero, in a work entitled "The Minerals of Turkestan," in which he comes to a conclusion apparently much more optimistic than that of Mr. I. Mushketoff before him, particularly in regard to reef gold. On the basis of some new facts, namely, the discovery of reef gold in quartz veins intersected by paleozoic schist, Mr. Vebero doubted the previously entertained essential connection between gold and granites.

In August, 1914, Mr. Mushketoff made some observations which confirmed those of Mr. Vebero, and throw a considerably more favourable light on the gold business of Turkestan. As is known, the Aliask Valley includes the system of the Fergana and Alai, from the Pamir, which begins on the Alai range. In the centre of this latter rises the great Kauffman peak, 26,300 feet high. From the western slope of this height there declines the little-known long Sauk valley which is difficult of access. The Sauk-Sai falls into the Muk-Su, at Altyn-Mazar. The Sauk-Saya is a tributary of the river Dzhanguchak, on which for two years investigation work was carried out by the Pamir Gold Association.

All the right slope of the valley of Sauk-Saya, intersected by the Dzhanguchak and other gorges parallel to it (Terek, Sasyk, Tyuve, and others) is complicated by a rather regular schist suite which stretches to the north-east. Investigations hitherto have disclosed several veins intersecting the gorge of Dzhanguchak about a verst above its mouth, and yielded pretty satisfactory results. Analysis showed not a bad content of gold in all the veins. A chief gallery was driven 20 arsheen in, and then a pit was sunk. The work is dry and easy.

Of much greater interest are the results obtained by the investigations of Mr. Ph. P. Paelyanin. In the little gorge running parallel downwards from Dzhanguchak—that is, between it and Terek—the vein is largely of ochry quartz. It contains much apparently pure gold in small pieces. Frequently fragments of gold are found in nests.

In almost every piece of quartz knocked off by the stamps there is one or more of such pieces of gold, so that the content on the whole should be very great. Of course, the reliability of the vein, its continuity, size, and contents, are not yet made quite clear, but the fact itself of such an abundance of visible gold in the quartz governed by the schist suite is very interesting as regards Turkestan. Everybody knows of the immense extent of such schist suites in Alaisk, Fergana, etc., whilst the veins of quartz, some of them ochry, are very wide.

It is interesting that now there is being cleared up the origin of the gold sands of Altyn-Mazar and the mouths of the Sauk-Sai, known long, long ago. The content of the gold sands, according to the observations of Kozell-Poklievsky, increases even higher up, along the Sauk-Sai. All these deposits have been discovered by traces of old mining work very frequently found here, having been carried out by an unknown race. The Kirgis call it Chinese-Armenian. The word Armenian in this case may be a synonym for Christian, and then it might mean the Nestorians, who were long hidden in Kashgaria and its neighbourhood. In Dzhanguchak are seen important galleries belonging to that time with half-rotted supports, and also remains of a complete gold-washing factory with twelve sets of grinding apparatus. How the reef deposits were found in the depths of the range by these ancient gold-seekers is not known.

According to a Berlin telegram the stocks of petrol and petroleum captured at Campina in the Roumanian oil district consist of about 2,000 truck-loads. The oil wells at Campina, the telegram says, will be in working order in about a week, and the Standard Refinery at Ploesti at once.

COMPANY MEETING.

Anglo-Persian Oil.

The seventh ordinary general meeting of the Anglo-Persian Oil Company, Ltd, was held on January 8 at Winchester House, Old Broad Street, E.C., Mr. C. Greenway (Chairman and managing director) presiding.

The secretary (Mr. F. Macindoe) having read the notice convening the meeting and the auditors' report,

The chairman said: Gentlemen.—As the directors' report, balance-sheet, and profit and loss accounts have been duly circulated we will, with your permission, follow the usual procedure of taking them as read. Before dealing with the accounts it is, however, necessary to refer to the delay which has taken place in the presentation of the report and accounts and to the consequent delay in holding our annual meeting. This, as you will doubtless have understood, has been due to the dislocation of our work and to the changes in staff which have been consequent upon the war, but I am pleased to say that the arrangements which we have now been able to make will, I think, tend to overcome these difficulties and to ensure our annual report and balance-sheet in future being presented at a date that will, notwithstanding the war, more nearly correspond with normal conditions.

I will now ask you to kindly give your attention to the accounts while I give you a few explanations. Dealing first of all with the balance-sheet, you will see on the debit side that the amount of paid-up share capital at the end of the financial year under review stood at £3,000,000, as compared with £2,750,000 in the previous year, the difference being represented by the amount of £250,000 received from His Majesty's Government in respect of the second call on their 2,000,000 Ordinary shares. Since the date of the accounts a third call of £250,000 has, as mentioned in the report, been made and paid on these shares. The item of £112,000 under the heading of "Advance against uncalled capital" represents an advance which we had obtained from our bankers against the outstanding uncalled capital. Turning to the credit side of the account, gentlemen, you will find that the amount at which "purchase price of concessions, shares, etc., in other companies" stands is £1,777,473 1s. 5d., as against £1,635,312 4s. in the previous year's accounts. The increase of £142,160 17s. 5d. represents further subscriptions of capital during the year to our subsidiary and associated companies. The expenditure under the heading of "refinery tank installations, pipe lines, etc.," has gone up from £1,420,279 15s. 1d. to £1,544,849 18s. 4d. The actual expenditure debited during the year in connection with the extensions in progress amounted to £419,255 0s. 10d., but deductions of £284,684 17s. 7d. were made on account of depreciation and transfers in respect of sale of lighters to the British Tanker Company and other items, leaving only a net increase of £134,570 3s. 3d. for the year. A new entry in the accounts is the credit of £160,000 in respect of the estimated amount of our claim against the Persian Government for the loss sustained through the shut down of our refinery for several months owing to the cutting of the pipe line by Persian tribesmen in the early part of last year. It is perhaps needless for me to say that no credit has been taken for any part of this amount in the trading account, it being offset by a similar sum included in the amount standing against "sundry creditors" on the opposite side of the balance-sheet. A further claim will fall to be made against the Persian Government in connection with the loss caused by the suspension of the work of laying our new pipe line, but we have not yet received sufficient particulars of the various items of this claim to enable us to estimate its amount. Another point to which I should like to draw your attention is that the credit of £49,470 1s. 3d. for "preliminary expenses and expenses in connection with increased capital"—always an unsatisfactory item in a balance-sheet—no longer appears, the whole of this amount having been written off in the profit and loss account, to which I will now ask you kindly to give your attention.

The only item in this account, gentlemen, which I think needs any comment is the credit, amounting to £171,723 1s. 4d., in

respect of the balance of trading account, including accrued dividends. This amount is only slightly in excess of the amount shown last year, but you will observe that it is arrived at after charging depreciation, instead of before, as in the previous year, and as depreciation has been dealt with on a much more liberal scale, I think it may be regarded as a satisfactory result, seeing that no portion of the new pipe line or refinery plant was in operation, and that our work was entirely shut down for a period of about three months during the period covered by the accounts. Altogether the amounts written off for depreciation and the balances carried forward by the Anglo-Persian and its allied companies are about £140,000 in excess of the amounts so provided for in the previous year's accounts, and this represents approximately the improvement in the working results for the year under review. The result for the current year ending three months hence will show a further considerable improvement on these figures, as the throughput of the refinery will be more than 100 per cent. in excess of that of the previous year, and a still further large augmentation may be looked for during the next financial year, as the first half of the refinery extensions provided for under the arrangements with His Majesty's Government will then be in full operation as well as the original refinery. Although these results may, I think, in the war conditions under which our extension work is being carried out, be regarded as quite satisfactory, yet it is necessary to again draw attention to the fact that they would have been vastly more favourable had we been in a position to transport and market our benzene and kerosene products ourselves.

As regards the political situation, gentlemen, you will be pleased to learn that since I last had the pleasure of addressing you we have had a period of entire tranquillity in the conduct of our operations, the German endeavours to induce Persia to depart from her neutrality having completely broken down. (Hear, hear.) The German agents who, by misrepresentation, for a time succeeded in inducing some of the more ignorant tribesmen in Southern Persia to revolt against their Government would appear now to be quite discredited, and have found it advisable either to clear out of the country altogether or to seek the protection of the Turkish forces which are still holding a small portion of North-Western Persia. Our relations with the Persian Government, I am pleased to say, continue to be of the most cordial character, and it must be a matter of extreme satisfaction to them, as it is to us, to see that this great undertaking, which has been developed in their territories by means of British enterprise and of British capital, is now arriving at a stage where it will be productive to them of a large annual revenue. Unfortunately, this satisfaction will be somewhat marred by the heavy loss which was sustained in consequence of the cutting of our pipe line last year by Persian rebels—and for which loss the Persian Government are under the terms of our concession liable—but inasmuch as this wanton act of destruction was, no doubt, directly or indirectly incited by the enemies of this country, and was one of the results of the German attempt to draw Persia into the war, it is to be hoped that the Allied Powers will, when settling the terms of peace, be able to arrange that Persia obtains compensation in one way or another for this and other losses of which she has to some extent been the innocent victim, although they were, I regret to say, unfortunately, aggravated by the support which was for a time lent to the German machinations by a disloyal section of the community.

The progress of our various works and extensions has, of course, continued to be seriously retarded by the great scarcity of labour and transport which has been brought about by the disturbed state of Persia, by the military operations in Mesopotamia, and also by the considerable aid, both in staff and engineering facilities, which we have been rendering to the military authorities in the very essential work of building the craft necessary for their operations on the River Tigris.

Notwithstanding these difficulties, however, we were able, in August last, to complete the upper section of the 10-inch pipe

line up to the point which permitted of a connection with the 8-inch portion of our old line, and this has enabled us since then to pump crude through the latter to the full extent of its capacity, and we learn by cable that the whole length of the 10-inch line will be completed and in operation this week. We shall then be able to pass through the two lines a total of about 360,000,000 gallons, or 1,440,000 tons of crude per annum. With additional pumping stations this quantity can very easily and at comparatively little cost be increased to 3,000,000 tons per annum.

As regards the refineries, the first half of the extensions to which I have already referred was also completed in August last, but, unfortunately, the quantity of crude which the 8-inch line was capable of delivering has not been sufficient to keep it fully running, but with the completion of the 10-inch line this week the whole will be brought into operation. In addition to this extension, a further one is in course of erection at Abadan, and should be completed towards the end of the present year. The progress in our refinery extension work is shown by the fact that our throughput for the present financial year will, as I have already mentioned, be more than 100 per cent. in excess of the year for which accounts are now submitted, and for the next financial year it will again, unless anything unforeseen happens, show an increase of a further 40 per cent.

As regards the fields which are being worked and tested by the producing companies, I have great pleasure in reporting that the further evidences which are being obtained as time goes on are proving more conclusively than ever the extraordinary richness and extent of the Persian oilfields, and leave little room for doubt that His Majesty's Government, in acquiring a two-thirds' interest in this company, has secured for the nation an asset of enormous value—one that will, when the fields are more developed and the further pipe lines, refineries, etc., which will then be necessary, can be built, not only be giving the Exchequer a very substantial addition to its annual revenue, but also be affording British consumers a most valuable safeguard against the dangers of monopoly. (Hear, hear.) The potentialities of this asset, gentlemen, are, indeed, so great, both as a source of revenue for the country and as a means of supplying under national control a large portion, if not the whole, of the petroleum products which have become such a necessity of the Empire—for naval and military purposes, as well as for the industrial and shipping developments which we are looking for after the conclusion of the war—that it has now become a matter of the highest Imperial importance for the Government to continue, and even to extend, the policy which was initiated when they acquired a controlling interest in this company.

As an illustration of the evidences which lead to this conclusion I may mention that well No. F7, which, when I had the pleasure of addressing you last year, I reported was maintaining its production of 7,500 barrels daily, is now giving a production of 10,000 barrels, or about 1,600 tons, daily under a pressure of 220 lbs. per square inch, and the Fields' manager estimates that if this pressure were taken off it would give a yield at the rate of 25,000 barrels, or 4,000 tons daily. This well during the five years for which it has been flowing has, under the heaviest pressure which could with safety be put on it, yielded something like 1½ million tons of oil, and is to-day not only showing no signs of falling off, but is, as I have just pointed out, giving a larger production than ever. Unfortunately, a good deal of this oil had, as you are aware, in the past to be burnt owing to the inadequacy of our former pipe line and refineries to deal with such a large quantity; but this is a contingency which we hope will be avoided, or at any rate minimised, in the future, with the further storage, pipe line and refinery facilities which are now being provided. The only other well which our producing companies have been able to allow to flow at all freely in the meantime, owing to the inadequacy of our facilities, is No. 8B. This well, although it has not yet been fully drilled in, has, since the oil horizon was first met with early in 1913, produced between 300,000 and 400,000 tons of oil, under the maximum pressure practicable, and there is little doubt that it will, when opened out fully and drilled further into the oil horizon, also prove to be a very large producer.

Further evidence of the phenomenal productivity of this field is given by a telegram received a fortnight ago reporting that six of the partly drilled wells which are being carried down to the main horizon in order to ensure a sufficient supply of crude for the new pipe line all give indications of being very large producers. These wells, it should be mentioned, are not in close proximity to F7 or B8, but were selected at different outlying points so as to test the productiveness of as large an area as possible, and the indications given by them go to show that wells 7F and B8 are not "freaks," dependent for their oil upon deposits of a "pockety" character, but that the whole of the field in which they are situated is enormously productive and capable of producing all the oil that we shall be able to deal with for a long time to come.

As regards testing work in other fields, I reported last year that in one of these a good oil horizon had been reached and that the test well had been successfully capped, but it will probably be a long time before we shall need to tap this additional source of supply and be in a position to form an estimate as to its productivity. At the field on which I reported that work had been resumed the first well put down was found to have been badly located, and a second well was started. This struck a small sand at a depth of 1,060 ft. yielding a very fine quality of oil, containing the extraordinary proportion of about 73 per cent. of benzene, but it is now being carried down to a lower depth in the hope that the main oil horizon may be reached. At the third outside field referred to by me last year work was interrupted for a considerable time by the unsettled conditions prevailing in this neighbourhood, but drilling there has now been actively resumed, and we have received a telegram reporting that the indications are favourable. Several other fields which show favourable indications are also now under close examination by our geologists. What I have said, though by no means exhaustive, regarding the richness of our territories will, I think, suffice to show that I have in no way over-estimated their great potentialities; and in view of the attention which is now being called, as a result of the lessons taught by the war, to the urgent necessity for securing some form of State control over the chief essentials of our national existence, you will, gentlemen, I feel sure, share the great satisfaction which we feel in knowing that in one of the most important of these essentials the interests of the nation have already been safeguarded by the policy which was initiated by the Government in respect of this company 2½ years ago. (Applause.)

Before concluding my remarks, gentlemen, I would like again to refer to the excellent services which have been rendered to us, under most trying conditions, by our staff during the past year. In addition to their current work they have not only had to cope with a large amount of additional work in connection with the extensions which have been in progress, but they have also had to devote a great deal of time and energy to the work which they have been called upon to do to assist the military authorities. That they have been able to carry through this work so satisfactorily as they have done, notwithstanding the shortage of staff and labour due to the war conditions, shows that they have not spared themselves, and I am sure that you will join with the Board in expressing our very great appreciation of the sacrifices that they have made in the national interests. (Hear, hear.) I am very pleased to state that the services of one of our staff—Dr. Young—who has given most valuable assistance to the authorities, have been recognised by the bestowal upon him of the Companion of the Order of the Indian Empire. (Applause.) I now beg to move, gentlemen: "That the report of the directors and balance-sheet and profit and loss account for the financial year ended March 31, 1916, be received, approved, and adopted," and I will ask Lord Inchcape kindly to second this motion.

The Right Hon. Lord Inchcape, G.C.M.G., K.C.S.I., K.C.I.E.: I have great pleasure in seconding this resolution.

The Chairman: Gentlemen,—Before putting it to the meeting I shall be glad to answer to the best of my ability any questions which you desire to ask.

There being no questions, the resolution was put to the meeting and carried unanimously.

The Chairman: The next business before the meeting is to elect directors. Before proceeding with this business I would like to take the opportunity of referring to the change which has taken place in the position of Admiral Sir Edmond J. W. Slade, who, as you will have seen from the report, has been elected Vice-Chairman. Admiral Slade, who has kindly consented to accept this position, will in future devote his whole time to the affairs of the company, and anyone who has had the opportunities which I have had of appreciating his great business abilities will, I am sure, agree with me that the securing of his whole time services in this capacity will be of great advantage to the future of the company. (Applause.) As Admiral Slade is already a director, this appointment does not need any confirmation, but I am sure it will meet with your warmest approval. The directors retiring by rotation are Sir Hugh S. Barnes, Mr. James Hamilton, and Mr. D. Garrow. They are all eligible for re-election, and you will, I am sure, all agree with me in desiring that we should continue to avail ourselves of their very valuable services. I, therefore, now beg to move:—"That Sir Hugh S. Barnes, Mr. James Hamilton, and Mr. D. Garrow, who retire by rotation and are eligible for re-election, be and are hereby re-elected members of the Board," and I will ask Admiral Slade kindly to second this motion.

The Vice-Chairman (Vice-Admiral Sir Edmond J. W. Slade, K.C.I.E., K.C.V.O.): I have great pleasure in seconding the motion.

The resolution was carried unanimously.

Mr. H. A. Powell proposed the reappointment of Messrs. Brown Fleming and Murray, C.A., as auditors to the company for the ensuing year.

Mr. W. A. Buchanan seconded the motion, which was carried unanimously.

The Chairman: The last business before the meeting, gentlemen, is the special resolution, of which notice has been read, by which we are asking for power to increase the number of the Board. In connection with this, and with the appointment of Admiral Slade as Vice-Chairman, I may explain that these steps have become advisable owing to the growing national importance of the company, which renders it desirable that we should, without calling special meetings from time to time for the purpose, be in a position at any time to make such additions to our Board as may be necessary in order to ensure the company being worked to the greatest possible advantage. Although we are asking for power to increase the number of directors to seventeen, I may explain that there is no intention, at any rate at present, of availing ourselves of this power to anything like the full extent, as we shall, it is needless to say, always limit the size of the Board to the smallest number consistent with the satisfactory working of the company. With this explanation I now beg to move: "That the company's articles of association be altered by striking out of Article 81 the word 'eleven' and substituting therefor the word 'seventeen,'" and I will ask Mr. J. T. Cargill kindly to second this motion.

Mr. John T. Cargill seconded the motion, which was carried unanimously.

The Chairman: That concludes the business of the meeting, and I have to thank you for your kind attendance.

Mr. Powell proposed a vote of thanks to the Chairman for presiding, and for his services to the company.

Mr. Buchanan seconded the motion, which was unanimously agreed to.

The proceedings then terminated.

COMPANY NOTES.

United Egyptian Lands.

A meeting of shareholders of the United Egyptian Lands has been convened for January 23, 1917, for the purpose of considering the financial position of the company, consequent upon the institution of foreclosure proceedings in Egypt by the Mortgage Company of Egypt against the company on account of the instalments of capital and interest on mortgages being in arrears.

In the course of a circular issued by the directors of the United Egyptian Lands, it is recalled that in 1911 plans for bringing into cultivation a further 2,000 feddans on the Kom El Ahkda Estate were prepared, and the Mortgage Company agreed to advance £25,000, to be spread over five years, to enable the company to bring the area into cultivation. Between the years 1911 and 1914 £21,000 of the £25,000 was advanced and was expended in the cultivation of the land at Kom El Ahkda, with the approval and concurrence of the Mortgage Company's expert. During the year 1914-15 the company's position became an exceedingly difficult one, owing to (1) the drop in the price of cotton, consequent on the war; (2) the scarcity of water, which seriously affected the crops; and (3) the virulence of the boll-worm; but an arrangement was come to with the Mortgage Company under which the company agreed to make the necessary further advances to enable the company to continue the development of its lands, subject to the following conditions, which were complied with:—

(1) That Mr. Citti, managing director of the United Egyptian Lands in Egypt, should be appointed judicial receiver, in which capacity he had to account for his doings to (a) the Mortgage Company, and (b) the Mixed Tribunals at Alexandria; (2) that a part of the staff should be dismissed and the salaries of the remaining employees reduced, from the managing director downwards. An arrangement was come to with outside creditors for £6,000, under which they were given a second mortgage. As appears by the last published balance-sheet, made up to March 31, 1916, the company was indebted to the Mortgage Company in £91,500, made up as follows:—Balance of moneys due on original mortgage, £55,500; further advances referred to, £21,000; balance of arrears to March 31, 1916, £15,000; arrears since that date estimated at £4,000. Against this the assets in mortgage to the Mortgage Company are:—(1) Balance of instalments due from purchasers of land; (2) 2,000 feddans of cultivated land at Kom El Ahkda; (3) about 1,300 feddans of uncultivated land at Kom El Ahkda; and (4) about 120,000 square metres building land at Rodah Island.

Ritz Hotels (Egypt).

An extraordinary general meeting of the Ritz Hotels (Egypt), Limited, will be held at the offices of the secretaries, Gresham House, Sharia Suliman Pasha, Cairo, on Wednesday, January 17, 1917, at 4 o'clock in the afternoon, when the following business will be discussed:—(a) Sale of the uncompleted construction and loose building materials of the company and the consideration of offers; (b) liquidation of the company. Should the meeting approve sale of such building material, resolutions authorising the directors to sell will be proposed. Should the meeting approve the liquidation of the company, meetings for passing the necessary resolutions will be subsequently convened.

"Flower" Motor Ship Co.

Pending the presentation of accounts, which will be compiled as soon as possible, the directors of the "Flower" Motor Ship Company, Limited, have decided to declare a dividend at the rate of 5 per cent. per annum (equal to 2½ per cent.) on the paid-up capital less income-tax, for the half-year ended December 31, 1916, being the final dividend for the year 1916, payable on February 1, 1917.

An ordinary general meeting of the Credit Foncier Egyptian will be held at Cairo on January 22, 1917.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THEOBALD STREET, Thursday.

Our market has been exceedingly quiet this week in consequence of holidays in Egypt and the approach of the War Loan here. Prices, however, are generally very steady.

Some few hundred Nationals and Agriculturals have changed hands in the neighbourhood of 13½ and 5½.

In Delta Light there were same small transactions at about 5½ to 5½. Markets have been done in a small way at 24s. 9d. and Khedivial Mails at 27s. 3d.

Union Foncières have been an exceptionally bright feature, with business up to 25s. 6d.

In United Egyptian Lands there have been some 4,000 shares changing hands at about 7½d.

In Greeks no business has been done, and the market remains absolutely nominal.

Oil Shares.

Little interest has been displayed in oil. This morning North Caucasians were dull at 25s. 9d., and New Schibaleffs receded to 6s. 3d. Chelekens came into request, and rose 9d., to 5s. 6d. Russian Generals were a shade firmer at 24s. Roumanian Consols were not much dealt in, but finished 3d. down at 8s. 6d. Bakus were done at 2s. 9d., and Spies again drooped.

MONEY MARKET.

LONDON, Thursday.

The tendency of discounts has been steady owing to the arrangements made with the non-clearing banks to prevent the market from being flooded with short credits. April Treasury Bills were quoted at from 5 to 5½ per cent., and longer dates at 5 3/16 per cent.

Bar silver was in the neighbourhood of 36½d. per ounce.

OIL OUTPUTS.

Anglo-Egyptian, Gamsah, 433 tons.
Baku Russian Petroleum (1909), 78,900 poods.
Bibi Eibat, 830 tons.
Black Sea, 332 tons.
British Maikop, 43 tons.
Hargarde, 1,655 tons.
Maikop Combine, 272 tons.
Maikop Pipeline, 290 tons.
North Caucasian, 9,953 tons.
Russian Petroleum, 54,900 poods.
Ural Caspian, 2,408 tons.

PRODUCE REPORT.

LONDON, January 11.

Currants.

There has been a moderate demand for all produce this week, with a fair amount of business done at old rates. It is evident that the political crisis in Greece has influenced holders in their firm attitude, and a further advance of prices is almost certain if the situation does not develop favourably.

The stock of currants in London on December 30, was 9,169 tons, against 6,725 tons in 1915; whilst in Liverpool it is reported to be only 3,000 tons. Therefore, with such apparently small available supplies in the two principal markets, and with no prospects of arrivals so long as the blockade exists in Greece, the outlook is serious.

Sultanas.

The market is quiet with only small business passing, mostly in Afghanistan and Australian sultanas, which in small quantities arrive occasionally.

Figs.

There has been a better demand with business done at full prices. A further advance is probable.

Seeds.

Linseed has been quiet, with small transactions passing at, more or less, recent prices; London-Calcutta, spot, closing at 103s., also afloat and December-January at 103s., with January-February at 104s. Bombay, ordinary, January-February, 105s. 6d. Rapeseed is somewhat neglected, but prices are firm; Toria, January-February, at 92s. 6d.; Ferozopore, December-January, 90s.; and brown Cawnpore, afloat, at 86s. 6d. Cottonseed is dull. London-Egyptian, Sakelaries, spot, is quoted at £18 10s. per ton, a fall of 17s. 6d. in the week. Canaryseed is inactive, and the various descriptions of Morocco seed are obtainable on somewhat reduced terms. Rangoon beans are quiet at about recent quotations.

Oils.

Linseed oil is rather quiet, spot pipes offered at £50 5s., and barrels at £51 5s. landed terms. Rape oil is firm with good business done in ordinary brown, naked, spot, at £54; and English, refined barrels, at £57 to £59. Cotton oil is quiet, and easier, closing for crude spot pipes at £49 10s., and barrels, sweet, at £58 to £60, as to make.

Locust Beans.

There is a scarcity of this article, especially of Cyprus kind, and with the existing demand any arrivals would be welcome.

NOTES OF THE WEEK.

The enemy's advance in Roumania has been arrested for a whole week before the Sereth lines. There have been alternating successes at different points along the battle front; but, as a result of the week's fighting, our Allies still hold their positions, and in some places have thrown back the German-Bulgarian forces. This constitutes the only serious check that the enemy has received since he initiated the sweeping movement through Roumania last November; for, although the approach to Braila was barred for some days, the Germans were in the meantime making headway on the left of their line, in the mountains, and ultimately their advance at this point led to the withdrawal of the Russian troops defending Braila. It is in the Carpathian heights, where the Hungarian railway system favours the invaders, that the Russians and Roumanians have experienced the greatest difficulty in checking the enemy's advance. For the measure of success which has attended their arms during the last week they may be indebted in part to the weather, which can be terribly severe in this region at this time of the year. It is evident, however, that Russian reinforcements are making their presence felt, and we may now hope that the moment is rapidly approaching, if it has not already arrived, when the advantage in numbers and munitions will rest with our Allies. Of the fighting qualities of the Roumanian soldiers when they can meet the enemy on anything like equal terms there is no question, and sooner or later we may expect to see them given an opportunity of showing their mettle under more favourable conditions than hitherto.

For the moment the heaviest fighting appears to have taken place between Braila and Galatz. The Russians, after artillery preparation, recaptured the village of Vadeni, seven miles south-west of the latter port. With the arrival of reinforcements the enemy resumed the offensive, but, coming under our Allies' concentrated fire, suffered great losses and failed to reach the Russian trenches. If von Mackensen finds himself unable to advance, his first consideration will be so to strengthen his present position, which represents the shortest line for holding the territory already conquered, that our Allies will have little chance of breaking through for some time to come. The Russians, on the other hand, if adequate reinforcements are now reaching them, will try to keep the fighting as mobile as possible, to prevent the enemy from digging him-

self in for the rest of the winter. The next few days, therefore, ought to witness the climax of the struggle on the Sereth line.

From Athens comes the announcement that the Greek Government has agreed to the demands of the Allies in their entirety. If, as is also stated, the British Minister has returned to the Legation from his refuge on board the Allied Fleet at the Piræus, it is evident that he has accepted the undertaking thus given and believes that it will be carried out strictly and without delay. In view of the past record of King Constantine and his Ministers it would, perhaps, have been fairer to them to allow a short time to elapse before showing this alacrity to resume normal diplomatic relations. The most charitable view of the Greek Government's conduct compels the Allies to realize that it is not altogether master in its own house. Nothing is more calculated to encourage the irresponsible element in Greece in whose hands the real power lies to continue the policy of kicking over the traces than the premature acceptance of promises before they have been translated into deeds. It is difficult, however, to suppose that the Allied Governments and their representatives in Greece do not appreciate this point, and are deliberately running the risks which the British Prime Minister promised should not be incurred. The blockade remains, and presumably it is considered that this will serve as an adequate guarantee for Greece's observance, after many failures, of her pledges.

We are the more ready to share Sir Francis Elliot's optimism, because it has consistently been maintained in these pages from the first that a firm attitude which left King Constantine no loophole for escape would solve the Greek problem. The blockade and the actual position of the Central Alliance, in spite of the somewhat dazzling flash in the Roumanian pan, together with the determination of the Allies, shown now for the first time, to put an end to an impossible situation, have had the inevitable effect. But it would be folly to overlook the various influences at work in Greece. Considerable misgiving has been caused by the report that Field-Marshal von Falkenhayn has paid a visit to King Constantine. As there had been a previous reference to a Major von Falkenhayn, who was stated to be the power behind the throne in Germany's interests in Greece, it is more than probable that there has been some confusion of names. The point is, perhaps, not very material. In the first place, as the Allies had found themselves obliged to insist upon the removal of

Baron Schenck and the enemy Ministers from Athens, it is equally a breach of the spirit of the undertaking given, however unwillingly, by King Constantine, that he should receive either Marshal von Falkenhayn or Major von Falkenhausen. In the second place, whoever the emissary from the German Emperor, his message will have taken one form or the other: either King Constantine will have been bidden to hold on because the Germans were coming to his help, or he will have been told that, as far as Greece was concerned, the game was up, and that he had better make the best terms he could with the Allies.

There can be little doubt that the Allied Governments have a shrewd notion of the tenour of the message delivered by Germany's emissary. If the latter should prove to have been von Falkenhayn, and if he has been discussing a plan of campaign with the Greek Commander-in-Chief, it would still be a comparatively simple matter to checkmate that plan. In these circumstances we should not expect to find the British Minister returning to Athens to take up his residence once more at the Legation. The more natural interpretation, therefore, of the course of events in Greece is that the Allies have gained their point. Whether, as is hinted, they have been helped by a conflict of opinion in the Royalist forces remains to be seen. The Greek Government, doubtless, finds itself from one cause or another compelled to yield. It is left to the Allies, however, to exercise a most careful scrutiny, in order to make sure that their demands are carried out in their entirety both in spirit and in letter. The *de facto* rulers of the country, whoever they may be, have shown themselves to be possessed of a most unpleasant disposition, and are quite capable of trying to hoodwink the Allies and to perpetuate their tyranny and spite at the expense of the Venizelists.

A further point to be borne in mind in connection with the situation in Greece is that, even when all the Allies' demands have been carried out, no settlement has been effected of the anomalous division of the country under two separate and mutually hostile jurisdictions. The Allied Governments may have adopted the attitude that sufficient unto the day is the evil thereof, and may prefer to give the situation time to adjust itself. Such a course could not prove satisfactory to either of the two parties, although from the Allies' point of view it avoids direct intervention in a matter which is essentially Greece's own private affair. Care must be taken, however, that no injustice is done to M. Venizelos and the Government of National Defence by a policy which, though nominally holding the ring with strict impartiality for both sides, in effect penalises the more honourable of the two opponents.

If the Central Powers should decide to stretch out a hand to Greece, it would be by way of Albania that we might expect the attempt to be made. During the past week there have been reports of fighting in Albania at two separate points, north and south respectively of Koritza. From the fact that the Italians record the capture of a village on the road from Liaskoviki to Koritza, at a point, that is to say, due east of Valona, it is evident that very little headway has been made in clearing southern Albania of the enemy. Between Lake Prespa and Koritza the Italian troops form the left wing of the Salonika force. It has, therefore, not yet been possible to advance the Italian front in Albania as a whole sufficiently to bring it into line with the Macedonian operations. Consequently any signal success on the part of the enemy in Albania would bring him to the Greek border in the rear of the army of the Orient. A dash of this kind would be theoretically much more attractive to German Headquarters than a methodical attack on the Salonika position. Difficulties of transport would probably rule out anything but a counsel of despair. This region, however, may call for close attention, unless it be accepted that the day for German military surprises has gone.

A further success of the British troops based on Egypt has finally cleared Sinai Peninsula of Turks. On January 9 Rafa, on the frontier of Palestine and thirty miles north-east of El Arish, was attacked by a force composed of Anzac Mounted Troops and the Imperial Camel Corps. A night march brought the troops to the Turkish position at seven o'clock in the morning. By the end of the afternoon the position was carried and 1,600 of the enemy out of a garrison of about 2,300 were taken prisoners. A relief force approaching from Shalal, sixteen miles east of Rafa, was intercepted at a short distance from the latter town and, according to the official report, "entirely destroyed." The offensive from Egypt has so far been characterized with a marked efficiency, which has led not only to the defeat of the enemy, but practically to the complete elimination of all the forces he had left in this region. We must suppose that the Turco-German authorities counted upon immobilizing a large army in Egypt by constant reports of impending attacks on the Canal. The demands of the Central Powers have caused Turkey to collect as many troops as possible for employment in Europe, and the rapidity of the British offensive in Sinai, supported as it has been by attacks on railway communications in Asia Minor, has prevented her sending help in time to the attenuated garrisons left in these parts. Not the least advantage of the Sinai offensive is that it will enable an estimate to be formed of Turkey's military strength at this moment, and of her capacity to resist a series of co-ordinated attacks on her various fronts.

In a remarkable document, serving as a covering despatch to the Allies' reply to President Wilson's Note, the British Secretary of State for Foreign Affairs supplies a striking commentary upon the Allies' aims in the prosecution of the war to a successful end. One passage refers to the expulsion of the Turks from Europe, and its importance justifies its reproduction at length in these notes. Mr. Balfour writes:

It has been argued, indeed, that the expulsion of the Turks from Europe forms no proper or logical part of this general scheme. The maintenance of the Turkish Empire was during many generations regarded by statesmen of world-wide authority as essential to the maintenance of European peace. Why, it is asked, should the cause of peace be now associated with a complete reversal of this traditional policy?

The answer is that circumstances have completely changed. It is unnecessary to consider now whether the creation of a reformed Turkey mediating between hostile races in the Near East was a scheme which, had the Sultan been sincere and the Powers united, could ever have been realized. It certainly cannot be realized now. The Turkey of "Union and Progress" is at least as barbarous and is far more aggressive than the Turkey of Sultan Abdul Hamid. In the hands of Germany it has ceased even in appearance to be a bulwark of peace and is openly used as an instrument of conquest. Under German officers Turkish soldiers are now fighting in lands from which they had long been expelled, and a Turkish Government, controlled, subsidized, and supported by Germany, has been guilty of massacres in Armenia and Syria more horrible than any recorded in the history even of those unhappy countries. Evidently the interests of peace and the claims of nationality alike require that Turkish rule over alien races shall, if possible, be brought to an end; and we may hope that the expulsion of Turkey from Europe will contribute as much to the cause of peace as the restoration of Alsace-Lorraine to France, of Italia Irredenta to Italy, or any of the other territorial changes indicated in the Allied Note.

Further progress in the neighbourhood of Kut has been reported, but it has to be measured in yards. Advancing from the south, the British force had been able to get astride the Shatt-el-Hai and so approached quite close to Kut from this direction. But the Turkish defences east of the town, on the right bank of the river, which were a connecting link between Kut and the Es Sinn position, held firm, and, aided by the bad weather, have resisted capture for some weeks. The greater part of these were taken as a result of a few days' operations terminating on January 11. From the report of the engagement it is clear that the enemy made a stubborn resistance. The Turk on the defensive, especially under German direction, is ever at his best. The slow rate of progress in this theatre may be a disappointment; but as no particular time-table has to be kept, one purpose of the offensive will be served by the exercise of unrelenting pressure on the enemy.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, December 27.

H.H. the Sultan.

H.H. the Sultan is still in Upper Egypt, and has derived great benefit from the change. He will remain at Assuan until next week, when he will start on his return journey to Cairo, where he is expected to arrive about the 10th prox. His Highness received Sir Reginald Wingate when he passed through Assuan on his way down from Khartoum.

The Departure of Sir Henry McMahon.

On Saturday last Sir Henry and Lady McMahon left Cairo for England. Their departure was an official one, and a great crowd of officials and residents, Egyptian and European, assembled at the station to bid them farewell. A guard of honour of British and Egyptian troops was drawn up in the station-yard and on the platform, and Sir Henry McMahon reviewed them before passing down the long line of guests, with each of whom both he and Lady McMahon shook hands. H.H. the Sultan specially delegated his Grand Chamberlain, Said Zulfikar Pasha, to convey his good wishes for a safe journey, and Lady McMahon was presented with many beautiful bouquets. When the train steamed out of the station the band struck up "Auld Lang Syne," and gave the finishing touch to what was a very impressive ceremonial. As the crowd filed out of the station, and, indeed, during the farewell ceremony, one heard on all sides expressions of sincere regret at the departure of their Excellencies after such a comparatively short sojourn in Egypt, and of hope that Sir Henry's signal services would soon receive fitting recognition from the Home Government.

The New High Commissioner.

This morning another impressive ceremony took place at the station, in honour of the arrival of the new High Commissioner. Sir Reginald and Lady Wingate, who were accompanied by Lieut.-Colonel G. S. Symes, D.S.O., Private Secretary, and Mr. Keown-Boyd, Assistant Private Secretary, had travelled down from Wady-Halfa by the Sudan Government steamer Ibis, and only boarded the special train at a station a few miles south of Cairo. There was a great crowd on the platform to welcome their Excellencies, those present including Said Zulfikar Pasha, representing H.H. the Sultan, General Sir Archibald Murray, Hussein Rushdi Pasha, the Prime Minister, the Ministers, and an unusually large number of officials and notables, including a noticeable sprinkling of old Army officers and Sudan officials. Sir Reginald Wingate, who, it may be noted, wore the uniform of a full general, and Lady Wingate passed slowly down the platform, shaking hands with most of the guests and saying a few words to the many old friends and acquaintances whom they recognised. Both their Excellencies looked remarkably fit, considering the long time they have spent in the Sudan without any change of climate. A salute of seventeen guns was fired when the train drew up in the station, and guards of honour, each of 100 men, were provided by the British and Egyptian Armies. Owing to the fact that he will still maintain his connection with the Sudan, the new High Commissioner will have a larger personal staff than his predecessor; and the extra accommodation required has been provided by transforming the ball-room constructed by the late Lord Kitchener into offices, where the Chancery will be housed.

The Sinai Victory.

The good news from the eastern frontier has had an excellent effect, and is regarded as a good augury for the new High Commissioner. It has certainly come most appropriately to put heart into the pro-Entente element, which has been feeling some discouragement at the unfortunate situation in Roumania and Greece. At the same time, by reason of the possibilities which the reoccupation of El Arish opens up, it has completely discountenanced the pro-Turks, who see in it, and in the almost simultaneous recognition by Great Britain and France of

the Shereef as King of the Hejaz, an indication of the final shattering of all their hopes. It has more than once been remarked in this correspondence that British successes on the frontiers of Egypt, however small they may be, have more effect on the Egyptians than the greatest victories of the Allied arms in other parts, and it has been noticeable that the fact that we have now reoccupied Egypt's eastern frontier town, with the prospect it holds out of the cutting off of all Turkish posts in the Sinai and of the certainty that our position will so menace the Turkish lines of communication that the Shereef will be enabled to capture Medina in the very near future, has made a more favourable impression on the local population than all the extraordinary successes which the Franco-British armies achieved a short time ago on the Western front.

The Racing Season.

On Saturday last Gezira Sporting Club held its first race meeting of the season. It was exceedingly well attended, and the racing was excellent, some of the events attracting unusually large fields. As recently mentioned, it was at one time feared that it would not be possible to hold race meetings this winter owing to certain objections that had been raised. The difficulties which then stood in the way have, however, since been overcome, which is a matter for much satisfaction, as there is no doubt that these race meetings constitute a great encouragement to local horse breeding, apart from the welcome relaxation which they afford to the military and civilian elements. The stewards are to be congratulated on the smoothness with which everything went, and on the excellent structural improvements that they have introduced since last year.

CAIRO, January 4.

H.H. the Sultan.

H.H. the Sultan is now on his way back to Cairo, having left Assuan on his *dahabeah* on Friday last. Before his departure from Assuan his Highness inspected the Dam—for the first time since the work of heightening had been completed—and also visited the schools in the town, which may be regarded as a distinct indication that he is completely restored in health. On his return to Cairo the Sultan will give a banquet at Abdin Palace in honour of the new High Commissioner and Lady Wingate.

The High Commissioner.

In addition to receiving Sir Reginald Wingate at Assuan and to deputing his Grand Chamberlain, Said Zulfikar Pasha, to greet him on his arrival at Cairo Station, the Sultan sent his Excellency a letter welcoming him, in his own name and that of the Egyptian nation, on his taking up his duties at the Residency. The letter was couched in the most friendly and cordial tone, and has made a great impression on the people generally. Certainly there can be no doubt as to the goodwill which the Egyptians bear towards Sir Reginald Wingate, and amongst the earliest and most prominent callers at the Residency have been not only officers, past and present, of the Egyptian Army, but provincial notables and Bedouin.

One of the first official acts of the new High Commissioner was to call on the Prime Minister and each of the other Ministers; and since the day of his arrival there has been a constant stream of higher officials through the portals of the Residency, come to report on and discuss the work of their various administrations with their new supreme chief, who is losing no time in picking up the threads and in getting a thorough grasp of current affairs. Some important questions concerning both the Sudan and Egypt, as it happens, are awaiting attention; and with Sir Reginald Wingate at the Residency it should be possible to reach a speedy decision, since it will not be necessary to incur all the delays which were entailed under the previous régime, when everything concerning the Sudan had to be referred to him at Khartoum.

The Sinai Victory.

On the occasion of his latest success in the Sinai, General Sir Archibald Murray has been the recipient of

congratulatory telegrams from H.H. the Sultan, Sir Reginald Wingate, Field-Marshal Sir Douglas Haig, Sir Henry McMahon (who received the news just before his departure), General Milne (commanding the British forces at Salonika), and the Grand Shereef, who sent his congratulations through the Residency. The importance of the victory is becoming more and more patent to the local population, and the Press is full of articles drawing attention to the significance of the British advance. From the message sent to General Murray by the High Commissioner after the fall of El Arish there appears no doubt that a forward movement into Turkish territory has been decided upon—the reference to the threat which our victory constitutes to Southern Syria and the Hejaz and to the enemy's communications allows of no other construction. The Syrian element is wild with delight at the prospect of an early deliverance of their brethren from the sufferings which they have been and are still undergoing, whilst those of us who have all along advocated the undertaking of a Syrian campaign rejoice that even at this eleventh hour the powers that be should have decided to adopt what is certainly one of the most obvious and effective means of creating a diversion in favour of the Allied forces engaged in fighting the Turks in various parts of the Ottoman Dominions and elsewhere.

Most of the prisoners taken at Maghdaba arrived in Cairo this week. They had come from El Arish by water to Port Said, and were all in splendid condition. The fact that most of them were Arabs, mainly from Syria, would confirm the information received here some while back that all the Arab element in the Medina garrison had had to be withdrawn and sent to other fronts. Mention of Medina reminds me that Fakhry Pasha, whose name has been freely mentioned in connection with the Armenian massacres, is in command of the Turkish forces at that point. If we are able to cut and hold the Hejaz Railway, he will, unless he can get back into Syria before that event takes place, fall into the hands of the Allies or the Shereef, which is the same thing. Surely this would be an ideal opportunity for the Allies to put into execution their threat to make those responsible for the atrocities personally accountable.

Officers invalided or on leave from the Sinai whom I have met are one and all loud in their praises of the assistance rendered by the Egyptian auxiliary services, especially the Egyptian Labour Corps. They affirm that the plucky and willing way in which the "Gyppies" have worked has been a positive revelation, and that but for their co-operation the lines of communication and means of supply would not to-day have reached anything approaching the advanced stage at which they now stand.

Egypt's Food Supply.

Considerable progress has been made with the investigation undertaken with a view to extending the cereal and food crop areas, so as to supply Egypt with the food-stuffs which she will lack this year—to which reference was made in the recent note on the cereal situation of Egypt—and some definite decision is shortly expected. Meanwhile an arrangement has been made whereby a considerable extension of the potato area will take place this winter. Egypt always obtains her seed potatoes from Italy, but, owing to transport and other difficulties, the usual supply has not been forthcoming. The military authorities, however, hold considerable stocks of potatoes, which, as it happens, have come from Italy. It has now been arranged through the Ministry of Agriculture for these stocks to be placed at the disposal of reliable cultivators on the condition that they deliver to the military authorities during the next three months an equivalent quantity from their last crop, and that they undertake to sell to the Army at a fixed price a similar quantity from the resultant crop when it is ready later on. By these means the situation will be saved both for the Army and for Egypt. The former will be certain of obtaining at reasonable prices all their potato supplies well into the summer; the Egyptian growers will be able to carry on as usual potato cultiva-

tion, which, as mentioned, at one time threatened to be out of the question this winter; and the country will be assured a potato crop which will certainly be above the normal size.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, December 30.

The Cold Weather.

The cold weather has set in with emphasis, and a number of residents have been laid up with fever, which has been brought out by the cold. The minimum has gone down to 51 degrees Fahr., and to those who have been here for a hot weather or more this is desperately cold; and few are found so hardy as to dine or to sit out under the stars after dinner, as is the usual custom. Notwithstanding this, the climate is now extremely bracing, and it would be difficult to find any place where the weather is so equable and so reliable as in Khartoum during the winter. Except in the middle of the day (and possibly not even then), it is not necessary to wear a sun helmet, and there is a briskness in the air which will one day make the place a medical resort for the jaded.

Col. Stack, C.M.G., and Mrs. Stack have just taken up their residence in the Palace, so that he can begin his period as Acting Governor-General and Sirdar from the beginning of the new year.

The usual lawn tennis tournament has been held on the grounds of the Sudan Club. The handicapping was most successful, and produced excellent matches. The Men's Doubles were won by Messrs. Job and Davidson, who secured the victory in the final against Mr. Hawkins and Capt. Pattison, after a desperate struggle. The winners of the Mixed Doubles were Mrs. Davidson and Major Giles. The runners-up were Mrs. Hewins and Mr. Howell, and this, too, was an extremely close game.

Venizelist Supporters.

There has been a most successful Venizelist meeting among the Greeks in Khartoum, and a considerable sum was collected for the cause. Telegrams of sympathy were also received from the various Greek communities outside Khartoum, and it is expected that a certain number of volunteers will shortly leave to serve in the Venizelist Army.

The *Sudan Herald* has changed hands, and is now the property of a syndicate of Greeks. A new editor has been installed, and it is said that the paper will develop a more forward policy.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, December 30.

By order of the High Commissioner, the King's message to his sailors and soldiers was published on Christmas Day in the official *Gazette*.

The Commissioner and Provost-Marshal, Mr. C. S. Cade, has fixed the maximum prices of a large number of articles, especially of food, to take effect from January 1. The step gives great satisfaction.

Rain has at last fallen in abundance. On December 24 and following days there were copious falls in almost all parts of the island, and the peasants are busily and joyfully engaged in sowing their lands. In some places there was a combination of hail. At Nicosia parts of the town were flooded, the water rising in some houses over three feet. Help was given by the police, who were well aided by civilians. The Pedias river brought down its rich volumes of fertilising water to the Nesaoria plain. One unfortunate villager, who had sought shelter under a culvert, was drowned, but no further casualties have been reported yet. The railway towards its western terminus was damaged at some points, and traffic was delayed for a short time. At a few villages some losses were sustained. At Skilloura, to the north-west of Nicosia, heavy rain on one night would have had more serious results had not the villagers been keeping an all-night vigil with prayers for rain. The change of weather has been most opportune, and a return of sunshine is welcomed, the outlook being at present quite satisfactory.

THE "YOUNG TURKS" AND THE ARABS.

(FROM A CORRESPONDENT.)

The following is a further instalment of the series of revelations which explain the events that led up to the final rupture between the Grand Shereef and the "Unionists." It serves to show how deep-seated were the causes that brought about the rising in the Hejaz, and how the national movement extended far beyond the limits of the peninsula, and embraced both Syria and Al Irak. It shows, also, that, far from the declaration of independence being the outcome of a growing personal antagonism between the Shereef and the "Unionists" the former, at least, exercised extraordinary patience and magnanimity. It amounts, in fact, to an *apologia* by the Shereef for having striven too long to hold back the rising tide of indignation in the Moslem world.

Before handing over to his interviewer the documents referred to below the Grand Shereef described the painful character of his position, which he likened, with the eloquence of Arabic metaphor, to the rain that is ardently desired by the peasant and equally dreaded by the artisan, and to the man who, having too short a bed, has to keep his limbs cramped up. The "Unionists," he said, were constantly narrowing the ground on which he could hope to arrange at least a compromise between them and the Arab and Moslem world.

The first document which he handed to his interviewer is a printed circular, signed by the leading Ulema and professors of Irak, Busreh, Baghdad, and Damascus. It is addressed to the Moslem world, and begins by saying that the state to which the Moslems have been driven required that expression be given to what has long been accumulating in the heart of the Moslem Arabs, and that the medium of writing be resorted to for a full understanding by them all of the present critical position throughout the world. Islam is likened to a temple resting on three foundations, the Koran, the language, and the two sacred shrines. If one of these be struck the blow would react on the other two. The circular then goes on to explain how the "Unionists," inspired by an evil spirit, tried to demolish this sacred temple, and how, having found it beyond their power to destroy the first two bases—which were of indestructible spiritual essence—they assailed the third. Of Islam they know only the word, acknowledging it in so far as it represents one large family, of which they want to be the ruling head. A heartfelt appeal is then made to the Shereef to protect the House of Allah, he being most fitted by right of descent and by position to do so. He will not and cannot tolerate, the signatories feel sure, that the house of his God and the tomb of his great ancestor be desecrated, that his religion and the language of the Sacred Book be reviled. The appeal is insistently repeated in a succession of phrases, varying in expression, but all stamped with the same passionate ardour. Finally, a general appeal is made to all Moslems in the world to support the leader of this sacred movement by every means in their power.

When the interviewer had finished reading this circular, the Grand Shereef turned to him and said: "The fact that this circular is printed shows that it is one of a large number of copies which have been distributed broadcast. While, on its receipt, I was in deep meditation as to what I should do in this grave crisis, which Islam was traversing, to please Allah and do my duty by the Faith and its followers, I was surprised by what some of the 'Unionists' thought best calculated to weaken my resolution, but which had the very contrary effect." He then handed over to his interviewer a letter written in Turkish to the following effect:—

To the Shereef of Mecca,

What we have lately learned has scarcely added to our knowledge of thy former acts against the Government. You have known that the Government does not consider the Arabian Peninsula as anything more than one of its many provinces. Indeed, we do not deem its inhabitants entitled to any special consideration, or endowed with any qualities beyond those possessed by the meanest inhabitants of the waste deserts. We,

therefore, do not wish that any demands be made for its reform, or that thou shouldst tell us any further about its fallen worth. We have not forgotten the behaviour that thou and thy inhabitants of the Peninsula have indulged in, from time to time, towards our valis; and if thou dost not relapse into quiet, and feel content with such reforms as the Government may think possible to grant, we shall let fall our might on thee and those around thee, and then thou shalt never rise up again.

For the Committee,

(Signed) KHALIL.

His Highness finally said: "Such is my position with these self-constituted leaders! Vainly have I tried to temporize and to co-operate with them. I am not of those who seek power for its own sake, so that I could find some excuse for myself towards my conscience. The more I feigned complaisance the more these people thought that it was due to fear and cowardice, and now I feel weary of all this artifice. Even so, I shall try to give them a further period of grace, wherein they may yet change their policy; for the hearts of men are in the hands of Allah. If, however, this change should not come about, then I shall have no other alternative but to turn to Allah for guidance."

A NEO-TURANIAN PRAYER.

The following is a translation of the new prayer specially drawn up by the Turkish Minister of War for the Turkish soldiers, who are under obligation to recite it every night. It will be noticed that it does not contain any verses from the Koran, and that no mention is made of the Prophet. The White Wolf is an idol which the Turks used to worship before their conversion to Islam:—

Almighty God! Grant the Turks health

And unite all the Brethren in the benevolence of the Sultan. That Thy Power may be glorified, grant us the favour of the White Wolf.

Thou Young Turan, thou beloved Fatherland, We beseech thee to show us thy path,

Our great ancestor Aghouz calls us.

Almighty God, shed upon the Turks the blaze of Thy light

That the path of Turan may be plain and dwellings be illuminated

In every place and corner with a rosy glow.

TURKISH ATROCITIES: THE ARAB VIEW.

In *Al Kibla* (the official organ of the Hejaz Government) of Safar 1, 1335, there is an article headed "Turkish Atrocities." In this article the Editor comments upon Mr. Asquith's speech at the Guildhall, in which he referred to Turkish tyranny and the Armenian massacres. He then affirms that he has been informed, through a trustworthy source, that Baron Oppenheim, Germany's representative in Syria, said:—"The Turkish authorities hang those Arabs who are of no importance and spare those who can use their pen and know how to speak, the intelligents who can influence and draw the Arab nation. It is impossible for Turkish rule to exist in this country unless the source of intellectual movements is demolished."

Commenting on Baron Oppenheim's statement, the Editor says:—"This is the highest degree of civilisation which the Germans claim to have reached, when we see one of their most prominent men calling upon the infernal Jemal Pasha to hang the intellectual and influential Arabs. Were these words uttered for the satisfaction of that evil soul bent on ignominious deeds and the annihilation of a nation by sword and fire?"

THE BRITISH IN ATHENS.

EXODUS OF THE COLONY.

(FROM OUR ATHENS CORRESPONDENT.)

ON BOARD S.S. ———,

PIRÆUS, December 20.

A large two-funnelled, white-painted steamer is quite a centre of attraction in Piræus harbour. This is the Greek Atlantic liner — which has been chartered by the British authorities to convey the British residents away from Greece in case of war. Steam launches, motor-boats, and rowing boats passing to and from the shore make an animated scene. A British bluejacket with fixed bayonet stands day and night at the gangway, as no unauthorised person is allowed to board the ship, and other sentries are on duty at other parts of the vessel.

There are over 400 British subjects on board, of whom probably two-thirds are women and children; and the scene somewhat resembles that on a cross-Channel steamer, where one meets various types of British character. They have now been on board a fortnight, and have become accustomed to their surroundings, and friendships and cliques have necessarily followed. The popular chaplain of the British Legation conducts Divine service on Sundays on the promenade deck, and a children's service is held in the afternoon. Much interest was attracted on the 17th by the novelty of a christening aboard, when Mr. and Mrs. Henderson's infant son was baptised, an ice bucket being used as a font.

Life on Board Ship.

Many of these passengers have left their businesses and their comfortable houses at short notice, to be reduced to idleness and the cramped accommodation of a crowded ship; some have large families, and there are several infants in arms; and many are undergoing this ordeal for a second time, for a large number are refugees from Constantinople who are now forced to leave their temporary homes and the livelihood they have managed to create in Athens. The merriment of the children and of the light-hearted produces, however, a diversion for the more sober ones; and those in authority have spared no pains to introduce amusement and to make the routine of life afloat as smooth as possible.

The ship is in charge of a distinguished Naval officer, who has with him a staff and a chief executive officer of exceptional tact and ability—qualities most necessary for one who has to listen to those who may have grievances to expose. Advisory committees have been formed to assist the commander and his staff, and rules have been drawn up to regulate the day's routine. A committee of ladies inspects the cabins each morning, and you risk being admonished if your cabin is untidy. Another committee will listen to any complaints you may have, and, if necessary, submit it to a higher authority, and a committee of gentlemen controls the stewards' department, and so on.

Entertaining the Refugees.

At 10.30 a.m. Lieut. Burns, clad in white, rings a bell for Swedish drill. Many of both sexes and all ages avail themselves of this exercise, and the children have their share of the amusement. On some afternoons a naval band affords great pleasure, and parties of officers from his Majesty's ships at — visit the ship and contribute to the entertainment of the fair sex. There is, fortunately, much musical talent on board, including a professional violinist who affords great pleasure in the evenings to lovers of music. Miss Pengelly and Miss Jameson, Lieut. Young, Major Huntingford, and Mr. Miller have delighted their audiences with their charming songs, and it is generally midnight before the handsome music saloon is emptied. In the comfortable smoking saloon bridge-players form their parties, and the young people will be found playing games or having their own little concerts in the second-class saloon. The spacious deck affords a fine promenade, and races for the children and young ladies have been organised and prizes distributed; while in the steerage cabin the Naval Guard attract quite a large audience with their sailor songs and other forms of amusement.

No mail has arrived from England for over a fortnight, and as only pro-German newspapers now appear in Athens, very little authentic news of what is going on is obtainable, but a daily bulletin is posted up with the oversea military *communiqués*. A small grey transport lying close by has on board the British Minister and his staff, and is in effect the British Legation afloat; and near by several French and Italian warships guard Piræus harbour.

January 6.

Weighing Anchor.

The s.s. — is under weigh at last, and a scene of merriment and laughter has been transformed into one of silence and reflection. All deck lights are out, all portholes

darkened, and in the hazy moonlight the dark outline of our escort, a British destroyer, is visible ahead. Most passengers are loth to retire to their cabins; many are reposing on deck and in the saloons, each one either wearing his lifebelt or having it by his side. The little ones have been put to bed with their clothes on and their little lifebelts by their side, and boat drill has already indicated the spot to which one must proceed in case of emergency.

The vessel hauled up her anchors soon after twelve, and, steaming, passed a British battleship. Cheers were exchanged, and the warship's band played "Home, Sweet Home." Slowly the — followed her escort out of the harbour.

Sailing orders arrived yesterday, and those who have elected to remain in these waters were transferred to a small steamer. Many of the refugees who left our ship go forth a second time to find another temporary home at Syra, Chios, Mitylene, or elsewhere, until the time comes for them to return to Constantinople or Smyrna. The sojourn on board has been a period of much merriment and gaiety, and the experience will have a lasting place in the memory of those who took part in it. The weather has been warm and springlike practically the whole time, rain having fallen only once or twice, and these conditions have contributed to making life on board all the more pleasant.

After the presentation of the famous Note, the — left her moorings at the Piræus and proceeded to —, where she took up an anchorage close to a British battleship. She was followed soon after by the floating "British Legation," which anchored close by, and later on by some British and French war vessels, Piræus harbour being left almost deserted save for a few Italian and French warships.

There are very few Greek vessels in the port; none have been allowed to enter—all are taken to — Bay or are running between the islands. — presents an animated scene with numerous warships and other craft, and it has been possible to land for walking exercise on the shore close by.

Christmas Afloat.

The Christmas festivities on board were probably among the most enjoyable ever spent by many of the refugees. On Christmas Eve carols were sung in the first-class music saloon, and the evening was spent in doing justice to the traditions of the mistletoe under most laughable conditions. There were three services on board on Christmas morning, and in the afternoon Santa Claus made his appearance and led the laughing children to the smoking-room, where a pretty tree laden with handsome presents awaited them. Contributions from the passengers defrayed the cost of the presents, and the children's faces testified to their happiness. The dining saloon was prettily decorated; turkey and plum pudding formed the menu of the day; and many of the company added to the general amusement by appearing at dinner attired in fancy costume. The dining saloon was a scene of much gaiety, and after dinner those in fancy costume, headed by the commander, walked through the second-class saloon and the steerage to wish all "A Merry Christmas." Singing and music made an enjoyable ending to a most novel Christmas.

The festivities closed with a very amusing theatrical performance, given on the evening of the 27th. It was a great success, and did credit to the authors and all those who took part. A revue in four acts, entitled "Concertinos," and written by Mr. G. Renwick, assisted by Mr. Thomas Miller, was acted. It was descriptive of the recent events in Athens and the embarkation on the steamer. Between the acts Miss Kettlewell delighted the audience with her graceful dancing, and solos on the piano by Corporal Taylor, and on the violin by our *maestro*, who was accompanied by Miss Rees, were much appreciated. A collection produced about £40, and was handed to the commander for some war fund.

[**An account of the experiences of the refugees on the voyage home will be published next week.]

LIST OF REFUGEES.

The following are the names and destinations of some of the British residents who have left Athens:—

CONSTANTINOPLE COLONY.	PROCEEDED TO:—
Mr. and Mrs. H. E. Mountain	England
Mr. and Mrs. R. La Fontaine and family	Rome
Mrs. Jack Whittall	Rome
Mr. W. J. H. Whittall	Rome
Mrs. Edwin Whittall and two children	England
Mrs. Wilfred La Fontaine and children	Lausanne
Mr. and Mrs. Thomas Maltass and Miss Maltass ...	Syra
Mr. and Mrs. Albert Maltass and family	Syra
Mr. and Mrs. H. Harty and family	England
Mrs. J. Campbell and children	England
Mrs. Chalmers and children	England
Mr. and Mrs. F. C. Tucker and family	England
Mrs. Jamieson	Syra
Miss O'Neill	England

Mrs. and Miss Wratistlaw	England
Mrs. Blair and children	England
Mr. N. Mumford	Syria
Mrs. Sofianos and two boys	England
Mr. G. Souvazoglou	England

SMYRNA COLONY.

PROCEEDED TO

Mr. and Mrs. Bird and family	Naples
Mr. and Mrs. R. Pengelly	Naples
Mr. and Mrs. A. Pengelly	Naples
Miss Doris Pengelly	Naples
Misses Jessie and Annie Pengelly	England
Mr. and Mrs. Rees and family	Chios
Mr. Charlton Whittall	England
Mr. and Mrs. J. Rose and child	Chios
Mr. Cook	Rome
Mr. Skidmore	Rome

ATHENS COLONY.

PROCEEDED TO

Mr. and Mrs. J. Barham	England
Mr. and Mrs. J. Robertson	England
Mr. and Mr. Baily	Rome
Mr. and Mrs. Meikle	Rome
Staff of Lake Copais Co.	Rome
Mr. and Mrs. Henderson and family	England
Rev. and Mrs. Gardner and family	England
Mr., Mrs. and Miss Finnis	England
Mr. Colson	England
Mr. Gordon Cooper	England
Mr. and Mrs. Lefroy	England
Mr. and Mrs. Pierson	England
Mr. S. de Bilinski	Syria
Mrs. Ford	England
Mr. Russell, sen.	England
Mr. Russell, jun.	England
Miss Russell	England
Mr. and Mrs. Wilson	England
Mr. and Mrs. Hasluck	Switzerland
Mr. G. Bowman	Syria
Mrs. Pilcher	Paris
Mrs. Alfred Grech and daughter	England
Mr. Kelly	England
Mr. and Mrs. Calfoglou	Paris
Captain Butler	England
Misses Moore, Rodier, Fraser, Lincoln, Roberts, Shakleton, Walker, Gough, Bois, Stocks, Julia Smith, Roswell Smith, Peacock, Hill, Flexman, Thynes, Hare, Wiles, Lemmon	England
Messrs. Ferguson, T. Miller	England
Mr. and Mrs. Eastwood and family	England
Mr. and Miss Chisolm	England
Mr. Consul Wilkinson	England
Mrs. Lough	England
Mrs. Merndrick and child	England
Mr. and Mrs. Sawyer	England
Mrs. Sargent	Corfu
Miss Hurry	Corfu
Mr. and Mrs. Stevens	Chios
Dr. and Mrs. Hamilton	Rome
Mr. O'Connor	Milan
Mrs. Cotterell and family	Syria
Mr. and Mrs. Simmonds and family	Syria

REMAINED IN ATHENS.

Mr. and Mrs. Rowe
Mr. and Mrs. A. Walker and family
Mr. and Mrs. J. Walker and family
Messrs. P. and F. Barbour
Miss Barbour
Mr. and Mrs. Barnes and family
Miss Alison
Mr. and Mrs. Hutchinson and family
Misses Jones, Kirk, Taylor, and Dodds
Mr. Simmons

[The Editor will be glad to receive—and to publish, if so desired—the present addresses of any former British residents in Athens.]

Photographs taken at Salonika by the Venizelist Ministry of War have reached London, and they prove conclusively that the Bulgarians have been firing into the Allied trenches on the Struma front where the bases of which were stamped with the Greek Army's inscription. It is evident that this ammunition is part of the war material handed over to the Bulgarians when the Greeks surrendered Fort Rupel and Kavalla to the Bulgarians.

Sofia reports state that General Jekoff and the Crown Prince Boris have paid a visit to German Main Headquarters, where they had a long conference with Marshal von Hindenburg. The Bulgarian Commander is reported to have "returned very satisfied as to the result of his visit."

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

SALONIKA AND BALKAN POLICY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—In the current issue of *The New Europe* is an article entitled "The Importance of Salonika," in which the writer, dealing with the operations in the Balkans, observes that the Allies as a whole never had a plan at all, and even at this moment are only very slowly evolving one. He also complains that prolonged neglect has prevented the expedition from achieving much more than a negative success. As a close student of Near Eastern affairs for some years, I beg to join issue with the writer, and to affirm that the Allied policy, when rightly understood, is a sound one; that the expedition is justified even if it be no part of its function to make advances into the interior, and

that while it remains securely seated on Salonika it holds the key to the whole Balkan problem; and if this is to be regarded as only a negative result, then it is in negative rather than in positive results that success in the Balkans is to be sought.

It does not require the expert to understand the strategical system employed for the subjugation of the Balkan Peninsula. It is written large in history, and the Central Powers are not originating it. With a passage through Serbia secured, it may be regarded in two aspects. The one, which is calculated to give command of the Western area, is the descent of Austria-Hungary upon Salonika by way of Valona—a movement that has come to be regarded almost as a strategical maxim—and the other is the creation of what in political language is known as a "Big Bulgaria," by means of which control of the Bosphorus and the Dardanelles may be gained and Constantinople occupied. The one is calculated to bring about the strangulation of Greece, the other of European Turkey, rendering both subject to the Germanic purpose. With the occupation of Valona and, so, command of the Straits of Otranto, and with a central seat in the Aegean that access to Salonika gives, the Dual Monarchy is virtually astride the Hellenic Kingdom, which at once becomes a threatened area liable to absorption in consequence of the natural tendencies inherent in every State to complete its coastline by encroachments upon an intervening area.

But Greece, so placed, is not only liable to incorporation; she is meanwhile exposed to the pressure of sea communications round her shores bridging the interval between the Adriatic and the Aegean ports which politically her independence separates. By this means her suffocation is compassed, and what is otherwise left to her of freedom is

FOR INSURANCES OF ALL KINDS.

destroyed by the fact that the establishment of sea communications round the Morea implies the loss of Crete and a Pan-German occupation of Suda Bay. In this way the finger is pressed upon her jugular, and, as Gibraltar has been said to divide France from France and Spain from Spain, so the occupation of the Cretan port by the Central Powers is calculated to divide Greece from Greece, and to place her separate existence at the will of others.

On the Eastern side of the Peninsula the same principle is set in operation; only where in the one case it was sought to employ Austria, in the other Bulgaria is the appointed instrument. A "Big Bulgaria" implies a Bulgaria with two coastlines, one on each side of the Bosphorus and the Dardanelles—the one on the Black Sea and the other on the Ægean—just as a "Big Austria" (if we may coin the term in this connection) implies, as its necessary equipment for the work in hand, a port on the Ægean and a port on the Adriatic. With two coastlines thus acquired, Bulgaria, as the German pincers, stands in relation to Turkey-in-Europe as Austria-Hungary stands in relation to Greece. Constantinople, like the Hellenic Kingdom, becomes a threatened area, and, while unabsorbed, efforts to bridge the interval caused by the divided coastline are the inevitable result, and Pan-German sea communications tend to be set up between the Black Sea and the Ægean, with the consequent suffocation of European Turkey and the ultimate command of the whole naval situation in the Levant.

This is the strategy in the German offensive which the Allies have had to meet, and it so happens that by the occupation of Salonika they have been able in one stroke to counter both enemy movements. Accompanied by the Italian occupation of Valona, they have, by their hold on the Ægean port, rendered impossible the lateral move upon Constantinople which was an element in the Pan-German scheme of envelopment; and though, in the Eastern area, Bulgaria still retains her two seaboard, her place on the Ægean can never be considered effective while the Allies occupy Salonika; for, so long as they are established there, Bulgaria's jaw is broken and she lacks the leverage, even though German muscle lay behind, to close upon Constantinople and the Straits.

In this connection the tragedy of Greece is seen to lie in the detachment from these remedial measures which the pro-German leanings of her King have brought about. For were she acting in co-operation with the Allies, the removal of Bulgaria's place on the Ægean would be accompanied by the substitution of a Greek seaboard in its stead. Their desire to avoid collision with Greece is therefore undiminished; for the political cure for Balkan ills, brought about by the German invasion, lies in the creation of a Magna Græcia which shall comprise the whole Ægean littoral that is not left in Turkish or does not come into Russian hands, and if the future of Greece rests with M. Venizelos her hopes and ambitions may yet be realised. In any case, the key to the situation lies in Salonika, and the fact that the Allies are retaining a firm hold on it is not only proof of the existence of a plan, but it is evidence of the existence of the right plan.—I am, etc.,

London, January 15, 1917.

DE FACTO.

BOOK NOTES.

Mr. Fisher Unwin announces "Turkey and the War," by M. Vladimir Jabotinsky, a Russian special correspondent who has an intimate knowledge of Turkey. The author, we are told, considers the destruction and partition of the Ottoman Empire as one of the principal aims of the war.

Messrs. Simpkin, Marshall and Co. are the publishers of "Venizelos and the War," by Mr. Crawford Price. The book is described as "a sketch of personalities and politics," and is published at 2s. net.

Messrs. Hodder and Stoughton will publish to-day the Lord Kitchener Memorial Book. The price of the book is 3s. 6d. net, and all profits from its sale will be given to the Lord Kitchener National Memorial Fund. Amongst the contributors to the volume are Lord Derby, Sir William Robertson, General Cadorna, General Joffre, General Sir W. R. Birdwood, and Mr. Arthur Henderson. General Joffre declares that "Kitchener deserves to bear for posterity the name of Organiser of Victory"; General Cadorna, commenting on his sureness of judgment, says that he "uttered the first authoritative words which revealed to the world, by the mouth of a foreigner, the special difficulties of the struggle on the Isonzo front"; and Mr. Henderson writes on "Lord Kitchener and Labour." One of the distinguishing features of the book is a very full pictorial record of Lord Kitchener's life.

Mr. Humphry Milford will publish in this country, for the Princeton University Press, a second volume of materials for a historical geography of Western Asia, "Early Egyptian Records of Travel," containing some texts of the XVIIIth Dynasty.

NEAR EAST BOOKSHELF.

A GLIMPSE OF MOHAMMED V.*

A wide circulation should be secured by "Indian Ink," which Messrs. Thacker, Spink and Co., of Calcutta, have again published for the benefit of the Imperial War Fund. Its editor has given the place of honour to Sir Valentine Chirol's account of an interview with the present titular Sultan of Turkey in the late autumn of 1908. "Reshad Effendi," as he was then styled, knew that the imperial purple would soon be his; for the Young Turks had announced their intention of deposing Abdul Hamid. But he felt his incapacity to occupy the thorny throne, and displayed a childlike naïveté in the interrogatories with which he plied Sir Valentine for several hours. He is described as—

an elderly gentleman of somewhat heavy build, clad in the usual Turkish Stamboulina, or long, close-fitting coat, buttoned up to the neck. His stooping shoulders and shuffling gait told of a life of enforced inactivity. His face was tired and worn, as of one who had been through evil times; and it was heavy in repose, though withal gentle and kindly, especially when lit up, as it frequently was, with a bright smile—a smile of the eyes as well as the lips. He had all the well-bred courtesy common to most Turkish gentlemen, with an added touch of almost childlike simplicity and sincerity.

This word-portrait confirms the impressions made on the present writer by a close inspection of Mohammed V. after he had girded on the Sword of Othman. His deeply-furrowed countenance, his pendulous lower lip and weary eyes, revealed the results of thirty years' captivity; nor did all the splendour of the Selamlık avail to arouse him from the torpor in which he was plunged.

Reshad Effendi told Sir Valentine Chirol that he had not conversed with an Englishman since the distant days when Sir Henry Layard was Ambassador to the Sublime Porte, and he detained his visitor until midnight. Profound ignorance of the world was the keynote of his conversation.

He knew little more than the names of the leading figures in Turkish political life, and the one question that he repeated in regard to every one who was mentioned was, "Is he a good man? Is he a straight man? Could I rely on him to tell me the truth? I have so much to learn!" Or again, when we talked of the European situation, and the heavy war-clouds which were then darkening the horizon after Austria-Hungary's lawless annexation of Bosnia and Herzegovina, "Allah, Allah, there is only one thing I want in my time—peace and quiet; peace and quiet. War is such a terrible thing, and I have suffered too much all my life. My unfortunate country, too, I am sure, wants peace, quiet and contentment." . . . I found myself in the strange position of having to deliver a sort of elementary lecture about the condition of Turkey and her relations with foreign countries to the man who, as one could easily foresee, was shortly to be her Sovereign ruler. He was full of curiosity about Germany, a Power almost unknown in Constantinople when he was a young man, and about the German Emperor who, to him above all, was the friend and ally of his dread brother Abdul Hamid, and the partner, as it were, of Abdul Hamid's tyranny. Towards the Turkish Committee of Union and Progress his feelings appeared to be compounded of gratitude and fear. He owed to them the ending of his rigorous seclusion; but he realized, I think, that this strange body of forceful men, so few of whom, he said, were apparently genuine Turks or good Mohammedans, were not likely to lead him into the path of peace and quiet which he himself yearned to tread.

The Sultan-Elect was very loath to part with his visitor, and met every suggestion that the hour was late by ordering another relay of refreshments. When at length Sir Valentine Chirol took leave he carried away a signed and dated photograph of—

perhaps the strangest and most pathetic figure of his day, and the melancholy conviction that never was anyone less fitted to ride the whirlwind than this kindly and well-meaning gentleman—a child in knowledge and experience of public affairs, but aged in body and in spirit even beyond his years by a lifetime of suffering and fear.

TANGIER TO TEHERAN.

I notice that during a discussion on a paper read at the Classical Association, at Leeds, the other day "an Army officer in khaki" asked whether this country now felt justified in withholding from Greece the Elgin Marbles. He had recently been in Greece and had noted the action "even now being taken by the Greeks in the restoration of their ancient monuments." That may be as it may be, and no one disputes the fact that the Greeks are paying much more attention to their priceless possessions than they did in Lord Elgin's day. But in view of what is happening in Greece at the present day it would be difficult to imagine a more inopportune suggestion than that of the "Army officer in khaki." I am not concerned to defend the removal of the Marbles, although the precautionary measure may have been perfectly justified at the time; but I am confident that they are being kept where they are not from any *cacoethes habendi*, but from a desire to preserve them for the edification of the world as a whole. The events of December 1 and 2 in Athens, it cannot be overlooked, render a general *émende* quite possible, when the Acropolis might be sacked with as great avidity as M. Venizelos's house. That would please the American tourist whom I once heard say "Well, I guess if we had this place in America, we'd level it up a bit and plant it out as a tea-garden," but no one else. Meanwhile, we can get back to the Greek oracle:—

Μὴ κίνεῖς Καμάριναν, ἀκίνητός γὰρ ἀμείνων.

A friend has been reading Mr. John Buchan's "Greenmantle," and his opinion of the book makes me want to go and do likewise; for he describes it as one of the very best and most exciting adventure stories he has ever read—and he is no mean judge. Moreover, it deals largely with a part of the world that still holds a fascination for me, the Baghdad-Persian frontier district. And it was in connection with Baghdad that my friend spoke to me of the book. For, it seems, Mr. Buchan somewhere mentions "the sewers of Baghdad." Now in my time, I am prepared to affirm, the City of the Khalifs certainly had no sewers at all, and I am wondering whether the "Young Turks," who, as we know, are rather keen on the introduction of such things, really have constructed anything of the kind. I seem to remember some talk of such an innovation, but I cannot trust my memory; and I cannot tell my friend whether Mr. Buchan has "slipped up." Can any reader help me? In any case, I doubt whether the introduction of sewers would be an improvement for Baghdad. The old city got along passably well without them when I lived there; though, to be sure, their absence had its drawbacks. And I fancy that the provision of a really satisfactory system would be anything but an easy matter, for technical reasons which need not be enumerated here; to say nothing of the prejudices of the Baghdadis.

In connection with this subject, it is a strange thing that many Eastern cities do manage to rub along with such freedom from epidemics, in spite of the absence of "all the latest sanitary improvements." Kerbellah and Nejef, for example, are—or were—perfect death traps, from the sanitary expert's point of view. Their water supply was hopelessly polluted; and, when I visited them, the condition of the streets and of one or two of the Khans I entered was about as unhealthy as it well could be. Both places have, of course, been visited many times by cholera and other epidemics, and the number of victims claimed is always considerable. But the mortality is usually greatest among the pilgrims and other visitors, and the townspeople themselves, who live their lives out amidst conditions that would reduce any self-respecting sanitary inspector to despair, seem to be absolutely proof against microbes, bacilli, and all the other terrors of which the patent medicine advertisements tell us such nerve-destroying stories. It is, I presume, a case of the survival of the fittest. If an infant born in Nejef or Kerbellah can stand the water of his native place, he is proof against any lesser danger!

Here is a heart-wail from the *Basrah Times*. It is a letter to the editor, dated November 23, and signed "S. S."—

Dear Mr. Editor,—I wish to cast no unworthy aspersions on a very useful Department, but history records it that an officer entered the presence of a Postal Official and said that he had come to make a complaint.

According to ancient custom he was handed paper and pencil, but he preferred to state what he had come to say; whereupon he complained that he had received no letters for over fifteen days at least. The Postal Official, looking upon him with benign scorn, said: "Probably nobody has written to you." "That's possible," replied the forlorn one, "but I've been

writing to myself," and, with a look of abject hopelessness, he left the office.—*Sic est Vita Mesopotamice.*

This looks like a deserving case for the attention of one of those young ladies who delight in writing letters to "Lonely Soldiers." But, alas! such charitable efforts have, I believe, been banned by the authorities.

I was pleased to read in last Saturday's *Times* that "a sharp drop in the price of eggs in the London market has been caused by the arrival of exceptionally heavy consignments from Egypt, America, and Canada." For I like my breakfast egg, and, indeed, am rather partial to eggs in any form—poached, boiled, fried, scrambled, curried, or in an omelette, an egg flip, or a custard; but lately, not being a millionaire, I have had to "go easy" on them. Now, however, I hope to indulge in an orgy; for, according to *The Times*, "on the whole, the prospects are that good new-laid eggs will be obtainable at from 2½d. to 3d. each, and cooking eggs at from 1½d. to 2d. each." The price of the "election egg" is not stated; but that is, after all, a matter of interest only to gentlemen who are anxious to earn £400 a year by the exercise of their vocal chords and their wits. What does interest me is the statement that "the Egyptian egg is small, but contains a very large yolk, and is excellent for cooking purposes." This bears out my own recollection of the youthful Nile Valley fowl, and makes my mouth water.

It is, by the way, a strange thing that eggs from the Near East usually are small. The Roumanian egg is tiny—almost as tiny as some that have been fetching as much as 4½d. in this country of late—I fancy, by the way, I must lately have come across some Roumanian eggs imported before (long before) the war. But that is another story, as Mr. Kipling says!—The eggs I used to buy in Egypt, when camping on the edge of the desert, were notably small, too; so were those I got in Baghdad and throughout Asiatic Turkey as a rule. But, then, so was the price. I remember that at Karieatain, in the Syrian Desert, we bought seventy-two eggs for the equivalent of 1s. 1½d.; and, of course, we were paying top prices, being "Franks," and therefore wealthy! But three of us managed to dispose of the six dozen between us at two sittings—a supper and a breakfast—and never felt any ill-effects. Perhaps the Egyptian eggs referred to by *The Times* are of the same diminutive size as those products of the oasis village. But even so they will be welcome, if only they are "good" and "new laid."

CORSAIR.

On Sunday the Greek colony in Paris assembled at the Greek Church for a "Te Deum" in honour of M. Venizelos. A Royalist had paid some twenty persons to attempt to create a counter-demonstration, but as fifteen of these were Venizelists the attempt proved abortive.

In a letter to the Rev. Harold Buxton, Hon. Sec. of the Armenian Refugees (Lord Mayor's) Fund, the Archbishop of Canterbury writes:—"In view of the appalling sufferings which the Armenian and the Assyrian Christians are still enduring in such a degree as to call for the sympathy and aid of every Christian man and woman, I desire to express my approval of the renewal, during the coming spring, of the effort which was made last year to raise money in our churches and elsewhere for the alleviation of that dire distress. In many churches arrangements are already being made for collections on their behalf on Sunday, February 4, and I venture to hope on that or one of the succeeding Sundays there may be a widespread effort to alleviate distresses which are literally unspeakable. The money should be sent to the Secretary of the Armenian Refugees (Lord Mayor's) Fund, 96, Victoria Street, London, S.W."

25	13	Thursday	1	2

Monday is the birthday of Prince Nicholas of Greece, second brother of King Constantine, who was born at Athens on January 9, 1872 (o.s.).

Wednesday is the birthday of Princess Militza of Montenegro, the wife of the Crown Prince Danilo, who was born in 1880. Before her marriage the Princess was the Duchess of Mecklenburg.

Prince Antoine Bibesco, of the Roumanian Legation, has left London for the Continent.

Mrs. Austen Chamberlain, wife of the Secretary of State for India, gave birth to a son on Friday last at 9, Egerton Place. Mr. and Mrs. Austen Chamberlain have now two sons and a daughter; their eldest son Joseph was born in 1907.

Mrs. Buxton, wife of Mr. Noel Buxton, M.P., gave birth to a son on Saturday at 12, Rutland Gate.

M. Denys Cochin, French Under-Secretary for Foreign Affairs, has renounced the citizenship of Athens—which was conferred upon him last year—as a protest against the Athens Municipality having deprived M. Venizelos of his citizenship.

Madame Také Jonescu, the wife of M. Také Jonescu, formerly Roumanian Minister of the Interior, was much better on Sunday, and was able to see a few friends. She has since continued to make very satisfactory progress.

Mr. Balfour received M. Misu, the Roumanian Minister, at the Foreign Office on Wednesday afternoon.

In the absence of Lord Cromer, who was confined to his house by illness, Lord Justice Pickford presided at a further meeting of the Dardanelles Commission at the House of Commons on the 12th inst.

General Sir John Maxwell was called as a witness before the Dardanelles Commission on Wednesday.

Sir Reginald Wingate has accepted the presidency of the British Red Cross and Order of St. John in Egypt, and Lady Wingate has consented to become the Patroness of the Joint Societies.

Bishop Gwynne of Khartoum, the Deputy Chaplain-General, who has just been awarded the C.M.G., has been twice mentioned in despatches during the present war. The Bishop has had a long experience of military work, having been Chaplain to the Forces at Khartoum before he was consecrated Bishop. It is impossible yet to give any details of his work in France, but those who know about it speak in no uncertain terms of all he has done

out there. The Bishop's great gifts of organisation, and his manner of dealing with men, have been as strikingly demonstrated in France as they were in the Sudan. To the Army in France his appointment as Deputy Chaplain-General gave the most unqualified satisfaction.

Mr. K. L. Reynolds, formerly headmaster of St. George's Boys' School at Jerusalem, is now working at an Armenian refugees' camp in Egypt.

Nurse M. O'Neill, who was well known in Constantinople, and who since the outbreak of war with Turkey has been carrying on her work in Athens, has now arrived in this country, and her friends will be glad to know that she will for the present exercise her profession here. Her addresses are:—The Nurses' Hostel, Francis Street, Tottenham Court Road; and c/o Mrs. Evans, Stoke-sub-Ham, Somerset.

A Greek military mission from Salonika, headed by General Lapathiotis, arrived in Cairo on Thursday of last week for the purpose of organising volunteers. General Lapathiotis called upon General Sir Reginald Wingate and General Sir Archibald Murray.

The following Army Order was published at Khartoum on December 24:—"Upon the retirement from the Egyptian Army of El Lewa W.S.R. May Pasha, the Sirdar wishes to record his appreciation of the excellent services rendered by this officer whilst employed in the Egyptian Army for a period of 17 years. El Lewa May Pasha held the important post of Assistant Financial Secretary, Sudan Government, for 15 years, and he carried out his arduous duties with marked ability and success. On behalf of all ranks, the Sirdar wishes El Lewa May Pasha every good fortune in his future career."

APPOINTMENTS, PROMOTIONS, ETC.

Under date of January 11, Reuter's Salonika correspondent reports:—M. de Billy and Lord Granville, respectively the French and British Diplomatic Agents accredited to the Greek Provisional Government, have arrived, and the former has already visited M. Venizelos. The arrival of the diplomatic representatives is hailed with much satisfaction among the Greeks adhering to the National Movement.

The *London Gazette* announces that the King has been pleased to appoint Mr. George Russell Clerk, C.B., C.M.G., to be an Acting Counsellor of Embassy in his Majesty's Diplomatic Service. Mr. Clerk, who was born in 1874, entered the Service in 1898, and was appointed an Acting Third Secretary in 1901. Among the appointments he has held is that of Assistant in the Agency at Adis Abeba (1903-1907), and of Acting First Secretary at Constantinople (1910-1912). He was granted an allowance for knowledge of Amharic in 1905, and another for knowledge of Turkish in 1911, and was made a C.M.G. in 1908 and a C.B. in 1915.

The *Gazette* also announces the appointment of Mr. Claromont Percival Skrine as H.M.'s Vice-Consul at Kerman.

M. Radovitch, the Montenegrin Prime Minister, has tendered his resignation to King Nicholas.

Mr. Albert Phillips, for many years Greek Consul in Birmingham, recently resigned on account of disagreement with the policy of the King of Greece. He has, says the *Jewish Chronicle*, received a letter from M. Blitry, Minister for Foreign Affairs of the Greek National Government, asking him to become the representative of that Government in Birmingham, and has decided to comply with the request.

The King has approved of the appointment of Mr. Addison E. Southard as U.S. Consul at Aden, and Mr. Antonio Cassar Torregiani as Peruvian Consul at Malta.

The Salonika Press Bureau announces the appointment of Mr. Sachtouris as Diplomatic Agent in Egypt and Consul in Alexandria for the Provisional Government.

The *Sudan Times* reports the following appointments and transfers:

Kaimakam H. J. Huddleston Bey, M.C., Officer Commanding Camel Corps, has been granted the temporary rank of Miralai.

Bimbashi R. F. White has been granted the temporary rank of Kaimakam whilst commanding the Equatorial Battalion.

Mr. E. J. S. Hall, Sudan Civil Service, has been granted the temporary rank of Kaimakam.

The following British officers have been taken on the strength of the Egyptian Army with the rank of Bimbashi, and posted as follows:—

Captain Vere H. Fergusson, Scottish Rifles, to the Equatorial Battalion.

Captain Arthur W. D. Bentinck, Coldstream Guards, to the 9th Sudanese.

Captain Robert A. Colville, Cameron Highlanders, to the Sobat-Pibor District.

Major J. Stevenson-Hamilton, Reserve of Officers (6th Dragoons), has been attached to the Egyptian Army as Special Service Officer with the temporary rank of Bimbashi, and his services have been placed at the disposal of the Sudan Government.

Lieutenant J. D. Mathews, Royal Artillery, has been attached to the Egyptian Army as a Special Service Officer, with the temporary rank of Bimbashi and attached to Artillery for duty.

Kaimakam D. C. Percy Smith Bey, D.S.O., Officer Commanding Equatorial Battalion, has been transferred to be Officer Commanding 1st Battalion, vice Kaimakam C. A. Barker Bey.

Mr. Doherty, Superintendent of Police at Omdurman, has been appointed Commandant of Police, Red Sea Province. The *Sudan Times* states that it is probable that he will be succeeded in Omdurman by Mr. Martin, Assistant Commandant of the Khartoum Province Police.

OBITUARY.

DR. JOHN CROPPER.

Dr. Cropper (Temporary Lieutenant, R.A.M.C.), who was drowned in the sinking of the hospital ship *Britannic*, was well known to many readers of *THE NEAR EAST*, as, although his home was in England, he paid many prolonged visits to Palestine, as well as to Persia and Uganda. For some four years (1895-1899) he worked in the Church Missionary Society, in charge of their medical work in Acre, Palestine, but later he left their regular service and went to the Near East as a volunteer helper for the Church Missionary Society.

He suffered all his life with "hay fever" when in England, and used to escape this troublesome complaint by going abroad every summer. Dr. Cropper was a man of many accomplishments, breezy enthusiasm, and various hobbies. His latest hobby always seemed to absorb his whole thoughts, and many of his friends will recall his energetic way of expatiating upon the newest subject of his own pre-occupation of thought and work. He did useful work in ophthalmic surgery and in the investigation of malaria in Palestine, and published a number of interesting papers on medical subjects.

He was educated at Charterhouse, at Trinity College, Cambridge, and at St. Bartholomew's Hospital, and held the degrees of M.A., M.D., B.C. He was also J.P. for Monmouthshire, his home being at Mount Ballan, Chepstow. He was fifty-two years of age, and leaves a widow and three children.

Before joining the R.A.M.C. he worked for some months as assistant surgeon to the Red Cross in France.

Brigadier-General Lord Binning, elder son and heir of the Earl of Haddington, died last Friday at his father's East Lothian seat. Lord Binning, who was born on December 24, 1856, was educated at Eton and Trinity College, Cambridge, and joined the Royal Horse Guards in 1880. He served in the Egyptian Campaign of 1882, and was present at the battles of Tel-el-Kebir and Kassassin, and the taking of Cairo, for which he re-

ORIENTAL STUDIES.

THE SCHOOL OF ORIENTAL STUDIES.

London Institution, Finsbury Circus, E.C., OPENED on 18th JANUARY, 1917. Courses will be held in the Principal Languages of the Near, Middle, and Far East, and of Africa. Courses will also be given on Oriental Religions and Customs.

Intending Students are invited to apply at once to the undersigned. E. DENISON ROSS, Director.

ceived the medal with clasp and the bronze star. He also took part in the Nile Expedition (two clasps) and the Hazara Campaign, receiving the medal with clasp and being mentioned in despatches. He commanded the Royal Horse Guards from 1899 to 1903, and retired from the Army in 1907. In 1888-89 he was A.D.C. to the Viceroy of India. He was created a member of the Royal Victorian Order in 1902, and a Companion of the Bath (Military Division) two years later. He married, in 1892, Katherine Augusta Millcent, daughter of Mr. William Severin Salting, and leaves two sons and a daughter. The elder son is the Hon. George Baillie-Hamilton, who was born in 1894, and is a lieutenant of Dragoons.

A Memorial Service was held at St. Peter's Church, Eaton Square, on Tuesday afternoon, the hour at which the funeral took place at Tynningham.

The death has occurred at Bath of Major J. Llewellyn Evans at the age of ninety-four. He was in the Indian Army on the Bombay Staff Corps, and served in the Mutiny and the Persian Gulf Expedition. He was Acting Quartermaster-General when his health failed, and he retired in 1860.

Major Alan Gordon McNeill, M.C., Royal Engineers, has died of wounds received on the Western Front on January 10. He was thirty-two years of age, and the fifth son of the late John McNeill, of Great Western Terrace, Glasgow. He passed out of Woolwich into the Royal Engineers in July, 1903, and had promotion in April, 1906; he received his captaincy in July, 1914, and was given the rank of major in November, 1915. Major McNeill was employed with the Egyptian Army from February, 1913, until the outbreak of war. He had served with distinction in the war, and his name was in the Birthday Honours List of last June among the awards of the Military Cross.

Captain C. C. B. Ward, North Staffs Regiment, died of wounds on January 11, aged twenty-five. Captain Ward was for some years resident in Smyrna and in Patras. At the outbreak of the War he was in the H.A.C. and became second lieutenant in the East Yorkshire Regiment in November, 1914. He went to Suva Bay in September, 1915, being attached to the North Stafford Regiment, and remained there until the evacuation, being also present at the evacuation of Cape Helles. Proceeding to another front he was wounded in April, and on December 19 he received the wounds of which he died. He was educated at St. Paul's School, and was the son of Mr. and Mrs. C. H. Ward, of Chiswick.

The death, on service, is announced of Captain Henry Thomas Richard Somerset Wright, Manchester Regiment, attached Egyptian Army. He obtained his commission in 1903, when he was nineteen years old, was promoted in 1907, and in June, 1914, was seconded for service with the Egyptian Army. In December of the same year he was promoted Captain.

In a letter dated December 20, a Cyprus correspondent writes:—The death in action on the Somme is announced of Second Lieutenant Alfred Sherwood Cleveland, of the Sherwood Foresters, eldest son of Dr. R. A. Cleveland, Member of the Legislative Council, and Chief Medical Officer, Cyprus. The deceased officer was born at Nicosia, Cyprus, on December 6, 1897, and was educated at St. Paul's School, Nicosia, Stubbington House, Fareham, and Epsom College. He entered the Royal Military College, Sandhurst, in 1914, and was gazetted to his regiment the following year. Proceeding to the Western Front in France on September 1, 1916, he was wounded in a front line trench on October 16, 1916, and died the same day.

Sergeant John Smith Parkinson, a survivor of the Balaklava Charge, died last Friday in his eighty-fourth year. He enlisted in the 11th Hussars (Prince Albert's Own). For nearly two years he was engaged in the Crimea, and was present at the Battle of Alma, in the Charge of the "Six Hundred" at Balaklava, at the Battle of Inkerman, and in the siege of Sebastopol.

EGYPTIAN ACCESSION HONOURS.

On the occasion of the anniversary of his accession, the Sultan of Egypt has conferred the following honours:—

ORDER OF THE NILE, SECOND CLASS.

Ismail Hassanein Pasha, Under-Secretary for Education; Mohamed Shukri Pasha, Under-Secretary for Justice; Gaafar Wali Pasha, Under-Secretary for the Interior; Sir George Macauley, Under-Secretary for Railways and Telegraphs; Mr. John Langley, Under-Secretary for Agriculture; Lieut.-Col. Blakeney, Deputy General Manager, Egyptian State Railways, N.T.; Borton Pasha, Postmaster-General; Lewa Hopkinson Pasha, Commandant of the Alexandria City Police; Mr. H. W. Halton, Vice-President of the Native Court of Appeal; Ahmed Talaat Pasha, Procureur-General to the Native Tribunals; Mr. Molesworth, Public Works Ministry; Dr. Comanos Pasha, the well-known Cairo practitioner; and Mr. R. Abdy, of Alexandria.

ORDER OF THE NILE, THIRD CLASS.

Mr. W. A. E. Coxon, inspector of mines; Mr. W. B. Trelawney, director of the Government Press; Mr. R. V. Wild, sub-director of direct taxes; Mr. C. Barton, sub-director Comptabilité Générale; Mr. W. Swainson, inspector; Mr. J. Monteith Furness, director of the Khedivial School; Dr. R. G. Kirton, chief medical officer, Prisons Department; Mr. W. H. McLean, chief municipal engineer; Dr. MacCarthy Morrogh, Public Hygiene; Mr. F. P. Walton, director of the Sultanieh School; Mr. W. Ross Taylor, substitute of the Sultanieh Council; Mr. G. Darussy, Secretary-General of Antiquities; and Mr. Ernest Shearer, School of Agriculture, Gizeh.

ORDER OF THE NILE, FOURTH CLASS.

Mr. A. J. Bell, foreman in the Locomotive Department; Mr. S. C. Foster, Egyptian State Railways; Mr. J. W. Macaldan, Egyptian State Railways; Mr. James Addie, Egyptian State Railways; Mr. E. H. W. Callendar, Egyptian State Railways; Mr. A. Holden, Ministry of Finance; A. Wood Bey, Ministry of Finance; Kaimakam Royle Bey, Coast Guards; Kaimakam Dowson Bey, Coast Guards; Kaimakam Peacock Bey, Ports and Lights; Kaimakam Trelawney Bey, Port Officer of Port Said; Mr. J. J. Jelf, Secretary, Ministry of Finance; Mr. W. B. Shearer, Polytechnic School; Mr. T. A. Chinn, Sultanieh School; Mr. J. F. Burrill, Abbassieh School; Mr. J. B. Peacock, Tewfikieh School; Mr. A. Miller, Veterinary Service; Mr. N. D. MacNaghten, Ministry of the Interior; Mr. R. Wellesley, Ministry of the Interior; Mr. Monfront, parks and plantations; Dr. D. C. Haywood, Public Hygiene; Dr. Cannoni, Quarantine Board; Kaimakam Randall Bey, Cairo City Police; Bimbashi F. H. Teall, Cairo City Police; Bimbashi C. A. Furness, inspector of police; Sagh. John Philip, Cairo City Police; Sagh. W. L. Muir, Alexandria City Police; Sagh. E. T. Waller, captain of the Alexandria Fire Brigade; Mr. F. Hughes, Ministry of Agriculture; Mr. A. T. B. Carter, Irrigation Service; Mr. J. Hindmarch, Irrigation Service; Mr. M. Slater, Public Works Department; Mr. G. Legrain, Service of Antiquities; Mr. G. Wingfield, Public Works Department; Mr. A. W. Wylie, Gharbieh Drainage Service; Mr. R. C. Moser, Highways and Byways; Mr. H. Knox Shaw, Physical Service; Mr. L. C. Hayward, Public Works Department.

ORDER OF THE NILE, FIFTH CLASS.

Mr. R. W. Clethers, Egyptian State Railways; Mr. F. Henning, Egyptian State Railways; Mr. A. Boudon, Egyptian State Railways; Mr. J. Cruickshank, Egyptian State Railways; Bimbashi D. R. Tweedie, Coast Guards; Mr. W. K. Marr, Irrigation Service; Mr. F. Gordon, Irrigation Service; Mr. D. Mackenzie, Tanzim.

THE RANK OF BEY, SECOND CLASS.

F. Williams Bey, Egyptian State Railways; F. Woods Bey, Egyptian State Railways.

On Sunday, the Orthodox New Year's Day, a *Te Deum* was sung at the Greek Church, Bayswater, for the success of the Greek National Triumvirate—M. Venizelos, Admiral Condouriotis, and General Danglis. The Archimandrite officiated at the service, which was held at the request of the Greek, Russian, Rumanian, and Serbian colonies in Paris and London. Among the large congregation were M. Gennadius and M. Stavridis.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

BUXTON.—On January 12, at 12, Rutland Gate, S.W., the wife of Noel Buxton, M.P., of a son.

MARRIAGE.

CAMPBELL—DEVONSHIRE.—On January 9, at Cairo, Egypt, Evan Roland Campbell, Lieutenant Royal Sussex Regiment, youngest son of W. Middleton Campbell, of Colgrain, Dumbartonshire, and Fen Place, Sussex, to Antoinette Priscilla Vulliamy, younger daughter of Mr. and Mrs. Robert L. Devonshire, of Maadi, Cairo.

DEATHS.

KELLY.—On January 9, at 96, Fellows Road, N.W., after a very brief illness, Lilius, wife of R. Talbot Kelly, R.I. Funeral at the Crematorium, Golder's Green, on Friday, the 12th, at twelve o'clock.

LOGIE.—On January 12, at 17, Station Road, Cambridge, Louisa, daughter of the late John Littledale (of Dublin), and widow of Donald Logie, formerly Consul-General and Judge of the Supreme Court of Constantinople, in her eighty-sixth year.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

FRIDAY, JANUARY 19, 1917.

CONSTANTINOPLE AND AFTER.

The destinies of the Near East are too closely linked with the understanding between Great Britain and Russia to allow the death of the Russian Ambassador to the Court of St. James's, who played so prominent a part in bringing about that understanding, to be passed over in silence in these pages. Three years after Count Benckendorff came to London the Anglo-Russian Convention of 1907 was signed. It marked the tentative efforts of the two countries to overcome mutual suspicion and mistrust. Thanks to the personality of Count Benckendorff and the devotion of Viscount Grey to the cause of universal peace, the Convention, halting and inadequate in itself as it was, prepared the way for a steady improvement in the relations between Great Britain and Russia, until the Entente ripened into the Alliance of 1914, with, as we believe, such profound effects in store for Europe and Asia. Left to itself, the Agreement of 1907, which achieved so little for the country that seemed to offer the best *milieu* for an Anglo-Russian *rapprochement*, might indeed have been provocative of fresh misunderstanding; but the loyalty of the two protagonists in London to the cause of closer co-operation triumphed over all obstacles. The crowning touch to Count Benckendorff's work came in the Pact of London, at once a pledge and earnest of the stability of the Alliance, which has since shown itself proof against all the disintegrating influences of a long struggle. His efforts, it is true, would have availed little if they had not been supported by the Russian Government at home; but in the light of all that has happened during the last two or three years, the British public will readily acknowledge the advantage derived from having in this country an Ambassador whose genuine wholeheartedness for the promotion of Anglo-Russian friendship must have been a formidable obstacle to German influences in Russia. Before he died Count Benckendorff had the satisfaction of seeing the seal placed on that friendship in the way that, above all others, would convince his own countrymen of the wisdom of the policy for which he stood. The Tsar could justly say in a Rescript to his Ambassador that, in devoting all his efforts to the continuation and development of friendly relations between Russia and the United Kingdom, he had manifested a true understanding of the interests of Russia. But the Russian people, being better able to judge achievements than tendencies, are now in a position to realize the concrete advantages of the Anglo-Russian friendship, and, when Constantinople is theirs, will not forget, we will hope, the names of those who brought them within reach of their goal.

The death of Count Benckendorff is the greater loss because, at a time when the internal situation in Russia is so difficult to understand, it is the more essential that Great Britain should be able to rely upon one whose judgment and policy had been proved long enough to inspire implicit confidence. One point only emerges from the bewildering sequence of changes in the Russian Government, and that is the firm resolve of the nation to carry on the war to its appointed end of victory. For the rest, we seem to be in the presence of a gulf between the Government and the people which is almost incredible in the presentation of it that

reaches this country, in view of the common determination to win the war. Two months ago, in the Duma, it was said of the Government of the day that, while the whole Russian people was united and ready for any sacrifice which would bring victory, it had lost faith in the ability of the existing authorities to achieve that victory, "the more so as all the men who had deserved the nation's confidence were systematically dismissed from the Cabinet." It would be expected that the changes in the Government, consequent on this bold speech, would lead to the instalment of those leaders who were trusted by the people; but Prime Minister has followed Prime Minister, and still there seems to be no assurance that the reactionary régime is at an end. To Russia's Allies, it may be thought, it matters little through what stages her domestic politics pass so long as the Alliance holds good and the will to victory is there. In the main this is so, and there is no suggestion of the least uneasiness. But the experience of every country teaches it that its best effort is only possible when Government and people are at one in their concentration upon the war, and it is evident that Russia's contribution to the joint cause, tremendous as it has been in the past, will be still more effective when all domestic misunderstandings have been cleared away.

Great Britain's understanding with Russia, it is to be hoped, will not be restricted to the situation immediately connected with this war. In 1907, as we have seen, very cautious steps were taken towards establishing a community of purpose where all was conflict before. The war has brought about a truer appreciation of the real interests of the two Powers, while strengthening the bonds of sympathy between them. If the new understanding is to be put to the wisest use, we shall see a careful and skilfully directed attempt made to extend its influence beyond the confines of the Balkans and Persia. A correspondent in *The Times* dwells upon the possibility that a transcontinental Empire from Antwerp to Shanghai will be Germany's reply to the decisions of the Paris Conference. The occupation of Constantinople by Russia, the restriction of Turkey to Asia Minor, and a change in the ownership of the Baghdad Railway ought effectually to prevent the realization of such a scheme. But the warning should not pass unheeded. It serves to remind us that Anglo-Russian interests march from the North Sea or Baltic to the Pacific, and that, unless the peace imposed by the Allies on the Central Powers eliminates for many years to come the feverish striving of Germany after world-dominion, we must expect her insidious efforts to be directed against any country in which she has not been definitely forestalled. The restoration of the balance of power in the Baltic in Russia's favour will come within the scope of peace terms, and can be effected in different ways, which it is not necessary to specify here. In the Balkans the settlement which can now be decided upon without reference to the Central Powers must pay far more attention to elements of permanency than to past or present prejudices. But it is in Asia as a whole that the chapter which begins with Constantinople can find its most fitting end. Germany, we may feel confident, will be ready to fish wherever the waters are troubled. The best protection that the Allies can have will be to remove as far as can be done all possibility of future misunderstanding. In the Middle East and the Far East there is scope for clear-cut arrangements which will be to the advantage of all concerned. Japan as the ally of both Russia and Great Britain here enters the picture, and we can conceive no greater deterrent to German intrigue than to be confronted with a complete understanding between these three Powers. Preliminary work to this end may be begun now, although it can only be brought to fruition after the war. The programme before the Russian and British Governments is thus a heavy one, and will call for long-sightedness, driving power, and the closest sympathy. If, as seems possible, Count Benckendorff's place is taken by M. Sazonoff, then on the foundation the former helped to lay we may look forward to the rapid construction of the complete edifice.

THE BALKANS.

By H. M. Wallis.

III.—THE BREAK-UP OF THE WINTER.

By the end of February one has grown used to winter and begun to enjoy thoroughly the white expanses of snow marked by the feet of hare, and, occasionally, in covert, with the broad, five-toed seal of badger, and the narrower pad of fox. The winter birds, few and hungry, are still with us; most seem birds of prey—short-eared owl, buzzard, and harrier, constantly on the make for a meal. Of course, farm work is at a standstill, but the hard-beaten roads, roughened with foul old snow, are in constant use. Village produce is moved into town, cotton taken down from the uplands to the ginning mills, timber drawn, and so forth—chiefly women's work, the women marching lightly ahead of the trudging oxen, crocheting as they walk, always busy.

Then one day there is a smell of rain in the air, and within a few hours the drains are running full, and the bigger culverts, built to accommodate the spring floods, are pouring down to the flooding rivers. The snow holds out wonderfully; there is a lot of it, and it takes a deal of melting; but it goes at last, piece-meal. The ground beneath is still too hard for the share, however. The bare, brown mountain sides show golden in patches with crocus. There are acres of ground near the Black Sea covered with the purple sprouts of peony, a fine blood-red flower with a great yellow tassel in its centre, single, of course, and scented.

Then come the first of the spring birds, new sorts of lark, two sorts of starling, ours and the unspotted purple Sardinian starling. Outside the shore-ice on the Danube fleets of swan are sailing, and a little later flamingo and pelican arrive, also crane. It is a strange sight to behold from the train, as it crawls across the Karnabat Plains at daybreak, a vast flock of crane, tall, bluey birds, just alighted from their night's journey, and dog tired, so weary that they will hardly take wing, but walk out of the way of the engine, lifting and floating for a few yards, and pitching again in ranks.

"In a week we will get the ploughs to work," say the women, "but the ground is still too wet." By mid-March they are at it tentatively, hardly daring to tackle the land with a bone in it yet. Afar, across the enormous levels between the Rhodope and the Balkans, where the eye travels on from one line of ancient tumuli to another—one has counted seventeen great grave mounds from a single point of view, and some were very lofty and distant—one sees the little pair-ox ploughs going, each with its driver between the stilts, and one in three of them is a woman, discernible from a mile or more by the glint of her scarlet apron. No Bulgar will wear colour.

More migrants arrive, wheatear and stonechat, swallow and stork, and the small, red-backed kestrel, which builds behind the wooden shutters of houses in Adrianople.

Presently the snow has entirely withered away on the level, and out come the tortoise and small green frogs from their underground hibernations. By the beginning of April the wonders of a southern spring are in operation along the sides of the south-flowing Maritza, and it is growing warm at Salonika. But up at Sofia, and still more so in Upper Serbia, there may be returns of hard weather and heavyish falls

of belated snow. The little ring-necked turtle-doves, parasitic all over the East, are back in flocks in every garden, but among the mountains the first cuckoo flits north across desolate snowfields, and the purple ibis finds no open swamp, and probes the snow with his long, curlew-like bill.

It is treacherous going, even if one is convoyed by a native. The mud exposed by the melting snow is worse than anything I have ever encountered elsewhere. It was a disconcerting experience to slip up on greasy yellow brick-earth and find it impossible to arise without help; for hands went in to the elbow, and feet over the boots. Lose the track and your carriage sticks, no encouragement will get a move upon the horses.

But by the end of April the winter is over everywhere except among the Rilo glens, and as Rilo is ten thousand feet high, one must concede him leave to have a weather of his own.

Here, then, you have the climate of the Balkan region, the conditions of a continental area, wholly unlike our home weather, and worthy of study and respect. The summer heat will be found as hot as Lombardy; the winter cold as deadly as the frosts of Southern Russia; communications few and evil, fuel scarce and local; the population stubborn and proud, as becomes a nation of small freeholders. They were kind to me, and it is hard to believe that it was necessary for us to be killing them, or they us. Between four and five months I dwelt and travelled among them, an unarmed stranger, and was always civilly and frequently kindly treated, and never defrauded of a sixpence. Whether in a big hotel, a little public, or a rough rest-house beside the rails, one could always, by night or by day, feel as safe as in one's bed in England, and as little call to lock the door! One incident and I have done. Shortage of trucks compelled me on one occasion to leave nearly one thousand sacks of flour beside the railway track in a wildish country. Some were laid on sleepers and sheeted, some put into an open-ended shed, some in a neighbouring public-house. It was rained on, covered in by snow, exposed for ten weeks to the vicissitudes of the winter, and to the tender mercies of passing troop-trains of hungry soldiers, and the needs of a neighbouring village—since burnt—of two thousand souls. But when at last I re-sold my convoy, it tallied out to the last sack, and I was paid in full. But these were Bulgarians, who, I am told, are dishonest, treacherous, and generally outside the pale of pity.

"THE TURANIAN CONQUEROR."

Addressing a meeting of the Victoria Working Men's Club at Kew on Wednesday evening, Colonel Sir Mark Sykes said that the keystone of the German arch lay in the maintenance of communication between Berlin and Constantinople. This was the first step towards the realization of the great Berlin to Baghdad ambition. The next steps which animated the German ideal were—Berlin to Calcutta and Berlin to the Cape by land. This lust for power was based on the immorality of Prussian policy. Prussia inspired a curious kind of enthusiasm into that mass which was by insidious processes driven into the position of enthusiastic slaves. To the Prussian came by natural attraction the Hungarian and the Turk—the two races which believed in dominion by violence. The Turk, who in the last ten years had thrown back to the primitive Turanian Conqueror, was not content with dominating, but was now engaged in exterminating the Armenian, the Syrian Christian, and the Arabs, and was even now beginning to bully the Jews. The Turk had overthrown Islam as Prussia had overthrown Christianity. Prussia had replaced God by Thor and the Cross by his hammer. The Turk had replaced Mohammed by Oghuz and Allah by the "White Wolf" of the primitive Turks. No belief was to be placed in that cloak of chivalry under which in exceptional cases the Turk tried to hide his abominable acts. He might treat General Townshend well; but how was he treating the thousands of Indians and Englishmen in his hands? If it were possible that the Teuton-Turanian federation of violence could win this war it would be twenty generations before mankind regained its liberty.

KING GEORGE.

KING OF SPAIN

THE PRESS ON THE NEAR EAST.

The Exodus from Bucharest.

On Tuesday *The Times* published a moving account of "The Flight from Bucharest," by its correspondent in the Balkan Peninsula. In spite of the German advance, and many aeroplane attacks, public tranquillity remained undisturbed, says the writer, "and when on November 4 the authorities received the news that the enemy had crossed the Danube, had established himself at Zimniza, and was advancing on Rosiori, some six hours' journey by rail from the capital, no intimation of these serious tidings was conveyed to the population. As a consequence, the train conveying the Diplomatic Corps and a certain number of invited and uninvited persons took its departure in comparative quiet, although the station was already densely crowded with refugees." But when the departure of the diplomatists became known a state of panic ensued, which was increased by the arrival of some military officers, who promptly took measures for the removal of their families.—

A *saute qui peut* followed, and violent scenes occurred at the railway station, the doors of which were guarded by cordons of soldiers. Revolvers were discharged at the troops, who were ordered to charge with fixed bayonets; the number of the casualties has not been revealed.

Fabulous prices were paid for country carts and other vehicles by those who despaired of reaching the trains, but the bulk of the refugees set out on foot, carrying with them a portion of their *penates*; many were compelled by fatigue to abandon their burdens, and the main roads leading east and north were strewn with objects which had been dropped or thrown away. The greater portion of the British colony were enabled to leave, thanks to the efforts of the Rev. Mr. Cullis, the British chaplain, who, though remaining himself at his post, induced the Government to facilitate their departure.

A friend who contrived to reach Ploesti in a peasant's cart, for which he paid £10, came thence to Jassy by train. Another arrived here in a train composed of sixty carriages which was only partially fitted with the Westinghouse brake; on a sudden stop being made the brakeless portion of the train "telescoped," and several persons were killed or injured. Another train derailed three times on the journey.

Roumania—and Beyond.

Writing on "The Great War," in the *Saturday Review* (January 13), Brigadier-General F. G. Stone expresses the opinion that "Germany has the strongest political reasons for pressing on to complete the conquest of the rest of Moldavia."

Her military occupation of the whole of Roumania in so short a time—in the event of successfully crossing the Sereth and conquering the whole of Eastern Moldavia—would be a dramatic reply to the Entente rejection of her insolent peace proposals. We may reasonably assume that the complete conquest of Roumania will, therefore, take precedence of all other interests in any other theatre of operations, and that nothing will be allowed to deflect one iota of the military energies of the Central Powers from this objective until it is accomplished in its entirety; in the meantime no help can be given to the Bulgarians in Serbia and Greece.

The Central Powers will, however, by no means have a walk-over in Northern Moldavia, says the writer; and more recent events show that his prophecy is likely to prove a correct one. He continues:—

The offensive against Roumania was, undoubtedly, in the first instance, an economic offensive from which great material results were anticipated; these anticipations have scarcely been realised up till now, partly owing to the prompt measures which were taken to destroy the whole machinery of the oil fields, and to remove supplies and ammunition into the interior of Moldavia; and partly owing to the fact that the anticipations were unduly sanguine—for, while it is true that every cultivator produced more than was necessary for his own requirements, and that after providing for export there was still more than a sufficiency to keep 7,000,000 of people in comfort, it is evident, nevertheless, that what constitutes a huge surplus for 7,000,000 people does not go very far when it has to be divided between 140,000,000.

After discussing the possibility of an invasion of Bessarabia, and describing the geographical features of that region, General Stone concludes a most interesting article as follows:—

The chief outstanding factor in Germany's grandiose scheme is the attitude of Austria-Hungary; signs are not lacking to show that the economic condition of the Dual Monarchy is so serious that it may at any time begin to exercise an influence on the operations in the field; there is also another feature in the Austro-Hungarian attitude, which is rapidly becoming more significant, and that is the apparent determination of the Emperor not to allow his country to become absorbed in the German Empire: if it is indeed the case that he has a clear vision of what the realisation of the Kaiser's pan-German scheme of an empire stretching from the North Sea to the Persian Gulf will mean for Austria-

Hungary; if he fully grasps the fact that any Austro-Hungarian ideals, rights, ambitions, or sentiments which are inconsistent with the fructification of the Kaiser's plans will be ruthlessly swept aside or put out of the way by methods known to German diplomacy, then indeed it may be expected that if the prosecution of the war into Bessarabia in furtherance of the North Sea to the Persian Gulf policy involves greater sacrifices from Austria-Hungary than the Dual Monarchy can conveniently bear, the Emperor will make it perfectly plain to the Kaiser that the consolidation of the Austrian position in regard to Serbia is of more interest to him than the capture of Odessa. In this case Falkenhayn's army might not be long in coming to King Constantine's aid, and—well, we should know where we are as regards Greece!

An Ambitious Scheme.

In an article entitled "Germany's Eastern Lure," the *Nation* (January 13) takes a somewhat pessimistic view of the situation. "We have," it says, "witnessed recently several Allied plans brought to nought one after another; and at length we reach a point where the whole Eastern Front becomes involved. There were several feasible lines of defence for our Allies, and there is still the line of the Sereth and one of its western tributaries which might form the basis of a dependable flank. But the capture of Foczani has practically ended any stand on 'the Sereth lines,' and it can serve no useful purpose to minimise the effect of this success." The article continues:—

The Sereth lines are, of course, not the line of the Sereth. Foczani, which is one of the three places along the fortified "Sereth lines" with a half-ellipse of works facing northward, actually lies south of the Putna, a tributary of the Sereth. But it was one of the pivots, if not the chief pivot, of the defensive lines which are named after the river. Its fall means that there will be a corresponding readjustment towards the West. Another stretch of the Moldavian mountain line will be untenable, and our Allies will to that extent find their left flank in danger. There can now be little doubt that the enemy will try to cut their way across the Sereth, and perhaps the Pruth, towards Odessa and the Black Sea ports. It is not that they will gain any strictly military advantage or any great material assistance from such an advance in itself. Their main aim will look further ahead. Their objective will be to force back the whole Russian line, perhaps to the extent of capturing Petrograd. The development of such an ambitious scheme offers no chances similar to that which confronted Mackensen in his 1915 campaign against Russia. . . . But a continued advance on this flank must compel the Russians to fall back.

"Athens Under the Terror."

Under the above title, the *Morning Post* publishes (January 17) a letter received by its Paris correspondent from a friend who has lived many years in Greece and Turkey. The writer begins by saying:—

These are dark days in Athens. We Britishers are safe on board the ships in Piræus harbour, but it is a veritable reign of terror for the Liberal Party ashore, who are being hunted down, arrested, and man handled with a fury that shows no abating as the days go by. Numerous prominent Venizelists succeeded in escaping to the ships in the nick of time, but many more were less fortunate. Beginning with Mayor Benachi and General Coraka, a large number of higher public officials, University professors, lawyers, merchants, bankers, manufacturers, journalists, officers, and civilians are under arrest, charged with the set formula: "High treason, lèse-majesté, murder, shooting from windows, propagating sedition, harbouring traitors, possessing firearms," etc. The old gang of spies and informers who formed the King's "Special Safety Service" in the balmy days of the Skouloudis-Gounaris Cabinet have foregathered again from the provinces, whither they had been scattered by the Allies' Note of June 21, and are once more at their dirty work. To be known as a Liberal is enough to bring these bloodhounds down upon any man, however inoffensive.

He proceeds to refer to the rioting and lawlessness of the so-called "Reservists" equipped out of the Government armouries, and specially mentions that "in most cases the outraged patriotic feelings" of these atrocious cowards "compelled them to finish by looting each house attacked, and thus to-day thousands of citizens find themselves stripped of money, clothing, utensils, and all portable goods by these high-minded patriots." It is to be hoped that at the final reckoning these "Reservists" will be made to disgorge their ill-gotten gains, and receive the punishment they so richly merit.

We are then given two typical instances of the proceedings of the "Royalists." The first is that of an American citizen of Greek origin, who—was seized by "Reservists" on the second day (December 2) outside his house near the Acropolis and hustled off to the infantry barracks, after being lightened of his pocket-book containing £140, was brought before a colonel, who ordered his guards (with a significant wink) to take him off to the "Prefecture." But to the man's dismay he found himself being marched off in the opposite direction, namely, towards Goudi. On the way he was mocked openly by passing patrols, as well as by his own guards, as going to swell the ranks of the "unknelled, un-

coffined, and unsung," and they had already passed to the last houses into the fields when a mounted messenger galloped up with an order to the squad to bring the prisoner back to barracks, it having finally come to the colonel's ears that he was an American citizen. And at the barracks, after producing his passport, he was released.

American citizenship, it seems, was worth something to this gentleman! The second case is justly referred to as "a peculiarly atrocious" one. It is that of "a well-known Greek surgeon of Alexandria, Dr. Canellis, a Cretan by birth, who had done distinguished field ambulance work in the Balkan wars, and who had come back to Greece in response to the mobilisation decree of September, 1915." His past service to his country, however, did not save him from the fury of the mob.

Merely the fact of his being a Cretan and a friend of Venizelos was enough for the King's butchers. His house was first riddled with volleys, then he was arrested and dragged off under a storm of blows and kicks, in which he received a dangerous wound on the head and had both arms broken by bayonet and bullet wounds. He was kept in this suffering state, half insensible, for three whole days, until finally even the *Procureur* in charge of his case had to admit that there was not the slightest evidence against him and he was discharged, an utter wreck. He was taken to a hospital for two days and then mercilessly turned out by order of the Director (who was a patriotic Royalist) "to complete his cure at home"! He was brought back almost naked to his home, which in the meantime had been sacked and plundered by the "Reservists," who, in their "high-souled exaltation" (a choice expression used by the Minister of Foreign Affairs, in defending them to foreign critics) had carried off everything—money, clothing, household utensils—down to the baby's shoes!

King Constantine's Responsibility.

The writer concludes with some most interesting references to King Constantine's share in the sorry business. How far his Majesty is a tool in the hands of the military party he (the writer) has, he says, no means of judging; but he is encouraged in "mediæval delusions" regarding his own importance and his own authority by the flatterers and schemers who surround him, who have their own ends to further.

It is therefore quite possible that this cabal, for whose cleverness his moderate intellectual equipment is absolutely no match, has already got the reins firmly in hand, and that he is by this time under their control, though he is not allowed to perceive it. This, however, abates not one jot of his own personal responsibility; for he has always been ready for such unconstitutional courses. For a free Press he has ever had, and expressed, the greatest aversion. All men who disagree with his own preconceptions he hates with a perfect hatred. As he hates M. Venizelos to-day, he hated Greece's other great statesman, M. Tricoupis, in his day. Tricoupis fell from power because of his interference, and died in exile of a broken heart. M. Delyannis, though M. Tricoupis's life-long rival, once said of Constantine that he "would one day drench Greece in blood." The Military League of 1909 drove him from Greece, as the cause of the country's military disorganisation. M. Theotokis, M. Rallis, M. Gounaris, and other politicians, who are to-day flattering him, criticised M. Venizelos sharply for his reinstatement in the Army. And only M. Venizelos, in the teeth of the universal prejudice against the exiled Crown Prince, brought him and his brothers back from exile, and his political genius opened the road to rehabilitation and renown for him and his family. And now this is M. Venizelos' reward!

The last sentence quoted is: "If the Allies tolerate this situation much longer they may safely count on losing all their friends in Greece and the East."

Italy and the Near East.

Sig. Raffaello Piccoli contributes to the *Sunday Times* an article on "The Rome Conference: Italy's Role in the War," which is worth careful reading. Dealing with Italy and Greece, he writes:—

The divergence between Italy and the Allies on the subject of Greece, which gave rise to so much comment, often of a very unfair kind, against Italy, was mainly due to the fact that Italy is not one of the Protecting Powers, and had no reason to interfere in Greek internal affairs as long as the other Powers insisted in dealing with Greece in that capacity. The last Note to Greece, while embodying all the requests made in the former Notes of the Protecting Powers, treats the whole matter as a problem of political expediency in relation to our strategic position in the Balkans; and this is naturally the common ground on which all the Powers could not fail to agree.

A fact to which the English Press has made no reference was the presence in Rome of General Sarraïl. General Sarraïl expressed to General Cadorna his admiration for the Italian troops fighting under him in Macedonia, and for their commander, General Pettiti; and the two soldiers discussed with Generals Robertson and Liautey the whole military situation. It is evident that Greece knew that in the event of non-acceptation of the Allied Note there would have been no doubts and no delay in the course of action to be adopted.

The Germans, says the writer, knowing that they can do no more on the Western front, "will certainly aim

their next blow in the South-east, against the Allies in Macedonia, or against Italy."

They can now be assured that they will not find that front unprepared, and also that in the same way as England's military frontiers are to-day in Flanders and France, so Italy's military frontiers extend now from Switzerland to the Ægean. Italy is fully prepared to meet the enemy on this ground, and she is determined to have her full share in the sacrifices leading to the common victory. And the country is tranquil and hopeful under the terrible strain. She sees at last that the value of her efforts and the justice of her aspirations are fully recognised by the Allies, and she puts all her trust in the men who are now at the head of the Allied Governments.

Articles to Note.

"Germany's Policy in the Balkans," by Frank Fox, in *Land and Water* (January 11).

"Greece as a Republic" (An interview with Mr. John Mavrogordato), in the *Daily Graphic* (January 13).

"Austria and Central Europe," in the *Nation* (January 13).

"Roumania and the West," by N. Iorga, in the *New Europe* (January 11).

MESOPOTAMIA COMFORTS FUND

FOR BRITISH TROOPS,
15, ALDFORD STREET, MAYFAIR.

PATRON.

MAJOR H.R.H. PRINCE ARTHUR OF CONNAUGHT, K.C.
PRESIDENT.

COLONEL THE VISCOUNT GOSCHEN.

CHAIRMAN.

COLONEL THE LORD LAMINGTON, G.C.M.G., G.C.I.E.

VICE-CHAIRMAN.

THE COUNTESS DOWAGER OF CARNARVON.

The Committee are authorised to state that they are working in conjunction with Colonel Sir Edward Ward, Bart., K.C.B., Director-General of Voluntary Organisations, and with the approval of the War Office.

Cheques should be made payable to the MESOPOTAMIA COMFORTS FUND, and sent to the Hon. Secretaries, 15, Aldford Street, Mayfair, and crossed "Coutts and Co."

A Berne telegram states that over 1,000 enemy guns have been despatched from the Roumanian front back to the workshops. Up to the present the Roumanian campaign is said to have accounted for the entire output of the German munition factories for two months.

Under date of January 11 the *Times'* special correspondent with the Serbian Army reports:—"The Serbian authorities have received authoritative information to the effect that all Bulgarian conscripts of the 43rd Class—i.e., those aged seventeen—were summoned to the Colours last month, also that all men in Bulgaria hitherto exempted owing to physical unfitness or other causes have been called up to present themselves before the recruiting commissions, and with few exceptions have been enrolled.

Mr. S. E. Backhouse, the chief agent of the Armenian Refugees (Lord Mayor's) Fund, writing from Tiflis to the secretary of the fund, sends some interesting information with regard to the sorely tried Armenian people. He states that the 20,000 Armenians who recently had to retreat from the region of Van back to the Russian frontier are now in dire distress in the neighbourhood of Erivan and Alexandropol. He continues: "I should suggest that not less than £5,000 should be spent on this work during the winter. Could you make a special appeal to cover this expenditure?" Mr. Backhouse also reports that the Kurds are making a regular business in aiding the Armenians to get through into Russian territory—for payment, of course. "This work is being carried on in the district of Erzincan, where about 1,000 refugees have recently been received at a cost of between one and two Turkish pounds a head. A similar number were recovered in the Mush district before the changed military situation made the continuance of the work there impossible."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

How much gold is there in Egypt? I had an interesting conversation yesterday with a prominent City man who has a great experience of the Land of the Nile, and he declared that the accumulations were considerable, and that an attempt should be made to bring it into the Empire exchequer. And he is right. Egypt is enjoying much prosperity just now. Where other units of the Empire have incurred grievous losses through the war, Egypt has gained, and it is only right and just that appreciation of this fact should be shown by investment in what we all hope will be the great Victory Loan of the war. I realise how difficult it is to induce people to take a correct perspective in these matters; but the Government ought certainly to embark on propaganda work in this matter. I cannot think it would fail if the right methods are employed.

So far as I know at present very little has been done in Egypt in regard to the loan. Of course, the days are early—there is nearly a month to run; but there is nothing like being in time, and it is undesirable to incur unnecessary delay in such a matter. I suppose the banks will do something to push the loan among their customers; but there is a case for strong official action, and while there must be no suggestion of coercion, persuasion must be used up to the last possible limit. I shall soon expect to hear that the British Chamber of Commerce, many of whose members have gained so much profit in war transactions, and through war conditions, are moving in the matter. The Chamber have always been to the fore in all good work, and are not likely to permit this new opportunity for patriotic work to pass unheeded.

Some very interesting facts—and fancies—have been published regarding Turkish finance during the week. I may call attention to the special article published elsewhere in THE NEAR EAST this week on the same subject. From a German source we learn that "the Turkish Government have withdrawn the privilege of a note issue granted to the Imperial Ottoman Bank." Although the I.O.B. has its head office in Constantinople, it is really an Anglo-French institution, and its operations are now carried on under conditions which naturally preclude business with Turkey or alien enemies. The reason given by the Turkish Government for the withdrawal is that the administration of the bank is in the hands of aliens. The privilege of a note issue is said to have been "transferred to the Administration of the public Debt," which, of course, is now conducted in German and Austrian interests."

The enemy does not say, however, what is the greater and more important fact, both from his point of view and our own, that the outstanding notes of the Imperial Ottoman Bank in Turkey command a premium. This fact speaks for itself, does it not?

"Turkey's bid for full sovereign rights, reported briefly in the papers some time

ago (writes a correspondent) is not merely a political act intended to show the world at large, and more particularly neutral States, that the Ottoman Empire is in a position to throw off tutelage. As such it is of no value whatever, because a Hun tutelage of the very worst kind does exist, and consequently Turkey is not a free agent, Germany being directly responsible for Turkish "policy." In these circumstances, the Allies are free to recognise as many of the political alterations involved as suits the future map of the Near East and our relations with the Ottoman Empire, and can promptly discard those which are contrary to our object and aims in continuing the war to the bitter end.

"However, apart from the political bluff of the recent *Irâde*, the full terms of which have not been published, there is the financial aspect, and I should not be at all surprised to learn that the real object, the very backbone of Turkey's bid for sovereignty, is essentially financial. Readers of THE NEAR EAST will be aware that no financial question in the whole world is so complicated, so intrinsically complex, as that of the Ottoman Empire. To such an extent is this true that the experts acquainted with the ins and outs of Turkish finance can be counted on the fingers of one hand.

"Now, with one stroke of the pen, the Young Turks, under the German-Austrian régime, have demolished this intricate fabric, and left us, the Allied creditors (mainly Franco-British), much where an unsecured bankrupt leaves his creditors. This is a grave matter. Presumably the control of the Debt Commission has been abolished *pro tem.*, and more chaos reigns than has been the case since the war began. Moreover, the administration of the debt since Turkey began hostilities in 1914 having been entirely in Austro-German hands, it is more than probable that one of the enemy's objects in getting the Turks to declare their sovereignty now, after having been bullied and mismanaged by the Kaiser's minions for two years, is to prevent the unmasking of their misappropriation of funds belonging to us by throwing the entire blame on the Turks.

"We must not allow ourselves to be fooled by any such manoeuvre. The principal criminals are, and remain, the Germans, and it is they who will have to be held responsible for the payment of sums owing to us. We must not forget this when the time comes for a settlement in full. It will be the German attempt to lay as much of the blame for the existing welter of financial crimes committed in Constantinople since November, 1914, at the door of the Turks, and I think that the *Irâde* in question is a first step in this direction. We must not be deceived. An expert commission will have to go carefully into the Ottoman finances when hostilities cease."

Meanwhile, a special telegram to the *Matin* from Zurich states that "it is confirmed by a semi-official Note from Berlin that a Germano-Turkish treaty was signed on January 11 at Berlin. On the admission of the German papers Turkey has consented that the reorganisation of her whole economic system shall be effected by a

special German mission. 'That is how,' cynically says a new Stuttgart journal, 'we work for the liberation of peoples and nationalities.'"

The recent news that another German commerce raider (or raiders) has broken through the blockade is disquieting, in the memory of the "Moewe" depredations of last year; but apart from the temporary inconvenience caused by the loss of valuable and important cargoes, the effect on the progress of the war will be negligible. Up to the time of writing, eight vessels appear to have fallen prey to the pirate; but it is impossible at the moment to speak definitely regarding the fate of the crews. More than 200 men have been landed, and it is stated that 400 others have been sent off, presumably to the Fatherland, in two prizes.

Most of the shipping companies affected are well known in Near Eastern ports. T. and J. Harrison have lost the "Dramatist"; the unfortunate Moss Company, the "Minieh"; the Ellerman Lines have lost the "Netherby Hall," and the Canadian Pacific Railway Company the fine steamer "Mount Temple," of 9,797 tons. The most serious loss falls to the White Star Line in the "Georgic," a ship of over 10,000 tons, and Lamport and Holt's steamer, the "Voltaire," 8,618 tons, is also among the pirate's victims. It may be presumed that the enemy raider is being hunted out, and that before long she will be accounted for. On the whole, notwithstanding our heavy losses in mercantile shipping, matters might be worse than they are. Meanwhile British trade is still booming.

The committee of the Organizers' Clearing House, of Parliament Mansions, Victoria Street, London, S.W., write to point out that they "have reason to believe that there is in the country a supply of talent and energy available for useful work which at present is either unable to find an outlet for its capacity or is misapplied. The need for perfecting and assisting existing organisations is generally admitted, and there is evidence on every hand that the volume of new work to be undertaken is destined to increase." The objects of the Clearing House are then given in brief outline; but beyond the fact that the circular is signed by the Earl of Chichester, Earl Percy, Mr. F. C. Whitbread, Mr. A. E. Owen, and Captain Percy Creed, I know nothing of the organisation, and must wait for further information before commenting on its activities.

The Financial Situation in Turkey.

(FROM OUR FORMER FINANCIAL CORRESPONDENT IN TURKEY.)

In addition to the excellent *résumé*, published not long ago, by the Council of Foreign Bondholders, of the report of the Council of Administration of the Ottoman Public Debt for the financial year March, 1914—March, 1915, it is now possible to examine more closely the causes which brought about a decrease in the various revenues administered by the Debt Council. These causes throw an interesting sidelight on the conditions prevailing in Turkey during the first four months of the year, November, 1914, to March, 1915, and it is now possible to form some idea of what the effect on these revenues will have been since then.

The preface of the report of the Council is very tactfully worded, but the full meaning of certain events can be read between the lines. The fact must not be lost sight of that although Turkey only entered the war on November 11, 1914, the Ottoman Army was mobilized on August 3, the Stock Exchange was closed and a moratorium declared on that date. This means, among other things, that the fiscal disorganization of the country commenced about that time.

On October 1 the Customs duty was raised from 11 per cent. to 15 per cent. *ad valorem*, thus raising to 7 per cent. the surtax, which is encashed by the Debt Administration.

Revenues Held Over?

As stated by the Council of Foreign Bondholders, no bonds were amortized during the second half of 1914-15, and only about 15 per cent. of the half-yearly coupon was paid. It is very unlikely that this situation has been modified up to date and, therefore, the revenues that are being encashed are probably being held over for a settlement of outstanding coupons and sinking-fund purposes after the war.

Whilst the writer has no definite knowledge on the subject, in view of past experience it is likely that considerable sums of this money have been temporarily advanced to the Ottoman Treasury to help them in their present difficulty.

During the period under review the Ottoman Government do not appear to have made any serious inroads on the Debt's revenues as a whole (except some £T168,000 represented by the failure to pay the £T114,000 substituted for the Eastern Roumelian Tribute, the £T129,000 from the surplus of the tobacco tithe, and the £T25,000 half-yearly instalment of the Tumbeki revenue, which sums are not likely to be forthcoming during the present year either) beyond a sum of £T40,735, representing the value of salt and sacks requisitioned by the military authorities.

The Salt Monopoly.

Coming to the revenues themselves we find that the principal source of revenue, the Salt Monopoly, decreased by £T233,178, equal to 21 per cent., and the provisional surtax on this revenue decreased by £T119,275, or nearly 25 per cent.

The causes contributing to this falling off were, partly, the purchase by merchants of large supplies at the end of the financial year 1913-14, instead of the beginning of 1914-15; the difficulties of working the salt pans in the Smyrna-Aivalik district, due to the emigration "en masse" of the population, the requisitioning of transport for the Army, the closing of the Dardanelles, the restriction of sales to prevent a "corner" being made in this commodity, and the small production of salt due to mobilization and the bad weather, which hampered the operations.

With regard to the export of salt, the year had promised well, for, in addition to supplying salt to India and Bulgaria, the Administration had obtained orders in Greece and Rormanian, and, as the result of a mission to the Far East and America, was in correspondence with various houses in the Malay States, Philippine Islands, Canada, and the United States with a view to placing contracts for

the sale of salt. The war, however, put a stop to all these export operations.

Stamps and Spirits.

The stamp revenue showed a falling-off amounting to £T115,039, or over 27 per cent., compared with the preceding year. This was entirely due to the economic situation arising out of the war.

The spirit revenue and its surtax fell 45 per cent. and 42 per cent. respectively. This was due to more than one cause. One was the loss of territory resulting from the Balkan war, whence a considerable revenue was obtained owing to the population being chiefly non-Moslem. Other reasons were the emigration of the Greeks, who are the chief producers of wines and spirits, from certain districts, the conditions arising from the war, such as the restriction of sales, etc., and the ravages of mildew and phylloxera in the vineyards of Thrace and the province of Aidin. It is a significant fact that the number of wine manufacturers in Turkey fell from 56,616 in 1913-14 to 8,123 in 1914-15.

The export of wines from the two principal provinces which between them represent 85 per cent. of the total export, namely, Smyrna and Beyrout, ceased after the declaration of war owing to the rigorous blockade of the Mediterranean littoral, which completely paralysed the commerce of Beyrout and Smyrna.

On the other hand the province of Adrianople, which was not so much affected by the blockade, increased its exports to countries with which communication was still possible.

The fishery revenues, which started the year well, fell off by 13 per cent., chiefly owing to the war, which led to the calling to the colours of a large number of fishermen, the lack of means of transportation, the prohibition of export and the emigration from the sea coasts.

The decrease of £T40,413, or 49 per cent., in the silk revenue was not entirely due to the war, as considerable damage had been done to this industry by heavy rains and other unfavourable climatic conditions in Anatolia.

The Customs surtax fell from £T1,061,580 to £T614,867, equal to 42 per cent., and that, in spite of the fact that the tax was raised by 4 per cent. from October 1, 1914. This diminution is, of course, one of the direct results of the war.

The Outlook.

From the bondholders' point of view a decrease of 50 per cent. or more in the revenues ceded to them may be expected, but Turkey is a country of quick recuperative power, especially under a proper administration, and the international financial interests in that land are so considerable that it is not very likely the bondholders will be allowed to suffer to any considerable extent. Nor must it be forgotten that the reserve fund of £T2,000,000, specially created to meet any unexpected falling-off in the revenues, is represented by sound investments, geographically distributed over some 15 different countries. Whilst the nominal value may have depreciated and the payment of coupons been suspended in many cases this is probably only temporary, and after the war the reserve fund will still be a valuable asset in the hands of the bondholders to make good to a certain extent their loss of revenue.

One interesting result of this review of the position of the revenues assigned to the bondholders is the conclusion it points to of the general financial situation of the Ottoman Empire. The Debt revenues reflect very closely the other revenues of the State, and if these showed a decrease of nearly 34 per cent. when the war was only four months old, it is certain that the other revenues showed a similar decrease. Since then the condition must have become appreciably worse. The full effects of the mobilization and consequent decrease of productive power, the stringent blockade and the loss of territory in Armenia, Mesopotamia and Arabia, must

have had a paralysing effect on the revenues of the country, which, at the best of times, showed an excess of expenditure over receipts and was still suffering from the consequences of the Balkan war and the territorial losses on that occasion. Against this, however, must be set the fact that no country in the world can get along better without money than Turkey. If the money is not forthcoming the soldiers and officials have to go without it and manage as best they can, and requisitioning takes the place of purchasing.

Turkey's Position.

With arms, munitions, and a little money supplied by Germany, with unpaid troops and officials, and with commandeered food supplies and transport, the Turkish Government can get along better than more highly organised States. The result to commerce, however, is much more disastrous, and ruin and emigration must have brought the country economically to a very low ebb indeed.

In short, from the bondholders' point of view, the situation is not too hopeless, and whilst Turkey may be most anxious for peace for political and economic reasons, the lack of funds will not prevent the Government from carrying on the war as long as their allies dictate. Lack of money has not prevented Turkey from waging war in the past and is not likely to do so in the present instance.

RUSSIAN OIL PROSPECTS.

The fuel question in Russia is a serious one for two principal reasons:—First, the shortage of labour; and, second, the disorganisation of the transport services. The former, says the *Financier*, has led to considerable difficulties in organising the output of coal in Russia's principal coal basin, the Donetz, and the latter has made the deliveries of coal, notwithstanding the praiseworthy efforts of chiefs of departments, very irregular. What is called the private consumer, of course, as distinct from the consumer who works on behalf of the national defence, has been the principal sufferer. The scarcity of coal had as a result the greater output of petroleum in Russia's principal oil region, Baku. But, although there is an appreciable advance in that region—where, however, the old fields do not show up well—the output for the year has not been as great as might have been expected. No doubt the wells were pressed as far as possible with the means at the disposal of the owners.

There is a feature in the recent experience of the oilfields that calls for prompt Government assistance, both at Baku and Grosny, and no doubt other oilfields as well—that is, the shortage of metal goods for fitting up new wells or deepening old ones. The scarcity of the goods referred to is very great, and, unless the remedy be applied promptly in the form of sufficient supplies of the goods required, there is pretty sure to be a reduced output at Baku and Grosny in the near future, and it will only be possible to maintain the level of delivery by extra pressure on wells that are at present showing no signs of exhaustion. The decline that is in view, whilst not affecting the reserves of petroleum in the district named, may for a time give a misleading idea of the oilfields and lead to the false impression that the oilfields are becoming exhausted quicker than is the case. On the other hand, with a rapidly-growing population, and a still more rapidly-growing industry generally, the demand on the part of the community for petroleum and its derivatives it appears must certainly have the effect of making the price very high over a protracted period of time.

ALEXANDRIA PROPERTY SALE.

On December 26 the sale of Mr. Emin Karam's large house at the Carlton Halt at Ramleh took place in the Mixed Courts. The house and grounds comprise 36,128.85 square *pics* of land, and, in addition to the main residence, there are a number of other buildings, such as stables, conservatories, hothouses, etc. The upset price was £E10,000, in addition to the expenses of the sale. The purchaser was Mr. Jacques Karam, who purchased the property at £E12,000, not including the expenses of the sale. This property was sold under an enforced expropriation of the landed property of Mr. Emin Karam and of Mrs. Marie Karam, *née* Sursock.

EGYPTIAN TRADE.

Remarkable Increase in Exports in November.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, December 26.

The Customs returns for November show a marked swing round of the balance of trade in favour of Egypt. During the month imports amounted to £2,405,621, as against £1,787,213 in the previous November. whilst the figures for export were £6,048,584 and £3,276,832 respectively. The totals for the eleven months are, in imports, £27,199,317, as compared with £16,692,314 last year, and £25,054,508 in 1913, and, in exports, £30,065,021, as compared with £22,562,823 a year ago and £26,566,995 in 1913.

The principal imports during November were: rice, £31,251—all from India; flour, £34,704—a decrease of £16,623; all came from the British Empire (Great Britain, India and Australia), but a sign of the times is the fact that whereas this year only 24,000 tons have been imported during the same period of 1913 no less than 182,000 tons were brought into the country; raw sugar, £132,033—an increase of £29,076 and all from Java; coffee, £29,762—£27,477 from Brazil and the balance from India; petroleum, £47,484—all from the United States; stationery, £88,044—about double that of last year (it is noteworthy that of this £69,635 was represented by writing, packing, and printing paper and cardboard, and that Norway and Sweden sent half of this and Holland about 20 per cent.); coal, £233,681—£47,340 more than in November, 1913 (£199,036 from Great Britain and £34,589 from the United States), but it is to be noted that the quantity was 20,324 tons less, and that compared with the same period in 1913 the total quantity imported this year is 685,884 tons, or 45 per cent. less; natural indigo, £43,773—all from India, and five times what came in the previous November; matches, £45,546—nintenths from Sweden; chemical manures, £129,974—the fact that to date only 24,724 tons, costing £363,157, as against 63,674 tons valued at £599,126 in 1913, have been imported indicates that agriculture must have suffered this year both from shortage in quantity and also from price; textiles, £899,417—an increase of over 50 per cent. on last November (the chief item was cotton tissues, £577,688, of which Great Britain sent £435,289, Italy £132,930, and Spain £7,527, whilst the next important were cotton threads, £62,481—of which India sent £39,168, Italy £9,896, and Great Britain £9,700); sacks, £46,204, all from India, and ready-made linen and millinery, £46,995, of which Great Britain sent £10,431, Japan £17,285, France £6,218, Italy £4,422, and Spain £5,590; metals and worked metals, £80,234, of which Great Britain sent £61,326.

Under exports the chief items were: eggs, £51,037—four times the quantity that went out in the previous November; cotton seed, £147,108—half the amount of last year, but a decrease of more than 50 per cent. in quantity; cotton-seed cake, £54,746; wool, £17,744—double the previous November (Great Britain took all the exports of these items); raw skins, £42,012—of which £13,016 to Great Britain, £13,798 to the United States, and £10,672 to Greece; cereals, £56,444—a decrease of about 50 per cent. (£22,292 to France—mostly rice and lentils, and £11,271 to Greece); refined sugar, £16,827—£12,743 to India and £2,740 to Greece; pure alcohol, £17,472—double of last November, practically all to France; cotton, £5,553,472—Great Britain took 46 per cent., the United States 28 per cent., Russia 10 per cent., France and Italy each 4 per cent. (the value was more than double that of the previous November, but the quantity was only 52,133 cantars more).

Tobacco imports during the month were £69,062, about what they were a year ago; practically all came from Greece. Cigarettes exported came to £23,332, a little less than the previous November, but the trade for the eleven months is slightly up.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

Traders throughout the market have continued to experience a very disappointing demand, and no relief is in sight in the way of a larger turnover. There is no confidence whatever in current values, and buyers seem determined to limit their purchases as much as possible.

The Government, through the Board of Trade, has recently made inquiries as to speculative dealings in raw cotton futures in the Liverpool market, and, although the restrictions relating to the Egyptian section have been withdrawn, the members have been requested by the directors of the Association to take no part in transactions except with people who are directly interested in the cotton business.

The fluctuations in futures have been erratic and uncertain. There is a little uneasiness with regard to the outlook for next season's American crop owing to deficiency of rain in Texas.

Piece goods for Egypt have again attracted very little attention. The offers mentioned in sized goods have been too low. Fancies have only moved off in retail lots. Although fresh business in scarce, shipments to Egypt continue on a free scale. The offtake for India remains poor. Dealers on the other side are working off old contracts without giving out fresh orders to make.

There has been no activity for China, although there are expectations in some quarters of a revival of demand after the New Year celebrations in the Far East towards the end of this month. Occasional sales have been mentioned for Java and for the West Coast of Africa.

The position of manufacturers is not so strong as a month ago, but many makers have still plenty of work to go on with. Spinners of yarn have found no relief, and other lists are steadily running down, the production of the spindles not having been sold.

American wefts have been more freely offered, and the margin is nothing like so encouraging as a month ago.

Some inquiry has been about in bundles for India, but very little has been done.

Egyptian spinnings have not attracted much attention, but late rates are fairly well held.

COTTON SPECULATION.

The following circular, issued to the members of the Liverpool Cotton Association over the signature of its president, will interest cotton shippers in Egypt:—"His Majesty's Government, being strongly of the opinion that during the war it is undesirable for members to accept orders from persons not engaged in the cotton business, has requested the directors to urge members to confine their business to clients directly engaged in the cotton trade, and even from this source not to accept large future orders. The directors feel sure that members will loyally comply with the wishes of his Majesty's Government, and so obviate the possibility of legislation being introduced which would interfere with free trading in this market."

A telegram from Constantinople to Amsterdam says the Turkish Government has approved the statutory regulations in respect of the National Ottoman Bank and the appointment of Herr Victor Weil as general director and Djavid Bey as first president. The bank will shortly open in Stamboul.

Officers who have purchased and used Messrs. Hazel and Co.'s new web equipment for use in the field speak of it in the highest terms, and many orders have been received from officers at the front. It is much more useful than the rank-and-file equipment usually issued in the field.

TRADE NOTES.

Liquidation.

Notice is given of the appointment of Mr. F. H. Russell, of Cairo, to be receiver of the estate and business in Egypt of Alfred Wiesendanger, deceased, with instructions to liquidate the business, taking such steps as may be necessary in the Special Court for Germans and Austrians in Egypt to obtain letters of administration of the estate.

Licences to Trade.

Notice is given that the following persons have been granted licences to trade in Egypt, with the British Empire and with Allies of Great Britain:—Vascotto Bey, Ildo Valdo, 7, Rue Racottis, Camp de César, Alexandria; Vascotto, Ubaldo Ildo, 7, Rue Racottis, Camp de César, Alexandria; Penoff, Athanase Georgheff, 16, Rue Mahmoud Pacha el Falaki, Alexandria.

Concession.

The French *Journal Officiel* of December 16 contained the text of a decree, dated December 4, granting to a British company a concession for the working of certain iron ore mines in the Department of Constantine, Algeria. An annual royalty of 40 centimes (about 4d.) per metric ton of ore is payable to the Algerian Government, and the proceeds will be devoted, in part, to promoting the study of the mining industry in Algeria.

Openings.

The British Consul at Cairo (Mr. A. D. Alban) reports that a local Italian firm of buying and commission agents desires to get into touch with United Kingdom manufacturers of Belfast fronting linens, cambrics, sheets, etc., with a view to obtaining the representation of such firms in Egypt or the sole rights of selling their productions in that country. This firm states that Belfast linens are now in considerable demand in Egypt, and claims to be in a position to find an outlet for large quantities of these goods. United Kingdom manufacturers of the goods mentioned, desirous of being represented at Cairo, may obtain the name and address of the firm referred to on application to the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.

Miscellaneous.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that British goods arriving at Melilla, Morocco, in transit for the French Zone, with certificates of origin and manufacture bearing the visa of the French Consul at the place of origin, will be allowed to enter the French Zone. In the case of consignments of British goods received at Melilla, not in transit, which are opened up there and sold in smaller parcels for transmission to the French Zone, the Melilla Chamber of Commerce will, on production of the certificates of origin and manufacture covering the original consignment, issue the necessary certificates as it does in the case of French goods. The certificates issued by the Chamber will then have to be sent to Malaga for the visa of the French Consul.

Tenders.

The *Boletín Oficial* of the Spanish Zone in Morocco announces that tenders will be received up to February 16 at the Secretariat of the "Junta de Servicios Locales," Tetuan, or in the Morocco Section of the Ministry of State at Madrid, for the construction of a market in Tetuan at an estimated cost of 175,000 pesetas (about £7,000 at par). The market building is to be erected on a site in the old grain market, and on the portions of the area not occupied by the market place other buildings are to be erected. The market place, which is to be built in the Moorish style of architecture, must be covered in, and from 100 to 110 compartments must be provided, ranging in size from four to eight square metres, all having marble or artificial stone counters, and the walls faced with white stones or tiles up to a height of 2½ to 3 metres. The floor is to be of cement grooved tiles, and the drain pipes of stone-ware. A preliminary deposit of 1,000 pesetas (about £40 at par) is required to qualify each tender.

PRODUCE REPORT.**Currants.**

LONDON, January 18.

The market has shown moderate activity during this week, and a fair amount of business has been done at late rates. The prices for all qualities are steady, but if the news just to hand that the Allies' demands have been accepted in their entirety by the Greek Government is confirmed, the tone of the market may be easier, as with the raising of the blockade further shipments may be expected in the near future.

Sultanas.

The market is very quiet, but prices are firm, especially for Afghanistan fruit, which is quoted dearer.

Figs.

There has been a better demand, and prices are again up. Spanish are quoted 52s. to 56s. and Greek 58s. to 60s.

Dates.

There has been a moderate demand during the week, with small business done, mostly in Persian, at late rates.

Seeds.

Linseed is quiet, London-Calcutta being quoted, spot and afloat, at 104s., with Jan.-Feb. at 104s. 6d. Bombay ordinary: Jan.-Feb. is offered at 105s., with no buyers.

Rapeseed is dull. Ferozepore, Jan.-Feb., is quoted at 90s. 6d., and Toria ditto 93s. 6d., to Hull; brown Cawnpore, afloat, to London, 88s. 6d. Cotton-seed has been quiet all the week: London-Egyptian, Sakelarides, spot, is quoted at £18 10s. per ton, but with little business done at that figure. Rangoon beans are steady: Spot were sold to-day at £41 10s.; new crop, May-June, at £34; and June-Aug. at £33 12s. 6d. Lentils are in good demand at 38s. to 39s. per 100 lbs. Mustard-seed is in moderate demand, offering at 26s. to 32s. per cwt.

Oils.

Linseed oil is steady; spot pipes, landed, sold at £50 5s., and barrels ditto at £51 5s. Rape oil is in better demand, and firm; ordinary brown, naked, spot, offered at £54, whilst English, refined barrels, at £57 to £59. Cotton oil has been quiet this week: Crude, spot pipes, are quoted at £49 10s.; and barrels, sweet, at £58 to £60, as to make, but with little doing for all kinds.

Oilcakes.

Linseed: There has been a remarkable absence of demand, which has caused unusual inactivity in the market, and quotations are more or less nominal, although holders would probably be willing to accept less. Best London makes are quoted at £19 5s. to £19 10s.; while American, westerns, are offered at £18, and East India seed, pures, at £18 to £18 10s., to arrive.

Cotton.—Egyptian cakes, on spot, are plentiful, and, with other quantities afloat, prices have been affected, and are now 10s. to 12s. per ton lower. Quotations are £15 10s., ex ship, and £15 15s. ex quay; whilst English makes are £15 17s. to £16, ex mill.

GERMANY'S WOOL FAMINE.

In the opinion of Australian members of the British Empire Producers' Organisation, the effect of shortage of wool on Germany staying power has not been sufficiently appreciated in this country. In ordinary times Germany was a large buyer of supplies from Australia and Argentina. She was able to seize valuable stocks of the material in Antwerp, and probably also in the French textile district surrounding Lille; but otherwise there can have been no replenishment, except what may have come from Turkey. Without information as to the quantity that the Near East could afford, it does not seem likely that Australian and South American imports can have been replaced. Yet in the meantime there is a great demand for the material for clothing so many millions of German and Austrian troops. The exhaustion of stocks and any interference with the limited supply through the Balkan route would make winter campaigning in 1917-18 a very unpromising prospect, and the influence of wool is, therefore, not to be overlooked in connection with peace overtures.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

CONTRACTORS TO GOVERNMENT.

ENGINEERING NOTES.

Naxos Emery.

The adhesion of several islands in the Greek Archipelago to the National Government at Salonika has been announced, and one of these is Naxos, famous for the excellent quality of its emery, which will henceforth be used only in the service of the Allies. Naxos is the largest of the Cyclades islands, with an area of 164 square miles, and a population of 15,000 inhabitants. Emery is a State monopoly in Greece, and the revenue from it is assigned to the International Financial Control. Only selected mineral is allowed for export. Naxos emery has frequently been found mixed with that of Asia Minor, the value of which is one-third that of Naxos, and for obvious reasons vessels carrying it used to make a point of calling at Naxos on their way to complete the cargo taken at Smyrna. British manufacturers were officially advised, some time ago, to insist on a consular certificate of origin being furnished with every consignment. The Greek Government, in order to restore to Naxos emery its former reputation, besides the rule that only selected emery should be exported, prohibited the consignment of emery from the ports of Liana and Montzouna, which are near the mines, but too remote to permit strict observation. For the product of these districts a depot was established at Syra, where the same price, about £4 10s. per ton, is charged as for that obtained at Naxos. Owing to the extensive use of emery, in various forms, in the manufacture of munitions, enormous quantities of the mineral are required, and as nothing can be obtained from Asia Minor, and the American is in limited supply, and of about the same quality as that of Asia Minor, the security of Naxos emery for the exclusive use of the Allies is a matter of much importance.

Mines in the Greek Archipelago.

Apart from emery, there are good openings for business in connection with minerals throughout the Cyclades islands, the development of which has been neglected chiefly through lack of capital. Nearly every island of the Greek Archipelago contains more or less mineral ores of different kinds, but more particularly iron and manganese, which might be worked with advantage now that such minerals are in demand. Several syndicates have been formed for the purpose of working the islands, but very few achieved practical results. Inefficiency of management and want of capital neutralised the efforts of most of them.

A Boiler-scale Preventer.

The serious consequences of scale in steam boilers are well known. Many scale preventives have been placed on the market at various times; but, so far, few of them have proved successful. One of the latest is of American origin. It is a compound called the Navy Standard Boiler Compound, which has been used, according to authoritative reports, with considerable success in the prevention of corrosion and scale in steam boilers. The constituents of the compound are sodium carbonate, trisodium phosphate, dextrine, or starch, and a tannin compound such as cutch. The sodium carbonate prevents chemical reaction and renders the solution non-corrosive; the tannic acid throws down the scale, and the trisodium phosphate prevents priming. It is stated that in one case when the compound was used the tube replacements were reduced from 171 per month to nothing. There was no scale in the boilers, which were absolutely clean. Equally successful results have been attained when the water used contained solid matter varying in amount from 5 to 231 grains per gallon.

Co-operation of Manufacturers.

A very interesting and timely discussion was opened by Mr. A. P. Fleming last week

at the Engineers' Club, Manchester, on industrial research. If we are to compete successfully in export markets, he said, it was necessary that our research should develop on co-operative lines. The general outline of the plan developed some two years ago for the formation of national research in this country was well known, and whilst it was not necessary to discuss in detail the lines on which this national effort could best proceed, it was clear that some means should be taken to try and secure co-operation of manufacturers in similar industries, and to conduct a great deal of research through trade associations. These efforts could hardly be successful unless backed up largely by the manufacturers themselves. For many reasons research, to be most effective, must be carried out on extensive lines, and from a matter purely of economy it was not possible for each individual firm to expend the money necessary for this. To achieve this co-operative working, not only must manufacturers be prepared to forego some of the strong individualistic tendency that had been characteristic of the past, but also steps must be taken to educate the growing worker, since every advance in manufacturing refinement would involve corresponding progress on the part of the worker.

House Refuse for Fuel.

At the recent National Economy Exhibition at the People's Palace, in London, there was an exhibit showing the various steps in the manufacture of fuel from house refuse by a process of which a London municipal engineer is the inventor. By a simple process of crushing, pressing and impregnating, it is claimed that an excellent fuel can be produced from what has hitherto been waste material, which in many districts, at home and abroad, disfigures the landscape and causes a considerable nuisance. The cost of the necessary plant, and also the production of finished fuel per ton, will, of course, depend upon the output desired. Speaking generally, the cost per ton would not, it is said, exceed 7s. 6d. (including all charges), and the fuel could be sold at a cost which would not only cover cost of production but also show a considerable profit, while, in addition, the cost of present methods would be saved. It is claimed that local authorities, by the adoption of the process, would secure, among other results: (1) Disposal works would be central and so save cost of carriage; (2) refuse would be converted as received, and could be stored without any nuisance arising for any length of time, and used as and when required; (3) the receipts from the sale of the fuel would more than cover the cost of conversion; (4) cost of present methods would be obviated entirely; (5) the request "Burn your refuse and so save your rates" would be brought home forcibly to householders; (6) local authorities would set a real example of national economy.

This new process will undoubtedly be of great interest to municipal authorities in many districts throughout the East, where the disposal of house refuse is not only a question of expense but a vital problem of public health, for it is well known that refuse has often been proved to be the cause of epidemics during the hot season.

BRITISH COTTON GROWING ASSOCIATION.

The 155th meeting of the Council of the British Cotton Growing Association was held at the offices, 15, Cross Street, Manchester. It was mentioned that as a result of the representations made by the Association the Egyptian Government have again called the attention of ginners to the presence of pieces of twine and other foreign matter in bales of Egyptian cotton, and the ginners have been requested to do everything possible to avoid pieces of hemp and string being mixed with the cotton.

NEWS FROM ALL SOURCES.

Sir Edward Sassoon has been elected a director of the Eastern Bank, Limited.

Mr. Thomas Ashley Sparks, manager of the Cunard and Anchor Line Agency in New York, has joined the board of directors of the Cunard Steamship Company.

An Alexandria message of January 15 states:—"Last week's arrivals of cotton seed totalled 3,420 tons, and shipments were 7,500, leaving stocks in hand at 131,620 tons, compared with 77,920 a year ago."

From January 1, 1916, to December, 1916, the export of eggs from Egypt totalled 144,539 cases, as compared with 140,690 cases in the corresponding period of last year. Each case contains 1,440 eggs.

The *Sudan Times* learns that two of the highest officials of the Sudan Government are shortly proceeding to England in connection, it is believed, with a great enterprise for the development of the Sudan.

At an extraordinary general meeting, held on January 17 at the offices, Old Jewry, of Reuter's Telegram Company, the Hon. Mark F. Napier presiding, the resolution passed on the 29th ult. for winding up the company voluntarily was unanimously confirmed.

During the period from January 1 to December 28, 489,662 tons of coal were shipped to Alexandria, as compared with 670,175 tons in 1915. Of this quantity, 132,512 tons were Welsh, 45,662 Newcastle, 40,647 Scotch, 60,587 Yorkahire, and 210,254 other qualities.

According to a Swiss telegram to Rome, 500 German engineers have arrived in Roumania for the purpose of working the oil wells which have fallen into the hands of the enemy. Attempts on the part of Austria to associate herself with the German enterprises were repulsed. Some Hungarian journals timidly remark that Germany alone is dominating Roumania, while her allies are kept at a distance.

The Egyptian Ministry of the Interior has issued an official notice to the effect that "a man for whom the police had been looking for many weeks past has now been found, and it has been satisfactorily shown that in no respect can he be considered a German spy. He is a Greek subject, born at Smyrna, and is in the service of Messrs. Ralli Brothers at Calcutta. An officer of the R.A.M.C. has certified that he knows the man well, and has declared that there is nothing against him. He has consequently been released."

FIRE DISASTER AT ALEXANDRIA.

The *Egyptian Gazette* gives the following details of the fire which occurred recently at Alexandria on the German prize ship Quarta, 1,824 tons, which was loading a cargo of 40,000 cases of benzine, when the fire broke out in No. 2 hold. The contractor who was entrusted with the loading of the ship is a well-known native contractor named Hamed Ismail, surnamed "Jackson." He had over 200 labourers for the job, but the number of men became less and less with the progress of the work, and when the disaster took place there were only sixty-one native labourers and three British West Indians on board.

Thirteen of these made a leap for the quay and escaped, but thirteen others received serious burns and were sent to the Government hospital, after receiving first aid medical treatment at the hands of the British medical officers in the western harbour.

Twelve dead bodies were conveyed to the Government hospital, another body being sent for interment on Thursday. The other bodies have not been recovered.

COMPANY MEETINGS.

Land Bank of Egypt.

The following is a translation of the report of the directors presented at the ordinary general meeting of shareholders, held in Alexandria on December 5, 1916:—

We have pleasure in presenting the report for the year ended September 30 last. As we anticipated in our last report, the improvement in the condition of Egypt, made manifest in the autumn of 1915, continued throughout the whole year; the arrival in the country of contingents of Allied troops has brought with it considerable extra revenue, which has partly made up for the deficit arising from the poor cotton crop. The high prices of cotton maintained during the year, which were again increased at the commencement of the new season, has had a satisfactory effect on the company's receipts. Our financial condition enabled us to transfer funds to Europe for the service of our debenture coupons, on terms which left us a fair margin of profit. Our mortgage business, which has been suspended since the beginning of the war, has consisted mainly in consolidating and regularising certain old loans. It was only at the end of the season that we were able to undertake, on a small scale, the consideration of certain proposals which appeared specially attractive as regards the security offered. The total of our mortgage transactions up to September 30, 1916, amounts to £E3,535,160.760. Although our cash receipts were far higher than those of the previous year, owing to the credit restrictions imposed on the fellah by prevailing circumstances and the necessity of meeting with a reduced yield the higher expenses connected with cultivation, our arrears have increased from £E404,931,908 on September 30, 1915, to £E448,314,438 on September 30, 1916. The financial year now commencing leads us to hope that our arrears will decrease appreciably during the ensuing campaign; we propose to increase and to maintain at 10 per cent. the special provision created last year under this head. As in the case of the payment of annuities the liquidation of the property forming our estate has been affected by current events. The company's property on September 30, 1915, consisted of about 2,842 square feddans, 31,980 pics of building land, representing altogether a value of £E144,930.764. During the year 685 square feddans, 2,334 pics were sold for £E58,937, yielding a profit of £E3,446.019. Further appropriations have brought our account on September 30 last to about 3,813 square feddans, 132,136 pics, of the value of £E207,679.719. Earnest efforts have and are still being made in order that the sale of our land be effected on the best possible terms. After having omitted from our profit and loss account such interest as, for various reasons, we considered the collection doubtful, the profits of the year amount to £E299,820. Deducting from this sum the expenses of the past year, including general expenditure, stamp duties paid to French Government, interest falling due during the year, and the various establishment charges, there remains a balance of receipts over expenditure of £E123,975.100. We propose to set aside the sum of £E53,738.955 in the manner following: (1) Provision for amortisation of debentures, premiums, and charges, £E12,545.028; (2) provision for risks on annuities to be collected (a sum sufficient to raise it to 10 per cent. of the arrears) £E4,378.263; (3) amortisation of expenditure of the estate, on the construction of premises, office furniture, and commission on mortgage loans, £E6,315.674; (4) provision for risks on loans, £30,500.000. The net balance of £E70,236.145, to which is added the balance from the year 1913-14, will allow of the distribution of a dividend of 6s. 6d. per ordinary share, and of £1 2s. on the founders' shares. We have maintained intact the special provision of the sum of £E50,036.471 for risks made in last year's balance sheet; its definite use under the various headings of amortisation will be made as soon as circumstances allow. In view of the prolongation of the world crisis created by the war, your directors deem it advisable to guard against various eventualities which

might affect the general economic and financial situation, notwithstanding the satisfactory results of the past year and the favourable prospects of the cotton season of 1916-1917. It must not be forgotten that the year follows two hard years for the Egyptian fellah, owing to two consecutive bad harvests, the one marked by very low prices, the other by a notable decrease in the yield of cotton.

BALANCE SHEET AS AT SEPTEMBER 30, 1916.

ASSETS.	£E.
Cash in hand at bank.....	18,769.377

Egyptian Salt and Soda Co.

The following were the proceedings at the seventeenth ordinary general meeting of the shareholders, held at Alexandria, on Friday, December 22, 1916:—

Mr. Choremi, chairman of the Board of Directors, presided. The accounts, directors' and auditors' reports were taken as read.

The chairman moved the adoption of the accounts and directors' report to August 31, 1916. The resolution was seconded by Mr. Laecaris, put to the meeting and carried unanimously. The chairman then moved that a dividend be declared of 12½ per cent. per annum payable January 2, 1917. The resolution was seconded by Dr. Milton, put to the meeting and carried unanimously.

The chairman then moved that Messrs. Choremi and Milton, retiring in accordance with the articles of association, be re-elected directors. The resolution was seconded by Mr. Lowe, put to the meeting and carried unanimously.

The chairman then moved that Messrs. Russell, Harris and Co. be re-elected auditors for the ensuing year at the usual remuneration. The resolution was seconded by Mr. Debourg, put to the meeting and carried unanimously. The meeting then terminated.

The minutes of the extraordinary general meeting, held at the same place and on the same date, were as follows:—

Mr. C. Choremi, chairman of the board of directors, presided.

The chairman moved the following resolution: "That the articles of association be altered in manner following: Article 92 shall be cancelled and the following article substituted therefor, namely: The remuneration of the directors shall be the sum of £2,000 (two thousand pounds) per annum which sum shall be divided among them in such proportions and in such manner as they shall agree, or in default of agreement equally."

The resolution was seconded by Mr. Baerlocher and carried unanimously.

COMPANY NOTES.

Currant Monopoly.

Privileged Company to Protect Production and Trade in Currants.—Notice has been given that a general meeting of the bondholders of this company will be held at Winchester House, Old Broad Street, in the City of London, on January 29, 1917, for the purpose of considering, and if thought fit, passing as an extraordinary resolution pursuant to the provisions of the second schedule of the trust deed the following resolution, namely:—

"That this meeting of holders of the 5 per cent. sterling bonds of the Privileged Company to Protect Production and Trade in Currants secured by trust deed dated June 3, 1910, hereby assents to the annual redemption of the bonds being held on February 1 in each year instead of August 1—the next redemption, which would have taken place on August 1, 1917, to take place on February 1, 1917—and to the rights of the bondholders against the company and its property being modified accordingly, and hereby authorises and directs the trustees to concur with the company in the necessary amendments in the said trust deed to give effect to the foregoing."

Meetings.

Credit Foncier Egyptien.—An ordinary general meeting will be held at the registered office at Cairo on Monday, January 22.

Oil Outputs.

NOTES OF THE WEEK.

The Russo-Roumanian stand on the Sereth continues, with a certain amount of give and take at various portions of the line. On January 21 the enemy reported the capture of Fundeni, which with Focsani and Galatz are the main points in the lower section of the Allies' position. But the strength of this part of the Sereth consists mainly in the marshy stretches which flank it at intervals. It remains to be seen whether the severity of the present winter will affect this feature of the terrain—and in whose favour. The enemy are clearly seeking for the weak spot in the defence, but so far do not appear to have found it. A success gained by the Bulgarians, who threw a detachment across the St. George's arm of the Danube Delta, was short-lived. Within twenty-four hours a Russian night attack seems to have accounted for the whole force, and the German *communiqué* admits that the north bank of the stream has been abandoned.

Perhaps the significance of the Russo-Roumanian stand can best be gauged from the attempts of the German Press to explain it away. In the first flush of Mackensen's onward sweep from Bucharest it was confidently predicted that the Sereth line would prove of little value to the Russians, who would be forced back to their own frontier behind the Pruth. But the subsequent rate of progress has fallen short of the earlier expectations, and it has been discovered that the marshy ground along the Sereth has been of particular advantage to the defenders. Fortunately the resistance of our Allies seems to be as strong in the north as it is in the south, and if they can continue to hold the extremities of the line, they may yet upset von Hindenburg's plans. Reports of the movement of enemy troops in various directions suggest that the demands of other fronts have penalised von Mackensen just at the time when he was encountering the first real resistance on the part of the Russo-Roumanian forces.

Greece is showing, like an equally childish prototype, that, though when she is bad, she is horrid, when she is good, she is very, very good. Most optimistic reports are now being forwarded from Athens. The transfer of troops and artillery is said to be proceeding satisfactorily, Venizelists are being liberated, and even the fire-

eating Royalist Press is adopting a more reasonable attitude. It is evident that all elements of the population are actuated by a feverish anxiety to see the blockade removed. The relative part played by this factor and by the realization that the Central Powers were unable to afford Greece any practical support in a collision with the Entente must be left in doubt. But the fact remains that the exercise of pressure has brought about the change, not any fundamental alteration in the disposition of King Constantine and his Ministers. For this reason nothing can be left to chance, nor ought there to be any relaxation of the hold that the Allies have on Greece by virtue of the blockade, until full reparation has been made and the necessary guarantees for the future have been given. If the Allied officers entrusted with the task of supervising Greece's measures of compliance have been chosen from among those who were the victims of the outrages of December 1 and 2, we may feel some confidence that the programme of the demands will be carried out to the letter.

A report that search is being made for an Englishman who left his house in Athens on December 1 in company with two Frenchmen, and has not been seen or heard of since, suggests that the full story of all that official Greece has to atone for has not yet been published. The actual course of the military events of that day are still obscure; but it will not be overlooked that the saluting of the flags in a public square in Athens is an act of reparation more frequently imposed on barbarous or semi-civilized communities than on a civilized State. It is claimed that the result of the military movements now being carried out will be that only 3,000 troops will be left north of the Isthmus of Corinth. The only possibility of a hitch in the proceedings seems to be in connection with the dissolution of the Reservists' League. Its members have been allowed to have things their own way for so long that they do not take kindly to the relapse into insignificance. Here, however, the blockade is a useful reminder that discretion is the better part of valour. The number of Venizelists who have been imprisoned and will have suffered personal injury or loss is considerable. In these circumstances the work of the Mixed Commission which is to assess the indemnities to be paid to these victims of their fellow-countrymen's intolerance and savagery may well be prolonged beyond the duration of the work, if it is carried out thoroughly.

While the Allies are settling these affairs with the Greek Government, at whose head the pistol has still to be levelled, the British Government has been able to negotiate a friendly deal with Greek shipowners. On the principle that they that go down to the sea in ships, that do business in great waters, can be relied upon to take a sounder view of international affairs, no objection seems likely to be raised by the shipowners themselves to the arrangement. It is understood that all suitable steamers are to be chartered, but that a sufficient number will be left to ply for the country's needs. Needless to say, the terms offered by the British Government are exceedingly generous. Perhaps before the blockade comes to an end King Constantine and his Ministers will have occasion to reflect on the rosier path that would have been opened up for the country as a whole, if they had accepted the Allies' overtures in the first instance in the spirit of the Greek shipowners, who now have held before them the prospect of nothing to do beyond drawing regular profits. In the place of a prosperous country King Constantine is confronted with a depleted Treasury and a nation divided into two hostile camps. No present amenities on the part of the Greek Government towards the Allies will affect the estrangement between the Venizelists and the rest of the people. The feelings of the former as they return from prison to their pillaged homes can well be imagined. Their reckoning with their political opponents will have to be taken up at the point where the Allies leave it.

The steady pressure on the Turkish positions at Kut has been continued, with the result that the right bank of the Tigris from the Shatt-el-Hai down stream has been cleared of the enemy. Turkish reports admit the withdrawal, and, as they lay stress on the intensity of the British bombardment, we may hope that the conditions are now favourable for the full use of the immense superiority that the Expedition has in artillery. On January 20 an air raid was carried out on Baghdad, which is just over a hundred miles from Kut. The objective was the Turkish munition factory situated in the citadel. Six 100-lb. bombs, it is stated, were dropped on and around the factory; but the official *communiqué* attempts no estimate of the damage done, and does not even conclude with the customary formula that the airmen returned in safety.

Rumour has been interesting itself with the fate of the 4th Greek Army Corps which, after surrendering itself to the Bulgarians and Germans, was removed to Görlitz, to be the guests of the Emperor for the duration of the war. As if to refute the statement that the Greeks were taking part in the attack on the Allies the German Press entertains its readers with an account of a function given in the Corps' honour by the German-Greek Association on January 11. The circumstantial evidence thus supplied of the presence of the Greek troops in Görlitz may be satisfactory to the Germans, but it makes short work of the Greek protest to the German Government against the kidnapping of the Corps, and entirely disposes of King Constantine's statement that the Corps commander had acted without authority. Other proof of the falseness of this claim has been supplied in Greece itself, but the confirmation of it by events in Görlitz is of interest. The German-Greek Association is under the personal patronage of Queen Sophie of Greece. If the Greek Army Corps were officially in disgrace, it would hardly be possible for the Association to arrange festivities in its honour, to be attended by a representative of the Greek Legation in Berlin. We are compelled, therefore, to accept the German version that the troops are still in Görlitz, and there is no room for doubting that, as brave warriors, they prefer to act up to the spirit of their Sovereign's instructions.

Further fighting in Tripoli has to be regarded as an offshoot of the world-war. The fresh rebellion against

Italy is stated to have been inspired from Turkey and assisted by Turco-German funds. It has signally failed. Finding that the rebel forces were advancing to attack Zuara, the Governor of Tripoli on January 15 sent out a column to engage the enemy. Fighting began the following day, and, continuing until the afternoon, ended in the complete defeat of the rebels. The pursuit was at once taken up, and on January 17 a second engagement was fought at Agilah. Once more the tribesmen were routed, and the Italian forces were able to return to their base.

A curious point is raised in the *New Europe* by Mr. R. W. Seton-Watson, who challenges the reliability of the correspondence that has reached the *Morning Post* from Budapest since the outbreak of the war. He has satisfied himself that an examination of the references to the Hungarian Press and to Parliamentary speeches shows that the quotations are frequently incorrect, and he places the communications on a level with a variety of forgeries associated with the Hungarian Government. Only one interpretation, Mr. Seton-Watson avers, can be put upon the communications. "They represent a deliberate attempt to mislead public opinion in England into supposing that Hungary is hostile to Germany, and is merely awaiting overtures from the Entente Governments to enter into separate peace negotiations; whereas, in reality, the Magyars have been from the first, and still are, the mainstay of Berlin, and are as determined as ever to maintain and, if possible, to extend their hegemony over the subject races of Hungary and the Balkans." There can be no question, Mr. Seton-Watson points out, of the perfect good faith of those who are responsible for publishing the communications. So far as we are aware, the *Morning Post* has not yet replied to the challenge. At best Mr. Seton-Watson's evidence is negative, and there may be other explanations of phenomena which he marshals so ably to support a preconceived idea. Even if the *Morning Post* should have been victimized, we cannot help thinking that more good than harm will have been done—that is to say, that the danger of anyone being misled on the lines suggested by Mr. Seton-Watson are small, while the advantage of a first-hand example of the Hungarian Government's propaganda work, if this should prove to be a case, would be considerable.

The Balkan correspondent of *The Times*, in a message from Jassy, states that the residence of M. Take Jonescu in Bucharest is reported to be totally destroyed and a black flag hoisted over the ruins. His villa at Senla, it is added, has been plundered. If these reports should prove true, we hope that the Allied Governments will make a point of seeing that adequate compensation is secured for one who has deserved well of the Grand Alliance. M. Take Jonescu's fearlessness in espousing the cause of the Allies at a time when neutrality seemed the only safe course for Roumania was well known to the Germans, and it is typical of their methods of warfare that they should have picked out his property for special destruction.

The speedy acknowledgment of the good work done by the British forces in Egypt in the rapid clearance of the Sinai Peninsula will give general satisfaction. Congratulatory telegrams have reached the Commander-in-Chief, General Sir Archibald Murray, from the King and from Sultan Hussein, and he has received the honour of the Grand Cross of St. Michael and St. George. We are particularly glad to note also that the good work done by the Australian troops has not been overlooked. General Chauvel becomes a Knight Commander of the same Order "in recognition of his distinguished services in the field." Not the least encouraging feature in the situation is the fact that the War Cabinet in congratulating Sir Archibald Murray add: "The operations have not only resulted in clearing the enemy from the peninsula, but promise you further successes in the future." The realization of this forecast will be watched with special interest.

THE BRITISH EXODUS FROM GREECE.

(FROM A CORRESPONDENT LATELY IN ATHENS.)

January 14.

The exodus from Athens reached its final stage yesterday, when 180 of those who embarked at the Piræus landed at an English port after having experienced a most trying journey across the Continent.

The port to which our "ark of refuge" conveyed us was reached about noon on Monday, the 8th, forty-eight hours after leaving Keratsini. The second day was slightly rough, and most of the ladies were "*hors de combat*"; but the next day was fine, and as harbour was approached two Allied destroyers joined our escort and took up positions on either side of the —, and a trawler ahead of the British destroyer piloted the way.

As soon as we arrived the British Consul and several naval officers from British warships came aboard, and the afternoon and evening were occupied in viscéring passports and arrangements for landing the following day. British bluejackets transferred all the baggage from the ship to the quay, where each passenger saw that his effects were put into the right van. The landing took place after lunch on the 9th, and at 2.30 the special train left amidst cheering for the commander and officers of his staff who remained behind to follow the next day.

The French capital was reached about seven o'clock on the 11th. Some fifty of the party remained there. The special train for Havre left that evening, and on arrival at the French port on Friday morning the British military took charge of the party and conducted them to the Y.M.C.A., where a welcome breakfast was served. The whole of that day was spent there, the greatest kindness and attention being shown us; and the embarkation aboard the Channel steamer was carried out under the supervision and with the assistance of the military. At our port of disembarkation the military authorities had prepared for the arrival of the party, and after all formalities had been carried out and the baggage had been claimed a special train conveyed the refugees to London.

The long journey across the Continent proved most fatiguing in the absence of sleeping- and dining-cars, and the struggles to obtain something to eat at the various stations were alike strenuous and amusing. The station buffet keeper, assailed by scores of hungry refugees, would find his stock of provisions gone before he could recover his surprise, and amidst his gesticulations the train would steam away. And the same would be repeated at the next stoppage.

The party was in charge of Commander Brier, R.N.; and Nurse Lockyer, who had been engaged on the — to attend to the sick, continued on duty in the train.

There was a general expression of deep gratitude for the kind attention and thought which had been shown to the party from the time of embarkation until arrival in England.

The refugees have been conveyed from Athens to London free of any charge, the only expense they incurred being for their food on the Continent.

Everyone is grateful to Sir Francis Elliot and the Staff of the British Legation for their unfailing kindness on all occasions, and for their constant readiness to help and advise. Thanks to Sir Francis's forethought and consideration, and to the kind attention of the Naval officer in charge and his staff, the refugees have been spared much expense and discomfort, and have probably travelled in greater comfort and safety than any other party of refugees in this war.

On leaving Athens the Constantinople refugees carry away many pleasant reminiscences of the sympathy of kind friends during their two years' sojourn in that city, and one will also never forget the kindness and assistance always readily given by the American Legation and Consulate in the Greek capital.

LEPERS IN THE SUDAN.

(BY OUR KHARTOUM CORRESPONDENT.)

Anyone who visits Khartoum must be struck by the number of unpleasant beggars who roam the streets asking alms. Many of these are lepers who, from inability to earn a living, are compelled to beg for their sustenance; and not unnaturally they congregate in considerable numbers in the capital town, where there is a relatively large number of people who can afford to give to the unfortunate. The total number of lepers in the Sudan is not great, but they are scattered all over the country, and, though they are to some degree concentrated in the three towns of Khartoum, Omdurman, and Khartoum North, there are individual cases to be found almost anywhere. The problem of their disposal is not so simple as might appear at first sight. It is clearly desirable to collect them into one centre, and to provide them with the necessary means of sustenance and with such employment as they are capable of. There is only one form of employment that is common to the whole Sudan, and that is the simplest form of cultivation. Many of the lepers would no doubt be capable of cultivating if they could be provided with the necessary land and seed and implements, but, unfortunately, they do not all know the same method of cultivation, and the system that would be necessary in the place to which they would be relegated would be known to only a small proportion of them. Difficulties of language also would be considerable, *e.g.*, there is a fairly large number of lepers amongst the Nuba, and their various dialects are quite unknown and not always mutually comprehensible. Some sort of control would be necessary, and would be extremely difficult with so mixed a population, and the very fact of removal from their own people would encourage many to try and break away and return to their old country. So far, although there is a small settlement in the extreme east of the Sudan, the difficulties have proved insurmountable.

The problem still remains, then, to deal with the relatively large proportion that drift into the larger towns to live by begging. These are more or less of a kind, and vary only in the degree to which they are afflicted with the disease. A very small settlement has been maintained at Omdurman by voluntary contributions, and a movement has been set on foot to enlarge this into a place big enough to accommodate the bulk, if not all, of the unfortunate victims of this scourge who are to be found in the vicinity. It is to be hoped that the movement will be crowned with success, as the appearance of the public thoroughfares at the present time is sadly marred by these beggars, whose chief claim to compassion is to expose their sores in order to touch the hearts and the purses of the passers-by. Unfortunately the Sudan has no rich endowments, such as the "Evkaf" of other Moslem countries, on which to draw for the purpose, and the movement has to rely on private charity alone, which in these days is very hard worked already for all the various funds resultant on the war.

NEAR EASTERN COINS.

At a meeting of the Royal Numismatic Society on the 18th inst. Mr. G. F. Hill described some of the Greek coins acquired by the British Museum during the last two years. Sir Arthur Evans, he said, had presented a rare Syracusan silver coin, which is thought to allude to the peace congress held at Gela in 424 B.C. Fine portrait coins of Demetrius I., King of Macedon, of Antiochus I., King of Syria, and of Orodes III., King of Parthia (of whom the only other extant coin is in the Berlin cabinet), were also described, as well as a coin of a king of some State in Asia Minor, who calls himself Attalus the (God) Manifest, who does not seem to be otherwise recorded. A valuable series of coins of ancient Arabia and Ethiopia, Mr. Hill added, had been acquired from the collection of the late Colonel W. F. Prideaux.

CYPRUS IN 1916.

(By OUR CYPRUS CORRESPONDENT.)

A Tranquil Year.

Official reports deal with financial years, and retrospects are not available till long after each year has passed. A brief survey of the past twelve months shows once more that Cyprus, like Egypt, has—thanks to British rule—enjoyed complete tranquillity, while the neighbouring mainlands of Syria and Asia Minor, separated only by narrow seas, and still under Turkish domination, present a spectacle of misery and degradation which the enforced subjection of Turkey to Hun influence has aggravated instead of relieving. Syrians, as well as Armenians, have learned the meaning of German *Kultur*.

The year has passed without the least sign of disturbance. There has been no friction between Greek and Turk. The attitude of the Turkish community has been, as always, completely loyal. The Provost-Marshal has had but few and trivial cases to deal with. A few Turks were arrested, but in general there has been no manifestation of disaffection; and martial law, as in the two preceding years, has not interfered with the liberties of the people.

The Island's "Bit."

As regards the war, the island has quietly "done its bit." Several members of the British community have joined the Army, and some—all young men of good promise—have laid down their lives for the Empire. The Chief Commandant of Police, Major Gallagher, D.S.O., has rendered good service. Others, out of regard—perhaps too rigidly enforced—for "the exigencies of the Service," have been refused permission to join. As Mr. Bonar Law stated in the House of Commons last October, H.M. Government did not consider that the extension of the Military Service Act to Malta and Cyprus would be useful.

The island has provided mules, donkeys, and muleteers to the Army at Salonika, and gifts of fuel from the forests have been despatched to Egypt. A convalescent camp on Mount Troödos offered a welcome refuge to many wounded soldiers. At — a large and well-ordered internment camp holds some thousands of Turkish prisoners. A few French aeroplanes flew over the island, and gun-firing was heard on a few occasions.

From a material point of view the island has derived some profit from the war. The sale of animals and island produce at high prices, and the employment of a large number of Cypriots of different classes, at substantial rates of pay, have helped. On the other hand, Cyprus, like most other countries, has inevitably felt some of the adverse consequences of war. The prices of many necessities have risen to abnormal rates, and many have suffered privations. Some classes—e.g., those connected with shipping—have experienced hardships. Officials with small salaries have felt the pinch, and have petitioned Government for relief. The Greek Press, generally prone to attribute blame to Government for all that goes wrong, and to show little, if any, gratitude for benefits received, has grumbled, lectured the Government on its duties, and accused it of want of foresight in providing for the needs of the people.

A large number of Cypriots have emigrated to Egypt, France, and the United States, but in many cases they have jumped, according to their own accounts, out of the frying-pan into the fire. The Greek community has watched with mixed feelings the distractions of Hellas and the suicidal strife of factions. The balance of feeling has inclined strongly towards Venizelism and intervention on the side of the Allies against Bulgarian encroachments. The principal local event was the election of a new Archbishop, Kyrillos, who has many excellent qualifications for the position. There is reason to hope that he combines with a genuine insight into the needs of the island Church a determination to deal with them in a prompt and practical manner.

Agricultural Development.

To expect any wide or rapid development of agriculture in any of its branches is, under present circumstances, still hopeless. But the hard-working Agricultural Department has continued its uphill work, under the Director, Mr. W. Bevan, with good results in several directions. These are largely attributed, as might be expected, to the advisory work of travelling officers. Pests have been fought. Good

work has been done at four new sericultural stations, and instruction has been given in cheesemaking and agriculture. Some successful shows have been held, and cattle-breeding has been encouraged. The year, however, has not been a very happy one for agriculturists. Exceptional heat in critical months had disastrous effects on cereal crops, fruit trees, and locust beans.

As the year closed, rain came in time to relieve a situation which for the agricultural classes throughout the island had become one of great anxiety.

The Forest Department, with its limited grants and staff, worked energetically, under Mr. A. K. Bovill, one of the most experienced of Government officials, whose work, it may be said, embraces a variety of duties besides those of the State Forests.

The Medical Department, under Dr. R. A. Cleveland, C.M.O., has maintained its well-established reputation for good all-round work in the interests of public health, including the anti-malarial campaign, as advised by Sir Ronald Ross, in various parts of the island.

Public Works.

As regards public works, every year shows a steady record of useful work. The Director, Mr. (now Captain) Nicolls (who has taken over important military duties in addition to his own), ably seconded by Mr. W. Williams, has continued the excellent work by which the island is being transformed from a wild and roadless province to a state which enables Cyprus at last to rank as one of the most civilized "rocks" in the Mediterranean and Near East.

The Commissioner of Papho, Major G. Bayly, has directed the police during the absence of Major Gallagher, D.S.O. Reference has been made to the good order maintained throughout the year. The multifarious duties assigned to this excellent force have been efficiently carried out by both mounted and foot branches.

The work of the Law Courts, which have been such a godsend and object-lesson to Turk and Greek alike, has impressed its salutary influence upon the people. Cypriots of all classes render ungrudging tribute to the benefits that British justice bestows. The Chief Justice, Sir Charles Tyser, can regard the results of another year with satisfaction.

The Legislative Council.

The Legislative Council, whose term expired in 1916, has had but little to occupy its attention during the war. Three Mohammedan and nine non-Mohammedan members were elected, out of twenty-four candidates, to sit in the new Assembly. Some new blood has been introduced, and several well-known figures disappear, at least for a time.

Education has progressed under the guidance of Canon Newham, whose tact and long experience are fully appreciated. But various reforms, which may be looked for in happier times, remain in abeyance. The rudiments of agriculture are taught in elementary schools, and many village masters attend courses conducted by the Agricultural Department.

Mining operations have been continued by the American Company, and when the war ends shipments of ore should be largely increased.

The High Commissioner can, no doubt, regard with satisfaction a year of peaceful progress, and the people, of whatever nationality, may be profoundly grateful for the good fortune which has given them for nearly forty years the benefits of stable rule and justice.

The classes at the School of Oriental Studies, London Institution, Finsbury Circus, were opened last week with about forty students, a number which it is expected will be considerably increased. Most of the students have joined the Japanese section.

According to the German papers, the Turkish Government has sent a Note to the neutral Powers respecting the Entente's reply to the peace proposal, says Reuter's Amsterdam correspondent, in a message dated January 21. The Note, which is similar to those of the Central Powers, comments on the British Protectorate in Egypt, the annexation of Cyprus, the occupation of Tripoli by the Italians, and the proposal to give Constantinople and the Sea of Marmora to Russia.

We have received from Messrs. Raphael Tuck and Sons a set of most effective postcards that has just been added to their "Oilette" series. It is entitled "Æsop's Fables Up-to-Date," and the six pictures comprised in it are reproduced direct from paintings by Francisco Sancha, a well-known Spanish artist, who hits off most neatly German pretensions and aims in the great war. The skill with which the German Crown Prince and his august papa are caricatured is very marked. In one subject, "The Wolf and the Stork," the unhappy Turk (in the part of the bird) is introduced; in another, "The Tortoise and the Eagle," Bulgaria, as the tortoise, is just beginning a nasty fall, and looking, naturally, somewhat anxious. The other subjects are: "The Fox and the Grapes," "The Dog and the Shadow"—an extremely clever bit of satire—"The Hare and the Tortoise," and "The Hen that Laid the Golden Eggs." The cards are issued in various languages, and they will almost certainly be highly popular in all countries save those of the "Central Europe" block.

SYRIA AND THE LEBANON.

(FROM A CORRESPONDENT.)

CAIRO, December 28.

The following are some further extracts from the information communicated to *Al Mokattam* by the Syrian refugee whose arrival I reported in my former letter.*

The two distributing centres from which the Lebanese draw their supplies are Muallakat Zahle, in the Bekaa, and Tripoli, Syria. As a proof of the acuteness of the distress prevailing in the land, this informant cites the enormously high prices of certain articles of prime necessity. Thus oil was selling, at the time he left, at 32 piastres (about 5s.) the oke; olives, 13 piastres; coffee, 96 piastres; sugar, 87 piastres; and petroleum at 16 Turkish pounds the case of two tins! Although the point is not mentioned, it is legitimate to assume that this rise in prices is not caused solely by the scarcity of foodstuffs, especially in the case of home-grown products, but is probably due in part to the great depreciation of the paper currency. What seems to have aggravated matters is Turkish maladministration and bad organisation. At one time the supply of flour was suddenly cut off from Beyrout, and the majority of the inhabitants were left for about a week without bread.

The Lebanon Administration.

As regards the administration of the Lebanon, it is said that, although the old system is still maintained, yet great changes have been effected in the personnel, which has now a considerable admixture of Turkish officials. The Lebanese gendarmerie has been practically cleared of Christians, and their non-Christian substitutes wear now the Turkish uniform, and are mainly entrusted with patrolling the coast near Sidon. The total number of Turkish soldiers in the Lebanon is said to be not more than 2,500, most of whom are distributed along the coast between Beyrout and El Salamun. The headquarters of this garrison are at Bikfaya and Batroun. In Beit Shebab a school has been opened for the teaching of Turkish, German, and Arabic, especially to those who wish to volunteer in the Turkish Army.

It seems that two Druses of the Lebanon who have given themselves body and soul to the Unionist cause are mainly responsible for this interference of Jemal Pasha in the internal affairs of the Mountain. It is said that one of them, an officer in the Lebanon militia, had, on the occasion of the first attack on the Canal, toured parts of the Lebanon and the Anti-Lebanon, as well as Hauran, on a propaganda of voluntary recruitment, and succeeded in forming a corps of about 3,000 volunteers. Later, however, when these volunteers found that they were being led to do actual fighting on the front, and not patrolling duty on the coast, as they had been led to believe, they started deserting, and only about a hundred of them were left when they arrived at Beersheba. At first the Ottoman Government accorded privileged treatment to the Druses; but eventually it put pressure on them in the same way as it had been doing on the Christians, so that many of them fled to the Hauran, which is in a state of rebellion. The people of that region, who on more than one occasion have known how to assert their independence, have refused to give up their arms, and even to allow part of their grain produce to be sent to the neighbouring markets, as they used to do before the war; and they are now said to be taking up a strong position of defence in their mountain, where some of the Bedouin in the vicinity have joined them. These are said to have carried out some raids on the Turkish forces stationed near by, and to have captured no inconsiderable amount of arms and ammunition, as well as provisions and camels.

Adherents of the Grand Shereef.

When the Grand Shereef proclaimed his independence, almost all the Bedouin of Syria declared themselves on his side, and Jemal Pasha then tried to revenge himself on the settled tribes in Julan, Ajloun, and El Ghor, who, however, quickly abandoned their settlements, some seeking refuge in El Leja, and the rest wandering as far south as the Hejaz to join the Shereef's men. Jemal Pasha then ordered the burning of their settlements and of their crops and the carrying away of their cattle.

The trains between Beyrout and Damascus are reported to be running very irregularly. Wood is used as fuel, and is mainly supplied by the pine groves of El Metn district, the most wooded part of the Lebanon. The wood contractor is said to have made a fortune out of this business, as a few others did on the flour and petroleum monopolies. It is satisfactory to learn that the Government did not commit any high-handed action in connection with its fuel requirements. Such olive and fruit trees as have been actually supplied as fuel were voluntarily cut down by their

owners, who were anxious to get money at any cost to meet their immediate needs.

(FROM AN OCCASIONAL CORRESPONDENT.)

CAIRO, January 1.

The following are some items of information gathered from persons arrived last month from Syria.

"Prosperity!"

In Beyrout, following the German method of misleading public, and especially neutral, opinion, by covering the misery in the provinces with a display of prosperity in the towns, the Turkish Government is said to have laid out wide streets through the old and overcrowded city, and to have paid the owners of the expropriated property in paper money, re-selling the surplus against payment in gold. Under Government auspices, also, a group of wealthy persons formed a syndicate for carrying out a scheme involving the building of a grand Casino Hotel, and the laying out of a sports ground, with pavilions, etc.

One of the refugees, in confirming the almost total lack of drugs, imparts the interesting information that, according to official correspondence received from Germany by the Turkish military authorities, the latter have been informed that not only is it impossible to supply the drugs asked for, but that requirements in Germany itself can hardly be met. This informant, who is a merchant of standing, further states that no goods from Germany have been received in Syria. Owing to the lack of drugs, there have been numerous cases of deaths among sick soldiers. It seems that, owing to this lack, the dearth of doctors, and poor feeding, the spread of diseases has been specially favoured; but the heaviest toll has been exacted by typhus fever, which is said to have played greater havoc than cholera. All accounts agree as to the prevalence of famine, wholesale deaths from hunger, the enormous rise in the price of foodstuffs, and the bad quality of the bread, which is said to consist of a mixture of barley, vetches, and a small proportion of wheat. The price of this darkish kind of bread is said to be 17 piastres per oke in Damascus, which has always been known to be the cheapest town in Syria. The distribution of bread is made in the following fashion: The Government has allotted to each quarter (Haret) two ovens, whither the people repair with tickets. The utmost confusion and disorder reign there, and after waiting for hours, persons sometimes get one-fourth of the quantity indicated on the ticket.

The condition of Palestine in this respect is said to be a little better than that of Syria.

The Government used at first to allow one piastre to the dependent family of the soldier exceptionally called to the Colours by the new law, but they have lately stopped even this meagre allowance, a fact which has further contributed to the distress of the population.

Jemal and the Druses.

It was rumoured, at the time the traveller I quote from left Syria, that Jemal Pasha was recalled to Constantinople to give account of his gross misdirection of affairs in Syria. It is further said that on the occasion of the Kourban Bairam feast neither he nor Tahsin Bey, the Vali of Syria, nor the Military Commandant was present, as all three had to proceed to Hauran to try to pacify the Druses. The best and last means they thought of resorting to was liberal grants of money, but even this did not induce these people to part with one bushel of their carefully-stored grain.

The death sentence passed on a number of notables, including members of the Majliss and former high officials, is said to have been commuted to exile, with all their families, into the interior, where the worst treatment is meted out to them, while their property has all been confiscated.

All the buildings round the Ommeyad Mosque are reported to have been demolished; but the Tomb of Saladdin has been spared, the authorities, no doubt, fearing to incur the high displeasure of the Kaiser, who, on the occasion of his historic speech there, paid such a high tribute to the great Arab leader.

MONTENEGRO.

Any interested in the commercial and general development of this country together with all that its rehabilitation and replenishing after the war will entail, are invited to communicate, in confidence, with

"Major," c/o Messrs. Stilgoes, Solicitors,
24, Essex Street, Strand, W.C.

* See THE NEAR EAST of January 12, p. 245.

THE YEMEN.

In view of the events occurring in greater Arabia it may be of interest to recall briefly the past history of the Yemen, which province has apparently now joined the Shereef of Mecca in the movement against the Turks, and also to give a short description of this little-known country.

The inhabitants of Arabia, or rather the more southern Arabia, the Arabia Felix, now known as the Yemen, were, according to Genesis x. 30, the children of Joktan, who was descended from Shem. Among these children are found the familiar names of Ophir and Sheba. The next Biblical reference to this land is in Ezekiel xxviii. 21-24, which, in referring to the riches of Tyre, runs as follows:—

Arabia, and all the Princes of Kedar, they occupied with thee in lambs and rams and goats: in these they were thy merchants. The merchants of Sheba [the Sana of to-day] and Raamah, they were thy merchants; they occupied in thy fairs with chief of all spices and with all precious stones and gold, Haran and Canneh and Eden [possibly Aden], the merchants of Sheba, Asshur and Chilmad were thy merchants. These were thy merchants in all sorts of things, in blue cloths, and brodered work, and in chests of rich apparel, bound with cords and made of cedar, among thy merchandise.

The chief Joktanite kingdom of Arabia was the Yemen, founded by Yaarub, the son of Joktan, and known in Biblical times as Sheba, whose queen paid the celebrated visit to King Solomon. The inhabitants of Sheba were the classical Sabaei of whom the principal family was that of Himyar, one of whom founded the more modern kingdom of the Himyarites, who ruled over the Yemen and Hadramaut till 525 A.D., when the dynasty was overthrown by an invasion from Abyssinia. During the Abyssinian domination many of the people became Christians under the influence of their conquerors. Later, however, the country became a Persian Satrapy, and the people reverted to idolatry and to the Jewish faith.

In 628 A.D. the Persian Governor of the Yemen embraced Islam, and since then it has been a purely Islamic country, which has yielded in importance to the northern province of the Hejaz, in whose borders the holy places of Mecca and Medina are situated. The inhabitants are a hardy and independent race, who claim that their language is pure Koranic, and over whom the hold of the Turkish authorities has been very slight even at the best of times. Among them, indeed, revolts and internal warfare seem almost a normal state of things.

Geographically, Hogarth places the Yemen at the bottom of the list, as the least known of the regions of the Nearer East. "Fully half the southern peninsula," he says, "has not been seen by any European eye, and most of the other half only by ill-equipped or disguised travellers passing covertly along main caravan tracks."

Roughly, the country may be divided into two districts, the Red Sea coastal region, known as the Tehama, a belt of desert stretching from the sea to the foothills of the mountains of the interior, and the fertile uplands of the interior itself. The Tehama, which the writer visited in 1912, is a real desolation, barren, stony and sandy, the vegetation consisting of a few low shrubs, water practically unobtainable, and heat excessive. The chief port of this province is Hodeidah, from which a railway was projected to connect it with Sana, the capital of the Vilayet. A few hundred tons of material were brought, but are now rusting on the beach, as the project was abandoned.

Mocha, on the coast south of Hodeidah, has lost much of its importance as a trading centre, though the excellent coffee which bears its name was still, previous to the outbreak of war, largely exported from Hodeidah.

Very few foreigners have succeeded in visiting Sana, which is supposed to be not far from the site of the Queen of Sheba's capital. The strength and prosperity of the Yemen are all concentrated in the uplands back from the coast where the climate is more equable and rainfall abundant. Whilst on the coast the writer was told wondrous tales of fruit-gardens, corn-fields, coffee plantations, and flourishing villages which existed on the highlands.

The Yemen Arabs appear to be a fine, sturdy race, primitive in the arts, which consist in leather and metal working, the best samples of the latter being the ornamental "janbias," or short curved daggers that are universally carried.

In this hot region the camels are absolutely hairless, which gives them a rather unpleasant naked appearance, very different from the shaggy-coated animals met with round Smyrna and the plateaux of Asia Minor.

An interesting survival is to be found in the coinage of the Yemen, which consists of Maria Theresa of Austria dollars, worth about 1s. 8d., which are now manufactured in Austria from the old dies and smuggled into the country. They were presumably the first foreign coins introduced into this region, and the inhabitants look with distrust on any other. It is only in the largest coast towns that rupees and Turkish silver coins will be accepted. The fact that this is the only coin complicates the making of purchases in this part of the world; for whether you wish to buy a postage stamp or 100 acres of ground, your dollars are all you have to pay with; change there is none, and you must wait till your account runs up to an even dollar. When paying labourers whose day's wage may be half a dollar, one dollar is given to every two men, one of whom makes the necessary purchases of food, etc., and divides with his comrade.

What changes the new condition of affairs in Arabia may bring to the Yemen it is early yet to think, but it is a province which, if properly and wisely governed and opened up to commerce, would add not a little to its own prosperity and to the general commercial wealth of the world.

F. R. G. S.

EARLY HISTORY OF THE SERBS AND THEIR KINSMEN.

At the Royal Victoria Hall, South London, on Thursday, Miss F. Copeland told the story of the Serbs and their kinsmen from their first settlement in the Roman Empire until the beginning of the modern period. The Serbs, she said, were only one branch of the Southern Slav race, all of whom told the same fairy tales, believed the same superstitions, sang the same songs, and so forth. The differences that existed were those between men of the plains and men of the hills, between townsfolk and seafarers; not those between one nation and another. The land they inhabited was most beautiful and varied, and they were one of the handsomest and healthiest of the world's peoples. They were clever, artistic, good at business, and should be happy and flourishing; but, instead of that, they were the most distressful people in all Europe. This was due to historical circumstances. When they settled down in their present country it was already divided between the Eastern and Western Roman Empires. One half of them, after a century of independence, fell under Charlemagne, in due course came under Austria, and remained so to this day. The other half, after a longer period of independence, fell under the Turks, and endured 400 years of slavery. Napoleon, at the beginning of the Nineteenth Century, brought a new hope to the Western branch of the Southern Slavs; for he allowed them to use their own language, a privilege which had previously been denied. About the same time the Serbs revolted, first under Karageorge, and then under Milosh Obrenovitch; after which events the period of modern history might be considered to begin.

Miss Copeland wore the picturesque Serbian costume, and the lecture was illustrated by lantern slides.

ARMENIAN RED CROSS & REFUGEE FUND

FOUNDED DECEMBER, 1914.

President, VISCOUNTESS BRYCE.

Donations are earnestly entreated for the relief of sickness and distress among 250,000 destitute Armenian refugees in the Caucasus, whose condition is "pitiable in the extreme." Relief pay is less than 4d. per head a day. Food and all necessities of life are very dear. A copy of the Report for last year will be sent to inquirers. All work in connection with this Fund is voluntary. Contributions will be thankfully received and acknowledged by the Hon. Secretary and Treasurer, Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W. Cheques may be made payable to the Armenian Red Cross and Refugee Fund; they should be crossed "London and South Western Bank, Holland Park Branch."

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE LEVANT COMPANY'S RECORDS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—You publish in your issue of December 1, 1916 (which reaches me, by the way, at this intellectual centre, after what must have been a painfully tiresome journey!), extracts from old-day letters culled from the records of "Ye Right Worshipful Company of Merchants of England Trading into Levant Seas," otherwise, and in a more abbreviated form, known as the Levant Company. I trust that you have only given us a foretaste of many a literary epicurean dish of similar substance and flavour, for, believe me, they, like Turkish delight—the real thing, I mean—are agreeable to the palate.

Might I suggest how you could possibly eliminate an intruding, though in the circumstances perfectly justified, bracketed note of interrogation which occurs after an undecipherable word in the letter to Consul Brandon, Aleppo, dated London, December 2, 1704? The sentence is: "For we think it very unbecoming Christians to assist or encourage the Turkish Ministers in making false pretences or raising aravias (?) on any one, etc."

The word, I think, is "averias," and, in the language of the immortal Quixote, signifies damages or harm. Its use to-day is restricted, but in the Spanish of the seventeenth and eighteenth centuries, when highly-spiced Boccaccian *pasa-calles* were much relished, it is frequently to be encountered, as irate husbands would have a right to expect. Perhaps, even, with no necessary stretch of the imagination, we can picture the user of the word in the above letter to Consul Brandon varying at times City austerity with more human virtues—let us hope, *sin perjuicio ni averia*.

Trusting that this ambling digression will not interfere with the publication of future records, I am, etc.,

Aldershot, January 22, 1917.

Q. S. M. B.

JEMAL PASHA'S SYRIAN RECORD.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—We knew some time ago that a book did appear in Constantinople, in Arabic, French, and Turkish, setting out Jemal's justification for the executions carried out in Syria under his orders, but we did not know that it would be the most damning evidence of his cruelty and ignorance!

The Geneva correspondent of the Arabic Paris weekly, *Al-Moustakbal*, Haji Ali Elghayati, tells us now that he has just seen a copy of this book, containing 168 pages, and facsimiles of thirty-six pieces of evidence, upon which Jemal executed thirty-four Syrian notables and passed lesser sentences on eleven others, besides fifty-four death sentences in default, the parties being beyond his reach! This, however, carries us back only to eight months ago, since which time several other executions have taken place, and are still taking place.

The title of this book is "La Vérité sur la Question Syrienne," and it is described as "Publié par la Commandant de la IV. Armée. Constantinople, 1916. Imprimerie Tanine." It seems to be a wretched specimen of printing, on most common paper, so that most, if not all the pieces of evidence are undecipherable! The text, however, is there to tell us that the evidence is based on documents dated 1913, and found at the French Consulates of Beyrout and Damascus, which had been left in charge and under the protection of the American Consul!

We notice already that the supposed offence is dated 1913, but what was it? It was that after the Balkan muddle the Syrians were dissatisfied with the policy of the Turkish Committee, and wanted certain reforms and a limited Home Rule, to enable the country, and eventually the Ottoman Empire, to pull through. Failing to get a fulfilment of Turkish promises, they appealed to England and France, the Protecting Powers, and friends of Turkey, to help them by the exercise of their influence at the Porte. Some correspondence with the Consuls of these Powers ensued, and a deputation composed of Syrian reformers came eventually to Paris. But the Turks renewed their promises of reforms, and enticed some of the agitators to Constantinople for a discussion of terms. The movement then subsided, and things went their usual way in Constantinople, with here and there an occasional assassination of some of those who

had been enticed thither under safe conduct. Those who remained in Syria were naturally not satisfied, but they were doing nothing to deserve banishment or prison, much less hanging. Then Turkey began mobilising, and soon after entered the war with Germany.

We know that Syria is the most enlightened province of Turkey, and Germany, unfortunately, knows that the sympathy of the Syrians is pro-French and English, as that of the Armenians is pro-Russian. Therefore, Germany says, "Let them die!"—I am, etc.,

A. SEFI.

January 21.

THE INFLUENCE OF ISLAM ON MODERN CIVILISATION.

Dr. Majid, speaking recently before the Sufi Society, at 86, Ladbroke Road, W., on "The Influence of Islam on Modern Civilisation," said that a great deal of the best in modern European civilisation had been borrowed from Islam without acknowledgment. Its basis was modern science, such as chemistry and engineering. Chemistry was the Arabic science; the Arabs had originated it. The idea of the old alchemists that the baser metals could be transmuted into gold had for long been scoffed at, but the most recent chemical discovery, that of radium, showed that such a thing was conceivable as possible. Aeroplanes were the most modern of European engineering inventions; but he (Dr. Majid) had been Vice-President of the Aero League of the Empire years ago, at a time when most people in this country laughed at the whole idea, and his reason for accepting such a position was that he had read in a very early book of such things existing of old amongst the Mohammedans. In quite another department of thought the beginnings of International Law were to be sought in Islam. The ancient Romans had had a law of nations, but it was only applicable to the different States within the Empire. Mohammed, having a mission to humanity at large, laid down rules for the guidance of his followers when they came into contact with the Persians, on the one side, and the Roman Empire on the other. The old Dutch jurist, Grotius, who was looked back to as the fountain-head of modern International Law, had taken everything from the Mohammedans without acknowledgment. By the irony of fate the International Law of modern European States left the Moslem world outside. Descartes, the father of modern philosophy, had borrowed very largely from the Arab, Al Ghazali; and Lord Bacon, the originator of inductive reasoning alike in the East and the West, had been anticipated by Islamic writers, even if he did not borrow from them. So, too, with history. Gibbon was the first European writer to produce a really critical history. But he mentioned in his "Decline and Fall" certain great Mohammedan writers who had produced works of that character. Those works had been translated into Latin, and, no doubt, Gibbon read them and imitated the methods of their authors.

THE PERSIAN GENDARMERIE.

Under date of January 24 the *Morning Post* Stockholm correspondent reports:—In connection with the visit to Stockholm of the Persian Minister in Madrid, who has now left for Copenhagen, it is reported that the Persian Gendarmerie will be completely reorganised. The commander of the force, Colonel Nystrom, has been dismissed, and will be succeeded by another Swedish instructor. The corps will be placed directly under the Persian Government's control.

Turkish troops in Austrian uniforms are reported on the Isonzo front.

The Greek Consul-General in Sydney, who recently resigned, has been appointed agent of the Venizelos Government there.

An Egyptian police officer, who was in command of the Baharia Oasis when it was occupied by the Senussi, has been tried for treason and sentenced to death. The sentence has, however, been commuted to ten years' penal servitude.

A telegram from Sofia states that the Bulgarian Government has addressed to neutral countries a communication, which is in parts a repetition, and on the whole a reflection, of the German reply to the Note of the Entente Powers on the peace offer of December 12.

The Milan correspondent of *The Times* reports that the Congregation Propaganda Fide at the Vatican has been informed that 110,000 people have died of hunger in the Mount Lebanon district of Syria. At Beyrout the starving fall in the streets and are carted away. The Pope has sent a large sum of money to the Apostolic Delegate at Constantinople for distribution in Syria.

TANGIER TO TEHERAN.

Further evidence of the value of Germany's protestations of friendly feeling towards Moslems, and of her respect for their religion, has recently reached this country from British East Africa. I hope it will be made known as widely as possible throughout the Moslem world, and that it will help all Moslems to realize how faithfully the Kaiser is redeeming his promise to be their protector and patron. Here are a couple of instances taken from sworn evidence, dated November, 1915, in the course of inquiries held regarding German behaviour to natives:—

In one case cited a Mohammedan girl of twelve was seized by the Germans, and on the way to Muzi was taken by a German officer named Riecho to his tent and outraged. In another inquiry a Mohammedan native said that he was made prisoner by the Germans and removed to Tanga. He was made to work and given very little food. He saw several natives shot by the Germans for refusing to give information about the British troops. The men who were shot had not taken part in the fighting, and were unarmed.

These are strange ways of showing friendship and respect for Islam and its followers. So is the following:—

An Arab, in a sworn statement before the British Court, declared that he and eight others were made prisoners by the Germans. His old father, who was very ill, was beaten by order of the European officer and died. He had, he said, no witness left beside himself. All the others had been killed or had died of their wounds. Numerous other cases of German brutality were sworn to, including that of a Mohammedan, who was made to carry very heavy loads and beaten as he staggered along. The statement adds that the prisoners were attached with chains round their necks and had to live chiefly on roots.

What has Hajji Wilhelm to say on the subject? Will his tender conscience allow him to decorate the gallant Riecho and the other ruffians?

The account of the exodus of the British from Athens published in last week's NEAR EAST shows that our countrymen, their women-folk, and their children succeeded in putting the best possible face on a distinctly unpleasant experience. Amongst them, by the way, was an old gentleman who had been an invalid for years, and had to be conveyed in an invalid-chair. Let us hope the change of air will benefit his health and, literally, set him on his feet again! The refugees tell some strange stories of their experiences in Greece; and as they appear to be now widely scattered over this country, it is likely that a fairly accurate estimate of the Athenian character will be somewhat widely shared. I do not purpose reproducing these tales—I doubt whether I should be allowed to do so. They are hardly calculated to warm one's heart towards the "Royalists," and they are calculated to inspire us—if possible—with a deeper detestation of the "Reservists' Leagues" and their supporters. To learn of Venizelists being bound back to back, and then beaten, knocked about, and insulted in unspeakable fashion by a crowd, of which priests formed part, is enough to turn the stomach of most Englishmen. In view of some of the reports referred to, it is satisfactory to know that the Serbian children—poor little orphans, for the greater part—from the institution established at Phaleron had been sent away to Nice just before the trouble began.

One point that may be mentioned in regard to the "events" is that they reminded some of the refugees of what took place in Constantinople during the Counter-Revolution of 1909. Just as the "Young Turks" were then hunted out and persecuted by the Hamidian party, so now were the supporters of M. Venizelos and the friends of the Entente sought out and bullied—to say no worse—by the military rabble that has so disgraced the name of Athens. The treatment of our friends must have been shameful beyond description, to judge by the feelings it has aroused in those who witnessed it. I trust that the ruffians who made the most of their brief hour of power will be made to pay the price in full. And there, for the present, I will leave the subject, lest I might write something "injurious."

I have been struck by the number of interesting notes on the habits of birds, beasts, insects, and even of fishes, that have been sent to various papers by soldiers—or their friends—since the war broke out. It seems to me that a collection of these notes would make a most fascinating volume, and I shall be surprised if some maker of books does not take up the idea and work it—for the benefit, let us hope, of one or other of the War funds. Naturally, the birds are the first favourites with these observers of Nature, because they are often so amazingly friendly; and to some extent, no doubt, because when you are in a country so lacking in natural beauty as, say, Mesopotamia, the birds

assume an extraordinary interest. Moreover, in such a country, where cover is scarce, small birds will often seek refuge from their feathered enemies in the neighbourhood of man. Thus, I remember reading in the *Field* some time ago a little story of a wheatear, which was so pretty that I venture to reproduce it. The incident took place at Ali Shergi, on the Tigris, where, says the writer, "immature wheatears were plentiful. The first I saw appeared in an unexpected manner. It settled on a man's shoulder as he was sitting on the ground, then dropped and ran underneath the folds of his coat just as a merlin swept past the man's head and went off scared. Then out came the wheatear and made off in the opposite direction. The man was quite unconscious of the drama in which he was taking part." A "drama" indeed—and a pleasing one, surely, for a fighting man to record.

Perhaps, upon the whole, the insects claim most attention from our soldiers, who—though they usually record their experiences with that irrepressible good humour which puts most of us stay-at-homes to the blush—are, clearly, not always voluntary students of their subject. Here, again, Mesopotamia is a happy (or the reverse—more often the reverse, I fear!) hunting-ground. As I have often remarked, that mud-formed land is probably the home of more insects to the square inch, and of more varieties, than any other region in the world. The ants alone are numerous enough, and ferocious enough, to make life a burden when they really set about it; and sand flies (which, I regret to say, an Army chaplain writes of as biting "like blazes"!), mosquitoes, gigantic earwigs, and other pests too small and too painful to be named, all do their bit as faithful allies of the Unspeakable One. Our soldiers write of them in feeling terms, and I am not surprised!

But thus far I have not come across any mention of an insect for which I entertain a sincerely friendly feeling, having experienced nothing but relief from the exercise of his activities. This is the Praying Mantis. Perhaps he does not flourish in Lower Mesopotamia. The only specimen I actually saw was up the Euphrates, above Anah; and I am open to confess that I parted company with him with genuine regret. For I first saw him one hot afternoon when I was lying down in my tent, cursing the flies. My eyes were roving round the little canvas enclosure, when suddenly I saw what seemed to be an animated twig making its way, very cautiously, along the sloping roof towards a fly. I watched, fascinated, and the Praying Mantis stalked the fly marvellously, made a spring, secured its prey, and—disposed of it. After that I watched him repeat the performance many times, and blessed him and his appetite at each "kill"; for the flies had roused my wrath to boiling point. And when my tent was struck, I hoped my quaint little friend would travel unharmed. To my great joy he did so; and for four or five days I benefited by his kind attentions. Then, to my real sorrow, he disappeared. I had hoped to bring him to England—if only in alcohol, poor dear! But the Fates ordained otherwise. What became of him I cannot say. But I have, at least, placed his merits on record at last. And if the Mesopotamia Comforts Fund could despatch a few thousand of his fellows to Iraq, they would, I am sure, earn the thanks of our fly-pestered soldiers in the coming hot weather.

CORSAIR.

ROUMANIA AND THE ALLIES.

Last Friday Mr. Lloyd George, who was accompanied by Lord Milner, received M. Fagure, editor of *Adevărul*, one of the leading newspapers of Roumania, and discussed informally the position and prospects of our latest Ally.

The Prime Minister authorised M. Fagure to assure his compatriots that England and all the Allies considered Roumania as being entirely one of themselves, and as entitled to all their support. Especially was this so at the present moment, when the Roumanian Army had shown such high valour in the great struggle in which it had now been engaged for three months—a struggle still conducted by that Army with an energy and resolution of which the encouraging effects had been conspicuous during the last few days. Mr. Lloyd George added that the British Government would take every means effectively to solve the problem of the transport of munitions for Roumania, and he expressed the firm conviction that ere long Roumania would be fully restored to her own, and would see the realisation of her national ideals.

A Sofia telegram states that M. Radoslavoff, the Bulgarian Premier, on Sunday, handed to the representatives of neutral countries Bulgaria's reply to the Entente Note relative to the offer of peace.

NEAR EAST BOOKSHELF.

"ALICE" IN THE BALKANS.*

There are people, just as there are things and scenes, that come into our lives, play a rôle which is sublime, commonplace, or grotesque, and then fade away again like the naked branches of winter trees in a mist. They are accidents, as it were, in the normal run of existence, or stage accessories with an effect to produce or an impression to create. Having served their purpose, they disappear, making room for their successors, much as one man makes room for another, or as tragedy creeps along in the wake of comedy.

Books have been written describing these accidents or accessories. There is little or no plot in them, just a thread or two connecting the pictures as they succeed each other with greater or less celerity, with more or less humour, according to the temperament of the narrator. "R. L. S." penned such a book when he rode an ass through the Cevennes and moralised thereon. But greater fame, certainly, attended the author of "Alice in Wonderland," when, in pages that are as lasting as our language, he drew pictures for us of an ordinary little, human girl wandering in a wonder-land that entrances the very young as it does their elders and the very old. "The Luck of Thirteen" is a book of the same character. Attached to a British hospital unit in Serbia, the authors manage a *soi-disant* holiday in Montenegro—in reality in search for some medical supplies that are as elusive as liquid mercury on a china plate. Then, when the end comes, and a starving, dying people stumbles with frozen, naked feet across the mountain snows in quest of peace from barbarians, the authors, accompanied by eleven companions, likewise migrate as best they can across Serbia, Montenegro, and Northern Albania to San Giovanni, where they finally get picked up by a French boat and are taken to Brindisi. Like them we also would have exclaimed on reaching Italy: "Thank God, we are back in Europe once again." For, after all, we are also mere insular Britons, and the staging of the rude war-play on Serbian mud-roads, in Montenegrin villages, and in Albanian inns, would have impressed us as something quite un-European. Whether, however, we should, like the authors, have taken real hardships and serious situations with gay humour, is another matter. They did, and they are to be congratulated, because the result is a series of crowded impressionist sketches of a small wonder-land as seen by those school children, Jan and Jo, the one an engineer, the other his wife, "an artist and a V.A.D." Thanks to the blood of Alice which flows in their veins, they have given us an amusing book, of which not only the style, but the drawings also, are "Alice-y." The latter we are unable to reproduce, but here is a paragraph taken at random:—

On the road were travellers never ending in their variety, and one father was mounted with a pack behind him, and on the top of the pack his little daughter, clad in many-coloured cottons, clasping him tight round the neck and peering inquisitively from behind his ear.

There are travellers galore on these quaint mud-roads and byways of Serbia. Like wayfarers along the road of life, they amble onwards and past the spectator. They mutter, mumble, or vociferate, and are thereby ticketed like some zoological specimen in a natural history museum. Thus, the French messenger or what-not, whose impressions of the country are eloquently summed up in the horrified words of "Quels pays!" As Quels Pays—a little, dapper Frenchman, ultra-civilised and with a Parisian shrug—he will remain with us for many a day. So will the querulous Serbian professor—"an aged Red Riding Hood clad in a scarlet blanket"—and the "Sirdar" in the Montenegrin Army—stout, hoarse (the hoarseness being cured with libations of wine), but eminently practical. "Never forget a face," is his wise utterance; "never forget its name. That is the secret of popularity." Other characters there are in number, from highly placed civil, church and military authorities to beggars, peasants, ruffians and their kin—from Albanians, Turks, Serbs, Austro-Serbs, Montenegrins, and Greeks, to nondescripts of all shades and hues. There is the Englishman, too, at Ipek. Disgusted with the vermin of the Hotel de l'Europe, he went to a monastery, where the "Archbishop" invited him to spend the night. He did so. On the following morning the prelate attempted to rouse his guest, but he would not get up. "No, no," said he; "I spent two nights under a ceiling which rained bugs upon me, and I know a good bed when I've got it." Amusing also is the description of the day spent by the authors at the Montenegrin front, in view of the enemy. "Jan climbed down the hill and took snapshots; the enemy got a couple of pretty near shots at him." Then the Montenegrins wanted to get the range of a big house in Gorazhda with one of the big guns. "This decision had been made a day or two before with much deliberation. They thought the State could afford it. The precious shell

was brought out, and everyone fondled it. . . . At last they pulled the string.

"Goodness! Now we've done it," Jo thought as the mountains sent back the fearful report in decreasing echoes. We seemed to wait an eternity, and then "something white" happened far beyond the village.

The officers looked at each other with long faces. "A bad miss—the expense."

We felt the resources of the Montenegrin Empire were tottering. Awful! Could they afford another?

Finally, with great courage they decided that it was better to spend two shells on getting a decent aim than to lose one for nothing. The terrific bang went off again, and this time the "something white" happened right on the roof of the house.

From people we pass to scenes, treated likewise with a spirit of childish levity such as the description of Cetinje: "Nature has half-filled a big crater with silt, and the Montenegrins have half-covered it with Cetinje. It is a polychromatic village of little square houses, cheerfully dreary." Or Uskub:—

The country about Uskub is a great cemetery, and on every hand rise little rounded hills bristling with gravestones, like almonds in a tippy-cake. Strange old streets there are in Uskub. One comes suddenly upon half-burned mosques with grass growing from their dilapidated domes, a refuge only for chickens; some deserted baths, and in the midst of all, its outer walls like a prison and with prison windows, the old caravanserai.

We watched the sun set from one of the tippy-cake hills, sitting on a gravestone with an old Turkish shepherd, who seemed to derive great comfort from our company.

At times—rarely, however, as behoves a book written in the lighter vein and brimful of nursery similes—a deeper note is touched, of pathos real and human, such as the realistic picture of night and its moans and groans in a field hospital, or the arrival of the first wounded at Vrnitze:—

It was dark before the first motor-load came. . . . The undressing-room was a large white-stone-floored room, with four long plank beds covered with mackintosh; behind was the bathroom. The first wounded man was pushed in through the window on a stretcher, a brown, crumpled heap of misery, and groaning. . . . A second was handed in. No need to examine this one. Bloody head bandage and great, blue, swollen eyelids told plainly where his wound was. . . . Outside was one electric lamp, which threw strong lights and darker shadows, making a veritable Rembrandt of the scene, lighting up the white-clad forms of the assistants who were drawing out the stretchers, the big square end of the ambulance car, and picking out from the gloom of the garden a rose tree which bore one white rose.

Then follows the flight of Serbians—the great, tragic, winter exodus of a semi-naked people—across snow-bound fields and over ice-blocked passes into an inhospitable land. The roads were crowded with weary travellers—old and young, men and women, wounded and starving, beggars and officers, helpless cars and rustic vehicles, the oxen and horses of which, when spent with fatigue, were left where they dropped. From Kralievo to Novi Bazar, where all that was left of Serbia was concentrated: "Private houses had suddenly become ministries; cafés, headquarters; and shops, departmental offices. The square was the central automobile station." Our friends Jo and Jan, with their eleven companions, hurried on, making for Cetinje instead of for Mitrovitza, for where the bulk of the Serbs were heading. The story of their wanderings makes extremely pleasant and attractive reading. Perchance, now and again the colour is too bright, and we lose sight of the real hardships of a terrible journey with little to live and less to sleep on, with rain—and sleet—drenched nights in the open, and days of cold and hunger. However, can one gainsay them the levity with which they treat their trials when we remember that they are of the progeny of Alice (assuming that, unlike Peter Pan, she did grow up and marry happily and fruitfully), and that, if they do not grumble, certainly we have no right to expect it from them?

BOOK NOTES.

Mr. Walter Scott has just published "Turkey, Greece, and the Great Powers," by Mr. G. F. Abbott, the author of "Turkey in Transition." Mr. Abbott, as many of our readers are aware, belongs to a family the members of which have been intimately connected with the Ottoman Empire ever since the seventeenth century, and he is an original and painstaking student of Eastern affairs. In this new work (which is published at 7s. 6d. net) he traces the evolution of the political relations between Turkey and Greece and the Great Powers.

Mr. Murray will publish next month "The Straits Impregnable," a personal narrative of the Gallipoli Campaign, by Sydney de Loghe.

Tuesday is the birthday of H.R.H. Princess Helen of Greece, wife of Prince Nicholas, who was born on January 17, 1882 (o.s.), and was before her marriage the Grand Duchess Vladimirovna of Russia.

Crown Prince Carol of Roumania arrived in Petrograd on Saturday, accompanied by M. Bratiano, the Roumanian Prime Minister.

The Tsar and Tsaritsa attended a banquet which was given at Tsarskoe Selo, on Monday, in honour of the Crown Prince.

The Sultan of Egypt, upon his return from a tour in Upper Egypt, where he was everywhere enthusiastically welcomed, received Sir Reginald Wingate in audience at Cairo and handed him the insignia of the Grand Cordon of Mohammed Ali.

Lieutenant-General Sir Percy Lake had the honour of being received by the King at Buckingham Palace on Wednesday, when His Majesty invested him with the Insignia of a Knight Commander of the Most Honourable Order of the Bath (Military Division).

Sir Walter Townley was received in audience by the King on Wednesday, and kissed hands upon his appointment as His Majesty's Envoy Extraordinary and Minister Plenipotentiary at the Hague.

The Dean of Rochester and the Rev. E. A. Burroughs, Fellow of Hertford College, Oxford, by invitation of Bishop MacInnes, the Bishop in Jerusalem, and at the request of the Archbishop of Canterbury, have gone to Egypt as Archbishop's messengers in connection with the National Mission of Repentance and Hope. They will be absent from England about six weeks.

At the request of the Archbishop of Canterbury the Bishop of Buckingham (Dr. Shaw) is proceeding to Egypt to minister to the troops and hold confirmations. He expects to return about Easter.

Madame Také Jonescu left London last Friday for Brighton, where she expects to spend about a fortnight recuperating after her recent illness.

Lord Apsley, who was reported wounded in the recent fighting in the Sinai Peninsula, has recovered from the effect of his wound and is again back on duty.

Lord and Lady Oranmore and Browne returned to their residence in Cavendish Place on Wednesday from Castle Macgarrett, County Mayo.

Sir Charles and Lady Waldstein and Miss Seligman have arrived at 12, Bruton Street, Mayfair, which they have taken until Easter.

The new Duke of Atholl saw service in the Nile Expedition of 1898, and was present at the battles of Atbara and Omdurman. He also served in the South African War, and in the present war he has taken a leading part in connection with the Scottish Horse, of which he is Brigadier-General Commanding.

Mr. Thomas Stelian, formerly Roumanian Minister of Justice, has been on a short visit to London.

Princess Soutzo, the wife of the Military Attaché to the Roumanian Legation, arrived in London from Paris last week.

An official telegram from Constantinople states that General Townshend, the defender of Kut, who had previously been a prisoner on Prinkipo Island, in the Sea of Marmora, was last week removed to another place of internment as a "measure of precaution."

His Majesty the King has been graciously pleased to approve of the Grand Cross of the Most Distinguished Order of St. Michael and St. George being conferred on Lieutenant-General (Temporary General) Sir Archibald J. Murray, K.C.B., K.C.M.G., C.V.O., D.S.O., Colonel Royal Inniskilling Fusiliers, General Officer Commanding-in-Chief Egyptian Expeditionary Force, in recognition of his distinguished services in the field.

A Reuter's message, forwarded from Cairo on the 15th inst. and delayed in transmission, states:—

The King has telegraphed to General Sir Archibald Murray, the Commander-in-Chief in Egypt, congratulating him on the success of the operations which resulted in the expulsion of the enemy from the Sinai Peninsula. The War Cabinet likewise sent congratulations, adding: "The operations have not only resulted in clearing the enemy from the peninsula, but promise you further successes in the future."

Sultan Hussein telegraphed: "I have noted the new and brilliant victory from the two despatches you sent me. I am deeply touched by your courteous attention, and I note with pleasure the success upon success which has followed your appointment to the command in Egypt, giving proof of your skill and sound strategy. Thanks to you, the entire province of Sinai has been cleared of the enemy. Again I thank and warmly congratulate you."

Sir Archibald Murray replied: "Your gracious message has given myself and the troops of my command the greatest pleasure."

Other telegrams were received from General Sir F. R. Wingate, the Egyptian Premier, and General Milne.

Among the results of the Hilary Examination of students of the Inns of Court held by the Council of Legal Education we notice the following, under the heading "Final":—

Class I.—(Certificate of Honour).—Bell, Bernard Humphrey, G.

Note.—The studentship would have been awarded to Mr. Bell had he not been disqualified by age.

Mr. Bell is District Judge at El Obeid, Kordofan. He is the second son of the late Rev. J. J. Bell, M.A., who was headmaster of Christ's Hospital Junior School, Hertford, from 1880 to 1902. He was educated at Christ's Hospital and won a Major Scholarship to Trinity College, Cambridge, when he became 4th wrangler. Mr. Bell married in 1912 the second daughter of the late Rev. G. Platt Dew, rector of Shirenewton, Mon., and the Lady Mary Dew, and niece of the late Earl of Carrick.

Mr. Augustus Miller, whose name appears in the list of Egyptian Accession Honours published in last week's NEAR EAST, has been lent to the Veterinary Service, Egyptian Army, for two years for the P.H.D. Service. During the war he has been doing excellent work in connection with procuring camels for the Remount Service, has been mentioned in General Murray's despatches, and his name has been submitted to the War Office for suitable recognition.

Under date of January 16 the Petrograd correspondent of *The Times* reports:—The death is announced as the result of a motor-car accident on the Russian front of Lieutenant Eric Hill. The *Norve Vremya* states that two British officers, Lieutenants Wright and Ingle, attached to the British armoured-car detachment, who were injured during operations on the Roumanian front,

have arrived at the Grand Duchess Olga's Hospital at Odessa.

M. Venizelos has sent to the Classical Association a message of thanks for the telegram sent to him by members of the association at their recent general meeting in the University of Leeds.

Surgeon-General Sir Thomas Gallwey has presented the original Maclufa camel saddle on which General Gordon rode when he made his last entry into Khartoum in 1885, before the town was besieged, to the art sale which Messrs. Christie are holding on behalf of the British Red Cross Society and the Order of St. John.

Writing in the *Morning Post* an appreciation of Brigadier-General Lord Binning—whose death was announced in these columns last week—Lord Esher says: "His letters from the Sudan and from India compare with the best from the trenches to-day, and no praise could be higher. . . . At moments he appeared to revel in danger, as when he jumped, for a lark, a hog-backed stile near Trumpington with a frozen pool on the take-off side, or when at Abou Klea he crawled out of the square on the fruitless errand of taking a flask of water to the gallant Fred Burnaby—his Colonel—who was lying by that time past all hope a hundred yards away. . . . In Egypt, in the Sudan, and the Black Mountain he won the ribbons and medals that he wore. Now he has taken his last journey and fought his last battle, within sight of his beloved Lammermoors. His name will linger often on the lips of his children and his friends, though his memory be blown away by the winds of the world."

During the absence from Roumania of M. Bratiano, M. Pherekyde, the senior member of the Roumanian Cabinet, is acting as President, and M. Také Jonescu has assumed the portfolio of Foreign Affairs.

The plaster bust of Lord Kitchener by Mr. R. C. Belt, which has been presented to the National Memorial Committee, was sent to Paris on Wednesday to be cast in bronze by the firm of Barbedienne, to whom the Ordnance Department, by order of the Army Council, have already sent a captured cannon to be melted down for the purpose. Friends of the late Lord Kitchener agree that the sculptor has succeeded in making a striking likeness. The bust, when completed, will have a greenish tinge.

The letter by Lord Kitchener appealing for 300,000 men for the Army, purchased by the late Mr. T. Fenwick Harrison at the Red Cross Sale for £6,000 and presented by him to the nation, is now on exhibition in the Armouries of the Tower of London.

The Central Islamic Society will hold a farewell reception in honour of Prince Abdul Karim Khan, of Sachin, at the Imperial Hotel, Russell Square, on Saturday, February 3, at half-past two. Prince Abdul Karim Khan is President of the Society.

APPOINTMENTS, PROMOTIONS, ETC.

Le Journal states that the Montenegrin Government has been reconstituted as follows:—M. Tomanovitch, Prime Minister and Minister of the Interior and Commerce; M. Martinovitch, Minister for Foreign Affairs. M. Ilitch, formerly Judge of the High Court of Cettigne, will take control of the other Ministries.

Captain Arion, the Chief of the Roumanian Mission in London, has been promoted Major.

Mr. Dayrell Crackenthorpe has been appointed Counsellor of the Embassy at Athens. Mr. Crackenthorpe is proceeding to Athens immediately.

Mr. Crackenthorpe, who was born in 1871, was nominated an Attaché in 1895, and has served in many parts of the world—Old and New. He was at Bucharest in 1906 for a short time, and acted as Chargé d'Affaires there. After serving in Vienna and Tokio, he was sent to Belgrade in 1912, and remained in Serbia till the outbreak of hostilities, when he was transferred to the Foreign Office.

A British military mission, composed of General Philips and three other officers, arrived at Athens on the 18th, and the following day presented themselves to M. Lambros. The mission will take part in the Allied military control. Captain Rogers has taken charge at Piræus as controller of the shipping movements at the port.

Sheikh M. H. Abdar Razek has been appointed instructor in colloquial Egyptian Arabic at the School of Oriental Studies.

Mr. Constantin Collas, Secretary, and M. Spiro Marchetti, Attaché, of the Greek Legation in London, who resigned their respective posts, have proceeded to Paris to assume their duties in the diplomatic service of the Provisional Government of Salonika.

Mr. Dragomir Yancovitch, who was formerly private secretary to his Majesty King Peter, but has been appointed Serbian Minister at the newly-created Legation at Madrid, has arrived in that city.

Count Ludwig Szechenyi, Austro-Hungarian Minister at Sofia, is to succeed Baron von Giskra as Austro-Hungarian Minister at The Hague. Count Otto Czernin is to be the new Minister at Sofia.

FORTHCOMING LECTURES.

Among lectures to be shortly delivered that will be of interest to readers of *THE NEAR EAST* we may mention the following:—At the London School of Economics there will be a course entitled "The Historical Causes of Problems in the Near East," by the Director of the School, Dr. W. Pember Reeves, on Wednesdays, at 6 p.m., beginning on February 7. At the same school Professor John A. Todd will deliver an address on Friday, February 16, at 5 p.m., on the cotton resources of the Empire. The chair will be taken by Professor Wyndham Dunstan, Director of the Imperial Institute. This lecture is one of a course, admission to which is free by ticket to be obtained on application to the secretary. Also at the same place Professor Sidney Webb is now delivering a course on the making of the British Empire, dealing *inter alia* with the differences in race, language and religion, constitutional status and local autonomy, fiscal policy and democratic control of its various parts. A fee is charged for these lectures. So also with the lectures by Professor Seligman on the Arabs, in North Africa and the French Sudan, and the peoples of Europe and the adjoining parts of Asia and Africa. These are for students of ethnology, and will be given on Tuesday and Wednesday afternoons, the earliest being on February 6.

At King's College, Strand, on Wednesday, January 31, at 5.15 p.m., Dr. Seton-Watson will give a public lecture on the Slovaks. It will be illustrated by coloured lantern slides of peasant art and costumes. Professor T. G. Masaryk will take the chair, admission free.

At University College, Gower Street, on February 12, at 5 p.m., Dr. W. Lawrence Ball, of the Cotton Investigation Department, will give an address on Cotton, this being one of a series of lectures on "Science and the Empire: The Exploitation of Plants." On February 15, at 2.30 p.m., Miss Margaret A. Murray will lecture on Egyptian History. This is also at University College. The lectures are free.

Among the lectures to be delivered before the Société Internationale de Philologie, Sciences et Beaux-Arts, which meets at 39, Upper Bedford Place, W.C., is one at 8 p.m. to-day (January 26), "Glimpses of Constantinople," by Syed Ehsan El-Bakry, and another, "Personal Experiences in Jerusalem," by Miss Helena Frank. The latter will be on February 5, at 4 p.m.

On Sunday, February 4, at 6 p.m., at 86, Ladbroke Road, W., Syed H. R. Abdul Majid, barrister-at-law, will lecture for the Sufi Society on "Education in Islam."

OBITUARY.

MR. WILLIAM FORBES.

We regret to learn of the death at Bath, at the age of 88, of Mr. William Forbes, head of the well-known firm of MacAndrews and Forbes.

Mr. Forbes went out to Turkey in the middle of last century and had a very successful business career, becoming head of his firm when still quite a young man. During his residence in the Near East, he was one of the best known figures in Smyrna, and was highly respected by all the Europeans. He retired from business in 1870, and thereafter took no active part in connection with British interests in Turkey.

Colonel Charles Louis Nepean Bishop, Royal Marine Artillery (retired), has died at Southsea. He was the eldest son of the late Rev. Freeman Bishop, vicar of Basingbourne, entered the Royal Marine Artillery in 1876, reached the rank of lieutenant-colonel in January, 1905, and had his brevet as colonel in October, 1907. Colonel Bishop served during the Egyptian War of 1882, and was decorated with the medal and the Khedive's star.

Colonel George Blake Napier Martin, C.B., Royal Artillery, died suddenly on Saturday last, aged seventy. A son of the late John N. Martin, H.E.I.C.S., he entered the Royal Artillery in 1866, and became brevet-colonel in 1898. In the Egyptian Expedition of 1882, he was A.D.C. to the Officer Commanding the Royal Artillery at the battle of Tel-el-Kebir, and was mentioned in despatches; he was also decorated with the medal with clasp, the bronze star, and the Order of the Mejidieh (Fourth Class). In 1884-85 he took part in the Sudan Expedition, and was mentioned in despatches, and had two more clasps to his Egyptian medal. Colonel Martin, who also took part in the Burmese Expedition of 1886, received the Companionship of the Order of the Bath in 1889. He married, in 1889, the only daughter of Colonel H. Swinnerton-Dyer, of Westhope, Salop.

Major-General Thomas Carlisle Crowe, formerly Royal Horse Artillery, died suddenly last Friday at his residence, Bouverie Road West, Folkestone, aged eighty-six years. Entering the Army in 1847 he served in Persia ten years later, receiving the medal with clasp, in the Indian Mutiny (medal with clasp), and in the Riel Rebellion in Canada in 1866.

Bombardier Charles Johnson, a Crimean veteran, died at Colchester on Tuesday in his eighty-fourth year.

A message from Sofia (received in London last Friday) announces the death from cancer of Dr. Vladoff, a former chief of the Macedonian movement.

Baron Hubert Jules de Reuter, a private in the Black Watch, of Margery House, Reigate, Surrey, who was killed in action on November 13, has left estate of the value of £26,065, the net personalty being £24,765. The will, dated September 26, 1916, with a codicil of October 7 following, made on scraps of paper and written in pencil during active service, is proved by the Hon. Helen Forbes, of Courfield Gardens, cousin, to whom the whole of the property is left absolutely.

At St. Augustine's Church, Flimwell, on the 19th inst., the Bishop of Chichester dedicated a new rood screen and the chancel of the church, which has been restored by Viscount and Viscountess Goschen in memory of their son, the Hon. G. J. Goschen, who died of wounds at Amarah, January 19, 1916. Many members of the family were present, and several officers of Lord Goschen's regiment attended. Six non-commissioned officers who had served with Lieutenant Goschen in Mesopotamia represented the regiment.

ORIENTAL STUDIES.

THE SCHOOL OF ORIENTAL STUDIES, London Institution, Finsbury Circus, E.C., OPENED on 18th JANUARY, 1917. Courses will be held in the Principal Languages of the Near, Middle, and Far East, and of Africa. Courses will also be given on Oriental Religions and Customs. Intending Students are invited to apply at once to the undersigned. E. DENISON ROSS, Director.

DOMESTIC ANNOUNCEMENTS.

MARRIAGES.

APOSTOLIDES—GRAHAM.—On the 18th inst., at Calcutta, E. C. Apostolides, late Colonel of the Calcutta Light Horse and Honorary A.D.C. to the Viceroy of India, to Frances Jane, youngest daughter of Sir John Graham, Bart., Larbert House, Stirlingshire, N.B.

TOWNSEND—ENGLISH.—On the 20th inst., at All Saints', Cairo, and at the British Consulate, Thomas Cyril, of the Anglo-Egyptian Bank, fifth son of Henry M. Townsend and Mrs. Townsend, of Orton Longueville, Peterborough, to Phyllis, youngest daughter of Marcus V. English and Mrs. English, of Orton Longueville.

DEATHS.

FORBES.—At Bath, on the 2nd inst., William Forbes, formerly of Messrs. MacAndrews and Forbes, Smyrna, in his 88th year.

JACKSON.—On 9th December, 1916, at Constantinople (detained there since July, 1914), Thomas James Jackson, of Paradiso, near Smyrna, eldest son of the late Thomas Hayes Jackson, M.D., F.R.C.P., of Darlington, aged seventy-four years.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURS CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troödos.

For Tickets and further Particulars, apply to

NAJEM HOURS & SONS,

LIMASSOL, CYPRUS.

Proprietors of "The Army and Navy Stores." Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.

Head Office and Central Stores: LIMASSOL. All arrangements for Transport, &c., are made by the above Firm.

THE NEAR EAST.

Editorial and Publishing Offices:

DEVONSHIRE SQUARE, LONDON, E.C.

Telegrams: "EASTAPROX, AVE, LONDON." Telephone: No. 618 London Wall

FRIDAY, JANUARY 26, 1917.

ALBANIA AND THE WAR.

Occasional references to Albania in the war bulletins will have served to remind the reading public that, as that country has come within the scope of the world-conflict, so it ought to be able to count on a share in any of the blessings that may be associated with a durable peace. The past history of Albania, however, has proved the difficulty of devising any settlement that can be relied upon to give peace within its borders and a reasonable amount of satisfaction outside. Even with the elimination of foreign jealousies there could have been no certainty before the present war that the Albanians would consent to settle down to a quiet life, and the question arises whether recent events have tended to simplify this part of the problem. The very little light that is being thrown these days upon Albanian affairs does not encourage optimism in regard to the subject. On the one hand, there is Essad Pasha associated with the Allied Army at Salonika. At first sight this fact would seem to range Albania definitely with the Allies and open up the prospect of an easy adjustment of the position at the end of the war. It would be satisfactory indeed if this should prove to be the case. The numbers of Essad's army, however, are not great, and the Allies cannot be certain, in view of his long absence from the country, that his authority will be as readily recognised hereafter by the nation as a whole as it is by the Albanians of his own tribe. An indication of the trouble that is being judiciously fomented under Austro-Hungarian domination is given by a recent announcement in the *Neue Freie Presse* to the effect that Hassan Bey of Prishtina has been decorated with the Cross and Star of the Order of Francis Joseph for services rendered to Austria-Hungary during the war. Hassan Bey took a prominent part, at Austria's instigation, in the Albanian revolts of 1910 and 1912 against the Young Turks, and has always been at the head of the pro-Austrian element in Albania. On the outbreak of the war he seems to have thrown himself heart and soul into the Austro-Hungarian cause. As the organiser of the numerous Albanian bands that took the field, he may be held responsible for the trouble that the Serbian Army suffered from these irregulars, especially in its final retreat to the coast. It is safe to infer, therefore, that the enemy's occupation of Albania has fallen very lightly on their companions in arms, and any pro-Austrian feeling that existed before will have been sedulously encouraged, while Hassan Bey's position will have been proportionately strengthened.

If it were merely a question of deciding between the claims of two rival chieftains, the Albanian problem would present little difficulty. The population, it is to be feared, is far too bitterly divided to allow either candidate's claims to sole authority to be acquiesced in with any hope for a peaceful future. For some years now Essad Pasha has served the Allies well; but it cannot be overlooked that he has made numerous enemies in his own country. The circumstances attending the surrender of Skutari to the Montenegrins after the murder of Hassan Riza Bey were shrouded with considerable mystery, and some of Essad Pasha's fellow-countrymen were far from satisfied to see him withdraw from the town with his men fully armed. While the war lasts it is impossible to gauge the feelings of the Albanians as a whole; but

obvious facts must not be ignored, even though they are unpalatable. The Allies are pledged to certain general principles in regard to the settlement after the war, and a very close watch will doubtless be kept on the manner in which they live up to these principles. Albania probably presents the greatest difficulties in the application of the principle of nationality. With a population hopelessly divided against itself, the country cannot be left to its own devices. An attempt to solve the problem was made before the war by the introduction of a foreign ruler. But, quite apart from the wisdom of the choice made, the appointment was so hedged around with unworkable conditions, as a result of the jealousies of the Powers interested, that the experiment was bound to be a failure. That does not imply that the policy was inherently unsound. Unless foreign intrigue is entirely eliminated, there is little hope of any attempted solution of the Albanian problem being a success. The justification for raising the question at this stage of the war is to be found in the need for an agreement among the Allies with regard to the general principles of the Albanian settlement, in order that the military occupation of the country, which will follow upon successful operations against the enemy, may as far as possible conduce to the future welfare of the inhabitants.

At present the campaign in Albania is being carried out exclusively by the Italians. The recent accession of liveliness in this region at a time when it was thought that the enemy might try to force his way into Greece has gone in favour of our Allies. It is unlikely that they are opposed exclusively by Austrian or Austro-German troops, and as they advance the question of the attitude to be adopted towards the people of the country, who may have been compelled to side, or make a show of siding, with the enemy, will arise. Albania, it is true, does not loom large on the Allied horizon. This is, however, no reason why some thought should not be given to the future settlement. It is likely to prove unfair both to the Italians and to the Albanians to leave the problem entirely to the military authorities on the spot. If, as seems probable, there will have to be some rectification of Albanian boundaries after the war, the general nature of the proposed changes should be known to the Governments concerned, in order that the earliest opportunity may be taken to regulate the administration of the districts affected in keeping with future requirements. For the rest, the Albania which, under whatever form of government, will presumably belong to the Albanians (even though owing to their actions it has to be administered in trust for them), ought to be regarded and treated as part of the Near East, which it is in the interests of the Allies to see at peace with itself and prosperous. Unless this point be kept carefully in mind by the military authorities, the Albanian record may prompt them to treat the conquered districts as enemy country pure and simple. No hard and fast rules can be laid down; but we should like to see some consideration given to the aspect of the case here set forth. It is unlikely that the Albanians have any instinctive leanings towards any foreigners. The tribesmen for the most part are not well versed in European politics; but they are accustomed to render unquestioning allegiance to their immediate chiefs, and are by no means averse from fighting. If they find that they have been misled by the Austrians, they will probably show little hesitation in transferring their sympathies elsewhere; but it will be necessary for those who are making a bid for those sympathies to appear amongst them, first as victors, certainly, but after that essentially as friends.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

FAMILY LIFE IN EGYPT IN ROMAN TIMES.

As Disclosed by the Papyri.

Probably no collection of translations from papyri of the Greek and Roman eras in Egypt affords such an insight into the daily life of its people as does the second volume of the Tebtunis Papyri. Their work and play, their joys and sorrows, their quarrels and endless litigation are all illustrated as by the cinematograph—save that there is no posing or attempt to appeal to the gallery. For the writers of the documents we now peruse with amusement or sincere sympathy disclose their doings to us without the faintest idea that some 2,000 years after they penned them their letters and lawsuits, deeds and receipts would be published in learned tomes by peoples in the distant North, or on a new continent far away over the Western seas.

The study of the thoughts, motives, and actions of our fellow men and women under the stress of circumstances that come at times to almost all of us in life will always be of supreme interest. Reading over such papyri as these, which the savants designate as "non-literary," may not result in the acquisition of much learning; but then even the studious cannot be always acquiring knowledge, but need mental as well as bodily recreation. Some day a clever novelist will find in these old, often mutilated, rolls a perfect mine of wealth for his art and the plots for many entrancing stories. He will also have the additional advantage of introducing his readers to a newly recovered page in the story of mankind.

To illustrate these ideas we propose here not to summarise or review the documents to be referred to so much as to quote some of the most naïve and interesting, and to let them speak for themselves.

Several of those selected will be police or magisterial reports, or appeals to the authorities for redress of wrongs and grievances, because such matters were collected by the administrators or solicitors and stored in the archives or safe places, and so, fortunately, have been preserved for our entertainment. Sometimes, as we shall see, the remains of private letters, wills and deeds, and accounts are found amid the ruins of private houses or in tombs.

We commence with a notification of birth, which had to be duly made by the father, some of the names being omitted for reasons of space:

To Arius Commogranneus of Tebtunis, from Psophis, son of Harpooras, son of Pasebkis, inhabitants of the village, priest of the fifth tribe of the gods at the village, one of fifty exempted persons. I register Pakebkis, the son born of me and of Tasies, daughter of Taopis in the 10th year of Tiberius Claudius Caesar Imperator, and request that the name of my aforesaid son Pakebkis be entered on the list.

In many cases priests were excused from serving in the *corvées* and freed from taxation, and this one, Psophis, in case, by this notice, his name should come before some revenue officer who might search for and fail to find tax payments from him, takes care to mention his exemption.

The barbarous practice of worshipping animals was, it is well known, carried to its farthest limits in Egypt. Not only were those of them that were kept in the temples to be adored as deities pampered and cared for during life, but, like human beings, they were mummified and interred in coffins and vast tombs when dead. This debasing cult continued far into the Christian era, as the papyrus we will now quote proves. Its text concerns the providing of fine linen for the funeral of a bull, the animal representative of the god Mnevis. Another papyrus at Geneva contains the record of a similar supply of linen for the obsequies of an Apis bull. The document is a receipt from the priest of the temple of Atum-Mnevis at Heliopolis for linen sent to him from another priest at Tebtunis. Almost all the temples had a staff of linen weavers; and as such a large animal required much material for wrappings, several shrines seem to have sent lengths to make up the quantity.

Tasens, chief prophet and overseer of the temples of Heliopolis and Aphroditopolis, through Horus, son of Areis, and

other priests of Helios and Mnevis, to Maron, son of Pakebkis, priest of the temple of the gods, in the village of Tebtunis; you have delivered and given to us for the burial of Mnevis, son of Osortha, 20 cubits of fine linen; the 19th year of the Emperors Cæsars Marcus Aurelius Antonius and Publius Septimius Geta.

Many papyri contain complaints of personal assaults and robberies with violence, such as the following appeal dated A.D. 167.

To Longinus, Decurion of the Arsinite Nome, from Pakebkis, son of Onnophris, of the village of Tebtunis. On the 30th of the month Epeiph, when the hour was late, one Saturnilus, with a great many others, I know not why, having no complaint against us, picked a quarrel, going so far as to rush in with stones, and seizing my brother, Onnophris, they wounded him so that his life is endangered. Wherefore, sir, I submit this statement, and beg you to order him (the perpetrator) to be brought before you so that he may take the consequences, and that I may obtain satisfaction.

Such assaults appear to have been made also upon the gentler sex, as the next document shows:—

To Apollonius, who is performing the duties of Epistates of Tebtunis, from Tarmiusis, daughter of Petesuchus. On Thoth 18, of the 22nd year, at a late hour, Patunis, surnamed the dumb, inhabitant of the said village of Tebtunis, made an attack upon my mother Tasuthis, and gave her numerous blows upon various parts of the body, and her life is endangered. I therefore present this notice, begging you if you please to secure the aforesaid Patunis. For, if this is done I shall have gained succour from you.

The wrongful imposition of taxes forms the subject-matters of scores of complaints addressed to the administration. The following, from a lady, will give an idea of the nature of many of these documents. It is of the Second Century.

To His Highness the Epistrategus, from Cronous, daughter of Zoius, son of Petesiechos, of the village of Tebtunis. A long while ago, my lord, my aforesaid father was selected as a superintendent of confiscated property, and, after the appointed term of his office, he died without means, leaving nothing at all; yet ever since the 13th year of the deified Aurelius Antonius demands have wrongfully been made upon me for the Government dues payable on behalf of the property. Wherefore, my lord, since it has been decreed that women should be exempt from such burdens, I, being a defenceless woman, weighted with many years and in danger of having to leave my home on this account, perforce take refuge with you, begging you to give orders now, that the property standing in the name of my father be transferred to living persons.

The result of this application is that the epistrategus endorses it "To be sent to the Strategus."

In Egypt, until very recent times indeed, *baksheesh* and personal influence were all-powerful in ameliorating the rapacity of the Government and the rascality of the fiscal officials. The next document, a letter to a priest who was connected with the financial arrangement of his temple, concerns the approaching visit of a government inspector. There was evidently reason to believe that the temple accounts would be found defective, or would disclose maladministration. The cleric is, however, told he need not be anxious, as, whatever he might detect, the official was not likely to make a disturbance. It looks very much as if some of the funds had been applied to the purchase of robes to be presented to the writer of the letter. The farewell is a comical comment upon honour among thieves.

To his dearest: greeting. I have sent letters about the six robes, telling you to send them to me at any cost. I now write in haste to prevent you being anxious, for I will see that you are not worried. You must know that an inspector of finance in the temples has arrived and intends going to your division also. Do not be disturbed on this account. I will get you off. So, if you have time, write up your books and come to me; for he is a very stern fellow. If anything detains you, send them on to me and I will see you through, as he has become my friend. If you have difficulties for funds write to me and I will get you off, as I did at first. I write to you in order that you may not put in an appearance yourself, for I will make him let you through, before he comes to you. He has instructions to send recalcitrants under guard to the high priest. Do not neglect yourself nor what I wrote to you to buy for me, as I am in need of them. Good-bye, most honoured friend.

Domestic differences arising from unfortunate marriages are revealed in the papyri, as in the following case of an appeal to the authority from a wronged wife:—

To Gallus, Centurion, from Heraclia, daughter of Didymus of Antine, residing at Tebtunis. Several years ago, my lord, I was united in marriage to Hermes, son of . . . of the village of Theognis, during my parents' lifetime, and brought on the marriage, in accordance with the contract made between us, a dowry amounting to 5,000 drachmæ. I have also had two children by him, and have no thought of another man. But he, after

my parents' death, carried off all that was left me by them, and took it to his house at Theognis, and is using it up.

The wife's dowry remained her personal property after marriage, and her possession of it would be upheld by an honourable husband. Hence, when in need of funds for some profitable transaction, or because of bad crops or misfortune, the lady would lend part or all of her dowry to her spouse. The next document, which is of the year B.C. 12, is a specimen of such an arrangement.

The 18th year of Cæsar. Registered by Herodes, writer of contracts. I, Pakenus, inhabitant of Hiera, Persian of the Epigone, have received from Tameische, daughter of Soknopis, my wife, the loan of her dowry, with clothing, making 24 silver drachmæ, which I will repay. If a separation between us take place, I will pay it within 30 days, from the day on which I receive notice, without any delay, or subterfuge, as aforesaid, and I have placed the contract in the hands of Ptolemaeus. I, Hippas, wrote for him at his request, because he stated that he was illiterate.

J. O.

'TWIXT TIGRIS AND INDUS.

Viscount Bryce presided over a meeting of the Indian Section of the Royal Society of Arts, held on the 18th inst., at which a paper entitled "Between the Tigris and the Indus—the Ben-i-Israel," was read by Sir Thomas H. Holdich, K.C.M.G.

The lecturer began by describing the home of the Ben-i-Israel, who, he said, belong to (if they do not comprise) those Durani clans who established themselves as the dominant power in Afghanistan after the death of the great Persian ruler, Nadir Shah, in the eighteenth century. It was a well-watered and fertile land, bright and warm with sunshine in summer and wrapped in the snowy mantle of an Eastern Switzerland in winter. The Ben-i-Israel are all Mohammedans, of the Sunni sect, and there are certain curious traces of Levitical ritual in some of their observances. They maintain that they originally came from Asia Minor, and they are undoubtedly immigrants from the West. They possess in a very marked degree the Hebraic cast of feature and character; but the lecturer emphasised the necessity of distinguishing between the Jew and the Israelite. The Afghan hates the Yahudi, or Jew. Referring to the name Kabul, Sir Thomas said that there was no difficulty in identifying it with that of a well-known place mentioned by travellers in Palestine and one of the cities given by Solomon to Hiram. The identity of a place-name in localities so widely separated as Syria and Afghanistan was at least curious, if not significant.

It might be interesting to know how the Ben-i-Israel could have reached the Kabul valley from Armenia, or from any other district "beyond the Euphrates," to which they were originally carried captive. There was a time when, across the width of Persia, by at least two world-old high roads, the slow caravans passed and repassed from Central Asia and India to Syria and the West. Then came the sweeping hordes of the North-east, to interpose a barbaric wedge which practically shut the main gates of the Eastern trade, and the sea-borne trade sprang into existence. Now, again, there appears in the not very remote future the chance of a revival of that old-world honoured overland trade which existed before the days of Israel. Who could well doubt that the centre of conflicting interest in the present war is trending towards Constantinople (with all it stands for in the Mediterranean, in Egypt, in Asia Minor, Mesopotamia, and ultimately in Persia) as the final issue to be fought to a finish between Germany and Russia? Two notable events had lately been recorded in the progress of Eastern affairs bearing directly on this important question of overhead communications: the first railway had been opened in Persia, and the Taurus had been pierced by the Germans. The rights of the highways through Persia, if not Persia herself, had become the desire of Western nations, and we heard loudly-expressed political aspirations for the open "road to the East." What did "the East" mean? Did it mean Persia and Central Asia, or did it mean Afghanistan, India, and China—or all of them? Sir Thomas thought we might take it that it meant India directly, and the rest ultimately.

The iron rails of two great systems emerging from Europe now pointed eastwards, and neither of the two belonged to England. One was Russian, from the Black Sea, the other was German, from Berlin and Constantinople. We had lately been paralysed by fear of German designs on Baghdad. Let us hope that the war would shake old England out of her paralysis and that we should take our place once more in the world of international enterprise. Anyhow, Asiatic developments would not stand still for us. It seemed probable that either Russia or Germany would dominate Constantinople after the war. We meant that it should be Russia. We might regard all the Balkan fighting and all the struggle in Asia Minor as but the preliminary to a decision on the final question of command in Constantinople, with all that it stood for. There was, however, this difference between the two: Russia without Constantinople had still a wide vista of national expansion if she retained Armenia. Germany, if she lost Constantinople, lost all hope of her Eastern progress. It was not merely Mesopotamia and Persia, or even India added, that filled the German

horizon. We must remember China and the millions Germany had already sunk in securing a footing there.

Lord Bryce, in opening a discussion, said in the future we should see two or three railway lines projected to connect the West with India. He hoped that when peace came the Allies would be determined not to allow Germany to obtain any hold on Mesopotamia. We now knew how dangerous that would be to our own interests in India. He also hoped that on no terms would Germany be allowed to acquire Constantinople, for that would be extremely dangerous. One of the points on which the Allies would be most united was to prevent any hold whatever being established by Germany in the Balkan countries.

Dr. Moses Gaster (Chief Rabbi of the Spanish and Portuguese Jews) said that he remembered a lecture over which Lord Reay presided some years ago, when pictures of Pathans were shown, and one might have thought they were Jews who had walked out of the ghettos of Russia. We knew from Josephus that large numbers of Jews lived beyond the Euphrates in ancient times, and there was a legend of a Jewish traveller who, in the ninth century, visited various Jewish tribes in that part of the world. Apparently he started from the coast of India, or the Persian Gulf, went to the North, skirted the Black Sea, touched Southern Russia, and walked back through Syria to Ethiopia. Several centuries later the same story appeared in Europe as the legend of Prester John, very little being changed but the name. Later than this story of the early Hebrew traveller was a very ancient Persian document, written in Hebrew characters, which had been discovered in the Treasury of Egypt. It was dated about 1020, and came from Jews living in India close to the Afghan border. Then there was in mediæval times a big colony of Jews in India, to whom the other Jews refused recognition, because of some peculiar customs, they having become more or less assimilated with the local population. Another link in the tradition was furnished by the black Jews of Cochin, who had still further changed.

Colonel Yate said that nobody who had lived with the Afghans, as he had done, week by week and month by month, would doubt that they were bona-fide Israelites. He had ridden with them all day, fed with them, sat up by the camp fire talking with them, and found that they firmly believed they were Ben-i-Israel. He did not see why people who had no great personal dealings with Afghanistan should doubt their statement. He congratulated Sir Thomas Holdich on his Biblical knowledge; he (Colonel Yate) had not previously known that the word Kabul was in the Bible at all. We had seen recent references to an Armenian settlement in Persia 300 years old, where the settlers had given their habitation the name of the place they had come from, and it was certainly possible that Israelites who had been deported beyond the Euphrates and had wandered for centuries, when they settled down in Afghanistan would give their new settlement the name of the city from which they had originally come. Sir Thomas Holdich had opened up vast possibilities for the future. He agreed that the Ben-i-Israel were the dominating tribe of the great kingdom holding the gates of their enemies—the great passage of the Hindu Khoosh both east and west. He looked upon the Amir of Afghanistan as a real warden of our marches. The Amir had been a most faithful ally throughout the war and had kept the whole country quiet.

Sir Henry James said that Sir Thomas Holdich had not brought the Ben-i-Israel far enough to the East. There was a very curious old habitation of undoubted Israelites, with synagogues, rolls of the law, and so on, still to be found in the centre of China.

On Saturday an order was received in Canea from the Salonika Government calling on all untrained classes in Crete born in the years 1884 and 1885 to report themselves between the 21st and 28th inst. It is stated, adds Reuter's agent in forwarding the news, that a general mobilization of the trained classes is expected within a few days.

Reuter's Paris correspondent reports (January 22):—M. Hanotaux has an article in the *Figaro* on "The Future of Turkey," a nation which Mr. Balfour demands shall be eliminated from Europe. The writer says: "Germany, it is stated, had voluntarily offered Constantinople to Russia in order to obtain a separate peace." "The idea," M. Hanotaux concludes, "therefore originated with the friends of the Turks."

In an appeal from Erzeroum received by the hon. secretary of the Armenian Red Cross and Refugee Fund, it is stated that the territory bounded by Bayazet and Erzinjan, Kharsis, and Alashker, "has been the scene of terrible bloodshed, in which 250,000 of our unfortunate compatriots suffered last year. Some 30,000 are saved, mostly women and children. This broken remnant must form the basis of our future hopes and expectations. Hundreds of survivors come in daily from every corner of ruined Armenia in a most pitiable condition." Contributions should be addressed to Miss E. J. Robinson, hon. secretary, 35a, Elsham Road, Kensington, W.

"THE NEAR EAST."

THE PRESS ON THE NEAR EAST.

America and the Near East.

In a message (dated January 18, and published last Friday) the Washington correspondent of *The Times* describes the impression created in the United States by Mr. Balfour's note. He quotes the *World* as saying: "Certainly there is no guarantee of peace in the proposal to barricade a great Empire like Austria-Hungary from the sea in order to aggrandize Italy."

And while it may contribute to the welfare of mankind to exile the Ottoman Empire from Turkish soil, it will not necessarily promote peace if the Turk is driven from Constantinople." And he goes on to remark:—

The magnificent reception accorded to the spirit and principles of our peace terms should not tempt people to think that all Americans agree with them. The feeling still obtains in Liberal circles that by being too hard upon Germany and her Allies we may produce grievances pregnant with future wars.

One of the chief reasons for this feeling, besides the fact that neutrals are always more moderate than belligerents, is ignorance of the real significance of the Near Eastern situation. There is still a rather surprising amount of talk about the futility of our spending our energies to secure what it wants for this or that Balkan Power. The positions of Italy and Roumania are still easy targets for Prussian misrepresentation, as are Russia's claims to Constantinople.

The Turkish "Bulwark of Peace."

Dealing with Mr. Balfour's "remarkably able despatch . . . to America," the *Nation* (January 20) remarks:—

Its main concern is to justify the demand for the expulsion of the Turks from Europe. It points out that our view has changed since the days when we used to defend Turkish "integrity," because the facts have changed, and the Turks in German hands are no longer "a bulwark of peace." That, of course, was never the Liberal view of the rôle of the Turks. As for the case for their expulsion from Europe, it is almost rounded off now that they have been driven from Macedonia. The more imminent need is for the liberation of Armenia and Syria. What Mr. Balfour has in mind, however, is plainly the fact that the Germans have enlisted the Turks permanently in their military system, and are even now using them, as he points out, to fight beyond their own territories.

The *Nation* is of opinion that "this particular case of the Turks might, of course, be met by creating an international State in Constantinople and Thrace, or even by neutralising these territories under international control. The argument certainly does not require the annexation of Constantinople by Russia."

A Delusion of the "Talkers."

The *Saturday Review* (January 20) deals vigorously with what it well styles an "obstinate delusion" about the Allies and Greece.

The delusion in question is that we have not settled the Greek question because we are all tender Tories over the dynasty difficulty! This was ventilated by one of the "much-talkers" in Parliament some time ago, and now there seems no way of getting it out of the public's head. As a fact, it would be considerably nearer the mark to say that we have not solved the Greek problem because we are all not tender Tories, but visionary Whigs over the Parliamentary difficulty. The idea has been that, if only we could get the Greek Parliament with us, the Greek people and the Greek Army would fling up their caps and follow with wild enthusiasm. That is a mistake. The country made much the same mistake about the Turkish Parliament years ago. But there are people capable of believing that if we could only set up a popular Assembly in Hades we should free the inhabitants of the Infernal Regions; and that the spirits there would hereafter always take the right side and live happily and freely ever after.

"Our real misfortune in Greece," adds the *Saturday Review*, "has lain in not long ago recognising that it was a bad egg, putting its Army safely away in the Peloponnese and troubling no further about its people, its King, or its Parliament."

The Balkans and Republicanism.

The *New Statesman* (January 13) concludes an article entitled "The Allies and Greece" with the following paragraph:—

A last point worth considering is the extent to which the faults (as the Allies regard them) of King Constantine of Greece and King Ferdinand of Bulgaria may be regarded as faults of kingship, to be remedied, so far as those countries are concerned, by setting up republics in them. We have naturally no prejudice against either a Greek or a Bulgarian Republic; but we doubt whether either would prove much more democratic than what it replaced. The real trouble in Greece is not the strength of the King but the weakness of the people. There is not yet in the country any solid tradition or habit or instinct of law-abiding constitutional democracy; and for such a defect no quick paper remedy can do much. It is probably true that in 1915 M. Veni-

zelos had with him the majority of the Greek masses—the people who had votes and little else. But such people had never been the real holders of power in Greece; nor would they be under a republic. If the King gave place to a President, the latter would, in the nature of the case, follow South American rather than Parisian models. He might, of course, be a philosopher-autocrat, a Venizelos; but it is at least as likely that he would be a Castro or a Villa, or (to go no further afield than Greece's own modern republican history) a Capodistria. The one generic difference between Presidents of this type and Kings of Constantine's type is that their rule is less permanent; civil war and bloodshed are commoner; good and bad rulers alike are more easily displaced, and have more visibly and normally to rest their power upon bribery or military force. For this reason the peace-desiring sentiment of men, which lies at the basis of every State's existence, often leads peoples at such a stage of development to prefer a monarchical to a republican Constitution. M. Venizelos himself has expressed this preference strongly. Where it exists and is genuine, it seems to us that it would be a mistake in the name of the old-fashioned dogmatic Republicanism to force on a people a Constitution for which they felt themselves unripe.

"A Clever Automaton."

Sir William M. Ramsay contributes to *Land and Water* (January 18) "A Study of King Constantine." He considers that the best example of the success of one side of the Kaiser's diplomacy—his personal power—is seen in the case of the present King of the Hellenes. He writes:—

The present writer has watched King Constantine for a period of thirty-five years, and has seen him grow up from early childhood and develop. At the time of the first Greco-Turkish war, in 1896, he was a young man of little ability, inadequate education, empty and selfish, who had not been brought up to recognise and to make any sacrifice for the duties of his position. The war against Turkey came to test the Crown Prince, and he was shown to be not merely selfish, but cowardly.

I remember well the explosion of indignation against him personally which was roused then. A chorus, indeed, of champions of royalty protested that the Greek people was prejudiced and unfair in judging him, because, as a race, the Greeks could not forgive ill-success. The accounts of his conduct, however, as I read them and heard them, were given not only by impassioned Greeks, but by cool neutral observers, and they were unanimous. It was a right instinct which led the Greek people to protest against their destiny being allowed to pass under the control of such an empty, incompetent, and selfish individual.

It became necessary for the Prince to go for a time into "a sort of genteel exile," and he was accordingly packed off to Berlin.

In Germany the Kaiser took him and breathed a spirit into him, but it was a German spirit. It made him able to work, to sacrifice the present to the future, to form plans for a distant time, to conceal his intentions under a mask of bonhomie, and to aim steadily at autocracy, as well as to know something about the movement of soldiers in the field and the principles of modern war. This training left him as selfish as before. His ideas were bigger, his outlook on the world was immensely enlarged on the intellectual side, but on the moral side there was no improvement. He was almost hypnotised by the German diplomacy and militarism. Previously he had shown extremely little power of thinking or planning, and all that which he now acquired was breathed into him by the German mind. And so he has remained—little more than a clever automaton, which could be guided and influenced at will by the master in Berlin.

Sir William considers that "it is morally and psychologically impossible for the Greek King to act otherwise."

The soul which was put into him was a German soul. His thoughts and ideas and aspirations are wholly German. He knows that it is his German training which has made him a man; and every word that issues from Berlin is to him sacred and all-powerful, as the full expression of the highest truth. He knows far better than we do how the Kaiser has succeeded in re-making the Turkish people. He knows the fate of Serbia, and he is firmly convinced that Roumania will suffer equally. He believes that his only chance for salvation lies in declaring himself on the German side at the suitable moment. He sees how Ferdinand of Bulgaria succeeded in maintaining a pretended neutrality until the proper time came; and he is imitating Ferdinand to the best of his ability. Finally, he understands how he gained the reputation among his own people of a great and successful general; and he trusts to a "plan of campaign," suggested by the Kaiser, to carry him safely through the next war.

The Value of Greece.

The article concludes by asking: "Why trouble about Greece? . . . Of what value is it?" And Sir William Ramsay replies to these questions thus:—

To us it possesses in itself no value; but to Germany and her Asiatic plans, it is of enormous importance. With Greece Germany would command both sides of the Aegean Sea, and would stretch far into the Levant, and with those far-stretched fingers of the Morea touch the sea-path from Malta to Syria and to Egypt. It possesses a very long coast-line, which is a great want in Germany, even in the greater Germany. It covers the Berlin-Bagdad Railway on the west, as Roumania with the Danube and Bulgaria protects that line on the east. In German hands Greece would immensely lengthen that long sea-way which at present lies between Russia and the open Mediterranean.

Those who ask about the value of Greece to Germany can best answer their own question by taking a map and indicating on it the railway artery that gives vitality to German Asia, and then noticing how Greece protects that artery.

Praise Indeed!

The *Daily Telegraph* remarks very truly that "a Hamburg shipping organ is hardly the place where one would expect to find a tribute to the personality of the King of Roumania. But," it adds, "the *Hamburger Fremdenblatt* provides us with an exceptional instance. The special correspondent of this paper, Dr. Heinrich Wodnik, entered Bucharest with Falkenhayn's army, and spent a few days in collecting political gossip, apparently with the object of ascertaining to what extent King Ferdinand was to blame for Roumania's entry into the war. The result of his investigations is a remarkable summary of public opinion regarding the Royal family." The *Telegraph* then translates the doctor's report as follows:—

Who is blamed for what has happened? The names of certain politicians are always mentioned when this question is put; but the King himself is invariably absolved of responsibility. Still, the very manner in which his Majesty and his family are excused indicates that they mean more in Roumania than is generally believed. We in Germany are too apt to fancy that the kingdom of Roumania, since its origin is not national, in spite of old Carol's unquestionable leadership, sits rather unsteadily on its throne, and can easily be uprooted by the ruling oligarchy in case there is any disagreement with regard to policy. I am convinced that this belief is utterly wrong, for the dynasty is almost incredibly popular. The people are charmed with the present representatives of the Royal house—not only the King and his consort, but even more particularly the beautiful young princesses, whose photographs are to be seen in every country cottage.

In view of all this, it follows that the dynasty is no mere ornament, which the "real" rulers of the country can send about its business, as is too often loosely suggested; but a sovereign power rooted in the hearts and consciousness of the people. It would be a grave error to suppose that King Ferdinand owes his authority to this or that group of politicians, and that it is only thanks to their favour that he enjoys the possession of his throne.

Bucharest in Happier Days.

A charming picture of Bucharest before the coming of the Hun is given by W. F. Bailey and J. V. Bates in the current *Fortnightly Review*. "Here," says the writers, "the dull, grey, serious world seems to be non-existent"; and the picture they draw is certainly a pleasant one. Bucharest has progressed enormously in recent years.

It seems scarcely credible that fifty years ago these streets were nothing better than rough country roads, in the mud of which ox-waggons and carriages were wont to stick fast, while the side-walks were paved with boulders taken from the bed of the Dombovitza. Well within the memory of the older inhabitants petroleum lamps were the only lights obtainable, sanitation was conspicuous by its absence, and the Royal palace was little better than a huge farmhouse. Now there is not a vestige of an old building to be seen from one end to the other of the grand boulevards, where nationalism, independence, petroleum wells, granite quarries, and grain have changed an old into a new Roumania.

But a turn down one of the side streets and a walk in the older quarters of the town will enable you to fancy yourself back again in a Roumanian country village.

Small, low, white or pink, wooden-roofed cottages, with stacks of firewood and sheds leaning up against them, surrounded by tall, bright green poplar, mulberry, and plane trees, and orchards, fronted by tiny gardens full of lilies, roses, and sunflowers, meet the eye. Everywhere is heard the cackling, gobbling, crowing, and screeching of cocks, hens, turkeys, and geese. Here in one open space a flock of white sheep with fawn-coloured ears and fawn-coloured feet are resting, guarded by a couple of shaggy, bare-legged, bronzed shepherds clad in huge brown felt cloaks, with black astrachan caps, the size of a tea-cosy, on the swart heads, and with ten-foot staffs in their hands. Deplorably mingled with the sheep are the goats—goats of all sorts and styles, black, brown, white, and mottled; goats with horns sweeping in immense curves over their back. Not far off, under a clump of alders and willows, are some ox-waggons, and beside these, on the dusty ground, sleepy-eyed white oxen and buffaloes lie chewing the cud, while others of their species are hauling along their squealing, wooden-wheeled, overladen carts, the noise from which is enough to set the strongest nerves on edge. Behind booths set out upon the roadways the market folk are serenely waiting for purchasers. The women turn their distaffs, the men smoke and play cards and leave fortune unwooded, apparently indifferent as to whether or not they do bad or good business.

In this respect, the authors point out, the "Roumanians differ absolutely from the French, with whom, and not always correctly, they are compared. With

'the dignity of labour' these excellent people are totally unacquainted. Yet no one works harder for six days out of seven than does the ordinary Roumanian peasant, who is the backbone of the nation, but he works to live, not lives to work." The rest of the description is as pleasing as that quoted, but any reader whose appetite has been whetted must go to the original.

"Dirty Tactics in Roumania."

Mr. Edmund Dane begins an article in the *Daily Express* (January 22) with a reference to the Germans' use of explosive bullets in the upper valley of the Susita. The use of such things, he says very truly, "is a tribute to military ascendancy," and he gives it as his opinion that "the Roumanian situation is for the enemy growing day by day worse." At the time that the invasion of Roumania was decided upon—

There were evidently two courses open. One was to stand on the defensive against Roumania and to stiffen the resistance on the west with a view to an ultimate and fresh offensive; the other, to attack Roumania and postpone any eventual developments on the west to the issue of that attack. There is not the slightest doubt that Falkenhayn held out for the first of these courses, and there is not the slightest doubt that in doing so he clashed with the Kaiser's desire to be revenged. . . . The attack on Roumania promised to be a political, economic, and military coup of the first order, and appeared to be easy as well as short. Falkenhayn was dismissed and the famous Hindenburg plan adopted.

It has, says Mr. Dane, proved neither short nor easy. It was a false move. The article concludes:—

Some speculation is now being indulged in as to where Germany's next stroke, or attempted stroke, may fall. The one thing to be kept in mind is that the abandonment of the Falkenhayn for the Hindenburg plan has made an immense difference to the German prospects in the west. In a certain sense the Roumanian campaign is an additional war. Measuring it simply on the scale of this conflict, people regard it as a sidelight. In duration and in the number of troops engaged it has been for Germany as big a war as that of 1870-1871.

On the Falkenhayn plan all these resources were to have been used on the west. Even were the resources, raised with blood and tears, undiminished—and they have been already heavily wasted—the assumption that there can be another revulsion of purpose is gratuitous. Neither the position of Austria-Hungary, nor that of Bulgaria, nor that of Turkey, permits of any such proceeding. The enemy cannot walk out of this tangle as he chooses. He has to fight it out to the bitter end.

It is supposed that he is looking in the direction of Salonika with the design of a great attack. He is looking in that direction with a fear, not unjustified, about his capacity for defence. To meet the forthcoming blows on the west—strokes such as he has never yet experienced—he has once more to harrow his already thrice-harrowed population. All that is behind his use of dum-dum bullets in Roumania. He is hard pushed.

The Russians in Roumania.

On Saturday the first "leader" in *The Times* was entitled "Russia and the War." The concluding paragraph, which expresses unalterable confidence in the valiant Russian army, contains a hopeful reference to the situation in Roumania:—

As to the ability of the Russian armies in the field to render a good account of themselves this spring, the most satisfactory reports continue to be received. It is not necessary, indeed, to wait for the spring in order to measure the probable strength of Russian efforts this year. Daily proof of the increasing vigour of Russian military operations is furnished by the stern and continuous fighting on the borders of the Transylvanian Alps and on the banks of the River Sereth. The check administered to the Austro-German advance in Moldavia grows constantly more significant, and gives rise to strong hopes. We hinted some days ago that there might soon be a turn of the tide in the Roumanian campaign, and it is more than possible that the change may be at hand. The Russian forces in Roumania are no longer on the defensive, and there is some reason for thinking that Marshal von Hindenburg's attempt to march to the Pruth may involve him more deeply than he cares about. He has committed himself very far indeed in his Roumanian adventure, and conceivably he may have cause to regret it.

"Whatever may be the outcome of the Roumanian campaign," the article continues, "it is certain that Russia will take her full part in the general resumption of hostilities this year, armed and prepared as she never has been yet. She has an astonishing abundance of men at her disposal, and her gallant troops will no longer be asked to face the heavy batteries of the enemy with insufficient artillery protection. Beyond the transient elements of domestic unrest we can see the true might of Russia, which resides in the unalterable decision of her myriads that the great sacrifices of the past shall not have been made in vain."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

In a recent United States Consular report the American representative at Tunis requested that American exporters should furnish him with catalogues, trade journals, and other export literature for the use of the Consulate. The Consul adds that, "While Tunisia does not offer so large a market as do some other districts, there is a live interest in that field in both American goods and American methods. . . . It would seem that there is business to be done in this North African country, and British people should start in to see what it may amount to. We are at war, I know, and there are many difficulties in the way of trade; but the war is not going to last for ever, and we ought to do something in the direction of preparing for the day of peace."

The expression "trade after the war" is rapidly becoming a flimsy and threadbare shibboleth, and British traders and manufacturers are in deadly danger of being the victims of a faith which is without works. Let us hold on to the faith that is within us in the British genius to see things through; but if we fail to back our belief with good works we need not have much hope of salvation. And Tunis is not the only country in the Mediterranean that is calling aloud for enlightened enterprise; there is Egypt, where the authorities have been demanding for months British substitutes for the Huns, now happily excluded, but who "ran" certain lines exclusively before the war.

I was much impressed by a lecture which Mr. Edwin T. Nind delivered to the Sales Managers' Association in London the other evening. He advocated that every article of British manufacture should bear a distinctive official national trade mark, "to imitate which would be both forgery and treason, punishable by severe penalties." "There must," said Mr. Nind, "be some sign by which our brothers in the colonies and our friends in neutral countries can know what is British and what is German."

Our friends in Near Eastern markets will appreciate the force of this demand. British trade has suffered heavy losses through the practice of dishonest foreign travellers foisting off trash as being of the "best British manufacture." But we must be honest with ourselves none the less. We have had traitors in our own camp, and if we are not careful they will revive their practices as soon as the war ends. I know of cases in which the cheapest product of the cheapest British makers of cutlery—to mention one line—have sold their stuff to German travellers labelled "Best Sheffield make," and so on. The Huns have taken the trash abroad and displayed it to potential buyers as "the sort of stuff Britain turns out nowadays," and the damage done is such that it wanted a lot of working down. Therefore, while we busy ourselves about a distinctive British trade mark—and we want that—let us be certain also that a trade mark already in existence is not prostituted by the profiteer.

The "commandeering" of all Greek shipping in Allied ports by the Powers of the Entente follows almost logically in the sequence of

events in Greece, and there can be little complaint of high-handedness. The news, we are told, caused a great stir and some of the newspapers in Athens were quick to lament the "seizure" of the vessels. That was a temporary attitude, however, and when the rates which the British authorities propose to pay for the use of the vessels were made known "Piræus shipowners showed no dislike of the bargain which enables them to sit with folded hands till the war ends and to draw regular profits." In London, and other British centres, the impression is not only that the Greeks have been treated generously; but that the rates to be paid to them are out of all proportion to those which our own people, whose ships have been taken over, are paid. British shipowners are paid only 7s. per ton.

At first sight the rates which the Government propose to pay to the Greek shipowners do appear to err on the side of generosity—30s. per ton deadweight per month and the valuation of vessels for insurance at from £20 to £30 per ton according to their age and condition. Before the war the freight rate in the market was somewhere in the neighbourhood of 3s. a ton, and, as I have already said, since the war British shipping has been requisitioned at 7s. a ton. Then as to value: before the war, new ships could be built for £6 a ton, and it is pointed out that many of the Greek vessels can "by no effort of the imagination be described as new," and would have been "written down" to £3 a ton or less, which is one-tenth of the value now placed on them for insurance purposes. The early impression of undue generosity, therefore, is justified.

There is another point of view, however. Since early in 1915 the Greek shipowners have been reaping a rich harvest: they have been able to employ their vessels at very profitable terms and have consequently been receiving large returns on invested capital. We, that is the British Government, cannot say to them, "you have been making too much out of the war and we propose to tax your profits"—and to commandeer their ships on the terms we pay our own people would be a tax of a sort—because they are aliens. We might as well say to those neutral countries from which we purchase supplies: "It is war-time and you must sell at our price." That seems to me to be the position. Even now, in the matter of the Greek ships, we are applying the principle of "commandeering," because it is laid down distinctly that if Greek shipowners decline to accept our terms they will be paid at the British rate of 7s. a ton; and whether they accept or not, in the event of Greece going over lock, stock and barrel to our enemies "the contract will continue unaltered and the profits will be paid over to the owners through a Shipowners' Association to be formed in London."

Some interesting facts and figures were mentioned on Wednesday at the annual meeting of the shareholders of the Sudan Plantations Syndicate, Limited. It is noteworthy that Mr. F. Eckstein, the chairman, added to the tributes which Anglo-Egyptians had paid to the late Lord Kitchener, and emphasised the great interest which he displayed, after his appointment as Agent-General, in the cotton-growing problem of the Sudan. "Lord Kitchener," we are told, "fre-

quently visited the Gezira Plain," and was so impressed by the fact that the district "was a most ideal and suitable spot for cotton-growing on a large scale that he induced the British Government to sanction an important loan for the purpose of irrigation works."

No dividend has been recommended "in view of the necessity of maintaining a strong cash position," but the total results of last year's working show an increased profit—£3,277, which is better by £1,286 than that of the previous year. The syndicate's acreage under cotton has also been increased, and altogether the outlook is bright.

The stockholders of the Credit Foncier Egyptien have such confidence, apparently, in their directors that even the ordinary general meeting of the concern, called for the purpose (among others) of declaring a dividend does not appeal to them. The meeting convened for January 22 failed to attract "the number of shares required by the by-laws for rendering legal its proceedings," and the meeting has now been convened for February 7 at Cairo.

I am not surprised to learn that the people of Athens are becoming uneasy regarding the blockade. But, as the Athens correspondent of the *Morning Post* remarked in his message of January 22, "the raising of the blockade depends on the fulfilment of the Entente's demands, which are being satisfactorily carried out with the exception of the demobilisation of the Reservists, who are taking advantage of the privileges granted to them on account of their support of the King during the crisis. The Government are experiencing difficulties in demobilising these men, who number some 20,000." It is difficult to understand how the Greek Government can experience "difficulty" in sending back to civil life 20,000 reservists. "Difficulty" is scarcely the word to use, and I could find another.

Meanwhile, Greek maritime trade is at a standstill. I have reason to know that not only the Greeks themselves are in great straits, but that some neutrals who had entered into contracts with them are likely to be involved in loss of a serious character. It is unfortunate that this should be so, and that neutrals, inoffensive for the most part, should be made to share the penalty of King Constantine's treachery and double-dealing; but there is a point at which our solicitude for them must break down. We have to win this war, and a settlement in Greece is an essential factor in the operations, and—well, there is nothing more to be said.

Readers will join me in the hope that the committee appointed by the shareholders in London of the United Egyptian Lands, Limited, for the purpose of conferring with the board of directors, of looking into the present position of the company, of negotiating with the Mortgage Company of Egypt, and of endeavouring to formulate a scheme of reorganisation, will succeed in evolving a scheme that will get the company out of its present unfortunate—almost desperate situation. The committee, which includes Mr. P. Freme-Nassif and Mr. James Davenport, may be relied on to make the best of the position, and the shareholders' interests could not be in better hands.

COMMENTATOR.

Greece's Lost Opportunity.

King Constantine's Policy and Its Effect on the Trade of the Country.

(FROM A CORRESPONDENT.)

Not the least of the reasons for regretting the short-sighted and treacherous policy of the Greek King is the damage it inflicts on the material and commercial wellbeing of the country and people. In the early days of the war, the new conditions which were ushered in were not an unmixed curse. It is true that the cost of living advanced, that many industries were injured, certain branches of trade were restricted and credit acquired new limitations; all these may be admitted, but there were compensations apart from the assistance which Entente Powers would most willingly have rendered if other things had been equal.

The mercantile marine brought wealth. Greek ships were chartered easily and at the abnormal rates of freight which arose out of the shortage of tonnage, shipowners literally "coined" money; and it is on record that shareholders have received dividends which were beyond the dreams of avarice. The sudden access of wealth to the mercantile marine brought prosperity to several of the ports—Piræus and Salonika to mention two of them. Business which, formerly, went to Smyrna on the one side and to Trieste on the other, came to Greek ports, and up to a certain point Piræus, in particular, was rapidly becoming a centre of Mediterranean trade.

The King's Evil Genius.

Then, unfortunately, the evil genius of the King asserted itself. He had already played fast and loose with the friends of Greece and of the Greek people. German malignity began to peep through his dealings and character and he proceeded to develop his attitude of "passivity"—to describe which he abused the definition of honest neutrality—until he reached the stage where the ways turned, in one direction to the fulfilment of his treaty obligations and to union with the Entente, and on the other to dishonour and partnership with Bulgaria and Turkey. We know which way his heart led him—a sight for the gods would it not have been, a Greek King combining with Turkey and Bulgaria against Britain, France, Russia and Serbia!

To return to the trade question and its figures however. The records for 1915 are interesting. Imports into Old Greece in that year totalled just over £6,062,800 as compared with £6,760,194 in the preceding year, a decrease of £697,394, or nearly ten per cent. Against this, however, the exports advanced from £4,521,403 to £5,251,694, or about fourteen per cent. above those of 1914.

Food Imports.

Naturally food supplies were the chief articles in the list of imports, because Greece had never been able to produce sufficient to feed her people. These reached, in value, about forty per cent. of the total. In 1914 the percentage was twenty-eight.

The improvement in exports extended to many lines, the most significant being in agricultural products, largely owing to the abundant currant crop of 1914. Gains were also recorded in animal products, chemicals, cottons, yarns, and fabrics; but there were considerable declines in metal wares and oil substances.

The olive crop was, more or less, a failure, and its meagre character caused a decline in the demand for salt, which is used, of course, for clearing, while the difficulty in securing a supply of matches and in the shipment

of this commodity were also unfavourable items in the list.

Large numbers of refugees had fled to Old Greece from other countries, and this fact accounted for the gains in the receipts of petroleum, and also, on the other hand, for the scarcity and high cost of other lighting products, such as alcohol and oil, which had been active rivals of petroleum.

American Wheat.

In the imports American wheat was a prominent feature, and some interesting facts in this connection are available from a report submitted by the United States Consul-General at Athens, Mr. Alexander W. Weddell. He writes:—

"The movement of wheat from American ports to Greece that began after the outbreak of war in 1914 was continued in 1915. Practically all imports were made by or for account of the Government, which in turn distributed the grain to the millers. Imports of wheat from the United States in 1915 amounted to 294,623 metric tons, which was the entire quantity brought in, with the exception of 2,000 tons from Bulgaria; the United States also sent 63,000 metric tons of flour last year. Wheat and flour constituted the largest item of imports from the United States during 1915.

"Formerly the flour and wheat came from Russia through Black Sea ports, but with the closing of the Dardanelles this became impossible, and Greece was obliged to turn to the United States. It is not thought that this market can be held after the war, because of the relatively lower freight rates that will prevail from the Black Sea to Greece. In the past many steamers carried coal from England to the Black Sea, taking wheat as a return cargo, and in this trade Greek vessels played an active part."

In the exports the greatest decrease was in tobacco, which fell off in value by £787,772. It is thought that this heavy decline was caused by lack of shipping facilities. Other articles in which decreases were recorded were cheese, crude opium, olives, olive oil, sulphur, olive oil, and chrome ore, but there were heavy gains in shipments of figs, furs, gum mastic, emery, magnesite, licorice root, paints and colours, skins, and wool.

Prosperous Shipping.

Recent events have added to the importance of any information which can be gleaned about the Greek mercantile marine. There is no doubt whatever that this department of commerce has reaped all the benefits which were offered by the high rates that have prevailed from the beginning of the war. Last year (1915) Greek shipowners, attracted by the large prices offered for shipping, disposed of some ninety-one vessels of a gross tonnage of 231,000.

According to reliable figures, the number of Greek steamers of over 1,000 tons at the beginning of 1915 amounted to 498, having a total gross tonnage of 860,000. The ships of greater tonnage were principally engaged in deep-sea service, but as a result of the active demand for tonnage it is estimated that at present no less than 314 Greek vessels are engaged in foreign waters.

No satisfactory figures showing shipping profits for 1915 are available, although these gains have been placed as high as £20,000,000. One conservative shipping man estimates the gross profits, however, at £8,000,000, with net gains of £5,400,000. The same authority holds that the decline in earning power through tonnage sold in 1915 was compensated for by the great increases in freight rates and the renewed activity witnessed in the twelve months.

The Greek mercantile marine has never been favoured by any Governmental subvention or subsidy in any form, and this fact is largely the basic reason advanced by shipping interests in their opposition to the proposals

that have been made to tax shipping profits caused by the war.

Tobacco Producers Score.

It would seem that producers of tobacco scored, notwithstanding the war. True, the unfavourable weather conditions in October, the difficulty of raising money, and the declaration of a moratorium compelled planters to sell their tobaccos grown in 1914 and marketed in the spring of 1915 at very low prices. The 1915 crop was affected by the unusual conditions prevailing, and for that reason was smaller than the preceding one. At the same time, Asia Minor tobaccos, which ordinarily reach the market through Samsoun and Smyrna, were shut off. Under these circumstances the demand for Macedonian tobacco became abnormal, and resulted in a heavy advance in prices. Even the tobacco of Old Greece, which is of inferior quality, was eagerly bought up.

It is to be feared, however, that when the trade and commercial industry of 1916 comes to be written, the evils arising from the King's departure from the path of righteousness will be apparent. The internal conditions of the country have been made bad enough, and precarious enough, by the war, as war must affect neutrals adjacent to the fighting zone; but in addition to this the Entente Powers have been compelled to impose restrictions to withhold assistance at a time when the one would bear very heavily and the other would have been of great advantage.

At the moment the outlook is cloudy and obscure, but there are people who adore and love the Old Greece, who look with confidence to a future in which the King will have realized that he has made a mistake, and in which he will return to a policy which will be more beneficial to the country and people than that which has alienated them from their best friends.

EGYPT AS A REST-HOUSE.

Having decided to pass the evening of my life in Egypt, I have built myself a small house in the ever-fertile fields of this country, a Giza correspondent writes to the *Field*. I feel that in my old age a garden, in this climate and with three of the most beautiful views that man can imagine, will be a great resource. In this country the sun shines every day and all day for 360 days a year, and the rain is, so to speak, on tap; I mean that our only source of cultivation water is the irrigation water supplied by the Government.

In winter there is, every five or six years, a slight wind frost; but you can judge of the winter climate by the fact that from December 1 on is the time for roses and strawberries, roses being magnificent here and most easy to grow. In summer we get 85 degs. to 95 degs. Fahr. for several months, and generally a few days on which the temperature rises to 110 degs. to 117 degs.

The dryness of the atmosphere prevents us from growing many plants of the equatorial zone; for instance, stephanotis grows and flowers splendidly in autumn and winter; but in summer it requires care or one day it quietly dries up and dies.

I should say that after Central America, Egypt is meant for cacti. I have collected a good many from old palace gardens, where they had probably been put by Ismail Pasha, who bought every plant he could. They have grown magnificently.

Several echinocacti have now, for two years running, been in blossom for four to five months, with three or more flowers open at a time in some cases on plants so small that the whole plant—roots, spines, and all—would go into one of its own flowers.

There are fine gardens here, but they are exclusively devoted to producing roses and European annuals in winter. I want to get on to other plants, and my few cacti, stapelias, and gasterias have encouraged me much. It used to be said here of all roses, except La France and Gloire de Dijon, that they would grow in Egypt till some bold adventurer imported others and found that they all grew and flowered splendidly. Again, the zinnia grown here is a poor thing, so I got some of Sutton's and had plants a yard high and a yard and a-half wide, covered with flowers, many of which were 16½ ins. in circumference. Single plants of Indian pink are 4 ft. across.

GERMANY'S CREDIT SYSTEM.

A letter in the *Financial Times* from its Paris correspondent quotes a pamphlet by M. Ernest Sona, an Italian, who describes himself as "just a commercial traveller, who has never been mixed up in any political movement, but who has travelled extensively and observed much in all parts of the world," on "The Truth about the War," in which he describes in an interesting way the evolution of German trade. He explains how the German manufacturers came to introduce the long-credit system in foreign markets, including, of course, the Near East. When the Germans entered into the export trade they found that it was almost entirely in the hands of the British and the French.

The manufacturers of these two nations did all their business with wholesale houses of importing countries entirely through commission agents. The British and French manufacturers never sold to retailers, not wishing to fall out with the wholesale importers.

The commission agents paid the manufacturers by bills at 30 days, and opened accounts with the wholesalers, giving them longer or shorter credit according to their financial rating. The retail merchants thus depended upon the wholesale houses for their supplies, and the wholesale houses being in a position to judge as to the standing of the retailers in their district or country, the stability of local and of international trade was assured.

The Germans have completely upset this wise arrangement, and for the following reasons. When, many years ago, they offered their goods to the wholesale importers in each foreign market they found all doors closed against them. The importer considered German goods inferior in quality, though much cheaper.

Moreover, the import houses had been doing business for a great many years with the commission houses, and through these houses were on good terms with the British or the French manufacturers, who supplied goods to which they were accustomed. Finding a great difficulty in getting the wholesalers to take German goods, the German manufacturers—often through German commission houses which they established and financed for the purpose in each country—began to offer their products to the local retailers, directly over the heads of the wholesale houses, at such prices and with such long credits that the wholesalers were soon compelled to come to terms with the German commission houses.

It will be seen that the object of the German manufacturers was to interest the retail merchants in the exclusive sale of German products, thus detaching them from the local wholesalers, saving a middleman's profit, and freeing the retailer from the sort of tyranny in the matter of credit exercised by the local wholesale firms. Thanks to the long credit granted by German manufacturers, the retailer was able to enlarge his business and get rich quick without risking very much of his own capital, for he had six or nine months in which to sell the goods, and he only paid for them, in actual practice, when he had sold them. In order not to lose their connection, the local wholesale houses were reluctantly compelled not only to buy German goods, but also—even against their better judgment—to give the same long credits to retailers as the Germans did.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Wednesday.

It would almost be impossible for a more slack state of affairs to prevail in our market than at the present time, and the inactivity on the part of buyers throughout the past week has been very pronounced. There has been a marked distrust of prices in all quarters, and although the holding-off policy carries with it some risk, the feeling is prevalent that some advantage is to be gained by delaying the placing of fresh contracts. Rather violent fluctuations have occurred in American cotton rates, and the New York and Liverpool markets seem to be very sensitive and easily influenced by unimportant events. There is no particular change in the outlook for supplies of Egyptian cotton this season. Cloth merchants who do business with Egypt report that the conditions abroad remain generally healthy, but very little fresh buying has occurred, and manufacturers' engagements are steadily running down. The offers put forward in sized shirtings have been a long way out. A fair amount of inquiry has come through for the West Coast of Africa, and operations have not been quite at a standstill for Java and Singapore. With regard to India and China, the demand has been very disappointing, and any bids put forward have been altogether too low. Makers of cloth have now very irregular engagements. Printed, dyed, and coloured goods are still well sold, and producers of bleaching cloths have also substantial contracts yet to be executed. Fairly early delivery, however, can be obtained in ordinary grey staples. There has been very little activity in home trade circles, but distribution throughout the country is fairly healthy. The yarn market has been more depressed than ever. Home users of American qualities are inclined to use up supplies at the sheds and stop deliveries from spinners. Stocks, therefore, tend to back up in first hands, and this sort of thing results in weakness on the part of sellers. Export yarns for all outlets have been dull of sale. Egyptian yarns continue deeply sold, especially the finer counts. Producers of coarse numbers, however, are getting more prepared to meet buyers when fresh business is offering.

INTERESTING WILLS.

Mr. Otto Baerlein, of Osborne House, Alderley Edge, Cheshire, of Blackfriars Street, Salford, Lancs., and of Bank Top, Hartington, Derby, Serbian Consul and senior partner in the firm of Baerlein Bros., spinners, doublers, and merchants, of Salford and Gorton, who died on November 18, aged 59, left estate valued at £42,150 gross, with net personalty £41,500. He left legacies to relatives and servants amounting to about £10,000, and the residue of his estate for such charitable purposes at Alderley Edge as the Urban District Council may direct.

Mr. A. P. Ralli, of West End Avenue, Manhattan, New York, third son of the late Pandeli Ralli, of London, left estate in the United Kingdom to the value of £146,388.

NEWS FROM ALL SOURCES.

The Japanese propose to convert paddy and rice lands in Formosa into cotton areas.

The number of tobacco-growers in Germany in 1916 was 85,066. The acreage of tobacco plantations was 31,396.

Mr. R. E. Holland, an official of the Government of India, has gone to Busreh on special duty in connection with commercial affairs.

The Government of the Punjab (India) is considering the possibility of raising another prison labour corps for service in Mesopotamia.

In the six months, April-September, 1916, India imported from Egypt goods to the value of £207,400 and exported to Egypt goods valued at £586,066 sterling.

The Greek Consul-General at Sydney, who resigned his post under the King's Government recently, has been appointed agent of the Venizelos Government there.

Proceedings have been instituted in the prize court at Malta in respect of certain goods seized from the vessel *Taxiarchi*. The date of the appearance was January 15.

The importation into Tunis is forbidden of wine lees and crude tartar. Exceptions to the prohibition may be accorded under conditions to be fixed by the Tunisian Director-General of Finance.

Under an Order-in-Council, dated January 10, 1917, it is forbidden to negotiate for the charter, whether by time or voyage, of any vessel for the carriage of goods exceeding 1,000 tons to or from any port in the King's dominions, or in the territory of any of the Allies. It is also forbidden to negotiate the purchase of any goods exceeding 1,000 tons in weight from abroad on terms which include freight as well as cost.

The political and other dislocations in the Near East have caused the diversion of a good deal of the raisin trade to Spain. So far this season France and Algiers have imported 1,809,584 lbs of Denia fruit as compared with 110,432 lbs., and Switzerland—which imported none of the Denia fruit in 1915-16—received 608,944 lbs. Up to November 24, 1916, shipments to the British Isles totalled 23,198,000 lbs. as compared with 11,736,816 lbs. in the corresponding period of the previous year.

The *Egyptian Journal Officiel* of December 25, 1916, publishes the text of the law which enacts measures for the destruction of the pink worm pest in cotton-seed. This measure, which abrogates the act which came in force on December 25, 1916, prohibits between May 1 and August 1 of each year, the storing of cotton-seed and unginned cotton otherwise than in public and other depots licensed for that purpose by the Ministry of Agriculture. After September 1, 1917, all cotton-ginning factories must be fitted with special apparatus, approved by the Ministry of Agriculture, for the destruction of this pest, and all cotton brought to these factories must be treated by this method.

PRODUCE REPORT.

LONDON, Thursday.

Currents.

The market for spot fruit continues very firm, whilst choice and fine qualities are becoming scarce. No shipments have yet been reported, the blockade being still in force. Prices for Pyrgos and Provincial are quoted at 74s. to 75s.; Amalias, 78s. to 80s.; Gulf, 80s. to 82s.; Patras, 79s. to 82s.; and Vostizza, 82s. to 86s.

Sultanas.

There has been a moderate activity during the week, the demand being more for red Afghanistan sultanas, whilst some old Greeks were sold at full prices. Quotations for Afghan half-cases are 83s. to 95s.; Australian, 106s. to 108s.; Greek, 104s. to 118s.; Cretan, 90s. to 96s.; and Californian, 65s. to 94s.

Figs.

Some business has been done in Greek bags, at 62s. to 63s.; whilst Spanish have been moving at 50s. to 52s.

Dates.

Good business has been done in Hallowie at 33s. 6d., whilst other Persians are a little easier, Sieh at 30s. and Kadrowie at 31s. Egyptians sell slowly at 32s. to 42s.

Seeds.

Linseed is rather dull and cheaper; London-Calcutta, spot and afloat, quoted at 97s. 6d.; and January-February, nominally 100s.; Bombay ordinary, January-February, 101s. Rapeseed is firm; Toria-Ferozepore, January-February, is offered at 91s.; Toria ditto, 93s. 6d., Hull. Cottonseed is dull, with very little doing; London-Egyptian, Sakelaries, spot, £17 15s. per ton. Rangoon Beans are in better request at late rates.

Oils.

Linseed oil is dull and easier. Spot pipes £47 10s.; barrels, ditto, £48 10s., landed. Rape oil is firm for ordinary brown, naked, on spot, £54; English refined, barrels, £57 to £58. Cotton oil is quiet, but steady; crude, spot pipes, £49 10s.; refined pipes, pale, £51 10s. to £52 10s.; and barrels, sweet, £58 to £60, as to make. Soya Bean oil is firm; Oriental in cases, on passage, £47. Olive oil in good demand at £66 to £73, but offers are limited owing to absence of supplies.

Oilcakes.

Linseed Cakes: The market is very quiet, and prices remain nominal pending the decision of the Government as to any new regulations of prices. Best London made is offered at £18 10s., ex mill. Cottonseed

Cakes: Owing to heavy arrivals from Egypt, prices have declined fully 5s. per ton; best Egyptian in bags being quoted £15 15s., and best London made at £15 17s. 6d. Cottonseed Meal, spot, offered at £17, c.i.f.

Miscellaneous.

Eggs have declined, especially Egyptians, which have been sold this past week at low figures. English, per 120, 26s. to 30s.; Irish, 26s. to 30s.; Danish, 28s. to 32s.; Dutch, 28s. to 32s.; and Egyptian, 9s. 6d. to 12s. 6d. ONIONS are in short supply, and the cold weather has made rates much higher. ALMONDS are dearer; Jordan, finest, are quoted at £12 per cwt. to £12 10s.; good to fine, £10 10s. to £11; Barbary, sweet, £3 12s. to £3 15s.; and bitter, £5 to £5 8s.

As is well known, the bulk of Greek tonnage in British ports has been held up for several weeks past, writes a Cardiff correspondent in a contemporary. Only in a few cases have vessels of this nationality been permitted to clear, and at the present time there are close on a dozen Greek steamers in South Wales ports. Owners have now received an intimation from the British Government that Greek vessels may trade between the United Kingdom and French ports situated between Dunkirk and Brest.

ENGINEERING NOTES.

Nitrates from the Air.

Addressing the Association of Science Teachers on "Nitrates from the Air" a few days ago, Mr. E. Kilburn Scott said he believed three scientific developments were among the leading factors in leading Germany to decide that the time was opportune for the war—the manufacture of nitrates from the air, the success of aircraft (especially the Zeppelin, which modified the insular position of this country), and the success of the gyro-compass, which solved the problem of accurate steering of battleships and submarines by making the compass independent of magnetism. Mr. Scott suggested that steps should be taken to develop the manufacture of ammonium nitrate, which was more profitable and of greater benefit to the country than ammonium sulphate. The whole of the plant and material for the manufacture of nitric acid from the atmosphere by the direct electric method could be obtained in this country. This suggestion should be seriously, and promptly, considered, for, indeed, few important countries in Europe have not installed plants for the manufacture of nitric acid from the atmosphere and nitrates for the purposes mainly of explosives and fertilisers.

Cheap Power.

The industry, as a rule, flourishes on cheap power; and as water power is, at present, the cheapest, countries which nature has endowed with waterfalls were the first to avail themselves of that power and develop the industry with success. America, with Niagara, and Norway, with her unique waterfalls, are prominent in the development of the industry on a large scale, while Switzerland, Italy, and the two Germanic Empires were prompt in utilising similar resources for the purpose. In Great Britain nothing has been done, although the waterfalls in Scotland and in some parts of Wales could be utilised for such an important industry. It is often said that if other European countries can boast of such water-power energy, Great Britain is blessed with an abundance of coal; but apart from the warnings given by various British scientists regarding the economy with which coal must be used by steam users, the difference in the cost of production of nitrates as between water power and steam power is worth consideration.

Methods of Production.

Nitric acid is obtained from the atmosphere by means of large and powerful arcs. Taking a general figure, according to authentic observations, it may be stated that one kilowatt hour yields 63 grams of the acid. One ton of the 100. per cent. acid thus requires nearly two kilowatt years, or nearly 3 h.p. years. Much discussion has waged around the relative consumption of energy in the direct method, or arching through air, or the indirect method, via calcium carbide, cyanamide, and ammonia. Both methods are in use. In either case energy consumption is large, even if, as in the one case, raw materials are without cost. With steam-generated energy at £8 per h.p. year the energy per ton of acid amounts to about £21, as compared with slightly less than £1 in Norway and £10 at Niagara. Now £8 per h.p. year represents .29d. per unit, while the Niagara figure is about 0.14d. per unit. This difference ought to encourage prompt action in this country.

Balkan Producers.

In many districts on the Balkan peninsula the industry could be developed with success, and particularly in Serbia and Montenegro, where there are spots, naturally convenient for the purpose, in which the manufacture of nitrates from the air by the utilisation of water-power can be established, with results as regards cost of production

very much approaching, if not equal, those in Norway. In Serbia, apart from other secondary water-power sources, the Morava and Vardar rivers can afford immense power for the purpose; whilst Montenegro, with the rivers Boyana and Drin, could be one of the greatest producers of nitrates in Eastern Europe. Unlike some of their neighbours, the Montenegrins are very industrious and enterprising. As a proof we may mention the businesslike activity which they displayed after the Balkan War and while they were in possession of Scutari. The possession of that town, with its vast lake and surrounding fertile district, has always been considered by the Montenegrins as absolutely essential to their economic and commercial progress; thus, as soon as they expelled the Turks and occupied the town in 1912 their Government prepared a scheme, which was to have been carried out as soon as peace (after the Balkan War) was concluded.

To Divert the Drin.

The scheme was to divert the River Drin to its original bed and dredge the Boyana River for the reclamation of the barren marsh lands around Lake Scutari. The Drin, through Turkish negligence, had gradually forced a new course for itself from the sea into Lake Scutari, which is now 36 to 40 ft. higher than the Adriatic. The Montenegrin Government proposed, by means of a huge barrage, to lower the level of the lake for about 16 ft., and this would enable them to reclaim the low-lying and once fertile lands surrounding the lake to the extent of some 75,000 acres, and in the vicinity of the Boyana to the length and breadth of another 75,000 acres. They also proposed to dredge the Boyana, to make it navigable for coasting vessels right up to Scutari from Palai, a small town at the mouth of the Boyana. Unfortunately, however when peace was concluded the Great Powers decided that Scutari should belong to Albania and not to Montenegro. Whatever the future may hold for Montenegro, we should remember that there is at present sufficient available water-power in some parts of these two rivers that can be utilised at a comparatively small cost for the manufacture of nitrates; while with the additional power which the Montenegrin scheme will provide the output would be much larger, and Montenegro would accordingly become a great producer of nitrates.

German Motor Ploughs.

A note written recently by Mr. Julius G. Lay, Consul-General for the United States in Berlin, regarding German motor ploughs, will be of interest to British manufacturers of agricultural machinery. "The motor-plough that was invented by a citizen of Elbing, near Dantzig, possesses many admirable features," he writes, "but on account of its rigid middle beam it is not as valuable as some of the later inventions of the same type. These ploughs were greatly in demand in East Prussia, where the fields are large and labour is scarce. The plough mentioned costs about 17,000 marks (£810) before the war, but now brings 35,000 marks (£1,666). The best plough of this type is the 'Stock,' manufactured in Berlin. In 1913, about 700 from that factory were placed upon the market. More have been sold during the war. These ploughs are known not only in Germany, but also in many of the agricultural countries of Europe, such as Austria-Hungary, Russia, Roumania, Bulgaria, and Denmark. Some have been sold in South America, Australia, and the German colonies. After the war these ploughs will doubtless have a large market abroad, because during the past two years they have been further perfected."

Chromatic Ore.

Crude chromite ore, so important in modern steel metallurgy, has generally to be dressed to make it suitable for sale. It has usually

to be broken up either by hand or mechanically to a suitable size, so that it can be hand-picked. The output should contain about 50 per cent. of chromium sesquioxide. Chromite, says *The Indian and Eastern Engineer*, is obtained in large quantities from New Caledonia in the South Pacific. There is a large output from Rhodesia, and Greece exports chromiferous iron ores in considerable quantities. In Europe there are large deposits of low grade ores in both Germany and Austria. Great Britain and France have to import all the chromites they require. North America has a small output, about 2,000 tons annually, but has also to import. There are many chromite mines in the Ural district, mainly along outcrops of the rivers Kameuka and Top Kaja, which have yielded as much as 20,000 to 30,000 tons annually. The mineral is also found in some of the areas from which platinum is recovered. In Japan outcrops have been found, but there is no output, as the quantities available appear to be too limited to encourage enterprise.

TILBURY DOCKS ENLARGED.

An important extension of the accommodation for the largest class of liners frequenting the Port of London has just been completed. By the enlargement of the main dock at Tilbury berthage has been provided for three additional ocean steamers of 600 ft. or 700 ft. in length, together with the necessary equipment in the shape of railway lines, transit sheds, and electric cranes. The new berths are being allotted by the Port of London Authority to the White Star Line, the Cunard Company, and the British India Company respectively. Vessels up to about 25,000 tons can be conveniently dealt with at this main dock extension, where there is a depth alongside the south quay of 42 ft. 6 in. below Trinity high water. The water area added to the dock is about 20 acres, and the available berthage is increased by nearly 20 per cent.

For years past the average size of the steamers entering Tilbury Dock has been steadily increased. As originally constructed, the dock was intended to accommodate twenty-six vessels at the berths, and transit sheds 300 ft. in length by 120 ft. in width were considered of sufficient size. At the present time the accommodation designed for twenty-six steamers of a former age is sufficient for only sixteen modern liners. By the present extension the number of berths for steamers of modern dimensions is increased to nineteen, with the advantage that the three recently completed are provided with transit sheds respectively 550, 600, and 660 ft. in length and 120 ft. in width. Such figures perhaps hardly convey an adequate impression of the hugeness of these well-constructed corrugated iron buildings, the largest of which would be capable of holding nearly 40,000 persons standing closely together. Tilbury is chiefly a transit dock for most of the goods landed there either go up river by lighter or are put on rail. These sheds give an idea of the immense space required for purely transit purposes in connection with the arrival of modern liners.

Railway lines in the rear of the sheds give connection for passenger and goods traffic with London and all parts of the Kingdom. Pending the erection of the contemplated landing stage on the adjoining river front, these new berths and their convenient railway platforms will be used by passengers to and from the colonies. For the discharge of cargo the new quayage is equipped with ten electric cranes capable of lifting three tons each, and two more are under construction. This new development at Tilbury, which is regarded as of great importance by the liner interest in London, is part of a much larger scheme of dock extension which the Port Authority has in view when the war is over.

BACKWARD BRITAIN.

Speaking last week as the new president of the Geographical Association, at the annual Conference of Members held at the Day Training College, Colonel Sir Thomas Holdich said there was necessity for a revision of our British methods of treating commercial or economic geography in view of our trade competition with other nations, especially Germany.

Not only had we shown a lamentable lack of energy in this matter, but we had neglected opportunities in the past which we fully deserved to lose for ever. He could testify from his own experience that in the remoter parts of the world we were being shouldered, out of particular areas by Russians and Germans, partly because of a national apathy which stemmed the energies and activities of our trade agents, and partly because of the want of knowledge and foresight on the part of those behind the agents. There was a lack of geographical knowledge, not merely knowledge of the physical aspects of these places, but of their human elements—their wants, characteristics, and fancies.

One would imagine that in view of past experience there would be an increasing demand for the study of commercial geography. Yet out of 19,000 candidates who presented themselves for examination before the council of the Royal Society of Arts in 1916 only twenty-three had taken up commercial geography, and half of these failed. That did not indicate any wide demand for this particular study, the usefulness of which was so obvious. A demand must be created by a revision of our system of education in elementary and secondary schools. We must develop the subject in view of the large opportunity for capturing enemy trade this war afforded, and we must beware of the counter-attack on the part of an enterprising enemy who knew his geography.

THE PAN-GERMAN SEER.

Dr. Paul Rohrbach, well known as a leading pan-German, and the protagonist of ruthless forward policy in the Near East, has added a new chapter to his "Deutsche Politik." "The real decision of the war lies in the Orient," he declares, in a passage of much significance. "Asia Minor, Syria, Mesopotamia, Persia, and the Balkans will be able to supply all the wants of the Central Empires. It is true that the best informed experts on the subject have cast ridicule on this claim, but that makes no difference. In the depths of the Taurus is a wealth of various ores, in ancient Assyria and Babylonia are mineral oil wells more abundant than those of Russia and North America. In Cilicia and on the plains of Syria cotton can be grown to meet all our requirements. Wheat will come from the great river valleys, and countless herds of sheep on the highlands of Syria and Anatolia will supply us with our wool."

Turning to a still more entrancing vision, Rohrbach writes: "A railway from Damascus to Cairo, and one from Angora to Erzerum, will compel Britain and Russia to respect us. Should we maintain our position in the Turkish Orient, the natural consequence will be the extension of our influence over the rest of the Mohammedan world."

ACREAGE OF ROUMANIAN CROPS.

The Roumanian Minister of Agriculture has published figures for the crop acreage of Roumania in the autumn of 1915 and the spring of 1916. The following table shows the area devoted to various crops in the agricultural year 1915-16, compared with the area in 1914-15 and the average for the five years, 1908-9 to 1912-13:—

Crops.	Average 1908-9 to 1912-13.	1914-15.	1915-16.
	Acres.	Acres.	Acres.
Barley	1,318,650	1,317,182	1,453,732
Beans	89,593	185,452	188,167
Corn	5,150,236	5,207,204	5,055,994
Millet	111,993	125,349	104,014
Oats	1,105,352	1,064,329	1,068,096
Rape	184,836	94,204	68,264
Rye	316,316	186,643	199,611
Wheat	4,576,371	4,705,493	4,843,587

COMPANY MEETINGS.

United Egyptian Lands.

A meeting of shareholders of the United Egyptian Lands, Ltd., was held on Tuesday at Winchester House, E.C., for the purpose of considering the position of the company consequent upon the action for foreclosure commenced by the Mortgage Company of Egypt, Ltd., against the company in Egypt.

Mr. W. W. R. Swinson (London secretary), who presided, said that, as shareholders were aware, all the members of the Board were resident in Egypt. The London Board was abolished some years ago and the entire management transferred to Egypt, where the assets of the company were situated. He was appointed London secretary for the sole purpose of fulfilling the requirements of the Joint Stock Companies Acts, and, in the circumstances, shareholders would appreciate that he had no first-hand knowledge of the position of the company in Egypt, and could only give them such information as he had received from Mr. Citti, the managing director. Upon receiving the letter from Mr. Citti, which was referred to in the circular issued to the shareholders, he immediately communicated with the secretary in London of the Mortgage Company of Egypt, and upon that gentleman promising to bring the matter before the next meeting of his Board, he (the speaker) wrote him a letter, dated November 29, setting out the position so far as he knew it, and asking him what were the reasons for the action which his company had taken. Mr. Swinson then read the letter referred to, in the course of which he said he understood that at the present time this company was indebted to the Mortgage Company in the sum of £91,500, made up as follows: balance of moneys due on original mortgage, £55,500; further advance, £21,000; balance of arrears to March 31, 1916, £15,000; and that so far as the assets of the company were concerned he thought he was well within the mark in stating the value of these to be £200,000.

On November 29 he received a cable from Mr. Citti instructing him to await his letter before calling a meeting; but he did not receive that letter—or, rather, a copy of it—until the first week in this year, as the original was in a mail boat which was torpedoed in the Mediterranean. Hence the delay in calling the present meeting. In that letter Mr. Citti said:—"The Mortgage Company of Egypt is proceeding with the legal formalities in order to arrive within two or three months to the 'saisie immobilière' and get an official sequestrator appointed by the Mixed Courts and so as to eliminate administration expenses, which I think superfluous in this state of things. We understand from the head office of the Mortgage Company in Cairo that they do not intend to proceed immediately with the expropriation, reserving power, however, to do it when they will judge necessary in their interests." Mr. Citti also said that the immovable seizure would take place in February or March, and that if the writs for the sale were then immediately issued it would require from four to six months before the Mortgage Company would be in a position to sell. With regard to the reasons for the present position of the company, Mr. Citti said that the war stopped the progress of development of the estate, but the position was particularly due to the damage caused to the cotton by the pink boll worm and the scarcity of water. Proceeding, Mr. Swinson said that his letter of November 29 came before the Board of the Mortgage Company in London on December 8, and the matter was referred to Egypt. On January 10 he received a reply from the London secretary stating that the directors had received from Egypt a full report with regard to this company's indebtedness and were not prepared to discontinue the proceedings which had been commenced in Egypt; but if the shareholders had any serious business proposals to put forward with regard to the substantial reduction of the company's indebtedness and the future proper development of the property his directors would be prepared to consider them.

Mr. James Davenport said the shareholders were much indebted to Mr. Swinson for the steps he had taken, in a very difficult position, with a view to protecting the interests of the shareholders. Whatever criticism might be offered, none could be directed to Mr. Swinson.

with whom they all sympathised very much in the position in which he had been placed.

In addressing the shareholders of the Mortgage Company—in which the company he (the speaker) represented had a small interest—eighteen months ago, Lord Milner (the then chairman) said:—"Of course, it is only with the greatest reluctance that we go the length of expropriating our debtors. It is not our desire to become a land-owning company, and in an exceptional pinch like the present it would be both harsh to the mortgagors and unwise in our own interest to sell up a number of men who are in temporary difficulties, but who, with the turn of the tide, are likely any time to discharge all their obligations." That was what he would expect from a man of Lord Milner's position—and, although he was no longer chairman of that company, and was using his great abilities for other and more serious purposes, he was sure he would not be wrong in predicting that the policy which Lord Milner laid down at that time was the policy of the Mortgage Company's Board today. He believed that they had treated this company well in the past and he had little doubt that, if approached on business lines today, they would treat it equitably and fairly in the future. The Mortgage Company, however, could not be expected to pull the chestnuts out of the fire for the shareholders of this company, who, if they wished to save their investment, must show them that they were treating the matter seriously and were making an effort—which ought to have been made long ago—to deal with a position which he did not hesitate to describe as critical. He had come to the conclusion that the best procedure to adopt would be to appoint a committee of shareholders, not for any hostile purpose, but in order to get into touch with the directors and officials of this company in Egypt and also with the Mortgage Company in order to see whether they could formulate some scheme whereby the interests of the shareholders would be safeguarded.

He had some little diffidence in making the proposition because it had been suggested that he should be one of the members of the committee. Personally he did not seek such a position, but if he could be of any assistance he would be prepared to do what he could in the matter. He therefore proposed the following resolution:—"That a committee consisting of Dr. G. T. Moody, Mr. J. H. Newcomb, Mr. James Davenport and Mr. P. Freme-Nassif, be appointed, with power to add to their number, for the purpose of conferring with the Board, looking into the present position of the company, negotiating with the Mortgage Company of Egypt, and of endeavouring to formulate a scheme of re-organisation for the approval of the shareholders at a subsequent meeting."

Mr. S. Lamert, in seconding the resolution, said the shareholders were to be congratulated upon the fact that a gentleman of Mr. Davenport's standing should have come forward at the present juncture in the shareholders' interests, as he was bound to command not only a hearing but a respectful hearing on the part of the Mortgage Company. The other gentlemen named in the resolution were of equally high standing.

After a brief discussion the resolution was carried unanimously, and a cordial vote of thanks to Mr. Swinson for the action he had taken in the interests of the shareholders closed the proceedings.

Sudan Plantations Syndicate.

The adjourned ordinary general meeting of this syndicate was held on Wednesday at the registered offices of the company, 1, London Wall Buildings, Mr. F. Eckstein (the chairman) presiding.

The Representative of the Secretaries (the Central Mining and Investment Corporation, Limited) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—Our annual report and balance sheet have been sent to all shareholders, and with your permission I propose taking them as read. Before dealing with the report and accounts of the past year of our syndicate, I feel it to be my duty to refer to the sudden and dramatic death of the man who has been so intimately connected with the country in which our interests are located. I mean, of course, Lord Kitchener, whose death has caused an irreparable loss, not only to this country, but to all our Allies and to Egypt, and the Sudan

particularly. I need not refer to the patience and care which Lord Kitchener bestowed on the Sudan after its re-conquest, but I would like to mention the interest he took, after his appointment as his Majesty's Agent-General in Egypt, in the cotton-growing problem in the Sudan and in the operations of our syndicate in this respect. Lord Kitchener frequently visited the Gezira plain, and our effort to demonstrate that that district was a most ideal and suitable spot for cotton growing on a large scale so impressed him that he induced the British Government to sanction an important loan for the purpose of irrigation works in that zone, and at the same time asked our syndicate to carry out the practical part of the work, as far as management, development, and cultivation were concerned. Negotiations between the Sudan Government and our syndicate are still proceeding on these lines, and while the same are pending I am reluctantly precluded from saying more on the subject. My colleague, Mr. Hutton, as chairman of the British Cotton Growing Association, in an address to the council of that association some time ago, said that no finer or more enduring monument to the memory of Lord Kitchener could be raised than by everybody—and I include in this both the British Government and the Sudan authorities—doing their best to make this Gezira cotton-growing scheme a huge success. This would bring both prosperity to the inhabitants of the Sudan and meet the constantly increasing demands of the great cotton industry of Lancashire. I feel sure that Sir Reginald Wingate, to whom we extend our hearty congratulations on his appointment as successor to Lord Kitchener in Egypt, will do all in his power to further this important and national work.

You have in your hands the directors' report, which gives the number of bales of cotton forwarded from each of our three stations. The yield was decidedly lower than in the previous year, and especially so in the Gezira, the total number of bales being 4,777, against 6,982 in the previous year. The Zeidab district yielded 8,362 cantars, as against 12,000 the previous year. The average yield at Barakat was about 3.4 cantars per feddan, and at Tayiba about 3.1 cantars. I may inform you that in January last we experienced the coldest winter in the Sudan recorded since the re-conquest of that country in 1898, and, I am informed, the coldest in Egypt for forty years. This cold weather had a detrimental effect on the yield. At the same time, I am glad to be able to inform you that we received higher prices for our cotton. Zeidab cotton was sold on the basis of 9.75d. per lb. and Tayiba and Barakat cotton on the basis of 9.88d. per lb., as against 8.65d. per lb. for Zeidab, 8.53d. for Tayiba, and 7.2d. for Barakat in the previous year.

Dealing now with the balance-sheet, our share capital remains at £135,000, and our debenture capital is likewise unchanged at £57,000. Our debentures were due for redemption on July 1, 1916, but in order to maintain a strong cash position an arrangement was come to postponing the date of repayment for seven years and increasing the interest. Creditors in London (£378) represented expenses and disbursements not allocated at June 30. The Sudan figure of £25,875 is approximately represented by £5,069 due to Sudan Government as partner in Tayiba, £4,260 due to tenants, £1,035 deposits of our staff, and £15,511 outstanding accounts. I may inform you that since June 30 about £15,896 of the amount shown as due to creditors has been paid. On the other side of the balance-sheet you will observe that concession and land account is slightly reduced. General development: the Zeidab figure remains unaltered. An amount of £1,965 has been expended during the year on developing and canalising increased areas at Tayiba and Barakat. Buildings and furni-

ture: the increase of £2,000 under this heading is entirely on Gezira account. Canalisation: we have reduced the figure by £1,000 on Zeidab account. Pumping installation, at £42,000, is unchanged, and represents our Zeidab pumping station, all repairs and upkeep being charged to general expenses. Agricultural implements: this item is £1,000 lower than it was last year by machinery sold £145, and written off £855.

Ginning factories have been enlarged at a capital cost of £1,305. Tugs, barges, and boat account is unchanged. The plant has been thoroughly overhauled lately, and the cost charged to annual expenditure. The cotton and seed from our two ginning factories has been sold, and realised the figure shown in the balance-sheet. Other stocks in the Sudan comprise:—Live stock, £1,640; seeds and stores, £5,177; total, £6,817. All our cotton was again satisfactorily sold through the British Cotton Growing Association, Manchester. Debtors in the Sudan stand at £29,046, as against £30,486 last year and £35,972 at June 30, 1914. The figure of £29,046 is composed of £25,000 due by tenants, less reserve. You will be glad to know that the amount due by tenants has been slightly reduced since last year. Cash is at the figure shown in the balance-sheet. Profit and loss account shows receipts from all sources amounting to £41,992, which is £2,269 higher than last year. Expenses in London and the Sudan amounted to £25,939, and debenture interest accounts for £1,993. We have written off a sum of £4,780, as per details shown in the profit and loss account, and again have put aside a sum of £6,000 as a reserve for expenditure incurred at Barakat. The final results, therefore, show a profit of £3,277, which is £1,286 better than last year. In view of the necessity of maintaining a strong cash position, we do not propose the payment of a dividend this year.

Regarding the present season, our area under cotton at Barakat is 2,500 feddans, being an increase of 500 feddans since last year. The area at Tayiba is 1,800 feddans, being an increase of 415 since last year. The cotton area at Zeidab is about the same as in the previous year—namely, 3,100 feddans. I am pleased to inform you that natives in the Zeidab district are cultivating every year an increased area of cotton. Cable advices recently received show that we have picked at Barakat 700 cantars, and at Tayiba 900 cantars, and the amount of cotton we have received to date at our Zeidab factory is 3,632 cantars. A shipment is already on the way from Zeidab amounting to 577 bales of cotton, and 190 tons of seed, valued at over £20,000.

Before I sit down I wish to strike a personal note. Our colleague, Lord Lovat, is still on active service, and his military duties prevent his attending our meeting to-day. Our managing director, Mr. MacGillivray, who crossed the Mediterranean several times during the past year, has given his active help to the Sudan Government. He has been mentioned in dispatches, and received from the Sultan of Egypt the Order of the Nile. Two of our inspectors, Mr. Archdale and Mr. Maxwell, were gazetted temporary captains in the British Army, and took part in the Darfur Campaign against the Sultan Ali Dinar. They were both mentioned in dispatches for services rendered, and have now resumed their duties with us in the Gezira. My two colleagues, Mr. D. M. Hannay, of Glasgow, and Mr. Arthur Hutton, of Manchester, have again assisted me in every possible way, and met me on all occasions when I required their help and counsel. I also wish to record the board's high appreciation of the services of our manager in the Sudan and of our whole staff there. They all put their backs into their work to the best interests of our syndicate. I now beg to move the adoption of the report and balance-sheet to June 30, 1916.

The motion was seconded by Mr. J. A. Hutton, and carried unanimously.

Mr. Frederic Wise, Mr. D. M. Hannay, and Mr. J. A. Hutton, the retiring directors, were unanimously re-elected, and Messrs. Cooper Brothers and Co. were re-appointed auditors.

A resolution was passed voting the directors a remuneration of £100 each for their services.

The proceedings then terminated with a vote of thanks to the chairman.

COMPANY NOTES.

Dividends, Payments, Etc.

Messrs. C. J. Hambro and Son have given notice that in accordance with the terms of the Greek Government 5 per cent. loan of 1914, the amortization for March 1 and September 1, 1916, has been affected by the purchase of 1,673 obligations for March 1 and 1,700 for September 1, 1916.

Oil Outputs.

Anglo-Egyptian.—Gemsah, 20 tons, and Hurgahda, 1,719 tons.

Baku Russian.—90,000 poods.

Bibi Eibat.—January, 14,806 tons.

Black Sea Amalgamated.—21,886 poods.

British Maikop.—2,126 poods.

European Oilfields Corporation.—74,700 poods.

Maikop Combine.—16,553 poods.

Maikop Pipeline.—January 13, 1,783 tons.

Spies.—214,755 poods.

RUSSIAN OIL PRICES.

Telegraphic advices received by Mr. Herbert Allen from Petrograd state that the Russian Government has raised the maximum price of crude oil at Baku and Grozny to 55 kopeks per pood. This follows on a price of 45 kopeks per pood fixed in February last.

CONSTANTINE FIELDS.

The Constantine Oilfields, Ltd., announces that the following cablegram has just been received from Captain Carlier:—"Have started bores on four different selected spots, one particularly quite close one of the producing wells belonging to Société Anonyme des Pétroles de Tlionanet. The steadily increasing supply of oil decided this company to construct at once a pipeline to deliver the oil nearest railway station at the cost of £10,000 sterling."

TREBIZOND LIQUOR INDUSTRY.

Mr. W. L. Jenkins, United States Consul at Trebizond, in a recent report to Washington says that a few years ago a small plant for the manufacture of liquor was established at Trebizond, but it was closed after the outbreak of the war. More recently it was adapted to the making of lemonade, and for a time did a good business. Bottles of one funt (0.9028 lbs.) are used. Work again is suspended on account of the lack not only of lemons, but also of carbonic acid, citric acid, and sugar. The materials required daily are two to three pounds of citric acid, 250 lbs. of sugar, and 40 kilos (88.185 lbs.) of carbonic acid. A stock of 30,000 bottles is needed.

The prospect of starting work again is said to be poor, for even if some way might be found of importing the acids in small quantities the lack of sugar is considered prohibitive. The industry, however, may be continued and developed after the war.

RUMOURS TO BE IGNORED.

Readers of THE NEAR EAST in Egypt, and elsewhere for the matter of that, may be told sensational stories of the unsatisfactory conditions in Russia, a correspondent writes. A good deal of "rumour" of that sort has been current lately. The best thing to do in such circumstances is to consult the latest news of the Petrograd Bourse. If there is serious trouble in Russia nothing is surer than that it will be reflected in financial and commercial circles. At the moment the Petrograd Bourse is firm, and that fact may be permitted to speak for itself. So-called rumour has but one source, and it comes from a city whose people are always on the spree!

31, CHRISTOPHER STREET, LONDON, E.C.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON STREET, Thursday.
There has been a rather sustained inquiry this week for Egyptian Unified and Three and a-Half per Cent. Preference, and a very fair amount of business has been passing in the neighbourhood of 78 and 66 respectively. Agricultural Banks have changed hands to a small extent at about 5 1-16, with buyers at the close near 5½. In Alexandria Water there have been some transactions at about 11½. Behéra Preference have been done at 3½. A few Delta Light have changed hands at 5 5-16. About a thousand Khedivial Mail were dealt in earlier in the week at 25s. 6d., and some Preference at 3½. National Banks are a firm spot at about 13½, but very little business has been done in them. A few Union Foncière were done at 25s. 3d.

In Greek securities there has been a renewal of demand from the East, and most of the stock recently on sale here has been either absorbed or withdrawn. Monopoly are wanted at 46, but not offered under 48. Funding are buyers at 48½, but sellers are scarce. 1884 have been done at 51, and 1881 are quoted at about the same price. Larissa have changed hands at 49. Rentes are wanted at 40, and offered at 41. In Greek Rails a fairly large transaction took place at 61, and some business has been done in Greek 1914 at 72½. Current bonds are wanted at about 89.

Oil Shares.

There has been a little activity in one or two descriptions of shares, and as a rule the tone has been steady. Constantines have been in demand, and there has also been a fair inquiry for Roumanian Consolidateds.

To come to figures, North Caucasians have been inquired for and improved 6d. to 25s. 9d., but New Generals have again been in request, and further hardened to 26s. 3d. Roumanian Consols maintained a firm appearance, closing 6d. better at 9s. 9d.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, Thursday.

There have recently been no offers of cheap money, and at the close 4½ per cent. was the general charge, 4½ per cent. being quoted occasionally. Weekly fixtures have been in good demand at from 4½ to 5 per cent., the latter figure applying more to bank demands than to anything else.

Discount rates have been firm, and most of the leading houses have declined to take three months' paper below 5 per cent.

In the Exchange market there has been some good business, with a satisfactory recovery in the rouble. The rate on Alexandria continues at 97½ piastres to the £ sterling.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the dates mentioned and as compared with the corresponding dates in 1916:—

	1916.	1917.
	Frs.	Frs.
January 17	200,000	140,000
January 19 and 20	450,000	360,000
January 21	190,000	250,000
January 22	310,000	210,000

IN LIQUIDATION BY ORDER OF THE OFFICER

COMMANDING-IN-CHIEF, H.M. FORCES IN

EGYPT,

EGYPTISCHE EGRENIR FABRIKEN A.G.

(EGYPTIAN COTTON-GINNING FACTORY

COMPANY).

NOTICE OF SALE.

of a COTTON-GINNING FACTORY of 130 GINS at KAFR-EL-ZAYAT (GHARBIEH), Lower EGYPT, situated on the bank of Nile and directly connected with the Egyptian State Railway and Delta Light Railway.

OFFERS for the PURCHASE of this valuable property will be received by Mr. H. Bridson, the Receiver of the above-mentioned enemy Company (appointed the 30th day of May, 1916, by the C-in-C. of H.M. Forces in Egypt), at his office at 6, Old Bourse Street, Alexandria, Egypt, on or before the 31st day of January, 1917, at 11 o'clock in the forenoon.

All offers must be accompanied by a deposit in cash equal to one-tenth of the price offered. All deposits accompanying offers which are refused will be returned to the owners at their risk.

The said Receiver reserves the right to refuse any offer without giving the reasons for such refusal and shall not be bound to accept the highest offer.

The property consists of 15 feddans 23 kirats and 2 sahes or thereabouts approximately 67,000 square metres or thereabouts, and the large modern and complete Cotton-Ginning Factory and the Manager's and Staff's Dwelling Houses, Business Offices, Garage, Store Sheds, and other Buildings erected thereon, and the Gins, Engine, Dynamos, Presses, and other Machinery, Tools, Implements, Furniture, Fittings, and Effects therein and thereon.

The buildings, exclusive of the store-sheds, cover 4,861.56 square metres or thereabouts.

Particulars and Conditions of Sale and copies of the general plan of the property can be obtained from Frederick Leveau, of 6, Old Bourse Street, Alexandria, Advocate, or Messrs. Field, Roscoe and Co., of 36, Lincoln's Inn Fields, London, solicitors, or Messrs. Oliver Jones, Billson, and Co., of 5, Cook Street, Liverpool, solicitors.

The deeds and documents of title can be inspected at the aforesaid office of Mr. Frederick Leveau, the Advocate of the said Receiver, any weekday between the hours of 9 a.m. and 12 noon. The property can be inspected on application to the said Receiver.

NOTES OF THE WEEK.

There has been no slackening in the eastern theatre of the war during the past week, but the main activity has been outside Roumania. The great battle in the Riga district is still in progress, the Germans attacking in force and with some persistence. Our Allies, however, seem to be in a position to exact heavy penalties for any ground that they may abandon, and for the time being such tactics are practically as valuable to the common cause as an advance on their part. All along this front the weather conditions are of the severest, but, as we saw last year in Armenia, nothing deters the Russian soldier. In the Bukovina, advancing up to their waists in snow, says the official report, the Russian troops captured at the point of the bayonet the enemy's fortifications on the heights a little over a mile east of Jokobeni, and took a number of prisoners. Under climatic conditions such as these, if the Russian forces can be kept adequately supplied, they should experience little difficulty in establishing as great a moral superiority over the enemy as the Anglo-French forces have in the west.

In Roumania itself the comparative inactivity caused by the weather is to a large extent welcome to both sides. The Germans are provided with an excuse for not pushing their venture any further, while our Allies are necessarily glad to have a short breathing space. From the bulletins it may be inferred that, wherever an opportunity offers, the Russo-Roumanian forces endeavour to correct the alignment of the front in their favour. Thus in the Casinu valley the offensive was taken on January 25, and, after eleven hours' fighting in great cold and heavy snow, the enemy was driven back some distance to the south. Even the German reports bear witness to the very different nature of the resistance now encountered in Roumania. Whoever was responsible for the heroic measure of offering a minimum opposition to the invaders in order that a substantial part of the army should be withdrawn from the fighting and be carefully reorganized in the rear has deserved well of the Roumanians. They have had to sacrifice much territory, but they retain their army intact and remain a nation in being.

Behind the Sereth line the work of Roumanian reorganization has been carried on apace. Some idea of

the thoroughness with which it is being effected is given by the report that fourteen Generals of Division and of Brigade have been placed on the retired list, and have been succeeded by junior officers. It may be premature to imagine that the enemy has entirely shot his bolt in this region; but it is stated with some confidence that both German and Bulgarian troops have been largely withdrawn from this front, leaving Austrian and Turkish forces to hold the line. This is not a time when the German higher command can afford to keep superfluous strength locked up in any one theatre, and it has probably decided that all the indications are in favour of Roumania being a safer proposition than any of the others which the Central Alliance now has on its hands. There can be little doubt that the Bulgarian army needs a rest, if it is to remain an effective unit for an indefinite period. The Turks are likely to prove the more willing horse of the pair, and for this as well as other reasons can be worked the harder. Their usefulness in defensive operations, when well commanded, is, moreover, an established fact. Unless, therefore, our Allies should be in a position to assume the offensive sooner than is expected, we may look for a period of comparative quiet on the Sereth line.

King Constantine and his Government are earning such golden opinions of their capacity for good behaviour that they might almost venture upon another *ballon d'essai* about the Allied Ministers dining at the Palace without serious risk to their present reputation. We can but hope, however, that the conversion goes deeper than the outward observances of diplomatic forms, and that a definite end has been put to the policy of seeing how near the wind it is possible to sail the Greek boat without actual disaster. On the surface all goes smoothly. Notes were addressed on January 24 to the Ministers of the Allied Powers conveying the formal apologies of the Greek Government in connection with the regrettable occurrences of December 1. It was arranged that the ceremony of saluting the Allied Flags was to take place on January 27, but owing to the inability of the Russian detachment to arrive by that date, the function was postponed until the 29th.

The formal act of reparation entailed in the salute given to the Allied Flags is said to have been carried through in an entirely satisfactory manner. From the descriptions it is to be gathered that the scene was an impressive one. The square where the ceremony took

place does not lend itself to any big gathering, and for this reason the populace of Athens would have to be kept at a distance. But the streets and all the neighbouring coigns of vantage were thronged, and there can have been no question of the Greek public not being thoroughly cognisant of the significance of what was being enacted. The four Allied Powers were represented by their Ministers, the French Admiral and a joint contingent, 120 strong. All arms of the Athens garrison were present, some regiments being at full strength, others represented by detachments. As soon as the Ministers had taken their places by the Allied Flags the Greek General in command saluted, the troops presented arms, the Greek flags were lowered, and bugles sounded the general salute. The massed military bands played in succession the National Anthem of each of the four Allied Powers, while a Greek battery fired a salute of twenty-one guns, which was returned by an Allied man-of-war in Phaleron Bay. Finally, the Greek troops marched past in column formation, saluting the Allied Flags. Among the Greek officers present was Prince Andrew, a younger brother of King Constantine, and it is not without interest to note that an attempt was made to read some special significance into his participation in the ceremony. He was there, however, as head of his regiment; his absence would have constituted a breach of the agreement with the Allied Powers.

If the Greek Government is at all desirous of proving that the Allied Powers have never wavered in their goodwill towards Greece, it has an excellent opportunity now. The utmost readiness to credit the Government with the best intentions is being displayed. It is indeed apparent that public feeling in the Allied countries is inclined to question the wisdom of the alacrity which the Ministers are showing to accept without question the sincerity of Greece's conversion. In such a matter, however, the man on the spot is the better judge, and it must not be overlooked that the Allies' representatives, having suffered personally from the Greek Government's lapses and the Greek army's treachery, can be relied upon to be on their guard against exposing themselves to a second experience. Greece has completed her reparation for the events of December 1 as far as the outrages on the Allied detachments are concerned, and is in process of giving the requisite guarantees for her future conduct. All the Allied demands will have to be satisfied in their entirety before there can be complete confidence that the Greek *contretemps* has been settled. There will then remain the problem of repairing the political wrongs done to the country by the action of its own Government. Without the help of the Allies there is little prospect of a solution being found by the Greeks themselves. If, therefore, King Constantine and his advisers are sincere, they will go beyond the letter of the Allies' Notes and ask them for their friendly mediation in restoring the nation to harmony with itself and in enabling it to face the future with a united front.

The less spectacular of the Allied demands are being carried out, it is stated, in a manner that so far gives the Allies satisfaction. At the present rate of progress the military transfers ought to be completed within the fortnight stipulated. Venizelists have been released from prison without any untoward incidents; the General commanding the Athens garrison on December 1 has been deprived of his command, and the necessary orders for the dissolution of the Reservists' Leagues have been given. Such orders have been issued before and have been entirely ignored. This time the grip of the blockade introduces a new factor, which seems to appeal to the imagination of all sections of the Greek people. The attempt of the Greek Press—only Royalist papers are in existence—to maintain the truculent attitude which won it such high praise a few weeks ago has failed. Every shade of opinion in Greece seems to recognize the necessity of falling into line with the official lead in order to secure the removal of the blockade. All this is to the good, and in due course the blockade will be raised. But care should be taken to make use of the spirit it has engendered, and to see

that the situation in Greece does not get out of hand again.

From the progress of the operations before Kut it is possible to realize the good use to which the enemy put the long period of inaction that followed General Townshend's capitulation and the renewal of the British offensive. The main Turkish effort has been directed towards the strengthening of the immediate defences of Kut. No difficulty was apparently experienced by the Expeditionary Force in reaching the Shatt-el-Hai; but the earlier success revealed the fact that the Turkish position in the neighbourhood of the Shumran and Kut bends of the Tigris was to prove as formidable an obstacle as the positions lower down the river, which it was hoped to turn by this flanking movement on the west. Consequently, the progress from that moment onwards has been slow. Gradually, however, General Maude is working round the river bend. Last week the enemy's first and second lines south-west of Kut, on a front of 4,300 yards, were captured, as was a smaller section of his third and fourth lines. In all the engagements, in spite of being on the defensive, the Turks are reported to suffer considerable losses, and it may be hoped that the British superiority in artillery has the effect of keeping down our own losses.

As the war progresses it becomes painfully evident that we have to revise our conception of the Turks' method of waging it. Ready testimony was borne to any considerate action shown by the enemy on the battlefields of Gallipoli; but the record of that campaign cannot be allowed to serve as a cloak for outrages and atrocities in other directions. It is impossible at this stage to plead the evil influence of the German taskmasters. That is just the point which makes Turkey a European menace; she provides far too dangerous a tool for unscrupulous hands, and the only certain preventive in such cases is to make sure that the tool's capacity for inflicting injury is removed. According to the *Morning Post*, disquieting reports have now been received of the scandalous treatment of British prisoners of war, both officers and men, now in the hands of the Turks. Nothing is more calculated to create in this country a revulsion of feeling against the Turk, which in the end may prove more prejudicial to him than defeat in the war. Whatever may be forgiven our enemies, it is certain that the outrageous treatment of prisoners in Germany, Turkey, and possibly in the other countries of the Central Alliance will not be forgotten or forgiven. The release of these men at the end of the war, or the realization that numbers who have been prisoners have been virtually done to death by calculated savagery, must arouse passions in the British nation which will endure for many a long year.

One effect of the régime which now holds sway in Turkey is that every moral influence has been eliminated. There have been massacres and outrages before in the Ottoman Empire, but some allowance had generally to be made for religious fanaticism, which, if not the original cause of the ill-deeds, was more often than not the weapon with which they were carried out. The existing administration in Turkey—which is associated with the Young Turk or the Committee of Union and Progress—knows nothing of religion or religious motives. Its own interests prompt it to attempt the extermination of the Moslem Arab elements within its reach with as little compunction as it undertook the massacre of Christian Armenians. What may evoke still deeper detestation against the Turkish Government throughout the Moslem world will be the report, which there is good reason to believe is correct, that it has deliberately profaned the Holy City of Medina by the introduction of some twenty Germans, among them the notorious Baron Oppenheim. The struggle between the Arab world and Turkey for the defence of Islam must soon impose upon all Mohammedans the duty of ranging themselves definitely against the agnostic clique now established in Constantinople.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, January 10.

The Muled El Nabi.

The festivities in connection with the Muled El Nabi (the Birthday of the Prophet) came to an end on Saturday, which was, as usual, a Government holiday. This picturesque function was this year shorn somewhat of its attractions owing to the lighting regulations recently introduced in Cairo and to the inclement weather that set in during the week; a veritable gale blew on several days and nights, and rain fell on an almost unprecedented scale. In spite of the unfavourable conditions, crowds of Egyptians went out to Abbassia, where the feast is always celebrated; and the customary ceremonies took place in the tent of Sayed Abdul Hamid Bey El Bakhri, the head of the religious sects (Tarikas) in Egypt. H. H. Prince Ahmed Fuad represented the Sultan at the traditional reading of the history of the Prophet's birth, which, it may be noted, was read for the first time in Arabic. On the instructions of the Sultan, a similar ceremony took place on the Saturday evening at the Rifaii Mosque.

H.H. the Sultan.

H.H. the Sultan is slowly making his way down the Nile, and will now not be back in the capital until the end of the week. He is having quite a triumphal progress, and at every stopping-place is being received with the greatest enthusiasm. The various towns on the banks of the Nile and the principal notables are vying with each other in their efforts to demonstrate their loyalty, and at Assiout and Minia, especially, the most magnificent preparations had been made. At both places his Highness held a reception, and afterwards proceeded on shore to inspect the guard of honour, which at Minia included a detachment of British troops. Whilst the enthusiastic manner in which the Sultan is being received in Upper Egypt is giving much satisfaction in official circles, a certain amount of concern is being expressed as to the effect on his health of the constant strain and excitement entailed by these receptions, which have been going on from early morning till late at night. His Highness had only intended making a very few stops on his way up and down from Assuan; and it is regretted that the original plan was not adhered to, as it is feared that all this ceremonial may undo the good which his river trip has done him.

The Hellenes of Egypt.

The Egyptian Government has officially acknowledged M. Sachtouris as the representative in Egypt of the Provisional Government at Salonika. M. Sachtouris was formerly Hellenic Consul-General at Alexandria, and resigned his position some little time ago because, like many members of the Greek Diplomatic and Consular Corps in other countries, he did not approve of his Sovereign's attitude. He had a long interview on Friday morning last with the High Commissioner, but, as far as can be ascertained, no decision has been come to as to whether he is to exercise over the local Hellenic colony the legal jurisdiction hitherto enjoyed by the representatives of the Athens Government. M. Roussos, the President of the Venezelist party in Egypt, has issued a *communiqué* to the effect that those representatives no longer have any right over Egyptian Hellenes; but as these officials are still accredited to, and have not been disowned by, the Egyptian Government, this *communiqué* would scarcely seem sufficient to regularise the legal position of the local Hellenic colony. This community is situated very differently from its fellows in other countries, and its position would appear at present to be a somewhat complicated one.

That, as mentioned in a previous letter, there are still some members in the colony here who are pronounced Royalists and anti-Entente in sympathy has been proved by incidents that have occurred during the past week. Perhaps the arrival on Monday last of General Lapathiotis with the military mission from Salonika will lead to an active beat-up of the service-fit members of the Hellenic community, and thus to the complete elimination of the disturbing element.

The Clearance of the Sinai.

The good news, just received, of the defeat of the Turks at Rafa, and the complete clearance of the Sinai peninsula, has made a tremendous impression. Success has consistently followed our efforts ever since the Turks ill-advisedly tried conclusions with us at Romani last April; and the complete capture of all the forces with which we have recently come in contact speaks volumes for the excellent manner in which our plans have been laid and carried out. At the same time due credit must be given to those responsible for the supply service and the running of the railway. They have all done wonders, with everything against them. We are now informed that the broad-gauge railway reached El Arish on the 4th instant, fourteen days only after our occupation, at which time railhead was still fifteen miles to the west. This last effort on the part of the railway engineers—in itself a most wonderful achievement—must certainly have materially assisted us to round up the Turks and clear the peninsula of all hostile troops within a little over a fortnight of our capture of the frontier town.

The National Mission.

A cable from London announces that the Rev. Dr. Storrs, Dean of Rochester, and the Rev. E. A. Burroughes, Fellow of Hertford College, Oxford, have been asked by the Archbishop of Canterbury to come to Egypt as his messengers. They will arrive in about ten days' time, and will spend two months visiting Egypt, Cyprus, and the Sudan.

CAIRO, January 17.

The Sultan's Arrival.

H.H. the Sultan, who had spent the preceding few days quietly on board his steamer, landed at Helwan yesterday afternoon and motored into Cairo, where he has resumed his residence at Abdin Palace. His Highness, who is delighted with his river trip, is much improved in health.

The High Commissioner.

Sir Reginald Wingate has been busy during the past week receiving deputations of notables from the various provinces, who have come up to Cairo to welcome him on his arrival and to offer him their congratulations. One and all have expressed themselves as charmed by the affable reception accorded to them and the fluent manner in which his Excellency conversed with them. The High Commissioner has, also, spent some time in returning official calls and visiting the more important centres of learning. Accompanied by Mr. Ronald Storrs and Lieut.-Colonel Watson, Sir Reginald called last week on the Coptic Orthodox Patriarch, by whom he was received with great ceremony; and he has also visited the Sultania Library, the Arab Museum, and Al Azhar. At the latter centre he was accorded an exceedingly warm reception by the Rector of the University, the Grand Mufti, and other members of the governing council, and also by the ulema and teachers, with whom he spent some time discussing their work. Before he left his Excellency inspected the "liwans" and the library, and expressed to the Rector the great pleasure that his visit had given him.

Irrigation Projects.

Sir Ismail Sirri Pasha, Minister of Public Works, and Sir Murdoch Macdonald, Under-Secretary of State in the same Ministry, are leaving on Saturday for the Sudan. Their visit is mainly connected with the irrigation projects that are in progress or the execution of which is under consideration, and they will inspect and study the sites that have been selected for the works on the White and Blue Niles. Sirri Pasha and Sir Murdoch, who will be away about three weeks, will on their return from Khartoum visit the Wad Hamed basins, where it is hoped next year considerably to extend the cultivated area.

The Rafa Victory.

General Sir Archibald Murray has received congratulatory telegrams on his victory at Rafa from all parts, including messages from H.M. the King, H.H. the Sultan, and H.E. the High Commissioner. The consistent success that follows the efforts of the Egyptian Expeditionary Force continues to make a very great impression on the local population. The news

that the Sinai has been completely cleared of Turkish troops came as a welcome surprise, as it was known that until very recently Nakhl and other points were still held by the enemy. It is to be presumed that, as the *communiqués* say nothing of captures of hostile bodies elsewhere than on the northern line, the posts at the points in question were withdrawn when news of our speedy and successful advance was received, and that the troops in question managed to get across the frontier in time. It would be interesting to hear officially what really happened to these posts.

The Greek Situation.

General Lapathiotis, who, as I informed you in my last letter, has arrived in Egypt on a special military mission from Salonika, came up to Cairo last weekend, when I had the opportunity of discussing the present situation with him. The General, as no doubt your readers will recollect, was the leading spirit in the revolution of 1909—at which date he was merely a colonel—which resulted in the forcible retirement of the Crown Prince (the present King) from the army. He consequently thoroughly understands the ins and outs of the present situation in his country and the influences that are at work, and, ever an outspoken man, he did not mince matters in expressing his views to me. He is strongly of opinion that no faith should be put in King Constantine's acceptance of the Allied ultimatum. Even if eventually the King accepts it unconditionally, the General is persuaded that he will find some excuse for delaying execution of the conditions, and that, relying upon the Allies' weakness in the past, he will, unless proper measures for the immediate enforcement of these conditions are taken, continue temporizing until such time as he (the King) hopes the Germans may be sufficiently strong in the Balkans to afford him support, or enable him to join them in an attack on the Allies. That he has some such plan in mind the General is firmly convinced, and he considers that, in addition to the removal of Dousmanis and the rest of the King's pro-German entourage, the only sane course open to the Allies is to tighten the blockade and occupy both the Piræus and Athens. Such a measure would completely undermine the King's influence and ensure the establishment of a satisfactory state of affairs, especially in northern Greece.

As far as concerns the threat levelled at Monastir, General Lapathiotis is very doubtful whether the Germans can really collect sufficient troops from the various fronts to menace that point seriously. He pointed out that they have a very short time in which to mass the men, as their effort must be made before the spring, when all the troops at their disposal will be needed on the other fronts. But no matter what they are able to do, the Germans and their allies can carry out no successful operations against our position at Salonika, which, he says, is the last word in impregnability.

General Lapathiotis' mission is to organize the recruiting movement amongst the Hellenes of Egypt. The length of his stay in Egypt will depend on various circumstances. He has had interviews with the High Commissioner and General Murray, and is doing all he can to stimulate voluntary recruiting amongst the Egyptian Greeks. So far the latter have sent 800 volunteers to Salonika, and there are about 400 more in training at Alexandria. If compulsory powers could be granted to the representatives of the Provisional Government, the Egyptian contingent could be brought up to quite 5,000, whilst a considerable addition to the Army of National Defence could be obtained from the Hellenic communities in Allied countries.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, January 6.

The Question of Food.

The Press takes credit for a recent Government experiment by which samples of bread have been prepared from mixed wheat and barley flour. Two kinds have been made, one containing barley and wheat in equal proportions, the other, three parts of barley to one of wheat. These can be sold at 2½ and 2, or 2½, piastres respectively, as against 4½ piastres (6d.) per oke, as paid for wheaten bread. Hopes are accordingly expressed that Government will take measures to render the sale of barley bread obligatory for bakers, at fixed prices, as may be deemed reasonable, from time to time. Complaints are also made that much of the white bread ordinarily sold is of doubtful quality. The proverbial difficulty of pleasing everybody is exemplified in the different towns and districts. Thus the fixing of maximum prices for most articles of food, welcomed by most purchasers, also gives rise to great complaints, viz., that the vendors, being free to dispose of their goods *ad libitum*, have exported large quantities, and so created a dearth in the Nicosia markets. It is, therefore, now urged that exportation should be prohibited, and that the quantity to be sold to individuals should be restricted. Again, in some places loud complaints are made by tradesmen who allege that, having bought stock at certain prices, they are now obliged to sell at less than cost price. The fixing of rates is said to be leading to the adulteration of many articles, necessitating much vigilance on the part of the police and municipalities. In other places it is urged that the prices of all native produce, including fruit, should be regulated. Thus, e.g., in the Famagusta district oranges are largely consumed, especially now that cheese, eggs, etc., are at prices which are prohibitive for the poor. Oranges have been generally sold at little over one shilling the hundred, whereas now growers charge what they please.

Arrest of Cypriots in Greece.

Amongst the persons so scandalously arrested and detained at Athens during the late crisis was Mr. Simos Menardos, a distinguished Cypriot of Limassol, who for several years recently held the newly created chair of Modern Greek at Oxford. On relinquishing this appointment, he accepted a post as Professor in the University of Athens. In reply to Mr. N. Pascáles, barrister-at-law, and M.L.C., of Nicosia, word has been received from the British Embassy at Athens stating that Mr. Menardos has been released. It is probable that he may shortly find his way to Cyprus. His father was Hellenic Consul at Ancona. On leaving Italy he settled in Cyprus, and for some years practised as an advocate at Limassol. Mr. Menardos himself is one of the best read and foremost Greek scholars of Cyprus. He is well versed in antiquarian research, and has made various contributions to Greek literature, including monographs on Cypriot history and mythology.

Another Cypriot who was arrested has also been released. Of the natives who went under contract to serve at Salonika, a considerable number have returned, having been released from their engagements on grounds of health.

Cypriots in Egypt.

A Greek newspaper, quoting the *Cairo*, published in Egypt, states that a Cypriot who was implicated in a recent stabbing case in that country, and who was arrested by the police, declared that he was of Cypriot nationality. The police, being in perplexity, referred to the British Consulate, and were informed that, whereas Cypriots residing in the island enjoy British protection, those domiciled in Egypt must be regarded as native subjects.

On Monday a large number of elderly men and women arrived in London with their families, whose homes and estates in Roumania have recently been invaded. Some of the party were professors and merchants. It is understood that many of them will make their homes in this country and that others will go to France.

NEWS OF SYRIA.

(FROM AN OCCASIONAL CORRESPONDENT.)

CAIRO, January 18.

The Jesuit Fathers.

A person of authority, who left Beyrout at the end of August last, and has since been able to follow events in Syria from a secure place close at hand, gives the following details which have not yet appeared in previous correspondence published about Syria.

Some of the Jesuit Fathers who have been allowed to remain in the country are now the guests of the Maronite clergy. The few Jesuit Fathers of Syrian nationality, such as the well-known and erudite writer, Father Louis Cheikho, are living in the Maronite Convent of St. Antonics, but their state is said to be rather critical. The nuns of Syrian nationality belonging to French orders have been allowed to live in the well-known Convent of St. Charles, belonging to the Dames de Nazareth. The authorities have laid hands on the Jesuit College of Beyrout, one part of which has been allotted to the Red Crescent Society, the other part having been turned into Government offices, including those of the National Defence Committee. The church has not been interfered with, all the costly vessels, sacred ornaments, etc., within it being still intact. The fine library, however, has not been so respected, all the rare books of value having been sent to Constantinople. The Jesuits' printing-press has met with a worse fate, the machinery, type, paper, etc., the value of which is estimated at not less than half a million francs, having been confiscated. All the equipment and apparatus of the laboratories of the French Colleges of Medicine and Pharmacy have also been confiscated, and sent over to the Sultanieh School of Medicine at Damascus. As to the rich estates owned by the Jesuits in the Lebanon and the Bekaa, these have been taken over by the Government, and a German agricultural engineer has been appointed to undertake the management thereof.

Clergy Persecuted.

The Apostolic Delegate and the Syriac Patriarch have not been molested, except that the latter was twice called up before the Court Martial at Aley to answer certain baseless charges brought against him. The Syriac Bishop, however, together with thirty-five of his clergy, was condemned to death, as the result of false charges laid against them. The Maronite Patriarch is still living in his winter residence, El Diman. He, also, was twice called to the Seraglio at Beyrout. The well-known Maronite Bishop of Beyrout was condemned to death, but, on the intercession of the Apostolic Delegate, the death sentence was commuted to one of exile to Adana. The Greek Catholic Bishop of Acre was condemned to death; while the Bishops of Baalbek, Tripoli, and Damascus, of the same community, were exiled to Adana.

The Shortage of Drugs and Food.

It is estimated that at least seven-eighths of the doctors and pharmacists in Syria have been called up for service in the army, only the aged and medically unfit having been spared. The stock of drugs and medicines is practically exhausted, and yet the Government is still compelling the chemist shops to continue open to the public, "to throw dust in the eyes" and make a show of a normal state of things.

Harrowing details are given of the famine prevailing and of the extraordinary dearness of foodstuffs, the prices of certain articles of prime necessity being quoted; all of which tallies with accounts already published. A strange report is that, owing to the exhaustion of the stock of salt, the people have been resorting to the evaporation of sea water. When it is learned that some well-known salines on the northern coast of the Lebanon used to be worked, and that the salt produced therefrom used to be in excess of the needs of the Lebanese, before salt passed as a monopoly into the hands of the Public Debt, the Turks' want of administrative capacity is realized.

ARCHÆOLOGY UNDER FIRE.

(FROM A CORRESPONDENT.)

During the terrible fighting at Gallipoli, the French, when trench-digging, came across the remains of a large ancient necropolis, and at various intervals between June and December, 1915, the military authorities authorised the site being carefully excavated and explored. The tombs were certainly those of the more affluent members of the ancient Hellenic city of Elæus. This place is often mentioned in Thracian history, and it was there that a great naval battle took place between the fleets of Constantine and Licinius in Roman times.

The Staff of the French Army at the Dardanelles has presented to the French Academy an elaborate report of the researches carried out by its officers, illustrated by numerous photographs of the site, before and after the excavations, and others of the antiquities obtained. This occupies more than one hundred pages in the *Bulletin Correspondance Hellenique* for, with Gallic thoroughness, it tells all that is historically known of Elæus, as well as describing the digging and all the results this produced.

Unfortunately, although a great number of large stone sarcophagi were uncovered, and numerous small objects, such as vases, statuettes, and coins, were found, there was a total absence of inscribed records, not even the names of the occupants of the sepulchres being legible. All the important tombs consisted of large rectangular stone coffins with heavy stone lids, often protected by a four-sided low wall built around them. The coffers were all covered up with earth, as were a number of large jars which were interspersed among them. These jars, or *pithoi*, contained bones and funerary objects, as did the sarcophagi, and the opening to them was closed by a stone. They were not very durable pottery, and some, which had cracked at their baking, were mended with lead clamps before being used. Besides these, there were numerous amphoras scattered about, which doubtless, when the interments took place, contained funerary offerings.

Some of the sarcophagi held two, or even three, skeletons, and a few of the large jars two. The report fully describes and gives an inventory of the objects recovered from fifty-six coffins and jars. The funerary vases are all of inexpensive types and manufacture, as are all the phials of glass. The statuettes are of the kind frequent in thousands of Hellenic sepulchres, and inferior to those famous ones from Tanagra and Myrina.

So thoroughly was all the narrow peninsula cut up by trenches that we may be certain that within the French and British lines no antiquities of value will ever be found. The necropolis of Elæus has been completely explored, and proved to be one which, excepting the satisfaction of knowing how meagre for historical or artistic purposes were its contents, was hardly worth the cost of excavation.

FOR BRITISH REFUGEES FROM TURKEY.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—May I once more trespass upon your kindness in connection with the "British Refugees from Turkey Fund"?

Last year Mr. Munford, the Director of Kensington College, generously placed at the disposal of our committee nominations for free training at the college in favour of daughters of British refugees from Turkey. The training fees range from thirty-five guineas to sixty guineas for the complete course, according to the class of diploma for which the candidate enters, and the value of the scholarships placed at our disposal aggregates £200, which may possibly be increased to £500.

For your information and guidance I enclose copy of the prospectus and other papers connected with the useful work carried on by Mr. Munford, and I would be much obliged if you would help us in getting the advantage of this useful and gratuitous training known among the British subjects from Turkey now residing in this country, as they are so widely dispersed that it is difficult for our committee to ascertain the whereabouts of those who might be disposed to apply for a nomination.

Every graduate will be provided with the offer of a number of dignified and remunerative positions, from which she may select a congenial career. Initial salaries vary from about 40s. to 84s. weekly.

Applications can be made to me or to any member of the Executive Committee of the "British Refugees from Turkey Fund," and any information regarding Kensington College will be gladly furnished by Mr. Munford from 34, Gloucester Gardens, Paddington.—I am, etc.,

ALICE LOWTHER.

LORD CROMER.

HIS WORK FOR EGYPT AND THE SUDAN.

The death of Lord Cromer leaves not only the British Empire but the entire world the poorer. Britain loses a public servant of the best type; the world a man of rare force of character and a scholar of considerable attainments.

Born in 1841, at Cromer Hall, Norfolk, he was the son of Mr. Henry Baring, M.P., his mother being a daughter of Vice-Admiral William Wyndham. He entered the Army, and joined the Royal Artillery in 1858; and three years later was appointed A.D.C. to the High Commissioner of the Ionian Islands, thus beginning a connection with the Near East which was later to have such far-reaching results. But that connection was somewhat quickly terminated. He went first to Jamaica, as secretary to a Commission sent out to inquire into certain complaints and abuses, and afterwards to India, as private secretary to Lord Northbrook, his cousin, Viceroy of India. In 1877, having meanwhile reached the rank of major and been awarded the C.S.I., he was sent to Egypt as British Commissioner for the Public Debt. It is hardly necessary to remind readers of THE NEAR EAST of the chaotic state of Egyptian finances at that time, or of the hopeless condition of the Fellah as a result of Ismail Pasha's extravagance and his passion for trying experiments of one kind and another. Major Baring's appointment had been regarded with some surprise, but he very soon justified his selection, and his influence made itself felt to a remarkable extent in the inquiry into the financial entanglements of the Khedive. As a result, when Ismail, having tried the patience of the Western Powers beyond all further bearing, was forced to abdicate, Major Baring was appointed with M. de Blignières to the joint control of Egypt's finances. Strangely, as it seems now, his work in Egypt was soon interrupted, and he was sent out to India again, as Financial Member of the Council. Of the excellent service he rendered during the three years he spent in that capacity there is no need to speak here. It greatly enhanced his reputation, and when he returned to Egypt it was felt that, though he had heavy and difficult work before him, he was the man to see it through successfully.

It was in 1883 that he arrived in Cairo as British Agent and Consul-General, and began what was certainly the great work of his life. The prospect before him was not a pleasant one to face. The situation was full of uncertainty, and the only thing about which there seemed to be no doubt at all was that Egypt was in a very bad way indeed. The country was on the verge of bankruptcy; its administration was corrupt; Arabi's rebellion was still fresh in the minds of the people; and trouble was threatening badly from the south. To make matters worse, the British Government appeared to be incapable of making up its mind regarding either the future of the country or its own intentions towards it, and Turkey was playing—as usual—a game which required careful watching. It is worth adding that at the time the new British Agent considered that his stay in the country was likely to be but a short one. His difficulties, then, were great. But he grappled with them fearlessly, and, as events have proved, with rare insight; and, though he did not at first always find it easy to induce the British Government to see eye to eye with him, it was usually his policy that was pursued. He was overruled at times, as in the case of the withdrawal of the Egyptian garrisons from the Sudan and the ill-fated mission of Gordon. He could not avert the troubles that he foresaw as a result of those steps, but he could work to undo the mischief that was done. And work he did with a patience and a tenacity of purpose that in due time won through.

The first thing to be done, obviously, was to get the Egyptian finances out of the state of muddle into which they had drifted. Sir Evelyn Baring did what he could do at the time. Almost certainly it was not what he would have wished to do, but it was at least the best that could be done in all the circumstances. In March, 1885,

the finances of Egypt were put on some kind of regular footing by the International Convention which was signed in London. Thereupon it became possible to finance undertakings necessary to turn the great agricultural possibilities of the country to account; the cultivators were provided with water, and the foundations were laid of that prosperity which the country enjoys to-day. In five years Egypt was put, financially, upon its feet. At the same time the work of readjusting taxation was pushed forward steadily, and the various administrative departments were thoroughly overhauled.

While all these things were being done, Lord Cromer yet found time to think of what had been done, and what was still being done, in the Sudan. People at home might have forgotten, but he had not; and when the right moment came he recognized its arrival, and acted promptly and energetically, as usual. He urged action on the British Government, and carried his point in face of a good deal of opposition. Moreover, to him must be given the credit for selecting the right man for the work that had to be done. He selected Kitchener, and he secured Kitchener's appointment; and once more the event justified his judgment. The Battle of Omdurman freed the Sudan from the oppression of the Khalifa Abdullah, and set it also on the road to prosperity. And while Kitchener fought and won the battle, it was Lord Cromer—and practically Lord Cromer alone—who made that victory possible. He deserves the title of the Saviour of the Sudan almost as much as that of the Maker of Modern Egypt.

His relations with the Egyptians have been made very clear in his own writings. With the Khedive Tewfik they were friendly, for Tewfik recognized what he owed to the British, and remembered the state of Egypt before Lord Cromer's beneficent guidance. Abbas II. forgot these things, and suffered himself to be made the tool of intriguers; and the consequence was that he and the British Agent were not infrequently at variance. How delicate the situation became on more than one occasion is made clear in "Abbas II.," which was published in 1915, and which shows how sound was Lord Cromer's judgment of the Khedive, and how he held himself in hand for the sake both of Egypt and of Great Britain. He was always ready to recognize real merit in any man, and though he was no believer in the "Egypt for the Egyptians" theory, he worked gladly with many of the Egyptian Ministers who showed that they had at heart their country's best interests. Towards the people, the *fellaheen*, he was truly sympathetic, and though he never indulged in sentimental talk regarding their "rights," he undoubtedly did even more for their welfare than is generally recognized.

Nor did he forget the welfare of the Europeans in the country, being, indeed, anxious that all who helped to make the land prosper should themselves prosper also. His aim, it is safe to say, was the ultimate abolition of the Capitulations, which afford opportunities for so many abuses, and have in the past proved such a thorn in the side of the Administration; and shortly before he left Egypt he prepared a scheme for the representation of the European communities in the government of the country, which would render possible the abolition of the Capitulations. For various reasons it has not yet proved possible to achieve this very desirable end, but it is to be hoped that it will now very shortly be achieved.

In May, 1907, Lord Cromer's health compelled him to resign, and he returned to England. To the last, however, he continued to take the most lively interest in the affairs of Egypt; his advice was always at the disposal of his successors and of the British Government; and his speeches in the House of Lords showed that he had by no means lost his grip of Eastern affairs, or his genuine, if undemonstrative, affection for the land for which he had done so much.

A Constantinople telegram received by way of Amsterdam reports that, at the instance of the Ottoman Government, the Chamber of Deputies has sanctioned the adoption of the Gregorian Calendar.

TANGIER TO TEHERAN.

I was interested in Sir William Ramsay's estimate of King Constantine, which was quoted (from *Land and Water*) in last week's NEAR EAST. Sir William undoubtedly knows his subject, and when he refers to the "explosion of indignation" against Tino after the Greco-Turkish War of 1896 he records a fact that is beyond dispute. There was such a chorus, and Tino had to put it vulgarly—"a close squeak." The Greeks wanted a scapegoat, and the Crown Prince was the most convenient—and, indeed, most suitable—object to hand. But, for all that, one wonders whether he received quite fair play at that time. A friend who knows his Greece well, and was in Athens at the time, tells me that the Greek *débâcle* was certainly due in part to causes beyond Tino's control. The Crown Prince, according to my friend, had posted a force at one particular pass, with orders to hold it—which could have been done quite easily. The officer in command, however, did not approve of his instructions, and telegraphed—and the incident was typical of the state of discipline in the Greek Army at the time—to the Ministry of War, setting his own views against Tino's. And his own views prevailed: he was instructed to fall back; did so; and before Tino was aware that the position had been vacated the Turks were pouring through the pass, and threatening to cut him and his army off altogether. But if Tino had bad luck then, the Fates have certainly been kind enough to him since. Never, one feels, did a mediocre person have such phenomenal luck!

A few days ago I was allowed to read a letter giving an account of the "Braemar Castle" outrage, written by one of the nursing staff. It bore out other accounts which have already appeared in the Press, but also gave many details that have not been published, and probably would not be allowed to be published, for very good reasons. One thing may safely be said, however: the conduct of the wounded, and of all on board, was above praise, just as the conduct of the enemy in attacking a hospital ship was beneath contempt. Another point that struck me in reading the letter was that the survivors, who were taken to one of the Greek islands, evidently brought away with them somewhat mixed impressions. The writer refers enthusiastically to the kindness shown them by the British consular representative and his family, and by some French nuns and one or two Italians on the island; she pays ungrudging tribute to the skill and kindness of a certain Greek doctor, whose help was evidently invaluable; and she is very grateful to many of the natives who showed them kindness; but of some other islanders, who sought to make hay while the sun was shining, so to say, she writes, with obvious feeling, as "sharks."

One passage in the letter records a minor tragedy of the War. It refers to the state in which the writer's personal belongings were brought ashore, after an interval which had taught her the advantages possessed by her uniform. The packing, it seems, was done by stewards, who, in the urgency of the moment, appear to have forgotten—if they ever knew, poor fellows!—what care is necessary in handling feminine head-gear. "My three hats," says the writer, "were put at the bottom of my kit-bag, which was then filled up by tumbling books and boots in on top of them." But the part of the letter that interested me most of all was a postscript, in which the writer records that when taken off their island of refuge the "Braemar Castle" folk were all "entered as cases of 'nerve strain'"; and adds: "as no one is allowed to travel on a hospital ship unless they are either sick or working in it. (Thus do we observe the rules of war)." That, coming from one who has spent the greater part of the last two years on hospital ships, ought to dispose of certain lies told by the Huns as excuses for their iniquitous attacks on such boats.

Anyone who has travelled in the East must have been struck by the exaggerated respect shown by most Orientals to any official. There are, of course, exceptions, but they only go to prove the rule. Your real Oriental reverences an official intensely, and the feeling, which is often quite genuine, sometimes carries him to extraordinary lengths in the way of expression. I heard quite lately of a most amusing case in point. A certain high official in India, who believed in looking into things for himself, was given to travelling in out-of-the-way districts where none of his predecessors had ever shed the light of their countenance; and one day his peregrinations took him to a tiny office which was in charge of a venerable native. The latter, on hearing who had arrived, hastened out to pay his respects, and, approaching the official with great reverence, kissed his riding boots, and murmured ecstatically: "My god—oh, my god!" Then, before his slightly embarrassed and not slightly amused chief could remonstrate, he went on to say:

"Now my petition will be granted. Never before has one of the Great Ones deigned to visit this place. But now all will be well!" Inquiry elicited the fact that the old gentleman had been in receipt of an allowance of eight annas a month for "sundry office expenses," and that he had "petitioned" to have it raised to twelve annas a month. Incidentally the petition strikes one as not being precisely greedy! He was confident that, Providence having sent the Great One to his door, the desire of his (official) heart would now be granted; and the confusion of ideas at the back of his mind accounted, no doubt, for his deification of his chief. It is pleasing to be able to record that his petition, being considered reasonable, was granted on the spot.

Now, that it is a true story; and it seems to me typical of much that you come across in the East—and entirely delightful at that. A cynic would no doubt call the old native a blatant sycophant, and talk knowingly about the "cunning" of the Oriental; but personally I am prepared to believe that the old gentleman acted in perfect good faith. I have been through one or two incidents of the same kind myself, only with Arabs instead of Indians, and I was frequently touched by the boundless faith in the "power" and the exaggerated respect for the "riches" of the *Firengi* that these people showed. It was often embarrassing at the time; and when it was a case of being expected to work a miracle, and cure some quite incurable disease, it was apt to be painful. But it was touching for all that. And I suspect that it is very often memories of such incidents that lend the East so much charm when we look back upon it through the years that have gone.

A short time ago I heard a curious story, for the truth of which I am ready to vouch. In the early days of the War a British vessel and a Greek vessel were lying at the quay at the Pireus so close together that what went on on one ship was easily visible on the other. On the British boat were a large number of British workmen, who were on their way to a certain harbour to do war work. Presently down the quay marched a party of Greek gendarmes escorting a couple of very wretched, used-up-looking Albanian Moslems, who were handcuffed together and looked utterly exhausted and hopeless. They were to be sent to Salonika, it seemed; and the guard marched them on board the Greek steamer, where they were made to sit down on the deck, in full view of the Englishmen on the other boat, who regarded them with natural interest. Then, very quickly, interest became sympathy. For suddenly the Greek guards began to hit their prisoners—who were still handcuffed together—over the head, on the face, anywhere, abusing them violently the while. The Albanians bore it quietly: they were too exhausted and too handicapped to do otherwise. But the Britons soon lost their tempers at the sight of such poltroonery. "You cowards!" they shouted, "stop it!" And they made a rush for the gangway of their own boat. The Greeks desisted for a while; then they resumed their "amusement." The British workmen again "demonstrated"; they expressed their opinions of the performance forcibly, and again they made a rush for the gangway. But again they were stopped, as they had been before, by an Englishman of long experience in the Near East. If I gave you his name you would most likely recognise it at once. He calmed the raging crowd with words of reason and talk of "international complications." "But," he said, in telling me of the incident, "I am afraid that, even so, those two Albanians never reached Salonika."

A NEW TRANSLATION OF THE KORAN.*

This is the first part of a series of thirty which it is intended to bring out at somewhat irregular intervals. "When all the thirty parts have been published, an ample introduction to the Holy Quran will be added, which will be a comprehensive exposition of such important matters as require a detailed and lengthy discussion." The original Arabic text is given at the top of each page in clear, bold characters, three lines deep on the average, the remainder of the page being devoted successively to a transliteration in English characters, an English translation, explanatory notes, and a "running note" on the arrangement and sequences of the verses. Some of these features constitute a departure which the author finds it necessary to justify. Thus the inclusion of the original is prompted by "a desire not to jeopardise the text," while the transliteration is intended "as a radical help to the new converts to Islam who have to learn by heart a portion of the Holy Quran to be read in prayers." The book is in the main a commentary. The greater part of it being taken up by notes, neither the Arabic version nor the transliteration introduces an element of disproportion.

The identity of the author is not revealed. But the gentleman under "whose auspices" the work is published is described as "the second successor of the promised Messiah." The announcement is displayed in bold type on the cover, and is the first thing that leaps to the eye. Three full pages are then devoted to pampering this mysterious personage into a sort of semi-holy existence. The opening sentence "conveys to the world at large the glad tidings that the Blessed Messenger of the latter days, whose advent was foretold by almost all the great prophets of the world, made his appearance in due time in the person of Hadrat Mirza Ghulam Ahmad of Qadian." This is followed by a lengthy attempt to explain that although the Prophet called the promised one Jesus, that did not mean that the very Jesus who appeared in the world 1,900 years ago would come back again. "He" (the promised Messiah) "was called Jesus because he was to be the last successor of the heavenly dispensations established by the Prophet, just as Jesus was the last successor of Mosaic dispensations." The institution thus set up is going to be permanent. As soon as a Messiah dies a successor is promptly appointed. There appear to have been three of them so far, the first passing away in 1908, "in accordance with prophecy established beforehand." He was duly succeeded by another gentleman who died in 1914, and whose place is now filled by his son, to whom "the world at large" is kindly referred for spiritual blessing.

This may all be perfectly legitimate if kept within limits. But to incorporate, as the author does, such pet dogmas into what purports to be a serious commentary constitutes a gross abuse. The "Messiah" is most ingeniously smuggled in in several places. On page 3 the seventh verse of the Fatiha is profaned by being made to refer to the advent of a Messiah; and a few lines further the author introduces his predecessor in the following manner:—"The Messiah referred to in the verse has already appeared, and his name is Mirza Ghulam Ahmad of Qadian." On p. 11, in connection with verse 6 of El Bakara, the following passage occurs in the notes:—"It may be mentioned in passing that the Promised One has already appeared. His name is Mirza Ghulam Ahmad of Qadian." Again, on p. 55, we are told that the alleged degradation of Moslems to-day is by way of punishment, but that a promise of freedom from fears and dangers is held up to those who would only accept Mr. Ghulam of Qadian. There are at least six lengthy references to the Messiah in the notes of but one-thirtieth part of the Koran. At the same rate there would be no less than 180 such allusions in the complete text, apart from the ninety pages (three to each part) that would presumably be devoted to immortalising the Messiah. Now, this is altogether an illicit use of a commentary. From the purely Moslem point of view the procedure is profane, to say the least. It is bound to rouse the great majority of Moslems to a sense of very deep indignation. The Azharites in particular will resent the method as a gratuitous encroachment upon the sanctity of the Holy Book. The author's method, moreover, threatens to reduce what might otherwise be called a laudable attempt at comprehensiveness to a piece of pamphleteering of a very undignified type.

The author's comments leave much to be desired. A dogmatic attitude characterises their tenor. The author follows ancient commentators rather slavishly, and is, on the whole, justly open to the criticism of being out of touch with modern development. For instance, in discussing the three letters "Alif," "Lam," "Mim," occurring

at the beginning of the second chapter, the author, after disposing satisfactorily of the notion that these were added by a scribe, drives the reader irresistibly to a sense of disappointment by endorsing the view that these letters stand for "I, God, the Most Knowing." Where the issue is not linguistic, he often fails to give references. The distinguished Moslem commentators of old were perhaps justified in giving opinions on trust. They addressed themselves to a Moslem public. They, therefore, started with the assumption, as a premiss, that the Koran was the undoubted Word of God. Any apparent inconsistency was easily brushed aside as being incompatible with His qualities. But to adopt the same process of reasoning with an audience which does not necessarily accept that premiss as a starting-point is to beg the question.

The work is not free from polemics. Here and there the opportunity is taken of replying to "Christian writers," these being occasionally mentioned by name. The author refutes the construction placed upon the fifth verse of the second chapter, "And who believe in what has been sent down upon thee and what has been sent down before thee" as enjoining Moslems to follow teachings other than those of the Koran. In the footnote on page 41 "our Christian critics," who are "exultant over the discovery of an inconsistency," are blamed for not piecing together verse 49 of Chapter II. with other verses. Had they done so, they "would have understood the true character of intercession in Islam." In connection with verse 80 of the same chapter, warning the Jews against tampering with Divine Scriptures, the author asserts that "some Christian writers have in vain attempted to force an unwarranted corollary out of it." These writers are said to take this warning "as a testimony to the existence of the true Bible at that time," and the author retorts that "reference to tampering with the text does not necessarily mean tampering with the genuine text."

The author deals at length with verse 83 of Chapter II., where, after speaking of the prophets who came after Moses, special mention is made of Christ. "Christian missionaries, who often hunt up handles for attacking Islam, and read the Holy Koran with the settled object of discovering in it something in support of their own pet theories," are credited with the opinion that the special mention made of Christ is meant for his exaltation over other prophets. This the author sets himself to refute.

Far from feeling that an apology is due for adding one more translation to those already published, the author holds that a good translation is "the crying need of the time." Summarily and without qualification, he condemns "all the English translations, so far published," as having been done "either by those who were swayed by nothing but religious prejudice, and whose object was certainly not the manifestation of truth, but the presentation of a ghastly picture of the Holy Quran before the world, or by those who had no acquaintance worth the name with the Holy Quran and the Arabic language, the result being that those translations are too poor reading to afford anything like a real insight into the excellences of Islam." This is certainly a highly coloured picture and an ungenerous account. Arabic is deeply indebted to European scholars; much more so than to anything that Indians, Persians, or even Arabs can lay claim of late. The thoroughness with which some of those scholars master Arabic, the devotion and care they lavish upon its advancement, all redound to their credit; and the Margoliouths, the Brownes, and the Macdonalds can be pointed to by the score. Of Palmer the charge of ignorance assuredly cannot be maintained. Rodwell's translation does not differ materially from that of Palmer. After all, our author's version is but a modified form (not a happy one) of one or other of these. But the notes are copious. In the linguistic side of these lies the chief merit of the book. Where the author differs from other translators—indeed, even where he does not differ—he very often adduces authoritative evidence in support of his view. Taj El Arus, Lisan El Arab, and Lane are thus freely and frequently quoted. The first departure that strikes the reader is the well-known Islamic formula usually stated in English as "In the name of Allah," which the author renders: "I begin with the name of Allah." This, we venture to think, is making too much of a grammatical device. For parsing purposes in Arabic a phrase such as "I begin" or "I read" is supposed to be "understood," and is mentally prefixed to this form of opening. But it does not seem warrantable to carry the assumption beyond this.

The first verse in Surat El Bakara is made to read:—"This book, wherein there is no doubt, is a guidance for the God-fearing." There seems here to be adherence to the letter somewhat at the expense of the spirit of the Arabic text. In the notes the author rightly explains the variety of interpretations of which the Arabic version is capable. Palmer's rendering, however, appears to be the one most in consonance with modern acceptance. The reason for

*"The Holy Quran." With English Translation, Explanatory Note, etc. Part I. (Published by An-Noman-i-Tarqi-i-Islam, Qadian, Punjab, India. First edition. Price Rs.2.)

preferring the wording "That is the book; there is no doubt therein; a guidance," etc., is that as thus interpreted the verse conforms with the best rules of rhetoric.

"Muttaquin," in the same verse, is translated as God-fearing, as against Palmer's "pious." The latter seems more faithful to the text. In support of his view the author embarks upon a rather roundabout reasoning. "Muttaqi," says he, "is derived from Ittiqa, which means to save oneself. Hence Muttaqi is one who saves himself. As man saves himself from God's wrath by perfect submission to His will and complete obedience to His commandments, and as God's wrath is the greatest of all dreads which a human being strives to escape, therefore he who does righteous deeds and, by complete resignation to God's will, attains to that state of human perfection which entitles him to salvation is called 'Muttaqi.'" This is certainly too far-fetched. But it is also strange, after taking such pains in magnifying the difference between his own rendering and that of other translators, that the author should elsewhere commit the very mistake he had set himself to condemn. The circumstance argues an unpardonable levity and lack of correlation.

The fourth verse of El Bakara, the latter part of which reads, "And expend out of what we have provided them with," is more faithful to the Arabic text than either Rodwell's, which makes it "expend for God," or Palmer's "expend in alms"; while in the notes the author takes the broader view that expenditure is meant for the welfare of mankind generally. He seeks to elaborate the point further, but rather labours it by restricting the meaning of God-given things to "such of our belongings as are obtained in strict compliance with God's will."

Verse 7 of the second chapter claims lengthy consideration. Palmer's version, which reads, "Verily, those who misbelieve, it is the same to them if ye warn them or if ye warn them not, they will not believe," is rejected as a "serious mistake," as "running counter to actual experience," and as "directly opposed to the teachings of the Koran." He seeks to remedy all this by treating part of the sentence as a dependent clause, thus:—"Verily, those who have disbelieved—while it is alike to them whether thou warn them or warn them not—will not believe." This rendering has every appearance of making the verse less presentable while altering the sense but little, if at all. But the author claims that the alteration imparts to the verse the significance that "there is no chance for the disbelievers to believe while they are indifferent to the admonition of the Holy Prophet."

In verse 10, the author rightly substitutes "strive to deceive Allah" for "deceive Allah," adducing more than one authority in support of the change. In verse 16, the words "Allah shall requite their ridicule" are substituted for "God shall mock at them." The alteration is ably explained by the fact that, according to the Arabic idiom, punishment for a vice is often denoted by the term used for the vice itself, abundant examples being cited. In verse 15 the author differs from both Rodwell and Palmer by interpreting "shaitan" as ringleader instead of devil. "When they are alone with their ringleaders" is thus substituted for Palmer's "When they go aside with their devils." While Palmer's in this particular instance is, perhaps rightly condemned as being much too literal, our author has hardly made out a case for his version. From the fact that the root "shatana" means straying away from the truth, it hardly follows that shaitan means a ringleader. Rather we prefer to consider the sense as figurative. The last construction would make the verse descriptive of a tendency in the persons referred to, on being alone, to yield to impious feeling or to revert to a state of disbelief.

In verse 35 the angels are made to "fall prostrate for Adam" instead of before him or of "worshipping" him, the explanation being furnished partly by an appeal to consistency, and partly by the fact that "sijdah" also signifies obedience or submission. "Taken in this sense," says the author, "the order refers to Adam, and means that God bade the angels serve Adam—that is, assist him in his mission."

In connection with verse 66 the author is careful to point out that it is not meant that the profaners of the Sabbath were actually transformed into apes. Two instances from the Koran are quoted where similar expressions occur, but where the context makes it obvious that their use is symbolical. It is also explained, by reference to grammar, that, inasmuch as the termination "in" appended to the Arabic equivalent of "vile" postulated of apes denotes that the epithet refers to rational beings, transformation into apes could not have been meant in a literal sense.

Instances could be multiplied of the minute care and attention devoted to details. On the linguistic side, felicitous explanations abound. Errors there are, and our author does not always err on the "safe side." On page 15, verse 12, the sentence "We are only promoters of peace" is rather arbitrarily substituted for the correcter, "We do but what is right." In verse 27, p. 25, the setting forth of a "parable of a gnat" is altered by the author into "the giving a

description little like a gnat and what exceeds it." The alteration does not appear justified, and the English rendering is made clumsy and very unreadable.

From the fact that the translation is by a Moslem one might have expected to find it adhere unduly to the letter of the Book. The purity of the text is an ideal so deeply ingrained in the Moslem mind that in a translation that aim might conceivably take the undesirable form of a literal rendering. Our author has managed to tear himself free from that objection; but he has made such bad use of a right method that his version may be pronounced a failure. Indeed, in parts, the English is atrocious. The work on the whole is "too poor reading to afford anything like a real insight into the excellence of Islam."

Translation is never an easy task. The Koran in particular seems to present a combination of all the factors that go to make a translation into English particularly difficult. In the first place, the language of the original possesses a totally different diction. In the second place, it is brimful of figures of speech which, when rendered into their equivalent forms in English, fail to have the same connotation or to command the same grip upon the imagination. "The style is fluent and concise, adorned with bold figures after the Eastern taste, enlivened with florid and sententious expressions, and, especially where the majesty and attributes of God are described, sublime and magnificent." The Koran is admittedly the standard of the Arabic tongue. Elegance of style plays such a predominant part that a translation cannot be termed faithful unless it reproduces not only the gist of the original, but the grandeur and sublimity of its diction. This may be well-nigh impossible in any translation. But there is room for a more thorough attempt to approximate the melody and the sonorous cadence of the Arabic.

One, on the other hand, might have expected a commentary written in English in the twentieth century, claiming to be a research, to be a tolerably good achievement. Instead, one is confronted with unsubstantiated, antiquated dogmas, given as on trust, and marred throughout by a bold, if not licentious, encroachment upon the sanctity of a book revered by three hundred millions of people by using its sacred tenets as a medium for canvassing a sectarian movement. The present age may well be one of religious research. It may even be readily receptive of fairy tales. But, we submit, a work cannot be at once a serious research and a fairy tale. S. L.

BOOKS RECEIVED.

Turkey, Greece, and the Great Powers: A Study in Friendship and Hate. By G. F. Abbott. With maps. (Robert Scott. 7s. 6d. net.)

The Reconstruction of South-Eastern Europe. By Vladislav R. Savitch. With preface by Sir James George Fraser, Hon.D.C.L., LL.D., Litt.D. (Chapman and Hall. 7s. 6d. net.)

To-day is the birthday of Prince Andrew of Greece, King Constantine's third brother, who was born at Athens in 1882, and married (in 1903) Princess Alice of Battenberg.

The King has consented to open the School of Oriental Studies, London Institution, on Friday morning, February 23.

In a message sent off last Saturday, Reuter's Cairo correspondent reports that the Sultan of Egypt "has had a relapse of the fever from which he suffered in the autumn, and the doctors have ordered him to take absolute rest for some time. The banquet which had been arranged in honour of Sir Reginald Wingate, the Siridar, has therefore had to be postponed." This, unfortunately, emphasises what our Cairo Correspondent writes in his letter, which appears elsewhere, regarding the strain to which Sultan Hussein has subjected himself during his recent journey up the Nile.

Earl and Countess Curzon of Kedleston have taken up their permanent residence at 1, Carlton House Terrace.

Princess Soutzo left London last Friday for Paris.

Lady Howard de Walden has returned to Seaford House, Belgrave Square, from Chirk Castle, North Wales, where she spent the week-end.

We learn that Mrs. Cator, the wife of Judge Cator, has left Egypt for Salonika, where she has complied with Sir A. Ruffer's request to assist him with the work he is organising there, in relation to a certain section of the Red Cross Sanitary Service and Hospitals. Mrs. Cator has volunteered her services for six months.

Mr. Balfour received H.E. the Persian Minister at the Foreign Office last Friday.

Imail Khan Fanzaneh, the newly-appointed Persian Minister in Madrid, has left Teheran to take up the duties of his post.

General Ilescu, representing the Roumanian General Staff, visited the French General Headquarters on Tuesday to confer with General Nivelle.

Captain Yovan U. Yovanovitch, who was recently appointed Assistant Military Attaché to the Serbian Legation, arrived in London and entered on his duties last week.

M. Mitilineu, formerly Secretary to the Roumanian Legation in Brussels, passed through London last Friday on his way from Roumania to the Legation at Havre.

ORIENTAL STUDIES.

THE SCHOOL OF ORIENTAL STUDIES, London Institution, Finsbury Circus, E.C. OPENED on 18th JANUARY, 1917. Courses will be held in the Principal Languages of the Near, Middle, and Far East, and of Africa. Courses will also be given on Oriental Religions and Customs. Intending Students are invited to apply at once to the undersigned. E. DENISON ROSS, Director.

M. M. Miloyevitch has left London for The Hague, where he will act as Chargé d'Affaires of the Serbian Legation.

M. Bojidar Puritch, an attaché to the Serbian Legation in Berne, arrived in London from Russia a few days ago.

Last Saturday, at the offices of the Serbian Relief Fund, Cromwell Road, Kensington, a short religious service was held in commemoration of the anniversary of St. Sava, the patron saint of Serbia. The Very Rev. Father Nicholas Velimirovitch officiated, and H.E. the Serbian Minister and Madame Yovanovitch were present.

Mr. Alexander Devine, of Northwood Park, Winchester, acting as Commissioner on the Continent on behalf of the Montenegro Red Cross and Relief Fund of London, has just returned from France. Whilst abroad he concluded negotiations on behalf of the London Committee with regard to the relief in food and clothing of the Montenegrin prisoners interned in various parts of Hungary and Austria. During his visit to Paris he was received on several occasions by his Majesty King Nicholas.

On January 9, at All Saints' Church, Cairo, the marriage took place of Miss Antoinette Priscilla Vulliamy Devonshire, second daughter of Mr. and Mrs. R. L. Devonshire, of Heston, Middlesex, and Maadi, Cairo, to Lieutenant Evan R. Campbell, son of Mr. Middleton Campbell, of Colgrain, Dumbarthshire, N.B., and Fen Place, Sussex. The Right Rev. the Bishop of Jerusalem officiated, assisted by the Rev. C. T. Horan, Chaplain of All Saints', and the Rev. W. A. Taylor, C.F. The bride was given away by her father, and her sister was her only bridesmaid. The bridegroom was attended by Captain Ridley, as best man.

Among the friends present at the ceremony were Mrs. and the Misses Madden, Mrs. Phillips and Miss Barbara Phillips, Mrs. Teale, Lieutenant Golding and Mrs. Golding, Mrs. Dudgeon, Miss Marshall, Mr. and Mrs. Arthur Bolland, Lady Oakes, Mr. and Mrs. Hart, Mrs. and Miss Horan, Mrs. Elgood, Miss Pound, Miss Gordon Smith, Madame Huszar, Mr. Kingsford, Major Kerr, Sister Margaret Clare, Mrs. Peckitt, Sister Tacon, Sister Kenny, and the Misses MacInnes.

Later in the day Lieutenant and Mrs. Campbell left for Upper Egypt, where the honeymoon will be spent. The wedding gifts to the bride and bridegroom comprised many very valuable presents.

Lieutenant-General A. R. Hoskins, C.M.G., D.S.O., who has assumed command of the East African Expeditionary Force, vice Lieutenant-General Smuts, saw service in Egypt soon after entering the Army. He joined the Prince of Wales's North Staffordshire Regiment in 1891, at the age of 20, and in 1895 he served with the Dongola Expedition. He also took part in the Nile Expedition in the following year, and he was three times mentioned in despatches for his services. He won the D.S.O. in the South African War, also the Queen's and King's medals with five clasps. During the present war he has been twice mentioned in despatches, and has won the C.M.G.

Second Lieutenant C. A. M. van Millingen, Rifle Brigade, elder son of the late Professor van Millingen, has, we are glad to learn, quite recovered from the effects of his wound. He has now returned to the front.

A Reuter's message from Paris, dated January 26, says:—The *Matin* states that General Berthelot, who was in charge of the French Mission to Roumania, has had long interviews at the Russian Headquarters with General Gourko, on whom will fall the responsibility in the future of conducting operations on the Russo-Roumanian front.

Mr. Anthony White, churchwarden of All Saints, Galley Hill, Swanscombe, Kent, has recently presented to that church, in memory of Earl Kitchener, a picture of "The Message

of the Angel to St. Joseph," painted by Marcello Venusti, a pupil of Michael Angelo, and four plaster casts of British saints.

The following members of the British Colony in Athens were not included in the list sent us by our Correspondent, published in THE NEAR EAST a fortnight ago:—

Mr. Garniss.
Mr. and Mrs. Couvela and Son.
Mr. Weak and family.
Mrs. Lockyer.
Misses Burnett, Brownley, McCarthy, Crowley, Hall Pyne, Wood, Ashover, Woolcott, Colebran, Aaruso, Kerr.
Mr. Fisher (who went to Bordeaux).
Mr., Mrs., and Miss Skidmore went to Syra, not Rome.

Reuter's Amsterdam correspondent reports (January 28): According to a telegram from Sofia, the ex-Minister, M. Halatcheff, father-in-law of M. Ghenadieff, who was sentenced at the recent trial of prominent politicians for high treason, has been pardoned and released.

APPOINTMENTS, PROMOTIONS, ETC.

Miralai R. P. S. Eldeston Bey, Deputy Assistant, Financial Secretary, Sudan Government, has been promoted Assistant Financial Secretary in succession to Lewa W. S. R. May Pasha, retired. Mr. T. J. Morris, Inspector in the Finance Department, has been promoted Deputy Assistant Financial Secretary.

Mr. R. K. Winter, Inspector Legal Department, Sudan Government, has been transferred as Assistant to the Civil Secretary, and Mr. E. G. S. Hall, Inspector Legal Department, has been appointed Inspector Darfur Province.

Bimbashi R. W. Hulton, of the artillery, and Bimbashi C. C. Godwin, General Staff, Egyptian Army, have been transferred to the Sudan Government from January 1, 1917.

Kaimakam J. P. L. Mostyn Bey, Inspector, Sudan Government, and Bimbashi W. F. L. Bright, Sudan Veterinary Department, have been struck off the strength of the Egyptian Army.

Captain G. C. Mostyn Owen, Shropshire Yeomanry, has been attached to the Egyptian Army as Special Service Officer. He has been granted the temporary rank of Bimbashi, and attached to the 1st Battalion for duty.

Miralai W. Byam Bey has been struck off the strength of the Egyptian Army.

Captain A. J. Matthew, West Yorkshire Regiment, has been attached to the Egyptian Army as a Special Service Officer. He is granted the temporary rank of Bimbashi and his services are placed at the disposal of the Sudan Government.

Captain J. W. D. Cook, Army Service Corps, has ceased to be attached to the Egyptian Army as a special service officer from December 27, 1916.

Bimbashi R. F. White, Equatorial Battalion, has been promoted to the temporary rank of Kaimakam and appointed acting officer commanding that battalion vice Kaimakam D. C. Percy Smith Bey, D.S.O., transferred as officer commanding 1st Battalion.

Major J. Stevenson-Hamilton, reserve of officers (6th Dragoons), and Lieutenant J. D. Matthews, Royal Artillery, having reported their arrival in Egypt, were taken on the strength of the Egyptian Army as special service officers, with the rank of Bimbashi, and have been posted, the first, to the Sudan Government, and the second to the Artillery.

Kaimakam H. J. Huddleston Bey, officer commanding Camel Corps, has been granted the temporary rank of Miralai.

Mr. E. G. S. Hall, of the Sudan Civil Service, has been granted the temporary rank of Kaimakam.

OBITUARY.

LORD CROMER.

It is with much regret that we have to announce that Lord Cromer died on January 29, at his residence, 36, Wimpole Street. He had been unwell for some weeks, and his condition caused considerable anxiety to his family and friends; but his recuperative powers were so great that it was hoped they might triumph over this illness as they had over previous attacks. The hope was, however, doomed to disappointment, and he passed away at ten o'clock in the evening. His loss is a great one for the country and for the Empire, and he will be sincerely mourned not only in this country and in Egypt—where he spent so many years and wrought such wonders—but wherever there are Britons who feel pride in the Empire, and wherever there is recognition of a truly great man and his worth to the world.

The King and Queen, the Duke of Connaught, Princess Victoria, and the Sultan of Egypt have addressed messages of condolence to the family of the late Lord Cromer. It has been arranged that the funeral shall take place at Bournemouth Cemetery to-morrow afternoon at a quarter past two o'clock, and arrangements have been made for those attending to leave Waterloo Station by the 9.35 a.m. train, returning to London by the 3.45 p.m. train from Bournemouth.

A memorial service will be held at Westminster Abbey on the same day at half past twelve o'clock. No tickets will be issued, but admission will be given to personal friends on presentation of their visiting cards at the entrance to the choir.

Reference to Lord Cromer's work in Egypt will be found elsewhere, but it must necessarily be inadequate; for to tell all that he did for that country, it would be necessary to write another history of "Modern Egypt." The condition of the Nile Valley to-day is the best testimony to his work and ability, and neither Englishmen nor Egyptians are likely soon to forget the debt they owe him.

TWO GALLANT BROTHERS.

We regret to learn that Mr. C. J. Giraud, of Smyrna, has lost two of his sons in the War. One, Sergeant Noel Edward Giraud, is believed to have been killed on June 29, 1916; and Caporal Herbert Giraud fell on October 21, 1916. A correspondent writes:—

Noel Edward Giraud, Sergeant 173ème de Ligne, and Herbert Wilfrid Giraud, Caporal 52ème Infanterie Coloniale, were the sons of Mr. Charlton J. Giraud, of Smyrna, and grand-nephews of the late Sir William Whittall of Constantinople. Both were educated at Berkhamsted School, and answered the call to the French Army on the outbreak of the war. The former received the Croix de Guerre and was made Sergeant for very gallant conduct in June, 1915, when with a lieutenant and only five men he held an isolated advanced position for twenty hours. He was "cité à l'ordre du régiment" as follows:—"Le caporal Noel Giraud, demeuré seul comme gradé avec son chef de section a fait preuve du plus grand sangfroid en portant en avant les hommes de sa section sous un feu intense d'artillerie, de torpilles et de bombes."

The second son, having passed safely through five attacks, and having made numerous prisoners, was buried by a shell. His body was recovered, and a friend writes that his gallantry had made him such a favorite with his regiment "that he was buried with all honours, as though he had been the colonel of the regiment."

A third brother, Raymond, the eldest son of Mr. Giraud, has just been awarded the Croix de Guerre "avec palme" for his conduct in Athens, where attaché comme interprète aux détachements français en pays hostile s'est acquitté de sa tâche avec beaucoup d'intelligence et de calme. Pris dans le piège-à-mus de grec du 1er Décembre il ne s'est pas départi de son sangfroid en présence du danger."

DR. SHIBEI SCHEMEIL.

Dr. Shibeï Schemeil, a well known Syrian writer and patriot, died in Cairo on January 1, aged 66. He was (says the *Egyptian Mail*), a native of Mount Lebanon, and studied medicine in the American College, Beyrout, being one of its very first graduates. As soon as he left college, Dr. Schemeil went

to France, where he perfected his knowledge of medicine, and came to Egypt over forty years ago, making Tanta his home. His fame as a skilful physician having gone beyond the limits of that town, he moved to Cairo about thirty years ago, where he has lived ever since, and where he acquired a reputation second to no physician in the country, native or foreign, and was often appointed as expert by the Courts to decide important medical matters.

But Dr. Schemeil was not only noted as a great physician; he was also one of the very ablest scientists and writers in the country, in both Arabic and French, as is proved by his works on Darwinism and his frequent articles in the magazines and newspapers on various scientific, philosophical, social, political, and literary subjects, written in a vigorous, terse style which has come to be known as peculiarly his own. His acceptance of Darwinism made him many enemies, owing to bigotry, but their attacks, which he easily parried, made him adhere more strongly to his ideas, and he continued to his death to be the champion and exponent of Darwinism in the East.

For a number of years Dr. Schemeil published a monthly medical magazine, but, owing to want of support from the Government, he had to give up editing it. He also published a book entitled "Al-Hakika," and a collection of his articles in two volumes, besides a large number of pamphlets on philosophical and other subjects, all of which testify to the depth and width of his scientific and literary attainments, certainly unrivalled in an Oriental of the present day. He was also a poet of no mean order, and without fear of contradiction it can be said that Dr. Schemeil was the greatest living Syrian, both in Egypt and in his own country, and that he leaves a void which will not be easily filled.

For many years Dr. Schemeil was one of the greatest critics (enemies would be a more correct word) of the Turkish Government, owing to its tyranny, particularly to his countrymen the Syrians; and the articles he published in the newspapers were written in as severe and trenchant language as was ever used by a man against the oppressors of his race. Unfortunately he has not lived to see his country liberated from the heavy yoke of the Turks.

It is said that Dr. Schemeil has written his memoirs, which will appear in the Arabic magazine *Al-Bayan*.

The death of Sir Robert Bouchier Sherard Wray, eleventh baronet, of Tawstock Court, Barnstaple, took place at a nursing home in London last week. He was formerly major and lieutenant-colonel in the Royal North Devon Hussars; served in the Zulu War (medal with clasp), in the Egyptian campaign, 1882 (Egyptian medal and Khedive's bronze star), and in the Burma Expedition, 1885-6 (medal with clasp). He was sixty-one years old. In 1905 he married Jessie Maud, daughter of the late William Thomson Fraser.

Lieut.-Colonel Francis Tichborne Wilkinson, R.A.M.C. (retired), died on Thursday of last week at The Maples, Blackheath, aged fifty-nine. He took part in the Nile Expedition of 1898, and was awarded the Egyptian medal, with clasp. He also served with the Isazai Expedition (1892) and in the South African War.

Colonel Arthur Montagu Bowles, 2nd North Staffs Regiment, died on Sunday at his residence, Sutherland House, Kensington, at the age of sixty-nine. He took part in the Egyptian Expedition of 1882, when he received the medal and bronze star.

The Wounded Allies Relief Committee, 8, Grosvenor Gardens, S.W., is presenting to the Queen of Roumania, through Mme. Misu, wife of the Roumanian Minister in London, drugs and surgical instruments to the value of £500 for the benefit of Roumanian sick and wounded, as well as £100 worth of hospital stores.

The Roumanian Legation, 4, Cromwell Place, S.W., acknowledges, in response to an urgent appeal for comforts for the Roumanians, the receipt of a large consignment of soap from Sir William Lever.

FRIDAY, FEBRUARY 2, 1917.

A GREAT IMPERIALIST.

By the death of Lord Cromer the British Empire has lost more than a successful administrator. He was essentially a great Englishman, embodying the characteristics associated with the race, but which only here and there in a generation are to be met with combined to a similar extent in one and the same person. A contemporary French writer has found in the romance of "Robinson Crusoe" the best handbook and guide to the English character. Crusoe, it is pointed out, is practical, but is conscious of the overshadowing presence of the things that are greater than man. The whole bent of Lord Cromer's mind was essentially practical. The facts of life and the facts of the immediate situation were there to be faced, to be made to serve the purpose he had in view, if possible; in no case were they simply to be ignored. To a military training he added accurate scholarship and devotion to classical literature, which throughout a long career engrossed in public affairs never lost their grip on his whole outlook on life; they contributed in no small measure to his faculty for clear reasoning. At no time hasty in making up his mind, he never lacked confidence in his own judgment, nor hesitated to accept responsibility. A man so sure of himself in connection with all that concerned the sphere in which he was placed must have been far less amenable to those who had authority over him if he had not found in his philosophy a place for the "things that are greater than man." Lord Cromer was indeed a loyal subordinate to the Home Government, not only when he was proving his capacity in Egypt, but also when, his position already established beyond challenge, it was not always possible that his recommendations or wishes should be adopted as Great Britain's policy. In turn, he looked for the same readiness for responsibility, the same cult of efficiency in those who served under him. But, however much his personality might be stamped on his work, there could be no question of the unselfishness of his motives, of his genuine interest in the welfare of the country for whose destinies he was mainly responsible. Lord Cromer had the intellect to see the task before him in Egypt as a whole, and he set himself to carry it out in its entirety on lines with the correctness of which he was thoroughly satisfied. To this work he brought the marked aptitude for rule so often displayed in the class of Englishmen to which he belonged that goes hand in hand with courage and perseverance, as well as those other special qualities which are summed up in the hall-mark of a successful administrator, *Mens aqua in arduis*.

Lord Cromer's association with Egypt, apart from the few years which he spent there as Commissioner of the Debt, extended uninterruptedly from 1883 to 1907. He was confronted with chaos in the Administration, an empty exchequer, and unrest both in Egypt proper and, still more ominous, in the Sudan. The country was at its lowest ebb, morally and financially. The task of setting it upon its feet again was rendered the more difficult by the fact that the British Government was unable to make up its mind with regard to the attitude to be adopted towards the problem of Egypt's rehabilitation. Not the least of the services which Lord Cromer rendered the Egyptians at this time was to stand himself for a definite policy, which in spite of the vacillation and timidity of the Home authorities kept the goal steadily in view, and ultimately im-

pressed itself both on the Government and the public mind as the only line of action that could be reconciled with Egypt's interests and those of Great Britain. Into the details of the administration which Lord Cromer was instrumental in establishing and maintaining it is unnecessary to enter here. Through many vicissitudes it brought Egypt's finances to equilibrium and then to a condition of settled prosperity, while keeping State expenditure under careful control and taxation low both in Egypt and the Sudan; it opened the way for the unlimited development of the country's agricultural resources by providing funds for the necessary public works; it infused a new spirit into the relations between the governing classes and the governed, and revolutionized the popular conception of justice; in a word, it enabled Egypt to regain her self-respect. How thoroughly the work has been accomplished may be gauged from the fact that a generation has sprung up, which, forgetting the days of the Khedive Ismail, has produced those who would have it believed that the country was ever thus, and is in a position to-day to dispense with the guiding hand. Before Lord Cromer left in 1907 the movement was one that had to be reckoned with. He dealt with it in a farewell speech in Cairo, sympathetically but candidly. Changes there would have to be, but the difference which divided him from his critics was "not so much one of principle as of degree. They wish to gallop. I consider that a steady jog-trot is the pace best suited to advance the interests of this country. It is a pace which has done us good service in the past. I say it should be continued, never relaxing into a walk or breaking into a gallop; and my strong conviction is that, if the pace be greatly mended, a serious risk will be incurred that the horse will come down and break his knees."

Shortly afterwards, as is well known, an attempt was made to force the pace. It proved a grave failure. Since then the political destiny of Egypt has at last been definitely settled by incorporation into the British Empire. Commenting upon this step, Lord Cromer wrote: "No other solution was possible. Provided that the statesmanship be skilful and that there is no undue haste, the adoption of this measure, far from hindering, will tend to facilitate the execution of that rationally Liberal policy to which Great Britain is wedded in dealing with its outlying dependencies." His Imperialism was broad-minded, but it was pre-eminently sane. He was accustomed to face facts as they were, and not as he might have liked them to be. All his work in Egypt was directed to improving the conditions of life for the *fellaheen*, but this did not prevent him from recognizing their limitations. "Personally," he wrote in "Abbas II.," "I do not believe that such education as can be imparted in the schools and colleges will ever render the Egyptians capable of complete self-government without some transformation of the national character, which must necessarily be a slow process. . . . The cornerstone of Egyptian and Sudanese policy should be a full recognition of the fact that, in the absence of ties, such as community of race, language, religion, and social customs, the only link between the governors and the governed is to be found in material interests, and amongst those interests by far the most important is the imposition of light fiscal burthens." The same views Lord Cromer held in regard to India. "The foundation-stone of Indian reform," he wrote, "must be the steadfast maintenance of British supremacy. In this respect something of the clearness of political vision and bluntness of expression which characterized the Imperialists of Ancient Rome might, not without advantage, be imparted to our own Imperialist policy. Nations wax and wane. It may be that at some future and far distant time we shall be justified in handing over the torch of progress and civilization in India to those whom we have ourselves civilized. All that can be said at present is that, until human nature entirely changes, and until racial and religious passions disappear from the face of the earth, the relinquishment of that torch would almost certainly lead to its extinction." In the long run the straightforwardness of such a policy as Lord Cromer advocated must appeal more strongly to the governed than a régime of uncertainty and vacillation.

THE KING OF THE HEJAZ.

(FROM A CAIRO CORRESPONDENT.)

The official recognition by England, France, and Italy of the proclamation of the Grand Shereef of Mecca as King of the Hejaz invests a really remarkable figure with singular interest. The following is a character sketch of him, given by one who has been favoured with an intimate knowledge of the great man of Mecca, his entourage, and his epoch-making movement. Present circumstances, however, impose special discretion, and only a selection of facts can be made from the material available.

His Majesty the King of the Hejaz, Hussein Ibn Ali, has the distinction of being able to claim what is probably the purest and oldest lineage of all the crowned heads of the world. Added to his personal qualities and achievements, this fact goes far to account for the remarkable phenomenon of a practically unanimous acknowledgment of him as their supreme lord by the great chieftains of Arabia, whose mutual jealousies and exaggerated love of personal authority are proverbial. Purity of lineage is a source of great pride with the Arabs, and, when it is traceable to their Prophet, it commands the highest veneration on their part. The high value they place on documents attesting the descent of their thoroughbred horses may be cited as a proof of the value they attach to the principle of selection. Shereef Hussein Ibn Ali comes from Beni Hashem, the quintessence, so to say, of the tribe of Koreish. His descent is traceable, through his immediate ancestors, Ali Ibn Mohammed, Ibn Abdul Aziz, Ibn Aoun, back in unbroken line to the Prophet Mohammed. All the Moslems of the world acknowledge this lineage, and believe in Ishmael as being the original ancestor of the Arabs, whose lineage is again traced back to Noah.

His Majesty was born in Mecca the Honoured, and as soon as he attained manhood he went to Constantinople. It was the traditional custom of the Turkish Government to endeavour to win the goodwill of the Emirs of Mecca, to attract them by every possible means to the capital, and to impress them with the power and splendour of the Empire. To that end they built for them palatial residences in the city and its suburbs, provided education for their youths in the highest schools, and appointed private tutors to give them a special course of instruction; conferred on them some of the highest Government posts, and lavished on them the highest grades and decorations. This policy succeeded so well that in the course of time there grew up a group of the nobles of Koreish so imbued with Constantinopolitan ideals, and brought so thoroughly under the influence of the Turks, as to like what they liked and dislike what they disliked, even though this should be their own nation and their own language. Indeed, many of these nobles do not even speak Arabic properly, and have lost all touch and sympathy with Arabian life and ideals. A striking example is that of Shereef Haidar, the vice-president of the Majliss (Parliament), who has almost outdone the Unionists themselves in their Chauvinistic policy.

King Hussein Ibn Ali received the largest share of attention and favours at the hands of the late Sultan, who sent for him twenty-seven years ago, and continued to pay the closest attention to him. By special Imperial order, a sumptuous palace was built for him on the shores of the Bosphorus. During his long sojourn in the capital he won the esteem and love of all the high personalities with whom he came into contact, by the nobility of his character, the soundness of his judgment, and the keenness of his intelligence; so that, throughout the Hamidian régime, the Porte consulted him on most of the important questions of State. Thus, during his nineteen years' almost continuous sojourn in Constantinople, he was able to render, and did render, his Government and his nation the highest services. It required the exercise of rare tact and judgment to conciliate these jarring interests and serve them equally well, but history will record to his undying credit that he did so.

At the time when the Constitution was proclaimed the Vali of the Hejaz was Ratib Pasha, a notoriously corrupt tyrant, while the Emir of Mecca was Shereef Ali Pasha, actually residing in Cairo. When the people of the Hejaz were apprised of the proclamation of Qanun el Assasi (Constitution) and the downfall of the despotic régime, they rose as one man and expelled their Vali, heaping upon him insult and opprobrium. The new Government then recalled

Ratib Pasha and the Shereef as well, desiring to question the latter about certain flagrant abuses in which he was said to be also involved. Shereef Ali obeyed the call and departed for Constantinople; but on passing through Suez he found an opportunity to land in Egypt; and there he has remained ever since. Soon afterwards an Imperial Iradé was issued—on the 1st of Zil Kade, 1328 (about seven years ago)—appointing Shereef Hussein as Emir of Mecca. It may be mentioned in this connection, that Shereef Ali Numai el Koreishi, of happy memory, was the first to assume the Emirship of Mecca in 1525, and this high office has since been held, in unbroken succession, by his family up to the present day.

From the day when he took over the Emirship, Shereef Hussein was a faithful counsellor and sincere supporter of the Ottoman Government. In 1909 the people of the Hejaz Province elected his second son, Emir Abdullah (now Minister of Foreign Affairs in the new Arab Government) as Deputy in the Majliss el Mab'outhan (Parliament), and he proceeded to Constantinople a few days after the opening of the Ottoman Chamber. While acting as deputy for the Hejaz, Shereef Abdullah was the mouthpiece of his father, and a faithful agent in endeavouring to smooth away the growing friction between Arab and Turk. He thus ably represented his father in carrying out his policy, which coincided with that of the Liberal Party—namely, to insure the harmonious working of the different constituent elements of the Empire for the good of all and for its greater glory. Indeed, this policy was so faithfully and honestly pursued that when the troops of Sayed el Idrissi revolted in Assir against the Turkish Government and besieged the Turkish force in Ubha, the Grand Shereef raised a large Arab force and relieved Ubha. The Constantinople journals then filled their columns with articles headed by the picture of the Shereef, and extolling him and his splendid loyalty. Special reference was made to this his toric incident in the first manifesto which the Grand Shereef issued to the Moslem world, on the proclamation of his independence, wherein he used the terse and forceful sentence: "And I have fought the Arabs by the Arabs."

He and his four sons—the Emirs Ali, Abdullah, Faisal, and Zeid—adhered so faithfully to this loyal policy that some of the Arab Emirs ascribed to him arrant Turkophilism. Then the "Unionists" started their violent anti-Arab campaign of persecution and extermination. Free-minded Arabs in Syria and El Irak thereupon naturally turned to the great Emir of Arabia, the guardian of the Holy Shrines of Islam, for succour and redress. He tried then to calm them and comfort them with earnest promises of intervention, and at the same time he represented to the Unionists the gravity of the situation and the danger to which the Empire would be exposed if such a policy were persisted in. Soon afterwards the Great War broke out, and the Unionists were not long in siding with the Germanic Powers and throwing the fortunes of the Empire into the melting pot. They had consulted the Grand Shereef, informing him, at the same time, of their resolve to join the Central Powers. He wisely advised the strictest neutrality. Their object in consulting him, however, had doubtless been to sound his own and his people's feelings and intentions, rather than to seek his advice.

About four months later a rumour was circulated in Constantinople as to the existence of a movement in Syria and El Irak unsympathetic to the alliance of Turkey with Germany. The Unionists seized this as an occasion, or rather pretext, to send out to Syria Jemal Pasha, in order to carry out, with ruthless rigour, their programme for crushing out the life and spirit of this "Arab movement," by hanging its leaders, exiling the Arab notables, and starving the masses. On his arrival, however, Jemal found that the inhabitants were peaceful, and practically all supporting the Government with their lives and property in its conduct of the war which it had imposed on them; and that, therefore, there was nothing to justify the institution of a reign of terror. Thereon, he, with the characteristic cunning and deceit of the Turk, tried at first to pose as the friend of the Arabs, gathered round him the élite of Syria, and lured them into confidence by falsely pretending to approve and admire the Arab national movement. It is even said that he went so far as to make a speech, on the occasion of a banquet given in his honour at Damascus, wherein he said: "How can we expect the fatherland to

By Appointment to

progress when Arab and Turk forget and neglect their respective national ideals and when ignorance prevails?" On suitable occasions he gave expression to other views of a similar character, and thus entrapped the Arab patriots, who revealed to him their innermost hopes and aspirations, assuring him, at the same time, in all sincerity, that they were ready to sacrifice their very lives on the altar of Empire, provided the Government respected and recognised their national claims and rights. He then started dispersing Arab officers and men in the outlying provinces of the Empire, in the Caucasus, the Dardanelles and Persia, and organised an elaborate system of spying; and when finally he saw the country cleared of its militant elements, and his position absolutely secure, he brought down his heavy hand on the helpless population and indulged in that series of atrocities that has horrified the civilised world.

When all this was reported to the Grand Shereef, he at once sent his son Emir Faisal (now Minister of War) to remonstrate with Jemal against this suicidal policy, and to advise him to refrain from it. The Pasha promised to do so; but hardly had Emir Faisal arrived back in the Hejaz when the same ruthless policy was revived with even greater violence. Cases of hanging and exile became more frequent, and, worse than all, the wilful starving of the population was inaugurated. Meantime, the blockade of the Turkish coasts had been declared, and as the Turks stopped the carriage of all foodstuffs by the railway and by caravan to the Hejaz, a state of famine was brought about.

The Unionists, meantime, had become so drunk with the lust of blood that they actually set about condemning, wholesale, Arab officers who were fighting for them on distant fronts, and degrading Arab soldiers to the position of slaves, driving them to menial work and calling them on every occasion "traitors." As a crowning of this mad career they finally attacked the Arabs in their most sensitive and vital point, the Sheriat, a well-known member of the Committee, going so far as to declare publicly his contempt for Islam and its teaching.

Finding that persuasion and argument were worse than useless with a people of such temper and mind, the Grand Shereef finally drew the sword as the final arbiter.

CONSTANTINOPLE BEFORE THE WAR.

Last Friday, before the Société Internationale de Philologie, Sciences et Beaux-Arts, Syed Ehsan El-Bakry gave an account of Constantinople as he remembered it immediately before the war. He said that he was a native of Egypt who had spent much of his life in England; but he had been taken as a child nearly every year to Constantinople; and, after an absence of several years in this country had visited that city again shortly before the outbreak of the present war. The first impression of Constantinople when one arrived by railway was, he said, unfavourable, for the station was in a bad part of the town; but, coming by sea, one entered near the islands, and saw the beautiful gardens on the Bosphorus and the hills rising behind covered with minarets and domes. Of his personal experiences, one of the first was somewhat amusing by its contrast with anything he had been used to in the West. He had gone to a village on the Bosphorus where he had been recognised by the boatman, who had been accustomed to row him as a child. "Praise to Allah, how you have grown!" said the boatman, and immediately embraced the young man. Then, turning to some Turks standing by, "Has he not grown?" he asked. They had never seen Mr. El-Bakry before, but "Praise to Allah, he has indeed grown," they all replied; for it would not be good manners in Turkey not to agree in such a case.

Constantinople, said Mr. El-Bakry, he had found a good deal changed and very much improved under the Young Turks. The old horse trams had been replaced by electric ones, and there was a new bridge over the Golden Horn. The police and soldiers were no longer dirty and dressed in shabby uniforms; they were smart and well looked after, and the police, in particular, he considered to be as efficient as those of any city in the world. The city, however, still suffered greatly from fires, and he saw more than one great blaze while he was there. The houses are built of wood upon a few courses of stone. They are not insured, and the fire service is inefficient. Of the inhabitants of the city, he said, the Turks were quiet, dignified, pious, and law-abiding; the disorderly elements of the population were all to be found in the non-Moslem quarters.

The Turkish Minister of Instruction has decided upon the construction of a university building in Constantinople. Hitherto the various faculties have been housed in various parts of the city.

A Reuter's message dispatched from Jassy on January 25 says:—The *Official Gazette* announces that fourteen generals of division and of brigade have been placed on the retired list, and have been succeeded by junior officers. This infusion of young blood into the Army is well received.

BRITISH PRISONERS IN TURKEY.

Under date of January 23, Reuter's Berne correspondent reports that the International Committee of the Red Cross has issued the following *communiqué*:—

M. Alfred Boissier and Dr. Vischer, delegates of the International Committee of the Red Cross, have returned from visiting prisoners' camps in the Ottoman Empire. It is the first time that neutral delegates have been authorised to make a tour of Turkish camps. Up to now none had entered certain camps but a Councillor of the United States Embassy and two Catholic priests sent by the Papal Nuncio, Mgr. Dolci. M.M. Boissier and Vischer, who were received in Constantinople by the Society of the Red Crescent, stayed some time in the city, and then for a month travelled through Asia Minor by train and by coach.

After leaving Constantinople the delegates successively visited the camps at Brusa (British officers, Russian officers, Mussulman soldiers, and Indian soldiers), Eski-Shehir (Mussulman and Indian officers), Kutaia (Russian officers), Afion-Kara-Hissar (British and French officers, British, Indian, and Russian soldiers), Kir-Shehir (Russian soldiers), Konia (Indian officers), Yuzgat (British officers), and Ismid (British officers).

At Constantinople the delegates visited the Jedi Kule camp (Russian soldiers), the sanitary establishments, the Harbie Hospital, the School of Medicine, and the military hospital at Haidar Pasha. They were accompanied throughout the tour by one of the most active members of the Central Committee of the Ottoman Red Crescent, Izzet Bey, and by Colonel Yussuf Zia Bey, commander of the camp at Eski-Shehir, since then appointed Inspector-General of Prisoners' Camps. Despite their repeated demands, the delegates were not authorised to visit the camp at Bilemedik Bozanti, on the Baghdad Railway, as it was considered to be within the war zone.

On their return to Constantinople the delegates submitted to the Ministry of War their report, which it was promised would be considered. They emphasise the necessity of England and the Ottoman Empire coming to an agreement for the exchange of men who are severely wounded and seriously ill. The garrison of Kut-el-Amarah had suffered severely through the siege and the long marches across the desert after the surrender of the place. With regard to the distribution of parcels, which has been made the subject of numerous representations, the difficulty of communications easily explains the delay. The Society of the Ottoman Red Crescent, which was always ready to give its best assistance to the delegates, suggested that officers should be allowed to receive two parcels a month and the men one, as a maximum.

PLOT IN EGYPT.

A Reuter's message reports:—A military court assembled at Cairo on December 20 and following days to try the five men who were caught on their way from Baharia into Egypt carrying arms and letters inciting to treason. Dahman Ben Heyin, a Tripolitan Arab, who was an officer of the Senussi forces, was charged with attempting to enter an area occupied by British troops in the guise of a non-combatant, and with carrying bombs, pistols, and documents inciting to disloyalty and revolt in Egypt. Musa Saleh, Mufti Sneida, Yusef Mohammed, and Ali Mohammed were charged with acts of treason and rebellion in that they, being Egyptian subjects and under martial law in Egypt, aided Dahman in his attempt, and thereby assisted the enemies of his Britannic Majesty. The party were caught by an armed motor-car patrol on September 19, thirty-five miles north of Baharia, travelling in the direction of the Nile. They had with them camels loaded with dynamite, bombs, pistols, and letters from Saved Ahmed el Senussi. It was proved that before they left Baharia they had avowed their intention of blowing up the railway line at Amria. Dahman had no uniform with him when he was arrested, and evidence was forthcoming that the day before he set out on his mission he had changed his uniform for the dress of a peaceful trader. It was conclusively proved that the party were acting in concert and had been in close association for some time. After a long and careful inquiry all the accused were proved guilty. One of them, Ali Mohammed, a boy of 16, was pardoned in consideration of his youth, but two others, Mufti Sneida and Yusef Mohammed, were sentenced to penal servitude for life. The offence of Musa Saleh was aggravated by the fact that he had twice acted as an envoy from the Senussi to the Commander-in-Chief. Though an Egyptian subject, he was on these occasions, out of consideration for his character as an envoy, allowed to return to the Senussi forces, but on the second occasion he received warning that if he were caught he would be dealt with under martial law as a rebel. In spite of his life having thus been spared, he was found guiding into Egypt a disguised officer of the Senussi forces who was carrying a quantity of fire-arms and explosives for use against the British. He was condemned to death along with the spy, and the sentences have now been carried out.

King Ferdinand of Bulgaria has received the bâton of an Austrian field-marshal.

Two Englishmen have been sentenced at Cairo to twelve months' imprisonment for stealing and selling petrol belonging to the Flying Corps.

A British motor-lorry, which had been used by the Germans for a year, was towed into Salonika from Monastir recently. It was left in German hands when we were retiring in December, 1915, and the enemy in their turn had to leave it behind when the French and Serbians re-entered Monastir. The car had evidently run hundreds of miles without tyres.

THE PRESS ON THE NEAR EAST.

Italy and Greece.

The Rome correspondent of the *Morning Post*, who was, we understand, formerly in Athens, and certainly displays an intimate knowledge of Greek affairs, sends to his paper an interesting message regarding the relations between Italy and Greece. He reports that "M. Alexandrès, the representative of M. Venizelos, who has been in Rome about three weeks, has had conversations with the British, French, and Russian Ambassadors, and has exchanged cards with Baron Sonnino, the Italian Minister of Foreign Affairs." And he adds:—

It is a sign of the times that, although no Italian newspaper has yet been allowed to allude to his presence here, there has appeared for the first time in the Italian Press a defence of M. Venizelos in the shape of a very able letter from a very distinguished Italian official, Commendatore Federico Zapelloni, Inspector-General of the Treasury.

This gentleman, who spent four years on a financial mission to Greece from 1912 to last year, and therefore writes with special competence, remarks that M. Venizelos, far from being an enemy of Italy (as has been asserted here), has shown his friendship for that country not only by words but by deeds, as when he entrusted to Italian missions the reorganisation of the Greek finances and police and the development of the fishing industry. "M. Venizelos," he adds, "never asked any assistance or advice from Germany," while, under his administration, the Minister of National Economy, M. Michalopoulos, not only modelled many of his enactments upon Italian precedents, but tried to improve the commercial relations between Italy and Greece. Commendatore Zapelloni ends this letter to the *Piccolo Giornale d'Italia* with the hope that when the difficulties of the moment have been overcome the cloud of many misunderstandings which have contributed to create so much distrust between Italy and Greece may be dispelled.

"B.B.B.B.B.B."

Under the above title the *Independent* (New York) of January 15 publishes an article which begins:—

The aims of the Allies are vague and various. The aim of the Germans, according to Herr Hamburg-Amerika Ballin, is plain and direct. It is the Berlin-Budapest-Belgrade-Byzantium-Baghdad-Bahin, or, as we Americans would express it, the B. B. B. B. B. R. R. To connect the Orient and the Occident by land, as the British have by sea, has long been the German ambition and now it has been attained. The announcement comes from Germany that the Taurus Mountains have been pierced.

After discussing the possibilities thus opened up, the writer of the article points out that "so long as the British hold the mouth of the Tigris and Euphrates the Germans can never attain their seaport on the Persian Gulf, which was to give them entrance to the East." The most interesting part of the article, however, lies in its references to Constantinople. Says the writer:—

At Constantinople, the crossroads, the two came into conflict. Russia demands passage through the straits from north to south. Germany demands passage across the straits from west to east. The two crossings might easily be accommodated so far as traffic goes, since a tunnel, a ferry, or even a bridge, would not interfere with the passing of ships. But both Powers demand exclusive control of the straits, for each is, not without reason, unwilling to trust the other.

Up to the very eve of the war it was an established part of the British policy that Russia must, at all costs, be kept out of Constantinople. With this object sixty years ago Great Britain joined with France in the Crimean War; with this object three years ago she was almost willing to join with Germany.

The authority for this statement is not given. But the article concludes:—

This, then, was the traditional British policy up to three years ago. It would be interesting to know at what time since and under what influences it became completely reversed. As soon as peace terms began to be discussed openly the Russian Premier hastened to announce that Great Britain and her Allies were committed to the Russian possession of Constantinople. Since all of the Allies are pledged not to make peace so long as any one of them has not attained its aims, it would seem that the English will have to fight on until Constantinople is captured and handed over to Russia—the very thing which a few years ago they were willing to fight to prevent. Russia has not changed her nature; it is only that a new and more formidable foe to British trade and dominion has arisen. In themselves, the Russian claim of a water route and the German claim of a land route are commendable and not incompatible; but the British have good reason to suspect that the Germans are not content with their string of B.'s, but would like to add Brussels to one end of it and Bombay to the other.

If only by reason of their air of complete detachment, the views expressed are certainly interesting; but it is hardly necessary to say that they will not find a perfect echo in any of the Allied countries.

Hindenburg's Miscalculations.

In reviewing the military situation, the military correspondent of the *Morning Post* on Monday devotes considerable space to "Hindenburg and Roumania." "There is," he writes, "little doubt that if the Germans have not attained the goal of their ambitions in Roumania, they have at least reached the limit of their powers. We may still expect to see them attempting local enterprises, such as the attack which resulted in the occupation of Namesti on the 19th inst.; and minor operations are likely to continue in the mountain region, where the Russians and Roumanians appear to have established themselves firmly on the heights which command the approaches to the Trotus Valley. But so far as its main objects are concerned all indications point to the campaign having come to an end." Amongst the reasons which led Hindenburg to undertake the move against Roumania on such a large scale, the writer mentions the following:—

The Hungarians, weary of fighting Germany's battles, were fired with fresh ardour at the prospect of an attack on Roumania, which promised at once to gratify their private animosity and to bring them territorial acquisitions in Wallachia. The assistance of Bulgaria would be secured by the promise of the Dobrudsha; while the Turks were too deeply committed to the German cause to jib at any demands that might be made upon their resources. Hindenburg could, therefore, count on putting larger forces in the field against Roumania than on any other front, while, owing to Roumania's isolated position, which exposed her to attack in front and rear, the strategical conditions were exceptionally favourable for their employment.

But Hindenburg has miscalculated, as the declarations made by himself and Ludendorff regarding their designs are made to show.

In fact, he fell into the vulgar mistake of undervaluing the enemy. The despised Roumanians baffled for two months Falkenhayn's efforts to force the passes, enabling the Russians to arrive in time to bring Mackensen's formidable armies to a halt on the Sereth. At the end of five months' fighting Hindenburg's proclaimed intentions remain unfulfilled. The Roumanians are unconquered, their armies, in spite of heavy losses, are still full of fight, and the "war of positions" has merely transferred itself to a new front. Nor have the Germans realised their other expectations. Their hopes of economic relief have been disappointed, the Allies have been brought no nearer to a recognition of Germany's invincibility, and the Germans are no nearer to dictating a German peace.

It is not to be expected that Hindenburg will unburden his mind on the present situation. There would be too much to explain, and he is too preoccupied with the problems of the future. If taken to task he would probably dilate on the conquest of Wallachia, which has added a new strip of territory to the "pledges of victory" which Germany had acquired in other regions, though it would not compare well with the programme which he advertised with so much assurance four months ago. In his own mind he probably thinks that he has come rather fortunately out of an adventure which proved more difficult than he anticipated. . . . For the time being Hungary has been saved from invasion, and the road to Constantinople and the East has been made more secure. These, however, are merely defensive gains, won at a considerable cost, which the Germans can ill afford. Nor can the defensive position be regarded as ideal so long as the Allies hold the Trotus-Sereth line and the delta of the Danube. The situation is not unlike that which existed on the Dvina in the autumn of 1915, when the Germans had to abandon their campaign against Russia in order to hasten to the relief of Turkey.

Mr. Edmund Dane, writing in the *Daily Express* (January 29), also gives it as his opinion that the miscalculations as to Roumania will cost the enemy dear.

Unfortunately for the calculations of the enemy, the "push" in Roumania shows no signs yet of having entered into the clearing-up stage. On the contrary, the forces forming Mackensen's left wing—entrusted with the decisive operation of turning the line of the Sereth by a flank attack—have not only been thrown on the defensive, but have failed to stand their ground. There is all the making here of a grave situation. Between the Sereth and the Danube Mackensen is in a terribly awkward corner.

It is idle to conclude that he can pursue offensive operations along his centre and right so long as his left is thus menaced. The very fact that his troops have there been thrown on the defensive leaves it perfectly clear that the strength at his disposal has now become insufficient. In brief, and short of a large increase in that strength, the enterprise of forcing the line of the Sereth has broken down. The finishing touch has really been put on the German "push" in Roumania by the battle in Courland.

Yet abortive though it has proved to be, the Germans cannot withdraw from this Roumanian adventure. If they do not persevere their "conquest" will be lost, and their prestige in the Balkans, already damaged by their check, as well as by their failure to aid the pro-German Greeks, will collapse like a house of cards. If they persevere, they will add to the emphasis of the check and inflame their losses.

Germany and Turkey.

"Are the Germans preparing to cast Turkey adrift?" asks the *Western Daily Press* (January 26). Probably nobody except the Turks would be surprised if such should prove to be the case; and what the *Press* says on the subject might give even the Turks cause for uneasiness, if only they could read it.

When Turkey entered the war she was offered by Germany adequate rewards, including the expansion of the Ottoman Empire in Europe, and the preservation of Turkish supremacy at Constantinople and over the Dardanelles. An influential German newspaper yesterday gave a hint to Turkey that her aspirations in this direction might cease to command German support. The comment ran as follows:—"The neutralisation of the Dardanelles under a general guarantee would find many supporters in Germany, who, of course, would desire that the waterways of Suez and Gibraltar should not be forgotten." These insinuations about the abolition of the Turkish control of the Dardanelles will scarcely be relished in Constantinople, where it is already known that the Powers of the Grand Alliance demand the expulsion of the Turk from Europe. That Germany should aspire to a voice in the control of the Straits of Gibraltar and the Suez Canal is quite characteristic.

The whole attitude of Germany to Turkey is, of course, "quite characteristic."

Removing the Greek Danger.

In a leading article, "The Military Movements," the *Daily Chronicle* remarks that news which comes to us at present regarding movements of German troops "must usually be received with caution," and that some of it may be put about by the enemy in their own interests. The writer goes on to say that "the features which seem best established are that the Germans are taking divisions away from the Roumanian theatre and concentrating strong forces within striking distance of the Alsace front. If they ever had the intention of pushing their Roumanian drive through to Odessa, it seems for the moment to have been abandoned." After expressing admiration for the way in which the Russians fight under winter conditions, the writer asks: "Do the Germans plan an offensive at Salonika?" and adds:—

It is, perhaps, the most interesting of the unanswered questions. On the whole, the chances of their doing so have waned. The season would scarcely permit it till long after hard fighting has been practicable elsewhere, and it is not the German way to be the last to begin. In any case, the Allies seem at last to have taken adequate steps to remove the Greek danger in their rear. The transfer of King Constantine's army to the Peloponnese is in full swing, and some progress has been made with the dissolution of the Reservists. The blockade still continues, and we hope that the Allied Governments will be firm about not relaxing it until the whole of the measures necessary for our military safety have been completed to our satisfaction. . . . The Greek Court, acting on German instructions, has made a pretty full surrender to our actual demands, but has not changed its heart in doing so. While freeing the imprisoned Venizelists, on whose release we insisted, it has proceeded to arrest a great many others. The Allies ought to show the King, with all necessary firmness, that this kind of chicanery will not be tolerated, and that after what has passed we shall expect him not merely to carry out the measures of redress which he has promised, but to abstain from further provocations.

Athens in Chastened Mood.

The following are the concluding paragraphs of an interesting despatch sent off from Athens on January 26 by Mr. George Renwick, and published in the *Daily Chronicle* on Tuesday. The writer has just described some anti-Royalist demonstrations at Patras. He continues:—

In Athens the temper of the people is very much subdued. The rigorous blockade brought them face to face with the fact that Greece can be dealt with sternly without war. The greater portion of the Press, too, reflects this calmer spirit. The wildest section of the newspapers is now engaged in pointing out that, after all, the Entente Powers have protected Greece in the past, and there is no real reason for hostility. Especially is *Neon Asty*, the organ of the Goumarists, strong on this line of policy, and it is actually taking upon itself the task of sternly rebuking those journals which continue to spit fire.

There are two reasons for this change of attitude. The first is the blockade, which, for the first time, is regarded as effective. The second is equally persuasive, and that is the death of the hopes of the arrival of a German army from the north.

I can state it as a fact that King Constantine was advised directly by the Kaiser to accept the Allies' ultimatum, as it was impossible for Germany to dispatch a force to aid Greece.

So, to sum up, the position is becoming normal again. But it is idle to think that the last phase of the Greek tragedy has been played out. There is still in official Greece strong Liberal feeling. A successful offensive by the Allies would enormously strengthen this, and as the predominant idea of the Greeks is

to be on the winning side, Allied successes, coming at a time when the first doubts of the Royalists are springing up as to the triumph of Germany, would most certainly swing round the great body of public opinion.

Mr. Renwick concludes his message thus:—"I am quite firmly convinced, therefore, that the two sections in Greece have still to face one another in the last and stern reckoning, and that with the moral help of the evidence of the approach of the Allies' war triumph, the forces of Venizelism will prove to be much stronger than is dreamed of at the present moment."

"The Real Queen Sophie."

Under the above title "A Lady of the Greek Court" gives, in the *Sunday Times* (January 14) her impressions of King Constantine's consort. We quote a few passages from this interesting character sketch, which certainly is not lacking in frankness.

I believe that her chief fault is a too zealous attachment to German ideals. It gives her greater pleasure to be a Hohenzollern than to be Queen of Greece. With her, it is essentially "Deutschland über Alles," although it must in all fairness be confessed in the same breath that, up to the moment of the war, she retained the liveliest regard for the land in which her mother was the Princess Royal. English, indeed, was the language she used—and still uses—in her private life with the King. When he is ill, she reads English novels to him. She has a strong sense of appreciation of English institutions also, and modelled her innumerable hospitals and soup kitchens for the poor on English originals.

She is really "not a bad sort." She used to express her opinions very freely before me, by the way. She impressed me with her remarkable tendency to form hasty likes and dislikes.

She was always very stiff and unbending before strangers, yet exceedingly charming in her private circle. While she was autocratic in her outlook, she would forgive anything in any German, and even Germans of low birth were sure of the Queen's sympathy.

I remember one case where a military doctor of German origin received her patronage—and was rapidly advanced—for no other reason than that found in his nationality. All persons in Athens with German blood get on.

Queen Sophie certainly has a great influence over her husband, but she does not dominate him!—as some people have suggested.

M. Venizelos, we are told, "she has disliked for a long time. He was one of the victims of her immediate dislike, I fancy." And the following extract will be read with interest in this connection:—

A rather strange incident occurred during the Emperor's visit to Corfu in 1914. On the day appointed for the ball at the Russian Legation at Athens the Queen came over from Corfu. That night she attended the ball, and when Admiral Kerr, the head of the British Naval Mission, appeared before her, arrayed in full uniform, her Majesty cut him dead. People believed that she came from Corfu simply to have an opportunity of behaving as she did, owing to a disagreement about the Admiral between Venizelos and the Kaiser. As a matter of fact, Queen Sophie returned again to the island immediately.

Her Majesty appears to have been at some pains to show her bad manners!

Articles to Note.

"Turcs et Alliés en Asie," in *Correspondance d'Orient* (January 25).

"Austria and Europe," by H. Wickham Steed, and "The End of Greek Monarchy," by John Mavrogordato, in the *Edinburgh Review* (January).

"East of Suez," in the *Evening Standard* (January 30).

Dr. Kramarz, the Czech leader, whose death sentence the Emperor Charles commuted to penal servitude, has appealed to the Austrian High Court for a new trial.

ARMENIAN RED CROSS & REFUGEE FUND

FOUNDED DECEMBER, 1914.

President, VISCOUNTESS BRYCE.

Donations are earnestly entreated for the relief of sickness and distress among 250,000 destitute Armenian refugees in the Caucasus, whose condition is "pitiable in the extreme." Relief pay is less than 4d. per head a day. Food and all necessities of life are very dear. A copy of the Report for last year will be sent to inquirers. All work in connection with this Fund is voluntary. Contributions will be thankfully received and acknowledged by the Hon. Secretary and Treasurer, Miss Emily J. Robinson, 35a, Elsham Road, Kensington, London, W. Cheques may be made payable to the Armenian Red Cross and Refugee Fund: they should be crossed "London and South Western Bank, Holland Park Branch."

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

I am informed that the head office of the Imperial Ottoman Bank has cabled to its Egyptian and Cyprus branches inviting them to make advances to clients who desire to participate in the new War Loan. The advances are to be made at 1 per cent. below Bank Rate, with a minimum of 5 per cent., and the bank making them will cable advices over here so that the application may go in. Thus, Government officials and others in Egypt and Cyprus who wish to participate in the loan are placed on the same footing as if they were resident in this country. If other banks followed this lead subscriptions to the War Loan would be materially increased. Congratulations are due to the wise and patriotic management of this famous concern, which, notwithstanding the enemy association in its name, is under British and Allied control.

The result of the inquiry which Sir John Jackson demanded should be conducted into the hut contracts which his firm undertook on behalf of the War Office early in the war, when the need of the great War Department was so great, has still to be made known, and it would in these circumstances not be proper to comment on the evidence placed before the Commissioners. I may be allowed to refer, however, to one notable passage in the evidence given by the famous master of industry. When he spoke of the great Mesopotamian irrigation contract with the Turkish Government, Sir John declared that, although the sum involved was expected to amount to £15,000,000, and the Ottoman Government paid a preliminary deposit of £75,000 into a bank at Baghdad for salaries, he did not pay a single "stiver" of "backsheesh" to any Turkish official. He spoke in high terms of Nazim Pasha. I wonder how many people who have had business transactions with the Turk could say the same!

I am glad to observe that the work of liquidating—and, let us hope, the despatch on the long, lone trail—of enemy prizes in Egypt is proceeding, if not with haste, methodically. The latest issue of the *Journal Official* to reach this country contained notices of sale of two considerable cotton ginning factories belonging to the Egyptian Cotton Ginning Factory Company. The factories are at Kafr el Zayat (Gharbia) and at Wasta (Beni Suef Province) respectively, and both are on the banks of the Nile and are also connected directly with the Egyptian State Railway, the former, in addition, being in touch with the Delta Light Railway. I hope these important factories will now pass into the hands of British subjects.

Development by the State for the State is the keynote of the work to which the Empire Resources Development Committee has pledged itself. There is no room for doubt that we want something of the kind. In the past, speaking generally, the development of industries, the utilisation of resources, both in kind and communications, and, indeed, the planting of the staff from which the Empire flag

is to fly has been left mainly to private enterprise. The result has not always been happy. In such circumstances it is inevitable that adventurers of the most shady description would attempt to exploit opportunities which, in the hands of honest men, would lead to profitable success. The committee would have none of that, and, allowing for certain ambitions, which I fear will be found to be the outcome of a too optimistic estimate of human adaptability, appear to have in view a goal which may be reached with the aid of intelligent effort.

The objects of the committee, as they were set out in a recent manifesto, are:—(1) "to advocate (a) the conservation for the benefit of the Empire of such natural resources as are, or may come, under the ownership or control of the Imperial, Dominion, or Indian Governments; (b) the development of selected resources of the Empire under such conditions as will give to the State an adequate share of the proceeds; (c) the appointment in due time of a Board for the conservation and development of the resources of the Empire, so that Imperial effort may be concentrated on assets ripe for development for the common good of the Empire. (2) To take such action as may from time to time appear to be desirable in order to disseminate information in regard to the objects of the committee, to arouse and maintain public interest, to enlist public sympathy and support, and to co-operate with other committees and associations having similar objects.

The people whose names are attached to this document are not only well known: they are regarded as leaders in political, social, and economic life. Sir Starr Jameson, Lord Selborne, Lord Plymouth, Mr. Rudyard Kipling, Lord Dunraven, Mr. H. Wilson Fox, Mr. W. H. Lynch, Mr. Victor Fisher, and Mr. Alfred Byland are among them, and they represent a variety of interests and stand for a variety of achievements. Some of the problems which they propose to tackle, and as many of the remedies which they suggest should be applied, will lead them to ground which has never before been broken, and will furnish risks of error which must not be overlooked. Nevertheless, the men behind the committee's propaganda stand for practicality, and my readers will join me in the hope that their success will be in proportion to the greatness of their aims.

One of the problems which has been created by the Huns' slap-dash advance in Roumania is connected with their railway transport, and hits them in a very vital part of the economic body. Many thousands of railway wagons were sent post haste to Roumania and to Transylvania with troops, and were detained to take back to the Fatherland the huge stores of foodstuffs and other products which the Germans hoped to gain. But up to a very recent time neither the food nor the wagons had made a reappearance. This fact has led to trouble, and has necessitated the publication in the *Journal* of the Union of German War Administrations of a laboured, if obviously inspired, explanation of the shortage of coal, which causes at the moment nearly as much distress in Germany as hunger.

The *Journal* declares that the shortage in coal is due entirely to transport difficulties. It observes that at the beginning of the war "the railways were well armed and achieved splendid results in the mobilisation. Since August, 1914, the rolling stock has been increased by 3,600 engines and about 70,000 wagons. Thirty-six new engines are still provided every week, but the supply of new wagons is 'irregular.' Meanwhile, the strain on the engines has become so great that 23 per cent. of them are under repair, as compared with 18 per cent. in times of peace." It is added that 10,000 miles of new railway have been opened in the occupied enemy territories, and have to be run mainly with German materials. At the same time there are many thousands of wagons which cannot yet be brought back from abroad, especially from Transylvania and Roumania. In these circumstances the restriction of traffic, with consequent shortage of coal, is described as "inevitable." Germany, let us hope, is faced by a good many "inevitables" just now.

Sir T. H. Holdich, in his recent presidential address to the members of the Geographical Association, had some terse comments to make on the average Briton's ignorance of "the map." Business men, he said, were among the chief delinquents in this respect, and it was largely owing to their lack of geographical knowledge—with particular emphasis on economic geography—that they steadily lost ground in the world markets before the war. I agree with Sir T. H. Holdich, and have myself been frequently astonished at the geographical ignorance of men who, from their commercial position, ought to have known better.

The fact is, in our schools, attention is called almost exclusively to political geography as opposed to economic geography. The latter is carefully taught in German schools. British ignorance is to be deplored because it gives the German trader a tremendous advantage over us, and nowhere has this been more noteworthy than in the Near East. What is wanted is (1) a radical reform in our methods of teaching geography at school and (2) the publication of one or more economic-geographical text books, made thoroughly up-to-date, reliable in all details, and of easy acquisition for students and, generally speaking, for people who are interested in our foreign trade.

"Empire tobacco" is coming very much to the fore just now, and I am pleased to see that good reports are forthcoming from Cyprus, where experiments with Latakia leaf are progressing favourably. This tobacco obtains its peculiar—and pleasant—flavour from a secret curing process, and it appears that refugees from Asia Minor have discovered in our little island the tree which yields the wood necessary for the process. This is good news and should do much to give Cyprus tobacco cultivation a much-needed push forward. Good tobacco, of the Turkish type, is already grown in Cyprus, and ought to do something—though at present little—towards replenishing the very small stocks of Turkish held in this country. As for Egypt, it is a proved tobacco grower, but whether it will ever revert again to that particular cultivation remains to be seen. It is doubtful, however.

COMMENTATOR.

No. II.—The Berber Campaign.

BY PERCY F. MARTIN, F.R.G.S.

[The first article of this series appeared in THE NEAR EAST on January 12, 1917.]

Ranking as one of the largest of the administered areas in the Anglo-Egyptian Sudan, the Province of Berber was about the earliest to benefit from the new régime introduced by the well-intentioned Khedive Ismail of Egypt, in 1870. He it was who divided the Sudan into provinces, each of which was governed by a separate and responsible official, instead of serving under one Governor-General residing at the far-distant town of Khartoum. Berber, moreover, was fortunate in its first-appointed Governor, one Hussein Khalifeh, who appears to have been an exceptionally intelligent official, while ranking at the same time as a great Sheikh of the desert. He became extremely popular with the numerous powerful Arabs, but Sir F. Reginald Wingate, the recently-retired Governor-General of the Sudan, did not consider that Hussein Pasha was altogether honest, and in his work entitled "Mahdism and the Egyptian Sudan" he tells us that Hussein's defence of Berber, at the time of the Mahdi's attack, May 26, 1884, "was only half-hearted."

Romance in History.

The whole early history of the province of Berber is full of interest and even romance, but, unfortunately, there is no space available to tell it here. Rather should we seek to describe the economic resources of the district, and trace the improvements that have been effected in its well-being dating from the triumphal entry of the Sirdar—the late Earl Kitchener—with the captured Mahmoud in chains, on the eventful day of April 13, 1893, after the battle of the Atbara, which by its completeness practically decided the fate of the whole country.

The Province of Berber differs from either that of Halfa or Dongola inasmuch as it contains several large blocks of good, irrigable land, running some way back from the river, especially suitable for crop-growing, and varying from 500 to 10,000 feddans. One may mention, for example, that located at Zeidab, one of the several estates belonging to the Sudan Plantations Syndicate. Agriculture is, and always has been, the main industry of the province, and, in connection with the pre-eminently successful experimental plantation established at Zeidab, it has become well known as a cotton producer. Another agricultural possibility, however, lies in the opening of new, or the reopening and extending of some old, canals for the purpose of basin-irrigation; this class of enterprise, nevertheless, would probably be best undertaken by the Government, since there would then arise no question of any fresh installation, the upkeep of elaborate machinery, or the need of any considerable staff. Many old canals still exist; the more immediately promising among them is that which waters the Kelli basin near Shendi, where, it is hoped, about 7,500 feddans will eventually be made irrigable. A somewhat smaller scheme, embracing the cultivation of no more than 1,500 feddans, could meanwhile be carried out there experimentally at a very low cost.

Potential Crops.

In addition to cotton, other crops which would most probably prove profitable include *dura*, maize, wheat, millet, (*dukkh*), barley, lubia, berseem, peas, Egyptian beans, butterbeans, etc. The cultivation of the profitable *keenna* bush might, also, be extended. An effort is likewise contemplated in connection with systematic date-cultivation, an impetus having been given by the successful

introduction of the fruit to the London market through the good offices of the Sudan Economic Board in conjunction with the assistance of the London Imperial Institute, at South Kensington. At present, however, the Berber dates, as grown in the Abou Hamed district, are of a distinctively inferior quality, and they would have probably but little chance of finding a ready market in London.

Limitations.

Apart from agriculture, the economic possibilities of Berber seem to be somewhat limited. A fair but not greatly increasing cattle trade is carried on, with El Damer as the centre, and here, for some six or seven months of the year, an average of from 4,000-5,000 sheep are sold weekly, principally for export to Egypt, at prices varying between 75 and 100 piastres (say 15s. 3d. to 20s. 6d.) per head. The British authorities consider that this industry might be very considerably extended, and that the possibilities of sheep-fattening are scarcely realised by the indolent native of the Sudan. By the sinking of additional wells in the extensive grazing grounds, which stretch away both south and east, there would be made available much new excellent pasture-land, at present lying useless owing to the lack of water. A modest trade in horned cattle is likewise carried on so long as cattle-plague does not interrupt the movements, while camels are very largely owned in this province.

Basket-making, from the fibre of the dom palm, bids fair to become, in course of time, a profitable industry for women and young children living in the northern parts of the province. Woven baskets are already supplied in considerable quantities to the Sudan Government Railways for use at the extensive coaling and other yards at Atbara. They are delivered there at 7 milliemmes per basket, a price which compares favourably with that for the Egyptian-made article—17 milliemmes—composed of date-palm fibre. A wide increase in the Sudan output should soon take place, since large quantities of the baskets will be required for carrying material for the earth-works on the Gezira in connection with the great irrigation project—just now in suspense so far as its main features are concerned, but being proceeded with in other directions.

Yet another local industry is that of the preparation of the material obtained from the dom-palm-nut kernel. A factory for shaping this substance into buttons exists at Atbara, and it is progressing well. This method for using the nuts is considered to be preferable to exporting the whole nuts in bulk.

Goldfields.

The Berber Province is distinguished among other political divisions of the Sudan by reason of its owning the only worked goldfields in the country. But it is not the only province wherein the precious metal has been found. The Um Nabardi mines are supposed to have been operated by the ancients as far back as 2,000 years, while the Arabs undoubtedly worked them in the early years of the Christian era. To-day they are the property of the Sudan Goldfield Company, Ltd., and give employment to some hundreds of natives and about 15 Europeans (of whom 12 are Englishmen), and they pay a modest profit to the London company of about £700 monthly.

The more important towns of the province include El Damer, Abou Hamed, and Shendi. The modern town of Atbara is the headquarters of the Sudan Government Railways, while Abou Hamed, formerly the terminus of

the railway from Halfa to Khartoum, now forms a junction upon the Khartoum-Halfa (Cairo) line. Metemneh is also a notable place, lying distant about four miles from Shendi, on the right bank of the Nile. The town was prominently concerned in the abortive 1884 expedition operations to relieve Gordon at Khartoum.

Administration.

For administration purposes the province is divided into four districts or *mamurias*. These are Abou Hamed, Berber, El Damer, and Shendi. The governing staff consists of the Governor, one Senior Inspector, one First Inspector, and two Third Inspectors. Mr. C. P. Browne, the Governor, has seen some fifteen years' service in the Sudan Administration, and is one of the few civil officials holding this high office. The others are Mr. G. E. Iles, of the Blue Nile Province; Mr. C. E. Lyall, of the Halfa Province; Mr. R. E. More, of Khartoum Province; and Mr. K. C. P. Struvé, of the White Nile Province. With Mr. A. J. C. Huddleston, who, in the absence of Mr. Browne, has filled the position of Acting-Governor, as Senior Inspector, and Messrs. E. W. Drummond-Hay, W. P. D. Clarke, W. D. C. L. Purves, and Mr. J. G. Monteith as Inspectors, the administration is considered a strong and capable one. Mr. F. P. Osborne is the Province Judge, but has latterly been absent from his post, due to ill-health. The extensive area of the province, nearly 92,000 square miles, with its considerable population of over 122,500, and its generally rich and loamy soil, cause it to stand out prominently as an important contributor to the general revenue of the Sudan Administration.

GREEK'S 10,000 REVOLVERS.

At a London police-court recently, before Mr. Clarke Hall, Ehotion Georgiades, a Greek export merchant and shipper, of Chiswell Street, was fined £50 and ordered to pay 15 guineas costs on a summons under the Defence of the Realm Regulations for proposing to deal in war material without a permit.

Mr. Bodkin, for the Director of Public Prosecutions, said that defendant was in partnership with another Greek named C. Kanditzki, the greater part of the trade being done with Athens and with a firm of importers and merchants there. Last year the defendant sent a letter to this firm offering 10,000 revolvers of military pattern, sleeping-bags, khaki cloth, boots, and other military articles. He said that his firm was in a position to supply them from London or elsewhere. The letter was opened by the Censor and the prosecution ordered. During the whole of the correspondence the defendant's partner was in Paris, and knew nothing of the matter. The defendant, in a voluntary statement, said that he had served in the Greek Army until it was demobilised, which, remarked Mr. Bodkin, must have been in 1915, and not recently—probably at the end of the second Balkan War. The defendant further said he had known the Greek firm—Messrs. Distinos and Kriesis—for fifteen years. In November, 1916, he entered into partnership with Mr. Kanditzki, putting in £6,000 out of £9,000 capital. In October he met a Greek named Costellos at the Imperial Restaurant. Costellos offered him 10,000 revolvers, and these, together with other things, he (defendant) offered to the Greek firm. Counsel added that there seemed no reason to doubt the statement, but the authorities wished to impress upon the defendant and other merchants that to deal in munitions without a permit was an exceedingly serious offence. To send or get into Greece for the purpose of the Greek Government military equipment would have been exceedingly serious for this country.

Mr. Patrick Hastings declared that the defendant had acted in ignorance. He was a Venizelist, and was registered as such in this country.

LANCASHIRE COTTON TRADE

(From Our Own Correspondent.)

MANCHESTER, Thursday.

The turnover throughout the market during the past week has again been very disappointing, and there is still that lack of confidence in prices which results in buyers operating as sparingly as possible.

It is feared in some quarters that the output of Egyptian cotton this season will be less than at one time expected, and those who have anticipated a yield of about 6,000,000 cantars do not now expect more than 5,500,000 cantars.

The absence of workable demand in yarn and cloth has again been very marked, and there is no doubt about the determination of our customers to adopt a waiting policy. Operations in piece-goods for Egypt have been very limited. Occasional offers mentioned in sized shirtings have been quite impracticable. There has been very little doing in fancies.

India has continued generally quiet. The comparatively few bids put forward have been a long way out. Order lists in grey shirtings are rather rapidly running down. Producers of dhooties and jaconets are losing ground.

An increased inquiry has come through in bleaching cloths for China, with fair sales in some directions, without the buying being of a general character.

Not much has been heard of the South American outlets. The position of manufacturers has tended to become worse, and although in some quarters engagements are still extensive, the position is nothing like so strong as at the end of last year. All kinds of yarn have been purchased in retail lots. Further ground has been lost by American spinners. Stocks can be found in medium wets, and there is some pressure for delivery instructions.

Export demand continues very disappointing. Restricted operations have again occurred in Egyptian spinnings.

MOROCCO AND ALGERIA.

The British Consul-General at Tangier (Mr. H. E. White, C.M.G.) has forwarded an extract from the *Cherifian Bulletin Officiel*, dated November 27, from which it appears that a Commission, especially appointed for the purpose, has reported as to the measures that should be adopted to render the existing military railways in the French zone in Morocco more useful for purposes of commerce, and that effect is shortly to be given to the recommendations of the Commission. Among these are the unification of the tariff of rates on the different railways; the modification of existing tariffs; the suppression of the present limitations as to the weights to be carried, and the waiving of the requirement of a special permit to send goods by the trains.

The *French Journal Officiel* for December 30 last contains a Presidential Decree, dated December 21, relative to the application in Algeria of the French Law of August 1, 1905, as modified by subsequent laws, respecting the adulteration of foodstuffs. The decree contains regulations as to the chemical products and colouring substances which may be used for preserving or colouring foodstuffs, the tins or wrappers in which such foodstuffs may be put up for sale, the sealing or soiling of such tins, and the colours or varnishes with which they may be painted. It also prohibits the application of any false trade description to the goods—whether such description refers to their origin, to the nature of their contents, or to their volume or weight.

Besides various regulations of general application, the decree deals specifically with various meat preparations (such as galantine, sausages, etc.), *paté de foie gras*, preserves of tomatoes, and preserves of fruit and vegetables. It is prohibited, *inter alia*, to sell or to have in possession for sale under the name of "sardines" any fresh or preserved fish other than "*alosa pilchardus*." The text of the decree (in French) may be consulted at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C.

TRADE NOTES.

Openings.

The British Consul in Moscow (Mr. R. H. B. Lockhart) reports that a firm in that city desires to get into touch with United Kingdom rope manufacturers who would be interested in "*Apocynum neneti*," a plant which is grown in the Turkestan districts along the river Amu-Daria. The firm states that the plant is little known, although its fibres possess many qualities and could be used for manufacturing ropes similar to Manila ropes. Mr. Lockhart has forwarded a sample of fibre from the plant, and this may be inspected by British firms at the Department of Commercial Intelligence, 73, Basinghall Street, London, E.C., where also the name and address of the firm referred to may be obtained. In making application for the name, the reference number (45) should be quoted.

Mr. H. E. White, British Consul at Tangier, has forwarded a copy of a notice of an adjudication in connection with a call for tenders by the special committee of Public Works for (1) the construction of a roadway 14,000 metres long between Arzila (Chemin des Jardins) and Ain Hamam; and (2) the construction of a roadway 16,315 metres long between Ain Hamam and Sidi ben Terik (Plateau du Jemis), both being on the route from Tangier to Rabat, between Arzila and Larache. Sealed tenders will be received by "M. le Président du Comité Spécial des Travaux Publics, Dar-en-Niaba," Tangier, up to 11 a.m. on March 8. The estimated values of the contracts are placed at 395,000 and 480,000 Spanish pesetas respectively, and to qualify any tender a deposit of 2,500 pesetas (25 to £1 par) is required in the case of (1) and 3,000 pesetas in the case of (2). At least 40 days before the date of the adjudication, certificates of competency must be forwarded to "M. l'Ingénieur en Chef des Travaux Publics," Tangier.

The cahier des charges may be consulted at the offices of the "Comité Spécial" and the "Ingénieur en Chef" above mentioned, as well as at the offices of the Development Committee, Tetuan, and of Public Works at Rabat.

Prohibited Exports.

A supplement issued with the *Board of Trade Journal* last week contains complete lists of articles which, according to the latest information received by the Board of Trade, are prohibited to be exported to various destinations from the Straits Settlements, Hong Kong, Nigeria, Gold Coast, Jamaica, Barbados, Trinidad and Tobago, and British Guiana. Part I. of the supplement was issued on January 18, and contained the lists of export prohibitions in operation in British India, Canada, New Zealand, South Africa, Newfoundland, Egypt, Malta, Cyprus, Mauritius, and Ceylon.

Liquidations, etc.

Notice has been given that the licence granted to Marie Welay, Alexandria, has been cancelled, and the liquidation of the business will be carried on by the Receiver.

The General Officer Commanding-in-Chief his Britannic Majesty's Forces in Egypt has appointed Mr. E. D. Joyce, Imperial Ottoman Bank, Alexandria, Receiver of the property and assets in Egypt of Marie Welay, Alexandria, with instructions to liquidate the same.

Accepted Tenders.

The tender of the Vacuum Oil Company, Cairo, has been accepted for the supply required, in bulk and in tins, during six months, commencing January 1, 1917, at £E13.160 mills per metrical ton, for petroleum in bulk delivered into the Egyptian State Railway's tank wagons at Gabbary, Alexandria, and £E0.240 mills per tin for petroleum in tins of 14.75 kilos, net weight, delivered free into the Administration's Stores at Gabbary, Alexandria. The petroleum to be supplied will be of the "Elephant" brand.

The tenders presented by the following firms in the adjudication for uniforms, boots, shoes, and tarbushes, which was held in the Administration on October 12, 1916, have been accepted:—J. Compton and Sons, Ltd., £E1.354.760; J. Vidon, £E205.380; Th. Hinshelwood and Co., Ltd., £E115.940; Cordouerie Parisienne, £E92.500; Fabrique

Nationale Egyptienne de Tarbouches, £E91.000; Khalil el Kashir, £E70.200.

Licences.

The following persons have been granted licences to trade in Egypt with the British Empire and with Allies of Great Britain:—Toumangeloff, Mosko Todoroff, 110, Rue Prince Abdel Moneim, Alexandria; Levy, Israel P., 7, Rue Antoniadès, Alexandria; Potocnjak, Antoine, 20, Haret Abou Houssein, Sharia el Farahda, Alexandria; Tocatljan, Gabriel S., 17, Rue Heliopolis, Camp de Cesar, Alexandria; and Fratelli Zecovin, 1, Sharia Saber, Bulâq, Abu el 'Ela, Cairo.

TOBACCO DUTIES IN ERYTHREA.

The Italian *Garzetta Ufficiale* for December 27, 1916, contains a Royal Decree, dated October 1, which provides that Customs duties on tobacco imported into the colony of Erythrea are to be levied at the following rates, as from the date of publication of the Decree in the *Bolletino Ufficiale della Colonia Eritrea*:—

Cigars of all kinds, 15 lire per kilogramme; cigarettes, 10 lire per kilogramme; other manufactured tobacco, 8 lire per kilogramme; leaf tobacco, excluding "Surati," 5 lire per kilogramme; "Surati" tobacco in leaves and stalks, 75 centesimi per kilogramme.

TOBACCO IN EGYPT.

Estimates regarding the stock of tobacco in Egypt are very confusing. A "crisis," due to shortage, is spoken of every week or two; but now the *Egyptian Gazette* declares that the statement that the stock will not suffice for more than three or four months is incorrect.

"We learn on good authority," says our contemporary, "that the present stock amounts to 97,000 bales, and this will keep the country well supplied for about seven months. During the last month about 13,000 bales were withdrawn from the bonded stores, and nothing was received in the same month from abroad.

"The tobacco which was saved from the Dutch steamer fire a few weeks ago, and discharged in Alexandria in order to be sold here by the insurance companies concerned, is estimated at about 600,000 kilos. Some of this tobacco has been brought to the Customs tobacco stores, and will be sold by auction. The first auction may be held to-day or tomorrow. The tobacco is for cigars, but can be used for cigarettes. Its flavour, however, is not like that of the Turkish or Greek tobacco."

PINK BOLLWORM IN BRAZIL.

Egyptian cotton cultivators will sympathise with Brazilians who, according to an American cotton expert in the employ of the Brazilian Department of Agriculture, are menaced by the appearance of the pink bollworm (*Gelechia gossypiella*, Saund.) in the northern districts of the country. These districts have shown the greatest interest in cotton, and many persons are urging upon the Government the adoption at once of some system of plant quarantine which would tend to prevent the introduction of the insect and limit its sphere of action. No reports of any material damage to the crops from this source have been received. Thus far the programme for the development of a prospective cotton industry in Brazil seems limited to the Northern States, but many claim that it could become a national crop.

DELICIOUS COFFEE.

**RED
WHITE
& BLUE**

For Breakfast & after Dinner

Wholesale, of Hanson's, London, England

PRODUCE REPORT.

LONDON, February 1.

Currants.

There has been only a moderate demand this past week, with business done at late rates. Prices are very steady for all qualities, although a decline is considered probable on the raising of the blockade, when further shipments may be expected.

Sultanas.

Small transactions in Afghan and Australian fruit have taken place at recent prices, but the tone of the market is generally quiet.

Seeds.

Linseed is firm, but with little doing. London-Calcutta spot, afloat, and for Jan.-Feb. shipment are noted at 105s. Bombay ordinary, Jan.-Feb., 106s., and small grain ditto at 103s. Rapeseed is firmly held, with apparently higher expectations. Ferozepore to Hull, Jan.-Feb., is quoted at 91s.; Toria, Feb.-March, 93s. 6d.; and brown Cawnpore, Jan.-Feb., London, at 88s. 6d. Cottonseed is comparatively dull at closing: London-Egyptian, f.a.q., Feb., £17 15s.; and Sakelides, spot, £17 per ton. Rangoon beans are steady at £42 to £43 for spot lots, whilst for arrivals £41 to £42, c.i.f. terms, is quoted. New crop for later shipments vary from £35 to £39 per ton.

Oils.

Linseed oil is a little easier to-day; spot pipes, landed, are quoted £47 10s., barrels

ditto £48 10s. Rape oil is firm, but with little doing; ordinary brown, naked, spot, £54 to £55; English refined barrels, £58 to £59. Cotton oil is firmer. Crude spot, pipes, is quoted £50; refined, pale, £52 to £53; and barrels, sweet, £59 to £61, as to make. Olive oil is in good demand, but at present in short supply. Prices are unchanged.

Oilcakes.

Cotton Cakes.—A large quantity of Egyptian that has arrived this week is offered at the reduced price of £15 2s. 6d. to £15 5s., but with very little response. English-made are also cheaper at £15 12s. 6d. to £15 15s. **Linseed Cakes.**—Pending the possible Government action as regards a regulation of prices, and, owing to the entire absence of consumptive demand, quotations are purely nominal; thus, best London-made has been offered this week at £18 15s. to £18 10s., and Western American, prime, at £17 10s. to £17 15s. per ton.

Maize germ meal is in moderate demand; English-made is offered at £16 12s. 6d., with American, arrived this week, at £16 15s.

The North British and Mercantile Insurance Company have increased their holding of War Loan to £5,000,000, of which £1,000,000 is new money, and the remainder conversion of 4½ per cent. War Loan, Exchange Bonds, and Treasury Bills

NEWS FROM ALL SOURCES.

Offers are invited in the *Journal Officiel Egyptien* for the purchase of the Old Lady Strangford Hospital at Port Said.

The quantity of sponges exported from British Honduras last year was increased owing to the operations of a Greek, who gathered them by means of a diving apparatus.

The presence is notified of the wreck of a large vessel in approximately N. 24deg. E. (magnetic) ten miles from Port Said Light-house in thirteen and a-half fathoms of water. A danger line should be drawn round this position on charts for five cables.

The announcement made in certain news papers of the creation of an Egyptian postal tax for redirection of registered correspondence and the imposition of demurrage fees in connection therewith is without foundation; the tax proposed concerns insured letters only.

An Alexandria message of January 29 states: The cottonseed market closed firm last week at 107p., spot, equivalent to £9 11s. 8½d., and 108p., February-March, equal to £9 13s. 6d. The week's arrivals were 7,430 tons and shipments 6,400, leaving stocks at 129,420 tons, against 72,670 a year ago.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CONTRACTORS TO GOVERNMENT.

TURKISH NEWS.

The New Bank.

According to information through Italian sources, writes the Paris Correspondent of the *Financial Times*, the recently constituted "National Ottoman Credit Bank" is not meeting with the desired response, despite strong official pressure, in the matter of subscriptions to its capital. The capital was fixed at £T4,000,000 in 400,000 shares of £T10 each, which can only be held by Ottoman subjects. The share warrants are printed in Turkish, which is the only language to be spoken in all business transactions carried on in the premises of the bank. According to the articles of association, the main object of this new Turkish banking institution is to co-operate in all national agricultural, industrial, and commercial enterprises of a strictly Turkish nature. The board of directors, managers, officials, and employees of the bank are all Ottoman subjects. In order to facilitate the widespread division of the share capital among Turkish subjects, agents have been appointed throughout all parts of the Turkish dominions to gather in subscriptions, but, so far, according to the source of information, the results have not justified the expectations of the official promoters.

Hun Activity.

Commenting on the fact that a number of Austrian and German banks have recently increased their capital, the *Berliner Tageblatt* says that this is not a mere coincidence, but a carefully-thought-out decision, come to with the object of creating fresh resources for the development of new enterprises in the Turkish Empire. The banks which have so increased their capital are all more or less associated with the Kreditanstalt or with the Vienna Bankverein, with the object of bringing about an "Oriental Financial Association" in Austria-Hungary. The object of this association, according to the *Berliner Tageblatt*, is to deal with all kinds of Turkish concessions. As regards purely banking business, each member of the association will be free to do as it pleases in Turkey. The "Oriental Financial Association" has already entered into an undertaking and has secured appreciable results in Turkey. The Kreditanstalt of Austria has an important interest in the Oriental Deutsche Bank, and the German financial papers consider that the new association will be a powerful instrument in furthering the economic and financial interests in Turkey of the Central Empires.

Constantinople Harbour Works.

With the assistance of Austro-German and—so it is stated—of American capital, the Ottoman Government has decided upon a great extension of the Port of Constantinople. Whatever the political destiny of Constantinople may be, nothing can prevent this huge city—with its unique position at the gateway of Asia—from becoming in a commercial sense the London of the East. It is this knowledge and the probability of an immense commercial development of the city after the war that has, according to semi-official or inspired statements, induced the Ottoman Government entirely to reorganise the seaport of Constantinople. With that object in view a special committee has been appointed to decide as to whether it is advisable to enlarge the Golden Horn by demolishing a large part of Galata, or to construct an entirely new harbour outside the limits of the capital. It appears that the majority of the members of the committee are favourable to the proposal for building a new harbour on the shores of the Sea of Marmora, between Jedikul and Kumpaku, where several miles of coast free of encumbrances are available for the construction of a modern seaport. In connection with this scheme there is a proposal on foot for establishing a direct line of weekly steamers between Constantinople and New York, calling at all the Black Sea ports.

The mails from the United Kingdom which were on board the steamer Ingeborg when she was intercepted by the enemy on the voyage to Sweden included bags for Persia and Roumania, containing letters which reached the London Post Office between January 6 and January 8.

BRITISH INDUSTRIES FAIR.

Exhibitors' Space Already Crowded Out.

Too much attention cannot be paid to the British Industries Fair, which will be held in London from February 26 to March 9, 1917. The arrangements are all well in hand, and friends in Egypt who are interested in the project will do well to communicate with the committee.

The Fair will be greater than was at first anticipated, and an increased space has therefore been found to be necessary. It will be held partly, as last year, in the Victoria and Albert Museum, and partly in the Great Hall and certain galleries in the Imperial Institute Building.

The allotments of space have already been sent out. There are many more entries than last year, and the exhibiting space of the Fair will be increased by about 12,000 feet. The space applied for has been again far in excess of the amount at the disposal of the Board of Trade, and, therefore, all applications have had to be cut down by 30 to 50 per cent., and some of the large applications to an even greater extent. Late applications, of which there were between twenty and thirty, could not be entertained.

About 20,000 invitations to attend the Fair have been forwarded to firms in the Dominions, India, Egypt, and the Colonies, and in foreign Allied or neutral countries; and 80,000 invitations will be sent to firms in the United Kingdom before the Fair opens.

Admittance to the Fair is confined to *bona fide* trade buyers, and the exhibits will include glass, earthenware, china, fancy goods, toys (including games of all kinds), printing, and stationery. These classes of goods were to a large extent formerly imported from enemy countries, but since the Board of Trade held their exhibition of samples of enemy goods at the beginning of the war, they have been increasingly produced in this country, and the forthcoming Fair may be regarded, therefore, as the reply of the British manufacturer to the foreign competition from which he has suffered.

In view of the risk of interference with the output of munitions of war, it has not been possible to include in the Fair certain trades which would otherwise have been invited to participate. The Fair, therefore, will be confined to the trades mentioned above, which are the same as were sanctioned by the Minister of Munitions last year.

An important development, however, has taken place since last year, in that the municipality of the City of Glasgow is organising a Fair at Glasgow which will take place concurrently with the Board of Trade Fair in London, and will include certain trades not comprised in the London Fair. The Glasgow Fair, which is being held under the auspices and with the support of the Board of Trade, will include textiles, ready-made clothing, boots and shoes, foodstuffs (prepared and preserved), and domestic chemical products. The extension of the number of articles exhibited simultaneously cannot fail to increase the importance of the Fairs in the eyes of foreign buyers, more especially as both Fairs are being brought to their notice at the same time.

POTATO CULTIVATION IN EGYPT.

The British military supplies department, being in possession of a large quantity of Italian potatoes suitable for cultivation in Egypt, has agreed to give up the same to Egyptian agriculturists who are desirous of growing potatoes on their land, on condition that when the potato crop comes out they will sell to the British Military Supplies Department a certain quantity in proportion to the amount of Italian potatoes taken at £8 per ton.

The Egyptian Ministry of Agriculture has, says the *Egyptian Gazette*, therefore prepared a special form of contract, which the agriculturists will be asked to sign, and has undertaken to distribute the potatoes on behalf of the British military authorities. No doubt this arrangement will prove to be of great help to the military authorities as well as to the public, as the price of potatoes, which had gone down to P.T.2 per oke, has again risen as fresh supplies arrive from the outside in very limited quantities.

EGYPTIAN STATE ACCOUNTS.

November Results—Another Increase in Revenue.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, January 16.

Last night's *Official Journal* contained the November statement of the Government accounts. The month has been a good one from the point of view of revenue, no less than £E2,251,669 having been collected against £E2,045,637 the previous November. Comparing the months in question Land and other Direct Taxes are down £E81,312, Rent of Government Land, £E1,993, Investment of Funds £E31,238, and Telegraphs £E3,276, but, on the other hand, Customs are up £E138,626—almost double the amount—Legal Fees, £E21,487; Railways, £E87,150, and Domains, £E63,475. Expenditure during the two months was practically the same. For the eight months of the financial year revenue amounts to £E13,448,733—only three millions of the total budgeted for the whole year—as against £E11,432,390 at the end of November 1915, while the figures for the expenditure are respectively £E11,859,354 and £E10,968,134. Thus revenue has increased by £E2,016,343, but the other side of the account has only gone up £E891,220, as a result the position is £E1,125,123 better, there being a surplus of £E1,589,379 as compared with one of only £E464,256 at the same date last year.

It is interesting to note that Assay Fees, Rent of Government Land, and Sale of Land and Domains Receipts have already exceeded the amount put down against them in the budget and that Customs and Railway Receipts are respectively within £E100,000 and £E400,000 of what they were expected to reach in the year's estimates. As the monthly average of these last two items has been £E200,000, and £E350,000, there is little doubt that they will both produce a large excess over the estimate, and that with the other items also showing a tendency to exceed budgetary figures and ordinary expenditure keeping within its present limits we may look for a very substantial surplus.

BANNED FIRMS.**Further Additions to the British List.**

The following additions have been made to the statutory list of firms in foreign countries with whom trading is prohibited by persons and firms in the United Kingdom:—

GREECE.

Farkouh, Constantine, Salonika; Farkouh, George, Salonika and Athens; Farkouh, Hadzi Daoud, Salonika and Athens.

Hasson and Recanati, Emniyet Han, Salonika.

Recanati, Fils de Joseph, Sibi Gumruk Han, Salonika; Recanati, H. J., and Company, Sibi Gumruk Han, Salonika; and Spiedel and Co., Island of Thassos and Suja, Crete.

ORIENTAL RUGS IN THE U.S.

Mr. Bedros Kazanjian, the well-known New York importer of Oriental rugs, recently spoke to a representative of an American paper of the difficulties in importing Oriental rugs. He stated that over two years had been required to transport one shipment of fifty bales from Persia to Archangel, Russia, whence it was coming by boat to New York.

The goods were taken by caravan from Hamadan to Enzeli, a port on the Caspian Sea, thence by boat to Baku, thence by train to Archangel. Another shipment from Hamadan went by caravan to Ahwaz, on the Karun River, thence by boat to Bombay, India, by way of the Persian Gulf, and from Bombay round the Cape of Good Hope to New York. Another route open for shipments from Persia is by boat and rail to Batoum, thence by rail to Karlow, and from there over the Siberian Railway to Vladivostock, and across the Pacific to Seattle or San Francisco.

Mr. Kazanjian said that on account of the invasions of Persia, alternatively by the Turks and Russians, the Turks being now in control there, rug weaving in Persia had practically ceased and would not begin again until the end of the war. The present high cost of Persian rugs was caused not only by their scarcity but by the rate of exchange.

ENGINEERING NOTES.

How we Lose Trade.

An Oxfordshire farmer who, evidently responding to the appeal to increase our food supplies, has extended his sowings of potatoes this year, writes to a London paper that owing to the scarcity of farm labour for digging the potatoes, he has now twenty-five acres rotting in the ground! An American replied to his lament, saying that he saw in Canada a machine which dug potatoes faster than they could be picked up and put in baskets. This brought forward a British engineering firm, who hastened to inform the embarrassed farmer that he has no need to go to America to see a digger working satisfactorily, because there are British-made machines doing this work, and he offered to put him in touch with a large number of farmers in this country who are using them. This correspondence reminds us that some time ago, before the war, we described in these columns, for the benefit of our readers in the Near East, a British machine for digging and picking up potatoes. Before the paper was mailed abroad we received inquiries from readers in this country asking where the machine could be obtained! With this case in point, and the admission of the embarrassed Oxfordshire farmer, is it not evident that British manufacturers' methods of advertising and introducing their goods, not only abroad, but at home as well, require reform? A farmer in an important and most central district of England is not aware that there are British machines that can be obtained for his work!

Pumping Machinery for the East.

We had, however, alluded previously in these notes to the fact that among the goods

which find a ready sale in the Near East are pumps and pumping machinery, and we pointed out that designs of simple construction, compact, and easily operated, with as few as possible working parts, are the kinds generally favoured. Such characteristics are of great importance, and desirable in those districts because of the difficulty that is experienced in finding skilful mechanics, either as attendants or for the necessary repairs in case of breakdowns. With this point in view, American and German firms, with their characteristic business methods, have managed, in recent years, to introduce in those markets certain types of rotary or centrifugal pumps which soon gained favour among buyers in towns and rural districts to the detriment of other ordinary types which were imported mostly from the United Kingdom and France. Apparently, no efforts were made by British manufacturers to regain the lost ground; thus, their foreign competitors had a free run in that particular line of engineering goods, and succeeded in securing the orders for two-thirds of pumps and pumping machinery imported in the various districts of the Near East. Yet there are several types of such machinery of British design and construction, much superior to the foreign-made in all points, which would entirely satisfy the requirements of Oriental markets if they were properly introduced. The present writer saw recently a new pump at work on the Thames, pumping muddy water with perfect mechanical efficiency and without any vibration or noise.

The New Pump.

The pump here referred to can be adapted for coupling direct either to oil engines, electric motors, or steam engines. It needs no clutch because an open by-pass from the delivery to the suction side gives the effect of a no-load start until full speed is obtained. There are no valves, consequently there is no

danger of foreign matter clogging the pump. It lifts and discharges its fluid with a minimum of agitation, an advantage over other types, which will be found serviceable in olive oil mills and stores, wine depots, breweries, etc., while its great suction enables it to handle molasses, tar, heavy fuel oil, and other viscous products with remarkable efficiency. It can also pump sewage without difficulty. Other interesting features of the new pump are that, coupled to a steam engine, it is claimed to be the only pump that gives the service of a good condenser. On high suction lifts, by turning the exhaust of the engine into the suction side of the pump, striking figures of efficiency are obtained. It can also be used as an air compressor for blast furnaces, etc., or for the transmission of power. It is said that sizes at present, are made to pump from 60 gallons to 120,000 gallons of water per hour, running at any speed from 300 r.p.m. to 1,000 r.p.m. All parts are easily accessible, as the pump can be taken to pieces by removing one cover, and, owing to simplicity of design and minimum cost of maintenance, the price is moderate.

Mr. Hewins, the Director of the Commercial Intelligence Branch, Central Soudan Economic Board, has been appointed Licensing Officer, under the proclamations prohibiting and restricting exports and relating to trading with the enemy. He is authorised: First, to grant permission for the export of articles the export of which may for the time being be prohibited or restricted except with the permission of an officer appointed to grant such permission; and second, to grant licences under the authority of the proclamations relating to trading with the enemy, for any transactions of things prohibited by the said proclamations.

SALONIKA MARKETS.**Demand for Paints and Paint Materials.**

We take the following interesting note, which deals with certain trade conditions at Salonika, from a recent despatch by the United States Consul at that port. He writes:—

The attention of American exporters is directed to the fact that there has always been a good market in Salonika for paints and paint materials, practically all of which are imported from European countries.

Under normal conditions the annual consumption of dry paints (earthen and metallic) by Salonika and its commercial hinterland was estimated at 100 tons; that of ready-mixed paints, 50 tons; varnish, 20 tons; linseed oil, 100 tons; and turpentine, 5 tons; making a total annual consumption of 275 tons of paint materials.

The international situation has had a tendency to restrict paint imports, as shown by the figures of 1915, which total only 152 tons. The institution of a tariff in 1914, levying a duty of about £5 per 281.86 pounds on paints mixed with oil has had a tendency to greatly reduce the imports of mixed paints and has increased the consumption of dry paints. Of the paint materials mentioned in this report, turpentine is the only product produced locally. However, a small amount of turpentine is usually imported.

Dry green colours, chiefly of German origin, are imported in kegs of 50 kilos (110.23 pounds). Prussian blue of French origin and ultramarine blue from England, Belgium, Holland, and Germany are packed in barrels of 125 kilos (275.57 pounds). Mineral colours of various hues, mostly of Belgian and Hungarian origin, are imported in kegs of 50 and 100 kilos (110.23 and 220.46 pounds). Red mineral colours are supplied from France in barrels of 200 and 250 kilos (440.92 and 551.15 pounds).

Mixed paints contributed by various countries of Western Europe, are packed in cans ranging in weight from one-fourth kilo to 12 kilos. The cans commonly used weigh one-half kilo (1.1 pounds) filled. Varnish is usually of German origin and is packed in tins of one-half kilo to 1 kilo. Turpentine is chiefly of domestic origin, the local demand being supplied from the Greek island of Euboea. Small quantities are imported from England and France. Turpentine is contained in kegs of 150 kilos (330.7 pounds). linseed oil is usually of English origin and is imported in standard drums.

FRANCE AND PERSIAN TRADE.

It will be seen from the following translation of an article which appeared last week in *La Dépêche Coloniale* that French trade with Persia is on the decline, and that the writer of the article advocates a more energetic policy on the part of his countrymen in order to secure a larger share of the trade. He says:—

The last commercial statistics published by the Administration of the Persian Customs relates to the period March 21, 1914, to March 20, 1915. During that year the imports attained the value of 499,322,010 krans, and the exports 396,057,863 krans, or a total of 895,380,773 krans—fr.358,152,309. It is the Russian and the British Empires which absorb three-fourths of these figures. The trade with France, which was 24,218,223 krans in 1913-1914, was only 12,217,860 krans in 1914-1915, viz.: Imports, krans 11,096,312; exports, krans 1,121,548.

In the preceding year French imports represented 19,629,020 krans. This was, therefore, a decrease of 8,532,708 krans, mainly in lump sugar, automobiles, cottons, haberdashery, clothes, powder, wines, and liqueurs. It is to be noted that in 1906-1907 the importation of French sugar alone showed a value of fr.17,770,597.

French imports into Persia consist of sugar, woollen goods, silk, cottons, haberdashery, clothes, brandy and liqueurs; copper, nickel in bars, plated metals, etc.; powder and cartridges, drugs, wine, motor-cars, paper, lace, leather, leather-work, furniture, perfumery, preserved fish, preserved fruits, etc.

The export trade from Persia to France has suffered a great decline in the course of the last few years. In 1910-11 France bought goods from Persia to the extent of 12,244,022 krans; in 1913-1914, 4,589,203 krans; and in 1914-15, 1,121,548 krans. In these figures is included the value of the antiquities of Suse consigned to the Louvre Museum, Paris.

The other articles bought by France are: Unpurified petrol in bulk, woollen carpets, unmanufactured tobacco, silk in cocoons, fruit, gum, etc.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the dates mentioned and as compared with the corresponding dates in 1916:—

	1916.	1917.
	Frs.	Frs.
January 23 and 24	520,000	630,000
January 26 and 27	480,000	340,000
January 28	110,000	180,000
January 29	360,000	130,000

COMPANY NOTES.**Dividends, Payments, Etc.**

Privileged Company to Protect Production and Trade in Currants 5 per Cent. Sterling Loan.—The half-yearly interest, due February 1, will be paid on that and any succeeding day (Saturdays excepted) between the hours of 11 and 2 o'clock, at the offices of Messrs. Emile Erlanger and Co., 8, Crosby Square, E.C. Coupons must be left three clear days for examination.

Nestor Gianaclis Five per Cent. Debentures.—The coupon due on February 1, 1917, will be paid on and after that date at the London office of the Bank of Athens, 22, Fenchurch Street, E.C.

Meetings.

The adjourned general meeting of the bondholders will be held at Winchester House, Old Broad Street, London, on February 8, 1917, for the purpose of considering, and, if thought fit, passing as an extraordinary resolution, the following resolution: "That this meeting of holders of the 5 per cent. Sterling Bonds of the Privileged Company to Protect Production and Trade in Currants secured by trust deed dated June 3, 1910, hereby assents to the annual redemption of the bonds being held on February 1 in each year, instead of August 1—the next redemption which would have taken place on August 1, 1917, to take place on February 1, 1917—and to the rights of the bondholders against the company and its property being modified accordingly, and hereby authorises and directs the trustees to concur with the company in the necessary amendments in the said trust deed to give effect to the foregoing."

The one hundred and eighteenth half-yearly ordinary general meeting of the shareholders in the Ottoman Railway from Smyrna to Aidin Company will be held at Winchester House, 50, Old Broad Street, London, E.C., on Tuesday, March 27, to receive the report of the council, statements of accounts, and balance-sheet to December 31, 1916; to elect two members of the council, Mr. W. H. Swaffield and Mr. J. Henry Trewby, who retire in accordance with the company's statutes, offering themselves for re-election; to elect two auditors, Messrs. G. S. Oldfield and W. S. Sneath, who retire, offering themselves for re-election; and for the transaction of the general business of the company.

LONDON COUNTY & WESTMINSTER BANK, LTD.

ESTABLISHED IN 1836.

CAPITAL - £14,000,000, in 700,000 Shares of £20 each.

Sums of £10 and upwards received on deposit, and interest allowed thereon.

Every description of British and Foreign Banking Business transacted.

EXECUTOR AND TRUSTEE DUTIES UNDERTAKEN.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON STREET,
THURSDAY EVENING.

Business this week has been practically at a standstill in view of the Government's prohibition as regards the export of securities. Yesterday various regulations were published, under which the export of certain securities will be permitted; but further particulars are awaited before normal conditions are restored.

Prices, on the whole, have kept quite firm, and there has been no pressure to sell. Some small transactions have taken place in Agriculturals round 5 1-16, and Anglo-Egyptian Banks are rather firmer, having been taken up to 11½.

In Alexandria Waters some small transactions took place up to 11½. Khedivial Mails were done in a small way round 25s., and United Egyptian Lands changed hands at 6d.

In Greek securities prices were firm, and there were again some transactions in 1881's round 51, and in Rente at 40½.

Oil Shares.

Business has fallen off again and several declines have to be recorded.

North Caucasians were firm at 26s. and New Caucasians maintained their rise to 7s. 6d. Black Sea Amalgamated were dull at 2s. 4½d. Roumanian Consols were rather offered and weakened to 8s. 9d.

Anglo-Egyptian "B" were quiet, but Constantinian were a shade off at 8s.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, Thursday.

Despite the very marked activity in the War Loan, supplies of floating credits have not been depleted. During the earlier hours of to-day short loans were in fair demand at about 4½ and 4½ per cent., but these quotations towards the close came down to 4 per cent.

Discount, however, was quiet with rates well maintained at 4½ to 5 per cent.

New Russian Treasury Bills, running into January, 1918, were dealt in at about 6 per cent., and for March, 1917, at about 5½ per cent.

Exchange on Alexandria stands at 97½ piastres.

OIL OUTPUTS.

Russian petroleum, 54,000 poods and 51,400 poods; Anglo-Egyptian: Gensah, 789 tons and 222 tons; Hircada, 1,519 tons and 1,319 tons; Black Sea Amalgamated, 20,888 poods; Maikop Combine, 16,014 poods; North British Maikop, 2,165 poods; Ural Caucasian, 606,444 poods; Baku Russian, 81,600 poods; Bibi Eibat, 49,400 poods; British Maikop, 2,165 poods; Ural Caspian, 2,517 tons and 2,360 tons; Spies Petroleum, 211,810 poods; and European 82,100 poods.

NOTES OF THE WEEK.

The grip of a winter of exceptional severity has fastened upon all the theatres of the war from the Ancre to Armenia, and has caused the temporary suspension of major operations. Syria and Mesopotamia alone, apart from the closing phases of the East Africa campaign, are outside the cold belt. In the former we have yet to learn how far the rout of the Turks from Sinai Peninsula may encourage the British forces to continue their pressure on the enemy. As for Mesopotamia, though it is nominally the campaigning season, we cannot forget the terrible experiences of the Relief Expedition which just a year ago was trying to fight its way to Kut: incessant rains, the Tigris in flood, the country water-logged or deep in mud. Wet weather has again interfered with the investment of Kut, but not to the same extent as before, and progress is being systematically made. But while there may be an absence of notable developments on the other fronts, there is little rest either in the firing line or among the masses of troops behind it. Nothing could be more striking than the regularity with which slight successes on the Western theatre are being recorded these days, culminating on the British front in the evacuation of Grandcourt. In themselves they may seem to amount to little; but in their cumulative effect they represent the constant harassing of the enemy, who can never be sure that one or more of these seemingly minor attempts may not prove to be the forerunner of a big attack.

At the present moment it is impossible for the public in this or any other country to keep the submarine question for long out of its mind. The gravity of the danger requires no emphasis. In Great Britain the daily toll of ships is an indication that the German threat is no idle one. Confidence in the ability of the Navy to grapple with the new problem as successfully as it has with every other one that preceded it remains, and will remain, unabated. But it is recognised that time is required to cope with the latest developments of Germany's submarine warfare, and meanwhile the diminution in the world's tonnage has a direct effect on conditions in the United Kingdom, and on every other country, for all are dependent on sea-borne trade. The United States Government is credited with the desire to avoid a rupture of diplomatic relations with Austria-Hungary on the ground that the Dual Monarchy may disassociate itself from its Ally's policy. There has been

no cessation of submarine outrages in the Mediterranean, and it will be difficult to exonerate Austria-Hungary from complicity in the campaign. If the boats are exclusively German, they will hardly have been able to operate without Austrian assistance either in the provision of bases or in the matter of revictualling. In some cases the boats may have been sent overland or down the Danube under Austrian charge.

In this connection it is of interest to note that emphasis is being laid in German military circles on the effect of the submarine campaign on the Allies' position at Salonika. It is pointed out that the weakness of the Macedonian undertaking lay in its long sea communications. A great deal of tonnage was required, and this diminished the amount available for other purposes. With increased activities on the part of submarines the oversea communications of General Sarrail's army will cost considerably more sacrifices, and will be still more uncertain and unpunctual. "It should be added," continues the Military Correspondent of the *Frankfurter Zeitung* quoted in *The Times*, "that the abandonment of the Salonika undertaking, which has already often been considered, will have its difficulties in the present circumstances." The wish is here father to the thought. Any considerable successes on Germany's part in her submarine policy will cause inconvenience to the Allies' Mediterranean forces; but the commitments in this part of the world are now inseparable from the conduct of the war as a whole, and cannot be regarded in the light of a detached enterprise, as the German critic would like to have it. Moreover, the idea of the Salonika force depending for its supplies on the punctual arrival of a steamer service from England is somewhat naïve. No doubt the Germans have based great expectations on the damage to be done by their submarines; but the stress laid on the possible effect upon the Macedonian campaign may be regarded as a recognition of the embarrassment which General Sarrail's force is causing the enemy, even when its activities fall far short of the hopes formed in the Allied countries.

If the rupture between the United States and Germany should result in a declaration of war, the former will have to decide what attitude they will adopt in regard to Bulgaria and Turkey. America has close ties with the Near East; a number of prominent Bulgarians and Turks have received their education at Robert College, Constantinople, or are in other ways indebted

to American institutions. Moreover, America has not been a member of the Concert of Powers, whose existence has not always proved an unmixed blessing to Near Eastern States, and for this reason she compares favourably with the Great Powers of Europe. In these circumstances the Washington Government might be unwilling to extend the sphere of hostilities to Bulgaria and Turkey. It must not, however, overlook the fact that Germany, in the event of a complete rupture, will not allow her scruples to interfere with the determination to take what vengeance she can on those who have refused to support her. American interests in the Near East will be as much at Germany's mercy as if they were on German soil. For this reason the American Government will do well not to copy the mistake made by Roumania in imagining that she can declare war on the Central Powers and remain on friendly terms with their allies. The wiser course, as is suggested elsewhere in this issue, would be to take the opportunity of serving the interests of peace by bringing home at least to Bulgaria the futility of further resistance. The Turkish Government, which now knows that it has to face the loss of Constantinople, may be less amenable to argument. But no harm would be done by representing to both countries that Germany's acts of despair prove conclusively that they can no longer count on any improvement in the military position calculated to relieve them from the full effects of their unsuccessful appeal to the sword.

From the Roumanian front only isolated actions are reported. Inasmuch as these are either initiated by our Allies or end in their favour, it would seem that they have the situation well in hand. Just north of the Roumanian frontier, in the south-western corner of the Bukovina, the Russians have achieved a more notable success, again surprising the enemy as the result of an attack through deep snow and securing a second batch of over a thousand prisoners. The marked superiority of the Russians in these encounters, in which the personal element plays such a prominent part, points to an army better equipped for winter conditions than the Austro-German forces. Reports, indeed, speak of prisoners being taken still wearing their summer uniform. In view of the economic situation in Germany and Austria, it would be strange if at some points of their long battle line a failure of the war machine could not be detected. The more thoroughly German organisation succeeds in extracting the maximum value from human and material resources, the more certain will be the collapse, when every part of the wonderful machinery comes to be tested simultaneously, and it is no longer possible to make good the deficiencies at one point by denuding another which has escaped their enemy's attention at that moment.

In the absence of definite news from Greece it may be presumed that the work of transferring the army and munitions from the northern portion of the country to the Peloponnese is being carried out according to the stipulated programme. The chorus of approval which the ceremony of saluting the Allied Flags evoked from susceptible correspondents has given place to more discriminating reports of the situation. The Greek Government has applied to the Allied Powers to have the blockade raised. It points out that it has carried into effect all the immediate demands of the Entente Governments, and that only the question of fixing the compensation due to the Venizelists remains to be adjusted. The reply to this request is understood to have held out prospects of relief for the poorer classes of the population, without an actual termination of the blockade. The caution of the Allies in this matter cannot be regarded as unjustifiable. Apart from the difficulty of making sure that the Reservists have not only been disbanded, but have delivered up their arms, the Allies are under an obligation to the National Government of Defence to satisfy themselves that all imprisoned Venizelists have been released, and that there

are no others who have to be accounted for as a result of the events of December 1 and subsequent days.

The statement that the British Minister had again taken up his residence at the Legation in Athens has since been contradicted. It is certainly more in keeping with the elements of the situation that he should remain on a man-of-war until normal relations are restored with the Greek Government. The anxiety to represent the whole Greek episode as closed when the Allied Flags had been saluted was putting temptation in the way of King Constantine and his advisers, and argued inability to appreciate the unfinished nature of the task which the Allies had to a large extent brought upon themselves. It is unfortunate that the only method open to the Entente of bringing King Constantine to realize the facts of the position was to interfere with the conditions of life of the Greek population. The latter, however, are aware of all the circumstances, and the remedy is in their hands. Until they devise means of restricting their Sovereign's capacity for independent action inimical to Greece's interests, they must be content to be "beaten," as of old, for the madness of their kings. The Allies must be most anxious to see conditions in Greece restored to the normal, but they have become in an increasing degree trustees for the people's welfare, and must safeguard them from the danger threatening from the licence of the King's Praetorian Guard.

The rôle of Job's comforter in regard to Greek affairs has fallen upon the Anglo-Hellenic League, which is issuing far from reassuring reports of the position in Athens and elsewhere. From the first doubt has been thrown in many quarters on the genuineness of the Government's compliance with the demand to transfer the army to the Peloponnese. It was alleged that numbers of soldiers were returning to northern Greece in civilian garb after their despatch across the Corinth Canal had been duly recorded. Now comes the intimation that another method of circumventing the Allies' demands has been found in granting leave to a large proportion of the army. It is hardly credible that the Allies' representatives will allow themselves to be hoodwinked by these or any other subterfuges. On the other hand, if there is the least suspicion for believing that the Government or the military authorities are conniving at them, it would be well to lose no time in bringing home to King Constantine that the Allies' patience is exhausted, and that they must have a régime in Athens capable of acting honourably.

The suggestion made in a leading article in our issue of January 26 that the Allies might with advantage come to an understanding in regard to the future of Albania, in order that nothing should be done during the military operations to prejudice the future of the country, has received some measure of support from the Albanian news that has since been received. In Southern Albania and Northern Epirus something in the nature of a settled administration has been introduced by the Italians. According to an Italian newspaper, the occupied territory has been divided into three districts, the province of Valona, including Tepeleni, the sub-prefecture of Chimarra, and the province of Argyrokastro, including Delvino and Prmeti. The first two are administered by Moslem Albanians, and Argyrokastro is under the Italian military authorities. There is a law-court at Valona, and local tribunals have been established at the five other towns already mentioned. Thirty-six schools, it is added, have been opened in Valona province alone, "in which the Italian language is obligatory under the direction of military instructors." The value of introducing settled administration into Albania is obvious, and Italian energy in this matter is to be commended. A definite plan agreed upon beforehand among the Allies would

not only be ready for application, as the sphere of occupation is extended, but would serve the Italian military authorities as a guide in their treatment of the inhabitants in the conquered territories.

Further successes at Kut have cleared the whole of the right bank of the Tigris below the Hai branch of the enemy. Raids west of the junction of the Hai and Tigris have at the same time driven the Turks from a considerable portion of the right bank above Kut, and have brought their base in the Shumran bend under shell fire. The work of clearing the south bank has only been accomplished at the expense of much fighting. In all these engagements, extending over seven weeks, the enemy has lost heavily, the number of dead found in the captured trenches, put at 2,630, being a tribute to the stubbornness which has characterized the defence. Meanwhile, the Turks continue to hold the Sanna-i-Yat position on the left bank of the river, fifteen miles below Kut. The strength of their lines at that point, protected as they are on the left flank by the Suwaicha marsh, has proved too formidable for any further attempts at a frontal attack. The urgency that impelled the Relief Expedition to risk the effort a year ago no longer obtains. General Maude is not fighting against time; his aim must be rather to keep the enemy occupied and to wear him down with the minimum loss to the British forces. In the original advance the Turks made no stand between Kut and Ctesiphon. They will no doubt be better prepared this time; but their main effort will have been concentrated upon the defences of Kut and the immediate neighbourhood.

The resignation of Turkey's Grand Vizier, Said Halim, and the appointment of Talaat Bey to succeed him has little significance beyond the personal triumph it entails for the new Vizier. Said Halim was Vizier only in name; power rested with Talaat Bey and Enver Pasha, with Jemal Pasha for a time at least closely associated with them. To what extent the Triumvirate directed the affairs of Turkey or merely carried out the behests of the Committee of Union and Progress it is difficult to determine. The explanation given by the heads of the Committee is that, having once selected their Ministers, they give them a free hand, always on the understanding that they are the agents of the Committee, and are responsible to it for their acts. This statement doubtless corresponds with the theory of the organisation, but some allowance must be made for the personal ascendancy gained by at least two members of the Triumvirate. That Enver Pasha should now allow Talaat Bey seemingly to eclipse him is an interesting development; Jemal Pasha must have sacrificed much of his authority at headquarters by his absence in Syria, even if the post itself were not in the nature of a reprimand. But all that may safely be inferred from the changes in the Vizierate and Cabinet is that the same Committee clique is still firmly established in power in Constantinople. It knows that it is too gravely compromised with its own people to do anything beyond keeping close to the German war-chariot; but when once its confidence in itself and in Germany's victory has been shaken political changes in Turkey will acquire greater significance.

A Decree has been signed extending the mandate of the Egyptian Mixed Courts for another year from February 1. This step is in accordance with the practice introduced in 1915, when the quinquennial period, for which the mandate was regularly renewed up till that year, lapsed and the decision was taken to renew it for a year only. The idea, no doubt, was that the war would not last long, and that with the advent of peace it would be possible to introduce changes in the relations of the various local jurisdictions. Accordingly, a yearly renewal was introduced; but, as has been pointed out, a number of Chancelleries would have been saved some trouble if the renewal had been for an indefinite period regulated by the duration of the war.

"THE SUDANESE."

(By OUR KHARTOUM CORRESPONDENT.)

The word Sudan is used in a variety of significations, to a Frenchman it means quite a different thing from what it means to an Englishman; and the term Sudanese is often applied in a way that seems ludicrous to those who live in the Sudan and know the implications of the word. In the Sudan the name Sudanese is used for those whose origin is derived entirely or mainly from the black or negroid tribes of the Sudan. Thus, an Arab would not refer to himself as a Sudanese, as he would thereby imply that he was not of pure-bred Arab stock; and although there are comparatively few, if any, of the Arabs of the Sudan who are pure bred, they are for that very reason the more particular to lay stress on their Arab strain. Many of the Arabs married with blacks in the past, as they do in the present, and the offspring of these marriages is known as Sudanese; and though it would probably be extremely difficult to define in accurate terms the exact meaning of the name, there is little difficulty in practice in knowing the Sudanese from the Arab. Besides the considerable numbers of the pure-bred black or negroid, such as the Nuba and Shilluk, which is the mass of the population in the south, there is a large number of more or less pure blacks living amongst the Arabs in the more northerly provinces, and the half-bred Arab-black which forms the labouring population all over the Sudan.

These intermarry with others of their own kind, or with the pure black, and practically never with the Arabs. They tend to lose the peculiarities of the tribes from which their forbears were sprung, and do not in many cases attempt to maintain the distinctions of tribes in the way that the Arabs do. Thus a man will describe himself as a Sudanese, and may have only a very vague idea of what tribes his parents came from; whilst an Arab is always sure of his tribe and keeps up the distinctions of tribes with care. Where an Arab marries into another tribe the descendants identify themselves with one or other of the tribes of their parents and keep up the tribal tie; whilst the black, once he has crossed with another tribe, tends to forget the distinction and becomes just a Sudanese. This applies, of course, more forcibly in the larger towns, where the tribal distinctions have little value. Outside, a Sudanese may attach himself to a tribe for the protection thereby afforded him, but he can only do so to a black and not to an Arab tribe. There are, indeed, certain exceptions to this. For instance, there is a considerable colony of so-called "Arabs" in the Nuba Mountains who are in fact the offspring of runaway slaves of a generation or two ago, and they have divided themselves up according to the tribes and sub-tribes of their original masters. There are colonies of this sort in various parts of the Sudan, and in some cases also the Arabs have intermarried so extensively with the blacks that it is difficult to tell them apart; but the people themselves know and maintain the distinctions in many small matters of family affairs.

Briefly the main point in the term Sudanese is that it implies a certain admixture of black blood, which is, after all, the original meaning of the word. For that reason the words "Sudanese Government" look queer to the members of the Sudan Government, who, as British and Egyptian, can hardly be called Sudanese. But the phrase is to be found not infrequently in the Press.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, January 21.

The Cyprus Museum.

A meeting of the Museum Committee was held on January 11, under the presidency of the High Commissioner, when various resolutions were passed and announcements made. The director of the American Mining Company, Mr. C. Gunther, who takes great interest in the matter of antiquities, has offered £550 for excavations in localities to be indicated by him, subject to the condition that any objects of antiquity not required by the Museum shall be reserved as his share. He has also presented some valuable objects of Mycenaean pottery and of glass to the Nicosia collection. A member of the Committee, Mr. Sevéris, M.L.C., has contributed £50 for excavations at Lápathos, in the Kyrenia District. The New York Museum has contributed a copy of a valuable work, the catalogue of the well-known Cesnola collection. Mr. Z. Pierides, another member, has also presented several objects of value. The Committee decided to buy up some of the hovels which still remain amidst the ruins of the great Temple of Aphrodite at "Old Papho," near Kuklia, in the Papho District. These were unearthed in 1887 by Professor Gardiner and Mr. D. G. Hogarth. Mr. I. K. Peristiáni, one of the leading Greek archaeologists and writers on Cyprus history, has long advocated the better preservation of the Temple ruins, especially of what remains of the mosaic pavement, and of many stones bearing inscriptions. These are now exposed to injury and to depredations by villagers. The difficulty in the case both of the old Paphian ruins and of others in Cyprus is to find funds for the proper protection and custody of these remains. The museum has before it a programme of what should provide interesting work during the present year, and add considerably to its treasures.

Cypriots in the Greek Army of Defence.

The President of the Alexandria Branch of the Committee of Relief, M. Michel Sinadino, has remitted a sum of money in aid of families of Cypriots who have joined the Venizelist National Army, accompanied by a letter to the Archbishop of Cyprus, begging that he will undertake its distribution according to his discretion. A list of the volunteers is sent, and the Archbishop is asked to cause an inquiry to be made into the circumstances of the families concerned. General Lapathiotis states that the National Army at Salonika now numbers nearly 60,000, and should by the end of January reach about 80,000. The General is, as his name implies, a Cypriot from the village of Lápathos, in the Kyrenia District.

General News.

The Greek Christmas and New Year's Day were celebrated quietly on January 7 and 14. The food question continues to agitate the public. At Christmas very little meat was found in the Nicosia markets, and what there was was of the poorest quality. People had to be content with vegetarian fare. Regulations have been in many cases evaded, animals being slaughtered outside the municipal slaughter-houses, and the meat taken to private houses, instead of being exposed in the markets. Papers blame the police, quite unjustly, as they carry out their duties energetically. Government is said to contemplate further measures relating to prices and the protection of the public. Amongst the articles of which the export is prohibited are beans and meal made from pulse, rice and ground rice. Several bakers in the capital are now making bread made of one part wheat and two parts barley. This is sold at 3 piastres (4d.) the oke of 2 4/5 lbs.

The new Greek Archbishop is showing great activity in matters relating to the Church, including that of the better education of the priesthood.

A concert is to be given on January 26 at Nicosia by members of an English club, under the patronage of Sir John Clauson, in aid of soldiers and sailors who have been blinded in the war. It will be held in the Papadopoulos Theatre, and is sure of success.

WITH THE ENEMY IN THE BALKANS.

(FROM A CORRESPONDENT.)

Bucharest in German Hands.

From the Dutch papers it is possible to get a fairly accurate picture of the changes wrought by German rule in the Near East. The *Handelsblad* correspondent gives a description of Roumania under the new governor-general, which may not be without interest to those who knew the country in happier days. The change, so far as the capital was concerned, came suddenly. Until the invaders were almost at the city the Bucharesters maintained their round of pleasure—indeed, one correspondent compares them, not to their advantage, with the Parisian in August, 1914. Until the end of November the Capsa Restaurant went on catering lavishly for the idle rich, and not till the city was given up did the old order give place to the new, when the military took over everything, fixing prices and suppressing extravagance.

The *Handelsblad* writer gives an account of an interview he had with M. Peter Carp. It was difficult, he says, to get the old man to talk without reserve on questions of home politics; but he adds that it was not difficult to gauge his feelings, and the rest could be filled in from the conversation of his followers, who spoke their minds quite freely. They had no doubt that their country would retain its independence, but there would be another king. The Dobruja, they thought, would probably go and possibly a piece of Wallachia, while a portion of Moldavia might have to be ceded to Russia. They further expressed their thankfulness that so many Roumanians had been captured, and so spared for the future of the nation.

In Bulgar Prisons.

Another Dutch correspondent (this time in the *Nieuwe Rotterdamse Courant*) gives details of the prisoners of war interned in Bulgaria. No official lists are issued, but the figures are approximately as follows: 37,000 Serbians, 12,000 Russians, 20,000 Roumanians, 900 French, 200 Italians, 500 British, together with a few Japanese who were with the Russian Army, a few Venizelist Greeks, and some Portuguese and Spanish volunteers in the French service. The camps in which they live are outside Philippopolis, at Stara Zagora, by Lovetsh, and at Uskub. The first named is described as being in no way inferior to the majority of such camps in other belligerent countries. It is situated a few minutes outside the town in a healthy location on the banks of the river. The men live in wooden erections, the various nationalities being quartered separately, though having their meals in common. It is said that the British and French consider the diet meagre, but the others are apparently satisfied. They get each day a kilo. of bread and each week three-quarters of a kilo. of meat, one kilo. of vegetables and one kilo. of potatoes, in addition to tea and sugar. The clothing, we read, is not satisfactory; but it is pointed out that the Bulgarians have difficulty in supplying their own army. The prisoners, therefore, are dependent on the Legations and various charities. The British, as usual, are best looked after from home, the French coming next. The poor Serbians, as might be expected, get little, and the Russians less. The Roumanians are worst off, because their organisations are not yet complete.

The officers at Philippopolis live in a stone building in the camp. Formerly they were quartered in hotels and houses in the town and given a fair amount of freedom. But some months ago there were attempts at escape by some of the British and French, and since then they have been confined to camp, being forbidden to leave without special reason, and then only under guard. It is said that the military authorities are considering the abolition of this restriction in the case of Staff officers and, perhaps, others as well.

A despatch from Athens reports that the Greek division in Corfu has completed its evacuation of the island.

A Paris court-martial has unanimously sentenced to death a Roumanian named Sani Lieberman, forty-two years of age, a chemist by profession, born at Tutova of German parents, who, while in Paris, furnished Germany with information likely to prejudice French military operations.

NEWS OF SYRIA.

(FROM AN OCCASIONAL CORRESPONDENT.)

CAIRO, January 19.

A Terrible Record.

The informant whom I quoted in my letter of yesterday's date* deals in some detail with the causes which have brought about the state of famine in Syria. These may be briefly summarised thus: requisitioning by the Government of staple articles of foodstuffs; commandeering of beasts of burden and the taking over of the railways exclusively for military transport; locust invasion; the paralysis of certain industries and trades, such as the silk industry, which used to provide employment for large numbers of the working classes; the blockade; the greed of a few unscrupulous individuals, who, profiting by the Government's apathy, played with prices at will; and, finally, the interruption of remittances from Syrian emigrants abroad.

Famine paved the way for sickness and epidemics, which, owing to the almost total absence of doctors and drugs, played terrific havoc. In the town of Homs alone, it is said, not less than 6,000 deaths from fever were reported. This state of things excited the compassion of the American missionaries, who formed societies for distributing food among the poor and tending the sick; but the authorities actually stopped this work of mercy, saying that they would undertake it themselves. The result was that the death-roll from hunger and disease assumed appalling proportions, so that by the end of last August the total number of deaths from hunger was estimated at 60,000, and from disease at a little less. These figures are borne out by the estimate of the American Government itself, which put the total at over 60,000.

Deportation of Armenians.

With regard to Armenians, it is said that Urfa, Tarsus, Adana, Casere and Mersine, and the whole of Northern Syria have been practically cleared of them, the Government having sent them all away to Mesopotamia, and that the majority perished on the way. Their properties and belongings have been distributed among the Turks who emigrated from Asia Minor. All that remains of Armenian property in Syria are the convents of El Sherfe and Bzummareen—the latter in Mt. Lebanon—the monks in these two convents having been allowed to remain.

Military Service.

As to military service, the first exoneration tax of £T1.44 remained in force for some time, when an additional tax of £T1.33 was imposed; and, finally, on October 26 the semi-official papers of Constantinople proclaimed the Government's intention of calling to the colours all Ottomans, including those who had paid the tax. In the latter case, it was added, the Government would refund the tax by monthly instalments of £T2, as from the beginning of this year. As the Turkish Government has lately denounced the Treaty of Berlin, it is expected that the Lebanese will soon be placed on the same footing as the inhabitants of the vilayets and will be similarly mobilized.

Relief from America.

Since the above information was made public, further news about Syria has been received, which relieves the gloomy picture. The writer has just received a private letter from an American lady in the States, dated December 7, saying that much food and funds are being sent to Syria; that when she left Syria in June last, figs and grapes promised to be abundant, and that the colleges and schools were opening. Shortly after this copies of Arabic papers published in New York were received, containing welcome news of the arrival of the relief ship *Cæsar* at New York to complete loading and proceed direct to Beyrout. The value of her cargo is estimated at about one-quarter of a million dollars. She will carry also the funds collected by the American Relief Committee in aid of the Syrians and Armenians—which are said to amount to 2,018,900 dollars—as well as those collected by the Syrian Relief Committee.

* See THE NEAR EAST, February 2.

THE PROGRESS OF SERBIA.

A course of lectures on the government of small nations is in progress at the headquarters of the Irish Literary Society, 20, Hanover Square. It was brilliantly inaugurated on January 8 by Dr. Sophie Bryant, LL.D., D.Sc., who expounded the principle of nationality—perhaps the most outstanding fact at this momentous crisis. On Saturday afternoon Mr. C. R. Cooke-Taylor, who has spent a year in Serbia under the Red Cross, took the chair at a lecture on that country delivered by Prof. Pavle Popovitch, of Belgrade University. The latter gave his audience a most interesting sketch of his country's early history, and of her recent advance from barbarism to civilisation. A century ago Serbia was a Turkish Pashalik, which is equivalent to saying that her people suffered from chronic corruption, lawlessness, and oppression. The little country had only ten inferior schools, and barely one in a thousand of its population could read or write. In 1815 a herdsman named Milosh Obrenovitch headed an insurrection which drove out the Turkish garrison in a single campaign. With Russian help he secured a measure of autonomy for Serbia; and in 1829 the Sultan was forced to recognise him as hereditary Prince. A new era opened under his grandson, Prince Michael. That enlightened statesman softened the acerbities of faction, maintained the supremacy of law, organized an effective citizen army, and placed foreign relations on a sound basis. To him Serbia owes the introduction of printing and an elaborate system of secondary education. At his death by an assassin's knife in 1868 Serbia had made giant strides on the path of civilisation. Prof. Popovitch touched lightly on the modern history of his country, the outlines of which are now fairly well known in England. Serbia's progress in education is not so generally recognized; and the audience was surprised to learn that, in 1914, she had a well-equipped university, with many schools teaching literature, arts, and crafts.

Speaking of the events that led to the present war, Prof. Popovitch said that when the last war with Bulgaria was over and the treaty of Bucharest signed, the people of Serbia hoped to devote themselves to the arts of peace; but, unfortunately, the present war followed. The Austrian Red Book contained a statement that the news of the assassination of the Archduke was received with transports of joy, but this was an abominable lie. It was said, too, that Serbia provoked the war; this was an absurd calumny, for the Serbs knew too well the odds against them, and were full of anxiety. At the time a peasant woman had said to him: "I have two sons who have been in the Turkish and Bulgarian wars. We beat the Turks, but my son told me they were good soldiers; we beat the Bulgars, though my son told me they were much better soldiers than the Turks. If we now beat the Austrians our glory will be known to all Europe, but my son told me the Austrians have so many soldiers that they almost swarm." When the enemy entered the country in November, 1914, with a vast army, Serbia shivered from head to foot, but arose as one man. Everyone was called to the colours. He remembered one snowy day about a hundred students from the university joined, and were distributed over various regiments. It was felt by some of those in authority that Serbia ought to conserve her supply of men of this class, and it was proposed to give them a post in the rear. He (the speaker) had ventured to propose this to one of them; but, "No," was the reply. "Do not speak to me of that; I have been sent to the fighting line, and I am going. I do not want to be reproached all my life with having sheltered myself from dangers to which my comrades were exposed." Four days later came the news that the young man had met his death on the field of battle. When the time came that the Serbians would be able to re-enter their country they would find nothing left of what was once the fine university of Belgrade; for the students were dead, the buildings wrecked, and the books stolen or destroyed.

Miss Eleanor Hull, President of the Irish Literary Society, Mr. Alfred Percival Graves, and Mr. Francis H. Skrine took part in the discussion that followed. The speaker last-named drew a striking parallel between the Serbian and the Irish characters. Both races, he said, had an intense love of poetry, a disposition to "let things slide," and a disregard of monetary considerations. Both were quick-witted, emotional, and brave to a fault. The Entente's treatment of their brilliant and devoted ally was a discreditable episode in the world-war now raging; but there was still time to repair the consequences of vacillation and blundering diplomacy.

A vote of thanks to Prof. Popovitch was carried by acclamation, and he promised to deliver another lecture, on Serbian literature, at a later date.

The deportations in Belgium have now been extended to resident Roumanian subjects of sixteen to sixty years of age, who are being taken to Germany for internment.

ARCHÆOLOGICAL NOTES.

By JOSEPH OFFORD, M.S.B.

When the celebrated "Code" of laws of the Babylonian King Hammurapi was found, at Susa, by the French explorers, about five columns which must have set forth some thirty-five sections of the Code were erased, probably because the Elamite king who carried away the stele from Mesopotamia had levelled the space to insert some record of his own. From time to time other copies of parts of the missing Code are found; for instance, several paragraphs are upon a tablet in the Constantinople Museum. Some seven or eight of the lost sections are preserved upon tablets in the University of Pennsylvania Museum, and were published in 1914 by Arno Poebel. These have now been edited by Père Scheil, the first editor of the Code, in the "Revue d'Assyriologie." They all concern loans, either of money or what was its equivalent in those days before the invention of a coinage, or of grain; and regulate, in some cases, the legal amount of interest and punishment, for having given short measure, or the commission of other irregularities. These new-found clauses will be particularly useful to scholars, because they concern cases of dispute which are described in hundreds of the, so-called, "contract tablets," and will enable us to follow the decisions of the magistrates as being based upon the ordinances of the Code.

It is well known that the names of Abraham and Terah, or Tarah, and Peleg, or Palga, have been found as borne by Babylonians of about the same time that Abraham left Ur of the Chaldees. A very old cylinder of the time known as the Epoch of Agade, that is to say, when that town happened to be one of the chief cities of Babylonia, bears an archaic inscription, the cuneiform characters being almost pictorial in their arrangement, which gives the name Ishre-il, or Ishre-el. This is really identical with the Biblical Israel, and is not surprising, because such names as Ishma-il had already been found in Babylonia. Its occurrence is important in connection with the fact of an Egyptian Pharaoh having recorded a war in Palestine with a tribe called Israel, at a date previous to Joshua's conquest of the country; because it tends to show that Israel was a not uncommon name, and, therefore, the foes of the Egyptian king need not have been connected with the Hebrews directly.

The permanence of the names of districts and cities in Western Asia is extraordinary, considering the vicissitudes of conquest by various races that these lands have undergone. The veteran scholar Professor A. H. Sayce has recently given further important illustrations of this in an essay, "The Northern Campaigns of Sargon of Akkad," published in the "Proceedings" of the Society of Biblical Archaeology. Sargon's career may be dated about 3800 B.C. An inscription of his, now in the United States, found at Nippur, records his conquest of cities named Mari, Ibla, and Earmutia, and towards the extreme north-western series of his foray, the "Cedar Forest" and the "Silver Mountains."

Mari is the Mrrha of the Classics, now Tel-el-Ishara, close to Der-az-Zor, on the Euphrates. It is mentioned by Thotmes III. of Egypt, about 1600 B.C., as also are Ibla and Earmutia; so are Amaiqu, the Amyke of the Greeks, and Khalbu or Aleppo. The "forest mountain" is Amanus, and the "Silver" one Mount Taurus. Amanus is Amanus in the Babylonian inscription of Gudea. The great production of the Taurus silver deposits under the Hittite dominion caused this metal—which at one time was, in Egypt, more valuable than gold—to become second in price of the then known precious metals for all time.

During the last twenty years some scores of large clay bowls have been dug up in Mesopotamia bearing Hebrao-Aramaic magical texts. Most of these have been edited by M. Moise Schwaab, of Paris, and Professor Montgomery in the United States. Their dialect is found to be identical with that contained in some of the ancient manuscripts discovered in the sand-covered cities of Thibet. As literature their value is nil, but their strange sentences and mystical words are now found useful as illustrating the Greek magical papyri from Egypt, all of which appear to ascribe their potent powers to Semitic names, repeated many times under various disguises, frequently written backwards and acrostically.

Dr. M. Gaster has been for some time publishing a number of Samaritan phylacteries and amulets, and finds the bowl inscriptions, the papyri, and his texts all mutually illustrate each other. They are also connected with the words and symbols upon the thousands of so-called Gnostic seals and amulets. The whole subject shows the depth of the folly of human credulity; for there can be no doubt that all these documents and inscribed talismans, as far as being protective or really prophetic, were absolute rubbish. They were only produced because they could be sold to people of

means at high prices. We, however, have recently seen how, notwithstanding the vast strides of science and civilisation, similar charlatans obtain a livelihood by kindred malpractices to-day.

JEW IN MODERN JERUSALEM.

Addressing a meeting of the Société Internationale de Philologie last Monday on the subject of her recent experiences in Jerusalem, Miss Helena Frank gave an interesting account of some of the Jewish inhabitants of that city. She said most of the Jews now there are of Polish birth or descent; but there are colonies from a number of other lands, and notably one of Sephardim Jews, who have been in Jerusalem now for three centuries, and speak old Spanish and Arabic. Between these and the Polish community there is not much connection. Outside the town there is a colony of Jews from Bokhara, who still dress in old-fashioned Persian costumes. You may meet a boy dressed in one very tightly-buttoned, cherry-coloured silk garment, or a group of ladies in the most beautiful sky-blue, green, scarlet, cherry, or lemon-coloured silks, wonderful to behold. The members of this community are fairly well off, but there is another colony of poorer Persian Jews. There is still another settlement of Jews from the south of Arabia. These work on the land, and are a very attractive, simple people.

The work that Miss Frank was occupied with concerned little Jewish *chedar* boys, whose days were passed in Rabbinical schools studying the Talmud. Of these *chedars*, she said the Persian was about the worst. She described her visit. Going into the school the atmosphere was enough to send her out again. It was a little room, nearly dark; if it contained a window, that window was not made to open. In the middle of the room was a little stove, behind the stove along the wall there was a shelf, and to the right of the door was a bedstead. The tutor was a nice old man, sitting on the floor. Besides him, there were in this small and half-dark room twenty-eight children, from three to seven years of age, all busy learning. On the bedstead a child of five was teaching the Hebrew alphabet to children of three or four. On the floor were other children learning from the tutor, while still others sat on the shelf waiting, with folded arms, until their turn should come. Of the twenty-eight children, twenty had some form or other of eye disease, and the teacher also was afflicted in the same way. The Polish *chedars* were not so bad as this. Some lady doctors, friends of Miss Frank, established a clinic for the treatment of children suffering from trachoma or other eye diseases. Of the patients, said Miss Frank, the most typical was little Moishel. He was five years old, fair-haired, with curly earlocks. He wore always two caps, an inner one of white wool and a heavy black cap outside. Besides these, he wore a kaftan coming down to his feet, tied with a girdle round his waist, and under his arm he always carried a large black book. He was one of the first to attend the clinic, and continued to do so until his father left Jerusalem.

CENTRAL ISLAMIC SOCIETY.

The Central Islamic Society is losing its president, for Prince Abdul Karim Khan of Sachin will shortly be returning to India after spending fourteen years in this country being educated. Last Saturday, at the Imperial Hotel, Russell Square, the Society gave him a farewell reception which was attended by about 130 people, among others whom we noticed as present being Professor and Mrs. H. Léon, Syed El-Bakry, the Hon. Mirza Ali Baig, Mr. and Mrs. M. Pickthall, Mrs. Ellen Dickinson, Miss Claridge, and Messrs. S. M. H. Kidwai, Duse Mohammed, J. Fisher, H. N. Flewker, and Sydney Moggeridge. Tea was provided, and there was a musical programme to which Miss Shirazi, Miss Romé, the Misses Sammons and the Versatile Four contributed.

Mr. Ispahani, acting President of the Society, wished the Prince a safe voyage home and a useful career in his new sphere of life. Among the objects of the Central Islamic Society, he said, one was to inform public opinion by lectures, publications, and in every possible manner as to the true spirit of Islam. Another was to enlighten our own and other Governments who had Moslem subjects—there were 140 million such in the British Empire—as to the inner thoughts of the Moslem world. Among problems raised by the war were those affecting the Khalifate, and he trusted these would be dealt with in a way that would not only have regard to Moslem feeling, but would also enable Islam to be again a power of light and leading in the world.

The Prince, replying, said that he felt a natural elation at the idea of returning home after so long an absence, and also at the thought of having achieved the object which he had come here to attain; at the same time he could not bear the thought of leaving so many happy associations of his young days, and so many kind friends.

Lecturing recently at the Jewish Institute, Bradford, Mr. F. C. Kramrisch (the Serbian Consul in that town) said that Serbia was one of the few States that treated the Jews with freedom and respect and allowed them full human rights. "At the present time," he continued, "we are cut off from our members abroad, and we must think of and sympathise with our co-religionists in the East of Europe, who are enduring the most appalling hardships and misery. We must hope and pray that after our victory in this unprecedented war Great Britain and her Allies will grant our suffering brethren a home and refuge in Palestine, where they can live unmolested and practise the religion of their forefathers."

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

"THE FUTURE OF PALESTINE."

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Many are the speculations regarding the future of Palestine, but few people have anything very tangible to suggest, except the so-called visionary, who looks outside and beyond all present political considerations. Miss Blyth, in her most interesting articles, suggests various expedients, the most obvious of which is that Great Britain should take the southern portion of Palestine under her care, and administer it like Egypt. That may, and probably will, be the outcome of this present war, but what of the future?

Miss Blyth has, I think, underrated the idea of Jewish nationality among the Jews themselves, and compares them unfavourably in this respect with the Armenians. The Jew through centuries of persecution has been compelled to suppress any outward parade of his aspirations or nationality, but few doubt that it still exists. No one denies that among Jews there are many "freethinkers"; but if one takes the percentage of the devout amongst them, I think that it will compare favourably with any other creed. It is well known that one of the most solemn parts of the Passover service, performed by Jews in every country, are the words "this year here, next year in Jerusalem," which testifies to their national belief in their restoration to Palestine. Also it is a remarkable fact that immediately after the Constitution had been granted to the Turks, there was an extraordinary revival of Hebrew as a spoken language amongst the Jews of Palestine, so much so that it is now spoken, not only in the home, but in the shop, not only in the classrooms of the schools, but in the playground, taking the place of the Yiddish patois that had hitherto been used. Not only that but the British and Foreign Bible Society had to recast the whole of their printing arrangements to meet the demand amongst Jews for the whole Bible in Hebrew.

Political prophets have again and again proved themselves wrong, so that one wonders where we are to turn for any hint as to the future. Let us turn for a moment to the Law and the Testimony, and see whether the Bible gives us any light on the subject. The book by Daniel told the Jews of his day of the four world empires that were to arise, and although desperate and fanatical attempts have been made by the self-styled "Higher Critics" to discredit the book as a late forgery, the bricks of Babylonia, and the papyri of Egypt, have dragged him safely out of the critics' den. That is past; but what of the future?

Everyone acknowledges that Jerusalem has been trodden under foot by the Gentiles, that Gentile power being the Turk. Students of the Bible said that the Turkish power was to wane, and the Promised Land to be released from their domination. A few years ago when the Young Turk Party rose to power, political prophets said that a new era had arisen for the Turkish Empire, and from a human standpoint the power of Turkey was riveted more firmly on Palestine than ever. But what is the result? The very thing that was to have been the renovating of Turkey has proved the chief, if not the only, cause of its collapse, and the very thing that will probably release Palestine from its grip.

That is present, but what of the future? Let us again go to the Bible. There we find that the whole of the Promised Land was given by God unconditionally to the seed of Abraham. It is well here to realize what the Promised Land includes; Palestine is only a small portion of it. The land given to Abraham by God is that part of the earth between the Nile and the Euphrates, and includes British East Africa, Abyssinia, Sudan, Egypt, Arabia, Mesopotamia, and last, but not least, Syria—truly a good heritage.

The Jews are now (apart from war conditions) flocking back to Palestine, and form at present the most numerous of the races which inhabit Jerusalem; in fact, it can now be called a Jewish city. The Bible tells us that in the future there will be a Jewish state in Palestine, and that the Jews representatively will return there, aided and probably protected by Israel. Jerusalem will then become the metropolis of the world. How can an inland city become a world centre in these modern times? But wait; we are also told that the tongue of the Egyptian Sea will be dried up. This undoubtedly refers to the Gulf of Suez, and when that takes place the Suez Canal will become unusable. But the same convulsion of nature (or probably the same) will divide the Mount of Olives and cause a highway (waterway) to

appear from the Mediterranean through Jerusalem to the Dead Sea. That means that the level of the latter will be raised 1,300 ft., that again will cause it to overflow and join the Gulf of Akaba, which will make the most magnificent natural waterway that the world has ever seen, connecting East and West, with Jerusalem at its centre situated in the midst of an extraordinarily fertile country. And who will say that this convulsion of nature will not alter the features and climate of the Great Syrian and Arabian deserts, so that they, too, shall blossom as the rose?

The mind can hardly grasp the possibilities of this waterway, but we know it must come, and then the visions of Israel's seers will be an actual fact, and the future of Palestine will need no more discussion.—I am, etc.,

VICTOR L. TRUMPER

Port Said.

(Lieut.-Com., R.N.R.).

THE BYZANTINE EMPIRE.

Speaking last Wednesday at the London School of Economics on the Historical Causes of Problems of the Near East, the Hon. W. P. Reeves described the Byzantine Empire as it existed from about 400 A.D. to 1050 A.D. He said it was a despotism, but an enlightened one. It had a disciplined and very efficient army and navy, and a trained civil service. Its population was never completely reduced to serfage as was that of western Europe, and edict after edict of the Emperors showed the care that was taken by them to preserve the class of free peasant proprietors. Its law was the foundation of that of most civilised States to-day. It had country gentlemen who provided the civil service, and officered the army and navy. It had a great commercial class, and Constantinople was the chief trading centre of the epoch. Its galleys came as far as England. The greatest art of Byzantium was architecture, but it had many minor ones. It kept the light of civilisation shining at a time when the dark ages had spread over Europe, and in its death struggle with the barbarous or semi-barbarous nations that surrounded it, it handed over religion and learning to the nations of the West, thus creating the foundations of the Renaissance period which changed the iron-clad brutes of the Middle Ages into civilised peoples. It was a chapter of history that seemed to be forgotten in these days when some of us were inclined to look down upon the Greek Empire; but there was hardly any art in Europe that did not owe a great deal to it.

BELFAST AND SUDAN MISSIONS.

On January 30, at a meeting held in the Y.M.C.A. Hall, Wellington Place, Belfast, under the auspices of the Belfast and North of Ireland Branch of the Sudan United Mission, the Rev. C. N. Barton, B.A., of the Sudan, delivered an interesting lecture, illustrated by limelight views. The chairman, Mr. J. Hamilton McCleery, referred to the work of Mr. Barton in going through the country and stirring up interest in the Sudan. Before he left the Sudan a year ago, when he came home on furlough, he had been doing a splendid work, and they wished him god-speed when he returned to it. In the North of Ireland they had set themselves to raise £1,000 for a new mission station in the Sudan, and of that amount £400 had been subscribed. They hoped that the remainder would come in so that the work might grow more and more.

Rev. C. N. Barton, in the course of his lecture, referred to the extension of trade under the protection of British rule in the Sudan. He then described the people who, he said, lost a very large percentage of their children before they were one year old, as a result of superstitious practices. The people were constantly in dread of spirits, and it was pitiable to see mothers weeping over their dead, looking up to heaven, and questioning God as to why their loved ones had been taken away. Referring to the work of the mission, he said they did not go in for numbers, but to see that every man was a true believer in God. They had eleven stations and five out-stations at present, but what were they among so many people? Now was the time to go in and win these tribes.

NEW TURKISH CABINET.

According to a Constantinople telegram, the Grand Vizier, Said Halim, has tendered his resignation for reasons of health, says a Reuter's message sent off from Amsterdam on February 5. The Sultan has accepted the resignation, and has entrusted Talaat Bey with the formation of a new Cabinet, which is as follows:—

Grand Vizier, Minister of the Interior and temporarily Minister of Finance	Talaat Bey
Sheikh-ul-Islam and Minister of Wakuf	Moussa Kiazim Effendi
Minister for Foreign Affairs	Messimy Bey
Minister of Justice and President of the State Council	Halil Bey
Minister of War	Enver Pasha
Minister of Marine	Jemal Pasha
Minister of Public Instruction, Posts and Telegraphs	Shukri Bey
Minister of Commerce and Agriculture	Shereef Bey
Minister of Public Works	Ali Murad Bey, Governor of the Lebanon

The Sultan has conferred upon Talaat Bey the title of Vizier and Pasha.

The telegram adds that the new Cabinet will energetically prosecute the war in conjunction with Turkey's Allies until the attainment of final victory.

NEAR EAST BOOKSHELF.

THE BALKAN TANGLE.*

The Near Eastern question has agitated Europe without intermission for half a century, and has been a nightmare to every peaceably inclined Chancellery throughout that period. But the fact remains that until the outbreak of the present war there was in most countries a very indifferent appreciation of the full meaning—to say nothing of the details—of the problem. Even now it must be reluctantly admitted that the British public, although its interest has been stimulated, is far from being in a position to realize the significance of all that is at stake in a satisfactory solution of the vexed question. There is also reason to suppose that for at least some months after the outbreak of the war a considerable amount of ignorance prevailed in high quarters, and that no anomaly was found in attempting to settle one aspect of the question without reference either to the other parts of it or to the other parties interested. In these circumstances there can hardly be too many books on the subject of the Near East and the settlement. There are, indeed, enough angles from which the problem can be viewed to give variety to a large number of analyses, and it is only by a careful study of the different claims and aspirations that any solution which may hope to attain finality can be reached.

In the volume before us we have the Serbian point of view of the Near Eastern tangle and the best way of unravelling it. Probably we may regard it also as the point of view of the Jugo-Slavs or Southern Slavs, in this term being included the Serbo-Croat peoples and Slovenes inhabiting the Austrian provinces of Carniola, Istria, Croatia, Dalmatia, Bosnia and Herzegovina, Serbia, and Montenegro. The qualification of a "probably" is justified by the fact—to which the author calls attention—that, although a Jugo-Slav State is contemplated as a result of the war, it is impossible to state at this stage on what basis it will be arranged, as there can be no agreement reached between the component parts. The Croats are Catholic Slavs; but the exponents of Jugo-Slav views reject the contention that any differences of religion, customs, or dialect can in any way affect the solidarity of the future State. It must be accepted as an axiom that a Serbo-Croat-Slovene State can and will be formed, but, in regard to its actual constitution, "nobody is at present able fully to answer that question with even a shade of authority."

Any scheme put forward in this respect, however ingenious and well-founded, represents nothing but personal views, and is, therefore, of little value; and sometimes, if not stated with all necessary reserve or caution, may easily be misunderstood and lead to false conclusions." In this respect, it will be noted, Jugo-Slav aspirations differ from Roumanian, inasmuch as there can be no doubt as to the future of any additional territory acquired by Roumania; it will, of course, be incorporated in the existing kingdom. The point is perhaps not unimportant in a consideration of the Near Eastern question, for the reason that, if the establishment of Jugo-Slavia as a homogeneous State is likely to present such difficulties that warnings have to be uttered against any theories which may be devised now in regard to its future constitution, then the greatest care must be exercised in not overloading the embryo State with more problems in the matter of territory and mixed populations than it is likely to be able to assimilate. In other words, if Serbs, Croats, and Slovenes may be expected to have all their attention occupied for some time to come in arranging the basis of their own confederation, they ought to be on their guard against complicating their task with the presence in the new State of Italians, Roumanians, and Bulgarians. A *sine qua non* for the settlement after the war is that all concerned should be in a position to settle down to quiet, ordered government in the shortest possible time.

M. Vasitch is quite right in taking the British public to task for its ignorance of the Near Eastern question; he is equally right in assuming that Britons now approach the question with a strong bias in favour of the Serbians. At the same time he must not forget the ignorance and the past prejudices, and if he appeals to Great Britain as a final arbiter he ought to be careful not to overstate his case. Compromise is not, or ought not to be, the same as bargaining in the matter of judicial awards; and the Southern Slavs will do well not to strain the good case they have, with the idea, as they may persuade themselves, of having a margin to surrender in the final settlement without incurring any real sacrifice on their part. It would be most regrettable if those who may have the responsibility of fixing the frontiers in Near Eastern Europe were forced to the conclusion that the different nationalities were all claiming so much that it was impossible to arrive at an accurate determination of the

truth, and that therefore they would be adopting the safest plan in cutting off more or less haphazardly portions from each claim. An accurate delimitation or at least a satisfactory approximation to it, should be possible; but to enable it to be carried into effect will call for a dispassionate attitude on the part of the chief claimants.

The Jugo-Slav scheme which has the support of M. Vasitch is nothing if not complete. Italy is to be excluded entirely from Dalmatia and Carniola, and her claims upon Istria, Trieste, and Goritzia "are untenable as a whole." M. Vasitch, however, recognises that "here some compromise is necessary," and is of opinion that it could be easily effected "if both sides were equally animated by the sincere desire for a peaceful settlement." Unfortunately he does not suggest any basis for a compromise, as he leaves the matter with an emphatic "*Cave canem*" addressed to Italy in regard to the three districts where the compromise is to be effected. On the east the new Jugo-Slav State is to extend to the Isker river, for the reason that "Serbia must be protected from any future outburst of Bulgarian hate and vengeance." But in dealing with Italy our author uttered a very impressive warning against the argument of "strategic frontiers." Thus: "The reason of strong strategic frontiers has always been a trump card in the hands of the militarists of every State and a constant source of friction among European nations. . . . The direct results of such a policy have been fear and hatred, and their lawful heir the military burdens under which the European nations have laboured during the last sixty years. How can we expect or hope that an Italian occupation of the Serbo-Croatian provinces and the enslavement by her of a million of Southern Slavs can give different results?" According to this line of argument, it is very evident that there must be no "enslavement" of Bulgarians, Greeks, or Roumanians by the Jugo-Slavs. A potential Southern Slav State of fourteen million inhabitants has little reason to fear aggression on the part of a State of only five million inhabitants. The bogey of Bulgarian "hate and vengeance" conjured up in these pages could only materialize if the "enslavement" of Bulgarians took place. M. Vasitch would be on safer ground if he attributed to all the nations of South-Eastern Europe the sweet reasonableness he counts on finding among the Roumanians and Greeks. The claims of Serbia in respect of the Banat, he points out, are complicated by the presence of large numbers of Roumanians; but he hopes to find the Roumanians inspired "with a lofty determination for complete agreement." "No petty quarrel over a few villages in the Banat should mar the good relations between them." But just as the Italians have to give way all along the line to the Southern Slavs, so must the Roumanians. Again, Greece ought not to prevent Serbia "from completing her unity and independence by obtaining free access to Salonika." "It is in the best interest of Greece that the Allies should solve the question of Salonika, taking into account the real factors which dominate it." The Greeks "can be compensated by some other port and territories in Asia Minor." Surely the "lofty determination" which is to be met with in Roumania and Greece ought to exist to an even greater extent among the Southern Slavs and make them ready to incur many sacrifices of which M. Vasitch offers not the least hint.

"The Reconstruction of South-Eastern Europe" is not only instructive in the information which it imparts on the Balkan tangle, but it gives the reader an insight into the nature of the difficulties other than territorial which complicate the problem. On page 179 our author gives the following version of the formation of the Balkan League:—"Ferdinand approached Serbia at the moment when she was most disposed for making the greatest concessions in Macedonia in exchange for the promise of some help and co-operation against Austria-Hungary. Thus the Serbo-Bulgarian Treaty of Alliance was signed in 1912, and the Balkan League, embracing Serbia, Bulgaria, Greece, and Montenegro, was formed in the same year."

Such a version can only convey an entirely misleading idea of the genesis and purpose of the League. It is generally accepted that the idea of a Balkan League originated with or at least was set in motion by M. Venizelos, and that it was directed against Turkey. The Serbo-Bulgarian Treaty of Alliance was a part of M. Venizelos' scheme, and it is not correct to represent the Balkan League as growing out of the alliance between Serbia and Bulgaria. Clearly, when such recent happenings are liable to misinterpretation, the reading of anterior tendencies and events must also be checked, if the object in view is to gain an absolutely impartial knowledge of Balkan history. But that is the duty of the judge. Before he sums up it is the province of counsel to state his case as lucidly and as brilliantly as his powers allow. The Jugo-Slav cause has found an able exponent in M. Vasitch. His main contention, that the interests of Europe require the formation of a strong Southern Slav State, is an axiom with THE NEAR EAST, and the suggestion in this review that Serbia as well as Italy and Roumania must leave the door open for a policy of give-and-take is

(* "The Reconstruction of South-Eastern Europe." By Vladislav R. Savic, with a Preface by Sir James George Frazer, Hon. D.C.L., LL.D., Litt.D. London. Chapman and Hall, Limited. Price 17s. 6d. net.)

put forward in the confidence that, when the details of the final settlement come be arranged, the responsible statesmen of all the countries concerned will have little difficulty in reaching an equitable understanding.

BOOK NOTES.

Among Messrs. Macmillan's announcements of new books we notice "British Foreign Policy in Europe: A Rough Outline," by Professor H. E. Egerton, who is Beit Professor of Colonial History at Oxford.

Owing to military reasons, we understand, Dr. Ball's "The Geography and Geology of West Central Sinai" will not be issued to the public for the present.

Part 128 of "The Times History of the War" deals with Sir Archibald Murray's campaign in Eastern Egypt in 1916. The Darfur campaign and the operations in the Aden hinterland are also described.

BOOK RECEIVED.

With Kitchener in Cairo. By Sydney A. Moseley. (Cassell, 5s. net.)

TANGIER TO TEHERAN.

The value of the work done in Egypt by Lord Cromer has been recognized for some time by his countrymen; and though he was not always regarded with unmixed admiration by the type of man who sets the worth of words above that of deeds and would sacrifice solid gain for the gratification of his own pet theories, he was, I think, sincerely respected by even the most ardent Radicals at the last. They were forced by the logic of facts to realize that his views upon Egypt were sounder than their own, and in their hearts they must to-day feel deeply thankful that his ideas, not theirs, prevailed. But it seems to me that the obituary writers might well have made more of two features of Lord Cromer's recent activities: his work in connection with the establishment of the London School of Oriental Studies, and his labours as Chairman of the Dardanelles Commission. For the former cause he worked hard indeed; for, though he never learned Arabic during all the years he spent in Egypt, he knew—no one better—the importance to any official of being master of the language of the country in which he has to work; and it is hardly an exaggeration to say that but for his steady persistence, we might still lack such a school in our capital. As to the Dardanelles Commission, it always seemed to me that his lordship's acceptance of the chairmanship was one of the bravest and most unselfish things he did for his country. At the time he took up the duties his health was already in a very precarious condition; and the prospect of presiding over a Commission which could hardly fail to have much painful evidence to examine, cannot have been a pleasant one. But Lord Cromer was not the man to ask himself: "Will it be pleasant for me?" or "Will it make me popular?" He saw his duty clear—and did it. And therein, I believe, lay the secret of his great success. Would that we had more public men of his stamp.

The Turk—even the Young Turk—has not yet lost the sense of humour—or is it the utter lack of the sense of humour? I can never feel quite sure!—that used to characterise him in happier days. The University of Constantinople has, I observe, recommended the Kaiser as a suitable candidate for the Nobel Peace Prize! That, surely, would take a great deal of beating? It is open to anyone, of course, to argue that the outbreak of "frightfulness" may quite well eventually go far to make war unlikely in the future. But one hardly imagines that the Turks looked at the matter in that light in making their recommendation. Personally I am inclined to suspect that they must have wanted to prove that if the Kaiser could make himself supremely ridiculous, as he did in his proclamation regarding the promotion of his hopeful heir to be a General of Infantry, they could go one better in that direction. But if that be so, I am not at all sure that they have succeeded. For to me it seems that the Kaiser's performance is quite unapproachable!

The Editor of *Poultry* has, I see, been studying my disquisition upon the eggs of the Near East, and he pays me the compliment of reproducing some of my remarks for the benefit (I trust!) of his readers. But alas! he then adds:—

"Corsair gloriously maintained his reputation as an egg manipulator, even in the City of the Seven Noisome Effluvia. Surely he has not forgotten the quantities he consumed in the form of prairie oyster while he resided

in Baghdad at a house euphoniously named "Angels' Rest," as guest of a certain Englishman now fighting for his country, as an artilleryman somewhere in France?"

It looks to me as if a little bird—or a big bird; for it may have been a Buff Orpington—must have been libelling me. For, if I am not mistaken, a "prairie oyster" is a rather deadly American concoction, in which whiskey plays a leading part; and if that be so, I do assure the Editor of *Poultry* that I never consumed even one P.O. Indeed, the City of the Khalifs did not produce such luxuries in my time, I fancy; though other mixed poisons in which whiskey was an ingredient were not unknown.

In case the reference to the "Angels' Rest" may puzzle any reader, I may add that it was an eminently respectable, if happy-go-lucky, bachelor establishment. How it came by the title would take too long to tell; but it was a joyous house, and I shall always cherish happy memories of my sojourn there. My host, the "certain Englishman" referred to, was one of the very best, and I regard the days spent in his company as some of the happiest in my life. May his guns give the Huns the hammering they so richly deserve, and may he soon return to Old England! But I should like to know the name of that libellous fowl that has been defaming my fair reputation in the matter of the "Prairie Oysters." *Poultry*, it seems to me, is uncannily well informed.

My recent reference to the Praying Mantis that befriended me in my journey up the Euphrates has led a correspondent to ask whether I can confirm stories he has heard of lizards acting as fly-catchers in Baghdad and Busreh. I am afraid I cannot recall seeing anything of the kind in Baghdad, but that is not to say that the stories referred to are not perfectly true. I do remember perfectly well, however, that in Busreh I saw at least one lizard acting as fly-catcher in a house—and doing the job remarkably well. It was at the old British Residency, where I was enjoying the hospitality of our Consul; and the lizard whose feats won my admiration was a little fellow who had his hunting ground in the dining-room. My attention was drawn to him by my host, who said the performance was worth watching; and so indeed I found it. The lizard had his "lair" behind a wall-hanging of some kind—a curtain, if I remember aright—and near a very brightly lighted patch of wall, which attracted the flies. On the advice of my host, I watched this patch closely, though there was as yet no sign of the lizard. Then, suddenly, a fly settled on the wall, and instantly the lizard emerged from his ambush, stalked the fly to within a few inches, then *jumped* and secured his prey most neatly. It struck me as a remarkable performance, and though I saw it repeated many times it never lost its fascination for me. It would have been quite clever on a floor, a table, or any other horizontal plane; but on a vertical plane it seemed almost marvellous. For, as you will understand, Mr. Lizard must have made just the right allowance to counteract the force of gravity that would tend to pull him below the level of the fly. And the fact that the wall was smoothly plastered added to the cleverness of his performance.

This reminds me of another lizard incident; and though I hardly like to recall it, I will do so, because it shows what pluck these little creatures will show. It was on the edge of the desert in Egypt, and I was returning to camp, carrying a steel-shod "lining up" rod. A number of small lizards were scurrying about over the pebbly foothills, and in a thoughtless moment I made a thrust at one of them with my rod. I meant only to strike the ground near him, in order to make him jump; but, by ill fortune, I just touched the tip of his tail. In an instant the poor little fellow had turned round and snapped at the rod; and, as his bad luck would have it, he actually shut his mouth on the iron point. To my regret, I saw that he had torn his mouth so badly that there could be no hope for him, and very reluctantly I resolved to put him out of his misery rather than leave him to become the victim of some hawk or any other of his natural enemies. So I struck again. But the lizard—he was about three inches long at the outside—was not to be so easily disposed of. He snapped at the rod again and sprang at me in the most gallant way. . . . Never, I think, did I feel so contemptible as I did a minute later. I gave him honourable burial, and no hawk, I trust, secured his remains. But I still blush at the recollection of that uneven combat, and never since then have I taken "pot shots" at any lizard.

CORSAIR.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the
Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)		Moslem.	Jewish.
1917. Feb. 9 10	1917. Jan. 27 28	Friday	1335. Rebi il. 16	5677. Sebat. 17
		Saturday	17	18
11	29	Sunday	18	19
12	30	Monday	19	20
13	31	Tuesday	20	21
14	Feb. 1	Wednesday ..	21	22
15	2	Thursday	22	23

To-morrow is the birthday of Princess Eugenie, the daughter of Prince George of Greece, who was born in Paris on February 10, 1910.

Tuesday is the birthday of Princess Irene of Greece, the second daughter and fifth child of King Constantine, who was born in Athens on January 31, 1904 (O.S.).

A message received in London last Saturday reports that the Sultan of Egypt, in addition to suffering from fever, has had to undergo a slight operation. The message added that he was progressing satisfactorily.

King Ferdinand of Roumania returned to Jassy last week from a visit to the front. His Majesty has been in the Casin sector, and he congratulated the troops there on the admirable spirit they had shown for several months past in face of enemy attacks.

A Reuter's message announces that Sir Walter Townley and Lady Susan Townley arrived in Holland last Friday and proceeded to Amsterdam, where they intended to spend some days.

We are glad to learn that Mme. Také Jonescu is making very favourable progress towards complete recovery from her recent illness.

Madame Nicola Filipescu and her daughters left London for Paris last Friday.

It is officially announced that Sir Paul Harvey, K.C.M.G., C.B., has been appointed Secretary to the Air Board.

A Reuter's message from Athens, dated February 2, reports: Mr. Duckworth, the British subject who has been missing from Athens since the disturbances last December, and concerning whose safety anxiety was felt, is now at Salonika.

Our Khartoum Correspondent writes (January 17):—The usual Levee was held at the Palace to-day in honour of H.M. King George's visit to the Sudan in 1912. The day is a public holiday, and the town has been decked with flags.

Colonel Kelly, D.S.O., has arrived from El Fasher, and will proceed North after a few days.

Colonel O'Sullivan, R.A.M.C., has arrived in Khartoum on a short visit from Egypt.

The Remnants Pierrots Team went to Atbara to give a performance there. Their visit was a great success, and the residents of Atbara kept their guests very busy.

The Hon. W. Erskine, First Secretary at the Athens Legation, has been appointed Counsellor of Embassy at Rome, in succession to Mr. G. D. Grahame, transferred to Paris; and Mr. Davrell Crackenthorne has been appointed First Secretary at Athens.

ORIENTAL STUDIES.

THE SCHOOL OF ORIENTAL STUDIES,
London Institution, Finsbury Circus, E.C.2.
OPENED on 18th JANUARY, 1917. Courses will be held in the Principal Languages of the Near, Middle, and Far East and of Africa. Courses will also be given on Oriental Religions and Customs.
Intending Students are invited to apply at once to the undersigned. E. DENISON ROSS, Director.

Mr. Trowbridge, of the American Mission in Asia Minor, and Mrs. Trowbridge and Mr. Jessop, world's Y.M.C.A. secretary in Egypt, and Mrs. Jessop arrived on a visit to the Sudan last month. After staying a week at Omdurman and Khartoum they left for Doleib Hill to visit the American Mission at that station.

Lady Maxwell, the wife of Lieutenant-General Sir John Maxwell, has offered the Government one-third of her capital, free of interest, for the duration of the war. The gift, which amounts to about £35,000, is made as a contribution towards the cost of the war. In the course of her letter to the Prime Minister, Lady Maxwell says: "There is so little that we women can do; but I know that one of the chief factors of victory is money. Therefore, I am writing to offer the Government, through you, one-third of my capital, free of any interest whatever, for the duration of the war." A certificate will be given to Lady Maxwell entitling her to repayment three months after the war.

In the list of honours appearing in *The Times* of the 2nd inst. we notice that Temporary Lieutenant S. Hubert La Fontaine has been awarded the Military Cross for services rendered in East Africa. At the outbreak of the war he was Assistant District Commissioner at Taveta, a station quite near the German frontier, when he and a party of eight policemen were attacked by the Germans. Promoted since then to the rank of Captain, and appointed Intelligence Officer to one of the divisions of the Army which invaded German East Africa under General Smuts, he was present at all the operations of that campaign now drawing to an end.

A London committee of the Roumanian Red Cross Society has been started. Its address is at No. 4, Hill Street, Knightsbridge. The President is the Roumanian Minister, M. Mishu, and Lord Bessborough is the treasurer.

M. Alexander Diomede, formerly Minister of Finance in Greece, is now in London, Reuter's Agency states, on a special mission from M. Venizelos. He has already spent some time in Paris, where he repeatedly saw M. Briand and other Ministers. He will remain in London during February, and will have conferences with the Prime Minister, Mr. Balfour, Lord Hardinge, and others.

The *London Gazette* announces that the King has been pleased to sanction the appointment of M. Henri Edouard Naville an Honorary Knight of Grace of the Order of St. John of Jerusalem.

The *Gazette* last Friday announced that the King has been graciously pleased to approve of the posthumous grant of the Victoria Cross to Lieutenant Humphry Osbaldeston Brooke Firman, R.N., and Lieutenant-Commander Charles Henry Cowley, R.N.V.R., in recognition of their conspicuous gallantry in an attempt to re-provision the force besieged in Kut-el-Amarah.

The General Officer Commanding, Indian Expeditionary Force "D," reported on this attempt in the following words:—

"At 8 p.m. on April 24, 1916, with a crew from the Royal Navy under Lieutenant Firman, R.N., assisted by Lieutenant-Commander Cowley, R.N.V.R., the Julnar, carrying 270 tons of supplies, left Felahiyah in an attempt to reach Kut. Her departure was covered by all artillery and machine-gun fire that could be brought to bear, in the hope of distracting the enemy's attention. She was, however, discovered and shelled on her passage up the river. At 1 a.m. on the 25th General Townshend reported that she had not arrived, and that at midnight a burst of heavy firing had been heard at Magasis, some 8½ miles from Kut by river, which had suddenly ceased. There could be but little doubt that the enterprise had failed, and the next day the Air Service reported the Julnar in the hands of the Turks at Magasis.

"The leaders of this brave attempt, Lieutenant H. O. B. Firman, R.N., and his assistant—Lieutenant-Commander C. H. Cowley, R.N.V.R.—the latter of whom throughout the campaign in Mesopotamia performed magnificent service in command of the

Mejdieh—have been reported by the Turks to have been killed; the remainder of the gallant crew, including five wounded, are prisoners of war.

"Knowing well the chances against them, all the gallant officers and men who manned the Julnar for the occasion were volunteers. I trust that the services in this connection of Lieutenant H. O. B. Firman, R.N., and Lieutenant-Commander C. H. Cowley, R.N.V.R., his assistant, both of whom were unfortunately killed, may be recognised by the posthumous grant of some suitable honour."

Lieutenant H. O. B. Firman was the only son of Mr. Humphrey Brooke Firman, late of Gateforth Hall, Selby, Yorkshire. Born in 1886, he served in the Navy for about fourteen years, and held the Persian Gulf and Somaliland medals. Lieutenant-Commander C. H. Cowley was the son of the late Captain Cowley, formerly in the service of the Euphrates and Tigris Steam Navigation Company, and of Mrs. Cowley, of Baghdad. Following in his father's footsteps, he entered the service of the E. and T.S.N. Company, and before the war had been for some time in command of the Mejdieh.

On Monday, February 19, at an evening meeting of the Royal Geographical Society, Mr. H. Charles Woods will read a paper on "The Baghdad Railway and its Tributaries." The hour of these evening meetings of the Society, it should be noted, has been changed from 8.30 to 5.30 p.m. Mr. Woods' lecture will be illustrated by lantern slides.

Mr. H. C. Woods gave evidence before the Dardanelles Commission on Tuesday.

At a Mansion House meeting on Tuesday afternoon, the 20th, Viscount Bryce, O.M., the Bishop of London, and Miss Frances E. Newton will speak of the pitiable conditions prevailing in Syria and Palestine owing to the ravages of war and starvation. The Lord Mayor of London will preside. H.R.H. the Princess Christian is President of the Fund for Relief in Syria and Palestine. Admission to the Mansion House meeting will be free, but a few reserved seats at half-a-crown can be obtained from the honorary secretary, the Rev. E. M. Bickersteth, the Church House, Westminster.

The *Egyptian Gazette* of January 20 says: "The Committee of All Saints' Church, Ramleh, have received a letter from the Bishop saying that he has appointed the Rev. H. J. Hoare, B.A., to the chaplaincy. Mr. and Mrs. Hoare were to leave England on the 13th, and may, therefore, be expected to arrive soon in Egypt. After a visit to the Bishop in Cairo, it is hoped they will take up their residence at Ramleh about the 25th inst."

"Mr. Hoare," the *Gazette* adds, "was ordained deacon by the Bishop of London in 1889 and priest by the Bishop of Lahore in 1890. He has had some twenty five years' experience in India as missionary and civilian chaplain, and has also been tutor of St. John's Divinity College at Lahore and Principal of the C.M.S. High School at Dera Ismail Khan. On the outbreak of the war Mr. Hoare, having already decided to leave India, took up a temporary post as an Army chaplain, and has now been released by the Chaplain-General in order to take up this work in Egypt. Nothing has been decided yet as to how long he will hold the appointment, as the Bishop has not yet had the opportunity of discussing the matter with him."

The Anglo-Hellenic League announces that General Sarraïl, Commander-in-Chief of the Allied troops at Salonika, has issued an order of the day, in which he mentions an officer of the Greek Army of National Defence, Major Verikios, for distinguished service in the air. This Greek officer, who is awarded the French Croix de Guerre with palms, recently engaged a hostile aeroplane and compelled it to land, wounding the pilot and seriously damaging the machine.

Mr. and Mrs. John Ross, of Alexandria, have arrived in London from Bournemouth.

Mr. Augustus van Millingen is leaving London on Sunday on his return to Alexandria.

On March 19, at a meeting of the Royal Geographical Society, to be held in the Theatre, Burlington Gardens, at 5.30 p.m., Dr. E. W. G. Masterman will read a paper, "Palestine: its Resources and Suitability for Colonisation."

Commander John Marshall, R.N. (retired), who took part in the operations in Crete when the island sought prematurely to throw off the Turkish yoke, died last Saturday. He was the fourth son of Colonel Sir Thomas Marshall, C.B., and was forty-eight years old.

FUNERAL OF LORD CROMER.

The Dean and Chapter of Westminster offered burial of the body of Lord Cromer in the Abbey. His family, however, while appreciating the honour, felt bound to respect his wish to be buried in the same grave as the first Lady Cromer in Bournemouth Cemetery. The funeral therefore took place at Bournemouth on Saturday.

Men of the Royal Artillery, in which regiment Lord Cromer was formerly an officer, were present, and the coffin was borne from the chapel to the graveside by eight sergeants of the regiment. The funeral was simple but most impressive.

The mourners were met at the doors of the cemetery church by Canon Daldy, vicar of St. Peter's Bournemouth, who conducted the service. It began with the singing of Psalm 90 by the choir, and included the hymn "Abide with me," which was sung by Lord Cromer's own request. At the grave the "Last Post" was sounded by five trumpeters of the Royal Artillery.

The chief mourners were the Countess of Cromer, Viscount and Viscountess Errington, Lieutenant the Hon. Windham Baring, Lady Gweneth Baring, Sir Hugh Shaw-Stewart, Brigadier-General Count Gleichen, Lady Beatrice Thynne, Lieutenant Oliver Baring, the Hon. Cecil Baring, the Hon. Lady Reid, the Hon. Lady Musgrave, and Lady Nunburnholme. The Hon. Evelyn Baring was unable to be present owing to an attack of influenza.

The congregation included Field-Marshal Lord Grenfell, Lord Ruthven, Lieutenant-General Sir H. C. Sclater, and Colonel A. J. Abdy (representing the Royal Artillery), Colonel A. B. Helyar, Major R. E. F. Wemyss, Major E. J. Jervis-Smith, Sir Daniel Morris, Professor W. T. Hewett (Cornell University), Mr. Francis C. Baring, the Rev. Algernon Ward (formerly Archdeacon in Egypt), Mr. John Ross (Alexandria), Mr. Charles Redman Bey (Egypt), and Mrs. J. T. Grafton Ross.

Among those who sent wreaths were: Sir Reginald and Lady Wingate; the Residency Staff, Cairo; Sir William Garstin, the Acting Governor-General of the Sudan; Princess Saliha de Yourkevitch; the Countess of Bessborough; Madame Carton de Wiart; Miss James; Miss Dolly Gorst; Mr. Wilfred Carey; and the Committee of the Serbian Society of Great Britain.

At half-past twelve a Memorial Service was

held at Westminster Abbey. The Dean (Bishop Kyle), the Sub-Dean (Bishop Boyd-Carpenter), and the Precentor (the Rev. L. H. Nixon), officiated, and Sir Frederick Bridge was at the organ.

The King was represented by Major-General Lord Ranksborough, Lord in Waiting; Earl Howe, Lord Chamberlain to Queen Alexandra, represented her Majesty; Lieutenant-Colonel Sir Malcolm Murray was present for Field-Marshal the Duke of Connaught and the Duchess of Connaught, and Colonel V. Chater attended on behalf of Princess Louise, Duchess of Argyll.

Among others present were: Mr. Balfour, Lord Hardinge of Penshurst, the Marquess of Lansdowne, the Earl of Bessborough, Lord Sydenham, the Serbian Minister (who was accompanied by the Secretary of Legation), M. Gennadius, the Earl and Countess of Desart, Princess de Yourkevitch, Viscountess Duncannon, Lord and Lady d'Abernon, Lord and Lady Oranmore, Lord Stamfordham, Earl and Countess Curzon, the Countess of Minto, Admiral Lord Beresford, Lord Sanderson, Lord and Lady St. Oswald, Lord George Hamilton, Lord Edmund Talbot, M.P., Earl Spencer, Lord Weardale, Field-Marshal Lord Nicholson, the Earl of Camperdown, Lady Edward Grosvenor, Sir Ronald Graham, Sir Charles and Lady Waldstein, Lord Francis Scott, General Sir Arthur Paget, Sir Henry Craik, Sir Charles Lyall, Sir Montagu Turner, Sir James Reid, Sir William Garstin, Sir Henry and Lady McMahon, Admiral Sir Edmund Poë, General Sir Albert Williams, General the Hon. Sir Reginald and Lady Talbot, Sir Arthur Webb (Egyptian and Sudan Governments), Rear-Admiral R. Massie and Lady Blomfield, Sir Mark and Lady Sykes, the Hon. Sir Derek and Lady Keppel, Sir John Hewett, Lady Victoria Dawnay, Sir Malcolm McIlwraith, Sir John Aird, Sir Henry and Lady Bax-Ironside, Major-General Granville Egerton, Major H. G. Lyons (representing the Royal Society), Mr. O. G. Brooke (late Director Delta Barrage), Miss Chenevix Trench, Brigadier-General Everard Baring, Mr. J. T. Baring, Mrs. Pandeli Ralli, Miss James, Mrs. Coles, Mr. J. St. Loe Strachey, Mr. H. R. Beasley (Secretary Appeal Committee of the School of Oriental Studies), Mr. A. E. Robinson (Egyptian Educational Commission), Mrs. Manningham-Buller, Mr. P. J. Hartog (Hon. Secretary, School of Oriental Studies), Mr. J. Annan Bryce, M.P., Mr. E. Denison Ross (Director of the School of Oriental Studies), Mr. R. W. Seton-Watson, Dr. John Pollen, the Hon. Charles Lawrence, Mrs. Moberly Bell, Miss Violet Cust, Mr. W. Wilson Bowness, and Mr. James Currie. Sir Walter Miéville, late President of the Egyptian Quarantine Council, was prevented from attending.

Messages of condolence upon the death of the Earl of Cromer were received from the King and Queen, Queen Alexandra, the Duke and Duchess of Connaught, Princess Victoria, the Duchess of Argyll (Princess Louise), the Sultan of Egypt, the Lord Mayor of London (on behalf of the City), the High Commissioner of Egypt (on behalf of the community there), the Acting Governor-General of the Sudan, the Diplomatic Body in Egypt, the Commissioners of Public Debt, and various public bodies and institutions at home and abroad.

Reuter's Cairo Correspondent telegraphs that a Memorial Service for Lord Cromer was held on Saturday afternoon in All Saints' Church, the Bishop of Jerusalem officiating. The High Commissioner, Zulficar Pasha, on behalf of the Sultan, and various Ministers, Diplomats, and a representative congregation were present. The "Last Post" was sounded in the courtyard of the church, which Lord Cromer had so often traversed, and was particularly impressive.

Telegraphing on January 30, Reuter's Cairo correspondent says:—"The death of Lord Cromer has made a profound impression in Egypt. The papers publish eulogistic articles, and trace the history of the 'greatest figure in recent Egyptian history.' The success of his work is reflected in the tranquillity and ever-growing prosperity of Egypt. Flags are at half-mast throughout the country."

DOMESTIC ANNOUNCEMENTS.

BIRTH.

BAGGE.—On January 29, 1917, at the British Consulate-General, Odessa, the wife of John Picton Bagge, of a son.

DEATHS.

CAILLARD.—On February 1, at Eastbourne, Edith Elizabeth, wife of the late Alfred Caillard, C.M.G., a Pasha in the Egyptian Service.

MORTON.—On the 1st inst., Bertram Morton (Egyptian Army), youngest son of the late Robert Rutherford Morton, Star Stile, Halstead, Essex.

SPENCER.—On January 13, at Nicosia, Cyprus, Bessie Ellen, widow of Josiah Spencer, late Chaplain and Archdeacon of Cyprus, and daughter of the late T. Perry, Esq., of Bendameer, New South Wales, aged 72.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL, Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURS' CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms.

Excursions to Mount Troödos.

For Tickets and further Particulars, apply to

NAJEM HOURS & SONS, LIMASSOL, CYPRUS.

Proprietors of "The Army and Navy Stores." Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.

Head Offices and Central Stores: LIMASSOL. All arrangements for Transport, &c., are made by the above Firm.

THE SUDAN TIMES.

PUBLISHED TWICE A WEEK IN ENGLISH AND ARABIC.

For Advertisement Rates, etc., address—

THE MANAGING EDITOR, THE SUDAN TIMES, KHARTOUM.

RELIEF OF DISTRESS

IN PALESTINE AND SYRIA.

Bishop MacInnes will be glad to receive CONTRIBUTIONS made payable to the Rev. E. M. Bickersteth at the Church House, Westminster, S.W.

THE NEAR EAST.

FRIDAY, FEBRUARY 9, 1917.

THE PENULTIMATE PHASE AND THE NEAR EAST.

It is no encroachment upon the realm of prophecy to discover in the events of the last few days the threshold of a new and important stage in the war. In regarding this as the penultimate phase we need not attempt to determine its length, nor do we rule out the possibility of surprises in regard to its details. Least of all would it be logical to hold that, because it is felt that things are at last shaping towards a destined end, circumstances are favourable enough to justify any relaxation of the national effort that has only just now begun to take effect. Rather the importance of the new phase lies in the novel opportunities opened up for the Allies. A year all but a few days has passed since the Germans launched their terrific attack on Verdun. While it was still in progress the Austrians made a successful thrust into Italy, and the Turks drove back the Russians in Armenia, captured Kut with its British garrison, and lightheartedly essayed an advance upon Egypt. Looking back over the interval we find grounds for believing that these operations marked the zenith of the enemy's power. The advance against Verdun was held by the French, and when the Anglo-French forces attacked on the Somme in July it was quickly seen that the German powers of resistance had been sapped in order to meet the exactions of the great offensive to the south. Austria-Hungary's successes in the Trentino were short-lived. A sudden advance on the part of the Russians in Galicia proved the rashness of the enterprise against the Italians, for the ground that had been gained was soon lost, and Russia was to the good with a substantial capture of territory and some 170,000 prisoners. In Asia Minor and Mesopotamia the Turks were unable to reap any considerable advantage from the numerical superiority they could temporarily claim. Part of Persia where no resistance was encountered was overrun; but little impression was made upon the Russian position in Armenia, and in Mesopotamia the local troops were seemingly as glad as the British to accept the enforced inactivity imposed by weather conditions and sickness. From the earlier months of 1916 until now the enemy, with a single exception, has allowed the strategical offensive to remain in the Allies' hands. The latter's gains on the Somme, before Verdun, and on the Isonzo have been consolidated and gradually extended; the Bulgarians have been on the defensive in Macedonia, and the Turks have been ejected from the Sinai Peninsula, and are relying solely on the strength of their defences to delay the British advance in Mesopotamia. The only offensive that the enemy has attempted during the period in question has been in Roumania. Here, his knowledge of the country and of the military equipment of the Roumanian army held out hopes of a striking victory at a small cost. The available forces of the Central Alliance were rapidly concentrated, and the Roumanians were overwhelmed up to a point. That point, there is reason to believe, fell far short of the enemy's expectations, and again he is everywhere on the defensive.

It is at this stage of the military situation that Germany has proclaimed with a flourish of trumpets a fresh development in her naval warfare. Henceforth there are to be no restrictions imposed on her submarine

campaign. Within a wide area round Great Britain all ships, presumably, are to be sunk at sight; neutrals, if they wish to escape this fate, must obey Germany's instructions in regard to the number of ships plying to and from the British Isles and in regard to the routes followed. Those who have examined at all closely the toll that German submarines have been taking of international shipping during the last few weeks will be inclined to think that this declaration on the part of the German Government will in reality introduce no new feature into naval warfare. Even the simultaneous announcement that hospital ships sailing between Great Britain and France are to be treated in future as *mem-of-war* merely promises repetitions of the outrages previously perpetrated on the *Portugal*, the *Britannic*, and the *Braemar Castle*. Why, then, should Germany go out of her way to call attention to a practice which has achieved, from her point of view, such satisfactory results already, without emphasising her hostility to neutrals? Her end, it would be thought, could have been gained by continuing to sink as many ships as she could, and leaving neutral States to find out that any escapes their shipping had were due to the limitations of submarine warfare and not to her solicitude for their welfare. We shall probably not be far wrong in supposing that the German Government intended its declaration to exercise a salutary influence upon neutrals, not, perhaps, so much upon the United States as upon the two States, Holland and Denmark, which together might yet materially affect the course of the war. The consciousness that the inability of the Central armies to make any real headway against the Allies can no longer be disguised has prompted those whose belief, in the moral effect of frightfulness has not yet been shaken to tap a fresh source of intimidation for possible waverers among the neutral nations. At the same time there is no doubt the conviction, or at least the faint hope, that a really successful submarine campaign will lead either to the defeat of the Allies or to a condition of military stalemate.

For the moment we are concerned with the confirmation that the German threat has given of the fact that the Central Powers have definitely entered a phase in which their military resources are no longer equal to the increasing strain imposed upon them. The attitude taken up by the United States in breaking off relations with Germany, on receipt of the Note dictating the terms on which American ships might escape being torpedoed at sight, comes as a dramatic development. Whether a declaration of hostilities follows or not, President Wilson is in a position to influence the course of the war more materially than by his luckless attempts to devise peace terms. Germany has made a false move which cannot be disguised from her allies, Bulgaria and Turkey. It is probably the first mistake on her part which it will not be possible to explain away or represent as a successful manoeuvre in Sofia and Constantinople. From the fact that the United States Government hopes to avoid a rupture with Austria-Hungary we may infer that there will be no question of withdrawing the United States' representatives from Turkey and Bulgaria. In both these countries the United States occupy a special position, and it may be taken for granted that the Ottoman and Bulgarian Governments have found no small measure of justification for their attitude in the strict neutrality of the United States, entailing, as it did, the maintenance of friendly relations with Germany. Those relations have now been severed, and we trust that President Wilson will instruct his representatives to make it very clear to the Governments of Sofia and Constantinople why the step has been taken. If he is still anxious to avoid unnecessary bloodshed and to hasten the return of peace, he can also see to it that those Governments, or better still the Bulgarian and Turkish peoples, are made to understand that they have nothing to gain and much to lose by further sacrifices on Germany's behalf. This point, it is to be hoped, will not be lost sight of by the Allied Powers. Already, to some extent, the scales have fallen from Bulgarian and Turkish eyes. The time would seem to have come to let these peoples learn the path along which their real salvation lies.

THE BLACK SEA AND THE CAUCASUS.

REMINISCENCES OF A JOURNEY.

By Mary A. Poynter.

It was in the last year of the Nineteenth Century, or at the beginning of this Twentieth Century, that a delightful article, with illustrations, appeared in *Scribner's Magazine*, describing a journey over the Caucasus mountains. It was written by Sir Henry Norman, as one remembers, and so attractively and invitingly was it portrayed that my father and mother immediately set about making plans for a similar journey by the same route as soon as opportunity should offer. Opportunity did offer in the month of May, 1901. The following account is drawn wholly from notes that were jotted down more or less hastily on our journey; notes which hold true, I think, to-day; for Nature and Man have made few changes in the sixteen years since gone by in that part of the world. It is still "off the beaten track" of travel, and suffers some inconveniences, as well as many advantages, on this account.

We sailed from Constantinople through the Bosphorus on May 11, a season of the year that finds those shores clad in their most attractive dress. With the deep crimson-pink of the Judas trees and the mauve of the blossoms of the wistaria, that seems to roll up the hillsides in fragrant waves, there is a riot of colour on all sides. The steamers all sail slowly up the strait, with something of an air of majesty quite in keeping with the environment and giving plenty of time as one passes to recognise each town, and sometimes to be saluted by friends therein with that flag of all countries—the white pocket-handkerchief.

Between the towers of Roumeli Hissar, on the European side, and the point where the Sweet Waters of Asia join the Bosphorus just opposite, the strait is so narrow that a voice might easily be heard speaking from shore to shore. Nightingales even can be heard answering each other across the swift tide on still, moonlit nights. Darius came with his army across here on his bridge of boats, after camping in the valley of the Sweet Waters long enough to get acquainted with all the surrounding region and with all the ins and outs of the strait. And it is a strait consisting mostly of turns, of "ins and outs," if one wishes to put it that way. Looking down upon it from the hills above, one can see that the path for the waters rushing down from the Black Sea to the Sea of Marmora was opened out hurriedly by some convulsion of Nature in the long ago, and that if the hills were to be pressed together again the points on the one side would fit exactly into corresponding indentations on the shore opposite. Anyone who has had even a temporary home in that favoured region can but hope that that early "bridge of boats" will be the only one to span those blue waters. It would be almost a sacrilege—at any rate an unjustifiable intrusion on Nature's rights—were a bridge, no matter how light and graceful of design, to unite those shores for utilitarian purposes.

Our boat did not increase its speed until we had passed the Symplegades (which we skirted discreetly, remembering that legend has it that these rocks once guarded the entrance to forbidden waters), and had rounded the rocky and rather austere entrance to the Black Sea. High on a rock at this entrance, and on the Asian shore, in the old days, stood a temple to Jupiter, the "Distributor of Winds," which may account for some of the eccentric as well as forcible varieties that blow down the path of the strait from this direction in winter. Just because the ancients had a great dread of the Black Sea and its capacity for violent wave upheavals, I suppose, they named it the Euxine, "friendly to strangers," sea; possibly also to placate Neptune and to win his brusque favour.

One knows the Black Sea can be smooth; it has been so often when one has looked down upon it while in the company of friends picnicking on Giant's Mountain, which commands such a wide view of its surface. But it certainly was not smooth that day in May, that promised so fair when we committed ourselves to its uncertainties. During the five days we were on it we stopped five times at various towns on the southern shores, and thus were diverted from tossings and rollings by the interesting sights that awaited us on land.

The history-making process has been going on for a long time in this part of the world, and usually there was a ruin or ruins to each town, as well as a green mountain background. One of our early stopping points was at Ineboli, which is situated, as I remember, on a bold headland and in the midst of the rather wild mountain scenery which one associates with all that region.

Later came Samsun, a low-lying town that we reached by taking small boats from the steamer, which had to lie well out from the shore. On landing here we had some bother

with the Customs officials, and this occupied so much time that we saw little of the town, but we consoled ourselves by thinking that it was not a very interesting place after all. In the old Kingdom of Pontus times these towns bore other names and had an importance in the then-known world that one does not attach to them now. Still, Samsun is a fairly large town, has a flourishing tobacco industry, and is of considerable moment on account of its being the port of disembarkation for passengers (no tourist travel here) who are bound for Marsovan, Sivas, and other large towns far in the interior. Caravans of camels still come down to the sea bearing the rich produce of the upland country. But people tell us such slow commerce is not very remunerative—that camels "eat their weight" in a surprisingly short space of time: in other words, their appetites absorb the profit on long distance journeys, if the load carried be not a particularly choice and valuable one. Journeys by carriage are rather laborious undertakings, as the roads in this part of the world are very uneven and "jolty" at the best of seasons, and are "snowed under" for many months of the year. A railway, long projected, will some day bring the interior within easy access of the coast, and then, like Othello's, the picturesque camel's occupation will be gone.

To travellers, Trebizond is naturally the most interesting town of all those situated on the southern shore of the Black Sea. It claims much attention historically, associated as it was with Xenophon and the Ten Thousand in retreat, with King Mithridates, and with the later Byzantine rulers, and associated as it is in recent history with its capture from the Turks by the Russians in last winter's campaign. Trebizond is the sea port of Erzeroum, though the latter fortress city is situated many marches back among the mountains, and one who follows the strategic movements of this great war can understand why the Russians resolutely followed up their conquest of Erzeroum by the taking of Trebizond. It is a city that is a valuable asset to the Allies, and one that is worth holding on account of its roads, which furnish almost the only direct connection from the sea with cities like Erzeroum that have figured so largely of late in the Russian Caucasus campaign.

But apart from the glamour of its ancient history and its renown in the present war, Trebizond can lay claim to much picturesque charm and beauty of situation. It stands up and out boldly on a bluff that rises almost abruptly from the sea. It has fine overgrown walls and ruins, some of which date from its old pre-Turkish prosperous days—ruins to be found both in the town itself and in its immediate neighbourhood. So far as a walk and short drive about the place could show us, Trebizond has few modern buildings or conveniences; its very mosques and minarets—highly decorative features of this as well as of many another Eastern town—look mellow and time-worn, and as if they were marking the end of a régime and were ready to become ruins in their turn. As in olden times, the caravans come across the mountains from Persia, bearing frankincense and myrrh, or their more modern equivalents—rich carpets and embroideries—to be forwarded by boat from Trebizond to the bazaars of Constantinople for wider inspection and for the delectation of the greater world beyond. If we had had plenty of time at our command, Trebizond would have been a place pleasant to linger in, a place in which to study old peoples, or their representatives, and for the study of old customs that are so quickly supplanted by new ones when the steps of what we call progress are heard.

Passing on from Trebizond, there comes a little town called Rizeh, as I remember, hidden away on the shores of the very south-easternmost corner of the Black Sea (almost at the point where Russia and Turkey then met) that is guarded by high mountains in such a way that a really chill wind is never allowed to blow there, and where the climate is so mild that the palm tree flourishes and orange trees yield a fruit not second in flavour even to that of the orange trees of Jaffa.

Jason came through the Black Sea in search of the Golden Fleece; and as he found that shining commodity among the mountains of the Caucasus I fancy he, too, must have landed at Batum, although then there was no railway to take him on to Tiflis. Batum is at the eastern extremity of the Black Sea, and has changed national proprietors well within fifty years. On landing, our passports and luggage were examined with interest by Russian officials, and then we were permitted to go to the railway station and take the Transcaucasian train that runs daily between the Black Sea and the Caspian. It was on the morning of May 16 that I looked for the Russian word for "railway station," and found it, but could not pronounce it! We got to the railway station, however, and secured our tickets and seats in the train without difficulty. The road after leaving Batum passes at first through a level plain that is occupied with cultivated fields and jungles of luxuriant green. The yellow azalea sent whole breezes of perfume through the carriages that quite offset, when it came, the odour of petroleum with which product our engine was provided as a motive power. After two hours we began to get distant glimpses of white

mountains, and at each station there were interesting people to see, who did not conform to the fashions of the twentieth century.

It was evening when we reached Tiflis, and it was morning before we were able to receive "first impressions." Tiflis is situated on the southern slopes of the higher Caucasus, with the lesser Caucasus on the other side of the valley to keep the temperature at a warm level. But for these lesser Caucasus, if one were to put spectacles on his mind's eye, he could see Mount Ararat, which is less than a hundred miles to the south.

It is Russia there now; but it has been Persia, Georgia, Circassia, and it is still a good deal of all these countries. There is enough of Russia to make one part of the town quite European and Western, with its broad streets, electric lights, and tramcars. But the Oriental part is still Oriental, and descendants of all the lost tribes and those who never went abroad are still wearing their national dress and speaking their ancestral tongue. In one feature of adornment all the Transcaucasian men are alike; each carries silver-wrought weapons in such numbers that he might almost stand out against a whole Western regiment! Picturesque headgear seems to be a speciality also in this region. It varies from the huge fur caps of the Persian and Georgian to the soft, silken folds of the Turk, who here lays aside his fez. The Russians wear caps—caps of all colours and conditions.

We knew we were out of the usual routes of travel, for nobody spoke English, and the French tongue fared little better. But here was a city of some hundred thousand people, with a fine Caucasian museum, handsome parks, a botanical garden, bazaars that for riches of the East rival those of Damascus, and here were mountains, the highest in Europe, which travellers say are next to the Himalayas in grandeur and snowy solitudes.

It was the southern side of the mountains, however, that was in the old days, and still is, the most attractive; though in these days the country to the north stands more for progress and civilisation.

(To be continued.)

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS

The War in the Near East.

Feb. 7.

EARL CURZON expressed his sense of the distinguished services rendered by Sir Archibald Murray in Egypt and General Maude in Mesopotamia. He then went on to say:—With regard to the present position in Mesopotamia there is in every respect a vast improvement in that part of the war. There can be no doubt that earlier in the operations there were miscalculations, mismanagement, and mistakes, some of which are the subject of an inquiry that is still proceeding. Many of those mistakes were due to lack of facilities for handling the forces and transporting them up the river to the front. They were serious and lamentable. But all this is now changed, and every arrangement is now most excellent. In January the tonnage that went up the river to the front was ten times the amount of that sent in July, 1916. The result of the improved arrangements has been a wonderful recovery in the spirit and moral of our forces, as is shown by a large number of letters I have recently received from officers at the front. During the last ten days the British and Indian troops have driven back the enemy from the one bank of the river and both banks of the tributary, and have not only practically cleared the enemy out of those positions, but are now in a situation very seriously to threaten their front. Although these troops are sometimes regarded only as a secondary force, they are playing a large and vital part in the war. They are killing a large number of the enemy, they are holding up a very considerable portion of the Turkish Army, and thereby are relieving both Russia and ourselves in the Caucasus and Persia. Then I turn to Salonika, where we have one of the most composite forces that can be imagined. There are together British, French, Italian, Russian, Serbian, and Greek troops, the latter being the followers of Venizelos. They have done much hard work and have engaged in a good deal of useful fighting, and not the least of their achievements has been the wonderful dash and gallantry of the Serbian Army, which has recovered a not unimportant corner of their native land. In Egypt also we have attained considerable success. Our forces there have not only defeated on two occasions Turkish attacks, but have cleared the enemy out of the frontiers, and have now assumed the offensive.

HOUSE OF COMMONS.

The Military Situation.

Feb. 7.

Mr. BONAR LAW, in referring to the military operations, said: Roumania is not a subject of which any of the Allies can think without distress. We all recognize the terrible disaster which has fallen on her—a disaster which this country and our other Allies would have done everything to prevent. But since the House met the position has not grown worse. Thanks to the fighting qualities of the soldiers there, Roumanians and Russians, although a large part of the country has been overrun,

a large portion of the Roumanian Army is still in being and ready to continue the fight. By their efforts the advance of the Germans has been stopped on the Sereth, and we have reason to hope, at least, that they will not be able to gain further successes in that field. The over-running of Roumania was a terrible moral and political disaster, but it is not a military success—at least so I have reason to believe—for our German enemies. They have not gained the objects at which they aimed. They have endured very heavy losses, and for that reason are less able than they would otherwise have been to bear the strain which will be put upon them on other fronts as the season advances. There is every indication that, thanks, I am glad to say, largely to the action of British officers, a great part of the corn which the Germans depended on getting from Roumania has been destroyed, and we have reason to believe that the oil wells have been scientifically and successfully closed, so that they have lost the advantage which they expected to get in that direction. If we turn to the British Forces, the position is, I think, not discouraging. About the Force in Salonika I shall say nothing, for there is nothing to say since the House met. Owing to the climate and to the severity of the season, which I am told has been unusual even for that part of the world, no operations have been possible, except raids. The Serbian troops are still prepared, though they have been despoiled of their country, to take part in the fighting when the time comes. In that theatre there is at all events this much to be said, that up till now everything points to our ability to defend the position in which we are placed.

If we look at the other theatres of war I think there is a more pleasant picture. Take first the position in Egypt. Towards the end of December an expedition, carefully planned and thought out long before, was made against El Arish. That place was taken. Two days afterwards our mounted troops moved forward and took Magdhaba and destroyed a force there of about 3,000 men, taking 1,350 prisoners. A fortnight later Rafa was taken, and a force of 3,000 men was destroyed there, with more than 1,600 prisoners. I am glad to say that in those two operations our total casualties were only 632 men. The result is that we have cleared the enemy out of the Sinai Peninsula, and the House will agree that both the General Officer Commanding in Egypt and those who serve under him deserve the highest praise for the skill and success with which those operations have been carried through. The next field to which I would refer is Mesopotamia. The expedition began with a great success, which was eagerly welcomed by the House and the country, for we were not getting many successes. It was followed by what was really a great disaster. But I am glad to be able to assure the House that the position has been completely retrieved, and that the picture which is presented there is one on which from every point of view we have reason to congratulate ourselves. Our troops have got complete possession of the whole of the right bank of the Tigris, and this has been done in spite of the fact that large reinforcements have come to help our enemies in that theatre. The House will understand that that in itself is a great military advantage, for it weakens the force which will be opposed to our Russian Allies when the time for movement in that direction comes. During the last few weeks extensive operations have taken place there. General Maude has told us that he estimates that, apart from other losses, up till February 3 the enemy had 2,630 killed and our losses were very slight. There is another side to this picture, which is equally pleasing. It shows that if mistakes are made, we, as a nation, know how to repair them. That has been done here. There are now no complaints about supplies of any kind, and some indication of what has been done during the last six months will be found in the fact that the traffic up the Tigris during January was almost ten times as great as it was during July. The success which has attended that expedition, the knowledge that it was well cared for, has had the most splendid effect upon our troops, who are showing there, as everywhere, a spirit of which, as a nation, wherever our soldiers are, we have reason to be proud. Of them General Maude, who himself deserves congratulations for the work he has done, uses these words: "The stubborn determination and fighting spirit of the troops and the complete co-operation of all arms have been superb."

At a meeting of the Council of the Royal Colonial Institute, Sir Charles Lucas in the chair, a resolution was passed placing on record the loss which the British Empire had sustained by the death of the Earl of Cromer.

According to a Berlin telegram from Main Headquarters, the Kaiser, with a large suite, on Saturday visited the King of Bulgaria at Poestyen, in Hungary, where the King is under medical treatment, says a Reuter's message from Amsterdam. A private conversation lasting several hours took place. The Kaiser returned to Headquarters late in the evening.

M. Alexander Diomede is now in London on a special mission from M. Venizelos, says Reuter's Agency. He states that his object is to explain on behalf of M. Venizelos to the British Government and people some points in the Venizelist programme that are not fully understood here. He will also set forth in detail the plans of M. Venizelos for the future of Greece and the Balkans generally, particularly emphasising what is the programme of the Provisional Government in reference to the present war and to what extent politically, and especially from a military point of view, it may assist the Allies.

Le Matin learns that Djavid Bey, the only Ottoman Minister who, at the time of the declaration of war, refused to sign the Imperial Iradé proclaiming the opening of hostilities, has arrived at Geneva. Noury Bey, who is still a prominent Turkish politician, is also displaying great activity in Switzerland.

THE PRESS ON THE NEAR EAST.

Lord Cromer in Egypt.

Last Saturday *The Times* contained a fine tribute to Lord Cromer, by "A Friend"—"one who knew him for years, and was associated with him in carrying out many of the objects to which, after his return to England, he devoted the strenuous evening of his days."

The writer tells us that he

saw Lord Cromer in Egypt in the days both of Tewfik and Abbas II., and can recall the troubled period when his relations with both rulers, and especially the latter, were highly strained, when some of his Consular colleagues were scarcely concealed diplomatic enemies, while his own hands were tied by the almost inconceivable entanglements of the international system that existed in Cairo. In the midst of all these difficulties, inexpressibly thwarting both to personal temper and to public accomplishment, Lord Cromer pursued the even tenor of his way, serene, never openly complaining (however secretly chafing), a master of the necessary forms, receding at one point in order to advance at another, dealing with each situation with the surest intuition, never baffled or despondent, his eye steadily fixed upon the distant but clearly seen goal. The gifts that ensured his triumph were an exceptional power of self-control, wide knowledge of men, and a mental equipoise that enabled him to recover in a moment from shocks or reverses that would have daunted an inferior man.

A little later we read:—

His book on his Egyptian administration was remarkable, not merely as the history of an achievement rarely, if ever, equalled in the annals of British diplomacy, but as a monument of self-revelation, the cool analysis by a powerful and dispassionate intellect of the motives that had influenced his own action. There can be no doubt that he was profoundly out of sympathy with a career so emotional and wayward as that of General Gordon, and the difficulties that he had in dealing with that heroic but intractable figure are generously minimized rather than accentuated in the book. At each stage you see the trained diplomat coping with the impossible subordinate, but you also see the large-minded statesman struggling to make allowance for the impulses of a noble and sorely-tried soul.

This is as well put as it is true. It is interesting to be told that "of all the British Ministers whom he served, the intellect which Lord Cromer rated most highly, and which was most in tune with his own, was that of the late Lord Salisbury. In his later life he was perpetually quoting phrases that had occurred in the conversations or writings of that statesman; and the half cynical but profound philosophy with which Lord Salisbury would lay down rules of conduct in public life touched a quick and responsive chord in the mind of a follower in many respects so like his own." As to the position he held in Egypt in the last ten years of his work there, the writer describes it as "an astonishing and unique achievement."

He was nominally only *primus inter pares*, and he held no higher rank than that of British Agent. He had to be on pleasant terms with European colleagues, some of whom spent their entire time in obstructing him; with a Sovereign who visibly chafed under external control, and with native Ministers who often combined external subservience with the sleepless subtlety of the East. He moved amid them all, courteous, suave, unwearied, inflexible, the dominant figure of the scene. One of his main elements of strength lay in the fact that he knew how both to forgive and to forget. He was a man of strong likes and dislikes; but he never cherished an enduring resentment, and could work or serve without difficulty with an old antagonist.

"The Real Ruler of Egypt."

The *Nation* (February 3) also pays ungrudging tribute to Lord Cromer's work, in an article entitled "The Empire-BUILDER." We quote a typical passage:—

Lord Cromer had to deal in the early years with Governments of both parties which did not wish to make an occupation of Egypt perpetual, and with Liberal opinion all the time, which hesitated first over the occupation itself, and then over his omission to create any real beginnings of self-government. He won his battle by his own firmness of purpose, by his adroitness in handling men who were nominally his superiors, by the literary skill of his annual reports, and his power of creating a real popular interest in his problem. That he was the autocrat in Egypt was no miracle: he had the British Army behind him. That he became the real ruler of Egypt was a triumph of personality, rather because he made a legend which no Cabinet in London dare disturb. His ascendancy, in short, was won over his own countrymen. Very little of his power over the Egyptians was due to his personal qualities. He did not wield a human magnetism over them, as Lord Kitchener certainly did. He never tried to govern by private or public persuasion. He scarcely troubled to seek contact with the native mind. Though he was a good linguist, and learned Modern Greek in his first

official position in the Ionian Isles, it is significant that he had never tried to learn Arabic. The East did not allure him, as it allured all our greatest administrators, and the tone of his "Modern Egypt," especially towards Islam, is curiously external and even hostile. His immense success was not a psychological triumph. It was that of a very competent but rather hard intelligence, which set up a framework of an orderly Government as an engineer erects his plant.

The writer concludes his article by declaring that Lord Cromer "stands out the ablest, the most typical, the most famous figure in an age of capitalistic Imperialism whose final evolution none of us can read."

Regarding Kut.

Discussing the operations around Kut, the military correspondent of the *Glasgow Herald* (February 1) writes:—

Taken all round, the progress made at Kut under General Maude seems to be all that in the circumstances could be expected; but there is still some very hard work to be done, and the ground in many places is in a very boggy state. Time is slipping away, and the Turks, under German guidance, are fighting what is virtually a series of delaying actions with very considerable skill. Meanwhile it is increasingly galling to think that the place was formerly in our hands, and was allowed to slide into those of the enemy through a series of ghastly mistakes, the responsibility for which still remains to be fixed. It is hoped, no doubt, that time and the recapture of Kut will assuage the bitterness of some of the memories connected with the earlier phases of the Mesopotamian campaign. But a more practical and pertinent, if somewhat painful, suggestion is that the appreciable casualties which are now being incurred in the attempt to recover this lost strategical position might never have been necessary but for errors for which even now we do not know officially whom we ought to blame.

Armenia and its Future.

In connection with Armenian Sunday (February 4) the *Westminster Gazette* last Saturday published an article written by P. W. Wilson, and entitled "The Resurrection of Armenia." The article opens with the statement that "on this Armenian Sunday . . . there is heroism to be considered, as well as horror."

Merely to contemplate the unmentionable outrages and bestial tortures by which about 700,000 men, women, and children have been done to death is not very helpful. It leaves the impression that the worse has finally crushed the better and that there is no help for it. But the real truth is that, in Armenia, good has triumphed. Nowhere on God's earth has the victory been more of a miracle. It is not money that has done it, or intellect, as such, or trade, or armies and navies, but faith—a faith unarmed, often uninstructed (though not always), and yet, like the burning bush in the mountains, unconsumed. While many of us are drifting from our worship into indifference, these ancient Catholics are dying for and living by what we neglect.

As to the future of the Armenians, we read:—

Although there only remains a remnant of the Armenians in the six Turkish vilayets now occupied in part by Russia, their power of recuperation is so extraordinary that no one doubts their ability, under decent government, to resume their historic status as the leaders of civilisation around the Caucasus. One hopes that they will be satisfied with the generous autonomy granted to their Church and schools by the Russians—say, at Tiflis—and will avoid a nationalism which cannot be sustained amid populations so turbulent, divided, and fanatical. The Armenian Empire must be of the mind and the soul—an Empire within, not an Empire of politics.

Whether such an "Empire within" would satisfy the aspirations of the Armenians it would be hard to say; and, indeed, if the principle of nationalities is to be given full play, it is difficult to see why, and how, the formation of a quite independent Armenia should be denied. That, however, is a question for the statesmen of the Allied nations. Mr. Wilson pays a well-merited compliment to British and American administrators, whose personal influence, he says, is often extraordinary.

Although they exercise no authority on behalf of any Government, they are trusted implicitly, and their advice is as law. In the distribution of cattle, the provision of agricultural implements, the repatriation of families in new areas, and the removal of families from danger zones, the English-speaking missionaries and nurses—men and women—have done wonders by their disinterested and sympathetic wisdom. Many thousands of children are supported by these agencies, and not only supported but

educated, so becoming a nucleus for the nation of the future, bred up in the best western ideals.

What Armenia needs to-day, we are told, is "not proselytism but citizenship."

Equality of law, honesty of taxation, and suppression of brigandage would at once, as in Egypt, add a rich province to the world. Under Russian rule Tiflis, with its theatres and newspapers, has become a thriving and prosperous town. So will it be, given the same conditions, with Van, Trebizond, and Erzeroum.

Hopes of the Zionists.

The *Menorah Journal* (New York) for December contains the concluding portion of a paper entitled "The Hebraic Renaissance in Palestine," by Max Roseman, who here deals with "Zionism." The writer describes the difference between Jewish nationalism and Zionism as "the difference between a theory having a purely dialectical foundation, and a theory dominated by the same emotion that had caused the Renaissance—affection for Palestine. The Jewish nationalist emphasizes the necessity for a Jewish home anywhere; the Zionist emphasizes the necessity for the Jewish home in Palestine." He takes a hopeful view of the future of the Hebraic Renaissance, and his essay is well worth reading. We have room for only a few quotations. The first deals with rural life.

It is, of course, in the rural districts that the Renaissance stands forth in all its excellence. There Jews are making Palestine once more the land of milk and honey. A feature of Jewish, and especially of Zionist, endeavour is the reclamation and hygienic work being done by reforestation. To reclaim the barren districts, a special budget has been appropriated by the Jewish National Fund to be used in planting olive trees. These grow readily in sterile soil, yield fruit quickly, and give good pecuniary returns. The 30,000 trees already planted have not only refertilized large tracts of land but have provided immigrants with occupations and livelihoods. To stamp out malarial epidemics, some 400,000 eucalyptus trees have been planted. So peculiarly is this a Jewish undertaking that the eucalyptus tree has become known in Arabic terms as the "Jew's tree." In addition to reclamation service, Jewish effort is adding to the rural development by the establishment of agricultural schools and training-farms, while the Jewish Agricultural Experiment Station at Haifa has already become famous through the discovery of wild wheat by its director, Mr. Aaron Aaronsohn. His findings have been considered of sufficient importance to be published by the United States Department of Agriculture.

Aided by such agencies, rural life in Palestine before the war had anything but the weak, sickly, philanthropic character of twenty-five years ago. Not only are the colonies self-supporting, but they are self-governing and self-protecting. The *Wa-ad*, a committee of Jewish villagers, govern the hamlets, and the *HaShomerim*, a body of Jewish horsemen, guard them from the depredations of the Arabs. The latter have learned to respect the valour of the *HaShomer* and the rights of the Jewish colonists.

"Judaism" and "Hebraism."

In an earlier passage Mr. Roseman declares that "the importance of Zionism to Jewish progress in Palestine lies in the fact that it has made the Renaissance Hebraic. Within the past half-century, Judaism and Hebraism have developed separate and distinct connotations."

The former has a theological implication; the latter is an expression of all that is peculiar to the Hebrew; the first is merely the religious manifestation of the second, just as Mohammedanism is the religious manifestation of Arabian culture. Hebraism comprehends a whole theory of life, a definite political, social, and ethical outlook rising in the teachings of the Hebrew prophets.

Before the rise of Zionism, the Renaissance was Judaistic and philanthropic—not Hebraic. The miserable pilgrim who found his way to Palestine during the Middle Ages, the pious talmudical scholar who journeyed there to end his days, was governed not by a desire to give expression to the Hebraic tradition, but by his mystico-religious convictions. Hirsch Kalischer, instigator of the Renaissance, was motivated by theological principles—a return to Palestine must necessarily precede the coming of the Messiah. Baron Rothschild and the Jewish Colonisation Association looked upon their work in Palestine merely as part of their philanthropic undertakings. The *Chovevei Zion*, too, although beginning with a desire to establish a Jewish national life, had gradually narrowed its policy until that also became charitable in character. The weakness of the Judaists and the philanthropists had consisted in their concern with only part of Jewish life. They had not the broad, encompassing outlook of the Zionist movement. Consequently, such progress as the Renaissance made before Zionist influence was sporadic and unintelligent.

Zionism, attempting to gather up the threads of the whole of Jewish life, has developed its various components so that Palestine has again become the centre of a truly Hebraic civilization. Not merely has Judaism, the religion, been fortified against extinction, but Hebraism, the *Kultur*, has already expressed itself in the beginnings of a new art, a new literature, and in vital attempts to attain the social and economic justice first pro-

mulgated by the Hebrew prophets. The Mosaic injunction against perpetual private ownership of land, and the protest of Amos against the oppression of the proletariat, have found their echoes in the principles of two Zionist institutions—the Jewish National Fund and the co-operative settlement, Merhavia.

Palestine a Jewish State.

Finally, we may quote what the author has to say regarding the hope "expressed by many Zionists that the war may, after all, prove a blessing for the Jew."

The terrible cataclysm will end some day, and the Peace Congress will eventually meet. For this contingency the Jews of America are preparing by planning a Jewish Congress. Perhaps at this Congress the results in Palestine will be brought out to prove to the world that the Jew is morally and intellectually the equal of the Aryan. The Jewish farmer in Palestine, tilling the soil of his fathers, redeeming it from the hurt inflicted by strangers, belies the accusation that the Jew is physically lazy, unproductive, a parasite living on the fruits of others. The Bezalel School, with its beginning of a distinctly Hebraic art, is evidence that the Jew possesses originality—that he does not merely copy the masterpieces of others. The *HaShomer*, as he rides picturesquely and fearlessly over the plains, refutes the charge that the Jew is a coward—if the thousands of Jewish lives already lost in the war has not yet done so. The Renaissance by its very existence invalidates the allegation that the Jew is materialistic, that he cares merely for the belly and not for the spirit. Where so much idealism, where so much sacrifice, where so great an emphasis on *noblesse oblige* as in the New Testament? Give the Jew a chance to say "This is my own, my native land!" and he will prove himself fully capable of contributing his share to the world's culture.

"Not the Jew alone," he declares, "but all mankind will benefit if Palestine becomes again a Jewish state. Zionism is not a national, but an international movement. Progress is an exchange of national cultures; and a democracy of nations, each developing its particular contribution to the sum-total of civilization, is the desideratum whose realization will make wars like the present one impossible."

It is announced from Budapest that the second Mosty tunnel, near Jablunkau, in the Carpathians, has been opened for traffic. The completion of this tunnel has created a double-line railway connection from Breslau, through Hungary, to the Balkan States.

According to Reuter's Amsterdam correspondent, a telegram from Constantinople to the *Düsseldorf Generalanzeiger* states that the University of Stambul has proposed the German Emperor as a candidate for the Nobel Peace Prize.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The financial year of the Agricultural Bank of Egypt ended on January 31, and my latest news from the land of the Nile gives the impression that the results obtained will prove to be eminently satisfactory. Arrears of interest and principal by those who borrow from it have been paid up very largely, and as such payments go to the benefit of the year in which they are received, the bank should be in the position of having a greatly improved free balance. On another page in this issue of THE NEAR EAST is published, merely as a matter of interest, some views expressed on the bank recently by Mr. Henry W. Wolff, who is not unknown on the shores of the Eastern Mediterranean. I daresay some of my friends in Egypt would like to break a lance with that financial writer.

I am glad to see that the British Chamber of Commerce of Egypt has again directed attention to the shameful abuse to which the description "British" is put in that country. "In our opinion" (wrote the *Journal* of the Chamber in its January issue) "the present tolerance of the authorities is conducive to bringing into disrepute, if not disgracing, the word. What can be worse than a low drinking or dirty eating shop being designated as the 'British Bar' or 'Restaurant,' flying British colours, and being kept by nondescripts not knowing any word of English unless it be the filthiest? Surely the word 'British' should convey the sense of genuineness and everything shipshape and above board."

Then there is the practice of foreigners trading under English names. "The prejudice this device causes to honest British trade is enormous. The *Journal* adds: "The reasons are obviously that a foreigner elects to eclipse his identity in order to trade under an assumed British name or title, only because he desires to exploit the 'prestige' which such designation may confer upon him—and as certain foreign methods of doing business are anything but 'British,' the prestige suffers, and the public become reluctant to deal with other bona fide British firms." I cannot say if, during the war, the authorities can take steps to remove these disabilities on British firms and traders; but the matter ought certainly to be one of the first to be taken in hand when the war has ended.

The death of Lieutenant-Commander C. H. Cowley, R.N.V.R., has already been noted in the personal columns of THE NEAR EAST, but I would like to pay a personal tribute to this brave man who, for years before the war broke out, played his part in carrying the Flag. He was for some years a commander in the Euphrates and Tigris Steam Navigation Company—like his father before him—and was known to all Britons whose avocations took them to Busreh. The Victoria Cross, a great distinction as the Reward for Valour certainly is, is not too great a tribute to the services which the man rendered, and to the man himself.

I may take the opportunity, too, to keep in the public mind the great services which the Euphrates and Tigris Company are

rendering to the Naval and Military authorities. River navigation always presents difficulties, and these are pronounced on the Mesopotamian rivers as elsewhere. We may be thankful, indeed, that British control over the river steamer companies was maintained and that the valuable organization of the company was available for the use of the State when it was most required.

I have frequently directed attention in these Notes to Germany's insidious commercial methods and the menace which they present against our trade in the East, but I doubt if many people are aware of the extraordinary skill and patient persistence with which these methods have been pursued. A book which has just been published by Eveleigh Nash, "Germany's Commercial Grip on the World," is an absolute revelation in this respect. It shows Germany as the great mercantile octopus stretching its tentacles throughout the nations, eternally plotting and planning to get industry after industry within its coils, and always with the State behind it, financing it, subsidising it, protecting it, favouring home manufactures by railway concessions, and systematising all its ramifications.

The book is by the great French economist, Professor Henri Hauser, of Dijon University, and it has been admirably translated and arranged by Mr. Manfred Emanuel. I have no hesitation in saying that it should be read by every British and Allied merchant in the Near and Middle East, and by every Government concerned in the development of commercial interests and the upholding of commercial morality. The first step towards meeting a great peril is to understand its fundamentals. In this instance, these are the "chain methods" which Germany has employed to gain a monopoly of industries in foreign countries. In laying bare these methods, M. Hauser and his translator have performed equal service to manufacturers and traders throughout the world, and, more than incidentally, to countries which have suffered in the past from the "peaceful penetration" methods which have made Germany notorious.

According to the returns and reports for January the cotton trade of Lancashire showed a distinct change for the worse. Demand in all oversea quarters was poor, and all along the line buyers appear to have adopted a policy of "wait and see." Compared with a little time ago, Egypt gave very little support to markets during the month. Egyptian spinners continued to be busy, especially those who were engaged on fine counts, but during the last few weeks the production of the mills has not nearly been sold.

What is to be the future of Syria? The question is interesting, not only because the Syrians have received such atrocious treatment at the hands of their Turkish overlords; but there is a commercial and industrial point of view which is forcing itself on public attention. In a lecture in London recently Mr. Steel-Maitland, M.P., Under Secretary of State for the Colonies, discussed the "oils and fats in the British Empire," and emphasised the great need there was to secure as great a supply as possible for the needs of peace and war manufactures of the Empire.

Syria is a potential source of supply of fats and seed oils, and although the country may not become British, we ought certainly to be able to look upon this misgoverned Turkish dependency with a watchful eye.

I take the following illuminating passage from a review of the position regarding food and other essential products in Central Europe: "The military authorities are said to be keenly disappointed at the foodstuffs obtained by the Central Powers in Rumania. The expedition has been, in short, a fiasco so far as the expected seizure of huge supplies of grain is concerned, though the people are encouraged to expect a large measure of relief from the Wallachian harvest next summer. There is reason to believe that the stocks of wool, cotton, and leather are gradually approaching vanishing point."

The latest German act of maritime anarchy is on a par with the "scrap of paper" morality of Prussia and her previous record of land and water crimes. But whether it will affect to any appreciable extent shipping in the Eastern Mediterranean, presumed to have been blockaded by Germany, remains to be seen. The ruthless sinking of ships has already been extensively practised in this region by the Huns, and with as much ruthlessness as they could command. It is not to be supposed for one moment that, having the means at their disposal, the Huns would, out of pity or goodness of heart, have refrained from using them before now. The only deduction to be made, therefore, is that either their new order is a gigantic bluff designed to frighten neutral shipping, or that our enemies have suddenly come into possession of more and mightier engines of destruction. Either surmise may be correct. There is this certainty, however, that, while this attempt to make Britain hungry is proceeding and the enemy is bullying and terrorising shipping, Germany herself is starving and frost-bitten.

So far as Allied shipping is concerned, I have no doubt that we shall proceed calmly along the lines of policy we have pursued from the beginning. The main highways of the sea are watched by our respective navies, and we do not propose to allow bluff to interfere with our commerce. The outstanding point of it all is that the German people now admit that they sanction anarchy at sea. They have always practised it; now they admit and rejoice in it—that is the only difference.

In the meantime it is likely that neutral shipping in the Mediterranean will be greatly restricted in cases where direct protection cannot be provided. But as such shipping, with the possible exception of Greek and American, has already been reduced to a minimum, it is not likely that any appreciable difference will be noticed. In any case, the situation created by Germany is so very extreme that it is not likely to last long. Either the bluff and its impotency will be exposed, or neutrals will be driven to become belligerents on the side of the Allies, which will mean the end of all things German. Never was a more suicidal policy adopted by a beaten country.

COMMENTATOR.

The Science of Agricultural Banking.

Merits of Egyptian and Indian Methods Compared— A Frank Review.

A well-known Indian publicist, now dead, declared in an article in the *Indian Journal of Economics* that the Government of India should establish an "imitation" of the Agricultural Bank of Egypt for India.

Mr. Henry W. Wollit, in the September issue of the *Journal*, makes a spirited reply to the statement.

"Is it possible?" he asks. "At the very time when Egyptian authorities are casting wistful looks at India, well armed as it is since 1904 with credit banks, the number and results of which have filled the co-operative world in Europe with admiration—and are considering what steps can be taken to acclimatise banks of the same order in their own country, as a substitute for the Agricultural Bank of Egypt, whose occupation as a bank for the small peasantry is practically gone since the passage of the 'Five Feddan Statute' of 1913, and which found its borrowers such bad repayers that in 1910 it had 2,544 actions for recovery pending amongst about 40,000 borrowers, Mr. Wacha comes forward to recommend the formation of an imitation 'Agricultural Bank of Egypt' for India!

Lord Cromer's Dictum.

"It was in 1910, when a bill drafted under my instructions and brought in by Lord Shaftesbury for facilitating the formation of co-operative credit societies in this country was before a Select Committee of the House of Lords, that I questioned Lord Cromer, the founder of the Agricultural Bank of Egypt, who was a member of that Committee, and who evinced unmistakable interest in and sympathy with the object of my bill, why at the time he had had recourse to a capitalist, state-patronised institution rather than to co-operative banks, in the principle of which he quite evidently believed.

"I related to him that at the time I had been advised (by the late Lord Ilkerton) that I was about to be consulted with respect to the organisation of co-operative banks in Egypt. And accordingly I felt some disappointment at his selection of a different method. Lord Cromer's reply was that he had not at the time considered the fellaheen 'ripe' for co-operation. That is an explanation which, however earnestly meant, was bound to sound a little odd to a co-operator and such as could scarcely hold good now, after co-operative banks in India have shown by the test of all tests in credit banking, viz., by repayment made of loans that they are equal to their task, whereas the Agricultural Bank of Egypt has confessedly failed in that very office.

Legal Difficulties.

"In addition, I may add, there were thought to be legal difficulties in the way of the formation of co-operative societies, attempts to remove which have for some years taxed the legislative ingenuity of the polyglot Council severely. I have seen the draft bills prepared. In the end it was discovered to be doubtful if new legislation was required at all. As a makeshift the Government has, after the partial paralysis fallen upon the fellaheen business of the Agricultural Bank, as a very minute compensation for the loss sustained, authorised the formation of 'syndicates' and 'groups of borrowers,' to which the Agricultural Bank is now empowered to lend. There has not yet been much business. Evidently this is meant as a stepping stone to more perfect co-operation (on the consideration of which official minds continue busy), in the place of the exploded methods praised up a good many years too late by Mr. Wacha.

"The Agricultural Bank has never done anything like the business that the Indian co-operative banks do. Its increase of share capital, which has excited Mr. Wacha's admiration, is no proof whatever of good banking for the purpose here kept in view. That share capital comes from the shareholders, who receive their dividends in virtue

of other business that their bank carries on successfully. There is nothing to be said against the management of the Bank. The fault which has led to the stoppage of one part of its business—the part here under consideration—is the mistaken selection of means whereby to supply the fellaheen.

A French View.

"Speaking of the Agricultural Bank and its working, M. Pierre Arminjon, a professor at the Egyptian *Ecole de Droit*, who is now an old resident in Egypt and a specific student of its institutions, in his excellent *La Situation Economique et Financière de l'Egypte*, published in 1911, after reviewing briefly, but with evident appreciation, the results obtained by the Indian co-operative banks writes thus (pp. 644 ss.):—'Are not these quotations eloquent and do they not make one sigh for the day when each district, and even each village of any importance among ourselves will possess a similar society for the benefit of the fellaheen? . . .

"Meanwhile credit is dispensed to the small peasantry by the 'Agricultural Bank' . . . The idea suggesting its foundation was of the happiest . . . the peasantry have largely drawn upon its resources—now grown to over ££8,000,000. To what uses has this enormous capital been put by them? Only too often to one that was quite unproductive, to pay the expense of some merry-making, to buy some young fellow off his military service. Even when the loan has not been squandered in this fashion, it has often enough been wasted upon the purchase of land that did not pay the interest and sinking fund of the loan. During the last two years the Bank has been able to recover its loans only partially and with great difficulty.' And he goes on to quote from the last Report of the Board of Directors then out:—'It is to be feared that in only too many cases the inability of the borrowers to meet their engagements arises from an unproductive employment of their loan.' Professor Arminjon points out that repayment is not to be obtained, because the loan was badly employed, the lenders not being able to ascertain, and much less to control, the employment. 'Well,' says he, 'that is precisely what the Managing Committee of a co-operative society can do, its members being bound in common liability and knowing, and being able to watch, one another.'

Evidence of the Reports.

"Allow me to quote briefly from some of the Annual Reports of the Agricultural Bank of Egypt. In the Report for the year 1913 the Directors, after explaining the purport of the new law which deprives owners of properties of 5 feddens (about 5 acres) or less of the power to pledge their properties, say:—'This is a complete reversal of the policy of the Egyptian Government that led to the formation of the Bank, which was founded with the object of lending to the small cultivators on the security of their land.' Under the new law 'no such mortgage credit is to be allowed . . . It will be necessary to create a new system of agricultural credit.'

"Of the 235,000 clients now on the books of the Bank the large majority are holders of 5 feddens or less. The law thus 'reduces the business of the Bank by about two-thirds.' The Report of this year accordingly shows a great decline in lending business of the kind referred to, the number of agricultural loans having dwindled from 23,070 for ££1,239,615, at which it stood in the preceding year, to only 351 for ££72,351. Recovery has all along, except quite in the beginning, been a difficult business for the reason stated. In 1910 arrears figured at 18.9 per cent. of the amounts due; in Upper Egypt alone even to 53.8 per cent. In 1914-15 arrears even reached the appalling figure of 74.4 per cent. from which a reduced business (££100,304 as compared with ££1,212,087) brought it

down to 25.8 per cent. in the following year. Well, 25.8 per cent. is assuredly quite enough. In 1916-17 the amounts due for repayment, having stood at ££1,886,046 in 1908, had shrunk to ££816,691.

A Question.

"Mr. Wacha gibes at the modifications which have under practical testing proved desirable in the Act of 1904 and have been effected by the later Act of 1912. Is the Agricultural Bank of Egypt a good case to quote against this? We have heard that by the law of 1913 its whole purpose has been reversed. On the other hand there is absolutely nothing unusual or objectionable in the amendment of the Indian law of 1904. In that year the Viceroy and Council legislated on untried ground. As a matter of course the Act would require to be completed after testing by experience.

"I do not suppose that there is any one who has seen more of co-operative banks of various kinds and in various countries than myself. And I can candidly say that the progress of the co-operative banking movement in India has surprised me by its rapidity and its general soundness and filled me with satisfaction. It does very great credit to those who have been charged with the administration of the Act. On new ground, to which the old, well-tried principle had somehow to be adapted, they have shown admirable resource and judgment. And I judge the movement to be safe in their keeping. Certainly it is not likely to produce anything like the cataclysm of defaults in repayment which has marked the dealings of the Agricultural Bank of Egypt, the methods of which, so I would point out in conclusion, are not really applicable to India, as an inquiry instituted some years ago has made clear. The two systems of administration are too essentially different. There is, among other things, no 'omdeh' in India, who forms such an essential feature in Egyptian credit business for small cultivators. Indians will do well to rest content with what they have and not throw away their tried gold for Brummagem brass."

MEDITERRANEAN SHIPPING.

A correspondent writes, with regard to the Greek and general shipping situation in the Mediterranean:—

"Greek shipping is placed in a somewhat unique and peculiar position. There is a lane carved out—for what it is worth—through the Mediterranean for Greek shipping westwards bound to neutral countries. Why the Germans should have made this paper concession in favour of King Constantine's subjects is a mystery; in any case we need not fear it will enable Hellenic ships to pierce our blockade (which is not a paper one) unperceived. On the other hand, it is indicative of the world's faith in German promises and concessions that, in spite of this Hun-granted Greek lane through the Mediterranean, Greek shippers prefer to mistrust the privilege accorded them, and have wired orders for their vessels now in American and other ports to remain where they are pending a further development of the U-boat threat. It shows what little confidence the friends of the Huns place in the latter's protestation of friendship.

"On the other hand, it is not surprising that in present circumstances Greek shippers should regard the chartering of a large number of their ships by the British Government as a decided windfall. At first, there were people, mostly in German pay, who opposed that scheme because, they pretended, it aimed at reducing the tonnage of the nation's mercantile navy—a silly and utterly unfounded objection. In view, however, of recent events—the German threat, followed by the firm attitude of President Wilson—the matter is viewed in quite a different light, and I have no hesitation in predicting that Great Britain will be able to charter as many Greek vessels as she wants to. They will be thrust on her rather than their owners should remain with them idle on their hands."

BUSINESS MAN, many years' commercial experience in Egypt, East and West Africa, etc., seeks situation as AGENT or REPRESENTATIVE; free to go any country.—Write Box B. M., care of THE NEAR EAST OFFICES, Devonshire Square, E.C.

WHY NOT POSTAL C.-O.-D.?

Prejudices of British Firms
Against the System.

We are glad to observe that the British Chamber of Commerce of Egypt has taken up the matter of the use of the parcels post and cash-on-delivery system. For some very unaccountable reason British firms, or the great majority of them, refuse to transact business on that system, and the consequence is that much business is lost and inconvenience occasioned. It may be true to say that where considerable transactions are involved the cash-on-delivery system is not altogether appropriate; but we know of no better media when orders are small, or the bulk of the goods ordered is not great.

The Journal of the Chamber says that two or three instances have been brought to the notice of the Chamber in which British firms have refused to send goods to Egypt by the system.

"Cash with Order."

"Quite recently," writes one concern, "we remitted an order to a London firm, requesting that, as we were urgently in need of the goods, and had no idea of the price, having seen their notice in a trade journal, the goods should be sent cash-on-delivery."

"After waiting about five weeks, we received a letter as follows: 'Dear Sirs, As per your order, we herewith enclose invoice, and on receipt of remittance at London Bank we will despatch the goods at once.'

"We replied somewhat sarcastically, pointing out the fact that we were in urgent need of the ordered goods, and had requested that they should be sent cash-on-delivery; that they took practically no risk other than about 2s. 6d. for postage; that the Post Office took the responsibility of collecting the amount against delivery of the parcel, and that we had to take the risk of paying for the goods right or wrong."

"We sent our cheque along and received a reply as follows: 'We have to-day, despatched your goods as per invoice enclosed. We are quite aware how to send goods per post, but prefer cash with order.'"

"A typical example of the British trader at Home," adds the firm.

Why?

It would be interesting to learn why the British firms object to avail themselves of the facilities for prompt payment by the Post Office. A minimum of risk is involved, promptitude in the delivery of goods is ensured, and it also gives the nearest approach to the fulfilment of the condition "Cash with order" that we know of. Is it mere prejudice and insularity, or do British houses know of a way in which the safeguards adopted by the Post Office against fraud could be evaded?

In India, by the way, the system—called out there "Valuable Payable Post"—is in full working order, enjoys the confidence of purchaser and seller alike, and has actually made it possible for great retail houses to build up businesses which are conducted strictly on the cash system. We speak from personal knowledge when we write that great houses like Messrs. Whiteaway, Laidlaw and Co., Ltd., the Whiteley of the East, are able to carry on a trade, which embraces the great continent from one end to the other, with a minimum number of branches solely because the Valuable Payable Post system presents such advantages and other such facilities.

A Case in Point.

The present writer recalls one case in which the sale of a large consignment of cement, valued at many thousands of rupees, was negotiated through the system. The buyers, a great firm of native contractors, were in urgent need of cement at several stations along a distant railway. The goods were actually in a wagon at a Calcutta railway station, and it was arranged that the total should be split up into lots. Railway receipts were sent to the various agencies of the contractors by the Valuable Payable Post with the result that the cement was on the several works in a few days. If the ordinary business formalities had been adopted delivery could not have been effected completely in as many weeks.

The system is certainly worth trial, and we hope our Egyptian friends will persevere in their endeavours to break down British prejudices.

LANCASHIRE COTTON TRADE

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, February 7.

All other matters in the market during the past week have been overshadowed by the extraordinary developments in raw cotton circles. Violent fluctuations have occurred in New York and Liverpool, and at the moment it is quite impossible to know what the level of prices may be from one hour to another. The developments in connection with the international political situation have accounted for the disturbance, and the receipt of the German Note by the United States Government caused a panic in the New York market, prices dropping very quickly nearly 2d. a lb. Since then many ups and downs have been experienced, and at the time of writing the outlook is very unsettled. Under the circumstances, anything more than a retail business in yarn and cloth cannot be expected, and all along the line there has been a disposition on the part of both buyers and sellers to look on until the position is more settled. It is of interest to record that, while so many changes have transpired in American futures, Egyptian cotton prices have kept fairly steady. No news of any importance has come through with regard to the prospects for the crop in Egypt. Operations in piece goods for Egypt have been very limited. Fewer offers are being received than for some time back, and buyers on this side are in no mood to anticipate future requirements. In certain styles of cloth a little more activity has transpired for China. Not only have bleaching descriptions been purchased, but some special sales have been put through in grey shirtings. No improvement can be recorded in the offtake for India, and in both standard makes and fancies the turnover has been quite unimportant. The position of manufacturers as a body continues to be weakened, as contracts are being worked off without fresh orders coming round to follow on. The yarn market has been thoroughly disorganised, and it has been hard work to fix a basis on which to arrange transactions. There has been very little inquiry in yarns suitable for shipment abroad. Egyptian spinnings have been in retail request, but keep fairly firm in quotation.

THE EXPORT TRADE

Merchant shippers in Manchester have inaugurated a movement of considerable importance to the cotton trade and to the country. They are to approach the Chancellor of the Exchequer and the President of the Board of Trade to secure relief from conditions which are hampering exports of cotton goods.

For some time, writes a contemporary, dyers, bleachers, and finishers have taken three or four months longer to execute orders than before the war as the result of a number of causes, including the short supply of labour. This delay unfavourably affects exports in various ways, and puts a serious strain upon the financial resources of shippers. It is clearly in the interests of the nation that the export trade in cottons should be maintained and facilitated.

The proposal of shippers is that shipping orders should have precedence of home trade contracts, and that this should be secured by Government action. They ask for an Order in Council requiring manufacturers, dyers, bleachers, and finishers, after executing Government orders, to consistently give precedence to contracts for export over other work. The view of the trade generally as gathered on 'Change is that there is much to be said for the proposal, which would help exports without inflicting damage beyond delay on home trade account.

EGYPTIAN COTTON STOCKS.

According to the official statement of the Liverpool Cotton Association, Ltd., the actual stock of Egyptian cotton held in Liverpool on January 26, 1917, was:—

Egyptian	Bales.
Egyptian for export, but not yet reported as having sailed	45,626
Erdan	12,093
.....	379
Total	58,098

During the week ended January 25, imports of cotton into the United Kingdom included 6,959 bales Egyptian, and the exports, 3,266 bales.

CYPRUS NOTES.

Good New Year Prospects for
Cultivators.

(FROM OUR OWN CORRESPONDENT.)

NICOSIA, January 16.

The year has opened under very favourable conditions. Troodos, Adelphi, and most of the higher ranges are now snow-clad, sending down icy winds. In the plains there has been more rain, and the wide cereal growing area of the Mesaoria and Morphou have been well supplied with showers, alternating with beneficial sunshine. Everything is therefore promising well for the peasantry.

January 21.

The Carob Crop.

Merchants who hold stocks of locust beans in all parts of Cyprus have been informed that Government will buy all they have; that fair prices should be asked, otherwise that they may be requisitioned at a valuation. The best carobs are from Limassol and Kyrenia divisions, while good qualities are also produced in Paphos and Larnaca. The Kyrenia merchants have proposed to sell at £4 18s. 0d. the ton, f.o.b.

Basket Making.

For some years the Agricultural Department has endeavoured to introduce a basket-making industry on European models into the island. A new impetus has now been given, with the concurrence of the Educational Department, teachers being sent to some of the villages to instruct boys of the higher classes in the Elementary Schools. This industry, practically a new one in Cyprus, deserves all encouragement, especially as the materials grow in the island, and Cypriots are clever at making various articles out of rushes and reeds, and also out of straw, such as the flat trays which are so much in use in both town and village households.

GERMAN HOPES.

In the course of a letter to the *Spectator*, Mr. J. G. Legge, writing from the University Club, Liverpool, says:—

"During the 'forties' an early glimpse is obtainable of German ambitions in the East, which have in the fulness of time developed as we know them to-day. As a young man Prince Hohenlohe, German Chancellor at the end of the nineteenth century, travelled in the East in 1849 on a diplomatic mission from the short-lived National Government at Frankfurt. Surveying the situation of Turkey, he says in his *Journal* (see 'Memoirs,' I., pp. 52-53):—

"If Germany is unified, strong, and armed, she will be able to secure Cyprus and more besides in the universal partition.' He goes on to say:—

"If, however, by peaceful negotiations with the Turkish Government, or the explosion of the Eastern question, we acquire Rhodes or Cyprus, or whatever else, we shall thereby obtain a splendid outlet for thousands of the proletariat, we shall gain a sea-board and a mercantile navy, marines and sailors. Nor must Syria and Asia Minor be forgotten. We must do all we can to check the Russians and English there, to which end it is essential to send out no Protestant bishops and missionaries, but to make it a station for the Catholic world in the East. German consulates filled by efficient men are among the most pressing tasks of the Imperial Executive."

"Germans have shown themselves to be possessed of long memories. It is probable that Prince Hohenlohe never forgot his early dreams, and the time came when he was in a position commanding enough to assist very effectively in making them a reality."

31, CHRISTOPHER STREET, LONDON, E.C.

PRODUCE REPORT.

LONDON, Feb. 8.

Currants.

There has been a very good demand this past week, with considerable business done in all available quantities; even damaged or out-of-condition fruit was in demand, and sold freely. Practically all common or cheap fruit has been cleared, and as the demand continues the price of other better qualities has advanced from 1s. to 2s. per cwt. Provincial was sold from 77s. to 79s., whilst Patras is quoted 78s. to 83s.; Gulf, 80s. to 85s.; Vostizza, 84s. to 86s.; Zante, 79s. to 82s.; and Smalls, 75s. to 84s. The stock of currants in London on January 31 was 7,298 tons, against 7,241 tons the same period last year.

Sultanas.

There is a very small demand, with transactions, as a rule, of little importance. Afghanistan fruit is selling slowly at from 85s. to 100s., whilst Greek is quoted from 104s. to 118s., but with no buyers.

Figs and Dates.

Both these articles are selling slowly at late rates.

Seeds.

Linseed is firm. London-Calcutta, ex warehouse, was sold yesterday at 115s.; Bombay, ditto, 114s.; while for forward positions quotations are 115s.

Rapeseed is very steady. Toria, for shipment, is quoted at 93s. 6d.; Ferozepore at 91s.; and brown Cawnpore at 87s., Hull. Cottonseed is firmer. Egyptian, Sakelarides, spot, London, has been sold yesterday at £17 5s. per ton. Rangoon Beans show a slight improvement on the week, quotations being higher for spot lots and arrival, as well as for later shipments of new crop. Canary seed: After the recent easier rates there has been a reaction, and prices are distinctly higher for Morocco, but with only small transactions at present.

Oils.

Linseed oil is firmer. Spot pipes offered at £52 15s., and barrels, ditto, at £53 15s., landed. Rape oil is firm, ordinary brown naked, spot, being quoted at £54 to £55; English refined, barrels, £58 to £59. Cotton oil has been quiet this past week, with very little transactions. Crude spot pipes is quoted £48 10s.; refined, pale, £51 10s. to £52 10s.; and barrels, sweet, £58 to £60, as to make. Olive oil is quiet, but late rates are well maintained.

Oilcakes.

Cotton cakes: Supplies are again limited, and for best Egyptian, in bags, £15 to £15 5s. is asked; whilst English makes are quoted at £15 10s. to £15 15s. Linseed cakes: There has been a much better demand this week, and English manufacturers have advanced their prices fully 10s. per ton, with every indication that this increase will be maintained.

Best London made is offered at £18 15s. to £19 per ton, whilst prime Western American is quoted at £17 15s. to £18 per ton, ex store.

Miscellaneous.

Egyptian eggs were sold this past week at 11s. 9d. to 12s., the finest; and 10s. 9d. to 11s. the fine, with a firm tendency. Egyptian beans, the 480lbs., are selling well at 50s. Bees' wax: East India yellow, £6 15s. to £7 5s.; white, £8 15s. to £8 17s. 6d.

A TURK'S COMPLAINT.

A man who spoke with a foreign accent applied to the magistrate (Mr. d'Eyncourt) of the West London Police Court for a summons against a servant girl, who, he said, had threatened to murder him and his wife. In broken English he said that the girl had brought a revolver and was going about threatening to shoot them. She had been worried of late because her brother had returned from the Front paralysed.

Mr. d'Eyncourt: What nationality are you?—I am an Ottoman—Turkish—merchant; my wife is Spanish.

Why is it then that you are not interned? You are an enemy.—I have been in London for twenty years.

You do not speak English very well?—Well, I have not got the London accent yet because I have been in Liverpool for some time.

A summons was granted.

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

RECONSTRUCTION OF SERBIA.

Proposals for Official Measures after the War.

Friends of the Serbian people will welcome the announcement that the question of the reconstruction of Serbia and the rehabilitation of her people and industries is to be taken up seriously.

The British Minister to Serbia has forwarded from Corfu, under date of December 9, 1916, a translation of a circular issued by the Serbian Minister of Agriculture and Commerce, published in the Serbian *Official Gazette* of November 17-30, dealing with the organisation of the supply of the principal articles which will be in immediate and urgent demand on the return of the Serbian refugees to their country.

The circular points out that the end of the war will find the agricultural and commercial activities of Serbia completely dead, and that a general want of all the necessities of life will be felt. With a view to satisfying at once this vital necessity, the Ministry of Agriculture and Commerce, assisted by the Skupshtina Commission for reprovioning Serbia, have taken the necessary steps for reorganising this important work. This task will, in the first place, be left to individual commercial initiative, the State only undertaking the work of satisfying such national requirements as individual initiative will not be in a position to meet. Until the accomplishment of the above task the State undertakes to support, assist, and control private initiative.

In order to ascertain whether individual commercial initiative can sufficiently satisfy this necessity in every way, the Ministry of Agriculture and Commerce have communicated with all Serbian traders, banks, private organisations, and with all concerned in the reprovioning of Serbia, to the following effect:—

(a) All who wish to import any goods into Serbia should address themselves at once to the Special Statistical and Information Bureau of the Ministry of Agriculture and Commerce, stating exactly the quantity, kind, and origin of the goods to be imported.

(b) All import trade will be under a system of permits, the State affording facilities to those who obtain such permits in a regular manner. Guarantees will be exacted and permits will not be transferable.

(c) In order to prevent excessive prices the State will, when issuing the permits, fix with the importers the manner in which and the prices at which the goods are to be sold.

(d) All goods to be imported into Serbia must, in preference, be bought in the Allied countries.

(e) Among the principal articles—with the exception of such as are monopolies, and bread cereals (flour and wheat), which the State will provide—the most necessary are meat, fat, dry and preserved vegetables, oil, sugar, colonial foodstuffs, children's foods, leather, boots, manufactured goods in general, wool, cloth, candles, soap, iron goods and household goods.

Further developments of this important movement will be awaited with interest and sympathy.

BRITISH INDUSTRIES FAIR.

Criticism by a Manufacturing Exporter.

A director of a manufacturing company in the City of London has delivered himself of some frank and comprehensive criticism of the attitude of the various war departments of the Government towards the manufacturing industries, and its effect on the prospects of the British Industries Fair, which is to be opened in London at the end of this month.

Limitations.

"While the War Office is taking the manufacturers' men, and the trade organisations of the country have decided, owing to existing difficulties, not to hold a fair themselves this year, the Exhibition Branch of the Board of Trade decide on a big exhibition, to include among other things toys," he said to a representative of the *Daily News*.

"In another room of the same department, the manufacturer is told, 'You must not take cardboard, paper, boards, or timber required to make toys.' Another department of the same Board says, 'Whatever you do, don't travel,' while at the same time the Exhibition Branch is issuing 100,000 invitations to people to visit the exhibition, and inviting manufacturers to send tons of exhibits.

Labour.

"The Director-General of National Service declares, 'I want every man who is not engaged on work of national importance to volunteer for it,' while the Exhibition Branch of the Board of Trade propose to employ carpenters, painters, electricians, and telephone operators in preparing buildings for the exhibition. Hotels and clubs have been freely commandeered and huts built to accommodate departmental staffs, while the Exhibition Branch proposes to secure the reopening for the second time of a large part of the Victoria and Albert Museum, which was closed early in the war by the Office of Works on the grounds of economy.

Factories.

"Last of all, the Ministry of Munitions says emphatically, 'We want every factory, machine, and worker employed on national work.'"

"I suppose your company is not exhibiting?" asked the interviewer.

"Oh, yes, we are, for the simple reason that we cannot help ourselves. Our competitor has taken a stand, and in spite of the fact that the Ministry of Munitions are pressing for delivery of their orders, we have to call men from the factory, bring them to London, and engage accommodation for them to prevent our competitors from securing our trade."

ECONOMIC DISTRESS IN SERBIA.

The Corfu correspondent of *Le Petit Marseillais* writes that the economic situation of the invaded Serbian provinces is going from bad to worse. The enemy has requisitioned all the food of the country to remedy as much as possible the disastrous state of things in his own territory. This is the reason why Serbia, which is essentially an agricultural and a stock-raising country finds itself in absolute misery.

The enemy passes through towns and villages and requisitions everything under penalty of death. The prices of comestibles have, in consequence, become fabulous.

On August 5, 1916, the *Journal Outro* (Sofia) published a list of provisions with prices, among which were: a kilogramme of beef, 12 crowns, and a kilogramme of cheese, 14 crowns. These prices are official, but in reality they are much dearer.

According to the latest information prices have risen 50 per cent. owing to the forced requisition of all the resources of the country. Even at these exorbitant prices, it is not possible to procure anything because the public have been forbidden access to the markets before 7 a.m.; previous to that hour all the officials are already in possession of whatever food is available.

NEWS FROM ALL SOURCES.

Mr. H. F. Forbes, of the Indian Civil Service, has been posted to Mesopotamia on special duty.

Eleven Shanghai pilots have accepted river work in Mesopotamia in response to an offer by the Government of India.

The Military Governor of Busreh has notified that, as breaches of blockade rules are on the increase, offenders will in future be punished by imprisonment, in addition to corporal punishment and fines.

Mr. C. R. Beasley, of No. 3 Sharia Elwi, Cairo, has been appointed Controller of the Daira of the late Mohammed Pasha Chakib, in so far as the interests therein of Mohammed Bey Chakib, Sitt Chadieh Hanem, and Sitt Aisha Sadika Hanem are concerned.

With a view to capturing German trade thirty-five British Chambers of Commerce have agreed to produce an official register of British manufacturers. The register will be printed in English, French, Russian, Italian, and Spanish, and will be widely distributed abroad.

The attention of his Majesty's Government has been called to the fact that inquiries are appearing in the *Continental Times*, a propaganda organ of the Central Powers, published in English in Germany, as to missing British officers and other ranks. It is not permissible that British subjects should have any correspondence, direct or indirect, with this newspaper.

The Board of Trade are in receipt, through the Foreign Office, of information to the effect that a Decree of the Russian Ministry of Finance prohibits the export from the Empire, by all frontiers, of floss silk and silk waste of all kinds, and also of "bourrette" silk yarns and "bourre-de-soie" or schappe yarn, silk wadding, combed and uncombed, and raw silk waste. Exceptions from this prohibition may, however, be made by the Ministry of Finance in favour of Allied and friendly countries.

A great demonstration took place at Petrograd on January 27, during the passage through the city of several hundred Roumanian reservists who were en route from England and the United States to rejoin the Roumanian Army. The crowd surrounded the men, singing the Russian National Anthem to which the reservists responded with the Roumanian Hymn. Soldiers and spectators proceeded to the Kazantki Cathedral where a requiem service was celebrated for the Roumanian soldiers who have fallen in defence of their country.

Mr. Demetrius Gerakis, a tobacconist, of 28a, Leicester Square, London, W.C., has obtained an injunction against the Alhambra Music Hall. The crowds which await admission to the Alhambra had seriously interfered with Mr. Gerakis in the conduct of his business and were a public nuisance. Theatre proprietors must (said the judge in delivering judgment) provide accommodation for the crowds they collected instead of forming them into queues to obstruct and annoy other people. The plaintiff had suffered substantial damage, with regard to the extent of which there must be an inquiry.

THE WAR LOAN.

Several Greek and Near Eastern names appear in the list of subscribers to the new great War Loan. These include:—

National Bank of Egypt and Clients	£750,000
Messrs. Rodocanachi, Sons, and Co.	105,000
A. Frangopulo and Co., on a/c of the Hellenic Transport Steamship Co., of Athens (new money £30,000).	60,000

A daylight saving scheme is being introduced in Egypt.

DELICIOUS COFFEE.

**RED
WHITE
& BLUE**

For Breakfast & after Dinner.

Wholesale, of Hanson's, London, England.

ENGINEERING NOTES.

A British Petrol Substitute.

Since the scarcity of petrol and the subsequent rise in its price we have heard of many substitutes invented abroad by foreigners, while very little is said of others invented here by British scientists and experts. One of the latest petrol substitutes invented and prepared in England is one the constituents of which are cheap and entirely obtainable in this country. The fuel consists essentially of a solution of ethane and its higher gaseous homologues or isologues in paraffin oil or other liquid hydro-carbon under pressure. Coal gas produced by the low temperature distillation of coal is washed with paraffin oil or other liquid hydro-carbon under pressure and at a low temperature, and the solution of hydro-carbon gases so obtained is delivered under pressure into drums. For use the solution of gases is drawn off from the bottom of the drum and is delivered into the carburettor through a small orifice, without wire-drawing, so as to obtain the full atomising effect of the dissolved gases. The paraffin oil is partly or entirely volatilised in the carburettor, according to the proportion of dissolved gases. A patent for this petrol substitute has, it is stated, been taken out.

Petrol-Air Gas.

There are still many large towns in the East where olive-oil and paraffin lamps are the only means used for lighting private houses and public thoroughfares. The apparent adherence to this antiquated illuminant is not, by any means, due to any lack of appreciation of modern methods, or, as might be thought, to superstitious prejudice. Coal gas, for instance, which is one of the commonest and most used systems of illumination, is well known there and its advantages are fully appreciated; but it is the question of expenditure that often bars its adoption. The cost of an ordinary small installation is often beyond the means of a small town, and more so of isolated buildings, country mansions, farms, etc. The need, therefore, of a simple and reliable plant for the production of gas, which would be available for and within the means of any small or large user, has been very evident. This need is, apparently, now supplied by the petrol-air gas system, the use of which presents many advantages, and is undoubtedly suitable for countries in the East. Such gas, as is known, is produced from air and petrol vapour, there being 85 to 98 per cent. of the former to 2 to 5 per cent. of the latter. This mixture, generated in a suitable machine, passes to a small gas-holder, whence it is led by pipes to burners for lighting or heating. The light is brilliantly white, yet soft and steady, and as the gas contains so great a proportion of air the oxygen consumed is quite negligible, and hence there are no injurious bye-products to vitiate the atmosphere.

The machine for producing this petrol-air gas is worked by the aid of a weight, so that there is no cost for motive power. The carburettor used in this machine to vaporise the petrol is designed not only for the usual .680 lighting spirit, but also for ordinary motor spirit or petrol. There is a small sized machine which is capable of producing air gas for installations of from 500 to 2,500 c.p., or it can be used in series for larger installations. It starts or stops as the lights are turned on or off. The light is absolutely steady, and no skilled attention is needed for working the machine. It is said that the cost of the air gas produced on this system is about half that of acetylene, paraffin lamps or electricity. There is also a larger size machine for installations of 2,500 c.p. and upwards, constructed and worked on the same efficient principle. These

machines are, of course, entirely British made.

Opportunities in Cyprus.

Cyprus is, undoubtedly, going to be in the very near future a very desirable market, and agricultural machinery manufacturers and merchants ought to act with energy and businesslike method, from now and before the war ends, when their efforts will undoubtedly have to compete with the well organised and perhaps desperate efforts of their Continental and American competitors. At present it is a field approachable only to the British, while later it will be open again to all. According to recent information, not only has Cyprus not suffered materially from the war, but it has actually benefited. The revenue for 1915-1916 is the highest on record; and the Cypriote has been enabled by the abnormal state of affairs to earn money in a variety of ways. The requirements of the civil and military population of Egypt gave a great stimulus to the market gardeners of the island, many of whom, especially potato growers in the Famagusta district, were able not only to free themselves from debt, but to save considerable sums.

Cyprus Mines.

We believe that some time ago the Government compiled a list of the numerous localities in Cyprus at which mines were worked in ancient times, and the area over which the traces of these mines are found is very considerable. If the mineral wealth of Cyprus was developed the island would be made less dependent on the vicissitudes of agriculture. Some time ago offers were made by persons having the command of adequate capital to prospect the mining districts and test the question whether either the ancient mines might not be advantageously worked with modern appliances or new mines opened. Unfortunately, the Legislative Council declined, at the time, to pass the required measure to secure to the persons interested fair terms for their undertakings, and the opportunity was lost.

Rapid Ship Construction.

Germans, in trying to secure orders from Mediterranean shipowners, used to boast of their capacity for building ships very rapidly, far more rapidly than the English. It may interest such shipowners to hear that a British firm has recently established a record for rapid construction. The firm launched a 6,000 ton steamer in three months from the day of the laying of the keel, and the vessel was complete and ready for her steam trials in a week from the day of launching.

A Cotton Baling Invention.

So many new inventions in connection with armaments and weapons of warfare have come into being since the great war that a peaceful invention, writes the *Egyptian Gazette*, however useful, runs the risk of being almost overlooked. One of the most useful of such inventions has been brought out and patented by an Alexandria engineer, Mr. Samuel Leyland, and we are convinced that, had it not been for the war, his invention would have caused more public interest than it has done, as it is intimately connected with the staple industry of the country, viz., cotton. The invention aims at the simplification of the baling process as applied to cotton or other materials, and this is accomplished by punching the two ends of the iron or steel bale band in such a manner that they interlock easily, one with the other, around the bale and, on the expansion of the bale, become firmly fixed like a buckle.

Bale Bands.

The different possible constructions of the ends and the method of using the bale bands form the subject of much matter in the complete patent specification, but the invention itself is simple and can be readily understood

and applied by the native labourers employed in pressing establishments in Egypt. For the past three or four months all the compressed forage for the forces stationed in Egypt and also a large quantity of dries and forage, which has been exported to destinations which we may not mention, has been baled with Leyland's patent fastener, and everyone visiting the large pressing factory at Gabbary is impressed with the speed and efficiency of the work as compared with the old method of using studs as fasteners. We believe it is also a fact that when the steel fastening studs are used they often get into the fodder and cause injuries to the teeth and even stomachs of horses fed on the material. The invention has also been used with success by several firms for cotton baling purposes and, as it ensures a very great economy at the present time by eliminating the use of studs or other fasteners and is also much simpler in use than other systems, we believe it has come to stay. The simplest inventions have often the most profound results, and we must congratulate Mr. Leyland not only on his ingenuity but for having brought out, at this time, an invention which has been of service to the British Army.

Metallic Copper.

Copper smelting in the Urals shows a decided tendency to decline over the whole area, for declines are observed in the smelting done at nearly all the factories, writes the *Financier*. Thus, in the Pyshmin Klyucheff and Kalatinak factories of the Upper Isset Company, in the first seven months of 1916 the quantity of copper smelted was 131,718 poods, or a decline of 5,520 poods compared with the corresponding period of 1915. At the Polievsk and Sysertsk factories the quantity was 13,720 poods, or a decline of 15,532 poods; at Demidoff's Viesky factory 17,939 poods, decline 13,213 poods; at the Kyshtim 285,641 poods, decline 28,496 poods. It was only at the Bogosloff factory that there was an increase. Here the quantity of metallic copper obtained in the first seven months of the year was 139,883 poods, or an increase of 12,071 poods. The total quantity of metallic copper produced in the Urals district in the first seven months of 1916 was 588,901 poods, which was less by 51,757 poods than the quantity produced in the corresponding period of 1915.

THE SUEZ CANAL—A GERMAN GROAN.

The minimum peace terms of the Pan-Germanians and of the Bedlamite company known as the German Naval League have already been recited in this column, says the writer of that admirable column in the *Daily Express*—"Through German Spectacles." They include all the Flemish coast, every important French port, including Marseilles, and the bulk of Africa. To this fancy programme the *Rheinisch-Westfälische Zeitung* adds two more small items—the freedom of the Suez Canal and the Straits of Gibraltar:—

"It is a disgraceful thing that England, with relatively only a handful of troops at the Pillars of Hercules and in the Nile Delta, should have the power to close these two important roads to the Mediterranean Sea.

"The whole miserable enslavement to England in which Europe has to exist finds its expression in this inglorious fact. For the sake of Europe in chains, the Central Powers must make it a binding proviso in their peace terms that the Straits of Gibraltar as well as the Suez Canal be internationalised.

"Turkey, Bulgaria, and Austria-Hungary are in urgent need of the opening of these two great means of communication, while for Germany the matter, though of less importance, is still equally necessary as her means of exit from the watery trap of the North Sea."

EXPANDING BRITISH TRADE

Exports and Imports Increase—
Adverse Balance Continues.

We are proceeding rapidly towards the end of the third year of the war, and, despite all the sea anarchy practised by our enemies, with the resultant loss of shipping and cargoes, British trade returns continue to show almost amazing advantages, although, of course, we have not yet returned to the pre-war level.

The returns for January, 1917, have just been issued, and while from the point of view of expansion they may be regarded as satisfactory, the adverse balance of trade for the month (excluding bullion and coin) has increased from £29,348,402 a year ago to £35,243,454.

Imports reached the unprecedented total of £90,565,311, while British exports were valued at £46,860,542.

Details.

Compared with the preceding month, which had three working days less than the past month, imports advanced by £15,000,000 sterling, British exports by £7,000,000, and re-exports by £2,225,000. A large part of the expansion is due to higher prices.

The following table shows the value of imports and exports for January, together with the increase or decrease as compared with the corresponding period of 1916:—

	£	£	Per cent.
Imports ..	90,565,311 ..	+ 15,629,570 ..	+ 20.8
Exports ..	46,860,542 ..	+ 10,103,375 ..	+ 27.4
Re-exports	8,431,315 ..	- 398,857 ..	- 4.7

In imports, food, drink, and tobacco advanced by £2,648,489, raw materials by £13,485,533, but manufactured articles declined by £471,777, and miscellaneous articles by £30,675.

Food and Drink.

In articles of food and drink, grain and flour declined in value by £1,247,066; wheat advanced in value by £76,381, but declined in quantity by 2,244,140 cwt. Barley was lower in quantity by 1,823,200 cwt. and in value by £872,263, whilst maize declined in quantity by 2,200,600 cwt. and in value by £1,127,174. Meat was higher in value by £1,114,537 in spite of a shrinkage of 150,000 cwt. in fresh beef and 172,000 cwt. in fresh mutton; bacon shows an advance of 145,699 cwt. in quantity, with an increase of £1,195,259 in value. Other food and drink non-dutiable advanced in value by £2,549,012, butter accounting for £1,309,089 with an increase of 54,264 cwt. in quantity. Cheese and margarine also show substantial increases in quantity and value. In dutiable articles refined sugar was reduced by 411,742 cwt., but this was more than offset by an increase of 1,044,581 cwt. in refined sugar. Tea was reduced by nearly 11,000,000 lb. in quantity, and unmanufactured tobacco by a quarter of a million pounds. In raw materials, hewn wood declined by 43,000 loads, but sawn wood increased by 58,000 loads.

Raw Cotton.

Raw cotton advanced in quantity by 435,000 centals and in value by £6,141,998, whilst sheep's wool rose by 19½ million pounds in quantity and £3,000,000 in value. Petroleum was higher in quantity by 12 million gallons and in value by nearly 1½ million pounds; rubber was higher in quantity by 31,202 centals and in value by £34,502, equal to 20.2 and 1.4 per cent. respectively.

Exports.

As regards the exports of the produce and manufactures of the United Kingdom, food, drink, and tobacco declined by £363,089, and miscellaneous articles by £45,231, whilst raw materials advanced by £1,328,770, due solely to coal, which advanced in value by £1,366,997, with an increase of 165,393 tons in value, and manufactured articles by £9,182,925.

In manufactured articles, cotton yarn advanced in quantity by 139,400 lb. and in value by £617,558, cotton piece goods by 74,380,500 yards in quantity and £3,781,948 in value, and other cotton manufactures by £675,545. Woollen and worsted tissues advanced by £1,516,539, silk manufactures by £29,128, and other textile manufactures by £371,704.

HOMS TO KOWEIT.

A Great Trans-Continental
Railway Scheme.

Reference is made by "Commentator" in his "Notes and News" to Mr. Manfred Emanuel's translation of Hauser's fine book on the German grip. Here, however, is an outline, the summary of an article contributed to *Cassier's Engineering Monthly*, by Mr. Francis Aldridge, which will go far to convert the German into an Anglo-French "grip."

Check the German Scheme.

The German line through Asia Minor, it is safe to say, was one of the great factors in this international war, since it was part of the great pan-Germanic scheme for the control, directly or indirectly, of the railway systems of Europe and Asia. People are, however, apt to forget that the alternative British scheme has made steady progress for many years past, and prior to the war was accepted in its main line both by the British and French Governments. The project is now being taken up again very seriously, not merely as a theoretical idea, but by practical engineers and by leading financiers, and it ought to be carried to completion at no great distance of time.

Now what is this line? Roughly speaking, it is 1,004 English miles in extent made up as follows:—

Koweit to Bagdad 646 kilometres,
Bagdad to Homs 970 kilometres,

of which the suggestion is, and always has been, that the first-mentioned section should be entirely British and the second section Anglo-French.

The Scheme.

The port of the Persian Gulf must necessarily be Koweit, which offers a far better terminus than most people imagine, for the basin is thirty-five kilometres in length and seventeen in width, and the actual situation is only eighty kilometres from the mouth of the Shatt-ul-Arab. The port on the Mediterranean is Tripoli, high upon the Syrian Mediterranean coast. From this port a French line already runs to Homs, and it was always anticipated that this place would be the "jumping-off" point for a line to the Hinterland of Palestine, for which it is admirably situated. The line now proposed is therefore from Homs, through Palmyra to Bagdad, and from Bagdad to the Gulf, and the latter section of the line, which would be exclusively British, would comprise five sections, about 500 miles in all in length, as follows:—

- (1) Koweit to Zobeir (branch line to Basra and Mohammerah).
- (2) Zobeir to Nazria, where the Shatt-ul-Hai joins the Euphrates.
- (3) Nazria to Diwania.
- (4) Diwania to Hilla (Babylon).
- (5) Hilla to Bagdad (with a branch line from a point midway to Kerbela (Imam Hussein) and Nedjef (Imam Ali)).

There would, of course, be branch lines in places on the Homs-Bagdad route, but for the moment the scheme which is under consideration does not take them into account either from the point of view of finance or of engineering.

The Advantages.

Now what are the engineering estimates of this proposed line which would develop the resources of Mesopotamia south of Bagdad, incidentally serve a very large pilgrim traffic, save at least four to five days in the time of transit to India, and prove of incalculable benefit in opening up Syria and Palestine? It would, of course, in addition, ensure that a through shortened route to India was in the possession of the Allies.

According to the engineers' estimates, the section from Homs-Bagdad, which includes one large bridge across the Euphrates and three and a half miles of tunnelling, could be completed at an average cost of £11,650 per mile, including interest during construction, and assuming the gauge at 4 ft. 8½ in., that 65 lb. rails are adopted, and that their cost c.i.f. Koweit would not exceed £10 a ton.

The section from Koweit to Nazria (320 kilometres) would probably cost somewhat less, while that from Nazria to Bagdad (325 kilometres) would be more in expenditure, principally because of the four large bridges required and of the numerous watercourses to be crossed.

COMPANY NOTES.

Egyptian and Foreign Trust.

The thirteenth ordinary general meeting of the shareholders of the Egyptian and Foreign Trust, Limited, will be held at Dashwood House, 9, New Broad Street, in the City of London, on February 19, 1917, for the following purposes:—(1) To receive and consider the directors' report and the annual statement of accounts for the year ended December 31, 1916, and the report of the auditors thereon; (2) to elect a director; (3) to elect auditors.

United Egyptian Lands.

Holders of shares are requested to communicate with Mr. H. W. Cable, Secretary to the Shareholders' Committee, 16, Gracechurch Street, E.C., giving their names and addresses and the number of shares held.

Oil Outputs.

Bibi Eibat, 48,366 poods; Maikop Pipeline and Transport, 29,404 poods; North Caucasian, 594,445 poods; Black Sea Amalgamated, 19,559 poods; Cheleken, 536 tons; Maikop Combine, 15,949 poods; European, 83,400 poods.

AN OIL COMPANY'S ARRANGEMENT.

Mr. Justice Astbury, in the Chancery Division on February 2, was asked to approve an agreement of November, 1916, made between Mr. Allen Paull, a holder of "A" Convertible Mortgage Debentures in the Tchengelek Proprietary Company, Ltd., of the first part, the receiver of the second part, the Kertch Taman Oilfields of the third part, the Oilfields Finance Corporation, Ltd., of the fourth part, the Tchengelek Company of the fifth part, the Roumanian Consolidated Oilfields, Ltd., of the sixth part, and the Phoenix Investment Trust, Ltd., of the seventh part.

Counsel (Mr. Turner) said the agreement was for a compromise, the main features of which were the termination of the Debenture holder's action and the cancellation of an agreement with the Oilfields Finance Corporation. A meeting of the Debenture holders has passed a resolution unanimously approving the scheme. There had been two issues of Debentures—namely, £60,000 of "A" Debentures, secured by a trust deed of which the Oilfields Finance Corporation was the trustee, with power to issue another £20,000 ranking *pari passu*, and £20,000 of "B" Debentures held by the same company. A difficulty had arisen with regard to the company's property in Russia, the titles being open to some question. An action was begun in February, 1916, and a receiver was appointed. Under the present agreement both actions were to be discontinued, the receiver discharged, the interest on the "B" Debentures postponed until all the interest on the "A" Series had been paid, and the Tchengelek Company was to discharge its debts, a sum of money being provided for that purpose.

His Lordship said he could not make the agreement binding, as he was asked to do, on an absent Debenture holder.

Mr. Turner said it would be enough if his Lordship would allow the actions to be stayed on the terms of the agreement.

His Lordship said the Court would approve the agreement, and grant a stay of all further proceedings for the purpose of enabling it to be carried out.

EGYPTIAN NOTE ISSUE.

The return showing the details of the Egyptian Note circulation as at November 30 last has been issued by the London office of the National Bank of Egypt. On the date mentioned the total issue amounted to £22,650,000, compared with £13,300,000 at the end of September. Against this there was held gold to the amount of £6,174,278 and British Treasury Bills for £5,150,722, these totals comparing with £6,300,400 and £349,600 on September 30.

Taken together, these items represent 50 per cent. of the total note issue, the balance being secured by £2,876,250 of Egyptian Treasury Bills, £608,182 of Egyptian Government securities and securities guaranteed by the Egyptian Government, and £7,840,568 of British Treasury Bills and Exchequer Bonds, the last-named comparing with £3,164,690 at the end of September last.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON STREET, Thursday.

Business this week in Egyptian securities has remained in a more or less disorganised condition, owing to the uncertainty still prevailing in certain quarters with regard to the recent Government restrictions on the export of securities, but when the new regulations become thoroughly understood, and it is realised that there is no prohibition whatever respecting the shipment abroad of Egyptian securities bought here with funds remitted from Egypt, business is likely to revive and become normal again. Here and there, although only on a small scale, there have been signs of a certain desire to sell with the view of reinvesting in the new War Loan; and this is likely to continue so long as the lists remain open. Some business has been done in Agriculturals round 5—5 1-16. In Nationals about 100 shares have changed hands at 13½. Anglo-Egyptians have been quieter on sales for a deceased account, and are about ¼ down at 11½. In Alexandria Waters a few shares changed hands at 11 11-16. Markets are firmer at 1 7-32, after some business at 24s. In Salts, the few shares on the market have been taken at 20s. 9d., and sellers are now scarce. Khedivial Mails have been done round 25s., and Union Foncière between 25s. and 25s. 6d.

In Greek securities the demand has continued, and prices remain very firm. Sellers have become rather scarce.

Oil Shares.

Business in oil shares has been on a limited scale all the week, and there have been some declines—in certain cases from advances made since I wrote last.

The news that the Russian Government has raised the price of crude oil did little good to Russian issues, and although on Tuesday Spies flattered holders by a sharp advance, they dropped afterwards, and at the close stood at 14s. 6d. Some business was done in North Caucasians between 26s. and 25s. 4½d.; but Ural Caspians have been neglected. Premier Oil and Pipe Lines were dull at 1s. 7½d.

There is no change to report in Anglo-Egyptian B's and Roumanian Consolidateds. Anglo-Persian preferences, however, have strengthened to 21s.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, February 8.

There has been a sufficient supply of money, although it cannot be said that there has been a super-abundance.

There have been few indications of any increase in the demand for short loans, and there has been no appreciable change in the rates offered by lenders, who have been able to ask and secure 4 per cent. as a minimum.

The discount market has been quiet to hard.

Treasury Bills have come out with greater freedom to be discounted at from 5 per cent. to 4 15-16 per cent.

In the Exchange market Italy fell heavily; but the rouble appreciated in value. Alexandria remains at 97½ piastres.

EGYPTIAN MARKETS.

SUEZ CANAL RECEIPTS.

The traffic receipts of the Suez Canal were as follows on the dates mentioned and as compared with the corresponding dates in 1916:—

	1916. Frs.	1917. Frs.
January 31	150,000	230,000
February 1, 2, 3 and 4 ..	1,270,000	690,000

THE GREEK DEBT.

The Council of Foreign Bondholders issues the following information compiled from figures published by the International Financial Commission at Athens with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to November 30, 1916 (New Style: January 14 to December 13, 1916):—

	Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
Gross Receipts, Nov., 1916	Drachmas. 2,698,816	Drachmas. 1,727,000
Do. do. do 1915	2,718,555	1,671,000
Estimated Receipts for 11 months (Law of Control)	26,491,666	9,803,333
Actual do. do. 1916	32,714,686	24,902,000
Do. do. do 1915	32,885,006	21,786,887
Difference between estimated and actual receipts for 11 months	+ 6,223,020	+ 15,093,666
	+ 6,393,339	+ 11,978,553

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund of the External Gold Loans of 1881 to 1893. The receipts in gold both from Naxos emery and the Piræus Customs are converted into drachmas at par when the average rate of exchange of the month is par or below par, but when the average rate of the month is above par the conversion is made at that average rate.

NOTES OF THE WEEK.

There was an interesting reference to the Rome Conference in the speech delivered by the Chancellor of the Exchequer in Parliament last Monday. He confirmed the statement already made in these columns that the Conference was directly responsible for the stiffening of the Allies' attitude in regard to Greece, and threw some light on the difficulties which had previously hampered the Entente in dealing with the subject. Mr. Bonar Law attributed these difficulties to the fact "that there were so many different Powers trying to deal with the same problem." The admission was an unfortunate one to have to make after more than two years of war; but it is satisfactory to learn that the Conference "came to a definite decision as to the policy to be adopted towards Greece." An Italian journal, using more direct language, has declared that King Constantine owes his retention of the Greek throne to Italy. If there be any truth in the assertion, we must suppose that the Rome Conference was able to register its agreement by means of a compromise; for King Constantine is still on his throne, but the Allied commanders are of opinion that they have prevented their forces in Macedonia from running the risk of being attacked from behind by the Greeks, if an invasion were to take place by the Germans and Bulgarians.

According to information which has reached the Greek National Defence Government, Italy is not alone in wishing to see King Constantine retained on the Greek throne. Her anxiety in this respect—always supposing the statement in the Italian Press is accurate—would seem to be shared by the German Emperor, who is credited with having sent a message to the King of the Hellenes to the effect that Germany is unable to come to Greece's aid against the Allies in Macedonia, and adding: "All I ask of you now is that you shall keep your throne." The message may be apocryphal, but cannot be said to be inherently improbable. It has been clear that the change in King Constantine's attitude has been due in no small measure to the realization that he could not count on any direct assistance from Germany. What is not so clear is the common ground which Italy and Germany are said to occupy in regard to King Constantine's position. As far as the German Emperor is concerned, it is only natural that he should wish to find a friendly régime in Greece after the war. He can imagine no future which does not contain a Germany still striving for the hegemony of the world,

and hoping to base it on the *Mitteuropa* scheme, with Greece as a serviceable buttress. Any tenderness that may be felt in Italy towards King Constantine can only be caused by suspicion that a Venizelist régime will in some way or another be hostile to Italian interests. If such a spectre had been raised in Italy, it has not been established beyond doubt that it was completely exorcised by the Rome Conference.

A subsequent conference within the Grand Alliance has taken place in Petrograd, where a British Mission headed by Lord Milner has been in consultation with the Russian Government and the Russian military and naval authorities. In the course of a speech at a banquet given by the Russo-British Society, Lord Milner made a striking avowal: "As the proceedings have gone on," he said, "I have wondered more and more every day how our great Alliance has progressed so well as it has done, on the whole, without the close consultations for which a conference of this kind affords opportunities. It seems to me to be marvellous that we should have been able to work together so well as we have done without that knowledge of particulars which we are now only for the first time beginning to develop." If the Allied Governments have been so remiss in the past in arranging for common action and concerted plans to bring the war to a successful issue, they will still less have found occasion to decide upon a common policy for the peace settlement and the future after the war. The Rome and Petrograd Conferences are steps in the right direction; but the process may well be carried further. There should be no room for difficulties arising out of the fact lamented by Mr. Bonar Law that so many different Powers have to deal with the same problem. By this time each Power, realizing that its future depends on the solidarity of the Alliance, ought to be able to approach any problem confronting the Alliance from the same point of view as its Allies. The sooner any tendency to plough a separate furrow, as seems to have been the case in regard to Greece, is eradicated the better.

Very little news has reached this country during the past week regarding the situation in Greece. According to the last reports the Allied Ministers were by no means satisfied that the Reservists had delivered up either their arms or even their artillery, and no promise appears to have been given in regard to the raising of the blockade. Bread rations are now in vogue in Athens; but the Allies are not likely to allow the regulations to press too harshly on the poorer classes. It is

not easy to see a way out of the present *impasse*. The Venizelists who remain in the capital are probably too broken after their sufferings or are still too much under the terrorist régime to be able to form a nucleus round which the rest of the population could rally to make its voice heard. The Allies' policy in the past has split Greece into two sections, and it seems to be their plan now to keep those two sections rigorously apart. Such a course spells peace for the moment; but it ignores the interests of Greece, and it leaves the pro-German section established in Athens masters of the situation.

Complaint was made in the House of Commons last Monday that discussion of the Salonika Expedition was being discouraged. What truth there is in the charge is outside our knowledge; but it must be evident to anyone who tries to follow the military situation that there is little room for such a discussion at this stage. The time for the Salonika Expedition was in the early months of the war, when a vigorous diplomacy backed by military support might have brought Bulgaria in on the side of the Allies. A Balkan federation, to which Roumania and Greece would have been parties, might have kept Turkey neutral—again with adequate diplomatic support in Constantinople—and have taken the war on to the Hungarian plain. The course of events has shown that there were too many "ifs" attached to this strategy. When the Salonika Expedition was eventually launched and continued to receive reinforcements, it seemed reasonable to hope that co-operation with the Roumanian army would enable it to reach its natural objective at Sofia. But other views prevailed. Roumania divided her forces and was overrun. There was no longer an attainable objective for an Allied advance in Macedonia. On the other hand, it was imperative that Salonika should be kept out of German hands, and sound military purposes were served, as an Allied army had to be there, in containing the largest possible force of the enemy. Weather conditions have recently led to enforced inactivity, but the mere presence of the troops acted as pressure on the Bulgarians, Austro-Germans, and Turks, and influenced operations in other theatres. The Salonika force may not have realized all the expectations founded upon it, but the Allies have at least prevented the Greek port from being used as a German submarine base, and—the war is not yet over.

Kut is putting up almost as stubborn a defence in its second innings as it did in its first. General Townshend held out from the first week in December until the last day of April; but for the greater part of this period the enemy played for time, relying on starvation to force a surrender, and only occasionally indulging in actual assaults. Nearly two months have elapsed since General Maude launched his attack on the Turkish positions at Kut; with the exception of interruptions aggregating two or three weeks, owing to the weather, the whole of this time has seen the investment pressed home with determination. But the Turks have held their ground, and it has been necessary to clear them line by line from the whole length of their formidable positions on the right bank of the river. During the past week the British troops have worked round the peninsula on which Kut stands, but remain divided from their objective by the waters of the Tigris. It would be supposed that our artillery could long ago have made the town itself untenable. No mention, however, is made in General Maude's reports of any bombardment of the left bank. His present tactics would be justified by a desire to gain time while developments in another direction are maturing.

Organisation and skilful preparations have again achieved a signal success in Egypt, this time on the western front. When the Senussi were driven from the coast regions last year, their main body under Sayed Ahmed established itself in the oasis of Siwa, a point in Egyptian territory 170 miles from the coast. There they were left undisturbed for the time being, but the work of dealing effectually with them was taken in hand and painstakingly carried out. By February 4 it was

possible to advance against the Senussi position. The main body was found in a well-defended position just south of Girba, fifteen miles west of Siwa, and after an engagement lasting the whole day the enemy fled, leaving his camp in flames. His intention was to escape due westward, but he found himself forestalled by a British detachment which had occupied the only pass in that direction available for camels. The leading party of the enemy was ambushed, but the main body, discovering that the pass was held, abandoned the road and made off southward into the waterless desert. There can be little doubt that the power of the Senussi has been finally broken by this defeat. They were stirred up by Turko-German agents, and were encouraged to invade Egypt. The enterprise has ended in disaster, and the next stage, which should entail the elimination of foreign influence and the return of the Senussi to the condition of peaceful neighbours, should be taken in hand without unnecessary delay.

The task of gauging conditions in a country is notoriously difficult. With every intention of judging impartially, the observer is necessarily obliged to generalize on incomplete data. He describes the things he sees, and from these he infers the condition of the people as a whole; but what he sees may be only a thousandth part of what is to be seen, and the remainder, if seen, might well reverse the previous verdict. In spite of such reservations the particulars regarding conditions in Constantinople furnished by a neutral long resident there, who has given the information to a Dutch paper, are of considerable interest. According to this observer, as quoted in *The Times*, "Turkey is half dead." A variety of reasons are given to support the statement. "The population of Constantinople is without coal. What exists has been appropriated for the munition factories, electricity works, the railways, and the navy. . . . If the coal famine becomes complete, pitch darkness will prevail. The coal supply can only be obtained at great danger to life, as the Russians are bombarding Tugul, on the Black Sea coast, whence the coal is obtained. The Russians have totally destroyed the Turkish Fleet, and the merchant fleet is not worth anything. The Bosphorus is wholly shut off." Meat, bread, and sugar cards have been introduced, but what makes for order in Berlin and Vienna creates disorder in Constantinople. The Turkish official is venal and cannot be regulated. Accordingly, stores are despatched to Germany, and the Turkish public remains without.

Side by side with abject poverty we are given a picture of "the fashionable world in Constantinople" as being extraordinarily gay. "The principal street in Pera is filled every afternoon with an elegant throng. The concert halls and picture theatres are packed in the evenings. The very wealthy families who reside there can afford to pay the high prices for provisions. Thus they have no deficiency." Clearly the whole is a superficial sketch, which implies little more than that in Constantinople, like other capitals, the extremes of poverty and wealth are to be found. The neutral observer is on surer ground in his description of the Turkish Fleet and Turkish shipping. German engineers have not hitherto been able to repair the Goeben, and she is still in dock. The Breslau is still afloat, saved in each case by her speed, and, with some torpedo-boats and submarines, serves to modify the previous statement that the Turkish Fleet had been totally destroyed. Only four ships of the Turkish merchant fleet, it is added, remain. In the long run, therefore, if this information be correct, the Russian Black Sea Fleet has disposed of most of the enemy's ships, but further operations are presumably curtailed by the danger of submarines. The part played by our Allies in these waters has not been spectacular, but it has evidently been effective up to a point. As there is still much useful work that they could do, it would seem worth while to introduce into the Black Sea the various devices which have proved and are proving so useful against submarines in other waters.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, January 24.

The High Commissioner.

The High Commissioner had an audience of the Sultan on Thursday morning last. Although his Excellency had been received by his Highness at Assuan, when he passed through on his way down from Khartoum, this was his first official reception; and he was accordingly accompanied by the principal members of his staff, including Sir Milne Cheetham, Mr. Ronald Storrs, and Lieut.-Col. Watson. The audience lasted the unprecedented time of an hour and a-half. In the course of it the Sultan personally presented Sir Reginald Wingate with the insignia of the Grand Cordon of the Mohammed Ali Order, which he had recently conferred on him; and later on Said Zulfikar Pasha, his Highness's Grand Chamberlain, called at the Residency in order to hand to Lady Wingate the First Class of the Al Kemal Order. The same afternoon the Sultan returned the High Commissioner's visit. He was accompanied by Zulfikar Pasha, and Lewa Chehata Pasha and Miralai Kenny Bey, his aides-de-camp, and remained at the Residency over three-quarters of an hour. The unusual length of these "official" visits has aroused much favourable comment in Egyptian circles, where it is regarded as an indication of the excellent relations existing between the Sultan and the High Commissioner, and as of good augury for the future.

The Sultan and his People.

On the occasion of his return to Cairo from his visit to Upper Egypt, the Sultan has addressed a rescript to the Prime Minister, Hussein Rushdi Pasha, in which he expresses his gratification at the warm reception accorded to him by his subjects, and at the evidence that he found everywhere of material and moral progress and of development in education and industries. His Highness concludes by asking the Prime Minister to acquaint the provincial governors, and through them his people, with the intense pleasure which his tour afforded him, and with his determination to continue to do all in his power to promote their welfare.

That the Sultan should be gratified with his experiences on his way back from Assuan is not to be wondered at, for he was accorded at every point a reception such as has not been vouchsafed to any Sovereign in this country for many years past. As mentioned in a previous letter, at the outset his trip was intended to be merely a private one taken for reasons of health, and it was only because he was besieged by requests from the inhabitants of most of the towns on the river bank to afford them an opportunity of presenting to him their loyal salutations that it was decided to allow his tour to become an official one, which eventually developed into a triumphal progress. It is, indeed, a matter of sincere satisfaction to both the Egyptian and the British powers that be to find that the Egyptian nation fully appreciates the excellent prince who now sits on the throne, and who, in the words used by him in his above-mentioned rescript, feels towards his subjects as a father, and, one may add, certainly acts towards them in that character.

The British Red Cross.

A meeting of the local committee of the British Red Cross and Order of St. John was held at the Residency on Saturday last, when Sir Reginald Wingate was elected president and Lady Wingate patroness in the place of Sir Henry and Lady McMahon. Sir Courtauld Thomson, the Chief Commissioner, Sir John Rogers, the Commissioner, and Lady Cheetham, Commandant of the Cairo V.A.D. and chairman of the Committees for Convalescent Outings and of the Empire Nurses' Club, reported on the work done during the past year, and at the conclusion Sir Reginald Wingate addressed the meeting. His Excellency stated that Lady Wingate had been much impressed by what she had already seen, and that she would shortly make a more detailed inspection; and, whilst commenting on the generous "Our Day" contributions made by Egypt, as showing that

the people on the spot fully appreciated the value of the work done, he paid a well-deserved tribute to the manner in which the local organisation is managed, as is evidenced by the fact that the working expenses come to only 5½d. in every pound subscribed locally.

The Turkish Prisoners.

The prisoners from Maghdaba and Rafa have all come up to Cairo, and have by now been distributed between the various camps. The officers have been sent to Sidi Bishr, near Aboukir. The number of prisoners we already held was very considerable, and this substantial addition is a good opportunity for raising again the question of the employment of these "guests" of ours, who are fed and looked after at our expense, and render us no service whatsoever in return. The question of labour has always been a serious factor both here and in the Sudan, whenever any public works of any importance have been under consideration; and to-day when there is so much talk of the necessity for Egypt to extend her cultivation to the utmost, and when the war is daily making a greater call on local labour, it really seems absurd that we should not avail ourselves of the supply that lies to our hand in these prisoners, who are mostly drawn from the labourer and farmer class, and who for their part would certainly not demur at this opportunity of earning a little pocket-money. These prisoners need not be sent to the Sudan, where as a matter of fact there is a call for labour; nor need they be used in any way directly connected with military operations in Egypt. It should, however, certainly be possible to devise some judicious combination whereby they could be employed in some way so as to help solve the problem which is being created by the ever-growing requirements of the auxiliary services of the Egyptian Expeditionary Force, and by the encroachment which, it is to be feared, the meeting of these requirements will make on the supply available for agriculture and for the ordinary routine of the Public Works and other labour-employing enterprises. Apart from these very weighty considerations, there is a good deal of spade work that could be done in connection with the various projects which have been hung up by the war, but which will certainly be resumed or embarked upon as soon as peace is declared, and some of our prisoners could certainly be used in this connection. It is safe to say that any other nation would in such circumstances have turned to account the extra labour supply that had become available, and would have made the fullest use of its prisoners instead of allowing them, as we are doing, to live a life of idleness, to which they have never been accustomed.

CAIRO, January 30.

Indisposition of the Sultan.

The hopes that were entertained that the Sultan's trip up-river would have completely restored him to health have not been realised. On Thursday last a *communiqué* was issued by the Palace to the effect that the fever from which his Highness had suffered last autumn had recurred, and that his doctors had ordered him complete rest for some time. This *communiqué* was issued after a consultation had been held between Lieut.-Colonel L. L. P. Phillips, the Sultan's personal physician, and Drs. Legrand, Mohammed Bey Talaat, Velassopoulos, and Brossard, and in consequence of the decision taken by them the banquet in honour of the new High Commissioner, which was to have been held the following evening, had to be countermanded, and all the Palace engagements have had to be postponed indefinitely. His Highness underwent a slight surgical operation yesterday to relieve some local pain, and is reported to be progressing favourably to-day.

It is not known how long the Sultan's enforced rest will last, but his medical attendants may be relied upon this time to see that no risks are run. There is no doubt that his Highness made a great mistake in not adhering to his original intention of merely making a pleasure trip in Upper Egypt. Having just recovered from a bad attack of fever, he was not in a fit state of health for the ceremonies and *fantasia* that are necessarily attendant on an official tour; and by holding, on

his way down from Assuan, all the receptions, which he was persuaded to do by the local authorities and notables, he undoubtedly overtaxed his strength. The news of the Sultan's ill-health, whilst in certain circles it came, in the circumstances, as no surprise, has aroused widespread sympathy, and the number of callers at Abdin Palace since the publication of the *communiqué* has been considerable.

The Sinai.

For the time being there is a lull on our eastern frontier, and Cairo is full of officers and men who have been granted short leave. I understand, however, that the E.E.F. will soon be active again, and that it will not be long before important news is received from that part of the world. In the meanwhile, no time is being lost in getting the civil administration going once more, at any rate in El Arish, and the military authorities have requested the various administrations interested to appoint the necessary officials to the posts which their nominees had held up to our evacuation of the town in October, 1914. In this connection the local Press very rightly draws attention to the fact that these officials are amongst the few people whom this war has really benefited, for whereas it took their predecessors several days on camel-back to reach El Arish from the Canal, to-day, thanks to the railway, they can cover the distance in about eight hours. Indeed, I understand that, if the railway authorities liked to arrange connections, one could now leave Cairo in the morning and arrive at El Arish the same evening; and I should not be at all surprised if, as soon as the war is over and the Canal and the Sinai are declared to be no longer a military zone, Cook or some equally enterprising agents start advertised day-trips from Port Said to the historic spots in the Sinai, where the "great invasion of Egypt" was hurled back! Romani, Toussoun, Serapeum, Katia, El Arish, Rafa, and even beyond, are sure to attract our cousins from across the hemming-pond, and they will find throughout the area ample war souvenirs to satisfy even their thirst for trophies.

A Police Sensation.

In my letter published on November 17 last I announced that somewhat of a sensation had been created by the suspension of a high Egyptian police official. At the time it was not permissible to refer more explicitly to this matter; but to-day there is no longer any need for reticence. The official in question is George Philippides Bey, Chief of the Cairo Secret Police, through whose hands have passed all the political inquiries of late years, and who had in the course of the intricate and delicate work that fell to him gained for himself a great reputation as an intelligent, able, and hard-working official. He is accused of having taken bribes for the advancement of police officials and in connection with other matters, and was at first suspended, while the administrative inquiry was in progress at the Cairo Governorate. The papers have since been handed over to the Parquet (Public Prosecutor's Office), where a judicial inquiry is being conducted. Last week Philippides Bey and his assistant were arrested; the latter has since been set free, having, it is understood, confessed and turned "King's evidence." The inquiry is being followed with the greatest interest out here. It appears certain that whichever way this case goes there will be some important changes in the personnel of the Cairo City Police in the very near future.

The National Mission.

The Dean of Rochester and the Rev. E. A. Burroughs have arrived, and have already started work in connection with the National Mission of Repentance and Hope, for which they are acting as the Messengers of the Archbishop of Canterbury in Egypt, the Sudan, and Cyprus. Very quiet but earnest preparation has been made by the local clergy for this Mission, and between the middle of November last and the arrival of the Messengers special meetings have been held by the Bishop in Jerusalem, and the Cairo clergy have been visiting as his messengers all the towns where there are any British residents, in order to explain what this Mission really is. It has been arranged that Dean

Storrs shall visit Suez, Mansurah, Alexandria, and Cairo, and Mr. Burroughs, Zagazig, Ramleh Tantah, Damanhur, and Cairo up to February 12, on which date one of the messengers will proceed to the Sudan and the other to Cyprus. On their return further visits will be arranged for Port Said, Assiut, and Ismailia.

RELIEF FOR SYRIA.

(FROM A CORRESPONDENT.)

CAIRO, January 31.

The s.s. *Cæsar*, laden with foodstuffs, clothing, and medical requisites for the victims of the famine in Syria, arrived at Alexandria on the 24th inst. The U.S. Consulate at Alexandria is awaiting further instructions from Washington before allowing the ship to proceed to Beyrout, and it is thought that over a fortnight may yet elapse before these instructions are received. The ship is still lying in Alexandria harbour. This most regrettable delay can only be occasioned by difficulties created by the Ottoman Government, especially as the American Red Cross had already clearly intimated that this work of charity shall not be hampered by any so-called collaboration of the Ottoman Red Crescent. The ship's cargo, of about 8,000 tons, consists of 75 per cent. of flour, 10 per cent. of *burghul* (crushed wheat), and the remainder of kidney-beans, rice, tinned butter, oils, salt, matches, and clothing, including shoes—a most useful and thoughtful selection.

Why the direct voyage should have taken so long it is difficult to explain. The ship—which should not be liable to search—left New York on December 16. The Arabic papers of New York published touching accounts of the farewell ceremony, which was presided over by the well-known millionaire and philanthropist, Mr. Cleveland Dodge, President of the New York branch of the American Red Cross, and attended by Mr. Oscar Strauss, Mr. Henry Morgenthau, ex-American Ambassador at Constantinople, and deputations of the American Relief Committee for Syrians and Armenians, and of the Syrian Relief Committee at New York, as well as a representative body of Syrian clergy and notables. Mr. Dodge's speech moved his hearers to tears. "I have," he said in the course of it, "a son and grandsons in Beyrout, and my heart is filled with anxious thoughts about their welfare; but it throbs with gratefulness at the thought of the joy that the sight of the American flag flying over an American ship in Beyrout harbour, after a period of eighteen months, will create in their hearts, and those of all Americans there. . . . It is with great satisfaction that I now announce to you that the American Committee of relief in aid of Syrians and Armenians sent them, last week, not less than \$400,000, with a view to alleviate their suffering and pain." At the end of the speech some Syrian ladies sang a farewell to the ship; other speeches followed; and, finally, a message was read from President Wilson wishing the vessel God-speed.

Dr. Dodge, in his speech, refers to his son, who married, a few years ago, one of the daughters of Dr. Howard Bliss, the President of the American College, and who went out to Syria to act as Secretary to the fine institution which was founded, through the munificence of his father, to perpetuate the memory of the late Professor Robert West, one of the most valued workers in the S.P.C. This building, known as Robert West Hall, is destined as a sort of recreation club for the students, and boarding house for ex-graduates passing through Beyrout, while its large halls lend themselves admirably to Y.M.C.A. meetings and other public functions.

One of the Arabic papers of New York makes the useful suggestion, in connection with the second relief ship, that, instead of flour and *burghul*, wheat should be sent, inasmuch as the cost would thereby be reduced, while, on the other hand, the grinding and crushing of wheat in Syria may be done at hardly any cost, since the many water-mills there, which the war and the destructive hand of the Turk could not affect, can still be worked.

A most satisfactory item of news published by the Board of Foreign Missions of the Presbyterian Church in the U.S.A. is to the effect that the sums remitted by Syrian emigrants, including Lebanese, to their people at home, since the beginning of the war, amount to \$1,750,988. This, added to sums sent through other channels, brings the total to over \$2,000,000.

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, January 29.

Official Changes.

A considerable number of changes are being made in the personnel of the Government. Various minor officials have been transferred to different posts in the Judicial Department; also in the offices of the Receiver-General, the Director of Agriculture, the Commissioners, the Police, the Prison, and the Post Office.

The chief Secretary to Government, Captain Orr, whose leave expires early in February, will not return to Cyprus. His successor has not yet been appointed, and Mr. Fenn continues to act. As regards the vacant Commissionerships of Larnaca and Papho, it is considered unlikely that they will be filled before the end of the war. The district judges, who are doing double work, have an arduous task.

The Government has notified that a war bonus will be given to all officials in receipt of salaries of £250 a year and under, viz., £1 a month to married, and 10s. to unmarried. This, though a small increase, may be regarded as liberal in the unparalleled circumstances of the present war, and has caused much gratification.

The Food Supply.

There is a considerable scarcity of food in all markets. The long and comprehensive tariff which came into force on January 1 is subject to changes from time to time. The Provost-Marshal at Nicosia has already altered the list in several respects. Strange to say, mutton, which was sold at a moderate price, is difficult to obtain, while beef, which was hardly obtainable, owing to a local custom of long standing, for many years after the Occupation, and only very gradually came into use, is now offered in considerable quantities. The season for the slaughtering of lambs is approaching, and when these—of which there is always an abundance—come into the markets, meat will be more plentiful, especially as their exportation is prohibited. By a recent proclamation of the High Commissioner, the export, under any circumstances, is now forbidden of oxen, cows, calves, meat of all kinds, macaroni, and olive oil. There have been various prosecutions under Martial Law; both Greeks and Turks having been fined by the Provost-Marshals of different districts for refusing to sell meat, for defying tariff rates, and for offences against the regulations relating to the export of potatoes, etc.

General News.

The merchants of Kyrenia, having offered the Government carobs at £4 18s. the ton, f.o.b., the officer who is in charge of negotiations has replied that he considers £4 15s. at Nicosia a fair price. The merchants hold out for a higher price on account of alleged difficulty in transport.

The Abbot of Kykkou Monastery, Kleopas, has attention mainly to ecclesiastical matters, is also interesting himself much in education. He has given his patronage, and pecuniary assistance, to the "Cyprus Library," which now contains about 800 volumes.

The Abbot of Kykkou Monastery, Kleopas, has announced that he will under no circumstances accept the vacant Bishopric of Kyrenia, the election to which is approaching. The monastery is the principal institution of the kind in Cyprus, and is much visited annually, not only by Cypriots, but also by pilgrims from other countries.

A message from Sofia reports that a few days ago a fairly strong earthquake shock was felt at Cupria, Despotovatz, Svilainatz, and other localities in the Morava Valley in Serbia. No damage was done.

Count Elemer Lonyay von Nagy-Lonya has been made a prince. He is the husband of Princess Stephanie of Belgium, who was the widow of the Archduke Rudolph, the heir to the Austrian and Hungarian thrones.

YOUNG TURK AND ARAB.

IN IRAK AND SYRIA.

(FROM A CORRESPONDENT.)

The blood-red trail of treachery runs through the whole of the Turk's history. The fatal cup of coffee and the mysterious bundles that fed the fishes of the Bosphorus—grim facts that seem like fiction in their tragic horror—will always be associated with his savage rule. During the recent massacres in Armenia, wherever there was any fear of opposition the Turkish Governors used to invite the notables to meet them, on the pretext of taking friendly counsel together, and once the confiding victims came within their reach they were done away with in cold blood. Jemal Pasha's achievements in Syria are familiar to your readers.

Recent reports from El Irak show that Akif Bey has there diligently carried on the infamous work. Arriving with his troops near Hillah—the town that lies amidst the ruins of ancient Babylon—this commander sent an invitation to the notables to come and see him in his camp. He desired, he said, to discuss with them certain matters connected with the passage of the troops through the town and their provisioning, as well as the protection of the inhabitants, and the maintenance of order. Hardly, however, had the notables entered his tent when he ordered their arrest, and let loose his troops on the town. Eight of the notables were hanged, and their leader, Es Sayed Ahmed el Qazwini, was clapped into jail, while the town was pillaged and part of it destroyed.

The treachery of the Young Turk is equalled by the impudence of his lying and deceit. A deputation of Syrians, among whom were some representatives of the Press, went—or, rather, were made to go—to Constantinople, to testify to their "loyalty" to the Government and their "admiration" of the heroic defence made by the Turkish troops at Gallipoli and in Mesopotamia. This was, of course, a piece of Unionist "window-dressing"; but the delegates, having before them the alternative of going to the capital or to the gallows, naturally preferred the former. The Unionists, then, to return the compliment, sent a deputation to Syria to proclaim how deeply are the Arabs attached to them, and how Syria has distinguished itself by its loyalty. This deputation left on October 28, and visited Damascus, Beyrout, and Beersheba, and was to visit other parts of Syria. Its members consisted of Unionists of the worst type and of a few German Pressmen.

The Constantinople papers indulged in glowing accounts of this "moral tour," as the Turks called it, and of the cordial welcome accorded by the people to the deputation, as well as of the patriotic speeches exchanged on every possible occasion. After offering them a sumptuous banquet at Damascus, Jemal Pasha accompanied the members to Beyrout, to attend a tea party given in their honour by the Mufti. On that occasion the Commander of the 4th Army Corps made a speech, which was published in the French papers of Constantinople, and of which the following passages are characteristic:—

Those who have helped foreign intrigue in Syria are few, and may be divided into three categories: (1) those who invited foreign intervention in obedience to their mean ambitions and evil aims; (2) those who joined this first category in blind obedience; (3) those who absolutely refused to adhere to these aims, and opposed by force foreign intervention as being hurtful to interests of the country.

The orator concluded his speech with the following words:—

The Beyroulines especially, and the Syrians generally, are indisputably loyal and faithful to Ottoman union, and to the Islamic Khalifate. Their hearts are made of gold, and are adorned with the finest qualities. There can be no manner of doubt about their feelings.

Were it not for its revolting deceit and impudence this speech of the arch-assassin might be qualified as humorous.

THE CALLOUS TEUTON.

RECOLLECTIONS OF PALESTINE.

By Estelle Blyth.

On January 31, the *Star* published some horrifying details from Copenhagen concerning the exploits of the German raider *Moewë*. On December 6 the *Moewë* sank the Canadian Pacific Railway liner *Mount Temple*, on board of which were 750 horses. Having transferred the crew to its own decks, the raider sank the *Mount Temple* by bombs; the horses were flung into the ice-cold water, struggling, and uttering those terribly human cries of fear and pain which horses do utter when in distress. On December 10 the *White Star* liner *Georgic* was blown up by bombs. She carried 1,200 horses. "Hundreds of horses swimming towards the *Moewë* made desperate efforts to clamber on board, but the German sailors standing with loaded revolvers killed them as they reached the ship." We can only hope that they did *kill* them. The horror of the scene can be easily imagined, and does not bear dwelling on, but it has a stern significance for us in that it discloses yet another aspect of German callousness and cold-blooded cruelty. Perhaps we thought we had little to learn in this respect after two years of warfare.

The incident has reminded me, as it will surely remind many who have lived in Jerusalem, of German cruelty, or at best indifference, to animals, as we saw it in Palestine. I will begin with the Kaiser's visit in 1893. He came in October (May and October are our two bad sirocco months), and it was the worst October we had known for years. He rode through the country from Haifa to Jerusalem in the fiercest sirocco, and he lost no time. The little Syrian horses, which are always game to the very end no matter how greatly neglected or ill-treated, gave out under the unusual strain, and dropped by the way. Many a horse (it is said seventy) gave out in this way, and was hastily replaced, so as to cause no appreciable delay to the Imperial Juggernaut.

It was a young German prince, heir to one of the chief reigning dukes (I withhold his name, for he is now dead), who had the gay thought to make the return journey from Jericho to Jerusalem in record time. Jericho is between 800 and 900 ft. below the sea-level, and Jerusalem some 2,600 ft. above; the road is rough and winding, seldom repaired, and rises in sharp angles which make it necessary to proceed at a foot pace. Most travellers get out and walk up these bad bits, to ease the carriage-horses. The German prince had horses posted at intervals along the road; as one dropped dead or dying, he took another; the last horse fell under him just outside the Damascus Gate; later on, some merciful hand shot it. His suite boasted that he had done in under two hours a journey that we allow from four and a-half to five hours for. Truly a record!

About four years ago the German doctors started vivisection on a large scale; it was eagerly taken up by the Syrian doctors, who are often both keen and able at their work; the experiments were carried out at the house of one of the German practitioners. Naturally, here I must speak as an outsider, but it was one who was present who said that the proceedings were very scientific but exceedingly callous. The question of vivisection does not enter into the argument at all; but I think it will be generally conceded that to promote it broadcast in a place where animals have no rights and no protection, where ownerless dogs can be picked up any day for the bare trouble of getting them for use under no sense of restriction—surely to have done this is to have

brought in great and additional suffering where already animals suffered too much. The German doctors no doubt were skilful; the native ones, Syrian and Jewish, certainly were only beginners.

After the New Constitution of 1908, a branch of the S.P.C.A. was started at Jerusalem. It did really good work, under many disabilities. We had a hospital, picturesquely situated over the so-called Lower Pool of Gihon, and some of the Turkish officials were both keen and helpful members of the society. There was a committee composed of members of various nationalities, and the German member was no good at all. It may have been laziness that took him down a side street to avoid having to interfere in a flagrant case of cruelty to a donkey, near the Grand New Hotel; it may have been ignorance that made him ride his own donkey on one of the horrible native bits; it may have been pressure of other work that prevented his taking up cases that were reported to him—or it may have been only German callousness. The result was the same. There was one very bad case of cruelty to a donkey by a German subject which was reported (not by the German member) to the offender's Consulate, not once or twice; but the German Consulate absolutely refused to allow action to be taken by the S.P.C.A., and in the end the case had to be dropped, as official indifference threatened to turn into active animosity.

All these things were done in the green tree. We have seen what has been done in the dry. It is the same spirit, only extended in scope, that has made fighting Germany able to sink the *Lusitania*, to ravage Belgium and Poland, to murder Nurse Cavell, to ill-treat the prisoners, to sink hospital ships; while civilian Germany applauds each successive feat. And we, whose generation has seen the unmasked horror that is the real Germany, can only feel that not by us can the hand of *fellowship* ever again be extended to a people so terribly stained.

THE GREEK RESERVISTS.

In a message, dated February 8, Reuter's Athens correspondent reports:—The papers deal at length with the firm attitude adopted by Sir Francis Eliot and Prince Demidoff, the British and Russian Ministers respectively, at the last conferences with the Premier, particularly regarding the disarmament of the Reservists, which, the Government says, has long since been carried out, while the military control maintains that the Reservists still possess both artillery and other arms. The Allies attach the utmost importance to the Reservists question, which constitutes a stumbling-block to the raising of the blockade. The French Admiral has even rescinded the order for the delivery of the detained mail bags to the postal administration.

Seven Montenegrins who have escaped from Germany are now on their way to Salonika, via Paris.

On the occasion of the anniversary of the transfer of the Serbian Army to Corfu, after the great retreat, the official Serbian journal paid a grateful tribute to the assistance rendered to Serbia by the Allies.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galissani, 24 Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepherd's Hotel; The British Library, Shari' el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nassimalli and Company, 2, Rue Sossatri; Librairie Calabert, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cabala and Wilson, Nicosia.

SALONIKA. Librairie Franaise, Rue Sabri Pasha.

ATHENS. Librairie Th. Vafas.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

RULE OF TERROR IN SERBIA.

The Royal Serbian Legation in London makes the following announcement:—

From information which has reached the Serbian Government in Corfu through various channels, concerning the conditions prevailing in the Serbian provinces occupied by the enemy, as well as from numerous admissions made even in the *Beogradske Novine*, the official organ of the Austro-Hungarian administration in Serbia, it transpires that a rule of terror equal to that in the regions under Bulgaria prevails increasingly in those parts of Serbia which are under Austria-Hungary. The seemingly correct behaviour of the military authorities at the beginning of the occupation was simply designed to impress foreigners, especially neutral countries. No sooner had Austria-Hungary dismissed the foreign medical missions from the country and closed it to foreign travelers than she revealed her true attitude and intention towards the Serbs, adopting to the full those principles which the Bulgarians have frankly professed from the very first, viz., the elimination of the Serbian element, and the terrorising of the population by the removal of all the leading men in the country.

In pursuit of this object, the Austro-Hungarian authorities have resorted not only to the deportation and internment of Serbian men, women, and even children (from fifty to sixty thousand in all, so far) in Austria and Hungary, but to a system of most rigorous penalties, in most cases that of death on the gallows. Whereas the Bulgarian Government in Sofia considers it necessary for the National Sobranje to pass a special Bill "against brigandage" (see the Sofia paper, *Zarja*, of December 16, 1916), so as to give a judicial colouring to wholesale executions of Serbian citizens in the regions occupied by the Bulgarian authorities in Macedonia, Old Serbia, and the Morava region—in the territory occupied by the Austro-Hungarian authorities such judicial murders are carried out simply in accordance with a list in which certain anticipated "crimes" entail the death penalty, which list has been drawn up by the Military Commander-in-Chief, the Archduke Frederick. This list of crimes grows longer from day to day, and includes an ever-increasing number of offences which are punishable with death. From the official intimations of the *Beogradske Novine*, the penalty of death on the gallows is provided, apart from the usual offences "against the military powers":—

1. For persons in whose possession are found arms, munitions, or explosives.

2. For persons who, in any way (by giving food, shelter, clothing, etc.) assist prisoners to escape. (Order of the Military Commander-in-Chief, February 28, and October 27, 1916, see *Beogradske Novine*, No. 255, October 27, 1916.)

These regulations are to an incredible extent distorted and abused to suit the desires and requirements of the military authorities. Thus, e.g., the *Beogradske Novine* frequently reports cases in which several persons, often even women, have been hanged because the authorities found "rifle bullets" in their houses, or because "buried arms and explosives" were discovered in their fields and pastures, in some cases, solely the barrels of guns, and shrapnel, of which the accused could not have made any use whatsoever. The complete innocence of these poor victims is beyond all doubt, because it was impossible for them to know whether a few bullets had or had not been forgotten or concealed on their premises by some member of their family at the time of the retreat of the Serbian Army. Likewise (seeing that at the time of the military operations they were absent from their homes and grounds) they could have no knowledge of it, if individual officers or men, or even entire units, had at the time of the retreat buried arms or munitions in their orchards, pasture or woods, because they could not convey them further owing to lack of transport, or the bad condition of the roads.

As regards the sheltering of prisoners, in most cases a common denunciation is considered sufficient proof.

Moreover, the Serbian Government possesses reliable proof of the fact that the Austro-Hungarian military authorities frequently inflict the penalty of death for the following, besides the aforesaid, "crimes":—

1. For wearing Austrian, German, or Bulgarian uniforms. Here we must mention that the enemy soldiers themselves frequently trade sundry articles, chiefly underclothing, trousers and boots, to the natives for money or drink (as may be seen from the admissions in the *Beogradske Novine*).

2. For having more food in the house than is permitted by the regulations.

3. For retaining copper utensils after a second intimation to give them up.

4. Upon persons conveying letters other than their own. Here it is necessary to state that neither the Austro-Hungarian, nor the Bulgarian authorities permit postal intercourse between the native inhabitants in the respective Serbian territories under their administration.

Beside the aforesaid "crimes" and "offences," for which the death penalty is provided, it is inflicted in countless other cases, and, most often, wrongfully; and under the provision for anticipated prohibited actions, it affects cases which are not at all related to the aforesaid offences.

There have recently been numerous cases in which the Austrians have hanged individual citizens because they neither could nor would indicate the places where the Serbian authorities or fugitives had hidden (usually buried) various objects, in most cases State archives.

Thus the Serbian Government possesses authentic information of the fact that Mr. Sibin Yelatchitch, a wealthy merchant, was hanged in the market town of Brus for refusing to reveal the spot

where certain private property of H.R.H. the Crown Prince Alexander had been deposited.

As merely one, but a very eloquent, proof convicting the Austro-Hungarian authorities in Serbia of the perpetration of atrocities, the Serbian Legation retains for the inspection of persons or institutions desirous of convincing themselves the reproduction of a photograph received by the Serbian Government in Corfu from the Serbian Army Headquarters in Salonika. The original photograph, which is one of the most gruesome documents of the war, was found on a German officer, who was killed on the Monastir front. It represents a sextuple execution of Serbian citizens in the presence of officers and men of the Austro-Hungarian Army. To render the deed even more revolting, a gipsy was employed to act as hangman, the execution being public. The German officer for his amusement photographed the whole scene.

The members of the Serbian Parliament for the County of Krushevatz, who are at present in Corfu, identified three of the victims as well as the locality where the execution took place. The photograph shows a spot near the railway station at Krushevatz. The victims were highly-respected, honest and well-to-do peasants from the village of Lazaritz in the neighbourhood of Krushevatz, and one of them (the second in order from the right) is Mihaylo, the Mayor of the village of Lazaritz before the Austro-Hungarian invasion. Having regard to the blameless reputation and prosperous circumstances of these men, it is out of the question that they should have been hanged for some common crimes such as theft or murder; the reason for their execution must have been political. By public executions, and by exposing the dead bodies, Austria-Hungary is endeavouring to intimidate the nation, and by the removal of its best and most prominent men she is trying to deprive it of all its natural leaders and advisers.

THE ARMENT DOG.

(BY AN ANGLO-EGYPTIAN.)

Most countries have some special breed of dog associated with them, and specimens of most, if not of all, these breeds have found a home and a welcome in the British Isles; and, in spite of the fact that the Briton pays for the privilege of keeping a dog, the official recognition gives the animal a definite status, not as the friend of man alone, but also as a revenue earner.

China has contributed the Pekingese spaniel, the chow, and the lesser-known and somewhat bizarre Chinese snake-killer. There are also the Thibetan hound, the Siberian wolfhound, the Newfoundland, the St. Bernard, the Esquimo dog, the Bruxelles griffon, and the tiny Maltese terrier, all representing different countries; whilst the Borzoi, or Russian wolfhound, which Queen Alexandra and the Duchess of Newcastle have done so much to popularise in England, have long since become established favourites. The dogs of the Maremma and of Calabria and others too numerous to mention, all have their supporters. Almost every agricultural show in the United Kingdom has classes for dogs. The Battersea Home for Lost Dogs, the Canine Defence League, and the Anti-Vivisection Society all uphold the interests of the dog, and those who have read Miss Elizabeth Lee's memoir of "Ouida" will know what an individual can accomplish on behalf of her canine favourites.

In Eastern countries, unfortunately, the dog is held in light esteem, which is difficult to account for, especially in a stock-raising country such as Egypt, where a trained dog could often be of great assistance to the herdsman and also to the farmer living in isolated districts, as a protection from thieves. In Great Britain it is recognised that nothing is so disconcerting to the would-be burglar as the existence of a dog on premises upon which he has cast a covetous eye. Perhaps it is this Eastern indifference to canine merit in general that accounts for the neglect of the Arment species, which is threatened with extinction unless an effort be made towards its preservation. This breed is not indigenous to Egypt, it is true, and, while its origin cannot definitely be determined, it seems more than probable that its forbears were Pyrenean sheepdogs brought over by Napoleon when he landed in Egypt in 1798. This theory alone should bespeak for the Arment the interest of French residents in Egypt. Napoleon's expeditionary force is known to have comprised a numerous body of savants, naturalists, geographers, and other scientific men, but whether the dogs accompanied the troops as "mascottes," or the naturalists with a view to acclimatisation, it is at this date impossible to say. At Edfu, in 1906, the writer was introduced to a venerable native, who, on account of his age and the tradition that he had witnessed the visit of Napoleon's troops to Upper Egypt, was somewhat of a local celebrity. Whilst able to answer general questions intelligently enough, the ancient was unable to do anything towards establishing the origin of the Arment on a sounder basis. A careful comparison of an Arment dog with modern specimens of its reputed progenitors should do much to elucidate the mystery, and this the writer hopes to be able to accomplish at no very distant date.

A well-bred Arment is a truly noble specimen of the canine race, and would constitute an attractive feature of any dog show in Great Britain or Europe. They breed

fairly true to type as regards contour and general characteristics, though varying considerably in colour. But, in searching for a British breed with which to compare them, the writer is at a loss, owing to their strong individuality. The coat is extremely fine in texture and about 2½ inches in length, the chest narrow, the front legs (or forearms, in fanciers' parlance) straight as gun-barrels; the hind-quarters possess immense spring and power. There is a fine breadth of skull between the eyes. The ears are of the hound type, carried drooping; the eyes small, keen, and somewhat deep-set. In size they are about that of a greyhound, but there the comparison ends. A set of measurements which the writer took some years ago of a typical dog are unfortunately not available for reference.

True Arment puppies are usually absolutely clean indoors from the age of a month. A characteristic revealing their sheepdog ancestry is the habit they have, when taken for a run, of continually encircling their owner, as though for protection. The chief fault alleged against the Arment, which, unfortunately, is not devoid of foundation, is that, as he matures, he is apt to become somewhat uncertain in temper. Careful feeding, however, and the absence of undue restraint, should do much to mellow his crusty disposition, and in a cooler climate this trait might be kept within useful bounds. In certain circumstances this truculence might be accounted to him for a virtue, for he is at his best when guarding property from the would-be marauder. During the past summer, moreover, the writer has observed two fully-grown dogs accompanying European nursemaids and their charges in suburban Alexandria, which is a strong testimony in their favour.

It does not transpire that there are any recognised breeders of these dogs, but two fine specimens which passed through the writer's hands some years ago were bred by an Egyptian notable of Arment, the village whence they derive their name. They are not sold to Europeans, for, with true native generosity, the Egyptian will only *present* them; and thus they do not appear to have any intrinsic value as yet. One of the two specimens given to the writer was a black dog puppy, obtained on behalf of a friend interested in the breed. During a temporary stay in a Luxor hotel in the tourist season the little animal found many friends. He was a born watchdog, and guarded his owner's allotted bedroom with vigilance and vigour. After his companionship during a three weeks' tour it went sadly against the grain to have to part with him at a certain stage of the down-river journey. Twelve months later he had grown into a magnificent dog, but when his new owner had had him for about three years he failed to discriminate after dark between the labourers who worked on the premises and those who were not entitled to access, and, as a result, he had to be disposed of.

It is to be hoped that some influential Egyptian will form a kennel of these dogs and induce others to interest themselves in the breed, thus rescuing it from threatened oblivion. In future the wealthy Egyptian is likely to visit the British Isles in increasing numbers, and should he desire to make a present to anyone who may have had the pleasure of entertaining him there, a couple of these magnificent animals would constitute a truly princely gift when bestowed in a country of dog-lovers.

Reuter's Washington correspondent reports (February 14):—The State Department has again asked the United States Ambassador at Constantinople, Mr. Elkus, to explain why he has not been able to report about the Americans who have been detained in Asia Minor. Since the breaking off of diplomatic relations with Germany so far not a word has been allowed to reach the United States from Constantinople or from Sofia.

TANGIER TO TEHERAN.

Egyptian papers lately received report that Omdurman has been suffering, though not, apparently, very seriously, from a "witch" scare. The rumour ran round the city that one of its inhabitants possesses uncanny powers, and that she subsists entirely upon the flesh of children. The natural results followed. A lot of harmless old grannies gave, quite unintentionally, some of their fellow-citizens a bad fright, merely by walking about the streets; and in one case at least, a poor old soul was pelted by the rabble. It is, perhaps, unnecessary to add that the parents seem to have been as badly alarmed by the "witches" as their children; but I expect that by this time Omdurman has got over its "nerves" and is feeling rather ashamed of itself. It is, however, very interesting to note how this witchcraft cry persists in cropping up, now here, now there, and often in most unexpected places. As a rule, I think, a town or city offers less favourable soil for the growth of such weeds of superstition than does the country or the tiny village. But Omdurman is not by any means alone in this respect. Some years ago in one of our largest seaports I saw a poor old woman being mobbed by a lot of children, who were shouting after her, "Witch, witch!" And I was told by a local man that in the particular suburb in which she lived this poor, eccentric old maid was quite seriously regarded as "a witch" by many people.

Generally, however, the town or city, while it lends itself only too well to "fortune-telling," "palmistry," "crystal-gazing," and so forth, is too wise or too civilized to take any serious interest in "witches" of the old broomstick-and-puff-of-sulphur type. But in the country, whether of the East or of the West, the belief in the evil eye and a heap of other "supernatural" powers is very widespread. For instance, the old method of bringing misfortune upon an enemy by getting a "witch" to make an image of him (or her), and subsequently thrusting pins—sometimes poisoned—into this image is almost certainly followed to-day in various parts of these islands; and in a little village on the edge of the Egyptian desert I came upon a woman of the *fellaheen* who, I am practically sure, was practising the same rites. I came round the corner of a wall suddenly, and saw her, very gravely, but very meaningfully, thrusting a stout splinter into the head of a mud puppet. Then she caught sight of me, whisked her "doll" into the bosom of her dress, and bolted like a frightened rabbit. But if she was not practising the black art I should, indeed, be surprised. She was not a bad-looking young woman, but her expression was as unpleasant as it could be, both before and after she became aware of my presence.

In the main, I take it, the supply of "witches" depends upon the demand, in just the same way as does the supply of crystal-gazers and other quacks. We have only too good reason to know to what lengths some of the charlatans who set themselves to supply the demand will go. I hardly know whether it is more comforting or more humiliating to reflect that the "soothsayer," the vendor of "charms," and the rest of the quacks worked the same old dodges centuries and centuries ago, as Mr. Offord reminded us in his *Archæological Notes* last week. And that, by the way, is one of the drawbacks to the following of *Archæology*—it makes you wonder whether there really is any new thing under the sun! If ever you have been present at excavations of an old city or temple, or even a cemetery, and have watched the bringing to light of "all the modern conveniences" in their primitive form, you will know what I mean. The feeling comes over you that, after all, life four or five thousand years ago was amazingly like life to-day; and in some respects, at least, it must have been far happier.

Apropos of my reference last week to the "Angels' Rest," I am reminded that Baghdad actually boasted *two* "Angels' Rests." Both, of course, were bachelor establishments. In my time, I lived in both of them; but candour compels me to add that this fact had nothing to do with their securing their titles, so to say. Probably both buildings have been demolished by now; for Nazim Pasha and one of his successors were very keen on "improving" the city, and, I gather, new roads have been driven through its length with small regard to historic (!) buildings. Probably even the old, original British Club, known irreverently as "The Pig and Whistle," has shared a similar fate. Its glory vanished long ago, of course, when the new club was started; but it used to be a joyous spot in its palmy days, and old Shemmo, the steward, billiard-marker, and general "boss," was a Baghdad character whom every English visitor met sooner or later. He was a fine old fellow, full of pluck and strange expressions, and if he has not managed to make his way down "somewhere behind our lines" and there to render himself indispensable to our fighting men, I shall be surprised.

NEAR EAST BOOKSHELF.

FROM SUVLA*.

If the Gallipoli campaign were noteworthy for nothing else, it must assuredly lay claim to the attention of posterity from the many and varied tales and experiences which, even now, find favour among publishers, and, it is to be hoped for the sake of the authors, among the public. Mr. Hargrave is one of many who found among the shell-swept hills of the Peninsula the inspiration to write, and he has succeeded in giving us a very fair impression of what the life of a member of a field ambulance was during the latter part of the campaign.

As his nickname denotes, Mr. Hargrave was a Scout, who at the beginning of the war enlisted in "K's" Army in the R.A.M.C. He was also, when not scouting, an artist, and, indeed, the sketches in the book are by no means its least pleasing feature. He gives us a somewhat pessimistic picture of the early months of training, when the unit to which he was attached—the 32nd F.A. of the 10th Division—was shifted about from one camp to another, the men in half uniform and half mufti, and food not always too plentiful; but as he goes on he becomes more cheerful. Indeed, by the time he has reached Alexandria he has become optimistic enough to dub that evil-smelling port "the city of wonderful colour."

Mr. Hargrave is on good ground when describing his companions when enlisting: "Clerks in bowler hats; 'knuts' in brown suits, brown ties, brown shoes, and a horse-shoe tie-pin; tramp-like-looking men in rags and tatters, who smelt of beer and twist; old soldiers, lanky lads from the Lancashire mills, shop assistants with polished boots"—all these went to form what later became No. 32 Field Ambulance, 10th Division, M.E.F.

Mr. Hargrave has nothing new to tell us about the Dardanelles, but his book is so evidently merely a collection of personal experiences, that one does not look for any side-lights on the way the campaign was conducted. Indeed, with the exception of half a page, he ventures on no criticism at all, wherein he has shown himself wiser than a good many of the Dardanelles authors. The only remarks he makes with regard to the conduct of the operations are in reference to that fatal landing on August 8, and here he but voices the opinion of most of those we have met who were there. He says:—

In the first three days of the landing, it wanted but one thing to have marched us right through to Constantinople—it wanted, dash! It didn't want a careful, thoughtful man in command—it wanted dash and bluff. It could have been done in those early days. The landing was a success—a brilliant, blinding success—but it stuck at the very moment when it should have rushed forward. It was no one's fault, if you understand. It was just sheer luck. It just didn't come off!—and only just. But a man with dash, a devil-may-care sort of leader, could have cut right across on Sunday, August 8, and brought off a staggering victory.

Judging from the few examples interspersed through the book, Mr. Hargrave has a turn for versifying which he might well cultivate. There are one or two quite good little pieces of the Kipling type, the best of which is, perhaps, "The Indian Transport Train."

W. D. M.

RESPECTABLE CO'SAIRS.†

As soon as I learned that Messrs Harrap had sent to THE NEAR EAST a copy of "The Book of Pirates" for review, I appealed to the Editor for permission to undertake the agreeable task. As the intelligent reader will readily understand, my motives were mixed: I felt sure that the book would be interesting, and I dreaded that it might be handed to some unsympathetic person who would proceed to enlarge upon the enormity of piracy and the iniquity of corsairs. It is fortunate the Editor granted my humble petition, for I have found the book excellent reading; and my great predecessors will have no need to turn in their graves at any puritanical preaching against their idiosyncracies—in this review at least. Indeed, it is pleasant to be able to say that Mr. Gilbert himself writes of the pirates with a commendable freedom from cant; and while there is no fear whatever of his book implanting the desire for the life of a sea robber in any schoolboy's head, the stories of many of these enterprising sailors—especially the early members of the fraternity—are told with a good deal of sympathy. This, I venture to suggest, is as it should be; for in the days when the world was young piracy was a comparatively gentlemanly calling; and a well-conducted (and successful) pirate had quite a good chance of settling down to a comfortable and highly respectable old age under the direct protection of the Church and the State—as was

the case, e.g., with Rolf the Ganger, whose story Mr. Gilbert sets out in his third chapter. Nowadays such "happy endings" are, of course, reserved for stockbrokers, company promoters, and other urban and degenerate successors of the old-time sea plunderers. To-day we reserve the term "pirate" for Huns who sink hospital ships, unarmed passenger steamers, and defenceless fishing boats, in circumstances that would have brought the blush of shame to the cheeks of Kidd himself. Perhaps that is why the word has such an evil sound in our ears. It certainly seems rather hard on the old and genuine pirates to compare the modern U-boat variety with them; for at their worst they never perpetrated such a crime as the sinking of the Lusitania or the torpedoing of a Red Cross ship.

In the early days, at least, the pirate's calling was by no means without its romantic side; and very often, it may be noted, the man who afterwards became a successful pirate was impelled to take to the life by persecution and injustice. Thus, in Mr. Gilbert's collection of stories, we find that Sidi ben Muza, who was such a scourge in the Mediterranean in the sixteenth century, was driven to take up the calling by the treachery and the fanaticism of the Spaniards; and, similarly, Rolf the Ganger, though a rover and an adventurer by instinct, only turned to piracy after he had been outlawed—and unfairly outlawed, surely—by Harald the Fair-haired. Later the other type arose, called up by a new set of conditions, and, let it be admitted, by greed and natural cruelty. Of this type Kidd and "Blackbeard" may be mentioned as outstanding examples; while Avery appears to have been more cunning than brave—and yet not cunning enough to avoid dying in poverty in England! As Mr. Gilbert puts it in his last chapter:—

In the main, the story of one pirate is very much like another. The circumstances of time and place may differ, but the motives and manners are very similar. There were brave men among the sea-rovers . . . there were men, also, of uncommon gifts and many high qualities; but the average pirate was a man whose great motive was to get booty, by fair means or foul, from friend or from foe. And in the varying story of his attempts to gain his end there is scarcely any but can find some spice of attraction.

Mr. Gilbert opens his record with the story of "The Pirates Who Captured Caesar." It is interesting, but—perhaps because it hardly shows the captors in a very favourable light—I like it least of any in the book; and I am sure that many a schoolboy, after reading it, will regret that Spartaco, the pirate chief, so misused the opportunity that the Fates threw in his way of getting rid once and for all of the author of the "Commentaries." "The Pirates of the Saxon Shore" and "The Pirate Who Founded a Dukedom" are fascinating stories; so are "The Buccaneers of the Spanish Main" and "The Last of the Pirates." But I like best "The Corsairs of the Mediterranean," the chapter which tells of Sidi ben Muza, "The Sea Devil" as the Spaniards nicknamed him, and of the famous Kheyr-ed-Din Barbarossa. Of these two the former is the more attractive figure. He may, indeed, be described (with the Editor's permission) as "The Ideal Pirate"; for, as mentioned already, he took to the profession as the result of Spanish treachery towards the Moors in the first place; and if he showed himself a relentless enemy he had memories enough of fanatical persecution of his people to justify him. Moreover, his daring was beyond all question, and his attempt to carry off the Pope and hold him to ransom was a stroke of positive genius, which only missed achieving success by a hair's-breadth. Very often, too, his victims richly deserved all that they got; as, for example, in the case of the three Spanish vessels captured by him while they were occupied in a little private raid on the territory of one of their allies! Mr. Gilbert says truly:—

If ever poetic justice was done, it was on this occasion. Sidi and his Moslems smiled when they heard the facts from their prisoners, and nothing of the humour of the position was lost upon the keen-witted Moors. The three galleys which the pirate had fallen in with formed part of the great fleet of the "Alliance of Christian Princes," which had started out so ambitiously to break down the sea power of the Turk. . . . It occurred to the chivalrous and high-minded commanders of the French and Spanish fleets that as the territory of the King of Naples was thus without means of defence, it would afford a good opportunity to get possession of that desirable country.

One suspects that the King of Naples, who, "knowing that, having sold his artillery, he was powerless against them," did not wait "to meet his friends," was not altogether sorry to hear of the case of poetic justice!

Mr. Gilbert's book is most interesting throughout. I do not like his way of spelling some Arabic words—"achbar," for instance, is a quite unnecessary Teuton rendering of "akbar"; and why he should imagine that "the God of the Christians" is different from "the God of Mahomet" I cannot understand. But I am intensely grateful to him for putting it on record (on page 141) that there really can be "a respectable corsair," and I warmly commend his study of my predecessors to all readers of THE NEAR EAST.

CALENDAR OF THE WEEK.

Showing Concordance of the
Gregorian, Julian, Muslim, and Jewish dates.

Gregorian. (New Style)	Julian (Old Style)		Muslim.	Jewish.
1917. Feb. 16 17	1917. Feb. 3 4		1345. Rabi ul. 23 24	5677. Shebat. 24 25
18	5	Friday	25	26
19	6	Saturday	26	27
20	7	Sunday	27	28
21	8	Monday	28	29
22	9	Tuesday	29	30

The King will be accompanied by the Queen when he visits the School of Oriental Studies, London Institution, next Friday for the opening ceremony. An address will be read by Sir John Hewett, the chairman of the governing body, and his Majesty will reply. Lord Curzon will speak, and music will be played by a band under the conductorship of Sir Frederick Bridge.

Madame Yovanovitch, the wife of the Serbian Minister, is about to open in London a workshop for making clothes for recruits.

Mr. Maurice Bonham Carter had the honour of being received by the King at Buckingham Palace on Saturday, when his Majesty conferred upon him the honour of Knighthood and invested him with the insignia of a Knight Commander of the Most Honourable Order of the Bath, Civil Division.

Sir Walter Townley was, says a Reuter's message from The Hague, received by Queen Wilhelmina on Saturday, and presented his credentials.

Prince Antoine Bibesco, First Secretary to the Roumanian Legation, has returned to London from Paris.

General Ilesco, of the Roumanian Army, specially attached to the French Headquarters Staff, has arrived in London from France. He was entertained at luncheon on Tuesday by the officers of the General Staff of the War Office.

The following message from the Lady in Waiting to the Queen of Roumania has been forwarded to Mrs. Saxon Mills by the Roumanian Minister through the Central Committee for National Patriotic Organisations:— Her Majesty the Queen of Roumania requests me to send the best thanks for the organisation of a Roumanian Flag Day. Both she and his Majesty the King are grateful for the efforts made to help their country. Roumania, though for the present unhappy and crushed, will remain a faithful Ally, and hopes with staunch confidence for the final victory of the Entente and a happy issue of this war of liberation.

The Duke of Connaught has sent £25 to the Lord Kitchener Sudan Memorial, which, as already announced, is to take the form of a School of Medicine in connection with the Gordon Memorial College at Khartoum. In response to the late Lord Cromer's appeal last November, £362 15s. has been received or promised. Subscriptions are received by Mr. B. S. Harvey, 67, Lombard Street, London, E.C.

M. Gennadius was among the callers at the Foreign Office on Monday afternoon, and on Wednesday he was received by Mr. Balfour.

Our readers will remember that Captain Procter, who in civil life is manager of the Manchester office of the Imperial Ottoman Bank, is in hospital suffering from the effects of an exploding shell, which buried him in the ear. Among other injuries, he received one to the nose, which rendered a small operation necessary. We are glad to announce that he is so far recovered from shock that the operation could be undertaken last week. It was successful, and he is going on well.

The King has granted to Mr. Henry Swagland, Official Representative of the Egyptian Government on the Alexandria Municipal Council, authority to wear the insignia of the Third Class of the Order of the Nile, conferred on him by the Sultan of Egypt.

All the English members of the Bucharest staff of the Bank of Roumania had left that city before the arrival of the enemy, but three of the Roumanian members are now prisoners of war in Bulgaria.

Mr. Hamilton Kyfe, who, as *Daily Mail* correspondent, took part in the great Roumanian retreat, addressed the members of the Aldwych Club last Friday. Lord Northcliffe presided.

The trustees of the late Lord Kitchener have lent to the London County Council for exhibition in the Horniman Museum, Forest Hill, the collection of Eastern weapons and armour made by Lord Kitchener, chief whilst he was Commander-in-Chief in India. Most of the weapons of Northern India and of the advanced peoples of other parts of India are represented in the collection together with a few from Persia, China, Japan, the Sudan, and elsewhere.

A memorial tablet to Lord Kitchener, to be erected by the London Society of East Anglians in Lakenheath Church, is now on exhibition in the lobby of the Guildhall between 9 and 5. It will be on view until February 24. Ancestors of Lord Kitchener lived at Lakenheath from 1693 to 1821.

APPOINTMENTS, PROMOTIONS, ETC.

Bimbashi G. V. C. Irwin, of the Equatorial Battalion, has been transferred to the Sudan Government.

Bimbashi R. W. Eaton, of Kordofan District, has been transferred to Darfur District.

Temporary Sagholaghasi H. Garland, Egyptian Army, has been granted the temporary rank of Bimbashi.

The following appointments and transfers are announced by the *Sudan Times*:—

Bimbashi S. T. Grigg, Camel Corps, has been promoted to the rank of Kaimakam and has been appointed Second-in-Command, Camel Corps.

Kaimakam E. A. T. Bayly Bey, Officer Commanding Sobat-Pibor District, and El Kaimakam M. J. Wheatley Bey, Sudan Government, have been granted the temporary rank of Miralai.

Bimbashi G. Thwaites, Department of Supplies, and Bimbashi Hon B. A. Forbes, General Staff, have been granted the temporary rank of Kaimakam.

Miralai H. J. Huddleston Bey, M.C., Officer Commanding Camel Corps, has been struck off the strength of the Egyptian Army.

Kaimakam T. B. Vandeleur Bey, Second-in-Command Camel Corps, has been appointed Officer Commanding Camel Corps.

Bimbashi (temporary) A. M. Ryan, Transport, has been transferred to 4th Battalion.

Mr. W. Wicks, Superintendent, Sudan Government Railways, who has been stationed at Halfa for the past seven years, has been transferred to Khartoum and replaced by Mr. Dawson.

Mr. F. S. Hayler, of the Civil Secretary's Office, Sudan Government, has been transferred to the Customs Department, where he is appointed Inspector of Customs.

The following British officers have been attached to the Egyptian Army as special service officers, with the rank of Bimbashi, and attached as follows:—

Captain W. G. S. Grant, M.C., Highland Light Infantry, to 10th Sudanese.

Captain H. G. Ruddock, Royal Artillery, to the Artillery.

Captain H. L. R. Watt, 1st Garrison Battalion, Royal Warwickshire Regiment, to 3rd Battalion.

Lieut. G. A. Fairbairn, 18th Hussars, to Cavalry and Mounted Infantry.

Lieut. J. Keith, Seaforth Highlanders, to Sudan Government.

Lieut. L. L. Bright, Suffolk Regiment, to 1st Battalion.

NEW YEAR'S HONOURS.

The following names appear in the lists of Honours published on Tuesday.

IRISH PRIVY COUNCILLOR.

LIEUTENANT-GENERAL SIR BRYAN MAHON, K.C.V.O., C.B., D.S.O.

(Sir Bryan Mahon, who was appointed to the command of the British Forces at Salonika in 1915, succeeded General Sir John Maxwell as Commander-in-Chief in Ireland last year. He is very well known and very popular in Egypt. He saw service in the Egyptian campaign, 1896, and was with the Dongola Expedition, 1898-9, being awarded the D.S.O. In the South African War he commanded the Kimberley column of Colonial Mounted Infantry, and was first in effecting the relief of Mafeking. He was Governor of Khartoum, 1903, and was afterwards in command of the Lucknow Division.)

KNIGHT.

WALTER MCGOUGH BOND, Esq.

(Sir Walter was Vice-President of the Native Court of Appeal in Egypt for many years.)

HONORARY K.C.M.G.

Monsieur CHARLES DE ROCCA-SERRA, C.M.G., Legal Adviser to the Egyptian Ministry of Finance.

C.M.G.

JOHN WARNOCK, Esq., M.D., Director of Lunatic Asylums, Egypt.

WILLIAM ANDREW BETTS, Esq., M.D., Director of the Municipal and Local Committees of Egypt.

K.C.B.

MAJOR (temporary Lieutenant-Colonel) JOHN NORTON GRIFFITHS, D.S.O., M.P., 2nd Regiment, King Edward's Horse.

(Major Griffiths has done good work in Roumania, where he was instrumental in rendering the oil wells useless to the enemy.)

Sir FREDERICK WILLIAM BLACK, C.B., Director-General of Munitions Supply (Director of Contracts, Admiralty).

(Sir Frederick has been Director-General of Munitions Supply since 1915. Entering the Civil Service in 1880, he was transferred from the Colonial Office to the Admiralty, and served under that Department in Malta and Ceylon. He was Director of Naval Stores from 1903 to 1906, and received his knighthood two years later.)

MAJOR-GENERAL SIR CHARLES CRUTCHLEY, K.C.V.O., Governor of Chelsea Hospital.

(General Sir Charles Crutchley has been Governor and Secretary of the Royal Hospital, Chelsea, since 1909. He served in Egypt in 1882 and was D.A.A.G. for recruiting, Headquarters Army, in 1889-1900, A.A.G., recruiting Headquarters, 1900-8; Director of Recruiting, 1908-9.)

The party of seven Montenegrins who, despite enormous linguistic difficulties, were successful in escaping from Sennelager and other camps in Germany, having enjoyed a few days' recuperative rest, are now leaving for Paris and Salonika. During their brief stay in London the Montenegrin Red Cross and Relief Fund have done all in their power to render their life happier, clothing them and providing them with the necessities two years of internment had denied them. The Chairman of the Fund, Sir J. Roper Parkinson, the Montenegrin Consul-General, entertained them at Claridge's Hotel on their arrival. These poor men are very anxious to be fighting for their small country and doing something for freedom.

OBITUARY.

MADAME DIEULAFOY.
(FROM A CORRESPONDENT.)

France has recently lost, by the lamented decease of Madame Jeanne Paule Henriette Dieulafoy, a lady whose intimate knowledge of the Near East was unique among French women. Married at 19, in 1870, she passed through l'année terrible, by the side of her young husband, attired in male costume, sharing all the dangers of the Army of the Loire.

When peace came she began to travel, especially in North Africa, from Morocco to, and including, Egypt. Later, in 1880 and 1881, she was in Persia. But she will be remembered as a traveller chiefly for the part she took during the years 1884 to 1886 in the memorable excavations carried out by M. Dieulafoy at Susa. She bore much of the responsibility for the equipment of the expedition, and edited the daily journal of the explorations. This diary of the discoveries, which included those of the palace of Darius and Artaxerxes, is a model of what such a work should be. A popular résumé of it may be found in her book, "A Suse," whilst the great knowledge of part of Western Asia she had acquired is made accessible to the public in the large and copiously illustrated volume "La Perse, la Chaldée, et la Susiane."

Anyone acquainted with the Persian climate will understand the intrepid endurance which Madame Dieulafoy exhibited during *les fouilles de Suse*. Her compatriots were not oblivious to it, and so awarded her the cross of a Chevalier of the Legion of Honour, in return for an energy and devotion which had assisted in obtaining for France the greatest then known collection of Persian antiquities.

Madame Dieulafoy continued to be a traveller chiefly in countries bordering upon the Mediterranean; she also visited England. Her last journey was to Morocco, whither, in 1914, she accompanied her husband to Rabot, where he held a position on the Military Engineering Staff. There, whilst ministering to the diseases and misery of the poor, she contracted the germs of the malady to which she has now succumbed.

Possessing such a knowledge of the world, and being observant, yet reticent when such was wise, Mme. Dieulafoy was one of those who early foresaw the surely approaching war. Her prevision enabled her to realize the great part that the women of France would have to play before victory could be achieved; and so energetic was she in pressing her views that long before the outbreak of war she had actually induced the Minister of War to promise to put in hand a preparatory organization of women workers to be ready to take the place of men in factories and Government offices and Departments, including many connected with the army, so as to enable more men to be available at the front.

She lived long enough to mourn the loss caused by neglecting her warnings and advice; but also to see almost all her suggestions put into actual practice, and to share the great confidence which all France feels in the ultimate triumph of their country's cause.

It is announced that Lieut.-Colonel Archibald Hay, Royal Welsh Fusiliers, was killed in action on February 3. He was the youngest son of the late Lieut.-General Sir R. J. Hay, K.C.B., Colonel Commandant, Royal Artillery, and was born in 1872. Educated at Charterhouse and Sandhurst, he received his commission in the Royal Welsh Fusiliers in 1892. He served as subaltern with the 2nd Battalion at home and abroad, and with it took part in the international occupation of Crete and also in the relief of the Pekin Legations, for which service he received the medal and clasp. On promotion to the rank of captain in 1900, he joined the 1st Battalion in South Africa, and served with it for the remainder of the campaign, being mentioned in despatches and receiving the Queen's Medal with five clasps. When he had promotion to major he joined the 2nd Battalion at Quetta, and came home with it in 1914, being posted to the Regimental Depot. In August 1914, he was given command of a service battalion of the regiment, and took it to Gallipoli and served with it until the evacuation. He

was mentioned in despatches. Afterwards the battalion was ordered to another front in the East.

Lieut.-Colonel James Montagu Fitz-Roy England, late of the Royal Irish Fusiliers, has died at Ryde, Isle of Wight, at the age of 71 years. He took part in the Egyptian War of 1882, and fought at Tel-el-Kebir. He was given his brevet of major, and was decorated with the Egyptian medal and clasp, the bronze star, and Mejidieh (fourth class).

The death is announced at Northfield Maidenhead, of Lieut.-General Arnold Bunbury Thompson, late of the Royal Artillery, in his ninety-fifth year. He fought in the Crimea, 1855-6, and subsequently served as Governor and commander of troops in Bermuda. He retired with the rank of major-general in 1880.

Major Charles Annesley Wilbraham Ford, Indian Army, has died at Margate. He saw service in the expedition against the Ogaden Somalis in 1898, and in Waziristan in 1901-2. He retired in 1911.

Colonel Johnston Shearer, formerly of the Indian Medical Service, has died at the age of 65 years at Bridge of Allan, N.B. He had seen a great deal of service in Indian punitive wars, and also took part in the Egyptian campaign of 1882 and the Burmese Expedition of 1887-8. His decorations were numerous—three medals with seven bars and the Egyptian bronze star—and he was twice mentioned in despatches.

The death occurred on Tuesday of Captain Reginald Graham Gregory, R.N., aged fifty-two, the eldest son of Mr. H. Charles Gregory, of West Court, Callan, County Kilkenny. As a midshipman of the Eclipse he saw service during the Egyptian War, 1882, and received the Egyptian medal and Khedive's Bronze Star. While a lieutenant in Rear-Admiral H. H. Rawson's flagship he was present at the bombardment and capture of the Sultan of Zanzibar's palace in 1896, being mentioned in despatches. He also served in the punitive naval expedition commanded by Rear-Admiral Rawson, being with those who landed from the squadron to punish the King of Benin for the massacre of the political expedition, ending in the capture of Benin City, 1897. He received the general African medal, Benin clasp.

Captain Shawe Smith, late of the 13th Light Dragoons, has died at Southampton at the age of 88 years. He is believed to have been the last surviving officer who took part in the charge of the Light Brigade at Balaclava.

Second Lieutenant John Edward Templeman Barnes, Gloucester Regiment, who was killed in action on February 3, was second surviving son of Mr. Edward D. Barnes, of Homefield, Godalming. He was born in 1895, and was educated at Sherborne; he was a colour-sergeant in the school O.T.C., and shot at Bisley for the school Eight in 1912 and 1913. In the latter year he won a History Scholarship at Corpus Christi, Cambridge. He obtained his commission in the Gloucestershire Regiment on September 8, 1914, and saw service in Gallipoli (August, 1915) and Egypt, and subsequently in the attempted relief of Kut.

Major Harry Kendal Walpole Bruce, Indian Infantry, who has been killed in action, was born in July, 1880. He passed out of Sandhurst in January, 1899, and was gazetted to the Indian Staff Corps in 1900, and had his captaincy eight years later. From September, 1913, until the outbreak of war he had employment with the Egyptian Army. His name was in the Birthday Honours last summer among the awards of the Military Cross.

In a few days there will arrive in London a medical mission to examine all Serbs of military age living here. The mission will sit with the Military Attaché at 115, Gloucester Road.

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Française, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.5; Room, P.T.2; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL,

Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURY'S CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troödos.

For Tickets and further Particulars, apply to

NAJEM HOURY & SONS, LIMASSOL, CYPRUS.

Proprietors of "The Army and Navy Stores."

Branches—Polymedia, Troödos, Nikosia, Famagusta, Larnaca and Platres.

Head Offices and Central Stores: LIMASSOL.

All arrangements for Transport, &c., are made by the above Firm.

RELIEF OF DISTRESS

PALESTINE AND SYRIA.

Bishop MacInnes will be glad to receive CONTRIBUTIONS made payable to the Rev. E. M. Bickersteth at the Church House, Westminster, S.W.

FRIDAY, FEBRUARY 16, 1917.

GREAT BRITAIN AND THE EAST.

Now that it is an axiom of British politics that Germany's power and German aspirations in the Near East must be shattered as a result of the present war, it ought to follow as a natural corollary that greater interest in these regions should be shown throughout the British Empire. Germany's schemes were by nature iconoclastic; they aimed at the absorption of the Near East and the countries beyond for German ends. Anything that served her purpose was to be encouraged; everything that tended to thwart her in the attainment of her object must be ruthlessly swept aside or exterminated. Such a policy became a serious danger when the Germans found themselves, through the treachery of a corrupt clique at Constantinople, virtual masters of the Ottoman Empire. The process of making the resources of the whole of Turkey subservient to German aims was accelerated; for already the Young Turks had embarked on a similar plan of their own, by eliminating the elements that could not be conveniently "Turkified," in order to prevent any possibility of a challenge to their domination. Hence German connivance at the massacre of Armenians and the undermining of Arab influence in the Ottoman Empire. From the point of view of a civilized Power there could be no justification for these measures of repression. If Germany had been concerned for the well-being of Asia Minor and the neighbouring regions, the first desideratum must have been to increase their population, not to depopulate them. German penetration undoubtedly stood for progress of a kind; the Baghdad Railway could not fail to be the means of increasing the prosperity of the country through which it passed, and for Mesopotamia there was the promise of a return to conditions which had made it at one time the granary of the world. But Germany's toleration of Turkish methods and her indifference to the welfare of the peoples who were thus selected as stepping-stones to a world dominion proved that even the advantages she had to offer could not be relied upon to accrue permanently to the benefit of those who served her, but were liable to be withdrawn or in some way counteracted as soon as her purpose might be attained. Be that as it may, it has become necessary to block the road to the East for Germany. But the mere fact that she could make such headway in this direction is a sure sign of the inability of the countries concerned to rely solely on themselves. If they are to emerge from the world-war in a better condition, a constructive policy must be found for them, which will provide all the advantages that German penetration held out, but be without its manifest disadvantages.

A variety of cogent reasons impose upon Great Britain the duty of playing a prominent part in formulating the policy that is to bring salvation to the Near and the Middle East. Just as it was necessary to prevent Germany from exercising a predominant influence in these regions, so it is essential that they should be encouraged to work out under suitable guidance their own independence and prosperity. Past experience has shown that in matters in which public opinion has

lagged behind there has been little enlightenment among those more immediately responsible for formulating Great Britain's policy. As a nation with such world-wide responsibilities we have been surprisingly remiss in the collective interest taken in foreign affairs. Generous instincts have given rise to a number of organizations formed with the object of watching over the interests of one nationality or another. All such bodies are worthy; some of them are necessary, and have done useful work. But the fact that they tend to regard one another as rival institutions argues a narrowed vision, while their very existence is an implied reproach to the indifference of the nation at large. The Balkan Committee had been active for many years when the Secretary of State for Foreign Affairs announced as a guiding principle of our foreign policy that British interests in Serbia were nil. Possibly, if a tithe of the interest devoted by the British public to such a matter as the introduction of indentured labour into a colony, with its bearing on party politics and a General Election at home, had been given to a question of vital importance to the security of the British Empire, the Foreign Secretary would have held other views on a subject in regard to which the nation trusted to his expert knowledge. Along the main lines of international relations the country's instinct has no difficulty in finding expression. It is in regard to the more intricate problems that the national intelligence must in future seek to assert itself, and in no sphere is the need greater than in respect of the Near East and beyond. The war has brought the Near and Middle East into prominence; and they will continue to be a subject of paramount concern to the British Empire, even when the Terms of Peace have brought Russia to Constantinople, a permanent wedge across Germany's path of conquest.

Whatever form the settlement after the war may take, events will not stand still in the Near and the Middle East. In the Balkans we like to think that the delimitation of frontiers will be so equitably carried out that the several States will be able to embark at once, without prejudice or enmity, on a career of progress and mutual assistance. Their importance as a factor in European politics, however, will remain, and for this reason they ought to have a special interest for the British public. The affairs of Asia Minor and the countries beyond stand in a different category. Years must elapse before anything in the nature of the progressive government that is to be expected in the Balkans can be looked for. In regard to a large part of this region Great Britain and Russia will have to make themselves responsible, directly or indirectly, for its development and administration; and, if the mistakes of the past are to be avoided, there must be a greater display of interest in its fate on the part of the British public than there was before the war. In the place of a negative policy, inspired by fear of Germany in one direction, and by fear of Russia in another, by anxiety for this set of considerations at home or for that chain of circumstances overseas, a definitely constructive policy is needed, which will shape the destinies of the countries along the highway to India in conformity with their own interests, with the commercial aims of Russia and with British Imperial interests. The war has led to a stirring of the dry bones in these parts, and if Great Britain is not ready to direct the new order, others will take her place. At the outbreak of the European struggle the actual advantage derived by Persia from her long association with the British Empire was rapidly being reduced to the vanishing point. There the old threads must be picked up again. If the time-honoured road to the East was valuable enough to serve German purposes of world-dominion, it must be worth attention for its own sake and as a protecting zone for India. Our Imperial interests do not clash with the legitimate interests of any other country. In the Middle East they call for the active promotion of the well-being of all the countries that form it; but only by giving intelligent heed to its own interests and by looking ahead can the British public make sure that the Empire will keep abreast of its responsibilities both to itself and to others.

THE BLACK SEA AND THE CAUCASUS.

REMINISCENCES OF A JOURNEY.

By Mary A. Poynter.

II.

The Caucasus Mountains, though now partly in Europe, are still Oriental in atmosphere and setting. Russia perfected the great post road across the mountains, but she did not lay it out, and the towns along this highway are peopled with Georgians, Circassians, and still more primitive races who speak their mother tongues, dress in their national costumes, and, always armed, shepherd their sheep on the steep inclines, as we hear of man doing in the beginning. All through the mountains there are remains of Troglydite dwellings, and some of the towns still occupied by man are almost as primitive.

We were four days in crossing the Caucasus from Tiflis to Vladikavkaz, by the fine Georgian military road via the Dariel Pass, a distance of 200 versts, and it took fifty-eight horses, usually six at a time, to draw our broad two-seated coach this distance. There were places for six people in our conveyance, and there being only five in our party we went forth in comfort and kept that happy maximum all the way. We stopped often to admire, and almost as often to show our passports and our quittance, which entitled us to fresh horses at the relay stations. Signs and an occasional Russian word from our "Murray" were all that was necessary to procure plain food and simple lodgings at the post houses for the night.

There is everything about these mountains to inspire respect and to excite the imagination, and, without drawing any comparisons, one can say there is nothing about them to indicate that they are on parade and have been made accessible for the special delectation of tourists. You see them just as they were "brought forth," and primitive man among them earning his bread laboriously. The peaks of the Caucasus average 11,000 ft., and five of these peaks are some thousand feet higher than Mt. Blanc, the Alpine King. As we left the pastures and wooded lands below and neared the summit of the pass we seemed to be driving along the top of the world! The mists came down and played hide and seek with the snowy heights that surrounded us, the air was winter cold, and there was no longer any sign of bird or vegetation, or any sound save the bird-like whistle of our postilion and the voice of our driver, urging his six galloping horses still onward and upward.

Our most intimate acquaintance with Caucasus peaks was with Mt. Kazbek. This height, where Prometheus was bound, is best seen to soaring advantage from the town of Kazbek, a little below the summit of the pass on the post road. That is to say, when it is to be seen at all. It rains often in spring among the Caucasus, and when it does not rain it mists. We arrived at Kazbek shortly after noon and found our mountain lost in the mist. There were lesser peaks shining all about, but Kazbek, the dome-like, the magnificent, was invisible. Our guide-book said: "Mt. Kazbek seen to best advantage in the morning; usually veiled with clouds in the afternoon." We resolved, therefore, to await the mountain's pleasure until morning. But its pleasure came earlier; at five o'clock that afternoon the mists lifted and Mt. Kazbek stood forth white and glorious—the highest height, nearly 17,000 ft., we had ever seen.

From Kazbek downward to Vladikavkaz, through the Dariel Pass, is now a haunting memory of sheer precipices, swift turns, a rapid glacier stream, and ruined Georgian watch towers that in bygone days saved the mountaineers from many a lowland enemy. On this northern side at the narrowest part of the grand defile are the Gates of Dariel, that give the pass its name, and where Queen Tamara's stronghold looks down on the Russian fort that now guards the pass, keeping a peace that was won by twenty-five years of hard fighting. The Caucasian mountains were not lightly won, and they can never be lightly held. These mountains are rich in minerals, and their pastures seem to support sheep and cattle enough to feed and clothe the world. The many sheep and their shepherds,

in long fur cloaks and fleecy caps, suggested the age of fable. We almost expected to see Pan come piping down the fields; and we were quite prepared to believe the legend that the tent of Abraham and the cradle of Christ were preserved in a cave high up on Mt. Kazbek. A magic rope is said to exist, visible only to the elect, by which one could climb to this grotto. And thus all the way have fancy, fable, and history combined with majestic nature to make this route of continuous interest to the traveller.

One comes frequently upon old monasteries among these mountains, some of them perched high on precipitous crags, but holding fast, like the faith they represent, in their fortress-like positions. Dr. Rendel Harris, who has journeyed through these out-of-the-way Near Eastern lands in search of ancient manuscript bearing on early Christian history, is my authority for saying that when the time is ripe and scholars are permitted freely to examine these monastical manuscript storehouses the finds there will be passing full of interest to the student world.

While much of the commerce of the surrounding country is now carried by rail around to the Caspian and Black Seas, there is still a great deal of travel across the mountains, and the road is kept by the Government in perfect repair. Each post station has, or had, its full quota of horses and also one camel, that the horses might be familiar with this beast of burden and not be frightened when they met it on narrow and dangerous parts of the road.

Since we made our journey across these mountains friends tell us that motor-cars have largely superseded the horse and carriage method of transportation. Of course, under these circumstances the journey is more quickly done; but as it is a journey really to linger over I am glad we had no such speedy vehicles at our disposal.

On the southern side of the mountains, where the climbing begins, there is a little place amid flowers and foliage called the "Inn of Tears." As far as this, in olden days, the Georgians used to come to say good-bye to their friends who were going across the mountains. The Gates of Dariel, on the other side, was a meeting and parting place also. As we passed through these gates we came down by a fertile plain to Vladikavkaz, leaving the Caucasus a snowy, stately line against the sky behind us.

From this modern military Russian town we travelled a day and a night by train to Novorissisk, on the Black Sea. Most of this journey was over a fertile steppe country where the grain was growing with Western luxuriance, but where they could not gather into barns for lack of buildings, and where nearly all the houses were thatched with straw and had only a door and sometimes one window. After the generous mountains came the generous plains. But it seemed strange to find man so poor.

One naturally thinks of Sevastopol as the most important town in the Crimea, and perhaps it is—although it is not the most attractive one. After our Caucasus mountain trip we came directly to Sevastopol by sea from Novorissisk, remaining there long enough to visit the town itself and the battlefields in its immediate vicinity.

Just behind the town, now a busy arsenal, rise "the dark Redan" and the Malakhof, those fortified heights that were so hard to take and whose shot and shell did such grim work among the Allied armies during the memorable siege of Sevastopol. All the surrounding hills were still furrowed with trenches and breastworks, as fresh almost as if made but yesterday. Yet it is well over sixty years since Bayard Taylor wrote his Song of the Camp and since:—

Each heart recalled a different name,
But all sang "Annie Laurie."

The country that was laid waste by the Crimean War was still bare and desolate. It seemed as if nature, being once so cruelly dedicated to war, had, in remonstrance, refused to be consecrated to peace.

Some ten miles to the east of Sevastopol is the scene of the Charge of the Light Brigade. In the midst of a field on the low hill across which they charged is a monument with the inscription, "To the memory of those who fell at Balaclava, October 25, 1854." The greater number of the immortal Six Hundred were buried where they fell, and grains, poppies, larkspurs, and wild thyme are growing above them. But their most beautiful and enduring monument is the one Tennyson created in song, and that is found in every home where English verse is read.

In the annals of all travellers in the Crimea the drive from Sevastopol to Yalta, a distance of fifty-five miles, is

WHITE HORSE
WHISKY.

GREAT AGE
AND
BOUQUET.

KING GEORGE.

KING OF SPAIN

put down in red letters. At Baidar Gate, half-way on the journey, and at the summit of the pass, the road breaks suddenly through the mountains and comes out high up on the cliffs above the sea. From this point it gradually winds downward along the "Riviera of the Crimea," with almost perpendicular rocks above, and with palaces, luxuriant gardens, and an inviting blue sea below. We arrived at Yalta by moonlight, which introduction was all that the most exacting traveller could desire. Yalta is the most fashionable of all the Crimean resorts, but happily it is one of those places first made beautiful by nature; man came here as an appreciative afterthought, and has not interfered with any of its natural picturesqueness. A few miles inland there are some old Tartar towns with remains of handsome palaces—towns where one may visit and be entertained with true Eastern hospitality, and where Western ways and innovations penetrate but slowly.

The Tsar has several houses and "a model farm" at Livadia, near Yalta. Royalty being absent, we took advantage of the opportunity to visit the palaces and grounds, and found them simply and tastefully arranged, and the whole estate such as any wealthy country gentleman might indulge in without being accused of extravagance. I believe one of the palaces we visited has been burned, and that a new one has since been erected. May is not the season for Russian visitors at Yalta. They come in numbers later in the year, and in the winter, when the Neva is ice-bound. Like so many other semi-southern resorts, its fairest season finds it deserted and—undisturbed. We discovered, among other pleasant things, that Yalta's nightingales were tireless singers. We were there for only two days, and we sailed away with genuine regret from the one place where the Black Sea is always blue and, I hope, always kind.

PRINCESS TOUSSOUN'S LIBEL ACTION.

The widow of Prince Ibrahim Toussoun obtained £250 damages in an action for alleged libel, heard, before the Lord Chief Justice and a special jury, on the 9th and 13th inst., against the Transatlantic Film Company, Limited.

Mr. Rawlinson, in opening the case, said that the plaintiff was an English lady, the widow of a Mr. Maguire when she met Prince Toussoun, the grandson of Saïd Pasha, a former Viceroy of Egypt. She married the prince in London in 1897, and went with him to Egypt, where, though she was admitted into Egyptian circles and visited her husband's female relatives in their harems, she lived as a European lady and was very popular in English society. In 1898 the prince died, and the plaintiff came back to England, where she married her present husband, Captain Turner, but retained her former name. She was well known as a breeder of Pekingese dogs and a judge at dog shows. In 1916 the defendants produced a cinematograph play film called "The Purple Iris," which purported to describe the adventures in a harem of the Princess Toussoun. The advertising matter contained the following passages:—

"The strange and thrilling story of Ola Humphrey, who became the wife of Prince Toussoun and entered the Royal harem. Her amazing experiences have been re-enacted for the Transatlantic Film Company."

"Princess Ahmed Toussoun has re-enacted for the Transatlantic Film Company, Limited, her amazing adventures in an Eastern Royal Harem."

The film was shown to the trade all over the country and advertising matter was distributed to various theatres. The film was exhibited to the public with the words "Princess Toussoun" excised, but the posters and advertising matter still retained the plaintiff's name. The plaintiff had been considerably injured in reputation, and had suffered much annoyance. At the adjourned hearing of the case, a settlement was arrived at, Mr. Rawlinson, for the plaintiff, stating he had considered the circumstances, and had come to the conclusion that the plaintiff would not be likely to recover more than the £250 paid into Court, and he had advised his client to accept that sum.

Judgment was therefore entered for the defendants, with costs.

A Sofia despatch states that the Queen of Bulgaria is very unwell and is confined to her bed, says a Central News message from Amsterdam.

An arms factory at the Piræus caught fire on Monday. Allied bluejackets gave valuable assistance to the Greek firemen, and after several hours the blaze was put out.

Information received in authoritative quarters in London shows (Reuter's Agency learns) that the Turks are carrying out a deliberate policy of destruction of Arabs, having apparently for its object their extermination, as in the case of the Armenians. In pursuance of this object they surrounded the whole region of the Lebanon with a military cordon, thus preventing any food getting through, with the result that about half the Christian and Druse Arabs in that zone have died of starvation. They have devastated Syria and Palestine on the pretext of getting fuel, olive trees and orange gardens having been ruined. They have also—as frequently mentioned in THE NEAR EAST—deported large numbers of the most illustrious Arab families, and have hanged on the flimsiest pretext all Arab leaders on whom they could lay their hands. The Turks also are trying to do away with the Arabic language and also to eliminate Arabic from the Mohammedan religion by introducing non-Arabic prayers.

NEAR EAST IN PARLIAMENT.

HOUSE OF COMMONS.

The Dardanelles Commission.

February 12.

MR. BONAR LAW, replying to questions put by Mr. G. LAMBERT and Commander BELLAIRS regarding the presentation of the report of the Dardanelles Commission, said: The report has, I understand, not yet been signed by all the members of the Committee, and has not yet been received by the Government. Perhaps, therefore, my hon. friends will put down the question again on Thursday, when I hope to be in a position to answer it.

Value of the Rome Conference.

MR. BONAR LAW, in moving two Votes of Credit, for £200,000,000 for the carrying on the war till the termination of the present financial year on March 31 and of £350,000,000 for carrying on till the end of May, referred to the Conferences held by the Allies. The Conference in Rome, he said, was one of the most useful since the war began. Whenever Greece has been the subject of discussion there has always been some misgiving on the part of the Allies. The difficulty, to a large extent, has been that there were so many Powers trying to deal with the same problem. At the Rome Conference General Sarraïl was present, and the result was that the Allied Powers came to a definite decision as to the policy to be adopted towards Greece. The object of that policy, which has been consistently carried out, was to prevent, if possible, the Allied forces running the risk of being attacked from behind by Greece if an invasion took place by the Germans and Bulgarians. The proposals which were then made to secure that object have nearly all been carried out, and our commanders, both British and French, do not now think there is anything like the same danger from that cause which there was even a few weeks ago. There was another advantage in that Conference. Arrangements were made to try to get some supplies to the Salonika forces overland through Italy. Some steps in that direction have already been taken. There was one further advantage from that Conference. There seemed to us to be a lack of co-ordination in the use of the naval power of the Allies. That was discussed, and, as a result, it was arranged that there should be a purely naval Conference here in London. That Conference took place, and the result has been that there is really more co-ordination, especially in the Mediterranean, than was possible before, and I believe the Naval Forces of all the Allies are, in consequence, being better utilised.

The Mesopotamia Expedition.

MR. McKENNA expressed the opinion that we should take the greatest care to avoid being plunged deeper into long-distance campaigns, which, he said, exhaust us out of all proportion to the exhaustion we cause the enemy. "In relation to one of these campaigns," he continued, "that in Mesopotamia, I am sure the Committee would wish to express their appreciation of the work recently done by the War Office. That campaign caused so much anxiety in this House that a Commission was appointed to examine into its origin and progress. There were undoubtedly grave troubles, both in respect to the supply service and hospital service. I am told to-day that since the administration was handed over to the Quartermaster-General here the transport, supply, and hospital services are as well managed as in any campaign in the whole history of the world. That is a great record which the War Office may be justly proud of."

The Balkans and Constantinople.

MR. J. R. MACDONALD said that there had been a complete revolution in the military situation. If the war had been confined to the West it would have been over by now; but under the conditions of to-day the West was not the critical position. The Germans were absolutely beaten in the West, and it was only now a question of driving them home. He doubted very much if, when we started our spring campaign, we would find very many there at all. If the Germans were going to shorten their lines in the West and allow us to attack them in the East, where diplomatic policy had developed so favourably for them, he thought we should discover a new phase of the war, which would be far more troublesome than anything we had yet had to face. It was difficult to see how the Germans were to be dislodged from the Balkans except by negotiations. Why had the old policy of this nation of internationalising Constantinople and the Dardanelles been departed from? The interests of this Empire were wrapped up in Constantinople being an international port.

The Salonika Expedition.

MR. PRINGLE complained that a ban was placed on the Press on discussion of the Salonika Expedition.

MR. BONAR LAW said that Parliamentary references to the Salonika Expedition might have been excised by the Censor, but he was perfectly certain that no general instruction such as the hon. member suggested had been issued.

MR. PRINGLE repeated that a general instruction had been issued to the Press stating that there should be no discussion of the Salonika Expedition. The House of Commons was, therefore, the only place where the matter could be dealt with, and he wanted to know what military objects were being attained.

Release of Venizelists.

Feb. 14.

MR. BALFOUR informed Mr. Lynch that all the persons who were imprisoned in Athens on account of their sympathies with M. Venizelos had now been released.

THE PRESS ON THE NEAR EAST.

Roumania's Gallant King.

On February 12 the *Daily Telegraph* published a long despatch from Professor Pares, written in Jassy on December 23 and December 25. The writer begins:—

The enemy's success in Roumania is one of his greatest successes, not in volume, but in the suddenness and swift results of the blow. Roumania did not profit by her preparedness, and did suffer very greatly by her inexperience of the conditions of the present war. The result was a smashing, almost back-breaking, blow, which leaves pitiful effects everywhere. German methods are now in their maturity, and the Roumanian public has not yet left behind the almost plaintive and protesting temperament of civil populations before the war. The Roumanian invasion of Transylvania began simultaneously with the actual declaration of war. The Emperor William is reported to have said that Roumania should suffer worse things than Belgium, Poland, and Serbia.

We are then told of the special manifestations of "frightfulness" to which Roumania was subjected in fulfilment of the Kaiser's boast. But what good those manifestations will do the enemy remains to be seen. When Professor Pares wrote the Roumanians were undismayed.

A country recently still engaged in the pursuit of wealth finds itself more than half occupied and devastated, engaged in an enterprise which means no less than the abolition of Austria; involved in a struggle which cannot admit of any but the most complete military triumph, and opposed by an army whose preparedness made it a match in conjunction with its allies for the other Great Powers of Europe combined. It is only in the light of these conditions that we can estimate the immense courage of the opening sentence of the King's Speech to-day, delivered in the Roumanian Parliament at Jassy. "The war which for the past two years has covered Europe with blood has shown that Austria-Hungary, in the present conditions of its existence, could no longer subsist as a factor of the balance of power in Europe." Mutilated Roumania gives to Europe the lead in demanding a complete liquidation of the Austrian State, which, by the way, is inevitable if Roumania is to win that for which she has entered the war.

The second part of the article will be read with much interest for the sake of the pen pictures of Queen Marie, who has showed herself in this time of fiery trial a fit mate for her brave husband.

"Constantinople To-day."

Under the above title *The Times* (February 12) publishes many interesting particulars of life in the Turkish capital as described by "a neutral long resident in Constantinople, who has just arrived at the Hague." The article is forwarded by *The Times* special correspondent in Amsterdam, who translates the neutral's observations from the *Telegraaf*. Germany and Austria, we are told, are regarded in Constantinople, "the first as the moral, and the second as the material enemy." It is satisfactory to learn that

Russia's power, especially after the taking of Trebizond, has asserted itself by the blockade of the Black Sea. The population of Constantinople is without coal. What exists has been appropriated for the munition factories, electricity works, the railways, and the Navy. The electricity is extremely irregular. If the coal famine becomes complete, pitch darkness will prevail. The coal supply can only be obtained at great danger to life, as the Russians are bombarding Tugul, on the Black Sea coast, whence the coal is obtained.

The Russians have totally destroyed the Turkish Fleet, and the merchant fleet is not worth anything. The Bosphorus is wholly shut off. Constantinople's trade with abroad, which was important before the war, is entirely at a standstill.

The news regarding the shortage of coal is perhaps the most important item, as it is the most gratifying from the Allied point of view. In the circumstances it is hardly surprising that "people expect that the Russian blockade will speedily decide Turkey's fate. Turkey is half dead." Turning to "the moral enemy," we read:—

The moral enemy, Germany, dominates all branches of the public service. Meat, bread, and sugar cards have been introduced. But what creates order in Berlin and Vienna produces disorder in Constantinople. The nonchalant Turkish official cannot be regulated, and he is venal. Government stores are almost always without supplies, and cunning purchasers despatch all they can to Germany. The Young Turks, profiting by the high German subsidies and fees, prejudice their own countrymen by such despatch. . . . The Young Turks maintain a strong police régime. They spare nothing. They betray others, and occasionally each other.

Those who know their Constantinople will hardly be surprised to learn that Pera still remains "elegant,"

and bent on its own pleasures. Nor will any one doubt the statement put forward regarding the Austrians in the Turkish capital.

The majority of Austrians in Constantinople are anti-German, though they conceal it tactfully. During my thorough journey I was much struck by the contrast between feeling in Vienna, Berlin, and Constantinople. Vienna and Berlin are greatly depressed. In Vienna especially one sees much mourning. While the higher circles in Austria and Germany are not very cheerful, the fashionable world in Constantinople is extraordinarily gay. The principal street in Pera is filled every afternoon with an elegant throng. The concert-halls and picture theatres are packed in the evenings. The very wealthy families who reside there can afford to pay the high prices for provisions. Thus they have no deficiency. It is still possible to get anything you want in Constantinople, but do not ask what it costs. The higher Turkish officials and European families continue to hold their "days" and receptions. "After me the deluge" is the tone that prevails. It appears as if Levantines and Europeans are penetrated by the Levantine atmosphere, and are utterly indifferent to the whole war situation. This attitude is in terrible contrast with the sufferings of the poor population.

This bears out what Mr. Marmaduke Pickthall wrote of the people of the Pera quarter in the days of the Balkan wars. They care not, and never have cared, for anything or anybody but themselves, and they stand out a ghastly illustration of the "cross-breed" at his—or her—worst.

Rival Powers in Greece.

Under the above heading the *Morning Post* last Saturday published an interview which was granted to one of its representatives by M. Alexander Diomede, who is in London on a political mission from M. Venizelos. M. Diomede had nothing very new to say, but he was emphatic in his statement that the "Royalists" are not representative of Greek feeling.

The authority of M. Venizelos extends over the greater part of the Hellenic Kingdom. Those provinces which acknowledge his Government are wealthier and have a larger population than those over which the King still rules. The total population of Greece is 5,200,000 inhabitants. The number who have spontaneously deserted the Government of Athens and rallied round M. Venizelos by way of showing that they are faithful to the traditional friendship with the Protecting Powers and that they disapprove of the treason of the Government of Athens towards its Allies of Serbia is 2,800,000.

It follows that the number of those who still acknowledge the rule of King Constantine is 2,400,000, but it must not be supposed by any means that even these are really in favour of the Royal policy. The Government of Athens is an oligarchy, which, with the help of money obtained from the Germans, succeeds in keeping down the people and preventing them from giving expression to the national sentiment. It is a system of terrorism that does not shrink even from murder and pillage, the object of which is to try to make the world believe that the people remain faithful to the Throne. How true it is that the Royal Government dreads public opinion is shown by the fact that it has forcibly suppressed all the Venizelist newspapers of Athens by destroying their printing machines.

The Greek people, M. Diomede went on to say, are, in fact, suffering from Prussian methods of repression.

Individual rights no longer exist, and no one dares to say in public what he thinks. The people are only waiting for an opportunity to proclaim themselves, and whenever that arrives there is not the slightest doubt that they will range themselves on the side of M. Venizelos almost to a man. In the meantime, M. Venizelos and his supporters are consolidating the National Government at Salonika and in the provinces in which its authority is recognised. . . .

When one speaks of Greece it is absurd to suppose that that word describes the Greece which is represented by the Government of Athens. No: the real Greece, that which has at all times been bound to the Allies both by sympathy and interest, is the Greece that is represented by the National Government at Salonika. That Greece gives freely of the lives of its citizens and its material resources to the common cause, and we, the real Greeks, are convinced that, with the help of the Protecting Powers, who recognise in us, and in us alone, their true friends, we shall succeed in fulfilling the duty which the Greece of King Constantine has repudiated.

Italy and M. Venizelos.

The *Manchester Guardian* of February 9 contained an important article on "Italy and Greece," with the sub-title "Coldness Towards M. Venizelos." The writer is of opinion that "if Italy is to be a friend of England, as France is a friend, an alliance must be based on mutual respect and admiration, not on grudging acquiescence." And he goes on to say:—

A test case is the impression made in England by the Italian attitude to Venizelos. The Italian press is never tired of warning us that in our sentimental enthusiasm for "the Cretan" we are sacrificing the material interests of Italy. The argument ap-

parently is that a Venizelist Greece would be a great Greece, and that it is to the interests of Italy that Greece should be small, disunited, and friendless.

That Italy would, even from the material point of view, gain from the failure of Venizelos is more than doubtful. It is unbelievable that at this moment in the history of Europe, considering the objects for which the present war is being fought, Italy could seriously contemplate occupying territory in Europe that is mainly or entirely inhabited by another European people. However suspect and Constantinean Greece might remain, Italy would not get Epirus or Corfu, or any other of the islands that Greece now possesses. On the other hand, the acquisition by Greece of territory in Asia Minor, however probable earlier in the war, is not a matter of practical policy for even the most fervent Venizelist, now that Greece has lost her opportunity by delay and divided counsels.

We must, says the writer of the article, use every effort to make the Italian people understand the grounds and the strength of our support of Venizelos.

To regard this support as a mixture of antiquarianism and sentimentality is completely to misunderstand it. In the first place, we believe in Venizelos as a brave man and a great statesman, and that belief is not confined to any one party or class, but is shared to quite a remarkable extent by the nation as a whole. No individual statesman in Europe would receive such a popular welcome in London to-day. Our attitude to him is not unlike our attitude to Garibaldi, and the warm memories that must still exist in Italy of our enthusiasm for the great Italian should enable our friends to understand our appreciation of the great Hellenic. In the second place, we feel that Venizelos is our man, that he and his friends have from the beginning of the war staked their all on the moral as well as the material strength of our cause, and that they are sacrificing for it career and property and life. To restore them, and to punish their enemies, is not a matter of sentiment with us, but a matter of honour, and we earnestly ask Italy, even if it cannot share our attitude, to recognize and to respect it.

Equilibrium in the Balkans.

We are indebted to the *Bystander* (February 7) for affording us an opportunity of viewing "Through a Woman's Eyes," a question which to a mere male seems a singularly complicated one—"The Balkan Nationalities—and Settlements." Miss Rosamond Boulton, the lady through whose eyes we are permitted to regard the problem for a few brief minutes, tells us:—

The real reason for the prolonged and unsatisfactory conditions in the Balkans has been the attempts made—especially by Disraeli and Bismarck—to settle affairs by the odious doctrine of compensations and equilibrium. This just won't work, that is all there is about it. The rights of small nationalities must be clearly defined by the Great Powers, and they must be confined within their own national limits. And so the most important task ahead of the Entente, if they want a lasting peace, is to settle the Balkan question. There are too many little nations in the Balkans, and there is no doubt as to which the Entente in unison consider to be the superfluous one. Yet, if Bulgaria is wiped off the map there will be several millions of people in Europe sowing the seed of discontent for future wars.

This is not entirely hopeful. But the writer is not downhearted. She concludes her article:—

However, if long-suffering, brave little Serbia is made into a powerful Slav State, predominating in the Balkans, and Roumania is also rewarded by just her own countrymen gathered into a strong Latin nation—an island of Romans surrounded by a sea of Slavs—the equilibrium we have so dearly fought for will be well secured; and a well-beaten and then re-instated Bulgaria, with her frontiers clearly defined, will probably bring about an entire metamorphosis in that country. The people are submissive, but their rulers are Germans. Eliminate that unwholesome influence and we shall probably find a nation useful and industrious for the good of all of us.

Russian Aid to Roumania.

Under the title "Russia Carries On," the *Field* (February 3) gives a glowing account of Russia's share in the war. The following passages are extracted from that portion of the article in which the writer shows how Russia helped Roumania.

At present there is every reason to hope that such a sweeping and complete tragedy as overwhelmed Serbia, and temporarily blotted out her name from the roll of nations, has been obviated by the might of the Russian arms. From the beginning of the Russian campaign Russia assisted Roumania by sending into the Dobruja the troops for which the Roumanian Government had asked and had bargained for before commencing hostilities against Austria-Hungary. Russia had fulfilled her part of the agreement, but Roumania's overestimate of her own strength and underestimate of that of the enemy made the Russian contribution, which was about 60,000 men, much below what was necessary in the circumstances. This soon was evident, and Russia forthwith began despatching reinforcements to the Dobruja, while she simultaneously joined up her forces with those of the Roumanians in the Carpathians in north-western Moldavia and started a vigorous offensive. Later she took over entirely an extensive portion of the Carpathian front, thus releasing large bodies of Roumanian soldiers for service elsewhere. The relatively poor Russian railways were strained to the uttermost in transporting munitions, great quantities of which were French

and British, and in carrying troops into Roumania. Russia did everything in her power, in the brief time at her command, to avert disaster, but she could not achieve the impossible.

The writer refers to our Allies' gallant and chivalrous attempts to save Bucharest. He then describes the Russian withdrawal to the Sereth line; and continues:—

But meanwhile Russia was able to do one splendid thing, and that was to save the Roumanian Army. That has been the really great part Russia has played in the Roumanian campaign, and she has perhaps hardly received proper credit for it. Germany sought to derive military, political, and economic advantages from her invasion of Roumania; but her main purpose was to destroy the Roumanian Army, and in that she was signally defeated by Russia. As the Roumanian Army retreated eastward from Bucharest and Ploesti, it passed through the squadrons and regiments of the advancing Russian cavalry and infantry, who thereupon protected its retirement. In a recent interview at Jassy M. Bratiano, the Roumanian Prime Minister, stated to a correspondent that the national army was intact, still retained three-fourths of its original strength, was being reorganized and re-equipped behind the Russian lines, and soon would be in a position to take the field again. As this means a force of about half a million men, that is the measure of the assistance Russia has given to Roumania and the common cause. The Roumanian Army fought with the highest courage and endurance, but for such a campaign as it undertook it was not well found, and it suffered accordingly. There will be a vast difference when it reappears in the arena.

ORIGINS OF NEAR EASTERN PROBLEMS.

The Turks.

Continuing his course of lectures on the historical causes of Near Eastern Problems, on the 14th inst., Dr. Pember Reeves sketched, at the London School of Economics, the course of events before which the Byzantine Empire went down. He described the attacks of Normans, who seized southern Italy and the island of Sicily; and, after quarrelling and fighting with the Popes, made terms with them and became Crusaders. He said that the Greek Emperors were prevented from dealing effectually with them because of fighting with other enemies, notably Turks, Serbs, and Bulgars. Of the Turks he said that they were originally a Mongol tribe from Central Asia, first heard of in history as harassing the Chinese, who gave them a name from which the word Turk is derived. They moved westwards and established themselves to the north of Persia as a formidable race of marauders and slave hunters, from whom their neighbours suffered greatly. For some centuries they were kept at bay by the Arabs of the Khalifate of Baghdad, but in the eleventh century they overran Persia and Mesopotamia—capturing Baghdad in 1050—put an end to the Khalifate, and began to make raids on the Byzantine Empire. Originally a Mongol race, said Dr. Reeves, they became rapidly blended with the peoples they harassed, as would naturally happen with a race of incorrigible slave hunters and kidnappers, and by the time we know them they were altogether different from, say, the Mongols of China. The accounts that have come down to us describe them as dark, thick-set, round-shouldered and bow-legged, with aquiline noses, and black hair. They lived on horseback. Their weapons were the bow and arrow and the curved sword. They were excellent fighters, could endure great hardships, were temperate in eating and drinking; but otherwise had no good qualities whatever. In a cruel age they stood pre-eminent for the ferocious cruelty with which they treated the civil population of the countries they invaded.

Dr. Reeves detailed the course of events by which the Seljuk Turks cleared the population out of Central Asia Minor, leaving that country a grassy wilderness for their flocks and herds; and explained the part played by the rising Italian cities and the Crusaders in sapping the trade and breaking the military strength of the Byzantine Empire. Of the Ottoman Turks, he said they were a small clan of adventurers who established themselves in Western Asia Minor on the borderland between the Seljuks and the Greeks. It was one of the mysteries and romances of history how a tiny clan of robbers and raiders had founded one of the greatest empires of the world, going on through the centuries from victory to victory. By 1290 the Ottomans began to be a thorn in the side of the Byzantines. They got some of the feudal proprietors on their side, and showed a great aptitude for converting their allies and friends and the people they conquered to Islam, and blending them with themselves. They were not religious enthusiasts and fanatics like the Arab followers of Mohammed, but they were very successful propagandists. Their two principles were never to admit the Christian inhabitants of any country they conquered to equality with themselves, but always to treat them as slaves and conquered subjects; while, on the other hand, they used every means to convert as many of the Christians as possible to Islam. These converts they then accepted as Turks, uniting and blending with them. An unbroken succession of able military leaders contributed largely to Ottoman success. They first appeared in Europe on the invitation of the Byzantine Emperor, who had asked them to come and help him against the Serbs. They gradually conquered nearly the whole of the Balkan Peninsula, but it was not until May 29, 1453, that Constantinople fell into their hands. Then, said Dr. Reeves, the Sultan rode into the market place and signaled in a most characteristic way the meaning of Turkish domination. He rode up to the great Greek relic, the twisted column of serpents set up to commemorate the defeat of Xerxes. This precious relic had seen set up in the Hippodrome. The Sultan rode up to it swaying his mace, and shattered the head of the serpent, thereby indicating at once the irresistible power of the Turks and the attitude they always adopted towards art and civilization.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The British military authorities in Egypt have proved their human character recently by an act which, if performed in this country, would cause some of us to rub our eyes with wonderment. Five hundred horses had been reported as unserviceable for military purposes, and it was decided to give them free to agriculturists for work on the land instead of destroying them, as is usually the practice. When the decision was reached, the Veterinary Department sent circulars to all Governors informing them of the intention of the authorities, and it was added that the horses would be "lent permanently" to great landowners on condition that they undertook to treat them properly and not to dispose of the animals by sale or otherwise.

It will be recalled by some of my readers that last year considerable sensation was caused in this country by statements made in the House of Commons that useless horses which had been discarded from the Army had been sold to proprietors of hackney carriages in Alexandria and Cairo, and that the poor beasts were treated very brutally in that they were overworked and ill-fed. It would serve no useful purpose now to go over that rough ground again, but I am glad to observe that there will be no scandal in the present instance. If the animals handed over to agriculturists become unserviceable they are to be destroyed and a report made to that effect. The horses at work will also be subject to the inspection of a delegate of the Veterinary Department from time to time. Special forms of undertaking to abide by these conditions have been prepared by the Veterinary Department, and will have to be signed by the landowner before any horses are handed over to him.

Another sensible action of the Army people in Egypt was performed in regard to a quantity of Italian potatoes which in some places might have found a place on a scrap heap. What the Army man in Egypt did was to hand them over to cultivators (through the Ministry of Agriculture, of course) to be utilised as seed, on the condition that 25 per cent. of the crop should be sold to the Army, and that an equivalent quantity of Egyptian tubers was given immediately in return. More than 1,300 tons have already been handed over to the Ministry of Agriculture, and one looks with confidence for a reduction in price when the crop comes to hand.

Italian commercial men have already discovered what a fine thing it is that the Hun, with his shady methods, has been removed from Egypt. Imports of Italian goods there have increased very substantially since the war and show no sign of tailing off. British traders in Egypt have allowed themselves to be outstripped in this case by the go-ahead Italian. It is a remarkable fact that the latter is able to buy Manchester goods

wholesale from England and to retail them in Egypt at cheaper rates than English importers can sell them. Up to now, I am informed, English traders have failed to show any enterprise, and still persist in refusing to send free samples to their agents and, as was pointed out in THE NEAR EAST last week, will not make use of the cash-on-delivery system. Commenting on this, a contemporary somewhat sarcastically remarks: "They always ask for cash in advance, and yet we are told that German trade will be ousted after the war! The fact is that many people, not through any love of the Germans, are only waiting for the war to end to have the opportunity of taking advantage of the facilities offered by German traders to begin doing business with them again."

What a grave indictment this is of British methods! Let us place on one side the faults of the British State, and the consular system, and Hun corruption—there is a beam to be removed from our own eye before we attempt to extract the motes from others. We are failing as traders because of our *laissez-faire* policy. *The Indiaman*, in its last issue, deals in trenchant and appropriate fashion with this failing of ours: "'We are British traders,' we have told the buyers of the world. 'We know what you ought to want, and we will make it for you. If you don't like it you can go elsewhere.' The tragedy of it all is that so many buyers of the world have gone elsewhere." Surely the time has come for us to undertake a searching self-examination. If we fail to mend our ways, ten years of the new peace will see the Hun marching once more steadily towards trade predominance, and that must be avoided at all costs.

The consistent attitude of some organs of the Press, foremost among them THE NEAR EAST, in urging the Government to introduce serious reforms in our Consular Service seems at last to be bearing fruit. As my readers are aware, the Association of the Chambers of Commerce drew up a report on the subject last December, and it was presented to the Foreign Office. The latter in its turn submitted to the Association a confidential report drawn up by a Foreign Office Committee, and though at present nothing definite can be said regarding the reforms which it is intended to introduce, I am informed that the Association has considered them in a most favourable light without, however, weakening "their determination to press for the creation of a Ministry of Commerce."

This is, indeed, most welcome news. It shows that the pressure which has been brought to bear by public opinion and the legitimate trade interests of the British Empire on the Government has at last had some effect. The matter must not be allowed to rest, however. It must be energetically pushed because of the danger of its being shelved indefinitely, as are so many other reports of departmental committees. As I have frequently insisted in these columns, we do not wish to begin the peace era with a new system utterly untried and inexperienced. It must already have found its feet by then, and hence my contention that no time is

to be lost in introducing the many reforms on a comprehensive and generous scale. This latter is essential: the Consular Service of the British Empire, together with its ramifications, bent on hastening the growth of British trade by all honourable means, must not be starved at the outset. It must be made an attractive service for intelligent men, and it must spare no expense in collecting information of service to our traders, and in drawing attention to trade openings in foreign countries. As regards these, the Eastern Mediterranean was an important British market before the war, and it must be made a much more important one in the future.

In a recent Note I drew attention to the wonderful railway work done by our R.E. Corps and Egyptian labour on both banks to the east and to the west of the Suez Canal. I also ventured to remark that those of us who knew the pre-war canal would indeed be surprised when they learned how our troops had transformed it. Naturally, it is yet impossible to publish full particulars of the railway work, both narrow and broad, which has already been consummated; but when this chapter of our military activity comes to be written it will be found to be no whit less marvellous than the building of the Omdurman railway during the Sudan Campaign in 1898. That this is so we can gather from the recently constructed El Arish railway.

It would appear that a fortnight after the Turks had been driven back from El Arish, the headquarters of the enemy in the Sinai Peninsula, the broad gauge railway which starts at Kantara had been completed and was carrying transport to El Arish. Prior to our occupation of the latter town the railhead had advanced to within fifteen miles, so that the last stretch was built across shifting sands at the rate of a mile a day. This is, indeed, an achievement, the more so when it is remembered that all material had to be brought a distance of 100 miles, and that the rails had to be laid firmly across a waterless desert of flimsy sand. All told, the whole line has been built under most strenuous circumstances, always following military exigencies. The first section, Kantara-Romani, was completed in April of last year, several stretches having had to be built at the rate of a mile a day as our troops advanced. Whether the line will continue towards Syria to the Hejaz railway we are not told, but, whatever its fate, it will remain an eloquent testimony to the engineering skill of the British Army.

I gather from a report which has come to hand from Messrs. R. J. Moss and Co., Alexandria, that some trades in Egypt are sadly in need of better days. The freight market is in a state of suspense, and the "spot" rate for parces of cotton seed for London and Hull continues to be an "unknown quantity." The coal market is dull, with stocks standing at 19,000 tons, while as to the weather—"a wintry week, finishing up with misty morning atmosphere and a cold north-east wind." It is satisfactory to know, however, that the war is not responsible for at least one of the disturbing influences—the weather.

COMMENTATOR.

Egyptian Oversea Trade in 1916.

A Phenomenal Period of Prosperity and Development: The Returns Analysed.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, January 22.

The Customs published their returns for December last night, and we are now enabled to see how Egypt's trade has progressed during 1916. The year has been a phenomenal one for the commerce of the country, and never in its modern history have its imports or exports attained such high figures. The following table will show how trade has picked up since the first set-back caused by the war, and how the past year has beaten all previous records, 1912 being the year of the greatest exports, and 1913 that of the highest imports.

Imports.				
1916.	1915.	1914.	1913.	1912.
£E.	£E.	£E.	£E.	£E.
30,854,141	19,328,993	21,724,606	27,865,195	25,907,759

Exports.				
1916.	1915.	1914.	1913.	1912.
£E.	£E.	£E.	£E.	£E.
37,162,453	27,046,872	24,091,793	31,662,065	34,574,321

Thus from this it can be seen that imports last year were nearly three millions more than in 1913, the last normal year before the war, and that exports are practically a like amount above the figure for the previous record, 1912, and nearly six millions above that of 1913.

In these figures are not included the specie movements during each year. These must, of course, be taken into consideration when the balances of trade are compared. If the specie figures are added to the years in question it will be found that the balance of trade in 1916 was about a quarter of a million more in favour of Egypt than that of 1913, which stood at £E5,143,614, and that it has never been so much in favour of this country as it has been since the outbreak of war. This feature is just as welcome as is the steady rise in the imports and exports.

Principal Imports.

The principal imports during the year have been: preserved meat, £E1,693,907; skins and tanned goods, £E301,627; flour, £E571,484 (5,000 tons less than the previous year and only 13 per cent. of the quantity imported in 1913, so that one can understand that the country is somewhat short in breadstuffs); rice, £E117,275 (also considerably less in quantity than normally); sugar, £E209,322; coffee, £E420,258; jams and preserves, £E328,904; beer, £E481,610; wines and liqueurs, £E595,856; petroleum, £E897,726; mineral oils, £E244,531; stationery, £E765,883; construction wood, £E249,300; furniture, £E253,607; coal, £E5,134,142 (the value compared with 1915 has more than doubled, but the quantity is 10 per cent. more, whilst compared with 1913 the value is about treble and the quantity about half); china and porcelain, £E158,346; natural indigo, £E205,160 (formerly all the indigo imported was artificial, from Germany); matches, £E174,767; drugs and chemical products, £E348,699; chemical manures, £E379,356 (this is the item which shows the largest falling-off in value, i.e., £E279,336 by comparison with 1915, and the fact that the quantities imported last year and in 1915 were only 25,000 and 61,000 tons as against

71,000 tons in 1913 may have a very serious effect on the agricultural situation); textiles, £E9,644,417 (of which £E5,734,277 were cotton tissues, £E685,671 cotton thread, £E621,935 sacks, £E417,347 woollen tissues, £E576,626 ready-made linen and millinery); worked iron and steel, £E929,244, and machinery, £E373,302.

Exports.

As regards exports, the following table will best show how the trade has developed during 1916 as compared with pre-war years:—

	Quantity.		Value.	
	1916.	1913.	1916.	1913.
	Tons.	Tons.	£E.	£E.
Eggs ...	235,370,000	148,571,000	653,230	251,957
Wheat ...	10,900	2,000	111,700	20,400
Maize ...	140,000	250	911,740	1,680
Lentils ...	3,000	1,000	34,600	9,000
Beans ...	15,900	1,200	114,710	10,280
Rice ...	23,000	23,500	282,000	279,000
Cotton Seed	278,000	555,000	1,898,850	3,300,000
Cotton Cake	83,000	61,000	513,640	295,800
Onions ...	64,000	104,450	310,860	275,500
Sugar ...	29,000	8,133	640,650	79,100
Oil ...	1,420	2,105	58,200	38,000
Wool ...	2,730	2,200	271,600	136,640
Cotton ...	5,416,900	6,972,680	29,815,680	25,513,100
	(Cantars)	(Cantars)		

In addition to the above, the following, for which no weights are given in the monthly return, showed increases: Alcohol, £E216,592, as against £E4,270; skins and tanned goods, £E418,715, as against £E237,122; flour and bran, £E156,064, as against £E840 (the comparison is with 1913). Cigarettes fell off from £E394,978 to £E262,333.

A Lesson in Cotton.

The above table demonstrates in an unmistakable manner that, as far as Egypt herself was concerned, the restriction of the cotton area in 1915 did not do her harm. It is true that, had she continued to grow the normal area, she would have benefited by the high prices which would have ruled in any case, though possibly not on the same level as they have done during the past year; but against that has to be set the fact that she would not have been self-supporting in the matter of breadstuffs, as she undoubtedly has been during the past twelvemonth, and that she could not possibly have dispensed, as she did, with 87 per cent. of the quantity of flour (210,000 tons) which she imports normally. It is not to be expected that Egypt will for a long time export again such large quantities of cereals, but she will certainly derive the benefit from the place which she has established for herself in the European markets for such items as eggs, sugar, alcohol, etc.

Trade Distribution.

Turning now to the question of the share in Egypt's trade accruing to the various nations, we find that under imports Great Britain has taken just under half, as compared with 30.5 in 1913, and that the Empire, as a whole, has accounted for over 60 per cent. of the total as against 37.6 three years ago. Italy and America have both increased their share, the former to 8 per cent. and the latter to 6 per cent.; France has fallen off by half while Russia and Roumania have considerably diminished, the latter practically to nil.

On the other hand, neutral countries such as Spain, Holland, Switzerland, and Sweden have very greatly increased their shipments, though not sufficiently to include them as yet in the percentage table. Under exports Great Britain has increased her share since the war from 43 to 53 per cent.; America has jumped from 8 to 18 per cent.; whilst France has fallen to only 7 per cent., and Russia to 5 per cent. No other noteworthy changes have taken place on this side of the trade

account. It will not be possible to say exactly what articles were sent to or taken by each country until the annual statistics appear towards the end of March, so it is useless to try to-day to find out how the trade has gone.

With the Sudan.

Trade between Egypt and the Sudan was equally flourishing during 1916. Imports from South to North rose from £E519,243 to £E923,175, and traffic in the opposite direction from £E877,773 to £E1,157,891. The chief imports into Egypt from the Sudan were: Maize, £E162,665, and sesame, £E147,346 (£E43,249 and £E63,266 respectively); skins, £E30,692 (£E22,112); gum, £E28,294 (£E19,126); charcoal, £E27,820 (£E12,969); senna, £E17,038 (£E10,204); cotton, £E128,358 (£E87,932); and livestock £E189,268 (£E142,663; most of the increase is due to camels). The principal exports from Egypt into the Sudan were: Sugar, £E268,610 (£E190,997); cotton tissues £E280,754 (£E210,640); skins and tanned goods, £E29,866 (£E14,672); coffee, £E33,225 (£E38,705); cereals, £E62,875 (£E62,961); common soap, £E17,130 (£E20,827); petroleum, £E14,232 (£E7,834); machinery, £E19,212 (£E4,372); sacks, £E22,825 (£E25,047); and tobacco and cigarettes, £E109,793 (£E106,174). The figures in brackets are those for 1915.

THE FELLAH AS COTTON GROWER.

In the course of a lecture dealing with the world's production of cotton, delivered at University College, London, on February 13, Dr. W. Lawrence Balls said the proportion which Egypt contributed was relatively small measured by its actual weight; yet Egypt was a very important contributor, because almost the best cotton in the world was grown there.

The better the cotton the finer the yarn that could be spun from it, and this meant more work for spinners and a higher selling price for the product. The bulk of the English cotton trade was in the spinning of "counts" of a degree of fineness such as was not touched in other countries.

Dr. Balls illustrated this point by showing a "cob" of cotton yarn about three inches long and less than an inch in diameter; there were three miles of cotton wound on this bobbin, he said, and yet the yarn was only about half-way to the limit of fine spinning.

Going on to describe the conditions that affect the plant's growth and the possibility of improving the quantity and quality produced, Dr. Balls paid a remarkable tribute to the Egyptian cultivator. The production of cotton, he explained, was only possible where there was cheap and abundant labour, and he proceeded: "Cotton is grown almost exclusively by native labour, and one is inclined to think that the native cultivator is an ignorant, prejudiced person. He really is, but he is also a farmer, and a farmer usually has a very good reason for what he does. We have found that the case in Egypt with the fellah. He has one or two curious customs peculiar to Egypt. He plants the cotton much too close, and plants it later than seems advisable. He is lectured and preached at by would-be reformers for trying to force his land and get too much crop, and losing thereby. But when we got this elaborate series of curves that I have shown you, we found he was correct to centimetres in the distance at which he planted his bushes. If he had put a thousand more on the acre of land in the particular district, or a thousand less, the yield would have fallen off. Similarly, if he had planted a week or two sooner or later he would have been worse off. It was amazingly correct, and it taught me a lesson to be very careful about telling a practical man what his business was until I had studied it carefully."

THE CONSULAR SERVICE.

Speaking at a meeting at the Russian Section of the London Chamber of Commerce on February 5, Mr. Leslie Urquhart, basing his observations on his own experience as Honorary Consul at Baku, expressed the opinion that there is great need to reform the Consular system, and that an efficient Consular Service cannot be maintained by a country like Great Britain for the paltry sum of £97,000 per annum. Mr. Urquhart also agreed that Consuls should be the nationals of the country they represent.

ENEMY BANKS.

Roumanian Debtors and the Liquidation.

The liquidators of enemy banks in England, Mr. Walter Leaf and Mr. R. V. Vassar Smith, have submitted a report on the progress made in the liquidation of the concerns, in which they say:—"From our experience as practical bankers, not only has due diligence been used in the realisation and distribution of assets and liabilities, but the present position of operations shows that they have been conducted with an ability and expedition reflecting the highest credit on Sir William Plender and the supervisors who have acted under him."

The report concerns the Deutsche Bank, Dresdner Bank, Disconto Gesellschaft, Oesterreichische Laenderbank, and the Anglo-Austrian Bank. The main obstacle to a more rapid liquidation had been the decision of the French and Russian Governments to regard the London establishments as hostile creditors and to refuse permission to remit to them any assets in their respective countries. All the banks at the outbreak of war had large assets both in Russia and in France, more particularly the former. The whole of these were "frozen up," and could not be realised till after the war.

The case of debtors in neutral countries presented many difficult and at the moment insoluble problems. All the banks had considerable interests in Roumania, and at the outbreak of war exchange on London became impossible except at a very heavy loss. Roumanian debtors refused to pay except in local currency, thus trying to throw the loss on the banks.

Large amounts were also owing from German firms in South America and other neutral countries. To applications for payment these firms generally replied that their account was with the head office of the bank in Berlin or Vienna, and that they had settled or meant to settle with them. These claims, as in the case of those in Roumania, could only be decided by proceedings in local Courts, and it was quite possible that these Courts would hold that the London establishment was to be treated only as a part of the bank and that settlement with the head office was a discharge of the debt.

Some German firms abroad had been forbidden by their Government to remit, and had accordingly paid their debts into joint bank accounts to be held till the end of the war.

BANNED FIRMS.

Further Changes in the Egyptian List.

The following additions to and removals from the list of firms and persons not resident in enemy territory with whom trading by persons in Egypt is prohibited appear in the *Egyptian Official Journal* of January 25:—

Additions.

GREECE.

Anatoli Insurance Company, The, Athens; Coundourakis, Georges J., Candia, Crete; Margaritis, J., Piræus; Yannoukakis, Nicholas, Piræus.

PERSIA.

Meister, Lucius and Brunig.

Removals.

MOROCCO.

Escalant, Antonio Lopez, Larache.

PERSIA.

Haji Gholem Ali and Haji Mahomed Bagher Behbehani and Sons, Bushire.

ROUMANIA BUYS TEXTILES.

During the last few weeks the British textile trade has been furnished with ample evidence that Roumania is still very much in being. Our Ally has placed considerable orders with British manufacturers for Welsh shirtings and flannels. Welsh makers have specialised on the former for rather more than a century. It is a somewhat coarse cloth, but very warm, and, of course, invaluable in the Balkans at this time of the year.

Generally, the cloth is made from domestic wool, but there is no restriction regarding the raw material, and a considerable amount of colonial lambswool is also utilized.

LANCASHIRE COTTON TRADE.

A Firmer Tone with an Improved Enquiry.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The general tone of the market has been firmer this week, and the stiffer feeling in raw cotton circles has brought about a rather improved enquiry in some quarters. The general experience of sellers, however, has not been at all encouraging, and many complaints have been met with as to the slack state of affairs compared with a month or two back.

Bullish sentiment has prevailed in the New York and Liverpool markets, and the nervousness with regard to the German menace on the seas has not been so pronounced.

Egyptian cotton prices have tended to harden in sympathy with the stronger tone in the American staple. The receipts at Alexandria so far this season are 4,253,504 cantars, against 3,951,847 cantars same time last year.

A limited trade has again been done in piece goods for Egypt. The news now being received by mail is not so encouraging as a little time ago. Merchants in Alexandria and Cairo are undoubtedly disturbed by the political situation and the uncertainty as to the course of the war.

The recent improvement in the enquiry for China has been fairly well maintained, and some fair lots have been put through in bleaching cloths and fancies. A little more activity has also transpired for Singapore and the Straits Settlements.

With regard to India, workable offers have been scarce, and dealers abroad are still disposed to look on. The position of manufacturers is very irregular. Isolated cases have been mentioned of contracts being cancelled owing to late delivery. Makers are finding it more difficult than ever to keep up their production.

Prices in American yarns have been put up, but buyers have followed rather slowly, and the margin of profit has tended to be narrowed. In stock lots, however, a little more business has been done in some quarters.

No improvement whatever can be recorded in the demand for export yarns. Bolton spinings made from Egyptian cotton have tended to harden in price, and a little more inquiry has been met with in some directions.

EGYPT AND "SUMMER TIME."

The British Chamber of Commerce of Egypt has asked the Alexandria Municipality and the French Chamber of Commerce for their views regarding the introduction of "summer time" in Egypt, and the question has thus become of practical interest.

Dr. Granville has recently been interviewed on the subject by *The Egyptian Gazette*, and although he appears to be undecided regarding the utility of the proposal, he intends to submit it to the Municipal Commission.

If the proposal is generally approved, the new time would probably come in operation on April 1. It is pointed out that owing to the difference between the hours of the rising and the setting of the sun in Egypt and at home the saving on lighting in Egypt would be 50 per cent. less than in England.

"Moreover," says the *Gazette*, "the people of this country, both natives and Europeans, are early risers, and owing to the extraordinary dullness of life in Alexandria and Cairo in the evenings, the rareness of nocturnal amusements since the war broke out, and the early closing of bars and restaurants, it is to be presumed that even the most inveterate lovers of amusement must have long ago given up going out in the evenings and adopted the habit of going to bed early so that so far as that matter goes the introduction of this reform would have little social advantage."

A Reuter message from Valencia, dated February 13, states that the German Consulate has announced that permits would be granted for the export of oranges and onions from Spain, via Cette, subject to the control of the Consulate.

TRADE NOTES.

Openings.

Tenders are invited by the Central Office, Ports and Lighthouses Administration, Alexandria, for the supply of timber during the financial year 1917-18, beginning in April, 1917. (March 31, 1917.)

Offers will be received by the Administration of the Egyptian State Railways up to noon on March 19, 1917, addressed to the Superintendent of Stores, Cairo, for the supply of sundry white linen, khaki and blue canvas uniforms required for the year 1918, according to samples to be submitted by tenderers. The specification relating to this supply may be obtained, against payment in advance of one hundred milliemmes, at the Administration's Central Stores at Saptia (Cairo) and Gabbary (Alexandria).

Sealed tenders (in duplicate) will be received at the Treasury, Valetta, Malta, up to 11 a.m. on Thursday, March 15, 1917, for the supply of stationery in the year 1917-18. Forms of tender and specification may be obtained and samples of stationery may be seen on application at the above office, or at the Pattern Room of the Crown Agents for the Colonies, 4, Millbank, S.W.

Licence Restored.

The licence of Marie Wellay, of Alexandria, which was cancelled on January 11, 1917, has been restored.

Change in Receivership.

The appointment of Mr. F. H. Russell as receiver of the business of Joseph Eggert, Cairo, bearing date of August 25, 1916, has been terminated, and all remaining assets of the liquidation have been vested in the Public Custodian of Enemy Property.

Liquidation.

The General Officer Commanding-in-Chief his Britannic Majesty's Forces in Egypt has ordered the liquidation of the business of hotel-keeper formerly carried on at Assuan by Marguerite Neufeld, and has directed that all property in Egypt of the said enemy person be vested in the Public Custodian of Enemy Property in Egypt.

Successful Tenders.

The following are in the list of successful tenderers for the supply of stores for the year 1917-18 to the Personnel and Equipment Department of the Ministry of the Interior, Egypt:—

	Police. £K.	Ghafr. £E.
J. Compton and Sons, Ltd.	10,645	—
The Limerick Clothing Factory, Ltd.	10,037	—
Levi Harda and Co.	4,565	1,320
C. and J. Webb and Co., Ltd.	4,028	1,429
The Commercial and Agency Co. of Egypt, Ltd.	5,189	—
Hussien Abdalla 34-0	—	—
Kannrenther and Co., Ltd.	1,704	187
W. Petersen and Co., Ltd.	1,377	—
Mohamed el Zahhar 1	—	1,161
Walter W. Davies 2-9	—	—
Thos. Hunselwood and Co., Ltd.	778	—
Moustarha Gohar 205	—	417
John Day and Co. 404	—	—
Hamid el Sayed 359	—	—
Paul Lifshitz 300	—	—

THE WAR LOAN.

We publish further Greek and Near Eastern names which appear in the list of subscribers to the new great War Loan. These include:—

National Bank of Egypt (2nd instalment)	575,000
National Bank of Egypt and clients (additional)	95,000
Flower Motor Ship Co.	£140,000
Union-Castle S.S. Co., Ltd.	905,350
Lampart and Holt, Ltd.	820,000
Royal Mail S.S. Co., Ltd.	970,000
Pacific Steam Nav. Co., Ltd.	800,000
Egyptian Delta Light Railways ...	85,000
Egyptian Delta Light Railways (Provident and Fire Funds)...	3,900
Bibi Eibat Oil Co., Ltd.	10,000
Messrs. Gellat'y, Hankey and Co.	225,000
Messrs. Ralli Bros.	1,500,000
Agricultural Bank of Egypt	500,000
Lloyds Register of Shipping	202,650
Sir John Jackson, Ltd., and private subscriptions of Sir John Jackson and Family	41,000
Government of Malta	50,000
Ir. B. Kostonn's, Manchester ...	12,400
Iodocanachi, Sons, and Co.	10,300

PRODUCE REPORT.

LONDON, February 15.

The statement that further restrictions are to be placed on imports, leaving free only essential goods, has caused some uneasiness.

Currants.

The market has been fairly active this past week, and, with the apparent shortage of sound fruit and no prospects of further arrivals in the near future, prices have again advanced. Vostizza are selling well at 85s. to 86s., while other grades, especially smalls, sell slowly, but at higher prices than those mentioned last week.

The Liverpool market is also very strong. Provincial are quoted there at 82s., Gulph and Patras 83s. to 86s., and Vostizza 90s.

Sultanas.

The market is more active, with good business mostly in red Afghans at slightly cheaper rates. There is also a better demand for Australian fruit.

Figs.

Almost all new crop fruit is cleared, while the remaining old fruit, which is offered at more or less low prices, is good only for manufacturing purposes.

Dates.

There has been a comparatively heavy demand for Persians, and the market for this kind is 1s. to 1s. 6d. dearer.

Seeds.

Linseed is easier to-day; London-Calcutta, spot, is quoted at 112s., with Bombay ditto at 112s. Rapeseed is firmly held for higher prices; Toria-Hull is quoted at 95s., brown Cawnpore ditto 90s., and Ferozepore-London 92s. Cottonseed is firm; London-Egyptian f.a.q. is quoted at £18 10s., and Sakelarides, spot, at £17 10s. per ton. Rangoon beans are in better request at steadier rates, while Canary seed is held for more money.

Oils.

Linseed oil is slightly easier this week. Spot pipes were sold at £52, barrels ditto at £53 landed terms. Rape oil is firmer; ordinary brown, naked, spot, selling at £55, and English refined barrels at £58 to £59. Cotton oil is firm: Crude, spot, pipes, is quoted £49, refined pale £51 10s. to £52 10s., and barrels, sweet, £58 to £60 as to make. Olive oil: Stocks are cleared and prices are nominal.

Olcakes.

Egyptian cotton cakes on spot are offered sparingly, commanding full prices at £15 5s. to £15 7s. 6d. ex quay, whilst English makes are unchanged at £15 7s. 6d. to £15 10s. Linseed cakes are in better demand, and values are firmly held up, with a further advance for kinds of home manufacture. Best London-made is selling well at £19 10s. to £20.

Decorticated cotton-cake of very fine quality Argentine is offered at £18 10s. ex docks. Egyptian is not available.

GREEK STEAMER TORPEDOED.

King Constantine's ships are no more immune from the Hun piratical operations than are those of Spain or America. Among the latest of Greek steamers to suffer was the Vasilissa Olga, an iron screw vessel of 1,400 tons, which was built in 1869 by Messrs. W. Pile and Co., of Sunderland, and owned by Stakos and Nanapoulos. All the crew have been landed at an English Channel port. The chief engineer, F. Casanova, said, in an interview to a newspaper representative:—

"A submarine ran alongside, and we were ordered to leave our ship immediately. We lowered our lifeboat, and the whole twenty of us got into it, although we were not allowed sufficient time to obtain much clothing. Finding that I was the only one who could speak English, the German commander ordered me to go on board the submarine. They kept me a prisoner for upwards of an hour, covering me with their revolvers, while some of the submarine's crew lowered one of their boats and rowed to our vessel, on board which they placed bombs."

"When the German sailors returned I was immediately ordered to join my companions, who were waiting alongside in our boat. After we steered away we heard a violent explosion, which blew up our ship, and she sank in about seven or eight minutes. We saw nothing more of the submarine. About seven o'clock we were picked up by a small steamer."

Prominent Industries of India

The Announcements below are published to acquaint our readers with the opportunity India affords the keen purchaser.

CAWNPORE WOOLLEN MILLS CO., Ltd.

CYPRUS FOOD PRICES.

How the War Affects the Cost of Living.

(FROM OUR OWN CORRESPONDENT.)

NICOSIA, Jan. 29.

The appended list of tariff prices for articles chiefly in demand in Cyprus will give an idea of the present cost of living. Bearing in mind that the oke is exactly equal to 2 4-5 lb., it will be seen that there is little to complain of in comparison with prices in England; but that, of course, is not the question. The rise in prices during the British occupation has been prodigious—a usual consequence of British or American settlement—and for natives especially very exacting.

It must also be remarked that the quality of many articles, e.g., fowls, is distinctly poor, and inferior to that in many European countries. Some articles, too, e.g., green peas, can only be obtained as rare luxuries. Cow's milk is seldom obtainable in most parts.

The prices given are per oke, except where stated:—

	s.	d.		s.	d.
Mutton	1	8	Rice Indian	0	4 1/2
Lamb	1	10 1/2	Rice (Genoa)	0	8

Rice (Egyptian) ..	0	7 1/2	Petroleum (box of 2 large tins)	18	0

Agricultural Outlook.

There has been more rain and snow, the northern heights of the Kyrenia ranges, as well as the larger southern mountains, being well covered. The sowing of cereals in all the lower lands is practically finished, and the outlook for farmers is excellent in all districts. March will bring the critical period, and the spring rainfall will be the all-important element.

RICE GROWING IN EGYPT.

It will be remembered, writes the *Egyptian Gazette*, that two years ago the irrigation authorities, fearing that the state of the Nile flood would not allow them to give the rice-grown districts the necessary water for cultivation, decided to restrict the rice-growing zones. The rice growers made several complaints at the time, but it was not possible to alter the decision, and the rice crops naturally did not turn out to be as abundant as in previous years.

As this decision affects the Sharkia cultivators in particular, the Sharkia Province Council held a meeting at Zagazig last week with the object of submitting an official complaint to the authorities on the subject. The meeting was attended by Mr. Adamson representing the Irrigation service, and Mr. McKillop, Chief Inspector of the Ministry of Agriculture, representing his own ministry. The former stated that in view of the present abundance of water, the authorities had decided to raise the restrictions made in the growing of rice, and to allow its cultivation in 1917 in all the areas on which rice was grown prior to the restrictions—Fakous, Kafr Sakr, and other districts of the Sharkia Province.

Mr. Adamson added that the rotations during the rice-growing period would be regulated so as to comprise five days of irrigation and five days of suspension, against six days of irrigation and twelve days of suspension before this period.

A strong earthquake shock has been felt at Cupria, Desbotovatz, Svilainatz, and other localities in the Morava Valley. No serious damage was done.

A German report says that Diavid Bey, who has been on a financial mission to Berlin, has been recalled to Constantinople in order to assume the portfolio of Finance in the Turkish Government.

GREEK TOBACCO.

Conditions in and Prospects of the Industry.

The United States Consul at Patras sends to his Government at Washington an interesting report on Greek tobacco. He writes:—

There are three distinct kinds of tobacco grown in the Patras district, known locally as Tsembelia, Aromatic, and Basma. The Tsembelia is the ordinary kind, a strong variety, having a leaf nine to ten inches long, and of light yellow colour in the good grades. The Aromatic is mild and very fragrant. It bears a leaf five to six inches long, light of weight, and bright yellow. The Basma is a tobacco grown from seed brought from Cavalla, and is a new venture in the district. The growers are confident that they will be able in the future to rival the famous Cavalla product so popular with American buyers.

The chief tobacco-growing region of the district, so far as the American market is concerned, is that lying around the town of Agrinion and its adjacent lakes on mainland Greece just north of the Bay of Patras. The tobacco region round about the old city of Argos, though it furnishes a large supply for the domestic market and for certain foreign markets in times of peace, does not produce a sufficiently good quality to attract American buyers. The Agrinion crop for 1916, which has now (November 1916) all been harvested and put in the drying barns, shows a falling off in quantity of some 15 per cent. as compared with the normal crop of that region, though the quality is reported to be good. The total crop, all grades, is estimated at 5,000,000 pounds. This is about equally divided between the Patofyllo and Tsembelia grades on the one hand and the Myrodato and Cavalla-seed grades on the other. The short crop is attributed to the exceedingly hot, dry weather that prevailed in May and June.

Grades.	Price per 100 pounds.			
	Feb. 14, 1914.		Nov. 14, 1916.	
	£	s. d.	£	s. d.
Patofyllo	—	2 16 3	—	5 14 7
Tsembelia I.	4 17	8 10 8	2—10	10 3
Tsembelia II.	3 10	4 7 12	6—7	13 4
Tsembelia III.	2 2	6 4 16	8—4	12 6
Aromatic (Myrodato) I.	8 0	0 13 12	6—13	14 7
Aromatic (Myrodato) II.	6 13	3 10 14	7—10	16 8
Aromatic (Myrodato) III.	3 0	0 11 0	0—8	4 2
Cavalla seed (Basma)	6 13	4 10 6	3—15	6 3

Sharp Advance in Prices.

The tobacco of this region usually commands a less attractive price than the well-known qualities grown around Cavalla—so much so, in fact, that in the past American buyers have not shown a disposition to invest heavily in the Agrinion article. However, with the closing of the port of Cavalla to outside markets on account of hostilities in that region, and the consequent cutting off of tobacco supplies from there, prices have risen sharply in the Agrinion region. Buyers state that prices have risen 100 per cent. since September 1, 1916. The following tabulation, showing the prices per 100 pounds of the different grades, f.o.b. Patras, on February 14, 1914, and November 14, 1916, will indicate generally the advance in prices.

To these prices must be added ocean freight. The grade Patofyllo comprises in general the seconds or lugs of the Tsembelia and Aromatic grades; hence the wide range in price, as the quality varies greatly.

Treatment of Leaves Affects Cost.

No small part of the cost of the higher grades is chargeable to manipulation of the leaves. Dealers estimate the cost of manipulation about as follows per 100 pounds: Tsembelia, 1s. 5 1/2 d. to 4s. 2 d.; Aromatic, if bunches are tied at ends, 14s. 7 d. to 20s.; Aromatic, if bunches are tied in middle, 20s. to 40s.; Cavalla seed, 29s. 2 d. to £5. according to fineness of quality. For the highest grades only the best and smallest leaves are used. These are sorted carefully as to size, and placed with great exactness one upon the other in the bunching process. The higher grades are handled repeatedly in order to secure the desired colour.

The crop of 1916 will not be ready for exportation before May or June, 1917. The prices given above are for the crop of 1915, which is now moving on the market. Prices are also quoted for May-June delivery, but there is little disposition on the part of buyers to place advance orders at present. American firms have recently become interested in Agrinion tobacco, and considerable purchases have already been made for their account.

ALGERIAN ALFA GRASS.

Some interesting notes by an American consul stationed in Algeria have been reprinted. We extract the following therefrom:—

The botanical name for esparto grass is *Stipa tenacissima*, but "alfa" is the name given to it by the Arabs in Algeria. It is inferior to and cheaper than the true esparto, which is still to be found in Spain; but being much more abundant in the Barbary States, and since both are often used by the same mill, the common name of esparto continues to be popularly applied to both grasses. Alfa grows wild in Southern Algeria, principally in the highlands of the Province of Oran, where it covers vast plains. It thrives where practically no other vegetation can exist and successfully resists both excessive heat and drought. It is of a dull-green colour, but after being plucked it is spread out to dry in the sun, when it gradually turns a bright yellow. When dry it is made up into bundles and stacked ready for sorting.

Long before esparto was used for paper-making it was, and still is, employed in Spain in the manufacture of baskets, mats, ropes, cords, etc. Marseilles and the South of France are also buyers for the same purposes. Esparto was never successfully employed upon a practical working scale for the manufacture of paper before 1861, when it was introduced into England. There is now hardly a paper mill in the United Kingdom where esparto is not employed.

The process of treatment at the mills is described as follows: Esparto does not require cutting, but is subjected to four or six hours' active boiling in lye to decompose the resinous substances and colouring matter contained in the grass. The fibre is then taken to the washing and bleaching machines and there rapidly converted into "half stuff" or stock ready for the beater or pulping engines for reduction to paper pulp, the subsequent processes being precisely similar to those employed for rags. The substantial difference between the treatment required for esparto and that employed for rags consists more especially in the careful and proper apportioning of the chemical ingredients used, this being absolutely essential to a successful result.

It may be remarked that two tons of raw esparto are required to make one ton of white printing paper.

FAMINE PRICES IN TURKEY.

Food conditions appear to have become very stringent again in Turkey, the *Times* Athens correspondent telegraphed on February 13. Telegraphic demands for the dispatch of foodstuffs for the Diplomatic and Consular staffs of one of the neutral Legations in Constantinople have been received in Athens, and it is declared in these that bread prices are becoming exorbitant, the equivalent of 1s. 8d. per lb. having been reached on one occasion lately, though there are, of course, fluctuations. The correspondent states that he has seen a very much censored letter from Smyrna, in which the writer speaks of persons in the easiest circumstances celebrating the birthday of one among them by the gift of some lumps of sugar, than which at present nothing could have been rarer or more costly.

ENGINEERING NOTES.

Berlin to Baghdad by Hanging Cars

In spite of the desperate position in which Germany stands to-day, the German dream, *Drang nach Osten*, of a Central Empire with full sway from Berlin to Baghdad, is still enjoyed. According to recent reports, there has been a conference at Stuttgart of leading German engineers for the discussion of the question of overland communication for goods traffic between Central Europe and Asia Minor. The main purpose is that "it shall be complete, with sea routes, and independent of English influences under all circumstances." Privy Councillor Professor von Schmidt suggested the construction of an overhead cable line, with hanging cars, from Berlin, via Constantinople, to Baghdad, which, he said, would be easy to make, and would satisfy all traffic demands. Another scheme discussed was for an electric railway along the same route, with only a few stations, at great distances apart, as collecting points for goods traffic. Considering the distance between Berlin and Baghdad and the climatic condition in the regions over which the cable line would run, the professor's scheme seems rather daring, if not impracticable. However, there is no harm in conferring over grand schemes, nor in the unprofitable practice of counting chickens before they are hatched.

Oilfields in England.

Dr. Forbes-Leslie, addressing a meeting of the Institution of Petroleum Technologists at the Royal Society of Arts the other evening on "The Occurrence of Petroleum in England," said the districts which up to the present had yielded oil in commercial quantities were in the north of Britain. But there were in the south and east indications of vast quantities of oil-shale. In Norfolk an important and practically inexhaustible source of mineral oil had been proved to exist. The boring made at Kelham, near Newark, demonstrated that all the conditions were present for the formation and retention of petroleum, and that a true oil-field existed in England.

Why Not?

It is very satisfactory that attention is being drawn to the possibility of striking oil in commercial quantities in England; indeed, there is no reason why petroleum should not exist in this country, considering that it has been found in practically every other European State. The results at Kelham may not mean much; in fact, according to the opinion of an expert expressed to the present writer, it is doubtful whether petroleum will ever be struck in paying quantities there; but, anyhow, it means a step in the right direction, and if sufficient capital could be found a few boreholes in different parts of England might more than repay the necessary expenditure. The expert thought that there would be more prospects of success if Heathfield were tried.

Motor-Car Engine Heater.

Motor-car owners can tell grim stories of the great inconvenience they have experienced during this winter from frozen radiators and other parts of the engine. The season is the worst for them since motor-cars came into general use. An ingenious device which has recently been invented will prevent such inconveniences, enabling every bonnet to be kept warm throughout the winter. The device is simple. It consists merely of a specially designed resistance coil within a perforated container. With it is supplied a length of insulated wire and an ordinary coupling suitable for making a connection with any ordinary incandescent lamp-holder. Hung within the bonnet, it serves as an effective safeguard against the effects of frost, and relieves owner, driver, and mechanic from further anxiety on that score. Such a relief, at the

cost of 25s. per fitting, is cheaply obtained. But, apart from this, there is the undoubted advantage, more apparent in some chassis than in others, that the use of this device enables an easy start to be made on mornings succeeding cold nights. The device is made to suit any voltage between 50 and 260, and consumes 100 watts per hour.

Economy in Gas Cooking.

A cheap and simple device, by the aid of which gas is saved in cooking, will interest not only gas users at home but, particularly, those in the East, where the use of gas for cooking purposes has been much extended in recent years, but with the present very high price, gas-cooking there is quite a luxury. The device is a simple gas-cooker top, and can be used with any gas-cooking stove. This top is perforated, and formed in such a way that the heat from the burners is radiated and conserved, the result being that one burner will often suffice instead of four. In this way four utensils can be kept cooking at the same time with only one burner going. This results in a great saving of gas. The device requires no fixing; it is simply placed in position on the top of the stove. The tops, which are also suitable for use with a gas-ring, are made in three standard styles, one being so arranged that it revolves, and thus saves the necessity of moving cooking utensils when a greater or less heat is desired.

The Nile Dam.

The *Mokattam* learns that it has been agreed that the best place for the construction of the White Nile dam is either at a place 60 miles to the south of Khartoum, or a place at a distance of 120 miles. The Minister of Public Works will give his opinion definitely with regard to these two places after inspection.

GEZIRA PLAIN IRRIGATION.**Cotton Industry Deputation to the Board of Trade.**

A report of the proceedings of the great Cotton Conference, held in Manchester on December 13, 1916, is now available. Its representative character can be gauged by the fact that no fewer than fifteen bodies connected with cotton and cotton textile manufacturers sent delegates. The principal of these were the British Cotton-Growing Association, the Federation of Master Cotton Spinners' Associations, the Cotton Spinners' and Manufacturers' Association, the Liverpool Cotton Association, the Manchester Cotton Association, and the Bleachers' Association.

The discussion embraced all the cotton-growing countries in the Empire, but our readers will be interested principally in that portion of the proceedings which related to Egypt. The report formed the basis of the submissions made a few days ago by a deputation from the Conference to the Board of Trade, where the members were received by Mr. G. H. Roberts, M.P., the Parliamentary Under-Secretary.

The following was among the resolutions passed by the Conference:—"That the authorised irrigation works for the development of the Gezira Plain should be pushed on with the least possible delay."

We take the following from the note of the proceedings used by the deputation to the Board of Trade:—

"While there are very large openings for the future development of cotton growing in many parts of the Empire, there are two propositions that are urged upon the Government to be taken in hand with the least possible delay. One is the development of the Gezira Plain in the Sudan; the other is the extension and improvement of cotton in India. The most immediate of these is the development of the Gezira Plain. This is the tract

of country lying between the Blue and the White Nile immediately South of Khartoum. It is thought to be ultimately capable of growing as much cotton as is now grown in the Egyptian Delta.

"The preliminary scheme, estimated to cost £3,000,000, has already received the authorisation of his Majesty's Government. The details of this proposition were fully inquired into by the late Lord Kitchener, and were drawn up under his personal supervision. Briefly stated, the scheme is as follows:—

The construction of a dam or barrage on the Blue Nile capable of supplying water to irrigate 3,000,000 acres.

The construction of a preliminary main canal and of subsidiary canals to irrigate 300,000 acres, of which 100,000 acres would be under cotton.

"It is estimated that if the work is pushed on rapidly the water supply will be available in two years from now, and that the whole of the preliminary area of 300,000 acres will be brought under cultivation five years hence—viz., in 1922. This area should produce about 80,000 bales of 500 lbs. per annum. It is hoped that the cultivated area will extend rapidly afterwards, but this will depend on two factors—namely, a sufficient population and the supply of water from the Blue Nile, part of which is required by Egypt.

"Many years must elapse before the whole of the Gezira Plain can be brought under cultivation, and further investigations of the conditions will be necessary, and more especially as to the relative allocation of water to Egypt and to the Sudan. This does not however apply to the preliminary scheme, for full investigation has already been made as to suitability of soil, sufficiency of population, and the necessary supply of water. In addition, two large experimental stations on a commercial scale have been working for several years, and it has been definitely proved that Egyptian cotton of good quality and most suitable for Lancashire requirements can be grown in the Gezira on a sound economic basis.

"The Gezira scheme is the only proposition which offers any prospect of producing any appreciable quantity of cotton of high quality in the immediate future, and therefore it is of paramount importance that not one moment should be lost in pushing on its development."

THE DANUBE-RHINE CANAL.

A discussion of the advantages to be derived from the proposed deep-water canal between the Danube and the Rhine was published recently by *Die Zeit*, which states that it would be an advantage of great importance if from the industries of West Germany products could be shipped by a cheap waterway to the Balkan States and Turkey, while in exchange the agricultural products of the East could be shipped via the Danube and Rhine.

An engineer, who urges that the canal work be started at once, estimates the water freight from Cologne to the Middle Balkans (1,553 miles) at 8s. 6½d. per long ton, and probably even less, while the water rate for that traffic (4,561 miles) was 13s. 10½d. per long ton before the war.

"It is well known," says the paper, "that the greater part of the shipments go up the Danube, while it lacks return freight. This is the principal reason why the Danube is deserted and can in no circumstances be compared with the Rhine. The connection with the Main and the Rhine would doubtless cause a very considerable downstream of traffic. While corn, wood, petroleum, etc., could be shipped upstream, coal, iron, chemical products, and other articles could be transported downstream."

HOMS TO KOWEIT.

The Possibilities of the Great Railway Scheme.

In last week's issue of THE NEAR EAST we summarised the scheme, as outlined in *Cassier's Engineering Monthly*, by Mr. Francis Aldridge, for the great trans-continental railway, from Homs, in Syria, to Koweit, Persian Gulf, which many British and French people would like to see constructed after the war.

The concluding portion of Mr. Aldridge's article, which deals with the prospects of such a line, is as follows:—

No one naturally anticipates that a line of this nature will be immediately paying. It possesses almost incalculable possibilities, but, like the Trans-Siberian and the Uganda Railways, its working costs just at the start must necessarily be considerable. The following, therefore, are the financial proposals which at present hold the field. It is assumed not unnaturally that, in the immediate future at any rate, the investing public will not be content with a net return of less than 6 per cent. on such an investment as this scheme.

Assuming the sinking fund (sixty years) to be invested in bonds of the company, or otherwise at the same rate of interest, an allowance of about 0.2 per cent. has to be made on that account. Five per cent. Government Guaranteed Bonds (assuming the whole cost of the line is provided for by debenture capital) would have to be issued at a price which would provide for the sinking fund and yield a net return to the investor of 6 per cent.

Suggested Guarantee.

It will be noticed that it is suggested that the Government, which shall have a director on the board, shall guarantee the payment of interest on the debenture stock at a minimum rate of 5 per cent. per annum, which means, of course, that it should undertake to make good to the company any amount by which the net earnings of the line should fall short of the sum required to pay interest at this rate. The idea of this Government guarantee is, of course, borrowed from railway construction in India, and therefore raises no new principle, and only recommends one which is accepted and endorsed by public opinion in the Mid-East.

It should be added that it is suggested that the guarantee should remain in force until the line is purchased by the Government, provided that all surplus profit which may be earned by the company after paying interest on the amount of debentures issued shall be equally divided between the Government and the company. The issue of the debentures would be supervised and regulated by the Government according to the progress of the construction of the line.

How the Turks and Germans Co-operate.

For the purposes of comparison and to show that this proposal is eminently fair, the terms accorded by the Ottoman Government to the German concessionaires of the Baghdad Railway may thus be set forth. The Ottoman Government undertook to—

(1) Pay a construction annuity of 11,000 frs. per kilometre, to be met by an Ottoman State Loan bearing interest at 4 per cent. (and with sinking fund at 0.087538 per cent.), redeemable in ninety-nine years. Consequently the concessionaires were to receive bonds to the face value of 269,110 frs. 65 cents for each kilometre constructed and open to traffic (about £17,050 per mile).

(2) Guarantee receipts up to 4,500 frs. per kilometre (about £285 per mile) per annum. Should the receipts exceed that amount the whole amount in excess of 4,500 frs. up to 10,000 frs. is to go to the Government, and any receipts beyond 10,000 frs. per kilometre are to be divided in the proportion of 60 per cent. to the Government and 40 per cent. to the company.

Finance.

The next point to consider is the cost of working and the receipts. Working expenses should not be taken at less than 60 per cent. of the gross receipts, and on this assumption a gross annual revenue per mile of £22,000,

or £38.46 per mile per week, would be necessary to yield a net return of 5 per cent. on the nominal capital of the company. What receipts could be expected? The line would undoubtedly attract a large through traffic, passengers and baggage, mails, parcel post, light and perishable goods, and bullion, between Europe and the Far East, and this would be largely and in the near future, when the scheme of irrigation work already commenced in Mesopotamia is developed, be very extensively increased both by local traffic and by the extension of commerce with India, the bulk of which is already in British hands. As a matter of fact, the figure of £38.46 per mile per week is not excessive. Here are some comparative statistics on the point.

In India the East Indian Railway line earned £52.60 per mile per week gross receipts in 1913-1914, the Bombay and Baroda line £48.06, the G.I.P. £44.22, and the North-Western £38.25. The Trans-Caspian Railway, even before the war, earned £51.65, and the Trans-Siberian £39.34.

Of the above lines, the North-Western Railway of India, though it has no through traffic, is somewhat comparable to the line under consideration.

Possibilities of Mesopotamia.

There is no need to lay stress upon the potentialities of Mesopotamia, once the granary of the world, under an enlightened and energetic administration. Even to-day the trade is very considerable, and it would be possible in a very short space of time to repopulate and develop the extraordinary fertile district through which in its lower section the railway would pass. There might be one word added as regards the strategic value of this undertaking, which would be exceedingly important. A line between Baghdad and the Persian Gulf must be built—has to be built—by some nation, and we can afford to allow no other than ourselves to carry on the work of construction.

Such, in brief, is the main scheme. It possesses all the elements of success, and this time we should be wiser than we were many years ago, when we stood aside from any participation in the Baghdad Railway. Under the scheme we shall absolutely control railway communication between Baghdad and the Gulf; we shall have a thorough working understanding with France respecting railway development in Syria; we shall be independent of either the German or Turkish interest in the so-called Baghdad line; and we shall probably acquire certain of the existing branches. We shall open up a more rapid route to India, and develop in unfettered form our seaborne trade in the Mediterranean. It is a scheme, in short, which should be pushed ahead in the interests of the country and without loss of time.

FRUIT FLY IN WESTERN GREECE.

The American Consul at Patras, writing on December 6 last, says:—

The Mediterranean fruit fly has wrought great damage in the orchards of the Patras consular district during the fruit season just ending. This is the first time in ten years or more that the presence of this fly has been noticed in the district.

Among the fruits which it has attacked with damage to the crop are the orange, tangerine, peach, pear, and apple. So far as reports indicate, no damage has been done to the lemon, citron, or quince. The tangerine crop was practically a failure, owing to the ravages of this fly. Most of the fruit fell before maturity, and such as matured and was brought to market was infected with the maggots of the fly. The orange crop also suffered severely, a great part of the fruit falling before maturity, and the remainder being of inferior quality. The peach and pear crops were a failure, very little of this fruit even reaching the market.

The ravages of the fly did not affect directly the foreign trade of this district, since only the citron (in brine) is exported in commercial quantities. The pest had a serious effect, however, upon local conditions. The fruits mentioned constitute an important item in the food of the people, and it has borne hard upon them to have this shortage in their local fruit crops at a time when the cost of foodstuffs in general stands at a phenomenally high mark.

SYNTHETIC INDIGO.

Official Supplies for Egyptian Dyers.

The Press Bureau in Egypt has issued the following *communiqué*:—

An official statement says that the leading article of a local newspaper of January 4 has raised a question of some interest to Egypt where a considerable quantity of indigo is consumed annually by the native dyers; the value of artificial indigo imported in normal times is about £E70,000 per annum.

The Egyptian Government, recognising the difficulties and distress among the dyers of the country owing to the non-importations since the outbreak of war, made inquiries in England as to the possible sources of supply for the future, and received full information on the position of affairs.

It was found that owing to the elementary material for the manufacture of synthetic indigo and aniline coloured dyes being required for the manufacture of high explosives, no immediate imports of these dyes could be anticipated, although, as stated in the leading article above referred to, measures are being taken to manufacture the synthetic indigo in England.

The Egyptian Government therefore purchased supplies available from the Prize Court and are shortly putting this supply for sale throughout Egypt at the shoemahs of the Egyptian Markets Company in order to assist the native industry. Although necessarily the price charged is considerably higher than in pre-war times, it is being sold by the Government to the dyers at actual cost price.

In order to obviate any chance of speculation and cornering of stocks, special regulation for the sale will be put into force by means of permits obtainable from the Governorates and mamurs markaz to licensed dyers only.

By these measures the dyers throughout the country will be able to obtain a certain quantity of artificial indigo to carry on their industry for a little time, and it is hoped that when these supplies are exhausted a further supply may become available from Great Britain.

COMPANY NOTES.

Dividends, etc.

Privileged Company to Protect Production and Trade in Currants £500,000 5 per Cent. Sterling Loan.—Messrs. Emile Erlanger and Co. announce the number of bonds drawn to be paid off at par.

The dividend on the Egyptian Guaranteed 3 per Cent. Loan, due on March 1, 1917, will be paid by Messrs. N. M. Rothschild and Sons on and after that date (Saturdays excepted).

Meetings.

The ordinary general meeting of the Malta Tramways, Limited, will be held at the offices of the company, 4b, Frederick's Place, Old Jewry, London, E.C., on February 20, 1917, at 12.30 p.m.:—To receive and consider the account and balance-sheet for the years July 11, 1908, to February 29, 1916, and the report of the directors and auditors thereon. To confirm the election of the present directors and to elect a director in the place of the retiring director. To elect the auditors for the ensuing year, and to transact any other ordinary business of the company.

The ordinary general meeting of the Credit Foncier Egyptien, which was to have been held at Cairo on January 22, 1917, was postponed owing to the absence of a quorum. The postponed meeting was convened for February 7, 1917.

Oil Outputs.

Bibi Eibat, 776 and 772 tons; Anglo-Egyptian-Gemshah, 18 tons; Hurgada, 1,297 tons; Baku Russian Petroleum (1909), 88,000 poods and 55,000 poods; North Caucasian Oil Fields, 626,575 poods; British Maikop, 1,773 poods and 2,282 poods; European Oilfields, 86,300 poods; Ural Caspian, 140,946 poods.

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON STREET, Thursday.

There has not been much doing this week in Egyptian securities, the inactivity being due to some extent to the great delays in telegraphic communication with Egypt.

Generally speaking, there is not much change to report in prices, except occasionally here and there where a holder is anxious to realise in order to invest in the new War Loan.

News from Egypt continues to be very satisfactory, both as regards the encashments which mortgage companies are effecting and also as regards the sales of land by agricultural companies. Trading companies are also reported to be doing very well.

Some few hundred Agricultural Banks have changed hands round 5, and National Banks at 13½. A few Behéras have been done at about 6½, at which price they are still wanted. Delta Light are ½ lower at 5½. Some transactions have taken place in Markets at 24s., and in Salts at 20s. 6d. Khedivial Mails, after some fairly large buying, which carried the price to 25s. 6d., are again rather quieter to-day at 24s. 9d. Aboukirs have been done round 16s. 3d.

In Greek securities the market continues very firm, but there is not much doing owing to the absence of sellers. Greek 84's have again changed hands round 51 and Funding at about 48½. Greek 1881 have been done at 51 and Monopoly at 46½. Here also the blockade and the great delay in telegraphic communication have seriously interfered with business.

Oil Shares.

There have been few alterations in the oil share market. Spies Petroleum have been in some demand and have changed hands at 14s. 6d., and Russian Generals recovered to 2s., marking an advance of 1s. 8d. North Caucasians and Ural Caspians have been neglected.

A little business has passed in Rumanian Consolidateds, but values are not changed so far as quotations go.

In Anglo-Egyptian "B's" a bargain was done at 9s. 10½d., and Suez scrip has been dealt in at prices ranging from 1s. 9d. to 1s. 11d. Anglo-Persian preferences remain at 20s. 9d.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, Thursday.

Money has been in substantial demand at rates which have ranged between 4 per cent. and 4½ per cent., for from day-to-day loans, and weekly fixtures have been arranged at from 4½ per cent. to 5 per cent. It has been apparent all the week that the War Loan subscriptions have reduced the floating supply of credit, and this influence will be felt for some time.

The discount market has been steady: at the close the minimum quotation for bills of all dates varied between 5½ per cent. to 5½ per cent. Outstanding Treasury bills were offered in very free fashion at from 5 per cent. to 5½ per cent. A very fair supply was available.

The bank rate stands at 5½ per cent., at which it was fixed on January 18: a year ago it was 5 per cent. Bankers' deposit rates are now 4 per cent.

After being firm all the week at the abnormal price, the cash price of bar silver last night fell ½ to 38½d. per ounce, the movement being due to profit takers' operations. At the close buyers had satisfied all their needs and the market was dull.

Italian and Russian Exchanges have advanced; Alexandria stands at 97½ piastres.

THE EASTERN BANK.

We take the following from the Banking Supplement of the *Financial Times* of January 24:—

"The Eastern Bank, Limited, is the latest British institution to enter the banking field in the Middle East. It was formed in 1909 under the auspices of E. D. Sassoon and Company, and thus began life with an excellent amount of goodwill, that intangible asset which means so much to a bank, but which seldom or never figures in the balance-sheets. Already good progress has been made. The paid-up capital was originally £400,000, but in 1914 it was increased to £600,000 by the issue of new shares of £10, having £4 paid, at a premium of 15s. per share. There is a reserve fund of £55,000. The bank, in addition to its two Indian branches, has establishments at Baghdad and Basra. At the end of 1915 it controlled nearly £2,000,000 of deposits. Since the commencement of business the shareholders have received dividends of from 4 to 6 per cent., the distribution for 1914 and 1915 being 5 per cent."

SUZ CANAL RECEIPTS.

NOTES OF THE WEEK.

From Mesopotamia this week has come news of a success and of a reverse. Continuing his operations on the right bank of the Tigris, General Maude, on February 15, launched an attack on the enemy's right in the Dahra bend of the river, west of Kut. This was successful, and was at once followed up by an assault on the Turkish right centre, as a result of which an advance along a front of 700 yards was made. These gains were still further extended, and attention was immediately afterwards paid to the left of the enemy's line. Again the attack was successful, and the whole of the Dahra bend was thus cleared, except for small detachments holding points on the river bank. The same night even these last areas were occupied. Meanwhile cavalry had been working round on the left of the British line, and, during the two days, contrived to establish a hold on the south-west corner of the Shumran bend. These operations entailed the capture of 1,995 prisoners, including 89 officers, together with five machine-guns and quantities of rifles, ammunition, and equipment.

Against the success on the south bank of the Tigris has to be set a check on the left bank at the Sanna-i-Yat position. These formidable lines have resisted all attempts to pierce them since the investment of Kut by the Turks in December, 1915. They extend over a short front and are protected on each side of the river by marshy ground. Once at least the Relief Expedition of 1916 managed to reach the first line of trenches, but no permanent hold could be established. Again, on February 17, the attack achieved an initial success, and the enemy's two front lines were occupied on a frontage of a few hundred yards. The first Turkish counter-attack was repulsed, but a second one half an hour later forced the right of the British line back to its original position, and the left had to be withdrawn after dusk. According to the Turkish version one British officer and sixty men were made prisoners on this occasion. After the successes on the right bank it was inevitable that the Sanna-i-Yat position should be tested again. It seems to constitute the key to the Kut defences, or at least it is desirable that, when the Turkish line does break, it should break both east and west of Kut. General Maude's tactics have been slow, but eminently successful, and we may look to the experience gained in the check on February 17 being put to good use in further opera-

tions. Since the advance began in December the enemy's casualties are estimated to have been 15,000.

Greece is still experiencing great difficulty in playing the game. The trouble, as was to be expected, is over the surrender of rifles. In all 80,000 rifles are reported to have passed the scrutiny of the Allied officers on their way to the Peloponnese, and it is felt that the muster, as far as the official army is concerned, is satisfactory. But a considerable number of rifles is known to have passed into the hands of reservists and the civilian population generally, and practically none of them has been forthcoming. The Greek Government met the Allies' representations on this subject by promulgating a decree for the disarmament of civilians. But no rifles have been handed in, and meanwhile the Greek Press is adopting a truculent attitude once more towards the Entente Powers and lashing itself into a fury because the blockade has not been raised when all the Allies' demands, as it avers, have been met. In these circumstances the Protecting Powers have adopted a wise course in issuing a *communiqué* direct to the Greek people. This document points out very clearly that there is every reason to suppose that hidden arms remain north of the Peloponnese, and that in default of the correct attitude which the Allies have the right to expect of Greece, the guarantees stipulated by the Note of January 8 cannot yet be regarded as obtained.

The course of events is entirely in keeping with what might have been anticipated; but if the representatives of the Allies act circumspectly and patiently, Greece will fall into line in the end. A *sine quâ non*, however, is the retention of some means of exercising immediate pressure when it is needed. The Greek Government takes exception to the Allies' interpretation of the order for disarmament as an admission that the civilian population necessarily had arms to hand over. It also explains the excavations on the banks of the Corinth Canal, to which the Allies had called attention, as a measure undertaken “when the Entente Diplomatic Corps and the Venizelists had left Athens, and there seemed to be a possibility of war.” The works, it is added, had ceased as soon as the Allied Military Control raised objections to them. The upshot of the whole matter is that the blockade remains, but the Allies announce that they have already considered how to arrange for the re-victualling of Greece as soon as circumstances will permit. Meanwhile provisions are scarce, and bread rations in Athens are being reduced to vanishing

point. The Greek authorities have the remedy in their own hands, for if they have the will, they have the power to call in the hidden arms. An attempt will be made to represent the population as being out of hand and the authorities powerless; but that is an argument which does not hold water in Greece.

Both in Roumania and in Macedonia there have been only local outbursts of activity. In the latter theatre the Italians are meeting Germans, and French troops are for the first time confronted by Austrians. The appearance of flame machines in the enemy's ranks points to German reinforcements of a kind, but it is not yet established that any large bodies of troops are accompanying the introduction of the diabolical contrivances in which Germany specialises. Deserters have tales to tell of the coming employment of these various horrors. At this stage of the war it is most probable that a systematic attempt will be made by the Germans to keep up the spirits of their own troops, and those of their allies, by reports of the numerous shortcuts to victory which are always on the point of arriving.

A statement attributed to the Bulgarian Government in its reply, despatched to neutral Powers, to the Allies' recent Note, to the effect that Bulgaria entered the war because her neighbours threatened her existence, and planned to divide her territory, has elicited an interesting statement from M. Pasitch, the Serbian Prime Minister. The main course of the negotiations which preceded Bulgaria's entry into the war is familiar to readers of THE NEAR EAST, but M. Pasitch now gives an official account which enters more into details. At the very beginning of the war, he says, Serbia proposed to Roumania and Greece that they should make a joint declaration to Bulgaria, informing her that they were ready to proceed with a revision of the Treaty of Bucharest in her favour. Russia was informed by the Serbian Government that it was ready to grant territorial concessions to Bulgaria east of the Vardar. On the entry of Turkey into the war Serbia urged Bulgaria to discharge her debt to Russia, her liberator, and promised her in exchange territorial concessions. "Finally, some time before the mobilisation of Bulgaria, after the Entente had made *démarches* to the Serbian Government with a view to obtaining territorial concessions in favour of Bulgaria, Serbia declared that she was willing, in order to bring a speedy end to the war and to effect concord in the Balkans, to make these territorial concessions. The sacrifices which she promised were enormous. She agreed to cede territory west of the Vardar, almost all the famous line mentioned in the Treaty of 1912, including Monastir, with the exception only of Prilep, with the reservation that she should have a common frontier with Greece." Bulgaria, as we know, was too far committed to Germany by the time the Entente Powers had wrung from Serbia her assent to these sacrifices. Perhaps the value of the disclosures lies in the light it throws on national claims in the Balkans. When the final settlement is reached the course of the war cannot be entirely ignored, but a real effort must be made to reach finality on equitable grounds in the demarcation of boundaries.

Discussion on any subject connected with the Near and Middle East is to be encouraged at the present time, when it is so necessary that public interest in this region should be stimulated with a view to securing a satisfactory settlement of the whole Eastern question at the end of the war. But we are particularly glad to find the Baghdad Railway chosen as the subject of an address delivered by Mr. H. C. Woods before the Royal Geographical Society. Considerable uncertainty seems to exist in many minds regarding the future relations of Germany to this enterprise. It is, however, unthinkable that this line should remain what in the conception of the scheme it was intended to be, the instrument of German domination in Asia. On this point Mr. Woods had no doubts in his own mind, "The Allies

must leave no stone unturned to prevent the conclusion of a peace which would leave the enemy still possessed of a predominating control in an undertaking which, once it was robbed of its political significance, could easily be established upon an international basis. Arrangements would have to be made guaranteeing to Great Britain, France, Russia, and Italy the safety of their respective positions in areas in which each of these countries was possessed of special interest." Lord Curzon, in speaking on the situation in Persia in the House of Lords on Tuesday, referred to the suspicions he had always entertained of Germany's Baghdad Railway project, and added significantly that "the plan was a bold one, but it was by no means completed, and it would not be completed until the Conference had met at the end of the war."

Talaat Pasha has met the Turkish Chamber in his capacity as Grand Vizier, and has elaborated the policy of the new Cabinet. He made a special point of the Allies' declaration of their intention to turn the Turks out of Constantinople and drive them from the Straits. The Turkish reply to these "ridiculous threats" was that they would not relinquish Constantinople as long as there was a single Ottoman left. They would persevere in this gigantic struggle in close fraternity of arms with their brave and victorious allies until they had compelled their enemies to recognize their right to existence. Talaat Pasha's rodomontades ignored the fact that the integrity of the Ottoman Empire was guaranteed by the Entente Powers so long as it remained neutral in this war. Only after the unprovoked attack upon them has the Allies' fiat gone forth that Turkey cannot be allowed to play into the hands of German militarism. To that unpardonable offence Turkey's rulers have added a long list of wanton crimes which have served to seal her doom, as far as her claim to remain in Europe is concerned. The time for carrying the Allies' intentions into effect, it has to be admitted, has not yet come; but the sentence has been pronounced and will remain until it has been executed. No one fully cognizant of all the facts of the case will hesitate to admit that the crimes have merited the punishment.

To those who still doubt how it stands with those who are responsible for Turkey's destinies to-day may be commended the story of the famine in Palestine and Syria. The widespread suffering, it is pointed out by the Committee of the Syria and Palestine Relief Fund, is caused by a deliberate policy of starvation, and the testimony of Lord Grey is cited: "It is clear that there has gone on in Turkey, on a scale unprecedented and with horrors unequalled before, an attempt to exterminate the Christian population." After all, the Turkish population will be amongst the first to benefit by their ejection from Europe, for it is unlikely that the present *régime* will survive such a *débâcle*. When the ruling clique has been eliminated there will be some chance of a permanent amelioration of the lot of both the Moslem and the Christian population of the Ottoman Empire.

In the absence of further pressure by British troops the Turkish forces on the Sinai frontier gained sufficient heart to cross over into the Peninsula and to establish themselves in two places on the southern route. They were allowed little respite, however. Simultaneous attacks directed against the posts occupied were completely successful. At Bir-el-Hassana the whole garrison of three officers and twenty-one men was captured, while at Nakhel the detachment of about a hundred mounted men made good their escape, but left eleven of their number in the hands of the British troops. Our casualties, it is satisfactory to note, were nil.

"THE NEAR EAST" INDEX.

Indexes for Volume XI. (May 5-October 27, 1916) are now ready, and may be obtained, post free, by readers on application to the Manager.

TURKISH TREACHERY IN IRAK ARABI.

(FROM A CORRESPONDENT.)

CAIRO, January 27.

Akif Bey and the Holy Places.

A copy of an Arabic paper published in Busreh has just come to hand, giving details of the attack on Hillah, to which I referred in my last letter. These show up the treachery of the Turkish commander, Akif Bey, in all its cynical brutality. Following certain disturbances, brought about by Turkish injustice, the Unionist Government decided to send to that town, and to Nejef and Kerbellah, a punitive expedition composed of seven battalions, under the command of Akif Bey.

On the arrival of this force at Musseyib, the Commander-in-Chief went in person to Kerbellah, and had an interview with its leading sheikh, Mohammed Ali Kamouna. In the course of this interview he said: "We have come to guard your faith, to protect your country and your women's honour from the enemy, and our only object is the passage of our troops in your town and the maintenance of security." The Sheikh replied: "The town of Kerbellah does not lie on your way; and as to maintaining security, that is our concern, and we are able to attend to it. If, however, you have another object in view, know that we are ready to fight you in return for your iniquitous acts."

The Turkish commander thereupon returned, crest-fallen and furious. He then wrote to the chiefs of Nejef to meet and parley with him, but received no reply. Finally, he started negotiations with the chiefs of Hillah, beginning with Qazwini Zadé Mohammed Ali and Nur-ed-Din Zadé Muhye Agha. One of his letters ran thus: "Our soldiers, the protectors of the Faith and fatherland, are seeking the enemy to expel him from the land of the Moslems. We, therefore, request from you freedom of passage through your town and the re-victualling of the troops." The two chiefs called the inhabitants together, and read this missive to them, but the proposals met with unanimous refusal. The commander repeated the request, even to the fourth time, and still the inhabitants persisted in their refusal. The two chiefs then wrote to him, saying, "We have done all we could to prevail upon the inhabitants, but without result, as they can place no faith in you and your promises, especially as they cannot forget your doings at Kut." The commander then took up a Koran and wrote upon it: "This, the word of Allah, presents us to you, and thus binds us to you with the solemn promise made before Allah and His Prophet. We bear you no ill-will, nor do we intend causing you any harm. You are in the trust of Allah and His Prophet, safe in your possessions and your honour. Our only object is freedom of passage for and re-victualling of our troops, in order to facilitate their march."

Perjury.

In face of such solemn and sacred declarations, El Qazwini could not but summon the inhabitants again; and he harangued them on two consecutive days, using every persuasion, but to no avail. He then told them: "I shall quit your town if you do not accede to my request." "That," they replied, "is easier for us to bear than to give up ourselves and our women's honour to a tyrant who has no mercy." In the evening he summoned them once more, and said: "In my religious capacity of *alim* I declare to you that if you do not accept the oath taken on the Book of Allah, and in His name and that of His Prophet, you will be denying Islam." This threw the inhabitants into perplexity, and they finally agreed to allow the Turks to enter the town. The commander received the news with unconcealed joy, but, by way of safeguard, he asked the Sayyed to send out all the chiefs of the tribes to meet him at Musseyib, which was done. The troops then advanced, escorted by about 500 horsemen of the different tribes, and spent the night at a spot about six miles from Hillah. Then the commander wrote to the inhabitants: "If you desire that our troops should enter your town, let all your men and women come out to meet them." This also was done.

The Mask Thrown Off.

The troops then moved from their encampment in companies of 50, one after the other, until some of them got behind the inhabitants, when they closed round them in a circle, brandishing their swords. This created panic, and some of the inhabitants fled. Thereupon Akif Bey came up and greeted them; and they returned the greeting, and gave assurances of their loyalty and submission. He then asked about some of the chiefs who were not present; and, being told that they were away, ordered the people to distribute themselves quarter by quarter. There were five such divisions. Inhabitants of other quarters had not come up, and the commander knew it. The people remained in their position for four hours, then the commander ordered four battalions to enter Hillah and occupy the forts and defences on the pretext of restoring order, and, after the troops had firmly established themselves therein, he ordered the inhabitants to return to the town. Further troops followed. In the evening the chiefs called on the Commander and professed their loyalty. Next morning, however, he ordered that they should be called up before him, on the pretext of discussing with them matters of public interest, but no sooner had they arrived than he had them surrounded by troops and forthwith imprisoned. Gallows were then erected, and fifteen innocent notables and chiefs were hanged that day, while the Sayyed who had done so much to win over the inhabitants was clapped in the house of Es Sayyed Abdul Selam, which was guarded by troops.

That night the inhabitants formed armed bands of seventy, eighty, and 100 men to attack the troops and rescue their families from the net in which the treacherous invaders had snared them. The Commander, however, had meanwhile ordered his troops, including the artillery and airmen, to destroy four quarters of the town. In a few hours these were reduced to ashes. On the following day he compelled men of the town itself to destroy the residences of their leaders, and finally started mobilising all men between twenty and fifty years of age.

Since then many of the inhabitants have fled to Busreh, which has become a veritable city of refuge for all Mesopotamia. It is estimated that the total number of fugitives who have hitherto flocked to Busreh from Nejef, Kerbellah, Hindia, and Baghdad, including some Syrians, amounts to not less than 50,000.

A Notable Visit.

In this connection reference should be made to the recent visit of Sheikh Abdul Aziz Ibn Seoud, which marks, indeed, an epoch in the war history of Busreh. The great Emir of Nejd and El Hasa arrived at Busreh by the s.s. Koweit, and had several meetings with the notables of the town, where matters of high moment were discussed. It may not be long before the effect of the decisions arrived at in these meetings will be felt. On the occasion of one of these meetings, when Sheikh Khaz'al, Emir of Mohammerah, sat beside the great Emir of Arabia, a poet asked leave to read a poem, and the noble chieftain readily assented, saying in the Nejdian dialect, "Sem." The poem, of course, starts with incisive remarks on the enemy's attack on Arab religion, honour, and literature, and then calls upon the great Emir, who personifies the noble traditions of the Arabs, to defend the nation, and save also "Baghdad, which mourns, and Damascus, which cries for redress."

Emir Ibn Seoud, after spending a few days at Busreh, returned to his capital, Riadh.

Town Improvements.

As in Damascus and Beyrout, the Young Turks with perverse vanity have chosen this time to carry out the project of the late Nazim Pasha for re-planning Baghdad, and have cut through it, from end to end, streets from 14 to 15 metres wide; while the inhabitants have been left to die of hunger and disease! The opening of such wide streets in a crowded town like Baghdad necessitated the demolishing of a considerable number of houses, and the result was that many homeless families, finding no more shelter in their own town, had to emigrate to Nejef, Kerbellah, and neighbouring villages.

BRITISH PRISONERS IN TURKEY.

The *Morning Post* published on Tuesday the following communication, which it received from Sir Starr Jameson, Chairman of the Central Prisoners of War Committee. It relates to an article which appeared in the *Post* of January 29, and to which reference was made in THE NEAR EAST of February 2 (p. 314):—

The full report of the International Red Cross Commission which recently visited certain of the internment camps in Asia Minor and hospitals in Constantinople has not yet been received, but from information supplied by the American Embassy in Constantinople the statement that the Turkish authorities are "regardless of all considerations of humanity" or "that their aim is to render the lives of their British prisoners intolerable" appears to be an exaggeration. The cost of living is very high, but the American Embassy has the means of supplying money to those who need it. From the same source the British prisoners of war receive clothing, the lists of articles delivered by the Embassy to the Turkish Red Crescent being checked and receipts forwarded by the prisoners of war for whom they are intended. Thus, between December 1 and 15 of last year 606 native quilts, 455 raincoats and overcoats, 192 pairs of boots, besides 216 woollen jackets, and many other articles of clothing were despatched to various camps. During that fortnight 189 Christmas puddings and eighty-one Christmas cakes were also sent to the camps in Asia Minor by the American Embassy, in addition to any parcels which may have reached the prisoners from England.

The question of parcels is one of great difficulty, but the reason of their non-delivery would seem to be a question of transport—especially in the cases of camps which are some scores of miles from a railway—rather than indifference or ill-will on the part of those responsible. On the whole, though the British prisoners of war, especially the Kut Garrison, have undergone great sufferings and hardships, the conditions now existing in the internment camps in Asia Minor appear to be improving.

It is certainly comforting to be assured that some, at least, of our countrymen imprisoned in Turkey are not so utterly without "comforts" as was feared. Nevertheless, a note appended by the Editor of the *Morning Post* to Sir Starr Jameson's communication informs us that the statements in the original article were taken from the letter of a British officer-prisoner in Turkey; so that it is impossible to avoid the conclusion that, in some internment camps at least, the lot of the British prisoners is far from a happy one. It is to be hoped that those responsible for any unnecessary suffering or hardships will eventually be called to account.

In the House of Commons, on Wednesday, Mr. J. F. Hope, answering a question by Mr. G. Lambert, said: The present number of British prisoners of war in Turkish hands is as follows: British Army, 323 officers, 1,652 other ranks. Colonial Army, 13 officers, 140 other ranks. Indian native, 195 officers, 3,573 other ranks. There are still untraced 17 British officers and 1,388 other ranks, and Indian natives, 4,879 other ranks. In answer to a supplementary question with regard to the conditions of the prisoners, Mr. J. F. Hope stated that a very long report had just come in, but he was not yet in a position to generalise.

The Montenegrin Government denies the rumours that negotiations have been taking place with the Central Empires for the creation of a Jugo-Slav State governed by the reigning Montenegrin dynasty under Austro-Hungarian protection.

All Serbian subjects living in the British Isles and the Dominions born between 1862 and 1898, inclusive, are warned by the Serbian Legation that they are liable, according to the new law, to present themselves for examination before the Recruiting Commission in London, 115, Gloucester Road, S.W., before March 2, on pain of being treated as deserters. All persons presenting themselves for examination must be prepared to start for their military duty at once if they are found fit. All Jugoslavs under Serbian protection must also present themselves to the Commission.

THE WORLD-FAMOUS YAGHOURT

may be obtained, in 6d. and 1s. jars, of
MANOLI-CORBETTL.

22, Great Chapel Street, Oxford Street.

Also LEVANT PRODUCE:
Tomato Paste, Black Olives, Locomes, Maiva,
Bamias, &c.

Recommended by Mrs. Frank Barker.

GREEK SEMINARY AT LARNACA.

(By OUR CYPRUS CORRESPONDENT.)

Some years ago the present Bishop of Kition, who recognised the urgent need of a better education for the village clergy, formed a training school at Larnaca, which is under his direction. It has been recognised by the High Commissioner as a school for elementary teachers. Little is heard of this seminary outside Larnaca, but it should become in time the means of effecting considerable progress, in raising the standard of the rural clergy, and creating a new atmosphere in the villages. Various subjects besides theology are taught, including a certain modicum of agriculture and gardening, for which adjacent land is provided. In the last report of the High Commissioner on the Blue-Book, the hope was expressed that the seminary will help to remedy the deficiency of teachers, especially in small hamlets, where the duties of schoolmaster and priest may be well combined.

Mr. Gennadius, when Director of Agriculture, insisted that in Cyprus, as in Greece, agriculture could be best taught to peasants by priests and schoolmasters. "Everywhere," he says, "particularly in the East, priests and teachers are the advisers of the peasant in every emergency, especially when by their conduct they manage to acquire his good opinion and esteem." These services, he adds, can be rendered in a very short time, and without expense. By no other means could they be secured so easily. With the co-operation of the Departments of Agriculture and Education good results should be obtained, as suggested.

As regards the Government Agricultural School at Nicosia, there has been good progress, and in 1914 students were selected for employment by the Agricultural Department. It was hoped that the majority of students, who were to complete their course of instruction, would return to their farms to put into practice the knowledge acquired at the school. The courses of instruction in agriculture now given annually to village teachers at Nicosia, Limassol, and Paphos has been another excellent move. All this shows that in various directions the teaching of elementary agriculture is proceeding. It remains to push forward practical demonstrations as far as practicable in all branches, and in as many centres as possible.

CAUSES OF TURKISH GREATNESS AND DECAY.

In the course of a lecture last Wednesday—one of a series dealing with the historical causes of Near Eastern Problems now being delivered at the London School of Economics—Dr. Pember Reeves said that undoubtedly the Turks conquered first of all because they had the luck to be led for a couple of centuries by a most extraordinary succession of able and vigorous rulers. Undoubtedly, too, the original little clan were a race of men who fought well. But much more important as a cause of the Ottoman rise to greatness was the fact that they were able to attract or force into their service picked men from all the peoples with whom they came into contact, that they organised and trained these men, and blended with them, so recruiting the Turkish race. In the day of power and prosperity the Turkish system was a barbarous, but none the less elaborate, and, in its way, scientifically organised thing. The regular army and the Civil Service were composed entirely of slaves of the Sultan. Christians were not allowed to bear arms, but every few years Government officials visited the districts where a Christian population resided and summoned all the families before them. From among the boys of from twelve to twenty years of age a certain proportion of the most promising, physically and intellectually, were selected to be the slaves of the Sultan, and from these the army and Civil Service were recruited. They were not forcibly converted, that is to say they were not offered the alternative of Islam or death; but, short of this, every sort of pressure was brought to bear, and in practice they all became Moslems. Those who were thought to be most intelligent were first of all well trained physically and then well educated. They were usually taught to speak four languages, and instructed in the whole Moslem code of religion and law. They were well dressed, taught to bear themselves in a dignified manner, and gradually moved into Government offices, where promotion under the earlier and more vigorous Sultans was strictly a matter of merit.

It was estimated that about 3,000 boys of the very pick of the Christian population were thus taken every year: a number which was increased to as much as 8,000 by slaves taken on the frontiers, received as presents or bought in the market. From the year 1350 until 1600 the system showed a most extraordinary measure of efficiency. Its greatest weakness was that the boys having been inhumanly torn from the arms of their parents and made to change their religion when they were old enough to understand what they were doing, developed, as a rule, into men with no religion at all—shiftless, selfish, unscrupulous, scheming, and corrupt. Some, of course, became enthusiastic Moslems, others always remained Christian at heart, but most developed in the way stated, and, ultimately, it became beyond the power of the Sultans to control them.

THE BAGHDAD RAILWAY AND ITS TRIBUTARIES.

At a meeting of the Royal Geographical Society, held on Monday evening at the Theatre, Burlington Gardens, Mr. H. Charles Woods read a paper, "The Baghdad Railway and its Tributaries." The lecture was illustrated by maps and lantern slides, many of the latter having been made from Mr. Woods' own photographs. Whilst series of maps were thrown upon the screen during the reading of the more serious passages of the paper, Mr. Woods paused at intervals to show groups of pictures which illustrated the particular areas about which he had been speaking. Thus, there were slides depicting respectively the Seljukian remains at Konia, the Taurus Range, and the kind of country and cities through which the railway passes. Many of these photographs, and particularly those of the Taurus section, proved the magnitude of the engineering difficulties which have had to be overcome in the construction of the Baghdad Railway.

After briefly explaining that the Baghdad Railway now under construction was by no means the first line ever proposed from the Mediterranean to the Persian Gulf, Mr. Woods went on to give two reasons which led to the starting of that railway, not from the Mediterranean but from the Bosphorus. The first of these reasons was that the opening of a through line to Constantinople in 1888 meant that if there was to be an overland route to the Persian Gulf at all, such a route would naturally start from Constantinople. The other and, from the military and political points of view, the far more important reason for the change of plan was that German influence had been entirely directed towards the construction of railways which would not be easy of attack by a group of Powers possessing the command of the sea. Thus, whilst a line starting from the Mediterranean would, under present circumstances, have been quite useless to Germany or Turkey as a means of through communication between East and West, a railway broken only at the southern end of the Bosphorus—and therefore at a point effectively protected against naval attack by the forts of the Bosphorus and the Dardanelles—enabled the Sultan and his Germanic Allies rapidly to convey troops or foodstuffs from Europe to Asia Minor, Syria or Mesopotamia in the very face of the Allied Fleets, which were powerless to interfere in an area in which the enemy practically enjoys the advantages of naval power.

Starting from Haidar Pasha, opposite to Constantinople, it was now possible to travel by train or by water across the greater parts of the areas which lie between the Ottoman capital and Baghdad on the one hand and the Egyptian frontier on the other. As a result of the opening of the Taurus tunnels in November last, direct communication had been established as far as a junction about ten miles north of Aleppo. From here the Baghdad Railway proper continued its way in an easterly direction as far as a point situated between the rivers Euphrates and Tigris. At the other, or Baghdad end, the railway had been completed in a northerly direction, at least as far as Samara, and probably up to Tekrit. Even if we took it that the respective termini were at Ras-el-Ain and at Tekrit, this means that out of a total distance of approximately 1,500 miles from Constantinople to Baghdad, over 1,100 miles can be accomplished by train. It was therefore obvious that the progress of the railway had had its military advantages to Turkey in the Mesopotamia campaign. But what was of equal importance was that the Baghdad Railway provided an easier and quicker means of communication between Constantinople and Eastern Asia Minor than would otherwise have existed.

The southern prong of the Asiatic railway system starts from Aleppo. Passing through Damascus, it runs in a more or less due southerly direction for a distance of 330 miles, and as far as Deraia. From this point there were two railways: the first was the Hejaz line, which continues its way in a southerly direction as far as Medina; the second bent off in a westerly direction towards Haifa, but, before reaching that port, turned south near Nazareth, running thence as far as El Auja, to the south-west of Beersheba. Although there was at least one break of gauge, at Rayak, near Damascus, the strategical importance of this great southern prong, or more correctly of these southern prongs, was enormous. Indeed it was the existence of the railways, some of which had only been completed since the outbreak of war, that rendered possible the threatened attack upon Egypt.

In 1888 the three railways existing in Asia Minor were completely—or, at least, practically—in the hands of English capitalists. From that time, when the Germans obtained possession of the Haidar Pasha-Ismid line, the diplomacy of Berlin had gradually secured the various concessions leading up to the construction of the Baghdad Railway. The Anatolian Railway Company, which came into being in 1889, built and owned the line to Konia, which was opened in 1896. The completion of that line was most important, not only because it laid the foundation for the construction of the Baghdad Railway over its present route but because it established railway connection between Smyrna and Constantinople by means of a line which connected the former town with Afium Karahissar, on the main route to Konia. It was the second visit of the Kaiser to Turkey in 1898 that led up to the promise of the real concession for the Baghdad Railway, which was signed on March 25, 1903.

The completion of the first section of the railway, which runs across the plain from Konia to Ereğli, and which was opened in

the year 1904, was followed by a prolonged delay. This was due partly to geographical and partly to political and international conditions. The early construction of the second section, which was not begun until early in 1910, entailed by far the most difficult work on the whole line. This was due to the facts that the line was obliged to follow narrow winding gorges, and that, in addition to four tunnels, which had a total length of about eleven miles, there was a great amount of earthwork cutting and bridge building to be done. This meant that there was a gap in the Taurus section of the railway for a period of nearly three years and until November last, and that the Turks were compelled to utilise the road which runs through the Cilician Gates for the purposes of military transport.

In connection with the section of the railway which lies to the north and north-east of Alexandretta, Mr. Woods pointed out the significance of the route which had been adopted. The importance of that route was that while various suggestions had been made at different times that the line ought to run via Alexandretta to Aleppo, the route as defined in the original concession had actually been adopted. This meant that instead of passing for a number of miles absolutely along the sea-coast, the railway ran nowhere within less than ten miles of the shore, and that it was, therefore, practically secure against attack from the sea, as to seize it would require not merely a raid, but actually an expeditionary force of considerable size. This plan was obviously dictated by reasons of strategy.

Were it not for the fact that the war could hardly fail to obliterate many of the more important results of the events which preceded and followed the signing of the new agreements between Turkey and the Company in March, 1911, these arrangements might have been possessed of more far-reaching political consequences. The signature of that agreement almost immediately followed the meeting of the Tsar with the Emperor at Potsdam, a meeting during which the relations existing between Turkey and Germany were temporarily adjusted. It remained, then, for Berlin to negotiate with England and France for agreements as to the development of districts in which they were specially interested, and particularly as to the future construction of the Baghdad-Persian Gulf section, to which the Company had more or less renounced its rights in 1911. The Tripoli war and the Balkan war were not favourable to negotiation, and it was only in 1913 that Turkey, in agreement with Germany, despatched to London the ex-Grand Vizier, Hakkı Pasha, to try to bring about agreements to be drawn up between the Foreign Office, the German Embassy, and the Ottoman Embassy—agreements to settle the outstanding differences as regards the Baghdad-Persian Gulf section, and other cognate matters of river transport in those regions. These agreements presumably presupposed a continuance of friendly and peaceful relations between Turkey, Germany, and Great Britain, and it is believed they were practically already concluded when, in August, 1914, Great Britain found herself compelled to declare war on Germany.

Speaking of the possible future of the railway, Mr. Woods said that the line was single, the gauge was the normal Continental one, and the stations, or passing places, were separated by an average distance of 12½ miles. The original agreement stipulated that after the opening of the railway as far as Aleppo there was to be a weekly express train as far as that point, and subsequently a fortnightly express to the Persian Gulf. By agreement the speed for these trains was to be about twenty-eight miles an hour, which meant that the journey from Constantinople to Baghdad could be accomplished in about fifty-four hours, and from the Turkish capital to Busreh in about sixty-six hours. Taking all the conditions at their most favourable value from the point of view of the Baghdad Railway, travellers and mails might be conveyed from London to Bombay by that route in about nine days seventeen hours instead of, as before the war, in between thirteen and fourteen days by way of the Suez Canal. Prior to the outbreak of the war, however, the traveller could not be provided with the comforts which would have led him to choose such a route in preference to a first-class ocean steamer. The average speed on the Anatolian Railways was nowhere more than nineteen miles per hour; there were no night trains, and those which ran in the day time were made up partly of passenger coaches and partly of goods waggons, thereby causing a considerable delay necessary to allow for the loading and unloading of goods.

In conclusion, Mr. Woods said that the present was a moment at which it was not desirable to make a detailed forecast of the Baghdad Railway. Two things, however, seemed to him to be certain: first, that sooner or later the line would be completed; and, second, that its ownership and control would depend not so much on any agreement already made as upon the results of the war, and particularly upon the fate of Turkey. For years the Germans had turned their attention to the East, towards development of an influence which, so to speak, pivoted upon the Baghdad Railway. It was for this reason that whatever concessions should be offered to them near at home, the Allies must leave no stone unturned to prevent the conclusion of a peace which would leave the enemy still possessed of a predominating control in an undertaking which, once it is robbed of its political significance, could easily be established upon an international basis. It was too early to lay down definitely the form of that internationalisation. It depended, and it must depend, upon the future status of parts of the now Asiatic dominions of the Sultan. If there were to be spheres of influence, of protection, then it was obvious that the main lines and their branches existing in these various spheres must pass under the direct or indirect control of the Power most closely interested in the area in question. If, on the other hand, Asiatic Turkey were not to be divided into such spheres, or if only part of it were to be so divided, then as the Turks could not manage their railways without foreign assistance some scheme of internationalisation would have to be devised

for the railways located in the areas still left under the direct control of the Sultan. Whether that scheme should give to each country, or to each group of countries, the line in a particular district, or whether the railways should be internationalised as a whole, are questions which could not be decided until the advent of peace. It was clear, however, that arrangements would have to be made guaranteeing to Great Britain, France, Russia, and Italy the safety of their respective positions in areas in which they possessed special interests.

In the course of a short discussion which followed, Sir Edwin Pears said that he remembered that, about 1903, a party of German engineers, scientists, and workmen was sent out to take possession of the oilfields. It was commonly reported that few ever returned; and the report added that the tribesmen of Mahmoud Yahia, who claims exclusive rights over the districts in question, had made away with them. Mr. Woods could have told them how enormously wealthy in petroleum and other mineral produce was the neighbourhood of the Upper Tigris. A great German expert, who had gone out just before the unfortunate expedition alluded to, had said that the Baku district was not in it with the oilfield of the Upper Tigris. He (Sir Edwin Pears) was a little sceptical as to this, because an expert sent out by the Standard Oil Company of America had satisfied himself that no German or English company could take that Upper Tigris field and work it profitably against the great American field. Another matter was that, whatever might be said against the Young Turks, when they first came into power they endeavoured to reverse the policy that Abdul Hamid had followed of granting concessions to Germans in the most reckless fashion. He recalled the case of a project of railways into north-eastern Asia Minor. In that case the Young Turks had granted a concession to a powerful American group, notwithstanding German opposition.

Col. A. C. Yate said that he remembered travelling home in May, 1890. Among his fellow-passengers was a German named Richarz, with whom he had a good deal of conversation on the voyage to Marseilles. Richarz was a very interesting man and a fine musician. He surprised Col. Yate by telling him that he had been for two years at Baghdad studying archæology, and that he had a steam launch there. Within a year of that date, if Col. Yate remembered aright, there was an announcement in the newspapers that Richarz had been appointed German Consul-General at Baghdad.

TALAAAT: GRAND VIZIER.

Under date of February 16, Reuter's Amsterdam correspondent telegraphs:—A telegram from Constantinople reports that a statement read to the Chamber by Talaat Pasha, the new Grand Vizier, setting forth the policy of the new Turkish Cabinet, contained the following passage:—

"Our country, which has always been exposed to internal difficulties, has found itself compelled to make sacrifices such as our past has never previously known. Our enemies have declared their intention of thrusting us back into the depths of Asia Minor, turning us out of Constantinople, and driving us from the Straits. To these ridiculous threats of our enemies, who took flight at the Dardanelles as a result of the defeat inflicted upon them by our valiant army, we reply that we shall not relinquish Constantinople as long as there is a single Ottoman left. We shall persevere in this gigantic struggle in close fraternity of arms with our brave and victorious allies until we have compelled our enemies to recognise our right to existence. That is our aim."

Talaat Pasha then proceeded to speak of the necessity for internal reform and reorganisation, but he added:—"In this great crisis it is quite impossible to undertake important reforms, as all the nation's effort must be concentrated for the moment upon dealing with the internal difficulties created by the war. Every step with a view to the establishment of important industrial enterprises emanating from the capitalists and manufacturers of allied and neutral countries will be favourably welcomed."

At the conclusion of the Grand Vizier's statement the Government was given a unanimous vote of confidence.

MR. BERNARD SHAW says:

"The New Witness' employs more specific literary talent to the square inch than most of our journals could enlist even if they liked literary talent (which they mostly don't)."

Mr. G. K. CHESTERTON contributes each week an article on current events, under the title: "AT THE SIGN OF THE WORLD'S END."

Mr. HILAIRE BELLOC writes special articles on matters of public import connected with the national crisis.

Mr. ERNEST NEWMAN, our Musical Critic, writes weekly.

M. ERNEST DIMNET, whose articles on French politics have attracted so much attention, will continue his series, entitled "France at War."

Mr. RAYMOND RADCLIFFE, the City Editor of THE NEW WITNESS, replies to any queries accompanied by a coupon.

Mr. HERBERT VIVIAN, our Special Correspondent on the Italian front, contributes a series of striking articles from Italy.

DRAMA: THE NEW WITNESS follows closely all dramatic performances.

LITERATURE: All books worth reading are reviewed by distinguished literary critics.

FUTURE OF CONSTANTINOPLE.

The future of Constantinople was the theme of a discourse delivered by Mr. G. P. Gooch at the Ethical Church, Bayswater, last Sunday. Mr. Gooch remarked that of cities it might be said, as Shakespeare said of men, that some are born great, some achieve greatness, and some have greatness thrust upon them. Rome rose to greatness, Washington had greatness thrust upon her; but of Constantinople more than of any other city in the world it might be said that she was born great. Of the future, he said there were several possible courses. The first was that the Turks might remain in full nominal sovereignty; subject only to the influence of Germany, which had now ruled Turkey for twenty years. A second course, if the Turks were beaten but not turned out of Constantinople, would be that an international body might take over the responsibility for the navigation and defence of the Straits. Such a body had partial control of Turkish finances in the interests of bondholders, and another example was furnished by the International Commission for the navigation of the Danube. A third course was that the Turks should be turned out of Constantinople and the city be internationalised. It would be necessary to add to it a strip of land on both sides of the Straits from the Black Sea to the Ægean. Internationalisation was proposed by Sir Edwin Pears, in this country the man who had the best right to speak with authority on Constantinople. He was urging that if Turkey was turned out no other great Power should be allowed to enter in, but that the city should be taken over like a ward in Chancery, to be administered by Europe as a whole. An argument against the proposal was furnished by the increasing distrust and ill-will of the great Powers towards one another. It was difficult to imagine them after the war quietly co-operating to give the inhabitants of Constantinople the good government to which they were entitled. A fourth suggestion, that of Mr. Arnold Toynbee, was that, so far as concerned civil affairs at any rate, Constantinople should be independent. About half the present population of the city was Turkish. If the Turkish Government was turned out, many of these would go with it to the new capital at Brusa or Konieh, or wherever it might be. Of the very mixed population that would remain the two largest groups would be the Greeks and the Armenians, each numbering about 150,000 people. The Armenians had most money, but the Greeks, in view of a hundred years' experience in their own country, would probably be most ready to take political control. An independent Constantinople dominated by Greek brains and culture would be a partial revival of the Byzantine tradition. But could the independent city be trusted to have control of the Straits? These could not be left undefended, because that would be a perpetual temptation to a sudden raid. A defending army was necessary. A small Power would not be strong enough, the great Powers could not trust one another; it was suggested that the United States should be asked to take control of the Straits, and should look after the interests of a Europe too divided to look after itself.

The last proposition was that of a Russian occupation. The conquest and occupation of the city whence his race derived its church, its art, and its culture was the dream of every Russian peasant however ignorant. The rulers of Russia had professed various opinions on the matter, but the present Russian Government was avowedly in favour of taking the city. Besides the sentimental reason was the fact that the control of the Straits would add to the economic and naval strength of Russia. At the time of the war with Japan Russia had been unable to send her Black Sea Fleet to the Far East, and during the wars of 1913 and 1914 the Straits had been closed against her. The first objection to Russia having control was that it would be a denial of the principle of nationality. There were very few Russians or other Slavs in Constantinople. Next, Russia would need a land approach. This would mean a further denial of the principle of nationality, whether the approach was by the Balkan Peninsula, at the expense of Roumania and Bulgaria, or whether it was by the inclusion within the Russian Empire of the greater part of Asia Minor. Despite these and other disadvantages of Russian occupation, there was nevertheless to-day a considerable number of people—neither Russophiles nor yet favourably disposed to despotic government—who yet thought that a Russian occupation was the only possible alternative to the pan-German idea. An independent Bohemia, an independent Jugo-Slavia, and Constantinople in Russian hands, were regarded as necessary dykes against the flood.

A successful entertainment in aid of the Scottish Women's Hospitals in Roumania was given at the Criterion Theatre on Tuesday afternoon.

Five hundred officers, non-commissioned officers, and soldiers who had deserted from the Greek Royalist Army arrived at Salonika on Saturday and joined the Venizelist forces.

Under date of the 19th inst., Reuter's Jassy correspondent reports:—The Roumanian states that the Grand Duke George of Russia, who is visiting Galatz, declared to the authorities of the town that the military situation had now completely changed.

A telegram from Athens received in Paris states that an official order has been issued there directing under pain of heavy penalties that arms of all kinds retained by civilians shall be handed over to the authorities. The decree authorises the searching of private houses.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

THE RESURRECTION OF ARMENIA.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—You are quite right in making those remarks in the last issue of your paper in connection with some passages which you have quoted from P. W. Wilson's article in the *Westminster Gazette* on "The Resurrection of Armenia." By suggesting an autonomous Armenia you are truly voicing the deep-seated aspirations of the Armenians, who cannot, owing to the tragic circumstances in which they are, put forward at present their national claims in the same way as Poles, Southern Slavs, and others can do in the Allied countries. As a result of this enforced silence on the part of the Armenians, most people seem to have come to the conclusion that the only possible solution of the Armenian question is to extend Russian sovereignty over the vilayets of Turkish Armenia. The Armenian element in the Caucasus, they say, has made great economic and social progress under Russian rule, and if Armenian vilayets also went over to Russia, they would make rapid progress. "Under Russian rule," says Mr. Wilson, "Tiflis, with its theatres and newspapers, has become a thriving and prosperous town, so will it be, given the same conditions, with Van, Trebizond, and Erzeroum." On the face of things, no one would deny the assertions and predictions made by Mr. Wilson. It seems, however, that behind such sweeping statements there is the momentum of old political conceptions and a good deal of misapprehension of local conditions.

Excluding a few large towns like Tiflis, Erivan, etc., and several thriving hamlets on the high roads, one may say that most of the Armenian peasantry in Trans-Caucasia, in consequence of the prevailing system of land tenure, education, and other causes which cannot well be specified here, was little better off than the average Armenian peasantry across the frontiers. This may seem extremely paradoxical to those who have seen advanced centres or travelled in Trans-Caucasia in motor or carriage without having an opportunity of examining the conditions obtaining in outlying regions.

Unfortunately, in the present state of affairs, one cannot discuss the subject as fully as one would have wished. A comparison may, perhaps, be made without much indiscretion. After about a century of Russian rule, Tiflis, they say, has become a prosperous town; but they seem to forget that Sofia rose from a filthy village to its present standing in less than forty years. Bearing such examples in mind, is it not more reasonable to look forward to a thriving Erzeroum, Van, or Trebizond under self-governing Armenia, than under Russia, who has gigantic territories awaiting development and innumerable cities wanting material and social improvement?

Mr. Wilson and other British friends have been urging us to give up political aspirations and concentrate our efforts on erecting under Russian rule "an Armenian Empire of the mind and the soul"—an Empire within, not an empire of politics. An appropriate answer to the above well-intentioned expectation is supplied by Prof. Migulin, the well-known Russian economist, who, discussing the future of Turkish Armenia in one of the November numbers of the *Novii Economist*, exhorts the Government to cease thinking of small nations; the victors must compensate themselves by annexing conquered territories. After some argument, the Petrograd professor concludes by telling his readers that Turkish Armenia, already occupied, must be annexed in the interest of Russian industries.

One might, perhaps, fairly hope that, after what has happened during the last forty years, the statesmen of the Allied Powers are not going to allow Armenians to be subjected to industrial exploitation.

If, after so much bloodshed and suffering, Europe is not divested of at least part of its prejudices and commercial selfishness—if, after so many nice phrases about the public right and small nations, Europe emerges from this ordeal leaving Armenia still under alien rule, then many wounds will be left unhealed and bitterly aching. People apparently continue to think in the good old ways and in terms of numbers and present circumstances, without considering moral and spiritual values involved in the problem.

Now, what Armenians demand is an honest and fair opportunity for themselves.

An autonomous Armenia guaranteed at least for a generation by the Allied Great Powers would not only produce a

resurrection of Armenia, but would also serve as the most trustworthy outpost of the Russian Empire on the south-western frontiers.

I am, etc.,

A. S. SAFRASTIAN,

Former British Acting Vice-Consul at Bitlis.

EMPLOYMENT OF TURKISH PRISONERS.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—Your Cairo Correspondent raises this question in your last week's issue. It may be interesting to record that in the winter of 1912-13 I repeatedly saw Turkish prisoners of war engaged in civil employment at Sofia. I was told the men were paid one lev (franc) per diem, and that employment was popular. Certainly the appearance and bearing of the men concerned left little to be desired. I also heard of Turkish prisoners being employed upon Tsar Ferdinand's experimental farms, where they were trusted to fetch goods from the nearest station *without supervision*; but these were Pomaks, not Turks *pur sang*.

If given employment and wages, it is not unlikely that our prisoners may prefer to settle in Egypt rather than return to less pleasant conditions in Anatolia, etc.—

I am, etc.,

Reading, February 19, 1917.

H. M. WALLIS.

FAMINE IN THE HOLY LAND.

TO THE EDITOR OF "THE NEAR EAST."

Sir,—The latest news clearly reveals the extremely serious conditions in Syria and Palestine. Many thousands of the inhabitants are starving, and in one district alone a careful estimate, made on the spot, puts the deaths from this cause at fully 80,000. Many villages have lost half their population. Cholera, typhus, and other diseases are rampant. Children are being sold in the streets for a shilling or two. An eye-witness says:—"We passed women and children lying by the roadside with closed eyes and ghastly pale faces. It was a common thing to find people searching the garbage heaps for orange peel, old bones, and other refuse, and eating them greedily when found. . . . In three different places which we visited were camps of women and children where any man could go in and select a child or a woman and take them with him, dragging them along by the hair." (*The Times*, September 15 and 27, 1916.)

This widespread suffering is caused by a deliberate policy of starvation. "It is clear," said Lord Grey on October 28, "that there has gone on, and is going on in Turkey, on a scale unprecedented and with horrors unequalled before, an attempt to exterminate the Christian population." Massacre by the sword is terrible enough; massacre by famine is tenfold worse.

At the moment we seem powerless to meet this appalling situation. If, however, the success of the Allied operations permits, it may be possible to bring relief to these sufferers even before the close of the war. In any case, the needed supplies of food, medicine, and clothing should be poured in as soon as ever this becomes possible. They can be bought and stored in Egypt, whence they can be conveyed in a few hours to the ports of entry for the Holy Land when opportunity offers. A small beginning has been made, but at least £50,000 should be forthcoming if anything like an adequate supply is to be ready.

No country on the face of the earth should make a stronger appeal to people of all classes in the British Isles than that in which our Lord lived, and to which we owe the Scriptures and our whole religious inspiration. Now is the time to help. It will be of little avail to collect this sum after the Holy Land is open to us.

The distribution of the fund will be in the hands of those who know the people and have lived amongst them. Though the policy of starvation is mainly directed against the Christian population, help will be given to all in need, irrespective of creed or race. Pains will be taken not to pauperise, but to re-establish the people in their homes and on their farms. We appeal with confidence for your help in trying to meet the needs of these innocent sufferers in Palestine and Syria.—We are, Sir, yours very truly,

A. F. LONDON.

TANGIER TO TEHERAN.

According to a Press *communiqué*, issued in India in the middle of last month, "the inadequacy of the present supply of fresh fruit, vegetables, and garden produce for the use of the increased Mesopotamian Field Force has recently seriously affected the health of the troops there, especially the Indian troops." To any one—if any one there be—who still regards "The Thousand and One Nights" as a reliable guide to conditions in El Irak to-day this will doubtless come as a painful surprise. For were not Baghdad, Busreh, and other cities of the Land between the Rivers almost as famous for their gardens and their fruits as they were for their incomparably lovely ladies? But to those who know the country as it is, and as it has been since the Mongol hordes from the East reduced it to a howling wilderness, the announcement will cause little or no astonishment. At the best of times fruit and fresh vegetables are hard to obtain in any quantities. You can get dates, of course, at any time; and in their season cucumbers and melons ("sweet" and "water") are plentiful. But beyond these things I can remember few fruits or vegetables that can be described as being abundant, though tomatoes, *badinjân*, and one or two other vegetables were not scarce in Baghdad.

The fault does not lie, I think, with the soil or the climate. The former is certainly impregnated with saline matter, and the latter makes constant watering an indispensable condition of success. But with care it is possible to grow a variety of European vegetables, as the American expedition to Nippur proved conclusively; and careful gardeners would no doubt be able to achieve results that would astonish the natives. The point is now to be put to the test; for I see that Lord Pentland, as President of the Madras War Fund, has offered to raise, equip, and despatch to Mesopotamia a "Madras Gardeners Corps," and the G.O.C. has gratefully accepted the offer. Apparently, at first, sufficient gardeners will be sent to cultivate about sixty acres, and other units will probably follow later on. The corps "will be placed under the command of a European superintendent as commandant, who will have the status of a commissioned officer and will have as his assistant a European subordinate of the status of a quartermaster-sergeant." Sixty acres is not a large area, and it will be but a speck in the wilderness, no doubt. But the experiment is full of interest and of promise; and we shall all wish it success, not only for the sake of our troops, but also for the object lesson that it ought to afford to the people of Mesopotamia.

These Arabs, by the way, are not bad market gardeners in their own fashion. They are conservative to a degree, but in recent years they have learned the advantages of modern methods of irrigation, and those who could afford it have imported British made pumps and installed them in place of the old-fashioned *churd*. The result was that before the outbreak of war considerable areas that had formerly lain idle had been brought under cultivation; and when peace returns to the land once more it is to be hoped that this work will go forward with fresh energy—under British auspices, or, at any rate, freed from Turkish obstruction. Given protection from plundering by Bedouin and by greedy Turkish officials, the Arab would work with more hope and energy; and in view of what he has done in the past, I believe he would very soon become a good and successful agriculturist. One point in connection with the growth of vegetables for the Baghdad market is perhaps worth mention. As the Tigris falls it leaves a number of mudbanks in its stream, and these are always staked out in advance by thrifty growers, who have their reward, as a rule, in really wonderful crops.

On the day these lines appear in print the King will formally open the London School of Oriental Studies in Finsbury Circus. His Majesty is to be accompanied by Queen Mary, and the ceremony bids fair to be an imposing one. It will undoubtedly give the school a first-class advertisement—and that, I venture to think, it really wanted. For, so far, the British public has not apparently realised the importance of the new institution; and the City has not woken up to the fact that the venerable London Institution, overhauled and renovated out of all recognition, is likely very soon to become a centre from which will go forth a steady stream of budding empire-builders and empire-holders. At least, that is what we all hope. But if the hope is to be transformed into accomplished fact, it is certain that the country, and the Empire as a whole, will have to unloose its purse-strings. Up to date the school has met with generous help from several public bodies and from not a few famous financial and commer-

cial houses. But much—very much—remains to be done yet. A sum of £150,000 is required for the foundation of Chaire. And it is up to the public to see that it is forthcoming, unless the public really does not care, after all, whether we are to see our rivals beating us in the future in the race for efficiency.

It is, by the way, rather surprising, and not a little disappointing, to learn that of the comparatively small number of students attending the school the majority are taking up the study of Japanese. Why Japanese? Why not Arabic or Persian? I admire the Japs enormously, and their conduct as our Allies has been absolutely ideal. But it seems to me that they are such excellent business men that, whatever is to be done in Japan, they will do themselves; so that we shall never expect to do any great things commercially in their field. On the other hand, in the Near Eastern markets there will be, as soon as peace comes, magnificent openings for business; and the man who will go out there and get in touch with the native buyers should—and would, I feel sure—reap a rich harvest. It is especially the "smaller man" that I should like to see entering this market: the man who is content to book small orders, if only he books enough of them, and who is not too big to study his customers' requirements. Such an one, if he were early in the field, and able to dispense with the services of an interpreter, would secure a connection that ought to prove priceless. I do not know whether the London School of Oriental Studies is arranging classes likely to help this class of man, but I hope it is, and I hope there is still enough enterprise in this country to take advantage of the school.

A correspondent, signing himself "A. S.," writes to me suggesting that someone in Cairo has been pulling the leg of a certain pressman. In a telegram dated Saturday last the latter announces that: "Reports from Siwa show that acute distress prevails among the Senussi, who have been reduced to a diet of camel flesh and dates." On this "A. S." comments: "Acute distress, indeed, considering that these Bedouin live usually and mainly on a diet of camel's milk, a little dari seed, and dates! Only on festive days do they ever indulge in the luxury of camel flesh, or any flesh at all." I agree with "A. S." as to the distress that the Senussi are likely to feel at having to eat camel flesh. But I expect they are feeling "acute distress" all right as a result of experiences that they have gone through recently.

NEAR EAST BOOKSHELF.

BEHIND THE VEIL IN YILDIZ KIOSK.*

The glamour attaching to Oriental sovereignty possesses fascination for the Western mind, and many writers have attempted to raise the veil which guards its harámlik from scrutiny. Mme. Demetra Vaka is the latest traveller in that well-beaten track. The plot of her novel rests on a train of wildly improbable incidents. Lionel Deguerney, the ne'er-do-well scion of an ancient English family, drifts to Constantinople, where he is pitchforked into the responsible office of tutor to the Sultan's sixteen sons. Mme. Vaka's picture of the inner life at Yıldız Kiosk has been evolved from her inner consciousness, for it fails to render the mixture of magnificence and squalor which is characteristic of every Oriental Court, past and present. By a miraculous accident Deguerney obtains a glimpse of Kizatesh, the mother of the Sultan's youngest son, and, of course, falls head over ears in love with the beautiful Sultane. Exasperated by her Imperial master's tyranny, she lends a willing ear to the handsome stranger's suit; and he, aided by an impossible Chief Eunuch, succeeds in spiriting his lady-love with her little son on board a friend's yacht. Readers who prefer a happy ending will be delighted with Mme. Vaka's dénouement:—

Lionel was wholly in the mood of the woman that he loved. They smiled at each other like two children who had wandered into the Never-Never land.

"And have you no more dreams now?"

She looked, remote and ethereal; yet the warmth of life was in her eyes, and they encouraged him to say: "Yes, I dream now that some day you will care enough for me to become my wife." Before his gaze her eyes faltered, and he—with the capacity of a lover for tormenting himself—waited, fearing that he had spoken too soon. Her face was averted. The sunset claimed her attention, and there, above the mass of colour, a little white cloud floated. Kizatesh turned toward her lover, her lips parted, her slender figure swaying like a lily in a breeze. "See!" she cried, "Your cloud is touched with gold!"

This peroration is a fair sample of Mme. Vaka's staccato style. Her novel is a mixture of the late Colonel Meadows Taylor, Pierre Loti, and Ethel Stefana Stevens, with the common or garden "shilling shocker" thrown in. Intrigue follows intrigue, and the reader is kept for 300 pages in a state of breathless suspense. W. T. Benda's double-page illustrations show some artistic power, but their general effect is ruined by the inevitable dividing-line.

F. H. S.

FLYING MEN.†

This book has no connection whatever with the Near East, but it is one that we can heartily commend to our readers. It contains a number of sketches and narratives, "mostly founded on fact," as we are told in the preface, all concerned with the work of our flying men. They make excellent reading, and, with one exception ("A Personal Incident"), they have about them an air of reality that leaves no doubt in one's mind that they are written with inside knowledge of the Air Service. In the case of the exception, the lack of reality makes itself felt not in regard to the technical side of the story, but in the straining of the long arm of coincidence. The world, however, is a small place, after all; and it is possible that even in this story the foundation of fact is actually broader than seems likely on the surface.

In any case, the book deserves to be popular, for it will help the uninitiated to appreciate the dangers—and the pleasures—of flying, as nothing else that we have read so far has done. Now and then the reader may feel tempted to believe that the author is exaggerating the risks faced by the splendid men of the Air Service, but he need only turn to his daily paper to clear his mind of the doubt; and then he will feel grateful to "Hermes" for enabling him to realise more clearly what we all owe to our airmen. For the rest, he will find the little book enjoyable throughout, and when he has turned the last page he will probably be inclined, like *Oliver Twist*, to "ask for more."

BOOK NOTES.

Messrs. Longmans issued recently a second edition of Sir Julian Corbett's "England in the Mediterranean, 1603-1713," at the price of 16s.

The scene of M. Robert Hichens' new novel, "In the Wilderness," is laid partly in the Near East—in Turkey and in Greece.

Vol. XV. of "Nelson's History of the War," by Mr. John Buchan, deals with General Brusiloff's offensive and the intervention of Roumania.

FUND FOR RELIEF IN SYRIA AND PALESTINE.

A meeting was held on Tuesday at the Mansion House, London, the object of which was to raise funds for the relief of sufferers in Syria and Palestine.

The Lord Mayor, who presided, said that during the war large sums of money had been collected at the Mansion House for the relief of sufferers in Belgium, Poland, Armenia, and elsewhere, but until now no appeal had been made on a national scale for the relief of the starving population of Syria and Palestine. Yet the latest news confirmed what had preceded it, and left no doubt as to the condition of affairs there. In one district alone 80,000 people had perished from starvation. The Anglican Bishop in Jerusalem was prepared to pour the needed supplies of medicines, food, and clothing into the Holy Land at the earliest possible moment.

Lieut.-Colonel Sir Henry McMahon (Chairman of the London Committee) said that the conditions obtaining in Syria and Palestine did not permit of the application of relief at present, but so great were the increasingly evil straits of the poor people of those countries that we must make every effort to afford relief at the earliest moment it became possible. It was proposed to collect funds and organise measures of relief for effective and rapid work when the time came, and to this end large stores would be accumulated in Egypt ready for immediate transfer to the Holy Land. The committee proposed that the distribution of relief should be directed in the first instance to meet the immediate needs of those who were starving, ill-clad, and homeless. In the second place, it would seek to re-establish the people on their lands and in their homes, and to provide them with agricultural employment, with seed and other things which would enable them to become again economically independent. It was proposed to put the work of distribution into the hands of those who knew the country people, who could administer relief with tact and sympathy, and, above all, with the local knowledge and experience which alone could enable charity to promote independence. Other organisations were moving in the same direction, and it was important by timely action to get into touch with them, so as to secure that efficiency and economy which co-operative working alone could provide. The objects of the fund were non-political and non-sectarian; its work would not be used as a means of either political or religious propaganda. Its promoters aimed only at responding to human need, and proposed to distribute to all alike, whatever their race or creed. Its founder, the Right Rev. the Bishop in Jerusalem, was one who had given his heart to the country to which it applied. With him were associated other workers who had devoted their lives to Syria and Palestine, and who knew—none could better know—the circumstances and needs of the people. During the last two years they had already done much by assisting refugees who had succeeded in leaving Syria. Many thousands of these, chiefly Jews, had come to Egypt, and had been sheltered and fed until they could become self-supporting. Several thousands were still being supported there at the expense of the Government and private charity. A second and greater task, of providing help to the destitute in Syria and Palestine, they had not been able to accomplish, because any attempt to get large funds into the hands of communities and institutions had been frustrated by the interception of those funds by the Turkish Government en route. Small doles to a comparatively small number of individuals had, however, been successfully distributed through neutral agency. Whatever could be done in this and other ways for the relief of Syria had been done by the willing agents of the United States of America.

Sir Henry McMahon concluded by reading letters expressing sympathy from the Archbishop of Canterbury, Sir Mark Sykes, M.P., the late Lord Cromer, and others.

The Bishop of London said that we had been absolutely misled about the Turk. In the course of the present war more devilish things had been done by the Turk than had ever been done in history. Seven hundred thousand Armenians had been done to death, and hundreds of thousands of people slowly starved in Palestine and Syria.

Miss Inglesi (a Syrian lady by birth) said that when the men who had been forced to fight for the Turk returned they would come back crippled and worn out, and with no provision made for them. They would find a barren country, for the trees had been cut down for fuel and the gardens were ruined for want of irrigation. All mission premises, too, had been taken and looted.

Viscount Bryce said we knew little about Palestine. At the very beginning of the war a dark curtain dropped in front of that country—a dark curtain from behind which we could only faintly hear the sobs and cries of the suffering people. But we knew that a year ago in Jerusalem alone 40,000 people were living on rations doled out by the German Government. This was in a country which previously had provided more than sufficient for its own support.

To-day is the birthday of Princess Vera of Montenegro, fifth daughter and seventh child of King Nicholas. The Princess was born in 1887 at Rieka.

Sunday is the birthday of Princess Alice of Greece, the wife of Prince Andrew, who before her marriage was Princess Alice of Battenberg. She was born in 1885.

The Empress Zeoditu of Abyssinia was crowned at Addis Ababa (the capital) on February 11 amidst great general enthusiasm. The procession from the Cathedral to the Palace was characterised by splendid pomp.

Lady Howard de Walden left Seaford House, Belgrave Square, on Monday, for Dean Castle, Kilmarnock.

Sir Henry McMahon has accepted the chairmanship of the London Committee of the Syria and Palestine Relief Fund. On Tuesday he presided at a meeting in support of the Fund, held at the Mansion House. A report of the meeting will be found elsewhere.

Prince Emanuel Bibesco, brother of Prince Antoine Bibesco, the Secretary of the Roumanian Legation in London, has arrived in New York from England.

On Wednesday, at Buckingham Palace, the Earl of Ronaldshay was received in audience by the King, and kissed hands upon his appointment as Governor of Bengal, when his Majesty invested him with the Insignia of a Knight Grand Cross of the Most Eminent Order of the Indian Empire. The Earl of Ronaldshay subsequently had the honour of being received by the Queen.

The Chief Secretary for Ireland has appointed Captain the Hon. Aubrey Herbert, M.P., to be his Parliamentary Private Secretary (unpaid). Captain Herbert will continue to perform the special military duties for which he has been detailed.

Captain the Hon. Aubrey Herbert had the honour of being received by the King at Buckingham Palace on Wednesday.

Colonel I'imitrievitch, Colonel Popovitch, and Colonel Subotitch, members of the Serbian Medical Mission, arrived in London on Wednesday from Paris.

General Iliesco, of the Roumanian Army, who is specially attached to the French Headquarters Staff, and who last week visited London, has now returned to France.

M. Diomides, M. Venizelos' special envoy, had a long conference with Mr. Balfour at the Foreign Office on Thursday of last week.

M. Gennadius, Diplomatic Agent of the Greek Provisional Government in London, presided last Friday evening at a meeting of the Anglo-Hellenic League, which was addressed by M. Diomides on the subject of M. Venizelos' policy and aims.

A marriage has been arranged between John Henry Goldsmith, Sudan Civil Service, eldest surviving son of the late Rev. H. Delpratt Goldsmith and Mrs. Goldsmith, of Lyndewode Road, Cambridge, and Mary Melesina,

younger daughter of Sir Algernon Coote, Bart., and Lady Coote, of Ballyfin, Queen's County.

Count de Salis, the new British Envoy to the Vatican, gave his first reception in Rome on Tuesday evening. It was given in honour of Cardinal Bourne.

In a very interesting article, "The Late Lord Cromer," contributed to the *Morning Post* (February 20) by "Oge who worked with him," we read:—"It is of special interest to record his views regarding Orientals in general. No one could be more convinced than he of the essential and fundamental differences between the West and the East. So far from irritating him, this difference of outlook and standard was a constant source of amusement and interest. Any idea of introducing institutions in the East because they had succeeded in the West appeared to him the last word of unsound reasoning. He used to illustrate the fundamental difference of outlook by the story of a leading Egyptian Minister, who, when war was thought to be imminent between England and Russia, on being asked what public opinion in Egypt would be if war between these Great Powers were to break out, replied: 'Nous penserons comme cela-rien du tout.'"

"Natives," the writer adds, "Lord Cromer regarded with sympathy and affection, but emphatically considered them as belonging to a different race, with different ideas, different aspirations, and different capabilities. He frequently quoted a remark made to him early in life in Corfu when acting as private secretary to Sir Henry Storks: 'The English should remember this—we Greeks prefer bad government by our own people to good government by foreigners.' Lord Cromer never forgot this saying. Whenever it was possible to achieve approximately the same end through native instrumentality, he preferred employing native Ministers and officials to Europeans. He was resolutely opposed to Europeans at low pay in subordinate posts. 'Let us have few of them, but let them be first-rate and well paid.' And the article concludes: "Though somewhat abrupt and curt in manner, Lord Cromer was at heart a genial and a kindly man. He had a great sense of humour and great enjoyment of the simple pleasures of life. His intellect was essentially sane, his fortitude unflinching, his courage equal to any emergency. It is doubtful if England has ever sent out a sounder or a stronger Administrator, or one who triumphed over greater difficulties."

The Hon. Secretary of the Armenian Refugees' (Lord Mayor's) Fund has received grateful acknowledgment of the gift of 10,000 roubles towards the support of the Armenian Orphanage at Erzeroum from General Pierre de Kalitin, of the Caucasian army, who writes:—"It will help Russia's mission of civilisation and progress in the conquered territory. The native population, feeling already the beneficent results of Russian rule, looks forward with hope and confidence, and joins with me in heartily thanking you."

If You are willing to help the Serbian Army

send your Donation for

THE SERBIAN RED CROSS

to the Serbian Legation in London, which is alone authorised to collect funds in Great Britain and the Dominions for the "Serbian Red Cross Society."

There is a separate fund for the

RELIEF OF THE DISTRESS OF THE SERBIAN CIVIL POPULATION

at the disposal of the Serbian Minister, from which money is sent where it is most urgently needed. The address of the Serbian Legation is 195, Queen's Gate, S.W.

Lord Hugh Cecil, M.P., will deliver the first of a series of five lectures on "The Oncoming Revival of Church Life in the East and West" at St. Margaret's, Westminster, on Tuesday, the 27th inst., at six o'clock. The remaining lectures will be given by Father Nicolai Velimirovitch, Head of the Theological Faculty in the University of Belgrade.

At the urgent request of the Russian Red Cross, Dr. Inglis, of the Scottish Women's Hospitals, London Unit, recently agreed to open a hospital for Russians at Galatz, where it remained six weeks. During the period of severe fighting near that port the evacuation and refilling of the 100 beds the hospital contained were almost continuous. The Scottish Women were fortunate in meeting with the British Armoured Car Section, and when the time for the evacuation of Galatz came the unit, with their equipment, were shipped to Reni on barges belonging to that section. At Reni another building was handed over to Dr. Inglis to convert into a hospital, and there the nursing of the wounded was continued. The general in command of the Serbian Division said he could not speak too highly of their work, and the chief of the Russian Red Cross with the Danube army has thanked them in the name of the army. A consignment of medical stores will shortly be despatched, and funds are needed to meet maintenance expenses. Contributions should be sent to Lady Cowdray, 66, Victoria Street, S.W.

Mr. Alexander Pallis, greatly esteemed during a long career both in the high places of British international commerce and as a citizen of Liverpool, has thought it wise to retire from the Liverpool bench of magistrates (says a "Day to Day" writer in the *Liverpool Daily Post*). He is of opinion that it is best in the public interest for British subjects who are not British-born to avoid public functions in the present war circumstances. Mr. Pallis has received from the Chancellor of the Duchy of Lancaster a letter expressing "appreciation of the feeling which has prompted" Mr. Pallis to take this course. The Chancellor of the Duchy "does not question" his "right to take it," but accepts the resignation "with very great regret, and hopes that in more tranquil times the city of Liverpool may again have the advantage of" Mr. Pallis's services. It is scarcely necessary to add that Mr. Pallis is a warm friend of the Entente cause and an influential Venizelist in Greek affairs.

M. Jean Psichari, Director of Studies at the Ecole des Hautes Etudes and professor at the National School of Living Oriental Languages, has presented his magnificent library of about 25,000 volumes, bearing upon Eastern philology, history, and literature, to the Luxembourg, in memory of his son "Ernest Psichari, who fell on August 22, 1914, fighting for France."

A supplement to the "London Gazette" of February 15 contained a long list of decorations conferred upon members of the British forces by H.M. the King of Serbia. Of these the most important are:—

ORDER OF THE WHITE EAGLE.

2nd Class (with Swords).

Maj.-Gen. W. Campbell, C.B., D.S.O.
Maj.-Gen. Sir H. V. Cox, K.C.M.G., C.B., C.S.I.

Col. (temp. Maj.-Gen.) A. G. Dallas, C.B., C.M.G.

Maj.-Gen. (temp. Lt.-Gen.) Sir A. J. Godley, K.C.B., K.C.M.G.

Maj.-Gen. W. R. Marshall, C.B.

Maj.-Gen. F. C. Shaw, C.B.

Maj.-Gen. E. M. Woodward, C.B.

Maj.-Gen. M. Cowper, C.I.E., I.A.

Maj.-Gen. A. W. Money, C.B.

Surg.-Gen. F. H. Treherne, C.M.G., F.R.C.S.

Maj.-Gen. W. C. Hunter-Blair, C.B.

Maj.-Gen. H. D'U. Keary, C.B., D.S.O.

3rd Class.

Principal Chaplain the Rev. A. V. C. Hordern, C.M.G., Army Chaplains Dept.

APPOINTMENTS, PROMOTIONS, ETC.

In a message dated February 19, the Rome correspondent of the *Morning Post* telegraphs:—In Greek circles here it is considered improbable that M. Simopoulos, Secretary to the Greek Legation here, will accept the offer to proceed to London to take charge of the Greek Legation there, as stated in an Athens telegram.

In the same message the *Post's* correspondent says:—"Information reaches me from Salonika that Earl Granville is giving great satisfaction there as the British representative to the Provisional Government."

The *London Gazette* announces that the King has been pleased to approve of the award of the Distinguished Service Order to Captain Henry Warton Worsley, K.O.S.B., attached Egyptian Army.

The King has granted the following gentlemen permission to wear decorations (as stated against their respective names), which have been conferred upon them by the Sultan of Egypt in recognition of valuable services rendered by them:—Third Class of the Order of the Nile: Mr. William Swanson, Inspector, Ministry of Education, Cairo; and Mr. John Montith Furness, Headmaster, Khedivial Secondary School, Cairo. Fourth Class of the Order of the Nile: Mr. William Valentine Shearer, Lecturer, School of Engineering, Giza; Mr. Thomas Morton Chinn, Lecturer, Sultania Training College for Schoolmasters, Cairo; Mr. John Frederick Burrill, Assistant Master, Abbassia Secondary School, Alexandria; and Mr. James Serle Butler Peacock, Assistant Master, Tewfikia Secondary School, Cairo.

BRITISH REFUGEES FROM GREECE.

Lady Neave, president of the Executive Committee of the British Refugees from Turkey Fund, has received several letters asking for help for British refugees from Athens, who, being stranded in England, after their sudden flight from that city, are in need of assistance, and had hoped to be helped by her fund. This, we understand, is not possible, as the money subscribed is only for British refugees from Turkey. Lady Neave hopes that some kind British resident from Greece will offer to raise a fund for the refugees from that country. If no such offer is forthcoming, however, Lady Neave will be pleased to accept any donations towards helping those ladies who have found themselves so unfortunately placed in England. She will also be pleased if all such as require help will write to her, stating whether they require monetary assistance or employment. All subscriptions and letters should, for the present, be addressed to Lady Neave, Eithinog, Abbey Road, Llandudno, N. Wales.

"THE BALKAN PROBLEM."

Lieutenant A. F. Whyte, M.P., R.N.V.R., spoke on "The Balkan Problem" before a large audience in Edinburgh University last Saturday afternoon. Principal Sir Alfred Ewing presided. Lieutenant Whyte said three out of the four Balkan thrones were occupied by foreign potentates who had not acquired that sense of nationality and understanding of their own peoples which was vitally necessary in regions where national aspirations were still developing and had not yet reached their full realisation. They would not be able to secure a satisfactory peace in the Balkans until the dynasty of King Ferdinand of Bulgaria had been removed. To get the Germans out of Belgium, out of France, and possibly out of their own colonies, but still enable them to realise some of their ambitions in the East—that was what he conceived was meant by those who spoke of "peace without victory." He was convinced that unless the German dream was destroyed in the East as well as in the West we could not have the foundations of a lasting peace. A vote of thanks was accorded to Lieutenant Whyte, on the motion of the Rev. Dr. Kelman.

OBITUARY.

Colonel Sir Horace George Proctor-Beauchamp, Bart., C.B., Norfolk Regiment, late Lieutenant-Colonel, 20th Hussars, previously reported missing, is now officially presumed to have been killed at Suvla Bay on August 12, 1915. He was the third son of the fourth baronet and Lady Beauchamp, daughter of the second Lord Radstock, and brother of the fifth baronet, whom he succeeded in 1912. He served with the Sudan Expedition, 1885, at Suakin, and was awarded the medal with clasp and the bronze star, and he was present at the action of Gamaizah, being mentioned in despatches, and receiving the Third Class of the Medjidieh. He again saw active service in the South African War, was mentioned in despatches, and received the Queen's medal with four clasps and the C.B. At the outbreak of the present war he was asked to take command of a battalion of his county's regiment, and was appointed to the 1/5th Norfolk Regiment, with which he went to Gallipoli, where he was killed in the gallant assault on the wad above Suvla Bay.

Lieutenant-Colonel James Alleyne Clarke, late of the Cheshire Regiment, has died in Italy, aged seventy-four. He entered the Army in 1867, and in 1885 saw service with the Sudan Expedition, taking part in the operations at Suakin; and was mentioned in despatches, and awarded the Egyptian medal with clasp and the Bronze Star. He became lieutenant-colonel in 1888, and retired seven years later.

Mr. Wilfrid Ball, a well-known painter of charming water-colours and an etcher, of Sunnerset, Lymington, died from heat-stroke at Khartoum on the 14th inst., aged sixty-four years. He had exhibited at the Royal Academy for many years, and was the holder of the Bronze Medal, Paris Exhibition, 1900, for etching. He also won the London Athletic Club challenge cup for walking in 1876. Mr. Ball, whose loss will be felt by many friends, gave up his painting and went out to do war work in Egypt.

Lieutenant Edmond St. Vincent Ryan, R.M.L.I., who died on active service on February 2, aged 22, was the only child of Colonel and Mrs. St. Vincent Ryan. He was educated at Beaumont College, Old Windsor, and passed into the Royal Marines in October, 1912. He was wounded at Smyrna, and was serving in H.M.S. *Triumph* when that vessel was torpedoed in the Dardanelles, and was also in the battle of Jutland.

Second-Lieutenant Humfrey Theodore Shulldham Cole, London Regiment, attached Yorkshire Light Infantry, was the younger son of Canon T. E. F. Cole, Chaplain to the Salonika Forces and formerly Indian Chaplain. He was educated at Radley, and had just begun to study at Oxford when the war began. He received his commission in the London Regiment on September 1, 1915. He went to the front in March and was attached to the Yorkshire L.I. in December. He received the wound from which he died on February 11.

A Reuter's message from Petrograd announces the death in that city of M. Zinovieff, who was Russian Ambassador in Constantinople from 1897 to 1909.

A meeting of the Dardanelles Commission was held at the House of Lords on Wednesday, when a general discussion took place on procedure and other matters. No witnesses were examined.

German interests in Egypt, hitherto under the care of the United States Consul-General, have been placed under the charge of the Swedish representative.

The first train bringing disabled Serbian prisoners of war released from Austria arrived at Lyons on Wednesday. There was a public demonstration in their honour.

WHERE TO STAY.**Cairo's Hotels de Luxe.****SHEPHEARD'S HOTEL.**

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

GHEZIREH CASINO.

In pure Moorish style, with a permanent Restaurant Francaise, is situated in the immediate neighbourhood of Ghezireh Palace.

The only English Hotels in Alexandria.

Proprietor: AUGUSTUS MILLINGEN.

WINDSOR HOTEL

(Facing the Sea, opposite Y.M.C.A.), Alexandria.

Full Pension, P.T.50; Room, P.T.20; Lunch, P.T.15; Dinner, P.T.20.

For long stay, apply to the Manager.

SUMMER PALACE HOTEL, Glymenopoulo, Ramleh.

This Hotel is situated near the Beach. Open all the Year. Bathing Cabins.

Terms from:

Pension, P.T.60; Lunch, P.T.20; Dinner, P.T.25.

NAJEM HOURS' CYPRUS HOTELS COMPANY.

Open all the Year Round—

NIKOSIA—Cyprus Palace Hotel.

LIMASSOL—Olympus Hotel.

FAMAGUSTA—Savoy Hotel.

For Summer Season—

PLATRES—Platres Hotel: 4,000 feet above sea level. Open from May till October.

TROODOS—Olympus Hotel: 6,000 feet above sea level. Open from May till October.

Perfect situation. French and English Cuisine. Moderate Terms. Excursions to Mount Troodos.

For Tickets and further Particulars, apply to

NAJEM HOURS & SONS, LIMASSOL, CYPRUS.

Proprietors of "The Army and Navy Stores." Branches—Polymedia, Troodos, Nikosia, Famagusta, Larnaca and Platres.

Head Offices and Central Stores: LIMASSOL. All arrangements for Transport, &c., are made by the above Firm.

Alexandria.**CARLTON HOTEL, Bulkeley.**

Just outside Alexandria. Half-way to San Stefano.

Ramleh's Fashionable Hotel.

Patronised by the *Elite*.

Open all the year round. Visitors from Cairo alight at Sidi Gaber Station and thence drive to Bulkeley in five minutes. Full Pension P.T. 50 per day.

G. AQUILINA, Proprietor.

(Late of Messrs. Thos. Cook & Son.)

THE NEAR EAST.

Any Newsagent or Bookstall in the United Kingdom can supply copies of the *NEAR EAST* every Friday morning.

Should any difficulty be experienced in obtaining the paper, a post card addressed to the Manager, 16-17, Devonshire Square, London, E.C., will oblige.

PERSIA AND THE WAR.

The veil which has so persistently hung over Persia for the greater part of the war has at last been lifted in part by Lord Curzon in the House of Lords. His speech dealt with the German schemes in operation in the country, which represented the natural development of a long system of intrigue carried out before the war with a view to the extension of Germany's power to the Indian Ocean, and proceeded to sketch the steps taken by the British and Russian Governments to checkmate the enemy's machinations. The main facts of the Turco-German activities in Persia are already familiar to readers of THE NEAR EAST, but Lord Curzon was able to add some interesting details. The Consuls of the Central Powers at Ispahan and other large towns were the centre of the hostile organization. Numerous German and Austrian prisoners who had escaped from captivity in Russian territory formed the nuclei of a number of bands scattered about the country, of which at one time there were "quite a hundred." These bands were supplied with machine-guns and rifles, and traversed the country, terrorizing the peaceful tribesmen and offering bribes. Some of the Swedish Gendarmerie—of whom Lord Curzon said that they might be regarded as Germans under the thinnest of disguises—joined them, and no doubt proved useful in stirring up some of the tribes against the Central Government. Then came the Turkish invasion, which was not only calculated to assist Germany's object in Persia, but must have appealed to the Turks as an opportunity for taking possession of territory along the Turco-Persian frontier which had long been a matter of dispute between the two countries. This military advance, it will be remembered, was undertaken shortly after the fall of Kut. The movement reached its maximum force, Lord Curzon considered, in August last. It "was exercising so disastrous an influence on the situation in Teheran at that time that the Persian Government was on the eve of evacuating the capital." The intrigue which was to bring about that *coup d'état* failed, as we know, and the enemy realized that his more grandiose plans had miscarried. "Since then there has been not merely a sensible alleviation, but a steady improvement in the conditions."

Two factors contributed to bring about this result. In the first place, the recovery of the Russian Army, which had previously been compelled to fall back before the Turks, stemmed the tide of invasion and interposed an effective barrier before the capital. "In this manner," Lord Curzon pointed out, "the Russian force rendered great service to the Allied cause, and we found ourselves in the somewhat strange and anomalous position of having the Russian Army acting as a successful screen of defence to our Indian Empire." The second factor in the situation was the arrival in Persia of General Sir Percy Sykes for the purpose of reorganizing a Gendarmerie to take the place of the force which had been used by Swedish officers for their own treacherous ends. General Sykes landed at Bunder Abbas in March, 1916, with a small force and proceeded to Kirman. Here the initial steps of forming a Gendarmerie were taken. The British public now learns for the first time that General Sykes led his force from Kirman to Ispahan, and thence to Teheran.

At the present moment he is back again in South Persia, at Shiraz. The strength of the Gendarmerie amounts to five thousand, and that of the British military escort to eight hundred; but the military position, we are told, is being strengthened by reinforcements from India under a military officer experienced in tribal warfare. It is thus evident that Great Britain has at last accepted the responsibilities of her position in Persia. Sir Percy Sykes's march across the country to Teheran was clearly not a recruiting parade for Gendarmerie purposes. It represented, although on a small enough scale, a military enterprise undertaken for the purpose of proving to the Persians that both the protecting Powers were resolved to uphold the authority of the Central Government. The expedition, with its limited numbers, was only rendered possible by the Russian recovery in the north. It is satisfactory, therefore, to find that the intention is not to restrict the British force to such modest proportions that it can only operate behind, so to speak, a Russian screen. The Gendarmerie is ultimately to attain a strength of 11,000 men, of whom about one-half will be raised among the Bakhtiari tribesmen, who have always been friendly to Great Britain. With this force, and with the additional troops from India, it is expected that Sir Percy Sykes will shortly be in a position to start upon a fresh expedition with a view to clearing up "the brigand camps and robber nests" in South-West Persia. Meanwhile on the eastern side similar success has been achieved under a British officer, Major Keith, who has pacified the whole of that considerable quarter.

Lord Curzon is too well acquainted with his subject not to recognize the limitations of what has been accomplished up to the present. He could not say that the situation was altogether free from anxiety. Turkish troops had still to be turned out of parts of Persia, and in the hinterland of the Persian Gulf there was still disorder. No one who knew anything about the East cared to venture to prophesy about it; but he hoped that it might be said that the worst was over, and that the great chain of ambition and aggrandisement stretching from Europe to Asia had been twisted aside, if it had not been broken. By far the most valuable portion of Lord Curzon's speech was the indication he gave that the British Government's policy in Persia was at last to be guided by expert knowledge. He declared emphatically that it would be the object of Great Britain to see not merely that the chain of German ambition and aggrandisement was broken, but that it should never be reformed. To achieve this end, we may point out, it is necessary that there should be on Great Britain's part a complete reversal of the policy of *laissez faire* and of playing second fiddle in the Middle East, which was responsible for the situation at the outbreak of the war. Lord Curzon pointedly challenged the soundness of the British attitude in the past towards the Baghdad Railway—Germany's principal instrument in her attempt "to strike at the dominion of Great Britain in India and to take from us the hegemony of the Eastern world." He believed that every word uttered by those who, like himself, were suspicious of the scheme had been amply justified by what had passed. From these remarks we should like to infer that at the end of the war the status of the Baghdad Railway will be revised, and that before then there will be a definite understanding with Russia regarding the new rôle which Great Britain has been forced by circumstances to play in Persia. That rôle, it is hardly necessary to state, will not lose sight of Persian interests; rather will it be prompted by the knowledge that the former policy of drift was equally prejudicial to Persian and to British Imperial interests. The failure of Great Britain to act up to her responsibilities in the country was Germany's opportunity, and gave Russia and the world at large the impression that the British Government was indifferent to the welfare of the Persians and to the protection of the British position in India. A definite pronouncement that the Middle East is not to be given away to any who may care to intrigue for it will lay the foundation of a happier era for this part of the world.

ALBANIA, PAST AND PRESENT.

I.—The Language Question.

By M. EDITH DURHAM.

It was in the year 1901 that I first visited Albania and was struck by the vigour and originality of the people. But it was not until a much longer visit in 1904 that I came in close touch with the national movement. The patriots of Koritza first inspired me with the interest for their heroic little nation which subsequent travels have ever increased.

The tale indeed of Albania's struggle for education and development is one of the most remarkable in the history of education, and deserves more detailed telling than we have space for here. The Turkish Government learnt by bitter experience that the result of permitting national schools to the Greeks, Bulgars, and Serbs was that they became centres of political propaganda, which was supported by money and teachers supplied by various Great Powers. And Greek, Bulgar, and Serb insurrections and independence followed. The Sultan resolved that no such thing should happen in the case of Albania. The Albanian tongue was prohibited; the printing of it and the teaching of it were made punishable by heavy terms of imprisonment. If an Albanian child was to learn to read, he or she must first learn a foreign tongue, and in that case the child was classed as belonging to the nationality of the school selected. This fact I found caused intense bitterness.

"When I was a little boy," said a Moslem Albanian, "I was sent to school at Constantinople. They said that I was a Turk; I said that I was an Albanian. I would not say that I was a Turk. Then they turned on me, and called me a dog. I have hated them ever since."

"I hate, hate, hate the Greeks," said a Koritza woman. "When I was a child the Government would not permit any Albanian school. My parents wanted me to learn, so I had to go to the Greek one. There were Greek teachers. They used every day to tell me and my little friends that we were Greek. It was a lie. We did not know one word until we went to school. They used to tell us that Christ was Greek, and that it was useless for us to pray in Albanian because He did not understand it. Now they pretend that we are Greek! I will never again defile my tongue with their dirty language. Nor shall my children learn it. I hate, hate, hate it."

Similarly, children attending Slav schools are denationalised, if possible. I had formed on previous journeys a very favourable opinion of certain Montenegrins, and afterwards found that they were not Slavs at all, but Albanians, who spoke their mother tongue at home; but they had been educated in Serb, for Albanian schools are prohibited also in Montenegro.

England, in 1880, made a strong effort on Albania's behalf. Lord Goschen, then H.M. Ambassador at Constantinople, in his report on the subject, put Albania's case in a nutshell, when he said: "Nor can it be denied that the Albanian movement is a perfectly natural one. As ancient and distinct a race as any by whom they are surrounded, they have seen the nationality of these neighbour races taken under the protection of various European Powers and gratified in their aspirations for more independent existence. . . . Meanwhile they have not received similar treatment. Their nationality is ignored, . . . exchanges of territory are proposed, other difficulties arise, but it is still at the expense of Albania, and Albanians are handed over to Slavs and Greeks without reference to the claims of nationality."

Lord Goschen then mapped out a large Albania with a view to its autonomy and future independence. Not all the Powers agreed to this scheme, unfortunately, and it was dropped. Had these frontiers been delimited, very many recent complications would have been avoided. It appears, indeed, that injustice to a small nation recoils sooner or later upon the Great Powers which inflict it. A tiny shell splinter will make a whole limb suppurate.

So will a small race incorporated in a large one act as a perpetual sore which undermines the conqueror's strength. The result of the Sultan's attempts to crush Albanian development were the Albanian insurrections of 1910-11 and 1912. Similar results may be expected by any nation trying forcibly to annex Albanian territory.

To return to Koritza in 1904. An unhappy schoolmaster for a time had had permission to open an Albanian school, the permission had been suddenly withdrawn, and he was still working out his sentence of fifteen years' imprisonment.

Much talk did I hear of the difficulties and dangers of learning. Turkish spies and Greek propagandists were ever ready to denounce the readers and importers of Albanian books and papers. But I was furnished with the addresses in various lands where such could be obtained. And at great risk papers, published in London and Bucharest, were secretly circulated. A luckless zaptieh had just been given two years' imprisonment for being found with one in his pocket. And a poor restaurant keeper at Scutari, to whom one had been sent by post by some foolish foreigner, ignorant of the possible results, was condemned to fifteen years', and only released by the efforts of all the Consuls.

In Scutari both Italy and Austria opened schools and protected them. In Koritza the American mission opened a girls' school. For a boys' school permission could not be obtained. Even under the protection of the Stars and Stripes the heroic schoolmistress ran great risks. Turkish authorities spied on her continually. But she used English school books and translated her lessons, and so managed to teach her mother tongue. The girls taught their brothers to write at home. And though the school was essentially a Christian mission school, yet Moslems, too, sent their daughters, because it was Albanian. I visited with very great interest the homes of several of the parents of the school children, and was much impressed with the earnestness of their desire that their children should not be denationalized.

From Koritza I rode through Albania from south to north with one of the colporteurs of the British and Foreign Bible Society, himself an ardent patriot. It was a ride almost equal in incident and excitement to Borrow's well-known journey with the Bible in Spain. The Turkish authorities had not the smallest objection to the sale of the Scriptures. It was to the sale of them in Albanian that they objected. But the society had leave to sell all its publications, and the Albanians seized upon this as a means for circulating books in their mother tongue. We had a stock of the Gospels and of the Book of Genesis. We were stopped and searched in all places except those where the local Governor happened to be an Albanian. There we were warmly welcomed. One Turkish Kaimakam seized all our stock, but we picked up more at a depot further on. Everywhere folk flocked to buy, secretly in some places, publicly in others. I realised the strength of the national feeling when a Moslem schoolmaster brought all his boys, and they bought a book apiece.

At Liaskovik a deputation waited on me and begged that I would make a school under English protection. And at Permeti we were received with such enthusiasm that the Turkish Kaimakam would not allow us to speak to anyone without a soldier as witness. As some of our visitors spoke French the soldier's presence did not incommode us much. More than one officer in the Turkish army bought books, and even begged us to come again with a greater variety.

That journey I shall never forget. What a people, indeed! They have survived five empires, and successfully resisted every effort to denationalize them. Brave, intelligent, and receptive—the artists of the Balkan peninsula—they have retained their language, their national customs and traditions through all the centuries. But Mr. Asquith has declared that the present war is waged for the purpose of defending the rights of little nationalities, and we may therefore hope, together with the Albanians, that their day, too, is about to dawn.

The story of their epic struggle for existence we may tell in another article.

NEAR EAST IN PARLIAMENT.

HOUSE OF LORDS.

News of Persia.

Feb. 20.

Viscount BRYCE asked whether the Government could, consistently with the interests of the public service, give some information regarding the present position of affairs in Persia? He pointed out that a long time had passed since a statement on the subject was made, and it was desirable that it should be known how far the Government were satisfied with the present position of affairs; whether the German agents and officers and the bands collected and hired by them, who were trying to make mischief in portions of Persia, were still at work, or had been dispelled or reduced to impotence; and what was the condition of Persia in regard to public safety? So far as had been heard, the numerous attempts which had been made by the German Government to provoke trouble, discontent, and even aggression in the region of the Indian frontier had failed.

Earl CURZON said that it was now possible to view the Persian problem and situation in something approaching a proper perspective. It was common knowledge that before the war began Germany had been engaged in intriguing for the extension of her power to the Indian Ocean with a view to striking at the dominion of Great Britain in India and taking from us the hegemony of the Eastern world. In order to carry out this plan, Austria in the first place was to be treated as the washpot of Germany as far as the Balkans were concerned; Turkey was to become her slave in order that she might obtain control of the Straits; Egypt was to be menaced; Persia was to be controlled; Afghanistan was to be stirred up. This plot dated as far back as 1898, when the German Emperor made a theatrical entry into Jerusalem, and afterwards addressed a great meeting and told the 300 millions of the Moslem world to look upon him as their true and only friend. The principal instrument of this policy was to be the Baghdad Railway. He had been unable to understand the curious *punchant* of some politicians of both parties for that scheme, and he believed that every word uttered by those who, like himself, were suspicious of the scheme had been amply justified by what had passed. The plan was a bold one, but it was by no means completed, and it would not be completed until the Conference had met at the end of the war. Referring to German intrigue in Persia during the last twelve months, the speaker said that that country was one of the principal Asiatic pieces on the board. The Consuls of the Central Powers at Ispahan and other large towns were well organised, and use was made of a considerable number of German and Austrian prisoners who had escaped from captivity in Russian territory. They had a number of machine-guns and probably a large consignment of rifles. At one time there were quite 100 of these German bands scattered about in different parts of Persia, terrorising peaceful tribes and bribing right and left. They found help from some of the Swedish gendarmerie, and they stirred up trouble with the tribes who were habitually at peace with the Central Government. Of all such people the German agitators and agents made friends, and they carried on the operations in the neighbourhood of the British-Indian border. Meanwhile, Germany succeeded in getting a more powerful ally. The Turks, intending to pay off old scores against their hereditary enemy, and anxious to recover territory on the borders of Persia and Turkey, penetrated into Persia and overran part of it, and the Turkish army was still there. Then stories were spread everywhere that the German Emperor had embraced the creed of Islam, and one might have thought that the German *picklehaube* was a synonym for the Cap of Liberty. The movement in Germany's favour reached its maximum force in August last. At that time the Persian Government was on the eve of evacuating the capital. Since then there had been not merely a sensible alleviation but a steady improvement in the conditions. The Russian Army had recovered its position and effectively barred the way of the Turkish forces to Teheran. In that manner the Russian force had rendered great service to the Allied cause, and we found ourselves in the somewhat strange and anomalous position of having the Russian Army acting as a successful screen of defence to our Indian Empire. The British Consul at Shiraz and the few male members of the community there who were imprisoned with him had been released after eight months of harsh captivity. Most of the German agents in the country had been captured, and he hoped that before long the few who were still at large would be taken. The harm that a single evil-minded European, plentifully provided with money, could do in a country like Persia was almost incredible, and not until all of the German agents were captured could the situation be cleared.

The march of the force under Sir Percy Sykes from Bunder Abbas to Ispahan, and finally to Teheran, for 1,000 miles in circumstances of the most arduous and, in some places, of a perilous character, had not, he thought, been mentioned hitherto in this country. It resulted in establishing order over a wide area. In Teheran itself we had secured the existence of a Government friendly to the Allied Powers; and Russia and Great Britain had been constant, although not imprudent, in giving steady financial assistance to the Persian Government in the difficult times through which it had passed. The object of Sir Percy Sykes was to organise in Southern Persia a force of military gendarmerie or police, under the Persian Government, but officered by British officers with Indian training and experience. That force was ultimately to attain to a strength of 11,000 men. Sir Percy Sykes had at present a force of 5,000 men in addition to a military escort of about 800 troops from India, and his military position was being strengthened by reinforcements now being despatched from India under a military officer experienced in tribal warfare. A similar force of gendarmerie was being raised from Bakhtiari tribesmen, who had always been very friendly to us. He hoped

that before long Sir Percy would be able to march from Shiraz, where he was now, and to clear up the brigand camps and robber nests with which that part of Persia was infested. On the eastern side of Persia a similar success had been obtained by another force under a British officer, Major Keith, who had succeeded in pacifying the whole of that considerable quarter. In Afghanistan the Ameer, in spite of solicitations, offers, and bribes, had, so far as the Government knew, remained faithful to us. The improvement in the general situation in Persia was considerable, and it had been materially assisted by the success of our arms in Mesopotamia and by the Shereef of Mecca's movement against the Turks. As far as he knew the position of the oil wells was adequately secured. No one who knew anything about the East would venture to prophesy about it; but he thought the worst was over, that the link which Persia supplied in the great chain of German ambition and aggrandisement had been forcibly twisted aside, if not broken; and it would be our object to see not merely that the link was broken but that it was never reformed to the lasting peril of Great Britain and menace of the whole Eastern world.

The Marquess of CREWE said that with regard to the appointment of the Swedish officers to the gendarmerie in Persia, it was not easy to come to a conclusion as to which neutral Power should provide the officers. As many of the Swedish officers had received their training in Germany it might be they had retained a German bias. He wished that Earl Curzon had been able to say that the German agents in Persia had been all cleared out. They all knew, however, how immense was the difficulty of hunting down a few individuals in a great and sparsely populated country. He feared that it would be necessary to send considerable reinforcements to Persia before we could hope to drive the Turks completely back. The vast distances that separated the scenes of operations ought never to be forgotten. We could not, therefore, expect that any success likely to be obtained on the Tigris in the near future could have more than an indirect effect upon the state of affairs in Southern Persia. In regard to Mesopotamia, while viewing with admiration the successes of our troops, he was glad that the noble earl had not given that over-encouragement which the public might be tempted to gather from some of the accounts which had been published. The march of Sir Percy Sykes was very remarkable and well worthy of the traditions of the Indian Army, and he hoped that the nature of that task and of the obstacles which Sir Percy had to surmount would receive greater recognition than they had done hitherto in the pressure of news concerning the war. The statement of the noble earl as a whole would give great satisfaction. It was clear that some progress had been made in Persia, and it might be said with some confidence that the situation tended to improve and that we need not take a gloomy outlook.

HOUSE OF COMMONS.

Aden Field Force.

Feb. 14.

Colonel YATE asked the Secretary of State for India if he could now state what arrangements had been made for the organisation of the Aden field force similar to that of other expeditionary forces.

Mr. CHAMBERLAIN: The Government of India informed me in December of their intention to issue orders placing the Aden field force on a footing similar to that of other expeditionary forces. They had not then decided as to the grant of special field allowance. I am inquiring whether the orders have actually issued, and what is the decision as to the special field force.

Colonel YATE: Thank you, sir; the Aden field force will be very grateful.

Persian Rates of Exchange.

Colonel YATE asked the Secretary of State for India if he would say what was the fixed minimum rate allowed to the Indo-European Telegraph Department in Persia in exchange from pounds sterling to krans and from rupees to krans; and what was the rate given to the troops engaged in operations in Persia and on the Perso-Afghan frontier.

Mr. CHAMBERLAIN: Gazetted officers of the Indo-European Telegraph Department are paid in rupees converted into Persian currency at the official rate fixed quarterly on the basis of market rates. The present official rate is 280 krans per 100 rupees. Non-gazetted officers enjoy a minimum of 385 krans per 100 rupees on half their pay, and receive the other half at official rate. A petition asking for a revision of these arrangements on account of the appreciation of the kran is under consideration. The Government of India have not informed me of the arrangements made for troops.

The Mesopotamia Expedition.

February 16.

Mr. MACPHERSON, Under Secretary for War, in a written reply to Sir J. Jardine, states that the situation as to supplies and transport in Mesopotamia is now very satisfactory. Hospital accommodation is being provided at Nasiriyah, and as soon as it is ready nurses will no doubt be sent there.

Colonel AUBREY HERBERT, having asked whether the War Office was considering the question of double pay and pension for officers and men, British and Indian, engaged in Mesopotamia, having regard to the very exceptional character of that campaign, was informed by Mr. FORSTER that the matter was not being considered.

Dardanelles Commission's Report.

Feb. 19.

Mr. BONAR LAW, replying to Mr. G. LAMBERT, stated that the report of the Dardanelles Commission would be published at once, and he hoped that it would be in the hands of members in the course of a few days.

Sir H. DALZIEL: Will the evidence be published?

Mr. BONAR LAW: The Minority Report will be published, but not the evidence, as at present advised.

Czecho-Slovaks.

Mr. OUTHWAITE asked the Secretary of State for Foreign Affairs whether the Czecho-Slovaks referred to in the Allies' Note as being a people for whose independence they were fighting were two distinct nationalities, or, as suggested by the hyphen, were they Slovaks of Czech origin?

Mr. BALFOUR said the Czechs and Slovaks were two branches of the same race.

Mr. OUTHWAITE asked if it would be possible to decide the territory to which independence would be granted, so that we might learn something about the people?

Mr. BALFOUR: No, sir.

Mr. PRINGLE: Have the Foreign Office a map showing the territory occupied by the Czecho-Slovaks?

Mr. BALFOUR: There are a number of maps at the Foreign Office, but whether they are absolutely correct I cannot say.

Persian Gendarmerie.

Feb. 19.

Colonel YATE asked the Secretary of State for Foreign Affairs whether the Swedish gendarmerie in Persia was to be reorganised under fresh Swedish instructors as recently reported.

Mr. BALFOUR: The reply is in the negative.

Roumania and Her Enemies.

Mr. BALFOUR, answering Mr. J. King, said he had no information leading him to suppose that the state of war now existing between Roumania on the one side and Germany and Turkey on the other was preceded by a formal declaration of war. As to whether Roumania had given adhesion to the pact of London, he did not think it desirable in the public interest to reply.

Cyprus Timber.

Mr. WALTER LONG, answering Colonel Yate, said the exportation of timber from Cyprus was prohibited by law, but this prohibition had been relaxed in order to assist the troops in Egypt. What was possible was being done to develop the forest resources of Cyprus consistently with the pressing need for reafforestation in the island.

THE PRESS ON THE NEAR EAST.

Peaceful Kerman.

So few articles on Persia and Persian affairs have been published of late that particular interest attaches to one, entitled "In a Persian City," which appeared in *The Times* on Wednesday. It was sent off from Kerman on December 8, and the writer tells us that he has reached that city after many days of caravan travel. There is, he adds:—

satisfaction not unmixed with relief in the thought that my wanderings are for the time being over. For in Persia, even when the world is at peace, he who starts upon a journey can never be sure that he and his goods will arrive at his journey's end. Marauding tribes are many and powerful, and their operations are far-reaching; there is not a caravan route that is not liable to be closed for weeks at a time by robber bands. If in other countries "all roads lead to Rome," in Persia it may be said that all roads lead to the robber's den.

As a matter of fact his caravan, though strongly escorted, was actually attacked. But the brigands were driven off with considerable loss to themselves, and the party got through to its destination safely. The article continues:—

Here at Kerman peace reigns, though it be that of the calm which follows a storm. Although the greater part of the British colony, including the ladies, has not yet been allowed to return, British prestige stands as high as ever. It seems to have suffered nothing from the temporary eclipse which it underwent last winter and spring, when the local Democratic revolutionaries, led and financed by German and Turkish agents, turned out the British colony and with the help of the Swedish Gendarmerie ruled Kerman. The advent of General Sir Percy Sykes's column in June last most effectively turned the tables, and now Kerman itself and most of the province are strongly on our side. Never were relations between the Consulate and the local Persian authorities more satisfactory. The new Governor-General, a young Prince of the Royal House, who has travelled in France and Russia, and, together with most of his staff, speaks French with an excellent accent, is thoroughly pro-Ally in his sympathies. The Deputy-Governor Sirdar Nusret, who is the most powerful noble in the province, is one of the oldest friends of the British cause, and remained loyal in its darkest hour. Everyone is ready to help us, and the voice of the Democrat is stilled.

The Only Hope for Armenia.

In the course of an editorial, entitled "Bag and Baggage," the *Christian Science Monitor*, of Boston, Mass., sketches events in Turkey since the "Young Turks" came into power; and, having weighed the Envers and the Talaats in the scale, it finds them wanting. The Armenian massacres naturally con-

stitute the most damning indictment against the reckless criminals. The *Monitor* concludes:—

It is because of all this that it is absolutely necessary that whatever other form the coming peace may take, the monstrosity known as the Sublime Porte shall be expelled, as Mr. Gladstone put it, "bag and baggage," from Europe, and shall cease to be permitted to misgovern in Asia. What is needed to make this effective is a European guarantee for whatever new state of affairs may be established in Asia Minor. In the case of Armenia, which is the case at present under consideration, the way is simple, if the Great Powers have learned enough during the war to cause them to set aside the jealousies of the past, which have ended in making Armenia a martyred nation. An autonomous Armenia, under a European guarantee, a guarantee in which everybody would like to see the United States join, would be, in one way, the most satisfactory solution. Unfortunately the statement of Talaat that there is no Armenian question is so nearly literally true that it is doubtful if an autonomous Armenia, with an Armenian population, could be formed to-day out of the Turkish possessions in Asia Minor. In order to make such a State a possibility it might be necessary to draw on the ethnologically Armenian provinces of Russia and even Persia. Russia would probably be willing to add her own provinces to such a State, and to agree to the incorporation of the necessary Persian territory in such a State, the more so as such Persian territory all happens to fall within her own present sphere of influence in Persia. Persia would have distinct grounds for objecting to this were it not that compensation could certainly be made to her, in some form or another, for the territory she would be called upon to surrender. It is obvious, however, that Russia would only agree to such a course provided the new autonomous State were placed under her guardianship; and in order to make such an autonomous Armenia a realisable condition it may be desirable, as well as necessary, to consider Russia's requirements in this respect.

Some years ago the Armenians would have objected to the control of Russia, but many snows have melted on the slopes of the Taurus range since those days. The restoration of the Armenian nation, if it is to be successful, may make an absolute demand for the inclusion of the Russian Armenians, and this may be the overwhelming factor in the formation of the new State. What the boundaries of such a State should be, under what conditions such a State should be set up, is another question altogether. But it is tolerably certain that if, as a result of the war, an autonomous Armenian State does not take concrete form, the Armenian nation will cease to exist.

Why We Must Take Kut.

The *Daily Chronicle* published on Monday a leading article, "The Kut Victory," from which we quote the concluding passages:—

The town itself is only a miserable collection of Arab dwellings; but its capture and that of the north bank are essential if the important military position formed by the junction of the Hai and Tigris is to be held by us for future purposes. At present, with the enemy holding one bank and ourselves the other, the use of the river from Sanna-i-yat up to Shumran is denied to the flotillas of both armies. With the whole under our control we should greatly improve our situation, whether for holding or for advancing, besides wiping out the stigma of last year's reverses. Thus the recapture of Kut has become of material importance both to our prestige and to our safety in Mesopotamia. We hope, however, that the War Cabinet will count the cost very fully before allowing success to tempt them to any ambitious advance further. The Mesopotamia expedition requires for its support more shipping in proportion to its size than any other; and though it was necessary up to a point, and our defeats made it necessary up to a further point, one must remember that in itself it can never have any decisive effect on the war as a whole.

America and Constantinople.

The *New York Independent* (January 29), in referring (under the heading, "A New Hand at the Pen") to Mr. Balfour's Note, remarks that it is "a joy to read, merely for its wording," and that "it will carry conviction where a dull State paper would remain unread." It goes on to say:—

We must recognise also the skilfulness of its silences as well as of its wording. It is hardly necessary to argue before Americans that the Turk has forfeited all right to Constantinople, but we should like to know who is to get it. Russia has publicly announced that Great Britain has promised it to her. Great Britain declines either to affirm or to deny this, and Mr. Balfour's note, especially devoted to the question, makes no mention of Russia. Americans would like to see the Sultan ousted from Constantinople. But Americans are very doubtful about the advantages of installing the Czar in his place.

The "Clean-fighting Turk."

On Tuesday *The Times* published an article with the above heading, written by "a distinguished authority on Oriental affairs," who "has had exceptional experience in the ways of the Turk." It begins with the statement: "During the present war we have heard a good deal of the good nature of the Turks, yet they have pursued the most devilish policy that even this war has

seen." The writer then refers to the massacres of Armenians, the starvation of the Lebanese, the outrageous treatment of the Syrian Moslems and the Jewish colonists, and the neglect—to use no harsher term—of the British prisoners of war. Nevertheless, says he, the sportsmanship and chivalry of the Turks is a favourite theme of some writers; and he asks how the paradox is to be explained:—

The plain fact is, that the Turk as a ruler is a merciless oppressor; as a negotiator a cunning Byzantine; as a soldier a tough fighter; as a victor a remorseless bully—but when he feels he has met his match he is chivalrous, when he is defeated he is a pathetic and distressed gentleman. And so he contrives that the Turk has never been in the wrong, no one has ever convicted a Turk of a mean or cruel act. When he is beaten, or near beaten, he would have us believe that the Armenians were killed by wicked Kurds, that the Lebanon famine was a disaster which was beyond the power of man to avert, that the British prisoners died because they were delicate, that the war itself was the work of the Germans (curses on them), and so on.

When his star is in the ascendant, however, the tale is pitched in another key, and we may then "get a glimpse of the seamy side of Turkish mentality, which is made up of the craft of Byzantium, the ruthlessness of the nomad of the Steppe, the cold cruelty of the fanatic." He is a puzzle indeed:—

The Turk has strewn the earth with ruins and has made the prettiest nursery rhymes; he has shattered civilisations both Moslem and Christian; he has coined the most witty and delightful proverbs. He is a thoughtful and solicitous host, an easy-going master, and a mild landlord, but he is a merciless misgovernor, a feckless squanderer, and as revengeful as a camel.

To a certain extent the puzzle may be explained by the difference between the "Old Turk" and the "Young Turk." A pleasing portrait of the former is given by the writer:—

The good old Turk with a rosary, a melting eye, a long white beard, a compliment on his lips, a large turban on his reverend head, a small child nestling in the folds of his ample gown, is a picture which has bewitched many a heart. A philanthropic and gentle philosopher, you will find him contemplating vacuum in many a mosque and shrine in Asia Minor, and no one can deny that he is a good old Turk, charitable, benevolent, and kind; I have no doubt he would save Armenians from pursuit if they came his way, though he would not go a yard to find them; he would surreptitiously convey food to English prisoners just as he would share his last crust with a mangy street dog, for the pious must be kind even to unclean things; but his benevolence is individual and isolated; he is a sort of hermit crab dwelling in a rosy shell of personal philanthropy, he counts for nothing, nor would five million of him count for anything.

This picture is in sharp contrast with that of the "Young Turk" with a German uniform, a German parade voice and German technical education:—

He has been reared in a Stamboul harem; when he was four years old his mama helped him first at table, and taught his elder sister to kiss his hand; his papa taught him that by blood alone could Christian subjects be governed, and that by diplomacy alone could the Christian Powers be set by the ears; his German professors taught him all there was to be known about mass-suggestion, *Weltpolitik*, and high explosives.

Breeding, environment, and education combine to produce a very complete foil to the passive philanthropist of the shrine. This young man is the embodiment of ruthless action and inflexible tyranny. His mother taught him that whatever he wanted was his; his father taught him to hold whatever he got; and his German schoolmaster taught him what he believes to be the universal method of getting what he wants. Moreover, the German professor reinoculated him with some of the destructive virus of his plundering Turanian ancestors. *Yeni-Turan* is the latest creed.

The writer then refers to what the Turks owe to the Arabs, the Persians, the Greeks, and so forth; and declares that the German professor has taught our Young Turk to purge his mind of these lessons, to hark back to the palæolithic state of mind, so to say. And, we read: "so strong is the taint of the Turanian stock which runs through that maze of cross-bred Celts, Sumerians, Hellenes, Iranians, Semites, and Caucasians which we call the Turkish people, that *Yeni-Turan* is a living thing which finds a responsive echo in the Turkey of to-day." Unfortunately:—

The old Turk with a turban is the negative, the young Turk with a Mauser pistol is the positive; and, contrary to all rules of philosophy, it is the evil principle which is positive, and the good, for what it is worth, which is negative.

The violent Young Turk reactionary is the controlling power, the old Turk quietist has about as much influence on actual events as a decaying monument of a forgotten age. The young Turk who snubbed his mother, pulled his sister's hair, kicked the Armenian porter, cringed before his father, gobbled up the dogmas of the German professor, mastered the formulæ of the Prussian military instructor, and resuscitated the dormant lusts

of his savage ancestors in his heart, is the man who counts.

His dream is to exterminate or Turanise everything within reach, and nothing is to stand between it and its realisation.

"In the Heart of Roumania."

Under the above title the Right Hon. W. F. Bailey and J. V. Bates contribute to the February *Fortnightly* another delightful article describing life in Roumania in pre-war days. It opens with a picture of Vaja, a little village near the foot of the North-Eastern Carpathians, and describes the homesteads in some detail. Each is surrounded by its own wattle stockade, topped with thorn bushes.

They are all alike, the little country homes of Free Roumania, the only difference being that some may be prettier than others, and in the hill districts, such as this, they are built of wood, whereas those on the plains are made entirely of clay and wattles. One by one the logs were felled and carted down from the forests which fringe the mountain slopes; one by one they were hewn into beams and fixed securely together into these spacious, one-storied, thatched-roofed cottages. Then, with infinite care, the plaster, compounded of earth and cow dung, was put on. When the clay had been dried by the sun and wind, the walls were whitewashed till they glistened like snow, and, finally, the adornment of the woodwork, the doors, the window sashes, ceilings, and the verandahs was commenced. The clay used for the adorning, which is dyed a warm red, was smeared on carefully in long straight stripes; the pillars, or tree stems, supporting each *prispă* (verandah) and the balustrades of the staircases that lead from the *casa*, or yard, in front of each dwelling, were enlivened by red bands of this clay paint. There are many buildings beside the house itself enclosed within the stockades. In every well-to-do *casa* there stands an outhouse for the cattle, a commodious pigsty and a hen-coop, and, if the family be prosperous, there is a *cosâr*, or barn, for storing maize.

A little later, in connection with the large supply of domestic utensils to be seen in each house, we are told that "it is customary in Roumania to set apart special vessels for use when celebrating the various religious fasts and feasts, for each fast and feast has its own utensils, and these must not be employed except on the special occasion for which they are intended."

It was in this part of the country that when "fell the blighting shadow of the Middle Ages, the hour of the Turkish rule, and the misery of the Greek oppression" . . . "the people who are to-day the purest and strongest element of the Roumanian nation held the passes against their enemies." As to the Greeks, the authors write:—

Undoubtedly the Greeks were the people who wrought the most enduring harm in Roumania, for they laid the seed of class-hatred in the land. Before their coming—not as a conquering warrior host, but as a mean, cruel army of worthless, cowardly adventurers—there existed little, if any, bad blood between the wealthy landowners, the *boiars*, and the peasantry. But with the advent of the Greeks the true *boiars* became demoralised. Little by little the original nobility sank under the Greek influence, and either went down like gentlemen into poverty and oblivion or turned traitor, intermarried with the foes of their country, and learnt and adopted their vices. The peasants were forced to toil for alien masters, in whose eyes they were no better than sheep and oxen, and from this time onward the name *boiar* was altered by the lower classes into the name *ciocoi*, which means an upstart or parvenu. Although the Greeks were eventually sent about their business, they left their evil trail behind them, which can be traced only too plainly in the character of the decadent Roumanian nobility who frequent the capital and whose Roman blood has been tainted by the hated Greek element. Still more plainly also, as it has been said, can the track of the Greek serpent be seen in the bitter animosity which exists between the rich and poor. In most of the mountainous districts, however, the injurious foreigners failed to upset to any very serious degree the good fellowship between the classes.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

Mr. Henry Charles Woods, who lectured at the Royal Geographical Society on February 19, on the Baghdad Railway, made very intelligent use of the mass of information available regarding that great undertaking, and his main conclusion, that the future of the line must be secured free from enemy domination, was very sound, not to say obvious. He was lamentably adrift when he came to discuss the final sea stage of the trans-continental London to Bombay route, however. Calculating the journey from Busreh to Bombay as rather more than 1,900 miles, it cannot be done, even at the speed of twenty knots, in eighty hours. Four days would be more approximately correct, assuming that the provision of a service of steamers on a twenty-knot contract would be a paying proposition, which I very much doubt.

Sixteen knots would even be an extravagant speed; but even if the Government of India, or whoever becomes responsible, were prepared to sanction so expensive a project, the journey would occupy five days; or—to accept Mr. Woods's estimate of six days from London to Busreh—eleven days for the entire journey. Such a route, it need scarcely be pointed out, would be suitable only for mails and passengers. Would the latter use it? I have my doubts. London to Bombay, via Marseilles or Brindisi and the Suez Canal, takes, say, from fourteen to fifteen days. The journey is comparatively comfortable, the P. and O. people are remarkably efficient in their conduct of the line, and the great majority of travellers would certainly prefer the journey round to the long, monotonous trip across Europe and the Middle East, with all the well-known climatic disadvantages.

The City Editor of the *Daily Telegraph* a few days ago, in discussing certain aspects of the financial situation in India, made an interesting reference to the ultimate destination of the rupees in which the wages of Indian troops employed in Egypt and Mesopotamia are paid. "The rupees," he says, "take a long time to find their way back to India, if they do not remain permanently in Egypt and Mesopotamia." Some of the money, perhaps, does remain in restricted circulation in those countries, but not much. The Indian sepoy, generally speaking, is not a spendthrift; he saves as much of his pay as he can and sends it back to his people. It is probable that the Indian money, up to now, in permanent circulation in Mesopotamia is not great. The interesting question is raised, however, as to what form the future coinage of Mesopotamia will take. Indian, like so many of the British areas in East Africa?

Turks will not have derived much comfort from the statement which Djavid Bey, the Finance Minister, made in the Turkish Senate on February 13, when the House adopted a Bill authorising the Government to accept from Germany advances of £42,500,000, and to issue £732,000,000 of notes. It will be seen from the report, which appears elsewhere

in this issue of THE NEAR EAST, that the Minister of the Imperial Ottoman Government builds up a very optimistic future for Turkey on a series of hypotheses; but he discounted entirely the value of his convictions "that German statesmen would do everything to facilitate Turkey's payment of her debts" by his expression of surprise that the value of the notes, "which will be cashed by Germany in gold," was decreasing, and that the public were "giving three paper pounds for one pound in gold."

The fact is that Germany has no intention of fulfilling any of the promises which have been made to Djavid Bey. If that confiding personage has been hoodwinked—and people of his class are usually difficult to deceive—the Turks themselves refuse to be bluffed, and no more direct or definite testimony regarding the financial position of the Turkish Government could be forthcoming than this obvious and popular vote of no confidence in Turkish paper currency. German statesmen will have so much to do, after the war, to set their own house in order that there will be little time left in which to assist quondam allies who have fallen by the way, even apart from the finer question of good faith. It is obvious that the Turks realise this, and it will be interesting to see how long the Sultan's Ministers will continue to deceive themselves—if they are really doing so. The people who ultimately have the task of adjusting the Turkish financial tangle after the war will be confronted with many grave difficulties.

Cotton producers and shippers in India are directing some little attention to the claim which has been made by Germans on behalf of the typha plant, which, it is alleged, will make the Faderland independent of cotton, jute and wool. Typha is a sort of "cat-tail" plant which grows in marshes and can be worked in threads according to the kind of cloth made. I have heard something of the kind before, and am inclined to think that if before the war the Huns could have made themselves independent of foreign supplies of cotton, jute and wool, they would have done so. It is interesting to note that the United States has been chosen for the publicity campaign on behalf of this addition to the list of German war-time substitutes, and that the correspondent of a Chicago paper has made himself responsible for the statement that "capital has been subscribed by the greatest spinners, merchants, and bankers for the exploitation and manufacture of the material."

I have my doubts. The American Pressman writes with obvious uncertainty. "I have been told" (he writes) "by a Berlin merchant, whose name is known throughout the world, that Germany as early as next year will make enough of the material to equal all the supplies usually imported, largely from America and Egypt." The name of the famous merchant would have added strength to the story. "The discovery is considered of extraordinary importance, and it may make Germany an exporter of this product instead of being an importer of cotton, wool, and flax. The first work with the new capital will be to develop the coarser grades of material, and then,

after further experiments, the finer grade. Real results are expected next year." The italicised words will serve to emphasise that the journalist declined to vouch for the statements made to him. Egypt need not, I think, be afraid of the threatened rival to its cotton.

Some interesting speculations have been rife recently regarding the future population of Mesopotamia, and men who know the country have expressed the view that in many corners of it Sikhs would, after the war, find a happy and profitable scope in it. It is pointed out that the conditions there are almost the same as obtain in parts of the Punjab, that the characteristics of agriculture would be the same in both countries with similarity of climate, and that if the Government of India are entrusted with the administration of affairs—which the establishment of Indian departments would seem to indicate—Indian settlers would find the old conditions ready-made for them in a new land. The subject abounds in interest, and I hope more will be heard of it. Traders from Bombay and Karachi have already established themselves in the Busreh bazaar, and there is a considerable colony of Indian labourers. It is possible now to place money in an Indian post-office savings bank and to buy British postal orders in the Garden of Eden! Mesopotamia was a blessed name in the past before the Turks defiled the land; it would seem that its future will be as happy.

One of the happy results of the expulsion of the Turk from portions of Asia Minor is that the oppressed people of the freed areas are able now to take in hand the planting of what has hitherto been waste land. As is reported in our news pages to-day, the Mayors of the towns in the region of Trebizond have met to discuss the preparation for sowings, and all will join me in the hope that such difficulties as money will not be permitted to interfere with the development of whatever schemes may be decided on as being most suitable. The possibilities, it is unnecessary to point out, are immense. Wheat and other cereals and cotton are among the crops which could be raised with profit. Asia Minor under a new and generous régime should become a great producing area, and a people endowed with great genius—hitherto chained up by barbarous and tyrannical overlords—would not fail to become prosperous and contented.

I am glad to hear from a Cyprus correspondent that although there has been no great development of rural credit societies in the island, as was hoped for under the law passed in 1914, there has been some movement in a few of the larger villages towards co-operation. The main object of the law was, of course, to encourage thrift and self-help, neither virtue being very conspicuous in Cyprus; and the necessary machinery was provided under this measure for the purpose. So far the preaching of co-operation in general has fallen on rather deaf ears, although it would already have proved profitable in many directions. But it must be hoped that more advantage will now be taken of the law referred to as a means of defence against the usurer.

COMMENTATOR.

The Sudan and its Economic Advance.

* No. III.—The Blue Nile Province.

By PERCY F. MARTIN, F.R.G.S.

Prior to 1906 the Blue Nile Province, as a separate political division, did not exist. At that time the Anglo-Egyptian Sudan consisted of only twelve provinces, apportioned into eight first-class and four second-class divisions. The Blue Nile Province, formerly known as the Gezira, was created in 1906; the Nuba Mountains, by separation from Kordofan, was constituted in 1913; and the Sultanate of Darfur, by conquest, was added, as the fifteenth province, to the Sudan as recently as 1916. Thus the approximate area of the Sudan, including Darfur—150,300—is now 984,520 square miles.

Although the Blue Nile ranks as the second smallest among the different provinces, it can boast of possessing one of the largest populations, being exceeded only by the Bahr-el-Ghazal, Kordofan, the Upper Nile, and Mongalla. It is difficult, however, to make anything like an accurate counting of heads in this part of the Sudan, as there is always a roving population invading the province in years of a plentiful rainfall, and, perhaps, remaining in it for two or three years, after which the people either return to their own homes, when they hear that the rains there are good, or move elsewhere when the rains in the Blue Nile are bad. Surprising fluctuations in the total number of inhabitants, therefore, frequently occur, but just at present the population of the province may be put at between 190,000 and 195,000, which, for a territory of not more than 12,580 square miles, cannot be considered unsatisfactory. Although not regarded as "nomads," very many of the tribes, especially the Batahin, the Shukria, and Marharba, come under this description.

Dependence on Rain.

Like most other parts of the Sudan, the Blue Nile Province is dependent for its economic prosperity upon both river-water and seasonal rains. The agricultural crops raised include cotton and *dura*, the former being scientifically cultivated at the Government Experimental Farm, situated at Tayiba. Cattle-raising is another important pursuit, but, here again, much of the success achieved depends upon the rainfall met with. The province, of recent years, has not been very fortunate in this respect, while cattle-plague has still further added to the burdens to be borne by the inhabitants. The last visitation of this kind endured from the end of 1912 almost to the middle of 1914, by which time the entire cattle trade of the province had been dislocated. Locusts have also from time to time devastated the grain and other crops; thus the people have had their full share of trouble; but like the Aeneas of old, their policy was not to yield to misfortune, *sed contra audientior ito*.

For encouragement and assistance they have always looked to the Government, and they have not looked in vain. By showing the people how to help themselves, even in a dry season, by the establishment by the Government of one farm at Managil and another at Tayiba, by foregoing taxes, and even by financing the landowners to a moderate extent, the Administration have shown their practical sympathy with the people. The results obtained were in every way satisfactory, for so soon as things again became

normal, and rains fell in their proper season, the people began to reap the reward of their confidence and their patience. To Lieutenant-Colonel E. A. Dickinson, the Governor of those days, much praise is due for his unceasing and indefatigable efforts to improve the condition of the inhabitants, whose lasting gratitude he assuredly must have earned. Colonel Dickinson retired from the Sudan Administration in the early part of 1914, after ten years' valuable service. He was succeeded by Mr. G. E. Iles, formerly Governor of the Halfa Province, and one of the most distinguished Arabic scholars of the day.

Development.

Including the Wad Medani District, the number of *manurias* in the Blue Nile Province is seven. The others are: Abu Deleig, Kamlin, Managil, Mesellemlia, Rufaa, and Wad Medani Town. The latter has been the seat of Government since 1905, growing gradually from a small native settlement into a substantially-built and pleasant-looking town, very agreeably situated on the left bank of the Blue Nile, just above its junction with the Rahad. The original settlement is said to have been founded as far back as 1800 A.D. by one Fiki Medani, whose name is still held in reverence by the people. These latter include representatives of a large number of different sedentary tribes—principally Khawalda, Ayakin, Jaalin, and Medaniim.

Abu Deleig.

No little historical interest attaches to the small native town, or village, of Abu Deleig—historical interest, that is to say, of a kind, for, after all, there is nothing in this African country that can compare with some of the associations in our own country, and some of its venerable institutions, such, for instance, as the Tower of London, the origin of which, like that of the Iliad, that of the Sphinx, or that of the Newton Stone, is lost in those nebulous ages before our definite history took shape. Nevertheless, Abu Deleig is very old. Up to February, 1898, the place, which stands in a melancholy district, treeless and almost grassless, was held by a Dervish force under the command of a redoubtable chieftain named Abd-el-Rahman Wad Abu Dugal; but, notwithstanding his terrifying name and well-known bravery, he was once surprised by irregular troops from Kassala and temporarily defeated. But soon afterwards he surprised them in turn, and took a terrible revenge upon the disturbers of his peace. To-day Abu Deleig is ruled by the Sheikh Mahommed Talha, and forms the headquarters of the tribe of Batahin. They are good and peaceable people, pay their taxes with commendable regularity, and occasion little or no trouble to the Administration. The people show complete confidence in the Government, and to them refer even their most trivial disputes instead of patching them up, with more or less violence, on their own account.

Kamlin is one of the districts of this province, and Eilafuu, its principal village, is both clean and well-kept; it is inhabited by the Mahas and Shaigia tribes, who appear to prosper under the local government of the Omda Mohammed Abd-el-Rahman. The picturesque *tuk'* town is situated on the west bank of the Blue Nile, about seven miles distant from the nearest point of the railway. At one time there existed here a small sugar factory, but nothing except the ruins now remains. Both Managil and Mesellemlia are very fruitful districts, and the waters of the historic Nile, which course through them, are considered more valuable as a fertiliser than those of the White Nile. And the richness of the pasture-lands and of the sub-soil found in these districts abundantly justifies the belief. Rufaa, situated some ninety-five miles from Khartoum by land and 104 by river, has a population of nearly 30,000,

composed mainly of Shukria Arabs. In size and importance the town ranks next to Wad Medani itself.

Pictures of Prosperity.

The whole of the Blue Nile Province strikes the traveller as forming one of the most pleasing and satisfying pictures of prosperity. By far the larger yield of *dura* comes from this district; others which contribute notably are the White Nile, Sennar and Kassala. In 1909, the Blue Nile produced 155,000 out of the total of 258,000 tons of *dura* raised in the four provinces named; while, in 1914, the same district produced 125,000 out of the total, for the four provinces, of 250,600 tons.

In the administration of his province the Governor, Mr. G. E. Iles, is assisted by four inspectors, Mr. J. W. Sagar, the Senior; Mr. H. C. Jackson, Second; and Messrs. T. McNeill and R. V. Bardsley, Third Inspectors. Mr. R. K. Winter, a very capable lawyer and Arabic legal authority, is the district judge, with Wad Medani as his headquarters. Two of the Inspectors, Messrs. McNeill and Bardsley, are located at Kamlin and Rufaa respectively.

THE BLOCKADE.

There was published in a supplement to the *London Gazette*, issued on Wednesday, the text of an Order-in-Council, made on February 16, in regard to tightening the blockade of enemy countries, as the result of the German blockade memorandum of February 1 and the similar directions by other enemy Powers.

"Whereas," the order proceeds, "these enemy orders are in flagrant contradiction of the rules of international law, the dictates of humanity and the treaty obligations of the enemy and render it necessary for further measures to be adopted in order to maintain the efficiency of those previously taken to prevent commodities reaching, or leaving, enemy countries, His Majesty has ordered that the following directions shall be observed in respect of all vessels which sail from their port of departure after the date of this order.

"(1) A vessel which is encountered at sea on her way to or from a port in any neutral country affording means of access to the enemy territory, without calling at a port in British or Allied territory, shall, until the contrary is established, be deemed to be carrying goods with an enemy destination, or of enemy origin, and shall be brought in for examination and, if necessary, for adjudication before the prize court.

"(2) Any vessel carrying goods with an enemy destination or of enemy origin shall be liable to capture and condemnation in respect of the carriage of such goods provided that in the case of any vessel which calls at an appointed British or Allied port for the examination of her cargo, no sentence of condemnation shall be pronounced in respect of only the carriage of goods of enemy origin or destination, and no such presumption, as is laid down in article one, shall arise.

"(3) Goods which are found on the examination of any vessel to be goods of enemy origin, or of enemy destination, shall be liable to condemnation.

"(4) Nothing in this order shall be deemed to affect the liability of any vessel or goods to capture or condemnation independently of this order.

"(5) This order is supplemental to the orders in council of March 11, 1915, and January 10, 1917, for restricting the commerce of the enemy."

The Public Custodian of Enemy Property in Egypt invites offers for the purchase of the printing machinery, papers, and accessories of A. Safaronsky, Cairo (in liquidation).

THE COTTON TRADE.

No Improvement in Lancashire Market.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

So far as fresh business is concerned, the market during the past week has shown practically no improvement whatever, and producers of yarn and cloth continue to experience a very dragging demand. The outlook with regard to the future course of events is as uncertain as ever, and buyers all along the line are refusing to commit themselves to fresh contracts of importance.

Much more difficulty is now being experienced in moving goods on land and sea, and the ports are becoming very congested, shipping facilities being much less favourable than a few weeks ago. Many merchant houses are finding a large part of their capital locked up, and the financial side of trading has to receive more attention than in ordinary times.

Although the Egyptian cotton crop for this season will not be so encouraging as at one time expected, there are reports of preparations being made for a big acreage for next year. It is generally realised that difficulties are increasing as to obtaining supplies of raw cotton in this country, and it is quite possible that the Government will decide to issue regulations with regard to imports.

The inquiry in piece goods for Egypt has been on small lines, and although some attempts have been made at transactions, not much has been done. Buyers fear what may happen during the next few weeks, and are inclined to limit their purchases as much as possible.

A very disappointing inquiry continues to be reported for India, and the few offers put forward have been a long way out. The position in Calcutta and Bombay, however, is said to be improving.

The general demand for China continues rather better. Finishing and bleaching cloths have again moved off in moderate lots, and some business has been about in grey staples, chiefly in the poorer qualities.

The position of manufacturers as a whole tends to become worse, and in some weaving districts certain firms are faced with the possibility of looms having to stop for want of orders. The prospects for spinners remain very poor.

In the American section a little more business has been done on certain days at very low figures, especially for stock lots. Producers are determined not to accumulate supplies at the mills. Cases have been mentioned of coarse numbers being sold at a loss.

Export trade in yarns at the moment is demoralised by the uncertainty as to the shipping situation, and producers are pressing for fresh contracts. Egyptian yarns have been rather firmer in quotation, but no particular development in the offtake can be recorded.

NEW CONTRACT FOR EGYPTIAN COTTON.

The new Egyptian cotton contract form which has been adopted by the Liverpool Cotton Association, and which, it is intended, will come into force on November 1 next, make provision for Sudan cotton. It is headed: "— Bales. Egyptian and/or Sudan cotton delivery contract note. 12th February, 1917." In specifying the amount to be delivered the note says: "not lower in grade than good fair, of any growths, at the price of — pence per lb. for fully good fair Sakellaridis standard quality of the Liverpool Cotton Association, Ltd.; with additions or deductions for other qualities according to their value as compared with the spot value of fully good fair Sakellaridis on the day the cotton is tendered, allowance to seller not to exceed 3d. per lb. Sudan cotton, with the exception of that grown from American seed, may only be tendered on this contract provided the staple is not inferior to the average staple of Upper Egyptian cotton." The rules of the Association as in force at the date when any question arises under the contract are to apply, even if the rules have been altered from the form in which they appear at the back of the contract note.

LANCASHIRE COTTON STOCKS.

About a fortnight ago Lancashire users of raw cotton were requested by the Government to supply particulars of their stocks in hand, and to estimate their consumption during the next few months. It is understood that these statistics are about to be used in connection with the import question.

It is not usual for users in this country to keep large supplies at the mills. The stock of American cotton in Liverpool at the moment is 742,000 bales, against 579,000 bales at the same time last year. The average weekly consumption of Lancashire spinners is about 60,000 bales. Any interference with imports is bound to affect prices. About 80 per cent. of the cotton goods manufactured in Lancashire are sent abroad.

EMPIRE COTTON-GROWING.

Mr. J. Arthur Hutton, chairman of the Council of the British Cotton-growing Association, gave an address at Manchester on February 16 on "The development of the cotton-growing resources of the Empire." He said those actively engaged in the cotton trade were so accustomed to thinking in terms of American and Egyptian cotton that probably few realised that even at the present time something like 5½ million bales of cotton are produced in the British Empire. India herself requires more than half her crop of short-staple cotton, the latter estimated at 4,000,000 bales of 500 lb. As to the future, the West Indies could produce all the Sea Island cotton we required, but the production depended on the price and on whether the industry was sufficiently remunerative to the planters.

In the Sudan, Mr. Hutton said, the Gezira scheme is the only proposition which offers any prospect of producing an appreciable quantity of high-class cotton in the immediate future.

GOODS COMMANDEERED BY GERMANS

A case was heard recently in Hawick (Scotland) Sheriff Court, in which Messrs. Alfred H. Midwood and Co., Ltd., Leicester, sought leave to proceed with special dispatch on a decree obtained against Mr. John B. Currie, tweed merchant, Hawick, for £97 for goods supplied. It was stated, on behalf of Mr. Currie, who pleaded the Emergency Powers Act as a special defence, that the goods were supplied prior to the outbreak of hostilities. They were sent principally to Roumania and Austria, passing through German territory, and on the way a considerable portion of the goods was commandeered by the Germans. Owing to the war, the moneys due had not yet been recovered, and a claim was being put in against the German Government by the forwarding agent at Bucharest for the goods they took. The Sheriff held that the Emergency Powers Act applied to this case, and refused the plaintiffs leave to proceed further at present.

GERMAN CANAL ACTIVITY.

With reference to traffic on inland waterways in Germany, the *Neueste Nachrichten* (Munich) states that at the next sitting of the Landtag the Bavarian Ministry of Commerce will probably ask for 5,000,000 marks for the preliminary expenses of a scheme for connecting the Danube with the Main. It is proposed that the waterway should extend from Aschaffenburg (on the Bavarian north-west frontier) to Passau (on the Austrian frontier), and should accommodate ships of 1,200 tons burden. The cost is estimated at 650,000,000 marks (mark equals 11.8d. at par), not including the cost of constructing quays and of connecting Munich and Augsburg with the system. The locks are to be constructed to accommodate two 1,200-ton ships side by side.

ASIA MINOR CULTIVATION.

The correspondent of the Central News at Petrograd telegraphed on February 21 that on the previous day an important meeting was held at Trebizond of the mayors of the towns in the region.

Measures were discussed for the development of uncultivated land in Asia Minor; and among the schemes considered was one for the provision of seeds for the population in preparation for the coming sowings.

NEWS FROM ALL SOURCES.

The consumption of Marsala (Italian) wine is increasing rapidly in Algeria.

The clock will be put forward one hour throughout France and in Algeria in the night of March 3-4.

An official bulletin issued at Cairo says the wheat crop is estimated to be normal in Lower Egypt and 99 per cent. in Upper Egypt.

A Greek ship and the Norwegian steamer Breim collided three miles off Biarritz on February 17. The Breim sank in a quarter of an hour. Her crew was saved.

German interests in Egypt, which have hitherto been under the care of the United States Consul-General, have now been placed under the charge of the Swedish representative.

The Greek Minister of the Interior has instructed the Food Commission to reduce the bread ration for the wealthier classes from 160 grammes (5½ ozs.) to 80 grammes (2½ ozs.) per head. It is proposed shortly to allow the same classes bread only twice a week.

Telegraphic advices from New York announce (says a Paris contemporary) that M. Seferovitch, the distinguished Consul-General of Montenegro in that city, has resigned. He is the fifth representative of the little Balkan kingdom who has given up his position since December last.

The provisional Hellenic Government in Macedonia has decided to establish a bi-weekly steamer service—the headquarters of which will be at Salonika—in order to serve regularly the islands which have adhered to the national movement. The steamers engaged in the work are of 500 to 600 tons net register, and serve Lemnos, Chios, Mytilene and Crete.

The French Ministry of War intends, through the local authorities, to buy up all the wool shorn in Algeria in 1917. Wool of all kinds will be requisitioned, but waste will, for the present, be left at the free disposal of holders. Waste from Algiers has of late been going to Marseilles, Mazamet, and Paris in considerable quantities, but has not given satisfaction to buyers, as the lots were sandy and dirty. Lots from the Bona district were better, but were also considerably dearer.

The C.P.R. steamship Princess Charlotte will make three round trips in the Alaska tourist service this year, which becomes effective on June 8. The list of sailings between Victoria, Vancouver, and Skagway, which has just been announced by the B.C. Coast Service, provides for three round-trip sailings for the Princess Charlotte, seven for the Princess Alice, and seven for the Princess Sophia, making seventeen round-trip sailings all told for the summer season. The accommodation on the Princess Charlotte will be largely reserved for parties booking in the East.

The Allies' blockade, says a message to *The Times*, is beginning to tell on Greece. To-day (February 19) seven-eighths of an ounce of bread per person was distributed in Athens, and yesterday none at all was available till mid-day. There does not appear to be a great lack of rice, macaroni, vegetables, and other similar foods, but the shopkeepers are selling them at high prices, and the situation is difficult for the poorer classes. The number of beggars has largely increased in Athens, but there are not obvious signs of distress. Nevertheless, Piræus workmen are beginning to arrive in the capital, going up and down the streets in search of work.

BUSINESS MAN, many years' commercial experience in Egypt, East and West Africa, etc., seeks situation as AGENT or REPRESENTATIVE; free to go any country.—Write Box B.M., care of THE NEAR EAST Offices, Devonshire Square, E.C.

PRODUCE REPORT.

LONDON, February 22.

Currants.

The market has been very active this past week, with a strong demand for all kinds, and prices have again advanced. Provincials are all cleared. Amalias are quoted 80s. to 84s., Patras 84s. to 85s., Gulf 84s. to 86s., Vostizza 85s. to 87s., Zante 82s. to 84s., and smalls, which are apparently in good supply, but not in much demand, 75s. to 84s.

Sultanas.

There has been only a limited demand during the week, mostly for Afghanistan fruit, while Australian and Greeks are comparatively quiet. Prices, however, are very firm, holders expecting a further advance in the near future.

Figs.

There has been only a moderate demand, with few transactions at late full rates.

Dates.

There is a good demand for all kinds, particularly for Persian, which are firmly held at last week's prices.

Seeds.

Linseed has been steady and sellers are more reserved. Calcutta to London, Feb.-March, is offered at 113s., Bombay ditto 114s., and Bombay to Hull, spot and afloat, was sold at 109s.; Feb.-March, also 109s. asked, with small grain afloat, at 107s.

Rapeseed is firm and dearer owing to scanty offerings. Ferozepore to London is not offered, whilst brown Cawnpore, prompt, is offered at 95s., with few buyers. Cotton seed is firm, and sellers rather scarce. Egyptian to London, spot f.a.q., is quoted at £19 15s., and prompt £19 10s.; Sakelarides, spot, offered at £19 to Hull, spot f.a.q., offered at £19 15s., whilst prompt was sold at £19 15s., and Sakelarides, afloat, sold at £19, with Bombay to Hull afloat at £18 15s. Rangoon beans are sparingly offered, and the market is strong. Spot is held at £53 per ton ex store, with new crop at £45 to £41 per ton, c.i.f. terms, according to position. Canary seed rules firm, on spot, at 125s. to 134s. per 464 lbs. ex store, as in quality.

Oils.

Linseed oil is firm and dearer. Spot pipes offered at £51 10s., with spot barrels at £52; March-April, £53 15s.; May-Aug., £54 17s. 6d.; and Sept.-Dec. at £56. Rape oil continues very firm, with English in barrels, spot, at £59. Cotton oil is firm, with crude pipes spot at £49, refined pale pipes £52 10s., and sweet barrels £58 to £60. Olive oil is very little offered, and values remain nominal.

Oilcakes.

Cotton-seed cake, Egyptian, nominal, at Hull is offered at £15 10s., with Bombay at £14 15s. Linseed cake is quoted at £19 5s.

Cotton-seed meal continues scarce, and is firmly held, with American on spot quoted nominally at £17 10s. to £17 15s. per ton ex store net.

Locust Beans.—Values, owing to absence of offering, are nominal.

DEBTS DUE FROM OUR ENEMIES.

The Chancellor of the Exchequer, in the House of Commons on Wednesday, said:—"A Committee was appointed by the Treasury on November 13, 1916, under the chairmanship of Sir Henry Babington Smith, K.C.B., to report on the arrangements to be adopted for the liquidation of the commercial, banking, and other financial transactions between British and enemy persons, the completion of which was prevented by the outbreak of war, and for this purpose to consider the returns made to the custodians of enemy property and to the Public Trustee and the Foreign Claims Office and any information on matters relating thereto. The members of the Committee are:—Sir Henry Babington Smith, K.C.B., chairman, the Right Hon. Donald Maclean, M.P., the Hon. M. Macnaghten, Sir Algernon Firth, Sir William Plender, Mr. C. J. B. Hurst, of the Foreign Office, Mr. Brien Cokayne, Deputy-Governor of the Bank of England, Mr. Walter Leaf, Mr. Stewart, Public Trustee, Mr. J. J. Wills, of the Board of Trade. The secretary of the Committee is Mr. H. Mead Taylor, Gwydyr House, Board of Trade."

CONTRACTORS TO GOVERNMENT.

ENGINEERING NOTES.

Ural Caspian Oilfields.

The results of recent explorations in the Ural Caspian oil-bearing area has confirmed the impression that there is a great wealth of oil there. Numerous signs of oil have also been found many miles from the original fountain area. Telephones, telegraphs, and electric lighting have been installed on the fields, and the Gurief-Embe road is prepared to carry a motor service. Many ambars and reservoirs were erected before the war, while boring was carried on by day and by night. Enormous sums of money, it is proposed, will be spent in deepening the waterway and providing a port. A railway is also to be constructed to Astrakhan, and for this purpose a party of engineers was about to proceed with a survey when the war broke out. In view of these encouraging facts, and the present excellent relations between Britain and Russia, competent British contractors, engineers, and others interested in such enterprises should avail themselves of the present opportunity to study the requirements of that important district, and secure, in due time, some of the contracts for constructional work or machinery that will soon be required there and elsewhere.

Oil-drilling.

We have had occasion previously to refer to the system of oil-drilling that is employed in the South Russian oilfields, and to point out the opportunities which were open to British engineers if they desired to interest themselves in that direction. It is known that the only system of drilling used in the Maikop field is the Austro-Canadian. It is also the one employed, with slight modifications, in the Grozny field, where, before the war, there were more than 360 wells. The plant was said to give satisfactory results. The old Russian Freefall was formerly tried there, but it proved too cumbersome and expensive. Of course, in the Baku fields the latter rig is still the only one in use, nothing else having ever been found suitable, owing to the peculiar nature of the strata; but it is surprising why, when exploration work is being started in a new field, a trial is not given to the newer system, beginning with as wide a diameter as possible. It is less expensive, and capable of going down 4,500 to 5,000 feet. Anyhow, it gives excellent results in Maikop, where the strata is by no means easy to drill in. This oil-drilling outfit can, we are told, be supplied from England.

Old Water-lifts.

At a recent show a new water elevator was exhibited which recalled the water-lifts which have been in use throughout the Near East, Egypt, and India from time immemorial. It is constructed on a remarkably simple principle, which does away with the use of tubes, plungers, pistons, and valves, and to which motive power can be readily applied, either hand or engine. An endless chain is fitted with circular cups, the distance between the cups being about $\frac{1}{2}$ in. This chain is supported and made to revolve by an axle. The lower end is allowed to fall into the water or the fluid to be raised, the result being that as the chain cups pass through they are filled, and fluid is brought to the surface in considerable quantity. When it is desired to raise larger quantities and quickly, the cup chains can be used in parallel, double, or triple form. The chains are supplied in various lengths, and can easily be increased in length if the depth of the well requires it. It is said that from a well 250 ft. deep 240 gallons of water have been raised in an hour with the aid of a 1-h.p. petrol engine. The principle, it will be seen, is almost similar to that used by the "natives"

throughout the East for irrigating gardens and small plantations, but, of course, are more compact and efficient in work and less bulky in appearance. It will undoubtedly find a welcome in the East if properly introduced; it will appeal to the "natives" as an improvement on a method which they already know.

The German Way.

In their efforts to capture the Eastern markets, the Germans observed that modern mechanical means, or apparatus for pumping or lifting water from wells or other low-lying sources in the East, would be a line of business worthy of effort. A German firm endeavoured to introduce in Asia Minor and Palestine oil engines of 3 or 4 h.p. for pumping water more rapidly than it could be lifted by mules or oxen. At first no one would try these engines, garden proprietors in particular looking on them with suspicion. Finally, however, the agent of the firm in question volunteered to set up an experimental engine, free of expense, in one of the gardens, and it was found to work so well that several orders were at once placed. When first set to work these engines were made to pump up the water, but it was found that the pipes frequently became clogged with mud and sand. The enterprising German firm did not give up their attempts, and in order to secure sales suggested a very simple adjustment of the engine belt in connection with the old water wheel, which, with its buckets, was made to rotate, and the water was raised as formerly, but at a considerably greater speed. It was then found that an oil-engine could fill one of the large reservoirs in about six hours at half the daily cost of three or four mules, and the gain of the garden proprietors was, therefore, manifest. Ever since the employment of oil engines has annually increased, and of the many hundreds that were in operation before the war, two-thirds at least were of German manufacture, the remainder being British. In the meantime, the old water-wheels with their buckets have been gradually replaced by chain buckets or other modern water lifts. In recent years there has been a marked preference for British-made oil-engines, especially those embodying compactness and simplicity in construction, a matter not to be overlooked when it is considered that the engines are placed mainly in charge of native labourers.

LIQUID FUELS.

"The Nearest Approach to the Ideal."

Professor J. S. S. Brame, F.C.S., delivered an interesting lecture on February 20 at a meeting of Petroleum Technologists on "Liquid Fuel and Its Combustion."

Until recently, he said, the term "liquid fuel" was understood to refer exclusively to the heavier classes of oil used as fuel under boilers or in furnaces for metallurgical or other general heating purposes. With the introduction of the internal combustion engine, "liquid fuel" has acquired a much wider significance, and now covers the whole wide range of petroleum and shale-oil products, from the light petrol to heavy oils formerly only used for combustion; it includes also such fuels as benzol and alcohol.

The practical results which have followed the introduction of the latter type of engine for liquid fuel are of vast importance. The high-speed motor-car is familiar to all. The mastery of the problem of flight, for which man strove so long in vain, was accomplished through the petrol motor. That command of the deep through the submarine, which is playing such an important part in our national history, has been pos-

sible through the petrol motor in the first place, and has been extended and strengthened by the heavy-oil engine of the Diesel type. The air and the sea have been brought into subjection by man through the agency of oil.

Internal Combustion Engines.

"I do not propose to-night" (proceeded Professor Brame) "to deal with the whole subject of the use of liquid fuel, but to confine myself to the use of oil fuel when burnt free in air for steam-raising and other industrial heating operations. It will be better for me to treat this fairly large section of the subject as thoroughly as time permits rather than attempt what would have to be a somewhat sketchy outline of the whole subject if the use of liquid fuels in internal combustion engines were included."

"Suffice it to say that by the introduction of these engines the petroleum derivatives of every grade have been rendered serviceable to man as liquid fuels. Prior to use in internal combustion engines it was only the crude oils with very little low-boiling constituents present or heavy residues from crude oils which were applied as fuel oils. Now the range includes everything, from the lighter petrols, the illuminating oils, the intermediate oils, until finally the heavy fuel oils find their application in engines of the Diesel type."

"Again, I may be very brief on the question of sources and general production of oil fuel. In the Near East suitable fuel oils are obtained in Russia, Galicia and Roumania. In the East supplies come from Borneo, Burmah and more recently from Persia. In the West we have large outputs from California, Texas, and Mexico. The Trinidad supplies are naturally of interest to the people in the Mother Country. The proximity of some of the latter supplies to the great trade route which must be expected to develop through the Panama Canal will be an important factor contributing to the extended use of oil in ships. To the East again no great distances have to be traversed to put oil supplies on very important trade routes."

"The characters which a fuel oil should possess are high calorific value, fluidity at moderately low temperatures, freedom from solid matter which may choke the jets of atomisers or cause trouble through abrasion, and a satisfactorily high flash-point."

Methods of Combustion.

"Among the earliest methods which were used for the combustion of oil fuel were the open Nobel troughs and percolation on a porous bed of non-combustible material. The most natural further development followed, namely, attempts to gasify the oil and burn the oil-gas, but the general failure of such systems as gasification of heavy oils led naturally to attempts to burn the oil in the next best physical condition, namely, in the form of a fine spray."

"In the satisfactory combustion of oil fuel, assuming, of course, that an atomiser of efficient type has been installed, everything depends on suitable furnace arrangements. Too much stress can hardly be laid on this point. In general, experience of combustion has been gained with solid fuel, and, although certain guiding principles apply in all cases of combustion, conditions necessary for the proper combustion of a large quantity of oil are very different from those governing the combustion of solid fuel."

"All petroleum men have faith in oil fuel as being the nearest approach to the ideal fuel, if burnt under conditions founded on sound theory. I have endeavoured to expound these principles to-night. All look forward to its attaining increased importance in the future, especially in internal-combustion engines."

TRADE WITHIN THE EMPIRE.

Will Imperial Preference be Adopted?

The Committee appointed by Mr. Asquith, when Prime Minister, under the chairmanship of Lord Balfour of Burleigh, to consider and report on Commercial and Industrial Policy on the subject of Imperial Preference has been submitted. The resolutions passed by the Committee have been issued as a White Paper and are accompanied by a covering letter to the Prime Minister, dated February 2 last, to which are appended two memoranda, one by Sir Frederick H. Smith, and the other by Messrs. John O'Neill and R. Hazleton.

The resolutions are as follows:—

(1) In the light of experience gained during the war, we consider that special steps must be taken to stimulate the production of food-stuffs, raw materials, and manufactured articles within the Empire, wherever the expansion of production is possible and economically desirable for the safety and welfare of the Empire as a whole.

(2) We therefore recommend that H.M. Government should now declare their adherence to the principle that preference should be accorded to the products and manufactures of the British Overseas Dominions in respect of any Customs duties now or hereafter to be imposed on imports into the United Kingdom.

(3) Further, it will, in our opinion, be necessary to take into early consideration, as one of the methods of achieving the above objects, the desirability of establishing a wider range of Customs duties, which would be remitted or reduced on the products and manufactures of the Empire, and which would form the basis of commercial treaties with Allied and Neutral Powers.

To Meet the Dominions.

The covering letter is signed by Lord Balfour of Burleigh (Chairman), Mr. Balfour, Lord Faringdon, Mr. Alfred Booth, Mr. Harry Gosling, L.C.C., Mr. J. Wardle, M.P., Prof. W. A. S. Hewins, Sir Charles Parsons, and others.

In the course of this letter the Committee state that they had not considered the position of the great staple industries in regard to this question of industrial policy, as they felt bound to wait for the reports of the Special Committees appointed by the Board of Trade. The announcement that an Imperial Conference will be held at an early date made it, in their judgment, expedient to state their opinions in the form of the resolutions given.

The Committee say that they have arrived at the conclusions chiefly on the ground that although to some of them any measures which might act in restraint of trade were in the abstract distasteful, they think it necessary that, for the sake of the unity of the Empire, a serious attempt should now be made "to meet the declared wishes of the Dominions and Colonies for the development of their economic relations with the United Kingdom, and that any abstract opinions we may hold should not, under the circumstances in which we are placed and with the experience gained during the war, stand in the way of any measures which are seen to be important, having regard to the general interests of the Empire."

Sacrifices and Compensations.

In recalling the resolutions of the Colonial Conference of 1902, the Committee say that whatever controversies may have arisen in the past, they think that, regard being had in particular to the sacrifices made and the services rendered by our fellow subjects overseas for a common purpose during the present war, the time has now arrived at which this request should be granted to the fullest extent which is now or may hereafter become practicable.

They did not overlook the practical difficulties involved, but they desire to emphasise the fact that for the purpose of recovering trade lost during the war, of securing new markets, and of consolidating the resources of the British Empire the development throughout the Empire of a system of mutual tariff preferences was a subject which cannot, in their opinion, any longer be neglected.

Measures must be devised to safeguard the interests of the consumer and the rightful demand of labour.

Sir F. H. Smith, in a memorandum, says that in his opinion it would be desirable before arriving at any conclusions on the subject they should meet the representatives of the Dominions for a confidential discussion, at which the question of our commercial relations with our Allies and other practical difficulties could be fully and freely discussed.

DEAL IN SUEZ CANAL SHARES.

In the Court of the Lord Mayor of London on February 19, before Sir Forrest Fulton, K.C., the Recorder, and a jury, a claim was made by Mr. Charles William Gordon, trading as Charles W. Gordon and Co., stock and share dealers, Broad Street House, E.C., against Mr. A. L. Dunning, Bankside, Eskdale Avenue, Chesham, for £10 16s. 10d., difference in the price of a deal in Suez Oil shares.

The plaintiffs' case was that the defendant got into touch with the plaintiffs, and made one or two purchases of Rhodesian shares which apparently were rather successful. He then purchased 250 Suez Oil shares and did not pay for them, and after a great deal of leniency on the part of the plaintiffs the shares were closed against the defendant by being taken in at a price. The plaintiffs were suing for the differences between the price at which the defendant had agreed to purchase the shares and that at which they were closed against him.

Mr. John Gordon, manager of the plaintiff firm, said that the 250 Suez Oil shares were sold to the defendant in June at 2s. 1d., they having bought them from Messrs. E. M. Vowler and Co., stockbrokers, at 1s. 10½d. A transfer in respect of the shares was sent to the defendant to be executed. In October, 1916, in consequence of the defendant not having paid for the shares they were bought back by Mr. Gordon at 1s. 3d., that price being based upon the market price of the day. The price of the shares now was 1s. 6d. to 2s.

In cross-examination, witness said the bargain with the defendant was a share-dealing transaction, not a stockbroking one. The parties were principals.

At the close of the plaintiffs' case counsel submitted there was no case for the defendant to answer. The plaintiffs claimed "a balance of a stockbroking account" and for moneys paid by the plaintiffs on account of the defendant and on an account stated. The whole of the evidence given on behalf of the plaintiffs was directly contrary to such a claim.

The Recorder held that the plaintiffs were not entitled to recover, and he directed the jury to return a verdict for the defendant. The jury returned a verdict for the defendant.

CLAIM FOR PRIZE BOUNTY REJECTED.

Judgment was given in the Prize Court in London, on Wednesday, in an application by Commander Boyle, in respect of the torpedoing, by submarine E14, of a Turkish transport, carrying 6,000 troops. The claim was that £5 per head bounty should be paid in respect of these troops as well as of the crew of 200.

Sir Samuel Evans, the judge, said, in his view, an armed ship must be a fighting unit of a fleet and it had not been shown that this transport was such a ship. He therefore disallowed the claim, but without prejudice to a further application if additional evidence was forthcoming.

MALTESE LABOUR FOR FRANCE.

Mr. Walter Long, M.P., Secretary for the Colonies, announced recently in the House of Commons that he was consulting the authorities in Malta with regard to the suggestion that men there should be enrolled in labour corps for service in France. A message from the island, dated February 15, points out that Malta has already provided several battalions of such corps. The first of these displayed great coolness under fire and earned unstinted praise. Several officers of the Malta Militia serving with the corps were recently mentioned in despatches.

GERMAN "LOAN" TO TURKEY.

According to a Constantinople telegram and the German newspapers, the Turkish Senate on February 13 adopted a Bill authorising the Government to accept from Germany advances to 42½ million pounds (Turkish), and to issue 32 million pounds of banknotes, says Reuter's correspondent in Amsterdam.

In the course of his speech the Finance Minister, Djavid Bey, pointed out that the advances from Germany and Austria-Hungary since the outbreak of war amounted to 79 million pounds, repayable eleven years after the conclusion of peace.

His journeys to Berlin, continued the Minister, had convinced him that German statesmen would do everything to facilitate Turkey's payment of her debts, and that they were even ready to give Turkey, apart from these advances, the necessary money for her reorganisation after the war.

"If these hopes are realised," he declared, "if we receive this favour, and if we succeed during the years following the war in securing for our country 100 or 150 million pounds, then, provided that this money is spent on agriculture, railways, and the building of roads and factories, Turkey will be able in ten years to cover her ordinary expenditure, and the interest on the sinking fund, on the national debt, and on the debts contracted during the war."

After pointing out that the advances would not be guaranteed by any receipts until they had been converted into consolidated loans, when the question of the necessary guarantees would be decided, he explained that the banknotes issued were not paper money, but notes which would be cashed by Germany in gold, and he expressed his surprise that the value of these notes was decreasing, and that the public were giving three paper pounds for one pound in gold.

WANTED—ORGANISATION.

We have, then, to organise our merchant shipping (borrowing a lesson or two from the elaborate system of tariffs framed by the Deutsche-Levante Linie and other steamship companies for facilitating the despatch of goods in inland towns in Germany to inland towns in foreign countries), writes a correspondent in the *Financier*, in the course of an article on the British Consular System. Above all, we have to educate and organise our commercial travellers and trade agents abroad, so that, in addition to any paltry percentages or other direct profits of their work, they may feel that they are parts of a great and a properly-recognised and organised institution, which by promoting British trade is also propagating British methods, and instilling into the inhabitants of the waste places of the earth that love of liberty which lies at the root of British greatness and is at this moment destroying the most formidable and highly-developed system of tyranny that ever menaced mankind.

The mere mention of the Consular Service in the same breath with the great issues for which Great Britain and her Colonies are fighting side by side with their Allies, not to mention the neutral countries, who are really suffering in the same cause, or the United States of America, whose entrance into the lists appears to be merely a matter of time—seems to be a bathos.

Let the British nation organise itself for trade as it is organising itself for war, and the organisation of the Consular Service and of all other Government services at home or abroad will very quickly expand to meet the new demands made upon them.

BANNED FIRMS.

It is notified that persons and firms in the United Kingdom are prohibited from trading with the following:—

Dukali, Nokhtar ben el Maati, Laraiche; Kuhlmann, Alfred, Laraiche; and Nolting, Fritz, Laraiche.

The names of the undermentioned have been removed from the list of persons and firms with whom persons and firms in the United Kingdom are prohibited from trading:—

Amir, Taher Ben, Laraiche; Odadih, Joseph Brahim, Laraiche; Soudry (Essoudry), Samuel (Soudry, Mordechai and Elias), Laraiche.

COMPANY MEETINGS.

Egyptian and Foreign Trust.

The thirteenth ordinary general meeting of the Egyptian and Foreign Trust, Ltd., was held on February 19 at Dashwood House, New Broad Street, E.C., Sir Alexander Roger (the Chairman) presiding.—The Secretary (Mr. H. O. King, F.C.I.S.), having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—You see that I am alone to-day. I am sorry to say that Mr. Cruickshank—owing, no doubt, to the very heavy burden of public work which he shoulders—is ill, and is unable to be with us. I am sure you will hope with me that he will speedily recover. (Hear, hear.) So far as Major Goldie is concerned, he is with his troops, and, I am glad to say, is well. Gentlemen, the feature of our accounts this year is the unexpected recovery in our profit and loss account. For the first time in ten years—long before I was associated with the company—we have a credit balance, and I think it will interest you to have a résumé of the figures over the past ten years. In 1906 we had a credit balance in our profit and loss account of £11,800 odd; in 1907 the bottom fell out of Egypt generally, and our profit and loss account showed a debit balance of £13,300 odd; in 1909 this was increased to £16,000 odd, and from that date to this it has been a steadily decreasing item until, as I have said, this year, for the first time in ten years, shows a credit balance. (Hear, hear.) So far as this year is concerned, I doubt whether we are going to have as good a year as last year. For the most part our increase in revenue has been owing to one or two investments entering the ranks of dividend-earners, and so long as that continues our improvement will be maintained, but I am not quite certain whether it will continue. So far as our expenses are concerned, we have again "achieved the impossible," and reduced our expenses for the third time; and in this connection I should just like to make an acknowledgment to the auditors, who have again reduced their fee. So far as the balance is concerned, we propose that it should be carried forward. As regards the balance-sheet, I do not think I have anything of importance to say with respect to the debit side. On the credit side you will notice that the amount of our investments has been reduced, and our deficit on realisations has been increased by practically a similar sum. This, as you will imagine, is owing to our selling some of our non-dividend-payers and investing the proceeds in dividend-earners. I should like to draw your attention to the fact that even with our very limited resources we had at December 31 £5,000 invested in the French Loan. I am glad to say that we have also applied for £5,000 of the new British Loan. (Hear, hear.)

The bulk of our interest is still in Egypt, and we are naturally deeply interested in the position of that country. By a curious turn of the wheel of fortune, Egypt was probably never more prosperous than it is to-day. The presence of a large British army has brought trade, and has provided an outlet for native produce, while the price of cotton—now about 1s. 7d. a lb., compared with 11d. a year ago—has put money into everybody's pockets. Exports, both in value and in quantity, have increased, and trade generally is distinctly on the up grade. The fellah is having a prosperous time, and is not only paying up current balances due to the mortgage companies, but is actually anticipating future instalments. I often think that Egypt is not adequately appreciated by the business community of this country, and I wish that the great opportunity which lies there for British brains and energy were more widely known. Egypt has a unique situation, standing on the highway to the East. It has a prolific soil, abundance of labour, and a vast and rich hinterland from which to draw tribute. In the past much of the wealth and trade has been in the hands of German and other foreign interests when they might well have been in British or French hands; but I am glad to say that German interests are being vigorously stamped out, and I sincerely trust they will be replaced by strong British interests. (Hear, hear.) There is a large amount of capital in this country invested in Egypt, and shareholders should insist that the directors resident in Egypt responsible for their interests

should in all cases be approved by them. When Turkey disappears from Europe and establishes its capital in Asia Minor, the importance of a strong and prosperous Egypt will become more than ever apparent, and if British and French trading is protected and fostered, I can think of no more effective barrier between Germany and the riches of the Nile Valley and the East generally. I now propose: "That the directors' report and annual statement of accounts for the year ended December 31, 1916, be adopted."

Mr. G. A. Williams seconded the resolution, which was carried unanimously.

The retiring director (Sir Alexander Roger) and the auditors (Messrs. Russell Harris and Co.) were re-elected.

Dr. Moody proposed a hearty vote of thanks to the Chairman, and the motion was seconded by Mr. A. H. King and passed unanimously.

The proceedings then terminated.

Ritz Hotels (Egypt).

An extraordinary general meeting of the Ritz Hotels (Egypt), Limited, was held on January 14 at the offices of Messrs. Russell Harris and Co., the secretaries, Gresham House, Cairo, for the purpose of (a) the sale of the uncompleted construction and loose building materials of the company and the consideration of the offers; (b) liquidation of the company.

The Chairman, Mr. Shumaker, stated that it would be in the interests of the company that any shareholder present who was interested in the purchase should retire from the meeting, as it would be necessary to discuss freely the estimations of the building, loose materials, etc., in accordance with the experts' report, and divulge the figures at which they were valued.

Mr. Salvago agreed to this statement in principle, but proposed that the estimations should not be submitted to the assembly at all, but should be left to the board of directors to deal with, thus guarding against any intending purchaser, present in the meeting, taking advantage of this information and modifying his tender accordingly. The motion was carried.

Mr. Salvago then explained to the meeting that in his opinion there were three questions to be considered. First: Is it possible to find a group to take over the building in its present condition and complete it? Second: Is it possible to utilise the building as it now stands? Third: Owing to the current high prices of materials, would it pay the company to demolish the building and sell the materials?

He explained that it would be practically impossible to find a company or a group at the present time to take over the building and complete it; and that further, owing to the nature and special construction it cannot be utilised in any way. The only practical question to be considered therefore is whether if the building is demolished and the materials sold, the sum to be realised would cover the amounts already expended. This question, he added, must be considered in conjunction with the offers, and if it transpires that those made or to be made were good offers, the directors could then carry out the sale. On the other hand, if the offers proved to be commercial offers, he did not think it would pay to agree to them, and suggested that, in this latter case, the question may be left in abeyance until the situation cleared up, especially as the sum for which the company was indebted was not large. Mr. Salvago did not favour any tender being made for the sale, and proposed that the board of directors be given full liberty to deal with the matter as best they thought. This was agreed to by the meeting.

It was resolved that, owing to the fact that there were only two members of the board of directors in Egypt at present, a consultative committee composed of Mr. Carver, Mr. Salvago, and Mr. Lacaris, who are the biggest shareholders, should be appointed, and that the directors should consult them on all important matters connected with the sale.

BRITISH-ROUMANIAN CHAMBER OF COMMERCE.

The Liverpool Chamber of Commerce (says its *Monthly Magazine*) has received an invitation to nominate a representative to serve on the Council of the British-Roumanian Chamber of Commerce. The headquarters of the British-Roumanian Chamber will probably be in London.

COMPANY REPORTS.

Credit Foncier Egyptien.

According to the report of the Credit Foncier Egyptien, owing to the high prices of cotton and other crops, the payments made out of the bank during the month of October, 1916, the last month of its financial year, amounted to £E550,000, and those made during the first and second months of the present financial year, namely, November and December, 1916, amounted to £E650,000 and £E640,000 respectively. The amounts paid into the bank during the year ending October 31, 1916, were £E2,600,000 against £E1,650,000 made during the preceding financial year. According to the report of the directors the net profits of the bank for the year in question amounted to £E432,547 as compared with £E373,347 in 1915, and £E414,335 in 1914. Considering the fact that only three months of war were included in 1914 the results of 1916 appear most gratifying.

It is understood, says the *Egyptian Gazette*, that it is proposed to allot the dividend of 6 per cent. prescribed in Art. 77 of the statutes of the bank, amounting to £E231,450 plus 70 per cent. of the balance and £E2,182 carried forward from last year, making in all a total of £E374,397 in respect of 400,000 shares of P.T. 92 per share. The remaining 30 per cent. will be distributed as follows: £E30,163 or 15 per cent. to the founders' shares; £E20,109 or 10 per cent. to the reserve fund, and £E10,054 or 5 per cent. to the board of directors.

The dividend paid last year was only P.T.77.15, whereas that paid before the war attained P.T.100 and more. The dividend on the founders' shares will in all probability attain P.T.1.505 per share against P.T.1.065 in 1915. Owing to these excellent results the management of the bank, which has withheld the increases of its officials' pay in 1915 and adopted other measures of economy, has now given increases of pay and gratuities to those officials who are deserving of consideration and has relaxed the stringent measures of economy adopted hitherto.

COMPANY NOTES.

Dividends, Payments, Etc.

Messrs. R. Raphael and Sons give notice, in regard to the 3 per cent. bonds of the Piræus, Athens, and Peloponnesus Railway, that the coupons due January 15 last are now being paid at their office, Austin Friars House, E.C.

Oil Outputs.

Baku Russian.—76,000 poods.
Anglo-Egyptian—Gemsah, 23 tons; Hurgada, 1,341 tons.
Spies Petroleum.—181,475 poods.
Cheleken Oilfields.—491 tons.
Maikop Pipeline and Transport.—48,761 poods.
North Caucasian Oilfields.—664,100 poods.
North Caucasian, 10,711 tons.
Black Sea Amalgamated Oilfields, 20,204 poods.
Maikop Combine, 15,159 poods.
Ural Caspian, 2,507 tons.
European Oilfields Corporation, 88,200 poods.
Bibi Eibat, 780 tons.
Baku Russian Petroleum (1909), 75,000 poods.
Spies Petroleum, 2,969 tons.

THE WAR LOAN.

We publish further Greek and Near Eastern names which appear in the list of subscribers to the new great War Loan. These include.—

Anglo-Egyptian Bank (for self and clients)	£835,000
Anglo-Greek Magnesite Co.	45,000
Armenian Educational Trusts	23,000
European Oilfields Corporation	15,000
Gellatly, Hankey, and Co. (London staff)	5,650
Clients of the National Bank of Egypt	1,243,000
Clan Line Steamers	500,000
Anglo-Egyptian Oilfields	10,000
National Bank of Egypt and Clients	325,000

ON 'CHANGE.

(FROM OUR CITY CORRESPONDENT.)

THROGMORTON STREET, Thursday.

Although business this week has again been on a somewhat restricted scale, there has been a firmer tone in the market, and changes are mostly in the upward direction.

Egyptian Government stocks have continued in good demand, but, owing to the lack of sellers, very little business has been done.

National Banks have changed hands to some extent at 13½, but are finishing firmer at 13½.

In Agriculturals a small amount of business was done round 5, but here also some business was done at the close at 5½, with further buyers.

In Aboukirs, about 1,000 shares were done round 13-16, and a few hundred Alexandria Waters changed hands at 11½, with buyers still unsatisfied, but no further sellers.

Khedivial Mails have improved rather sharply to 27s. 6d.

In Greek bonds there has been a fair amount of transactions, and the market is generally higher and sellers scarce at the close: 1881's and 1884's have been done at 51, Monopolies at 46½, Rente at 40½, Funding in a small way at 49, 1902's at 61½, and Current Bonds at 86½. At the close there were a good many unsatisfied buyers.

Oil Shares.

On the whole, the week has been devoid of interest, business has been done only on a restricted scale, and there are few movements to record.

Some business has been done in North Caucasians which, at the close, were a shade easier at 28s. 6d. Ural Caspians receded to 29s. 9d., while Spies remained steady at the old price, 14s. 9d. Russian Petroleums were very dull in the vicinity of 1s. 10½d., and Roumanian Consolidateds maintained their price of 9s. Anglo-Egyptians remain dull at about 11½, a few hundred shares being for sale.

A rise occurred in Anglo-Persian Preferences, the price of which advanced 6d. to 20s. 9d.

The Paris Bourse.

Advices from Paris, dated yesterday, state that on the Parquet, Suez Canal shares rose 20 francs to 4,445; Russian Industrials were slow to inactive; while Russian Oil scrip weakened—Baku to 1,739 and Lianosoff to 390.

THE MONEY MARKET.

(FROM OUR FINANCIAL CORRESPONDENT.)

LONDON, Thursday.

After a pretty uneventful week, a good deal of money came into the market yesterday through a Colonial bank from the Government, it is thought on account of wheat purchases, with the result that money became plentiful. At the beginning 4½ per cent. was asked and conceded, but as the day wore on there were free offers at 4 per cent.

Regarding discounts, some uneasiness has been caused in some quarters owing to the impending transfer of War Loan money to the Bank of England; but it is believed that measures will be devised to keep dislocations at a minimum.

In exchange, Alexandria stands at its usual figure of 97½ piastres to the pound sterling. Italian has made another advance, this time to 35 lire.

MOROCCO.

There is no need to emphasise the growing importance which the development of our economic relations with Morocco presents for Bordeaux and its neighbourhood, says a Paris contemporary. The office of the Sherifian Government, which is directed from Paris under the able guidance of M. A. Terrier, already constitutes a very useful organisation to facilitate our penetration into the Protectorate, but in order to consolidate local efforts and to give them greater effect, it appears necessary to establish at Bordeaux a committee analogous to that which functions at Marseilles. With this object in view, the President of the Bordeaux Chamber, M. D. Guesier, recently convoked a meeting of the principal houses of the port engaged in trade with Morocco, and, in the course of this gathering, it was decided to form the Comité Bordeaux-Moroc.

"A GOOD TURKISH LOAN."

We take the following from the *Financial News*:—"Give a dog a bad name —." The Turkish Four per Cent. Loan, 1891, is apparently suffering from its unfortunate title. As a matter of fact, it is an Egyptian stock, and is now quoted under 'Egyptian' in the Stock Exchange Official List. It is secured on the Egyptian Tribute, an annual sum of £230,622 being payable to Messrs. Rothschilds by the Khedive of Egypt for the service of the loan. Interest is paid half-yearly, in April and October, and a cumulative sinking fund to redeem the entire loan in sixty years from date of issue is operative by annual drawings at par each September. The loan is now quoted at 71-73. On the other hand, Egyptian Unified, bearing 4 per cent., but not enjoying the benefit of drawings, stands at 77½-78½. If there is anything to choose between the two loans as regards security it is, perhaps, in favour of the Turkish Four per Cent., 1891, and it appears, therefore, that an exchange from Egyptian Unified into Turkish, 1891, would be profitable."

SUZ CANAL RECEIPTS.

The receipts of the Suez Canal were as follows on the dates mentioned:—

	1916.	1917.
	Francs.	Francs.
February 10	380,000	270,000
February 14	390,000	390,000
February 17 and 18	550,000	540,000
February 19	220,000	150,000

NOTES OF THE WEEK.

Kut is once more in British hands, and the capitulation of General Townshend has, from a military point of view, been avenged. Organization and generalship have again won the day, and Mesopotamia has no longer to be classed among the graves of Army reputations. General Sir Stanley Maude has been more fortunate than his various predecessors in the measure of interest and support at headquarters, whether in India or England, that he has been able to rely upon in his part of the long campaign. But he must be credited with having realized the nature of the preparations required for success and with the resolve not to undertake an advance until he was ready. Here, indeed, is an important element of generalship. It is true that the necessity which prompted the hurried launching of the Relief Expedition under General Aylmer existed no longer; but the whole conception of the undertaking was in those days radically at fault. Enlightenment and determination have succeeded to a regrettable display of ignorance and indifference, and the new regime was fortunately placed in competent hands.

General Maude's success can perhaps best be gauged by recalling the powers of resistance which the enemy has shown for more than two months and comparing with them the suddenness and the rapidity of his present retreat. Ever since the offensive was resumed last December the Turks have stubbornly contested every inch of ground. Even when the British troops had worked all round the Kut bend of the river the enemy clung to each successive line of trenches until the last moment. The process of ejecting him was continued the whole length of this section of the right bank of the Tigris, and only when this part had been cleared was an attempt made to deal with the Sanna-i-Yat position fifteen miles lower down the river. As we know, the first attack failed; but General Maude was too sure of himself to accept an adverse verdict. By this time the Turks had evidently learned to appreciate his bull-dog tactics. They appear to have devoted all their attention for the moment to the designs upon Sanna-i-Yat. General Maude did attack again, and in force; but in the meantime plans were being made for crossing the river above Kut. The strategy was completely successful. Covering parties were ferried across the Tigris before daybreak on February 23 and established a hold on the left bank. They were able to effect a sufficient clearance of the enemy in this quarter to allow a bridge to be built behind them in nine hours, and by the fol-

lowing morning the whole of the Turkish position had been turned.

From this point the rout of the Turks has been complete. Their advanced base for the operations round Kut was at Baghela, lying twenty-four miles west of the town. It has been hurriedly abandoned, stores and guns being thrown into the river, and the Turks are falling back towards Baghdad. Sir Stanley Maude reports that when the pursuit became general on February 25, strong Turkish rearguards, supported by artillery, were found to be occupying a position fifteen miles from Kut, but they were quickly dislodged. In this pursuit of a flying enemy the Mesopotamia Expedition will have found some compensation for the hardships it has been called upon to undergo in the past. Whatever the future may have in store, the tables have been handsomely turned. Over this same ground the Turks pressed General Townshend's small force, handicapped with its wounded from the Ctesiphon battlefield. They are now themselves being driven in far larger numbers after a trial of strength in which they had every advantage on their side.

The question that naturally follows the capture of Kut is: Will General Maude advance on Baghdad? There can be not the least doubt that the general wish of all Britons interested in the Middle East is that he should. At this stage of the war, however, many considerations have to be taken into account. Let it be said at once that British interests will be better served by the military occupation of Baghdad than if the Expedition has to rest content with its present victory. On the other hand, the advance can only be undertaken with the certainty that it will be successful and that the whole region can be held indefinitely against the enemy. What the additional length of communications will entail on British resources, especially in the matter of shipping, must be determined by the responsible authorities, and they will have to reckon with the indeterminate factor of the submarine menace. Much, too, depends on the capacity of the Turks for further formidable resistance in the event of reinforcements reaching them.

Such indications as are available to the public point to a previous intention to re-establish by arms what Lord Crewe has rightly termed the necessary predominance in the whole region of Mesopotamia. Whether shipping difficulties may affect that resolve remains to be seen. We hope that they will not. The nation, however, would be satisfied with the knowledge

that the abandonment of the scheme, if it should be abandoned, was prompted solely by military considerations which could not be overcome. In a telegram to General Maude, the King expressed the confidence that all ranks of the Expedition would spare no effort to achieve further success. The message was sent before the fall of Kut, but his Majesty's confidence can hardly have been limited to an event which was then expected at any moment. Lord Curzon, in reply to a question in the House of Lords, could naturally not commit himself to a discussion of future operations. But it is known that the preparations made for General Maude's offensive have been systematic and thorough. His troops must necessarily remain in touch with the enemy in the retreat, and the more thoroughly he follows up his advantage, the easier the subsequent task of rehabilitating British prestige from the Sinai Peninsula to the Indian frontier.

That the news from Greece should continue to be meagre may be regarded as a sound development of the situation. The Military Control established by the Allies is officiating at points where a check can be exercised upon the troops and munitions transferred from northern Greece to the Peloponnese. Superficially the work is being carried out according to the letter of the agreement; but it is evident that the Entente Powers are not yet wholly reassured. They are taking steps to relieve the shortage of foodstuffs in Athens, and are prepared to raise the blockade as soon as Greece has complied with the terms of the various Notes. But the attitude of the authorities, the demeanour of the Royalist Press, and reports of the maintenance of communication with Germany by wireless and aeroplane necessarily create misgivings and delay a return to normal conditions. In any case it is difficult to see how any really satisfactory relations can be re-established between the Entente and the Athens Government while M. Venizelos remains an excommunicated outlaw. A further indication of the Greek Government's disposition will be provided by the conduct of its representatives on the Joint Commission which is to fix the amount of the indemnity due to the maltreated Venizelists.

The only operations of any significance on the Eastern front during the last two weeks have taken place in Bukovina, where the enemy in the neighbourhood of Jakobeny claims to have recovered in two engagements practically the whole of the ground previously won by the Russians. The opposing forces are in touch in Roumania, and the skirmishing in the Carpathians has advanced the Russian line a short distance at various points. But the greater part of this extended theatre from Riga southwards appears still to be snow-bound. According to the German Press, Bulgaria has enjoyed an unusually mild winter, and rosy accounts are given of the forwardness of some crops. If there be any truth in the statement it may point to an early breaking-up of the weather in the north—a factor which ought to suit the Allies, as it may enable the offensives in the East and West to be more closely synchronized. If the winter should have enabled Russia to put her house in order and make the resources which are hers available for the fighting line, there can be little doubt that the effect would be as startling as recent events in the West. Reference has recently been allowed to the exploits of British armoured cars, which played no insignificant part during the Roumanian retreat and subsequently on the Sereth line. What cars these were is not stated, but we are reminded of a dozen such cars which were simply lost for an incredible time in Russia in their transit from north to south. If the last few months have served to remove the congestion of the railways and to promote efficiency in the matter of transport of all kinds, it is certain that Russia will find herself in a very strong position for the offensive when the weather conditions allow.

The opening of the School of Oriental Studies by the King on February 23 was an earnest of the important

part which it is hoped the new institution will play among the forces that make for the consolidation of the British Empire. It coincides with the awakening of the British people to the fact that both the art of government and the struggle for existence have been rendered more difficult of recent years, and that happy-go-lucky methods must give place to scientific principles. In all personal relationships with the East, whether in an administrative capacity in India, Egypt, or the Middle East, or in the pursuit of commerce and industry, within the Empire or beyond, it has become essential for the Briton to know the language and something of the mode of life and thought of the people among whom his lot is cast, if he aspires to make his full quota to the Empire's well-being. By many, no doubt, the advantages of the School will be reckoned in terms of money; but even these, if they imbibe its spirit only in part, will instinctively offer their contribution to the Imperial cause. Knowledge brings understanding, and the two together make any man, in spite of himself, a better administrator and a better merchant. "The greatness and solidity of the Empire in its internal and external relations," said Sir John Hewett, chairman of the Governing Body, "rest on the comprehension of and the just and sympathetic dealing with men infinitely varied in race, religion, speech, and character." The King in his admirable address emphasized the same point when he expressed the wish that the labours of the School might be blessed in the advancement of learning, unity, and good government among his people of every race and language. Individual students may use it to enhance the monetary value of their services, but in the long run, as the Patron and the founders of the School realize, its influence will be wider and greater.

This higher purpose lying behind the School of Oriental Studies stands revealed without any conscious striving after effect on the part of those who think Imperially. Instinctively, British administration, when it has to deal with people of another race, aims at improving the condition of the governed. (Its efforts may not always be to the liking of the latter; but the aim is there.) Whatever the explanation, the fact remains, and it goes far to account for the fundamental differences between the British and German characters. We have found it difficult to understand German and Austro-Hungarian policy, because the idea of a State altogether without conscience, without soul, and without morality, stopping at no action in the pursuit of its goal, is too foreign to our natures to be easily comprehended. Thus in dealing with the settlement of Eastern Europe the British public is in danger of failing to appreciate its problems from inability to conceive how a Government can be so blind to its own interests as to imagine that a regime of oppression can serve its purpose. In the same way there is a disposition among Britons to doubt the accuracy of the accounts of what is happening in the countries and districts occupied by our enemies. Perhaps if we recall the treatment by the Governments concerned of some of their own subjects, it will be less difficult to realize their possible attitude towards those whom they regard as their enemies.

The day set apart for public contributions in aid of the Mesopotamia Comforts Fund—April 13—is still some way off; but amid the multiplicity of appeals it is necessary that some time should be devoted to working up a suitable "atmosphere." Donations and offers of assistance are already invited. The committee has started under excellent auspices with a telegram wishing it success from General Maude. Probably no body of troops wherever the British are fighting in this war has had a harder time than the Mesopotamia Force. Officers and men have deserved well of their country, and the least that those at home can do is to ensure that some tangible expression of their gratitude is sent out to them. It can bear no relation to the measure of their services or their sufferings, but will at least assure them that they have not been forgotten.

LETTER FROM CAIRO.

(FROM OUR OWN CORRESPONDENT.)

CAIRO, FEB. 7.

The Health of the Sultan.

The bulletins published at Abdin Palace continue good. The slight operation performed on the Sultan appears to have given him complete relief, and his condition of health has altogether much improved. His Highness is still abstaining from receiving any visitors, and is only signing the most urgent and important papers.

The Late Lord Cromer.

The death of Lord Cromer came somewhat as a surprise to most people out here, as it had not been generally known that he was ill. The news was certainly received with marked regret everywhere; for although it is nearly ten years since he was last in Egypt, he still had many personal friends and acquaintances here, with whom he maintained relations, and who made it a point of visiting him whenever they went to England. The Press, vernacular and European, has been full of eulogistic articles, some of them several columns in length, dealing with his career and the work he had done for Egypt. On all hands I have heard nothing but generous recognition of the benefits which this country derived under his administration. One old Egyptian remarked to me: "To few men in her long history can Egypt have been so indebted as to Lord Cromer, under whose régime she and her sons made more progress than at any other period of her existence." And others who remember the condition of things thirty years ago say quite freely that the Egyptians will never be able adequately to express their gratitude to the great Pro-Consul for the changed circumstances, due to his sagacious and statesmanlike direction of affairs, amid which they live to-day.

Services in memory of Lord Cromer took place in Cairo and Alexandria at the same hour as that fixed for the funeral at home. The service at Cairo was held at All Saints' Church, where he had been a regular worshipper during his residence in Egypt, and was conducted by the Right Rev. the Bishop in Jerusalem, assisted by the Chaplain, the Rev. T. C. Horan. The gathering in the church was fully representative of the cosmopolitan population of the country. The High Commissioner was present. H.H. the Sultan was represented by his brother, Prince Ahmed Fuad, who was accompanied by other members of the Sultania household. Both General Sir Archibald Murray and Vice-Admiral Sir R. Wemyss were also represented. The Prime Minister, the Ministers, the Diplomatic Corps, and all the older residents and high Government officials were there; whilst a sign of recognition of the extreme solicitude which Lord Cromer had always shown for the interests and religious feelings of the Moslem community was afforded by the presence of a remarkable number of Moslem dignitaries, headed by the Grand Mufti. The ceremony, which was a very impressive one, ended with the sounding of the "Last Post" by the Welsh Fusiliers' buglers, assembled in the churchyard outside, and with the playing of the National Anthem.

The service in Alexandria, which was held at St. Mark's Church, was equally well attended, those present including Mr. D. Cameron, the Consul-General; Ziwar Pasha, the Governor; Hopkinson Pasha, the Commandant of Police; and all the older residents.

The Mixed Tribunals.

The *Official Journal* of Tuesday last contained the decree extending the mandate of the Mixed Tribunals for another year as from the 1st inst. This is the thirteenth renewal that has taken place since the creation of this jurisdiction in 1876. It was established in the first instance for five years, and was extended for annual periods until 1884, when quinquennial periods were resumed and continued—with the exception of the year 1899, when the consideration of certain reforms rendered it advisable to renew for one year—until the first year of the war, since when recourse has again been had to annual periods. As mentioned in previous

letters, no unification of the jurisdictions existing in Egypt is possible so long as the war lasts, or will, indeed, be possible for some little time after the conclusion of peace; and until that reorganisation takes place the Mixed Courts will have to continue in their present form. When the unification is carried into effect and the new codes necessitated thereby are enacted, it is to be hoped that, among other improvements, they will provide some less cumbersome procedure than at present exists for the collection and recovery of debts.

The Census.

Preparations for the coming Census are proceeding apace, and the Controller has recently applied for the services of all Government officials aged under forty years and drawing less than £E360 per annum. These officials will be required to act as enumerators, and will have to give up an hour every day for about a month, their work being in connection with the enumeration of the inhabitants of the district in which they live. For these services they will receive no remuneration, in virtue of the law passed in August last, which empowered the Census Controller to requisition the services of all Government officials and provincial agents, who are liable to a maximum fine of £E1, or imprisonment not exceeding one week, for any failure to comply with the orders given them. This system of obtaining labour for the Census means, of course, a considerable economy in the cost of taking it—the economy runs into six figures, I understand—and very satisfactory results were obtained from it in 1907, when the last "numbering of the people" took place.

The National Mission.

The National Mission which, as I reported last week, is being led in this country by the Dean of Rochester and the Rev. E. A. Burroughs, who have been sent out by the Archbishop of Canterbury, started work in Cairo on Thursday last with an "At Home" held by Bishop and Mrs. MacInnes at Bishop's House, followed by short explanatory addresses from each of the Messengers in St. Mary's Church. There was a very large attendance, Sir Reginald and Lady Wingate being amongst those present. On Saturday evening another meeting was held at the Anzac Hostel. The Bishop in Jerusalem took the chair, and opened the proceedings by reading a stirring letter of welcome to the Messengers from Sir R. Wingate. The speakers were Brigadier-General Paul, C.B., Mr. H. Farnall, C.B., C.M.G., and the Rev. E. A. Burroughs, M.A. Special services are being held throughout this week at All Saints' and St. Mary's Churches, and, judging from the attendance at the preparatory meetings and at those since the arrival in Egypt of the Archbishop's Messengers, it is evident that the movement is appealing very much to the Anglican community of this country.

An interesting result of the transfer of the Greek Army to the Peloponnese has been a recrudescence of departures for Salonika, says the Syria correspondent of the *Times*, in a message dated February 22. Officers and men who wish to join the Venizelist forces are slipping away with a new regularity, 180 having left on Tuesday.

SUDAN NOTES.

(FROM OUR OWN CORRESPONDENT.)

KHARTOUM, February 4.

Khartoum Racing Club.

The third winter meeting took place on February 2. There were six races, of which two were for horses sired and bred in the Sudan, a polo scurry, and two other races for Arabs. But the most important event of the day was the race for the Governor-General's Cup. Except for the last-named, the racing was of little interest, as the winners in each case came in first without difficulty. One noticeable feature, however, was that in the first three races the winning horse was ridden by Major Fail; in the last three races by Major Middleton; so these officers divided the honours of the day equally. In the Southey Plate, a race of a distance of one mile for country-breds, the chief point of interest was the running of Colonel Carr's pony K1. This horse completely outclassed anything in the race, and won handsomely. He was sired by an English horse, presented to the Sudan Government by Lord Kitchener; and if he is to be taken as a sample of what can be bred in the Sudan, there should be a fine future in the country for horse-breeding. In the race for the Governor-General's Cup, which covers a distance of about one and a-quarter miles, popular opinion seems to be chiefly in favour of Mr. More's Monitor, which did, in fact, lead over a considerable part of the course. Coming up the straight, he was challenged by Beyrout, and Haramis, which had been completely behind, came up with a tremendous rush, and all three horses finished within the limits of a neck. Haramis, however, just managed to get his head in front of Beyrout at the post. After the races were over, Mrs. Stack presented the cups to the winners of the Southey Plate and the Governor-General's Cup, and the meeting came to a successful close.

Movements of Officials.

Mr. C. E. Lyall, Governor of Halfa, has visited Khartoum for a few days before leaving for Kassala, to take over that province, on the retirement of Mr. C. H. Townsend.

Mr. Sagar arrived in Khartoum from Wad Medani, and left for El Obeid, where he will be acting Governor until Colonel Kelly's retirement from the Sudan Government makes a vacancy for his final appointment.

Mr. Young, who has for several years been in Dongola Province, reached Khartoum on February 3, on his way to take up his new duties in the Bara District, Kordofan Province.

Visitors to Khartoum.

Mr. Goschen, of the Egyptian Ministry of Finance, has visited Khartoum for a few days.

Sir Ismail Sirri Pasha, K.C.M.G., arrived in Khartoum on January 26, with his staff, accompanied by Sir M. MacDonald, K.C.M.G. They left Khartoum on January 29 to inspect the irrigation works and the farms at Tayiba, Barakat, and Makwar, and then crossed to the White Nile, where they are visiting Jebelain and Jebelauli, returning thence to Khartoum on February 4. They will visit the new basin at Wad Hamid in the course of the week, and will then return to Cairo. They will then have covered most of the points of interest to irrigation experts at present in existence in the Sudan, and will doubtless from the data collected formulate the future policy which will guide the irrigation of the Sudan.

FUEL IN TURKEY.

El Kiblah, the Mecca official paper, says that wood, which before the winter was obtained with great difficulty in Syria at £T2 a cantar (about 280 lb.), is now as scarce as gold. The women, children, and old men left in the homes are in consequence suffering intensely from the cold, while the Turks have denuded Syria, the Lebanon, and Anatolia of all traces of wood, and the town of Killis, near Aleppo, which used to be celebrated for its forests of olive trees, is now as bare as a desert—all because of the Government's requirements for the railways, which are deprived of European coal! Even fruit trees are paying this toll to the extent of 10 per cent., so that animate and inanimate things are made to bleed for the Turk!

CYPRUS NOTES.

(FROM OUR OWN CORRESPONDENT.)

CYPRUS, February 6.

The Bread Supply.

The new bread, of mixed wheat and barley meal, has now been on the market at Nicosia for a sufficient time to enable the public to pronounce upon its merits; and it is admitted that it is wholesome and palatable. Complaints, however, are made that, either from want of skill in making or some other reason, the quality of the loaves sold by some bakers is not what it should be, and that both the Government and the municipality should intervene, in order that at all stages bakers should be made to carry out their work in an honest and competent manner. The Government, from February 1, has allowed bakers to take supplies of wheat and barley from their tithe stores; and the bread referred to is sold at 2½ piastres (about 3½d.) the oke. The facility given by Government is regarded as a great boon by the public.

The Use of the Greek Flag.

On the occasion of a recent visit by the Greek Archbishop to Famagusta, the pupils of the town schools were warned that they could not carry the Hellenic flags, which the Greeks are so fond of displaying in processions, at meetings, on the numerous anniversaries, fête days, etc. The Archbishop despatched a telegram to the High Commissioner, expressing the deep regret of the town and neighbouring villages that the pupils were not allowed to bear these flags "in orderly and decorous manner according to the liberal custom hitherto established, which does honour to British Government," and expressing his conviction that this action of the local police was not taken with his Excellency's approval. A reply has been received from the acting Chief Secretary, informing the Archbishop that the matter was receiving attention, and that a further communication would be sent to him. This custom of carrying the Hellenic flag has been allowed to grow up, until it has been, for many years past, carried to an absurd extreme, and in fact abused in a manner which naturally calls for comment from all writers and travellers, and would certainly not be tolerated in any other country. That a Greek banner should be displayed at some particular festival, by permission of the proper Government authority, might indeed occasion no surprise or objection. But as a matter of fact the Greek communities have been allowed to hoist and carry Hellenic colours on frequent occasions during the year in such profusion that any traveller might well imagine that he was visiting a Greek island. The flag for general use is, of course, the British, and if any other were to be flown, it should have been that of the Ottoman Sultan, for whom the island was until 1914 administered. There has never been more than a very small handful of Hellenic subjects in Cyprus, either before or after the occupation. At present, of course, the people, excepting a very small number of foreign nationalities, are British subjects. It is high time that the use of the Greek flag should be made the subject of proper regulations, to be observed in all parts of the island.

General News.

There have been some heavy rain and hail storms. In the Nicosia and Morphou districts hailstones fell, in some places, larger than walnuts, or, as some assert, "larger than eggs." The rising cereals have escaped damage, but beans have suffered in parts.

The Greek members of the Legislative Council have held a meeting at Nicosia, to discuss various matters which they regard as of primary importance.

Two of the Greek native judges are shortly to be retired on pensions, owing to age.

There is a fair abundance of game in the markets, especially of partridges (red-legs) and hares. Woodcock are not so plentiful as during more severe winters. Fair bags of snipe are made by British sportsmen. The price of all game is more than double what it was a year or two ago.

SALONIKA LETTER.

(FROM OUR OWN CORRESPONDENT.)

SALONIKA, February 9.

An Interrupted Correspondence.

I do not know if the absence from your columns for so long a time of my usual weekly budget has been the cause of any disappointment to your readers, but, as Salonika continues to be one of the great centres of interest in the present war, it may not be unreasonable to hope that the resumption of these communications may be of interest. It is unnecessary to explain the various causes of the interruption, but one of these, I may remark, has been the treacherous climate of this town, which does not spare even special correspondents.

No one would dream of selecting Salonika as a health resort. A large portion of the town lies on low, marshy ground, the chief products of which are flies and mosquitos in summer and oceans of mud in winter. In England the flies only give rise to momentary inconvenience, but here they attack in massed formations like the Germans at Verdun, but with more reserves to take the place of the slain than ever the Huns could muster. Even now, in the middle of winter, many mosquitos still linger near in the hope of getting a bite, and the protective nets continue in use.

Soldiers in Shirt Sleeves.

We complain in England if the thermometer dares to rise over 90 degrees Fahrenheit in the shade, but in this neighbourhood the temperature has been as high as 114 degrees during the summer. This was terribly trying to the sentries and other troops exposed to such a fierce heat, and the military authorities did a very wise and humane thing when they authorised our Tommies to discard their tunics. It then became a common sight to see the men with their shirt sleeves rolled up and their manly breasts laid bare, and when they also wore "shorts" there was very little of their persons hidden from view. Even the officers sometimes appeared in this light and airy costume.

We have in reality only two seasons at Salonika—summer and winter—the brief intervening periods being undeserving of the names of spring and autumn. Up to the end of January the winter has been quite mild, with occasional sunny spells, but now the worst part of the year has come, snow is falling thick, even in Salonika, and the roads have become quagmires. Of course the mountains to the north have been covered with snow for months past, and when I visited Monastir a short time ago the Moglena and Kaimakalan mountain ranges strongly reminded one of the snow-clad peaks of Switzerland.

Christmas and New Year.

We have three Christmases and an equal number of New Year's days at Salonika, besides numerous other festivals which convert the closing days of the old year and a large portion of the opening month of the new year into a continuous series of holidays. The British and French observe their Christmas on the same date, but there is no "Boxing Day" at Salonika; then the Russians and Greeks hold their festivals, thirteen days later; and the Armenians also have special days of their own. The Jews, of course, have no Christmas, and their New Year differs from that of all other people.

On the whole the troops spent an enjoyable time, as leave had been freely given, and the weather was warm and pleasant after a long spell of heavy rain. The only disagreeable thing was the mud, and some of the Army transport mules seemed to have been rolling in it. They had quite lost their pristine colour, and mostly assumed a slatey-grey appearance. On this occasion the Allied troops fraternised together with great heartiness, and you could often see parties of British, French, Russian, Italian, and even Greek soldiers marching arm-in-arm in happy mood. The difference of speech seemed to create little difficulty. It is really surprising how these brothers in arms seem to

understand one another without knowing a word of each other's languages.

Lord Granville and the Venizelists.

The Provisional Government, and indeed all Venizelists, are proud of the honour done them by the British Government in sending so distinguished a representative to Salonika, and they were also particularly delighted to learn that our Government had refused to recognise the nominee of King Constantine, whom he sent to replace the previous Greek Minister, who preferred to represent Venizelos. There is only one point on which even the highest Greek officials here express great disappointment, and that is the apparent reluctance of the Allies to deal firmly with the King and remove him from a position in which he has shown himself to be a traitor to the Allies as well as to his own people.

ROUMANIA'S ENTRANCE INTO THE WAR.

(FROM A CORRESPONDENT.)

The negotiations between the Central Powers at the time of Roumania's entrance into the war form the subject of a very interesting report in the Russian paper *Vecernnee Vremya*. We know already that on August 27 Roumania declared war on Austria-Hungary, that on the 28th Germany declared war on Roumania, that on September 1 Bulgaria took the same step, and that shortly afterwards her example was followed by Turkey. But we did not know that on September 7 Germany, Turkey, and Bulgaria signed a formal military Convention against Roumania. Neither, of course, were we aware of the cause of this Convention, nor of its terms. The Russian paper above-mentioned contains important information about the matter.

"When Roumania declared war," we read, "Kaiser Wilhelm was burning with impatience personally to take vengeance upon King Ferdinand of Roumania. He proposed—and did his best to get adopted by the German War Council—the following suggestion, viz., to ask the Turkish Government to send a great army for the Balkan and the Galician fronts.

"The necessary negotiations were energetically and swiftly proceeded with, and the Germans had the support of the Bulgars. All the items were agreed upon by the beginning of September, and on September 7 the Convention between Germany, Turkey, and Bulgaria was signed. The contents of the Convention are as follows:—1. The Turks pledge themselves to send ten new divisions to Europe, from three to four to Galicia and the Bukovina, and from six to seven to the Balkans. 2. In return, Bulgaria is to cede to Turkey all the territory won in Thrace during the autumn of 1915, and the port of Dedegatch. 3. Bulgaria is to receive the whole of the Dobruja and part of Bessarabia."

The signing of this Convention, adds the paper, caused great delight in the official circles of the Bulgarians and Young Turks.

Reuter's Agency is informed that the Anglo-Hellenic League learns from Lausanne that the 8,000 Greek troops who were surrendered to the Germans and Bulgarians at Kavalla, and are now interned at Görlitz, are infuriated with their commanding officer, Hatzopoulos, who has had to leave the neighbourhood. His troops accuse him of having taken them into Germany by false pretences, giving them to understand that they were to be sent back to Greece by way of Monastir. Their present condition is pitiable, as, owing to internal conditions in Germany, they are almost deprived of bread, which forms a large part of the Greek soldier's diet. Hunger and discontent have led to frequent mutinies, although the officers attempt to pacify them with promises of repatriation. A few are able to earn a little money, by practising their trade or profession; others are compelled to beg in the streets, while there have been numerous deaths from disease and improper nourishment. One of the officers has committed suicide.

POSTAGE OF NEWSPAPERS TO NEUTRAL COUNTRIES.

By an order of the War Office all papers posted to neutral countries are stopped, except those sent by the publishers or newsagents who have obtained special permission. No information is given as to the disposal of such stopped papers. Readers are therefore asked to bear in mind that if they desire to post a copy of THE NEAR EAST to a friend in a neutral country they should order its despatch by the publishers, at 16-17, Devonshire Square, London, E.C.

LONDON SCHOOL OF ORIENTAL STUDIES.

OPENING BY THE KING.

It was of the happiest augury for the future of the enterprise, so pregnant with importance for the welfare of the Empire, that the weather should have been on its best behaviour on the occasion of the Royal opening of the School of Oriental Studies on Friday. The day was one of the rare products of February, bright and warm, and the sun gleamed on the carriages in the Royal procession on the way to the school.

The King, who was accompanied by the Queen and Princess Mary, left Buckingham Palace soon after eleven o'clock, and drove by way of The Mall, Horse Guards' Avenue, and the Embankment to Finsbury Circus. On arriving at the school, their Majesties were received by Lord and Lady Curzon and Sir John Hewett, chairman of the governing body. The Royal party were then conducted to the Continuing Members' Room, where the following members of the governing body were presented to his Majesty:—Lieut.-Colonel Sir A. P. Gould, Sir C. Lyall, Sir Montagu Turner, Mr. P. J. Hartog, Dr. Denison Ross, and Professor F. M. Simpson, the architect of the new buildings.

A procession was then formed to the library, where the ceremony was to take place, and where a distinguished company was awaiting their Majesties. The audience included representatives of many universities and all manner of degrees, and the various academic colours made a most picturesque spectacle. Red and blue and white were the predominant colours, while here and there was to be seen the khaki of the military uniforms.

The ceremony began with the reading by Sir John Hewett of an address to his Majesty. The King replied to the address in most sympathetic terms. His brief and dignified utterances deeply impressed the audience, and his remarks were not infrequently punctuated by applause. Lord Curzon brought the ceremony to a close with an admirable speech, in the course of which he threw out a very timely hint to the City for further financial support. Notable in his speech was the moving tribute he paid to the late Lord Cromer, and the truly splendid compliment he paid the King in describing him as "the most travelled Sovereign since the days of the Roman Emperor Hadrian."

At the conclusion of the ceremony a number of presentations were made to his Majesty, and subsequently the Royal party inspected the buildings before leaving for the Palace.

Among those who attended the ceremony were Mr. Austen Chamberlain, the Marquess and Marchioness of Crewe, the Persian Minister, Viscount and Viscountess Bryce, the Right Hon. Syed Ameer Ali, Lord and Lady Inchoape, General Sir E. G. Barrow, Sir Charles and Lady Lyall, Professor Paul Bayer (Director of the Paris School of Oriental Languages), Sir Hugh Barnes, Sir John McLeavy Brown, Baron and Baroness D'Erlanger, Sir Walter Lawrence, Colonel C. E. Yate, M.P., Sir James Wolfe Murray, Sir J. D. Rees, M.P., and Sir Francis Younghusband.

The Address to His Majesty.

The address to the King read by Sir John Hewett thanked their Majesties for their presence there to sanction and encourage the undertaking, and set forth the aims of the institution. The main objects of the school, the address stated, might be expressed as follows:—First, to provide a place where our young men who will presently be engaged in governing or garrisoning the Oriental and African parts of the Empire may learn the languages and study the literature, the religions, and the customs of the peoples with whom they will so soon be brought into contact, and their influences over whom will largely depend upon their familiarity with indigenous character, ideas, and institutions. Secondly, to offer a training to those about to proceed to the same countries to take part in commercial enterprise or other avocations, or for purposes of study and research. Thirdly, to furnish to the capital of the Empire a meeting place and focus for scholars from the East of various nationalities, where, on their visits to this country, they may be assured of a sympathetic welcome, and find at hand, if they desire them, opportunities for study among those engaged in kindred pursuits.

They took the King's presence as a sign that his Majesty was fully cognisant of and impressed with the importance to the Empire of the study of Oriental and African languages and civilisations on a scale which Great Britain, alone among great countries of the world interested in the East, had not hitherto regarded as necessary; and they had planned that their school

should be at least equal to the Oriental schools in foreign capitals, and adequate to Imperial needs. Their teaching was only a means to an end. The greatness and solidity of this vast Empire in its internal and its external relations rested in the comprehension of, and the just and sympathetic dealing with, men infinitely varied in race, religion, speech, character, and upbringing. They believed that the training given in the school would materially contribute to the fuller realisation of the nation's ideals in the distant parts of his Majesty's dominions and to the prosperity and the efficient working of the whole.

The King's Speech.

The King replied as follows:—I thank you for your loyal and dutiful address.

I am glad to be the patron of the School of Oriental Studies, and it gives me particular gratification to take part to-day in the ceremony of opening this fine building in which the school is henceforth to carry on its work. I cannot sufficiently emphasise the wide scope and vast importance of that work. The school will afford fresh opportunities of study to those services which have been the pioneers of progress and the instruments of good government in India and Egypt. It will furnish with a fuller technical equipment the pioneers of commerce and industry who in each successive generation undertake the duty of upholding the honoured fame of British trade in the East. Its work will serve to develop the sympathy which already so happily exists between my subjects and those of my Far Eastern Ally, Japan. But more than this is to be looked for from the school.

If it happily succeeds in imparting to the pupils sent out as teachers of unselfish government and civilised commerce a clearer comprehension of the thoughts and lives of the diverse races of the East, the good effects of that success will extend far beyond the immediate and tangible results. The ancient literature and the art of India are of unique interest in the history of human endeavour. I look to the school to quicken public interest in the intellectual tradition of that great continent and to promote and assist the labours of students in these departments of knowledge, to the mutual advantage of both countries.

The school is about to open its doors in the midst of an unparalleled crisis in the world's history. For more than two years the peoples of my Dominions with loyalty and devotion have vied with each other in offering their blood and treasure for the prosecution of a righteous war. The sense of common sacrifice and common endeavour has drawn us all nearer to one another in feeling and sympathy. Meanwhile, we believe that the peaceful labours of this institution in spreading accurate and scientific knowledge of Eastern life and thought will foster the spirit of loyalty and patriotism and knit together still closer the many nations of my Empire.

I am very conscious of how much we owe to those distinguished scholars and statesmen whose undaunted efforts have largely aided in establishing this school. I deeply regret that one of the most illustrious, Lord Cromer, has not been permitted to see the completion of his share in the work. Had he lived, his wise judgment and unrivalled experience would have been of priceless value in council. I recognise and appreciate the debt of gratitude which this school owes to the public-spirited benefactors who have contributed so liberally to its endowment fund. In so doing they have rendered a service to the Empire, and I trust that the beneficence of the community will endow the school with funds adequate to all the demands which may be made upon its teaching capacity.

I now declare the School of Oriental Studies open. May God bless its labours in the advancement of learning, unity, and good government among my people of every race and language.

"A Memorable Ceremony."

Lord Curzon, speaking as chairman of the General Committee, said that his Majesty had taken part in a memorable ceremony. It marked the end of one period and the beginning of another. For years there had existed means of following Oriental studies both in King's College and in the University College of London quite apart from the larger efforts that had been made by the old academic institutions of Oxford and Cambridge. But now, for the first time, those efforts were to be co-ordinated, unified, and centralised in the metropolis of the Empire. Henceforward they would feel that they were not behind similar institutions which existed at Paris, at Petrograd, and, if he might say it with bated breath, at Berlin. Henceforward they hoped they would not be behind those rivals, or that enemy, in their equipment for that which was essentially part of the duty of the Empire.

It was nearly ten years since a committee was formed under the chairmanship of Lord Reay—whose absence owing to illness was regretted by nobody more than by himself—which laid down the plan of that School of Oriental Studies. A good deal of hard work had been done since then. He was in a position to speak of it because, first under Lord Cromer and afterwards under his successor in the chair, he was familiar with every stage of the development of the scheme. He could not exaggerate the debt which that institution no less than the Empire at large owed to that eminent man Lord Cromer. He devoted to that purpose an enthusiasm, an assiduity, and organising capacity which characterised everything he did. Nothing was too small for him to deal with, nothing too big for him to grasp. Indeed, it was a sad thing, as his Majesty had said, that only a few weeks before they opened the school his body should have been carried to its grave. But his friends and the public would always regard that institution as one of the lesser monuments to his memory; it would serve, though no such service was needed, to keep alive the memory of a great man who was a true friend of all Eastern people and a great servant of the State.

He (Lord Curzon) did not regard that place merely as an

educational institution, where the administrator and the soldier, the merchant and the missionary would learn languages and study the history and the absorbing customs of the institutions of the East. He hoped that, as time passed, the school would become a sort of clearing house of ideas between the East and the West—a bridge between the mind and character of Great Britain and those Oriental peoples with whom she was brought into such close contact. The gap that existed between the psychology of East and West was often spoken of as though it were unplumbable and impassable, but his belief was that with every year that passed it became less wide and less deep. Great indeed would be the disappointment of many of them if that place did not bring into closer union what he might describe as the soul of the Eastern and Western world.

There could be no happier augury for the success of such a scheme than that his Majesty should have graced the opening ceremony. There were many scholars and students present, but none of them would deny him when he said that his Majesty was the most travelled Sovereign since the days of the Roman Emperor Hadrian. There was hardly one of the countries—the languages of which were going to be taught in that school—which the King had not visited, and of which he could not speak with personal knowledge. Circumstances had thrown a good deal of his life into contact with the East, and the intimate acquaintance which his Majesty had acquired with those parts of the world had been of immense and incalculable value to the Empire of which he was the head. He hoped that all future Sovereigns of the British Empire would follow his Majesty's example in that respect, and that they would remember that, though the central tabernacle of the Empire was set up in this country, its outer courts were thronged with countless hosts who would continue to look to us in the future as in the past for administrative guidance, for inspiration, and for example. As to the future of those countries and those peoples, and what degree of autonomy or self-government would be conceded to them, or what would be the link that would unite them to us in the future, he hoped it would never be said that the country which started them forward on a career of constitutional development, of industrial and commercial expansion, and of moral advance would shrink from the task because it became more difficult, or because the end was lost in a cloud of mist. Rather might institutions like that be a wayside inn on the road which East and West would travel together, hand in hand, in an ever-closer and fraternal union.

NEAR EAST BOOKSHELF.

FLEET STREET AND KASR-EL-NIL.*

"Some publications are born to notoriety, some achieve it, and others have it thrust upon them. Mine comes under the last category."

Thus neatly does Mr. Sydney A. Moseley disarm criticism in introducing to the public his interesting little book of essays upon modern Egypt, the publication of which was, for some inexplicable reason, prevented in 1914—after the author had left Egypt. Mr. Moseley repeats—quoting Sirry Pasha as his authority—the story prevalent in Egypt at the time that Lord Kitchener confused the writer of this book with the late Mr. B. L. Mosely—"that new Wilfrid Blunt"—and forbade the publication on that ground. Unfortunately, the late Mr. B. L. Mosely, who was probably better fitted than any other man of our time to write about Egypt from the unofficial point of view, could never be persuaded to do so—to the great loss of the world.

What emerges out of all this pother about the Mr. Moseley who does write is a bright, gossipy and apparently harmless little book, recounting various episodes in the author's career in Egypt. He was not there very long—people who write about Egypt never are—but long enough to see things that made "the blood of the free English Press" congeal in his veins. Much of what he says about Anglo-Egyptian journalism is painfully true. Of the British official class, who, it must be remembered, form the bulk of English newspaper readers out there, he observes: "They refuse to help the journalist, and then are contemptuous of him because of his helplessness"—an exceedingly shrewd remark.

The fact is, of course, that Anglo-Egyptian newspapers cater for a public which *en masse* is better educated than the readers of any English daily. It is a public at once intelligent and unsympathetic, a fact which explains the ill success of so many young writers, who, like Mr. Moseley, have been tempted to transfer the scene of their activities from Fleet Street to Cairo. But, from the literary point of view, at all events, it is hardly fair to say, as Mr. Moseley does, that "in no other country in the world has the Fourth Estate descended to so low a level."

Mr. Moseley gives us an entertaining account of the Assuan Dam controversy, and another of the somewhat obscure "Adamovitch affair," in which he appears to have played a prominent part. There is also a deft comparison between Lord Kitchener and Mr. Lloyd George, to which the author might, perhaps, have added that both these courageous legislators have usually found themselves under the necessity of introducing Amending Acts before their very salutary reforms could be made workable. And there

is a good deal of criticism of the Anglo-Egyptian, some of it deserved.

Mr. Moseley does not appear to have been entirely happy in Egypt, and doubtless it was mostly Egypt's fault. But we venture to suggest that things might have gone a little better if Mr. Moseley, on his part, had realised that the conditions in the two countries are entirely different—that there is no Egyptian "man in the street"; that the Shareh Kasr-el-Nil is not another Fleet Street. For all that, we shall be surprised if there is not a considerable sale for this book in Egypt.

"INTERNATIONAL INFORMATION."

A body known as the International Information Committee has been formed for the purpose of preparing and publishing a systematic series of literature dealing with and explaining the British Empire, its origin, constitution, resources, and general conditions. The first volume of the series, entitled "The Resources of the Empire," has now been published. It has been written by Dr. J. Watson Grice, who is well qualified for his task. In a handy form a brief account is given of the food supplies, raw materials, minerals, mineral oils, and metals of the British Empire, and the rest of the pamphlet is devoted to an analysis of capital available for Empire development and of the labour supply, and to a consideration of the growth of an Imperial economic policy. From this bald synopsis of its contents it must not be inferred that the volume is merely a dry compilation of indigestible facts. On the contrary, Dr. Grice has contrived to make his narrative eminently interesting, in spite of the small compass within which it is enclosed, and the romance of the Empire's resources takes the reader from the little-known oil fields of Scotland to the wonderful development of the rubber industry in its plantation form, which is now "primarily British," and to gold, of which two-thirds of the world's total production originated within the British Empire.

There is scope enough among Britons for a fuller knowledge of all that concerns the Empire; but the intention of the committee wisely includes the distribution of the information it has set itself to provide among foreign nations. When the war is over, and indeed before then, the promotion of better knowledge of one another among the peoples now leagued in the defence of civilisation and justice must prove a valuable contribution to the world's progress. It would be well if many of the volumes contemplated by the International Information series could be translated into foreign languages. Certainly a start ought to be made with Dr. Grice's pamphlet. For Near Eastern purposes it might suffice at first to have a French translation, which would find a large circle of readers in the Balkans when normal conditions are restored.

The pamphlet is published at 1s. net. Without doubt it makes its appearance at a time when the cost of printing is heavy, and the price cannot be considered excessive. But we shall hope to see the price ultimately reduced to 6d., in order that there may be practically no restriction of the circles which it may be expected to reach. The general editor of the series is Mr. René Francis, and the committee as originally constituted included the Duke of Newcastle, the late Earl of Cromer, Lord Muir Mackenzie, Sir William Plender, Mr. Edmund Gosse, the Hon. W. Pember Reeves, Mr. F. Heath Jackson, and Mr. C. J. Stewart.

BOOK NOTES.

Messrs. Hunter and Longhurst have published "Serbia to Kut," by Canon Parfit, of Jerusalem. The price is 1s.

A new weekly, entitled *L'Orient Arabe*, made its appearance in Paris on January 20. It is devoted chiefly to commercial interests, is edited by a former member of the staff of *Al Moustakbal*, and is published at 93, Rue du Bac.

The Daylight Saving Act comes into operation in Malta at midnight on March 10, and will remain in force until October 31. This arrangement will continue every year while the Act remains on the Statute Book.

The Russian Embassy state that correspondence concerning the Russian Red Cross Society must be addressed to Mr. Mouravieff Apostol, delegate of the above society in London, 8, South Audley Street, W. (Russian Hospital).

With the object of obtaining recruits for the Central Empires, the Bulgarian Government is releasing Russian prisoners of war of Polish nationality and sending them back to Poland.

* "The Resources of the Empire." By J. Watson Grice, D.Sc. Vol. I. of the International Information Series. (Published for the International Information Committee by the Athenæum Press. 1s. net.)

Part 1 Now Ready.

A NEW ENGLISH TRANSLATION OF THE HOLY QUR-ĀN,

With Arabic Text, Phonetic Transliteration and Explanatory Notes.

AHMADIA MOVEMENT, 41, Great Russell Street, London, W.C.

* "With Kitchener in Cairo." By Sydney A. Moseley. (London: Cassell and Co. 5s. net.)

TANGIER TO TEHERAN.

It is not often that I regret missing any "amateur theatricals." In fact, I share the view of such things expressed by Ian Hay in "A Man's Man"; though, I fear, I could not write of them with such good-nature as does that sunny author. For once in a way, however, I do find myself regretting that I have missed one of these weird affairs. This was nothing less than an Arabic rendering of Shakespeare's masterpiece, presented at the Batn el Hagar Theatre, Halfa, by the Halfa Musical and Dramatic Society, on January 26 and 28. The rendering into Arabic of "Tipperary," lately referred to in these columns, must have been mere child's play compared with the translation of "Hamlet" and its adaptation for native consumption, so to say; and I am not surprised that the *Sudan Times*, to which I am indebted for an account of the entertainment, should refer to it as "ambitious."

Of course, we have all heard of "Hamlet, with Hamlet left out." The Halfa M. and D. S. would have nothing of that kind. Hamlet, I gather, was very much there; and though he "often looked too cheerful," and after the first act forsook "his suit of mourning . . . for a decidedly gay costume in pale blue and white," I read that he "took the chief rôle very well. His enunciation was clear and his action restrained." It was not, however, only in regard to the gloomy Dane's Alexander-Walleresque "gay costume" that novelty was introduced. "The translator (Tanius Effendi Abdu) has," says the *Sudan Times*, "altered the construction of the original so that the action falls into five acts, each of one scene; and he makes the very important change of leaving Hamlet alive and uninjured at the end of the play, while the ghost consigns the dying Queen, King and Laertes to final abodes suitable to their characters and circumstances. The Prince is no longer a Debating Society in himself, but a simple character; and the others also are simplified until their dramatic character comes within the range and powers of the intelligent amateur actor." After that, I was not surprised to be informed: "Few subtleties are left . . . the play is melodramatic, full of movement," etc., etc. I am, by the way, sorry to note that Polonius is not reserved for final consignment by the ghost to an "abode suitable to" his character. He was a tedious old gentleman, but in the new version he might surely have been kept going to the last act. Perhaps, however, so few of his subtleties were left that it was not thought worth while!

In one respect the Halfa "Hamlet" resembled the productions of Shakespeare's own day: the feminine parts were all taken by mere males. Wadia Effendi Michail played the Queen, and Shafik Effendi Shoucair was Ophelia. The latter's rendering of the part was, says the *Sudan Times*, "perhaps too tearful"; but "possessed with the necessary light voice" the artist "gave conviction of an unhappy maiden who is driven to madness. The difficult mad scene seems to be left in its entirety in the translation, and the actor rendered the pathetic lines extraordinarily well." I am afraid my Arabic never would have allowed me to follow the words of this new version. But as it is so "full of movement," that would not have mattered much, perhaps; and I must admit that I should dearly have liked to be present in the Batn el Hagar Theatre on one (or both) of the great nights. Had I been anywhere within range, the Syrian Relief Fund, in aid of which the performance was given, would certainly have been the richer by the price of at least one seat.

A friend who remembers my confession regarding my weakness for eggs has this week made my mouth water afresh. He has, it seems, been reading the article on "Egyptian Oversea Trade in 1916," which appeared in THE NEAR EAST of February 16, and has found therein a statement that 235,370,000 tons of eggs were sent out of the country, and that they fetched ££653,230. Being himself a poultry-keeper—a fact easily deducible from his scathing remarks about the iniquities of foxes—he was interested in these figures; and, being also a bit of a mathematician, he proceeded to analyse them. The result is that he works it out that one ought to be able to purchase 32,112 eggs, or thereabouts, for one penny—a price at which, he suggests, even such an egg glutton as myself might be able to satisfy my taste for these delicacies. I do not know whether his figures are accurate. They look conscientious enough on paper, but I have not the energy to check them. But I am tolerably sure there is a mistake somewhere. At any rate, I have not yet been able to get anything like this number of eggs for my penny. But I live in hopes.

My attention has been called to an account of the reception accorded by certain citizens of Baghdad to some of the British prisoners from Kut. The account is given by Private H. Filce, who has lately arrived in Croydon, after being exchanged; and it makes distinctly unpleasant reading. "That was a rough stunt for us," says Private Filce, referring to the transfer of himself and other prisoners from one building to another, "for the people treated us to a nice display of peace and goodwill. They jibed, jeered, and jabbered. Having learned two words, 'Engleesh fineesh,' they hissed them out with every contemptuous grimace possible. They threw mud and spat upon us." Now, if that had happened in Mosul it would not have surprised me at all, for the people of that town are an unpleasant and ill-bred crew. But the Baghdadi has some reputation for manners, and it is rather a shock to find him behaving in such an offensive way.

Doubtless it was only the riff-raff of the city that so far forgot itself, and acted in the way described with such artless alliteration by Private Filce. And I recognise that in every big city there is always a proportion of hooligans. But even so, I am disappointed to think that such a demonstration was tolerated in Baghdad. For the fact is that the Baghdad Arab is of a good type, with a sense of his own dignity, and I should have thought the force of public opinion would have prevented any manifestation of the kind described. Moreover, it is an undoubted fact that opinion in Baghdad has long been favourable to the British, and there is good reason to suppose that it still remains so to a large extent. The whole business looks to me as if it must have been engineered by the Huns' agents in Baghdad. Nevertheless, it is something for us to remember when the day comes for settling up accounts.

CORSAIR.

"MESOPOTAMIA DAY."

The Mesopotamia Comforts Fund Committee on Monday received the following telegram from General Sir Stanley Maude:—

"My heartfelt wishes are with you for complete success of your undertaking. Only those who have been here can realise fully the superb gallantry and self-sacrificing spirit of British and Indian troops and how well they have deserved of their country. After two and a-half months of strenuous fighting, it has culminated to-day in the complete rout of the enemy."

The undertaking referred to is the Mesopotamia Day (April 13), when emblems will be sold in aid of the Mesopotamia Comforts Fund. Donations and offers of assistance will be welcomed by the Hon. Organiser, Miss Stella Maude, 26, Regent Street.

TO OUR READERS.

THE NEAR EAST is published on Friday, and copies are obtainable at any London bookstall early in the morning, and in the Provinces in the afternoon, of that day. To prevent disappointment, readers would assist us very much if they would place a standing order with their newsagent or railway bookstall for the supply of the paper every week. Any newsagent or railway bookstall clerk can, however, obtain copies at a few hours' notice if they have temporarily run out of stock; or we will post THE NEAR EAST for delivery on Friday morning, to any address, on the following terms, post free:—

12 MONTHS, £1; 6 MONTHS, 11s.; 3 MONTHS, 6s.

Abroad THE NEAR EAST is obtainable at any of the following agencies:—

PARIS. Librairie Hachette, 79, Boulevard Saint-Germain; Librairie Galissani, 224, Rue de Rivoli, and at Railway Bookstalls.

CAIRO. Cairo Express Agency, near Shepheard's Hotel; The British Library, Sharia Kasr-el-Nil; and at Railway Bookstalls.

ALEXANDRIA. Librairie Schuler, Rue Cherif Pasha; Nacalli and Company, 12, Rue Sesostris; Librairie Calabotta, Rue Cherif Pasha; Librairie Cauro, Rue Cherif Pasha; J. Eugenides and Co., 12, Rue Cherif Pasha; Main Station Bookstall.

PORT SAID. Charles Evans, and on board vessels in the harbour.

KHARTOUM. Sudan Stationery and Bookstore.

CYPRUS. Cababe and Wilson, Nicosia.

SALONIKA. Librairie Francoise, Rue Sabri Pasha.

ATHENS. Librairie Th. Vassides.

CALCUTTA. 1, Royal Exchange Place.

NEW YORK. Office of "The New Armenia," Flat Iron Building.

LETTERS TO THE EDITOR.

The columns of THE NEAR EAST are always open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST.

Letters intended for publication MUST be accompanied by the writer's full name and address, not necessarily for publication, but as an evidence of good faith. They should be worded as briefly as possible and must be written on one side of the paper only.

"THE FUTURE OF PALESTINE."

TO THE EDITOR OF "THE NEAR EAST."

SIR,—I have read with much interest Lieut.-Commander Trumper's kindly criticism of my views on the future of Palestine; but I find it rather difficult to follow the concluding arguments.

Might not a "convulsion of nature" so terrific as to dry up the Gulf of Suez, "divide the Mount of Olives, and cause a highway (waterway) to appear from the Mediterranean through Jerusalem to the Dead Sea," also destroy Jerusalem herself? If the level of the Dead Sea is to be "raised 1,300 ft.," so as to "cause it to overflow and join the Gulf of Akaba," would not that mighty overflowing equally submerge the whole of the Jordan valley and at least a good part of Galilee, both very rich districts of Palestine? The Sea of Galilee is 682 ft. below the level of the Mediterranean, and the Jordan valley varies from 1,200 ft. to 835 ft. below. There are no sharp mountain ranges to hem in that mighty "waterway," which would obliterate much of the richness and beauty of the land, as well as many landmarks of sacred and ordinary history.

Jerusalem is, and ever has been, the religious capital of the world to both Christian and Jew. Would anything be gained by making her a great commercial centre?

I ask these questions not as criticising my critic, but from a real wish to know. We are at least in complete agreement as to the certain and glorious future of Palestine.—I am, Sir, etc.,

ESTELLE BLYTH.

London.

THE SORROWS OF CHRISTENDOM.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—Is it possible, one may ask, that a Christian priesthood, Catholic and Lutheran, is still keeping open churches in Germany, and repeating the Lord's Prayer, while the hands of their congregation are steeped in innocent blood? Such is human fatuity, that a mad Kaiser is sufficient to obliterate every letter of Christ's Gospel, while relying on Him to support a filibustering, murdering, and altogether unscrupulous venture, conceived in deceit and executed in cruelty, against even a trusting, small, peaceful, and highly civilised neighbour, like Belgium! The Mohammedan butcher, while slaughtering his sheep, must by a ritual custom say "Bismillah." An Eastern story has it that a young lamb, hearing this, turned to an older one saying, "Listen how pious is our master, always repeating 'Bismillah'" (in God's name). The older one replied: "Never mind what he says. See, my boy, what his hand is doing!"

We know, of course, the Germans' talk about their need of expansion, although they were overrunning the new world and the old with their surplus population, without let or hindrance, and were amassing wealth and enjoying a prosperity in worldly goods second to none. We hear them also now ready to sacrifice all to protect their home and hearth, when their home and hearth were perfectly safe, until they opened the floodgates of war against their neighbours. England, their old friend, Italy, their old ally, and France, their old enemy, besought them to keep quiet and let arbitration settle Austria's dispute with little Serbia; but nothing availed. They had formed an unholy pact with the Bulgarian king, the Balkan traitor, and with those barbarian adventurers the Turks, to support each other in the most wicked adventure the world has ever known; and thinking they were well prepared against all obstacles, they would let nothing stay their hand.

War, a merciful war, as a last resort, is truly holy, and truly enjoined on the strong by the Books of Heaven and books of chivalry to help the oppressed weak and redress an injustice and a wrong. The unmerited misery of Belgium, the sufferings of Serbia, the crying injustice to France, the martyrdom of Armenia and Syria, cry aloud to Heaven for vengeance and redress. The dragon of lust, greed, and cruelty is abroad, but, as on England's banner, the dragon shall be slain.—I am, etc.,

London, February 20, 1917.

ALEXANDER SEFI.

A NEW TRANSLATION OF THE KORAN.

TO THE EDITOR OF "THE NEAR EAST."

SIR,—I was glad to see in your issue of February 2 the review of the New Translation of the "Holy Qur-an" published by

the Anjuman-i-Taraqqi Islam, Qadian, India. No doubt the reviewer, "S. L.," has taken great pains in bringing to light the essential features of this new edition, but one familiar with the subject can easily discern that at many points he himself has viewed it in a coloured light, and has, therefore, failed to do justice to it. I may, however, clear some of the points where the reviewer seems to have stumbled; and I fervently hope that you will be kind enough to insert these lines for the benefit of your thoughtful readers.

In dealing with the claims and personality of Ahmad, the recipient of divine revelation and claimant of the Messiahship promised for the Mohammedan dispensation, "S. L." seems to have little knowledge of the Islamic theology concerning the subject. But the facts relating to the advent of the Promised Messiah were there, he had to judge them on the grounds presented. Simply to jeer at them and appeal to the sentiments of the mass is in no way creditable to him. If the Azharites resent the claims, as the reviewer supposes, of a Divine Messenger, it does not prove that his mission is not divine: no Divine Teacher has ever been given a warm reception at the hands of his people. The proud ones in particular side against him. So it matters little if the proud Azharites, and others of the same category, feel deep indignation at the second advent of the Promised Messiah, who has pointed out their errors, and revived the true faith, which had become like a skeleton in their hands. It only definitely proves the fact as indicated in the 7th verse of "Alfatiha." How truly the resemblance has been established may be judged from the well-known fact of the open rejection of the First Messiah by the learned Pharisees, Rabbis, etc., although they were anxiously waiting for his coming. Again, if the authors have noted on p. 55 "the alleged degradation of the Moslems is by way of punishment," there is no cause for indignation. It is merely in accordance with the Divine law established elsewhere. "This is due to the fact that God changeth not the favour which He bestows upon any people, until they change what is in them" (ch. viii. 55). In another verse we read to the same effect: "God never changeth the condition of a people until they change what is in their souls" (by disobedience) (ch. xiii. 12). So it must be noted that all the comments in this edition have been made with due deliberation and after careful research work. Of course, some of the important subjects which seem to have been taken for granted will be fully dealt with in the introduction.

"S. L." says that the identity of the author is not revealed. Probably the assumption that it is a work of a single person has led him to other serious mistakes. The announcement made on the specimen pages discloses the fact as to its authorship in these words, which perhaps have been overlooked by the reviewer: "The translation which we have undertaken is not the work of a single person, but of a board of translators composed of enlightened scholars with sound knowledge of the 'Holy Qur-an' and its existing commentaries, and Moslem graduates who are conversant with Arabic and have made the 'Holy Qur-an' the subject of their study for many years." The first part produced is, indeed, a far more reliable translation than those formerly existing. The authenticity lies in the fact that it is wholly and solely consistent with, and at the same time well expressive of, the Word of God. I do not deny the service that has been done to the Arabic language by European scholars. But in the case of the translation of the Qur-an, I may say without fear of contradiction that at some points serious blunders have been made that run counter to the spirit of the Holy Book.

Your reviewer has taken upon himself the trouble of pointing out several departures from the English translators. But I am afraid that in most cases he has not judged the position fairly. He is rather more inclined to defend the English translators, in spite of the blunders well exposed, in their versions. So I must point out that in rendering the translation of the Qur-an there are certain principles of supreme importance which should be carefully followed. Wherever they have been ignored, contradictory statements and objectionable interpretations have followed, and consequently a true picture of Islam has not been presented. This is why the Moslem authors have the right to say that the English translators of the Qur-an have failed to manifest the truth. One of the most important principles is that in the attempt to render any verse into a foreign language other verses interpreting it should be minutely observed. It would be a fatal mistake to translate it in contradiction to other explanatory verse or verses in the Qur-an (*vide* verse 7 of ch. ii. referred to by your reviewer, and the verse following). The interpretations clearly signify in what case the admonition to the disbelievers does no good to them, and how God seals up their hearts. It would be the most unwarrantable meaning to say that they do not believe because God has sealed up their hearts, etc. Similarly, no word ought to be so translated as to stand in opposition to any of the attributes of the Deity, who, according to Islamic theology, is absolutely holy and absolutely good. Ignoring this principle, the English translators have represented to us, in verse 10 of ch. ii., that God is deceived by the people, and in verse 15, that God mocks at the people—surely quite untenable and inconsistent with the spirit of the Qur-an. There are several other rules which have been closely and thoroughly observed by the authors of this new version, but I must not trespass on your space to enumerate them with illustrations. Finally, I may say that the Moslem translators of the "Holy Qur-an" have really succeeded so far as they have gone in presenting a real insight into the excellences of Islam. The notes and comments are so elaborate and argumentative that no serious objection to the teachings of Islam has been left unanswered.—I am, etc.,

Q. ABDULLAH.

PERSONAL & SOCIAL.

CALENDAR OF THE WEEK.

Showing Concordance of the
Gregorian, Julian, Moslem, and Jewish dates.

Gregorian. (New Style.)	Julian. (Old Style.)		Moslem.	Jewish.
1917. March. 2 3	1917. Feb. 17 18		1335. Jumada I. 8 9	5677. Adar. 8 9
4 5 6 7 8	19 20 21 22 23	Friday Saturday Sunday Monday Tuesday Wednesday .. Thursday	10 11 12 13 14	10 11 12 13 14

Reuter's Paris correspondent telegraphs (March 1):—A despatch from Jassy states that the Queen of Roumania has been injured in a motor accident. The motor-car was crossing one of the most frequented quarters of Jassy when a little girl, who was playing in the street, ran in front of it. The chauffeur pulled up the car with a jerk, and it was thrown against a shop front. The Queen, who is suffering from shock, was cut about the face by splinters of glass, and the chauffeur was badly injured.

General Georgesco, of the Roumanian Army, arrived in London from France on Sunday.

The Bishop of Buckingham is at present in Cairo. He went out to Egypt to assist the Bishop in Jerusalem in taking Confirmations, and will later proceed for the same purpose to Salonika and Malta.

A Reuter's message announces that the Maharajah of Bikanir, who is on his way to England to attend the special War Conference, arrived at Cairo on Sunday. He was met by representatives of the Sultan and the High Commissioner, and afterwards left for Assuan, the Sultan placing at his disposal two of his luxurious Nile steamers.

The Maharajah, it will be remembered, was the first of the Ruling Princes of India to offer the services of himself and his troops to the King-Emperor. He served in France with the Meerut Division of the Indian Expeditionary Force, and was made Aide-de-Camp on Sir John French's Staff, and was officially commended by the Commander-in-Chief for gallant conduct in the field. The Maharajah returned to India in February, 1915, owing to the fatal illness of his daughter, and reached Egypt on his way home just in time to place himself at the head of his famous regiment, the Bikanir Camel Corps, which was stationed there, and help to repel the Turkish invasion. Again he was mentioned for gallantry in despatches from the Commander-in-Chief, Sir John Maxwell.

Many people will have read with pleasure the announcement (made in last Friday's *Gazette*) that the King had been pleased to give directions for the appointment of Rear-Admiral Henry Russell Robinson (retired), Director-General of the Egyptian Ports and Lights Administration, to be a Knight Commander of the Order of St. Michael and St. George, in recognition of his services during the war.

Admiral Robinson has been Director-General of the Egyptian Ports and Lighthouses since 1907, and is extremely popular in Alexandria and in Cairo. He entered the Navy in 1870 at the age of 14, became a commander in 1895, a captain in 1900, and retired in 1909 with the rank of rear-admiral. He is a son of the late Rev. G. W. Robinson, of Walmley, Warwickshire, and he married a daughter of the Hon. W. Eccles, of Trinidad.

A feeling has been expressed in Egypt among the friends of the late Miss Etta Hughes that those who knew her might like to associate in some memorial to her of a useful nature. It is thought that a drinking fountain might be erected in one of the

thoroughfares of Cairo. Lady Willcocks, Gezira, Cairo; or Mrs. Elgood, Heliopolis, Cairo, will be glad to hear from friends wishing to subscribe.

Sir Bamfylde Fuller, who has been appointed head of the Timber Department in the War Office, was for some months in Egypt, his services having been lent by the Indian Government.

Our Cyprus Correspondent writes (February 6):—Great sympathy is felt for Mr. A. L. Stuart, President of the District Court of Limassol, and Mrs. Stuart, on account of the loss of the son of the latter, Mr. Mackay, news of whose death, through an accident, has been received. This officer has done gallant service at the front, and received the Military Cross.

One of the Egyptian princes, Mustafa Kamel, has been staying at Limassol. He is one of the many sons of Mustafa Fázyl Pasha (brother of the Khedive Ismail, and son of Ibrahim Pasha), who died in the seventies, at Constantinople.

A marriage has been arranged, and will shortly take place in Rome, between Major Cyril Roche, Irish Guards, and Betty, only child of Mr. and Mrs. Lewis Iddings. Mr. Lewis Iddings was formerly Diplomatic Agent for the United States in Cairo and Counsellor of the United States Embassy in Rome, where he has resided for many years.

The marriage arranged between Major T. B. Pritchett, R.F.A., only son of Mr. and Mrs. Theodore Pritchett, King's Norton, Warwickshire, and Irène, daughter of Mr. and Mrs. John Ross, Alexandria, and Hotel Rubens, London, will take place (leave permitting) at St. Peter's, Eaton Square, on March 7 at 2.30 p.m. Owing to mourning, no invitations are being sent, but all friends will be welcome at the church.

The engagement is announced of Clothilde Séjalon, younger daughter of the late M. A. Séjalon, of 2, Rue du Plat, Lyon, and of Les Verchères, Genay (Ain), and Geoffrey Barrow, lieutenant, R.F.A., younger son of General Sir Edmund Barrow, G.C.B., G.C.S.I.

The engagement is announced of Harry Surtees Altham, M.C., captain, 60th Rifles, of the College, Winchester, younger son of Lieutenant-General Sir Edward Altham, K.C.B., C.M.G., and Lady Altham, of Rotherwood, Salisbury, and Alison, only daughter of Mr. and Mrs. S. R. Livingstone-Learmonth, of Catherington House, Horn-dean, Hants.

The engagement is announced between Mr. Samuel Simpson, who was from 1903 to 1905 Senior Lecturer in Agriculture at the Ghizeh Agricultural College, and is now the Director of Agriculture, Uganda Protectorate, and Katherine Nathalie, second daughter of the Hon. Mr. Justice Broome, Supreme Court, Nata! The wedding is expected to take place shortly at Kampala.

Mr. Sydney Maltass, son of Mr. Neville Maltass, has been granted a commission in the Army.

Mr. A. van Millingen has arrived in Alexandria on his return from London.

In a letter to the Press Lord Curzon writes (February 24):—"My remarks as Chairman of the Committee at the opening of the new School of Oriental Studies in Finsbury Circus by his Majesty the King yesterday suffered from a very regrettable omission, due, not to inadvertence, but to forgetfulness—which I should like, with your permission, to rectify. After mentioning the services of Lord Cromer, as first Chairman of the Committee, I had meant to say how great is the debt that the new institution owes to our Hon. Secretary, Mr. P. J. Hartog, C.I.E., Registrar of the London University, without whose indefatigable and tactful labours during the past seven years the scheme could not have reached fruition. And further, I had intended to mention the contribution to the same result of our architect, Professor

J. W. Simpson, F.R.I.B.A., who adapted and added to the fine Classical structure of the London Institution with equal regard to utility and taste."

The *Egyptian Gazette* announces that Mr. Gilbert Harvey, its sub-editor, has resigned his position to rejoin the Royal Navy, which he entered on the outbreak of war but subsequently left owing to his health. "This," adds the *Gazette*, "is the fifth sub-editor whose services this newspaper has lost owing to the war. Mr. C. A. Wilkinson, who was wounded during the Somme advance, is now employed at the War Office, London; Mr. Sutton-Page is a captain, and is serving in German East Africa; Mr. Hart Edwards is in the Egyptian Labour Corps; and the late Mr. René Matté, French sub-editor, was killed at the French front in the early days of the war."

Twenty-two large cases of drugs and other hospital requisites have been sent out for the relief of the Roumanian Army by the Wounded Allies Relief Committee, 8, Grosvenor Gardens, S.W. The contents of ten of these cases came from the Wounded Allies Relief Branch of the Kensington War Hospital Supply Depot, 176, Cromwell Road, S.W., and included among other things 10,590 assorted swabs, 6,369 bandages of various kinds, and considerably over 200 splints.

The military degradation of the Roumanian General Sococ and his sentence to five years' hard labour seem to have produced an excellent effect in Roumania, writes the Paris correspondent of the *Morning Post*. It must be remembered that on several occasions before the battle of Argesh his attitude was called in question. Sococ is the son of a Saxon who established himself at Bucharest about the year 1860, and on several occasions his loyalty was questioned. It seems that he suggested that the bridge over the Danube at Cernavoda should be blown up at least ten days before it was necessary, whereupon a distinguished officer remarked that Sococ's destruction was more to be desired than that of the bridge.

APPOINTMENTS, PROMOTIONS, ETC.

A Cairo message announces that Sir Murdoch Macdonald has been appointed Adviser to the Ministry of Public Works, Egypt, and that he will retain the Under-Secretaryship in the same department.

Major G. S. Symes, D.S.O., private secretary to the Governor-General of the Sudan, has been appointed for special service, and granted the temporary rank of Lieut.-Colonel while so employed.

Mr. A. W. Keown-Boyd, private secretary and assistant private secretary to the Governor-General, has also been appointed for special service.

Mr. A. B. B. Howell, Inspector Sudan Finance Department, has been appointed as assistant private secretary, with effect from January, 1917.

The following appointments, etc., are announced in the *Egyptian Gazette*:—
Kaimakam G. F. Hudson-Kinahan Bey has been appointed officer commanding 3rd Battalion, vice Miralai Joyce Bey, struck off.
Captain H. S. Smith, Royal Fusiliers, has ceased to be attached to the Egyptian Army as special service officer, with effect from February 11.

Bimbashi J. N. F. C. Alexander, aide-de-camp to the Sirdar, has been transferred to Cairo district, and Bimbashi E. Chester-Master, 9th Sudanese, has been appointed acting aide-de-camp to the Sirdar in his place.

Bimbashi (temporary Kaimakam) G. F. Hudson-Kinahan, 3rd Battalion; Hon. B. A. Forbes, general staff; J. H. Pattison, deputy assistant adjutant-general and aide-de-camp to the Sirdar; and A. G. Rainsford-Hannay, acting director military works department, have been granted the rank of Kaimakam.

Miralai M. J. Wheatley Bey, Assistant Civil Secretary, Sudan Government, has been appointed private secretary to his Excellency the Governor-General, acting as Civil Secretary in addition.

OBITUARY.

Mlle. MISU.

We regret to announce that Mlle. Marie Marguerite Misu, eldest daughter of H. E. the Roumanian Minister, died early on Sunday morning, at the Legation, 4, Cromwell Place, S.W. The funeral took place yesterday, the first part of the service being held at the Greek Church, Moscow Road, Bayswater, and the interment taking place at Brompton Cemetery.

By command of the King, the Hon. Sir Arthur Walsh, Master of the Ceremonies, called on the Roumanian Minister at the Legation on Tuesday to express the condolences of his Majesty and the Queen on the Minister's loss. King Manoel also sent a message of condolence, and numerous other messages of condolence have been received by M. and Madame Misu. Among the callers who left cards were the French Ambassador, the Italian Ambassador and the Marchesa Imperiali, the Spanish Ambassador and Madame Merry del Val, the United States Ambassador and Mrs. Hines Page, the Japanese Ambassador, the Swiss Minister, the Swedish Minister and Countess Wrangel, the Norwegian Minister, M. and Madame Gennadius, the Portuguese Minister, the Netherlands Minister and Madame de Marees van Swinderen, the Serbian Minister and Madame Yovanovitch, the Belgian Minister and Madame Hymans, and other representatives of the Diplomatic Corps.

MR. JOHN RICHARD PREECE, C.M.G.

Mr. John Richard Preece, C.M.G., formerly H.M. Consul-General at Ispahan, died on Sunday, at his residence, 46, Bullingham Mansions, Kensington.

Born in 1843, he was the youngest son of the late Richard Matthias Preece, of Carnarvon, and was educated at a private school in this country and at the Imperial College, France. He first went out to Persia in 1868, as Assistant Traffic Manager, Indo-European Telegraph Department. He travelled much in those early days, and amongst other valuable work he accomplished was the survey of the road between Bunder Abbas and Jask. Then, as later, he always got on well with the Persians, who admired his straight dealing and his sound common-sense, and who used to say of him: "If Preece says it is so, it is so."

In 1891 he was appointed Consul at Ispahan, and in 1892 Consul for the Governorships of Ispahan, Yezd, Gulpaigan, and Komsar, the Province of Irak, and the districts of Cheharmahal, and Feridan, in the residence at Ispahan. In 1898 his district was extended to include the Bakhtiari territory; in 1899 he was made a C.M.G.; and in 1900 he was promoted to the rank of Consul-General. He retired in March, 1906.

As indicated above, his influence with the Persians was considerable. He was highly esteemed by H.H. the Zil-es-Sultan, and he possessed to a marked degree the confidence of the leading Bakhtiari chiefs and princes, who placed great reliance on his advice and frequently sought his assistance in the settlement of delicate questions. It was undoubtedly due to his personal influence with the Bakhtiari chiefs that the concession for the working of the oilfields was obtained, in 1905, as early as it was and upon conditions so favourable. The oilfields were, of course, in his district, and he was well acquainted with their possibilities. He had travelled extensively in the Bakhtiari country and in the Turco-Persian frontier region, and his knowledge of this country frequently stood him in good stead. He knew and thoroughly understood the Persian character, Persian policy, and Persian diplomacy; and there was perhaps no man better acquainted with the Persian question than he. His views on these subjects were particularly sound.

He was not a keen sportsman, in the ordinary acceptance of that term, but in his younger days he was a great player of games. Up to twelve years ago he thought nothing of walking out to Julfa, a distance of about three miles, playing half-a-dozen, or more, sets of tennis, and walking back. He was also a very good billiard player. A member of the Electrical Engineers Society, he occasionally read papers on telegraphic subjects and on Persian trade before this and

other societies to which he belonged. He married, last year, Mary Isobel, daughter of Mr. D. Graham Allardice and widow of Mr. J. Duncan.

Major-General Sir Cromer Ashburnham, K.C.B., Colonel-Commandant of the 3rd King's Royal Rifle Corps, died on Sunday at Coleherne Court, S.W. He entered the Army in 1855, and served through the Indian Mutiny Campaign and the Afghan War of 1878-80, and the Boer War of 1880. In 1882 he went with his battalion to Egypt, and there took part in Lord Wolseley's campaign against Arabi. He was present at the reconnaissance in force from Alexandria, the actions of Tel-el-Mahuta and Kassassin, and at the battle of Tel-el-Kebir he commanded the Fourth Infantry Brigade. He was twice mentioned in despatches and received the K.C.B. and the Mejidieh, and was also appointed Aide-de-Camp to Queen Victoria, a reward which carried with it promotion to the rank of colonel. Two years later he took part in the operations in the Sudan conducted by Sir Gerald Graham, and was present at the battles of El Teb and Tamai, thus earning the unusual distinction of having commanded a battalion in four separate campaigns, and having been mentioned in despatches in the five in which he had during his career taken part. In 1884 he was placed on half-pay, but given employment on the Staff, and in 1886 he retired with the rank of major-general, receiving in the same year a Distinguished Service reward.

Lieutenant Thomas Frederick Preston, Yeomanry, attached R.F.C., third son of the late Sir Henry Jacob Preston, Bart., of Beeston Hall, Norfolk, and of Lady Preston, Barton Hall, Norwich, was last week reported killed in action. He was born in 1889, and educated at Charterhouse, and in 1911 he went to Egypt, where he worked first in the National Bank of Egypt, and then in the Financial Department of the Egyptian Civil Service at Cairo. In 1913 he returned to England to take up an appointment. Lieutenant Preston went with the Yeomanry to Suvla Bay, where, after a few months, he contracted enteric, and was invalided home. In 1916 he joined the Royal Flying Corps, and proceeded to the front on January 2 last. He was reported missing on January 24. His machine appears to have been brought down by German anti-aircraft guns while he was taking observations over the enemy's lines. Later he was reported killed with his observer.

Dr. Laura Forster, daughter of the late Right Hon. William Forster, M.P., Agent-General for New South Wales, died on February 11, while in charge of a field hospital at Zaleschiki, Galicia.

Major Dashwood William Harrington Humphreys, D.S.O., Indian Infantry, who is reported killed in action, was, from April, 1910, to January, 1912, A.D.C. to the Political Agent at Aden. Before the present war he saw service in the Tibet campaign of 1903-4. He was slightly wounded, but took part in the march to Lhasa. In addition to mention in despatches, he was made a Companion of the D.S.O., and was decorated with the Tibet Medal with clasp.

We regret to announce the death, after two days' illness, from pneumonia and heart failure, of Mr. Jefferys Phillip Thomas Allen, of Lyngford, Taunton, only son of the late Colonel Allen, Scots Greys, and Mrs. Charles Allen. Born in 1867, he was educated at Eton and Cambridge, and served for ten years in the West Somerset Yeomanry. He was a fine rider, and in his early days did a good deal of racing at Cairo, where he was well known and had many friends. He married in 1896 the eldest daughter of the late General Sir Charles Staveley, K.C.B., who survives him, and leaves a son and three daughters.

Among those who perished when the Italian transport Minas was torpedoed and sunk on February 15 were General Goikovich and Colonels Dragouvin, Doultich, and Milin Ristitch, of the Serbian Army.

Owing to the sudden illness of Mr. Wickham Steed there was no discourse at the Royal Institution last Friday evening.

Next Tuesday afternoon, at 3 o'clock, at a meeting of the Anglo-Russian Literary Society, at the Imperial Institute, Miss M. Edith Durham will read a paper entitled "Serbia, as Seen in its Ballads."

WHERE TO STAY.

Cairo's Hotels de Luxe.

SHEPHEARD'S HOTEL.

Open all the year round.

SEMIRAMIS HOTEL.

Splendid position on the East Bank of the Nile.

GHEZIREH PALACE.

Formerly the Palace of the late Khedive Ismail.

FRIDAY, MARCH 2, 1917.

THE NEW NEAR EAST.

We have already urged in these columns the necessity of closer attention being given by the thinking section of the British public to the affairs of the Near East and the Middle East, pointing out the importance of these regions in their relation to the British Empire. The plea may not improperly be followed by a more detailed consideration of the settlement which in the interest of the future of these territories and of Great Britain it is desirable should be reached. As the Balkans have been the storm centre of Europe in the past, the aim of the Quadruple Entente must be permanently to eliminate this menace to the world's peace by restoring settled conditions and harmony where before the situation seethed with animosities and intrigues. A settlement on these lines must embrace two main principles: there should be no national grievances arising from the presence of large numbers of kinsmen under foreign rule, and the element or elements that made for intrigue in the past, whether in palace, barracks, or cottage, must either consent to turn over a new leaf or be eradicated. In this connection it will not be forgotten that the mere fact that in the general settlement of which we are thinking the Entente Powers will have established their superiority over the Central Powers will of itself curtail the capacity of the latter for mischief and the temptation for intrigue in the Balkan States. By the time, too, that stage is reached the Bulgarians, who must necessarily be regarded as the potential disturbers of the peace, will have learned, it is to be hoped, something of the canker which has led to their undoing, and will have taken steps to remove it, however drastic the surgical operation. The Balkan situation is too complicated ethnographically to admit of an ideal settlement. Room for criticism there must always be, but a great point will have been gained, if the criticism does not arise from an irredentist grievance. The claims of history need not be altogether ignored, but they must not be over-emphasised. Boundaries must be fixed on scientific as well as on political lines; but where they have to be drawn so as to cut off a community from the jurisdiction of its own nationality, an opportunity for a transfer of domicile, under the supervision of the Entente, ought to be granted. Such a system will have to be applied practically to every State in the Balkans. There is good reason to suppose that after the Treaty of Bucharest the countries concerned recognized the advantage of having only a homogeneous population to deal with; but they set about carrying the principle into effect in a way that could not be endorsed by the Entente Powers. Those evil practices have to be stopped once and for all.

It is impossible to examine at all closely into any proposal for the settlement of the Balkan question without realising that an indispensable preliminary to any satisfactory arrangement is a thoroughly candid exchange of views between all the Powers concerned—that is to say, in the Allied group. Nothing can be more derogatory to the good sense and the solidarity of the Grand Alliance than the toleration in its midst of a number of political cross-currents, of which every member is conscious, but to which none dares to call attention, as a definite factor in the situation. The course that finds favour at the present time seems to be for the Entente Powers to shake their heads gravely at any symptom of trouble in this direction and to postpone consideration of it until what is vaguely termed the Peace Conference, in the fond hope, apparently, that when a hundred and

one other matters are violently agitating the Allied Governments an easy and smooth solution of earlier difficulties will be found. In the first place, no reason has ever been adduced for the holding of a Peace Conference in the sense implied. That terms of peace will have to be formulated for the Central Powers to be accepted by them, if they want the war to end, is obvious; but no protest can be too strong against the idea of a conference at which the Central Powers will be allowed to haggle over terms and to whittle down the conditions which the Allies may be minded to impose. Still less ought it to be conceivable that representatives of the Central Powers should be present when the details of the settlement of the Near East are arranged. On these grounds an early conference of the Allied Powers seems essential, and it should be characterised by the utmost candour. The main factors to be recognised are the uneasiness in regard to Russia's ultimate intentions in the Balkans, the claims of Italy which tend to encroach unduly upon the Southern Slavs, and the pretensions of the latter, who would like to see the Italians virtually excluded from the Eastern side of the Adriatic, and would have, if they could, all their other neighbours, Roumanians and Greeks included, surrender territory for the benefit of the new State. Until these causes of dissension are fairly faced by the Allies, there seems to be no chance of a satisfactory situation being evolved in the Near East. With Russia's aims in regard to Constantinople and the Straits realised, there ought to be little difficulty in reassuring the Balkan peoples that they have no more to fear from her than from the United States of America. The rival claims of Italy and the Southern Slavs can be settled by a round-table conference at which the Powers of the Triple Entente make it clear that they are resolved upon finding an equitable solution which has a reasonable chance of being permanent. No time should be lost in holding such a conference, in order that an agreement may be reached before there is any question of the opening of negotiations with the Central Powers. When the details of the settlement have been fixed they can be incorporated, so far as may be necessary, in the terms of peace to be presented for the unconditional acceptance of Germany, Austria-Hungary, Bulgaria, and Turkey.

A useful introduction to the larger conference would be a complete understanding between Russia and Great Britain on all points which provide a meeting ground for their respective interests. Probably no one is better suited to carry out such negotiations than Lord Milner, and we can but hope that his mission to Petrograd has had reference not only to matters immediately affecting the conduct of the war, but is also concerned with the wider problem of the adjustment of Anglo-Russian interests throughout the Near and Middle East. It may be that the Russian Government has first to accustom itself to the new order in Great Britain, which, instead of playing shadow to the Tsar's officials in the Middle East, as it has been doing for the last dozen years or more, is prepared to put forward a definite policy of its own. With the fate of Constantinople settled in her favour, Russia can offer no objection to an equitable delimitation of Anglo-Russian spheres of interest in Persia; she will recognize, too, that the British claim to Mesopotamia does not necessarily determine the nature of Russia's future relations to Armenia, where the population, though counting on Russian help, has a distinct national entity of its own. An agreement between the two Powers, based on the recognition of the fact that Great Britain intends to shoulder her responsibilities in these parts more vigorously than she has hitherto done, will enable Russia to give the necessary assurances to the Balkan States that her aspirations in that quarter are entirely satisfied with the acquisition of Constantinople. Starting from this point, the Entente Powers can approach the adjustment of the Serbo-Italian question with a clean slate. Confiscations of territory will not be necessary to ensure Bulgaria's good behaviour, and there are other ways of mulcting her for the treacherous part she has played in the war. The great ideal to strive for in the Balkans is peace and co-operation in the paths of progress. Legitimate interests must be safeguarded; but militarist tendencies, whether from Italian or Jugoslav quarters, must be sternly repressed.

ALBANIA PAST AND PRESENT.

II.—THE RACE INSTINCT.

By M. Edith Durham.

Let us now consider the Albanian's centuries of struggle for existence. Save the Balkans themselves, Albania is about the oldest thing in the Balkan peninsula. We first hear of the land as Illyria, a very strong kingdom, which fought with the Romans as early as 230 B.C., so strong, indeed, that the Romans did not succeed in subduing and conquering it till A.D. 169. Scodra, now called Scutari by us, was then already its capital. And the Albanians call it by its old name very slightly modified—Shkodra—to this day. It is one of Europe's oldest capitals. Berlin, Petrograd, Sofia, and Belgrade are but modern in comparison.

The native population seems to have flourished under Rome. Many even rose to be Emperors, among them Diocletian and Constantine the Great, and others of less note. Christianity was early introduced. Scutari became a bishopric as early as 307 A.D. Judging by the things found in the numerous ancient graves there was a considerable native civilization before the advent of the Romans. Illyria manufactured and probably exported iron at a very early date.

Roman-Illyrian civilization was overwhelmed and largely destroyed by the inrush of great numbers of savage Slavonic tribes from across the Danube. They were pagan, and drove the Latins to the coast, where Roman influence has never yet quite died out, and settled on the plains of the interior. They were the ancestors of the modern Serbs, Bosniaks, and Montenegrins. Though they spread over wide land, they were a tribal people, and therefore weak. They were, therefore, in their turn speedily overwhelmed by the Bulgars who founded the first Bulgar Empire, which flourished in the Tenth Century and included the greater part of the Balkan peninsula. The Illyrian population, it would appear, had taken to the mountains of the West, just as did the Welsh in England. Here they maintained their language, traditions, and customs, and a certain amount of independence.

Two Bulgar Empires successively rose and fell. Finally the Serbs united under the Kings of the Nemanya line, and for about two hundred years were the dominant race in the Balkans. During the twenty years, indeed, of Tsar Stefan Dushan's reign the Serbian Empire included almost all the peninsula. But all Balkan Empires have been one-man empires: have gone up like rockets and down like sticks. Ambitious Serb nobles tore up Dushan's empire shortly after his death. Albania was one of the first to break loose, and we hear of local native chieftains.

It is highly probable that the inclusion in these fleeting mediæval Empires of a large and vigorous Albanian population was one of the sources of their weakness.

The Slav invaders, who did not become Christian till the Ninth Century—that is some five centuries after the Albanians—threw in their lot with Byzantium. Illyria, on the other hand, formed part of the Patriarchate of Rome. The efforts of the Serbs, however, to Slavize the Albanians failed completely. The Serb occupation was but brief, and ran off the Albanian as does water from a duck's back. All that remains is the hatred of the invaded for the invader. The Albanian has never forgotten that he is the aboriginal and the Slav a comparative newcomer.

The next great Balkan catastrophe—for we must be brief—was the advent of the Turk. The peninsula was at

this time in a wholly incoherent state, and no one race was supreme. The Balkan peoples have in fact owed all their troubles to the fact that they hate each other more than they hate any outsider, and so fail to combine. Even when faced with the Turkish danger this rule held good. The son-in-law of the Serb Tsar deserted to the Turks with all his men. Christian, not for the first nor the last time, betrayed Christian.

The Albanians were the last of all the Balkan peoples to succumb. Under the leadership of their celebrated champion, Skenderbeg, they successfully resisted one Turkish invasion after another. But he died in 1467, leaving no one capable of replacing him. Venice had for some time been creeping down the coast, occupying several towns and trading with the interior. The Albanians and Venetians united against the Turk. But Scutari fell after a long and fierce siege in 1479, and Albania was soon completely overrun. True to their traditions, the mountain tribesmen managed to retain their autonomy, and for over a century sent repeated appeals to Venice for help. But none came. The Albanians then, in the Seventeenth Century, began to go over to Islam. The Slavs had already done so in numbers, especially in Bosnia.

Gaining power as Moslems, the Albanians rapidly spread down on to the plains from which their ancestors had been evicted by the Serbs. The mountain tribes founded villages as far north as Mitrovitza, and spread towards Monastir. They reconquered, in fact, a large portion of their ancient Illyria. The Serbs of Kossovo vilayet accepted Austria's invitation, and migrated in a body into Austria.

The Albanians now began to struggle for independence. The Pashas of Scutari and the celebrated Ali Pasha, whose capital was Janina, were indeed for a time almost wholly independent. Crushed by the Turks at the beginning of the Nineteenth Century, they have never wholly yielded nor given up their national aspirations. They have survived Rome and Byzantium, two Bulgar Empires, one Serb Empire, and the Turkish Empire without losing their identity or their strong race instinct. To-day they look forward eagerly to the fulfilment of the promise that this war is one for the rights of small nationalities.

They look forward to the fulfilment of the promise made by Europe in 1913. Their hopes were cruelly disappointed when, in response to their appeal, Europe sent them a wholly incompetent and incapable German Prince—the Prince von Wied. They expected him as a Messiah. He did not even deign to visit his lands and people, but sat in a very comfortable palace, pastured off diet provided by a very excellent chef, and played at trying to form a little German Court, leaving the unfortunate Albanians to be made at once the prey of numerous and most unscrupulous European intriguers.

That story is too recent to tell.

Let us hope, though, that Albania's day is about to dawn, and that the oldest and in many ways the most capable of the Balkan peoples will soon have their "place in the sun." Given a fair chance, no one who knows the Albanian doubts that he will ultimately succeed. But in order that the chance should be fair it would be advisable that some one strong protector should guard Albania's interests. And that she should not a second time be left to the "too many cooks" of many Powers.

History and racial sympathies seem to indicate Italy as the most suitable protector. But in this, as on other national questions, let us hope the people themselves will be consulted. Above all, if even partially permanent peace is to be made, let us hope that no Albanian territory will be included in any other State. History shows that this results always in the break up of the State that is so constituted.

HOUSE OF LORDS.

The Mesopotamia Campaign.

February 27.

The Marquess of CREWE asked whether the Leader of the House could give any further information regarding the taking of Kut-el-Amarah. It was clear that General Maude had displayed those combined qualities of prudence and vigour which stamped him as a thoroughly capable commander. He hoped that it had been found possible to supply him with everything he required, and that he had in that respect been more fortunate than some of his predecessors. General Maude's feat of arms must be regarded with general satisfaction. Perhaps Lord Curzon would be able to tell the House at what point the considerable number of prisoners who were stated to have been taken were secured. Did they form part of the garrison of Kut itself, or were they taken at some point lower down the river?

EARL CURZON: I think your lordships will entirely agree with the noble Marquess in the encomium he passed on what has undoubtedly been a brilliant and successful feat of arms by General Maude. A very full account appeared in the newspapers this morning of the series of engagements that culminated in this success. It will be obvious that the scene of operations has been shifted from Kut-el-Amarah itself to a point considerably further up the river, and, therefore, the initial success announced in the telegrams yesterday and this morning has been continued and pursued. With regard to the question put to me concerning the localities in which prisoners were captured, I may say that the captures have been at each stage of the operations, first in the operations for securing the southern or right bank of the river; secondly, and more particularly, in the bend of the river called the Dahra bend to a point immediately below Shumran; and, thirdly, in the operations which consisted of a direct and most gallant frontal attack on the Sanna-i-Yat trenches. I have not the figures, but the total number of prisoners is, I think, several thousands. As to the degree of confidence these events may inspire in future operations, I should like to wait a little before answering that question; but it is quite obvious that the slur on our arms, if that be the phrase which is properly applicable, which was caused by the events of last year, has been entirely wiped out. The whole of the position at that time unsuccessfully held by our troops, and subsequently occupied by the Turks, has been wrested from the enemy. The series of engagements which have taken place, and which have carried the fighting to an area from ten to fifteen miles west of Kut-el-Amarah, must have much more than a merely local effect, and must alter, if they do not entirely transform, the Turkish position in Mesopotamia.

HOUSE OF COMMONS.

"Hard-lying" in Mesopotamia.

Feb. 21.

Colonel YATE asked the First Lord of the Admiralty whether the Admiralty had cancelled its decision to grant hard-lying money to the officers and men in the river gunboats in Mesopotamia, and further had ordered that all such hard-lying money already paid to the said officers and men should be refunded by them from their pay by monthly instalments; and, if so, whether in view of the hardships undergone by the said officers and men, he would take steps to make the grant of the hard-lying money effective.

DR. MACNAMARA: Hard-lying money in the gunboats was authorised locally without the necessary prior sanction of the Admiralty, and as it appeared that the discomforts experienced in the vessels were mainly due to the climatic conditions and were met by the payment of the usual climate allowance, directions were given for the recovery of the over-payments involved. Upon further representations being made, however, it was decided to allow full rates of hard-lying money (instead of half rates as paid in the first instance) in the small craft employed in the Mesopotamian rivers, and the orders that had been given for the recovery of past payments were cancelled.

The Dardanelles Report.

Feb. 26.

The Chancellor of the EXCHEQUER, replying to Commander BELLAIRS, stated that he could not promise to give a day for the discussion of the report on the Dardanelles Expedition until it had been circulated, and until he knew whether there was any general desire for such a discussion.

"VARDANANTZ."

Mr. Balfour states that of the 1,800,000 Armenians who were in the Ottoman Empire two years ago 1,200,000 have been either massacred or deported. In view of this statement the Armenian celebration of "Vardanantz," which took place last Sunday in London, had a pathetic aspect. Vardanantz is commemoration of a war in defence of Christianity which took place in 451, and is classed next to Christmas celebration, and has been celebrated annually for the last 1,466 years. In London the celebration was under the auspices of the Armenian Literary Society, and the many patriotic speeches delivered aroused great enthusiasm. It took place at the International Club, Regent Street. The chair was taken by Mr. Aivazian, of America. Messrs. Ardontz, Safrastian, Aghabegian, and Prof. Hagopian addressed the meeting. Mr. Aram Raffi explained some limelight views of Armenia, and Mr. Tiratzian recited. Altogether it was a successful gathering.

ARCHÆOLOGICAL NOTES.

By JOSEPH OFFORD.

The United States Universities have been, either by defraying the cost of excavations in Mesopotamia, or by purchasing from Arab and European dealers, obtaining many thousands of cuneiform clay tablets and cylinders from the buried cities of Assyria and Babylonia. One of their best collections is at Yale, and the first volume containing a selection from among 8,000 pieces of the Babylonian series has just been edited by Professor Clay.

Among them is a short piece from the celebrated Code of Laws of King Hammurapi. This fragment is a duplicate of part of the long text found at Susa, and so not so valuable as the four or five paragraphs now in the custody of Pennsylvania University, which present articles of the Code erased on the Susa monument. Cuneiform scholars have for some time known that there were Sumerian dialect laws in Babylonia that were recognised as binding upon the community, and so directive of judicial decisions, earlier than the era of Hammurapi, although they may not have been codified as the laws held binding in Hammurapi's time, were by that enlightened monarch. Now, at Yale, Prof. Clay has found a legal tablet containing some nine sections of these primitive laws. One of these is of much interest for jurists and students of the customs of mankind, because it clearly sets forth the Babylonian view as to the terms upon which an eldest son might anticipate his rights as first-born to his inheritance. In those early times in Western Asia we may suppose, from what we know, that even pastoral people, and town-dwellers, were still semi-nomadic. So many of the fair places of the earth were as yet unoccupied, and so innate was the sense of adventure, the wish to travel into unknown lands, among peoples who, born amidst the flux of the final settling down of races, were eager to search for new homes, that the eldest sons, seeing a numerous progeny of brothers arising to share the family fortunes, decided upon seeking out fresh fields and pastures new for themselves. This necessitated a rule for allowing such to anticipate their inheritance, and this clearly and wisely defined clause from this relic of ancient legislation, which is quoted from Prof. Clay's translation, shows these old peoples' attempt at meeting the emergency.

"If (a son) say unto his father and to his mother, 'Thou art not my father, thou art not my mother,' from the house, field, plantation, servants, property, animals, he shall go forth, and his portion to its full amount he (the father) shall give him. His father and his mother shall say to him (he is): 'Not now our son;' from the neighbourhood of the house he shall go."

An interesting discovery may be noted relating to the historical records of the old Mesopotamian monarchies which has come to light in connection with the work of the same scholar, Prof. Clay. He has recently published an old Babylonian chronology, or annals, of the Kings of Larsa, a dynasty ruling from the city of that name, which was overthrown by the rising power of Babylon under its famous monarch, Hammurapi. The new list gives fourteen Larsa monarchs reigning for 263 years, and then mentions Hammurapi, and his successor, Samsu-iluna, as reigning over Larsa for twenty-four years; so, for that period, some kind of autonomy appears to have been granted to the conquered.

This chronology is probably merely a summary made by an elder schoolboy, or student of his country's history; for he has, for practice, repeated it on both sides of his tablet. The cuneiform annalist took great precautions to keep a clearly understandable and accurate chronology because of the importance of verifying dates in all legal documents, and adopted two plans for the purpose. One was to fix every year of each reign by specifying some remarkable event occurring within it; the other was to have an annual official, or Eponym, whose name was associated with his special year of service—a plan afterwards adopted in Greece.

The special events of each year are quoted upon all the chief contract and business tablets, leases, deeds, and mortgages, so that, although the official list of these may not have come down to us, it can be made up for each reign from the common people's records of transactions. It was thought that the special event selected to identify the year would be invariably the same, for each year; but we now find that this is not so, for Dr. T. G. Pinches has, in the "Proceedings of the Society of Biblical Archaeology," for January, 1917, edited a list of the annual event dockets for Kings Hammurapi and Samsu-iluna, and some of these are not identical with those selected as given from copies of the State archives. Thus one tablet signals the tenth year of the second king named as "the year the king overthrew the original king of the disobedient land"; whilst another for the same date gives "the year when the Throne of the Deep was made the second time." It would seem that in different parts of the country the State scribes chose dissimilar events to be those marking the year; or there may have been some other cause for the discrepancy we cannot at present detect.

THE PRESS ON THE NEAR EAST

A Link of Empire.

In a note on the opening of the School of Oriental Studies by the King, the *Daily Graphic* remarks that this was "an event which in time of peace would have dominated every other event of the day; but in the midst of a great war incident clashes upon incident, and there is little time to measure the relative importance of passing events." From the permanent point of view the ceremony was, the writer says very truly, an event of the highest importance.

It creates a new and a very necessary link between England and the East. The problem of governing Eastern nations by a Western democracy is one of the most difficult problems that faces the British Empire. We can neither abandon the task our forefathers have bequeathed to us, nor can we carry it on by the methods which they found adequate. Our continued rule over India and our other Asiatic possessions can only succeed if the men sent forth to represent England have knowledge of and sympathy with the Oriental point of view. It is to effect this object that the School of Oriental Studies has been established. Mutual understanding is the necessary basis of loyalty to a common flag and of harmonious effort towards common ideals.

"A Montenegrin Intrigue."

Under the above heading, the *New Europe* (February 22) publishes a note which is certainly not lacking in interest. It begins:—

An impenetrable veil of mystery still shrouds the conquest of Montenegro in the autumn of 1915, and her rulers are the last who would desire to see it torn asunder. Though the full facts have never been published, it is well known to many outside official circles that for many months before the final surrender secret negotiations had taken place between Cetinje and Vienna. The Montenegrin dynasty has followed the example of certain Jacobite families in Scotland, who invested one son in the cause of King James and another in the cause of King George. While King Nicholas withdrew to Italy and eventually to France, his second son and eventual successor, Prince Mirko (the Crown Prince has a German wife and no children) remained behind, by arrangement with the Austrians. . . . Latterly the air has been full of rumours of a Southern Slav vassal State to be formed for the benefit of Mirko as an annexe to the Habsburg dominions.

Reference is then made to M. Radovitch, the well-known Montenegrin Liberal leader; and we are reminded that he was during his first premiership, some ten years ago, "the innocent victim of the Cetinje treason trial—a judicial farce which was inaugurated by Prince (now King) Nicholas to check the growth of the democratic tendency to control the finances of Montenegro, and which rested on the evidence of the Austrian police spy, George Nastic, whose sordid rôle was exposed at the subsequent treason trial at Agram (1909)." M. Radovitch, the articles goes on to say—

Like the overwhelming majority of Montenegrins, is not merely pledged to democratic principles, but is profoundly convinced that Montenegro's sole hope for the future lies in the achievement of Serbo-Croat national unity, which incidentally involves the union of Serbia and Montenegro. Last summer concrete proposals in this sense were laid before King Nicholas, who could not oppose this ideal without renouncing the great tradition of his uncle and great-uncle, the Vladikas Danilo and Peter, and the whole trend of his own poetical writings. But a visit to Rome last autumn cured him of his ideals, and last December occult influences led him to dismiss M. Radovitch from the office of Premier, to reject emphatically the proposals of union laid before him by the latter and by other prominent Montenegrin statesmen, and to appoint as Premier a man without political experience, who is hardly known even in his own country.

The writer considers, however, that the bestowal of the Order of the White Eagle upon M. Radovitch is the best possible proof that Russia "sternly discourages all petty intrigues directed towards the prevention of Southern Slav unity," and that this "broad hint" was doubtless responsible for the *communiqué* published by the new Montenegrin Government, officially denying the existence of secret negotiations at Zürich.

The "Clean-fighting Turk."

Last week we published several lengthy extracts from an article with the above title which appeared in *The Times*. On Friday *The Times* printed a letter from a correspondent who differs entirely from the view taken by the writer of the article. The letter, which is dated February 21, begins: "In your article yesterday on 'The Clean-Fighting Turk' you claim that the writer has had exceptional experience of the ways of the Turk. I think you will admit that my opportunities of knowing the Turk before and during the war give me a better

claim to be heard." He goes on to say that the author of the article is right when he complains that there has been nothing more horrible in the war than the treatment of Armenia and Syria. But—

When it comes to a question of honest fighting there are not, I think, two opinions about the Turk. The men in the first landing on the Peninsula, north or south, the soldiers of Suvla, the heroic forces that attempted to relieve Kut as well as those men who held it, the men who fought against overwhelming odds at Katia, whose experience entitles them to speak, do not share your correspondent's opinion. They know that, on the whole, the Turk has fought like a white man. He has never used poisoned gas or liquid fire, and he has invariably respected the white flag. He has not fired upon hospitals, and he has generally done the best that he could for our prisoners and wounded, sometimes at great personal risk.

This war has destroyed many things, and amongst them, not infrequently, sanity and chivalry, and consequently when we have met an enemy who has preserved those traditions that some of us still hold dear we think that even the purposes of propaganda are poorly served by suggestions which we know facts do not bear witness to. Let me add that the hope and the heart of all of us who have taken part in the Eastern campaigns are with our troops who are bringing us victory in Mesopotamia and Sinai. So are our memories with our friends who have given their lives in the Dardanelles, in Mesopotamia, and in Sinai to bring about that victory. But it does not help either the living or the dead to represent a good fighter as a poor fighter and a clean soldier as a coward. British soldiers know that the Turks have behaved with consideration when they were successful and with dignity in defeat.

The following day the writer of the article replied to his critic. He suggested that had "X." read his article he would not have inferred that he (the writer) accused the Turks of cowardice. As to the last sentence of "X.'s" letter, he remarks: "If your correspondent will trouble to read my article, he will observe that I have gone to some pains to explain why some Turks behave in this manner." Then he proceeds to state that replies to questions in the House of Commons do not bear out "X.'s" contention as to the alleged kind treatment of our prisoners in Turkey. And—after reference to a point in "X.'s" letter which need not be gone into, as it was subsequently explained that it was due to a typist's error—he concludes thus:—

However, I have no doubt that the Press agents of Potsdam and Constantinople will welcome your correspondent's letter as a valuable asset in their Press campaign in neutral countries, by which they are endeavouring to make the verdict of history as favourable as possible. In my article I pointed out the charm of the Turk; it is as alluring and illusive as that of Dulcinea, in whose name the greatest gentleman in the world rescued a gang of felons and massacred a flock of harmless sheep.

To this epistle "X." replied in due course, and his letter appeared in Wednesday's *Times*. As to the fear expressed that his former letter "would encourage the Press agents in Berlin and Constantinople, and consequently affect the conduct of the war and subsequent history," he observes:—

I think that this is an exaggeration of the importance of the criticism of his article, which was a comment by an unknown correspondent on the work of an anonymous writer, and as such is mainly of value to the two people concerned.

The remainder of the letter is as follows:—

His reference to the unsatisfactory nature of the replies in Parliament with regard to the treatment of our prisoners is very serious. For these answers have produced anxiety with regard to our men in this country, and pain that an enemy who dissociated himself from German methods on our battlefield should adopt them in the prisoners' camp.

I can only speak of what I know. Englishmen have always admired courage in friend or enemy, and have not been afraid to say so. That habit remains as much a part of our character as the wish to fight to a finish. If it is *travailler pour le Roi de Prusse* to tell the truth, that monarch, though he may find death at the hands of Englishmen, will always have that service. For the next thing to denying truth is voluntarily to believe falsehood, and the people that treads that path lays up disillusionment for itself.

It would be interesting to take a canvass of the views held by those of our soldiers who have met the Turk on the battlefield, and to learn whether the majority would support "X." or the writer of the original article.

Our Policy in Asiatic Turkey.

In a leading article, "The Capture of Kut," the *Manchester Guardian* on Tuesday remarked:—

Lord Curzon, in his recent speech in the House of Lords, fitted the development of the Turkish campaigns into the general scheme of German ambitions in the East. These ambitions were undoubtedly the chief political motive in Germany's decision to risk a European war. Whatever, therefore, tends to defeat them tends to political victory over the Germans. We confess that the campaign in Mesopotamia, compared with that in Gallipoli,

seems to us a singularly indirect way of achieving these ends. The German ambitions in the East begin on the Danube opposite Belgrade, and this slow mortification of the extremities is a much less expeditious despatch than the cutting of the jugular vein.

Even from the military point of view, however, the *Manchester Guardian* holds, this Mesopotamia campaign will help. But far more important than the military results are the political results which we hope to achieve. The article continues:—

We are as a nation committed to the abolition of Turkish rule in Europe and to the abolition of Turkey as an Imperial Power in Asia. That is to say, while Turkey may survive as a political unit in Asia it must cease to rule over subject nations. Amongst these subject races are the Armenians, whose old country is now to a great extent in Russian military occupation, the Jews in Palestine, and the Arabs. It would be helpful if some idea could be given of the kind of settlement to which the Government were looking forward in Asia of questions that have such a profound importance for this country as an Eastern Power. Our whole foreign policy in Asiatic Turkey will have to be reconstructed. Before the war the official policy of the country was to support the independence of Turkey as a great buffer State, to reform her methods of government, and perhaps because it was thought they might help to reform, to place no obstacles in the way of German economic ambitions. Every plank in this policy has been broken. No one will ever again think of Turkey as a friendly buffer State. No one hopes that she will reform. Nor can the Baghdad Railway project of Germany expect even the degree of support that it had from the British Foreign Office before the war. Clearly, the time has come when we must begin to reconstruct a positive policy out of this ruin, and though the Foreign Office is doubtless working hard at the problems, it would be greatly helped in its work and in any negotiations that were forward if it were to enlighten the public further on the general principles which it hoped to apply.

The Recapture of Kut.

The following are extracts from articles in various papers upon the recapture of Kut:—

Since the first battle of Kut, and until the present advance began, the news from Mesopotamia has been uniformly unfavourable. The tide of misfortune has now been turned, the beleaguered garrison of Kut has been avenged, and British arms are once more in the ascendancy in the Middle East. We have long ceased to regard the operations in Mesopotamia with enthusiasm, because we hold that the earlier phases were misguided, and also because the demand they make upon our shipping and other resources is probably disproportionate to their value. There never was a time when it was more important for the Allies to concentrate their energies upon the main fighting fronts. But we recognise and appreciate the reasons which have doubtless led the Government to persist in their resolute determination to turn the Turks out of Kut. British prestige was involved, and it was probably imperative not to leave the enemy in undisturbed possession of a strategic position which our own forces had held so long and so valiantly. In the face of many difficulties, Sir Stanley Maude and his indomitable troops have steadily and methodically fought their way along the right bank of the Tigris. . . . We rejoice that the Mesopotamian Field Force, which has undergone so much suffering and privation, has at last been heartened by a shining success. Yet though former reverses have been patiently wiped out, extravagant hopes must not be based upon these welcome local triumphs.—*The Times*.

In the word "Kut" was crystallised our lack of success in Mesopotamia. As to the causes that led to it is too early as yet to speak. The inquiry which is still going on will soon give us better means of judging the matter than we possess at present. At least it is clear that every consideration that last year lent importance to our loss of Kut adds now to the prestige of its recapture. . . . It is not a matter of immediate concern whether this present success is or is not the beginning of a more extended campaign. But it is as well to remember that, so far as the opinion of Arabia is concerned, the recapture of Kut is of an importance that the attention of Englishmen, riveted in other quarters, may well fail to grasp in its entirety. . . . It is possible that the preoccupations of to-day make it difficult for Englishmen fully to realise as yet the great issues that are bound up with the recapture of Kut. But we may rest assured that what we shall understand to-morrow, Egypt, India, and Arabia have recognised to-day.—*Daily Telegraph*.

The complete recovery of the Kut position will have a valuable effect in restoring our military prestige throughout that part of Asia. It also places in our hands a first-rate defensive position at the head of the Hai and the Lower Tigris, giving us a secure hold on the course of both rivers, and thoroughly consolidating our occupation of Lower Mesopotamia. Whether it will be used for a further advance it is not for us to say. But we hope that great caution will be exercised in the matter, having regard to the coming river floods and hot weather, and also to the fact that operations in Mesopotamia require a greater tonnage of shipping to support them than those in any other theatre where we are fighting on a large scale.—*Daily Chronicle*.

The importance of the fall of Kut can be best estimated by the anxieties of the enemy. The German Press is full of gloom over the position of the Sixth Turkish Army and the "very nightmare" of Bagdad, which cannot be reinforced for several months. Kut is indeed a bad omen for Germany. It signifies the dwindling of German prestige throughout the Middle East and the restoration of confidence in British arms. It indicates the rapid progress of Turkish decay. The Ottoman Empire is

no longer a German asset; every day tends to make it a grave German liability. The fall of Bagdad, reverberating throughout the Mohammedan world, would be pretty well fatal to the Young Turks; on the other hand, a serious attempt to save Bagdad must expose them to great danger from other quarters.

We hope there will be no halt in the victorious advance until the city of the Caliphs is firmly in British hands, thus giving a definite denial to the German scheme of lordship over Asia Minor. It is true that the war will not be decided by the forces operating in Mesopotamia. But the final settlement will be profoundly affected by the completeness or otherwise of our success. For Britain at least full victory in Mesopotamia is of the very highest importance.—*Evening Standard*.

Life at Salonika.

"An Englishwoman in Salonika, 1916," is the title of an article in the February *Contemporary*, which gives an entertaining and graphic account of some of the author's experiences in that port—to say nothing of her trials in getting there. Here is a paragraph describing the city and some of its features:—

The town of Salonika climbs steeply up a big bluff, its ancient walls culminating in the citadel. The latter is used as a prison, and the prisoners occupy their time and add a few luxuries to their existence by making crosses and snakes of minute and many-coloured beads. Beneath the citadel is the Turkish quarter, by far the most picturesque part of the town. It is intersected by narrow roughly cobbled streets, mostly running from north to south, and crossed by wider ones from east to west. Houses of stucco washed in varying tints of pink, mauve, blue, and ochre, with projecting harem windows and deep eaves, cast their grateful shadows over one side or other. Common to all streets alike, but multiplied in infinite variety and entirely beyond the power of pen to describe, are the odours that urge their subtle influences from all directions. They are not of the West, and can only be met appropriately in an Oriental setting. An officer, writing to his small nephew, spoke of them as "important and various, but indescribable," and suggested that if he tried chewing a lump of aniseed outside a fried-fish shop, he might get a faint idea of them.

The two main streets, we are told, are—

the Rue Venizelos, running north and south, and the Rue Vardar, which crosses it, and is the ancient Via Egnatia over which the Romans built an arch, richly carved in deep relief, and under which St. Paul must have walked. This Rue Vardar is lined with the small shops of greengrocers, blacksmiths, and saddlers, and leads to a space where several streets meet, and which Tommy has christened "Piccadilly Circus." Here transport lorries assemble and start on their way up to the camps, and close by is the Expeditionary Force canteen. Venizelos Street provides the most considerable shops and restaurants of the town, including, among the latter, the celebrated "Flocca's." In its last fifty yards before reaching the quay, the street widens and admits of rows of tables and chairs being set out. They are crowded with officers and men of all the Allied Armies, seeking whichever side is in the shade.

The surrounding country is mostly bare of trees or scrub, but it is not without its appeal, even in times of war.

Here and there, and generally near a spring, you will come to a magnificent plane tree, under which goat-herds foregather for their noonday sleep. Flowers in infinite variety grow riotously over the hills, in designs more rich and wonderful than any Persian carpet. They are only interrupted by the camps that dot their ugly scars over the hillsides, making bare patches for horse lines and provision dumps, and all the unsightly paraphernalia of war. Many of the tents are surrounded with little gardens neatly edged with broken fragments of marble and gay with flowers. From the edge of an escarpment overlooking the lakes of Longada and Beshik a beautiful panorama spreads before one's eyes. Beneath, as I looked down, one cloud-shadowed day in June, the waters reflected, in deepened tones, the hills on their further banks and caught the light of the great cumulus clouds massing on their summits. It is a land of legend, and romance lingers in every fold of the hills, only to withdraw to some further point of mystery as you approach.

COMMERCIAL & FINANCIAL SECTION.

NOTES AND NEWS.

Devonshire Square,
London, E.C.

The much-advertised British Industries Fair has been opened in London, and, when all the circumstances of the time are taken in consideration, the show must be classed as very good. It is true that most of the goods belong to what is called the "fancy" trade, but there is this to be remembered: that they also represent industries which, before the war, were German and Austrian monopolies. I need not emphasise the importance of this fact. I am aware that there has been some criticism of the arrangements, and, for all I know, some of the criticisms may have been justified; but there is no doubt that serious difficulties have been encountered in arranging the exhibition at all, and, on the whole, a very creditable show has been got together. Traders in the Near East who are interested in fancy goods, ladies' leather bags, and glassware of sorts, will do well to get in touch with the organisers through the Intelligence Branch of the Board of Trade, because, after the war, it will be possible to buy and sell British goods in these lines.

Nothing further has been heard about the taking over of Greek ships, and a good deal of speculation has been rife in some quarters regarding what is likely to happen. I hear from India that as soon as the news of the Allies became known out there a considerable rise in prices took place in certain produce markets. The jute-fabrics market, for example, had been very stagnant for a long time, but the news that more ships were to be taken over by the Entente Powers sent prices up more than a rupee all round. Other produce markets were also affected to a slighter extent, but I shall not be surprised to learn that a reaction set in pretty promptly.

I am glad to learn that the Government of India are taking steps to prepare for a trade campaign in the Persian Gulf after the war. Two special Commissioners have, as stated in our news columns to-day, proceeded to Busreh to conduct an inquiry into trade possibilities, and it is satisfactory to learn that men who possess a sound knowledge of the area have been selected for this very important work. When I was in Busreh a few years ago I saw enough to tell me that the corruption and ineptitude of the Turk stood in the way of development, and that, great as was the quantity of produce handled at the port—the natural *entrepôt* of a fine producing country—the actual possibilities had merely been tapped. British firms did their best, but I never met a commercial man of knowledge and experience who was really satisfied with the results which had been achieved.

Turkish corruption and German intrigue stood in the way of fair dealing. These have now been swept away, British institutions have been introduced, and a new and more possible régime has been established. My readers may or may not know that a British Customs House has been in working condition for some months. It is manned by officers trained

in Indian ports, and commanded by officials of the Indian service. I believe I am right in saying that the confidence of local traders has already been won, and that the men who might have been expected to oppose most strenuously the establishment of a new order of things are among its most enthusiastic admirers. Which is a good enough augury for the future.

Distressing news continues to reach this country of the grave conditions which prevail in Serbia, where the Huns and their satellites continue the campaign of oppression and brutality. The latest letters from friends of the Serbs speak of the burden of taxation. The sum raised last year in the Morava region alone by direct taxation was 5,572,344 leis; in December 2,592,944 leis were extracted. There is no doubt about this, for the figures were extracted from the Sofia paper, *Zarja*, of January 12. The only consolation that can be offered is that the day of reckoning must come. A very grim comment on this is a statement that appeared in the Basle paper, *Nachrichten*, on February 8:—"The Austro-Hungarian War Correspondence Bureau reports from Vienna that the inhabitants of Serbia and Montenegro have subscribed to the fifth war loan, and that the result of the subscription is very satisfactory, 6,000,000 kronen having been subscribed in Serbia and 750,000 kronen in Montenegro." I wonder what species of torture the oppressors used to crush this blood out of stones. We shall know some day.

We have become so accustomed to the record of improvement in the finances of the Sudan that I approach mention of the annual report for 1915 of the Financial Secretary with some difficulty. The receipts and expenditure for the year show a surplus of £E31,293. Considering how difficult it was at the end of 1914, when the Budget estimates for 1915 were framed, to foretell the probable course of events and the extent to which trade would be affected by the war, the result obtained must be looked upon as satisfactory. The actual revenue is £E5,773 less than the estimates and the expenditure £E27,056 less.

Bernard Pasha states, in his report, that the situation during the year was governed by two main factors—the war, and the incomplete recovery of the people from the hardship and privations due to the scanty rains and low Nile flood of 1912 and 1913. The rains of 1914 were fortunately abundant and well distributed and the flood good. The country was thus well filled with food and agricultural produce, except in the north. Prices, however, in the early part of 1915 ruled very low. Owing to war conditions, there was at first little demand for export, and the cultivators, who form the bulk of the population, while they had enough to eat, were short of ready money. Consequently the liquidation of indebtedness resulting from the bad days and the payment of taxes and arrears of taxes constituted a heavy strain upon their capacity. I hope to deal further with the report in a future issue of THE NEAR EAST.

I have pointed out previously in these columns the direction in which the war has benefited Egyptian industries. Flax cultivation is another case in point. Mr. Gerald C. Dudgeon, in an interesting pamphlet in which he deals with the subject at length, points out that the chief sources of the supply of flax to England and France having been cut off by the European War, the price of this product has been so enhanced that, in the opinion of the Ministry of Agriculture, it is worthy of consideration whether in some parts of Egypt it might not prove a profitable venture to plant the crop on a more extensive scale than has been adopted since the establishment of a specialised cotton taught the cultivator to consider the last-named fibre crop the main source of wealth.

Previous to the cultivation of cotton on a commercial scale, proceeds Mr. Dudgeon, flax was an important crop, and many looms were found in different parts of Egypt entirely devoted to the weaving of it. The cultivation of the plant has now almost completely died out, as the figures of the last few years' areas show: 1912-1913, 1,592 fed.; 1913-1914, 906 fed.; 1914-1915, 866 fed.; 1915-1916, 1,418 fed. There has been in the past a lively controversy regarding the effect of flax-growing on the soil; but habitual flax-growers in Egypt maintain that there is no deterioration, "and," says Mr. Dudgeon, "it may well be that, upon the rich soils of Egypt, a crop of flax does not exert such a severe influence as would be experienced in other localities." A new plant—the seed of which has been brought from Ireland—has been introduced with good results. It would be interesting to learn more of this industry, and all will hope that the revival of 1915-1916 will be developed into permanency.

The agricultural and educational authorities in Cyprus are, a correspondent on the island writes, giving every encouragement to the school garden movement. There are now more than sixty of these in full swing, and since a good beginning has been made there is no reason why the gardens should not become most useful institutions, as adjuncts to schools, if interest can be kept alive by the village committees and people. In these days, too, a good start could be made in the cultivation of the vegetables most useful as food, including potatoes. The hours to be given would not interfere with the regular course of teaching.

The Wealthy Middle-East.

Trade in Somaliland Gums and Spices.

Gums and resins, drugs, dyestuffs, essential, non-essential vegetable oils, oil seeds of both classes, and spices have averaged about 5 per cent. of the total exports from Aden for the last five years. Of these the gums and resins lead in value and importance. Olibanum (frankincense) is the largest item. This fragrant, aromatic gum resin comes into Aden principally from British Somaliland, the independent Somali ports, and the Arabian province of the Yemen, but the Somali product is considered the best. Local dealers say that the supplies of this gum in the Aden market have steadily decreased on account of the unsettled conditions in British Somaliland and the increasing practice of selling and exporting the gum direct from the Somali ports. Prices have advanced with the decreased supply, but it is said that the increased demand from India and the opening of a market in America have also been important factors.

The Americans are out to capture this trade. We have the authority of the United States Consul in the port for the statement that a local American firm has announced its intention to enter the market as soon as he can perfect his connections in the United States for the disposition of the product. Prices at the present writing for the various grades are 14s. 7d. to 29s. 2d. per cwt., with buyers for all that is offered. There is a speculative tendency, chiefly on account of an anticipation of an even greater demand from India. The best customers for olibanum are India, Egypt, and Abyssinia, where it is used in religious ceremonies and for disinfection purposes. In normal times Austria, Germany, and France buy considerable quantities.

Aden's exports of olibanum in the fiscal year 1914-15—the latest year for which returns are available—were valued at £12,120, as compared with £35,426 in 1913-14.

Trade in Gum Arabic.

About two-thirds of Aden's supply of gum arabic comes from the Somali ports (principally the independent ones) and about one-third from the Arabian hinterland. The highest grades of this gum are used in the manufacture of candy, while the lower grades are converted into mucilage. The trade is inactive on account of a decrease in the supply and higher prices that have caused a falling demand. Supplies from Somaliland have been affected by unsettled conditions and the direct marketing of the product at the places of origin. The market for gum arabic in Aden has also had the handicap of the preference of large purchasers for the Sudan gum. American importers are said to draw large supplies from the Sudan. Local dealers assert, however, that the Somali gum in the Aden market is equal in quality to the Sudan gum.

The principal exports of gum arabic from Aden have been to Great Britain, India, and France. There is said to be little or no demand here from American buyers. Prices in November, 1916, were 14s. 7d. to 27s. 1d., with an upward tendency, caused by the active buying by a local exporter for shipments to France. Exports of gum arabic were valued at £13,073 in 1913-14, and at £9,465 in 1914-15.

Myrrh in Great Demand.

Of all the gums and resins sold in the Aden market, myrrh is in greatest demand at present; it is well known for its use as a base for perfumery and for its medicinal properties. Myrrh is brought to Aden from Abyssinia and the Arabian hinterland, that from the former country being considered the best. The four winter months are considered the most active in the trade, for it is during these months that the largest supplies arrive.

There is always a steady demand from Bombay for myrrh, and this, with the increased demand in America, has advanced the local price for a good grade of the gum from 45s. 10d. to 75s. per hundredweight. There has been a tendency on the part of Indian buyers to speculate, and prices may go still higher. The supplies of myrrh from Abyssinia have not been normal, having been

affected by unsettled conditions in that country and the Somali hinterland.

The publications of the Aden Port Trust do not give separate statistics for myrrh, but it is the opinion of local dealers that it will be one of the most important items in the Aden gum and resin trade this year (1916).

Trade in Spices.

Aden's importance in the spice trade is that it is a distributing point for the requirements of Red Sea ports, Somali coast ports, and the Arabian hinterland. Betelnuts, cardamoms, chillies, cinnamon, ginger, and pepper come mainly from India. Zanzibar supplies some of the chillies and pepper and practically all of the cloves. The Straits Settlements contribute to the imports of pepper and cinnamon, and supply practically all the nutmegs.

The trade returns for 1915-16 showed a falling off in spices on account of the disturbed conditions in some parts of Somaliland and in Arabia. No other important change in spices or sources of supply is anticipated. The following table shows quantity and value of the exports of spices in 1913-14 and 1914-15:—

Spices.	1913-14.		1914-15.
	Lbs.		Lbs.
Cardamoms	7,182		9,798
Chillies	190,428		97,314
Cinnamon	130,536		96,106
Cloves	115,920		92,064
Ginger	929,113		941,635
Pepper	268,285		175,220

Sesame Oil and Seeds.

Sesame oil, an old and important article of commerce in both the Far and the Near East, is expressed from the seed of an annual herbaceous plant native to India, although now cultivated extensively in Egypt, Syria, and East Africa. The crops in India are immense, and it is from there that Aden markets principally are supplied, although some comes from Zanzibar, German East Africa, and Arabian Gulf ports. The principal exports from Aden of both oil and seed are to Hodeidal, Massaua, Jibuti, and Arabian Gulf ports.

Sesame oil and seeds are largely used as articles of food. The Mohammedan finds in it a cheap and palatable substitute for animal greases and fats. It is used to enrich various dishes and as a salad oil. The Arabs use it also as a hair oil. It is of fine quality usually, and is said to keep for years without becoming rancid. It is also known as *bonne oil* and as *gingelly oil*. The natives use the seed in making broths and cakes.

Indigo.

Aden's trade in dyeing and tanning substances is concerned principally with the import and export of indigo dyes. Other less important items in this branch of the trade are myrobalans, safflower, and turmeric.

The Arabs of the Yemen and of the Aden hinterland have a great liking for blue clothing. When possible they have all articles of clothing, including turbans, dyed an indigo blue. Such a custom creates a large and steady market for indigo dyes, and, while the Arabs in some places in the Yemen grow considerable quantities of the vegetable indigo, there is said to be no likelihood of the home industry even nearly supplying the demand.

In recent years the chemical dyes of Germany and Austria dominated the market. The large and insistent demand for indigo dye has been forced to seek other sources of supply since the war, and the vegetable indigo industry in India, the Straits Settlements, and the Dutch Indies has been stimulated to such an extent that Aden is getting large supplies from those sources, principally India. Aden's position as a good and steady market for indigo dyes is likely to be permanent.

Safflower and Turmeric.

The safflower is a large thistlelike plant, with orange-coloured flowers. The dried flower is the safflower of commerce. It affords both a yellow and a red colouring matter, and is used largely in silk dyeing, giving various shades of pink rose, crimson, and scarlet.

Turmeric is the dried tuber of an East Indian plant. It has varied uses—such as a dye, a medicine, a condiment, and a chemical test. The principal use in this part of the world is as a condiment and as a medicine. As a condiment it forms an ingredient of curry, for which purpose it is produced, and largely consumed in India. Principal exports from Aden are to Red Sea ports and the Arabian hinterland.

ENEMY DEBTORS.

Manchester and Accounts in Turkey and Bulgaria.

We take the following from the current issue of the Manchester Chamber of Commerce *Monthly Record*:—

"This subject [accounts owing from the Balkan Peninsula and Turkey] was considered in conjunction with the Middle East and North Africa Section, and representations were addressed to the Board of Trade on the serious effect to Lancashire of the cessation of remittances from Turkey and Bulgaria for shipments made antecedent to the war, which prejudiced manufacturing and exporting interests alike.

"Under the supposition that amounts owing from this country were largely in excess of the contra accounts, it was suggested that, with the aid of the Government, the accounts could be so adjusted that the sums due to merchants might be paid off and a great amount of Lancashire indebtedness cleared off.

"Mention was also made of the attitude of the Treasury towards remittances from enemy countries in discharge of indebtedness incurred prior to the war. British banks were not permitted to credit their English customers' accounts with the amount of any cheque from an enemy country, or of any cheques which bore an endorsement, the endorser being resident in an enemy country. Although such endorser might be one of a series of endorsements it was held to vitiate the cheque as a negotiable instrument here. Direct remittances from enemy countries were also forbidden, and remittances were even forbidden when made by cheques upon neutral countries. In the case of Asia Minor many of the Manchester debtors were only technically enemies, as, for example, in the case of Armenians and other subjects of Turkey, and the debtors had been quite willing to pay the moneys owing, but could not do so.

"Mr. Runciman was informed that most of the Turkish and Bulgarian firms were connected by ties of kinship with the firms here, and would be only too glad to have the opportunity of safely lodging sums of money on this side, to be out of the way of their own Government's exactions if sent here. These representations were only formally acknowledged."

THE BOOMING OF THE SPADE.

Makers of agricultural machinery and implements are reported by the British Empire Producers' Organisation to be working at their maximum rate of output, writes *Empire Trade Notes*, and the intensified demand is all connected with the development of farming in the United Kingdom. Such a position has never been reached before in the history of the industry. Before the war the manufacturers of agricultural machinery were obliged to seek markets abroad in order to fill their works, and their travellers and catalogues were to be met in Russia, Turkey, the Balkans, and other foreign territory, besides the British Dominions and Colonies. Now, under the general control of the Agricultural Machinery Branch domiciled at the Victoria Hotel and directed by Mr. S. F. Edge, they are devoted to the creation of machinery and tools for greatly increasing the productivity of our own soil, and the effects will persist long after the period of war crisis.

FURNITURE IN EGYPT.

A Call to the British Manufacturer.

(FROM OUR OWN CORRESPONDENT.)

ALEXANDRIA, February 16.

For no apparent reason British furniture manufacturers seem to have practically ignored the Egyptian market for years past, with the result that, when establishing a home in this country, Anglo-Egyptians either bring their furniture out with them or discontent themselves with a nucleus of foreign-made goods while waiting until some fellow countryman auctions his lares and penates in the hope of finding what they require at second-hand. The ideal method of furnishing is doubtless to begin with an irreducible minimum, adding thereto according to the promptings of fancy as the outcome of attendance at sales, and those whose method this is generally fight shy of "suites" of furniture. But this is not always convenient or practicable; nevertheless, it is noteworthy that the European population evinces marked interest in such sales, and it is not unusual to hear of second-hand English goods realising their original price.

Austrian Stocks.

On the outbreak of war, and for some time afterwards, the furniture showrooms in Alexandria were full of Viennese goods, a costly and unpleasing alternative to the British article. Whatever furniture is being imported at the present time—and the quantity is negligible—comes from Italy and Spain. A quarter of a century ago or thereabouts, an Anglo-Egyptian firm retired from the trade after having made a respectable fortune by the sale of English furniture, linoleum, and cutlery, and the profits in this trade must still be considerable, judging from the large areas occupied by furniture salesmen in the principal thoroughfares of Alexandria and the huge sheets of plate glass through which the public views their wares.

I have often admired the artistic productions in fumed oak of some London houses, although, strange to say, this type of furniture never figures in the showrooms in Egypt, inexpensive as it is, and admirably adapted to the Egyptian climate.

Imitation Sheraton, modern Chippendale and walnut furniture should find a sale here, and such articles in mahogany as come into the market are eagerly sought after, and command high prices at second-hand.

All furniture imported should be made of thoroughly-seasoned wood, as, if otherwise, it will warp and crack when the wind blows hot and dry off the desert. It should also be stout enough to withstand the brusque handling of native servants, the primitive methods of those who undertake the removal of household furniture in these parts, and possible transport over long distances by rail.

What to Avoid.

Heavily upholstered furniture is undesirable, in view of climatic conditions, and bearing in mind the fact that, as R. L. S. wrote of a certain brand of cigarettes, the "pulex irritans" has "insinuated itself into our very lives" in this country, while the "Norfolk Howard" is for ever knocking at the gate. It would be unnecessary for a British firm which contemplates the opening of a sales room in Alexandria to occupy premises at a high rental.

There is plenty of accommodation to be had in the less frequented quarters at terms relatively moderate, and a little preliminary advertising in the local Press would be all that is necessary. It should not be forgotten that, whereas fumed oak, mahogany, or walnut bedsteads are just as suitable for the climate, and much more pleasing than the iron or brass lacquered articles, they would require some attachment wherefrom to depend a mosquito net.

The writer hopes that it will no longer be necessary to reproach home manufacturers with the absence of British furniture in the showrooms in Egypt, for there are no better goods in the world. It should be remembered that Austrian and Italian furniture is usually shipped on mail steamers at corresponding high freight, whereas, in normal times, British manufacturers have a choice of two or three lines of cargo steamers trading regularly with Alexandria.

LANCASHIRE COTTON TRADE

Increased Difficulties of Producers and Merchants.

(FROM OUR OWN CORRESPONDENT.)

MANCHESTER, Thursday.

The difficulties of producers and merchants in our market are increasing, and, owing to various hindrances to progress, a limited amount of fresh business continues to be done. The prospects in most of our outlets abroad are not unfavourable, but facilities for getting goods out of this country are being reduced, and it is useless for transactions to be arranged when it is very uncertain as to whether it will be possible in a few weeks' time to export the articles to customers abroad.

Many manufacturers have been disturbed by the report that henceforward flour cannot be used for sizing purposes, and it is hoped that the representations now being made to the Government will be successful.

News of any importance relating to Egyptian cotton has been scarce.

The statistical position with regard to American qualities in Liverpool remains strong, and everything points to dearer prices.

A fair inquiry has been reported in piece goods for Egypt, and we are now approaching the season of the year when buying is generally expected for that outlet. Clearances abroad are fairly satisfactory.

Moderate sales have been reported in fancy goods and specialties, but offers, as a rule, in shirtings have been low.

A few more attempts have been made at operations for India, with occasional transactions in light fabrics, such as dhooties.

Buying for China has continued irregular, and business for Singapore has not been quite at a standstill. Rather more inquiry has come through in printing cloths.

Although the turnover in home American yarns has been rather better, the market, as a whole, remains weak when tested.

Some wretched prices have been taken for stock lots. Egyptian yarns have not attracted much attention, and prices are getting more irregular. Only small lines have been sold in export bundles.

THE COTTON SUPPLY.

Why special attention should be paid to the immediate development of Colonial cotton has been commented upon again and again in these columns (writes the *Textile Mercury*), and it cannot be impressed upon the nation too often. The Government have not yet realised that the matter has become urgent. Consumption of raw cotton increases in all parts of the world from year to year. The greater increase is in coarse counts, which planters will endeavour to supply, perhaps at the cost of the production of finer qualities of cotton, more and more used by Lancashire.

As Mr. J. A. Hutton pointed out in a lecture in Manchester, over 5½ million bales of cotton are now grown in the British Empire; but as 4 million bales of this come from India, the bulk of it is of the short-staple type, and of no use to Lancashire spinners. It is not impossible, however, to secure an improved growth from India, but the effort would have to be maintained for many years by financial help from the Government or other public sources. This is where the Imperial Treasury could be of assistance, as it could be in increasing the supply from the Sudan, from Uganda, and Nigeria. It should be stated that of the 5,595,000 bales of cotton produced in the British Empire we get 5,500,000 from India and Egypt—Egypt providing 1,500,000. Hence, from other portions of the Empire we derive only 95,000 bales.

To quote the memorandum referred to:—"In these days, when so much is wisely and nobly said about organising the resources of the Empire, this is surely a matter that should be taken in hand at once. The British Cotton Growing Association has done the pioneer work. It has now reached the limit of its resources. Some new departure is urgently needed." Why should there not be a bureau in the Imperial Government to advise and assist the various Colonies? We have an example of what can be done by the scientific study of cotton-growing in the national institutions set up for this purpose in America.

TRADE NOTES.

Licence Withdrawn.

The licence to trade issued to Messrs. Max Steinauer and Co. has been cancelled, the firm having been dissolved.

Accepted Tenders.

The supply of general stores, clothing, etc., to the Egyptian Administration has been adjudicated to the following contractors for one year from January 1 to December 31, 1917:—

	£E.
Messrs. Thomas Hinshelwood and Co. Ltd.	4,514
Sayed Eff. Ahmed Kawa	4,427
Messrs. Th. W. Petersen and Co. Ltd.	3,297
The Commercial and Agency Co. of Egypt, Ltd.	2,350
Messrs. J. Compton and Sons, Ltd.	1,454
Mr. Walter W. Davis	1,415
The Red Hand Compositions, Ltd.	824
Mr. Frederick Cree	619
Mr. A. Vidou	362
Hassan Eff. Gabel El Azhari	170
The Alexandria Engineering Works	121
The Vulcanite, Ltd.	86
Ibrahim Eff. Fawzi	59
Saad Eff. Amin el Battikhi	31

The Sultania Steam Yacht Service have accepted the following tenders for the supply of articles of clothing required for the sailors of their Nile steamboats.

	£E.
Messrs. J. Compton, Ltd., Cairo	295
Mr. Jacob Faydon, Cairo	189
Messrs. Orusdi Back, Cairo	71

Liquidated Firm.

Mr. F. H. Russell, Receiver of Oreinstein and Koppel (Arthur Koppel, Egypt, Limited), in liquidation, has received tenders for the sale of designs for light railway construction belonging to this concern, consisting principally of wagons, railway points, turning tables, locomotives, etc., etc., according to a list which may be inspected by the public. These designs, says the announcement, represent various types of wagons, etc., employed in Egypt and the colonies, and are the result of years of study and experience. This firm had practically the monopoly of this kind of business in Egypt prior to the war. The last date for the receipt of offers was February 21, 1917.

INDIAN OPIUM IN EUROPEAN MEDICINE.

Morphine and codeine, the two principal alkaloids of opium, are largely used in medicine, and are specially valuable in war-time. The opium used for their preparation came to this country before the war from Turkey and Persia, one of which sources is now shut off, while the other is difficult of access. Recourse was, therefore, had for supplies to India (which country formerly exported its opium to China), and the Indian Government gave special permission for the shipment of Indian opium to the United Kingdom. As at present produced, Indian opium is not so consistently rich in morphine as Turkish and Persian, but the unfortunate impression (which has recently received considerable publicity) that it is not suitable for European medicinal purposes requires immediate correction. As a matter of fact, Indian opium is already being freely utilised by morphine manufacturers in the United Kingdom.

An exhaustive investigation of the qualities of Indian opium has been in progress for some years at the Imperial Institute, and in an article published in the *Bulletin* of the Institute in 1915 it was shown that out of 102 samples of Indian opium collected in 1909 only thirty were unsuitable for medicinal use in the United Kingdom owing to a deficiency in morphine. At the suggestion of the Imperial Institute experiments are now being conducted in India as to the comparative merits of different varieties of poppy for opium production, and there seems no reason why in course of time an Indian product equal to the Turkish should not be forthcoming. The quality of Indian opium can, however, be considerably enhanced at once by improving the present methods employed for its collection and preparation.

The United States Census Bureau estimates the cotton seed crushed from the present crop at 2,930,000 tons and the number of linters obtained from same at 818,000 bales.

PRODUCE REPORT.**Currants.**

LONDON, March 1.

The market has been very active this week, with a continuous demand for all qualities. Provincials, as well as all out-of-condition currants, are now practically cleared, and prices for all other qualities have again advanced. Shortage of stocks and the continuation of the blockade in Greece are the principal reasons, because there are no prospects at present of arrivals, and no idea can be formed, under the present circumstances, as to when the blockade will be raised. Amalias are quoted 83s. to 88s., Patras 86s. to 89s., Gulf 88s. to 94s., Vostizza 88s. to 94s., Zante 84s. to 88s., and Smalls 78s. to 88s.

Sultanas.

The demand during the week has been good, with business done mostly in Afghanistan fruit, which is 1s. to 2s. 6d. dearer. Very little has been done in other growths, which are firmly held at higher prices.

Figs and Dates.

Both kinds are still in good demand, with considerable business passing at late rates.

Seeds.

The appointment of Mr. Alfred Bigland, M.P., as Oilseeds Controller, with "extreme powers," has not yet had any noticeable effect in the market. Linseed is firm,

London-Calcutta for shipment being quoted at 113s., and Bombay ordinary at 114s. Rape seed remains also firm, with only few buyers; brown Cawnpore is offered at 97s. Cottonseed is steady, London-Egyptian, f.a.q., offering at £20, and Sakelarides quality £19 per ton. There has been no change in Canary seed; and Rangoon Beans are fairly steady at the recent advance. Mustard seed is in fair demand at 23s. to 32s. cwt. Lentils are quoted 40s. to 42s. per 100 lb.

Oils.

Linseed oil has been rather quiet. Spot pipes, landed, were offered at £52 10s.; barrels, ditto, £53 10s. Rape oil is firm, but more or less nominal; ordinary brown, naked, spot, offered at £58; while English refined, barrels, sell at £61 to £62. Cottonseed is steady, with crude spot pipes at £49 10s.; refined, pale, £52 to £52 10s.; and barrels, sweet, £58 to £60, as to make. Olive oil continues scarce and without offering.

Oilcakes.

It is understood that the Oilseeds Controller will also control all feeding stuffs for cattle and the oilseed cake trade. This will, undoubtedly, effect an essential change in the regulation of the latter, in which speculation has often embarrassed genuine buyers for cattle-feeding purposes. Linseed cake is quoted at present—English made, £19 17s. 6d. to £20; and cottonseed cake, also English made, £15 7s. 6d. to £15 10s. per ton.

OLIVE CROPS IN WESTERN GREECE.

The principal olive and olive-producing regions in Western Greece, so far as foreign trade is concerned, are the islands of Corfu and Paxos, the region around the city of Agrinion in the Province of Acarnania, and the region around Amphissa (Salona) on the Gulf of Corinth.
